The copy filmed here has been reproduced thanks to the generosity of:

National Library of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the lest page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending or, the last page with a printed or illustrated impression.

The last recorded freme on each microfiche shell contain the symbol — (meening "CONTINUED"), or the symbol  $\nabla$  (meening "END"), whichever applies.

Meps, pietes, cherts, etc., mey be filmed et different reduction retios. Those too lerge to be entirely included in one exposure ere filmed beginning in the upper left hend corner, left to right end top to bottom, es meny frames es required. The following diegrems illustrate the method:

L'exempleire filmé fut reproduit grâce à la générosité de:

Bibliothèque nationale du Canada

Les imeges suiventse ont été reproduites evec le plus grand soin, compte tenu de le condition et de le netteté de l'exampleire filmé, et sn conformité evec les conditions du contret de filmege.

Les exempleires originaux dont le couverture en pepier est imprimée sont filmés en commençent par le premier piet et en terminant solt per le dernière pege qui comporte une empreinte d'impression ou d'iliustretion, soit par le second plat, seion le cas. Tous les eutres exempleires originaux sont filmés en commençent per le première pege qui comporte une empreinte d'impression ou d'iliustretion et en terminent per la dernière page qui comporte une teile empreinte.

Un des symboles suivents appareître sur le dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▼ signifie "FIN".

Les certes, pienches, tableeux, etc., peuvent êtrs filmés à des taux de réduction différents.

Lorsque le document est trop grend pour être reproduit en un seul cliché, il est filmé à pertir de l'engle supérieur geuche, de geuche à droite, et de haut en bes, en prenent le nombre d'imeges nécessaire. Les diegremmes suivents illustrent le méthode.

### KEY TO PRONUNCIATION

Three methods are used to indicate the pronunciation of the ords forming the headings of the separate articles:

- (1) By dividing the word into syllables, and indicating the vllable or syllables to be accented. This method is followed where he pronunciation is entirely obvious. Where accent marks are mitted, the omission indicates that all syllables are given subtantially the same value.
- (2) Where the pronunciation differs from the spelling, the vord is re-spelled phonetically, in addition to the accentuation.
- (3) Where the sound values of the vowels are not sufficiently ndicated merely by an attempt at phonetic spelling, the following ystem of diacritical marks is additionally employed to approximate he proper sounds as closely as may be done:

a, as in fate, or in bare.

ä, as in alms, Fr. ame, Ger. Bahn=a of Indian names.

å, the same sound short or medium, as in Fr. bal, Ger. Mann.

a, as in fat. a, as in fall.

e, obscure, as in rural, similar to u in but, è in her: common in Indian names.

ē, as in me=i in machine.

e, as in met. ė, as in her.

i, as in pine, or as ci in Ger. Mein.
i, as in pin, also used for the short
sound corresponding to ē, as in
French and Italian words.

eu, a long sound as in Fr. jeune, = Ger. long ö, as in Söhne, Göthe (Goethe).

eu, corresponding sound short or medi-um, as in Fr. peu=Ger. ö short.

o, as in note, moan. o, as in not, frog-that is, short or medium.

ö, as in move, two.

ū, as in tube. u, as in tub: similar to e and also to a.

u, as in bull.

ü, as in Sc abune=Fr. & as in da,
Ger. ü long as in grün, Bühne.

ü, the corresponding short or medium
sound, as in Fr. but, Ger. Müller.

oi, as in oil.
ou, as in pound; or as au in Ger. Haus.

The consonants, b, d, f, h, j, k, l, m, n, ng, p, sh, t, v, and z, when printed in Roman type, are always given their common English values in the transliteration of foreign words. The letter c is indicated by s or k, as the case may be. For the remaining consonant sounds the following symbols are employed:

ch is always as in rich.
d, nearly as th in this = Sp. d in

Madrid, etc.
g is always hard, as in go.
h represents represents the guttural in Scotch loch, Ger. nach, also other similar

gutturals.

p, Fr. nasal n as in bon.

r represents both English r, and r in foreign words, in which it is gen-

erally much more strongly trilled. s, always as in so.

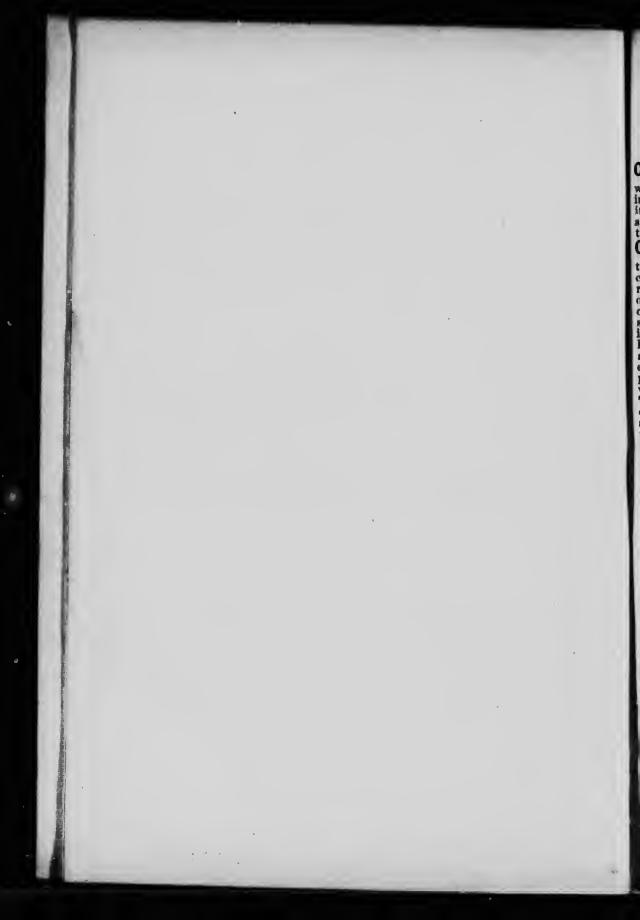

th, as th in thin.

th, as th in this.

w always consonantal, as in soe. x = ks, which are used instead.

y always consonantal, as in yea (Fr. ligne would be re-written leny).

zh, as e in pieneure = Kr. j.:

### VOLUME V

that he,' etc.

Optics (op'tlks) is the branch of is greater than the angle of incidence. It one medium is a liquid and the other alr, transmission of light, and its action in connection with the laws of reflection and refraction, including also the phenomena of vision. A ray of light is the smallest conceivable portion of light, and is represented by the straight line along which it sented by the straight line along which it propagated. A pencil of light is a column and the ray at in the air, and vice versa.

The law of reflection is illustrated especially by the action of mirrors. When a pencil of rays from a luminous point sented by the straight line along which it is propagated. A pencil of light is a collection of such rays; it is parallel when all the component rays are parallel to all the component rays are partitle to each other; converging when they all proceed to a single point; and diverging when they all proceed from a single point. The focus of the pencil is the point to or from which the rays proceed. Auy space or substance which light can traverse is in optics called 'a medium. When light falls on any surface a certain When light falls on any surface a certain portion of it is reflected or sent back, and it is owing to this reflected light that objects are visible. When light falls upon the surface of a solid substance or medlum that it can traverse (a transparent substance), one portion greater or less is directed or reflected back into the medium whence it came; another portion is transmitted through the solid medium, but undergoes a change called refraction; while a third portion is absorbed in the new medium. When all the minute parts such as air and water, or when rays slon that the luminous point from which traverse a medium the density of which it was sent is somewhere in the line of is not uniform, as the atmosphere. When the ray just before reaching the eye, and the ray of light passes from a rarer into bence an eye in such a position as to rea denser medium, it is bent or refracted ceive after reflection a few rays from

Optative (op'ta-tiv), in grammar, towards the perpendicular line drawn that form of the verb in through the point of incidence, or the which wish or desire is expressed, existing in the Greek and some other languages, its force being conveyed in English by such circumiocutions as 'may I,' 'would such circumiocutions as 'may I,' 'would that he,' etc.

Optics (op'tlks) is the branch of the one medium is a liquid and the other air.

Pig. 1.-Refraction.

falis on a plane mirror each ray is reflected according to the law given above. and it is easy to show by geometry that while a third portion is absorbed in the new medium. When all the minute parts of a surface give out rays of light in all directions we call it a luminous surface, whether it is self-luminous or is merely reflecting the light from a self-luminous body such as the sun. The law of reflection is that the angle of incidence and that of reflection are in the same plane, and that the angle of reflection is equal to the angle of incidence, and on the opposite side of the perpendicular. The law holds true whatever be the nature of the reflecting surface or the origin of the surface in the pencll which was divergent before incidence bas exactly the same divergence after reflection; but the rays now seem to have proceeded from a point behind the mirror. This point is called 'the virtual image' of the first point (being not a real image of it); the line joining the points is at right angles to and is blocked by the mirror. Now a luminous object is made up of points, each of which seems after reflection to proceed from a point behind the mirror. The law proceeded from a point behind the mirror. The law proceeded from a point (being not a real image of it); the line joining the points is at right angles to and is blocked by the mirror. Now a luminous object is made up of points, each of which seems after reflection; but the rays now seem to have proceeded from a point (being not a real image of it); the line joining the points is at right angles to and is blocked by the mirror. Now a luminous object is made up of points, each of which was divergence after reflection; but the rays now seem to have proceeded from a point (being not a real image of it); the line joining the points is at right angles to and is blocked by the mirror. Now a luminous object is made up of points, each of which seems after reflection to proceed from a point behind the mirror. the pencil which was divergent before inreflecting surface or the origin of the a luminous object sends rays to a plane light which falls upon it. The law of mirror which after reflection seem to have refraction comes into operation when a proceeded from a luminous object behind the mirror. An eye receiving a ray (or ray of light passes through a smooth surface which impresses the impresse face bounding two media not homogeneous, a small pencil of rays) gets the impres-

every point of the object sees the image of the object. (See fig. 2.) Besides plane mirrors concave and convex mirrors are often used in optics. When a parallel. When the faces are curved, or one of them curved and the ther plain, mirror is not plane the incident rays from a luminous point in general neither converge to a single point after reflection nor diverge as if they had come from a virtual image. But when a concave mirror forming a small portion of a supherical ror forming a smail portion of a spherical surface is used we find that all the rays falling upon it from a luminous point converge so nearly to a luminous point converge so nearly to a luminous point after reflection that their 'aberration' (as the non-convergence of the rays is called) may be neglected in practice. The line joining the center of the spherical surface with the 'pole' of the mirror (that is, the middle point of the reflecting surface) it called the principal axis. Any bundle of rays parallel to the principal bundle of rays parallel to the principal axis converges after reflection to a point in the axis called the principal focus; and any bundle of parallel rays converges

arter reflection to a focus which is at the same distance from the mirror as the principal focal distance. When the object from which the rays proceed is at a considerable distance, an inverted image of it will be formed midway between the center of curvature and the mirror. When the object is only at a moderate distance, but exceeding haif the radius of curvature, an inverted image is still formed in frort of the mirror, heing diminished when nearer the mirror than the object is and magnified when farther area. ls, and magnified when farther away than the object. The image of an object than the object. The image of an object placed nearer a concave mirror than the principal focus is erect and larger than the object, and is 'virtuai' as in fig. 3, where A B is the object, ba its image (Inverted), F the focus, C the center of curvature. The image of any object in a convex mirror is also virtual and erect; it is, however, smaller than the object, backward productions. Thus concave When the two faces of a piece of glass through which light is refracted are both

Fig. 3.—Reflection (Concave Mirror).

composing light and examining the properties of its component parts, as in spectrum analysis. (See Light.) A lens may be regarded as consisting of an unlim-ited number of prisms, the angles between their faces gradually diminishing the far-ther away from the axis of the lens. It is the property of convex lenses to di-minish the divergency of the pencils of light, of concave lenses to increase that divergency. It is the duty of a convex lens to make rays parallel to the axis falling on one face of it converge accurately to one point after emerging from the other face. This point is called the principal focus, and is the point where a 'real' image would be formed. When rays parallel to the axis pass through a concave long that diverge and if

optimism (op'tim-izm), that philosophical doctrine which maintains that this world, in spite of its apparent imperfections, is the best possible. It is an ancient doctrine; among modern philosophers Leibnits is its prin-

each eye separately to determine the presence or lack of binocular equipoise, and an area of 44.616 sq, miles ence or lack of binocular equipoise, and a population of 1,122,538.

supplying such lenses as will put the eyes in correct optical adjustment. The principal optical defects are due to: a., discipal optical optical defects are due to: a., discipal optical defects are due to: a., discipal optical optical

ws look through a concave lens it makes objects seem smailer whatever their distances are. When we look through a convex lens at an object between the iens and the principal focus it appears larger than it really is, and hence the use of such lenses in magnifying-glasses, mlcroscopes and telescopes. The rule as to the relative size of object and image will be understood from fig. 4, where the small arrow A B is the object, and the large arrow its image, o being the center of the tiens, F f its foci. Rays from A B are refracted towards the axis by the lens, and as the evisual angle, or angle made by the rays at the eyes, is larger than if there were no lens, the object and the image will be directly as their distance from 0; so that if the image is three times as for from the lens as the object, it will be three times as long and three times as broad. Conves lenses are used in spectacies for long-sighted (or old-mans, Egyptians, etc., were supposed to special and the long of their ways at the gods of the Greeks, Romans, Egyptians, etc., were supposed to

in spectacies for long-sighted (or old-mans, Egyptians, etc., were supposed to sighted) persons, hecause the lens of their give, hy words uttered or otherwise, to eye is too much flattened, and does not those who consuited them upon any occa-of itself cause a sufficient convergency of sion; also the places or sources whence of itself cause a sufficient convergency of the rays to make an image on the retina, these answers were received. The Greek but one that would fail behind it. Concave ienses, again, are used by nearest being that of Zeus (Jupiter) at Dosighted persons, hecause the rays in their case converge so much as to make an image in front of their retina instead of the first place, and it was often applied on it. See Eye, Light, Microscope, Telescope, Spectroscope, etc.

Optimism (op'timizm), that philographical destring which The Romans had no important oracies of The Romans had no important oracies of the contract of the co The Romans had no important oracies of their own, but had recourse to those of Greece and Egypt. The early Christians ascribed the oracles in general to the operation of the devil and his agents. Optometer (op-tom'e-ter), an instrument for measuring the extent of the iimits of distinct vision in different individuals, and consequently for determining the focal lengths of lenses bor was formerly at Mersel-Kehir about 1982. eye. cently excellent accommodation for shipping has been provided at Oran itself. Orangemen, the members of a secret society founded in the north of Ireland in 1795, to uphoid the Protestant religion and political ascendency, and to oppose the Catholic religion and influence and their secret societies. The title of the association was adopted in honor of William III of England, prince of Orange. The head of the association is the Imperial Grand Lodge with its imperial grand-master; then there are grand lodges, grand county lodges, district and subordinate lodges, spread over Ireland, Great Britain, United States, and some of the British colonies, especially Canada. In 1835 the society was dissolved in consequence of intrigues in the army, but revived in 1845. Great demonstrations take place annually on the 1st and 12th of July, the anniversaries of the battles of the Boyne and Aughrim, and encounters of processions of the opposite parties are apt to be the cause of serious disturbances. The Loyal Orange Institution in the United States numbers 150,000.

Orange River, or Garlep, a river in South Africa, forming part of the north boundary of Cape Colony, and falling after a total course of about 1300 miles into the Atlantic. It has its source in the Kathlamba or Drakensburg range. Its course is winding, and it has no value as a navigable stream. The area of its basin is 325,000 sq. miles.

Its chief tributary is the Vaal.

Orange River Colony, until 1900 range Free State, of South Africa. It has Cape Colony on S. and S. W., Bechuanaland on N. W., Vaal Colony on N., Natal on E., Basutoland on S. E.; area estimated at about 50,000 sq. miles; pop. (1911) 526,906, of whom 175,435 are whites. It was founded in 1835–36 by Dutch settlers from Cape Colony, annexed by Britain in 1848 in order to put a stop to the Boer outrages upon natives; then in 1854 it was recognized as an independent state. In 1899 it joined the South African Republic in declaring war against Britain. The year following it was proclaimed a British colony by General Roberts. Lying about 5000 feet above the sea-level, the country, chiefly vast. undulating plains, is cold in winter, with violent thunderstorms and long droughts in summer. It and Christus.

is, however, very healthy and favorable to European constitutions. Pasturing is the chief occupation, and wool, hides and ostrich feathers the principal exports. The principal exports theology, and for superintending the repliamonds and other precious stones are ligious exercises of the devout, visiting

collegiate institutions for colored stu-found in paying quantities, valuable coal mines exist, and the colony is said to abound in mineral wealth. Gold was first discovered here in 1887. The Dutch Reformed Church is the dominant religion, and a Dutch dialect the present language of the colony. The capital is Bloemfon-tein, a pretty, well-built city, containing a population of 33,883. In 1909 it be-came a member of the Union of South Africa under its original name of Orange

Free State. Oratorio (or-a-tō'ri-ō; Italian oratorio, a small chapel, the place where these compositions were first performed), a sacred musical composition consisting of airs, recitatives, duets, trios, quartettes, choruses, etc., with full orchestral and sometimes organ accompaniment, the subjects being generally taken from acripture. Its origin has been usually ascribed to St. Filippo de Neri, who, in 1570, founded the congregation of the Oratory in Rome, one of the objects of which was to render religious services as attrac-tive as possible. Its increasing popularity induced poets of eminence to supply texts for these works. From the rude beginnings of oratorio, which might be held to exist in Emilio del Cavaliere's Rappresentazione di amina e di corpo, in 1600, the art progressed until it reached its high expression in the German Passion music, notably that written by J. S. Bach. In England Handel brought the oratorio into popularity by the sheer excellence of his productions, and he has been the inspiration to writers in this form of music to the present day. Among the most notable examples of oratorio are the Passion According to St. Matthew, by Bach; the Messiah and Israel in Egypt, by Handel; the Creation, by Haydn; the Mount of Olives, by Beethon, the Last Judgment by Spohr: Saint ven; the Last Judgment, by Spohr; Saint Paul and Elijah, by Mendelssohn. Schu-bert left a remarkable fragment of an oratorio called Lazarus. Among the ora-torios by living composers may be men-tioned The Light of the World and The Prodigal Son, by Sir Arthur Sullivan; The Rose of Sharon, by A. C. Mackenzie: The Deluge and Ruth, by F. H. Cowen. The dramatic oratorio should be distinguished from its less secular form as exemplified in the earlier German productions. The 19th century tendency toward dramatic cantata is shown in Dvorak's St. Ludmilla and Liszt's St. Elizabeth

found alive in tropical seas, as also fos-sil in the tertiaries. They derive their name from their flattened globular shape. Orbit (or'hit), in astronomy, the path of a planet or comet; the curve-line which a planet describes in its periodical revolution round its central bedy. The orbits of the planets are elliptical, having the sun in one of the foci; and the planets all move in these ellipses by this law, that a straight line drawn from the center of the sun to the center of any one of them, termed the radius vector, albits, having their respective primaries in one of the foci. The elements of an orbit are those quantities hy which its position and magnitude, for the time, are determined; such as the major axis and eccentricity, the longitude of the node, and inclination of the plane to the ecliptic, and the longitude of the perihelion. Or'cades. See Orkney Islands.

Orcagna (or-kan'ya), Andrea di Ci-one, born about 1308; died early Florentine artists after Giotto. Painting, sculpture, architecture and mossic work were all within the sphere of his artistic genius; and his productions compare favorably with the hest of a period so rich and distinguished in the art of Italy. As a painter he executed the beautiful frescoes in the church S. Maria Norella at Florence; the chapel San Michele and its magnificent tahernacle in the same city are grand memorials of his magnificent and the musicism of lichens, originally hrought from the Levant, and employed from very early times as a dye agent. Large quantities are gathered in the maritime rocks of the Canary and Cape Verde Islands. A purple and a red dye, known as orchil or archil, are prepared from them.

Orchestra (or'kes-tra), the space in theaters between the seats occupied by the spectators and the stage, appropriated hy the Greeks to the chorus

attention, and are cultivated with zeal little plant, is found in shady woods and among rocks. O. mascula yields salep. See Orchidacew.

fernal regions. Ordeal (or'deal), an ancient form of cence, practiced by the rude nations of Europe, in the East, and by the savage tribes of Africa. In England there were two principal kinds of ordeal, fire-ordeal and water-ordeal; the former being confined to persons of higher rank, the latter to the common people. Both might be performed by deputy, but the princi-pal was to answer for the success of the trial. Fire-ordeal was performed either hy taking in the hand a piece of red-hot iron, or hy walking harefoot and blind-fold over glowing coals or over nine red-hot ploughshares laid lengthwise at unequal distances; and if the person escaped unhurt, he was adjudged innocent, otherwise he was condemned as guilty.
Water-ordeal was performed either by plunging the hare arm to the elbow in and tuners of several species; the frag-boiling water, escape from injury being rant vanilla is obtained from two species considered proof of innocence; or hy of a genus of that name. monastic vow, which enjoins residence in a monastery, celibacy, renunciation of worldly pleasures, the duty of prayer, fasting, and other austerities, and unconditional obedience to superiors. These conditions form the basis of the majority of orders, some being more austere in their observances than others. The first properly constituted religious order was founded in the fourth century by St. Basil. The Basilians are now chiefly adopting their names. The Ursuline and Confined to the Greek Church in the East. In the time of Justinian (530) St. Benedictines, under a set of rules based principally on those of St. Basil, and for some 600 years after the greatest number of European monks followed his statutes. According to some authorities as ber of European monks followed his stat- sisters, who were taken to perform the utes. According to some authorities as necessary labors of the monasteries, and to many as 23 orders sprung from this one. About 1220 the Dominicans and Franclscans originated by taking amended rules from their leaders. These rules, especially those of the Dominicans, were more anstere, including perpetual silence, total abstinence from flesh, and the wearing of woolen only, and they were not allowed to receive money, and had to subsist on alms, being thus mendicant fountain heads of numerous others which arose to accommodate the changing times, the altered conditions of countries, and the particular policies of the church. Modified orders of the Benedictines are, for instance, the Camaldulians or Camaldolites, the Carthusians, the Celestines, the Cistercians, the Bernardines, Feuillants, Recollets, the name of Port Royal, and the Trappists. The reputed rules of St. Angustine were accented by rules of St. Augustine were accepted by a large number of religious orders, but the monks, who were reckoned among the laity in the seventh century, could not adopt them, as they were designed for the clergy only. In the eighth century the monks began to be viewed as members of the clerical order, and in the tenth by receiving permission to assume tenth, by receiving permission to assume the tonsure, they were formally declared clergymen. Indeed, public opinion and several papal bulls placed them, as superlor in sanctity, above the secular perlor in sanctity, above the secular perlor in sanctity, above the secular clergy, who for this reason often became monks. The Premonstratenses, Augustines, Servites, Hieronymites or Jeronymites, Jesuits and Carmelites are Jeronymites, Jesuits and Carmelites are regular orders, according to the rules of farchitrave, frieze and cornice). The character of the order is superincumbent entablature (consisting played not only in its column, but in its played not only in its column, but in its column is, as it were, the regulator. There are five classic orders, namely Grecian: Doric, Ionic and Corinthian; Romans of pious females, so nuns tenth, by receiving permission to assume

manage their intercourse with the world. The orders first established governed themselves in an aristocratic-republican manner. The Benedictine monasteries were long independent of one another. Cistercians obeyed a high council made up of the superior, and other abbots and counselors, and these were again responsible to the general chapters. The four mendicant orders, the Dominicans, The orders mentioned are the Franciscans, Augustines and Carmelites, heads of numerous others which at their very commencement placed themselves in a much more intimate connection with the popes. Dependent solely and lmmediately on Rome, they preserved the strictness of their organization with a success which could be maintained only by the unity of the ruling power and the blind obedience of the subjects. and the blind obodience of the subjects. Most of the other orders soon adopted the same constitution. Accordingly at the head of every religious order stands a general or governor, who is chosen every three years from the officers of the institution, resides at Rome, and is responsible only to the pope. The counselors of the general are the officers to whom the supervision and government of monasteries is committed. See Monasmonasteries is committed. See Monastery, and the articles on the various

See Knighthood.

Ordinal (or'di-nal), the prescribed form of service used at the ordination of clergy, as in the English, Roman Catholic, and Eastern churches. The ordinal of the English Church was originally drawn up in the time of Edward VI. It was altered to some extent in the reign of Queen Elizabeth, and again revised in 1661.

Vided between the war office and the Horse Guards. In the United States the Operatment of Ordnance is attached to the War Department, and has a Chief of Ordnance, with a large force of officers and clerks at an annual cost in salaries of \$175,000.

Ordonnances (or'du-nan-ses), was the name given in France to decrees, edicts, declarations, regulations, etc., issued by the king or regent.

Ordinary (or'di-nar-i), in common law, one who has ordinary or immediate jurisdiction, in matters ecclesiastical, in any place. The term is sulphur, or car more frequently applied to the bishop of a diocese, who, of course, has the ordinary ecclesiastical jurisdiction. An archbishop is the ordinary of the whole province, having power to visit and receive appeals from inferior jurisdictions. As a nautical term an ordinary seaman is one not qualified to take the helm or sail the ship, and is thus distinguished from an able seaman.

Ordinate (or'di-nat), in analytical geometry, one of the lines or elements of reference which determine man mythology.

land, surrounded by forest-covered mountains. Southward is a series of similar valleys. The principal river is the Columbia, which for 300 miles forms the northern border of the State, and affords steam navigation. It has numerous tributaries, many of them navigable. Oregon has a variety of minerals, but none of great importance. They include gold, silver compare coal greaties iron lead quickgreat importance. They include gold, silver, copper, coal, granite, iron, lead, quick-silver, platinum, nickel, cobalt, lime-stone, sandstone, horax, gypsum, garnet, opal, chalcedony, etc. Western Oregon has an abundant rainfall and is well adapted to agriculture, yielding the best grades of winter wheat, barley and oats, but corn does not thrive, the summer being too cool. Hay is produced abundantly and wool-growing and cattle-raising are important. Hops are a very large crop, being grown chiefly in the Willamette Valley. Fruit is a large product, especially apples, plums and prunes, which grow in the region between the Cascade and Coast mountains. Peaches and figs grow in the southwest. Flax is cultivated for seed and fiber, and yields largely. In the Willamette Valley livestock of every kind thrives. The chief crops are wheat, oats, barley, potatoes and hay, while the wool yield is very large. Salmon and trout are common in the streams and the annual salmon catch in the Columbia is very large. The principal mountain ranges are densely wooded with a great variety of trees, some of distance of the Reformed Church at Bergamo in Italy. From 1813 to 1819 he held a professorship at the college of core. ver, copper, coal, granite, iron, lead, quickand hay, while the wool yield is very large. Salmon and trout are common in the streams and the annual salmon catch in the Columbia is very large. The principal mountain ranges are deusely wooded with a great variety of trees, some of gigantic size. The great Douglas fir yields the best masts and spars in the world. This abundance of forest trees renders Inmbering one of the most important industries, while the tanning of leather and making of boots and shoes, saddlery and larness are also of much value. Of animal products, those of the fisheries stand first, the salmon-canning yielding a large annual product. The University of Oreon at Eugene (founded 1872); the Oregon Agricultural College, at Corvallis (founded 1885); Pacific University, at Forest Grove; Pacific College at Newberg; Albany College, at Albany; Mcorpon and College, at McMinnville; Reed Institute at Portland; Philomath University, at Philomath; Willamette College, at Salcm, are among the many educational institutions. Ca; ital, Salem. Pop. 848,866, including about 5000 Indians, 7000 Chinese and 4000 Japanese.

Orel (Russian pron. ar-yol), a central kins, alarge section being Mohammedans, vated, and the soil raises grain and hemp soap and leather factories, and a large in abundance, and some good hops and tobacco. Live-stock, particularly horses.

are extensively reared from improved breeds. Manufactures are chiefly confined to the distillation of spirits. The principal rivers are the Oka, the Desna, and the Sosna. Orel, or Orlov, the capital, on the Oka, is an important business center, the river and canals giving it water communication with the Black Sea, the Caspian, and the Baltic. Its trade in grain, dairy produce, and cattle with Moscow and St. Petersburg is very extensive.

Orense (5-ren'sā), a city of N. W. gan of the Greeks. The early organs Spain, Galicia, capital of the were very imperfect instruments, but improvince of same name, and see of a provements were naturally made from blshop, on the left hank of the Minho, time to time, the most notable being those being the left had of the kinds, the most notable being those here crossed by an old and remarkable of the sixteenth century, when the belbridge, huilt in 1230. Origen (or'i-jen), ORIGINES, surnamed Adamantios, one of the greatest and most influential of the Greek fathers, born at Alexandria A.D. 185; died at Tyre tured with much success in Alexandria, and gained the patronage of Bishop Demetrius. His own studies were pursued with extraordinary zeal; he lived an ascet's life, and in order to be free from the lusts of the flesh he mutilated himself. A journey to Rome (211-212) greatly increased his reputation, and Christian com-In a new persecution, under the Emperor Decius, Origen, who was viewed as a pillar of the church, was thrown into prison, and subjected to the most cruel sufferings, ultimately resulting in his death. He has been reproached with having attempted to biend the Christian doctrines with the notions of Piato, and, without reason, of favoring materialism. He is credited with some 6000 works, including smaller tracts, but only a few have been transmitted to us, and some of these only in a distorted form. His work against Celsus is considered as the most complete and convincing defense of Christianity of which antiquity can boast. One of his works was the Hexapla (which see), but of it we have only fragments. A translation of his extant works into English has been publisher (Edinburgh, 1868-72).

Origenists (or'i-jin-istx), Christian heretics in the fourth cendeviation east and west, though often a tury, so called because they pretended to deviation from the true east has been ob-served to exist in churches which had been tions in the writings of Origen. They west.

nate with the human race, and that death has dominion over it hy reason of its origination from Adam after the fall. In the Latin Church the doctrine was more fully developed than in the Greek Church. Terand most influential of the Greek fathers, tuilian, in accordance with his doctrine of born at Aiexandria A.D. 185; died at Tyre

254. His father suffered martyrdom at Aiexandria in 202 under the Emperor Severus, when Origen undertook the support alike propagated from Adam; he according his mother and six children. He lectured with much success in Alexandria, regarding it as actual sin or derivative. regarding it as actual sin or denying to man the possibility of goodness. Pelagius heid that no change whatever had been brought about by the fail, that death was a part of man's original constitution, and that all men could render faultless ohedience to the law of God, if they wished. Augustine succeeded in getting creased his reputation, and Christian communities in various countries vied with each other in securing his services. In own, which inculcated that 'Death was 228 he went to Palestine; he was so weil received, and so many favors were bestowed on him that his patron hecame yielded, and so many favors were bestowed on him that his patron hecame will, was lost to him by the fail as regards evil.' Relagianism, howfinally deprived him of his priestly office, charged him with heresy, and expelled him from the city. These persecutions never ever, sprung up again in a modified form, ceased until the death of Demetrius in 231. called semi-Pelagianism, and according to In a new persecution, under the Emperor this view death and a taint of corruption this view death and a thint of corruption were inherited from Adam as a disease might be, but man still retained a power for good without the aid of divine grace; a doctrine which obtained much support at the time. The reformers of the sixteenth century upheid the strictest view of original sin, though by no means unanimously, in opposition to the Roman Cathelics, who at the Council of Trent gave their adhesion to the more liheral view of the doctrine. In recent times orthodox theologians, such as Oishausen, Hengstenberg and others, have stood up for the Augustinian doctrine, while those of the more liberal school have modified it in various ways. Philosophers as well as theologians have taken part in this controversy about original sin, it being a subject open to diverse opinions.

Orléans, PR PPE, DUKE of, only browler of Louis XIV of France, and founder of the house of Bourbon-Orleans, which for a short time heid the throne of France, was born in 1640; died in 1701. In his twenty-first year he married Henrietta of England, sister of Charles II. The great esteem which the king showed for this princess excited the jealousy of his brother, and her sudden death was attributed to poison, to the administration of which the duke was suspected of helng accessory. His jealousy seems not to have been unfounded. The second marriage of the duke, with the Princess Elizabeth of the Paiatinate (1671), was arranged by Louis to secure the neutrality of the Elector Paiatine in the approaching war against Holland. In this war the duke distinguished beautiful. this war the duke distinguished himself

in spite of his effeminacy.

Orléans, PHILIPPE, DUKE OF, Regent of France, son of Philippe, duke of Orléans (see preceding article), and the Princess Palatine Eigabeth, born in 1674; died in 1723. He fail agric under the influence of the clean feil early under the influence of the clever and unscripulors Abhé (afterwards Cardinal) Dubois, who continued his confidant and adviser through life. He made his military debut at the siege of Mons (1691), and in 1693 distinguished himself

was appointed to succeed the Duke of Berwick in Spain, and completed the subjugation of that country. He was recatied, however, being suspected of intriguing for the crown of Spain, and again forced into retirement. On the death of the king (September 1, 1715) he was appointed regent. On acceding to power the regent found the finances in extreme the regent and appropriate to improve most disorder, and endeavored to improve mutters hy retrenchment and peace; but his reckless introduction of a vast paper currency brought the nation to the verge of hankruptcy. He resigned the government to Louis XV on February 13, 1723, Orloff (or-lof'), a Russian noble family, of whom the following members.

bers may he mentlened:—Gregory Or-LOFF, born in 2734; died in 1783, assisted the Grand-princess Catharine in the revowent over to the revolutionary party without reserve, took the name of Philippo lution, hy which she was declared empress Egalité ('Philip Equality'), and voted (Catharine II), and her husband, the Emfor the death of Louis XVI. It did not save him from being arrested as a Bourson, condemned and beheaded, November 6, 1793.

See Logn of Arc.

The Dorn in 1737; died in 1808, is famous for his devotion to the empress as mous for his devotion to the cmpress, as one of the murderers of l'eter III, and as the admiral who defeated the Turkish fleet off Tschesme. -- ALEXIS FEDORO-VITCH, prince, a descendant of the same family, born in 1787; died in 1861. In 1825 he gained the favor of Nicholas I by assisting to suppress the revoit of the guards on his accession. He heid a cavguards on his accession. He need a cavairy command in the Turkish campaign of 1828, and assisted in suppressing the Poish insurrection in 1831; he also rendered successful diniomatic service, especially at Constantinopie. In 1844 he was appointed chief of the gendarmes and secret rollies. He was the confidential friend of police. He was the confidential friend of the emperor.

Orlop Deck (orlop), the lowest deck in a ship of several decks, consisting of a piatform iaid over the beams in the hold whereon the calles are usually coiled. In trading, vessels it is often a temporary deck.

Ormer (or'mer; French oreille de mer, sea-ear'). the ear-shell, a large marine nnivaive shell-fish belonging to the genus Haliotis, common on the shores of the Channel Islands, where it is cooked after being we' heaten to make it tender. The pearly interior of the shell has made it a fa orite ornament.

Orme's Head, GREAT, a bold project-ing headland in North at Neerwinden, but only to arouse the jealousy of Lonis XIV, his nucle, who compelled him to retire from the army. In 1692 he married Mdile, de Blois, the legitimated daughter of Louis. In 1707 he English frequently applied to a metal

Ormuz the north side, near its entrance, about 15 titute of vegetation and is only notice-called primaries, those on the lower fore-able as having once been a great trade arm secondaries, and those on the upper center. It was held by the Portuguese part of the forearm tertiaries, those on from 1515 to 1622. A few ruins are all that is left of its former wealth and splendor.

Ormuzd (ōr'muzd; Ahuramazda, the Oromasdes of the Greeks and Romans), the name of the supreme deity of the ancient Persians. According to the doctrine of Zoroaster he was the lord of the universe and the creator of earthly and spiritual life, the source of light, wis-

dom, and Intellect, and the giver of all good. He rev. rds the good and punishes the wicked. See Zoroaster.

Orne (orn), a department in Normandy, France; area, 2354 square miles. It receives its name from the river Orne, which river in this department. the river Orne, which rises in this department, and passing through that of Calvados falls into the English Channel (length, 95 miles). The surface is traversed by a lofty ridge, mostly covered with forests. The soil is various; oats, flax, hemp, beet, fruits and cheese are the chief produce, and a good breed of Norman horses is reared. It manufactures needles, pins, wire, porcelain, cotton and linen cloths, and has valuable granite quarries. Alençon is the capital. Pop. 315,998.

Ornithodelphia (5 r -ni-thō-del'fi-a). the name given to the subclass of mammals represented by the single order Monotremata, including only two species, the ornithorhynchus and

echidna.

Ornithology (ōr-ni-thol'ō-ji; Greek, ornis, ornithos, a blrd. logos, discourse), that branch of zoölogy which treats of birds. Birds (Aves) form the second class of the great division of

the shoulder-blade and humerus scapulars. The feathers covering the bases of the wing quills are called wing-coverts, and those covering the rectrices, or great feathers of the tail, tail-coverts. Birds moult or renew their feathers periodically, and the winter plumage discovery. in many cases the winter plumage dis-plays a different coloring from the summer plumage. The plumage in most cases is changed frequently before it attains its characteristic and full-grown state.

The mouth of birds takes the form of a beak or bill; the jaws or mandibles are hard and horny, and more or less prolonged into a point, while there are no fleshy lips and no teeth (except in certain fossil birds); a horny sheathing, generally smooth, but sometimes serrated, takes the place of the latter. The beak is variously vertebrate animals, the connecting link beplace of the latter. The beak is variously tween the Mammalia and Reptllia, but modified in accordance with the habits of are more closely allied to the latter. In the bird and the nature of the food on common with the Mammalia they have which it subsists. The sense of taste is not keen, their tongue being generally instead of marrow, to adapt them for slender, pointed, and more or less horny, flight; the air being admitted by means though some birds, as the parrots, have it of special apertures which are connected fleshy. The nostrils open upon the side, with certain sacs, termed air cells, filled or at the base of the beak. Their sense of smell is often very delica. A circle of naked skin called the cere in many birds, the long bones are filled with birds surrounds the base of the mandibles. The humeri, cranial bones and the sight of hirds is extremely keen, and sternum are most generally pneumatic, the The sight of birds is extremely keen, and sternum are most generally pneumatic, the equally adapted for near and for distant femora more rarely so. equally adapted for near and for distant remota mode.

A peculiar feature in the eye is the nictitating membrane, a sort of third translucent eyelid which rests in the inner elongated and flexible, and consists of angle of the eye, but can be drawn over it so as to protect it from too strong a or region of the back, is composed of from 4 to 9 vertebræ, and is generally firm, forming a support for the movements of the wings. In all birds the neck is of sufficient length to reach the oil-gland sitsufficient length to reach the oil-gland situated at the tail, the secretion of which is used for 'preening' or dressing the feathers. The vertebræ interposed between the dorsal vertebræ and those of the tail are united to form the sacrum, the tall are united to form the sacrum, the number of vertebræ which may coalesce varying from 9 to 20. The caudal or tail vertebræ may number ten, the last two or more of which unite to form a bone, called from its shape, 'ploughshare' bone. In some species this bone is absent, undeveloped, or modified. The bones of the skull become firmly united at an of the skull become firmly united at an early period, so as to leave few or no sutures or lines of union, as in mammals, a complete bony case being thus formed. The skull is joined, as in reptiles, to the spinal column and by a single process, or condyle, of the occipital bone, or hindermost bone of the skull. The chest or thorax is enclosed posteriorly by the dorsal vertebræ, laterally by the ribs, and in front by the sternum or breastbone and the sternal ribs. The ribs correspond in number with the dorsal vertebræ, from 6 to 9 pairs of ribs being thus found in birds, the first two being generally unatdigit of wing; h, second phalanx of chief and strong, and serves as the point of at tachment for the most powerful of the phalanx of chief digit; i, clavicle; k, sternum; l pelvis; m, coccyx; n, femur; o, tibia; p, tarsometatarsus; q, phalanges of foot.

light. Birds have no external ear, with birds of most powerful flight, and is altothe exception of the nocturnal tribes; these have a large exterior canch in the form of a thin leathery piece of flesh. The of hearing and serves as the point of at tachment for the most powerful of the muscles by which the wings are set in motion. It is provided with a medial crest or keel, which is most prominent in the birds of most powerful flight, and is altothese have a large exterior canch in the form of a thin leathery piece of flesh. The the chief supports of the fore limbs. At The bone tissue of birds is light and its upper portion each coracoid bone arcompact. The bones are whiter and conticulates with the scapula or shoulder-tain a larger proportion of phosphate of blade, and with one of the clavicles. The lime than those of the Mammalia and clavicles or collar bones are united in lower vertebrates. The bones of most most birds to form the furculum or merry-birds are pneumatic, that is, contain air thought. The bird exhibits the essential skeletal elements found in the fore limb of all other vertebrates. The humerus, or bone of the upper arm, is generally short; the forearm, composed of the radius and ulna, being the longest segment of the fore limb. The ulna is larger and better developed than the radius, which is slcn-developed than the radius, which is slcn-der and attenuated. In the bones which form the extremity of the wing we recognize the rudiments of a thumb and two fingers, one of which has two phalanges and the other only one. The femur or thigh is short, the tibia or shin-bone forming the chief element, in the leg; while the fibula is attenuated and generally ossified to the tibia. The toes generally numfied to the tibia. The toes generally number four; the hallux or great toe, when present, being composed of two phalanges, and the other toes of three, four and five phalanges respectively. The muscles of birds are firm and dense, and are generally colored deep red. The chief body muscles are the pectorals, or those of the breast, which are devoted to the move-

ments of the wings. There are three stomachs or stomachic dilatations in birds; the first is the crop, a considerable pouch attached to the æsophagus or gullet; then the ventriculus succenturiatus, a slight dilatation of the œsophagus, with thick and glandular walls; then immediately after this is the gizzard, a strong and muscular cavity. In graniv-orous birds the crop is large, and serves as a reservoir for the seeds swallowed by them, which are here moistened by a secretion before passing into the gizzard. In these birds the gizzard is extremely strong, having to perform the task of grinding down the hard substances subjected to its action. A. Pelvis and bones of the leg of the Loon or jected to its action, a process which is facilitated by the small stones which these birds generally swallow. The ventriculus secretes the gastric juice, and so far represents a real stomach. In birds which live on flesh or fish the gizzard is which live on flesh or fish the gizzard is trachea or windpipe is of great relative weaker and less distinct from the ven-length in birds, and is adapted to the triculus; while the crop becomes smaller, length of the neck. The nervous system and in some species completely disapevinces a marked superiority over that of pears. The intestinal canal is relatively reptiles. The cerebrum, or true brain, is

The liver is gencerally large, and colored a distinct tent organ. The female organs consist brownish hue, which is deepest in aquatic of an ovarium and oviduct. The eggs birds. A gall bladder is absent in a few cases only, as in the ostrich, pigeons, and some parrots. The kidneys are two in number. Of large size and elongated shape. The urine consists in greater part of earthy matters, and contains but a small proportion of water, hence to mode and materials used in construction, are endless. from one country to another, and a recent report on migration shows, that with billed); Fissirostres (cleft-billed). very few exceptions there is scarcely a Order III.—Scansores or Zygodactyk.

Order I.—RAPTORES or Accipitres. scratch Birds of Prey, as eagles, vultures, hawks above. Birds of Prey, as eagles, vultures, have and owls. Beak strong and curved, sharp at the edges. Feet adapted for seizing Running Birds, as the ostrich, emu, cas and destroying other animals. Claws sowary, etc. Wings rudimentary as and sharp, much hooked and retractile. Hind quite useless for flight; legs long and strong; hind toe wanting or merely ruditoe on the same level with the others. Wings well developed.

Order II.—INSESSORES, Passeres, or keel. Perching Birds, by far the most numer- On

Digestive system of the common Fowl (after Owen). o. Gullet; c. Crop: p. Proventriculus; g. Gissard; sm. Small intestine; k. Intestinal caca; l. Large intestine; cl. Cloaca.

and not retractile. Hind toe on the same AMEDEÆ (screamers). X. Anseres level as the rest. This order is usually (geese, ducks. swans). XI. Columbæ divided into four tribes or suborders: (pigeons). XII. PTEROCLETES (sand-

Many birds migrate at certain seasons Conirostres (cone-billed); Dentirostres (tooth - billed); Tenuirostres (Slender-

cent report on migration shows, that with very few exceptions there is scarcely a bird of either the palæarctic or nearctic regions that is not, to a greater or less degree, migratory in some part or other of its range. See Migration.

As for the classification of birds, many systems have been proposed. The chief older division is into seven orders, to which an eighth, the Saururæ of Huxley, is often added, to include the extinct archæopteryx. These orders are:

Order II.—Scansores (cleft-billed).

Order III.—Scansores or Zygodactyu.

Climbing Birds, as the parrots, woodpeckers, cuckoos, toucans, etc. Feet formed for climbing, two of the toes directed forward and two backward; powers of flight not in general great; bill variously shaped.

Order IV.—Rasores or Gallinæ. Downled in the hind toe situated above the heel, suited for order I.—Raptores or Accipitres.

toe situated above the heel, suited for scratching. Bill short, thick and arched

mentary; breastbone without a ridge or

Order VI.—GRALLATORES or Grallæ. Waders, as the cranes, herons, snipes, sandpipers, etc. Legs long, bare of feathers from above the knee; toes often half-webbed. Bill in general long and slender.

Order VII.—NATATORES or Palmipedes. Swi rs: web-footed birds, as ducks, geese, gulls, etc. Feet formed for swimming in general webbed, that is, the toes conn ted by a membrane. Hind toe ele-

vated above the plane of the others. Bill various, mostly flattened.

Mr. Sclater (partly following Huxley and others) has proposed a system of classification which has met with much classification which has met with much acceptance, and is bared partly on external, partly on internal features. Regarding the class Aves as divided into two subclasses, Carinātæ and Ratitæ, the former containing all birds that have a prominent keel on the sternum (Lat. carina), the latter having the sternum flat and raft-like (Lat. ratis, a raft), he divides the former into twenty-three and the 'atter into three orders, thus:

CARINATÆ.—I. PASSERES, with four suborders (including more than half of

suborders (including more than half of all known birds, and substantially cor-responding with the older order Passeres or Insessores). II. PICARIÆ, with six suborders (woodpeckers, swifts, goat-Owen). o. Gullet; c. Crop: p. Proventriculus: o. Giszard; sm. Small intestine; k. Intestinal cæca; l. Large intestine; cl. Cloaca.

Ous order. It includes all the singing vultures, and other diurnal birds of birds, and indeed, excluding the birds of prey). VI. STEGANOPODES (pelican, corprey), most birds which live habitually morant, gannet, etc). VII. HERODIONES among trees. Feet formed for grasping (herons, storks, bittern, etc.). VIII. and perching, claws moderately curved Odontoglossæ (flamingoes). IX. Paland not retractile. Hind toe on the same AMEDEÆ (screamers). X. Anseres

TURI (tinamous). Subclass RATIT.E.-XXIV. APTERYGES (apteryx). XXV XXIV. APTERYGES (apteryx). XXV. CASUARII (cassowary and emeu). XXVI. STRUTHIONES (ostrich, rhea).

Birds are not numerous as fossil organisms. Among the most important and interesting bird fossils we at present possess are the two specimens of archeop-teryx found in the slate quarries of Sol-enhofen (Bavaria). This bird differed from all existing birds in the elongated ing a single pair of quill feathers. It had also teeth. They certainly tend to prove the evolution of birds from reptiles. Other two most interesting fossil birds are the ichthyornis and the hesperornis, both found in the cretaceous formations of as the Orobanche major to broom and North America and both provided with furze, O. ramosa to hemp, O. rubra to teeth; but while the former must have thyme, O. hedera to ivy. had powerful wings the latter was quite

Ornithorhynchus or T., ter-mole (Ornithorhynchus paradoxus).

forms the order Monotremata—the low-est division of the mammalian class. This curious animal was first described by Shaw in 1792, and caused no little excite-

grouse). XIII. GALLINÆ (fowls, partridges, pheasants, grouse, etc.). XIV. fur; a horny flat bill like a duck; a short dhe Hoatzin). XV. HEMIPODII (Hemipodes, a small group). XVI. FULICARIÆ (rails, coots, etc.). XVII. ALECTORIDES (cranes, bustards, trumpeter). XVIII. LIMICOLÆ (snipe, woodcock, curlew, plover, etc.). XIX. GAVLÆ (gulls). XXI. TUBINARES (petrels). XXI. Pygopodes (divers, auks, grebes). XXIII. CRYPHODES (tinamous). Subclass RATITÆ.—

small otter, covered with short brows fur; a horny flat bill like a duck; a short degree with five-toed and webbed feet, terminated by claws. The eyes are small; external ear wholly want-correction; brain without convolutions; coraction; brain without convolutions; brain without convolutions; coraction; brai glands destitute of nipples. It forms large burrows in river and lake banks, rising from near the surface of the water to a neight of perhaps twenty feet above it, the nest being at the higher end. It swims for its feod, which consists of insects, worms, larvæ, etc.

Orobanchaceæ (or-o-ban-kā'si-ē), the of plan's. Their general properties are astringency and bitterness. The cally is divided, persistent, inferior; the corolla from all existing birds in the elongated hypogynous, irregular, persistent, æstivare ptilian nature of its tail, which was tion imbricated; stamens, four; ovary composed of simple vertebræ, each bearing a single pair of quill feathers. It has one; stigma, two-lobed, divided transalso teeth. They certainly tend to prove versely to the carpels; fruit . sular. The Orobanchaceæ are herbaceous parasites, with scales in place of leaves, and attach themselves to the roots of different plants,

Orobus (or'o-bus), a subgenus of the wingless.

Ornithorhynchus (or - n i - tho - ring'kus; Ornithorhynchus paradoxus), the duck-billed scription of mountains, their chains, water-mole of Australia. With the echid-branches, etc., or the mountain systems and or porcuping ant-eater of Australia of a country of the subjects na or porcupine ant-eater of Australia it of a country collectively.

Oronoko. See Orinoco. Oronoko.

Or'onsay. (ö'ron-sā), small island of Scotland. on Loch Sunart. Orontes (ō-ron'tēz), a river of Syria, rising on the east of the Anti-Libanus, and entering the Mediterranean; entire course about 200 miles. It is not navigable.

Oroshaza (ō-rōsh-hā'zo), a town of Hungary, about 30 miles northeast of Szegedin, in a cattle-raising and wine-growing district. Pop. 21,385.

Orosius (o-rō'si-us), a Latin historia:, born in Spain about 390 A.D., became a Christian presbyter, resided a considerable time with St. Augustine at Hippo, and wrote at his suggestion a general history of the world (Historia rum Libri vii. adversus Paganos), to prove that the Christians were not to blame for the downfall of the Roman empire as the heathen alleged. It is a worthless compilation, but for long enment among zoologists. It presents a worthless compilation, but for long enquadruped, of the shape and size of a joyed a great popularity, and was trans

with modifications and additions.

Orotava (ô-rô-th'va), a town and port of the Canary Islands, in the northwest of the island of Tenerifie. The town is about 3 miles from the port, and is a favorite summer residence of the rich Canarians. The port has a considerable trade. Pop. 9002.

Orphan Asylum, or Oberhanas reportided for and educe ed. In all well-regulated states the duty of taking care of destitute orphans was recognized at an early age, and it appears that the cities of Thebes, Athens, and Rome had establishments in which orphaned, destablishments in which orphaned are reported and educated at the public expense. In the laws of Emperor Justinian there is frequent mention of snch institutions. In the middle ages such as all the control of furious women engaged in the mystic rites of Bacchus. A considerable interactions of Bacchus. A considerable interaction of Bacchus. A considerable trade as one of the Argonauts, and to him is ascribed the origin of the so-called orphaned with the origin of Bacchus. A considerable trade as one of the Argonauts, and to him is ascribed the orig tions. In the middle ages such asylums were numerous and generally under the direction of the clergy. In recent times public orphanages have been substituted or supplemented by the farming-out system, that is, the children are brought up in private artificially.

Orrery (or'e-ri), an instrument for representing the motions of the planets, etc., a useful assistant to the teacher of elementary astronomy. It was occalled after the Earl of Orrery.

Orrery, Charles Boyle, Early or the planets artificially. or supplemented by the farming-out system, that is, the children are brought up in private families willing to undertake their charge. This system, with due care ceeded his brother in the earldom (an in the selection of guardians and judicious supervision, has proved satisfactory wherever it has been tried. It is was created a British near as Lord in the selection of guardians and judicious supervision, has proved satisfactory wherever it has been tried. It is more economical, and the example of respectable family life cannot fail to have a beneficial moral influence. Orphan asylums, as conducted in the United States, are supported as private institutions. They are fostered also by the religious denominations. The most important among them is Girard College, Philadelphia, which is an orphan asylum on a grand scale and a power for good.

Orpheus (or'fūs), a personage of mythology of Greece, surrounded by a mythology of Greece, surrounded by

lated into Anglo-Saxon by King Alfred have met his death at the hands of a with modifications and additions.

Orotava (ō-rō-tā'va), a town and mystic rites of Bacchus. He is repre-

Orsini, Felice, an Italian revolutionist, born in 1819. In 1838 he above the Gave-de-Pau. Soult was here
was sent to study law at the University
of Bologna, and joined the Society of
Young Italy, formed in 1831 by Mazzini.
In 1843 he took an active part in an insurrection, and being apprehended along
with his father, also an ardent patriot,
was sentenced to the galleys for life. By
the amnesty of July 16, 1846, he
obtained his freedom, but soon after he
again engaged in intrigues under Mazapprehended Mazorthoceras (orthoser-as), a genus again engaged in intrigues under Mazzini, and took prominent part in the stir-ring events of the following years. In bered shells, allied to the nautilus, and 1855 he was condemned to death, but the occurring from the Silurian to the Trias. sentence was not carried out, and in 1856 Orthoclase (orth'o-klūz). called also sentence was not carried out, and in 1856 Orthoclase (orth'o-klūz), called also he escaped to London. Here he wrote his work, Austrian Dungcons in Italy felspar, a silicate of aluminium and po- (1856), and lived by giving lectures on tassium found in fine monoclinic crystals his adventures. He now planned the discounterful in the longest contact of the common or potash is adventures. (1856), and lived by giving lectures on his adventures. He now planned the assassination of Napolcon III, as the main prop of reactionary tendencles in Europe, in concert with three Italian refugees, Rudio, Gomez and l'ierl. The attempt was made on January 14, 1858, but was unsuccessful and l'ieri and Or-(1856), and lived by giving lectures on his adventures. He now planned the disseminated in straight layers through-assassination of Napolcon III, as the out the older rocks of many countries. The color varies from white to green; it is transparent or translucent; specific refugees, Rudio, Gomez and l'ierl. The attempt was made on January 14. 1858, but was unsuccessful, and l'ieri and Orsini were executed March 13, 1858, ion), the opposite of heterodox (which see), generally applied to what is reprisonment for life.

Orchodox (or'thu-doks; Greek, orthos, right, and doxa, opinseni were executed March 13, 1858, ion), the opposite of heterodox (which see), generally applied to what is regarded as the established opinion, or that which is commonly considered as right.

Orsk (ōrsk), a town of Russla, government of Orchhurg, near the mouth of the Or, in the Ural. Pop. the

14,036.

(or'sho-va), New Orsova, the name of two places near the Orsova Iron Gates of the Danube, the former a small town in Hungary, the latter a fortress in Servia, occupied by the Aus-

trians.

Orsted, or Oersted (eur'sted), Hans Christian, a Danish physicist, horn in 1777; died at Copenhagen in 1851. He studied at the University of Copenhagen, spent several years at the expense of government in Holland, Germany and Paris; was in 1806 appointed extraordinary professor of physics at many and l'aris; was in 1806 appointed extraordinary professor of physics at Copenhagen; and in 1812-13, while on a second tour in Germany, he drew up his views of the chemical laws of nature, which he afterwards published in Paris under the title of Recherches sur l'Identité des Forces Electriques et Chimiques. His fame first became diffused over the sclentific world in 1819 by the discovery of the fundamental principles of electromagnetism. In 1829 he hecame director of the Polytechnic School of Conenhagen. of the Polytechnic School of Copenhagen, and on the occasion of his juhilee festival in 1850 he was created a privy-councilor.

Orthoceras (or-thos'er-as), a genus of fossil cephalopods,

which is commonly considered as right. The term is chlefly used in religious controversies to designate certain religious faiths or doctrines.

Orthoepy (or-tho'e-pi), that hranch of grammatical knowledge which deals with correct pronunciation. Orthographic Projection, a term specially applied to that spherical projection used by geographers in the construc-tion of maps in which the eye is supposed to he at an infinite distance from the sphere, so that the rays of light coming from every point of the hemisphere may be considered as parallel to one another. This method of projection is best adapted for representing countries at a moderate distance from the center of projection. See Projection.

Orthography (or - thog'ra-fi), that part of grammar which treats of the nature and properties of let-ters, and their proper application in writing words, making one of the four main divisions or branches of grammar. The word is also used in architecture.

Orthopædia (or-thu-pē'di-a; Greek, orthos, straight, paideia, tralning), a hranch of medical science relating to the cure of natural deformicouncilor.

Ortegal (or-tā-gāl'). Cape, the northwestern point of Spain.

Orthez (or-tās), a town of France, department of Basses-Pyrénées, subject met with the correction of deformed bones, but it was not until a comparatively recent epoch that this important subject met with the serious attention it ful rursing, and suitable food, clothing geology in the university. He wrote sevand exercise; that of the latter to coreral volumes on the Geology of Ohio. He rect deformities already existing by me-chanical treatment, which is most successful when resorted to as soon as any tion for the Advancement of Science deviation from natural shape manifests 1898-99.

semicoriaceous or leathery, usually with numerous nervures, the wings sometimes overlapping and sometimes meeting like the roof of a house. The feelers are generally straight, filiform organs. The limbs vary in conformation according to their methods of movement. In their methods of movement. In their methods of movement. In their methods of movement of women, Proverbialist and Poet, etc.

Ortona (or-tō'na), a town and seaport. Of Southern Italy, province Chieti, on the Adriatic, 11 miles east of their churches and convents. I'op. 8'667.

Ortyx (or'tiks), an American genus of gallinaceous bird. limbs vary in conformation according to their methods of movement. In their metamorphosis the larvæ and pupæ are both active, and the pupa generally resembles the perfect insect, the wings being undeveloped. These insects are divided into Running (Cursorial) and Leaping (Saltatorial) Orthoptera. Of the former division the Cockroaches, Earwigs, Mantis Insects, Walking-stick Insects, and Walking Leaves form the chief families. The Saltatoria are represented by the Locusts, some of which want wings entirely, Crickets and Grasshoppers. See also Entomology.

Ortler-Spitze, or Ortler (ort'ler), a gallinaceous birds allied to the quails and partridges. See Quail.

Oru'ba. See Aruba.

Oruro (ō-rö'rō), a town of Bolivia, capital of a department of the same name, on a bleak hill in a metalliferous district, at an absolute height of 13,000 feet. It has lost its former importance, and the population, once exceeding 40,000 is now 16,070. The department has an area of 19,000 square miles and a popof of 86,081.

Orvieto (or-vē-ā'tō), an old town of Italy, province of Pcrugia, picturesquely situated on an isolated hill

Alps.

Ortolan (or'tu-lan: Emberiza hortulāna), a bird of the hunting
family, a native of Northern Africa and
Southern Europe. The colors are yellow
on the throat and around the eyes, the
hreast and helly heing of reddish hue,
while the upper part of the hody is brown
varied with black. Its delicate flesh is
much esteemed hy epicures, and large
quantities are annually caught and fattened for the table in the south of France,
Italy and Cyprus.

Century Italian Gotnic. Top. 6525.

Orycteropus (or-ik-ter'o-pus), the
generic name of the
Capensis) of South Africa, an edentate,
insectiv ous animal. See Aardvark.

Oryx (or'iks), the name of the genus
of antelopes represented by the
addax (Oryx nasomaculata) and hy other
species, found in large herds chiefly in
the northern portions of the African continent. The horns are very long, spiral,
and curved hackwards. The gemsbok

deserves. Several institutions for the cure of bodily malformations were founded in France and Germany in the early part of the nineteenth century. Orthopædia is divided into prophylactic or preventive, and therapeutic or curative. The object of the former is to prevent deformities in infants, and is obtained by hygienic means, such as pure air, carestope of the pressing, and suitable tood. Clothing geology in the university. He wrote several control of the pressing of the

deviation from natural shape manifests itself. In our time the manufacture of orthopædic apparatus has become highly developed, and forms an important branch of trade.

Orthoptera (ōr-thop'te-rā; Greek, orthoptera (for-thop'te-rā; Greek, orthoptera thos, straight, pteron, a wing), an order of insects of the subclass Hemimetabola, or insects in which the metamorphosis is incomplete. They have four wings, the anterior pair being formal insects in the metamorphosis is incompleted.

Orton, James, scientist, born at Seneca Falls, New York, in 1840.

South America and in 1869 was made professor of natural history in Vassar College. He wrote The Andes and the parative Zoölogy, The Liberal Education of Women, Proverbialist and Poet, etc.

hoppers. See also Entomology.

Ortler-Spitze, or Ortler (ört'ler), a mountain of the Alps, mear the confluence of the Paglia and in Tyrol, near the horders of Switzerland and Italy, the highest of the Austrian and German Alps; height, 12,814 of black and white marble, and adorned feet. The group to which this mountain belongs is known as the Ortler Alps.

Ortolan (or'tu-lan: Emberiza hortu-liena), a bird of the hunting or generic name of the family a patitive of Northern Africa and advants. Capa pig or groundhog (or same of the family a patitive of Northern Africa and advants Capa pig or groundhog (or same of the family a patitive of Northern Africa and advants Capa pig or groundhog (or same of the family a patitive of Northern Africa and advants Capa pig or groundhog (or same of the family a patitive of Northern Africa and capacity Capa pig or groundhog (or same of the family a patitive of Northern Africa and capacity of the paglia and the confluence of the Paglia and the confluence of the Paglia and the children and German Alps; height, 12,814 of black and white marble, and adorned with fine sculptures, mosaics and painting and capacity of the paglia and the children and German Alps; height, 12,814 of black and white marble, and adorned with fine sculptures, mosaics and painting and capacity of the paglia and the children and German Alps; height, 12,814 of black and white marble, and adorned with fine sculptures, mosaics and painting and capacity of the paglia and the children and German Alps; height, 12,814 of black and white marble, and adorned with fine sculptures, mosaics and painting and capacity of the paglia and the children and German Alps.

Ortolan (or'tu-lan: Emberiza hortu-

(Orys Gazella) of Southern Africa is etc. He took little part in foreign poli-another species included in this genus. tics. He resigned in favor of his eldest description of Southern Africa is another species included in this genus.

Osage (o'saj), a river in the United States, which rises in Kansas, flows through Missouri, and after a winding course of 500 miles joins the Missouri 10 miles below Jefferson City. The river gave name to an Indian tribe, the remnant of which now inhabit the Indian Territory. Indian Territory.

Osage Orange (Macclara aurantidea), a tree of the nat. order Moraceæ (mulberry), indigenous to North America, where it is frequently used as a hedge-plant. It produces a large yellow fruit of a woody

dnces a large yellow fruit of a woody texture, somewhat resembling an orange, but not edible.

Osaka (ö'zā-kā), or Ohosa'ka, the second city and a free port of Japan, in the Island of Hondo, on the estuary of the Yodo Gawa, 28 mlles s. s. w. of Kioto. It is Intersected by canals, which are spanned by numerous wooden hridges. The banks of the main channel are lined for 2 or 3 miles with the residences of the nobles, and it has a strong dences of the nobles, and it has a strong citadel. A railway connects it with Yeddo. The greater part of its foreign trade is carried on at Hiogo. It has arsenals, machine shops, steel and glass works, cotton and woolen mills, boot and shoe and match factories, etc. It is sometimes called the 'Venice of Japan,' there belong called the 'Venice of Japan,' there being more than 1200 hridges, while the population (os-i-lā'shun), the act of lation lives chiefly on the water. It has over 1900 places of worship, and takes a leading part in social affairs. Pop. (1911)

1.226,590.

Oscillation (os-i-lā'shun), the act of swinging to and fro. The over 1900 places of worship, and takes a li sorts of forward and backward motions, but it has special reference to the movements of the pandulum while the population.

Oscans (os'kanz; L. Osci; Greek, Opikoi), an Italian people who appear to have heen the occupants, at the earliest known period, of Central Italy. The Oscans were subdued by the Sabines or Sabellians. Their language was closely allied to the Latin. Some wall-inscriptions in it have been found in Pompeii. There are no remains of lt pal occupate except in coins and inscriptions.

in Pompeii. There are no remains of it except in coins and inscriptions.

Oscar I (os'kar), Joseph François Dernadotte, King of Sweden and Norway, son of Bernadotte (Charles (Canada, on Lake Ontario, 33 miles N. E. 1859. In 1823 he married Joséphine, eldest daughter of Prince Eugéne Beauharnais. During the reign of his father he was three times (in 1824, 1828 and 1833) viceroy of Norway, where he made himself popular by his good administra-

son in 1857.

Oscar II, King of Sweden and Norceeded his brother, Charles XV, in 1872. He was a writer of some merit; translated Goethe's Faust into Swedish, wrote a Life of Charles XII, and published a volume of poems under the pen name of Oscar Frederik. During his reign Norway seceded from Sweden and established a separate kingdom. He died in 1907. a separate kingdom. He dled in 1907, and was succeeded by his son Gustavus V.

Osceola (os-se-o'la), a Seminole Indian chief, born in Florida about 1813. His wife being claimed and carried off as a slave in 1835, he declared war against the whites and fought with them for two years with varying success. He was finally taken prisoner hy treachery and confined in Fort Moultrie, where he died in 1837.

Oschatz (ō'shats), a town of Saxony, about 30 mlles to the east of Lelpzig, with manufactures of woolens, leather, etc. Pop. 10,854.

Oschersleben (ōsh-èrs-la'ben), a town of Prussian Saxony, on the Pode 10 miles 5 w. of Magdeburg.

the Bode, 19 miles s. w. of Magdeburg. It has sugar and agricultural machine works, etc. Pop. 13,271.

Oscillation (os-i-la'shun), the act of swinging to and from the control of the swinging to and from the swinging to an act of the swinging to a swingi

movements of the pendulum, which are subject to well-established laws. See

Osel (3'zel), an island in the Baltle Sca, forming part of the Russian government of Livonia. It lies across the entrance of the Gulf of Riga and has an area of 1010 sq. miles. Agriculture, horse-hreeding and fishing are the principal occupations. Chief town, Arensburg.

internal righteousness, brought about in a mystical manner by the union of Christ with men. One of his principal opponents was Martin Chemnitz. Although his views were condemned by several authorities he maintained them until his death. In 1556 ail the Osiandrists were deposed, and Osiandrism forever ban-ished out of Prussia.

Osier. See Willow.

Osiris (o-sl'ris), one of the great Egyptian divinities. He was the brother and husband of Isis, and the father of Horus. He is styled the Manifestor of Good, Lord

of Lords, King of the Gods, etc. In the zyptian theogony he represented the sum of beneficent agencies, as Set of evil agencies. Osiris, after having estab-lished good laws and institutions throughout Egypt, fell a prey to the intrigues of his brother Set, the Typhon of the Greeks. He became afterwards the judge of the dead. There of the dead. are a multitude of traditions, both Greek and Egyptian.

shed between the Des Moines and South Skunk rivers, 62 miles S. E. of Des Moines. It contains Penn Coliege, Central Holiness University, Oskaioosa College, and has bridge works and foundries, steam heater, brick and tile, ciothing, and other factories. Pop. 9466.

Osmanieh (os-man'i-e), a Turkish or-der established by Abdul Aziz in 1861 for the reward of services rendered to the state. The chief decoration is a golden six-pointed star enameled in green.

Osler (5s'ier), SIR EDMUND BOYD, a Canadian legislator and financier (1845-), born in Simcoe county, Ontario; educated at the grammar school, Dundas, Ontario. He began business in the Bark of Lipon Canada (Canada Canada the Bank of Upper Canada, Toronto, and later became head of the financial firm of Osler & Hammond, of Toronto. He was president of the Toronto Bond Trade in 1896, and was appointed as representative of Canada at the Congress of Chambers of Commerce held in London in 1896. Recognized as an authority in finance, he became president of the Dominion Bank of Canada, and member of the Executive Committee of the Canadian Pacific Railway Company, as well as a director of that company. He was elected a member of the Dominion House of Commons for

forms, and compared sometimes to the sun and sometimes to the Nile. His soul was supposed to animate the saered bull Apis, and thus to be continually present among men. His worship extended over Asia Minor, Greece and Gill University, Montreal: University

College, London. He also studied at don (q. v.) at Ehartoum in 1885. In Berlin and Vleuna, and was awarded an January, 1900, he was defeated at Tokar, honorary D.Se. from Oxford and Cam- and died soon afterward. honorary D.Sc. from Oxford and Cambridge universities; Yale, Harvard and other universities; Yale, Harvard and other universities conferring apon him the degree of LL.D. From 1874 to 1884 he was professor of the Institutes of Medicine at McGill University. In the latter He entered the Turkish army in 1853 and class at the University of Pennsylvania, remaining there till 1889, when he went to Johns Hopkins University as professor of the principles and practice of medicine. (3) he was promoted to liquid and the Cream campaign, 1867-of the principles and practice of medicine. of the principles and practice of medicine, becoming chief physician of the Johns Hopkins Hospital. He went to England as regius professor of medlelne at Oxford, devoting himself subsequently to lecturing and writing. In one of his popular lectures he declared that men over forty years of age were comparatively useless and this statement was tively useless, and this statement was taken up and given wide publicity, often are men between the ages of twenty-five and forty. . . . . Take the sum of and forty. . . . Take the sum of human achievement, in action, in science, white mineral which occurs in many in art, in literature; subtract the work of localities in acleular monoclinic crystals, eally be where we are to-day.' Among his and sodium.

He was often solicited by landscape painters to add figures to their pictures.

Ostashkov (hs-tilsh'kôt), a town of Russia, government of Tver, on Lake Seliger, 105 miles N. W. of Moscow. It is a host-building center.

Moscow. It is a boat-building center. Among the other industries are the manufacture of agricultural implements and boots and shoes. There was great demand for the latter during the war and the prosperity of the town was greatly increased. The German advance of 1917-18 did not reach Ostashkov. The cilmate is damp and far from healthy. The Smolensky monastery, a pilgrim resort, and the seventeenth-century cathedrai and several other ancient churches are among the interesting features of the vicinity. Pop. 10,457.

Ostend (ös-těnd'), a seaport of Beigium, province of West Flanders, on the North Sca. 67 miles northwest of Brusseis. It is situated on a sandy plain, and is protected against the sea by a solid wall of granitc. which extends for over two miles along the shore from the long jetty which protects the enfrom the long jetty which protects the entrance to the port. It is a favorite seaside resort, the bathing being unsurpassed. In 1900 the work of widening the harbor and carrying it back several miles was begun. A series of large docks and extensive quays were constructed, which proved of great advantage to the Germans, who took possession of the town during the great war and used it as a submarine

base. The Belgian government was removed to Ostend, October 8, 1914, and it was to this town that King Albert and most of the Belgian army escaped following the surrender of Antwerp on October 9. On October 14 the scat of the Belgian government was again moved, from Ostend to Havre, France. On October 16 German troops entered Ostend. It was the intention of the invading hosts to press on along the coast to Calais, but their progress was brought to a hait a few miles beyond Ostend with the heip of the small but efficient and superbly gallant British Regular Army. Both sides dug them-selves in at this flank of the long battle line that stretched for 350 miles from the North Sea to the borders of Switzerland.

for several years. Meanwhile Germany had shipped submarines by rail to Zeebrugge (q. v.) and Ostend, and with these harbors as a base began the work of demoralising British shipping. Ostend was bombarded by the Allies from the sea and air; but it was not till 1918 that the British navy undertook the hazardous task of bottling up the submarines in the harbor, a feat that recalled Lieutenant harbor, a feat that recalled Lieutenant Hobson's sinking of the Merrimac in Santiago Harbor during the war with Spain in 1898.

Two expeditions were undertaken. The

first took place on April 23 and was a combined raid on Ostend and Zeebrugge. The Zeebruggo effort was a complete success, but at Ostend the British blockading ships grounded when near their objective and biew up. Undaunted, a second attempt was made on the night of May 9, under Commodore Hubert Lynes, directed by Vice-Admiral Sir Robert Keyes. The ship selected as the victim was the cruiser Vindictive, which had taken part in the successful raid on Zeebrugge and bore the scars of battle. It was at Dover that she was filled with concrete and set out on her last task. Convoyed by monitors and motor boats and hidden by smoke screens, the Vindictive was steered into the pier the Vindictive was steered into the pier at Ostend and sunk by an internal charge, effectively blocking the harbor. The work was carried out in the face of a heavy fire from the German guns on the coast, which registered from six inches to monsters of fifteen-inch navai pieces in land turrets. It was one of the most daring and most successful navai exploits of the war, and the casualties were surof the war, and the casualties were surprisingly few.

Ostend was founded in the ninth century, and was fortified in 1585 by the Prince of Orange. It endured a memorable siege from 1601 to 1604 in its struggle to throw off the yoke of Spain. The population in 1912 was 43,000.

Ostend Company, a trading company formed by the people of Ostend in 1717 in rivairy to the Dutch, English and French East Settlements Companies. founded in the East Indies and for a time the company was successful; but the jealousy of the other nations culminated in the scizure of Ostend merchantmen by the Dutch and the English, and in 1727 the emperor, Charles VI, who had encouraged the enterprise, was compelled to suspend the charter of the company for seven roars. In 1731 the company was abolished.

The tide of battle ebbed and flowed over other sections of the line, but here at the coast the opposing armies remained locked matic history referring to a dispatch

drawn up at Ostend, October 9, 1854, by the United States ministers to Great Britain, France and Spain, who, at the request of President Pierce, had met to discuss the Cuban question. The dispatch declared that the sale of Cuba by Spain to the United States would be advantageous to both countries, and urged that if Spain refused to sell self-preservation if Spain refused to sell, self-preservation demanded that the United States take the island by force. The ministers suggested that a fair price would be \$120,000,000. The suggestion was not approved in the United States, and was strongly condemned in Europe.

(os-tē-ol'ō-ji), the depart-Osteology ment of anatomical science specially devoted to a description of the bony parts or skeleton of the body. Sec Anatomy, Skeleton, Bone, etc.

(os'teo-ma-lā'shī-d), a Osteomalacia characterized by softening of the bones, often resulting in deformities. In the majority of cases it affects women, ehiefly during pregnaucy or after child-bearing. Surgery has proved more effective than medical treatment in this disease. It is prevalent in Austria and South Germany.

Osteopathy (os-te-op'a-thi; Greek pathos, suffering), a system of healing discovered by Dr. Andrew T. Still, of Kirksville, Mo., an old-school practitioner. He contended that health meant perfect adjustment of all the tissues of the body, together with normal flow of the vital fluids—namely, bicod lymph and nerve force—and that disease had its beginning in an obstruction of some kind to ning in an obstruction of some kind to the free flow of vital fluids. Obstruc-tions in many eases are of a physical nature. They may be in the form of thickened connective tissues, such bones, especially of the ribs or spine, contracted muscles, etc. These abnormalities the osteopath through his careful study in anatomy is able to recognize when present, and by manipulation correct. In the ease of thickened, congested or contracted tissues, he stretches and loosens tracted tissues, he stretches and loosens tracted tissues, he circulation the circulation the Teleostei or bony fishes. The body is enclosed in a easing of strong bony is enclosed in a easing of the ganold variety, subluxated bones, he reduces the luxations through a series of mechanical manipulations adapted to the particular bones in question, frequently using adjated to the particular bones in question, frequently using adjated to the particular bones in question, frequently using adjated to the particular bones or muscles and ligaments as the State with the price of the pri cent bones or muscles and ligaments as levers to aid in the correction. The manipulations are specific for the sole purpose of correcting lesions and restablishing a normal circulation of the vital fluids. This is done without the

use of drugs. At the present time osteopathy is recognized in nearly all the states of the Union as a separate system of healing and protected by special acts of legislature. Many well-equipped osteopathic schools have been established and modern osteopathic hospitals are maintained in connection with them. Besides tained in connection with them. Besides the American School of Osteopathy at the American School of Osteopathy at Kirksville, Mo., there are the Massachusetts College of Osteopathy at Boston, Mass.; Philadelphia College of Osteopathy at Philadelphia, Pa.; Des Moines Still College of Osteopathy, Des Moines, Ia.; Central College of Osteopathy, Kansas City, Mo.; Chicago College of Osteopathy, Chicago, Ill.; and the College of Osteopathic Physicians and Surgeons at Los Angeles. In addition to these schools. Angeles. In addition to these schools, the profession has established the A. T. Still Osteopathic Research Institute at Chicago, Ill. There are about 7000 osteopathic physicians in the U. S. and Canada.

Osterode (os-te-rō'dē), the name of two Prussian manufacturing towns: (1) Prussian manufacturing 7467. (2) A town of East Prussia. Pop. 13,957.

Ostia (os'ti-ä), an ancient port of Italy, at the mouth of the Tiber, 14 miles from Rome by the Via Ostiensis. It was the first colony founded by Rome.
After the fall of the Roman Empire it
became a ruin. Excavations have revealed a forum, a theatre, baths, etc.

Ostiaks or Ostyaks (os'ti-akz), a race of Finnish origin, formerly numerous in several parts of Siberia, but which according to latest official returns now scarcely exceed 30,000, and are confined to the Obi and Irtish districts. In the latter they have become settled and

suzerainty.

at Angora in 1402 he was himself conquered and taken prisoner hy Timour, who divided the provinces between the sarabia, Bosnia, Herzegovina, Tripoli, Tunis, etc. We shall here give a brief sketch of the history of the Ottoman Empire, referring to the article Turkey for information regarding the geography, constitution, etc., of both European and Asiatic Turkey.

The Ottoman Turks came originally from the region of the Altai Mountains, in Central Asia, and in the sixth century they came in the eighth century they came in contact with the Saracens, from the religible. Since that time the city has heen the seat of the Sublime Porte or Turkish government. Mohammed added Servia, Bosnia, were first the slaves and mercenaries, and finally the successors in the callphate. In the thirteenth century they appeared as allies of the Seljukian Turks against the Mongols, and for their aid received a grant of lands from the Seljuk sultan of Iconium in Asia Minor. Their leader, Othman or Osman, of the race of Oghuzian Turkomans, became the most powerful emir of Western Asia, and after the death of the Seljuk sultan of Iconium in the Sel

In the latter part of the sixteenth cen-Mohacz, and in 1697 (by Prince Eugene) at Szenta. Then followed the Treaty of Carlowitz in 1699, by which Mustapha II agreed to renounce his claims upon Transylvania ard a large part of Hungary, to give up the Morea to the Venetians, to restore Podolia and the Ukraine to Poland, and to leave Azov to the Russians. Eugene's subsequent victories at Peterwardein and Belgrade obliged the Porte to give up, by the Treaty of Passarowitz in 1718, Temeswar, Belgrade, with a part of Servia and Walachia; but the Turks on the other hand took the Morea from Venice, and by the Treaty of Belgrade in 1739 regained Belgrade, Servia and Little Walachia, while for a time they also regained Azov.

they also regained Azov.

Russia, which had been making steady advances under Peter the Great and subsequently, now became the great opponent of Turkey. In the middle of the eighteenth century the Ottoman Empire still embraced a large part of Southern Russia. The victories of Cutharine II's still embraced a large part of Southern Russia. The victories of Catharine II's general Romanzoff in the war between 1768 and 1774 determined the political superiority of Russia, and at the Peace of Kutchuk-Kainargi, in 1774, Abdul-Hamid was obliged to renounce his sovereignty over the Crimea, to yield to Russia the country between the Bog and the Unieper, with Kinburn and Azov, and to open his seas to the Russian merchant to open his seas to the Russian merchant shins. By the Pcace of Jassy, 1792, which closed the war of 1787-91, Russia retained Taurida and the country between the Bog and the Dniester, together with Otchak v, and gained some accessions in the Canacana. In the long series sions in the Caucasus. In the long series of wars which followed the French revolution the Ottoman Empire first found herself opposed to France, in consequence of Bonaparte's campaign in Egypt, and finally to Russia. who demanded a more tenegrins still held out. Meantime the distinct recognition of her protectorate great powers of Europe were pressing reover the Christians, and to whom. by the forms on Turkey, and at the end of 1876 Peace of Bucharest, May 28, 1812, she a conference met at Constantinople with

time the race of Osman degenerated and ceded that part of Moldavia and Bessara-the power of the Porte declined. ceded that part of Moldavia and Bessara-bia which lies beyond the Pruth. In 1817 In the latter part of the sixteenth century, and most of the seventeenth century, the chief wars were with Venice and with Austria. The battle of Lepanto (1571), in which the Ottoman fleet was towards loosening the connection of Servenice and Spain, was the first great Ottoman reverse at sea; and the battle of St. Gothard (1664), near Vienna, in which Montecuculi defeated the Vizier Kiuprili, the first great Ottoman reverse on land. In 1683 Vienna was besieged by the Turks, but was relieved by John Sobieski and Charles of Lorraine; in 1687 the Turks were again defeated at Janizaries took place at Constantinople, at Szenta. Then followed the Treaty of crossed the Balkans and took Adrianople, at Szenta. Then followed the Treaty of crossed the Balkans and took Adrianople, at Szenta. Mahmud II was obliged to give up the principal mouth of the Danube to Russia. Further disputes ended in the Porte Britain, France and Russia against the cruelties with which the war against the Greeks was carried on proving of no avail, those powers attacked and destroyed the fleet of Mahmud at Navarino (1827). In 1826 the massacre of the Janizaries took place at Constantinople, after a revolt. In 1828-29 the Russians crossed the Balkans and took Adrianople, the war being terminated by the Peace crossed the Balkans and took Adrianople, the war being terminated by the Peace of Adrianople (1829). In that year Turkey had to recognize the independence of Greece. In 1831-33 Mehemet Ali, nominally Pasha of Egypt, but real ruler both of that and Syria, levied war against his sovereign in 1833, and threatened Constantinople; when the Russians, who had been called on for their aid by the sultan, forced the invaders to desist. In 1840 been called on for their aid by the suitan, forced the invaders to desist. In 1840 Mehemet Ali again rose against his sovereign; but through the active intervention of Great Britain, Austria and Russia was compelled to evacuate Syria. though he was, in recompense, recognized as hereditary vicercy of Egypt.

The next important event in the his-

The next important event in the history of the Ottoman Empire was the war with Russia in which Turkey became involved in 1853, and in which she was joined by England and France in the following year. This war, known as the Crimean war (which see) terminated lowing year. This war, known as the Crimean war (which see), terminated with the dereat of Russia, and the conclusion of a treaty at Paris on March 30, 1856, by which the influence of Russia in Turkey was greatly reduced. The principal articles were the abolition of the Russian protectorate over the Danubian principalities (Moldavia and Walachia, united in 1861 as the principality of Roumania), the rectification of the frontier between Russia and Turkey, and the cession of part of Bessarabia to the latter power

In 1875 the people of Herzegovina-unable to endure any longer the misgovernment of the Turks, broke into rebellion. A year later the Servians and

bellion. A year later the Servians and Montenegring likewise took up arms, and though the former were unsuccessful and obliged to abandon the war, the Montenegrins still held out. Meantime the re

the Aslatic and the European frontier of Turkey, Issued a warlike manifesto and commenced hostile operations in both parts of the Turkish Empire. It was immediately joined by Roumania, who on the 22d of May (1877) declared its independence. The progress of the Russians was at first rapid; but the Turks offered an obstinate resistance. After the offered an obstinate resistance. After the fall of Kars, however, November 18, and the fall of Plevna, December 10, the Turkish resistance completely collapsed, and on March 3, 1878, Turkey was compelled to agree to the Treaty of San Stefano, in which she accepted the terms of Russia. The provisions of this treaty were, however, considerably modl-fied by the Treaty of Berlin concluded on July 13th following, by which Rou-mania, Servia and Montenegro were declared independent: Roumanian Bessarabla was ceded to Russia; Austria was empowered to occupy Bosnia and Herzegovina; and Bulgaria was erected into a monarchy in 1908, and in the same year Bosnia and Herzegovina were annexed to the Austrian Empire. (See Berlin, Treaty of.)

The main events in the history of the the Treaty of Berlin are the French lavasion of Tunis in 1881, which soon after was formally placed under the protectorate of the French: the treaty with Greece, executed under pressure of the Great Powers in 1881, by which Turkey ceded to Greece almost the whole of Thesaly and a strip of Epirus; the occupation of Egypt by Great Britain in 1882; rice, sugar, indigo, and others of the richard the revolution at Philippopolis in est products of India are raised in large. A constitution granted in 1876 the battle of Kalpe, in 1765. In 1856 was quickly revoked by the reignlng sultan, Abdul Hamid II, who reigned as an autocrat until 1908, when he was obliged to yield to the demands of the Young Turk reform party and restore the constitution and legislature. In April, 1909, a reactionary military outbreak, supposed in 1987. In 1856 Turk reform party and restore the constitution and legislature. In April, 1909, produced much dissatisfaction, and when, a reactionary military outbreak, supposed to be fomented by the sultan, led to the capture of the city by a revolutionary of Lucknow resulted. (See Indian Muarmy and his deposition. On April 27, tiny.) Since the pacification of 1858, his brother, Mohammed Rechad, suc-schools and courts of justice have been established, and railways have been opened. Lucknow is the capital, and the main center of population and manufactures. Pop. 12,833,077 (mostly Hindus), giving the large average of 522 to the square mile.

Oudh (formerly Ayodhya), an ancient town in Faizabad District, Oudh, of which province it was anciently the capital. In remote antiquity it was one of the largest and most magnificent of In-dian cities, and Is famous as the early home of Buddhism and of its modern representative, Jainism. It is now a suburb

or Faizabad, or Fyzabad (which see).

Oudinot (ö-di-nö), Charles Nicolas,
Duke of Reggio, peer and
marshai of France, born in 1767. In 1791 he was elected commandant of a volunteer battalion, and gave many striking proofs of valor, which gained him speedy promotion. In 1792 he was colonel of the regiment of Picardy, in 1793 brigadier-general, and in 1799 general of division. Massena made him chief of the general staff, and under his command he decided the battle of the Mincio. In 1804 Napoleon gave him the command of a grenadier corps of 10,000 men, which was to form the advance guard of the main army. At the head of these troops he performed many exploits, winning the battle especially of Ostrolenka, and deciding the fate of three great battles—Austerlitz, Friedland and Wagram. After the last named battle Napoleon made ter the last named battle Napoleon made him a marshal and Duke of Reggio, and gave him an estate worth \$20,000 a year. He rendered valuable service and was severely wounded in the Russian campaign of 1812. In the campaign of 1813 Dennewitz. In the campaign of 1814 he took an active part and was wounded for the twenty-third time. After Napoleou's abdication he gave in his adhesion to the Bourbons, to whom he ever afterwards remained faithful, and who heaped upon him every honor. He died in 1847.—His eldest son, NICOLAS CHARLES VICTOR (born in 1791), commanded the troops which effected the capture of Rome from Garibaldi in 1849. He died in 1863.

Ouida (wē'da). See Ramée, Louisa de Composer, born in 1863.

Ouless (ou'les), WALTER WILLIAM, an English painter, born at St. Helier's, Jersey, in 1848. He studied at the Royal Academy, and hegan as a painter of genre, but has distinguished himself chiefly in portraiture. He was painter of years, but has distinguished himself chiefly in portraiture. He was elected R.A. in 1881. Darwin, Newman, Lord Selhorne, Sir Fred Roherts, Cardinai Manning, Samuel Morley, and other celebrities have been among his sitters.

Ounce (ouns; Latin, uncia, a twelfth Ounce (ouns; Latin, uncia, a twelfth part of any magnitude), In Troy weight, is the twelfth part of a pound, and weighs 480 grains; in avoirdupois weight is the sixteenth part of a pound, and weighs 437½ grains Troy. Ounce (Felis Uncia), one of the digitizate of the digitizate of the digitizate of the body is about 3½ feet, the tail measuring about 2 feet. It is a large cat, resembling the leopard and panther, but with a longer and more hairy tail and a thicker fur, somewhat less in size, and not so ficrce and dangerous. In some places it is and dangerous. In some places it is trained to hunt, like the cheetah.

Ourebi (ou're-hi), Scopophorus ourebi, an antelope of South Africa, found in great numbers in the open piains, and much hunted for its flesh. It is from 2 to 3 feet high, of a pale dun color, and the male has sharp, strong and deeply-ringed horns.

Ouro-Preto (ö'ru prā'tu), a town of Brazil, capital of the province of Minas-Geraes, 190 miles N. N. w. of Rio de Janeiro. It was formerly one of the great mining couters of Brazil, hut its gold mines are now nearly exhausted. Pop. ahout 13,000.

Ouse (öz), a river of Yorkshire, formed by the junction of the Swale with

the Ure near Boroughhridge; it flows torthe Ore near Boroughinings; it how tor-tuously southeast past York. Selby and Gooie, 8 miles east of which it unites with the Trent to form the estuary of the Humber. Its total course is 60 miles, for the last 45 of which (or to York) it is navigable.

Ouse (öz), Great, a river of England, rises near Brackley in the county of Northampton, flows in a general northeasterly direction, traverses the counties of Buckingham, Bedford, Huntingdon, Cambridge and Norfolk, and falls into the Wash at King's Lynn, after a course of about 160 miles, two-thirds of it being

Ouseley (ouzle), SIR FREDERICK ARTHUR GORE, BART.; English composer, born in 1825; only son of Sir Gore Ouseley, at one time British ambassador to Persia and Russia. He succeeded his father in the baronetcy in 1844, and subsequently took orders. He exhibited from childhood high musical ability, took the degree of Bachelor of Music at Oxford in 1850, and of Doctor in 1855, and the same year was appointed precentor of Hereford Cathedrai. His works include treatises on Harmony, on Counterpoint and Fugue, and on Mufth

in 1889.

Outcrop (out'krop), in geology, the exposure of an inclined stratum at the surface of the ground. absconding defendant in a civil or criminal proceeding. It invoived the depriva-tion of ail civil rights, and a forfeiture of goods and chattels to the crown. Outlawry in civil proceeding was formally aholished in England in 1879. In Scotiand outlawry is a sentence pronounced in the supreme criminal court, where one accused of a crime does not appear to answer the charge. The effect is that he is deprived of all personal privilege or hencfit hy law, and his movable property is forfelted to the crown. In the United

States the practice is unknown. Outram (ou'tram), Sir James, diplomat and soldler, was born at Butterley Hail, Derbyshire, in 1803. He was hrought up in Scotland, studied at Marischai College, Aberdeen, and in 1819 went out as a codet to India. In 1829 he went out as a cadet to India. In 1828 he was selected to undertake a mission to the wild hili tribes of the Bomhay presidency, a task in which he acquitted himseif with credit. As adjutant to Lord Keane he took part in the Afghan war of 1839, and distinguished himself at the capture of Kheiat, and hy his dangerous ride disguised as a native devotee through the enemy's country to Kurrachee the enemy's country to Kurrachee (1840). After the capture of Ghuznee, he performed the duties of British resident at Hyderabad, Sattara and Lucknow. In 1842 he was appointed commissioner to negotiate with the Ameers of Sind, in which position he adopted views at variance with the aggressive policy of General Sir Charles James Napier. In 1856 he was nominated chief Persia was summoned to Indla to aid in suppressing the mutiny. Although of higher rank than Havelock, whom he folned with reinforcements at Cawnpore in September, 1857, he fought under hlm until Lucknow was relieved by Sir Colin Camphell. In the following March he commanded the first division of infantry when Sir Colin finally regained possession of Lucknow. His services were rewarded with a baronetcy, the rank of lieutenant-general, the order of the grand-cross of the Bath, and the thanks of parliament; and statues were erected 22 miles south of Oporto. It is in a low-in his honor in London and Calcutta. lying and unhealthy region, but has valua-

Outcrop (out'krop), in geology, the exposure of an inclined stratum at the surface of the ground.

Outlawry (out'in-ri), the putting one hoat, with a rowlock at its extremity, out of the protection of so as to give an increased leverage to the law, a processor resorted to against an the oar without widening the boat; hence, the conding defendant in a civil or orlain a light hoat for viver matches provided a light hoat for river matches provided with such apparatus. The name is aiso applied to a contrivance in certain foreign hoats and canoes, consisting of a projecting framework or arrangement of timbers for counterhalancing the heeiing-over effect of the sails, which are large in proportion to the hreadth of the vessei.

Outworks (out'wurkz), all works of a fortress which are situatcd without the principal line of fortifi-cation, for the purpose of covering the piace and keeping the hesiegers at a distance.

Ouvirandra (ö-vi-ran'dra), a genus of plants. See Lattice-

leaf. Ouzel (ou'zl), a genus of insessorial or perching hirds, included in the family of the thrushes. The common or ring ouzel (Turdus torquatus) is a summer visitant of Britain, and its specific name is derived from the presence of a hroad semiiunar patch or stripe of white extending across its hreast. The water ouzel (Cinclus aquaticus) belongs to a different family. (See Dipper.) Ouzel is also an oid or poetical name for the hlackhird.

Oval (ö'vai), an egg-shaped curve or curve resembling the iongitudinal section of an egg. The oval has a general resemblance to the ellipse, but, unlike the latter, it is not symmetrical, belng hroader at one end than at the other. See Ellipse

Ovampos (ō-vam'pos), a collection of hlack tribes of Southwest commissioner of Oudh. He was commander-in-chief of the British forces in Africa, occupying the exceedingly fertile the Perslan war of 1856-57, and from country which lies south of the Cunene country which iles south of the Cunene River, between 14° and 18° E. iongitude, and north of Damara-iand. These black tribes resemble the Kaffirs and Damaras in feature, and by many are supposed to be a connecting link between Negroes and Kaffirs. Cattle forms the wealth of the Ovampo tribes, each of which has its own hereditary chief. They are also good agriculturists, and have made considerable progress in various arts.

Ovar (ō-vār'), a town of Portugal, district of Be'ra, near the Atlantic, on the north shore of the Bay of Aveiro, 22 miles south of Oporto. It is in a low-

especially since the adoption of the antierative apparatus, in which the ova or eggs are formed and developed. The ovary in the female corresponds to the testis of the male. In adult women the ovarles exist as two hodies of somewhat oval shape, and compressed from side to whitish color and unexpense. ovaries exist as two hodies of somewhat oval shape, and compressed from side to side, of whitish color and uneven surface. They are situated one on each side of the womb, and are attached to the hinder portion of the body of the womb by two thin cord-like bands—the ovarian ligaments, and by a lesser fibrous cord to the fringed edge of the womb cord to the fringed edge of the womb cord to the fringed edge of the womb cord to the finged edge of the womb cord to the finged edge of the womb cord to the solution of the body of the womb by two thin cord-like bands—the ovarian ligaments, and by a lesser fibrous cord to the fringed edge of the womb cord to the finged edge of the womb cord to the solution of the body of the womb by two thin cord-like bands—the ovarian ligaments, and by a lesser fibrous cord to the finged edge of the womb cord to the finged edge of the womb cord to the large transfer to the body of the womb by two thin cord-like bands—the ovarian ligaments. ies are subject to diseased conditions, Tasso's Green and the occhief among which are cancer and the occurrence of tumors and cysts. See Ova- Overbury (Ö'ver-he-ri), Sir Thomas, known as a miscellaneous

ble fisheries and considerable trade in tim-ber. Pop. 10,462.

Ovarian Tumor (5-va'ri-an), a substance. In English the term is usu-aily restricted to a close chamber for morbid growth in baking bread and other food substances.

morhid growth in the ovary of a woman, sometimes weighing as much as 30, 50, or upwards of 100 lbs., or more, consisting of a cyst containing a thin or thick ropy fluid, causing the disease known as ovarian dropsy, which is now generally cured by the operation of ovariotomy.

Ovariotomy (Ö-vā-ri-ot'ō-mi), the operation of removing the eration of removing the cal genus, hirds belonging to the family Certhidse or Creepers, found in South America; typical genus, hirds belonging to the cal genus, hirds belonging to the family Certhidse or cal genus, hirds belonging to the cal genus, hirds belonging to the cal genus, hirds belonging to the sabove); a surgical operation first performed in 1800, and long considered exceedingly dangerous, but latterly performed with great and increasing success, or mud with a winding entrance. rived from the form of their nest, which is dome-shaped, and built of tough clay or mud with a winding entrance.

Ovens River, a river in the northeast of the Australian

septic treatment inaugurated by Lister.

Ovary (ō'va-rl), or Ovarium, the escolony of Victoria, a tributary of the female gen-Murray. The district is an important gold mining and agricultural one.

portion of the body of the womb by two thin cord-like bands—the ovarian ligaments, and by a lesser fibrous cord to the fringed edge of the fallopian tube. Each ovary is about 1½ inchs in length, and about 1½ drachms in weight, and contains a number of vesicles known as ovisacs or Graafan follicles, in which the ovary, which are only assumed and herome active on the approach of puberty, are the formation of ova, their maturation, and their final discharge at periodic menstrual epochs into the uterus or womh. There the ovum may be impregnated and detained, or pass from the menced hls artistic studies in Vienna in 1805, and in 1810 went to Rome, where he, with Cornelius, Schadow, Veit and Schnorr, founded a new school of art, attempted to revive the devotional art of the pre-Raphaelite period. In 1814, in company with several of his artistic brethren, he abjured Lutheranism, empraced the Roman Catholic faith, and of his abode. Among his chief works are: The Entrance of Christ into Jerusalem; the Vision of St. Francis; two series of freescoes, one on the History of Joseph womh. There the ovum may be impregative vision of St. Francis; two series of nated and detained, or pass from the frescoes, one on the History of Joseph body with the menstrual flow. The ovar- for the Casa Bartholdi, and one on ies are subject to diseased conditions, Tasso's Gerusalemme Liberata for the

O'vary, in botany, is a hollow case writer, but more especially for his tragiseeds, containing one or more cells, and of Rochester and the Countess of Essex, nltimately becoming the fruit. Together was horn in Warwickshire in 1581, and with the style and stigma it constitutes the female system of the vegetable kingdom. When united to the calyx it is called inferior; when separated, superior.

Ovation. See Triumph.

Oven (uv'n), a close chamber of any description in which a considerable degree of heat may be generated, was horn in Warwickshire in 1581, and studied at Oxford. He contracted an intimacy with Rochester, then Robert Care, at the court of James I. and provoked the anger of the countess by endeavoring to dissuade his friend from marrying her. Rochester procured the imprisonment of his late friend in the Tower of London, by creating a cause of offense between him and the king, ny uor es,

Sir Richard Owen.

Anatomy of Vertebrates: The Fossil Reptiles of South Africa; The Fossil Mammals of Australia, etc. He died in 1832. Owen, ROBERT, philanthropist and so-cial theorist, born at Newtown, Montgomeryshire, North Wales, in 1771; died there in 1858. Early distinguished by his business talents, at the age of eighteen he became manar r of a spinning mill at Choriton, near Manchester, and subsequently of the New Lanark cotton mills, belonging to Mr. Dale, a wealthy Clasgew manufacturer where daughter Glasgow manufacturer, whose daughter he married. Here Owen introduced many important reforms, having for their object the improvement of the condition of the inborers in his employ. In 1812 he published New Views of Society, or Es-says upon the Formation of Human Character; and subsequently a Book of the New Moral World, in which he compietely developed his socialistic views, insisting upon an absolute equality among men. He had three opportunities of setting up social communities on his own ands. plan—one at New Harmony in America. Owl another at Orbiston in Lanarkshire, and the last in 1844, at Harmony Hali in Hampshire, all of which proved signal Owl-Parrot (Stringons habroptilus), the type and only known

palseontologist after Cuvier, and as a failures. In his later years Mr. Owen becomparative anatomist a worthy successor to Hunter. He was a voluming eidest son, Robert Daie Owen (1801-writer on his special subjects, and an 77), for a time resident minister of the honorary fellow of nearly every learned United States at Naples, is chiefly known society of Europe and America. Among society of Europe and America. Among as an exponent of spiritualism, on which it works are Lectures on the Comparasubject he wrote several works. Another tive Anatomy of the Invertebrate Ani- son, David Daie Owen (1807-60), ac-

quired reputation as a geologist.

Owensborough (ö'ens-bur-ö), a city, the capital of Daviess County, Kentucky, on the Ohio River, 160 miles from Louisville, is extensively engaged in the curing of tobacco and the manufacture of whisky. Coai and iron are mined and there are various other industries. I'op. 10,011.

Owens College (ô'enz), Manchester, was established under the will of John Owens, a Manchester who died in 1846, and ieft about £100,000 for the purpose of founding an institution for providing a univer-sity education, in which theological and religious subjects should form no part of the instruction given. Teaching com-menced in 1851, and the present hand-some Gothic building for the accommodation of the college was completed in 1873. The increasing success of the college icd to the establishment of a new university, Victoria University, to omy of the Vertebrate Animals; History consist of Owens College and several of British Fossil Mammals and Birds; towns, but having its headquarters in History of British Fossil Reptiles; Prinder of Comparative Osteology; On the Instituted by royal charter in 1880, with Anatomy of Vertebrates. The Fossil Repand law, a supplemental charter, granted May, 1883, giving power to grant de-grees in medicine. University College, rees in medicine. University College, iverpool, was incorporated with Victoria University in 1884, and the Yorkshire Coilege, Leeds, in 1888. There is a women's department in connection with Owens College, the classes being held in smarate buildings. The charter of Victoria University gives power to grant de-grees to women, and the examinations are thrown open to them.

Owen Sound, formerly System of entry of Ontario, Canada, on Georgian Bay, 91 miles N. w. of Toronto. The harbor is one of the best on Lake Huron, and there is a good grain and iumber trade, also varied manufactures. The scenery is fine and it is a popular summer resort. Pop. (1911) 12.558.

Owhyhee (ō-wī'hē), the same as Hawaii. See Sandwich Isl-

Owlglass, or Howleglass. See Eulen-

representative of a peculiar group of the or the hollows of trees; and in these situparrot family, is a large bird, a native ations the nests are constructed. They of the South Pacific Islands, and espectant in size, the smailest not beially of New Zealand. In aspect and larger than a thrush. In their distance in nocturnal habits it resembles the owl. It feeds on roots, which it digs out of the earth with its hooked beak. It seldom flies; it is generally to be seen resting in hollow stumps and logs, and is said to hihernate in caves. said to hihernate in caves.

Owls (oulz), a group of birds forming a well defined family (Strigidæ), which in itself represents the Nocturnal Section of the order of Raptores or Birds of Prey. The head is large and well covered with feathers, part of which are generally arranged around the eyes in circular discs, and in some species form the head. The heak is short, strongly curved and hooked. The ears are generally of large size, prominent, and in many cases provided with a kind of fleshy valve or lid, and their sense of hearing is exceedingly acute. The eyes are very prominent and full, and project forwards, the pupils being especially well developed—a structure enabling the owls to see well at dusk or in the dark. The plumage is of soft downy character, rendering their flight almost noiseless. The tarsi are feathered, generally to the very hase of the claws, but some forms, especially those of fish-catching hahits, have the toes and even the tarsi bare. The toes are

Barn-owl (Strix flammea).

backwards at wili, and the feet thus converted into hand-like or prehensile or-gans. In habits most species of owls are nocturnal, flying about during the night, and preying upon the smaller quadrupeds, nocturnal insects, and upon the smaller

Long-eared Owl (Asio otus),

group. The common white or barn owl (Strix flammea) is the owl which has the greatest geographical range, inhabit-The genus Asio contains the so-called horned owis, distinguished hy elongated horn-like tufts of feathers on the head. The long-eared owl (Asio otus or Otus vulgāris) appears to be common to hoth Europe and America. It inhabits woods arranged three forwards and one hack. Europe and America. It inhahits woods. wards; but the outer toe can be turned The short-eared owl (Asio accipitrinus or Otus brachyōtus) frequents heaths, moors, and the open country generally to the exclusion of woods. It has an enormous geographical range. The eagle owl (Bubo ignāvus) occurs in Norway, Sweden and Lapland, and over the continent of Europe to the Mediterranean. A similar species (B. Virginiānus) extends over the whole of North America. Owis of diurnoi habits are the hawk owl (Supplemental of diurnoi habits are the diurnoi ha of diurnai hahits are the hawk owl (Surnia) and the snowy owl (Nyctea). The hawk owi mostly inhabits the Arctic regions, but migrates southwards in winter, as does the snowy owl, which is remarkable for its large size and snowy piumage. The little owl (Carine noctua), the hird of Pallas Athena, is spread throughout the greater part of Europe. One of the most remarkable of owls is the burrowing owi (Athena cunicularia) of the United States and the West Indies, which inhahits the burrows of the marmots (which see), or prairie-dogs.

Owosso (ō-wos'sō), a city of Shiawasbirds. Mice in particular form a large see County, Michigan, on Shipart of their food. During the day they awassee River, which affords good water inhabit the crevices of rocks, the nooks power. It is 28 miles N. E. of Lansing. and crannies of oid or ruined buildings, It is the trade center of a wide farm. e-s-ly

Ox (oks), the general name of certain well-known ruminant quadrupeds, suhfamily Bovids (Cavicornia). The characters are: the horns are hollow, supported on a hony core, and curved supported on a hony core, and curved outward in the form of crescents; there are eight incisor teeth in the under jaw, hut none in the upper; there are no canines or dog-teeth; the naked muffle is hroad. The species are Bos Taurus, or common ox; B. Urus, aurochs, or bison of Europe; B. Bison, or huffalo of North America; B. Bubalus, or proper huffalo of the eastern continent; B. caffer, or Cape huffalo; B. grunniens, or yak of Thibet, etc. (See Bison, Buffalo, Yak, etc.) The common ox is one of the most valuable of our domestic animals. Its flesh is the principal article of animal food; and there is scarcely any part of the animal that is not useful to mankind; the skin, the horns, the hones, the hlood, the hair, and the very refuse of all these, have their separate uses. Having heen are eight incisor teeth in the curved ceptibly acid to the taste. Oxalic acid to have their separate uses. Having heen specially domesticated hy man from a stock which it is probably impossible to trace, the result has heen the formation the system in the system in the system in the system is the presence of crystallized oxalate of lime in

sometimes with potassium or sodium, at other times with calcium, in wood-sorrel (Oxalis Aoetosella) and other plants; and also in the animal hody, especially in and also in the animal hody, especially in as chancellor of the kingdom and one of urine, in urinary deposits, and in calculi. Many processes of oxidation of organic bodies produce this substance. Thus sugar, starch, cellulose, etc., yield oxalic acid when fused with caustic potash, or when treated with strong nitric ash, or when treated with strong nitric acid. Saw-dust is very much used for producing the acid. Oxalic acid has the formula CaHsO4; it is a solid substance, which crystallizes in four-sided prisms. which crystallizes in four-sided prisms, the sides of which are alternately broad

ing region, and has varied manufactures, and narrow, and the summits dihedral. They are efflorescent in dry air, but attract a little humidity if it be damp.

Ox (oks), the general name of certain They are soluhie in water, and their acidity is so great that, when dissolved in 3600 times their weight of water, the solution reddens litmus paper, and is perceptibly acid to the taste. Oxalic acid is

trace, the result has heen the formation of very many hreeds, races, or permanent varieties, some of which are vaiued for their flesh and hides, some for the richness and ahundance of their milk, while others are in great repute hoth for beef and milk. The name ox is used also in a more restricted sense to signify the male of the hovine genus (Bos Taurus) castrated, and full-grown, or nearly so. The young castrated male is called a steer. He is called an ox-calf or bull-calf until he is a year old, and a steer until he is four years old. The same animal not castrated is called a bull. Besides the European ox there are several other varieties, as the Indian or zehu, with a hump on its back, the Ahyssinian, Madagascar and South African.

Oxenstjerna (oks-en-shér'na), Axel, count, a Swed is he urine.

Oxenstjerna (oks-en-shér'na), Axel, count, a Swed is he statesman, born in 1583, studied theology at Rostock, Wittenberg and Jena; and in 1602, after visiting most of the German courts, returned to Sweden and entered the service of Charles IX. In 1608 he was admitted into the senate; and on the accession of Gustavus Adolphus, in 1611, he was made chancellor. He accompanied Gustavus Adolphus during his campaigns in Germany, taking charge of ail diplomatic affairs; and on the fail of his master at Lützen (1632) he was recognized, at a congress assembled at Heilhronn, as the head of the Protestant League. This league was held together and supported solely by his influence and wisdom, and in 1636 he returned to Sweden after an absence of ten other times with calcium, in wood-sorrel years, laid down his extraordinary powers, and took his seat in the senate

Oxford (oks'ferd), a city and county borough in England, capital of

Oxford county, and seat of one of the 500 feet, and abounds in beautifully premost celebrated universities in the world, served fossil shells of belemnites, ammois situated about 50 miles w. N. w. of nites, etc. London, on a gentle acclivity between the Oxford University, one of the two Cherwell and the Thames, here called the Isls. Oxford, as a city of towers and universities, established in the middle spires, of fine collegiate buildings old and ages, and situated in the city of Oxford new, of gardens, groves and avenues of trees, is unique in England. The oldest building is the castle keep, built in the time of William the Conqueror and still all hut entire. Of the numerous churches, the first place is due to the cathedral, hegun about 1160, and chiefly in the late Norman style. Of the university hulld-lngs the most remarkable are Christ's Church, the largest and grandest of all the colleges, with a fine quadrangle and other huildings, a nohle avenue of trees (the Broad Walk), the cathedral serving as its chapel; Magdalen College, considered to he the most beautiful and complete of all; Balliol College, with a modern front (1867-69) and a modern Gothle chapel; Brasenose College; and New College (more than 500 years old), largely consisting of the original huildings, and especially noted for use ters; hesides the Sheldonian Theater, public hall of the university; the new examination schools, new museum, Bodleian Llbrary, Radcliffe Library, and other buildings belonging to the university. (See Oxford University.) Oxford depends mostly on the university, and on its attractions as a place of residence. Pop. 53,049.—The county is hounded by Northampton, Warwick, hounded by Northampton, Warwick, and Buckingham; Colleges In not being corporate bodies.

Berks and Buckingham; College 16. Jesus College 17. Wadham College 18. Pembroke College 17. Wadham College 18. Pembroke College 17. Wadham College 18. Pembroke College 18. Pem five-sixths are under crops or in grass. The south part of the county presents alternations of hill and dale, the former, particularly the Chiltern Hills, heing heautifully varied with fine woods, tracts of arable land, and open sheep downs. The central parts are more level, and are also adorned by numerous woods. Much of the soil is well adapted for the growth of green crops and barley. The grass-land are also rich and extensive dairy lands are also rich and extensive, dairy husbandry is largely practiced, and great quantities of hutter are made. Manufactures are of little Importance. The principal rivers are the Thames or Isls, Thame, Evenlode, Cherwell and Windrush. Pop. 199.277.

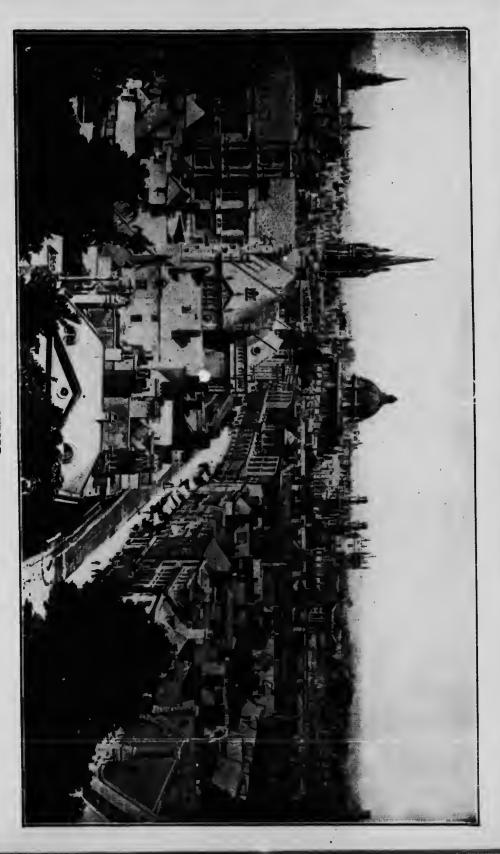

Oxford, Lord. See Harley.

Oxford,

ages, and situated in the city of Oxford (which see). Like Cambridge it em-(which see). Like Cambridge it embraces a number of colleges forming distinct corporations, of which the oldest is believed to be University College, dating from 1253, though Merton College was the first to adopt the collegiate system proper. The following list contains the name of the colleges, with the time when each was founded:—

degrees in music. Any B.A. may proceed to the degree of M.A. without further examination or exercise, in the twentyseventh term from his matriculation, provided he has kept his name on the books of some college or hall, or upon the register of unattached students for a period of twenty-six terms. In the case of all other degrees (except honorary oues) some examination or exercise is necessome examination of exercise is necessary. Women were admitted to the examinations in 1884, but do not receive degrees. Three colleges for women have been established; Somerville Hall, Lady Margaret Hall and St. Hugh's Hall. Mansfield College, for the education of meu for the uonconformist ministry, was established in 1888. The total number of students is about 3000. The total number of professorships, etc., in the university is about fifty. The total auuual revenues are between \$2,000,000 and \$2,500,000. The institutions counected with the university include: the Bodleian Library (the second in the kingdom), the building structures, hridges, etc. It makes Ashmolean Museum, Botanic Gardens, a clean cut of little width. See Acetylene. Taylor Iustitution for modern lauguages, University Museum, Radcliffe Library, Observatory and Indian Institute. Affilder Vaccinaces, commonly known as the lated Colleges are: St. David's College, cranberry (which see). iated Colleges are: St. David's College, Lampeter (1880); University College, Nottingham (1882); and Firth College, Sheffield (1886).

Oxides (oka'idz), the compounds of oxygen with one other element;

the primrose and cowslip.

W. through a broad valley and N.W. through the deserts of western Turkestan to the southern extremity of the Sea of Aral. The Oxus for a considerable distance forms the boundary between Afghanistan and Bokhara. Total course, 1300 miles.

Oxy-acetylene Flame is produced by the mixture of oxygen and acetylene gas. The highest furnace temperature, with solid fuel, is about 3000° F. The oxy-hydrogen flame gives a maximum of nearly 4000° F. The oxy-acetylene hlowpipe yields a temperature of 6300° F. An envelope of hydrogen, which at the great temperature generated does not combine with the oxygen, surrounds the flame of the torch. The oxy-acetylene flame is employed for various purposes where a great heat is required, such as welding, caulking, leaks, etc. It is also extensively used for cutting metal. It has been found useful in

Oxygen (oks'i-jeu), a gas which is the most widely distributed of all the elements. Eight-ninths hy weight of water, one-fourth of air, and about oue-half of silica, chalk and alumina consist of oxygen. It enters into the constitutiou of nearly all the important rocks and minerals; it exists in the tissues and hlood of animals; without it we could not live, and by its agency disintegration of Oxides oxygen with one other elements of thus hydrogen oxide, oxygen and of nearly all the map of hydrogen oxide, oxygen and of nearly all the map of hydrogen oxide, oxygen and of nearly all the map of hydrogen oxide, oxygen and of nearly all the map of nearly all two oxides of the same element exist, the name of that which contains the greater death. All processes of respiration are proportion of oxygen ends in ic, while the carried on through the agency of oxygen, all ordinary processes of hurning and of the oxide containing less oxygen all ordinary processes of hurning and of the oxide, and NrOs, called ns. or producing light are possible only in the nitrous oxide, and NrOs, called ns. or producing light are possible only in the nitrous oxide. If there he several oxides they may be distinguished by such prefixes as hypo, per, etc., or hy the more exact prefixes mono, di, tri, tetra, etc. For the different oxides see the articles on the individual chemical elements. onierent oxides see the articles on the stance which exists in common air, and individual chemical elements.

Oxlip (oks'lip; Primüls elatior), a osys, acid, and root gen to produce be kind of primrose, so called from some resemblance in the flowers to the the active constituent in all acids; modlips of au ox, and intermediate hetween ern experiments, however, prove that it is not necessary in all cause to acidity or is not necessary in all cases to acidity or Ox-peckers (oks'pek-ers), a name for combustiou. Oxygeu is invisible, inodorcertain African hirds, also kuown as Beef-esters (which see).

Oxus, Amoo, Amoo-Dama. or Jihoon, a large river in Central Asia, which has its sources between the Thian to air as 1,00; it is soluble in water to Shan and Hindu Kush ranges in the elevated region known as the Pamir, flows volumes of water at ordinary tempera-

tures. Oxygen was liquefied for the first Oxyrhynchus (-rin'kus), a cele-time in 1877 by the application of intense time in 1877 by the application of intense cold and pressure; it has since then been solidified. It is possessed of very marked chemical activity, having a powerful attraction for most of the simple substances, the act of combining with which is called oxidation. Some substances when hrought into contact with this gas when hrought into contact with this gas on the summits of the White Mountains, unite with it so violently as to produce light and heat; in other cases oxidation is much more gradual, as in the rusting of metals. The presence of oxygen is, so oxygen. The oxygalts form a very iminto the lungs a supply of oxygen; this oxides, hydrates, chlorates, carbonates, oxygen is carried by the blood to the va-borates, silicates, etc.

rious parts of the body, and there de-Oxysulphide (oks-i-sul'fid), a composited to aid in the functions of the orposited to aid in the functions of the organs; the deoxygenated blood returns to the lungs, and again receives a fresh supply of the necessary oxygen. Trees and plants evolve oxygen, which is formed hy the decomposition of the carbonic acid absorbed by the leaves from the atmosphere. This is due to the action of the sun's rays and the chlorophyll or green coloring matter of the leaves. When oxygen unites with another element the product is called an oxide. The oxides that victorious campaign. He received form a most important series of chemical compounds (see Oxides and the articles on the various chemical elements). The power of supporting combustion is one of the leading features of oxygen, and until the discovery of oxygen no well-founded at the same time with the Court of explanation of the facts of combustion Quarter Sessions, and by the same judges, was known. Oxygen exists in another and which have power, as the terms imform different from that of the ordinary ply, to hear and determine all treasons, gas; in this form it exhibits many marked peculiarities. See Oxone.

Oxyhydrogen Light (oksi-hi'dro-

of metals. The presence of oxygen is, so oxygen. The oxygalts form a very imfar as we know, one of the physical conportant series of substances; among them ditions of life. In inspiring we receive are included all the sulphates, nitrates,

See Blowpipe.

Oxyhydrogen Light (oksi - hi'drojen), or LimeMollusca, and a near ally of the mussels, etc. It belongs to the genus Ostræa,
is ignited and directed on a solid piece of
lime. It is commonly used in magic lantern exhibitions; and the two gases are
kept in separate air-tight hags, or iron
cylinders into which the gas is forced
under very high pressure. From these receptacles tuhes conduct the gases to meet
in a common jet.

Oxyhydrogen Light (oksi - hi'drojen), or LimeMollusca, and a near ally of the mussels, etc. It belongs to the genus Ostræa,
family Ostræidæ, the members of which
are distinguished by the possession of an
inequivalve shell, the one half or valve
may be free, or attached to fixed objects,
or may be simply imbedded in the mnd.
The foot is small and rudimentary, or
may be wanting. A single (adductor)
muscle for closing the shell is developed.
The most common American species is Oxyhydrogen Microscope,

The most common American species is Ostrae virginians, which is found on the Malantic coast from the Gulf of St. Lawmagnified image of it thrown on a screen.

Oxymoron (oksi-mo'ron), in r hetoric, a figure in which an epithet of quite contrary signification is added to a word; as, cruel kindness

hood thus formed above and at the sides of the palps is called the cucullus.

P. Palps exposed, a part of the cucullus on the right being cut away.

pd. Pedal muscle of right side, which is also inserted upon the shell of the same side.

pg. Parieto-splanchnic ganglion.

a. Genital opening of the right side.

ag. Supraccophageal ganglion.

v. Vent or anus.

v. Vent or anus.
v. Ventricle of the heart, which is dilated, or in the condition of diastole.

xxx. Areas at the edge of the inner surface of the shell, where intruded mud has been inclosed by a thin lamine of shelly matter deposited by the

and then attaches itself to some object. In about three years it attains its full growth. The oysters congregate together in their attached-state to form large submarine tracts or 'oyster-beds,' as they are termed.

The United States and France are the chief seats of the oyster industry. In the United States the natural oyster-beds are

still a source of great wealth, while in Ozark Mountains (6'zhrk), a chain Europe the native beds have long since Europe the native beds have long since been practically destroyed. Long Island Sound and Chesapeake Bay are leading fields in the oyster industry, and the canning and shipping of oysters an important part of the industries of Baltimore. Large quantities of American oysters are now sent to Enrope; and the American are generally larger and better flavored than the Enropean. In Enrope the oyster-fishery and becoming oyster culture, and this is practiced to some extent in the United States. The most elaborate system of oyster culture is that practiced at Arcachon in France and on the island of Hayling, near Portsmouth, in England.

UZERK MOUNTAINS of low mountains, intersecting in a sonthwest direction the States of Missouri and Arkan-sas; helght about 1400 feet.

OZIETI (Ö-5-3-16), a town in Sardinla, province of Bassari, the seat of OZOKETITE (Ö-5-5-06), a town in Sardinla, province of Sassari, the seat of OZOKETITE (Ö-5-5-06), a town in Sardinla, province of Sassari, the seat of OZOKETITE (Ö-5-5-06), a town in Sardinla, province of Sassari, the seat of OZOKETITE (Ö-5-5-06), a town in Sardinla, province of Sassari, the seat of OZOKETITE (Ö-5-5-06), a town in Sardinla, province of Sassari, the seat of OZOKETITE (Ö-5-5-06), a town in Sardinla, province of Sassari, the seat of OZOKETITE (Ö-5-5-06), a town in Sardinla, province of Sassari, the seat of OZOKETITE (Ö-5-5-06), a town in Sardinla, province of Sassari, the seat of OZOKETITE (Ö-5-5-06), a town in Sardinla, province of Sassari, the seat of OZOKETITE (Ö-5-5-06), a town in Sardinla, province of Sassari, the seat of OZOKETITE (Ö-5-5-06), a town in Sardinla, province of Sassari, the seat of OZOKETITE (Ö-5-5-06), a town in Sardinla, province of Sassari, the seat of OZOKETITE (Ö-5-5-06), a town in Sardinla, province of Sassari, the seat of OZOKETITE (Ö-5-5-06), a town in Sardinla, province of Sassari, the seat of OZOKETITE (Ö-5-5-06), a town in Sardinla, province of Sassari, the seat of OZOKETITE (Ö-5-5-06), a town in Sardinla, province of Sassari, the seat of OZO

Oyster Bay, a residence place and summer resort in Nassan Co., New York, on an inlet of Long Island Sound, about 30 miles eastward from Now York City Den Alexand from New York City. Pop. 4000. Ex-President Roosevelt resides here.

Oyster-catcher (Hæma opus ostra-legus), a bird be-longing to the order of Grallatores or Wading Birds, nearly allied to the plovers (Charadriidæ), and popularly known as the 'sea-pie.' It is distinguished by its long, thin, wedge-shaped, orange-colored bill, and its black and white pinmage. It is a permanent resident in Britain, and frequents the sea-coast, where It feeds on Mollnsca.

Oza. 18 (5-ze'na), a fetid ulcer in the nostril, which often follows scarlatina, or even a severe cold, but which may be a symptom of cancer or other similar disease.

of Hayling, near Portsmouth, in England. drogen in the proportion of 86 per cent. In the breeding season the young oysters of the former to 14 per cent. of the latter. are collected npon tiles or hardles, and When parified it forms a hard paraffin, laid down in artificial ponds or tronghs, from which excellent candles are mannifectured. It is used to some extent as the market.

an adulterant of bees'-wax.

Ozone (ô'zôn), a modified—technically an allotropio—form of oxygen.

Two volumes of ozone contain three volumes of oxygen condensed to two volumes of oxygen condensed to two volumes; the formula of ozone is there-fore Os. Ozone exists in small quantities in pure country alr, and is produced lu various ways. When an electric machine is set in operation a peculiar smell may be perceived; after a discharge of light-ning the same smell is perceptible. The ning the same smell is perceptible. The substance which manifests this odor is ozone (from Greek oző, I smell), and in ozone (from Greek oző, I smell), and in each of those cases ozone is produced.

Ozone acts as a very powerful oxidizer;

for this reason it is of great service in the atmosphere, as it so readily oxidizes, and thus renderr comparatively nnhurtful, animal effluvia and other obnoxious products of animal or vegetable decomposition. Ozone rapidly bleaches indigo, converting it into a white substance called isatin, which contains more oxygen than the indigo itself. than the indigo itself.

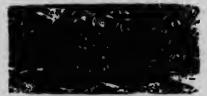

resents a sound produced by closely compressing the lips till the breath is collected,

and then letting it issue. See B.

n 1-

> (pub'na), chief town of district Pabna river Ichamati; contains the usuai pub-lic buildings and a jarge indigo factory. Pop. 18.424.-The district forms the southeast corner of the Rajshahi Division, and is bordered on the east by the Brahmaputra, and on its southwest frontier hy the Ganges. Area, 1847 square miles. Pop. 1,420,461.

> Paca (pa'ka; Calogenys), a genus of rodents allied to the capybaras, cavies, and agouts. The common paca (C. paca) is one of the largest of the rodents, being about 2 feet long and about 1 foot high. In form it is thick and clumps, and the tail is made and clumps, and the tail is made and clumps. and clumsy, and the tail is rudlmentary.

Common Paca (Calogenys paca).

In habits the pacas are chiefly nocturnal and herhivorous. They excavate burrows, run swiftly, and swlm and dive with facility. They are found in the eastern portion of South America, from Paraguay to Surinam. The flesh is said

to be savory.

Pacay (pa-kā'), a Peruvian tree (Pro-gumlnosæ, suborder Mimosæ. The pure white, flaky matter in which the seeds are embedded is used as food, and the pods, which are nearly two feet long, serve for feeding cattle. The mesquite (which see) belongs to the same genus. Pace (pas), a measure of length, used as a unit for long distances. It is derived from the Latin passus, which was, however, a different measure, the

P, the sixteenth letter and twelfth con- Latin passus being measured from the sonant in the English alphabet. It mark of the heel of one foot to the heel is one of the mutes and labials, and rep- of the same foot when it next touched the ground, thus stretching over two steps; while the English pace is meas-ured from heel to heel in a single step. The Latin pace was somewhat less than 5 feet; the English and American military pace at the ardinary marching rate is 2½ feet, and at double quick time 3 feet.

Pacha. See Pasha.

Pacheco (på-chā'kō), Francisco, a spanish painter, born at Seville in 1571; died in 1654. He was the pupil of Luis Fernandez, and the instruc-tor of Velasquez, who became his son-in-law. In his own time he attained great popularity. Of his numerous por-traits those of his wife and of Cervantes were the most admired. Pacheco was the author of a treatise on the Art of Painting.

Pachira (pa-ki'ra), a genus of trop-ical American trees allied to the baobab-tree. The iargest flowered species, P. macrantha, found in Brazil, attains a height of 100 feet, and has flowers 15 inches iong. The plants are familiar in our hothouses under the name

of Carolinea.

Pachomius (pa-kō'mi-us), a scholar of St. Antony, was the first who introduced, instead of the free hermit life, the regular association of monks living in cloisters, having founded one of them on Tabenna, an island of the Nile, about 340 A.D. He was also the founder of the first nunnery, and at his death is said to have had the oversight of above 7000 monks and nuns.

Pachuca (pa-chö'ka), a town of Mex-ico, capitni of the state Hidalgo, in a rich silver-mining region, about 8200 feet above the sea. Pop.

37,487.

Pachydermata (pak-i-der'ma-ta), the name formerly applied to the division or order of Mammalia, including the elephants, taplrs, hippopotamus, rhinoceros, swine, and hyrax—ail of which forms were dis-

tinguished by their thick skin, by their turn the uniformity of atmospheric presentations are sessing more than one hoof on each leg. The group is now divided among the various suborders of the Unguista. See The southeast trade-wind, on the other Umpulata.

Pachyglossæ (pak-i-gios'sē), a section of saurian reptiles having a thick, fleshy tongue, convex, with a slight nick at the end. It includes the iguanas and agamas.

Pachyrhizus (pak-i-ri'sus), a genus of tropical leguminous plants common to both hemispheres. P. angulatus has fleshy roots of great length and thickness, which are used in times of scarcity as an article of diet.

Pacific Ocean (pa sif'ik; originally designated the South Sea), that immense expanse of water which extends between the North and South American continents and Asia and Australia. It is the largest of the oceans, exceeding in compass the whoie of the four continents taken together, and occupying more than a fourth part of the occupying more than a fourth part of the earth's area, and fuily one-haif of its water surface. On the west it extends to the Indian Ocean, and has several more or less distinct seas connected with it—the China Sea, Yeilow Sea, Sea of Japan, Sea of Okhotsk, etc., on the north it communicates with the Arctic Ocean by Reiging Straits, on the south it is by Beliring Straits, on the south it is bounded by the Antarctic Ocean, and on the east it joins the Atlantic at Cone Horn. Within this enormous circum-ference it includes the numerous islands composing the groups of Australasia and Polynesia, and those adjoining America and Asia. The average depth of the Pacific appears to be greater than that of the Atlantic, and its bed more uniform. Recent soundings to the south of the Friendly Islands give a depth of from 4295 to 4430 fathoms (about five miles). The deepest soundings known are 4475 fathoms s. of the Ladrone Islands, and 4655 fathoms N.E. of Japan. (See Ocean.) In the Pacific the tides never attain the maximum heights for which some parts of the Atiantic and Indian oceans are celebrated. On ail the west coast of America the rise of the tide is usually below 10 feet, and only in the Bay of Panama does it vary from 13 feet to 15 feet. The trade-winds of the Pacific are not so regular in their limits as those of the Atlantic, and this imits as those of the Atlantic, and this irregularity extends over a much where region in the case of the southeast tradewind than in the case of the northeast. The cause of this is the greater number of islands in the South Pacific Ocean, which, especially in the hot season, dis-

sure by local condensations. The north-east trade-wind remains the whole year through within the northern hemisphere. The southeast trade-wind, on the other hand, advances beyond the equator, both in summer and winter, still preserving its original direction. In the region stretching from New Guinea and the Solomon Islands southeastwards, there are no regular winds. The ropes of the two tradeuiar winds. The zones of the two tradewinds are separated by regions of caims and of light winds, the limits of which vary, of course, with the varying limits of these zones. In the Chinese seas the terribic typhoon occasionally rages, and terrible typhoon occasionally rages, and may occur at any season of the year. As to the chief currents of the Pacific, see Currents, Marine. The Portuguese were the first Europeans who entered the Pacific, which they did from the east. Baiboa, in 1513, discovered it from the summit of the mountains which traverse the Isthmus of Darien. Magelian salied across it from west to east in 1520-21. across it from west to east in 1520-21. Drake, Tasman, Behring, Anson, Byron, Bougainville, Cook, Vancouver, Lapérouse, and others, traversed it in different directions in the seventeenth and eighteenth centuries.

Pacinian Corpuscles (pa-sin'i-an), in anatomy, minute ovai bodies appended to the extremities of certain nerves, es-pecially those of the hands and feet, probably connected with the sense of Packer (pak'er), Asa, philanthropist, was born at Groton, Connecticut in 1806; died in 1879. He was the projector of the Lehigh Valley Raliroad and served in the Pennsylvania Legisiature and in Congress. He is best known from his iiberal endowment of Lehigh University, at Bethiehem, Pa.

Packard (pak'ard), Alpheus Spring, zoologist, was born at Brunswick, Maine, in 1839; died in 1905. He became an assistant surgeon in the army, a lecturer on natural history, and in 1873 professor of zoology and geology in Brown University. He was also attached to state and national scientific surveys and to the United States Entomological Commission. He wrote Guide to the Study of Insects, Outlines of Comparative Zoology, Half-hours With Insects, etc.

a

Pack-ice, in the Arctic seas, an immense assemblage of large floating pieces of ice. When the pieces are in contact the pack is said to be closed; when they do not touch, though very near each other, it is said to be

Paco. See Llama.

Pactolus (pak-to'lus), in ancient times the name of a small river of Lydia, celebrated for its golden sand. It is now called Scrabet.

Pacuvius (pa-kû'vl-us), Mancus, an ancient Roman tragic poet, born at Brundusium in 219 3.0., passed the greater part of his life at Rome, where he became famous both for his

tlement and a European quarter. Pop.

12,000.

common oar, and is used without any fulcrum on the edge of the boat. The boatmen ait with their faces looking in the direction in which the boat moves, and propel the boat by dipping the blade of the paddle in the water and pushing backwards. When there is only one boatman a paddle with two biades connected by a common handle is used.

other great rivers of that continent.

The paddie-wheel, formerly common, is now almost entirely confined to river-boats; in ocean-going steamers, and commonly in river boats, it has given place to the

Paddy (pad'i), a Maiayan word universally adopted in the East Indies for rice in the husk, whether in

the field or rice in the huse, whether in the field or gathered.

Padella (på-del'å; Italian, a fryingpan), a shallow vissei used in illuminations. A number of them are partially filled with some kind of grease, in the middle of which is placed a wick, and are then piaced so as to bring out when lighted the outlines of a building. where he became famous both for his poetry and his paintings, retired to Tarentum during his last years, and died at the age of ninety in 129 n.c. Only fragments of his tragedies exist.

Padang (pi-ding'), a town in Sumarra, capital of a residency of the same name, and seat of the Dutch government of the West Coast, is the chief market in Sumarra for coffee and gold. The town embraces a Chinese settlement and a European quarter. Pop. and was placed under the care of a teacher when he was seven years of age. In 1872 he went to Warsaw, where he learned harmony and counterpoint from Rogusk', and later pursued this branch of study under Friedrich Kiel of Berlin. From Paddle (pad'1), a kind of oar used in 1878 to 1884 he was a teacher, afterwards propelling and steering canoes adopting the career of a virtuoso, under and boats by a vertical motion. It is shorter and broader in the blade than the formal debut in Vienna in 1887. In 1889 adopting the career of a virtuoso, under the tutelage of Leschetizky, making his formal début in Vienna in 1887. In 1889 he made his first appearance before a Parislan audience and created a furore by crum on the edge of the boat. The boatmen sit with their faces looking in the direction in which the boat moves, and propel the boat by dipping the blade of the paddle in the water and pushing backwards. When there is only one boatman a paddle with two biades connected by a common handle is used.

Paddlefish, the Polyodon spatula, a common handle is used.

Paddlefish, large fish alled to the sturgeons, so named from the elongated, broad snout with which it stirs up the soft muddy bottom in search of food. It soft muddy bottom in search of food. It often reaches a length of from 5 to 6 feet. The paddlefishes are exclusively North American in their distribution, being found in the Mississippi, Ohio, and other great rivers of that continent.

tt is a very ancient piace, and furnished thips for the slege of Calais in 1346. Pop. (1911) 2480. Padua (pad'û &: Italian, Padövs; Latin, Patavium), a city in Italy, capital of the province of the same name, 22 miles west of Venice, on a low flat on the Bacchiglione, which flows through it in several branches and is through it in several branches and is crossed by numerous hridges. The houses are lofty, the streets narrow, and several of these, as well as some of the squares, are lined with medlæval arcades. Of recent times the town has been limof recent times the town has been Improved by the opening up of new and the widening of old streets. The buildings most deserving of notice are the town-house or Paiazzo della Ragione, an immense pile erected between 1172 and 1219, extending along the marketplace, standing upon open arches, with a lofty roof, said to be the largest in the world unsupported by pillars, and containing a large hall, adorned with mural paintings; the large mosque-like Church of St. Antonio, called Il Santo, begun about the a large hall, adorned with mural paintings; the large mosque-like Church of St. Antonio, called Il Santo, begun about the year 1230 and finished in the following century; the Church of the Annunziata, the wails of which are covered with well-preserved paintings by Giotto, etc. The nniversity, said to have been founded by the Emperor Frederick II in 1238, was long renowned as the chief seat of law and medicine in Italy; and very many names famous in learning and art are connected with Padua, such as Gailleo, Scaliger, Tasso, Glotto, Lippo Lippl, and Donatello. Padua is the see of bishop. Under the Romans it was a fiourishing mnnicipal town, and its history follows the course of events common to mest of the cities of Italy on the decline and fall of the Roman Empire. Later it fell under the domination of Venice, whose fortunes it followed until 1866, when, with Venice, it became part of the kingdom of Italy. Italy 100 Mil 230 The provwith Venice, it became part of the kingdom of Italy. Pop. 96,230.—The province of Padua has an area of 854 square miles, and pop. of 434,322.

large quantities of tobacco, grain, live stock, etc. There are large railroad shops and various other industries, I'op. 22,760.

Padula (på-dö'lå), a town of Sonth Italy, province of Salerno.

the well-preserved ruins of two Doric temples of extreme interest. The city was settled by a Greek colony from Sybaris, B.C. 524.

Pacz (på-eth'), José Antonio, one of the founders of South American independence, born of Indian parents near Acarlgua, Venezuela, in 1790; entered the patriot army in 1810, rose to general of division in 1819, and took a leading part in the battle of Carabobo, which secured the independence of Calombia in 1821 in the battle of Carabobo, which secured the independence of Colombia in 1821. At first he acted in concert with Bollvar, but in 1829 he placed himself at the head of the revolution which culminated in the independence of Venezuela, of which he was the first president. He died in exile at New York in 1873.

Paganini (på-gå-në'në), Niccolo, a celebrated violinist, born in 1784 at Genoa: died at Nice in 1840.

1784 at Genoa; dled at Nice in 1840. His father, who had some knowledge of music, and discerned the talents of his son, put him at a very early age under the best masters (Costa, Rolla, Paer) to learn music, and particularly the violin. With this instrument his progress was so rapid that at the age of nine he was able to perform in public at Genoa. His first engagement was in 1805, at Lucca, where he found a patroness in Princess Eliza, Bonaparte's sister. In 1813 he left Lucca for Milan, and in 1828 visited Vienna. From this period his fame was world-wide. The wonder which he ex-Paducah (pa-dū'kà), county seat of of his execution and his extraordinary Ohio and Tennessee Rivers, 12 miles below the Cumberland and 35 miles above the Mississippl. It is the second largest jobbing center in the State, and ships he made a musical tour through France and Great Britain, realizing immense cited was caused not merely by the charm and Great Britain, realizing immense gains. Pain (pan), a distressing sensation of the body, resulting from particular impressions made on the extremities of the nerves and transmitted to the brain. Physical pain may be produced by various causes - by injuries to the organs in which the pain is iocaiized; by a pecuiiar state of the brain and nerves; or by the sympathetic affection of an organ at some distance from that which has been injured. It is often of great service in aiding the physician at arriving at a correct diagnosis of a disease, and still more obviously in frequently being the only intimation which a patient has of

Paine (pān), Robert Treat, statesman, was born at Boston, Massachusetts, in 1731. He was a delegate to the Provincial and Continental congresses and a signer of the Declaration of Independence. He held the offices of attorney general of Massachusetts and judge of the Supreme Court of that state, displaying fine ability as a judge. He died in 1814.—His son, of the same name (1773-1811), engaged in literary pursuits and is best known for his two patriotic songs. Rise, Columbia, and patriotic songs, Rise, Columbia, and

Adams and Liberty.

Paine, ROBERT TREAT, fourth in descent from the above, was born

inhabiting Eastern Asia. The peculiar masked paguma (P. larvatus) has a white streak down the forehead and nose, and a white circle round the eyes, which give it the appearance of wearing an artificial mask.

Pagurus (pa-gū'rus), the genus of Crustaceans to which the hermit or soldier-crabs belong. See Hermit-crab. Paine Association.

Paine, THOMAS, political and delstical cai writer, born in 1737 at Thetford, England. In 1774 he emigrated to America, with a letter from Franklin. Paine threw himself heart and soul into the cause of the colonists, and his namphiet entitled Common and his pamphiet entitled Common Sense, written to recommend the separation of the coionies from Great Britain, and his subsequent periodical called The Crisis, gave him, by their great effect on the public mind, a title to be considered one of the founders of American independence. In 1787 he returned to England, and in answer to Burke's Reflections on the French Revolution wrote his Rights of Man. A prosecution was commenced against him as the author of that work, but while the trial was pending he was chosen member of the national convention for the department of Caiais, and, making his escape, set off for France, where his Rights of Man had gained him great popularity, and arrived there in September, 1792. On the trial of Louis XVI he voted against the sentence of death, proposing his imprisonment during the war and his banishment afterwards. This conduct offended the Jacobins, and towards the ciose of 1793 he was exciuded from the convention, arrested, and committed to prison, where he isy for ten months, escaping the guiliotine by an accident. Just before his confinement he had finished the first part of his work correct diagnosis of a disease, and still had finished the first part of his work more obviously in frequently being the against reveiation, entitled the Age of the fact of there being a disease which demands a remedy.

Painter's Colic. See Lead Poison-

Painting (pant'ing) is the art of representing the external facts of and objects in nature by means of color. A study of the art requires a knowledge of form, animate and inanimate; of perspective; and of light and shade. Considered in relation to the subjects treated, painting may be divided into decorative, historical, portrait, genre (scenes of common or domestic life), landscape (with seascape), architectural, and still life. According to the methods employed in the practice of the art it is termed oil, water-coior, fresco, tempera or distemper, and enamel painting, and an enamel painting, and enamel pain In mosaics, on glass, porcelain, terra cotta, and ivory (this last being called miniature-painting). Decorative works, usually in fresco or tempera, but sometimes in oil, are generally executed upon the parts of a building. For the basis of easel pictures, wood-panels prepared with a coating of size and white were used solely up to the 14th century for both oil and tempera, and are still sparingly em-ployed; but canvas covered with a prim-ing of size and white lead, and tightly nailed over a wooden frame called a 's: tcher,' is now almost universally ad ed for oil-painting. For water-colors paper alone is employed. The tools used by an artist are charcoal, colored crayons, and lead pencils for outline purposes; colors, a palette for holding the same, a paiette knife for mixing them; brushes for laying them on; and an easel with adjustable heights for holding the sames. A wooden manile with more canvas. A wooden manlkin, with mov-able joints, and termed a 'lay-figure,' ls sometimes used on which to arrange cos-tumes and draperies.

The term 'oii-coiors' is employed to denominate colors ground with oil, and water-colors those wherein gum and glycerine have been employed. Both are ground solid, an oll medium being used in the first case and water in the second to thin out the colors when on the palette. Fresco-painting is executed on wet plas-ter. Mosalc work is formed by small cubes of colored glass, called tesserse, fixed in cement; in tempera the colors are mixed with white; in encaustic, wax is the medium employed; and in enamel the colors are fired. Egyptlan, Greek, and colors are fired. Egyptian, Greek, and early Roman paintings were executed in tempera; Byzantine art found its chief expression in mosaics, though tempera panels were executed; and early Christian art, up to and partly including the 14th century, adopted this last method. The

long attributed to the Van Eycks of Bruges (circa 1380-1441), but painting in oil is known to have been practiced at a much earlier period, and it is now gen-erally heid that the invention of the Van Eycks was the discovery of a drylng vehicle with which to mix or thin their colors, in place of the slow-drying oll previously in use. This new vehicle was composed of a thickened linseed-oii mixed with a resinous varnish, and it was its introduction that effected so great a revo-lution in the art of painting. For an account of special methods of painting see articles Fresco-painting, Mosaic, Tempera, Encaustic, Enameling, etc.

History — Egypt and Greece.— The practice of painting extends back to remote ages. It comes first into notice among the Egyptians in the 19th century B.C., the most flourishing period being between 1400 B.C. and 525 B.C. With them the art was the offspring of religion, and was with sculpture, from which it cannot be separated, subordinate to ar-chitecture. The productions are found chiefly on the walls of tombs and temples, but also on mummy-cases and rolls of papyrus. They consist chiefly of the representation of public events, sacrificial observances, and the affairs of everyday life. The work is purely conventional in character, and was executed according to a strict canon of rules under the supervision of the priesthood. Both outline vision of the priesthood. Both outline and color were arbitrarily fixed, the figures and objects being rendered in profile and painted in perfectly pure flat tints, with no light or shade. The colors used are very simple, but the effect is often very harmonious, and with a strong sense of decorative composition. Although art is the natural product of man's mind, and cannot be assigned any particular commencement, it is nevertheparticular commencement, it is nevertheless doubtless that Egyptian art slightly influenced that of Asia Minor, and strongly so that of Greece, in which country the arts attained to the highest excellence. This is proved by the testimony of historians, for no specimens of true Greek paintings save those on vases have come down to us. In Greece, as in Egypt, nainting and sculpture were the Egypt, painting and sculpture were the handmaids of architecture, the friezes, pediments, and statues of the temples beearly Roman paintings were executed in pediments, and statues of the temples betempera; Byzantine art found its chief ing originally colored. The more cele-expression in mosalcs, though tempera panels were executed; and early Christian art, up to and partly issuading the 14th century, adopted this last method. The vehicle employed in mixing the colors was a mixture of gum and white of egg, or amixture of gum and white of egg, or the expressed julce of fig-tree shoots. The introduction of oil-painting was rhasius directed their efforts to the perfecting of an ideal human form. Timanthes, a tragic painter, lived in the next generation; and at the time of Alexander the Great appeared Apelies (350 B.C.), the greatest of all Greek portrait painters, and Protogenes, an animal painter. With the death of these two painters decline set in, and Greek art gave itself up to the pursuit of trifling and unworthy subjects. Greek painting seems to have been, in truth of effect and in light and shade, in no way inferior to work of the present day, although perspective as a science does not seem to have been practiced.

Rome never had in ancient times an art that was indigenous, or produced a painter worthy of note. The conquest of Greece by the Romans brought an influx of Greek artists into Itaiy, and it was with their hands that the principal works of Roman art were produced. A number of specimens of facient paintings have been discovered in the tombs and baths of Rome, at Pompeii, and at other piaces in Italy, chiefly in fresco and mosaic. Judging from these remains, which are known to have been produced when art was in a state of decadence, the ancients would seem to have possessed a great knowledge of the human figure, of animais, and of inanimate nature, and of their uses in art. Their skiii as decorators has scarcely been surpassed. Their coiors were used pure, with a just treatment of light and shade, and the knowledge of perspective shown is true, but limited in extent. During the first three centuries after Christ painting under the new influence of Christianity was practiced secretiy in the catacombs under and around Rome. But with the establishment of Christianity by Constantine as the religion of the state, pagan art received its deathbiow. Christian art was permitted to emerge, and was ailowed to adorn its own churches in its own way. Mosaics, missal paintings, and a few paneis are ali that are left to us of this period. Notwithstanding the efforts made by several of the popes to encourage its growth by withdrawing certain limitations, especially as regards the use of the human figure, art sank lower and lower, until with the flood of barbarism which in the 7th century buried Italian civilization, the art of Christian Rome was practically extinguished.

Byzantium.— Meanwhiie, with the foundation of Byzantium by Constantine in 330 A.D., a Byzantine school of art had been steadily growing up. As to style, it manifested the old Greek ideals modified by Christianity, and had reached its highest point about the time

that Roman art was at its iowest. At Byzantium, art had become Christian sooner and more entirely than at Rome. Like the art of ancient Egypt, however, it had grown, under the strict influence of the priesthood, mechanical and conventional, but was yet strong enough to send artists and teachers through Southern Europe. Their works are still to be seen at Ravenna, in Rome, in l'alermo, and more especially in the church of St. Mark at Venice (tenth century A.D.). All the Byzantine decorations are in mosaic, and are noteworthy for the spiendor of their glided backgrounds and for their grandeur of conception, though the figure drawing is weak, with no attempt at pure beauty. The Byzantine school was thus the immediate parent of the great schools of Italy, and of the Rhenish or old Cologne school in Germany.

or oid Coiogne school in Germany.

Italy, Early Period.— The I talia a painters could not, however, at once free themselves from the Byzantine tradition which compeiled one painter to follow in the steps of his predecessor without referring to nature; and so this style was carried on in Italy by Byzantine artists and their Italian imitators up to the middle of the 13th century. The breaking through of this tradition and the great progress made by the arts in the 13th century form part of a movement which has been termed the Renaissance or Revival, the arts being no longer representative merely, as heretofore, but becoming imitative.

Three cities of Italy, namely, Siena, Pisa, and Florence, share the honors of this revival, each boasting a school and each possessing two or three great names and their consequent followers. The first regenerators were Guido of Siena, Giunta of Pisa, and Margaritone of Arezzo, whose works, though ugly and almost barbarous, yet show a departure from the stiffness of Byzantine tradition. Giovanni Cimabue, born at Florence in 1240, may, however, be said to be the father of modern painting, and was the first fairly to free himself from traditional models; his works and those of his predecessors just named forming the transition from the Byzantine to the modern manner. His appearance marks an era in history, and after him come two painters, the one at Siena and the other at Fiorence, in each of whom appears the power of deriving an impression direct from nature. These were Duccio di Buoninsegna (1260–1320), whose masterpiece is still at Siena, and Giotto (1266–1337), a pupil and protégé of Cimabue, and of whose works examples are still to be seen in Fiorence, at Assisi,

and at Padua. Of these two, Giotto is by far the greater, and his immediate pupils and their successors constituted a school which exercised an influence throughout Italy. The rival school of Slena produced Simone Memmi (1284–1344), but died out owing to its exclusiveness. The works of all the artists of these two schools were executed either in the school of the school fresco or in tempera, and although iacking in chiaroscuro and deficient in perspective, compensated largely for these defects by an earnestness, a devotion, and a spiritual significance which will for ever make the 14th century memorable in the history of art. No other schools worthy of note existed eisewhere in Italy during this century; neither could the Flemish or the German school be said to have had any distinct existence as

With the 15th century came the introduction of oll-painting, and with it an all-round improvement both in knowledge of technics and power of expression. To the earlier half of this century beiong the great masters of religious art, the most noteworthy being Fra Angelico (1387-1455), who worked chiefly in Florence, and whose productions are full of the peculiar religious fervor characteristle of the painter. A knowledge of the exact sciences as applied to art gave an added impulse, and Paolo Uccelli (1396-1475) and Piero della Francesca (1415-92) divide the honor belonging to the perfecting of a system of perspective. The works of Masolino da Panicale (died 1420) show the greatest advance yet made in the direction of chiaroscuro. Masaccio (1401-28), hy his knowledge of the figure and by his treatment of groups with their proper force of light and shade and relief in appropriate surgery became the founder of the roundings, became the founder of the modern style. Andrea Verrochio (1432–88), the master of Leonardo da Vinci, promoted a knowledge of anatomy, and Ghirlandajo (1449-98), the master of Michael Angelo, may also be mentioned, both as a goldsmith and as a painter. These painters all helong to the Florentine school; but other schools were cotine school; but other schools were coexistent, notably that of Padua founded
by Squarclone (1394-1474), whose pupil
was Andrea Mategna (1431-1506), an
artist who takes rank among the greatest masters of painting. The Venetian
school also arose under the influence of
the Bellini, Glovanni (1427-1516) and
his brother Gentile (1429-1507), whose
works, though somewhat hard and somewhat dry in texture, yet in coior anticipate the great works of their pupils.

The Umbrian school produced Pietro Pe-

rugino (1446-1524), a painter of the first rank and the master of Raphaei. The Neapolitan school also began to be heard of. The Italian art work of the 15th century by its unconsciousness and spiritual meaning excelled much of the which was to follow. The latter, thou a carried to the highest pitch of perfection, lost much of the freshness and spontaneity possessed by the art of the earlier

century.

Netherlands, Early Period.—Before
speaking of the 16th century it were well
speaking of the 16th century it were well to look elsewhere in Europe, and especially at the Netherlands, from whence had come the invention of oil painting, had come the invention of oil painting, which so completely revolutionized technical methods. This discovery was made by the brothers Hubert and Jan Van Eyck, of Bruges, about the commencement of the 15th century, and carried to Italy by Antoneilo da Messina (1445-93). The greatest follower of this school was Hans Memling (1450-99), a comparison of whose works with those of his Italian contemporaries shows an excellence of technic and a power of expression not always in favor of the southern artists. Quentin Matsys, of Antwerp, artists. Quentin Matsys, of Antwerp, (1460-1529) should also be mentioned as belonging to this school, a school which further exercised an influence upon that

of Germany, with a result apparent in the next century, and was also the means of founding a school in Holland.

Italy, Germany, 16th Century.— The work of the 16th century is centered as much upon particular men as upon schools. Though many of the painters hereafter named were born in the latter half of the 18th century, their work seen. half of the 15th century, their work separates itself so distinctly from that of their predecessors that it is the custom to consider it as beionging to the latter period. The four great schools were at Florence, Rome, Parma, and Venice, and such furnished from its scholars a painter each furnished from its scholars a painter who was in himself the particular glory of his school. Heading the Florentine comes Leonardo da Vinci (1452–1519), who established himself at Milan, and was celebrated as a painter, scuiptor, architect, and engineer, his chief pupil

(1483-1520), aptly called the prince of painters, who with his pupils and assistants, the chlef among them being Giulio Romano, constitute the Roman achool. Parma contains the work of Correggie (1494-1534), generally known as the head of the Lombard school, an artist unrivaled for grace, and barmony of chiaroscuro. Finally, Venice produced a school supreme in respect of color, and owing such power as it possesses entirely to the influence of the Bellini. The first name in this period is Giorglone (1476-1511); then comes Titian (1477-1576), who takes rank with the great masters of the Florentine and Roman schools; followed by Tintoretto (1512-94) and Paolo Veronese (1532-88), who with Titian stand for all that is greatest in this school. However, it further produced Jacopo Bassano (1510-92), noted as the first to introduce pure landscape into his backgrounds; and Paris Bordone (1500-71), noted for his power in coloring and brilliancy of effect. In the north the Flemish school had become rapidly Italianized, with a result hest seen in the following century. In Germany the influence of the Flemish school had made itself felt, and had produced in Albert Dürer, of Nuremberg, (1471-1528) the most celebrated master of his time north of the Alps. With him are associated Lucas Cranach (1472-1553), Burgkmair (1474-1559), and Albrecht Altdorier (1486-1538).

Italy, Holland, etc., 17th Century.—
The 16th century consummates the great age of modern art, an age that might

Italy, Holland, etc., 17th Century.—
The 16th century consummates the great age of modern art, an age that might justly be said to equal any period of Greek art. With the 17th century came the decline, brought about chiefly hy the slavish imitation of the great painters of the preceding period, and art was only saved from extinction by a reaction headed hy the Caracci. Their school, known as the Eciectle, was founded at Bologna by Ludovico (1555–1619), Agostino (1557–1607), and Annihale (1560–1609). Their principle was to unite a direct study of nature with a study of the excellencies of the great masters. To a certain extent the object was attained, and Guldo Reni (1574–1642), Albani (1578–1660), and Domenichino (1581–1641) best illustrate in their works the results arrived at. Side hy side with this school grew up that of the Naturalists at Naples, founded hy Caravaggio (1569–1609), and having as his pupil Spagnole to (1588–1656), who in turn taught Salvator Rosa (1615–73). Pietro da Cortona (1596–1669), the last of the Roman school, was the epponent of the Eclectic style. With the

later Venetian school, which count Canaletto (1697-1768) and Tiepolo (1693-1770) among its disciples, the art of Italy may be said to have ended. Its seed spread itself and took root in France, and especially in Flanders, where Rubens (1577-1640) had become its greatest exponent, and whose pupils Jordaens (1594-1678) and Vandyck (1599-1641) were the most noteworthy artists of this school. In Holland, however, art had acquired a distinct individuality, first in Franz Hals (1584-1642) and above all in its typical painter Rembrandt (1607-69), both portralt painters distinguished for their portralt groups; also by its landscape and genre painters, of which two classes of snbjects this school is the great exponent. Among its landscape painters are Van de Velde, Ruysdael, Hohbema, and Cuyp; and among its genre painters are Gerard Dow, Breughel, Teniers, and Van Ostade. The Spanish school, which stands alone in the prevailing religious ascetic character of its productions, and which in the preceding centuries had been influenced by Flemish and Italian painters, reached its greatest epoch in this century with Velasquez (1599-1660), one of the greatest of portrait painters, Murillo (1613-80); and with these may be mentloned Zurharan (1598-1662), and Cano (1601-67).

France, 16th-19th Century.—The effect of Italian art in France remains to be

of Italian art in France remains to be noted. The school of France, influenced at first both hy Flemish and by Italian art, finally inclined to the latter, and in the reign of Francis I (1515-47) a school was established at Fontainebleau and called hy that name. Leonardo da Vinci worked in France, and Primaticcio carried on the unfinished work of Rosso (died 1541). Jean Cousin (1501-89) may be called the founder of the French school as opposed to the Italianized version which began with Simon Vouet (1590-1649). The native school was, however, finally overcome by the Italian method. Nicholas Poussin (1594-1665), figure and landscape painter, one of the greatest painters France can claim; Claude Lorraine (1600-82) and Gasper Dughet or Poussin (1613-75), landscapists, are painters who, though born in France, yet worked in Italy, and stand apart from the followers of the then national style; as does also Eustache Lesucur (1617-55), sometimes called the Arench Raphael. This national style was coeval with the court of Louis XIV and representative of it, the chief exponents being Le Brun (1619-90), Mignard (1610-96), Du Fresnoy (1611-65), and Jouvenet (1644-1711). To

continue the history into the 18th century, with France we find a steady deterioration both in technic and morality; the latter phase commenced by Watteau and Lancret, two painters truly French, and consummated by Boucher (1704-70). Greuze (1725-1805) and Vien (1716-1809) were the first to protest against the corrupt influence of Boucher, and were the precursors of the reform, of which David (1748-1825) was the great instigator, a man whose influence made itself felt throughout Europe. He insisted upon a return to the study of the antique, and his followers number a few distinguished men, notably Gros and Guerin. Menzel, in historical; Knaus Vautier, Merzicault (1774-1829), a pupil of Guerin, Metzler, and Bochmann, in genre; and Achenbach in landscape. In Dutch art of the present day the same taste but not classicism of the school of David, and Ingres (1780-1867), Delacroix (1798-1863), Scheffer (1795-1858), and Delaroche, noted for the reality of his historical subjects and the tenderness and pathos of his sacred pictures, (1797-1856) are the most distinguished names of the more direct and romantic style upon a return to the study of the antique, of the more direct and romantic style initiated by him. Modern French iand-scape art, founded upon an impuise rescape art, founded upon an impulse received from England, has had Decamps (1803-66), Rousseau (1812-67), Corot (1796-1875), and Millet ('315-75) as its chief exponents. The work of Regnault (1843-71) remarkably illustrates the tendencies of modern French painting. Bastien Lepage (1848-84), with his literal renderings of nature, strongly indusposes the younger British school: and influences the younger British school; and Meissonier (1815-91), Gérôme (1824-1904), Bouguerean (1825-1905), Constans, and Cabanel, and Puvis de Chavannes as a decorative artist, are some of the chief members of a school which is at the present time influencing the art of the world.

Germany, Holland, etc., 19th Century.

—Germany during the 18th century remained stationary in matters of art, but with the revival in France came a similar but slightly later movement in Germany, the precursors of which were Holzer (1709-40), a Tyrolese fresco painter, and Carstens (1754-98). The chief of the revivalists, however, was Overbeck (1789-1869), who, with a band of followers, founded a school at Rome in 1810, the principle animating whose work was that painters of the time preceding Raphael. Overbeck painted religious subjects, and worked both in fresco and oil. His works, while possessing fine feeling, are poor in color and weak in chiaroscuro. Chief among his pupils is Cornelius (1783–1867), one of the greatest of modura German painters, and whose work is modern artists should only study the

best seen in Munich. Schadow (1789-1862) was a pupii of Cornelius. Schnorr von Carolsfeid (1794-1872) chose for his subjects the mediævai history and myths of Germany, and also produced an extensive series of illustrations of the Bibie of great merit. Kaulbach (1805–74), a great historical painter and pupil of Cornelins, shows in his work some of the worst faults of the modern Cornelins. of the worst faults of the modern German school. Lessing (1808-80) is famous both for his historical and landscape pictures, and among modern painters worthy of note are Gabriel Max and Menzel, in historical; Knaus Vautier, Matsler, and Bochmann in source, and subjects selected. Scholel and Schole-hart have distinguished themselves as iandscape-painters, Van Os, Van Stry, and Ommeganck as cattle and figure painters, whilst Josef Israels, a painter of domestic scenes, with M. Maris and Mesdag, are living artists. The influence of the French school is at present paramount in Belgium, as was the classiparamount in Belgium, as was the classicism introduced by David up to 1830. At that time a reaction was begun by Leys (1815-69), and followed up by Wappers (1803-74), painters who selected historical subjects of national interest. The work of reformation continued to be carried on notably by Gallait and De be carried on notably by Gallait and De Keyser; whilst the strong current of the present French influence may be seen in the works of the living artists Alfred Stevens and Veriat. In Italy after a iong period of artificialness and mediocrity there are signs of revival in painting. Pio Joris and Cammarano have gained distinction as painters of history, and Aiberto dall' Oro and Pailizzi as painters of landscape. Morbelli and Segantini show in their wo ke some signs of a return to nature. Spain, too, with the exception of the works of Fortuny, remains unindividualistic; but a strong remains unindividualistic; but a strong influence is now being exercised upon her by French art. Russlan art, which had remained at a standstill since the Byzantine time, has since 1850 made great advances. It has produced Swedomsky, historical painter, Verestchagin, a traveier artist, and Kramskoë, a religions painter. Scandinavian art inclined for some time to the two schools

tioned Normann Uhde and Edelfeidt. For painting in England see the article English Art and the paragraph below. Great Britain, 18th and 19th Centuries. - The first to bring high art to England in the field of painting was Hans Holbein (1497-1534), an artist of German birth and training, though his works were principally produced in England during the reign of Henry VIII. Rubens and Vandyke, leaders in Flemish art, also did some work in England during the reign of Charles I, the latter spending all his later life in that country. There were other artists of note in the island kingdom during this early period, but for the development of a distinctive English school of painting we must come down to Sir Joshua Reynolds (1723-92), who is looked upon as the founder of the Engiish school, and emlnent as a coiorist, excelling in portraiture. Gainsborough (1727-88), his contemporary, nearly approached him in portraits, and much excelled him in iandscapes, being in this field an artist of great skill and excellence. Another eminent painter of this period was Hogarth (1697-1764), whose works were powerful satires on the manners, morals, and follies of the age. works were powerful satires on the manners, morals, and follies of the age. Among the contemporaries of these artists may be named Fusell, the 'Dante' of painters; Wilson, eminent in landscapes; Romnie and Opie, able delineators of woman's beauty, and Barry, famous for his historical subjects. The nineteenth century yielded a prolific harvest of painters, the first to achieve fame being SIr Thomas Lawrence (1769–1830), highly distinguished for his rare delineation of female faces. Rivals of his in

highly distinguished for his rare delineation of female faces. Rivals of his in this field were Hoppner, Jackson, and Raeburn. Sir David Wilkie (1785–1841), a Scotch painter, has never been surpassed in Britain in his delineations of humble life. In poetic landscape Turner (1775–1851) stands first, his works being of the highest excellence in their particular field. Constable (1776–1837) was also distinguished in landscape, and among the others of this period may be

among the others of this period may be named Haydon, an historical painter of

hamed Haydon, an instorical painter of high merit; Etty, a splendid colorist; Caicott, Collins, Nasmyth, and Morland. Genre painting was cultivated by Birk, Stothard, and others, secreeded at a later date by Newton, Leslie, Cooper, Madise, Easticke, Hamilton, Cone, Dura, Land,

Eastiake, Hamilton, Cope, Dyce, Land-

seer, Frith, Faed, etc., most of these also painting landscape and historical subjects.

Landscape was also cultivated by Baddington, Linneil, Roberts, etc. Lance won fame for his pictures of still life, Stanfield for his splendid sea pieces, Landseer, Audeell, and Herring for ani-

mai subjects, and many others in special fields. An interesting feature of the period was the development of a new school of art, cailed the Pre-Raphaelite, its leading representatives being Holman Hunt, Dante G. Rossetti, John E. Millais, and Burne-Jones. These are only a few of leading position among the multitude who have produced creditable works of art in the British school. To the names given we may add those of Hall, Herklmer, Leighton, Poynter, Forbes, Lawson, Fildes, Parsons, and Moore.

In the United States painting had but slow development until a comparatively recent date. The troubious times of colonial settlement and the Revolution were not conducive to art culture, school of art, called the Pre-Raphaelite,

coloniai settiement and the Revolution were not conducive to art culture, although even then America had produced artists of merit — Benjamin West (1738–1820), who was made president of the Royal Academy of England; Copley (1737–1815), of high rank as portrait painter; Stuart (1756–1828), also ranking high in portraiture; Leslie (1794–1859), genre painter; Trumbuli (1756–1843), historical; and Allston (1779–1843), the first really distinctive American artist. Thomas Cole (1801–48) originated the American school of landoriginated the American school of land-scape painting; his pictures are lovely and loving reproductions of nature; his and loving reproductions of nature; his worthy follower was Thomas Doughty. Others of this period were Inman, the first successfui American master of genre, and Durand, who exceiled in land-scape, while Jarvis and Sully were noted portrait painters, and Vanderlyn ably painted historical subjects. Coming to a later date, we can mention only a few of the leaders in art. In the fields of history and genre may be found Rothermel, Page, Johnson, Homer, Leutze. history and genre may be found hottler mel, Page, Johnson, Homer, Leutze, Weir, May, Powell, Darley, Lambdin, Hennessey, Freeman, La Farge, Elihu Vedder, Huntington, and Reid; in marine subjects, Bradford, Dana, De Haas, Dix, Hamilton, March: Landscape subjects, Bradford, Dana, De Haas, Dix, Hamilton, Haseltine, Moran; landscape has Church, Bierstadt, Kensett, Inness, Hart, Cropsey, Casilear, Gignoux, Wyant, the Giffords, Cranch, Griswold, Bristol, Brown, Fitch, Richards, etc. In pertrait painting Whistler and Sargent attained world fame, and Abbey, though chiefly celebrated as an illustrator, has executed some remarkable works in color. In the field of landscape painting modern In the field of landscape painting modern artists have made notable progress.

Paisiello (pai-si-el'lō), GIOVANNI, an Italian singer and musician, born in 1741. In 1763 his first opera (La Pupilla) was performed with great applause at Bologna. By the year 1776 he had composed nearly fifty operas. In Russia he composed his best produc

tions, La Serva Padrona and Il Barbiere di Seviglia, and in Vienna Il Re Teodoro,

and twelve symphonies for the Emperor Joseph II. He dled in 1816.

Paisley (pāz'li), a burgh of Scotland, in the county of Renfrew, 7 miles w. s. w. of Glasgow. It consists of an old town on the west or left, and a new town on the east or right bank of the river, communicating by three hand-some bridges. The most noteworthy building is the Abbey Church, now a parlsh church, belonging to a monastery (of which little else now remains) founded in 1163 by Walter, son of Alan, the first of the house of the Stewarts, and at one time a very opulent founda-tion. In St. Mirren's Chapel or the Sounding Alsle, on the south side, stands a tomb supposed to have been built in honor of Bruce's daughter Marjory. Palsley has been long noted for its manufactures, especially of textile goods. The shawl manufacture, introduced about the beginning of the 19th century, and long a flourishing industry. Is not now a stante. flourishing industry, is not now a staple, but the textlie manufacture is still large, and to it has been added that of sewling cotton, for which Paisley is celebrated all over the world. Wilson the ornithologist, the poet Tannahlll, and Prof. Wilson (Christopher North) were natives of Paisley, which possesses a bronze statue of the ornithologist and of the poet. Paisley is a town of ancient origin, having been at one time a Roman station under the name of Vanduara. Pop. 84, 445.

Pajamas (pa-ja'maz), loose tronsers worn by both sexes in India, a modification of which is now largely used for chamber wear in America and

Europe. Paladin (pal'a-din), a term originally applied to the Comes palatic, Count of the Palace, or Count Palatine, the official who superintended the household of the Carlovinglan sovereigns, and then to the companions ln arms of Chariemagne, who belonged to his court. Lat-terly it was used in a more general sense.

Palæarctic Region (pa-le-ark'-ology, one of six divisions of the world based upon their characteristic fauna. It embraces Europe, Northern Asia, and

Africa north of the Atlas range.

Palæichthyes (pa-lē-ik'thi-ēz), a division of fishes comprising the Ganoidei and the Elasmo-branchil.

Palæography (pa-ië-og'ra-fi; Gr. palaios, ancient, and

writings and figures on ancient monuments, are deciphered and explained; as distinguished from diplomatics, which deals with written documents.

Palæologi (pa-ie-ol'o-jl), the name of the sovereigns of the last dynasty of the Byzantine Empire. The founder of the dynasty was Michael Palæologus, who in 1260 became Emperor of Nicæa, and in 1261 Emperor of Byzantium. See Ruganting Empire. tlum. See Byzantine Empire.

Palæontology (pa-lē-on-tol'ō-ji; Greek, palaios, ancient; onto, beings) is the science which treats of the living beings, whether animal or vegetable, that have inhabited the globe in the successive varieties. globe in the successive periods of its past history. The comparison of the fossil remains of plants and animals, belonging for the most part to extinct species, has given a powerful impulse to the science of comparative anatomy, and through it a truer lusight has been obtained into the natural arrangement and subdivision of the classes of animals. But the science which has profited in the highest degree from palæontology is geology. Palæontology, apart from its importance as treating of the past life-history of the earth, assists the geologist in his determination of the chronological succession of the materials composing the earth's crust. As a general result of united geological and palæontological researches, it has been found possible to divide the entire series of stratified deposits into a number of rock-systems or formations, each of which is defined by possessing an assemblage of organic remains which are not associated in any other formation. These systems as a whole are divided into three great divisions, based on the characters of their organic remains, and thus representing three successive life periods, as foilows: - Palæozoic, or ancient life epoch, which includes the Laurentian, Cambrian, Silurian, Devonian, Old Red Sandstone, Carbonlferons, and Permlan rock systems. Mesozoic, or middle life epoch, including the Triassic, Jurassic or Opilic and Cretaceous rock Jurassic or Ooiltic, and Cretaceous rock systems. Cainozoic, or recent life epoch, which comprises the Eocene, Miocene, Pliocene, and Post-tertiary rock systems. The fossil remains of the first two divisions of sions belong almost whoily to extlnct genera. The Calnozolc fossils belong genera. The Calnozolc rossus below a largely to living genera, or genera only recently extinct. See Geology.

Palæotherium (pa-le-o-the ri-um) an extinct genus of colors with colors and with

Palæography (pa-ië-og'ra-fi; Gr. Ungulate or Hoofed Quadru-peds with graphe, writing) is the science by means tapirs, and varied in size from a sheep of which ancient inscriptions, and the to a horse. They had twenty-two teets

in each jaw, and, in all probability, a short mobile snout or probaccis. This genus forms the type of the family Palso-

Palseotherium restored.

otheridæ, which occur as fossils in Eocene and Miocene strata. P. magnum is a familiar species.

Palæozoic. See Palæontology.

Palæstra (pa-ie'stra), originally in Greece a place for wrestilng, afterwards a place for training the athletes who contended in the public

Palais-Royal (på-lä-rwà-ài), a popular resort of the Parisians, originally a royal palace, as the name implies. The original palace was built (1629-36) by Richelieu, and by him presented to Louis XIII. It was confiscated by the republicans in 1793, and the Tribunai sat in the palace during the Reign of Terror. At the Restoration it was repurchased by the Duke of Orieans, but in the revolution of 1848 it was again appropriated to the state. In 1871 it was set on fire by the Communists, but has since been restored. The Théâtre Françals and several shops now form parts of the buildings of the Palais-Royal.

Palamedea (pa-ia-mē'de-a), a genus of S. American hirds. P. cornāta, the horned screamer (which see), is the typical species.

Palamkotta (pā-lām-kot'tā), town of India in Tinneveili district, Madras Presidency, 3 miles r. of Palanpur. See Pahlanpur.

Palanquin, Palankeen (pal-anance used in India, China, etc., borne by poles on the shoulders of men, and in which a single person is carried from place to place. The palanquin proper is a sort of box about 8 feet long, 4 feet wide, and as much in height, with wooden shutters on the Venetlan-hild principle. It used to be a very common conveyance in India, especially among the Europeans, but the introduction of railways and the

Palanquin.

improvement of the roads have almost caused its discontinuance.

Palatals (pai'-a-talz), sounds which derive their character from the conjunction of the tongue and hard paiate, as ch in church.

Palate (pal'at), the name applied to the roof of the mouth. It consists of two portions, the hard painte in front, the soft painte behind. The former is bounded above by the paiatal bones, in front and at the sides by the alveoiar arches and gums, being lined hy mucous membrane; behind it is continuous with the soft paiate. It supports the tongue in eating, speaking, and swai-lowing. The soft palate is a movable fold suspended from the posterior border of the hard palate. It consists of mucous the hard palate. It consists of mucous membranes, nerves, and muscles, and forms a sort of partition hetween the mouth and the hinder nostrils. Its upper border is attached to the posterior margin of the hard palate; its lower border is free. The uvula hangs from the middle of its lower border, and on each side are two curved folds of mucous membrane called the arches or pillars of the soft palate. Between these on either side of the pharynx are the two giandular bodies known as tonsils. The upper side of the pharynx are the two giandular bodies known as tonsils. The upper surface of the soft palate is convex, the lower surface is concave with a median ridge, the latter pointing to the early or embryo stage of its formation, when it consists of two distinct parts. Non-union of these haives and of those of the hard palate constitutes the deformity known as cleft palate, often associated with harelip. Glands are ahundant in the soft, palate, secreting the mucus the soft, palate, secreting the mucus which serves to lubricate the throat during the passage of food. The soft palate comes into action in swallowing, and also in speaking, being of great importance in the utterance of certain sounds. The special use of the uvula is not well

known. It is often relaxed er enlarged,

causing a troublesome cough.

Palatinate (pa-lat'i-nāt; German PFALZ), a division of the oid German Emplre, under the rule of counts-paiatine (Pfalzgrafen), consisting of two separate portions distinguished as the Upper and Lower Palatinate. The Upper or Bavarian Palatinate was bounded mainly by Bohemia and Bavaria, and its capital was Amberg. The Lower or Rhenish Palatinate lay on both sides of the Rhine, surrounded by Raden, Alsace, Lorraine, etc., its chief Baden, Alsace, Lorraine, etc., its chief towns heing Heldelberg and Mannhelm. The counts-palatine were in possession of the Palatinate and the districts belonging to it as early as the 11th century, and were long among the most powerful princes of the German Empire. At the Peace of Westphalia (1648) the Lower Palatinate was separated from the Upper, Bavaria getting the latter, while the former now became a separate electorate of the empire, and was henceforth generally known as the Palatinate. By the treaties of Parls (1814-15) the Palatinate was split up; Bavaria received the largest part, and the remainder was divided between Hesse-Darmstadt and Prussla. The name Palatinate now belongs to the detached portion of Bavaria on the west of the Rhine, while the Upper Palatinate forms another portion of the monarchy. See Bavaria. Palatinate was separated from the Upthe monarchy. See Bavaru.

See Palatinate and Count

Palatine. Palatine Hill.

Palatka (på-lat'kå), a port and clty of Florida, capital of Putnam Co., on the western bank of the St. John's River, 50 miles from the sea. It is frequented hy deep-sea as well as by river steamers, and has a trade in oranges, sugar, and cotton, small fruits and vegetables, and has iron and machine. and vegetables, and has Iron and machine works. Pop. 3779.

Palawan (pa-la'wan), an island on the northeast of Borneo, belonging to the Philippines; area, 4576 square miles. It is mountainous, well wooded and watered, and very fertile, but unhealthy. Pop. (chiefly Malays), about 30,000.

Palay (pa-la'), an Indian climbing plant (Cryptostegia grandiflora) of the nat. order Asclepladacese. Its stalk-libers, which are strong and white,

cuse, 663 n.c., where curious remains are still to be seen. Pop. 14,840.

Pale (pal), in heraldry, the first and slm-

piest kind of ordinary. is bounded by two vertical lines at equal distances from the sides of the escutcheon, of which it encloses one-third. See Her-

A pale azure

Pale, THE, or the ENGLISH PALE, a name formerly given to that part of Ireland which was completely under English rule, in distinction from the parts where the old Irish laws and customs prevailed.

Pales (pā'le-ē), in botany, the bracts that are stationed upon the receptacie of Compositse between the florets; also interior hracts of the flowers or grasses.

Palembang (pä-iem-bäng'), a town of Sumatra, capital of the province of same name, on the Moosl, here called the Palembang. There are about 60,000 inhabitants, partly linkalitants however reject on partly live. lng houses raised on posts, and partly llving on rafts moored in the river. Its port is one of the best in the Malay Archipel-

Palencia (pā-lān'thē-ā), a town of Spain in Leon, capital of a province of same name, situated on the Carrion, an affluent of the Pisuerga. It is a hishop's see, and has a fine Gothic cathedral. Pop. 15,940.—The province of Palencia is fertile and watered by the Carrion and Pisuerga. Area, 3256 square miles; pop. 192,473.

Palenque (pa-len'ka), a village of Mexico, state of Chiapas, 60 miles N. E. of Cludad Real. About 7 miles s. w. of it are some of the most extensive and magnificent ruins in America, belonging to the period anterior to the

belonging to the period anterior to the Spanish conquest. The principal of these, called the 'paiace,' is 220 feet long by 180 feet wide, with numerous sculptures and hieroglyphics.

Palermo (på-ler'mō; ancient Panormus), a seaport town, the capitai of Sicily, beautifully situated on the north side of the Island. It is built in the form of an amphitheater facing the sea, and is surrounded by walls. The city sea, and is surrounded by walls. The city is ornamented by numerous fountains, and has many public edifices, including a cathedral of the tenth century which conare spun into a very fine yarn; and its milky julce forms a kind of caputchouc.

Palazzolo (pa-lät'sō-lō), a city of Norman. Other notable buildings are the Sicily, 28 miles west of churches of St. Peter and St. Dominic; a Syracuse. Here are the ruins of the ancient city of Acrae, founded by Syraing the chapel of King Roger; the Capital Cap pella Palatina (Palatine Chapel), built in a mixed Saracenic and Norman style, and dating prior to 1132, having the walls entirely covered with rich Byzantine mosales on a golden ground; the picture gallery and the armory; the National Museum, containing some of the oldest monuments of Greek plastic art to which a definite date can be assigned (sixth century E.C.); the archiepiscopai palace, the custom-house, the university, three theaters, and numerous other structures of architectural interest. The port is enclosed by a mole 1300 feet in length. Palermo is the residence of the military commandant of the Island, and has an arsenal and shiphuilding yards. The manufactures consist chiefly of silks, cottons, olicioth, leather, glass, and gloves. The principal exports are sumach, wine and spirits, fruits, sulphur, skins, oll, essences, cream of tartar, liquorice, and manna; imports, colonial produce, woolen, cotton and silk tissues, hardware, earthenware, etc. The fisheries are very productive, and give employment to nearly 40,000 hands. Palermo was probably founded by the Phenicians; it afterwards became the capital of the Carthaginian possessions in Sicily. It was taken by the Romans, 254 B.C. The Saracens held it for a time, and in 1072 it fell to the Normans. The German emperors and the French subsequently held it, and since the Sicilian Vespers (1282) it has shared the fortunes of the Sicilian kingdom. The court of Naples resided here from 1806 to 1815. Garibaldi captured the town in 1860. Pop. 341,008.—
The province of Palermo contains an area of 1963 square miles. Pop. 785,357.

Pales (pā'lēz), the goddess (sometimes regarded as a god) of sheepfolds and pastures among the Homans. Her festivals, called Palitia, were celehrated on the same day as the anniversary of the founding of Rome.

Palestine (pal'es-tin), Canaan, or the Hory Land, long a maritime country of Turkey, in the south-

Palestine (pal'es-tin), Canaan, or the Holy Land, long a maritime country of Turkey, in the south-west of Syria, having on the north the mountains of Lebanon and Anti-Lebanon, east the Arabian Desert, south Arabia, and west the Mediterranean; length, north to south, about 140 miles; breadth, about 80 miles; area, nearly 10,000 square miles (or one-third the size of Scotland). about so miles; area, nearly 10,000 square miles (or one-third the size of Scotiand). The coast has no indentations except the Bay of Acre in the north. The chief feature of the interior, besides its generally irregular character, is the deep valley of the Jordan, a river which intersects the country from the north to south and the country from the north to south, and connects three lakes, the Dead Sea, Lake of Gennesaret, and Lake Merom. The

surface is generally mountainous, or consists of a series of plateaux both on the west and the east of the valley of the Jordan. With the exception of Mount Hermon in the north (9050 feet) few of the heights exceed 8000 feet. The most remarkable are Carmel, on the southwest side of the Bay of Acre; Jebel Tur (Tabor), farther inland; Ebal and Gerlalm, about the middle of the country; Zion, Moriah, and the Mount of Olives, in and near Jerusalem. Palestine has comparatively few plains, though in few countries is there such endless variety of countries is there such endless variety of countries is there such endless variety of valley as to size, shape, color, and fertility. The maritime or coast plains of Sharon and Philistia, the river plain of Jordan, and the plain of Esdraelon in the north, are all that are worthy of mention. The maritime plains are well peopled and cultivated. The Jordan plain is nearly a waste of sand. The plain of Esdraelon or valley of Jezreel is of great fertility. The principal river is the Jordan (which see). This river has a dan (which see). This river has a length of 200 miles, including windings, hut its direct course is only about 70. Its course from Merom to the Dead Sea is mostly below the sea-level. Most of the so-called rivers of Palestine are merely winter torrents which run day in sum. mostly below the sea-level. Most of the so-called rivers of Palestine are merely winter torrents which run dry in summer. Of the few permanent rivers emptying into the Mediterranean, the most important are the Kishon, which drains the plain of Esdraelon; and the Aujeh farther south. The chief tributary of the Jordan is the Zerka or Jahbok. The most remarkable lake is the Dead Sea (which see). 46 miles long, 9 or 10 hroad, and fully 1300 feet below the Mediterranean. The other lakes are Bahrel-Huleh (Merom), 5 miles long and 4 miles hroad, about 6 feet above the Mediterranean: and Lake Gennesaret or the Sea of Galilee, 682 feet below it, 12½ miles long 7½ broad. In Palestine the wells and springs are numerous, and are all counted worthy of note. Among the most interesting are the springs of hot water which issue forth on both sides of the Jordan valley. Of these there are five or six with a temperature varying from 100° to 144° F. As resertly scalery, the chief Jordan valley. Of these there are five or six with a temperature varying from 109° to 144° F. As regards geology, the chief rock formation of the country on both sides of the Jordan is limestone, full of caves. Sandstone also occurs, with hasalt and other volcanic rocks, the fatter being especially common on the east side of Jordan. Signs of volcanic action are of Jordan. Signs of volcanic action are ahundant, and earthquakes are still common. The year may be divided into two seasons, summer and winter. During the former, which lasts from April to November, little or no rain falls; during the latter there is a considerable fall of rain.

British Official Photograph

On December 9, 1917, the Holy City was surrendered to the British forces. Carrying out the customs of the Crusaders, the Commander-in-chief, General Allenby, is making his triumphal entry through the Jaffa Gate on foot and accompanied by his staff and the commanders of the French and Italian forces who cooperated in the drive through Palestine, the heads of the political missions and the military attachés of France, Italy and the United States.

the annual average at Jerusalem being about 60 inches. In the Jordan valley and along the Mediterranean lowlands the summer heat is apt the oppressive. During the winter the grand is seidom, if ever, frozen except on the higher elevations. Palestine was once very fertile, and were the same attention paid, as formerly, to artificial irrigation, and the construction of reservoirs and water-courses, it might be so again. Among the products, besides the usual cereals, are grapes, figs, olives, oranges, and apricots. The flora of Palestine is rich in flowering plants, including the scarles submone, ranunculus, narcissus, croces sheasant's ranunculus, narcissus, crocus sheasant's-eye, etc. The country was cace we'l timbered, but it is now, as a sole bare and desolate, though forests of pine and oak exist on the eart of the Jonan On the west side of the river, however, there are few trees. The most common tree is the oak, including the partyly evergreen oak and two decidnous species. evergreen oak and two de idnotes species. Other trees are the elve, pull chander, sycamore, wainut, ada, cedar. The wild animals include the recoard, space bear, wolf, jackal, boar, antelope, garelle, porcupine, coney, jerboa, etc. The domestic animals of burden are the row, nume, and camel, the horse being little used. The cattle are not generally very numerous. Sheep and goats are abundant, among the birds are eagles, vultures, hawks—birds of prey being very numerous—ravens, bes-eaters, hoopoes, storks, ous—ravens, bee-eaters, hoopoes, storks, and nightingales. Fish abound in the Sea of Galilee and the Jordan. There are many species of reptiles, among them being the chameleon, land and water tortical time described in the control of the control toise, lisards, and serpents, and even the crocodile.

tolse, lizards, and serpents, and even the crocodile.

The name Palestine, from the Hebrew Pelesoheth, means the land of the Philistines. It is properly only applicable to the southwest part of the country. The ancient name of the country was Canaan, and when thus named, in the time of the patriarchs, it was parceled out among a number of independent tribes, all probably Semitic. In the time of Moses the district east of the Jordan was taken and divided among the tribes of Reuben and Gad, and the half-tribe of Manasseh; and later the whole territory was apportioned among the twelve Jewish tribes. For the subsequent history see the article Jews. In the time of our Saviour Palestine was held by the Romans, and divided into the four provinces of Galilee, Samaria, Judea, and Perea. In 606 Palestine was taken by the Saracens under Omar. The severities exercised towards Christians gave rise to the Grussdes, but Mohammedanism remained in control, and the

country sank into a degraded state. The Sultan of Egypt ruled it till 1617, when it was made part of 'be Turkish Empire. The population of the stime is estimated at about 750,000, c which some \$40,000 are in the Sanjak (province) of the sanjak (p ut Jewish immigration is increasing. See

Palestine was invaded by the British in 1917 during the European war, the ad-vance beginning with the capture of Beervance beginning with the capture of Beersheba in the south, early in November. The city of Gaza was taken from the Turks on November 7. The port of Jaffa fell in mid-November, and General Alemby, commander of the British forces, and unced on December 7 that he had define to possession of Hebron. Then began in encircling movement that enfolded on the south the little town of Bethlehem, while Christ was born. Bethlehem was captured December 7, and the Holy City was surrendered December 9. Jericho was also wrested from Turkish control, and the Jordan was crossed in May, 1918. and the Jordan was crossed in May, 1918. Palestine Exploration Fund,

society established in London in 1865 to chery established in London in 1800 for the purpose of making a comprehensive scientific research in the Holy Land. A Quarterly Statement and an Annual are issued by the society. Large and detailed maps of the country have been prepared and an immense mass of information regarding topography, natural history, etc., has been accumulated.

Palestine, a city, capital of Anderson Co., Texas, 81 miles s. w. of Longview, has a cotton-seed oil mill and compress, saw and grist mills, etc. Iron and salt occur in the vicinity. Pop. 10,482.

Palestrina (pa - ies - tre'na; ancient Central Italy, 23 miles E.S.E. of Rome. It is of Greek origin, and has numerous ancient remains, and the Barberini Palace, now deserted.

ancient remains, and the Barberini Palace, now deserted. Pop. 6027.

Palestr. a (pā-les-trē'na), GIOVANNE PIERLUGI (or PIETRO PIERLOGI (or PIETRO PIERLOGI), an Italian musical composer, born at Palestrina in 1524; died in 1594. In 1551 he was appointed by Pope Julius III master of a choir of boys in the Julian Chapel, and was the first to receive the title of chapel-master. In 1554 he published a first collection of masses, and Julius admitted him ter. In 1802 he published a first collection of masses, and Julius admitted him into the college of choristers of the pope's chapel. He was dismissed by Pope Paul IV in 1555, but in the same year he was appointed chapel-master of San Giovanni in Laterano. He held this post for six years, when he exchanged

church Santa Maria Maggiore, in which he continued tili 1571. In the mean-time the Council of Trent, on reassem-bing in 1562, pointed out the necessity of a reform in church music, which had become vulgar and profane. A commission was appointed, and Palestrina composed three beautiful musses which created quite a revolution in sacred composition. One of them, the Misso Papa Marcelli, is still celebrated. In 1571 Paiestrina was appointed chapci-master of the Basilica San Pietro in Rome. He left an extraordinary number of musical compositions.

Palette (pal'et), PAINTER'S, an oval tablet of wood, or other materiai, very thin and smooth, on which painters lay the various colors they intend to use, so as to have them ready for the pencil. In connection with the palette painters use a palette knife, a thin, round-pointed knife for mlxing up colors. The paiette contains a hole at one end in which the thumb is inserted

to hold it.

Paley (pā'li), FREDERICK APTHORP, born in 1816. Educated at Shrewsbury, born in 1816. Educated at Shrewsbury, he went afterwards to St. John's Coliege, Cambridge, and took his degree in 1838. In 1846 he became a Roman Catholic, and in 1874 accepted the post of professor of classical literature in the Catholic College at Kensington. He died in 1888. His best title to fame rests on the valuable work he did as editor and annotator of classical texts. especially Æschylus and Euripides.

Paley, WILLIAM, an English theological and philosophical writer, was horn at Peterhorough in 1743; died in 1805. In 1758 he became a sizar of Christ's College, Cambridge, where he graduated B.A. as first wrangler in 1763. In 1766 he took his degree of M.A., and became a fellow and tutor of his college. In the following year he was ordained. In 1776 he married and gave up his fel-In 1776 he married and gave up his fellowship. In 1780 he became prebendary of Carlisie, and in 1785 chancellor of the diocese. In 1794 he was made prebendary of St. Paul's and subdean of Lincoln; and in 1795 he received the rectory of Bishop-Wearmouth. He also received in this year the degree of D.D. from Cambridge University. His chief works are: The Vrinciples of Moral and Political Philosophy (1785); Horæ Paulinæ (1790); A Vicw of the Evidences of Christianity (1794); Natural Theology, of Herrick (1877). He died in 1897.

Palgrave, WILLIAM GIFFORD, brother of the foregoing, born in 1826; died in 1888. He graduated at Oxford, and from 1847 to 1853 served in the Bombay Light Infantry. He then became a Roman Catholic, was ordained a priest, joined the Jesuits, and engaged in missionary undertook for Napoieon III, a journey through Central and Eastern Arabia. Christianity (1794); Natural Theology, or Evidences of the Existence and Atreceived in this year the degree of D.D. Catholic, was ordained a priest, joined from Cambridge University. His chief works are: The Principles of Moral and Political Philosophy (1785); Horæ Paulabors in India and Syria. In 1862 he undertook for Napoleon III, a journey linæ (1790); A Vicw of the Evidences of through Central and Eastern Arabia. Christianity (1794); Natural Theology, He subsequently left the Jesuits, entered or Evidences of the Existence and Attributes of the Deity collected from the acted as British consul at various places appearance of Nature (1802), founded until 1876. He was appointed censul-

is founded purely on utilitarianism.

Palghat (päi-ghät'), a town in Malabar, Madras, India. It is a busy entrepôt for the exchange of pro-

duce between Mainhar and the upland country. Pop. 44,177. Palgrave (pai'grav), SIR FRANCIS, was horn in London in 1788. He was a Jew, and his original name was Cohen, which he changed to Palgrave on embracing Christianity in 1823. He was called to the bar in 1827, and made himself known by his edition of the Parliamentary Writs from 1273 to 1327 (1827-34), History of England (1831), Rise and Progress of the Commonwealth (1832). In 1832 he was knighted. He served on the Municipal Corporation Commission, 1833-35, and was appointed deputy-keeper of records in 1838. He died at Hampstead in 1861. His other works include Truths and Fictions of the Middle Ages (1841), Reports of the Middle Ages (1841), Reports of the Deputy-keeper of the Public Records (1840-61), and the History of Normandy and England (1851-60). Palgrave, FRANCIS TURNER, son of the above, was born in London in 1824, and educated at Charterhouse and Balioi Coilege, Oxford. He hecame a feliow of Exeter Coilege, and was for five years vice-principal of the Schoolmaster's Training College at Kneller Hall. He then acted as private secretary to Lord Granville, and later on held a post in the Education Department. In 1886 he was elected professor of poetry at Oxford. His literary works include Idyls and Songs (1854), Golden Treasury of the Best Songs and Lyrical Poems (1861), Sonnets and Songs of Shakspere (1865), Essays on Art (1866), and Selected Lyrical Poems of Herrick (1877). He died in 1897.

Palorage William Gifford, brother and was for five years vice-principal of

general in Bulgaria in 1878, in Siam in 1879, and in 1884 minister resident and consul-general in Uruguay, and his death took place at Montevideo. His literary works include Personal Narrative of a Year's Journey through Central and Eastern Arabia (1872); Hermann Agha, a story (1872); Alkamah's Cave (1875); and Dutch Guiana (1876).

Pâli (pâ'lē), the sacred language of the Buddhists, as closely related

the Buddhists, as closely related to Sanskrit as Italian to Latin. It is to Sanskrit as Italian to Latin. It is the language in which the oldest re-ligious, philosophical, and historical lit-erature of Buddhism is written, and is especially the language of the sacred books of the Buddhists of Ceylon, Bur-mah, and Siam; but it is no longer spoken anywhere, though a corrupt form of it is to some extent used for literary purposes. The study of Pall was intro-duced into Europe by Lassen and Burnouf.

Palicourea (pā-li-kö'rē-a), a genus of plants, nat. order Rubiaceæ, tropical American shrubs with small or rather large flowers in com-pound thyrses or corymhs. P. officinalis is reported to be a powerful dinretic, and P. tinctoria forms a fine red dye, much valued in Peru. P. densifiora yields coto bark (which see).

Palimpsest (pal'Imp-sest; from Greek palin, again, psg-stos, ruhbed), a manuscript prepared by erasure for being written on again, especially a parchiment so prepared by washing or scraping. This custom was brought about hy the costliness of writing materials, and was practiced hoth hy the Greeks and Romans, and in the monasterles, especially from the 7th to the 13th centuries. That which replaced the ancient manuscripts was pearly adthe ancient manuscripts was nearly always some writing of an ecclesiastical character. The parchments which have been scraped are nearly indecipherable. Those which have been washed have often been revived by chemical processes. said Fragments of the *Iliad* and extensive eral portions of many Greek and Roman tlcle. writers have been recovered by these Pali

Palinode (pal'i-nōd), in a general sense, a poetical recantation or declaration contrary to a former one. In Scots law it is a solemn recantation demanded in addition to damages in ac-

wound, either perpendicularly or ob-

liquely, for the greater security of a position, and particularly for the closing up of some passage or the protection of any exposed point.

Palisander-wood (pal-i-sau'der), a for rosewood and some other woods.

Palissy (pal'i-si), BERNARD, a French about 1510. He was apprenticed in a glassworks at Agen, where he learned the art of painting on glass. Having completed his apprenticeship, he set out on a tour of France and Germany (1528), maintaining himself by practicing his craft of glass-painter and hy land-surveying. During his travels he studied attentively all the books within his reach, and acquired an extensive knowledge of natural solones. In 150% he welledge of natural science. In 1505 he returned to France, married, and settled at Salntes. Shortly after his return his attention was attracted by a fine specimen of enameled pottery, and he thereupon resolved to discover for himself the country of the cou secret of the enamel. Being ignorant of the potter's art he had to grope his way, and labored on year after year without success, almost starving, and reducing his family to the depths of poverty. At length, after sixteen years of unremu-nerated labor (1538-54), he obtained a pure white enamel, affording a perfect ground for the application of decorative art. He was now able to produce works in which he represented natural objects grouped and portrayed with consummate skill, and his enameled pottery and sculptures in clay hecame recognized as works of art. In 1562 he went to establish himself at Parls, where he continued to mark at his cart and also detinued to work at his art, and also de-livered scientific lectures, which were attended by the most distinguished men in l'aris, and contained views far ahead of his time. He suffered persecution as a Huguenot, and was arrested in 1589 and thrown into the Bastille, where he is said to have died in 1590. He left several philosophical works. See next ar-

Palissy-ware, a peculiar kind of French art pottery in-vented by Bernard Palissy. The surface is covered with a jasper-like white enamel, upon which animals, insects, and plants are represented in their natural forms and colors. Specimens of this

tions on account of slander or defamation raised in the commissary court, and even in the sheriff court.

Palisade (pal'i-sad), a fence or fortification consisting of a row of strong stakes or posts set firmly in the belonging to the nat. order Rhamnacess. belonging to the nat. order Rhamnacess. See Uhrist's Thorn.

Palk Strait (pak), a channel between the mainland of India and the north part of Ceylon, abounding in shoals, currents, sunken rocks, and sand banks.

Pall (pal), a covering of black velvet thrown over a coffin while being borne to burial, the ends of which in a walking procession are held by the friends of the deceased. In another sense the pall or pallium is an ecclesiastical vestment sent by the sovereign pontiff on their accession to patriarchs, primates and recognition to patriarchs, primates, and metropolitans, and some-times, as a mark of honor, to bishops. It is made of white iamb's wool, and consists of a narrow strip of cloth encir-cling the neck and shoulders, with two narrow pieces hanging down, all em-hroidered with crosses.

Palladian Architecture (pa-la'-di-an), a species of Italian architecture due to Palladio (see next article), founded upon the Roman antique as interpreted by the writings of Vitruvius, but rather upon the secular buildings of the Romans than upon their temples. It is consequently more applicable to palaces and civic buildings than to churches. A characteristic feature of the style is the use of engaged columns in façades, a single range of these often running through the two principal stories. It was introduced into England by Inigo Jones, a follower of the Venetian school of Palladio.

1

Palladio (pa-la'di-ō), Andrea, one of the greatest ciassical architects of modern Italy, was born at Vicenza in 1518; died at Venice in 1580, where he was architect of the republic. He perfected his architectural acquirements at Rome, and on his return to Vicenza he established his fame by his designs for many noble buildings both there and in other parts of Italy. From 1560 he erected many buildings at Venice. (See preceding article.) He was the author of a Treatise on Architecture.

Palladium (pa-la'di-um), a wooden image of Minerva (Pallas) which is said to have fallen from las) which is said to have fallen from heaven and to have been preserved in Troy. The Trojans believed that their city would be invincible so long as it contained the Palladium. The Romans pretended that it was brought to Italy by Æneas, and preserved in the temples of Vesta at Rome, but several Greek cities claimed to possess it.

Palladium, a metal discovered by Wellaston in 1803, and found in small quantity associated with

a great general resemblance to platinum, but is harder, lighter, and more easily oxidized; symbol Pd, specific gravity about 11.5. It is useful on account of its hardness, lightness, and resistance to tarnish, in the construction of philosophical instruments.

(pa-la'di-us), RUTILUS TANNIS ÆMELIANUS, A Palladius RUTILUS writer of the fourth century after Christ. He was the author of a poem on agricul. ture, De Re Rustica, in 14 books.

Pallah (pal'la), a species of anteiope (Epyceros melampus) found in South Africa.

Pallanza (på-iänt'så), a town of Italy beautifully situated on a

promontory on the west side of Lago Maggiore. Pop. 4619.

Pallas (pal'as), of the minor pianets revolving round the sun between Mars and Jupiter, that whose orbit is most inclined to the ecliptic. It was discovered in 1802 by Olbers at Bremen. It revolves round the sun in 4.61 years; di-

revolves round the sun in 4.01 years; unameter, 172 miles.

Pallas,
Peter Simon, traveler and naturalist, born at Berlin in 1741; died there in 1811. Becoming distinguished as a naturalist, he was sent by Catherine II, of Russia, in charge of a scientific expedition to Asiatic Russia. The results of his observations were published in his Travels through Various Provinces of the Russian Empire (1771-76). His other chief works are Spicilegia Zoologica (1767-80), Flora Rossica (1784-85), Journey through Southern Russia (1799, Eng. trans. 1812).

Pallas Athēnē (pai'as a - thē'nē), the Greek goddess of wisdom, subsequently identified with the Roman Minerva. See Athena.

Pallavicino (pal-a-ve-chē'nō), Sforza, son of Marquis Alessandro Pallavicino of Parma quis

Alessandro Pallavicino, of Parma, was born at Rome in 1607, studied in the Roman College, and afterwards joined the Jesuits. He is famous as the historian of the Council of Trent, and stood high in the esteem of Pope Alexander VII, who made him a cardinal. He died in 1667. Palliobranchiata (pai'-i-o-bran'ki-a-ta), the name for-

meriy applied to the class of Brachiopodous Moliusca from the belief that the pallium or mantle ilning the shell formed the chief organ of respiration.

Palliser (pal'is-er), Sir William, born in Dubiin in 1830.

Palladium, a metal discovered by Wellaston in 1803, and found in small quantity associated with rative gold and platinum. It presents and retired from the army in 1871. He

was the inventor of projectiles and guns which bear his name, and is the author of many improvements in fortifications, etc. He was knighted in 1873, and dled in 1882.

Pallium. See Pall.

Pall-mall (pei-mei), an ancient game, in which a round boxwood in which a round boxwood bail was with a maliet or club struck through a ring elevated upon a pole, standing at either end of an alley, the person who could do so with fewest blows or with a number agreed on being the winner. The game was formerly practiced in St. James's Park, London, and gave its name to the street called Pail Mali.

Palm, the tree. See Palms.

Palma (păi'ma), an episcopai city of Spaln, capitai of the isiand of Majorca, 130 miles south of Barcelona. It is built in the form of an amphitheater and enjoys an extremely mild and saluprious climate. The principal pubsalurrious climate. The principal public buildings are the cathedral, the exchange, the governor's palace, and the town-house. There are schools of medicine and surgery, normal and nautical schools, two public illerarles, and a museum. Shipbuilding yards employ numerous hands. Palma is the port of the public island, and has an important trade. whole island, and has an important trade, Pop. (1910) 67.544.

Palma, JACOPO, an Italian painter, called Palma Vecchio (the elder Paima), was born near Bergamo about 1480, and died in 1528. He is supposed to have been a pupil of Titian, and his later manner seems to have been and his later manner seems to have been modified by study of Giorgione. His work is iess remarkable for draughtsmanship than for the suffused golden britiance of its coloring. His most notable pieces are six paintings in the Church of S. Maria Formosa at Venice, and the Three Graces in the Dresden gallary. lery.

Palma, La, the most northwesteriy of the Canary Islands; area, 224 square miles; capitai, Santa Cruz de is Palma, the principal port. It consists for the most part of elevated mountains, and In the north the coast is high and precipitous. The cilmate is agreeable and healthy, and the soli fertile. Besides a small quantity of grain, La Palma produces wine, fruits, sugar, honey, wax, silk, etc. Pop. 41,994.

Palma Christi, a name frequently applied to the cas-

tor-oil plant.

a town of Sicily, in the province and 14

miles E. S. E. Girgenti. It is noted for its aimonds. Pop. 14,101.

Palmas (päl'mas), CAPE, a headland of W. Africa, on the Guinea coast, iat. 4° 22′ 6″ N., ion. 7° 44′ 15″ w. There is a lighthouse with a fixed light, and the adjacent harbor, which is the only one between Sierra Leone and Benin, is spacious, secure, and protected by a reef from the swell of the ocean.

Palm Beach, a village, Palm Beach Co., Fla., 66 miles N. by E. of Miami, on a narrow strip of land between Lake Worth and the Atlantic coast; a fashionable winter resort. The district is semi-tropical in character, producing quantities of fruit, such as cocoanuts, guavas, etc. Pop. about 300.

Palmer (päl'mer), in mediseval times, the name given properly to a pigrim who had visited the Holy Land, from the circumstance that those who performed the pilgrimage to the sa-cred sepuicher generally carried on their return a palm branch as a memorial of their journey. The name was also given to other pilgrims.

Palmer, EDWARD HENRY, an Engilsh Orientai schoiar, born at Cambridge in 1840; graduated at St. John's College in 1867. He was a memher of the survey expedition to Sinal (1868-69) and to Moab (1869-70), and on his natural headens are professor of Arable on his return became professor of Arable at Cambridge (1871). In 1882 he was killed by the Arabs in the Sinaltic penin-

sula. Among his numerous works are a Persian-English Dictionary (1876).

Palmer, a township of Hampden Co., Massachusetts, on the Chicopee River, 15 miles E. by N. of Spring-field. It has manufactures of cotton, wooien, and wire goods and carpets. Pop. 8610.

Palmer (på'mer), ERASTUS Dow, sculptor, born in Onondaga county, New York, in 1817; died in 1904. Among his best works are Indian Girl Contemplating a Crucifix, The White Captive, The Sleeping Peri, and Landing of the Pilgrims.

Palmerston (pa'mer-stun), Heney John Temple, Viscount, an English statesman, was born in West-

an English statesman, was born in West-mlnister in 1784; died in 1865. He was educated at Harrow, Edinburgh University, and St. John's College, Cambridge. In 1802 he succeeded his father in the title (an Irish one). In 1807 he was returned as member for Newrort Isia of returned as member for Newport, Isie of Wight, and became junior ford of the ad-Palma di Moraschiaro (mon-ta-istration. In 1809 he became secretary kylirö), of war, and two years later he was elected

member of Parliament for Cambridge University. He was a supporter of Catholic emancipation, and retired from office in the Wellington ministry in 1828 with others of the Canning party. He had already made a reputation for his command of foreign policy, and in 1830 he was made foreign secretary in the Whig ministry of Earl Grey. From this time he continued to be a member and leader of the Liberai party. In 1831 he was returned for Bletchingley, and after the Reform Bli (1832) for South Hants. He retired from office in December, 1834, but in April, 1835, he resumed his former

Erastus Dow Palmer

appointment under Lord Melbourne. He nate leaves, continued in office as foreign secretary until 1841. It was during this period that he gained his great reputation for vigilance and energy in the conduct of foreign affairs. In 1845 he supported the repeal of the corn-laws, and in 1846 he was foreign secretary in the Russeli ministry. Several causes of dissatisfaction, the chief being his recognition of Louis Napoleon without consulting his colleagues, led to Palmerston's resigna-tion in December, 1851. In February, 1852, he became home secretary in the coalition ministry of Lord Aberdeen. On the resignation of this ministry he became prime-minister, which position he held, with a brief interruption, for the remainder of his life. He was made D.C.L. of Oxford in 1862, and elected Lord-rector of Glasgow University in 1863.

Palmerston, the chief settlement in the Northern Territory of S. Australia, on Port Darwin, accessidraught. Pop. 600.

Palmer Worm, the common name caterpiliars, but particularly that of the polynomial of the polyn

Palmetto Palm (pai-met'to), a common name of severai paims, especially of the Sabal Palmetto, the cabbage-palm, which grows in the West Indies and in the Southern States of North America. It attains the height of 40 or 50 feet, and is crowned with a tuft of large leaves. It produces useful timber, and the ieaves are made into hats mate ato into hats, mats, etc.

Palmipedes (pāi-mīp'ē-dēz). See Na-Palmistry. See Cheiromancy.

Palmitic Acid (pai-mit'ik), a fatty acid occurring in wary fats, whether of the animal or vegetable kingdom, such as paim-oil, butter, tallow, lard, etc., existing partly in a free state but generally in combination with glycerine (as a glyceride). It forms a solid, colorless, inodorous body, which melts at 62° C.

Palm-kale (pam'kai), a variety of the cabbage extensively cuitivated in the Channel Islands. It grows to the height of 10 or 12 feet, and has much the aspect of a palm.

Palm-oil, a fatty substance obtained from several species of palms, but chiefly from the fruit of the oil-palm, or Elwis guincensis, a native of the west coast of Africa. This tree grows to the height of 30 feet, hears a

tuft of large plnand has a thick stem covered with the stumps of the stumps of the stalks of dead stalks of dead leaves. The fruits, which are borne in dense clusters, are about 1½ inches long by 1 lnch in diameter, and the oil is obtained from under their fleshy covering. In cold countries it acquires the consistence of butter, and is of an orange-yellow color. It is employed in the manufacture of soap and candles,

for lubricating machinery, wheels of rall-way-carriages, and many other purposes ble to ocean-going steamers of the largest By the natives of the Gold Coast this oi'. is used as butter; and when esten fresh

is a wholesome and delicate article of diet. It is called also Palm-butter.

Palms (pamz), the Palmaceæ, a nat. order of arborescent endogens, chiefly inhabiting the tropics, distinguished by their fleshy, colorless, sixparted flowers, enclosed within spathes; their minute emhryo, lying in the midst of albumen, and remote from the hilum; and their rigld, piaited or pinnated leaves, sometimes called fronds. The palms are among the most interesting plants in the vegetable kingdom, from their beauty, variety, and associations, as well as from their great value to mankind. While some, as Kunthia montana, Oreodoxa frigida, have trunks as slender as the reed, or longer than the longest cable (Calamus bwa spectabilis and Cocos butyracca, have stems 3 and even 5 feet thick; while some are of low growth, as Attalëa amygdulina, others exhibit a stem towering from 160 to 190 feet high, as Ceroxylon andicola or warneling of South America 160 to 190 feet high, as Ceroxylon andicola or wax-palm of South America. Also, while they generally have a cylindrical, undivided stem, Hyphane thebaica (the doum palm of Upper Egypt) and Hyphane coriacea are remarkable for their repeatedly divided trunk. About 600 species are known, but it is probable that many are still undescribed. Wine, oil wax, flour sugar sage, etc. are the oli, wax, flour, sugar, sago, etc., are the produce of palms; to which may be added thread, utensils, weapons, and materials for building houses, boats, etc. There is scarcely a single species in which some useful property is not found. The cocoanut, the date, and others are valued for their fruit; the cahbage-palm, for its edible terminal buds; the fan-palm, with many more, is valued for its foliage, whose hardness and durability render it an excellent material for thatching; the sweet juice of the Palmyra and others, when fermented, yields while; the center of the sago-palm abounds in nutritive starch; the trunk of the wax-palm exudes a valuable wax; oll is expressed in abundance from the oil-palm; many of the species contain so hard a kind of fibrous matter that it is used instead of needles, or so tough that it is manufactured into cordage; and, finally, their trunks are in some cases valued for their strength, and used as timber, or for their elasticity or flexibility. There is only one European species, the Chamærops humilis. See Chamærops; also, Arcca, Betel-nut, Cabbage-palm, Cocoanut, Coquilla-nut, Date, Doum Palm, Fan-palm, Palm-oil, Palmyra Palm, etc. Palm-sugar, a saccharlne substance obtained from the juice . of various palms.

Palm Sunday, the inst Sunday before Easter, on which Christ's entry into Jerusaiem, when palm hranches were strewed before him, is celebrated. It is still celebrated with much solemnity by the Roman Catholics, and branches are strewed in the churches. Palm Wine or Toddy, a species of wine obtained by fermenting the juice of the flowers and stems of the cocoanut palm, the Palmyra palm, the oll-palm, and other palms.

Palmyra (pai-mi'ra; Hebrew, Tad-mor, City of Palms), an ancient city of Syria, now in rulns, situ-ated in an oasis 140 mlles E. N. E. of Damascus. It was founded or enlarged by Solomon in the tenth century B.C. It was an entrepôt for the trade between Damascus and the Medlterranean, and during the wars between the Romans and the Parthians it acquired great Importance. It became the faithful ally of Rome, and during the reign of Gallienus (260–268) Odenathus, the ruler of Palmyra, established an independent Palmyra, rene kingdom. Odenathus was succeeded by his widow Zenobia, to whom Palmyra chiefly owes lts fame, and who took the title of Queen of the East. She was besieged in Palmyra hy Aurelian, and compelled to surrender. On his departure the inhabitants revolted, on which Aurclian returned and destroyed the city (A.D. 273). He permitted the inhabitants to rebuild it, but it never recovered its importance. In 1400 Tamerlane completely destroyed it. There are remains of ancient huildings, chlefly of the Corinthian order, with the exception of the Temple of the Sun, which is Ionic. See Zcnobia.

Palmyra Palm (Borassus flabelli-formis), the common Indian palm, a tree ranging from the northeastern parts of Arabia through India to the Bay of Bengal. In India and other parts of Asia it forms the chief support of 0,000,000 or 7,000,000 of population of 1,000,000 or 7,000,000 of population of 1,000,000 or 7,000,000 or 7,000 lation. Its frult is a valuable food, Its timber is excellent, and it furnishes thatch, cordage, and material for bats, fans, umhrellas, etc. It produces sugar and arrack, and its leaves are used for writing tablets. The young shoots are boiled and eaten, the seeds are edible, and the fruit yields a useful oil. A full-grown Palmyra is from 60 to 70 feet high, and its leaves are very large. The name l'almyra wood is frequently given to other woods of a similar nature.

Palolo (pa-15'15), a dorsibranchiate
annelid (P. viridis) found in
erent abundance in the sea near the cora!

Palmyra Palm (Boriassus flabelliformis).

reefs in the South Sea Islands. They are taken in large numbers in nets by the islanders, who esteem them, when

roasted, as a great delicacy.

Palos (pä'los), a smail town of Andalusia, in Spain, famous as the port whence Columbus sailed for the discovery of the New World in 1492. Pop.

Palpi (pai'pi), jointed processes, supposed to be organs of touch, attached in pairs to the labium and maxdeveloped also from the oral appendages of spiders and crustacea.

Palpitation (pal-pi-tā'shun) consists of repeated attacks of violent and spasmodic action of the heart. When palpitation arises from organic lesion of the heart it is called symptomatic, when it is caused by other disorders disturbing the heart's action it is called functional. Disorders which may cause palpitation include nervous affections. tions, anæmia, chlorosis, protracted mental emotion, excessive use of stimulants, etc.

Palsy (pal'si), paraiysis, especially a local or less serious form of it. See Paralysis.

Paludal Diseases (pal'ū-dai; L. palus, paludis, a marsh). disesses arising, like maiarla, in marshy places.

Paludan-Müller (pal'ö-dan mül'the chief recent poet of Denmark, born in 1809, and educated at Copenhagen University. He began his career as a poet in 1832, and died in 1871. His works include Adam Homo, a humorous didactic poem; Kalanus, an Indlan tragedy; Adonis, a poetic romance; Amor and Psyche, a lyrical drama, etc. Palunpur. See Pahlanpur.

Pamiers (på-mi-fi), a cathedrai city of S. France, dep. Ariège. It has ironworks and textile and other milis. Pop. 7728.

Pamir (pä'mer), an eievated region of Central Asia, that may be regarded as formed by the meeting of the Hlmalayan and Thian Shan mountain systems. It forms a plateau having a general elevation of more than 13,000 feet, dominated by still ioftier ridges and summits ciothed with eternal snow. There are several small lakes here, and the sources of the Oxus take their rise in the Pamir. The atmosphere is exceedingly dry, the extremes of heat and cold are very great, and a large part of the surface is bare and barren. The Klrghlz, however, find a certain amount of pasture for their cattle in summer, and in favored localities there is a little cul-tivation. The Pamir, or 'roof of the world,' is ceiebrated throughout Centrai Asia, and trade routes have passed across it for ages.

Pamlico Sound (pam'li-kō), a shailow lagoon on the southeast coast of North Carolina. It is 80 miles iong, from 8 to 30 miles wide, and separated from the ocean by long, narrow, sandy islands. Vessels can enter it through Ocracoka and Matter. illa of insects, and termed respectively and separated from the ocean by long, labic and maxillary palpi or feelers. narrow, sandy islands. Vessels can enter (See gure at Entomology.) Palpi are it through Ocracoke and Hatteras inlets. Pampas (pam'pas), a name given to the vast treeless plains of the vast treeless plains of South America in the Argentine Republic, Paraguay, and Uruguay. The pampas are generally covered with grass and other herbage, and in many parts with gigantic thistles, but with the heat of summer the vagetation is much of summer the vegetation is much burned up. Shallow lakes or swamps occur in some parts, and parts have the character of a salt steppe. The pampas are roamed over by various tribes of Indians, as weil as by herds of wild horses and cattle. In many parts there are now cattle ranches, and large flocks of sheep are also reared.

Pampas-grass (Gynerium argente-um), a grass which grows in the pampas in the southern parts of South America. It has been intro-duced in the United States and Europe

as an ornamental plant. It has panicles of silvery flowers on stalks more than 10 feet high, and its leaves are from 6

Pampas-grass (Gynerium argenteum).

to 8 feet long. The male and female

Pampero (pam-pā'rō), a violent wind from the west or southwest which sweeps over the pampas of South America.

Pamphylia (pam-fil'i-a), an ancient province of Asia Minor, extending along the Medlterranean from Cilicia on the east to Lycia on the west. It was mountainous, being covered with the ramifications of the Taurus Mountains. Pamphylia never attained any political importance. It was subject successively to Persia, Macedonia, Syria, and Rome, although some Greek colonies for a time succeeded in maintaining their independence.

Pamplona (pam-plo'na), or Pampenand Capital of the province of Navarre or Pamplona, and of the ancient kingdom of Navarre, on the Arga, 78 miles northwest of Saragossa, 197 mortheast of Madrid. The town is strongly fortified, and has a cathedrai dating from the end of the fourteenth century. The public fountains are supplied by a magnificent aqueduct. Pop. 28,886.

Pan a rural divinity of ancient Greece, the god of flocks and herds, rep-

Pan, a rurni divinity of ancient Greece, the god of flocks and herds, represented as old, with two horns, pointed cars, a goat's beard, goat's tail, and goat's feet. The worship of Pan was well established, particularly in Arcadia. His festivals were called by the Greeks Lycae, and were known at Rome as the Lupercalis. Pan invented the syriax or Pandean pipes.

Pan

Pana, a city of Christian county, Illinois, 42 miles s. E. of Springfield. It has coal-mining interests, a hay compress, creamery, etc. Pan. 6055

compress, creamery, etc. Pop. 6055.

Panama (pan-a-mii'), a town and capital of the Republic of Panama, on the Gulf of Panama and on the Pacific coast of the Isthmus of Panama. The city lies on a tongue of land, across which its streets stretch from sea to sea. The harbor is shallow, but affords secure anchorage. Panama is chiefly important as the terminus of the Interoceanic railway and also of the Panama Canal (which see). The railway, which has been in operation since 1855, runs across the isthmus from Panama to Colon or Aspinwali on the Atlantic, and accommodates a large traffic. Pop. 37 505

across the isthmus from Panama to Colon or Aspinwali on the Atlantic, and accommodates a large traffic. Pop. 37,506.

Panama, a republic of South America, occupying the isthmus connecting North and South America, and formerly a department of Colombia, from which it seceded in 1903. It has the Caribbean Sea on the N. and the Pacific Ocean on the S., and is about 350 miles long and 120 miles wide — reduced to a little over 40 miles in its narrowest part. Area about 31,600 square miles. It is traversed by a range of mountains, with a peak 11,970 feet high, and sinking to less than 400 feet at the point selected for the Panama Canal. Much of the low-lands is covered with a luxuriant tropical forest, and various economic plants of tropical America are grown. The rivers are of considerable length. It has a population of about 427,000, the largest part of Spanish descent, also aumerous agroes and a few Chinese.

Panama is the capital city.

Panama, ISTHMUS or, formerly called the Isthmus of Darien, has a breadth of from 40 to 120 miles, con-

nects North with South America, and separates the Pacific from the Atlantic. The coast is rocky and lofty along the Caribbean Bea, but low and swampy and the Pacific. See Pianesa.

Panama Canal Jicoused and facility and the Panama Canal Jong Panama Canal Jong the Pacific. See Pianesa.

Panama Canal Jicoused and facility cut across the 1sthmus of Panama from the Atlantic to the Pacific Ocean. This immense enterprise was originally undertaken in 18st by a French company under M. de Lesseps, the maker of the Suese of the S

000,000; and the yearly cost of operating Hospital (1854-64). He gained a high is estimated at \$3,500,000.

In men it iles behind the stomach in front of financed and controlled by San Francisco. The pancreas is an oblong gland about recognition and invitations to the various to 1 lnch thick. Its right. the viscera of the abdomen. In men it iles behind the atomach in front of the first and second immbar vertebre, The pancreas is an oblong gland about 8 inches iong, 1½ Inches broad, and from ½ to 1 inch thick. Its right extremity, called the kead, lies in a bend of the duodenum. The tail or left extremity extends to the spleen. The structure of the pancreas is similar to that of the sailvary glands. It is composed of lobules throughout. The secretion of this gland is conveyed to the intestine by the pancreatio duct. This duct runs from right to left, and is of the size of a quill at its intestinal end. The pana quil at its intestinal end. The pan-creatio juice is a clear, ropy fluid. The functions of the pancreatic juice in di-gestion are devoted to the conversion of starchy elements into sugar and to the assimilation of fatty matters. It also acts upon albuminoid matters.

Pancsova (pan'cho-va), a town of Hungary, 8 miles E. N. E. of

Panda (pan'da), or WAH (Ailurus fulgens), an animal of the bear family, found in the woody parts of the mountains of Northern India,

Panda (Allurus fulgens).

about equal to a large cat in size.

about equal to a large cat in size. It is chestnut-brown in color, and dwells chiefly in trees, preying on birds, small quadrupeds, and large insects.

Pandanaceæ (pan-da-nā'se-ē), the Screw-pine family of plants, endogenous trees or shrubs, with flowers unisexual or polygamous; perianth wenting or consisting only of a few anth wanting, or consisting only of a few scales. The fruit is either in parcels of fibrous drupes or in berries. The leaves are long, imbricated, and amplexicaul. Aerial roots are a feature of many. The order is divided into two sections, Pandenow and Oyolenthem; the first with undivided leaves and no perianth, the second with fan-shaped or pinnate leaves, and flowers having a few scales. They are tropical plants, and furnish edible and other useful products. Panama hats are made from one species. The typical genus is Pandanus. See Screw-pine.

Pandects (pan'dekts), a collection of laws, systematically arranged, from the works of Roman writers on jurisprudence, to which the Emperor Justinian gave the force of law, A.D. 533. See Corpus Juris.

See Corpus Juris.

Panderpur (pan'dur-pör), PANDHARPUR, a town in Bombay, India, held in great reverence by the
Brahmans for its Tempie of Vishnu.
Pop. 32,405.

Pandi'on. See Osprey.

Pandit (pan'dit), or PUNDIT, a learned Brahman; one versed in the Sanskrit ianguage, and in the sciences, laws and religion of the Hindus.

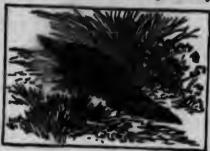

Pandoors (pan'dörz), the name given to a body of Hungarian soldiers, who, about the middie of last century, were dreaded for their savage mode of wartare. of wartare.

Pandora (pan-do'ra), in Greek my-thology, the first woman on earth, sent by Zeus to mankind in venge-ance for Prometheus's theft of heaveniy fre. Each of the gods gave her some gift fatai to man. According to later accounts, the gods gave her a box full of biessings for mankind, but on her opening the box they all flew away, except hope. Epimetheus, brother of Prometheus, married her.

Panel (pan'ei), a schedule or roii of jurors. (See Jury.) In Scottish law, the prisoner at the bar is the panel.

Pangenesis (pan-jen'i-sis), a theory of reproduction offered by Charles Darwin, in his Animals and Plants under Domestication. He suggests that all units of the body throw off minute granuies, which gather from ail parts of the body to form the sexual elements, their development in the next generation forming a new being. It will euflice to say that this theory has not been accepted.

Pangolin (pan'gō-iin), the name applies to the Scaly Antenders (Manidæ), forming a family of the Edentate order of mammais. They occur in Southern Asia and Africa; have the body invested by a covering of imbricated scales of horny material; vary from 8 to 4 feet in length, and defend themselves by assuming the form of a ball. The tail is long, and the feet are provided with strong curved claws, which assist the animals in burrowing. The jaws

Four-toed Pangolin (Manie tetradactyla).

are destitute of teeth, and the tongue is of great length. The food consists of insects. The four-toed pangolin (Manis tetradactyle) inhabits W. Africa.

Panio (pan'ik), the name of some species of millet (Panicum).

Panicle (pan'l-kl), a form of inflorescence differing from a raceme in having a branched instead of a simple axls. See Inflorescence.

Pânini (pa-nē'nē), a ceiebrated Indian grammarian who is supposed to have lived not later than the 4th century B.C. His Sanskrit grammar is highly scientific, but extremely abstruse.

Panipat (pä-në-pat'), a town of India, in the Punjah, 50 miles north by west of Delhi; surrounded by an oid waii. Pop. about 30,000.

Panizzi (pă-nit'zē), Sir Anthony, principai librarian of the Britana de Brasselle Melana

ish Museum, born at Bresceilo, Modena, in 1791. Having engaged in revolu-tionary movements, he came to Engiand in 1822, and became professor of Italian in University Coilege in 1828. In 1837 he was appointed keeper of printed books in the British Museum, and succeeded to the principal iibrarianship in 1856. He conceived and designed the pian for the new library and reading room, which is at once novel and very convenient. He died in 1870. Panjim. See Gog.

Panna. See Punnah.

Panniar. See Punniar.

Pannonia (pan-nō'ni-a), the ancient name of a district of Europe comprising the eastern parts of Austria, Carinthia, Carniola, the part of

Hungary between the Danube and the Save, Slavonia, and parts of Croatia and Bosnia. The Pannonians were finally subdued by Tiberius, a.b. 8, and Pannonia became a Roman province. It had numerous towns, of which Vindobona (Vienna) was the chief.

Panompenh. See Pnom-penh.

Panorama (pan-o-ra'ma; from Gr. pan, all, the whole, and horama, view), a painting in which all the objects that can be seen naturally the objects that can be seen naturally from one point are represented on the concave side of a whole or half cylindrical wall, the point of view being the axis of the cylinder. A painting of this kind when well mounted produces a complete iliusion, and no other method is so well calculated to give an exact idea of an actual view. See Diorama.

Panslavism (pan'slav-lzm), a genforts or aspirations of the Siavonic races in Europe, or some of them, after union.

in Europe, or some of them, after union, including the Russians, Czechs, Servians, Bulgarlans, etc.

Pan'tagraph. See Pantograph.

Pantellaria (pin-tel-ia-re'a), a fer-tile voicanic island of the Mediterranean, 50 miles E. S. E. of Cape Bon in Africa, and 80 miles south-west of Sicily, of which it is a depend-

west or Sicily, or which it is a dependency; length, north to south, 0 miles; breadth, 6 miles. It produces figs, raisins, wine, olives, etc. Pop. 8019.

Pantheism (pan-the'izm; Gr. pan, ali, and theos, god), in philosophy, the doctrine of the substantial identity of God and the universe, a doctrine that stands mildway between ether. trine that stands midway between athe-ism and dogmatic theism. The origin of the idea of a God with the theist and the panthelst is the same. It is by reasoning upon ourselves and the surrounding objects of which we are cognizant that we come to infer the existence of some superior being upon whom they all depend, from whom they proceed, or in whom they subsist. Pantheism assumes the identity of cause and effect. Matter, not less than mind, is with it the necessary emanation of the Deity. The unity of the universe is a unity which embraces are a variety in which all aii existing variety, a unity in which all contradictions and ail existing and inexpiicable congruities are combined. Pantheism has been the foundation of nearly ali the chlef forms of religion which have

Spinosa is the most representative pantheist of modern times. A twofold division of pantheism has been proposed:—1. That which loses the world in God, one only Being in whose modifications are the individual phenomena. 2. That which loses God in the world and totally denies the substantiality of God the substantiality of God.

the substantiality of God.

Pantheon (pan'the-on, or pan-the'-on; Greek, psn, all; theos, sod), a celebrated temple at Rome, built in 27 B.C. by Marcus Agrippa. It is a large edifice of brick, built in circular form, with a portico of lofty columns. It has the finest dome in the world (142½ feet internal diameter, 143 feet internal height), and its portico is almost equally celebrated. It is now a church, and is known as Santa Maria Rotonda. Raphael and other famous men are buried within its walls. The Pantheon in Paris, for some time the church of St. Geneviève, is a noble edifice with plofty dome, devoted to the interment of illustrious men. The plazza of the Pantheon, cleared by Eugenius IV of the ruins, which included basait lions and bronze figures, was called the Valley of the She-Goat.

Panther (pan'ther: Felis parddile),

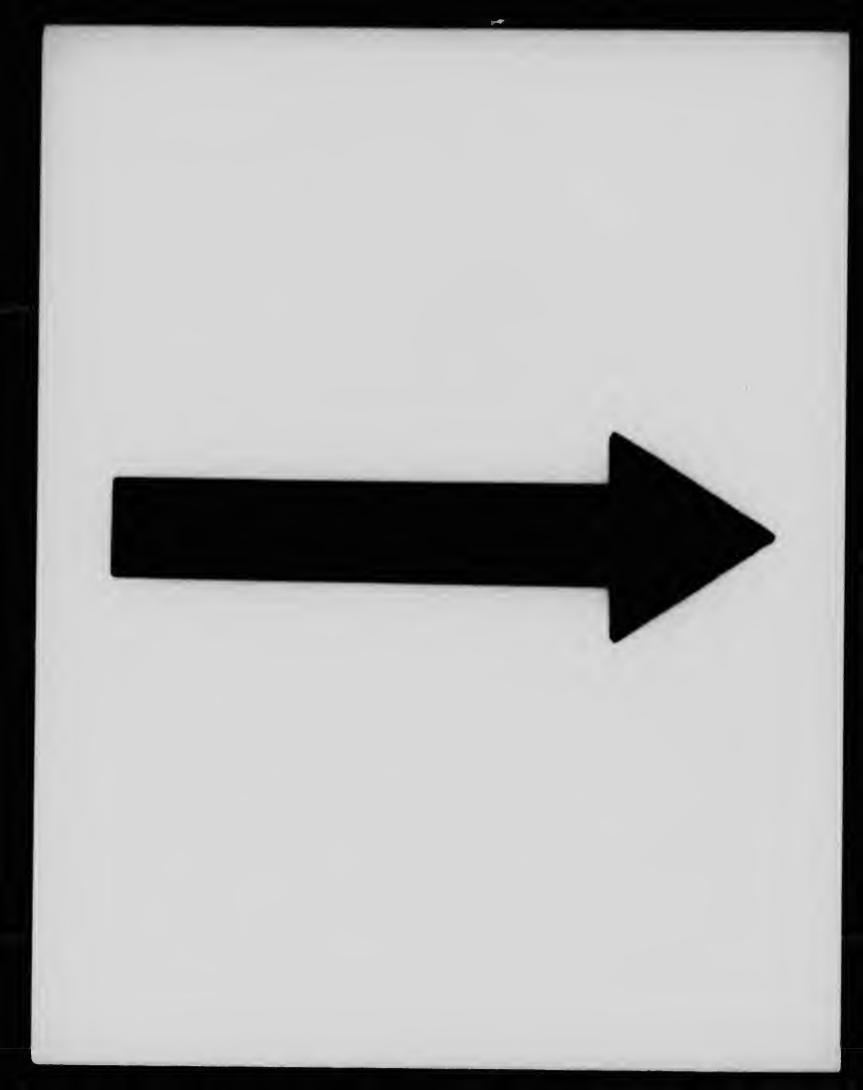

Panther (pan'ther; Felia pardalla), one of the Felida or Cat tribe, of a yellow color, diversified with

Panther (Felis pardális)

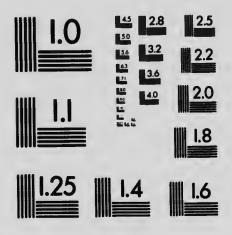

tribe, of a yeliow coior, diversified with roundish, black spots, a native of Asia and Africa. The panther is now supposed to be identical with, or a mere variety of, the leopard. (See Leopard.) The name panther (in vulgar language painter) is given to the puma in America.

Pantograph (pan'tō-graf), also cailed Pantagraph and PENTAGRAPH (from Gr. pan, aii, and graphein, to write or delineate), an instrument consisting of four iimbs joined together by movable joints, and so constructed that by means of it maps and structed that by means of it maps and existed in the world. It was represented graphein, to write or delineate), an inin the East by the Sankhya of Kaplla, strument consisting of four limbs joined a celebrated system of Indian philosophy. The Persian, Greek and Egyptian religious systems were also pantheistic.

Pantomime (pan'tu-mim), properly a theatrical representation without words, consisting of gestures, generally accompanied by music and dancing. The modern Christmas pantomime is a spectacular play of a burlesque character, founded on some popular fable, and interspersed with sing-ing and dancing, followed by a harle-quinade, the chief characters in which are the harlequin, pantaloon, columbine and clown, which may be traced back to the Italian pantomime, although their present development is almost entirely modern.

(pa'o-lē), PASQUALE DE, a Corsican patriot, born in 1725; died Paoli in 1807. In 1755 he was appointed captain-general by his countrymen, who were struggling for their independence against Genoa. He organized the government and military resources of the island, and maintained a protracted and generally successful struggle with the Genoese. The latter being unable to subdue the island, sold it to France in 1768. After a brief struggle Paoli was obliged to yield, and took refuge in England. After the Revolution of 1789 he was recalled by the National Assembly, and made governor of Corsica. Disagreements with the Democratic party in France followed, and despairing of maintaining, unaided, the independence of the island, he promoted its union with England. Subsembled to subdue the independence of the island, he promoted its union with England. Subsembled to subdue the independence of the island, he promoted its union with England. Papa (pä'pa), a town of Hungary, 75 miles west of Budapest. It has a castle of the Esterhazy family, a Protestant college, etc. Pop. 17,426.

Papa (pa'pa), the Low Latin form of Pope, the name given by the Greek churches to all their priests.

Papacy. See Popes.

Papal Flag, the authorized flag of the Roman Catholic Church with two stripes, gold and white, running perpendicularly.

Papal States (pā'pa!), the name the leaves grow the given to that portion of Central Italy of which the pope was sovereign by virtue of his position. The territory extended irregularly from the Adriatic to the Mediterranean, and eventually comprised an area of 15,289 square miles with 3,126,000 inhabitants. Rome was the capital. The foundation of the Papal States was lald in 754, when Pepin like other vegetable Bref presented the exarchate of Ra-

venna to Stephen II, Bishop of Rome. Benevento was added in 1053, and in 1102 Matilda of Tuscany left Parma, Modena, and Tuscany to the pope. In 1201 the Papal States were formally constituted an independent monarchy. Subsequently various territories were added to or subtracted from the pope's possessions, which tracted from the pope's possessions, which were incorporated with France by Napoleon in 1809, but restored to the pope in 1814. A revolution broke out in Rome in 1848, and the pope fied to Gaeta, but he was reinstated by French troops, and Rome was garrisoned by French soldlers until 1870. In the meantime one state after another threw off its allegiance to the pope and joined the kingdom of Italy, and when the French left Rome in the pope and joined the kingdom of Italy, and when the French left Rome in August, 1870, King Victor Emmanuel took possession of the city, declared it the capital of Italy, and thus abolished the temporal power of the pope.

Papantla (pa-pant'la), a town of Mexico, in the state of Vera Cruz, about 120 miles northeast of Mexico. It indicates its ancient splendor by its massive rulns. Pop. about 10.000.

They are smooth herbs, rarely shrubs, with alternate, often cut leaves, and solitary, handsome flowers. The poppies are

the most familiar members.

Papaw (pa-pa'; Carica Papaya, nat. order Papayacee), a tree

of South America, now widely cultivated in tropical countries. It grows to the height of 18 to 20 feet, with a soft herbaceous stem, naked nearly to the top, where the leaves issue on every side on long footstalks. Between

the unripe fruit is a powerful vermlfuge; the powder of the seed even answers the same purpose. The juice of the tree or its fruit, or an infusion of it, has the singular property of rendering the toughest meat tender, and this is even said to be effected by hanging the meat among the branches.—The papaw of North America is Asimina triloba, nat. order Anonacere; it produces a sweet, edibie frult.

Paper (pa'per), a thin and flexible substance, manufactured prin-cipally of vegetable fiber, used for writcipally of vegetable aber, used for writing and printing on, and for various other purposes. Egypt, China, and Japan are the countries in which the earliest manufacture of paper is known to have been carried on. The Egyptian paper was made from the papyrus (whence the word paper), but this was different from paper properly so called (See Papyrus) Acproperly so called. (See Papyrus.) According to the Chinese the fabrication of paper from cotton and other vegetable fibers was invented by them in the second century B.C. From the East it passed to the West, and it was introduced into Europe by the Arabs. Spain is said to have been the first country in Europe ln which paper from cotton was made, probably in the eleventh century; and at a later period the manufacture was carried on in Italy, France, and Germany. It cannot now be ascertained at what time linen rags were first brought into use for making paper; but remnants of Spanish paper of the twelfth century appear to indicate that attempts were made as early as that time to add linen rags to the cotton ones. The earliest paper manthe cotton ones. The earliest paper manufactory known to have been set up in England was that of John Tate, at Stevenage, in Hertfordshire, about 1495. The manufacture in England, however, iong remained in a backward state, so that until late in the elghteenth century the finer qualitles of paper were imported from France and Holland.

After the introduction into Europe of cotton and linen rags as materials for papermaking, other vegetable fibers were for many centuries almost entirely given up, rags being cheaper than any other It was only about the close of the eighteenth century that paper-manufacturers again began to turn their atten-tion to the possibility of using vegetable fibers as substitutes for rags, one of the earliest signs of the new departure being a work containing sixty specimens of of zinc or copper.

paper made from different vegetable materials, published in 1772 by a German process patented in France in the end of
named Schöffer or Schäffers. Straw, the eighteenth century, the pulp is placed
wood and esparto are the chief vegetable in iror vessels at one end of the ma-

fibers which have been found most suitable for the purpose

The process by which paper is produced depends on the minute subdivision of the fibers, and their subsequent cohesion; and before the making of the paper properly begins the rags or other materials have to be cleaned from impurities, boiled in a strong lye, and reduced by manifestications. by special machinery to the condition of a thin pulp, being bleached with chloride of lime. It is at this stage of the manu-facture that size is added, and toned and other colored papers have the coloring matter introduced. The pulp, composed of the fibrous particles mixed with water, is now ready to be made into paper.

Paper is made either by the hand or by machinery. When it is made by the hand the pulp is placed in a stone vat, in which revolves an agitator, which keeps the fibrous particles equally diffused throughout the mass; and the workman is provided with a mold, which is a square frame with a fine wire bottom, resembling a sieve, of the size of the intended sheet. These molds are sometimes made with the wires lying ali one way, except a few which are placed at intervals crosswise to bind the others together, and sometimes with the wires crossing each other as in a woven fabric. Paper made with molds of the former kind is said to be laid, and that made with those of the latter kind wove. The so-called watermark on paper is made by a design woven in wire in the mold. Above the mold the workman places a light frame called a deckie, which limits the size of the sheet. He then dips the mold and deckle into the pulp, a portlon of which he lifts up horizontally between the two, gently shaking the mold from side to side, to distribute the fibers equally and make them cohere more firmly, the water, of course, draining out through the wire meshes. The sheets thus formed are subjected to pressure, first between feits, and afterwards alone. They are then sized, pressed once more, and hung up separately on lines in a room to dry. The freedom with which they are allowed to contract under this method of drying gives to handmade paper its superior firmness and compactness. After drying they are ready for making up into quires and reams, unless they are to be glazed, which is done by submitting the sheets to a very high pressure between plates

chine, and is kept constantly agitated by a revolving spindle with arms attached to it. From these the pulp passes to the pulp-regulator, hy which the supply of puip to the machine is kept constant, thence through sand-catchers and strainers till it reaches the part of the machine which corresponds to the hand-mold. This consists of an endless weh of hrass wire-cloth, which constantly moves for-ward above a series of revolving rollers, ward above a series of revolving rollers, while a vibratory motion from side to side is also given to it, which has the same object as shaking the mold in making by the hand. Meanwhile its edges are kept even by what are called dccklo or boundary straps of vulcanized India rubber. At the end of the wire-cloch the puip comes to the dandy-roll, which impresses it with any mark that is desired. The fahric is now received by the felts, also, like the wire part of the machine, an endless weh, the remaining water being pressed out in this part of the machine by four or five consecutive rollers. If intended for a printing-paper, or any If intended for a printing-paper, or any other kind that requires no special slzing, it is dried by being passed round a succession of large hot cylinders, with intermediate smoothing rolls. It is then rendered glossy on the surface hy passing between polished cast-iron rollers called calenders, and is finally wound on a reel at the end of the machine, or submitted to the action of the cutting machinery, hy which it is cut up into sheets of the desired size. If the paper is to be sized, the weh, after leaving the machine, is passed through the sizing-tub, and is then led round a series of large and is then led round a series of large skeleton drums (sometimes as many as forty) with revolving fans in the inside, hy the action of which it is dried. If the paper were dried by hot cylinders after the sizing, there would he a loss of strength in consequence of the drying being too rapid. After heing dried the paper is glazed by the glazing-rollers, and then cut up. In some cases the sizing is paper is glazed by the glazing-rollers, and then cut up. In some cases the sizing is done after the paper has been cut into sheets, these being then hung up to dry on lines, like hand-made paper, acquiring in the process something of the same hardness and strength. The total length of a paper-machine, from the belength of a paper-machine, from the he-ginning of the wire-cloth to the cutters, is frequently more than 100 feet.

Paper was made from straw at the heginning of the last century, and the material is now largely used. The chief and best use of straw is to impart stiffness to common qualities. To prevent brittieness, however, it is necessary to destroy the silica contained in the straw by means of a strong aikaii. Paper is

now also made entirely from wood, previously reduced to a pulp; much the greater part of it being thus made. Esparto or Spanish grass, exported largely from Spain, Algeria, Tripoli, Tunis, and other countries, has been applied to papermaking only in comparatively recent years, but has risen rapidly into favor. The use of rushes for papermaking belongs to America, and dates from the year 1866. The root of the iucern has also been applied with success in France of late years to the fahrication of paper. Various mineral substances are sometimes added to the fibrous materials necessary to make paper, such as a sill-cate of alumina called Lenzinite, kaoliz or porcelain earth, and artificial sulphate of barium (permanent white). The first two substances have a tendency to diminish the tenacity of the fahric; the last is thought by some manufacturers to be heneficial to printing-papers, enabling them to take a clearer impression from the

Blotting and filtering paper are both made in the same way as ordinary paper except that the sizing is omitted. Copying paper is made by smearing writing paper with a composition of iard and black-lead, which, after being iet alone for a day or so, is scraped smooth and wiped with a soft cloth. Incomhustihle paper has been made from ashestos, but since fire removes the ink from a book printed on this material, the invention is of no utility, even though the paper itself he indestructihle. Indelihie check paper has been patented on several occasions. In one kind of it the paper is treated with an insoluhle ferrocyanide and an insoluhle salt of manganese, and is sized with acetate of alumina instead of alum. Parchment paper or vegetahle parchment is made from ordinary unsized paper hy treatment with sulphuric acid or oil of vitriol and ammonia. The so-cailed rice paper is not an artificial paper, but a vegetahle membrane imported from China, and obtained apparently from the pith of a plant called Aralia papyrifera. Tissue paper is a very thin paper of a silky softness used to protect engravings in hooks and for various other purposes. Tracing paper is made from tissue paper hy soaking it with Canada haisam and oil of turpentine or nut-oll and turpentine.

nut-oll and turpentine.

In recent times the uses of paper have greatly multiplied. Besides heing largely employed for making collars, cuffs, and other articles of dress, it is sometimes used for making huts in the hackwoods of America; for making hoats, pipes, and tanks for water; cuirasses to resist mus-

ket-huilets, wheels for railway-carriages. cannons. Paper and even belis and wheels have been used for some of Pullman's railway saloon cars in America, and have worn out one set of tires. Cannons made of paper have actually been tried with success. These are only a few of the articles made of paper. We may add to them barreis, vases, milkbottles, straw hats, into which no straw enters; clothing, handkerchiefs, etc. Even whole houses have heen huilt of paper — in Norway is a church, holding 1000 persons, huit entirely of it. The demand for paper has become so great, in view of the vast quantities now used for printing purposes, that more than 3,000,000 cords of wood are now used annually in this country for making paper pulp, and large quantities in Canada, spruce yielding the principal supply. Other species are heing experimented with and even the stalks of the cotton piant.

In Engiand a tax or duty on paper was imposed in the reign of Queen Anne, and was not repealed tili 1861. At one time the duty was ievied according to size or value, but later hy weight. So long as it was payable according to size, paper, as it proceeded from the mili, was cut with rigorous exactness into certain standard sizes, distinguished by different names. These were frequently departed from when the duty was made payable according to weight, but a number of sizes distinguished by different names are still made such as the following the standard of the standard standard of the standard st made, such as pot, foolscap, post, royal, imperial, etc. These are now the names of standard sizes of paper, royal being

19x24 inches.

Paper-hangings, ornamentai papers of the pasted on the walis of the rooms in dwellinghouses. The staining of papers for this purpose is said to be a Chinese invention, and was introduced into France early in the seventeenth century. It is now common everywhere, hut more especially in France, England, and the United States. Most of the processes in paperstaining are now usually done hy ma-chinery; but there is still much handwork in the finer qualities, especially those produced in France. The first operation is that of grounding, which consists in covering the surface with some eration is that of grounding, which consists in covering the surface with some duli color, the tint of which varies. Papers with a giazed ground are usually glazed immediately after receiving the ground tint. The designs on the surface of paper-hangings are applied by hand processes and machines exactly similar to those employed in calico-printing. (See Calico-printing.) Flock-paper is made by printing on the parts which are to instance made of cuttings of white or hrown paper boiled in water, and heaten in a mortar till they are reduced into a solution of gum Arabic or of size to give tenacity to the paste. Suiphate of iron, quicklime, and glue or white of egg, are sometimes added to enable the material to be sist the action of water, and by printing on the parts which are to borax and phosphate of soda to render

receive the flock a mixture of strong oil boiled with litharge and white lead, to render it drying. The colored flock is then sprinkled on the paper, and adheres to the parts to which the mixture has been applied.

See Currency. Paper Money.

Paper Mulberry. See Mulberry. See Argonaut. Paper Nautilus.

Paphlagonia (paf-la-go'ni-a), the former name of a mountainous district in the north of Asia Minor, hetween Bithynia on the west and Pontus on the east, separated from the latter by the Haiys. On the coast was the Greek city Sinope. Paphiagonia was first subdued by Crœsus, king of Lydia, and afterwards formed part of the Persian Empire will its actuary made them. sian Empire, until its satraps made themselves independent. It was ruled hy native princes from 316 B.C. uatil subdued hy Mithridates (63 B.C.), on whose overthrow the district was incorporated with the Roman Empire.

Paphos (pā'fos), the name of two ancient cities in Cyprus — Oid Paphos, a little more than a mile distant Paphos, a little more than a mile distant from the southwestern coast, upon a height; and New Paphos (modern Baffa), 7 or 8 miles to the northwest of Old Paphos, situated on the seashore. The first was famous in antiquity for the worship of Aphroditë (Venus). At New Paphos St. Paul preached before the processus Sargius.

consui Sergius.

Papias (pā'pi-as), a Christian writer of the age succeeding that of the aposties. He is described hy Irenæus as a 'hearer of John and a companion of Polycarp,' and was martyred at Pergamus in 163 A.D. He was the author of five books on the Sayings of our Lord, ali jost, except a few valuable fragments, which give important information as to which give important information as to the early traditions regarding the New Testament: e. g. that Matthew's Gospel was helieved to have heen written in Hehrew, and that the Evangelist Mark was the interpreter (hermeneutes) of Peter, and wrote to his dictation.

Papier Mâché (pap-yā mā-shā; Fr. mashed paper'), a

6-U-5

it to a great extent fire-proof. It is used for making all sorts of useful and ornamental articles that can be formed in moids. Another variety of papier maché is made by pasting or gluing sheets of paper together, and pressing them when soft into the form which it is desired to give them. is desired to give them.

Papilio (pa-pii'i-ō), a genus of but-terflies (Lepidoptera), containing some well-known species, as the swallow-tailed butterfly (Papilio machaon), the peacock butterfly (P. Io),

Papilionaceæ (pa-pii-yo-nā'she-ē), a division of plants, forming a suborder of the Leguminosæ (which see), distinguished by the resemblance of the superior petals of their flowers to the extended wings of a butter-flowers to the extended wings of a butter-fly (Latin, papilio). The best-known examples are the pea and bean, which are the typical plants of this division. the typical plants of this division.

Papillæ (pa-pll'e), the name applied in physiology to small or minute processes protruding from the surminute processes protruding from the surface of the skin, or of membranes generally, and which may possess either a secretory or other function. The human skin exhibits numerous papiliae, with divided or single extremities, and through which the sense of touch is chiefly exercised. The papillae of the tongue are important in connection with the sense of taste. See Skin and Tongue.

Papin (på-pan). Denys, natural phi-

Papin (på-pan), Denys, natural philosopher, born in Blois, in Frauce, in 1647. Having visited England, he was in 1681 admitted a fellow of the Royal Society. The revocation of the Edict of Nantes preventing him from returning to his native country, he set-tled at Marburg, in Germany, in 1687, as professor of mathematics, retaining this charge till 1707. He is believed to have dled in Germany about 1714. He is best known for the invention denominated Papin's Digester (see Digester).

Papinianus (pap-in-i-i'us), Æmilius (Papinian), a Roman lawan horn under Antoninus Dius

man lawyer, born under Antoninus Plus, about 140 A.D. Hls learning and integrity won him the first offices of state, and he was ultimately chosen prefect of the prestorian guards under the Emperor Septimius Severus, whom he accompanied to Britain. The Emperor Caracalla caused him to be executed in 212. In the Pandects are 595 excerpts taken from his works.

Papion (pā'pi-on), Cynocephālus it was extensively culti-sphins, a species of dog-vated in Lower Egypt, but is now rare headed baboon, akin to the mandril. It there. It is abundant in the equatorial

tempies, in the caves of which their mum-

mied forms have been often found.

Pappenheim (pap'en-him), GottFRIED HEINBICH, COUNT OF, imperial general in the Thirty Years' war, born in 1594 at Pappenheim, in Bavaria. He distinguished himself in the battie of Prague as colonel, in 1620; in 1623-25 served in Lombardy as commander of a regiment of cuirassiers (the Pappenheim dragoons). In 1626 he couquered, with the assistance of the Bavarians. 40,000 peasants in Upper varians, 40,000 peasants in Upper Austria, and in 1630 joined Tilly, who ascribed the ioss of the battle of Leipzig in 1631 to his impetuosity. He appeared on the field of Lützen on the side of Wallenstein, but was mortally wounded, and died the day after the battle, 1632.

Pappus (pap'us), in botany, the feathery appendage that crowns many single-seeded seed-vessels; for example, the dawn of the dendallon.

for example, the down of the dandellon.

Pappus, ALEXANDRINUS, mathematician, flourished at Alexandria in the fourth century after Christ. Ail his works appear to have perished, except portions of his Mathematical Collections, which possess great value, and have sufficed to found his fame. They include geometrical problems and theorems, a treatise on mechanics, etc.

See New Guinea. Papu'a.

Papyrus (pa-pi'rus; Papyrus anti-quorum, or Cyperus papy-rus), an aquatic plant belonging to the nat. order Cyperacem or sedges. It has acquired celebrity from furnishing the

acquired celebrity from paper of the ancient Egyptians. The root is very large, hard, and creeping; the stem is severai inches thick, naked, except at the base, 8 to 15 or more feet high, triangular above, and terminated by a compound, widespreading, and beautifui umbel, which is surrounded with an involucre composed of volucre composed of large elght swordshaped leaves. The little scaly spikelets of inconspicuous flowers are placed at the extremity of the rays of this umbei. Formerly

was held in great reverence in Egypt, regions of Africa in many places, and is selected individuals being kept near the found also in Western Africa and in

Southern Italy. The inhabitants of some countries where it grows manufacture it into various articles, including sail-cloth, cordage, and even wearing apparei and boats. Among the ancient Egyptians its uses were equally numerous, but it is best known as furnishing a kind of paper. This consisted of thin strips carefully separated from the stem longitudinally, laid side by side, and then covered transversely by shorter strips, the whole being caused to adhere together by the use of water and probably some gummy matter. A sheet of this kind formed really a sort of mat. In extensive writings a number of these sheets were united into one long roll, the writing materials being a reed pen and ink made of animal charcoal and oil. Thousands of these papyrl or papyrus rolis still exist (many of them were found in the ruins of Herculaneum),

but their contents, so far as deciphered, have only been of moderate value.

Par (par; Latin, 'equal') is used to denote a state of equality or equal value. Bilis of exchange, stocks, etc., are at par when they seli for their nominai

value; above par or below par when they sell for more or less.

Para (på-rå'), a small Turkish and Egyptian coin, of copper or copper and silver, the fortleth part of a Turkish part (grush). Value, about 1/8 of a cent.

Pará (pa-ra'), or Belem, a city and seaport in Brazil, capital of the province of Para, on the right bank of the estuary of the Para (or of the River Tocantlas). The principal buildings are the governor's palace, the cathedral, and the churches of Santa Anna São João Baptista. It is the seat of the legislative assembly of the province. The port, deports are caoutchouc, cacao, Brazii nuts, copaiba, rice, piassava, sarsaparilla, annotto, cotton, etc. Pop. (1913) 170,000. The province of Para, the most northerly In Brazil, comprises an area of 443,790 square miles on both sides of the lower Amazon, and consists chiefly of vast al-luvial plains connected with this river and its tributaries. These latter comprise the Tapajos and the Xingu, besides many others, the Tocantins being another great stream from the sonth. The province possesses immense forests, and is extremely fertile, but there is little cultivation, the inhabitants being fewer than one to the square mile. The trade centers in the capital. It is now facilitated by steamboats navigating the Amazon and Tocantins. Pop. estimated at 652,000.

Parable (par'a-bi), a short tale in which the actions or events of common life are made to serve as a vehicle for moral lessons. The parable is a mode of teaching peculiarly adapted to the Eastern mind, and was common among the Jews before the appearance of Christ. It is exemplified in the Oid Testament in the parable addressed by Nathan to David (II Sam., xii), and there are frequent examples of it in the Talmnd and the Gospels.

Parabola (par-ab'u-la), one of the curves known as conic seccurves known as conic sections. If a right cone is cut by a plane parallel to a slant side, the section is a parabola. It may also be defined as the curve traced out by a point which moves in such a way that its distance from a fixed point, called the 'focus,' is always equal to its perpendicular distance from a fixed straight.

from a fixed straight line, called the 'directrix.' In the figure B II is the directrix and F the focus, while P is a point that moves so that the perpendicular GP

ls always equal to the line P F; the curve P A D described by a point so moving is a parabola. The line F A C through the focus is the axis or principal diameter; any line parallel to it, as B D R, is a diameter. The path

of a projectile in vacuo, when not a vertical straight line, ls parabolic.

Parabolani (par-a-bo-lā'ni), in the early Christian chnrch, a class of men whose chief duty was to attend on the sick and diseased.

Paracelsus (par-a-sel'sus), or Philippus Aureolus Theofended by forts, is capable of admitting Phrastus Bombastus von Hohenheim, vessels of large size. The principal exempiric and alchemist, born at Elnsleempiric and alchemist, born at Elnsledeln, in the canton of Schwyz, in Switzerland, In 1493. Dissatisfied with the means of acquiring knowledge in his native country, he traveled over the greater part of Europe, everywhere seeking to add to his knowledge. ing to add to his knowledge. In the course of his travels he became acquainted with remedies not ln common use among physicians (probably preparations of mercury), by means of which he performed extraordinary cures, and obtained great reputation. In 1526 he accepted the chair of medicine offered him by the magistrates of Basel, and lectured there till the spring of 1528. The failure of a lawsuit, and the consequent quarrel with the jndges, led him to resume his wandering life, at first accompanied by his pupil Oporinus, who, however, disgusted with his violence and intemperance, at length left him. He died at the hospital of St. Sebastlan at Saizburg in 1541. For a long time he was regarded as little better than a chariatan, but he enriched science, particularly chemistry and medicine, with some valuable discoveries, and, indeed, is sometimes looked upon as the founder of modern therapeutics.

Parachute (pa'ra-shot), an appara-and construction, usually about 20 or 30 and construction, usually about 20 or 30 feet in diameter, attached to bailoons, by means of which the aeronaut may descend siowly from a great height. It is shut when carried up, and expands by inflation when the aeronaut begins to descend; out it is not altogether to be depended on, and accidents in connection with its use have been frequent. The earliest

Parachute (Garnerin's Parachute descending).

mention of a machine of this kind is in a MS. describing experiments made with one in 1617. In 1783 the French physician Lenormand made several further experiments at Montpellier; and shortly after the machine became well known through the descents of Bianchard in Parls and London. See Aeronautics.

Paraclete (par'a-klet; Gr. parakletos, a counselor, comforter),

the Comforter, the Holy Ghost (John, ziv, 16).

Paracoto, the hark of a South Paracoto, American tree, prohabiy a species of Cryptocarya. The bark has a spicy odor and an aromatic and pun-gent taste. It is used as an appetizer and in diarrhœai diseases. Its active

has been introduced into modern languages as a name for the garden of Eden (and hence of any abode of hap-piness) through its use in that sense in the Septuagint.

Paradise, adise. BIRD OF. See Bird of Per-

Paradox (para-doks), a statement or proposition which seems to be absurd, or at variance with common sense, or to contradict some previouslyascertained truth, though, when duly investigated, it may prove to be well founded.

Paradoxure (par-a-doks'ūr; Paradoxure doxurus typus), an animai of the civet family (Vlverridæ), common in India, and known also as the paim-cat from its hahit of climhing palmetres to sat their fruit. trees to eat their fruit. It can curi its taii into a tight spirai.

Paragould, a city, capital of Greene County, Arkansas, in a rich agricultural country. It is an important shipping point, and has large stave factories and other industries. Pop. 7000.

Paraffin (par'a-fin), a soiid white substance of a waxy appearance which is separated from petroleum and ozokerite, and is also largely obtained by the destructive distillation of various organic bodies, such as hrown coal or lignite, bituminous coai, shale, etc. The process generally consists in heating bituminous shale in iron retorts at a low red heat; condensing the tarry products, and purifying these by distillation, washing successively with sode water, and ing successively with soda, water, and acid, and again distilling. Those portions of the oil which solidify in the final distillations are collected separately from the liquid portions, washed with soda and acid, and crystallized or again distilled. The partially purified paraffin (called paraffin scale) is now again treated with acid, allowed to solidify, submitted to the action of centrifugal machines, and finally strongly pressed in order to remove any liquid oil which may still adhere to it. The refined paraffin is largely manufactured into candles, which largely manufactur d into candles, which may be either white or colored, and may he mixed with a certain quantity of wax, etc. The ilquid oils obtained in the process come into commerce under the general name of paraffin-oll, the lighter oils being used for illuminating and the and in diarrheal diseases. Its active principle is called paracotoin, a pale yellow, crystalline body, tasteless and odorless and sparingly soluble in water.

Paradise (para-dis), the garden of Eden. The word is originally Persian, and signifies a park. It was introduced into the Greek language in the form paradeisos by Kenophon, and sense general name of paradimon, the lightener is being used for illuminating and the heavier for intricating purposes. Paradin has secived its name (Lat. parum, ittle lightener in the form paradeisos and odorless in the form paradeisos by Kenophon, and vestas and tapers, for waterproofing.

sising, and glazing fabrics, as an electric country was deciared free and open both insulator, as a coating for the inside of beer barrels, etc.

Paragould (par'a-göld), a city, county scat of Green county, Arkansas, 67 miles N. by W. of Memphis. It has ficur and lumber milis, foundries and a fruit industry. Pop. 5248.

Paraguay (på'rå-gwl, or gwä), an iniand republic of South

America, surrounded by Argentina, Brazil, and Bolivia; area, 145,000 square miles. The whole surface belongs to the basins of the Paraguay and Parana, numerous tributaries of which intersect the country. Along the Paraguay and in the south adjaining the Paraguay and in the country. Along the Paraguay and in the south, adjoining the Parana, are extensive swampy tracts; westward of the Paraguay the country is little known. Eisewhere the surface is well diversified with hili and vallcy, and rich aliuvial piain. The climate is agreeable, the mean annual temperature being about 75°. The natural fertility of the soil is shown by a vegetation of almost unequaled in a surface and grandeur. In the equaled iuxuriance and grandeur. In the forests are found at least sixty varieties of timber-tree, besides dyewoods, gums, drugs, perfumes, vegetable oils, and fruits. Many of the hills are covered with the yerba maté or Paraguay tea. (See Maté.) The larger piains are roamed over by immense herds of cattie, which yield large quantities of hides, tailow, bones, etc.; and on all the cultivated ailurial treats. luvial tracts sugar-cane, cotton, tobacco, rice, maize, etc., are raised in profusion. The exports are mainly Paraguay tea, fruits, tobacco, sugar, hides, rnbber, and other native products. Asuncion, the capital, Paraguari, and Villa Rica are connected by a railway about 90 miles iong. Large river steamers ascend the Parana and the Paraguay far above Asuncion.

Paraguay was originally a Spanish coiony, the first settlement being made in 1535. In 1608 a number of Spanish Jesuits established a powerful and wellorganized government, which lasted till 1758, when it was overthrown by the Brazilians and Spaniards. Early in the nineteenth century its isolated position en-abled it by a single effort to emancipate itself from Spanish rule. Dr. Francia, secretary to the revolutionary junta in 1811, was elected consul, but exchanged the name for that of dictator in 1814, and thenceforward, by a rigorous system of esplonage and the strict prohibition of all intercourse with other nations, retained his position till his death in 1840 at the age of eighty-four. In 1844 Don The former (Palwornis torquatus), found Carlos Antonio Lopez was elected presi- in India and on the eastern coasts of dent for ten years, and soon after the Africa, has a bright-green body and a

to foreigners and foreign commerce. Don Carios Lopez remained president of Paraguay tili his death in 1862, when he was succeeded by his son Don Francisco, who concluded treaties of commerce with England, France, the United States, Brazil, etc., and did aii in his power to promote the growth of agriculture and industry in the land. But a disastrous war with Brazii and the Argentine Rewar with Brazii and the Argentine Republic, which broke out in 1804 and only closed with the death of Lopez in 1870, caused the death of far the greater portion of the male adults and entirely checked the progress of Paraguay. A popular constitutional government has since been established, and the state is now making rapid progress in propular now making rapid progress in population and prosperity. The people are largely half-breeds or of Indian blood. Before the war the population is said to have been over 1,000,000; after the war then a tenth of this. it was not more than a tenth of this. The census of 1886 made it 329,688, not including about 120,000 Indians. Pop., 1905, 631,347.

Paraguay, a river of S. America, which rises in the Brazilian province of Matto Grosso, takes a course generally southwards, and joins the Parana at the southwest angle of the state of Paraguay after a course of some 1300 miles. It receives the Pilco-mayo, Vermejo, and other large rivers, and is a valuable highway of trade to Paraguay and Brazil.

Paraguay Tea. See Maté.

Parahyba (pā-rā-ē'bā), a maritime province of Brazii, between Rlo-Grande-do-Norte on the north and Pernambuco on the south; area, 28,846 square miles. Much of the soil is of a sandy texture, though there are also extensive fertile tracts and large forests. Periodical droughts occur. Pop. about 600,000. The capitai, PARAHYBA, is a cathedrai city situated on the river of the same name, about 11 miles from its mouth. The harbor is much frequented by coasting vessels. Pop. (1908) estimate 30,000.

Parakeet (par'a-kēt), or PARROQUET, a subfamily or group of the Parrots, characterized by their generally small size and their long tail-feathers. The islands of the Eastern Archipelage form the chief habitat of these birds, but species also occur in India and Australia. Amongst the most familiar forms are the rose-ringed and Aiexandrine parakeets.

pink circle round the neck. The Alexandrine parakeet (P. Alexandri) of India is a nearly allied species. These birds may be taught to speak with distinctness. The ground parakeets of Australia live amongst the reeds and grass of swamps, generally in solitary pairs. The common ground parakeet of Australia (Pezoporus formõeus) possesses a green and hiack piumage, the tail being similarly colored, and the body-feathers

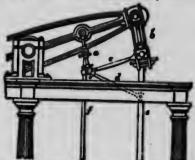

Rose-ringed Parakeet (Palæornis torquatus).

having each a band of dark-brown hue. The grass parakeets of Australia, of which the smail warbling parakeet (Melopsitiacus undulātus) is a good example, inhahit the central flat lands of Australia, and feed on the seeds of the grasses covering the plains. They perch on the eucaiypti or gum-trees during the day, and the nests are situated in the hollows of these trees. Contrary to most parrots, they have an agreeable voice.

Parallax (par'a-laks), the apparent change of place which bodies undergo by being viewed from different points. Thus an observer at A sees an object B in line with an object C, but when he moves to D it is in line with a gone backwards. The gone backwards. The cal in astronomy, and implies the difference of the apparent spositions of any celestial object when twiewed from the surface of the earth in the surface of the earth in the control of the term 'parallax' is also temployed to denote the non-coincidence of the crossibers in a telescope with the locus of the eyeglass.

Parallel Lines (par'el-el), in geometry, straight lines in the same plane which never meet, no matter how far produced.

Parallel Motion, a mechanical conpioyed by Watt to communicate the aiternate pushes and pulls of the piston-rod
of a steam engine to the end of a vibrating beam, and which prevents the
action of forces tending to destroy the
right-line motion of the piston-rod. The
motion given to the end of the rod is not
accurately in a straight line, but it is

Part of Beam of Condensing Engine.
abcd, Parallel motion. c, Pistonrod. f, Pump-rod.

very nearly so. Watt's parallel motion is still employed in all stationary beamengines. In marine heam-engines the arrangement employed differs somewhat in form, but is the same in principle as Watt's contrivance.

Parallelogram of Forces, an imtant dynamical principle, deduced hy Newton, which may be stated thus: If two forces acting in different directions on a particle at the same time be represented in magnitude and direction by two straight lines meeting at the particle, their resultant effect in giving motion to the particle is that of a force represented in magnitude and direction hy the diagonal (terminating in the particle) of the parallelogram, of which the two former lines are two sides.

Parallels, in military operations, are two sides, in military operations, are trenches formed by besiegers to cover their assault, being sonamed because they generally run parallel with the outlines of the fortress assailed. The communication from one to the other is effected by means of ditches formed in zigzag, so that they may not be raked by the fire of the fortress. Vauban first made use of them in 1673, at the siege of Maestricht.

Parallels of Latitude. See Lat.

Paralysis (pa-ral'i-sis), a bodily aliment, which in its effect consists in ioss of power in moving or ioss of feeling, or in both, and it is caused by disease of the brain, spinal cord, or nerves, or it may be due to lead or other poison affecting some part of the nervous system. When the paraiysis is iimited to one side of the body, and the voluntary power of moving the muscies is iost, this is due to disease of the brain which is of a one-sided or iocalized character, and receives the specific name of hemiplegia. It is generally caused by the bursting of a biood-vessel in the brain; it may also be due to a biood-vessel being blocked by a ciot of biood. The paralysis may be sudden and without anconsciousness, or it may be gradual and attended with sickness, faintness, and confusion of mind. In ordinary cases it will be found that one side of the hody is poweriess, the face twisted, the speech thick and indistinct. Recovery may he complete or partial, or the attack may prove fatal. In any case the shock is apt to be repeated. When one side of the body and the opposite side of the face are affected, the disease, which has its seat in the region of the medulia obilongata, resives the page of crossed carellesis and ceives the name of crossed paralysis, and is considered more dangerous than ordinary hemipiegia. When, again, the disease is situated in the spinai cord, the paralysis, which receives the name of paraplegia, may affect either the upper or lower part of the body, or motion may be lost on one side and sensation on the other. Local paralysis or paresis is the term used when disease or injury affects a specific nerve-trunk, and has no connection with disease of the brain or spinal cord. The effect of this local paralysis is to deprive the muscles of their nerve-supply, in which case they lose their power, becoming weak and faint.

Paramaribo (par-a-mar'i-bō), the capital of Dutch Gui-ana or Surinam, about 18 miles above the mouth of the River Surinam, which is navigable for vessels of considerable size. It is the center of the Dutch West Indian trade, and exports sugar, coffee, etc. Pop. 33,821.

Paramatta (par-a-mat'a), or Parra-MATTA, a town in New South Wales, on a river of same name (really an extension of Port Jackson), in a beautiful and weii-cuitivated district, 14 miles west of Sydney. Woolen cloth is manufactured to some extent; and in

is oldest in the colony except Sydney, Pop. 12,508.

Paramatta, a light, twilled fabric merino wool and cotton warp. It was invented at Bradford, in Yorkshire, where

Paraná (pä-ra-nä'), a river in South America, the largest except the Amazon, and draining a larger basin than any other river in the New World except the Amazon and the Mississippi. It is formed by the junction of two streams, the Rio Grande and the Paranahyha, which meet in Brazii, and it discharges likely like charges itself into the estuary of the La Plata, its final course being through the Argentine Republic. Its principal tribu-taries are the Paraguay and the Salado, both from the right. All the tributaries on its left are comparatively short. Its iength, from its sources to its junction with the Paraguay, is probably 1500 miles and thence to the sea 600 miles more. In breadth, current, and volume of water, the Parana has ten times the magnitude of the Paraguay, which is itself superior to the greatest European rivers. It is an important waterway to the interior of the country, though with obstructions at certain points.

Paraná, a province of Sonthern Brazil, having on the north the province of São Pauio, east the Atlantic, south the province of Santa Catharina, and west Paraguay and the province of Matto Grosso; area, 85,429 square miles. Its chief town is Curitiba. Pop. (1913) 486,404.

Paranahyba (på-rå-nå-e'bå), one of the

River Parana (which see).

Parapet (par'a-pet), in fortification.
a work, usually of earth, intended to protect the troops within the ramparts, as well as the pieces of artillery nsed in the defense. In order to fire, the defenders ascend a ledge called a banquette, about half-way up the parapet. In architecture the term parapet is applied to the structures placed at the edges of platforms, haiconies, roofs of houses, sides of bridges, etc., to prevent people from failing over.

Paranhamalia (par-a-fer-na'li-a), in

Paraphernalia (par-a-fer-na'li-a), in parel, jeweis, and other things, which, in the lifetime of her hushand, she wore as the ornaments of her person, and to which she has a distinct claim.

See Paralysis. Paraple'gia.

the vicinity there are large salt-works Parasang (par'a-sang), a Persian and copper-smeiting furnaces. Much fruit is grown in the district. The town both in ancient and modern times. Its

Paray le Monial (pa-ra le monial (pa-ra

rodern Persian name is forcens, and its length is estimated at from 5½ to 4 English miles.

Paraselene (pa-ra-se-18'nd), a luminous ring or circle sometimes seen round the moon, or there may the more than one ring as well as certain elberty points are apalogous to parhelis or muck suns; are apalogous to parhelis or muck suns

post at the top of the plane, and the ends passed under and round the object to be raised or lowered, when by pulling or slackening this can be accompiished.

Parcel Post (pär'sei pōst), an extension of the postal service of the United States by the admission to the mails of parcels of mermission to the mails of parcels of mer-chandise of greater weight than four it is granted. In cases of impeachment pounds, and for lowering the rate on this no pardon can now be granted by the

n

erown while the prosecution is pending; but after conviction of the offender it may be granted as in other cases. In the United States the pardoning power is lodged in the President, and the Governors of most of the States, and extends to all offences are extended. tends to all offenses except those which are punished by impeachment after conviction. In some States concurrence of one of the legislative bodies or of a

Pardoning Board is required.

Pardubitz (pär'du-bits), a town of Bohemia, on the Eibe.

It has an interesting oid castie, has various industries, and is a piace where iarge horse-fairs are heid. Pop. 17,029. Paré (pà-rà), Ambroise, the father of French surgery, born early in the sixteenth century at Laval; studied at Paris. He acted for a time as an army-surgeon, and in 1552 he became surgeon to Henry II. to Henry II, under whose successors (Francis II, Charies IX, and Henry III) he held the same post. From this 't was said that 'Paré was a legacy of the crown.' He died in 1590.

Paregoric Elixir (par-a-gor'ik), known also as the camphorated tincture of opium, is a solution of powdered opium, camphor, benzoic acid, and oil of anise. When used carefully it is found to be an exceiient anodyne and antispasmodic, but produces deleterious effects that must be guarded against.

Pareira (pa-ri'ra), a Portuguese name given to the roots of certain piants employed in medical practice, as vainable tonics and diuretics. The sort admitted into the pharmacopæia is called Pareira brava, and is produced by Cissam-Pareira brava, and is produced by Cissampelos Pareira, nat. order Menlspermacese.

Pareja (på-rā'hà), JUAN DE, a Spanish painter, 'the slave of Velasquez,' born of West Indian parents at Seville in 1606; died in 1670. In early life he was employed in menial work in the studio of Velasquez, and by closely watching his methods attained considerable skill secretly. At the intercession of Phillip IV he obtained his freedom, but continued in the family of Velasquez till his death. His success was chiefly in portraits, but he also painted

chiefly in portraits, but he also painted several large pictures closely imitative of the style of his master. Parent and Child, besides being a natural re-

general principles of the common is w, as well as of morality, statutory provisions existing in most of the states. The re-ciprocal rights of parent and child cease when the child has attained his majority; but may be revived on either side: thus if an adult chiid become a pauper the parent becomes responsible for its support, and if the parent become a public burden the adult chiid is responsible. The parent can leave his property away from his children. The right to the custody of the child belongs to both parents; the child's preference being consulted if he is 14 years old or over, and if not the court may use its discretion. The father may collect his child's earnings, and sue for damages for loss of services from injuries inflicted by a third party. An action may be brought by the child when the parent is killed through another's negligence. The mother and putative father of an illegitimate child are liable for its support.

Pargetting (par'jet-ing), Pargeting work, a term used for piaster-work of various kinds, but commonly applied to a particular sort of ornamental plaster, with patterns and ornaments raised or interior and often it. much used in the interior and often in the exterior of houses of the Tudor period. Numbers of wooden houses so ornamented on the outside, and beionging to the time of Queen Elizabeth, are still to be met with.

Parepa-Rosa, MADAME EUPHROSYNE, a distinguished vocalist and actress, born at Edinburgh in 1835; died in 1874. She made her first appearance as Aming when sixteen years old. Her voice had extraordinary compass and power, and she sang with brilliant success in London, New York, Philadeiphia and Boston. She married Carl Rosa, her manager, in 1867.

Paresis (pa-re'sis), a partial paralysis, or loss of muscular motion, but not of sensation. It is less marked in its effect than full paralysis, but is of the same nature. The loss of motor power is progressive and likely to end in death in from one to three years.

Parhelion (par-he'ii-on), a mock sun, having the appearance of the sun itself, and occasionally seen by the side of that iuminary. Parhelia are legitimacy and illegitimacy form a clear distinction. Various laws govern the relation in different countries, and in the United States it is generally held that the right of protection and support due from a parent to a child is dependent on sometimes double, sometimes triple, and United States it is generally held that or halo. They are the result of certain the right of protection and support due modifications which light undergoes when from a parent to a child is dependent on it falls on the crystals of ice, rain-drops,

or minute particles that constitute suitably situated clouds. Parhelia which appear on the same side of the circle with

Parhelia.

the true sun are often tinted with prismatic colors.

(pä'ri-a), Gulf of, an inlet of Paria the Atlantic on the northeast coast of South America, between the island of Trinidad and mainland of Venezuela, enclosed on the north by the Peninsula of Paria. It possesses good an-chorage, and receives some arms of the Orinoco.

Parnah (pā'ri-a), a name somewhat loosely applied to any of the lowest class of people in Hindustan, who have, properly speaking, no caste; hence, one despised and contemned by society; an outcast. Properly, however, Pariah (a Tamil name) is applied to the members of a somewhat widely spread race in Southern India, generally of the Hindu religion, and though regarded by the Hindus as of the lowest grade, yet superior to some ten other castes in their own country. They are frequently serfs to the agricultural class, or servants to Europeans.

Parian Chronicle. See Arundolian Marbles. Parian Marble (pā'ri-an), a mel-iow-tinted marble, highly valued by the ancients, and chosen blocks were obtained from Mount Marpassus, in the island of Paros.

Parima Sierra, a mountain range situated in the N. E. of Venezuela. In gen8000 ft. The Essequibo, Orinoco, and Rio Branco bave their rise in this range. Parini (pa-re'ne), GIUSEPPE, an Italian poet, born in 1729; died in 1798. He studied at Milan, published Parini some youthful poetry, and wrote a dra-matic satire on the Mllanese aristocracy entitled Il Giorno ('The Day'). He was latterly professor of rhetoric at Mllan.

Pari passu, in law, a term signifying equally in proportion, without preference: used especially of the creditors of an insolvent estate who (with certain exceptions) are entitled to pay-ment of their debts in shares proportioned to their respective clalms.

Paris (par'is), a genus of plants of the nat. order Trilliaceæ. P. quadrifolia (herb-paris, true-love, or one-berry) is not uncommon in Britain, being found in moist, shady woods. It has a simple stem bearing a whorl of four ovate leaves near the summit, and a solitary greenish flower. The fruit is a purplish-black berry.

Paris (pa'ris, Fr. pron. pa-re'; anciently, Lutetia Parisiorum), the

capital of France and of the department of the Seine. The city lies in the Selne valley surrounded by heights, those on the north being Charonne La Villette, the Buttes-Chaumont and Montmartre; those on the south St. Geneviève, Montrouge and the Butte-aux-Cailles. Through the valleys between these heights the river runs from east to west, enclosing two islands, upon which part of the city is built. It is navigable by small steamers. The quays or embankments, which extend along the Seine on both sides, being built of solid masonry, protect the city in some measure from inundation and in some measure from inundation and form excellent promenades. The river, which within the city is fully 530 ft. in width, and has a length of 7 miles, is crossed by numerous bridges, the more important being Pont Neuf, Pont des Arts, Pont du Carrousel, Pont Royal, Pont de l'Alma, etc. The city is surrounded by a line of fortifications which measures 22 miles; outside of this is the enceinte, while beyond that again are the enceinte, while beyond that again are the detached forts. These now form two main lines of defense. The inner line consists of sixteen forts, the outer line of 18 forts besides redoubts; the area for their choicest works. The principal thus enclosed measuring 430 square miles, with an encircling line of 77 miles. The climate of Paris is temperate and agree-(pa-re'ma), or PARIME, able. The city is divided into twenty arrondissements, at the bead of each of uated in the N.E. of Venezuela. In gen-which is a maire. Each arrondissement eral it is composed of bare plateaus, and is divided into four quarters, each of its highest peaks rise to a height of about which sends a member to the municipal

O,

council. The council discusses and votes Denls and Porte St. Martin, the former the budget of the city. At the head are of which is 72 feet in height. On the is derived from the Seine and the Marne, from the Ourcq Canal, from artesian wells, and from springs.

Streets, Boulevards, etc.—The houses of Parls are almost all built of white calcareous stone, and their general height is from five to six stories, arranged in separate tenements. Many of the modern

the prefect of the Seine and the prefect south side of the Seine the boulevards are of police. The water supply of the city neither so numerous nor so extensive, the best known being the Boulevard St. Germain, which extends from Pont Sully to the Pont de la Concorde. The exterior boulevards are so named becrois and the are outside the old mur d'octroi; and the military boulevards, still farther out, extend round the fortifications. After the boulevards the most famous line of streets street buildings have mansard roofs, and is the Rue de Rivoli, with its somewhat are highly enriched in the Renaissance irregular extension in the magnificent manner. In the older parts of the city Champs Elysées. A second is the Avenue

PARIS .- The Place de la Concorde and Montmartre, from the Chamber of Deputies.

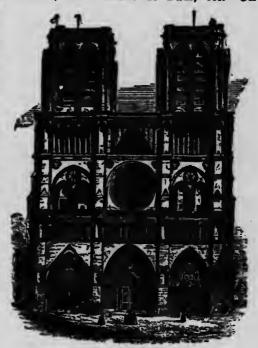

the streets are narrow and irregular, but de la Grande Armée and the Rue St. in the newer districts the avenues are Antoine. These traverse a great part straight, wide, and well paved. What are known as 'the boulevards,' include the interlor, exterior, and military. That which is specifically called *The Boulevard* extends, in an irregular arc on the north side of the Seine, from the Place de la Bastille in the east to the Place de la Madelelne in the west. It includes the Boulevards du Temple, St. Martin, St. Denis, des Italiens, Capuchins, Made-

Antoine. These traverse a great part of the city from S. E. to N. W. The Champs Elysées, a driveway about 11 miles long, and the Avenue du Bois de Boulogne constitute the most fashionable promenades of the city. Other important streets are the Rue Castlglione, Rue de la Paix, Rue de la Chaussée d'Antin, the Rue des Pyramides, and the twelve fine avenues radiating from the Place de i'Etoile. There are six passenger staleine, etc., and its length of nearly 3 tions for the railways to the various parts miles forms the most stirring part of the of the country, and a railway around the city. Here may be noted also the mag-city (the ceinture), by means of which wifecent triumphal arches of Porte St. interchange of traffic between the different lines is effected. There are also tramway lines to Versailles, St. Cloud, and other places in the suhurbs.

Squares, Parks, etc.—The most notable public squares or places are the Place de la Concorde, one of the largest and most elegant squares in Europe, surrounded by fine huildings and adorned hy an Egyptian obelisk, fountains, and statues; Place de l'Étoile, in which is aituated the Arc de Triomphe, a splendid structure 150 feet in beliebt did structure 152 feet in height; the Place Vendôme, with coium to Napoieon I; Place des Victoires, with equestrian statue of Louis XIV; Place de la Bastille, with the Column of July; Piace de la République, with colossai statue of the Republic atc. Within the city are the Republic, etc. Within the city are situated the gardens of the Tuileries, which are adorned with numerous which are adorned with numerous statues and fountains; the gardens of the Luxembourg, in which are fine conservatories of rare plants; the Jardin des Plantes, in which are the zoöiogicai gardens, hothouses, museums, lahoratories, etc., which have made this scientific institution famous; the Buttes-Chaumont Gardens, in which an extensive oid quarry has heen turned to good account in enhancing the heauty of the situation; the Parc Monceaux; and the Champs Eiysées, Parc Monceaux; and the Champs Elysées, the latter heing a favorite holiday resort of ail classes. But the most extensive parks are outside the city. Of these the Bois de Boulogne, on the west, covers an area of 2150 acres, gives an extensive view towards St. Cloud and Mont Vaiérien, comprises the race-courses of Longchamps and Auteuil, and in it are situated lakes, an aquarium, conservatories, etc. The Bois de Vincennes, on tories, etc. The Bois de Vincennes, on the east, even larger, is similarly adorned with artificial lakes and streams, and its high piateau offers a fine view over the high piateau offers a line view over the surrounding country. The most ceiehrated and extensive cemetery in Paris is Père la Chaise (106½ acres), finely situated and having many important monuments. The Catacombs are ancient quarries which extend under a portion of the southern part of the city, and in them are deposited the house removed. in them are deposited the bones removed from oid cemeteries now huilt over.

Churches.— Of the churches of Paris the most celebrated is the Cathedral of Notre Dame, situated on one of the islands of the Seine, cailed the lie de la Cité. It is a vast cruciform structure, with a lofty west front flanked by two square towers, the walis sustained by many flying buttresses, and the eastern end octagonai. The whoie length of the church is 426 feet, its breadth 164 feet, The foundation of Notre Dame helongs to the sixth century: the present edifice

dates from 1163; hut was restored in 1845. The interior decorations are all modern. The Church of La Madeleine, a modern structure in the style of a great Roman temple, entirely surrounded by massive Corinthian columns, stands on an eievated hasement fronting the north end of the Rue Royaie; the Church of St. Geneviève, built ahout the close of the eighteenth century, was after its compietion set apart, under the title of the Panthéon, as the burying-place of illustrious Frenchmen; St. Eustache (1532-1637), a strange mixture of degenerate Gothic and Renaissance architecture; St. Germain l'Auxerrois, dating from the fifteenth and sixteenth centuries; St. Gervais; St. Roch; St. Sulpice; Notre Dame de Lorette; St. Vincent de Paul, etc. On

The Cathedral of Nôtre Dame, Paris.

the very summit of Montmartre is the Church of the Sacred Heart, a vast structure in mediæval style. The Protestant churches are the Oratoire and Visitation, and chapels helonging to English, Scotch, and American denominations. There are also a Greek chapel and several synagones.

and several synagogues.

Many flying buttresses, and the eastern end octagonai. The whoie length of the church is 426 feet, its hreadth 164 feet, are its paiaces. The Louvre, a great foundation of Nôtre Dame helongs series of buildings within which are two to the sixth century; the present edifice

which comprises spiendid collections of stages or platforms (more than 400 feet scuipture, paintings, engravings, bronzes, pottery, Egyptian and Assyrian antiqui-tles, etc. (see Louvre); the palace of the Tulleries, the main front of which was destroyed in 1871 by the Communists, has since been restored, with the exception of its principal façade, the ruins of which have been removed and its site converted into a garden; the Palais du Luxembourg, on the south side of the river, has very extensive gardens attached to it, and contains the Musée du Luxembourg, appropriated to the works of modern French artists; the Paials Royal (which see) is a famed resort; the Paials de l'Elysées, situated in the Rue St. Honoré, with a large garden, is now the residence of the president of the republic; the Paiais du Corps Législatif, or Chambre des Députés, is the hulldlng in which the chamber of deputles meets; the Palais de l'Industrie, huilt for the first international exhibition in 1855, is used for the annual salon of modern paintings, etc. The Hôtel de Ville is situated in the Place de l'Hôtel de Ville, formally Place de Cables on the right formerly Place de Grève, on the right bank of the river. It was destroyed by the Communists in 1871, but has now been reërected on the same site with even greater magnificence. It is a very rich example of Renaissance architecture. The Hôtel des Invalides, built in 1670, with a lofty dome, is now used as a retreat for disabled soldiers and is capable of accommodating 5000. It contains the burial place of the first Napoleon. The Palais de Justice is an irregular mass of buildings occupying the greater part of the western extremity of the Ile de ia Cité. Opposite the Palais de Justice is the Tribunal de Commerce, a quadrangular building enclosing a large court roofed with glass. The Mint (Hôtei des Monnaies) fronts the Quai Conti, on the south side of the Seine, and contains an lmmense coilection of coins and medals. The other principal government build-lngs are the Treasury (Hôtel des Fi-nances), in the Rue de Rivoli; the Record Office (Hôtel des Archives Nationales). The Exchange (La Bourse) was completed in 1826; it is in the form of a parallelogram, 212 feet by 126 feet, of a parallelogram, 212 feet by 120 feet, surrounded by a range of slxty-six columns. A distinctive reature are the extensive markets, among the most luportant of which are the Halles Centrales, where fish, poultry, butcher-meat trales, where fish, poultry, butcher-meat trales, where soid. A notable des Invalides, or asyium for old soldiers, and sandan produce are soid. A notable des Invalides, or asyium (Maison des Alienés, and anotable des Invalides, or asyium (Maison des Alienés, anotable des Invalides, anotable and garden produce are soid. A notable des Invalides, or asylum for old soldiers, and unique structure is the Eiffel Tower, the iunatic asylum (Maison des Aliénés, built in connection with the Paris Exhibition of 1889. It is a structure of Iron latdown institute (Institution des Sourdstice-work 984 feet hlgh, and having three Muets); two hospitals at Vincennes for

higher than the Washington Monument). It is as yet the highest structure in the world.

Education, Libraries, etc.— The chief institution of higher education is the academy of the Sorbonne, where are the university 'faculties' (see France, section Education) of literature and science, while those of law and of medicine are in separate buildings. There are, besides, numerous courses of iectures in science, philology, and philosophy delivered in the Collège de France, and courses of in the Coilège de France, and courses of chemlstry, naturai history, etc., in the museum of the Jardin des Plantes. Among other Parisian schools are the secondary schools or lycées, the most important of which are Descartes (formerly Louis ie Grand), St. Louis, Corneille (formerly Collège Henri IV), Charlemagne, Fontanes (formerly Condorcet), De Vanves; the Ecole Polytechnique for military and civil engineers, etc.; Ecole des Beaux Arts; School of Orientai Languages: Conservatoire des Arts et guages: Conservatoire des Arts et Métiers, and the Conservatoire de Mu-sique. Of the iibraries the most im-portant is the Libliothèque Nationale, the largest in the world. The number of printed volumes which it contains is estimated at 2,500,000, besides 3,000,000 pamphlets, manuscript volumes, historical documents, etc. The other libraries are those of the Arsenal, St. Geneviève, Mazarin, De ia Ville, De l'Institut, and De i'Université (the Sorbonne). There are also libraries subsidized by the municipality in ail the arrondissements. Among museums, besides the Louvre and the Luxembonrg, there may be noted the Musee d'Artillerie, in the Hôtel des Invelides valides, containing suits of ancient armor, arms, etc.; the Conservatoire des Arts et Métiers; the Trocadéro Palace, containing curiositles brought home by French travelers, casts from choice specimens of architecture, etc.; the new palace, of the Eine Arts, creeked 1897-1900. aces of the Fine Arts, erected 1897-1900; and the Cluny Museum. containing an extensive collection of the products of the art and artistic handicrafts of the middle ages. The chief of the learned socie-ties is the Institute of France (which

wounded and convalescent artisans; the oreches, in which infants are received for the day at a small charge; and the ourroirs, in which aged people are sup-

plied with work.

Theaters.—The theaters of Paris are more numerous than those of any other city in the world. The most Important are the Maison de l'Opéra, a gorgeous edifice of great size; the Opéra Comique, the Théâtre Français, the Odéon; the Théâtre de la Gaîté, for vaudevilles and melodramas; Théâtre des Folies Dramatlques, Théâtre du Châtelet, Théâtre du Vaudeville, Théâtre des Variétés, Théâtre de la Porte St. Martin, and the Théâtre de l'Ambigu Comique.

Industries and Trade.—The most important manufactures are articles of jewelry and the precious metals, trinkets of various kinds, fine hardware, paper-langings, saddlery and other articles in leather, cabinet-work, carriages, various articles of dress, silk and woolen tissues, particularly shawls and carpets, Gobelin tapestry, lace, embroidery, artificial flowers, combs, machines, scientific instruments, types, books, engravings, refined sugar, tobacco (a government monopoly), chemical products, etc. That which is distinctively Parisian is the making of all kinds of small ornamental articles, which are called articles de Paris. A large trade is carried by the Seine both above and below Paris as well as by canals.

Population .- According to approximate estimates, the population of Paris was, in 1474, 150,000; under Henry II (1547-59), 210,000; in 1590, 200,000; under Louis XIV (1643-1715), 492,600; in 1856 (before the annexation of the parts beyond the old mur d'octroi), 1,174,346; 1861 (after the annexation), 1,667,841; 1881, 2,269,023; 1886, 2,256, 050; 1901, 2,714,068; 1911, 2,888,110.

History.— The first appearance of Davis in history is on the constlor of

Paris in history is on the occasion of Cesar's conquest of Gaul, when the small tribe of the were found inhabiting the banks o. eine, and occupying the island now called lie de la Cité. It was a fortified town in 360 A.D., when Julian's army encamped here summoned him to fill the imperial throne. In the hegin-nlng of the fifth century it suffered much from the northern hordes, and ultimately fell into the hands of the Franks, headed by Clovls, who made it his capital in 508. In 987 a new dynasty was established in the person of Hugo Capet, from whose roign downwards Parks has from whose reign downwards Paris has continued to be the residence of the kings of France. In 1437 and 1438, under Charles VII, Paris was ravaged by pesti-

lence and famine, and such was the desolation that wolves appeared in herds and prowled about the streets. Under Louis XI a course of prosperity again commenced. In the reign of Louis XIV the Parls walls were leveled to the ground after having stood for about 300 years, and what are now the principal boulevards were formed on their site (1670). Only the Bastille was left (till 1789), and in place of the four principal gates of the old walls, four triumphal arches were erected, two of which, the Porte St. Denis and Porte St. Martin, still stand. Many of the finest edifices of Paris were destroyed during the Revolu-tion, but the work of embellishment was resumed by the directory, and continued by all subsequent governments. The reign of Napoleon III is specially noteworthy in this respect; during it Paris was opened up by spacious streets and beautified to an extent surpassing all that had hitherto been effected by any of his predecessors. The most recent events in the history of Paris are the slege of the city by the Germans in the war of 1870-71, and the subsequent siege carried on hy the French national government in order to wrest the city from the hands of the Commune. Paris has been the scene of international exhibi-tions in 1855, 1867, and 1878, but the most important was that of 1889 in com-memoration of the centenary of the French Revolution. In 1900 was held the Exposition Universelle, at which Americans secured the greater part of the foreign awards. A great inunda-tion, due to an almost unprecedented flood in the Seine, submerged a great part of the city in 1910.

Paris (paris), a city, county seat of Edgar County, Illinois, 36 miles s. of Danville. It has manufactures of lumber, flour, hrooms, gloves, etc., and railroad car shops. Pop. 7664.

a city, county seat of Bourbon Co., Kentucky, on Stover Creek, Paris, 19 miles N. E. of Lexington. Its industries include whisky, tobacco, live stock and hlue-grass seed. Pop. 5859.

Paris, a city, county seat of Lamar Co., Texas, on the Texas Pacific and other railroads, 93 miles N. E. by E. of Dallas. It has cotton gins and compresses, oil mills, manufactories of furni-Paris, in Greek mythology, also called Priam, king of Troy, by Hecuba. His mother dreamed before his hirth that she had brought forth a firebrand, which was interpreted to mean that he would cause the destruction of Troy. To prevent this

the child was exposed on Mount Ida, where he was discovered by a shepherd, who brought him up as his own son. Here his grace and courage commended him to the favor of Œnone, a nymph of Ida, whom he married. At the marriage of Peleus and Thetis a dispute arose whether Hera, Athena, or Aphroditë was the most beautifui, and as such entitied to the goiden appie. Paris was chosen judge, and decided in favor of Aphroditë, who had promised him the fairest woman in the world for his wife. Subsequently he visited Sparta, the residence of Menelaus, who had married Helena (or Helen), the fairest woman of the age, whom he persuaded to elope with him. This led to the siege of Troy, at the capture of which city Paris was killed by an arrow.

Paris, Louis Albert Philippe D'Obleans, and grandson of Louis Philippe, born in 1838. After the revolution of 1848 he resided chiefly in Claremont, England, where he was educated by his mother. During the American Civil war of 1861 he, along with his brother the Duc de Chartres, voiunteered into the northern army, and served for some time on the staff of Generai McClellan. On his return to Europe the following year he married his cousin the Princess Marie Isabelle, eldest daughter of the Duc de Montpensier. After the Franco-German war he was admitted a member of the first national assembly. The Comte de Paris was recognized by the royalists as head of the royal house of France. Under the expuision bill of 1886 he, along with the other princes, was forbidden to enter France. He published a History of the Civil War in America, and a work on English Trade-unions. He died in England in 1894.

died in England in 1894.

Paris, Matthew, an English historian, born about 1195; died in 1259. He entered the Benedictine monastery of St. Albans, and in 1235 succeeded Roger of Wendover as chronicler to the monastery. He was very intimate with Henry III, and had a large number of influential friends besides. In 1248 he went on an ecclesiastical mission to Norway. He is characterized as at once a mathematician, poet, orator, theologian, painter, and architect. His principal work is his Historia Major (or Chronica Majora), written in Latin, and comprising a sketch of the history of the world down to his own times, the latter portion (1235-59) being, however, the only part exclusively his; the Historia Antorum, called also Historia Minor, a sort of abridgment of the former; and alse

Lives of the Abbots of St. Albans, Kings of Mercia, etc.

Paris, Treatles of. Of the numerous treatles bearing this designation a few only of the most important can be mentloned here. On February 10, 1703, a treaty of peace was signed between France, Spain, Portugal, and England, in which Canada was ceded to Great Britain. On February 6, 1778, was signed that between France and the United States, in which the independence of the latter country was recognized. A treaty was signed between Napoleon I and the ailies, ratified April 11, 1814, by which Napoleon was deposed and banished to Elba. The treaty for the conclusion of peace between Russia, on the one hand, and France, Sardinia, Austria, Turkey, and Great Britain, on the other, at the end of the Crimean war, was ratified March 30, 1856. The treaty of peace with Germany, at the end of the Franco-German war, May 10, 1871, by which France lost a great part of her Rhine provinces. The treaty of peace between the United States and Spain in 1899, by which Spain iost her coionial possessious in the West Indies and the Pacific.

Paris, UNIVERSITY OF, came into existence in the beginning of the thirteenth century, and was iong the most famous center of learning in Europe. It was suppressed by a decree of the Convention in 1793.

Paris Basin, In geology, the great area of tertlary strata on which Paris is situated. Besides a rich fossil fauna of marine and freshwater moliusca, the remains of mammais are abundant and interesting from their affinity to living forms.

Paris Blue, a bright biue obtained by exposing rosaniline, aniline and some benzoic acid to a temperature of 180° C.

Paris Green, a preparation of copper and arsenic employed on artificial flowers, in wall-papers, and as an in parish (parish out as district marked to belonging to one

church, and whose spiritual wants are to be under the particular charge of its own minister; or, to give the sense which the word often has in acts of Parliament, a district having its own offices for the legal care of the poor, etc. Parishes have existed in England for more than a thousand years. They were originally ecclesiastical divisions, but now, in England especially, a parish is an important subdivision of the country for purposes of iocal self-government, most of the iocal rates and taxes being confined within that

area, and to a certain extent self-im-posed. In Scotiand the division into parishes was complete about the beginning of the thirteenth century, and this division is also recognized for certain civil purposes as well as for purposes purely ecclesiastical. In the United States a parish is a body of people united in one

church organization. In Louisiana the countles are called parishes.

Parish Clerk is an officer in the Church of England, whose principal duties are to read the responses to the minister. The appointment is generally made by the incument and the ampliments consist of sale bent, and the emoluments consist of salarles and fees on marriages, burlais, etc. Park (park), in a legal sense, a large plece of ground enclosed and privileged for wild beasts of chase, by the monarch's grant, or hy prescription. The only distinction between a chace and a park was, that the latter was enclosed, whereas a chace was always open. The term now generally applies medal, and the Khedive's Star. He died to ornamental grounds connected with a grounds Connected with a grounds connected with a grounds connected with a grounds. gentleman's residence or public grounds devoted to recreation. The latter are genwithin recent years the establishing of city parks has made great progress in the United States, one of the carliest and most famous being the large and picturesque Fairmount Park of Philadelphia. Within the present century the development of pleasure grounds of this kind has gone on very actively in the cities of New York, Chicago, Boston and others of the large cities of this country and in many of the smaller ones. Great erally in or near a large town or city. and in many of the smaller ones. Great national and state parks have also been formed, chief among the former being the Yellowstone and Yosemite national parks. See National Parks.

Park City, a town in Knox County, Tennessee; a new place, organized in the first decade of the twentieth century Pop. 5126.

Park, Mungo, an African traveler, born near Selkirk in Scotland, in 1771; died in 1806. He was educated at Edinburgh for the medical profession; received an appointment as assistant-surgeon on hoard an East Indiaman and made a voyage to India. Returning to England in 1793 he was engaged by the African Society to trace the gourse of the Niger. He reached the the course of the Niger. He reached the Gamhia at the end of 1795, and advancing northeastward arrived at the Niger near Segu. After exploring part of the course of the river he returned home, and published his Travels in the Interior of Africa in 1799. He settled at Peehies as a country doctor, but in 1805 accepted

command of a government expedition to the Niger. Having advanced from Pisania on the Gamhla to Sansanding on the Niger, he built a boat at the latter place, with the intention of following the Niger to the sea. It was afterwards ascertained that the expedition advanced down the river as far as Boussa, where it was attacked by the natives. It is supposed that Mungo Park was drowned in his efforts to escape. The Journal of his second expedition as far as the Niger was published in 1815.

Parke, Thomas Hearth, born in Roscommon, Ireland, THOMAS HEAZLE, surgeon, was in 1857, and educated at Duhlin. He participated as surgeon in the campaign in Egypt in 1882 and in that for the relief of General Gordon in 1884-85; also

Parker (parker), ALTON BROOKS, judge, born at Cortland, New York, in 1852. Studied law, practiced at Kingston, and became chief judge of the Court of Appeals of New York in 1898. He took an active part in Democratic politics, was offered the post of Assistant Postmaster-General in 1881, and in 1904, received the Democratic nomina-1904: received the Democratic nomination for President of the United States. He was defeated by Theodore Roosevelt, the Republican candidate.

Parker, GILBERT, novelist, born in Canada, in 1862. He lectured in English in Toronto, edited a newspaper in Sydney, and wrote a number of able and popular novels, including When Valmond came to Pontiak, The

Seats of the Mighty, etc.

Parker, John Henry, an English
archmologist, horn in 1806. dled in 1884. He was a well-known publisher in Oxford, and in 1870 became keeper of the Ashmolean Museum. He devoted much time and labor to excavatlons in Rome.

Parker, Matthew, Archbishop of Canterhury, born at Norwich, in 1504; died in 1575. He was educated at Cambridge, and after having been licensed to preach was appointed dean of Stoke College in Suffolk. He was also made a king's chaplain and a canon of Ely. In 1544 he was appointed master of Corpus Christi College, Cambridge, and elected vice-chancellor of that university the following year. When university the following year. When Queen Mary succeeded to the throne Parker was deprived of his offices, and

n 1remained in concealment until the accession of Elizabeth in 1558. By royal command he was summoned to Lambeth, and appointed Archbishop of Canterbury. It was while he held this office that he had what is known as the Bishop's Bible translated from the text of Cranmer, and published at his own expense. He was the founder of the Antiquarian Society, a collector of MSS., which he presented to his college, and editor of the Chronicles of Walsingham, Matthew Paris, and Roger of Wendover.

Parker, THEODORE, an American divine, son of a Massachusetts farmer, born at Lexington in 1810; died at Florence in 1860. He studied at Harvard University, and in 1837 was settled as a Unitarian preacher at West Roxbury. Although his doctrine was accounted heterodox, yet such was his eloquence and ability that he soon became famous as a preacher and lecturer over New England. In 1843 he visited England, France, Italy, and Germany, and settled as a preacher in Boston on his return. He was a prominent advocate of the abolition of slavery. The principal of his published works are: Occasional Sermons and Speeches; and Sermons on Theism, Atheism, and the Popular Theology.

Parker, SIR HYDE, a British admiral, born about the year 1711; fought against the French, Spaniards, and Dutch. In 1783 he perished on his way to the East Indies.

Parker, SIR WILLIAM, a British admiral, born in 1781; died in 1866; entered the naval service, greatly distinguished himself by the capture of the Belle-Poule, a French frigate, and in 1809 made himself master of the citadel of Ferrol. In 1841 he took commind of the fleet operating against China; forced the entrance of the Yangtse-kiang, and appeared before Nanking, where terms of peace were agreed upon. In 1863 he was made admiral of the

Parkersburg (pär'kerz-burg), a city, capital of Wood Co., West Virginia, on the Ohio River, at the mouth of the Little Kanawha, 12 miles from Marietta, Ohio. It has an extensive trade in petroleum, which is abundant in its vicinity, and has large lumber mills, oil refineries, iron and a reply to the address is moved in each tures of furniture, etc. Pop. 25,000.

A house for the transition, has been read in lumber mills, oil refineries, iron and a reply to the address is moved in each tures of furniture, etc. Pop. 25,000.

A house for the transition, has been read in lumber mills, oil refineries, iron and a reply to the address is moved in each tures of furniture, etc. Pop. 25,000.

to the Rocky Mountains and published The California and Oregon Trail, and History of the Conspiracy of Pontico. Taking up the history of France in America as his lifework, he wrote a series of able and popular works, admired for their graces of style and graphic delineation of the subject. They include The Old Régime in Canada (1864), The Pioneers of France in the New World (1865), The Jesuits in North America (1866), The Discovery of the Greet West (1869), Count Frontenac and New France under Louis XIV (1878), Montcalm and Wolfe (1884), and A Half Century of Conflict (1892). He died in 1893.

Parkhurst (park'hurst), CHAELES HENRY, reformer, born at Framingham, Massachusetts, in 1842. He studied theology in Germany and in 1880 became pastor of the Madison Square Presbyterian Church, New York. In 1891, as president of the Society for the Prevention of Crime, he began an attack on the police methods in New York, and was prominent in the investigation that followed.

(par'li-ment; French, Parliament to speak), the supreme legislative as-sembly and court of law in Britain. In the article Britain the power and organization of Parliament are dealt with, while here its procedure and regulations are noted. When a new Parliament is summoned, and the two houses have met on the appointed day in their respective chambers, the lord-chancellor requires the presence of the Commons in the Upper House to hear His Majesty's commission read. When this is done the Commons withdraw to the Lower House and choose a speaker, previous to the election of whom the clerk of the House acts as speaker. After his election the administration of the requisite oath to the members is then proceeded with in both Houses. When most of the members have been sworn, the Commons are summoned to the Upper House, and the purposes for which Parliament has been assembled are then declared, either by the king in person or by his representative. After the royal speech, containing this declaration, has been read in

Parkman (park'man), Francis, historian, born at Boston, bers, otherwise the speaker will not take Massachusetts, in 1823; was graduated at the chair. The speaker of the House Harvard College in 1844. After spend-of Commons cannot take part in a debateing a year in Europe, he made a trip in the House, and can only speak on

questions of order or practice. He can, however, vote in cases where the votes are equally divided, or in committees of the whole house. The iord-chancellor is ex officio the speaker of the House of Lords, and he may both speak and vote in the House. When a division takes place upon a motion (that is, when a vote is taken on the motion) the practice is that those assenting to and those dissenting from the motion before the House each retire into a separate johy provided for that purpose, and are counted as they re-enter the house, hy two teliers on either side, who are appointed by the speaker. The mover of a motion puts it in writing, and delivers it to the speaker, who, when it has been seconded, puts it to the House, after which it cannot be withdrawn without the consent of the House. There are various ways in which a motion may be superseded, such as hy the adjournment of the House, by the motion that the orders of the day he now read, and hy the moving of the 'previous question' (which see). The House is adjourned when it is found that there are fewer than forty members present. Order is generally enforced by the chair, and in extreme cases of obstruction or the like, the offender is 'named' and suspended, or otherwise dealt with at the discretion of the honse. Irrelevancy or tedious repetition may also be dealt with by the chair, and to prevent dehates being end-lessly protracted, a measure called the Closure' has been recently adopted. See

The method of making laws is much the same in both Honses. In order to bring a private hill into the House of Commons it is first necessary to prefer a petition setting forth the aims of the measure, and otherwise comply with the standing orders of the house. When this is done the House, on the motion of a member, directs the bill to be introduced. The second reading of the bill is then fixed, and after being read it is referred to a select committee, upon which devolves all the actual work, in the shape of amendment, acceptance, or rejection. The committee on completion of its labors reports to the House, and the hill may then be read a third time and passed. Private bills include all those of a purely local character, such as the measures promoted hy municipal corporations, private individuals, railway, gas, and water companies, etc. In public matters a hill is hrought in upon motion made to the House without any petition. The hill is read a first time, and after a convenient interval a second time; and after each reading the sweaker

puts the question whether it shall proceed any further. If the opposition succeeds the bill must be dropped for that session. After the second reading it is referred to a committee, which is either selected by the House or the House resolves itself into a committee of the whoic House. A coma committee of the whole House. A committee of the whole House is composed of every member, and is presided over by a chairman other than the speaker—the speaker having vacated the chair, and the mace that he he he he he having been removed. In these committees the hill is dehated clause by clause, amendments made, the blanks filled up, and sometimes the hill entirely new-modeled. After it has some through the committee the chairman gone through the committee the chairman reports to the House such amendments as have been made, and then the House reconsiders the whole hili again. When the House has agreed or disagreed to the House has agreed or disagreed to the amendments of the committee, the bill is then ordered to be reprinted. It is then read a third time, and amendments are at this stage of its progress sometimes made. The speaker then puts the question whether the hill shall pass. If this be agreed to the title is settled, and the bill carried to the har of the Upper House, where it is received by the chancellor. It there passes through the same forms as in the other House, and if rejected no more notice is taken of it. But jected no more notice is taken of it. But if it be agreed to the Lords send a message hy one of the clerks, or on rare occasions by two masters in chancery to that effect, and the hill remains with the Lords. If any amendments are made, such amendments are sent down with the hill to receive the concurrence of the Commons of the Common of th mons. If the Commons disagree to the amendments, and both Houses in conference fail to agree, then the hill is dropped. If, however, the Commons agree to the amendments the hill is sent back to the Lords by one of the members, with a message to acquaint them therewith. The same forms are observed, mutatia mutandis, when the bili begins in the House of Lords.

The royal assent to bilis may be given hy the king in person; in which case he attends the House of Lords in state; or the royal assent may also be given under letters patent and notified in his absence, to both Houses assembled together in the Upper House, by commissioners, consisting of certain peers named in the letters. When the bill has received the royal assent in either of these ways it is then, and not before, a statute or act of par liament. All proceedings relating to the public income or expenditure originate in the Commons, a committee of the whole House, called the committee of supply, dis-

ds

le is

18 n

e

cussing and passing the various estimates during the session. These are all consol-idated in an appropriation hill at the end of the session sent to the House of Lords for approval, receive the royal assent and become law.

Within recent years, however, a vigorous movement has been made to limit the power of the House of Lords in dealing with financial measures. This movement reached a high state of development in 1910, when it became evident that the 1910, when it became evident that the hereditary rights of peers to iegislative power would have to be curtailed and the constitution of the House of Lords modified, the people sustaining the ministry in a revoit against the existing conditions. As a resuit a hill was passed by the House of Commons in 1911, and accepted after vigorous opposition by the House of Lords, greatly curtailing the powers of the latter body and making the lower House the dominant power. The right of rejecting or amending money hills was rejecting or amending money hills was taken from the House of Lords and the scope of what constituted a money hill was extended to include one connected in almost any way with the finances. In addition, if any bill not connected with finance should pass the lower House ln three successive sessions of that body it was not to be subject to amendment or rejection by the Lords, provided that two years had passed between its introduc-tion and its third passage. The duration of a Parliament was also limited to five years, instead of seven years, as formerly. The Parliament of France resembled that of England in being originally a con-

vocation of the great vassals of the crown. St. Lonis was the first to introduce into this body counseliors of inferior rank, chiefly ecclesiastics. The parliament had judicial as well as political functions, and after 1304, when it became a permanent court at Paris, the harons rarely attended and lawyers were its chief members and and lawyers were its chief members and officials. It remained the chief trihunai of the country, except for a short period after 1771, until the Revolution, its most important power being that of registering the edicts of the soverelgn and thus glv-ing them the force of law. It could pro-test against a tyrannous law and was thus able to modify the otherwise abso-

the more important buildings are the cathedral, begun in 1058, a cruciform building with a dome, an exceilent example of the Lombard-Romanesque style, the interior of the dome being painted in fresco by Correggio; the baptistery, a structure of marble; the Church of La Steccata; the Church of San Giovanni, which with other churches and build which, with other churches and buildings, contains paintings by Correggio and Mazzuoll, who were born here; the ducal palace, now the prefecture; the Palazzo delio Pliotta, comprising the museum of antiquities, picture-gallery, and library (more than 300,000 vols. and 5000 MSS.); and the university (about 200 students). Parma was originally an Etruscan town, and became a Roman colony in 183 B.C. The manufactures are of slik, cottons, woelens, felt hats, etc. Pop. 53,781.—The province lies on the right hank of the Po; area, 1253 square miles; pop. 294,159. It is watered chiefly by the Taro, the Parma, and the Enza, all of which fall into the Po. Parma. Duchy of, formerly an indewhich, with other churches and build-

DUCHY OF, formerly an inde-Parma, but since 1860 incorporated in the Kingdom of Italy, and divided into the provinces of Parma and Placenza. It comprehended the three duchles of Parma proper, Placentia or Piacenza, and Guas-taila, and had an area. taila, and had an area of about 2206 square miles. Parma anciently formed part of Gailia Cispadana and Liguria. Chariemagne made a present of it to the pope; hut it subsequently became an independent republic, and in the sixteenth century was erected into a duchy which was long ruled by the Farnese dukes. The victories of the French in Italy in the beginning of this century enabled Napoleon to seize the duchy and attach it to his Kingdom of Italy. After Napoleon's downfall it fell to his widow, the Archduchess Maria Louisa, for life, and thereafter to the Duke of Luca.

(par-mej-a-nē'nō). Same as *Mazzola*. Parmegianino Parmenides (par-men'i-dēz), a Greek philosopher, native of. Elea in Italy, and head of the Eleatic school, flourished about the middle of the fifth century B.C. In 450 he went to Parma (pār'ma), a city of North
Itaiy, capital of the province
of Parma, on the small river Parma, 72
miles sontheast of Milan. It is surrounded by a line of ramparts and bastlons, and though an old town has quite a modern aspect. The principal squares are four, and one of them, the Piazza
Grande, is large and handsome. Among

in the neighborhood of Parma of skimmed milk by a peculiar process, flavored with saffron, and celebrated for its keeping qualities. Indeed, it becomes so hard as to require to be grated when used.

Parmigiano (par - me - jil'nō). See Mazzola.

Parnahyba (par-na-ē'ba), a river of Brazli, which rises in the northeast of the province of Goyaz, flows northeast, forms the boundary hetween the provinces of Piauhl and Maranhão, and fails into the Atlantic helow Par-nahyba; total course about 800 miles. The port of Parnahyba admits only small vessels. Pop. about 12,000.

Parnassus (par-nas'sus), or Liaku'RA, a mountain of Greece,
situated in Phocls, 65 miles northwest of
Athens. It has two prominent peaks, one of which was dedlcated to the worship of Bacchus, and the other to Apollo and the Muses, white on its southern stope was situated Delphl and the Castalian fount. Its height is 8068 feet, and a magnificent view is obtained from its top. Parnell (par'nei), Charles Stewart, Avondaie, County Wickiow, Ireland, in 1846, was connected on his father's side with a family that originally belonged to Congleton, Cheshire, and whose members included Parnell the poet, and Sir John Parnell, chanceior of the exchequer in Grattan's Parliament; while his mother was the daughter of Admirai Stewart of the United Stewart of the United States navy. He was edu-cated at Magdaien College, Cambridge; became member of parliament for Meath in 1875; organized the 'active' Home Ruie party, and developed its obstruction tactics; and in 1879 formally adopted the policy of the newly-formed Land League, was an active member of it, and was chosen president of the organization. In 1880 he was returned for the City of Cork, and was chosen as leader of the Irish party. In the session of 1881 he opposed the Crlmes Act and the Land Act; was arrested (October 13th) under the terms of the former, along with other members of his party; and was lodged in Kilmainham Jail, from whence he was not released until the following May. In 1883 he was the recipient of a large money testimoniai (chiefly collected in America), and in this year was active in organizing the newly-formed National League. At the general election of 1885 he was reelected for Cork, and next year he and his followers supported the Home Ruie proposais introduced by Mr. Gladstone, while he also brought in a hill for the reiief of Irish tenants that was rejected.

party were accused by the Times news party were accused by the Times news-paper of complicity with the crimes and outrages committed by the extreme section of the Irlsh Nationalist party. To inves-tigate this charge a commission of three judges was appointed by the government in 1888, with the result that, after much evidence had been heard on both sides, a report was laid before Parilament in February, 1890, Mr. Parneil being acquitted of all the graver charges. He died in 1891.

Parnell, Thomas, poet, born in Dubin lin ln 1079; died in 1717. He was educated at Trinity Coilege, and, taking orders in 1705, was presented to the archdeaconry of Ciogher, but he resided chiefly in London. He was at first associated with Addison, Congreve, Steele, and other Whirs: but towards the latter and other Whigs; but towards the latter part of Queen Anne's reign he joined the Tory wits, of whom the most notable were Swift, Pope, Gay, and Arbuthnot. afforded Pope some assistance in his transintion of Homer, and wrote the Life pre-fixed to it. By Swlft's recommendation he obtained a prebend in the Dubiln Cathedrai and the valuable living of Finglass. After his death a collection of his poems was published by Pope in 1721.

Parochial Board (pa-rō'ki-ai), ln Scotland, a body of men in a parish elected by the payers of poor-rates to manage the relief of the poor, a duty which, in England, is per-

formed by overseers, and in some cases by the guardians of the poor.

Parody (par'u-dl), a kind of literary composition, usually in verse, In which the form and expression of grave or serious writings are closely lmitated,

but adapted to a ridiculous subject or a humorous method of treatment.

Parole (pa-roi'), a promise given by a prisoner of war that he will not try to escape if allowed to go about at liherty; or to return, If released, to custody at a certain time If not discharged; or not to bear arms against his captors for a certain period; and the like.

Paros (pā ros), an island in the Grecian Archipeiago, one of the Cyciades, 4 miles west of Naxos; length 13 miles; breadth 10 miles. It is generally mountainous; but the soil, though often rocky, is fertile, and in some piaces well cultivated Its markle has been famous from ancient times, and is the material of which some of the most celebrated pieces of statuary are composed. Paros was the hirthpiace of the poet Archilochus and the painter Polygnotus. Parikia, a seaport on the northwest coast, In 1887 he and other members of his island, 7740.

Parotid Gland (pa-rot'id), in anatomy, one of the adelphia, and was a pupil of Howard salivary glands, there being two paroticis, Pyie. Some of the many books which he one on either side of the face, immesaivary glands, there being two paroticis, one on either side of the face, immediately in front of the external ear, and communicating with the mouth by a duct. Parquetry (parket-ri), a species of lniaid woodwork in geometric or other patterns, and generally of different colors, principally used for

Parr (par), a smail fish common in the rivers of England and Scotland, at one time believed to be a distinct species of the genus Salmo, but now aimost universally regarded as the young of the salmon. The term is also applied to the young of any of the Salmonides. Called also Brandling.

Parr, Catharine. See Catharine Parr.

Parr, SAMUEL, an English scholar, born in 1747; died in 1825. He was educated at Harrow and Cambridge; taught successively in the grammar schools of Stanhope, Colchester, and Norwich; and in 1783 became perpetual curate of Hatton in Warwickshire. Here he engaged in literature, and became

noted among his contemporaries as a ciassical purist and bitter poiemic.

Parr, Thomas, better known as Old at Winnington, Shropshire, and died in 1635, he being then in his 152d year. A matrical account of his career was publications. metrical account of his career was published in 1635 by John Taylor, the 'water poet,' and he was buried in Westminster Abbey, where a monument records his longevity. His age, however, has been disputed, and doubtiess he was not nearly

Parrakeet, or PAROQUET. See Para-

Parrhasius (par-ra'she-us), a Greek painter, born at Ephesus, flourished about 420 n.c. Several of his pictures are mentioned by ancient authors, but none of them have been pre-

EDWARD (1822-1872), an Parrish, in Philadelphia, graduate of the Philadelphia College of Pharmacy. He established a school of practical pharmacy in 1849, and was made professor of materia medica in the College of Pharmacy in 1864, and professor of practical pharmacy in 1867. He won renown for his 'Parrish's Chemical Food,' a compound average of pharmacy in 1867.

syrup of phosphate of iron.

Parrish, Maxiell (1870-MAXFIELD (1870-), an American painter and illustrator, born in Philadelphia in 1870. He studied at the Pennsylvania Academy of Age, Eugene Fleid's Poems of Childhood, and Mother Goose Rhymes, Irving's Knickerbocker History of New York. His mural decorations include the well-known 'Old King Cole' in the Knickerbocker Hotel, New York, panels in the Curtis Building, Philadelphia, and other decorations in hote is in Chicago and San decorations in hoteis in Chicago and San Francisco. Francisco. He was elected to the National Academy of Design in 1908.

(par'ut), a name common to birds of the family Psittacide, Parrot of the order Scansores or climbers. The bill is hooked and rounded on all sides, and is much used in climbing. The tarsi are generally short and strong, the toes being arranged two forwards and two backwards. The tongue, unlike that of most other birds, is soft and fleshy throughout its whole extent. The wings are of moderate size, but the tail is often elongated, and in some cases assists in climblng. The plumage is generally brilliant. Parrots breed in hollow trees, and subsist on fruits and seeds. Several species can not only imitate the various tones. of the human voice, but also exercise in

cases actual conversational powers. wn of these birds reaching seventy and even ninety years. The species numerous, and are known under the years. hames of parrots, parakeets, macaws, lo-keets, lories, and cockatoos (see these articles), the name parrot, when used distinctively, being generally applied to species of some size, that have a strongly booked upper mendible and a short or hooked upper mandible and a short or medium-length tail. They are natives of both tropical and subtropical regions, and even extend northwards into the United States, and south to the Straits of Magelian, New Zealand, and Lasmania, The best-known species is the Gray Prerot (Psittācus crythācus) of Western
Africa, which can be most easily trained
to taik. The Green Parrots (Chrysön
are also common as domestic pets, being
brought from the tropical regions of South
America. The Carolina parrot (Congrue America. The Carolina parrot (Conurus Carolinensis) is found in the United States, and is gregarious in its habits. Parrot-coal, a name given in Scot-land to cannel-coal. Miners distinguish this coal into two va-rieties—viz. 'dry' or gas parrot, and soft' or oil parrot.

Parrot-fish, a fish of the genus, family Labride, remarkable for the beak-like plates into which the teeth of either jaw are united, and for their brilliancy of color, from one or other of which eigeumstances they have received their popus 2 name. Most of the species are tropical, but one, 8. oretensis, the source of the ancients, and esteemed by them the most delicate of all fishes, is

Ross, and during the succeeding nine Ross, and during the succeeding nine years he commanded various expeditions on his own account in efforts to find a northwest passage, and to reach the north pole. He afterwards filled various government situations, became rear-admirai of the white, ileutenant-governor of Greenwich Hospitai, and received the Greenwich Hospital, and received the honor of knighthood. He published sev-eral volumes, in which he narrated his voyages and adventures.

Parsees (par-sez'), the name given in India to the fire-worshiping followers of Zoroaster, chiefly settled in Bombay, Surat, etc., where they are amongst the most successful merchants. They have a great reverence for fire in ali its forms, since they find in it the symbol of the good deity Ahura-Mazda (Ormuzd). To this divinity they have dedicated 'fire-tempies,' on whose altar the sacred flame is kept continually burn-the Banardianae is the oblast practical ing. Benevoience is the chief practical precept of their religion, and their practice of this finds its evidence in their many charitable institutions. One of the most curious of their customs is in the disposai of their dead. For this they erect what are cailed 'towers of silence,' built of stone, about 25 feet high, and with a small door to admit the corpse. Inside is a large pit with a raised circular platform round it on which the body is exposed that it may be denuded of flesh by vultures, after which the bones drop through an iron grating into the pit be-iow. The number of Parsees in India is about 100,000. See Guebres.

Parsley (pars'ii), a plant of the nat. order Umbelliferæ, one species of which, the common parsiey (Petroselinum sativum), is a well-known gar-den vegetable, used for communicating an aromatic and agreeable flavor to sonps and other dishes. It is a native of Sardinia, introduced into Britain about the middle of the sixteenth century, and now widely grown. A variety with curied leaflets is generally preferred to that with

plain leasets, as being finer slavored. Hamburg parsley, a variety with a large white root like a carrot, is cultivated for its roots, and much in the same way as

by there the most delicate of all fishes, is found in the Mediterranean.

Parry (par'ri), Sir William Edward, born at Bath in 1790; died in 1855. He joined the navy in 1803, became lieutenant in 1810, took part in the successful expedition up the Connecticut River in 1813, and continued on the North American station tili 1817. In the following year he was appointed commander of the Alexander in an expedition to the Arctic regions under Sir John Ross, and during the succeeding nine for the use of the same way as carrots or parsnips.

Parsnip (pars'nip), a piant of the Umbellifers, the P. setive (common or garden parsnip), of which there are many primate leaves and bright-yellow flowers, cuitivated for its roots, which have been unsed as an escuient from a very early period. They are also cuitivated as food nsed as an escuient from a very early period. They are also cuitivated as food for the use of cattie.

Parson (par'sun), in English ecclesiastical law, is the rector or astical law, is the rector of the complete of the com

incumbent of a parish; also, in a wider sense, any one that has a parochial charge or cure of souls. Four requisites are nec-essary to constitute a parson, vlz.: holy orders, presentation, institution, and in-duction. His duties consist chiefly of performing divine service and administering the sacraments. In the United States parson is synonymous, in common speech,

parson is synonymous, in common speech, with minister, preacher, or clergyman.

Parsons, principal city of Labette Co., Kansas, 137 miles s. w. of Kansas City, on the Neosho River. It is the headquarters of the Missouri, Kentneky and Texas Railway, with extensive machine and car shope. Pop. 14,500.

Parsonstown (pars ns - toun), formerly called Birm. a

meriy called BIRR, a market-town in King's county, Ireland, on the river Little Brosna, about 90 miles s. w. of Dublin. The modern parts are weil built and regularly laid out in streets and squares. Birr Castie, the seat of the Earl of Rosse, with its famous telescope, closely adjoins the town. Pop. 4438.

Parterre (par-tar), a system of garden flower-beds arranged in

a design, with turf or gravei spaces intervening. Also applied to the pit of a French theater.

Parthenogenesis (par-the-no'jen-e-sis; Greek, parthenos, a virgin: genesis, birth), in zooiogy, a term applied to the production of new individuals from virgin females by means of ova, which are enabled to de-velop themselves without the contact of the maie element. We find several exampies of this pecnilar phenomenon among insects. The most notable aphides or piant-lice, whose fertilized ova, deposited in the autumn, lie without apparent development throughout the winter, and in the following spring produce modified females only. These females, without sexual contact with the males,

give birth to a second generation like to hemselves, and this form of reproduction indefinitely repeated. In the succeeding autumn, however, maie insects appear in the brood, and the ova are again im-pregnated with the maie element. In this case parthenogenesis has more the appearance of alternate generation. Perhaps the truest instance of parthenogenesis is found in the unfertilized queenbee, which deposits eggs out of which male or drone-bees are hatched. The eggs which produce neuters or females are impregnated in the usual way, but the eggs which produce the males are not fertilized. In the silkworm moth certain females, without fertilization, produce aggs. maies, without fertilization, produce eggs from which ordinary larve are duly developed.

Parthenon (par'the-non; Gr., from parthenos, a virgin—i.e., Athena or Minerva), a celebrated Grecian Athena or Minerva), a celebrated Grecian temple of Athena, on the Acropolis of Athens, one of the finest monuments of ancient architecture. It is huilt of marble, in the Doric style, and had originally 8 color is an each of the two fronts, with 17 color is on the sides, or 46 in all, of which are still standing; length 228 feet, breadth 101, and height to the apex of the pediments of feet; height of columns 84 feet 3 inches. The pediments were filled with large statues, the metopes adorned with sculptures in relief. After serving as a Christian church and After serving as a Christian church and as a mosque, it was rendered useless for any such purpose in 1637 by the expiosion of a quantity of gunpowder which the Turks had placed in it during the siege of Atheus hy the Venetians. Though the more precious pieces of aculature have been disnersed among sculpture have been dispersed among various European collections (see Elgin Marbles), the Parthenon still bears an imposing aspect.

Parthia (parthia), in the widest sense, was the Parthian Empire, iying between the Euphrates, the Oxus, the Caspian Sea, and the Arabian Sea. In the narrowest sense Parthia was the small country originally inhabited by the Parthians, and situated in the northwestern part of the modern Persian province of Khorasan. The Parthians were of Scythian origin, fought only on horse-back, and were celebrated for their skill in archery. They were subject successively to Persians, Macedonians and Syrians, and finally developed an important ampire according to the European portant empire extending to the Euphra-

sian, who conquered all Central Aria. These again were followed by the conquering Mohammedans. See Pereis. Participle (parti-si-pl; Latin, perticiples), in grammar a part of speech, so called because it partakes of the character both of a yearh and as of the character both of a verb and an adjective. The participle differs from the adjective in that it implies time, and therefore applies to a specific act, whereas the adjective designates only an attribute, as a habitual quality or characteristic, without regard to time. When we say, he has learned his leason, we have regard to a specific act done at a certain time; hut in the purase 'a learned man,' learned designates a habitnai quality. In the former case learned is a participle; in the iatter, an adjective. There are two participles in English: the present—ending in—ing, and the prst—ending, in regular verba, in—ed.

Partick (pär'tik), a police burgh of Scotiand, county of Lanark, on the Kelvin and the Clyde, adjoining Glasgow on the west. It has flour-mills, engineering works, shipbuilding yards, etc. Pop. (1911) 66,846.

Particles (par'ti-kis), such parts of speech as are incapable of any inflection, as, for instauce, the prepotime; but in the phrase 'a learned man.

any inflection, as, for instauce, the prepo-

sition, conjunction, etc.

Partnership (part'ner-ship) is the association of two or more persons for the purpose of undertaking and prosecuting conjointly any business, occupation, or calling; or a volume of the purpose of the purpose of the purpose of two or taking and prosecuting conjointly any business, occupation, or calling; or a volume to the purpose of the purpose of two or taking the purpose of the purpose of two or taking the purpose of the purpose of two or taking t untary contract by words or writing, be-tween two or more persons, for joining together their money, goods, labor, skill, or all or any of them, upon an agreement that the gain or loss shall be divided in certain proportions amongst them, depending upon the amount of money, capital, stock, etc., furnished by each partner. Partnership may be constituted by certain acts connected with the undertaktive of the contract of the contr ing apart from any deed or orai contract. ing apart from any deed or oral contract. The duration of the partnership may be limited by the contract or agreement, or it may be left indefinite, subject to be dissolved by mutual consent. The members of a partnership are called nominal when they have not ity actual interest in the trade or busir us, or its profits, but, by allowing their names to be used, hold themselves out to the world as apparently having an interest; dorment or sleeping, when they are merely passive in steeping, when they are merely passive in the firm, in coutradistinction to those who are active and conduct the business as principals, and who are known as ostentes, and resisting the Romans with various fortune. The Parthian dynasty, principals, and who are known as osten-founded by Arsaces (256 B.C.), was succeeded by the Sassanide, the latter being founded by Artaxerxes (214 A.D.), a Perbranch of business, without comprehend-

ing all the adventures in which any one partner may embark, but such reservation must be specified in the deed of contract. For in the usual course each member of a partnership is liable at common law for the debts of the firm, and a sleeping partner is responsible for all debts of the firm which have been contracted during his partnership. The powers of partners are very extensive, and the contract or other act of any member or members of the associated body in matters relating to the joint concern is, in point of law, the contract or act of the whole, and consequently binding npon the whole, to the extent of rendering each liable for it individually as well as in respect of the partnership property. This power does not extend to matters extraneous to the joint concern. Partners, though they should act in a fraudulent manner as respects their copartners, bind the firm in all matters connected with its peculiar dealings.

Parton (par'tun), JAMES, biographer, born at Canterbury, England, in 1822; died in 1891. He became a resident of New York and for a time was editor of the Home Journal. He wrote numerous able and popular works of biography. Among them were Life of Thomas Jefferson, Life and Times of Benjamin Franklin, Life of Voltaire, Captains of Industry, Famous Americans, etc. Partridge (par'trij), a well-known rasorial bird of the grouse family (Tetraonidæ). The common partridge (Perdix cinereus) is the most plen-tiful of all game-birds in Britain, and occurs in nearly all parts of Europe, in

Red-legged Partridge (Perdix rufus)

North Africa, and in some parts of Western Asia. The wings and tail are short, the tarsi as well as the toes naked, and the tarsi not spurred. The greater part of the plumage is ash-gray finely varied with brown and black. They feed on

there are the red-legged, French, or Guernsey partridge (P. or Caccabis rufus), which may now be found in considerable numbers in different parts of England; the Greek partridge (P. saxatilis), the African partridge, the Arabian partridge, the Indian partridge. The name partridge is applied in the United States to several North American species of the genus Ortyx or quails.

Partridge Berry, a plant of the Gaultheria procumbens, inhabiting North America, also known as wintergreen. The name is also applied to another North American shrub, Mitchella repens, a pretty little trailing plant, with white fragrant flowers and scarlet berries, nat. order Rubiaceæ.

Partridge Pigeon, a name for some of the Australian pigeons, otherwise called bronze-wings (which see).

Partridge Wood, a very pretty tained from the West Indies and Brazil, and much esteemed for cabinet-work. It is generally of a reddish color, in various shades from light to dark, the shades being mingled in thin streaks. It is said to be yielded by a leguminous tree, Andira inermis, and other South American and West Indian trees.

Parts of Speech are the classes which words are divided in virtue of the special funcare divided in virtue of the special func-tions which they discharge in the sen-tence. Properly speaking, there are only seven such classes, namely the noun, ad-jective, pronoun, verb, adverb, preposi-tion and conjunction; for the article, which is usually classed as a separate part of speech, is essentially an adjective. while the interjection can hardly be said to belong to articulate speech at all. Each of the parts of speech will be found separately treated und r their several heads throughout the work.

Party-wall is the wall that separates two houses from one another. Such a wall, together with the land upon which it stands, belongs equally to the landlords of the two tenements, half belonging to the one and half to the other.

Parvis (par'vis), Parvise, the name given in the middle ages to the vacant space before a church, now applied to the area around it.

Pasadena (pas-a-de'na), a city and winter resort of Los Angeles Co., California, 10 miles N. E. of Los grain and other seeds, i sects and their Angeles, on the Southern Pacific, Santa larve and pupe, and are chiefly found in Fé, Salt Lake and other railroads. cultivated grounds. Besides this species It is near the base of the Sierra Madre 01'

Mountains, and embowered in a wealth of southern vegetation. The city has important fruit industries, particularly oranges and lemons. It has a polytechnic school and a nature history museum. Pop. 30,291.

Pascal (pas'kal), BLAISE, a French philosopher and mathematician, born at Clermont, in Auvergne in 1623; a French died in 1662. In early youth he showed a decided inclination for geometry, and so rapid was his advance that while yet in his sixteenth year he wrote a treatise on conic sections, which received the astonished commendation of Descartes. His studies in languages, logic, physics, and philosophy were pursued with such assidu-ity that his health was irrecoverably gone in his eighteenth year. In 1647 he invented a calculating machine, and about the same time he made several discoveries concerning the equilibrium of fluids, the weight of the atmosphere, etc. He now came under the influence of the Jansenists — Arnauld and others—and from 1654 he lived much at the monastery of Port Royal, and partly accepted its rigorous rule, though he never actually became a solitaire. solitaire. He afterwards retired to a country estate, and finally returned to Paris, where he closed a life of almost unbroken ill-health. About 1655 he wrote, in defense of his Jansenist friend Arnauld, his famous 'Provincial Letters' (Lettres Ecrites par Louis de Montalte à un Provincial de ses Amis), and after his dental his Paradas (Planchia Paradas Amis) Pensées or Thoughts were published as the fragments of an unfinished apology for Christlanity. The latter, however, for long appeared in a garbled and corrupt form, and it is only lately that anything like a pure text has appeared. Of the Lettres there are many trustworthy editions.

See Cerro de Pasco. Pasco.

Pas-de-Calais (pä-dė-ka-la), a maritime department of Northern France; area, 2606 square miles. Its coast, extending about 80 miles, presents a long tract of low sand-hills, but near Boulogne forms a lofty crumbling cliff. The interior is generally miles. Its coast, extending about of miles, presents a long tract of low sand-hills, but near Boulogne forms a lofty crumbling cliff. The interior is generally flat, the streams and canals are numerous, and the soil fertile and well cultivated. The principal harbors are Boulogne and Calais. The chief minerals are large manufactures of wool, textiles, and indifferent coal good nine and notter's bandkerchiefs; also extensive print and logne and Calais. The chief minerals are large manufactures of wool, textness, and indifferent coal, good pipe and potter's clay, and excellent sandstone. There are numerous iron-foundries, glassworks, potteries, tanneries, bleachworks, mills, and plants. Pop. 65,000. factories of all kinds. The capital is Passamaquoddy Bay (pas-sa-ma-kras. Pop. 1,012,466.

Stettin, 27 miles from the town of that name, situated on the Ucker. Its industries embrace iron-founding, starch, to-

bacco, etc. Pop. 10,519.

Pasha (pa-sha', pa'sha), in Turkey, an honorary title originally bestowed on princes of the blood, but now conferred upon military commanders of high rank and the governors of provinces. There are three grades, each distinguished by a number of horse-tails waving from a lance, the distinctive badge of a pasha. Three horse-tails are allotted to the highest dignitaries; the pashas of two tails are generally the governors of the more important provinces; and the lowest rank, of one tail, is filled by minor provincial governors. Spelled also Pacha (the governors. Spell French spelling).

Pasht, in Egyptian mythology, a god-tus, in Lower Egypt, whence her alterna-tive name of Bubastes. She was said to be the daughter of the great goddess Isis. She was represented with the head of a cat, the animal sacred to her.

Pasque Flower (pask), the name given to Anemone Pulsatilla, nat. order Ranunculacese, plant with purplish flowers found on the continent of Europe, and so named be-cause Its petals are frequently used to dye Easter or pasque eggs. The flower blossoms in spring, and its leaves when crushed emit an acrid, poisonous juice.

Pasquinade (pas'kwi-nād), a lampublication, deriving its name from Pasquino, a tailor (others say a cobbler, and others again a barber) who lived about the end of the 15th century in Rome, and who was much noted for his caustic wit and satire. Soon after his death satirical placards were attached to a mutilated statue which had been dug up opposite his shop. His name was transferred to the statue and the term pasquil or pasquinade applied to the placards in which the wags of Rome lampooned well-

(pil'zė-valk), a town of bay opening out of the Bay of Fundy, Prussia, government of and lying between the state of Maine

and the Canadian province of New Brunswick. It is about 13 miles iong and 6 miles wide, and is dotted with islands

Passant (pas'ant), in heraldry, a term applied to a llon or other animai in a shield appearing to walk ielsurely, looking straight before him, so that he is seen in profile; when the full face is shown the term passant gardant is employed; and when the head is turned fairly around, as if the animal were looking behind, it is passant regardant.

Passau (pas'sou), a town of Bavaria. picturesquely situated on a rocky tongue of iand formed by the con-fluence of the Inn and Danube, 91 miles E. N. E. of Munich, on the southeast fron-tier of the kingdom. The principal huildings are the cathedral, an important example of 17th century work; the bishop's palace; Church of St. Michael; Jesuit College, now a lyceum; the town-house, gymnasium, library, etc. There is an important trade in timber. The fortress of Oberhaus crowns a precipitous wooded height (426 feet) on the left hank of the Danube opposite Passau. Pop. 18,003.

Passengers (pas'en-jerz). Railway, and other public carriers are legally required to carry passengers without any negligence on their (the carriers') part. In case of accident the carrier is ohilged to show that it was from no fault or negligence on his part, or on the part of his servants, that the accident occurred. Hence all passengers injured (or in case of death their nearest relatives) have a claim for compensation, unless it can be proved that the accident was due to the fauit of the passenger. Passengers hy sea are carried subject to the same general iaw as those hy land; the carriers are bound to observe ail due precautions to prevent accident or delay. No passenger ship having fifty persons on board, and the computed voyage exceeding eighty days by salling vessels or forty-five by steamers, can proceed on its voyage without a duly qualified medical practitioner on board. In the case of imminent danger from tempest or enemies passengers may be called upon by the master or commander of the ship to iend their assistance for the general safety.

Passeres (pas'e-res), the name given by Linnaus and Cuvler to the extensive order of hirds also called Insessores or perchers, See Insessores,

Ornithology.

Passing-bell, the beil that was rung in former times at the hour of a person's death, from the belief

that deviis iay in wait to afflict the soui the moment when it escaped from the miles wide, and is dotted with islands which make a safe harbor for the thriving town of Eastport.

Passant (pas'ant), in heraldry, a term body, and that bells had the power to territy evii spirits. In the proper sense of the term it has now ceased to be heard, but the toiling of beils at deaths or funerals is still a usage, more particularly as a mark of respect.

Passion (pash'un), The, a name for the crucifixlon of Jesus and

its attendant sufferings.

Passion-flower (Passiflora), a large genus of twining piants beionging to the nat. order Passifloracese. They are all twining plants, often climbing over trees to a considerable length, and in many cases are most beautiful objects, on account of their iarge, rich, or gaily-colored flowers, which are often succeeded by orange-colored edible fruits, for which indeed they are chiefly valued in the countries where they wild. Passiflora laurifolia pr. duces the water-lemon of the West Inc . s, and P. maliformis bears the sweet calabash. The name is applied more especially to P. carulea, which is commonly cultivated in England out of doors, and is the one to which the common than the one to which the common than the common terms of the common terms. is the one to which the genus owes its

Passionists (pash'un-istz), a rellgious order in the Church of Rome, founded in 1737. The members practice many austerities; they go harefooted, rise at mldnight to recite the canonical hours, etc. It is also known as the Order of the Hoiy Cross and the Passion of Christ.

Passion Play, a mystery or miracie different scenes in the passion of Christ. The passion play is still extant in the periodic representations at Oberammergau (which see).

Passion Week. See Holy Week.

Passive (pas'iv), in grammar, a term applied to certain verbai forms or inflections expressive of suffering or being affected by some action, or expresslng that the nominative is the object of some action or feeling; as, she is loved and admired.

Passometer (pas-om'e-ter), a small machine, with a dlal and index-hands like a watch, carried hy pedestrians to record their steps in waika sort of hodometer. Also known as .?edometer.

Passover (pas'ō-ver), a feast of the Jews, instituted to commemorate the providential escape of the Hebrews in Egypt, when God, smiting the first-born of the Egyptlans, passed over the houses of the Israeiites, which Ter

were marked with the biood of the paschal lamb. It was celebrated on the first full moon of the spring, from the 14th to the 21st of the month Nisan, which was the first month of the sacred year. During the eight days of the feast the Israeiites were permitted to eat only unleavened bread, hence the passover was also called the 'feast of unleavened bread.' Every householder with his famlly ate on the first evening a lamb killed by the priest, which was served up with-out breaking the bones. The passover was the principal Jewish festival.

Passport (pas'port), a warrant of protection and authority to travel, granted to persons moving from place to place, by a competent authority. In some states no foreigner is allowed to travel without a passport from his government, and in all cases the visitor to the continer of Europe is wiser to pro-vide himsel's with one, if only as a means of identification. In Russia and Turkey, In particular, a passport is indispensable. Passports to British subjects are granted at the Foreign Office, London. In the United States passports, with description of the applicant, are issued by the State Department at Washington. They are good for two years from date, renewable by stating the date and number of the old one. The fee required is one dollar. They are issued only to citizens, nativeborn or naturalized.

Pasta (pas'ta), Giuditta, an operatic singer, born at Como, near Miian, in 1798, of Jewish parents; died in 1865. She appeared at first without success, but in 1819–22 her reputation stead-lly increased, and up tili 1833 she held one of the foremost places on the jyric stage, which she then quitted. She was specially distinguished in the tragic opera: Bellini wrote for her his Norma and Sonnambula, and she made the rôles of Medea, Desdemona, and Semiramide her own.

Paste (past), a composition in which there is just sufficient moisture to soften without liquefying the mass, as the paste made of flour used in cookery. The term is applied to a highly refractive to slave a composition of pounded to the state of slave a composition of pounded to the state of slave a composition of pounded to the state of slave a composition of pounded to the state of slave as composition of pounded to the state of slave as a composition of pounded to the state of slave as a composition of pounded to the state of slave as a composition of slave as a state of slave as a composition of slave as a state of slave as a slave as a state of slave as a slave variety of glass, a composition of pounded rock-crystal melted with alkaline salts, and colored with metallic oxides: used for making lmltation gems. One variety of It is called Strass.

Pastel (pas'tel), or PASTIL, a colored crayon. Pastel painting. See

it answers to the first phalanx of a man's finger.

Pasteur (pasteur), Louis, a French chemist and physicist, born at Dôle, Jura, in 1822; educated at Jena University and the École Normale, Paris, where in 1847 he took his degree as doctor. The following year he was appointed professor of physics in Strasburg, where he devoted much research to the subject of fermentation; in 1857 he received the appointment of dean in the Faculty of Sciences, Lille; in 1863 he became professor of geology, chemistry, and physics at the Ecoie des Beaux-Arts, Paris; and in 1867 professor of chemistry at the Sorbonne. He became a member of the French Academy in 1882. He won a world-wide reputation by his success in demonstrating the agency of microbes in fermentation and decomposition, in Introducing a successful treatment of discount. ducing a successful treatment of disease in sllkworms and cattle, and in his efforts to check hydrophobla by means of inoculation. To enable him to deal with this disease under the best conditions a Pasteur Institute was opened in Paris, where patients were received from all parts of Europe, and thousands of persons suffering from hydrophobia were cured of the terrible disease. Similar institutions have been opened elsewhere. He died in 1895. See Hydrophobia.

Pasteurizer (pas'ter-iz'er), an app ratus for preserving milk and other fluids from deterioriation, named from Louis Pasteur (q. v.) the famous French chemist. To kill the bacteria a degree of heat varying from 130 to 160 Fahrenheit is employed. The pasteurization of milk has grown in favor, and the Dairy Division of the United States Department of Agriculture announces that it has been proven to be less approach than is generally believed. expensive than is generally believed. According to the figures of the department a careful study of a number of milk plants showed the average cost to be 0.313 cent for a gailon of milk and 0.634 for a gallon of cream. Laboratory tests have indicated that milk can be bottled bot and thus prevent reinfaction while hot and thus prevent reinfection while handling. The pasteurization of milk at low temperatures is said to hasten the rising of cream.

Pasticcio (pas-tlsh'i-ō), in music, an opera, cantata, or other work, the separate numbers of which are gleaned from the compositions of various Crayon. Pastel painting. See authors, or from several disconnected works of one author. In art the term is applied to a work which, though original next the foot and the coronet of the hoof: in the direct manner of execution next the foot and the coronet of the hoof: in the direct manner of another artist.

Pastille resin made up into small cones and burned in an apartment to give it a pleas-ant perfume. Pastilles are also made into

ed in 1539. It has manufactures of blank-

cts, hats, pottery, etc. Pop. 6000.

Paston Letters, The, a collection of letters written by and to members of the Paston family of the Roses, four volumes of which were published by Mr. (afterwards Sir) John Fenn, and a fifth by his literary executor, Sergeant Frere (Loudon, 1787-89 and 1823). These letters deal freely with the interests in public domestic affairs, the interests in public movements, the intriguing at elections, and the lawsuits of this particular family, and all the relations of English popular life in the period in which they were written. An accurate and extended edition in 3 vols. by Mr. Gairdner has been published (1872-75).

Pastor (pas'tur), a genus of birds belonging to the starling family,

found in the north of Africa, Syria, and India. The rose-colored pastor (P. rosčus) is a favorite song bird.

Pastor, the regularly ordained preacher of a congregation of religious worshipers.

Pastoral Letters (pas'tur-al) arc See Common. circulars addressed by a bishop to the clergy or laity under his jurisdiction at certain stated times or on special occasions for purposes of instruction or admonition.

Pastoral Poetry, poetry which deals, in a more or less direct form, with rustic life. It a kind of parachute for temporary suphas generally flourished in highly-corport.
rupted artificial states of society. Thus Patagonia (pa-ta-gō'ni-a), the name it was that Theoritus, the first pastoral poet, made artistic protest against the licentiousness of Syracuse and Virgil wrote his Bucolies and Ecloques in the corrupt Roman court. In the 16th century pastoral poetry received its most notable expression in the Arcadia of G. Calendar of Spenser, the Arcadia of Sidney, the Faithful Shepherdess of Fletcher, As You Like It of Shakespeare, and the Comus of Milton. The Gentle Shepherd of Allan Ramsey (1725) was the last successful dramatic pastoral.

(pas'til, pastel'), or PASTIL, Pastoral Ring, a ring worn by bishops on the ringfinger of the right hand.

Pastoral Staff, the official staff of ant perfume. Pastilles are also made into pills, and used by smokers to give the breath an aromatic odor.

Pasto (päs'tō), a town of the republic the form of a shepherd's crook as a symolocolombia, dep. Cauca, found-bol of the pastoral office. See Orosier.

Pastoral Theology, that part of the ology which treats of the obligations of the pastors themselves, and which is therefore designed for the training and preparation of the candidates for the pastoral office.

Pastry (pās'tri), articles of food made

Pastry pastry of paste or dough, which has been worked up with butter or fat, so that it assumes a light, flaky appearance. There are several varieties, such as puffpaste, paste for raised pies, and a light spane, which called bringhe. Pastry as a party of the called bringhe. spongy kind called brioche. Pastry as a rule is somewhat indigestible.

Pasture (pas'tūr), land under grass and herbage, which is eaten as it grows by horses, oxen, sheep, and other herbivorous and mals. First-class pastures are used for feeding heavy oxen; second class for inferior or dairy cattle; while hillsides, moors, and uplands are utilized for sheep. The great plains of the Western United States have long been devoted to pasture, feeding vast multitudes of grazing animals, and the same is the case with the great grassy areas of South America, New Zealand, and Australia.

(pa-ta-ji'um) is the name Patagium applied to the expansion of the skin or integumentary membrane by means of which bats, flying squirrels, flying lizards, and other semi-aerial forms support themselves in the air. This membrane is not a rue wing, but is used as

Patagonia (pa-ta-gō'ni-a), the name usually applied to that southern portion of South America which is bounded E. by the Atlantic, w. by the Pacific, s. by the Straits of Magellan, and N. by the Rio Negro. Since 1881 this large territory has been, by treaty divided between Chile and the Argentine Repub-Sannazaro, the Aminta of Tasso, and the lic. so that the portion west of the Andes Pastor Fido of Guarini. This tendency, (63,000 square miles) belongs now to the which was so potent in Italy, spread to former, and the portion east of the Andes England, and influenced the Shepherd's (360,000) belongs to the latter. The former, and the portion east of the Andes (360,000) belongs to the latter. The Straits of Magellan form a southern boundary of 360 miles, and separate the mainland from the numerous islands of Tierra del Fuego. Here the Chilean government has established the settlement of Punta Arenas, with stations along the

coast. Patagonia east of the Andes consists mainly of vast unduiating plains, frequently covered with shingle and broken up by ridges of volcanic rock. The vegetation is scanty, except in the region adjoining the Andes, and in many places there are shallow sait lakes and laguons. The chief rivers are the Rio Negro, the Chupat, the Rio Desire, and the Rio Chico, all of which have their sources in the Andes, and run eastward. There are few if any good seaports. The Patagonlans are a tail, muscular race averaging fully 6 feet in height, with black hair, thick iips, and skin of a darkbrown color. They are a nomad race, divided into numerous tribes, whose chief occupation is in hunting and cattle-breeding. This native population between ing. This native population, however, never numerous, is rapidly disappearing. Colonization is encouraged by the Argentine government, and there are many tracts suitable for European settlement. The country was first discovered by Mageilan in 1520.

(pa-ta-mar'), a vessei em-Patamar ployed in the coasting trade of Bombay and Ceylon. Its keel has an upward curve amidships, and extends only about half the length of the vessel; the stem and stern, especially the former, have great rake; and the draught of water is much greater at the head than at the stern. These vessels sail remarkably the stern. weli, and stow a good cargo.

See Lalitapatan. Patan.

(pa-cho'ii), a perfume obtained from the dried Patchouli leaves and branches of the Pogostemon patchouli, a labiate plant of India and Chiua, where it is cultivated on a large scale. It is used in India to scent costly Cashmere shawls, tobacco, and hair-oil, and is everywhere valued as a preservative of woolens and inens from insects. Pâté de foie gras (pā-tā de fwa mide from the enlarged livers of overfed geese, and much relished by picures. It is made in the form of a pie, and from its

oily nature is very ir ligestible.

Patella (ra-tel'a), the name applied in anatomy to the 'kneecap' or 'knee-pan,' the sesamoid bone of the knee.—The name is also applied to a genus of gasteropodous molluscs comprising the impets.

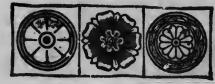

(pat'en), an ecclesiastical term applied to the round metallic plate on which the bread is placed in the sacrament of the Lord's supper. It often serves as a cover for the chaice.

ietters patent (whence the name), conveying to the individual or individuals specified therein the soie right to make. use, or dispose of some new invention or discovery for a certain limited period. The patent laws vary considerably in different countries. In the United States under the act of 1870 a patent is granted for a period of seventeen years to the original inventor only; in France it is granted to the patentee for a term of fifteen years on payment of \$20 annually; in Germany the period is fifteen years with a first payment of \$7.50; in Great Britain it is granted for conteen years but the it is granted for fonrteen years, but the period may be extended if the inventor can prove that his invention, while nse-fui, has been of little benefit to him. The various colonies and dependencies of Great Britain have each a separate patent iaw. An international convention for the protection of patentees has been formed whereby equal rights are secured in ail the signatory countries. The Patent Office of the United States is a bureau of vast extent, its extensive museum of 300,000 models, located in a fine marble building, being one of the sights of the capitai. It employs a large number of examiners and clerks, and issues more than 30,000 patents annually. It issues monthly voinmes in quarto, with detailed descriptions and drawings of patents, and a weekly Official Gazette of the Patent Office, with reduced drawings and lists of

new patents.
Within forty years (1871-1910) the
United States issued over 800,000 patents, while the total number, since the formation of the government, crossed the 1,000,-000 mark in 1911. This much surpasses the issue of other countries, the patents issued by Great Britain and France being about 400,000 for each country; Germany, 225,000; Belgium, 200,000; Canada, 120,000, and other nations in diminishing numbers.

Patera (pat'e-ra), a shallow, circniar, saucer-like vessel used by the Greats and Romans in their sections and

Greeks and Romans in their sacrifices and iibatlons. The name is applied in archi-

Architectural Patern.

tecture to the representation of a flat (pat'ent, pa'tent), a privilege round dish in bas-relief, used as an orna-from government granted by ment in friezes, etc.

(pa-ter'ni-anz), a heret-ical sect of the 5th century, followers of Paternue, who are said to have heid that God made the nobier parts of man and Satan the lower.

Hence they served God with the former parts and the devil with the latter.

Paterno (pa-ter'no), an ancient town of Sicily, 10 miles northwest of Catania, at the foot of Mt. Etnal

In the vicinity are mineral springs and the remains of baths, an aqueduct, etc. Pop. 20,098.

Paternoster (pā'ter-nos-ter; Latin, Our Father'), the opening of words of the Latin version of the Lord's prayer, hence employed to designate the prayer itself. See Lord's

Prayer.

Paterson (pat'er-sun), a city, the capital of Passaic county, New Jersey, on both sides of the Passaic, near its celebrated falls, and 16 miles northwest from New York. The town was founded in 1792, and now possesses numerous churches, schools, parks, library, etc. The falls, 50 ft high, are within the city limits and supply abundant waterpower to the numerous manufactories of the place. The silk industry here is the most important in the United States, the silk mills and silk dyeing establishments giving employment to 25,000 hands. There are large shirt factories, locomotive and bridge works, machine shops and cotton and woolen milis. In addition linens, carpets, velvets, iron goods, and various other articles are made. The city has several academic institutions. Pop. 125,600.

stitutions. Pop. 125,000.

Paterson, William, financier and founder of the Bank of Engiand, was born in Dumfriesshire in 1665; died in London in 1719. He went through England as a peddier, settled for a time at Bristol, subsequently resided in the Bahama Islands. Returning to London, he engaged in trade with success, and in 1694 proposed and founded the Bank of Engiand, being one of its first directors. Before this time he had conceived the project of founding a free emporinm of trade in Darien, and in 1695 he obtained the sanction of a Scottish act of parliament constituting the Darien Company. (See Darien Scheme.) After the failure of this great scheme he returned to England, broken in health and fortune. When the Treaty of Union between England and Scotland was considered in 1707. Patterney who was considered in 1707. ciuded in 1707, Paterson, who was one

Paterculus (pa-ter'ku-lus), CAIUS of its warmest advocates, after much difficulty received an indemnity of £18,Roman historian, born about 19 B.C.; 000 for the iosses he had sustained.

nearly 6. The island is an irregular mass of barren rock, agricultural products are scanty, and the population (mostly Greeks) find their chief occupation in their chief occupation in their chief occupation in the Guif of Patras lies between the fishing. Near the excellent natural harmorthwest part of the Morea and Northfishing. Near the excellent natural harbor of La Scala is the small town of Patmos, overlooked by the old monastery of St. John, in a grotto of which, it is said, the Apostle John saw his apocallyptic visions. Pop. about 4000.

Patna (pat'nä), a city of Hindustan, in the ileucenant-governorship of Bengal, situated on the Ganges near its junction with the Son and the Gandak, and about 400 miles northwest from Calcutta. It extends for 9 miles along the river, from which its tombs, mosques, and monuments present a fine appearance. On the west side is the suhurb of Banklpur, where the government offices and European residences are situated. By reason of its central position and natural advantages the city is an important husiness mart, and the chief seat of the oplum trade. Pop. 134,785.— The district of PATNA has an area of 2079 square miles, for the most flat and exceedingly fertile. The staple crop is rice, and the other products are wheat barley. and the other products are wheat, harley, cotton, tohacco, and sugar-cane. Pop. 1,624,985.

Patna, a native state in the Central Provinces of India. The country is hilly, and its large forests are infested by tigers, icopards, etc., while about a fourth of its area of 2400 square miles is cultivated. It is now under direct British supervision. Pop. 277,748.

Patois (pa-twil), a French word of

Patois unknown origin used to denote a dialect spoken by the rustic, provincial, or uneducated classes.

Paton (pat'on), John Gibson, missionary to the New Hebrides (1824-1907), born at Kirkmahoe, near Dumfries, Scotland, educated at Dumfries Academy, Normal Seminary and Glasgow University. He was a city missionary in Glasgow for ten years, and after being ordained to the ministry, sailed for the New Hehrides in 1858. His struggies to

ern Greece, and communicates on the east with the Guif of Lepanto.

Patriarch (pā'tri-ark; from the Greek patria, tribe, and archein, to ruie), the antedituvian head of a family; especially, originally applied to the three ancestors of the Hehrew race, Abraham, Isaac, and Jacob. The term at a later period became the titie of the presidents of the sanhedrim, which exercised a general authority over the Jews of Syrla and Persia after the destruction of Jerusalem. From them the title was adopted by the Christians, who applied it, from the beginning of the 5th century, to the hishops of Rome, Constantinople, Alexandria, Antloch, and Jerusalem. The Patrlarch of Rome became the supreme pontiff of the West (see Popes), the four heads of the Eastern church preserving the title of pa-triarch. The Patriarch of Constantinopie is the primate of the Greek Church in the Ottoman Empire, and hears the title of acumenical.

Patrician (pa-trish'an; Latin, patricius, from pater, father), the name given by the Romans to the members and descendants by hiood or adoption of the original gentes, houses or clans who, after the piebeians became a distinct order, constituted the aristocracy of the city and territory. See Rome.

Patrick (pat'rik; Patricius). St., the apostie of Ireland, was born about 373 in the British Roman province of Valentia, prohably at Nemthur on the Clyde where Dumbarton now is. His father, a decurion in the Roman army, retired to a farm on the Soiway, whence, at the age of sixteen, Patrick was carried off hy a band of marauders and sold as a slave to the Irish Celts New Hehrides in 1858. His struggies to propagate the Gospel among the cannibals are graphically told in his Autobiography. In 1892 he visited the United States.

Paton, Sir Joseph Noel, a Scottish Dunfermline. Among his paintings are Ruth Gleaning, Spirit of Religion, Oberon and Titania, Latiner at Erfurt, etc.

Patras (pä'tras), a fortified seaport and sold as a slave to the Irish Celts of country Antrim. After six years he propagate the Grounds his secape, and, resolving to devote himself to the conversion of Ireiand, probably at the monastic institution founded by St. Ninian at Candida Casa Ordained a hishop and received the papai benediction from Celestine I, he went of Irish Celts of country Antrim. After six years he propagate himself to the conversion of Ireiand, probably at the monastic institution founded by St. Ninian at Candida Casa Ordained a hishop and received the papai benediction from Celestine I, he went over to Ireiand about the year 405. Here Patras (pä'tras), a fortified seaport he is said to have founded over 360 Greece, in the northwest of the Morea, on the east side of the gulf of same name. The public hulldings include several churches, hospitals, and a celebrated over to freiand about the year 400. Here he is said to have founded over 360 churches, baptized with his own hand more than 12,000 persons, and ordained a great number of priests. The date of his death is prohably 463; it occurred at a piace called Saul, near Downpatrick, and his relics were preserved at Downpatrick till the time of the Reformation. His authentic literary remains consist of his Confessions and a letter addressed to a Welsh chief named Corotic. The existence of two other Irish aposties, Patrick or Pailadius, and Senn (oid) Patrick, about the same time has caused much confusion in the history of the early Irish church.

Patrick, St., Order or, an Irish order of knighthood, instituted in 1783 by George III, originally consisting of the sovereign, the lord-lieutenant of Ireland for the time being (who is the grandmaster of the order), and fifteen knights; but by a statute in 1833 the order was enlarged and the number of knights raised to twenty-two. The badge of the order is of gold, ovai in shape, with the cross of St. Patrick surmounted by a shamrock in the center, and round this is a blue enameied band bearing the motto 'Quis separabit.' The badge is suspended to a coliar of roses and harps by means of an imperial crown and gold harp. The mantle and hood are of sky-blue tabinet, lined with white

devoted to the lives and doctrines of the fathers of the church.

Patroclus (pa-trō'kius), in Greek story, the friend of Achiiies, whom he accompanied to the Trojan war. His success was at first brilliant; but, Apoilo having stunned him and rendered him formed by the start of th and rendered him defenseless, he was siain by Euphorbus and Hector. See Achilles.

Patrol (pa-troi'), a waiking or marching round by a guard in the night to watch and observe what passes, and to secure the peace and safety of a garrison, town, camp, or other piace; also, the guard or persons who go the rounds for observation.

Patron (pā'trun), in the Roman republic, a patrician who had piebeians, called clients, under his immedlate protection, and whose interests he supported by his authority and influence. In later times the term patron was appiled to every protector or influential promoter of the interests of others; hence the saints who were believed to watch over the interests of particular persons, places, or trades were called patron saints. See next article.

Patronage (pā'trun-ij, pat'run-ij), ECCLESIASTICAL, the right of presenting a fit person to a vacant benefice. In the earlier ages the bishops appointed the holders of all benefices.

but subsequently when proprietors of lands began to erect and endow churches they obtained the privilege of nominating the ciergyman. For a considerable time not only the nomination but also the investiture of the clergy were in the ds of in in the ds of in in the hierarchy began to consider this an infringement of its prerogatives, and several successive popes and councils declared that the investiture was not valid uniess it had also received the sanction of the ecclesiastical authority. Ecclesiastical patronage thus came to reside mainly in the pope, and the principal benefices in Europe were fillied by Italian ecclesiastics, who were often ignorant of the ianguage of their flocks. In England this ied to the Statutes of Provisors (1350-1415), by which persons who should attempt to enforce such appointments were subjected to severe penaities. In England the sovereign is the patron paramount of all benefices which do not belong to other patrons; but a vast number of livings are in the glft of private persons, who pos-sess the advowson as attached to their property. See Advoicson.

Patristic Theology (pa-tris'tik), that branch of historical theology which is particularly provided that directors and shareholders where India Co. (g. v.) in the Dutch West India Co. (q. v.) might take up certain sections of land in New Netherland provided they settled a number of tenants thereon. These estates were known as manors and their pro-prietors as patroons. The tenants were bound for a period usually of ten years and were little better than slaves, with the patroons petty sovereigns within their domains. The evils of the patroon system cuiminated in the Anti-Rent War (q. v.), which put an end to fcudal tenures. The largest manor, and the most successful, was that of Kilaen Van Rensselaer in Albany and Rensseiner counties.

Patten (pat'en), SIMON NELSON. Patten (paren), SIMON NELSON, economist, born at Sandwich. Iiiinois, in 1852, became professor of political economy at the University of Pennsylvania in 1888. He wrote Theory 

drid in 1843; received her musical training from her brother-in-iaw, Maurice Strakosch; made her first appearance in New York in 1859 as Lucia; and in 1861 made a brilliant début at Covent Garden, London, in the parts of Amina. Violetta, Zerlina, and Martha. Subsequently she successfully established her tti

her

reputation as an artiste in the chief cities of Europe and America. She married three times, to the Marquis de Coux, 1868, Signor Nicolini, 1883, and Baron Cederatrom, 1899. She died at Oraig-y-Nos Castle, Waies, Sept. 27, 1919.

Pattison (pat'i-sun), Mark, an English writer, born in 1813; died in 1884. He was educated at Oriel College, Oxford; received a fellowship in 1839, and two years subsequently he was ordained and won the Denyer theological prize. In 1853 he was appointed iogical prize. In 1853 he was appointed tutor of his college, and in 1861 became rector (or head) of Lincoln College. He devoted himself to university reform, for this purpose made many journeys to Germany, and was assistant-commissioner on the educational commission of the Duke on the educational commission of the Duke of Newcastie. He was a contributor to the famous Essays and Reviews, and published an edition of Pope's Epistles and Satires (1869), a work on Isaac Casaubon (1875), a memoir of Milton in the Men of Letters Series (1879), the Sonnets of Milton, etc.

Pau (pö), a town of France, capitai of the department of Basscs-Pyrénées, formerly of Béarn, picturesquely

enees, formerly of Bearn, picturesquely situated on a height above the right bank of the Gave-de-Pau, in view of the Pyrenees (10 miles distant), and 58 miles E.S.E. of Bayonnc. The most interesting edifice is the castle in which Henry IV was born, crowning a rising ground and overiooking the Gave-de-Pan. It is a large irregular structure, flanked with six square towers. The oldest part is supposed to date from 1363, and the whole is well preserved. Pau is a favorite winter resort, enjoying a mild dry climate and a peculiar stiliness of the atmosphere, with no sudden variations of temperature. Pop. (1911) 37,149.

Pauchonti (pa-chon'ti; Isonandra polyandra), a jarge tree found in the mountain regions of India. and from which a substance of the nature of gutta-percha is procured. The wood of the pauchonti is close-grained and heavy.

Paul (pai), the apostle, commonly cailed SAINT PAUL, was born of Jewish parents at Tarsus, in Cilicia, and inherited the rights of a Roman citizen. He received a learned education, and early went to Jerusalem to study under Gamailel, one of the most celebrated Jewish rabbins. Thus prepared for the office of teacher, he joined the sect of the Pharisees, and became a persecutor of the Christians, to crush whom the sanhedrim employed him both in and out of Jerusalem. He was present at and encouraged the stoning of Stephen, and it

was only when he was overtaken by a vision on his way to Damascus that he became a convert to Christianity. His sudden conversion was indicated by the change of his name from Saul to Paul, and he engaged in the work of an apostic with with an ardor that overcame every difficulty. Arabia, Syria, Asia Minor, Greece, and the islands of the Mediterranean were the scenes of his labors. The churches of Philippi in Macedonia, of Corinth, Gaiatia, and Thessalonica, honored him as their founder; and he wrote epistics to these churches and to the epistics to these churches, and to the churches in the chief cities of Greece and Asia Minor. By admitting the Gentiles to the church he incurred the hatred of the Jews, who persecuted him as an apostate. Undismayed, the apostic went apostate. Undismayed, the apostic went to Jerusaiem, and was there arrested and brought to Cæsarea, where he was kept a prisoner for two years by the Roman governors Festus and Feiix. He appeaied, as a Roman citizen, to the emperor; and on his way to Rome, where he arrived in the year 62, he was shipwrecked on the island of Meiita. At Rome he was treated with respectful kindness, and there is reason to believe that ness, and there is reason to believe that he for some time regained his liberty.

According to the tradition of the early church the apostic suffered martyrdom during the reign of Nero.

Paul, the name of five popes—PAUL I, pope from 757-767, brother of Stephen II, stood on good terms with Penin and Charlemagne. of Stephen II, stood on good terms with Pepin and Charlemagne.— PAUL II, pope from 1464-71, a native of Venice, originally called Pietro Barbo, caused a crusade to be preached against the Hussites.—PAUL III, pope from 1534-49, formerly Alessandro Farnese, excommunicated Henry VIII, 1535, concurred in the foundation of the order of Jesuits, opened the Council of Trent, defended himself hy his legates in the conferences between Catholics and Protestants at the diets of Worms and Ratisbon, and established a general inquisition for the suppression of the Protestant revolt.—PAUL IV, pope from 1555-59, formerly John Peter Caraffa, energetically directed the power of the Inquisition against the Protestant movement, and established an Protestant movement, and established an Index Librorum Prohibitorum.—PAUL V, pope from 1605-21, formerly Camillo Borghese, succeeded Leo XI.

Paul I, Emperor of Russia, son of Peter III and Catharine II.

was born in 1754. On the death of Catharine in 1796 he succeeded to the throne, and began his reign with acts of generosity. He put an end to the war with Persia, and liberated the Poles who were in confinement in Russia. He

joined the coalition of crowns against France, and sent 100,000 men, under Euwaroff and Korsakoff, to Italy and Switzeriand, and partiy to Holland, but he afterwards favored the cause of Napoieon. Paul caused himseif to be declared Grandmaster of the Knights of Malta (1798), but Britain, having conquered the island in 1800, refused to surrender it to the Russian emperor. He therefore iaid an embargo on all Brit-He therefore iaid an embargo on all British ships in the Russian ports, and pre-vailed upon the Swedish, Danish, and Prussian courts to enter into a conven-tion against Great Britain. At length (1801) the internal administration and his increasing acts of tyranny gave rise to a strong popular discontent, and he was murdered in his bed, March 24, 1801.

Paul, St. Vincent de, Roman Catholic philanthropist, born of poor parents in Southern France in 1576; died in 1660. He was educated at Dax and 1660. He was educated at Dax and Touiouse; ordained a priest in 1600; in 1605 he was captured by pirates; remained in slavery in Tunis for two years, and finally escaped to France. He afterwards visited Rome, from which he was sent on a mission to Paris, where he becare almoner to Queen Margaret of Vaiois. In 1616 he began the labors which occupied so large a portion of his life, and which included the foundation of the institution called the Priests of the Mission or Lazarists, the reformation of the hospitals, the institution of the of the hospitals, the institution of the Sisterhood of Charity, the instruction of idiots at his Priory of St. Lazare, etc. Among the last acts of his life was the foundation of an asylum for aged working people of both sexes, and a hospital for all the poor of Parls, which was opened 1657. He was canonized in 1737.

Paula, Francis DE. See Francis of Paula.

Paulding (pai'ding), James Kirke, miscellaneous writer, born in Dutchess county, New York, in 1779; died in 1860. He removed to New York, where he became intimately acquainted with Washington Irving, and published in connection with him a series of humorous and satirical essays, entitled Salmagundi. For some years he was secretary of the United States navy. He published a second series of Salmagundi, entirely his own composition; several novels, among which are Konigsmarke, and the Dutchman's Fireside; a Life of Washington; and many political pamphiets, poems, etc.

phiets, poems, etc.

Pauli (pa 'lē), Reinhold, historical
writer, born at Berlin in 1823;
died in 1882. He was educated at Berlin and Bonn; resided in London for

eight years, where he was secretary to the Prussian minister, and afterwards became a professor successively at Rostock, Tübingen, and Göttingen. His published works are: a Life of King Alfred (1851), a continuation of Lappenberg's History of England, a History of England since the Treaties of 1814 and 1815, Pictures of Old England, a monograph on Simon de Montford, and Essays on English History.

Paulicians (pa-il'she-ans), a Christian sect founded in the 7th century in Armenia. They rejected the adoration of the Virgin and the saints; refused homage to the cross; denied the validity of the sacraments; interpreted spiritually baptism and the Lord's supper; would not recognize any priestly dignity; and their public worship was altogether free from ritual. They suffered severe persecution at the hands of the Byzantine emperors, but as late as the 16th century remnants of the sect were found in Bulgaria.

Paul's Cathedral, ST., a famous re-ligious edifice of London, England, is situated on Lud-gate Hill, an elevation on the north bank gate Hill, an elevation on the north bank of the Thames. The site of the present building was originally occupied by a church erected by Ethelbert, king of Kent, in 610. This was destroyed by fire in 1087, and another edifice, Old St. Paul's, was shortly afterwards commenced. The structure was in the Gothic style, in the form of a Latin cross, 690 feet long, 130 feet broad, with a lead-covered wooden spire rising to cross, 690 feet iong, 130 feet broad, with a lead-covered wooden spire rising to the height of 520 feet. The middle alsie was termed Paul's Walk, from its being frequented by idlers as well as moneylenders and general dealers. Oid St. Paul's was much damaged by a fire in 1137, by lightning in 1444, again by fire in 1561, and was utterly destroyed by the great fire in 1666. The ruins remained for about eight years, when the rebuilding was taken in hand by the government of Charles II (1675–1710). The whole building was completed at a ernment of Charles II (1075-1710). The whoie building was completed at a total cost of £1,511,202 by Sir Christopher Wren, architect. The building is of Portland stone, in the form of a cross. Its length is 510 feet; the width from north to south portico 282 feet; the general height is 100 feet. The whoie is surmounted by a great dome raised on eight arches. Above the dome is a lantern eight arches. Above the dome is a iantern or gallery terminated above by a bail and gilded cross, 404 feet from the pavement beneath. The crypt under the nave contains the burying places of many illustrious personages, and some interesting relics of old St. Paul's. Among the

Pauperism. See Poor and Poor Laws.

Pausanias (pa-sā'ni-us), a Lacedæ-

of Platea in 479 n.c. To himself alone he ascribed the victory, and his preten-sions became insupportable when he afterwards, with a combined Greek fleet, de-livered Greece, Cyprus, and finally Byzantium from the Persian rule. At liength he entered into secret negotiations with Xerxes, and conceived the design of making himself master of Greece. To escape arrest he sought shelter in the temple of Athene at Sparta, where he was shut in by the enraged people and starved to death (B. c. 467).

Pausanias, a Greek writer on my-thology, history, and art, who lived in the 2d century after Christ.

who lived in the 2d century after Christ, and of whose personal history nothing is known. His Hellados Periegesis ('Peregrination of Hellas') is an itinerary in ten books of his travels, which were extensive. He appears to have visited the whole of the Peloponnesus, Rome, Syria, and Palastine He describes tempies and Palestine. He describes tempies, theaters, tombs, statues, pictures, monuments of every sort. He also mentions mountains, rivers, and fountains, and the

school, endowed by John Colet in 1512 mythological stories connected with for 153 boys of 'every nation, country, and class.' The first building, on the east of St. Paul's Churchyard, was burned in 1666; the second, by Wren, was taken down in 1824 and another building erected. In 1884 a new school was opened at West Kensington. The Mercer's Company are patrons.

Paulus Ægineta (pa'lus ë-ji-ne'-ta), a Greek medical writer, born, it is supposed, in the 7th century in the island of Ægina, and connected with the medical school at Alexandria. He abridged the works of Galen, and was deeply read in those of Hippocrates and others. His works have been translated into English.

Paulus Diaconus (di-ak'o-nus), an Italian ecclesiastic, born about 730; died about 800. He was educated in the court of the Lombard by the Romans in mentrons mountains, rivers, and fountains, and the mythological stories connected with the mythological stories connected with the second, by Wren, them. His observation is accurate, and his description simple and reliable.

Pausilippo.

Pavement (pāv'ment), a floor or covering consisting of stones, blocks of wood, etc., laid on the ground in such a manner as to make a found in the ancient Roman cities of Herculaneum and Pompeii, and the off Herculaneum and Pompeii, and the paving of important highways was practiced by the Romans. Of modern cities of Herculaneum and Pompeii, and the oldest pavement; but it is certain that Cordova, in Spain, was paved about Stories were paved in the 15th century. Holborn was first paved in 1417, the was educated in the court of the Lombard Street pavements in modern cities are tic, born about 730; dled about 800. He was educated in the court of the Lombard great Smlthfield Market not until 1614. kings at Pavla. In 781 he was called to the court of Charlemagne, and was one of the principal Instruments of the Intellectual reforms effected by the emperor in the countries of Western Europe. Paulus drew up a book of homilies from the fathers, wrote a history of the bishops of Mctz, and a history of the Lombards.

Holborn was first paved in 1417, the was educated in the Countril 1614. Street pavements in modern cities are usually of stone, asphalt, concrete, or wood. The stone commonly used for the carriage way is granite, blocks of which are placed upon a solid bed of concrete, or or carriage way is granite, blocks of which are placed upon a solid bed of concrete, or or carriage way is granite, blocks of which are placed upon a solid bed of concrete, or or carriage way is granite, blocks of which are placed upon a solid bed of concrete, or or carriage way is granite, blocks of which are placed upon a solid bed of concrete, or or carriage way is granite, blocks of which are placed upon a solid bed of concrete, or or carriage way is granite, blocks of which are placed upon a solid bed of concrete, or or carriage way is granite, blocks of which are placed upon a solid bed of concrete, or or carriage way is granite, blocks of which are placed upon a solid bed of concrete, or or carriage way is granite, blocks of which are placed upon a solid bed of concrete, or or carriage way is granite, blocks of which are placed upon a solid bed of concrete, or or carriage way is granite, blocks of which are placed upon a solid bed of concrete, or or carriage way is granite, blocks of which are placed upon a solid bed of concrete, or or carriage way is granite, blocks of which are placed upon a solid bed of concrete, or or carriage way is granite, blocks of which are placed upon a solid bed of concrete, or or carriage way is granite, blocks of which are placed upon a solid bed of concrete, or or carriage w stone, etc., mixed with Portland or other cement or asphalt. (See Concrete.) Trinidad and Venezueian asphalt is now much used for paving city streets, and bricks and wood blocks are coming into use. Wood pavements have the advanof Leonidas. He commanded the allied Greeks against the Persians at the battle They are laid in different ways, but the

blocks which form the pavement are al-

blocks which form the pavement are always placed on their ends, so that the cross surface of the wood is exposed. The spaces between the blocks are usually filled with gravel, npon which hot tar or pitch is poured.

Pavia (pâ'vi-a; Italian pron. pâ-vê'à), a city of Italy, in Lombardy, 22½ miles from Milan, on the left bank of the Ticino, capital of a province of the same name. Pavia is still partiy aurrounded by old wails and fortifications, and is connected with the Adriatic by the Po and Ticino, and with Milan by the Po and Ticino, and with Milan by a canal. Of edifices the most important are the cathedral (begun in 1486), containing some good paintings, and the tomb of St. Augustine; the church of San Micheie, a Romanesque edifice of the 11th century; the Castello, a bayrack gracted by Galeazzo Visconti, 1360-69; the university, founded in 1361, a handsome bnilding, with a library of about 130,000 volumes; the Collegio Borromeo, etc. The manufactures are unimportant. About 4 mlies to the north is the famous Carthusian monastery Certosa di Pavia, with a magnificent church in the Gothic style, begun 1896, and with a façade that ranks as the finest decorative work of the kind in North Italy. Pavia was a place of considerable importance during the reign of Augustus. It afterwards came into the possession of the Lombard kings, who made it their capital. It was latterly under the Milanese. Pop. (1914)

latterly under the Milanese. Pop. (1914) 40,260.—The province, which extends on both sides of the Po, has an area of 1285 square miles, partiy covered by the Apennines. Pop. 504,382.

Pavilion (pā-vll'yun), in architecture, a turret or small building, usnaliy isolated, having a tent-formed roof, whence the name. A projecting part of a building, when it is carried higher than the general structure and provided with a tent-formed roof, is also vided with a tent-formed roof, is also called a pavilion.

Pavlograd (pav-io-grat'), a town of Southern Russia, 16 miles northeast of Ekaterinoslav, in the government of that name. Pop. 17,188.

Pawl (pal), a short plece or bar mov-ing round a plvot at one end, so as to catch in a notch or projection of a revolving body and prevent motion in one direction, as in the capstan or windlass of a ship.

the restriction of a government ilcense.

casionally taken advantage of by all classes, and bankers, when they accept security for their advances, act on the same principle as the pawnbroker, the business, as a special one, originates chiefly in the necessities of the poor. In the middle ages lending upon pledges was a trade aimost exclusively pursued by Jews and Lombards. On the European continent this form continent this form of borrowing partiy conducted PA charitable institutions called Monts de Pitté (which see). In England pawnbrokers were recognised by statute in the reign of James I, and in 1872 an act was passed to consoildate ail the acts relating to pawn' ters in Great Britain; but it does not end to Ireland. In the United States the several states have each their own laws governing pawnbroking. Pawnbrokers have been taxed \$20 annually by the Federal government since July 1, 1898.

Pawtucket (va-tuk'et), a city of h'rovidence county, Rhode Island, 4½ miles N.N.E. of Providence. It is situated at the head of navigation of Narragansett Bay, on the Pawtucket River, which has a fail of 50 feet, yielding wa er power. Cotton mannfacture in the United States began in this city. Calico printing is done here on the largest scale. The thread works are the city. Calico printing is done here on the largest scale. The thread works are the largest in the country, and there are extensive bleaching and dyeing factories, with many other manufacturing establishments. Pop. 51,622.

Pax (14 8), an ecclesiastical utensil in the Roman Catholic Church, formed usually of a plate of metal chased en-

usually of a plate of metal, chased, engraved, or iniald with figures representing the Virgin and Chiid, the crucifixion, etc., which, having been kissed by the priest during the Agnus Dei of the high mass, is hanged to the acoiyte, who presents it to be kissed by each of the ecclesiastics officiating, saying to them Pass tecum (peace to thee). The decorations of the pax are frequently very rich.

Paxo (pak'so; anciently Paxos), one of the Ionian Islands, belonging to Greece, 9 miles south of Corfu. It is nearly 5 miles long and 2 broad, and consists of a mass of limestone rock. Principal product, olive oil of the finest quality. Pop. about 5000.

Paxton (paks'tun), Sie Joseph, land-scape gardener and architect, born in Bedfordshire in 1803; died in 1865. He was educated at the free school Pawnbroker (pan'brō-ker), a person who lends money of Woburn; became gardener, and afterous pledged or deposited at a wards estate manager, to the Duke of legally fixed rate of interest, and under Devonshire at Chatsworth, in Derbyshire; the present ideases designed the Crystal Palace for the great designed the Crystai Palace for the great Although this mode of borrowing is oc- International Exhibition (London) in

1851, and soon after was knighted. He edited the Horticultural Register, the Magasine of Boteny, the Cottage Calender, and was the author of a Pocket Botanical Dictionary. He was elected member of Parliament for Coventry in 1854, and continued to represent it until his death.

Pax-wax, the name given to the along the sides of the neck of a large quadruped to the middle of the back, as in an ox or horse. It diminishes the mus-cular effort needed to support the head in a horizontal position.

Paymaster (pa'mas-ter), an officer in the army and navy, from whom the officers and men receive their wages, and who is intrusted with money for that purpose. In matters of general discipline the paymaster is sub-ordinate to the commanding officer of his regiment. The paymaster of a ship in the navy has a general charge of the financial department in the vessei.

Payn (pan), JAMES, novelist, born at Cheitenham, Engiand, in 1830; educated at Eton, Woolwich Academy, educated at Eton, Woolwich Academy, and Trinity Coilege, Cambridge; published two volumes of verse; contributed to the Westminster Review and Household Words; became editor of Chambers's Journal in 1858, and of the Cornhill Magazine in 1882. He published inaumerable novels, of which the following may be mentioned: Lost Sir Massingberd, A County Family, Found Dead, By Proxy, The Talk of the Town, The Luck of the Darrels. The Heir of the Ages. He died Darrels, The Heir of the Ages. He dled in 1898.

Payne, John Howard, was born in New York in 1792. He adopted the stage as his profession, but is especially known as the author of the favorite song of Home, Sweet Home. In 1851 he was sent as consul to Tunis, where he died in 1852.

Pays de Vaud (pa-ë de vo). See

LA. See La Paz. Paz,

Pea (pē), a weii-known ieguminons plant of the genus Pisum, the P. sativum of many varieties. It is a climbing anauai plant, a native of the south of Europe, and has been cuitivated from remote antiquity. It forms one of the most valuable of culinary vegetables; contains much farinaceous and saccharine matter, and is therefore highly nutritious. It is cuitivated in the garden and in the

pess. They afterwards harden and be-come farinaceous. A whitish sort, which readily split when subjected to the action of milistones, is used in considerable quantities for soups, and especially for sea-stores. There is a blue sort which anstores. There is swers the same purpose.

Pea-beetle, a coleopterous insect (Bruchus piei) about 3 inch long, black, with white spots and dots on the wing-cases, very destructive to crops of peas in the south of Europe and in North America. Called also Pea-bug, Pea-chafer, and Pea-weevil.

Peabody (pë'bo-di), Guonge, philanthropist, born at Peabody.

Massachusetts, in 1795; died in 1869. In 1837 he went to London and established

1837 he went to London and established the firm of George Peabody & Co., ex-change hrokers and money-lenders. Havchange brokers and money-lenders. Having acquired a large fortune, he gave \$200,000 to establish a free library in his native town; presented \$1,000,000 to found a free library and institute of art and science at Baltimore; and in 1862 piaced \$750,000 in the hands of trustees for the benefit of the poor of London, to be employed in building model dwelling houses. He afterwards added \$1,750,000 to this benefaction. In 1866 he made a gift of \$2,100,000, afterward increased to \$3,500,000, for the cause of education in the South. In the same year he gave the South. In the same year he gave \$150,000 to Harvard University to found a museum for anthropological and archeological research. This institution has seat out many exploring expeditions and done very valuable work.

Peabody, a town of Essex Co., Massachusetts, 2 miles w. of Saiem. It contains the Peabody Institute, with a large library and a collection of paintings, etc. The place was named in honor of George Peabody, who was

born here, and manufactures. Pop. 15,721.
The most momentous conference in history was that which met in Paris, Jan. 18, 1919, following the Great War. (See next article.)

Peace, International. The first national movement in the direction of hringing about a permanent condition of peace between the nations, of ar international character, was the conference heid in 1899, at The Hague, Holland, at the suggestion of the Czar of Russia, to consider what could be done in the way of reducing the armaments of the nations and inducing them to settle their field. Its seed-vessel is a pod containing differences by arbitration instead of war, one row of round seeds, which are at first. The most important result of this conference and jnicy, in which state they are ence of the nations was the establishment at The Hague of a Permanent Interna-

useful services in bringing about a treaty of peace between Russia and Japan. Andrew Carnegie, in December, 1910, donated the sum of \$10,000,000, the income of which was to be used in the support and furtherance of all movements toward peace. The American Peace Society, a long-standing institution, held several notable congresses. Among other Ameri-can peace organizations may be mentioned the League of Nations Union (formed from a union of the New York Peace Society and the World's Court League), the League to Enforce Peace (under the presidency of Hon. Wm. H. Taft), the World Church Alliance, the American Peace and Arbitration League (incorporated 1909).

At the peace conference which followed the European war a plan for a League of Nations (q. v.) was incorporated with the treaties of neace with Cormany and here

treaties of peace with Germany and her allies (see *Trecty*). The conference convened at Paris, Jan. 18, 1919, and the treaty with Germany, which included the Covenant of the League of Nations, was signed by representatives of the belliger-ent powers, June 28, 1919. The covenant went a step farther than any former peace conference in that the signatory nations agreed to prohibit all commercial and financial relations with any country that went to war without the consent of the League. The members of the League agreed to preserve 'as against external aggression' the territorial integrity of all nations within the League. A clause specifically recognized the Monroe Doctrine (q. v.).

Peace River, a large river of Canada, which rises in the

tional Court of Arbitration, which settled in this respect according to soil and cli-amicably a number of international dis-mate. The varieties of the fruit, which One of the most important of is a large downy drupe containing a stone, putes. One of the most important of is a large downy drupe containing a stone, these was the settlement in 1910 of the are very numerous, differing in size, long-standing fishery controversy between the United States and Great Britain. A second conference was held at The Hague in 1907. The Hague Tribunal was as the stone separates readily or adheres unable to settle the larger disputes, and at about the time a third conference was planned the greatest war in all history broke out. (See European War.) The extensively cultivated. The peach regions Nobel Peace Prize was given to President include Delaware, Maryland, Georgia, Roosevelt in 1906 in recognition of his useful services in bringing about a treaty of the Great Lakes. New Jersey Califor. of the Great Lakes, New Jersey, California, and parts of Missouri, Alabama, Kansas, Arkansas, Louisiana, Colorado and Texas. The ripe fruit is occasionally distilled and made into peach brandy.

(pë'kok), called also Pra-FOWL, a large and beautifui Peacock gallinaceous bird of the genus Pavo, properly the male of the species, the female being, for distinction's sake, called

Peacock

a peahen. The common peacock, P. cristatus, is a native of India and Southeastern Asia. This bird is characterized by a crest of peculiar form, and by the tail coverts of the male extending far beyond the quills, and being capable of Peace River, a large river of Canada, which rises in the mountains of British Columbia, flows feathers, and the eye-like spots which decorate that a colors and finally enters the every one. The colors and plumage are Great Slave Lake under the name of the said to be more brilliant in the wild than the demortier of the said to be more brilliant in the wild than the demortier of the said to be more brilliant in the wild than the demortier of the said to be more brilliant in the wild than the demortier of the said to be more brilliant. assume their lustrous appearance. The black-shouldered or Japan peacock (P. nigripennis) is regarded as a variety of the common species; the Javan peacock (P. muticus) is a distinct form.

Peacock, Thomas Love, an English writer, born in 1785; died in 1866. His first important work was a nowed antitled Headlong Hall published.

Peacock, Thomas Love, an English writer, born in 1785; died in 1866. His first important work was a novel entitled Headlong Hall, published 1815, and this was followed by Melincourt, Nightman Abbey, Maid Marian, The Misfortunes of Elphin, Crotchet Castle, Cryll Trange, and a poem called Philododophne. He was the friend and executor of Shelley, and was connected with the East India Office for nearly forty years.

Peacock-butterfly, a name given by collectors of insects to butterflies of the species Vanessa Io, from the eyes on their wings resembling the eyes on peacocks' feathers. Peacock-fish, a fish of the Mediterranean and Indian seas (Crenilabrus pavo), characterized by the brilliancy of its hues—green, yellow, and red.

Pea-crab, a small brachyurous crustacean of the genus Pinnotheres, which lives in the shells of oysters, mussels, and other bivalves. There are several species in the United States.

Peak (pēk), or HIGH PEAK, a district of England, forming the northwest angle of Derbyshire, and consisting of a wild and romantic tract, full of hills, valleys, and moors, and celebrated for its limestone caverns and grottees

rits limestone caverns and grottoes.

Peale (pěl), CHARLES WILSON, painter and naturalist, was born at Charlestown, Maryland, in 1741; died in 1827. He studied under West in England, and afterwards settled in Philadelphia, where he won a high reputation as a portrait painter. He was one of the founders of the Academy of the Fine Arts, and formed in Philadelphia a museum of natural curiosities, containing the skeleton of a mammoth. It was known as Peale's Museum.

Peale (pël), REMBRANDT, artist, son of the preceding, was born in Bucks county, Pennsylvania, in 1778. When 17 years old he executed a portrait of Washington, from whom he had three sittings. He painted portraits of many distinguished men. He was president of the American Academy, and also one of the original members of the Academy of Design. His portrait of Washington (1823) was purchased by Congress. He died in 1860.

Pea-maggot, the caterpillar of a small moth which lays its eggs in peas.

Pea-nut. Same as ground-nut.

Pear (pār), a tree of the genus Pyrus, order Rosaceæ, the P. commānis, growing wild in many parts of Europe and Asia, and from which the numerous cultivated varieties have originated. The fruit is characterized by a saccharine aromatic juice, a soft and pearly liquid pulp, melting ln the mouth, as in the butter-pear; or by a firm and crisp consistence, as in the winter bergamots. The pear is chiefly propagated by grafting or budding on the wild pear stock, or on stocks raised from the seeds of cultivated pears, called free stocks. It is also grafted on the quince, the medlar, and the white thorn. At the present day more than 200 varieties are enumerated, and constant accessions are made every year. France and the north of Italy are celebrated for the perfection to which they have carried the culture of this fruit, and it is largely cultivated in the United States. Numerous varieties are cultivated solely for the purpose of making perry, a liquor analogous to cider, and prepared nearly in the same manner. The wood is fine-grained, of a yellowish color, and susceptible of a brilliant polish. In the early ages of Greece it was employed in statuary; now it is used for musical instruments, the handles of carpenters' tools, in wood-engraving, etc.

Pearl (perl), the name applied to a concretion produced within the shells of certain species of bivalve molluscs as the result of some abnormal secretory process. These concretions are highly valued, and are classed among the gems. The production of a pearl is generally begun by the introduction of some foreign body, such as a grain of sand, within the mantle-lobes. The presence of this body has the effect of setting up an Irritant action, resulting in the deposition by the mantle of a quantity of nacreous material over the offending particle. This material, in certain species of molluscs, is of such a texture and character, and is deposited in such regular laminae or layers, that in due time the structure known as a 'pearl,' varying in worth and brilliancy, is formed. Chief among such molluscs are the pearl-oyster (Meleagrina margaritifers), the pearl-mussel (Avicila margaritifers), and the fresh-water mussels (genus Unio).

The chief pearl-oyster fisheries are those of Ceylon, which, together with the fisheries in the Persian Gulf, were known to the ancients. The chief seat of the Ceylon fishery is in the Gulf of Manaar, on the northeast of the island. It be-

gins in February or March, and extends over a period of about a month, a large fleet of boats usually being engaged in it, The average depth at which the oysters are found varies from 60 to 70 feet, and the divers are let down hy a stout rope weighted hy a heavy stone. Having gathered a number of the oysters into a net, at the end of half a minute or so the diver is pulled up. The oysters being carried to shore, and laid in piles, in about ten days become thoroughly decomposed. They are then there is not the process. posed. They are then thrown into seawater, and carefully examined for pearls; while the shells, after being cleaned, are split into layers for the sake of the mother-of-pearl. The pearl-fisheries of Ceylon are a government monopoly, hut the revenue derived from them is not a regular one, the fishery sometimes failing for years in succession. There was no fishery, for example, between 1837 and 1854, or between 1863 and 1874. The best pearls are found about Ceylon, Persia, and other eastern coasts, and inferior ones on the tropical coasts of America. The pearl-oyster occurs throughout the Pacific. Very fine pearls are obtained from the Sulu Archipelago on the northeast of Borneo. Of late years pearlfishing has been started with considerable success ln Australian seas; and it is carried on also ln the Gulf of Mexico, upon the coast of California, and in the vicinity of Panama. Pearls are also to some extent obtained from the fresh-water mussels of the streams, especially in China, also in the United States and Germany. The British rivers have ylelded valuable pearls, but the fisheries there are now neglected as unprofitable, and findings of this kind in the United States are only occasionally made.

Pearls have formed valued articles of decoration and ornament from the earliest times. Julius Cæsar presented Servilia, the mother of Marcus Brutus, with a pearl valued in modern computation at \$240,000; while Cleopatra is fahled to have swallowed one gem valued at \$300,000 or \$400,000. A pearl purchased by the traveler Tavarniae is allowed to have the traveler Tavernier is alleged to have been sold by him to the Shah of Persia for £180,000. The 'Pilgrim' pearl of Moscow is diaphanous in character, and

weighs 24 carats.

Artificial pearls are largely made in France, Germany, and Italy, the pearl heing very well imitated by the scales of certain fishes. A substitute for black pearls is found in close-grained hematite, not too highly pollshed, and pink pearls are imitated by turning small spheres out of the rosy part of the conch-shell.

Pearl, Mother of See Mother of Pearl-ash, the common name for carbonate of potassium. See Potash. Pearl Barley. See Barley.

Pearl Moss, the same as Carrageen (which see). Pearl Powder. See Bismuth.

Pearl Stone, a felspathic mineral, consisting of silicate of aluminum with varylng quantities of iron, lime, and alkalies; it occurs in spherules, which have a pearly luster.

Padraic, Irish lawyer, edushort-lived Irish Republic, which lasted for a week in April, 1916. Although at first holding to the helief that Ireland's independence could be obtained by peaceful methods he allied himself with the extreme Sinn Eris measurement with the extreme treme Sinn Fein movement which culminated in the revolt of April 24, 1916, on which day the Republic of Ireland was proclaimed, Padraic Pearse signing the proclamation as President. After seven days of severe fighting, with hundreds of

casualties. Pearse surrendered. He was taken to England, tried by court martial, and executed May 3, 1916.

Peary, ROBERT EDWIN, a famous Arctic explorer, was born at Crestic explorer. son Springs, Pennsylvania, in 1856, and entered the civil engineer corps of the United States Navy in 1881. His first expedition northward was made in 1886, when, with one companion, he penetrated the Greenland ice-cap for 100 miles in lat. 69° 30' N. In 1891, with a party of six, he went to Northern Greenland and made a hrilliant sledge journey of 1300 miles, crossing Greenland to its Atlantic miles, crossing Greenland to its Atlantic coast and discovering Independence Bay in lat. 81° 37′ N. He made a second expedition in 1893-5..., again crossing Greenland, and in 1897 voyaged to Cape York and brought back an immense meteorite discovered there. In 1898 he went north again, on this occasion the discovery of the North Pole being his main object. He remained until 1902, making efforts to cross the ice of the main object. He remained until 1902, making efforts to cross the ice of the Arctic Sea by means of dog sledges, and reaching the high altitude of 83° 39' N. lat. He also traced the north coast of Greenland, thus proving Greenland to be an island. In 1905 the indefatigable explorer set out again and in this expedition reached 87° 6' N. lat., the highest point to that date attained in the northern seas. Dissatisfied with his achievements while the pole remained

undiscovered, he emharked on a sixth expedition in 1908, and in the spring of 1909 achieved the purpose to which his life had been devoted, attaining the pole, the northern extremity of the earth, on April 6. For a time it seemed as if the honor of this great achievement would be lost to him, Dr. Frederick A. Cook, of Brooklyn, who had been for a year or two lost to sight in the North, return-lng on Sept. 1, 1909, with the statement that he had reached the pole on April 21, 1908. Investigation of his story, how-ever, proved its falsity, and the full credit of the discovery was left to the upwarry of the discovery was left to the unwearying Peary.

Peasant Proprietors (pez'ant), the owners of relatively small estates of land which they cultivate themselves; the term deriving its specific meaning and importance from the theories of a class of economists represented on the European Continent by Sismondi, and in Britain hy John Stuart Mill. See Land.

Peasants' War, a great insurrectionary movement among the German peasantry, which in 1525 spread over the whole of Germany. The immediate cause of this movement was religious fanaticism, but the pent-up forces by which it was impelled grew out of the long course of oppression to which feudal customs and priestly tyranny had subjected the people. Before the Reformation, particularly from 1476 to 1517, a series of popular commotions and insurrections had broken out in various parts of Southern Germany, without pro-curing any relaxation of hurdens. The Reformation gave hopes of relief, and though Luther and Melanchthon opposed the idea of carrying out a religious and a social revolution simultaneously, a general ferment among the peasantry came to a head on Jan. 1, 1525, with the cap-ture of the convent of Kempten (Bavaria). A general unorganized rising of the German peasantry followed, fearful excesses and atrocious cruelties were committed, hut in a few months the mobs were dispersed or massacred by the soldiery of the nohles. It is estimated that 150,000 persons lost their lives in these risings, which for the time gave a severe hlow to the Reformation. See also Anabaptists; Jacquerie.

Pea-stone, or Pisolite (pls'o-lit), a limestone rock, composed of globules of limestone about the size of a pea, usually formed round a minute grain of sand or other foreign body, and joined with a cement of lime. In pisolitic rocks helonging to the Oolitic period ironstone is frequently found.

(pēt), a kind of turfy substance consisting of vegetable matter Peat which has accumulated by constant growth and decay in hollows or moist sibuations on land not in a state of cultivation, always more or less saturated with water, and consisting of the remains, more or less decomposed, of messes and other marsh plants. Peat is generally of a black or dark hrown color, or when recently formed, of a yellowish-hrown; it is soft and of a vicerd consistence, but it becomes hard and darker by exposure to the air. When thoroughly dried it hurns, giving out a gentle heat without much smoke; accordingly it is used as fuel.

Pea-weevil. See Pea-beetle.

Peba (pē'ba), a species of the armadillo (Tatusia septemcinctus) found in various parts of South America. Its flesh is much valued by the natives.

Pebble (peb'l) in jewelry, a name commonly given to an agate.

Scotch agates are commonly known as

Scotch pebbles.

(peb'rin), a French name for a destructive epizoötic Pebrine disease among silkworms due to internal parasites, which swarm in the blood and all the tissues of the hody, passing into the developed eggs of the females, so that is hereditary, but only on the side of the mother. It is contagious and infecticus, the parasitic corpuscles passing from the hodies of the diseased caterpillars into the alimentary canal of healthy silkworms in their neighborhood. Pecan (pē-kan'), Pecan-nut, a spe-cies of hickory (Carya oliva-formis) and its fruit, growing in the United States, especially in Texas. It is a large tree, with hard, very tough wood, pinnate leaves, and catkins of small flowers. The nut it yields is very palatable and is a favorite for table use.

Peccary (pek'a-ri; Dicotyles), a genus of Ungulate quadrupeds, included in the Artiodactyle

('even-toed') section of that order, and nearly allied to swine, in which family (Suidæ) the genus is classified. These (Suidæ) the genus is classified. These animals are exclusively confined to America, in which continent they represent the true swine of the Old World. In general form the peccaries resemble small pigs. The best-known species are the collared peccary (Dicatyles torquatus) and the white-lipped peccary (D. labiana de labiana company abundantly in ine). The former occurs ahundantly in South America, and also extends into North America, living generally in small flocks, which do not hesitate to attack with their tusks any one who meddlez with them. Their food consists of reaise, potatoes, sugar-cane, and similar materials, and cultivated fields suffer much from their raids. This species of peccary is readily domesticated. The fiesh is savory, and less fat than pigs' fiesh. D. labiatus is exceedingly pugnacious and is a dangerous animal to encounter.

Collared Peccary (Dicotyles torquatus).

The peccary possesses a glandular sac or pouch, situated in the loins, which secretes a strongly-smelling fluid of feetld nature. This must be cut away immediately on killing a peccary, to avoid contaminating the flesh.

Pe-chi-li (pe-chē-lē'), a province of China. Chief city, Peking.

Peck (pek), the fourth part of a bushel; a dry measure of 8 quarts for grain, pulse, etc. The standard or imperial peck contains 2 gallons or 554.548 cubic inches.

Pecopteris (pe-kop'ter-is), the name given to a genus of fossil ferns occurring in the Coal-measures, New Red Sandstone, and Oolite, from the comb-like arrangement of its leaflets.

Pecos River (pā'kōs), a river of New Mexico and Texas, which has a southeasterly course of about 800 miles, and falls into the Rio Grande del Norte, hut in summer is generally dry.

Pecquet (pek-ā), Jean, born at Dieppe, France, about 1620; dled in 1674. He studied medicine, and especially anatomy, at Montpeliier, in his studies discovering and demonstrating the course of the lacteal vessels in the human body.

Pecten (pek'ten), a genus of Lamelli-branchiate Mollusca, included in the oyster family (Ostræidæ), and popularly designated under the name of 'scallop-sheils.' Numerous species of pecten—180 or more—are known. The common pecten (P. operculāris) and the frill or great scallop (P. maximus) are the most common forms. The latter form is esteemed a delicacy. The shell of this species was borne in the middle ages

by pilgrims in their hats, as a sign that they had visited the Holy Land. The shell is what rounded, and terminates su orly in a triangular 'ear,' in which the hinge exists. The name 'pecten' (Latin for 'comb') is derived from the indentation of the edges and surfaces of the shell.

Pectinibranchiata (pek-tln-i-bran-kl-ā'ta), those gasteropods having pectinated hranchlæ or gills, as the purple shells (Murea), whelk (Buccinum), cowries (Cypraa), etc.

Pectolite (pek'tu-lit), a mineral consisting of a silicate of lime and soda. It is a tough grayish or whitish mineral occurring in trap-rocks, in aggregated crystals of a silky luster, arranged in sparlike or radiated forms. Called also Stellite.

Peculiar (pe-kūl'yar), in canon law, a particular parish or church which has jurisdiction within itself, and exemption from that of the ordinary or hishop's court. The Court of Peculiars, in England, is a branch of the Court of Arches which has jurisdiction over all the parishes in the province of Canterhury which are exempt from the ordinary jurisdiction, and subject to the metropolitan only.

Peculiar People, a small sect of English religionists whose special doctrine seems to be the efficiency of prayer without the use of any efforts on their own part. In sickness they reject the aid of physicians, accepting the exhortation of St. James v, 14, 15 in a strictly literal sense. They are called also Plumstead Peculiars, from the place of their origin.

the place of their origin.

Peculium (pe-kū'li-um), private property; specifically, in Roman law, that which was given by a father or master to his son, daughter, or slave, as his or her private property.

Pedagogy (ped'a-gō-ji), the science of teaching, or the systematic developing of the human faculties. Its ideal is to study the individual natures of youth, in order to train each in the special functions or talents with which he or she is endowed, so as to develop their mlnds in the most effective direction.

Pedals (ped'alz), parts of the mechanism of a musical Instrument acted on by the feet. Pedals are used for different purposes in different Instruments. In the organ they are used in two distinct ways: first, to act on the swell and stops when the instrument is played with the hands; second, to act upon a distinct set of pipes, called the

pedal organ, and which are played inde-pendently. On the pianoforte there was at first only one pedal, used to raise the dampers and proiong the sound after the fingers were lifted from the keys; a second was used to soften the notes, and is called the soft or una-corda pedal; a third has of late years been introduced, which arrests the sound immediately after the note is struck, and produces an artificial staccato. In the harmonium the pedals supply the instrument with wind.

Pedee (pē-dē'), GREAT and LITTLE, two rivers in the United States. The former rises in North Carolina, enters South Carolina, and falls into the Atlantic; total course, 360 miles, of which 200 miles are navigable for boats of 60 or 70 tons. Little Pedee rises in North Carolina, and enters the Great Pedee 32 miles above its embouchure.

Pedestal (ped'es-tal), an insulated hasement or support for a coiumn, a statue, or a vase. It usually consists of a base, a dado, and a cornice. When a range of columns is supported on a continuous pedestal the latter is called a stylobate.

Pedetes (pe-de'tes; Gr. pedetes, a leaper), a genus of rodent mammals, of the mouse family, of which the best-known species is P. capensis (the

jumping-hare of South Africa).

Pedicel (ped'i-sel), in botany, the stalk that supports one flower only when there are several on a pedun-cle. Any short and small footstalk, al-though it does not stand upon another

footstalk, is likewise called a pedicel.

Pedicellariæ (ped-i-sii-ā'ri-a), certain minnte organisms or structures found attached to the skin or outer surface of star-fishes, sea-urchins, and other Echinodermata. Each pedicellaria consists essentially of a stalk attached to the organism, and bearing at its free extremity two or more movable hlades or jaws, which close and open on foreign partials. foreign particles so as to retain them. The exact nature of these structures is still a matter of douht.

Pedic'ulus. See Louse.

See Genealogy. Ped'igree.

Pedilanthus (ped-i-lan'thns), a genus of South American plants belonging to the nat. order Euphorhiaces, of which one species (P. tithymaloides), used medicinally in the West Indies, is known under the name of

mass resembling a gabie, above the entablature at the end of bniidings or over porticoes. The pediment is surrounded by a cornice, and is often ornamented with scuipture. The triangular finishings over doors and windows are also called pediments. In the debased Roman style the same name is given to these same parts, though not triangular in their form. In the architecture of the middle ages small gahles and triangular decorations over openings, niches, etc., are called pediments.

Pedipalpi (ped'i-pal-pi), an order of arachnidans. It comprises the scorpions, together with certain other

animals.

Pedometer (pe-dom'e-ter) is an in-strument like a watch, which serves to indicate the distance a pedestrian traveler has gone, or rather the number of paces he has made. See Passometer.

Pedro II, Emperor of Brazii, was born at Rio Janeiro in 1825; succeeded to the throne on the abdication of his father, Dom Pedro I, in 1831, and married the Princess Theresa Christina Maria (died 1890), sister of Francis I, king of Naples, in 1843. Brazil prospered greatly under the rule of Pedro II, who did much to develop its resources in every direction. In 1871 he issued an imperial decree for the gradual abolition of slavery which the gradual abolition of slavery, which totally ceased in Brazil in May, 1888. In 1889 a revolt of republicans took place and he was put on board ship and sent to Europe, the successful revolutionists establishing a republic. He spent the remainder of his life in Enrope and died in 1891.

(pe-dung'kl), in botany, the stem or stalk that sup-Peduncle ports the fructification of a plant, i. c., the flower and the fruit.

Peebles (pē'blz), or Tweeddale, an iniand county in Scotland, between Dumfries, Selkirk, Edinhurgh, and Lanark; area, 356 square miles. The greater part of the surface consists of mountain, moor, and bog, and the main industry is sheep farming. Highest summit, Broad Law, 2723 feet, near the sonth border. White and red freestone are common in the northern part of the county, and both coal and limestone have been wrought at various points. The Tweed is the only river of any note. Pop. 15,066.—Peebles, capital of the above county, on the Tweed, is a favorite summer resort. The manufacture of ipecacuanha, and is employed for the summer resort. The manufacture of tweeds and other woolen stuffs is carried Pediment (ped'i-ment), in classic architecture, the triangular 1367. Pop. 8095.

Peechi. See Dauw.

Peekskill (pēks'kil), a village in town of Cortlandt, Westchester county, New York, on the E. bank of the Hudson, 42 miles N. of New York City. Here is the Peekskill Academy. Manufactures include boilers, stoves, hollowware, bricks, hats, liquors, yeast, raincoats, underwear, olicloth, etc. Pop. 16,500.

Peel (pēl), a seaport town and popular watering place on the west coast of the Isle of Man. It has important fisheries. On St. Patrick's Isle, joined to the mainland by a causeway, are the ruins of St. German's Cathedrai and of Peei Castle. About 3 miles to the southeast is Tynwald Hill, celebrated in connection with the passing of the Manx iaws. Pop. 3600.

Peel, SIE ROBERT, a British statesman, was born February 5, 1788, near Bury in Lancashlre. His father, who had raised himself from a comparatively humble station to be the largest cotten manufacturer in the world, was created a baronet in 1800, and left behind him a fortune of nearly £2,000,000,

Sir Robert Peel.

of which the largest share was inherited by his eidest son, Robert. Young Peel was sent to Harrow and Oxford, where he took his pachelor's degree in 1808, with double first-ciass honors. Immediately on attaining his majority he was elected member of Parliament for Cashel; in 1810 he became under-secretary of state for the colonies, and in 1812-18 he was chief secretary for Ireland. In 1817 he was elected representative of the Uni-

versity of Oxford, and in 1830 succeeded his father as baronet. In the election of 1832 he was returned for Tamworth, for which he continued to sit during the remainder of his life. On the dismissal of the Whig government in 1834 Peei undertook the government, but his party in the house being in a minority the task was hopeless. After a brief struggle the ministry resigned, and were succeeded by the Whig ministry of Lord Melbourne, which lasted from 1835 to 1841. The general election of 1841 gave a large majority to SIr Robert Peei, and the formation of a Conservative ministry could no longer be delayed. In 1844 and 1845 he passed his celebrated English and Scotch Banking Acts. During the recess in 1845 the potato-rot and famine in Ireland brought the question of the cornlaws to a crisis, and Peel declared in favor of their total repeal. The act repealing the corn-laws (after a modified duty for three years) was passed June 26, 1846. On the same day the ministry was defeated in the House of Commons on the Irish Coercion Bill, and on the 29th of June Peel resigned the premiership. As leader of the opposition he supported many of the measures of the government of Lord John Russell, who succeeded him; but the policy of Lord Palmerston after the revolution crisis of 1848-49 evoked from him a more active hostility to the ministry. On June 29, 1850, he was thrown-from his horse, and received injuries of which he died on July 2. By his will he renounced a peerage for his family, as he had before declined the Garter for himself.

Peele, George, one of the poets of Shakespeare's time, was born in Devonshire about 1558, and educated at Oxford, where he made a great reputation. Ultimately he settled at London as a theatrical writer, and was the associate of Nash, Marlowe and Greene. Of the many dramas of which he was reputed to be the author only a few are certainly known to be his, among these few being The Chronicle History of Edward I. He died in 1598.

Peele-Tower, or simply PEEL, the Scottish borders to small residential towers erected for defense against predatory excursions. They were usually square buildings with turrets at the angies. The lower part was vaulted, and served for the accommodation of horses and cattie.

Peep-o'-day Boys, the name given to those insurgents who appeared in Ireiand in 1784, shortly after the volunteer movement. They were so named from visiting the

Q

, oil

ye - - d

houses of the 'defenders,' their antago-nists, at daybreak in search of arms.

(pë'pul), PIPUL, or SACRED FIG (Ficus religiosa), a specles of fig-tree common in India, and held sacred hy the Hindus and Buddhists. Its leaves are heart-shaped on long stalks. It attains a great age, and is usually planted near temples, where it affords shelter to the devotees. Vishnu is said to have heen horn under a peepui-tree. Its fruits are edible, but not much esteemed.

Peer (per: French, pair, from Latin par, equal), in general, signifies an equal, one of the same rank and station. In this sense it is used hy the common law of England, which declares that every person is to he tried by his peers. Peer also signifies in Britain a member of one of the five degrees of memoer of one of the five degrees of nobllity that constitute the pecrago (duke, marquis, earl, viscount, baron), or more strictly a member of the House of Lords. The dignity and privileges of peers originated with the growth of the feudal system, the peers being originally the chief vassals holding fiefs directly from the crown and having in virtue of from the crown, and having, in virtue of their position, the hereditary right of acting as royal counselors. Subsequently not all the crown vassals appeared at court as advisers of the king, hut only those who were summoned to appear by writ. This custom grew at length into a rule, and these summonses were considered proofs of hereditary peerage. In later times the honor of the peerage has been exclusively conferred by patent. As regards their privileges all peers are on a perfect equality. The chief privileges are those of a seat in the House of Lords, of a trial hy persons of noble hirth in case of indictments for treason and felony, and misprision thereof, and of ex-emption from arrest in civil cases. The British peerage collectively consists of peers of England, of Scotiand, of Great Britain, of Ireland, and of the United Kingdom, hut only a portion of the Scotch and Irish peers are peers of Parliament. Pegasus (peg'a-sus), in Greek mythology, a winged horse, the offspring of Poseidon and Medusa. Bellerophon made use of Pegasus in his fight with the Chimera. (See Bellerophon.) With the stroke of his hoof Bellerophon called forth the secret well Hippocrepa called forth the sacred well Hippocrene, on Mount Helicon, from which he was in later times called the horse of the

Pegmatite (peg'ma-tit), a coarse granite rock, composed malniy of felspar and quarts, used in the manufacture of porcelain.

(pe'gö), now a division of Lower Burmah, but previous to Pegu 1757 a powerful and independent kingdom, and from that period up to 1853 a province of the Burmese Empire, from which it was severed and annexed to the British dominions in 1853. The province comprised the whole delta of the Irrawady; area, 25,964 square miles; pop. 2,323,512. The modern division of Fegu lies mainly on the east of the lower Irrawady; area, ahout 13,000 sq. mlles; cultivated area, 2043 square mlles; pop. 1,819,000. Chief town, Rangoon.

Pegu, an ancient city In the Pegu diieft hank of the Pegu River, about 70
miles north from Rangoon. Founded in
the sixth century A.D., and long the capital of the kingdom of the same name, it
was formerly a piace of great size,
strength, and Importance, hut was destroyed In 1757 by the Rurmess. A new stroyed in 1757 by the Burmese. A new town has been built on the site of the old. Pop. (1911) 17,104.

Pehlvi, or Pehler.

Language.

Pei-ho (pā-hō'), a river of Northern China, rises near the Great china, rises near the Gulf Wall, and flows southeast to the Gulf of Pechelee. It is navigable for boats to within 20 miles of Peking, which it passes at the distance of about 10 miles. At its mouth is the small town of Taku, with several forts, which acquired some note in the war with the British and French in 1860.

Peine Forte et Dure (pen fort e dur), a panishment formerly inflicted upon a pris-oner who refused to plead guilty or not gullty when put on trial for feiony. He was put into a low dark chamber, and laid on his back naked, on the floor. As great a weight of iron as he could bear was then laid upon him, and in this sltuation hread and water were alternately his daily dlet till he died or answered.

Peipus (pe'i-pus), a lake of Russia, between the governments of St. Petershurg, Revel, and Livonia; length, 55 miles; breadth, 30 miles. It discharges itself by the Narova into the Guif of Finland. It is well supplied with

in later times called the horse of the mnses.

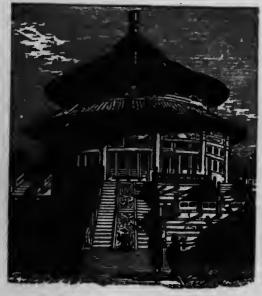

Peg'asus, a genus of acanthopterous quentiy the head of the Mahratta Empire or Confederacy. See Mahrattas.

P. draco, or sea-dragon, inhahits the In-Pekan (pek'an, pë'kan), a species of marten (Mustëla pennanti)

nearly allied to the sable, found in woody regions of North America.

Pekin (pē-kln'), a city, capital or Tazeweii county, Illinois, on the Illinois River, 10 miles below Peoria. It Illinois River, 10 miles below Peoria. It has wagon and piow factories, sugar refineries, chemical and malt works, distilleries, strawboard factories, etc. Coal abounds within the city limits. Grain and other products are shipped. Pop. 9897.

Peking (pë-king'), or Pekin' ('northern capital' as opposed to Nanking), the capital of the Chinese republic, is in the province of Chih-ie or Pechelee. on an extensive, barren, os Pechelee, on an extensive, barren, sandy plain, between the rivers Pei-ho and Hoen-ho, ahout 40 miles from the Great Wali, and 100 miles from the Gnif of Pechelee. The entire circuit of the walis and suburbs of Peking is reck-

Temple of Heaven, Peking.

oned at 30 miles. There are in all sixteen gates leading into the city, each protected hy a semicircular enceinte, and a higher tower built in galleries. The city consists of two portions, the north or Tartar city, and the south or Chinese city. The former is hullt in the shape of a paraileiogram, and consists of three inciosures, one within another, each sur-

dence of the imperial princes and efficials of the highest rank. The outer or Tartar city proper was the seat of the six supreme city proper was the sear of the six supreme tribunals, and contains the legations of Great Britain, France, the United States and Russla. In the Chinese city broad straight streets run from gate to gate, intersecting each other it right angles, but they are unpaved, and in rainy weather impassable from mud. Among the principal public bulldings of Peking the Temple of Etannal Pages belong. are the Temple of Eternal Peace, belonging to the iamas; the Mohammedan mosque; the observatory; the Temple of Agriculture and the Temple of Heaven. Agriculture and the Temple of Heaven. In the latter temple the emperor periodically offered sacrifice. It is a vast circular hullding surmonnted by a couple of inverted saucer-shaped roofs, one over the other, and the exterior is hrilliantly and harmoniously colored. It occupies a commanding position, and is approached from the different sides by magnificent from the different sides by magnificent aiahaster stairs. There are religious edifices appropriated to many forms of reilgion, the principle of toleration being here carried to the utmost extremity— among these are the Greek and Latin churches, Mosiem mosques, Buddhist temples, besides temples dedicated to Confacins and other deified mortais. Among the institutions of Peking are the national college, the medical college, astronomical board, and the imperial observatory. Peking is sustained solely by its being the seat of government, having no trade except that which is produced by the wants of its noulation. the wants of its population. Peking is regarded by the Chinese as one of their most ancient cities, hut it was not made the capital of the country until its conquest by the Mongols about 1282. In the war of 1860 Peking was occupied by the British and French on October 12, and evacuated by them Nov. 5, after burning the summer palace and inflicting other damage. In 1900 it was the chief seat of the Boxer outhreak and attack on the foreign emhassies, and was occupied by the international force sent to the reilef of the diplomatic bodies. Considerable damage was done to the imperial city and palace, the court having fied. (See China, History.) Within recent years improvements are being made in the streets and means of travel in accordance with European ideas. Pop. (1912) 203 000 European ideas. Pop. (1912) 693,090.

Pelagianism (pe-la'ji-an-izm). the system of opinions

rounded by its own waii. The innermost inciosure ('the forbidden city') contains the imperial paiace, and buildings connected with it, in which the emperor and royal family formerly resided. The second ('the imperial city') was the residence of the doctrine of free will not be second ('the imperial city') was the residence of the doctrine of the second ('the imperial city') was the residence of the doctrine of the power in man to receive or reject the

gospei. The promuigation of his views by Peiagius was nearly simuitaneous with that of the orthodox theory of original sin, etc., by Augustine, and in the deveiopment of his doctrine Augustine was influenced by his opposition to Peiagianism. Among the early supporters of Peiagius was Cœiestius, a Roman advocate, who afterwards became a monk; and it was the application of Cœiestius for ordination as a presbyter at Carthage which led to the open confilet between the two schools of thought. His application was denied on the ground of seven heretical opinions, and he was condemned and excommunicated by the Council of Carthage held in 412 A.D. In 417 and 418 A.D. the Council of Carthage repeated its condemnation, and the Emperor Honorius issued a rescript against the Peiagian doctrines. The pope then confirmed the sentence of the counciis, and anathematized the Peiagians. In the East, Pelagianism was officially condemned by the Council of Ephesus in 431 A.D. A doctrine subsequently distinguished as semi-pelagianism was taught by John Cassian, a monk of Constantinople, ordained a deacon by Chrysostom in 403.

(pe-ia'ji-us), the author of the system of doctrine which Pelagius goes by his name (see above article), was understood by his contemporaries to be of British birth, and the name is supposed to be a Greecized form of the Cymric Morgan (sea-begotten). He was not a monk, but he adhered to monastic discipiine, and distinguished himself by his sanctity and purity of life. He came to Rome in the beginning of the 5th century, and is there said to have learned the opinions afterwards identified with his name from a monk Ruffinus, whose teaching was founded on that of Origen. In 410 a.D., during Aiaric's third siege of the city, he escaped with his convert and pupil, Cœlestius, to Northern Africa, and had gone from chere to Paiestine before the meeting of the Council of Carthage (411-12) which condemned Colestius. In Palestine he lived unmoiested and revered until 415. Orosius, a Spanish priest, came from Augustine to warn Jerome against The resuit was that he was prosecuted for heresy, but two councils (at Jerusaiem, and at Diospolis, the ancient Lydda) pronounced him orthodox. He was subsequently expelled from Jerusalem, however, in consequence of condemnations by the Council of Carthage in 417 and 418 A.D., and by a synod held at Antioch in 421 A.D. Nothing is known of his subsequent career.

Pelamis (pel'a-mis), a genus of venomous sea-snakes, often found swimming in the ocean at great distances from iand. It has a length of 2½ feet, and is black above and yellow beneath. Pel'amys, a genus of fishes, belonging to the Scombridæ, or mackerel family. Five species are known. Pelargonium. See Geranium.

Pelasgians (pe-las'ji-anz), a prehistoric race widely spread over the whoie of Greece, the coasts and islands of the Ægean, and also in Asia Minor and Italy. Niebuhr regarded them as a great and widely-spread people, inhabiting all the countries from the Poto the Bosphorus, and supplying a common foundation to the Greek and Latin peoples and languages. Other writers, such as Grote, receive the entire tradition of the Pelasgians with almost complete scepticism.

Pelèe (pe-là'), Mont, a voicano in the island of Martinique, West Indies, which broke into violent eruption with disastrous resuits, on May 8, 1902, after having been quiescent for half a century. St. Pierre, the principal city of the island, iay at the mountain's foot and its inhabitants, 30,000 in number, were overwhelmed and destroyed by an outflow of hot and smothering gases. The only one that escaped with life was a convict, who iay locked in an underground dungeon.

Peleus (pē'lūs), in Greek mythology, son of Æācus, king of Ægina. After many adventures he became master of a part of Thessaiy, and married the nymph Thetis, by whom he became the father of Achilles. The nuptials were celebrated on Mount Pelion, and honored with the presence of all the gods, who brought rich bridal presents. After his death he received divine honors.

Pelew Islands (pē-lö'), a group belonging to the Caroline Archipelago, in the North Paris.

Pelew Islands (p8-16'), a group belonging to the Caroline Archipelago, in the North Pacific Ocean. They are about twenty in number, extend nearly N. N. E. and S. S. W. 87 miles, and are completely encircled by reefs. They are fertile, and enjoy a good climate. The lnhabltants are Polynesians, and have generally got a high character from visitors. Pop. 3160.

and have generally got a high character from visitors. Pop. 3160.

Pelias (pë'li-as), a genus of serpents, including the common viper or adder (P. berus).

Pelican (pel'i-kan), the name of several web-footed birds of the genus Pelecanus. They are larger than the swan, have a great extent of wing, and are excellent swimmers. Pelicans are gregarious, and frequent the neigh-

borhood of rivers, lakes, and the seacoast, feeding chlefly on fish, which they capture with great adroltness. They have a large flattened hill, the upper mandihle terminated hy a strong hook, which curves over the tip of the lower one; beneath the lower mandihle, which is composed of two flexible, bony hranches meeting at the tip, a great pouch of naked skin is appended, capable of holding a considerable number of fish, and thus enabling the hird to dispose of the superfluous quantity which may be taken during fishing expeditions, either for its own consumption or for the nourishment of its young. The species are found in Europe, Asia, Africa, and America. They sometimes perch upon trees; the nest is of rough construction, usually placed ciose

Pelican (Pelecanus onocrotalus).

to the water. The common or white pelican (P. onocrotălus) is colored a delicate white, tinged with rose or plnk. The young birds are fed hy the parents with fishes from the pouch, and the males are said to feed the incuhating females in a similar manner. The common pelican inhahits Europe, Asia and Africa. About the middle of September flocks repair to Egypt. During the summer months they take up their abode on the borders of the Black Sea and the shores of Greece. The pelican is not only susceptible of domestication, but may even be trained to fish for its master.

Pelion (pë'li-un), a mountain of Greece, in Thessaly, near the sea, 6300 feet high. In the war of the Titans with the gods the former, say the poets, piled Ossa upon Pelion to ald them in climbing to Olympus.

Pélissier (pā-lēs-yā), Jean Jacques posed to the sun or air, is accompanied of Pélissier Amable, Duc de Malakoff, preceded by remarkahle lassitude, melanched in Aigeria in 1864. He was edudied in Aigeria in 1864. He was edudied at the school of St. Cyr, and in the school of S

of artillery, subsequently serving in Spain in 1823, in the Morea in 1828-29, and in Algeria. In this country, being now a coionel, in 1845 he suffocated in a cave a party of Arabs who had taken refuge in it, hy lighting a fire at the mouth, an atrocity which brought great odium on his name. In 1855 he replaced Canrobert as commander-in-chief of the French army in the Crimea; and hy the vigor

Marshal Pélissier.

with which he pushed the siege he justified the expectations which had been formed of him. On the capture of the Malakoff and the fall of Schastopol Pélissier received his marshai's haton, and an annual pension of 100,000 francs. He was afterwards vice-president of the senate, a privy-councilor, and amhassador to England (1858). In 1860 he was appointed governor-general of Algeria.

Pella (pel'la), the ancient capital of Macedonia, and the hirthplace of Alexander the Creat.

Alexander the Great. It surrendered to Paulus Æmilius 168 B.C., and from a large and magnificent city it sank, under the Romans, to a mere station.

Pellagra (pe-la'gra, pel'a-gra), an endemic disease of comparatively modern origin occurring especially in the plains of North Italy. It hegins by an erysipelatous eruption on the skin, which hreaks out in the spring, continues till the autumn, and disappears in the winter, chiefly affecting those parts of the surface which are habitually exposed to the sun or air, is accompanied of preceded by remarkahle lassitude, melancholy, moroseness, hypochondriasis, and not seldom a strong propensity to suicide. With each year the disorder becomes more aggravated, with shorter intervals

pain d ln WA CAVO fuge , au a on obert rench AIGOL peasantry. It has recently been maintained that the disease is due to the use of spolled maize in making poienta, the common food of the Italian peasantry. The actual origin of the disease, however, is not yet fully established. It has recently made its appearance in the United States.

Pellew, EDWARD. See Exmouth.

(pel'i-kō), Silvio, an Italian poet, born in 1788 at Sa-Pellico luzzo, in Picdmont. By his tragedles of Lacodamia and Francesca da Riminia and Argolis, to which some add Sleyon. (represented in 1819, with great applause) he earned an honorable place among Italian poets. In the same year, with Manzoni and others, he established the periodical Il Conciliatore. In conand in 1822 was condemned to death, but the sentence was commuted to imprison-ment in the Austriau prison of the Spielberg for fifteen years. In 1830 he was set at liberty. Pellico has given a most interesting account of his ten years' sufferelings in Le Mie Prigioni ('My Frisons'), which has heen translated into many languages. His constitution, naturally feeble, had heen completely shattered. The Marchlouess of Barolo offered him an asylum at Turin, and he shattered. The Marchlouess of Barolo offered him an asylum at Turin, and he became her secretary. He died in 1854.

Pellitory (pel'i-tu-ri), or Spanish or in 1785; died in 1845. He was the Chamomile, of the same order and belonging to an allied genus, a native of the Levant and of Southern E. Pyrethrum), a plant nearly resembling chamomile, of the same order and belonging to an allied genus, a native of the Levant and of Southern Europe. It was introduced into England in 1750, and is chewed to relieve toothache and rheumatism of the gums. A genus of pignts from the see near the modern Divisions in a voltale circuit.

Pelusium (pë-iû'shi-um; the 'Sin' of the Scriptures), a city of the see near the modern Divisions in a voltale circuit. matism of the gums. A genus of piants (Parictaria) of the nettle order is also known as pellitory, or wall-pellitory. The common wall-pellitory (P. officinalis) is a herbaceous perennial, with prostrate or erect branched stems, ovate leaves, and small flowers. It contains niter, and was formerly used as a divertic

in the winter. At length the surface becomes permanently enveloped in a thick, livid crust, death succeeding this condition. The disease is almost confined to those who reside in the country, leading an agricultural life, and to the lowest orders of society. The general opinion is that the pellagra results from the extreme poverty and low unwholesome diet of the peasantry. It has recently been maintained that the disease is due to the use of spolled maize in making poienta, tie common food of the Italian peasantry. The actual origin of the disease, however, is not yet fully established. It has self was slain.

Peloponnesus (pei-ō-pon-nē'sus; Gr. 'island of Pelops'), the peninsula which comprehends the most southern part of Greece, now called the Morea. Peloponnesus was anciently divided into six states: Messenia, Laconia (Sparta), Elis, Arcadia, Achaia, and Argolis, to which some add Sicyon. See Greece and articles on the different states.

sequence of the liberal spirlt displayed in his productions he was in 1820, along with several of his friends, arrested on the charge of belonging to the Carbonari, and in 1822 was condemned to death, but the sentence was commuted to imprisonent the sentence was commuted to imprisonent the sentence was commuted to imprisonent to the Spiel.

Pemmican (pem'i-kan), originally a North American Indian preparation consisting of the lean portions of venison dried by the zun or wind, and then pounded into a paste and tightly pressed into cakes. Penmican made of beef is frequently used by traveiers.

Pen, an instrument for writing with a been in use from very early times, adapted to the material on which the characters were to be inscribed. The metallic stilus for the production of incised letters was probably the earliest writing implement. It was used by the Romans for writing on tablets coated with wax; hut both they and the Greeks also used what is the true ancient representative of the modern pen, namely, a hollow reed, as is yet common in Eastern countries. It has been asserted that quilis were used for writing as early na the fifth century A.D. In Europe tiley were long the only writing implement, the sorts generally used being those of the goose and swan. Up till the end of the first quarter of the 19th century these formed the principal materials from which pens were made. In 1803 Mr. Wise produced steel pens of a barrel form, monnted in a bone case for carrying in the pocket. They were of indifferent make, and being expensive (costing half-a-crown each originally, though the price was subsequently reduced to sixpence), were very ittie used. Joseph Gillott commenced the manufacture about 1820, and succeeded in making the pen of thinner and more eiastic steei, giving it a higher temper and finish. Mr. Gillott was followed into the source field by Mr. Parent into the so lowed into the same field hy Mr. Perry and others, and their improvements have so reduced the cost and raised the quality. that a gross of better pens are now sold hy the same makers at one-sixth of the price of a single pen in 1821. Cast-steel of the finest quality is used in the manu-facture, and the various operations are performed by cutting, stamping, and em-bossing apparatus worked mostly by handfly presses. Birmingham was the first home and is still the principal center of and

with minute particles of Irldium are now in somewhat extensive use, a... a good one will last for years. Fountain pens and penholders, to carry a considerable supply of ink and to discharge it in an equal manner, were invented by Joseph Bramah and have been frequently and greatly improved npon. They are now in somewhat common nsc. Gold pens are usually employed in them.

Penance (pen'ans), in theology, a punishment accepted or self-imposed by way of satisfaction and in token of sorrow for sin. In the early Christian church penances were of three kinds—secret, public, and solemn. The first consisted of such actions as are commonly imposed by confessors at the present day, as the repetition of certain prayers, etc. Public penance was in use from the earliest days of the church. It from the earliest days of the church. It was often very severe, and the pentents had to make a public confession of their sins in the church. It became gradually the custom of the blshops to commute the canonical penances for plous works, such as pligrimages, aims-deeds, and other works of charity; and these again were exchanged for indulgences. In the itoman Catholic Church penance is one of the seven sacraments. The matter of the consistence of the three sects of the penalty of the three sects of three sects o It consists of the three acts of the penltent: 1. Contrition, or heartfelt sorrow for sin as being an offense against God; 2. Confession to an authorized priest, and 3. Satisfaction, or the acceptance and performance of certain penitential works in atonement of the sin; and the form of the sacrament is the sentence of absolution from sin pronounced by the priest who received the confession, and has been satisfied of the earnest repentance of the sinner. According to the doctrine of the Protestants there is no such sacrament; they consider repentance and falth as the only regulaltes for forgiveness.

Penang (pē-nang'), Pulo-Penang, or Prince of Wales Island, an island belonging to Great Britain, lying at the north entrance of the Straits of Malacca, off the west coast

a handsome town, rapidly increasing in size, and has a large commerce. The harbor is the strait between island and mainland. Penang was made over by treaty to the East India Company in 1786 by the Rajah of Quedah, and with Province Wellewley, a long strip of the Maiay Peninsula opposite (area, 270 square miles), it now forms one of the Straits Settlements, having a resident councilor to control administration. Pop. of the settlement 248.207. of the settlement 248,207.

Penarth (pen-arth'), a seaport of South Wales, in Giamorgan, at the mouth of the river Taff, 3 mlles sonth of Cardiff. Penarth was an obscure viliage until the formation of its docks (1865-84), which have made it an important shipping port for the minerals of South Wales. It is frequented in summer as a bathing-place and seaside resort. I'op. (1911) 15,488.

Penates (pe-na'tes), the private or public gods of the Romans. The images of these gods were kept in the penetraila, or central part of every house, each family having its own Penates and the state its public Penates. The Lares were included among the Penates, but were not the only Penates; for each family had generally but one Lar, whereas the Penates are usually spoken of in the plurai. Their worship was classic apparent with that of light. was closely connected with that of Vesta. Pencil (pen'sll), an instrument used for painting, drawing, and writing. The first pencils used by artists were probably pleces of colored earth or chalk cut into a form convenient for hold-ing in the hand. On the introduction of moist colors, however, delicate brushes of fine hairs were used. Pencils of this kind, and of various degrees of fineness, are now almost solely used by painters for laying on their colors; and in China and Japan they are generally employed. for laying on their colors; and in China and Japan they are generally employed, instead of pens, for writing. The hairs used for these pencils are obtained from the camel, badger, squirrei, sable, goat, etc. The hairs, being selected, are bound in a little roll by a string tied tightly round their root ends. The roll is then fixed into the end of a quill tube. For larger pencils a socket of tin-plate is used instead of the quill. Black-lead pencils, for writing or drawing, are made of slips of graphite or plumbago (other-Straits of Malacca, off the west coast of the Maiay Peninsuia, from which it is separated by a channel 2 to 5 miles across; area, 107 sq. miles. Two-fifths of Penang is plain, and the rest hills—for the most part wooded—which rise to a height of 2784 feet in the peak now used as a sanatorium. The climate is hot, but very healthy. The scenery is charming. The island produces cocoanuts and arecs-nuts, nutmegs and cloves, rice, sugar, coffee, and pepper. George Town, or Penang (pop. about 50,000), the capital and port of the settlement, is

washed until pure, intimately mixed with clay in various proportions, and afterwards solidified by pressure. The comparative hardness and blackness of pencies are attained by the degree of heat to which they are subjected and the proportions of graphita and clear in the portions of graphite and clay in the leads. Nuremberg is the great center of the lead-pencil trade. Colored pencils are prepared from various chalks, such as are used for crayons, instead of the graphite. Penciis for writing on siate are made by cutting slate into small square pleces and rounding them, or into narrow silps and incasing them in wood. Pendant, in architecture, is a hang-ing ornament used in the vaults and timber roofs of Gothic buildings, more particularly in late Gothic work. In vaulted roofs pendants are of stone, and generally richly carved; in timber roofs they are of wood variously decorated. Fine examples of stone pendants are to be seen in the chapel of Henry VII at Westminster Abbey. See Pennant.

Pendentive (pen-den'tiv), in architecture, the portion of a dome-shaped vault which descends into a corner of a quadrangular opening when a ceiling of this kind is placed over

Pendentive Roof, Salisbury Cathedral.
a a a, Pendentives.

a straight-sided area; in Gothic architecture, the portion of a groined ceiling springlng from one piliar or impost, and bounded by the ridges or apices of the iongitudinal and transverse vaults. Pendulum (pen'du-ium), in the wid-est sense, a heavy body suspended so that it is free to turn or

swing upon an axls which does not pass through its center of gravity. Its only position of stable equilibrium is that in

to return to it, and it will osciliate or swing from one side of that position to the other until its energy is destroyed

by friction, and it at iength comes to rest. A smali, heavy body susheavy body suspended from a fixed point by a string, and caused to vibrate without much friction, is called a simple pendulum. When the swings of a simple penduium are not too great - that is, they are when never mabout 3° more than on each side of the posi-tion of rest—the pendulum is isoch-

Gridiron ronous, that is, Pendulum. Pendulum.

each swing occu-pies the same tlme, and its period is true to the law-

 $T=2\pi\sqrt{2}$ :

where T is the period of a complete vibration,  $\pi$  is the well-known mathe-matical number 3.1416, l the length of the pendulum in feet, and g the accelera-tion due to gravity, or 32.19 feet per-second at London. The 'seconds' pen-dulum has for its time of vibration (half its complete period) one second. In the above equation, putting for T two seconds, and for g 32.19, we find the length of the seconds pendulum at London to be 3.26 feet, or 39.1398 inches. A true simple pendulum is a mathematical abstraction: a heavy particle, an inex-tensible and inflexible weightless string, and no friction; these conditions are only approximated to in nature. The ordinary pendulum is what is properly a 'compound pendulum.' A compound pendulum, as seen in clocks, is usually a pendulum, as seen in clocks, is usually a pendulum as seen in clocks. rigid, heavy, pendulous body, varying in size according to the size of the clock, but the 'seconds' pendulum may be considered the standard. The penduium is connected with the ciockwork by means of the escapement, and is what renders the going of the clock uniform. (See Clook.) In a clock it is necessary that the period of vibration of the penduium should be constant. As all substances expand and contract with heat and cold, the distance from the center of suspenwhich its center of gravity is in the same sion to the center of gravity of a vertical piane with the axis. If the body pendulum is continually altering. Penduis displaced from its position it will tend lums constructed so that increase or dim-

These take particular names, according to their forms and materials, as the gridiron pendulum, the mercurial pendulum, etc. The former is composed of a number of rods so connected that the expansion or contraction of certain of them is counteracted by that of the others. The mercurial 'pendulum consists of one rod with a vessel containing mercury at the lower end, so adjusted in quantity that whatever alterations take place in the length of the pendulum, the center of oscillation remains the same. the center of osciliation remains the same,

the mercury ascending when the rod descends, and vice versa.

Penedo (pā-nā'du), a town of Brazil, in the province of Alagoas, near the mouth of the San Francisco

River. Pop. about 12,000. Penelope (pen-el'u-pe), in Greek my-thology, the wife of Odys-seus (Ulysses) and mother of Telemachus, who was but an infant when his father sailed against Troy. During the protracted absence of Odysseus, Penelope was surrounded by a host of suitors, whom she put off on the pretext that before she could make up her mind she must first finish a large robe which she was weaving for her father-in-law. weaving for her father-in-law, Laërtes. To gain time she undld by night the work she had done by day. Her stratagem was at last communicated to the suitors by her servants, and her posi-tion became more difficult than before; but fortunately Odysseus returned in time to protect his spouse, and slay the ob-noxious wooers, who had been living in rlot and wasting his property.

Penelope, a genus of gallinaceous birds. See Guan.

Penguin (pen'gwin), a family of natatorial or swimming birds adapted for living almost entirely in the water. They possess only rudimentary wings, destitute of qulll-feathers, and covered with a scaly integument or skin. Although useless as organs of flight, the wlngs are very effective aids in diving, and on land they may be used after the fashion of fore-limbs. The legs are placed at the hinder extremity of the body, and the birds assume an erect attitude when on land. The toes are completely webbed. They inhabit chiefly the birth southern letitudes congregating the high southern latitudes, congregating sometimes in colonies of from 30,000 to 40,000. There are three different types of penguins, represented by the king penguin, the jackass penguin, and the penguins, represented by the king his subsequent victorious march through penguin, the jackass penguin, and the Spain, marked by the great battles of rockhopper, constituting respectively the Salamanca (1812) and Vittoria (1813). generic groups Aptenodites, Spheniscus, In the spring of 1814 the tide of war and Osterractes. The jackass penguin rolled through the passes of the Pyre-

Penguins

Penicillium (pen-l-sil'i-um), a genus of fungous plants found on decaying bodies and in fluids in a state of acetification. P. glaucum is the ultimate state both of the vinegar-piant and the yeast-plant, called in its first

stage Torula cerevisia.

Peninsula (pen-in'sū-la; L. pene, almost, and insula, an island), a portlon of land almost surrounded by water, and connected with the mainland by a narrow neck or isthmus. The term 'The Peninsula' is frequently applied to Spain and Portugal conjointly. applied to Spain and Portugal conjointly. Peninsular War, The, was caused by the intrigues and ambition of Napoleon, who proposed the partition of Portugal (1807), and placed his brother Joseph npon the throne of Spain. For a time the whole penin-sula was occupied by French troops, but the Spanish and Portuguese peoples rose in defense of their liberties, and waged a flerce guerrilla warfare against the in-vaders. Britain joined the patriots in 1808. Of the memorable struggle which ensued, the main features were the retreat of Sir John Moore to Coruña, and his glorious death there; the accession of Sir Arthur Wellesley (afterwards Duke of Wellington) to the supreme command; his formation of the celebrated lines of Torres Vedras where he held the French Torres Vedras, where he held the French armies in check until he had accomplished the complete liberation of Portugal; and

great struggie was concluded by the crowning victory of Toulouse.

Penistone (pen'is-ton), a town of Yorkshire, Engiand, 12 miles N. W. of Sheffield, with steel and other industries. Pop. (1911) 7408.

Penitential Psalms (pen-i-ten'seven psaims vi, xxxii, xxxviii, ll, cii,
cxxx, cxliii of the Authorized Version,
so termed as being specially expressive of contrition. Reference is made
to them by Origen. They have a special
place in the breviary of the Roman
Church. The psalm most frequently repeated as being the most penitential is peated as being the most penitential is the Miserere, the li. of the Authorized

Penitentiary (pen-i-ten'sha-ri), victed offenders are confined and sub-jected to a course of discipline and instruction with a view to their reformation. The two systems of penitentiarles ln the United States are known as the Pennsylvania, or solitary confinement system, and the New York, or aggregate iabor system.

Penitentiary, at the court of Rome, an office in which are examined and delivered out the secret bulls, graces, or dispensations relating to cases of conscience, confession, etc.; also an officer in some Roman Catholic cathedrals, vested with power from the bishop to absoive in cases referred to

The prison for attending Quaker meetings, He died July 30, 1718.

The prison for attending Quaker meetings, He died July 30, 1718.

The prison for attending Quaker meetings at the prison for attending the prison for atte appeared as a preacher and an author, and on account of an essay, entitled The Sandy Foundation Shaken, he was imprisoned in the Tower, where he remained seven months. During this time Pennant (pen'ant), BASEBALL, is the he wrote his most ceiebrated work, No Cross, no Crown, and Innocency with ciubs in the various basebail leagues. Her Open Face. In 1670 Sir William It is of silk and is purchased out of the died, fully reconciled to his son, to whom league's funds and presented to the club

nees into the south of France, where this he left his estates and all his property. This same year meetings of Dissenters were forhidden, under severe penaities. The Quakers, however, continued to meet as usual, and Penn was once more put into prison for six months. The persecutlons of Dissenters continuing to rage, Penn turned his thoughts towards the New World. From his father he had inherited a claim upon the government of £16,000, and in settlement of this claim King Charles II, in 1681, granted him large territories on the west side of the Delaware River, the present State of Pennsylvania, with right to found a colony or society with such laws and institutions as expressed his views and principles. The following year Penn went over to America and lald the foundations of his colony on a democratical basis, and with a greater degree of religious liberty than had at that time been allowed in the world. The city of Philadelphia was iald out upon the banks of the Delaware, and the colony soon came into a flourishing condition, its settlers including not only Friends, or Quakers. Including not only Friends, or Quakers, but immigrants of different denominations and countries. He remained in the province about two years, adjusting its concerns, and establishing a friendly intercourse with his colonial nelghbors. Soon after Penn returned to England King Charles died (1685), and the respect which James II bore to the late admiral. who had recommended his son to his facathedrals, vested with power from the bishop to absolve in cases referred to him. The rope has a grand peniten-tlary, who is a cardinal and is chief of in producing the release of the 1200 the other penitentiaries.

Quakers then in prison, and probably in the other penitentiaries.

Quakers then in prison, and probably in Penn William, the founder of the the issue of a general pardon and the re-Penn, State of Pennsylvania, was born peal of religious tests and penalties. After the revolution of 1688 his former intimacy with James II led to a charge of disloyhis fifteenth year he was entered as a alty and trials for conspiracy and treason. gentleman commoner of Christ Church, While he was acquitted, he was for a time Oxford, where he imbibed the views of deprived of his American province. persons, usually for services previously rendered. In Britain civil pensions are conferred on certain miulsters of state,

etc., on retirement after a number of years' service, with smaller sums called the civil list pensions. These latter pen-sions are assigned to those who, by their personal services to the crown, by the performance of duties to the public, or by their useful discoveries in science and attainments in literature and the arts, have merited the gratitude of their country. In addition, army and navy pensions are paid to veterans those incapacitated for service by v. nds, etc. By a law which became effective January 1, 1909, a system of oid-age pensions was established in Britain. A similar system had existed in Germany for many years, and like ones have been established to a partial extent in some other countries. In the United States other countries. In the United States the pension system differs from that of most other countries; pensions, with few exceptions, are granted only on account of military service; having no large standing army, its pensions are given chiefly to volunteers and drafted men. Since the Civil war the pension system has developed from a very small establishment to a great bureau. The appropriations made by Congress have increased yearly. In 1861 there was disbursed on account of pensions \$1.072.461.

wool, cotton, and naval stores. rolls June 30, 1913, the disbursement for pensions amounting to \$174,171,000. While the system of old age pensions has not been introduced into the United States as a government institution, it has been established in some of the states and cities, for teachers, policemen, and firemen, and by a number of railroad and other corporations. The government is considering a general service pension sys-

Pensions, Mothers'. In connection with country-wide discusslon of the education of the child have come within recent years many definite steps for preserving to the child the bene-fits gained only from proper home in-fluences. In the belief that separation of mother and child necessarily works to the detriment of the child's development, many states have enacted legislation that Pensionary (pen'shun-a-ri), one of their chiidren, to keep them at nome into the chief magistrates of stead of placing them in various institutions in Holiand. The Grand Pensionary was the first minister of the sion or allowance system. Many state United Provinces of Holiand under the legislatures have passed these pension laws, and a number of cities have provided similar aid by municipal ordinances.

(pen'shunz), annual allow-vided similar aid by municipal ordinances. will enable mothers too poor to maintain their children, to keep them at home in-Pentagon (pen'ta-gon), a figure of five sides and five angles; if the sides and angles be equal it is a regular pentagon; otherwise, irregular. Pentagraph. See Pantagraph. Pentagraph.

> Pentamera (pen-tam'é-ra), one of the primary sections into which coleopterous insects (beetles) are divided, including those which have five joints on the tarsus of each leg.

(pen-ta-mē-rō'nā), a famous collection of Pentamerone fifty folk-tales (Naples, 1637), written by Giambattista Basile in the Neapolitan dialect. They are claimed to be told during five days by ten old women for the entertainment of a Moorish slave, who has usurped the place of the right-ful princess. They have been trans-lated into German and English, a com-piete English translation being published by Sir Richard Burton in 1893. These taies are of great value to the student of folk-lore.

Pentameter (pen-tam'e-tèr), in prosody, a verse consisting of five feet. It belongs more especially to Greek and Latin poetry. The first two feet may be either dactyls or spondees, the third is always a spondee, and the last two anapests. A pentameter verse, subjoined to a hexameter, constitutes what is called the elegiac measure.

bursed on account of pensions \$1,072,461. Pentateuch (pen'ta-tilk), the Greek There were \$20,200 pensioners on the

Law of Moses (Hehrew, Torak Moskeh), or simply the Law (Torak). The division of the whole work into five parts has by some authorities been supposed to be original; others, with more probability, think it was so divided by the Greek translators, the titles of the several books being Greek, not Hehrew. It begins with an account of creation and the primeval condition of man; of the entrance of sin into the world, and God's dealing with it, broadening out into a history of the early world, but again narrowing into blographies of the founders of the Jewish family; it then proceeds to describe how the family grew into a nation in Egypt, telis us of its oppression and deliverance; of its forty years' wandering in the wilderness; of the giving of the law, with all its civil and religious enactments; of the construction of the tabernacie; of the census of the people; of the rights and duties of the priesthood; and concludes with the last discourses of Moses and his death. The Pentateuch and the book of Joshua are sometimes spoken of together as the Hexateuch; when Judges and Ruth

as the Hexateuch; when Judges and Ruth are added, as the Octateuch.

Until nearly the end of the 18th century the conviction that Moses wrote the complete work, with the exception of the last chapter or so of Deuteronomy, ascribed to Joshua, might be said to have been universally adhered to; hut previously to this the question whether the Pentateuch was the work of one man or of one age, and what share Moses had in its composition, had heen discussed seriously and with more or less critical investigation. Spinoza, in a work puhilished in 1679, maintained that we owe the present form of the work to Ezra. A scientific basis was given to the investigation by Jean Astruc (1753), who recognized two main documentary sources in Genesis, one of which used the name Elohim and the other Jehovah for God. This 'documentary theory' gave way to the 'fragmentary theory' gave way to the 'fragmentary theory' gave way to the 'fragmentary theory' of Vater (1815) and Hartmann (1818), who maintained that the Pentateuch was merely a collection of fragments thrown together without order or design. This theory has now lost its popularity by the substitution of another, called the 'supplementary hypothesis,' whose leading principle is that there was only one original or fundamental document (the Elohistic) giving a connected history from first to last, such as we have in the Pentateuch; but that a later editor (the Jehovist), or several successive editors, enlarged it to its present

extent, sometimes very greatly, by the insertion of additional matter from other sources, whether these had appeared in a written form aiready, or whether they were still floating in the minds of the people as traditions. The book of Joshua as now generally regarded as in its character belonging to and completing the Pentateuch. De Wette was the first to concern himself (early in the last century) with the historical apart from the literary criticism of the Pentateuch, and refused to find anything in It but legend and poetry. The discussions on these points, which until recently were mainly led hy German theologians, have latterly heen taken up by English biblical critics, among the earliest being Dr. Desideon and Rishon Colerno.

cai critics, among the earliest being Dr.
Davidson and Bishop Coienso.

Among those critics of the present day who deny the Mosaic authorship of the Pentateuch there is a tendency to recognize three elements or component parts welded together in the whole work (including Joshua). One of these is the fundamental or Elohistic document, which is partly historic in its matter but mainly legal, embracing Leviticus and parts of Exodus and Numbers. Another element consists of the Jehovistic, which is almost entirely narrative and historical, and to which belongs the history of the patriarchs, etc. The third component element is Deuteronomy, the second giving of the iaw, as the name signifies. The respective antiquity of the several portions has been much disputed, many critics making the Eiohistic the earliest, the Jehovistic second, Deuteronomy last. Some modern critics, however, put the Eiohistic section last, believing it to have been drawn up during the exile and published hy Ezra after the return; while the Jehovistic section is assigned to the age of the early kings, and Deuteronomy to the reign of Josiah.

Pentecost (pen' te-kost: from the Greek pentekoste, the fiftieth), a Jewish festival, held on the fiftleth day after the passover, in celebration of the ingathering and in thanksgiving for the harvest. It was also called the Feast of Weeks, because it was celebrated seven weeks after the passover. It is also a festival of the Christian church, occurring fifty days after Easter, in commemoration of the descent of the Holy Ghost on the discipies, called in England Whitsuntide.

Penthesilea (pen-the-sil-ë'a), in queen of the Amazons (which see).

Penthièvre (pan-tyavr), an ancient county of Brittany, now forming the French department of Mor-

bihan. It belonged in earlier times to several branches of the house of Brit-tany, but at a later period came to the houses of Brosse and Luxembourg, and in houses of Brosse and Luxembourg, and in 1569 was erected in their favor by Charles IX into a dukedom. It afterwards feil to the crown, and was given, in 1697, by Louis XIV to one of his illegitimate sons by Madame de Montespan, the Count of Touiouse, who died in 1737. His only son and heir was Louis Jean Marie de Bourbon, duke of Pentbièvre, born in 1725; died in 1793; served as general at Dettingen and Fontenoy, and was father-in-law to King Louis Philippe.

Pantland Firth (pent'land), a

Pentland Firth (pent'land), a channel separating the mainland of Scotland from the Orkney Islands, and connecting the North Sea with the Atiantic Ocean. It is about 17 miles long east to west, and 6 to 8 miles broad. A current, setting from east to west, flows through it with a valority of 3 to 9 miles an hour causing velocity of 3 to 9 miles an hour, causing many eddies, and rendering its navigation difficult and dangerous.

Pentland Hills, a range of Scotties of Edinburgh, Peebles, and Lanark, commencing 41 miles south by west of Edinburgh, and extending southwest for about 16 miles. The highest summit, Scaid Law, is 1898 feet above sea-level.

Penumbra (pen-um'bra), the partial shadow between the full light and the total shadow caused by an opaque body intercepting the light from a luminous body, the penumbra being the result of rays emitted by part

Umbra and Penumbra.

of the luminous body. An eye placed in the penumbra would see part of the luminous body, part being eclipsed by the opaque body; an eye placed in the 'umbra,' or place of total shadow, would receive no rays from the luminous body; an eye placed anywhere else than in the penumbra and umbra sees the luminous body without eclipse. The subject is of importance in the consideration of eclipses. In a partial eclipse of the sun, as long as any part of the same is visible. as long as any part of the same is visible don, situated in Mile-end Road, opened the parties observing are in the ponum- by Queen Victoria, May, 1887. It pre-

bra; when the eclipse is total, in the umbrs. The cut shows the phenomena of the umbra and penumbra in the case of luminous body between two opaque

bodies, the one larger, the other smaller than itself. See also Eclipse.

Penza (pān'za), a government of Russia, bounded by Nijnl-Novgorod, Tambov, Saratov, and Simbirsk; area, 14,996 square miles; pop. 1,491,215. Its surface, though generally flat is intersurface, though generally flat, is inter-sected by some low hills separating the basins of the Don and Voiga. About 60 per cent. of the soil is arable, the chief crops being rye, oats, buckwheat, hemp, potatoes, and beet-root, and about 14 per cent. is under meadows or grazing land. The forests are extensive. The chief exports are corn, spirits, timber, metals, and oils.—PENZA, the capital, is on an eminence at the junction of the Penza and Sura, 440 miles southeast of Moscow. It was founded in 1666 as a defense against Tartar incursions, is mostly built of wood, has a cathedrai, several other churches, a theater, etc. Pop. 76,552.

Penzance (pen'zans), a municipal borough and seaport of England, in the county of Cornwail, picturesquely situated on the northwest of Mount's Bay, 26 miles southwest of Truro. The harbor has accommodation for large vessels, and there is a considerable export of tin and copper, chinaclay, and pilchards. The pilchard and

other fisheries employ many persons.

Penzance has a fine climate and pleasant environs, and is becoming a favorite watering-piace. Pop. 13,136.

Peony (pë'u-ni; Pæonia), a genus of plants belonging to the natural order Ranuncuiaces, and very generally cuitivated in gardens for the sake of their shows flowers. The species are large showy flowers. The species are mostly herbaceous, having perennial tuberous roots and large deeply-lobed leaves. The flowers are solitary, and of a variety of colors, crimson, purplish, pink, yellow, and white. The flowers, however, have no smell, or not an agreeable one, except in the case of a shrubby species, *P. Moutan*, a native of China, of which several varieties, with beautiful whitish flowers stained with pink, are cuitivated in gardens. The roots and seeds of all the species are emetic and cathartic in moderate doses. *P. officinālis* or festiva, the common peony of cottage gardens, was formerly in great repute as a medicine. however, have no smell, or not an agree-

Provost of the University in 1880, resigning in 1894. He was very active in extending the scope and adding to the andowment of the University, which owes its present high standing largely to him. He was also actively connected with the Public Library of Philadelphia, the Commercial Museums, and other institutions. He died in 1898.

Peppercorn Rent, a nominal rent to be paid on demand. A nominal rent of one pepper-corn a year is an expedient for securing acknowledgment of tenancy in cases where houses or lands are let virtually free of rent.

See Mint. Peppermint.

Peppermint-tree, the Eucalyptus piperita, a native of New South Wales.

Pepper-pot, a much-esteemed West Indian dish, the principai ingredient of which is cassareep (which see), with flesh of dried fish and vegetables, chiefly the unripe pods of the ochra, and chillies.

vegetables, chiefly the unripe pods of the ochra, and chillies.

Pepper-root, a herbaceous plant of the 'Gliead' of the Oid Testament.

Perak (pä'rāk), a native state of the United States, so cailed from the pungent, mustard-like about 80 miles along the west coast, and taste of its root, which is used as a stretching inward to the mountain range which forms the heatherns of the root. condiment.

represent.

Pepperwort, a plant of the genus Lepidium, one species of which (L. sativum), the common garden cress, is cultivated for the table. See also Dentaria.

Pepsine (pep'sin), an active principle of the gastric juice, a peculiar animal principle secreted by the stomach. The pepsine or pepsia of pharmacy is a preparation of the mucous lining of the stomach of the pig or calf. It is often prescribed in cases of indigestion connected with loss of power and tone of the stomach. tone of the stomach.

Pepys (peps or pep'is), SAMUEL, secretary to the admiralty in the reigns of Charies II and James II, was born at Brampton, Huntingdonshire, in 1632, and educated at Cambridge. He early acquired the patronage of Sir Edward Montagu, afterwards Earl of Sandwich, who employed him as secretary in wich, who employed him as secretary in the expedition for bringing Charles II from Holland. On his return he was appointed one of the principal officers of the navy. In 1673, when the king took the admiraity into his own hands, Pepys was appointed secretary to that office, and performed his duties with great credit. During the excitement of the Popish Plot

trial, and reinstated in his office at the admiralty, which he heid until the abdication of James II. He died in 1703. He was president of the Royal Society for two years; but his title to fame rests upon his Vicent (1850, 1850). for two years; but his title to tame rests upon his Diary (1059-09), which is a most entertaining work, revealing the writer's own character very plainly, giving an excellent picture of contemporary life, and of great value for the history of the court of Charles II. It is in shorthand, and was discovered among a collection of backs unints and manusculpits. iection of books, prints, and manuscripts bequeathed by Pepys to Magdaiene Coilege, Cambridge; first printed in 1825.

Pequots, a tribe of American Indians, a branch of the Mohegans, residing near the Thames River, in Connections Strong and warrisks they on

necticut. Strong and wariike, they op-posed the settlement of the English in Connecticut. Hostilities hroke out in 1637, the Indian town was hurned, and the tribe practically annihilated.

Pera (pa'ra), a suhurh of Constanti-nopie (which see).

which forms the hackbone of the peninsula; area, 7949 sq. m., pop. 329,665. Since 1875 Perak has been practically a dependency of the Straits Settlements (which see), the native rajah being controlled by a British resident appointed by the severe of thest colony and Fred. hy the governor of that colony, and Engiish officers holding many posts under the native government. Perak is a flourishing and progressive country. Roads and railways are constructed or being made and its rich resources developed. Tin is produced in large quantities, and tapioca, pepper, rice, sugar, coffee, cacao, and cinchona are successfully cultivated. The chief town is Thaipeng, but the head-quarters of the British resident are at Kwaia Kangsa.

Perception (pur-sep'shun), in phi-iosophy, the faculty of perceiving; the faculty hy which we have knowledge through the medium or instrumentality of the hodliv organs, or hy which we hold communication with the external world. Perception takes cognizance only of objects without the mind. We perceive a man, a horse, a tree; when we think or feel, we are conscious of our thoughts and emotions. Two great disputes are connected with perception. both brought into full prominence by Bishop he was committed to the Tower, hut was Berkeley. The first is the origin of our after some time discharged without a judgments of the distances and real magnitudes of visible bodies. The second question has reference to the grounds we have for asserting the existence of an external material world, which, according to Berkeley, was connected with the other. See Idealiem.

other. See Idealism.

Perceval (per'se-vai), Spencer, an English statesman, son of John Perceval, Earl of Egmont, born in 1762; received his education at Harrow and Trinity College, Cambridge. On quitting the university he studied law. In 1801 he became solicitor-general, and in 1802 attorney-general. In 1807 he was appointed chancellor of the exchequer, and on the death of the Duke of Portland, in 1809, he became premier. In this post he continued till May 11, 1812, when a person named Beilingham shot him dead in the lohby of the House of Commons. Perceval was a keen debater and a fluent and graceful speaker, hut was shallow and intolerant, and unequal to the task of leading the councils of a great nation.

Perch, a genus of acanthopterous fishes, forming the type of the perch family (Percidæ). The common perch (Perca fluviatilis) is a common tenant of fresh-water lakes and rivers. The hody is hroad, and somewhat flattened laterally. There are two dorsal fins, the anterior supported hy very strong spines. It is colored a greenish-hrown on the upper parts, the belly being of a yellowish or golden white. The

The common Perch (Percha fluviatilis). o, Gill-cover, with the gill-slit behind lt; p, One of the pectoral fins, the left; v, The left ventral fin; d, The first dorsal fin; d', The aecond dorsal fin; c, The caudal fin or tall; c, The anal fin; l, Lateral line.

sides are marked with from five to seven hiackish hands. The average weight is from 2 to 3 ibs. The perch is a voracious feeder, devouring smaller fishes, worms, etc. The American yeilow perch is one of the most common and beautiful of the fresh-water fishes of the United States. The Serranus cobrilla and S. gigas (giant perch) are also sometimes termed 'seaperches.' For the climbing-perch of India see Climbing-perch.

Perch, as a measure of length, see

Perchers, or PERCHING BIRDS. See

Perchlorio Acid (per-klo'rik; H Ci O4) is prepared by the action of strong suiphuric acid upon potassium perchiorate. It is a coloriess, sirupy liquid, resembling suiphuric acid. Brought into contact with organic matter it is instantly decomposed, often with explosive violence. The perchiorates have the general formula MCiO4, where M represents a monovalent metal, such as potassium or sodium.

Per'cidæ. See Perch.

Percussion (per-kush'un), in medicine, that method of diagnosis which consists in striking gently on the surface of one of the cavities of the body, and then endeavoring to ascertain from the sound produced the condition of the organ lying beneath. Percussion is most frequently used on the chest, hut it is also occasionally applied to the cavity of the abdomen, the head, etc.

Percussion Caps are smail copper cylinders, closed at one end for conveniently holding the detonating composition which is exploded by percussion, so as to ignite the powder in certain kinds of firearms. The copper cap came into general use between 1820 and 1830.

Percy (per'si), the name of a nobie family who came to England with William the Conqueror, and whose head, William de Percy, ohtained thirty knights' fees in the north of England. A descendant, also named William, who lived in the early part of the 12th century, left behind him two daughters, the elder of whom died childless, and the younger, Agnes, married Josceline of Lorain, hrother-in-law of Henry I, who assumed the surname of his bride. His son, RICHARD DE PERCY, was one of the twenty-five harons who extorted Magna Charta from King John. His great-grandson, HENRY, LORD PERCY, was created Earl of Northumberland in 1337. He was Marshal of England at the coronation of Richard II, against whom, however, he took up arms, and succeeded in placing the crown on the head of the Lancastrian aspirant, Henry IV. He took up arms against this king also, but his forces were beaten at Shrewshury (1403), where his son, Henry Percy (Hotspur), feil; and again at Barnham Moor (1407-8), where he himself fell. His titles were forfeited, hut were revived in favor of his grand-

constable of Engiand, and who feil fighting in the Lancastrian cause at St. Aibans (1453). For the same cause his son and successor shared the same fate at Towton (1461). The fourth eari was murdered during a popular rising, caused by his enforcing a subsidy ordered by the avaricious Henry VII. The sixth and seventh earis feli by the hands of the executioner in the reigns of Edward VI and Elizabeth respectively. The eighth died a violent death in the Tower, where he was confined on a charge of taking part in a plot in favor of Mary of Scotland. Aldernon, the tenth earl, took part in the civil war against Charles I, and afterwards used all his influence to bring about the Restoration. Josceline, the eleventh earl, died without male issue; his only daughter married Charles, duke of Somerset, and became the mother of Algernon, duke of Somerset, and became the fight to cocupies granted to Père de confessor of Louis it to co

Percy, in Ireland, was born at Bridgenorth in 1728, and graduated at Christ
Church, Oxford, in 1753. He held several livings, in 1769 was appointed
chaplain to the king, and in 1778 raised
to the deanery of Carlisle, which he
resigned four years after for the Irish
bishopric of Dromore. He died at
Dromore in 1811. The most popular of
his works are his Reliques of Ancient
English Poetry, based on an old manuscript collection of poetry, but much
modernized in style. The work was published in 1765, and materially helped to
give a more natural and vigorous tone
to English literature, then deeply tainted
with conventionallsm.

Perdix (perdiks), the generic name of the true partridges. The common partridge is P. cinereus.

Peregrine Falcon. See Falcon.

Perekop (pā-rā-kop'), a town of Southern Russia, government of Taurida, 85 miles N.N.w. of Simferopol, on the Isthmus of Perekop, formerly a place of some military importance. The isthmus, about 20 miles long, by 4 miles wide where narrowest, connects the Peninsula of the Crimea with the mainland, and separates the Sea of Asov from the Black Sea.

It loos he succeeded in organizing a society giving expression to his views at Putney. Besides himself this included his vife, his mother, and by several other families. All property was thrown into a common stock; all deties, all duties fell upon the society, which ate in one room, slept under one with the mainland, and separates the Sea of Asov from the Black Sea.

All prayer and religious service was

Père-la-Chaise (păr-lâ-shās), a famous cemetery to the northeast of Paris, opened in 1804. It occupies ground a part of which was granted to Père de la Chaise, or Chaise, confessor of Louis XIV. Its present extent is 212 acres, and it contains the burial-places of great numbers of eminent Frenchmen.

Perennial (pe-ren'i-al), in botany, a term applied to those plants whose roots subsist for a number of years, whether they retain their leaves in winter or not. Those which rstain their leaves are called evergreens; such as cast their leaves are called deciduous. Perennial herbaceous plants, like trees and shrubs, produce flowers and fruit year after year.

Perennibranchiata (per-en-i-bran-ki-a'ta), a section of the amphiblan order Urodela, ln which the branchise or gills of early life persist throughout the entire existence of the animal, instead of disappearing when the lungs are developed. Examples are seen in the Proteus, Siren, and Axolotl. See Amphibia.

Pereyaslavl (pā-rā-yas'lavl), an oid town of Southern Russia, government of Poltava, 175 nlies w.n.w. of Poltava. Pop. 14,609.

Pereyaslavl-Zalyesskii, an old town of Central Russia, government of Vladimir, 87 miles northeast of Moscow. It has extensive cotton manufactures. Pop. 8662.

Perfectionists (per-fec'shun-ists), or BIBLE COMMUNISTS, popularly named FREE-LOVERS, an American sect founded in 1838 by John Humphrey Noyes. Noyes was employed as a law-clerk at Putney, in Vermont, when the fierce religious revival of 1831 spread over the New England States, but he abandoned law for religion, and took upon himself the restoration of the primitive Christian ideal. His distinctive doctrines were—1st, reconcillation to God and salvation from sin—purely matters of faith; 2d, recognition of the brotherhood and the equality of man and woman; and 3d, community of labor and its fruits. In 1838 he succeeded in organizing a society giving expression to his views at Putney. Besides himself this included his vife, his mother, and his sister and brother, who were joined by several other families. All property was thrown into a common stock; all debts, all duties fell upon the society, which ate in one room, slept under one roof, and lived upon one common store. All prayer and religious service was

stopped, Sunday was unobserved, family ties were broken up, and a complex mar-riage system was established, by which each man became the husband and brother of every woman; every woman the wife and sister of every man. They held that true believers are free to follow the indi-cations of the Holy Spirit in all things, nothing being good or bad in itself. Con-sequently, they rejected all laws and rules of conduct except those which each believer formulated for himself; but to believer formulated for himself; but to
prevent the inconveniences arising from
an ignorant exercise of individual liberty,
they introduced the 'principle of sympathy,' or free public opinion, which in
fact constituted the supreme government
of the society. At length Putney became
too hostile for this state of affairs to
continue; the establishment was broken
up; but about fifty of the picked and
tried men, with as many women and
children, heid together. Uniting their
means, they, in 1847, bought a piece of
forest-land (about 600 acres) at Oneida
Creek, a sequestered district of New York
State, and in the course of twenty years
they made it one of the most productive
catates in the Union. The family or
society numbered at one time over 300
members, with a branch community of
50 or 60 members at Wallingford, Connecticut. This status continued for
the adiabate of the public opinion of
the calcus. It was founded by emigrants from Greece, and rose to importance about the commencement of the

third calcus and mignorates and mignorat necticut. This status continued for third century years; but the public opinion of the neighborhood began to demand that the social practices of the society should be abandoned; and this was done in 1870, under the counsel of its founder and director, Mr. Noyes. Marriage and fumily life were introduced; and in 1880 communism of property gave way to joint-stock, and the society was legally incorporated as the Oneida Community, Limited. Some of the more necessary and common communistic features, bowers, were preserved, such as common of treilis work over which are trained and common communistic features, bowever, were preserved, such as common dwellings, a common laundry, library, etc.

Perfumes (per'fūms), substances emitting an agreeable odor, and used about the person, the dress, or the dwelling. Perfumes of various sorts have been held in high estimation from the most ancient times. The Egyptians, Hebrews, Phenicians, Assyrians and Persians are known to have made great use of them, as did also the Greeks and Italy were most conspicuous for the use of this period.

from the Italian for an arbor of trellis work over which are trained especially for such an arbor covering a path, walk or veranda.

Pergolesi (per-go-lā'sē), Giovanna Battistan musical composer, born at Jesi in 1710; studied at the conservatory of music at Naples; produced his first oratorio and his first opera in 1731; led a life of no-produced produced his first oratorio and his first opera in 1731; led a life of no-produced produced his first oratorio and his first opera in 1731; led a life of no-produced produced his first oratorio and his first opera in 1731; led a life of no-produced produced his first oratorio and his first opera in 1731; led a life of no-produced his first oratorio and his first opera in 1731; led a life of no-produced his first oratorio and his first opera in 1731; led a life of no-produced his first opera in 1731; led a life of no-produced his first oratorio and his first opera in 1731; led a life of no-produced his first oratorio and his first opera in 1731; led a life of no-produced his first opera in 1731; led a life of no-produced his first opera in 1731; led a life of no-produced his first opera in 1731; led a life of no-produced his first opera in 1731; led a life of no-produced his first opera in 1731; led a life of no-produced his first opera in 1731; led a life of no-produced his first opera in 1731; led a life of no-produced his first opera in 1731; led a life of no-produced his first opera in 1731; led a life of no-produced his first opera in 1731; led a life of no-produced hi Romans. In the middle ages france and regarded as the best representations of Italy were most conspicuous for the use and preparation of perfumes. Perfumes are partly of animal but chiefly of vegetable origin. They may be divided into two classes, crude and prepared. The plied when the calyx and corolla are former consist of such animal perfumes combined so that they cannot be satisfactorily distinguished from each other, table perfumes as are obtained in the as in many monocovived annous plants the table perfumes as are obtained in the as in many monocotyledonous plants, the

form of essential oils. The prepared per-fumes, many of them known by fancy names, consist of various mixtures or preparations of odorous substances made up according to recipe. At the present time the manufacture of perfumes is chiefly carried on in Paris and London, and in various towns near the Mediterranean, especially in the south of France. Certain districts a... famous for certain productions; as Cannes for its perfumes of the rose, tuberose, cassia, jasmine; Nimes for thyme, rosemary and lavender; Nice for the violet and mignonette. (per-i-kar-di'tis), in-flammation of the mer-Pericarditis braneous sac (pericardium, which a containing the heart. In the acute st of the disease there is exudation of imph or serum; at a later stage faise membranes are formed, and at a still later stage the two sides become glued together, forming adherent pericardium. This is generally followed by changes in the substance of the heart, or in its internal surface, orlices, or valves, and a fatal termination is rarely long delayed. The symptoms of pericarditis are: 1st, pain more or less acute in the location pain more or less acute in the location of the heart; fever is present with loss of the neart; fever is present with los-of appetite and dry tongue. An anxious respiration and a feeling of overwheiming oppression are also present, with fre-quent sighing, which gives momentary relief. Most of the symptoms are aggravated by motion or a high temperature. For the diagnosis of pericarditis we must rely mainly on the physical signs, but it is only when the effusion is considerable that investigation by percussion is of much use. In ordinary cases, where adhesion takes place, there may be an apparently complete recovery at the end of three weeks or less; but adhesion frequently gives rise to other structural changes of the heart, and then fats! discussed that organ aimort aimore follows: ease of that organ aimost aiways follows. In slight cases a real cure without adhe- Attlea, but sion may be effected. This disease is Pericles had frequently brought on by exposure to made the rural cold or draughts when the body is warm population take and perspiring. Its most frequent occurrence is in connection with acute ens and refused between the content of the content rheumatism.

Pericardium (per-i-kar'di-um), the investing fibro-serous sac or hag of the heart in man and other animais. In man it contains the heart and origin of the great vessels. It consists of two layers, an outer or fibrous, and an inner or serous layer. The inner surface of the membrane secretes a serous fluid, which in health is present only in sufficient quantity to inhricate the heart, and so to facilitate its movements within

drupe, berry, nut, cone, etc.

Pericles (peri-klės), one of the most ceiebrated statesmen of ancient Greece, born at Athens about 494

P. C. He was connected by family reiaon the death of Cimon, in 449 s.c., Pericles became virtual rules of Athense. By his great public works he flattered the vanity of the Athenians, while he beautified the city and employed many jaborers and artists. His chief aim was to make Athens undoubtedly the first power in Greece, as well as the chief center of art and literature, and this position it attained and held for a num-

ber of years. (See Greece.) the At commencement of Peloponthe nesian war (B. 431), Athens which had to contend against Sparta and other states, Pericies was made commander-in-chief. The Spartans advanced into Attica, but hattie. After

Pericles. - Antique bust.

they retired he led an army into Megaris, and next year he commanded a powerful fleet against the Peloponnesus. In 430 B. C. a plague broke out in Athens, and for a hrief period Pericles iost his popularity and was deprived of the command. The peopie, however, soon recalled him to the head of the state, but amid his numerous sufficient quantity to indricate the heart, and so to facilitate its movements within the sac.

Pericarp (per'i-karp), in botany, the seed-vessel of a plant, or the whole case or covering in which the seed is inclosed. The pericarp often consists of very distinct layers, as in the pium, in which the externa kin forms the epicarp, the puip or fless, the sarcocosrp, and the stone which encases the seed by domestic cares he was afflicted by domestic cares he was afflicted by domestic cares. Many of his friends, and his two sons, Kanthippus and Paralus, were carried off by the piague; and to console him for this ioss the Athenians aliowed him to legitimize his son by Aspasia. He now sunk into a lingering sickness, and died B. C. 420, in the third year of the Peipoponnesian war. Pericles was distinguished by intellectual breadth, elevated moral tone, unruffled serenity, and superiority to the prejudices of his age. His name is intimately connected with the highest glory of art, science, and power in Athens.

Peridote (per'i-dot), a name given by jewelers to the green transparent varieties of olivine. It is usually some shade of ollve-green or leek-green. Perldote is found in Brazll, Ceylon, Egypt, and Pegu. It is a very soft gemstone, difficult to polish, and, when polished, llable to lose its luster and to suffer by wear.

Périer • (pā-ri-ā), Casimir, a French statesman, was born at Grenoble in 1777; educated at Lyons, and served with honor in the campaigns of Italy (1799 and 1800). In 1802 he established a prosperous banking house in company with his hrother. In 1817 he was elected to represent the depart-ment of the Seine in the Chamber of Deputies. Here he hecame one of the leaders of the opposition under Charles X, and was distinguished as an eloquent advocate of constitutional principles and an enlightened financier. After the revolution of 1830 he was prime-minister to Louis Philippe. Died in 1832. His grandson, of the same name, was President of France, 1894-95.

Perigee (per'i-je), that point in the orbit of the moon which is at the least distance from the earth. See

Apogee. Périgord (pā-ri-gör), an old province of France. It formed part of the military government of Guienne and Gascony, and is now represented by Dordogne and part of Lot-et-Garonne.

Périgueux (pā-ri-geu), a town of France, formerly capital of Pérlgord, now chief town of the department of Dordogne, on the right bank of the Isle, 68 miles E.N.E. of Bordeaux. There are bomhazine and serge factorles, iron and copper foundries, and a large trade in flour, wine, brandy, and the ramous truffle pâtés de Périgord. Pop. (1911) 33,548.

Perihelion (per-i-he'li-on; Greek, peri, near, and helios, the sun), that part of the orbit of the earth or any other planet in which it is at the point nearest to the sun. The 'perihelon distance' of a heavenly body is its distance from the sun at its nearest ap-

proach. Perim (pā-rēm'), an island in the Strait of Bab-el-Mandeh, at the entrance to the Red Sea, about 10 miles

manding position, which renders it the key of the Red Sea. On its southwest side is a well-sheltered harbor capable of

containing a fleet of warships.

Perimeter (pe-rim'i-ter), in geometry, the bounds or limits of any figure or body. The perimeters of surfaces or figures are lines; those of bodies are surfaces.

Period (pe'rl-ud), in astronomy, the interval of time occupied by a planet or comet in traveling once around the sun, or by a satellite in traveling

around its primary.

Periodicals (pe-ri-od'i-kals), publicaregular intervals, and whose principal object is not the conveyance of news (the main function of newspapers), but the circulation of information of a literary, scientific, artistic, or miscellaneous character, as also criticisms on books, essays, poems, tales, etc. Periodicals exclusively devoted to criticism are gen. erally called reviews, and those whose contents are of a miscellaneous and entertaining kind magazines; but there is no great strictness in the use of the terms. The first periodical was published in France, being a scientific magazine, the Journal des Savants, issued in 1665, and still existing in name at least. The most famous French literary periodical is the Revue de Deus Mondes, begun in 1829, from 1831 issued fortnightly, and marked by an ability which has placed it in the front rank of the world's periodicals. Into it tales, poems, etc., are admitted, and the names of the contributors have to be attached to their articles. The earliest English periodical seems to have been the Weckly Memorials. for the Ingenious, the first number of which is dated January, 1681-82, and which lasted but a year. It was followed by several other periodicals, which for the most part had but a brief existence. In the 18th century a number of monthly reviews appeared, including the Monthly Review (1749–1844); the Critical Review (1756–1817); the British Critic (1793–1843); the Anti-Jacobin Review and Magazine (1798–1821). At length in 1802 a new era in criticism was introduced by the Edinburgh Review, the organ of the Whigs, which came out every three months, and soon had a formidable rival in the Quarterly Review (1809), the organ of the Tories. In 1824 the Westminster Review was started from the Abyssinian and 1½ mile from by Bentham as the organ of utilitarian-the Arablan shore; 7 sq. miles in area. ism and radicalism, and with it was It has been held by Great Britain since afterwards incorporated the Foreign 1857, and is under the government of Quarterly Review (1827-46); and in Aden. Passing over the Tatler (1709-10), Spectator (1711-12, revived 1714), etc., (1709-10),what should be considered to be sui generis, the first English magazine properly speaking may be said to be the Gentleman's Journal, or Monthly Miscellany, commenced in 1692. It was followed in the London Magazine (1732-84), the London Magazine (1732-84), the London Magazine (1732-84), the London Magazine (1732-1817), the European Magazine (1782-1826), and the Monthly Magazine (1790-1829), being among the chief of this class which were entire at the last the continuous To these originated in the 18th century. To these a large number has since been added. Germany, Russia, the United States, and other countries were later in embarking actively in periodical publications, but the United States now stands first in the United States now stands first in activity in this field. The North American Review, the oldest of these, hegan as a quarterly in 1815, and is now published as a monthly. There followed the Atlantic, the finely illustrated Hurper's, Scribner's, and Century magazines, the Popular Science Monthly, and a host of others of more recent date. The United States has no counterpart of the British reviews, but in lighter magazine literareviews, but in lighter magazine literature has no rival in number and circulatlon of periodical publications.

Periodicity (pe-ri-u-dls'l-tl), the disposition of certain things or phenomena to recur at stated periods. It denotes the regular or nearly regular recurrence of certain phenomena of animal life, such as sleep and hunger. The first indication of a diseased state is generally a disturbance of the natural or acquired periodicity of the various functions of life.

(per - l - os' tē - um), the fibrous membrane invest-Periosteum ing the bones, and which serves as a medium for the transmission of the nutritive bioodvessels of the bone. The periosteum firmly adheres to the surface of bones (Including the inside of the long bones), save at their gristly or cartilaginous extremities, and it becomes contlnuous with the tendons or ligaments inserted into bones. When the periosteum, through disease or injury, becomes affected the blood supply and nutrition

Periostitis (per-l-os-tl'tis), inflamma-tion of the periosteum, a painful ailment frequently brought on by sudden exposure to cold after being heated. Peripatetic Philosophy (per-i-pa-tet'-ik), the philosophy of Aristotle and his followers, so-called, it is believed, because he was accustomed to walk up and down with his more intimate disciples while he expounded to them his doctrines (Greek, pcri, about, patein, to walk). The philosophy of Aristotle starts from his criticism of the Piatonic doctrine of ideas, in combating which he is led to the fundamental and which he is led to the fundamental antithesis of his philosophy, that between matter and form. The notion or idea of a thing is not, he says, a separate existence, different from the thing itself, but is related to the thing only as form to matter. Every sensible thing is a compound of matter and form, the matter heing the substance of which the thing consists, while the form is that which makes it a particular thing (a stone, for example, and not a tree). and therefore the same as its notion or idea. The form is the true nature of a acquiring form, it is merely a transition from potential to actual existence. Everything that actually exists previously existed potentially in the matter of which it is composed. Matter is thus of which it is composed. Matter is thus related to form as potentiality to actuality. And as there is, on the one hand, formless matter, which is mere potentiality without actuality, so, on the other hand, there is pure form which is pure hand, there is pure form which is pure actuality without potentiality. This pure form is the eternai Being, styled by Aristotle the first or prime mover. The whole of nature forms a scale rising from the lower to the higher of these extremes, from pure matter to pure form, and the whole movement of nature is an endeavor (incapable of realization; of all matter to become pure form. Motion is the transition from the potential to the actual. Space is the possibility of motion. Time is the measure of motion. According to his physical conception the universe is a vast sphere in constant motion, in the center of which is our earth. On this earth, as in ail nature, there is a regular scale of beings, the highest of which is man, who, to nutrition, sen-sation, and iccomotion, adds reason. The of the bone suffer, and in consequence the sation, and iocomotion, adds reason. The bone-tissue dies or becomes necrosed, and soul, which is merely the animating princis exfoliated or thrown off. When a cipie of the body and stands to the body bone is fractured the periosteum plays in the relation of form to matter, cannot an important part in the repair of the be thought of as separated from the

bedy; but the reason is semething higher than that, and as a pure intellectual principle exists apart from the body, and does not share in its mortality. Practical philosophy is divided by Aristotic into ethics, economics, and politics. According to his ethical system the highest good is happiness, which depends on the rational or virtuous activity of the soul throughont life. Virtue is proficiency in willing what is conformed to reason. All virtues are elther ethical or dianoetic. The former include justice or righteousness, generosity, temperance, bravery, the first being the highest. The dianoetic virtues are reason, science, art, and practical intelligence. For the attainment of the practical ends of life it is necessary for man to live in society and form a State.

The school of Arlstotie (the Peripatetic school) continued at Athens uninterruptedly till the time of Augustus. Those who proceeded from it during the first two or three centuries after his death abandoned, for the most part, the metaphysical side of Aristotle's teaching, and developed chiefly his ethical doctrines, or devoted themselves to the study of natural history. Later Peripatetics returned again to the metaphysical speculations of their master, and many of them distinguished themselves as commentators on his works. No one of the philosophical schools of antiquity maintained its influence so long as the Peripatetic. The philosophy of the Arabians was almost exclusively Aristotellanism, that of the schoolmen (scholasticism) was also based on it, and even down to modern times its principles served as the rule in philosophical inquiries.

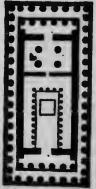

Periploca (per-iplo-ca), a genns of climbing plants beionging to the natural order Asclepiadacese, natives of South Europe and temperate and

subtropical Asla, one being found in tropicai

Africa.
Periplus (per'i-plus; Gr. 'a sailing around'), a term applied particularity to the voyage of Africaya Hanus (which see).
Peripneumonia.

See Pnoumonia.

Peripteral (pe-rip' ter-al), in Greek architecture, a term signifying surrounded by a row of columns; said of a temple or other building.

Plan of Peripteral Temple.

especially of a temple the celia of which is surrounded by columns, those on the flanks (or sides) being distant one intercolumniation frem the wall.

Peris (pë'rez), in Persian mythology, the descendants of failen spirits excluded from paradise until their penance is accomplished. They beiong to the family of the geall or jin, and are constantly at war with the Dēvs (the evil jin.) They are immortai, and spend their time in all imaginable delights. Periscope (per'i-scop), an apparatus adapted to rise above the water from a submerged submarine and reveal the position of surrounding vessels. This is usually a reflecting prism, which

This is usually a reflecting prism, which can be revolved to any angle.

Perissodactyla (peris-o-dak'ti-ia; Greek, perissos, odd, uneven; daktylos, finger or toe), one of the two great divisions of the order of Ungulata or Hoofed Quadrupeds, the animais included in which are distinguished by the fact that the toes, numbering one or three, are odd or uneven in number. This term is opposed to the Artiodactyia or 'Even-toed' Unguiata. The horse, tapir, and rhinoceros comprise the three existing genera.

Peristaltic Motion (per i atal's cailed Vermicular, the name given to certain movements connected with digestion observed in the stomach and intentines, which proceed with a wave-like or spiral motion, the object being to gradually propel forwards the contents of these viscera.

Peristyle (per'i-stil), in architecture, a range of columns surrounding the exterior or interior of anything, as the cella of a temple. It is frequently but incorrectly limited in signification to a range of columns around the interior of a place, as, for example, an open court.

Peritoneum (per-i-tu-nē'um), the serous membrane lining the abdominal cavity and covering the Intestines. Like ail other serous membranes, the peritoneum presents the structure of a closed sac; one layer (parietal) lining the abdominal walls, the other or visceral layer being reflected over the organs of the abdomen. A cavity—the peritoneal cavity—is thus inclosed between the two layers of the membrane, and this contains in health a quantity of serous fluid just sufficient to moisten its surfaces.

Peritonitis (per-i-tu-ni'tis), inflammation of the peritoneum (which see). It is either acute or chronic, and the chronic form either aim-

pie or tubercular. It may be caused by injuries such as a biow or a wound plercing the belly; is often the result of uicerations of the stomach or bowels, and of diseases of liver, kidneys, etc., and is sometimes a grave complication of puer-peral fever. The symptoms are chiefly severe pain, increased by pressure, and fever. Emollient poultices and fomentations to the abdomen when the patient is able to bear their weight, bathing in tepid water, and small doses of opium are the means of cure resorted to. Fluid food is to be given — beef-tea, thin soup, mllk, etc. For chronic cases nourishing diet is required, sea-air, friction of the belly with cod-liver oil, iodine treatment, etc.

Periwinkle (per'i-wing-ki; Vinca), a genus of herbaceous or suffruticose piants of the natural order Apocynaces or Dog-bane family. The greater and lesser periwinkle (Vinca major and Vinca minor) are hardy plants, which blossom in early spring, and are pretty common in woods, hedges, and thickets in many parts of Europe and in the south of England. Their flow-ers are of a fine blue color, but when cultivated in gardens they may be made to yield purple and variegated flowers, both single and double.

See Wig.

The common periwlnkle (L. littores) occupies the zone between high and low water marks, and is gathered and eaten in immense quantitles. It is called the wilk in Scotland, in some parts simply the buckie, but is quite different from the molluse called whelk (Buccinum) in England.

Perjury (perju-ri), the act or crime of willfully making a false oath in judicial proceedings in a matter material to the issue or cause in question. The penalties of perjury attach to willful falsehood in an affirmation made bx a Quaker or other witness where such affirmation is received in lieu of an oath. Perjury is a misdemeanor punishabie in England and the United States, at com-

Perm (perm), an eastern government of Russia, partly in Europe and partly in Asla; area, 128,211 sq. miles. It is traversed north to south by the Ural chain, and is well watered by rivers belonging to the Petchera. Toho (afflubelonging to the Petchora, Tobo 'affluent of the Obi), and Kama y tems. North of the 60th degree regular culture becomes impossible, and the far greater part of the surface is occupied by forests and marshes. The government is rich in minerals, comprising iron, silver, copper, platinum, nickel, lead, and gold. There was formerly a principality of Perm, the Permians (a Finnish tribe) being under independent princes.—PERM, the capital of the government, is situated on the Kama, 930 miles northeast of Moscow. It has flourishing industries in iron, steel, leather, etc. In the neighborhood is a government manufactory of guns and munitions of war. Perm derives its commercial importance from being an emporlum for the goods which are un-shipped here from the steamers coming up the Kama, and despatched by rail, car, or sledge to Siberia. Pop. (1911) 61,614. (pér-man'ga-nāt), a Permanganate compound of permanganic anhydride, Mn<sub>2</sub>O<sub>7</sub>, and a base. Potassic permanganate is used as a disinfectant, and as a chemical reagent.

Permian Formation (per'ml-an), in geology, a Periwinkle (Littorins), a genus of rock formation which received its name mollusca very comment from covering an extensive area in the on the British coasts. The shell is spiral, government of Perm, in Russia. It rests has few whorls, and is without a nacre-ous lining; the aperture is rounded and the upper portion of the Primary or entire or unnotched (holostomatous). Palæozoic geological age; being followed the common periwlnkle (L. littores) october the secondary was and lower and lower and lower and lower area. systems.

Permit (per'mit), a written permission given by officers of the customs or excise for conveying spirits and other goods liable to duties from place to place.

Permutations and Combina-

tions. In mathematics, the different or-ders in which any things can be arranged are called their 'permuta-tions.' The 'combinations' arranged are called their permuta-tions. The combinations of things are the different collections that can be formed out of them, without regarding the order in which the things are piaced. Thus the permutations of the letters a. b, c, taken two at a time, are ab, ba, ac, ca, bc, cb, being six in number. Their mon law, by fine or imprisonment; in co, bc, cb, being six in number. Their Scotland the punishment is penal services and combinations, however, are only three, tude or imprisonment. Popularly, the mamely sb, so, bc, and so in all cases mere act of making a false oath, or of the number of permutations exceeds the violating an eath, provided it be lawful, number of combinations. The theory of is considered perjuty.

Brazil, bounded N. by Ceara and Para. Pérouse, LA. See La Pérouse. Brazil, bounded N. by Ceara and Parahyba, E. by the Atlantic, s. by Alagons and Bahia, and W. by Piauhy. Area, 49,573 sq. m.; pop. 1,178,150. It compounds of oxygen containing the prises a comparatively narrow coastal greatest amount of that element; thus sone, a high inland plateau, and an intermediate zone formed by the terraces and alopes between the two. Its surface is much broken by the remains of the ancient Perpendicular (perpendicular in geometry, a line plateau which has been worm down by falling directly on another line, so as

wooded and fertile. It has a hot, humid climate, relieved to some extent by the south-east trade winds. This re-gion is locally known as the mattas (forests). The middle zone, called the cautinga or agreste re-gion, has a dry climate and lighter vegetation. The in land region, called the sertao, is high, stony and dry, and frequently devastated by prodroughts The longed (seccas). climate is characterized by hot cool

part flowing eastward to the Atlantic. Pernambuco is chiefly agricultural, the lowlands being devoted to sugar and fruit,

(per'nou), a seaport town and watering-place in Russia, in the government of Livonia, at the entrance of the river Pernau into the Gulf of Riga. Pop. about 13,000.

Peronospora (per-o-nos'po-ra), a churches of Engligenus of fungi, one pendicular style.

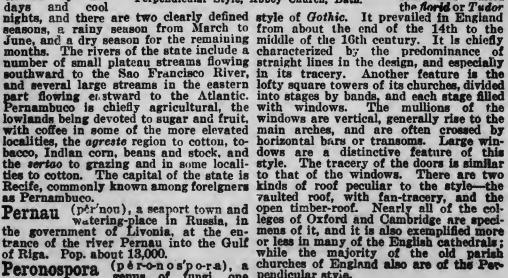

some importance from its bearings on species of which, P. infestans (otherwise that of probabilities.

Botrytis infestans), is said to be the Pernambuco (pernambuco), a cause of the potato disease.

plateau which has been worn down by falling directly on another line, so erosion. The coastal zone is low, well- to make equal angles on each side.

straight liue said to be perpendicular to a curve when it cuts the curve in a point where another straight line to which it is perpendicular makes tangent with the curve. In this case the perpendicular is usually called a normal to the curve.

Perpendicular Style, Abbey Church, Bath.

a machine which shail have the principles of its motion within itself, and numberless schemes have been proposed for its solution. It was not till the dis
(1826) he was on the principle of the principles of t covery of the principle of the conservation of energy (see Energy, Conserva-tion of), experimentally proved by Joule, that the impossibility of the existence of a perpetual motion was considered to be a physical axiom. This principle asserts that the whole amount of energy in the universe, or in any limited system which does not receive energy from without, or part with it to external matter, is invariable. But every machine when in action does a certain amount of work, if only in overcoming friction and the resistance of the air, and as the perpetual motion machine can start with only a certain amount of energy, this is gradually used np in the work it does. A machine, in short, to be perpetual, would need to be one with no friction, and which met with no resistance of any kind. The mechanicai arrangements which have been put forward as perpetual; otions by invent-ors are either, (1) Systems of welg, ts, which are allowed to slide on a wheel into such positions relatively to the axls of the wheel as to produce a constant turning movement in one direction; (2) Masses of liquid moving in wheels on the same principle; (3). Masses of iron arranged on the same principle, but subjected to the attractions of magnets instead of their ways weights. own weights. Numbers of patents for such machines have been taken out, but in every case inventors have shown an ignorance of the elementary principles of naturai philosophy,

Perpignan (per-pēn-yān), a city of Southern France, capitai of dep. Pyrénées-Orientaies, on the Têt, about 7 miles from the Mediterranean. Guarding the entrance from Spain into France by the East Pyrenees, it is strongly fortified, has a citadel and other works, and ranks as a fortress of the first ciass. The city has much of the Spanish character. The principal building is the cathedral, founded in the 14th century. Perpignan was formerly the capital of the county of Roussillon, was long under Spanish with the capital of the county of Roussillon, was

capital of the county of Housemon, was long under Spanish rule, and was not united to France till the Treaty of the Pyrenes in 1659. Pop. (1911) 39,516.

Perrault (pā-rō), Charles, a French writer, born in 1628; died in 1703; superintendent of royal buildings under Coibert. His highly mediocre

Perpetual Motion (per-pet'a-al), poem, Le Siècle de Louis le Grand motion that, (1687), gave rise to the famous contro-once originated, continues for ever or versy pursued in his Parallèle de Anciens indefinitely. The problem of a perpetet des Modernes. He is best known by

Perry, Matthew Calbraith, was born in S. Kingston, R. I., 1794; died in 1858. As commander (1826) he was on the recruiting service at Boston, and heiped to organize the first naval apprentice system in the United States navy. He rendered distinguished States navy. He rendered distinguished service in the Mexican war (1846) and as commodore was despatched with a squadron to Japan in 1852. There, after many difficulties, he negotiated a treaty with that nation, safeguarding the rights of American commerce (1854).

Perry, OLIVER HAZARD, naval officer, brother of M. C. Perry, born at Newport, Rhode Island, in 1785. He was in the navy in the War of 1812, and in 1813 was sent to Lake Erie to build a fleet and seek to gain control of the waters of that lake. This he accomplished in a brilliant action, September 10, 1813, in which he annihilated the British fleet. Sent in 1819 as commander of a squadron to the West India waters, he died of yeilow fever at Trinidad.

(per-se-kū'shunz), the Persecutions name usually applied to periods during which the early Christians were subjected to cruei treatment on account of their religion. Ten of these are usually counted. The first per-secution (64-68) was carried on under secution (64-68) was carried on under Nero. The crueities practiced on this occasion are worthy of the ferocious in-stincts of that notorious tyrant. The apostles Peter and Pani are supposed to have suffered in this persecution. The second persecution (95-96) took place under the Emperor Domitian. Many eminent Christians suffered, and it is generally heid that St. John was exited to Patmos at this tiny. The third per-secution began in the third year of Tra-jan (100). This persecution continued for several years, with different degrees of severity in many parts of the empire, of severity in many parts of the empire, and the severity of it appears from the great number of martyrs mentioned in the oid martyrologies. The fourth persccution, under Marcus Anrelius (161–180), at different places, with several intermissions and different degrees of violence, continued the greatest part of his reign. It raged with particular fury in Smyrna and Lyons, and Vienne in Gaui. Polycarp and Justin Marcyr are famous victims of this period. The fifth began in 197 under Severus. During the sinth persecution, under Maximian (235–238), only Christian teachers and ministers.

GENERAL JOHN JOSEPH PERSHING

Commander-in-Chief of the American Expeditionary Forces in Europe.

were persecuted. Decius began his reign (249) with a persecution of the Christians (the seventh) throughout his dominions. This was the first really general persecution. Valerian in 257 put to death few but the clergy (eighth persecution); and the execution of the edict of Aurelian against the Christians (274)—the ninth persecution, as it was called—was prevented by his violent death. A severe persecution of the Christians (the tenth) took place under the Emperor Diocletian (303). Throughout the Roman Empire their churches were destroyed, their sacred books burned, and all imaginable means of inhuman violence employed to induce them to renounce rere persecuted. Decius began his reign employed to induce them to renounce their faith. Persecutions, principally ditheir faith. Persecutions, principally directed against the clergy, continued with more or less viger until Constantine the Great (312 and 313) restored to the Christians full liberry and the use of their churches and goods; and his conversion to Christianity made it the established religion of the Roman Empire.

Persephone (per-sef'o-ne; Latin, Proserpina, Anglicized Proserpine), in Greek mythology, the daughter of Zeus and Demeter (Ceres). While she was gathering flowers near Enna in Sicily Pluto carried her off to the infernal regions, with the consent of Zeus, and made her his wife, but in answer to the prayers of Dēmētēr she was permitted to spend the spring and summer of each year in the upper world. In Homer she bears the name of Persephoneia. The chief seats of the worship phoneta. The chief sears of the worship of Persephone were Attica and Sicily. In the festivals held in her honor in autumn the celebrants were dressed in mourning in token of lamentation for her being carried off by Pluto, while at the spring festivals they were clad in gay attire in token of joy at her return.

Persepolis (per-sep'u-lis), a Persian city of great antiquity, famous for its magnificent ruins, situated in a fertile valley of the present province, Its foundation is generally ascribed to Cyrus, but its history is involved in much doubt. It was one of Persia's capitals, and the place of burial for many of its monarchs; and it was the residence of Darius III when it was taken in 331 B. C. by Alexander the Great, who is said to have given it up to pillage and destruction, but this probably applies only to some of its principal palaces. The remains of large marble columns, vast portals, walls, huge figures, bas-reliefs, etc., amply prove the former extent and mag-

Perseus, the last king of the Macedonians, son of Philip V, succeeded his father B. C. 178. The Romans defeated him at Pydna, 168 B. C. Perseus, Perseus, a northern constellation, surrounded by Andromeda, Aries, Taurus, Auriga, Camelopardalus, and Cassiopeia.

(pershing), JOHN JOSEPH (1860-), an American Pershing general, commander in chief of the American Expeditionary Forces in Europe from June, 1917. He was born in Linn county, Missouri, and graduated from the U. S. Military Academy in 1886. His record follows: First lieutenant, 6th U. S. Cavalry, 1886; first lieutenant, 10th Cavalry, 1901; brigadier-general, 1906; majorgeneral, 1916; general, 1917. He served in the Apache Indian campaign, 1886; Sioux campaign, 1890-91; was military instructor at the University of Nebraska, 1891-95; instructor in tactics, U. S. Military Academy, 1897-98; served in the Santiago campaign, 1898; Philippine Islands, 1899-1903; on the General Staff, 1903-06; on duty in the Philippines as military governor of Moro Province, 1909-13; commanded 8th Brigade, Presidio, can Expeditionary Forces in Europe from military governor of Moro Province, 1909-13; commanded 8th Brigade, Presidio, Cal., 1914; commanded border districts, 1914-16. He was in command of the United States troops sent to Mexico in pursuit of Villa, 1916-17. Appointed commander-in-chief of the American Ex-peditionary Forces, he arrived in France, June, 1917, and commanded in person the reduction of the German salient at St. Mihiel (q. v.) and other successful operations in the European war (q. v.). He was created a knight, Grand Cross of the Bath by Great Britain in 1918. Returning to the United States on Sept. 8, 1919, his rank of general was made permanent.

Persia (per'sha, per'zha; Persian, Iran), a kingdom of Western Asia; bounded north by Transcaucasian Russia, the Caspian Sea, and Russian Central Asia; east-by Afghanistan and Beluchistan; south by the Persian Gulf; and west by Asiatic Turkey; extending for 700 miles from N. to S. and 900 miles from E. to W.; area, about 636,000 sq. m.; pop. est. about 10,000,000. The country is divided into 27 provinces. is divided into 27 provinces; capital Teheran; chief trade centers, Teheran, Tabreez, Ispahan; chief ports, Bushire and Bender Abbas on the Persian Gulf. Other large towns are: Meshed, Balfrooch, Kerman, Yezd, Hamadan, Shiraz, Kasvin, Kom, Resht.

perseus (per'sus), an ancient Greek considered as an elevated plateau, broken hero, son of Danaë and Zeus. by clusters of hills or chains of rocky

mountains, which aiternate with extensive piains and barren deserts; the desert of Khorassan in the northeast alone absorbs about one-seventh of the entire area. Low tracts exist on the Perslan Guif and the Casplan Sea. The interior plains have an elevation of from 2000 to 6000 feet above the sea. This vast central plateau is supported in the N. and a. by two great mountain chains or systems, and from these all the minor ranges seem to spring. The north chain, an extension of the Hindu Kush, enters Persia from Northern Afghanistan, proceeds across the country, and reaches its reeds across the country, and reaches its greatest elevation on the south of the Caspian, where it takes the name of the Elbars Mountains, and attains in Mount Demavend a height of nearly 20,000 feet. Still further west it becomes linked with the mountains of Ararat. The other great mountain system runs from northwest to southeast nearest the Parent Casping Countries. northwest to southeast nearer the Persian Gulf, is of considerable width, and forms several separate ranges. In one of these an elevation of 17,000 feet is of these an elevation of 17,000 feet is reached. The rivers are few and insignificant. Not one of them is of any navigable importance, except the Enphrates, which waters only a small portion of the sonthwest frontier, and the Karun, recently opened to the navigation of the world. The latter is entirely within Persian territory, and flows into the Shat-el-Arab, or united Tigris and Enphrates. Of the streams which flow northwards into the Caspian the only important one is the Kizil-Uzen or Sefid Rud (White River), which has a course Rud (White River), which has a course of about 350 miles. There are a great number of small fresh-water lakes, and a few very extensive salt lakes, the largest being Urumlah in the extreme north-

Climate, Products, etc.—The climate varies considerably in different provinces, and in the central plateau intense snmmer heat alternates with extreme cold in winter. The shores of the Persian Gulf are scorched up in summer; those of the Caspian Sea, especially the parts covered with dense forest, are humid, but also noted for malaria. The mineral wealth of Persia is but little developed. Iron, copper, lead, and antimony, are abundant; snlphnr, naphtha, and rock-salt exist in great quanticities; coal also exists. The turquoise mines of Nishapur are about the only ones receiving anything like adequate attention. The interior of Persia, particularly its eastern and sonthern regions, is mostly devoid of vegetation over large areas; the southern regions, ticularly its eastern and sonthern regions, People.— The population is chiefly is mostly devoid of vegetation over made np of Iranians or pure Persians and large areas; the sonthwest has its formular tribes, ests of stunted oaks and other trees, and and in religion belongs almost exclusively

jungie; but on the Caspian the mountain-sides are covered with dense and maj-nificent woods of oak, beech, elm, and walnut, intermingled with box-trees, cy-presses, and cedars. Lower down wheat and barley are extensively cultivated. In the level and rich plains below, the sugar-cane and orange come to perfec-tion; the pomegranate grows wild; the cotton-plant and mulberry are extensively cotton-plant and mulberry are extensively and successfully cultivated, and large tracts are occupied by the vine and orchards producing every kind of European fruit. In the low plains the only grain under extensive and regular culture is rice; the principal subsidiary crops are cotton, indigo, oplum, sugar, madder, and tobacco. Excellent dates are produced on the southern coast treats are produced on the southern coast tracts.
Irrigation is well understood and extensively practiced. The domestic animals are: sheep, chiefly of the large-tailed variety; goats, some of which produce a wood little inferior to that of Cashmere; asses and mules of a large and superior description; horses of Arah, Turkoman, and Persian breeds, and camels. Wild animals include the lion, leopard, wolf, jackal, hyena, bear, porcupine, wild ass, gazelle, etc.

Manufactures and Trade.— The manufactures of Persia were once celebrated, but excepting some carpets and shawls, it may be said that the country has ceased may be said to the country had the country had the country had the country had the country to export mannfactured articles. Its chief exports now are rice, dried fruits, opium, silk, wool, cotton, hides, pearls, and turquoises. Chief imports: textlles, china and glass, carriages, sugar, tea, coffee, petroleum, drugs, and fancy articles. The internal trade of the country is almost entirely carried on by carried is almost entirely carried on by caravans. The total exports and imports are valued at about \$60,000,000; the revenue is about \$7,000,000; the; foreign deht is \$16,757,000. There are some 6500 miles of telegraph lines in operation, and a regular reg ular postal service was organized in 1877.

Government .- The government of Persia has long been an absolute monarchy, the only control to which its rnler, the Shah, was subject being the precepts of the Koran. He surrounded himself with

History.— The original country of the Persians occupied a small portion of modern Persia on the north of the Persian Gulf. After being under the Assyrlans, and next under the Medes, Cyrus (B.C. 559-529), by conquering and uniting Media, Bahylonia, Lydia, and all Asia Minor, became the founder of the Persian Empire. The empire was further extended by his son and successor Camhyses (B. C. 520-522), who conquered Tyre. Cyprus, and Egypt; and hy Darius I, who subdued Thrace and Macedonia, and a small part of India. His donla, and a small part of India. His son Xerxes (486-465 B.C.) reduced Egypt, which had revolted under his father, and also continued the war against the European Greeks, but was defeated on the field of Marathon and at Salamis (480 B.C.), and obliged to defend himself against the Greeks in a disastrous war. Artaxerxes I (B.C.) a disastrous war. Artaxerxes I (B.C. 465-425) had a long and comparatively peaceful reign. Artaxerxes was followed by Darius II or Darius Nothus, Arta-xerxes II (Mnemon), Artaxerxes III (Ochus), and Darius III (Codomannus, B. C. 338-330), the last of this dynasty, known as the Achæmenlan dynasty. He was defeated by Alexander the Great in three battles, lost his life, and the empire passed into the hands of his conqueror. On the dissolution of the Macedonian Empire, after the death of Alexander (323), Persia ultimately fell to his general Seleucus and his successors the Seleucidæ (312). They reigned over it till 236 B. C., when the last Seleucus was defeated and taken prisoner by Arsaces I, the founder of the dynasty of the Arsacidæ and of the Parthian Empire, of which Persia formed a portion, and which lasted till 226 A. D. The supremacy was then recovered hy Persia in the person of Ardishir Babigan (Artaxerxes), who obtained the sovereignty of all Central Asia, and left it to his descendants, the Sassanidæ, so-called from Sassan, the grandfather of Ardishir. This dynasty continued to was defeated by Alexander the Great in

to the Shiah sect of Mohammedans, or more properly to a subdivision of that sect. The priesthood is very influential and very bigoted. Education is comparatively well attended to, Persia being considered, next to China, the best-educated country in Asia. The Persians are rather short and slenderly built, fair in complexion, hair long and straight, but beard hushy, and aimost invariably jet black. The women are beautiful, intellectual, and polite. The Persian is ceiseful wars with the Indians, the Indians, and Arabs. Chosroes II (Khosru, 531-579), were perhaps the most notable of the whole dynasty. The latter extended the Persian Empire from the Mediterranean to the Indus, from the Jaxartes to Arabiack. The women are beautiful, intellectual, and polite. The Persian is ceiseful wars with the Indians, the Indians, and Arabs. Chosroes II (Khosru, 531-579), were perhaps the most notable of the Whole dynasty. The latter extended the Persian Empire from the Mediterranean to the Indus, from the Jaxartes to Arabiack. The women are beautiful, intellectual, and polite. The Persian is ceiseful wars with the Indians, t reign of the Bysantine Emperor Hera-cilus. His son Ardishir (Artaxerxes) III, hut seven years old, succeeded him, but was murdered a few days after his accession. He was the last descendant of the Sassanids in the male line. Numerous revolutions aow followed, until Yezdigerd III, a aephew of Chosroes II, ascended the throne in 632 at the age of sixteen. He was attacked and defeated by Caliph Omar in 630-045, and Persia became for more than 150 years a province of the Mohammedan Empire. The Arab conquest had a profound influence on Persian life as well as on the language and religion. The old Persian religion was given up in favor of Mohammedanism, only the Guehres (which area) remaining two to the faith the language and religion. The old Persian religion was given up in favor of Mohammedanism, only the Guehres (which see) remaining true to the falth of their fathers. About the beginning of the ninth century the Persian territories began to be broken up into numerous petty states. The Seljuks, a Turklish dynasty, who first became powerful about 1037, extended their dominions over several Persian provinces, and Malek-Shah, the most powerful of them, conquered also Georgia, Syria, and Asia Minor. Through Genghis Khan the Tartars and Mongols became dominant in Persia about 1220, and they preserved this ascendency till the beginning of the fifteenth century. Then appeared (1387) Timurlenk (Tamerlane) at the head of a new horde of Mongols, who conquered Persia and filled the world from Hindustan to the extremities of Asia Minor with terror. But the death of this famous conqueror in 1405 was followed not long after by the downfall of the Mongol dominion in Persia, where the Turkomans thenceforward remained masters for 100 years. The Turkomans were succeeded by the Sufi dynasty (1501-1736). The first sovereign of this dynasty, Ismail Sufi, pretended to be descended from All, the son-in-law of Mohammed. He assumed the title of shah, and introduced the sect of Ali (the Shlite or Shlah sect). The great Shah Ahbas (1587-1628) introduced absolute power, and made Ispahan

his capital. Under Shah Soilman (1600-64) the empire declined, and entirely Britain, Russia controlling a section in sunk under his son Hussein. A period of revolts and anarchy followed until the northern part, Great Britain a section in the northern part, Great Britain a section of revolts and anarchy followed until in the south, leaving a central belt content of the northern part, Great Britain a section in the south, leaving a central belt content of the south, le Shah, and fixed his residence at Teheran. This monarch's reign was in great part taken np with disastrous wars with Russia and Turkey. In 1813 he was compelled to cede to Russia all his possessions to the north of Armenia, and in 1828 his share of Armenia. Futteh Ali 1828 his share of Armenia. Futteh Ali dled in 1834, leaving the crown to his grandson, Mehemet Shah, during whose reign Persia became constantly weaker, and Russian influence in the country constantly greater. He died in 1848, and was succeeded by his son Nasr-ed-Deen, born 1829. The latter was obliged to suppress a number of insurrections, and in press a number of insurrections, and in 1851 a serious rebellion of the pure Persian party in Khorassan, who refused obedience to the Kajar dynasty on religious grounds. Nasr-ed-Deen was assassinated in 1896, and his son, Mazaffer-ed-Deen, succeeded to the throne. The new Shah was a man of liberal ideas, who had made several visits to the European capitals. and who, in 1905, surprised the world by granting a legislative assembly and a constitution to his people. He died in January, 1907, and was succeeded by his son, Mohammed Ali Mirza. The new Shah rebelled against constitutional restrictions and in 1908 dispersed the assembly, an act that was followed by a revolution, the capture of the capital, February 13, 1909, and the dethronement of the Shah. His son, Ahmed Mizza, 11 years of age, was raised to the throne under a liberal regent. Russia, however, favored the cause of the deposed Shah and during the years 1911-12 seriously threatened the freedom of Persia. See Shuster.

Up till the beginning of the European war in 1914 Persia had come within the

form of the language is called Old Bactrian or Zend. It is that in which the Zend-Avesta (which Lee) was originally composed, and is very closely allied to the Old Sanskrit of the Vedas. The next development of the Iranian language is the Old Posslan of the average is is the Old Persian of the cuneiform in-scriptions of the Achemenian dynasty. We then lose sight of the Iranian language, and in the inscriptions and coins of the Sassanian kings, and in the translations of the Zenda-Vesta made during the period of their sway in Persia, we find a language called Pehlevi or Pehlvi, which is strictly merely a mode of writing Persian in which the words are partly represented by their Semitic equivalents. This curious disguised language is also known as Middle Persian. New Persian was the next development, and is represented in its oldest form in the Shanameh of Firdusi (about 1000 A.D.). In its later form it is largely mingled with Arab words and phrases, introduced with Mohammedanism after the Arab conquest. The written character is the Arabic, but with four additional letters with three points. The Persians possess rich literary treasures in poetry, history, and geography, but principally in the former. Among the most brilliant of Persian poets are: Rudagl, a lyric and didactic poet (flourished about 952), regarded as the father of modern Persian garded as the father of modern Persian poetry; the epic poet Firdusi (beginning of 11th century), whose most celebrated work is the poetleal history of the Shanamch ('Book of Kings') in 6000 couplets; Omar Khayyam (died 1123), the author of the celebrated Quatrains; Nisami (12th century), a didactic poet; Sadi (13th century), a lyric and moral poet, author of the Gulistan or Kose Garden, a collection of stories; Rumi, his coma collection of stories; Rumi, his conin

temporary, a great mystic and didactic writer, etc.; Hafis (born about the beginning of the 14th century), the most celebrated writer of odes: Jami (15th century), one of the most productive and most captivating of Persian poets. (See the different articles.) In the 10th century literary production almost ceased. The Persians are remarkable as being the only Mohammedan nation which has cultivated the drama. Their productions in this province of literature closely resembie the mysteries of the middle ages, and abound in natural and affecting lyrical passages. Not less numerous are the prose fables, tales, and narratives, many of which have been translated into English, French, German, and other European languages. It was also through the Persian that much of the Indian literature in fables and tales was transmitted to the Arabs, and thence to Europe. In the departments of history, geography, and statistics the Persians have some large and valuable works. Tabari is the earliest historian (died 922 A.D.). Mirkhond, who flourished in the 15th century, wrote a voluminous work on the History of Persia down to 1471. Geometry and astronomy were also culti-vated with ardor by the Persians, but their knowledge on these subjects was in a great measure borrowed from the Arabians. Religious works are also numerous; besides those treating of Mohammed and Mohammedan religion, they have translations of the Pentateuch and the Gospels. The Persians have also translated many works belonging to old Indian literature, among others the epics Ramayana and Mahabharata, hesides the
abridgment of the Vcdas. They have
also paid great attention to their own
language, as the number of lexicographlcal and grammatical works testify.
Among the most important modern works
are the journals of Nasiru 'ddin Shah,
composed in collegular Parsian, and the composed in colloquial Persian, and the writings of the religious leaders.

Persian Gulf, a gulf separating Persia from Arabla, and communicating with the Indian Ocean by the Strait of Ormuz, 35 mlles wide; greatest length, 560 miles; medium breadth, 180 miles. It receives the waters of the united Euphrates and Tigris, and of a number of small streams; the principal port is Bushlre. There are many islands in the gulf; the largest are: Kishim, Ormuz, and the Bahrein Isies; in the neighborhood of the latter there are lucrative pearl-fisherious in

Persian Powder, an efficacious induced from the East, and prepared from

the flowers of the Pyrethrum carneum or roseum (feverfew genus), nat. order Compositm, a native of the Caucasus, Persia, etc.

Persian Wheel, or Norta, the Puterscan water, a machine for raising water to irrigate gardens, meadows, etc., employed from time immemorial in Asia and Africa, and introduced by the Saracens into Spain and other European countries. It consists of a double waterwheel, with float-boards on one side and a scries of buckets on the other, which are movable about an axis above their center of gravity. The wheel is placed in a stream, the water turns it, and the filled huckets ascend; when they reach the highest point, their lower ends strike against a fixed obstacle, and the water is discharged into a reservoir. In Portugal, Spain, Southern France, and Italy, this contrivance is extensively used; and has been modified to enable it to draw water also from ponds and wells, animais supplying the motive power, and pots, leather, or other bags taking the place of buckets.

Persigny (per-sen-ye), Jean Gilbert Persigny Victor Fialin, Duc De, a French statesman, born in 1808; died in 1872. In youth a royallst, in the army a republican, he finally became one of the staunchest and most active supporters of Napoleon III. He Instigated and took part in the military rising at Strasburg in 1836, and was arrested, but escaped. In 1840 he shared Napoleon's expedition to Boulogne, was again captured, and for a time kept in confinement. On the outbreak of the revolution of February, 1848, he hastened to Paris, contributed iargely to determine the vote by which Napoleon was elected president (December 10, 1849), and was also one of the most prominent actors in the coup d'état (December 2, 1851), hy which Napoleon made himselt imperor. He held the office of minister of the interior from 1852-54, and again from 1860-63; was appointed member of the senate in 1852; ambassador to Great Britain in 1855. He was elevated to the rank of duke in 1863.

of minister of the interior from 1852-54, and again from 1860-63; was appointed member of the senate in 1852; ambassador to Great Britain in 1855. He was elevated to the rank of duke in 1863.

Persimmon (per-sim'un), the fruit of the Dicappros virginiana, a tree (a species of chony) native to the United States, more especially the Southern States, where it attains the height of 60 feet or more. The fruit is succulent, reddish, and about the size of a small pium, containing a few oval stones. It is powerfully astringant when green, but when fully ripe the puip becomes soft, palatable, and very sweet. There are species also in Africa and

Personality, Double on Multiple, a name given to cases of alternating consciousness, in which a person may lose all memory of past events and gain a new series of memories. In such cases these two series of memories may alternate or replace each other, so that two distinct personalities seem to occupy one body. This abnormal state is usually the result of some injury affecting the brain. In some cases more than two personalities are developed. In normal persons the dream state is a parallel example, the dream series of thoughts disappearing on waking and at times reap-nearing on renewal of sleep.

Personalty, or Personal Property, movables: chattels;

things belonging to the person, as money, jewels, furniture, etc., as distinguished from real estate in lands and houses. In the United States and England the distinction between real and person... property is very nearly the same as the distinction between heritable and movable property in the law of Scotland.

Personation See False Persona-

Personation. tion.

Personification (per-son-i-fi-ka'-shun), in the fine arts, poetry, and rhetoric, the representation of an inanimate subject as a person. This may be done in poetry and rhetoric either by giving epitheta to inanimate subjects which properly belong only to persons, or by representing them as actually performing the part of animated beings. mated beings.

Perspective (per-spek'tiv), the art or science which teaches how to produce the representation of objects on a flat surface so as to affect

Burope, and a Japanese species, the fruit of which is larger than that of the American persimmon.

Persius (per'she-us), full name Aulus delineating even the simplest positions pressure Flaccus, a Roman of objects. That part of perspective satirical poet, was born A. D. 34 at Volumer and died in ti2. He was differe essentially from that which well connected: was on friendly terms teaches the gradation of colors according terra in Etruria, and died in the connected; was on friendly terms teaches the gradation of colors according with some of the most eminent men of the time, and much beloved for the purity and amenity of his manners. Six satires by him have been preserved; they are distinguished for vigor, conciseness, and austerity of tone. Dryden and Gifford, among others, have translated them into English.

Personality, Double or Multiple, a page of put in the place of the paper or the confidence of the paper or to the eye, as would arise on a ginest page. put in the place of the paper or canvas. Suppose a spectator to be looking through a glass window at a prospect without, he will perceive the shape, size, and situation of every object visible size, and situation or every object visible upon the glass. If the objects are near the window the spaces they occupy on the glass will be larger than those occupied by similar objects at a greater distance; if they are parallel to the window, their shapes upon the glass will be parallel ilkewise; if they are oblique, their shapes will be oblique; and so on. As shapes will be oblique; and so on. As the person alters his position, the situation of the objects upon the window will be altered also. The horizontal line, or line corresponding with the horizon, will in every situation of the eye be upon a level with it, that is, will seem to be raised as far above the ground upon which the spectator stands as his eye is. Now suppose the person at the window, keeping his head steady, draws the figure of an object seen through it upon the glass with a pencil, as if the point of a pencil touched the object, he would then have a true representation of the object in perspective as it appears to his eye. Representations of objects have, however, generally to be drawn on opaque planes, and for this purpose rules must planes, and for this purpose rules must be deduced from optics and geometry, and the application of these rules constitutes what is properly called the art of perspective. Linear perspective includes the various kinds of projections. Soonographic projection represents objects as they actually appear to the eye at imited distances. Orthographic projections represent objects as they would appear to the eye at an infinite distance, the the eye in the same manner as the object rays which proceed from them being paror objects themselves when viewed from aliel instead of converging. It is the a given point. Perspective is intimately method on which plans and sections are connected with the arts of design, and is graphic or orthographic projection taken as without correctness of perspective from an elevated point in the air from no pisture can be entirely extisfactory.

upon the objects. Aerial perspective teaches how to judge of the degree of light which objects reflect in proportion to their distance, and of the gradation of their tints in proportion to the intervening air. By its application each object in a picture tereives that degree of color and light which belongs to its distance from the spectator. The charm and harmony of a picture, particularly of a jandacape, depend greatly upon corof a landscape, depend greatly upon cor-rect aerial perspective.

rect aerial perspective.

Perspiration (per-spi-ra'shun), or Sweat, the fluid secretion of special glands, the sudoriperous or ewest glands of the skin. The term perspiration is, hower to sometimes need to include all the secreticus of the skin, such as those of the secreticus of the skin, such as those of the sweat-glands, sit ated in the subcutine cous udipose or fut tissue of the skin, makest of a confoll-up tube, invested to a conditate network of hlood-vessols, a continue to the surface of the skin, where it opens in an oblique valvular aperior. The special of the sweat-nucts conditate the popular of the sweat-oucis condition the popular pores of the skin. The largest and most numerous ducts are so unled in the palm of the hand (Krause of these tes 2736 to the square inch. Pressus Wilson 3528). Perspiration is dieded into insensible and sensible, the former being separated in the form of an invisible vapor, the latter so as to become visible by condensation in the form of little drops adhering to the skin. Water, fatty acids, carbonic acid, salts, etc., are re-moved from the body by the sweat, hy which siso the skin is kept moist. By the passing off of the sweat as vapor, is well laid out, with broad streets, and heat is lost from the body, and thus the has some good buildings. Pop. 55,000. greater or less activity of the sweat Perth Amboy, a city and port of glands plays an important part in regulating the bodily temperature. For these Jersey, on Raritan River, Staten Island reasons the regular process of perspiration Sound, Raritan Bay 21 miles s. w. of is necessary for the preservation of good New York; has a good harbor. Here are health. The constituents of sweat are large deposits of fire-clay and keelin, and mated at nearly two pounds daily.

land, deserve special mention. Perth is celebrated for its bleachfields and dyeworks. It manufactures cotton goods, ginghams, wiveys, piaids, table-linen, carriages, carriages, etc. The river is navigable to be city for smail vessels.—Perth is generally support to be of Roman origin. Its earlies, anown characteristics. Roman origin. Its earlies, anown charter is dated 1106; but it was first erected into a royal burgh in 1210 by William the Lion. Till the death of James I, in 1437, it was the capital of Scotland, and both then and subsequently it became the scene of some of the most remarkable events in Scotlish history. Pop. 83,566.—The COUNTY, which occuples the center of Scotland, has an extreme length, east to west, of 63 miles; breadth, north to south, 60 miles; area, 12,528 sq. miles. The Grampians, which occupy the N. and N.W. of the county, 12,528 sq. miles. The Grampians, which occupy the N. and N.w. of the county, cuiminate in several high peaks, including Benlawers (3984 feet), and the Ochil and Sidlaw ranges occupy the s.m. The principal river is the Tay, the basin of which comprises nearly the whole county. The chief lakes are Loch Tay, a magnificent expanse of water, 16 reflections: Loch Expanse of water, 16 reflections: a magnificent expanse of water, to false iong; Loch Ericht, Loch Rannoch, and Loch Katrine. Sheep farming is extensively carried on. The salmon fisheries of the Tay are very valuable. The principal towns of the county are Perth, Biairgowrle, Crieff, and Dunblane. Pop. 123,260.

Perth, capital of Western Anstralia, on the Swan River, 12 miles above its port, Freemantle (at the mouth of the Swan River). It was founded with the Swan River Settlement in 1829, is well laid out, with broad streets, and has some good huildings. Page 55 000

health. mated at nearly two pounds daily.

Perth (perth), a city of Scotland, capital of the county of the same name, on the right bank of the Tay. born in 1772; died in 1843. After carrying The North and South Inches, two fine public parks, extend along the river years, in 1821 he removed to Gotha and bank, and a bridge of nine arches leads to the suburb of Bridgend. St. John's chiefly of historical and theological literature, a Gothic building partly ancient, ture. An uncle founded the firm Justus the Episcopal cathedral, the County Perthes of Gotha, publishers of the famous geographical work Petermanns Mittellanges, and of the Almenach de Gotha.

Pertinax (per'ti-naks), Publius Helvius, a Roman emperor, born in 126 A.D., the son of a freedman. He distinguished himself in the army, and attracted the attention of Marcus Aureijus, who elevated him to the consulate in 179. During the reign of Commodus, Pertinax was employed in Britain and Africa, and finally made prefect of Rome. After the murder of Commodus he was proclaimed emperor in 193, but in three months was murin 193, but in three months was murdered by the prætorian guards.

Perturbations (per-tur-ba'shunz), the orbital lrregularities or deviations of the pianets from their regular elliptic orbits. These deviations arise, in the case of the primary planets, from the mutual gravitations of these planets towards each other, which derange their eiliptic motions around the sun; and in that of the secondaries, partly from the mutuai gravitation of the secondaries of the same system, simliarly deranging their elliptic motions around their primary, and partiy from the unequal attraction of the sun on them and on their primary.

tribes organized under the Incas.

Physical Features.—This country exhibits great varieties of physical character. It is traversed throughout its and on an average 60 miles distant from the coast, the region between largely garua, a thick heavy mist often accompanisting of gandy desert, except where

watered by transverse mountain streams. The Andes consist here of two main chains or Cordilleras, connected by cross ranges, inclosing extensive and lofty vaileys and piateaus. The Andes region is roughly estimated at about two-fifths of the cutire area of Peru. The ioftlest summits are in the southern portion of the W. Cordiliera; several peaks attain there an altitude of 20,000 feet or more. The country east of the Cordileras, forming a part of the Amazon basin, and mostly covered by dense forest, is but little known and almost exclusively in possession of the native Indians. It is called Montaña or Los Bosques. The elevated region between the gigantic ridges of the E. and W. Cordilleras, called Las Sierras, is now the chief, as it was anciently almost the archivity see it was anciently almost the exclusive seat, of the population of Peru. It is partly occupied hy mountains and naked rocks, partly hy table-lands yielding short grass, and extensive hilly pasture grounds, and partly hy large and fertile vaileys. The most important districts are those of Pasco, of Cuzco, the valleys of the Rlo and on their primary.

Peru (pe'rö), a city of Lasalle Co., Illinois, on the Illinois River, 100 miles w. s. w. of Chicago. The Illinois where the hranches of the Andes and Michigan Canal begins here and the plain, which has here a general height river is navigable to this point. There of these lies at one of those unite, the ridges sinking into an elevated plain, which has here a general height river is navigable to this point. There were not in which this receives the process of the Marañon or Amazon.

compensation, and the rivers from the is chiefly carried on with Great Britain Andes afford means of irrigation for and Germany. The internal trade of the sugar and cotton plantations. From No-country has been fostered by the convember to April the sky is cloudless, and struction of railways, one of which were it not for the cool oceanic currents, attains a height of 15,600 feet in its passes it not for the cool oceanic currents. sugar and cotton piantations. From No-sugar and cotton piantations. From No-vember to April the sky is cioudiess, and were it not for the cool oceanic currents, and the streams of coid air from the snowy Andes, the heat would be unbear-able. Fortunately the rainy season in the mountains corresponds with this period. The central plateau region has period. The central plateau region has a mild and comparatively humid climate, but the higher regions are inciement and subject to terrific tempests. East of the Andes the reguiar equatorial winds from the east come loaded with humidity, and, checked by the mountains, pour down copious, and in some places almost perpetuai, rains.

Plants and Animals. - Peru is exceedingly rich in botany, each region having its own flora. In the less elevated portions of the Eastern Andes a tropical vegetation is found; while on the higher parts representatives of Alpine families (as the gentians) iuxuriate. In the forests of Eastern Peru cinchona trees grow abundantly and supply the valuable bark from which the quinine is extracted. The same zone, especially the hot piains and swamps, also supply coca, the medicinal properties of which have for centuries been known to the n tives of Peru and Boilvia, who chew the leaves as a stimulant. Tobacco, cotton, sugar, rice, coffee, coca, and maize are grown in various parts and in increasing quantities. The eastern face of the Andes is as remarkable for its fauna as it is for its flora. The forests on the lower ranges and in the plains swarm with many species of parrots and monkeys; the tapir, sloth, ant-eater, armadilio, etc., are found here; the rivers are alive with alligators; and in the inundated plains the boa-constrictor attains a huge size. The puma and the South American bear inhabit the higher ieveis; the ilama, the guanaco, the aipaca, and the vicuña, the stiil more eievated regions.

Commerce.—Peru exports precious metals, siiver ores, guano, cubic nitre, wooi of the iiama, aipaca, and vicuña, cotton, sugar, cinchona bark, coca ieave, china and bides and cocaine, chinehilia skins, and hides. The chief imports are machinery, cotton, wooien, and linen goods, and provisions. The trade of the country has suffered much from revolutions, and more from the disastrous war with Chie (1879-83).

sage through the Andes, and exhibits remarkabie engineering works. Some 2000 miles have been constructed at a cost of about \$170,000,000, but only about 1500

miles are in working order.

Government, etc.— The government is based on a constitution adopted in 1867, and modeled on that of the United States. and modeied on that of the United States. The iegislative power is in the hands of a senate and a house of representatives, the senate being composed of two senators for each province, and the house of representatives containing one member for every 20,000 of the population. The president, elected for four years, is the executive. Peru has a foreign debt (chiefly contracted in Engiand) amounting to \$157,000,000, including unpaid interest since 1876. In 1890 this debt was settied by transfer of all the railways of the State to the bondholders. There is besides an internal debt of \$35,000,000. is besides an internal debt of \$35,000,000. The annual revenue amounts to about \$15,000,000. In Peru the Indian is on a ievei in political rights with the white man; there exists absolute political but not religious freedom, the constitution prohibiting the exercise of any other re-ligion than the Roman Catholic. There is, however, a considerable amount of tolerance. Education is compulsory and free; there are universities at Lima, Arequipa, and Cusco. The Peruvian language, of which there are many dialects, still maintains itself alongside of the language of the conquerers.

the language of the conquerors.

History.— Of the early history of Peru we are almost entirely ignorant, but existing ruins, spoils secured by the Spaniards, and the description left us by the historians of the Spanish conquest sufficiently prove that the ancient quest, sufficiently prove that the ancient Peruvians had no mean knowledge of architecture, scuipture, metal work, etc. They also had made considerable progress in astronomical science. The early religion of the Peruvians is bound up in the god Viracocha, the creator of the sun and the stars, and from him the Incas or emperors claimed descent as the sons of the sun. Under the Incas the empire was divided into four parts, corresponding to the four cardinal points: much from revolutions, and more from the disastrous war with Chile (1879-83). The export of guano and cubic nitre has naturally declined since the Chileans possessed themselves of the guano deposits of the Lobos Islands, and of the province of Tarapaca, which contains the richest nitrate beds. The foreign trade surface of the Incas was reigning when the Spanish adventurer, Pizarro, disembarked

in Peru in 1631. The Inca was taken prisoner (1532), numbers of his subjects were massacred, and the whole country fell in a short time into the hands of the invaders. It was then formed into a Spanish viceroyalty; subsequently parts of it were made into separate provinces such as Quito and Buenos Ayres. In 1821 the country proclaimed its independence, but did not obtain actual freedom from Spanish rule until 1824, after a prolonged war. Since then Peru, like the rest of the South American republics, has suffered from much dissensions and revolutions. In the spring of 1879 it joined Bolivia in a war against Chile, resulting in complete defeat. Peru had to cede by the peace of 1883 the province of Tarapaca, while Chile also got possession of the departments of Tacna and Arica for ten years, when the inhabitants were to decide by vote whether they would remain under Chilean rule. Possession was finally settled by arbitration (1913) in favor of Chile. Peru, after attempting to gain reparation from Germany for the sinking of a ship, severed dipiomatic relations with that country in 1917.

Peru Balsam, a resinous product.

Perugia, Lago DI, or Lago Trasi, MENO (ancient, Trasiménus (Lagos), a lake in Italy, 9 miles weet of Perugia, about 8 miles interly, 9 miles weet of Perugia, about 8 miles in preugia, about 8 miles (and interly 9 miles weet of Perugia, beut in free out of with oilve plantations. It contains three islands, and abounds in fish. It has no visible outlet.

Perugino (per-y-je'no), Pierno Va-gino, the founder of the Roman school of painting, born at Città della Pleve (a dependency of Perugia) in 1446; died at Fontignano in 1523. He spent his youth, search in fish in preugia, surmane), and at an early age distinguished himself by his earlier practice in tempera, but he afterwards became a master in the oil method. About 1480 Pope Sixtus IV sent for him to Rome, Hosellia in decorating the Sixtine Chapt with frescoes. Fine specim

Peru Balsam, a resinous product infrequent in European gaileries. Rations species of Myroxylon, order Leguninosæ, natives of tropical America, used in medicine and perfumery. It is peruvian Bark. See Bark, Perupotatined from the trunk of the tree after beating, scorching and removing the bark. Peruzzi (pā-rut'sē), Baldassari, ar-Its volatile oil contains cinnamic and benbeating, scorching and removing the bark. Its volatile oil contains cinnamic and benzoic acid, which give it fragrance. It man school, born at Siena in 1481; died at Rome in 1537. He went early to used chiefly as a disinfectant expectorant. Perugia (pā-rū'jā; ancient Perusia), of various churches. He designed the atom of Central Italy, capital of the province of the same name, and literary treasures, and has many remarkable buildings, including a Gothic cathedral of the 16th century, a number of churches and monasteries, a town-hall (Italian-Gothic, begun 1281), and a university, founded in 1307. The manufactures, not of much consequence, consist of velvet, silk stuffs, etc. Perugia was an old Etruscan city, and was conquered by Rome in 310 B.C. Subsequently it was taken by Totila, and recaptured by Narses in 552. It was incorporated with the Papal States in 1512 and annexed to Italy in 1860. In the 15th century it became the center of the Umbrian school of painting. Pop. (1911) 65,805.—The province of Perugia has an area of 3748 square

vine. Pop. (1911) 65,805.—The province of Perugia has an area of 3748 square miles, and is very fortile. It is traversed in all directions by offsets of the Aperniues. The principal stream is the Tibe Pop. (1911) 685,042.

is surrounded by a mnd wall, and commanded by the Baia Hissar, a fort which crowns an eminence just outside the walls. It has several good mosques, but of communicating all instruction by direct-few architectural attractions. It is appeal to the senses and the understand-favorably situated for commerce, lying in ing, and forming the child by constantly the great route from Bokhara and Cabul calling and its provimity to the Khubar Dass's large area, for the more rational system of elementary instruction which now obtains in Europe. The grand principle that lay at the basis of Pestalozzi's method was that appeal to the senses and the understand-favorably situated for commerce, lying in ing, and forming the child by constantly calling and its provimity to the Khubar Dass's large area, for the more rational system of elementary instruction which now obtains in Europe. The grand principle that lay at the province of the sense and principle that lay at the province of the sense and the understand-favorably situated for commerce, lying in instruction by direct-sense and the understand-favorably situated for commerce, lying in instruction by direct-sense are constantly instruction which now obtains in Europe. The grand principle that lay at the basis of Pestalozzi's method was that the basis of Pestalozzi's method was to India, and its proximity to the Khyber Pesth, or PEST. See Budapest.

Neither the time of its appearance nor its authorship are positively known. It staff. ls extremely faithful, and possesses high Petal (pet'al), an appellation given to the leaves of the corolla of

untavorable view of everything in nature, and that the present state of things only tends to evil; that in human existence there is an enormous surplus of pain over pleasure, and that humanity can find real good only by abnegation and self-sacrifice. It is antithetical to optimism, and as a specific theory is the entry in the en unfavorable view of everything in nature, work of Schopenhauer and Von Hartmann, though it is preluded in the metaphysics of Brahmanism and the philosern slope of the Ural Mountains, and

Peschiera (pes-ki-a'ra), a town and fortress of Itaiy, 20 miles northwest of Mantua, one of the four stronghoids which form the famous 'Quadrilateral.' Pop. 2962.

Pescha (pe-sa'ta), the Spanish money unit, equivaient to a franc.

Peshawar (pā-shā'wur), a town of India, in the Punjab, capital of the division of the same name, 12 miles east of the eastern extremity of the Khyber Pass. It covers a large area, is surrounded by a mnd wall, and comtant in the property of the more rational system of elementary instruction which now obtains in

results and its proximity to the Khyber Pass makes it an important strategical point of British India, hence a British garrison is stationed here. The population, including the military cantonment 2 miles w. of the city proper, is 95,147.

The cantonment accommodates a large force, the population in it being about 20,000. The division or commissionership comprises the districts of Peshawar, hazara, and Kohat, with the control of part of the hill tribes inhabiting the Khyber Pass. Area, 8381 square miles.

Peshito (peshè'tò), or Peshito that is, 'simple,' 'true,' or according to some, 'explained'), is the name given to a Syriac translation of the Oid and New Testaments. Neither the time of its appearance nor its authorship are positively known. It

authority, especially in regard to the New Testament, of which it is probably the first translation that was made. Four of the catholic epistles and the Reveiation of St. John are wanting.

Peso (pā'sō), a silver coin and money of account which is used in Mexico and other parts of Spanish America. It is often considered equivalent to a dollar.

Petalite (pet'a-lit), a rare mineral, a silicate of aluminum and lithium, containing from 5 to 6 per cent of the latter. It occurs in masses of foliated structure; color white, occasionally tinged with red, green, or blue.

Petaluma (pet-a-io'ma), a city in Sonoma county, Califor-ion or doctrine that maintains the most unfavorable view of everything in the county of the county of sonoma county. Califor-ion or doctrine that maintains the most cets. Pop. 5880

after a course of about 900 miles falls appointed to the highest offices. He into a bay of the Arctic Ocean by a then married the beautiful Juana de into a bay of the Arctic Ocean by a number of mouths.

Petechiæ (pe-tek'i-ē), in medicine, a name for purple or crimson spots which appear on the skin in certaln diseases.

Peter (pe'ter), THE APOSTLE, commonly called Saint Peter, was a Galijean fisherman from Bethsalda, originally named Simon, the son of Jona, and brother of St. Andrew, who conducted him to Christ. Jesus greeted Simon with the significant words, 'Thou art Simon with the significant words, 'Thou art Simon the son of Jona; thou shait be called Cephas' (in Greek Petros, a stone, whence the name Peter). After the miraculous draught of fishes Peter became a regular and intimate discipie of our Lord. The impetuosity of his character led Peter, especially in the early days of his apostieship, to commit many fauits which drew upon him the rebuke of his dlyine Master. His zeai and elecof his divine Master. His zeai and elo-quence made him often the speaker in behalf of his fellow-apostles on important occasions, and his opinions had great influence in the Christian churches. On one memorable occasion he incurred the rebuke of the apostle Paul in consequence of his behavlor towards the Gentile Christians ln regard to social intercourse. Nothing certain is known of his subsequent iife, but it is almost beyond doubt that he was a joint-founder of the church at Rome, and that he suffered martyrdom there, most likely under Nero, about 64 A.D. The only written documents left by Peter are his two Epistles. The genuineness of the First Epistle is placed beyond all reasonable doubt, both the external and internal evidence being of the strongest description; that of the Second Epistle, however, has been dispnted by numerous critics on what appears to be piausible grounds. Doubts of its genuineness aiready existed in the time of Eusebius, and it was not admitted into the New Testament canon till

Peter THE CRUEL, King of Castile and Leon, born 1334, succeeded his father Aifonso XI in 1350, and died in 1369. His reign was one long series of crueities and despotic acts. The year following his coronation he put to death Eleanora de Guzman, his father's mistress. In 1253 he married though contress. In 1353 he married, though contrary to his will, Bianche of Bourbon, one of the most accomplished princesses of the time, whom, however, he abandoned two days after his marriage in order to rejoin his mistress, Maria Palicia. The queen was imprisoned and divorced, and his mistress's relations Czarina Nataiia Kirilovna, as regent.

castro, but only to abandon her after a few months. Two revolts against him were unsuccessful. On the second occasion, however, ln 1366, Peter fled, and was dethroned, but he was reinstated in 1367 by an English army led by Edward the Black Prince. Executions and configurations naturally followed but these confiscations naturally followed, but these fresh cruelties only helped to swell the ranks of his opponents, of whom the chief was his half-brother, Henry of Transtamara. In 1369 Henry gained a signal victory over Peter at Montiel, and the latter was sialn in a sword combat with his brother.

Peter THE HERMIT, an enthusiastic monk of Amiens, whose preaching, after a pilgrimage to Jerusalem (end of the eieventh century), gave rise to the first Crusade. (See Crusades.) Peter led the way through Hungary at the head of an andiscipiined multitude of nearly 100,000 men, a comparatively small number of whom survived to reach their number of whom survived to reach their destination, and distinguished himself by his personal courage at the storming of the holy city. On his return to his native country he founded the abbey of Noirmoutier, and died its first superior in 1115.

(THE GREAT), ALEXEIEVITCH, Emperor of Russia, born in Peter I 1672, was the eidest son by his second wife of the Czar Alexis Mikhailovitch. His elder brothers, Fedor and Ivan, were

Sophia, third daughter of Alexis, amhi- teen years old. He died in 1730 of the proclaimed czar jointly with Peter, and Ivanovna. herseif regent. Peter was relegated to private life, his education purposely neglected, and his bad hahits encouraged. was the son of In 1689 he wrested the power from his sister, and confined her in a convent. Stein. Peter life, the death of his brother in man proclivitle (1697) he associated his power with his converse broken. though, till the death of his hrother in 1697, he associated his name with his spiracy broke out in July of the same own in the nkases of the empire. He now determined to do what he could to raise his country out of its barharism, and to place its people in the ranks of civilized nations. His journey to Holland and England (1697-98), when he worked as an artisan in slipyards, is familiar; and the knowledge he there gained was amply profited hy on his return. Peter, however, not only created a navy, hut gave Russia a seaboard and a navy, hut gave Russia a seaboard and seaports by wresting the Baitle provinces from Charles XII of Sweden. Young Russian nobles were obliged to travel; schools of navigation and mathematics were founded; agriculture was improved by the introduction of implements and supplements and supplements. ments, seeds, and superlor hreeds of cat-Peter imported foreign artisans of all kinds, established manufactories of arms, tools, and fabrics, and distributed metallurgists through the mining districts of Russia; roads and canals were made to foster internal commerce, and to extend trade with Asia. In 1703 he lald the foundation of St. Petershurg, and twenty years later of its Academy of Sciences. Laws and institutions which In any way interfered with his projects he either aholished or altered. In his zeal to do good he was too frequently injudicious in choosing times and seasons, and the least show of opposition irritated him into ferocity. He repudiated his wife a few years after marriage for the receipt of the research of the resear for her reactionary leanings; for the same reason his son Alexis was ill treated, compelled to renounce the succession, and condemned to death, hut died suddenly before sentence could be carried out. Peter died Jannary 28, 1725, the immediate cause being inflammation, contracted while assisting in the resource. contracted while assisting in the rescue of some soldiers in Lake Ladoga. In 1707 he had married his mistress Catharine; this marriage was publicly celebrated in 1712; Catharine was crowned in 1724, and succeeded Peter after his death. See Catharine I.

Peter II, ALEXEIEVITCH, Emperor of Russia, grandson of Peter the Great and son of Alexis, ascended the throne in consequence of the will of Catharine I, in 1727, when but thir-

tious to govern, succeeded in having Ivan smalipox, and was succeeded by Anna

FEODOROVITCH, Emperor of Russia, born in 1728, was the son of Anna Petrovna, danghter of Peter the Great, and the Duke of Hoistein. Peter III ascended the throne in January, 1762, but on account of his German proclivitles and other causes a con-

Important railway and agricultural center. The principal building is its cathedrai, originally founded in 655, destroyed hy the Danes in 870; rebuilt in 966, an again partly destroyed by fire in 1116. It has its present form since the com-mencement of the sixteenth century. The prevalling character of the huilding is Norman, but it exhibits examples of the transition, early English, decorated English, and perpendicular styles. Some alterations and restorations have recently been carried out. The bishopric was founded by Henry VIII (1541), and his wife, Catharine of Aragon, was interred in this cathedral. Peterborough received a municipal charter in 1874. Pop. (1911) 33,578.

Peterborough, a flourishing town of Canada, province of Ontario, on the river Otonabee, 26 mlles north of Lake Ontario. It is well hullt; has manufactures of machinery, agricultural implements, etc., and being a railway center has a good trade. Pop. (1911) 18,360.

Peterborough, CHARLES MORDAUNT, EARL OF, born about 1658, succeeded his father, Lord Mor-1658, succeeded his father, Lord Mordaunt, 1675, and his uncle in the earldom of Peterborough, 1697. William of Orange created him Earl of Monmonth. and appointed him first commissioner of the treasury for his services in connec-tion with the dethronement of James II. He eminently distinguished himself in Spain as a commander in the Spanish Succession war, 1705, especially by the capture of Barcelona, and received the thanks of the British parliament. He also held several diplomatic posts; was created a Knight of the Garter in 1713, general of the British marine forces in 1722, and dled in 1735 on a voyage to Lisbon.

Peterhead (peterhead), a seaport in of April, 1506, and selected the famous Scotland, in the county and 26 miles N.N.E. of Aberdeen, on a peninsula, near the most easterly point of Scotland, with a harbor on either side was appointed in 1546. He nearly compite the town is substantially built the building before his decease (1563). of it, communicating by a cut across the isthmus. The town is substantially built of granite, obtained from quarries in the of granite, obtained from quarries in the neighborhood, has several elegant public buildings, and a statue of Fleid-marshai James Kelth, presented by William I, emperor of Germany. It has a good trade, and is an important center of the herring fishery. The Greenland whale and seai fisheries are also important industries. Pop. 11.750.

Peterhof (pē'ter-hof), a town in Russla, 8 miles w. s. w. of St. Petersburg, celebrated for its imperial summer palace in Versailles style, built

summer palace in Versailles style, bullt in 1711 by Peter the Great. Pop. 11,300. (pā'ter-man), August, Petermann born in 1822; died at Gotha in 1878. His first important work in cartography was a map for Humboldt's Central Asia. He afterwards assisted Kelth Johnston in the preparation of his Physical Atlas; became a member of the Royal Geographical Society, and contributed to the Encyclopædia Britannica, etc. In 1854 he became professor of geography at Gotha, and superintendent of Justus Perthes' geographical establishment, editing the Mitteilungen, the foremost among geographical magazines.

Peter-port, Sr., capital of the island of Guernsey, on a bay on the east side, picturesquely situated on the slope of a hill. It has a conrt-house and prison, a coilege, and the finest church in the Channel Isles. The environment are exceedingly beautiful. The harber is large and commodious, and the roadstead affords convenient anchorage. Fort-George, a regular fortification of considerable strength, stands about a half mile south from the town. Pop. about

Peter's, SAINT, the Cathedrai of Rome, the largest and one of the most magnificent churches in Christendom. It is a cruciform building ln the Italian style, surmounted by a lofty dome, bullt on the legendary site of St. Peter's martyrdom. In 306 Constantine the Great erected on this spot a basilica of great magnificence. In the time of Nicholas V it threatened to fall into ruins, and he determined on its reconstruction, but the work of restoration proceeded slowly, and Julius II (1503-13) decided on the erection of an entirely new building. He iald the foundationstone of the new cathedral on the 18th

The nave was finished in 1612, the façade The nave was finished in 1612, the façade and portice in 1614, and the church was dedicated by Urban VIII on November 18, 1626. The extensive colonnade which surrounds the piazza and forms a magnificent approach to the church was begun by Bernini in 1667. The interior diameter of the dome is 189 feet, the exterior diameter 195½ feet; its height from the pavement to the base of the lantern 405 feet, to the top of the cross outside 448 feet. The length of the cathedral within the walls is 618½ feet; the dral within the walls is 613¼ feet; the height of the nave near the door 152¼ feet; the width 87¼ feet. The width of the side aisles is 33¾ feet; the entire width of nave and side aisles, including the piers that reports the piers that separate them, 197% feet. The height of the baldacchino is 94% feet. The circumference of the piers which support the dome is 253 feet.

Peters, RICHARD, American jurist, born near Philadeiphia, August 22, 1744. Daring the Revolutionary War he was made secretary of the board of war in 1776, serving until 1781. Died August 22, 1828.

Petersburg (pë'terz-burg), a city and river port of Virginia, on the Appomattox River, 23 miles s. of Richmond. It is an important railway center, and a place of considerable trade and manufacturing industry. The falls of the river, just above the city, furnish abundant power to the various mills. nish abundant power to the various mills and factories. This piace was besieged by the Federal forces under General Grant in 1864-65, and the capture of this town, 'the jast citadel of the Confederacy' was soon followed by the support of the capture of the capt

render of General Lee and the end of the Civil War. Pop. 24,127.

Petersen, Niels Matthias, Danish historian and philologist, born Oct. 24, 1791; died May 11, 1862. Among other works he wrote a History of the Danish, Norwegian and Swedish Languages (1829-30).

Peter's Pence, a papal tribute col-the western countries of Europe. The idea of an annual tribute seems to have originated in England before the Norman conquest, and was exacted from every householder about St. Peter's Day for the support of an English college or hos-pice in Rome. It was finally abolished by Elizabeth.

Pétion de Villeneuve (pā-ti-on de vēl - neuv), a species of vicious reasoning, which connaily an advocate at Chartres, where he to be proved as a premiss of the syliogism was born in 1753, was chosen deputy, by by which it is to be proved; in other the tiers-état of that city, to the states-general in 1789. In October he was made a member of the Committee of Public Safety; elected president of the Nalic Safety; elected president of the National Assembly in 1790; appointed president of the criminal tribunal of Paris. his youth he was for some time a common and became mayor of Paris in 1791. soldier and then a strolling player; in After the death of the king he was nominated a deputy to the Convention; joined the Girondists; was impeached by Robespierre; essented from prison and Robespierre; escaped from prison, and died, it is supposed, from hunger, his hody, in 1794, being found in a field in the department of the Gironde half devoured by wolves.

Petition (pe-tish'un), a representation of grievances with an appeal for redress. The first amendment to the Constitution of the United States provides that Congress shall make no law abridging the right of the people peaceably to assemble, and to petition the govrnment for a redress of grievances. The right of petition has always been treated as an individual right, wherehy the citizen can make his grievances known to the highest authority in the State or Union. In the anti-alwery agitation in the United States the right of petition was hotiy contested; and it was memorials touching the abolition of slavery should be laid upon the table without debate. The Bill of Rights, which is a part of all state constitutions parameters the right of retitions. tions, perpetuates the right of petition as a fundamental right incident to the relations between the government and the people. The right of petition is wide-spread and has been exercised in England from very early times.

Petition of Right, in English history, a parliamentary declaration of the rights and ilberties of the people, assented to by Charles I in the beginning of his reign (1028), and considered a constitutional document second in importance only to Magna Charta. The petition demanded:

Peterwardein (pā-ter-vār'dīn), a (1) that no freeman should be forced to town and fortress of pay any tax, loan, or benevolence, unless Hungary, on the Danube, opposite Neu-in accordance with an act of parliament; satz, 45 miles northwest of Beigrade, the (2) that no freeman should be imprissrongest fortress on the Danube. eral poems which attracted instant attention; he also wrote several dramas and novels; his lyric of Most vagy sohs ('Now or Never') became the warsong (1848) of the revolution; and in recognition of his lyrical fervency he has been named 'the Hungarian Burns.' In the revolutionary war he was an adjutant under Bem. Kliled in the battle of Schässburg. Schässburg.

Petoskey (pē-tos'ki), a city of Emmet county, Michigan, on Little Traverse Bay, 60 mlles N. N. E. of Traverse City. Lime, iumber, flour, paper, etc., are manufactured, Bear River furnishing much water-power. Pop. 4778. Petra (pë'tra), a ruined city, formerly the Nabathæan capital of Arabia Petræa, in a narrow valley of the Wady Musa, about 110 miles s.s.r. of Jerusalem. It appears to have been a place of considerable extent and great magnificence, for its ruins, partly temples, etc., cut out of the solid rock, cover a large space. It seems to have been the Joktheel of the Old Testament, taken hy

Amaziah from the Edomites.

Petrarch (pë'trark), FRANCESCO
PETRARCA, an Italian poet and scholar, born at Arezzo in 1304. His father being an exile from Florence, his earliest years were spent at Incisa, in the vale of Arno, and afterwards with hls father at Carpentras, near Avignon, where he began his education. He afterwards studied law at Montpellier and Bologna, but his own inclinations led him Sade two years before she was seen by pean poetry. Petrarch, and that she died in 1348 a virtuous wife and the mother of a large family. After this first meeting Petrarch remained at Avignon three years, singing his purely Platonic love, and haunting Laura at church and in her well-surface. The smaller specialism of the surface of the family Proceduride. The petrels are nocturnal in their habits, breed in holes in the rocks, lay but one egg, and haunting Laura at church and in her well-surface. The smaller specialism of the surface of the surface of the common name of the web-footed oceanic hirds of the family Proceduride. The petrels are nocturnal in their habits, breed in holes in the rocks, lay hut one egg, and haunting Laura at church and in her web-footed oceanic hirds of the web-footed oceanic hirds estate at Vaucluse, in order to be near lassidroma pelagica, a hird which seems Laura, and here for three years wrote numerous sonnets in her praise. It was upon his Latin scholarship, however, that he rested his hopes of fame. His Latin works were highly esteemed, and lassidroma pelagica, a hird which seems to run in a remarkable manner along the surface of the sea, where it picks up its to food.

Petrie (pë'tri), WILLIAM MATTHEW FLINDERS, archæologist, born

in 1341 he was called to Rome to receive the laureate crown awarded for his Latin poem of Africa, an epic on the Punic wars. At Parma he learned of the death of Laura, which he recorded on his copy of Virgil, and celebrated in his Triumphe. A large part of his time was employed in various diplomatic missions, and in 1370 he took up his residence at Arqua, near Padua, where he passed his remaining years in religious exercises, dying July 18, 1374. Among his Latin

Francesco Petrarca.

works are three books of Epistles (Epistolæ Familiares) and twelve Eclogues, hls poem Africa, various phllosophical, religious, political, and historical Bologna, but his own inclinations led him to devote his time to Latin and the Provenceal poets. It was at Avignon in 1327 that he first saw, in the church of St. Claire, the Laura who excrelsed so great an influence on his life and lyrics. Our information regarding this lady is di Laura, and of Trionfi ('Triumphs'), exceedingly meager, but it is supposed that her name was Laura de Noves, that she had become the wife of Hughes de development of Italian and modern Enropse.

walks. He then left Avignon for Lombes (French department of Gers), where cies are well known to sailors under the held a canonry gifted by Pope Benedict XII, and afterwards visited Paris, Brabant, Ghent, the Rhine, etc. In 1337 presage a storm. The term stormy petrel he returned to Avignon, bought a small is more exclusively applied to the Thanks at Vaucluse. In order to be near leaside on a placing a hird which seems

considerable size soon sprang up in the licentiousness, of which only fragments oil district, railways were constructed, have been preserved.

immense reservoirs were made, and long Petropaylovsk (pye-tro-paylovsk), immense reservoirs were made, and long lines of oil pipes laid down, while large fortunes were realised. At first the borings were not very deep, and the oil generally flowed naturally; subsequently deeper borings were necessary, and the oil could only be raised to the surface by pumping. The United States leads the world both in the production, facilities of handling and refining. The olities of handling and refining. The oli-fields are well distributed throughout the country, and, although Pennsylvania is still a great producer, other fields have been opened up. The coast ranges of Southern California, principally in Ventura and Los Angeles counties, after abortive borings by inexperienced persons, were taken up by Pennsylvania and New York people versed in the business, and have since produced steadily and largely. California and Oklahoma now lead in production, and Iiiinois, West Virginia, Ohlo, and Texas have also been found to contain profitable oll-belts. Several other states are also producers, Colorado and Wyoming producing an oll of much higher gravity than most of the others. Nearly 400,000,000 barrels (of 42 gallons each) of petroleum are estimated to be now produced annually in the mated to be now produced annually in the world. Of this great total about 250,000,000 (a great advance within the past ten years) are produced in the United States, 10,000,000 in Russia, and 25,000,000 in Mexico, with minor yields in other locali-Both the American and Mexican

Petrology, (pe-troi'o-jl), the science of the composition of

rocks of mineral formation.

Petromyzontidæ, (pe-trom-i-son'ti-de), the name given to a family of animals in allusion to the manner in which they remove small stones from their breeding-grounds formed from the Greek Petra, a rock; myzone, sucking. They comprise the family known as iampreys. Their form is eel-like, the skin naked, the head of the adult is elongated, the dorsal, anal, and candal fins represented by a contlanous or interrupted membrane; the pectorals and ventrals not developed. All the species undergo a metamorphosis, a very different form being possessed by the young or iarve.

Petro'nius Ar'biter, writer, Latin torious for his ilcentlousness, was born at Marsellies, and lived in the court of Nero. He is supposed by many authorities to be the anthor of Satyricon Libri, a work of fiction of great ability and

Petropavlovsk (pye-tro-pavlofsk), a town and harbor of Asiatic Russia, formerly capital of Kamtchatka, on the east coast of Kamtchatks. It is now of little importance, its naval institutions having been transferred to Nikolalevsk.—Also a town of Central Asiatic Russia, in the government of Akmoliinsk, on the Ischim. Pop. 21,790.

Petropolis (pā-trop'o-iēs), a town of Brasil, in the province of Rio de Janeiro, and 25 miles by rail from the city of that name. Pop. about 10,000. Petroselinum (pet-rō-se-il'num). See Petrovsk (pye-trofsk'), a town of Russia, in the government and 70 miles N.W. of the town of Ser-

and 70 mlles N.N.w. of the town of Saratov. Pop. 9806.

Petrozavodsk (pye-trō-za-votsk'), a town in Russia, capital of the government of Olonets, Lake Onega, 192 miles northeast of St. Petersburg. It has an important government marine and cannon foundry, and manufactures of iron and copper ware. Pop. 12,965.

Pop. 12,965.

Petsh, or IPEK, a town of European Turkey, in Albania, 73 miles

N.E. of Scutarl. Pop. about 12,000.

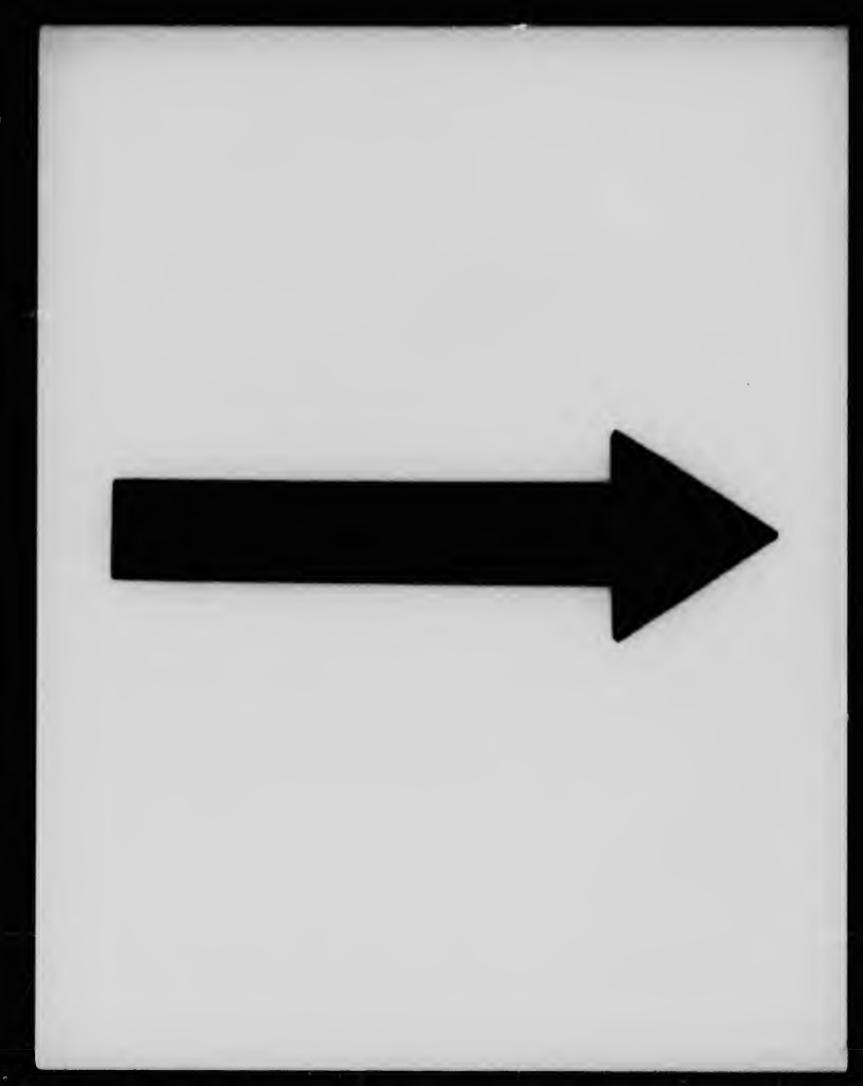

Pettie (pet'tl), John, a distinguished painter, born at Edinburgh in

1839; studied there at the Royai Scottish Academy; exhibited The Prison Pet (1859) at Edinburgh, and began in the following year to exhibit in London. Remarkable alike for vigorous conception and technical dexterity his historical and genre paintings were numerous. Of

and technical dexterity his historical and genre paintings were numerous. Of these may be mentioned The Drumhead Court-martial (1864), Diagrace of Wolsey (1869), Sword and Dagger Fight (1877), Two Strings to Her Bow (1887), The Traitor (1888), and Portraits (1889). He was elected A. R. A. in 1866, and R. A. in 1873. He died in

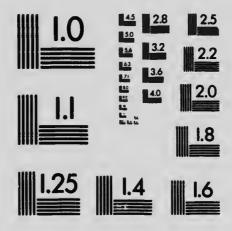

1893.

Petty (pet'i), Sir William, statistician and political economist, born at Romsey, Hampshire, in 1623; died in 1687. He was educated in his native town and in Normandy; served for a time in the navy; studied medicine at Utrecht, Leyden, and Paris; came to Oxford, and was (1649) elected a fellow of Brasenose; became professor of anatomy (1651), and in the following year joined the army in Ireland as a physician. Here he was appointed surveyor of the forfeited Iristic estates (1654), and produced the Down Survey of Irish Lands. He became see (pet'i), SIR WILLIAM, statisti-Petty

Phasmids, or Specter Insecta.

stick). 2, Acrophylla chronus, Australia,

the Mantide, restricted to warm countries, and remarkable for their very close resemblance to the objects in the midst of which they live, this peculiarity, known as mimicry, being their only protection against their enemies. The family includes the genera Phasma, Phyllium, Cladomorphus, etc. Some of them are destitute of wings, and have the appearance of dead twigs, while the absence of motion in the insects adds to the deception.

plumage of the males is brilliant, that of Pheasant's Eye. the females more sober, and the males Pheasant Shell (Phasianella), carry spurs on the tarso-metatarsus. Pheasant Shell (Phasianella), genus of gast

Reeve's Pheasant (Phasiarus veneratus).

The wings are short, the tail long. The three front toes are united by a membrane up to the first joint, and the hinder toc is articulated to the tarsus. The food consists of grains, soft herhage, roots, and insects. They are chiefly terrestrial in habits, taking short rapid flights when alarmed. The pheasants are polygamous, the males and females consorting together during breeding-time, which occurs in spring. The common pheasant (Phasianus Colchicus), now fully domesticated hut originally said to be a native of the hanks of the Phasis in Western Asia, is the familiar species. It extends in its distribution over Southern Europe its distribution over Southern Europe, and is said even to exist in Siberia. These birds breed freely in a domesticated state. The phensant will interhreed with the common fowl, the
Guinea fowl, and even with the black
grouse; and there are white and pied
varieties of the common species. The

Syros, and a contemporary of Thales.

Varieties of the common species. The

Warden of the immortality of the immorta pheasant with the common hen is termed a of the soul, and to have heen the in-

pero. Other species inhabiting Southern Asia and the Eastern Archipelago are the Diard's pheasant of Japan (P. versicolor); Reeve's pheasant (P. veneratus) of China; and Sömmering's pheasant (P. Sömmeringii), found in Japan. There are various others often put in different genera, as the firebacks, birds of rich plumage, natives of Siam and the adjacent Islands; the sliver pheasants (genus Euplocamus), of China, Burmah, and various parts of India, with a generally white plumage the feathers. Pheasant (fez'ant), the general name enalty white plumage, the feathers given to birds of the fammarked with fine hlack lines; the golden ily Phaslanidæ, which comprises several pleasant of Tihet and China, the type genera besides that of the pheasants of the genus Thaumalea. It is noted proper, Phasianus. There are usually for its hrilliant colors and magnificent naked spaces of skin on the head or crest. See also Argus Pheasant, Impey cheeks and often combs or wattles. The Pheasant, Tragopan.

See Adonis.

odous mollusca, found in South America, India, Australia, the Mediterranean, etc. The shell is spiral and ohovate, the

outside polished and richly colored.

Phelps (felpz), Edward John, diplomatist, was born at Middlebury,
Vermont, in 1822; died in 1900. He became professor of law at Yale in 1881, was United States minister to England 1885-89, and one of the counsel for this country in the Behring Sea arhitration of 1893.

Phenic Acid, PHENOL. bolic Acid. See Car-

Phenomenalism (fe-nom'e-nal-izm), that system of philosophy which inquires only into the causes of existing phenomena. The sceptical phenomenalism of Hume is now represented by Positivism. A phenomenalist does not helieve in an invariable connection between cause and effect, but holds this generally acknowledged relation to be nothing more than a habitually observed sequence.

Phenylamine (fen-il'a-mīn).

(fe're), an ancient city of Pheræ Thessaly, which under the rule of tyrants of its own hecame a controlling power of the whole of Thessaly, and for long made its influence felt in the affairs of Greece. In 352 B.C. it became subject, with the rest of Thessaly, to Philip of Macedon.

hybrid produced by the union of a cock- metempsychosis, or of the immortality

S

ments of his work are extant.

Phidias (fid'i-as), a celebrated Greek sculptor, who was born about 490 B.C., and flourished in the age of Pericies, but of whose life hardly any particulars are known. Among his works were three statues of Athena which were all in the Acropolis of Athens in the time of Pausanias One colossal status of of Pausanias. One colossal statue of Athena was in bronze, and the goddess was represented as a warrior-goddess in the attitude of battle. The second and still more famous stood in the Parthenon, and was made of ivory and gold, representing Athena standing with a spear in one hand and an image of Victory in the other; it measured, with the pedestal, about 41½ feet in height. The third statue, in bronze, of a smaller size, was called emphatically the beautiful, on on account of its exquisite proportions. Another colossal statue by Phldias, that of Zeus at Olympia, was ranked for its beauty among the wonders of the world. Zeus was here seen sitting upon a throne, with an olive wreath of gold about his temples; the upper part of his beat was naked; a wide manula cover about his temples; the upper part of his body was naked; a wide mantle, covering the rest of it, hung down in the richest folds to his feet, which rested on a footstool. The naked parts of the statue were of ivory, the dress was of beaten gold. The right hand held a Victory, and the left a scepter tipped with the eagle. The Zeus was removed to Constantinople by Theodosius I, and was destroyed by fire in 475 A.D. During the government of Pericles, which lasted the government of Pericles, which lasted twenty years, Athens was adorned with costly temples, colonnades, and other works of art. Phidlas superintended these improvements; and the sculptures with which the Parthenon, for instance, among other buildings was adorned among other buildings, was adorned, were partly his own work, and partly in the spirit and after the ideas of this great master. Of the merits of these we can ourselves judge. (See Elgin Markers Parthers) Phiding received great bles, Parthenon.) Phidias received great honors from the Athenians, but he is also said to have been falsely accused of peculation, and of impiety for putting his own likeness and that of Pericles on the shield of Athena. He died proba-

of Pythagoras. Some frag- best-preserved temples in Greece. The frieze, which was usually on the exterior of the temple, was here in the interior, and with the metopes was of Parian marble. It is now in the British marble. It is now in the British Museum, and is quite complete, consisting of 23 slabs of marble 2 feet high, carved in high relief, the whoie being 101 feet long. The subjects are the battle of the Lapithæ and the Centaurs, and that between the Amazons and the Greeks, the school being that of Phicias.

Philadelphia (fil-à-del'fi-à) (1) an ancient city of Palestine aust of the Jordan, originally Rabtine, east of the Jordan, originally Rabbath-Ammon, the ancient capital of the Ammonites. (2) An important city in the east of Lydia. See Ala-Shehr.

Philadelphia, a city and river port of the United States, in Pennsylvauia, ranks as the third largest city in the Union. It is situated on the rivers Delaware and Schuylkill, and, following the course of Delaware Bay and River, is 96 miles from the Atiantle Ocean. New York lies 97 miles to the northeast and Washington 136 miles to the southwest. The site is nearly flat, but slopes gently towards both the Deiaware and the Schuylkill. The houses are largely built of brick, with white marlargely built of brick, with white mar-ble trimmings. The streets were orig-inally laid out so as to run nearly due westward from the Delaware, intersected by other streets running nearly north and south, and still almost everywhere the streets cross each other at right angles. Market Street, the great central street running east and west, and continuously built upon for several miles, has a width of 100 feet; Broad Street, the principal central street running north and south, is built upon to a much greater length, and is 113 feet in width. Most of the other chief streets vary from 50 to 66 feet broad, some of the avenues, however, being much wider. An extensive system of street railway extends through nearly all the wider streets with subway and elevated railway extending through the entire length of Market Street. A number of bridges, for railway and general traffic, span the Schuylklll and a regular service of steam-ferries across the Delaware affords communication with the New Jersey side of the river. Philadelphia is the fortunate possessor of several of the chief historical monuments of the United States, the most notable of these bly about B. C. 432.

Phigalia (fē-gā-lē'yā), a city of ancient Greece in the most mountainous part of Arcadia. On one of the mountains. Mount Cotylium, to the northeast of the site of Phigalia, is room called Independence Hall, from the circumstance that the Deciarasituated the temple of Apollo Epicurius, the circumstance that the Declarabullt in the time of the Peloponnesian tion of Independence was signed there war by Ictinus, the architect of the Par- (July 4, 1776). The Liberty Beli, said thereon at Athens, and still one of the to have signaled that fact to the peo-

other historic sites, are sedulously preserved. Among the other notable buildings are the custom-house, a white marbie edifice; the United States new mint, a granite-fronted building; the post-office, a large and handsome granite structure with a dome; the new City Hali, having an elevation of 547 feet and surmounted by a colossal statue of Penn; Girard College, a fine example of the Corinthian attrict the huildings of the University of style; the huildings of the University of Pennsylvania; the Memorial and Horti-cultural Halls in Fairmount Park, erected in 1876 for the Centenniai Exhibition, and still retained; many handsome churches, banks, insurance offices, etc. Charitable institutions are numerous and efficient. The educational establishments include the University of Pennsylvania, with a medical department; the Jefferson Medical Coliege; the Women's Medical Coliege; the Medico-Chirurgical College, the Hahnemann College, the College of Pharmacy; the Academy of Fire Arts; the Drexel Institute; Temple University; the School of Judustrial Art: the School of Dec of Industrial Art; the School of Design for Women; the Philadelphia Museums; numerous colleges and educational institutions supported by the religious denominations; Girard College, devoted to the secular education of orphan the above institutions possess extensive and valuable libraries, in addition to which are the large collections belonging to the Philadelphia Library, the Mercantill Library the Free Vibrary tile Library, the Free Library, with its many branches, the University and the Academy of Science libraries, and various others; while Philadelphia is one of the others; while Philadelphia is one of the recognized centers of literary, dramatic, and artistic culture. Scientific progress is represented by the Academy of Natural Sciences, the Franklin Institute, the Philosophical Society, Historical Society, etc. In addition to the public squares the chief place of outdoor recreation is Fairmount Park, with an area of over 3000 acres, possessing much area of over 3000 acres, possessing much natural beauty, being well wooded, and having a great variety of surface. A handsome Parkway, adorned with magnificent buildings, is projected to connect the park entrance with the City Hail.

ple, is preserved as an invaluable historic and iron-wares, lumber, tobacco, and cottreasure. Carpenters' Hail, in which the ton (raw and manufactured). The prinfirst Congress met; Christ Church, which cipal imports consist of cotton, woolen, Washington attended while President, and flax goods, tin-plate, iron and ironton (raw and manufactured). The principal imports consist of cotton, woolen, and flax goods, tiu-plate, iron and iron-ore, chemicais, etc. The river channel is being deepened so that the largest merchant ships may reach the wharves. Philadeiphia is the first manufacturing city in the United States, the carpet industry being the largest in the country. The same may be said of the locomotive industry. industry, the largest in the world, and aiso of the shipbuilding industry of the city and its environs. The other leading manufactures are iron and steel, machinery and toois, refined sugar, ciothing, boots and shoes, brewery products, chemicais, household furniture, and a great vaicais, household furniture, and a great variety besides.— Philadelphia was founded and named by William Penn in 1682 as the capital of his colony of Pennsylvania. For a long time it was almost exc'usively occupied and controlled by Quakers. Many of its most important improvements were due to Benjamin. Franklin, and it played a most prominent part during the Revolutionary war. In May-November, 1876 (a hundred years after the issue of the Declaration of Independence), a Centennial Exhibition, the first World's Fair in the United States, was held on the grounds at the States, was held on the grounds at the southwest extremity of Fairmount Park. It was a large and imposing display of art and industry and has left the city two weil-filled structures, the Horticultural and Memoriai hails. The city has magnificent religeed terminals. The Panney nificent railroad terminals. The Pennsylvania Railroad station, completed in 1894, is of modern Gothic, absolutely fireproof; the train shed is one of the largest single spans ever constructed, being 304 ft., covering sixteen tracks. The Phila-delphia & Reading Railroad terminal is of composite Renaissance, and built of New England granite, brick, and terracotta. The train shed has a clear span of 266 ft., covering thirteen tracks. Of more recent construction is the Baitimore & Ohio Raiiroad terminai, a handsome structure. All these run, by underground or elevated tracks, to the center of the city. No cit; in the Union is better provided with freight terminals than Philadeiphia. The area of the municipality is 130 sq. miles, embracing the whole county. Of this a considerable portion in the northern section is rural in character, but the greater part of the area is closely hull over, the city containing an enormous number of well-built two-story residences for proprie of small means. In The principal places of indoor amusements are the opera houses, theaters, hult over, the city containing an enormumerous concert-rooms. etc. Philadelphia ranks high as a center of foreign, inland, and coasting trade. The leading articles of export are grain, provisions. petroieum, anthracite and gas-coal, iron of homes.' Pop. 1,549,008.

according to the prevaient opinion, was, together with the Episties to the Ephesians, Colossians, and Philippians, written from Rome during St. Paul's first imprisonment in that city. The only doubt thrown on this opinion by those who accept the genuineness of the episties is contained in the suggestion supported by Meyer and others, that these episties were written during the apostie's imprisonment at Cæsarea. The genuineness and authenticity of Philemon is questioned by very few critics.

Philetas of Cos (fil-e'tas), a Greek flourished between 350 and 290 B.C. He wrote elegies, epigrams, and prose grammatical works. He was preceptor to Ptolemy Philadelphus, and a favorite model of Theocritus. Fragments of his

poems are extant.

Philidor (fil'i-dor), François André Danican, a French musical composer and celebrated chess piayer; born in 1726; died in 1795. In early youth he was a chorister in the chapel of Louis XV, and afterwards supported himself as a teacher and copier of music. He traveled in Holland, Germany, England, etc., and in 1753, when in England. he set Dryden's Ode for St. Cecilia's Day to music. He had whlle here devoted his attention principally to chess; and he gained extended fame from having published his analysis of the game, which is still referred to as an authority. On his return to France, in 1754, he produced about twenty operas at the Opera Comique. He went to London in 1779, where he produced the music to Horace's Carmen Seculare, his best work. Having been pensioned for his services he ahandoned musical composition altogether, in 1788, in order to give himself up entirely to chess.

Philip (fil'ip), one of the twelve apostles, according to John's gospel 'of Bethsaida, the city of Andrew Jesus at Bethany. After the resurrection he was present at the election of Matthias to the apostleship, but is not again mentioned. In the Western church he is commemorated on May 1.—Puilip THE EVANGELIST, often confounded with the above, is first mentioned ln Acts vi, 5. He preached at Smyrna, where Simon Magus was one of his converts; baptized the Ethiopian eunuch; entertained Paul and his companion on their way to Jerusalem, when 'he had four daughters which did prophesy.

Philemon (fii-8' mon), EPISTLE OF Philip II, King of Macedon, the of the New Testament. This epistic, Macedonian kings of this name, and the father of Aiexander the Great, was a son of Amyntas II, born B.C. 382. He passed a portion of his early years in Thebes, where he became well acquainted with Greek literature and politics, and succeeded his eider brother, Perdiccas, in 360. His position at first was not very secure, but as he had few scruples and was a man of the highest talents both for war and diplomacy, in a short time he had firmly established himself, had reorganized the Macedonian army, and proceeded to extend his sway beyond his own kingdom. His amhition was to make is imself, in the first place, supreme in Greece, and to accomplish this he began hy seizing the Greek towns on his borders: Amphipolis, which gave him access
to the goid-mines of Mount Pangeus, Potidma, Olynthus, etc. The 'sacred war'
carried on by the Amphictyonic council against the Phocians gave Phillp his first opportunity for interfering directly in the affairs of Greece. (See Greece.) After the capture of Methone—the last pos-session of the Athenians on the Mace-donian coast—between 354 and 352. Philip made himseif master of Thessaly, and endeavored to force the pass of Thermopyle, but was repuised by the Athenians; Philip, however, compensated himself hy equipping a navy to harass the Athenian commerce. The terror of his name now provoked the 'Philippics' of Demostherer who endeavored to record Demosthenes, who endeavored to rouse the people of Athens to form a general league of the Greeks against him; but hy 346 he was master of the Phocian cities and of the pass of Thermopylæ, and as general to the Amphictyonic council he was the crowned protector of the Grecian faith. In the spirit proper to his office he marched into Greece to punish the Locrians for an act of profanity; but instead he seized the city of Elatea, and began to fortify it. Demosthenes now exerted ali his eloquence and statesmanship to raise the ancient spirit of Grecian independence, and a powerful army was soon in the field, but being without able or patriotic commanders it was defeated at the decisive battle of Chæroneia in August, 338 B. C. After this last struggle for freedom Philip was acknowledged chief of the whole Hellenic world, and at a congress held at Corinth-lie was appointed commander of the Greek forces, and the commander of the Greek forces, and was to organize an expedition against Persia. While preparing for this enter-prise he was murdered in 336 B. C., some say at the instigation of his wife Olyapias.

Philip I, King of France, son of Henry I, was born 1052, and succeeded to the throne under the guardianship of Baidwin V, count of Flanders, in 1000. The Norman conquest of Engiand took place in his reign, and he supported Prince Robert, son of the Conqueror, in his revoit against his father. He was a worthless dehauchee and was detested by his subjects. He died in 1108.

Philip II, Augustus, King of France, horn 1165, was crowned as successor during the lifetime of his father, Louis VII, whom he succeeded in 1180. One of his first measures was the banishment of the Jews from the kingdom, and the confiscation of their property. Philip next endeavored to re-press the tyranny and rapacity of the nohies, which he effected partly hy art and partly by force. In 1190 he em-barked at Genoa on a crusade to the Hoiy Land, where he met Richard Cour de Lion, who was engaged in the same cause in Sicily. The jealousies and disputes which divided the two kings induced Philip to return home the next year. He invaded Normandy during Richard's He invaded Normandy during Richard's captivity (1193), confiscated the possessions of King John in France after the death of Prince Arthur (1203), prepared to invade Engiand at the instance of the pope (1213), turned his arms against Fianders and gained the ceichrated battle of Bouvines (1214). He died in 1223.

Philip III, cailed the Hardy, King of France, was the son of Louis IX and Margaret of Provence. He was born in 1245, and succeeded his

of Louis IX and Margaret of Provence. He was born in 1245, and succeeded his father in 1270. In 1271 he possessed himself of Touiouse on the death of his uncie, Aiphonso; in 1272 he repressed the revoit of Roger, count of Foix, and in 1276 sustained a war against Aiphonso X, king of Castile. The invasion of Sicily hy Peter of Aragon, and the massacre of the French, known as 'the Sicilian vespers,' caused ilm to make war against that prince, in the course of which against that prince, in the course of which he died, 1285.

Philip IV (LE BEL), King of France, was horn in 1268, and succeeded his father in 1285. He had aiready married Joanna, queen of Navarre, hy which ailiance he added Champagne as well as Navarre to the royai domain, which he made it his policy still further to increase at the expense of the great vassals. He even attempted to take Gulenne from Edward I of Engiand, hut afterwards entered into an alli-

on the crown of France. He was long engaged in war with Fianders, which resulted in the accession of the Waiioon territory to France, and the restoration of the rest of Fianders to its count ou condition of feudai homage. Philip had been engaged at the same time in a vio-ient dispute with Pope Boniface VIII, in which he was supported by the Statesgeneral, and he publicly burned the
pope's buil excommunicating him. On
the death of Bonlface and of Benedict
XI, Ciement V, who succeeded the latter,
was elected by the influence of Philip,
and fixed his residence at Avignon.
Ciement before his election entered into a regular treaty as to the terms on which he should receive the pontificate. The destruction of the order of the Tempiars (1307-12), and the seizure hy the king of their goods and estates, was one of the fruits of this ailiance. Philip left numerous ordinances for the administration of the kingdom, which mark the decline of feudalism and the growth of the royal power. He also convoked and consulted the States-general for the first tlme. He dled in 1314.

Philip VI, OF VALOIS, King of Philip IV, to whose last son, Charles IV, he succeeded in virtue of the Salique law. He was born in 1293, and succeeded to the crown in 1328. In his reign occurred the wars with Edward the England who claimed the Franch III of England, who claimed the French crown as grandson, hy his mother, of Philip IV (see above article). Philip died in 1350. His relgn was unfortunate for France hy the long war which it inaugurated, known in France as the Hundred Years' war; and he has left are avii memory by his representations of an evil memory hy his persecutions of Jews and heretics, his confiscations and exactions.

Philip II, OF SPAIN, was the son of Charles V and Isabelia of Portugai, and was horn at Valladoiid in 1527. He was married in succession to the Princess Mary of Portugai in 1543, and to Mary of England in 1554, the same year in which he hecame king of Naples and Sicily hy the abdication of his father. In 1555 his father resolved to abdicate the sovereignty of the Netheriands in Philip's favor. This was done in public assembly at Rrussia on October in public assembly at Brusseis on October 25, 1555; and on January 16, 1556, in the same hail, he received, in presence of the Spanish grandees then in the Netherlands, the crown of Spain, with its possessions in Asia, Africa, and America. His first ance with that monarch, and gave him act was to propose a truce with France, his daughter in marriage (1299), from which was hroken aimost as soon as conwhich originated the ciaim of Edward III ciuded. In 1556 he went to England,

where he was refused the ceremony of a struggle were varied in 1567 by a domescoronation and the troops that he de-manded in aid of his war with France. These, however, were at length conceded to him by Mary, in violation of her marriage articles, and the levy, joined to the army of Emanuei Philibert, duke of Savoy, and Count Egmont, assisted to gain the battle of St. Quintin, August 10, 1557. On the death of Mary, in 1558, Philip, who was still prosecuting the war, made proposals of marriage to her successor, Elizabeth, and was refused. In 1559 the French war was concluded by the peace of Cateau-Cambrésis appointed his half-sister Margaret sov-ereign of the provinces, his main object in returning to Spain being to check the progress which the Reformation had made

Philip II of Spain.

there. On his arrival ln his native country he had the satisfaction of being present at an auto-de-fé; and a few years perseverance in similar measures extingulshed the cause of the Reformation, together with the spirit of freedom and enterprise in Spain. The cause of religion in France was also a constant subject of solicitude with Philip. In Naples, as in Spain, his zeal led him to persecute the Protestants; but it was in the Netherlands that his tyranny and obstinacy had their most disastrous, though ultimately fortunate, results. In 1556 the revolt of the Netherlands began, ending eventually in the separation of the seven northern provinces from the crown of Spain, and their formation into the Dutch republic. This struggle lasted about thirty years, till the close of Philip's reign. The events of this protracted

tic tragedy—the rebeilion, arrest, and suspicious death of Don Carios, the son of Philip and his first wife Mary of Portugai. Shortly afterwards he lost the Queen Elizabeth, his third wife, and about the same time the Moors of Granada revoited, whose subjugation was effected in 1570. In 1571 the Archduchess Anne of Austria became his nate. Shortly afterwards he lost the fourth wife, and the same year his nat-ural lrother, Don John of Austria, obfused. In 1559 the French war was concluded by the peace of Cateau-Cambrésis and the marriage of Phliip to Elizabeth of France, daughter of Henry II. I'hilip came sovereign. About this tlme he found appointed his half-sister Margaret sovereign. made offers of assistance to Henry, King of Navarre. In 1584 he renewed his alliance with the League, in order to oppose the succession of Henry to the crown of France. In 1586 Philip deciared war with England. The year 1588 saw the destruction of the Armada and the descent of Spain from her position as scent of Spain from her position as a first-class power in Europe. The remainder of his relgn was occupied with war the Peace of Vervins was concluded. Philip showed some disposition at the same time to make peace with England and the Netherlands, but his offers were not accepted, and he died in 1598 without recognizing the independence of the latter country or being reconciled to the former. Before his death he had bestowed the sovereignty of the Spanish Netherlands on his daughter Isabella, subject to the crown of Spain.

Philip V, of Spain, the first Spanish ving of the Bourbon dynasty, was born at Versailles in 1683; died in 1746. He was the grandson Louis XIV of France, and succeeded to the crown of Spain by the will of Charles II, who died without direct heirs, as the grandson of Charles' elder sister. On the death of Charles in November, 1700, Philip was immediately proclaimed king, and was generally recognized in Spain, Naples, and the Netherlands; but the succession was contested by the Archduke Charles of Austria, whose claim was enforced by the armies of England, Holland, and Austria in the wars of the Spanish Succession, which began in 1702. By the Treaty of Utrecht (1713) he was recognized as Klng of Spain, but Gibraltar was lost to Spain, Minorca was also ceded to England, Siclly to Savoy, the Netherlands, Naples, and the Milanese to Austria. He married Elizabeth Farnese, niece of the Duke of Parma, in 1714, and Alberoni, the minister of the Duke of Parma in Spain, became prime-minister. As Philip had a son by his first wife, the daughter of the Duke of Savoy, the children of Elizabeth could not succeed to the crown of Spain. Elizabeth wished to provide for them in Italy, and even coveted the reversion of the crown of France. These pretensions formed the basis of schemes on Alberoni's part which allenated France and led to the Triple Alliance, formed in 1717 hy Great Britain, France, and Holland against Spain, and which was afterwards merged by the accession of Austria into the Quadruple Alliance. The invasion of Spain hy the Duke of Berwick compelied Philip to accede to the terms of the alliance. In 1724 Philip resigned the crown of Spain in favor of his son Don Louis, but the death of Louis a few months later induced him to resume the royal power. He died in 1746, after a reign of forty-six years. Philip was constantly governed by favorites, and his constitutional melancholy at last completely incapacitated him for business.

Philip, THE BOLD, Duke of Burgundy, born in 1342, was the fourth son of John, king of France. He fought at Poltlers (1350), where, according to Froissart, he acquired the surname of the Bold. He shared his father's captivity in England, and on his return his father, whose favorite he was, made him Duke of Touraine, gave him he Duchy of Burgundy, and made him premier peer of France. He was one of the most powerful French princes during the minority of Charles VI, during whose insanity he acted as regent, retaining the regency till

Philip I (THE MAGNANIMOUS), Landgrave of Hesse, born in 1504. The began to relgn at the age of fourteen, and introduced the Lutheran religion into Hesse in 1526. In 1527 he founded the University of Marburg, subscribed the protestation to the Diet of Spires in 1529, submitted the Confession of Falth at Augshurg in 1530, and in 1531 formed with the Protestant princes the Schmalkaiden League. He was forced to submit to the Emperor Charles V in 1547, who kept him a prisoner for five years. After his return to his dominions he sent a body of auxiliaries to assist the French Huguenots. He died in 1567.

Philiphaugh (fil'lp-hou), a locality in Scotland 2 mlles s.w. of Selkirk, the scene of Sir David Leslie's victory over the Marquis of Montrose, September 13, 1645. A monument marks the field.

Philippeville (fii'r vii), a city and port of Aigeria, in the province and 89½ miles N.N.E of Constantine. It was founded in 1837, is well laid out, has several spacious squares and fine streets; is connected by rail with Constantine, and has considerable trade. I'op. (1906) 16,339.

Philippi (fii-ip'i), a city of Macedonia, now in rulns, founded by Philip of Macedon about B. C. 356. The two hattles fought in B. C. 42, which resulted in the overthrow of Brutus and Cassius hy Antony and Octavius, were fought here. Philippi was visited on several occasions hy the apostle Paul, who addressed to the church there one of his epistles.

Philippians (fil-ip'i-anz), EPISTLE
TO THE, one of St.
Paul's epistles, is supposed to have been
written from Rome towards the close of
his first imprisonment there, about A. D.
63. Some authorities suppose it to have
been written in Cæsarea. The genuineness of this epistle has been little questloned. It is referred to, though not
quoted, in the epistle of Polycarp and by
Tertuilian and other early fathers.
Epaphroditus, who conveyed it, was the
messenger of the Philippians to Paul, and
had been ill at Rome, which had been a
cause of anxiety to the Philippians. Paul,
therefore, hastened his return, and sent
this epistle hy him.

Philippics (fil-lp'iks), the name given to three celebrated orations of the Greek orator Demosthenes against Philip, king of Macedon (352-342 B.C.). This name was also applied to Cicero's fourteen speeches against Antony, and it has hence come to signify an invective in general.

an invective in general.

Philippines (fil'lp-pēnz), or Philippines (fil'lp-pēnz), and archipelago under United States control in the Pacific Ocean, northeast of Borneo, having on the west the China Sea, on the north and east the North Pacific, and on the south the Sea of Celehes: area, 115,-026 square miles: pop., in 1903, 7,635,426. It consists of ahout 1200 large and small islands. Of the former the chief are Luzon, Mindoro, Samar, Panay, Leyte, Cebu, Negros, Bohol. Mindanao, and Palawan (Paragua). Luzon is the only one of commercial importance. It contains the capital, Manila, and has about half the population, 3,798,507. The shore lines and internal surface of the larger islands are extremely rugged and irregular. They are largely of volcanic formation and are traversed by irregular chains of mountains, trending generally N, and E.

The mountain ranges are ciothed with a nila was taken and for a st on has held gigantic and ever-teeming vegetation, and by a British fleet. On May 1, 1898, durbetween them lie extensive slopes and ing the war between the United States plains of the richest tropical fertility, watered by numerous iakes and rivers, which afford ahundant means of irrigation and transport. The elimate on the tion and transport. The climate on the whole is heaithy, but hurricanes are common. Earthquakes are frequent, and often very destructive. The principal agricultural product is rice, and next in importance are sugar-cane, tobacco, and coffee. Fibrous plants are also ahundant, and among the chief of these are the well-known Manila hemp, the cotton-plant the gometically relies etc. The piant, the gomutl palm, ramee, etc. The pineapple is grown both for its fiber and its fruit. The textile productions of the Philippines, the work of the native population, are considerable in number, ranging from the delicate and costly pina musline, made from the pineapple fiber, to coarse cottons, sacking, and the mats made of Manila hemp, and the fiber of the gomutl palm. The isiands are rich in minerais, including gold, silver, copper, lead, Iron, quicksliver, sulphur, coal, and patroleum, but they are little worked. petroieum, but they are littie worked. The leading industries are the production and manufacture of hemp, tobacco and elgars, angar, copra, distilling, ship-building and iumbering. The foreign trade is mostly in the hands of foreign, especially British and American, mercantile houses, and consists principally in the export of sugar, rice, tobacco, Ma-niia hemp, indigo, coffee, hirds'-nests, tre-pang, sapan-wood, dye-woods, hides, rattans, mother-of-pearl, gold-dust, etc., and ir importing wines and iiquors, foodstuffs, and various manufactured articles. The natives are of diverse origin, and represent every stage of development from savagery to a high state of culture. Wild tribes, some of which are extremely ferocious, still haunt the mountains. The chief mountain tribes are the Negritos, a diminutive negro-ilke race, who have given their name to the island Negros, though not confined to lt. But the great mass of the inhabitants are divided into the Tagals, inhabiting Luzon, and the Bisayans, who inhabit the other islands. These speak respectively the Tagal and Bisayan tongues, each of which has a varlety of dialects. Haif-castes, Indo-European and Indo-Chinese, engross much of the husiness and wealth of the islands, Spaniards are compara-tively few. The independent tribes are partly Mohammedan and partly heathen. The largest town and chief scaport as partly Mohammedan and partly heathen. iish adjective). He wrote six pastorals. The largest town and chief seaport as and three tragedies: the Distrest Mother well as the seat of government is Manila. The Philippines were discovered (1722); and Humphrey, Duke of Gloucesby Magellan in 1520-21. In 1762 Mater (1723).

ing the war between the United States and Spain, an American fleet under Commodore Dewey attacked and destroyed the Spanish fleet, and on August 13 the city was taken. The natives, then in revoit against Spain, under Aguinaldo, continued in arms against the Americans and a war resulted which continued untl Marci, 1901, when Aguinaldo was captured and the native troops dispersed. The treaty of pence with Spain had left The treaty of peace with Spain had left the United States master of the Philip-pine archipelago. The government has exercised a protective sovereignty over the Islands, with a view to their ultimate independence. A thorough system of free schools has been introduced, railroads are being built to develop the resources of the islands, and free trade with the United States has been granted. In addition to this a Philippine legislature was established. iished in 1907. And in 1916 the appoint-ive Philippine Commission of nine which had formed the upper house of the legis-lature, was dissolved and a new upper house set up in which 24 of the 26 members are chosen by the electorate of eight or nine hundred thousand voters, consisting of ali males able to write.

Philippones (fii'ip-ponz), a Russian sect, formed in the seventeenth century, a hranch of the Roskolnicians, and so named from its founder, Philip Pustoswimt. They decline to serve as soidiers, refuse to take oaths, and use the liturgy of the ancient Russo-Greek Church.

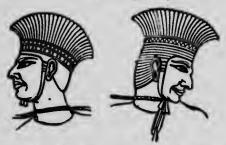

Philippenson (fii'lpg-hurs)

Philippsburg (fii'lpz-burg), a town of Baden, on the right oank of the Rhine, 16 miles north of Carisruhe, formerly a celebrated imperial fortress. In 1784 it was captured by the French under the Duke of Berwick (who lost his life here), and its fortifications were razed in 1800. Pop. about 2500.

(fii'lpz), AMBROSE, a poet Philips and dramatic writer, born of a Leicester family in 1671; died in 1749. He was educated at St. John's College. Cambridge, and subsequently became one of the wits who frequented 'Button's' in London. As a Whig politician he obtained various lucrative posts from the House of Hanover, while as a poet he was ridiculed by Swift and Pope, receiving the nickname of 'Namby Pamby' (which has since formed a useful Englishment in the state of th

Philips, John, an English poet, born in Oxfordshire in 1676; died at Hereford in 1708. He was educated at Christ Church, Oxford, where he produced the Splendid Shilling, a burlesque poem in Miltonic blank verse. He sub-sequently wrote *Blenheim*, a poem in celebration of the Duke of Marlborough's victory; and Cyder, a work in imitation of Virgil's Georgics.

Philistines (fil-ls'tInz), the name of a Semltic people or race who inhabited the southern part of the lowlands of Palestine, from the coast near Joppa to the Egyptian desert south of Gaza. They occupied five chief cities (Ashdod, Gaza, Gath, Askelon, Ekron), and these formed a kind of confederacy under five lords or chiefs. Mention is made of this people in Genesis xxi, xxvi, but it was during the time of the Judges in Israel, and subsequently in the reigns of Saul and David, that the Philistines attained their highest power, and from

Philistine Prisoners. - Sculptures at Medinet Haboo.

the latter received their greatest defeats. In the wars between Assyria and Egypt the country of Philistia was subdued by Tiglath-Pileser (734 B.C.), but the Philistines still intrigued with Egypt, and made various revolts against Sargon and Sennacherlb to assert their independence. During the Babylonian captivity they avenged themselves on their old enemies the Israelites (Ezekiei xxv, 15), but sub-sequently the two nations seem (Nehe-miah xlli, 23), to some extent, to have fraternized. The origin of this race has been a question of much debate by Biblical critics.

Phillip

Academy. Two years later he returned to Aberdeen, his pictures at this portion of his career consisting mainly of portraits and subjects from Scottish life. In 1852 and 1856 he visited Spain, and he again returned to that country in 1860. While resident there he was greatly influenced by the works of the Spanish masters, and especially by those of Velasquez. His style completely changed, his subjects became Spanish, and his grasp of color, composition, and character vastly improved. It is his plctures of Spanish life that have made him tures of Spanish me that have made min famous. Among the more important are Life among the Gipsies at Seville (1853), The Letter-writer of Seville (1854), Death of the Contrabandista (1858), A Spanish Volunteer (1862), Agua Bendita (1863), Chat Round the Brasero (1866). In 1860 he painted for Queen Victoria The Marriage of the Princess. Many of his works have been engraved. Many of his works have been engraved.

Phillips (fii'ipz), ADELAIDE, singer, born at Stratford-on-Avon, England, in 1833 died in 1882. She was brought over to Boston at 7 years of age and made that city her permanent home. Her volce was a fine contralto. She made her debut at the Boston Museum in 1843 as Little Pickle. In 1850 she went to Paris to study, sang in opera in Mlian in 1854, and subsequently in New York and elsewhere.

Phillips, DAVID GRAHAM, novelist, born at Madison, Indlana, in 1867. He became an author in 1887 and produced numerous works, beginning with The Great God Success. One of the latest was The Hungry Heart (1909). He was shot in New York by a lunatic, January 21, 1911.

Phillips, John, geologist, born in 1800; died in 1874. He was lastructed in geology by his uncle, William Smith, 'the father of English geology,' and spent many years in arranging ogy, and spent many years in arranging museums and organizing scientific societies in Yorkshire towns; became professor of geology in Dublin (1844) and in Oxford (1850). His chief works are a Guide to Geology (1834), Palæozoic Fossils of Cornwall, Devon, and West Somerset (1841), Manual of Geology (1855), and Life on the Earth (1861) (1855), and Life on the Earth (1861). (fil'ip), JOHN, painter, one of Phillips, STEPHEN, English poet, horn Phillips, at Somerton, near Oxford, at Somerton, near Oxford, British school, born at Aberdeen in 1817; in 1868. In 1897 his Poems were died in 1867. After serving his apprenticeship as a house-painter, he received some slight instruction from a local artist, and began to paint portraits. The merit of these induced Lord Panmure to ald him (1836) in going to London, and in attending the schools of the Royal historical pieces, but soon after turned in structured. in attending the schools of the Royal historical pieces, but soon after turned

currency. Collections of his letters and addresses have been published.

Pop. 15.000.

Philo Judæus (fi'lō jū-dē'us), an Aiexandrian Jew of the first century, of whom all that is known is that he belonged to a wealthy family, received a liberal education, and in 40 A.D. visited Rome as one of a deputation to ask the Emperor Caligula to revoke the decree which compelled the Jews to worship his statue. His very numerous writings (which are in Greek) include an account of the Mosaic narrative of the creation, allegorical exposi-tions of other parts of Genesis, lives of Abraham, Joseph, and Moses, treatises on the Decalogue, Circumcision, Mon-archy, First-fruits, Offerings, and other subjects.

Philology (fil-ol'o-ji), or Comparacommonly used as equivalent to the science of language, otherwise called Linguistic Science, or Linguistics. This science treats of language as a whole, of its nature and origin, etc., and of the different languages of the world in their general features, attempting to classify and arrange them according to such gonand arrange them according to such gen-eral features, and to settle in what rela-tionship each stands to the others. The gave vent to different emotions. But

his attention to portrait-painting. In 1808 he became a member of the Royai Academy, and in 1824 succeeded Fuseli able to read and speak a number of as professor of painting. He published his Lectures on the History and Principles of Painting in 1833.

Phillips, Wendelly, orator and restrictions of the property of th ciples of Painting in 1833.

Phillips, Wendell, orator and reformer, was born at Boston, Massachusetts, in 1811; died in 1884. He was educated at Harvard College, studied law, and was admitted to the bar in 1834. The persecution of the early abolitionists roused his active sympathy, and in 1837 he eloquently took his stand in favor of the abolition of the abolition of the interval of the content of the c the bar in 1834. The persecutive sympathy, and in 1837 he eloquently took his stand in favor of the abolition of rather, to quote Professor Whitney, as slavery, being preëminently the orator of an institution, an outcome of the needs the movement. From that date until the Civil war he continued an earnest advocate of the abolition cause, decirred that cate of the abolition was an unrighteous company the Constitution was an unrighteous company to the fact that certain ideas are attached from person to person in virtue of the fact that certain ideas are attached or belong to certain sounds by a sort pact between freedom and slavery, and of the fact that certain ideas are attached that a dissolution of the Union would be the most effectual mode of giving freedom of convention or general understanding to the siaves. He was also for many years an advocate of woman suffrage, propagate of the siaves. He was also for many guage. That there is any natural iaw hibition, prison reform, and a greenback by which one idea belongs to one vocal currency. Collections of his letters and sound rather than to another can hardly existing among those who use the language. That there is any natural law by which one idea belongs to one vocal sound rather than to another can hardly be affirmed in view of the fact that if we select any one idea we shall find that each of the thousand languages of Phillipsburg, a town of county, New Jersey, on the Delaware River, opposite Easton, the world expresses this idea by a difphia, and on several railroads. It has extensive iron industries and manufactures of cement, wood, chemicals, silk, etc. veloped in some communities, as also the finger-language of the deaf and dumo. We can even conceive that a language of hieroglyphics or written symbols might exist with no spoken language connected with it. We have, however, no knowledge of any such case, and, in fact, wherever man exists we find him making use of speech, which, indeed, is one of his most distinct and marked characteristics. As to the origin of language nothing is really known, although few doubt that it is an invention or acquisition of the human race, and not an original endowment. Any one, however, may believe if he pleases that man was created with a language and the faculty of making use of it already in his possession. If the other view is taken we must suppose that the earliest men had no ianguage to start with, but that having suitable organs for speech they devised a ian-guage among themselves as a means of intercommunication, and we may conclude that the earliest attempts at speeck were either in imitation of the different sounds heard in nature, or that they were

however language originally arose, it is Swedish, and Icelandic. Another divivery certain that whatever language we sion is into: East Germanic, including speak has to be acquired from others Gothic and Scandinavian, and West Gerwho have already learned to speak it, and manic, including the others. that those others have similarly acquired it from their predecessors, and so on backwards into the darkness of the remotest ages. Every language is thus at our birth a foreign language to all of us.

The science of philology is quite of modern origin, being hardly, if at ail, older than the 19th century. Speculations on language and its nature were induiged in by the ancient Greeks; but as the Greeks knew little or nothing of any language but their own, they had not sufficient materials wherewith to construct a science of language. In later times materials became more abundant as scholars studied Hebrew. Greek times materials became more abundant as scholars studied Hebrew, Greek, Latin, Arabic, etc.; but it was the introduction of Sanskrit to the western world, and its observed similarity in many respects to Greek that ied to the establishment of philology on a true scientific basis, an achievement which was largely due to the labors of Bopp, Pott, Schieicher, and other German scholars. Yet though most valuable results have been obtained and a large number of lan-guages have been studied and classified, much remains to be done, much remains uncertain and must always remains uncertain and must always remain so. One great difficulty that the philologist has to grapple with 1s the want of historical documents to throw ilght on the history of the great majority of ianguages, as only a very few possess a literature dating from before the Christian era, and far the greater number have no era, and far the greater number have no literature at all.

To begin with our own language and its kindred tongues. Philology has succeeded in showing that the English lanceeded in showing that the English language is one of a group of ciosely ailied languages which are known by the general name of the Teutonic or Germanic tongues. The other languages of the group, some of which are more ciosely connected with English than the rest, are Dutch, German, Danish, Icelandic or Old Norse, Swedish, and Gothic, to which may be added, as of less importance and having more the character of dialects, Norwegian, Frisian, the Piattdeutsch or Low German of Northern Germany, and Fiemish, which differs lit-Germany, and Fiemish, which differs itt-tle from Dutch. The Teutonic tongues are often divided into three sections, based on cioseness of relationship: the High German, of which the more modern

manic, including the others.

The evidence that all these languages are closely akin is to be found in the great number of words that they possess in common, in the similarity of their structure, their inflections, their manner of compounding words in short, in of compounding words — in short, in their family likeness. This likeness can only be accounted for by supposing that these languages are all descended from one common ianguage, the primitive Teutonic, which must have been spoken at a remote period by the ancestors of the present Teutonic peoples, there being then only one Teutonic people as well as one Teutonic tongue. In their earliest form, therefore, and when they began to be differentiated, these languages must have had the character of mere dialects, and it is only in so far as each has had a history and literature of its own that they have attained the rank of independent languages.

The rise of dialects is a weii-known phenomenon, taking its origin in the perpetual change to which ail languages are subject. A language that comes to be spoken over a considerable area and by a considerable number of persons— more especially when not yet to some extent fixed by writing and literature— is sure to develop dialects, and each of these may in course of time become uning telligible to the persons using the others, If the respective speakers have little intercourse with each other, being separated by mountain ranges, arms of the sea, or merely by distance. In this way is the existence of the different Teutonic tongues to be accounted for. A similar instance of several languages arising from one is seen in the case of Italian, French, Spanish, and Portuguese. all of which are descended from the Latin. Of

which are descended from the Latin. Of the common origin of these we have, of course, direct and abundant evidence. The Teutonic tongues, with the primi-tive or parent Teutonic from which they are descended, have been proved by the investigations of philologists to belong to a wider group or family of tongues, which has received the name of the Aryan, Indo-European, or (especially in Germany) Indo-Germanic family. The are often divided into three sections, based on cioseness of relationship: the High German, of which the modern classical German is the representative; the Low German, including English, Dutch, Frisian. Plattdeutsch, and Gothic; and the Scandinavian, including Danish, of one parent Teutonic tongue, so this chief members of this family are the

r

f f Aryan races of Europe and Asia, are believed by many to have had their seat in Central Asia to the eastward of the southern extremity of the Caspian Sea. This, however, is very problematical, and some philologists see reason to think that Europe may rather have been the original home of the Aryans. The latter view is

now perhaps the one most generally held.

How remote the period may have been when the ancestors of the Teutons, the Celts, the Slavs, the Greeks, Romans, Perslans, and Hindus were living together and speaking a commor language is uncertain. Yet the general character of their language is approximately known, and philologists tell us with some confi-dence what consonant and what vowel sounds the Aryan parent-speech must have possessed, what were the forms of its inflections, and what, at the least, must have been the extent of its vocabulary, judging from the words that can still be traced as forming a common possession of the sister tongues of the

family.

In order to understand how it is that many words in the different Aryan tongues are really of the same origin, though superficially they may appear very different, it is necessary to know something of Grimm's Law. This law, which, like a natural law, is simply a statement of observed facts, is so named from the great German philologist who from the great German philologist who first definitely laid it down as the result of observation and comparison of the relative linguistic phenomena. It concerns the so-called 'mute' consonants (t, d, th; k, g, h (ch); p, b, f), and takes effect more especially when these are initial. According to it, in words and roots that form a common possession of the Arven tongues, being inherited by the Aryan tongues, being inherited by the Aryan tongues, being innerited by them from the parent-speech, where in English (more especially Anglo-Saxon) and in most of the Teutonic tongues we find t, d, or th, we find in Latin, Greek, and Sanskrit not these letters, but respectively d instead of t, an aspirated sound instead of d and t instead of th.

That is, an English t corresponds to a That is, an English t corresponds to a do not, as in the Aryan tongues, asso-Latin, Greek, and Sanskrit d, as Is seen in tame; compared with L. domare, Gr. important linguistic families are the damaein, Skr. dam, to tame: an English Hamitic, which includes the ancient d corresponds to Latin f, Greek th, Sanskrit dh, as in E. door, L. fores, Gr. Somali, etc.; the Turanian or Ural-Althyra, Skr. dvara (for original dhvara), taic, which includes Turkish, Finnish,

parent Teutonic and the other members a door; an English th corresponds to of the Aryan family are all believed to Latin, Greek, and Sanskrit t, as in thin, be descended from one primitive lancompared with L. tenuis, Gr. tanas, guage, the Aryan or Indo-European Skr. tans, from root tan, to stretch. If parent-speech. The people who spoke this primeval Aryan language, the ancest take the gutturals we find that this primeval Aryan language, the ancest take the gutturals we find that English k (or c hard), g, h, correspond are primeval Aryan races of Europe and Asia are a h (ch ch) k as in soon in English the corresponds to the compared with L. tenuis, Gr. tanas, from root tan, to stretch. If we have a language to Aryan races of Europe and Asia are a h (ch ch) k as in soon in English the corresponds to the compared with L. tenuis, Gr. tanas, from root tan, to stretch. If we have a language to Aryan races of Europe and Asia are a h (ch ch) k as in thin, we next take the guittines we had that the English k (or c hard), g, h, correspond respectively in the above languages to g, h (ch, gh), k, as is seen in E. kin, L. genus, Gr. genos, Skr. janas (where j is for original gans), compared with L. genus (for older hancer). Gr. chen Skr. anser (for older hanser), Gr. chen, Skr. hansa; E. head (A. Sax. heafod), L. caput, Gr. kephale, Skr. kapala. Similarly b in English corresponds to f in ilarly b in English corresponds to f in Latin, ph in Greek, and bh in Sanskrlt, as In brother = L. frater, Gr. phratër. Skr. bhratri, a hrother; f in English to p In Latin, Greek, and Sanskrit, as In father = L. pater, Gr. patër, Skr. pitri, father. German exhibits certain letter-changes peculiar to Itself, and for this reason is placed, in any full statement of Grimm's law, apart from the other Tentonic tongues. In German, for instance, t takes the place of an English d, as in G. tag, E. day, G. tcil, E. deal; d the place of th, as in G. ding, E. thing. G. drei, E. three, etc. In some cases G. drei, E. three, etc. In some cases the law does rot operate in consequence of the influence of other letters; thus of the influence of other letters; thus the s of stand prevents the t from becoming th, as it ought to do to represent the t of L. stare, to stand. Certain other exceptions to the law are accounted for hy a subsidiary law of more recent discovery than Grimm's law, known as Verner's Law, and formulating certain facts connected with the original accentnation of Aryan words.

The Aryan tongues, ancient and mode

The Aryan tongues, ancient and modern, are entitled to claim the first rank among the languages of the globe, both for richness, harmony, and variety, and more especially as embodying a series of literatures to which no other family of tongues can show a parallel. Next in importance come the Semitic tongues— Hehrew, Chaldee, Syriac, Arabic, etc.
These, like the Aryan tongues, form a
well-marked family, one notable peculiarity of which is the possession of 'triliterai' roots, or roots of which three
consonants form the basis and give the general meaning, while inflection or modification of meaning is indicated by inter-nai vowel-change. Thus the vowels play nai vowel-change. a subordinate part to the consonants, and

Hungarian, Mongolian, etc.; and the South-Eastern Asiatic, which includes Chinese, Siamese, etc. The Turanian languages belong to the type known as agglutinate or agglutinating, being so called from the fact that the roll always and the south of independence or discountering. the maintains a sort of independence or distinctive existence, the other elements of the word being more or less icosely 'giued' or stuck on, as it were. The Chinese is the chlef of the monosyllabic languages, so called from their words consisting normally of monosyllabics. consisting normally of monosyllabics. Other familles of ianguages are the Maiayo-Polynesian of the Indian Archlpelago and Pacific; the Bantu, a great family of S. Africa; and the American Indian languages, the latter characterized as polysynthetic, from the way in which they crowd as many ideas as possible into one unwieldy averageing. Ali sible into one unwieldy expression. Ali these families form groups, so far as is known, separate from and independent of each other; and attempts to connect any two of them, as Aryan and Semitic for instance, have met with little success. Formerly etymologists had no hesitation in deriving English words from Hebrew roots, hut this was in the days when there was no science of comparative philology. That all languages are descendants of one original tongue, as is believed by many, linguistic science can neither affirm nor deny, though the evidence does not sustain it. We may add that community of language is not a proof of community of race, since it is well known that, as the result of war or otherwise, races have given up the language that once belonged to them and adopted some

Philomela (fil-o-mē'la), in mythology, a daughter of Pandion, king of Athens, who being violated and deprived her tongue by Tereus, the hushand of her sister Progne, made known her wrong to the latter by embroidering it in tapestry. In revenge the sisters murdered Itys, the son of Progne hy Tereus, d served him up to his father. Teres were sued them, but they were the gods into birds, Philomela and Progne into a nightingale and a swallow, and Tereus into a lapwing.

Philopemen (fil-o-pē'men), an ancient Greek patriot born at Megalopolis, in Arcadia, about B. c. 252. Having distinguished himself in war against the Spartans, he was, in 208 B.C., appointed commander-in-chief of the forces of the Achæan League. He reorganized the Achean League. He reorganized the Achean army, defeated and slew with his own hand Machanidas, tyrant of

the successor of Machanidas. He induced the Spartans to join the Achean League; but, soon becoming dissatisfied, they separated from the confederacy, and called in the Romans to their assistance. Philopemen, as commander of the Ache-ans, declared war against Sparta, and, having taken the city, treated it with the greatest severity. The Romans, however, interfered, and Sparta was again admitted into the confederacy as an Independent state. Messene now revolted, and Philopæmen, though hroken hy infirmity and disease, drove hack the insurgents. but was afterwards taken prisoner, car-rled in chains to Messene, and compelled to drink polson, B. C. 183. Philosopher's Stone. See

chemy. Philosophy (fil-os'u-fi; Greek wisdom), a term first brought into general use hy Socrates. Philosophy is the science that deals with the general principles which form the hasis of the other sciences, and of which they themselves take no cognizance. It follows up the data of experience to their ultimate grounds, regarding each particular fact in relation only to a final principle, and as a determinate link in the system of knowledge. In this view philosophy may be defined as the science of principles.

For all practical purposes the history of philosophy may be treated as com-mencing with the Greeks, the philosophic notions of the inhabitants of the East being considered merely as introductory to the Greek philosophy, in which many oriental notions were incorporated. The first problem of Greek philosophy was to explain the enigma of external nature, to solve the problem not of the soui hut of the world. Thales (ahout 600 B.C.) stands at the head of the Ionian school, which, with the Eleatic school, was the chief representative of speculative thought in pre-Socratic tlmes; the for-mer of these schools being characterized by Aristotle as seeking to find a material, the latter a formal principle of all things. The material principle sought by the Ionian school was assumed to be water by Thales, a primitive infinite hut undetermined matter hy Anaximander, and air by Anaximenes. The Pythagoreans, abstracting from the guaratter materials. abstracting from the quantitative rather than the qualitative character of matter, substituted a symbolic principle—number—for the sensuous principle; hut the Eleatics, transcending alike the sensuous principle of the Ionics and the quantitative principle of the Pythagoreaus, conceived of pure being as the one soie Sparta, and subsequently defeated Nabis, substance, the phenomenal world being

phanes, its founder, Parmenides, and Zeno. The transition from abstract to zeno. The transition from abstract to concrete being, from the Eleatic principle of unity to the world of phenomena, was attempted by Heraclitus (about 520 B.C.), who asserted for an absolute principle the unity of being and non-being—becoming. According to him all things are in constant flux, the product of conflicting conceptors of the One at once flicting opposites, of the One at once warring and harmonizing with itself. Empedocies (440 B. c), in attempting to soive the reason of this flux, advanced the theory that matter was the principle of permanent being, while force was the principle of movement. The two moving forces in his system were love and hate. According to the Atomists, on the other hand, who are represented by Leucippus and Democritus (450 B.C.), the moving forces became an unintelligible necessity giving form to the world. Anaxagoras (born about 500) asserted reason as the principle, and though he did not develop his theory to any extent, the mere expression of a spiritual principle is sufficient to mark it as forming an era in phllosophy. In the hands of the Sophlets this principle, in the sense of individual reason, became the occasion of their denial of all objective reality. In Socrates (470–399 B.C.), who united scientific method and a high ethical and religious spirit the destruction united scientific method and a figh ethical and religious spirit, the destructive teaching of the Sophists found its keenest opponent. What are called the minor Socratic schools—the Cynics, Cyrenaics, and Megarians—severally professed to regard Socrates as their founder, the Cyrics, however, delining the end of action as self-sufficiency, the Cyrenaics as tion as self-sufficiency, the Cyrenaics as pleasure, and the Megarians as reason. With Plato (430-347) philosophy lost its one-sided character. Though professedly a disciple of Socrates his system of idealism is his own. The Platonic life is the number of such as the control of the control ldea is the pure archetypal essence, which is the source of all the finite realities that correspond to it. The visible world is an inferior reproduction of the world of pure ideas, where shine in all their splendor the good, the true, and the beautiful. In logic Plato brings back science to general ideas. In ethics the highest end of man is regarded as the unity of his nature. Plato's ideal theory is criticized by Aristotle, because he gives no real explanation of the connection between the phenomenal and the ideal. tween the phenomenal and the ideal. ground of all things, that excludes from In Aristotle's own system, instead of beinning with the general and the absolute, as Plato had done, he begins with 1704), who had a precursor in Hobbes the particular and individual. His (1588–1679), the influence of whom,

viewed as unreal. The three great whole philosophy is a description of the philosophers of this school are Xeno-given and empirical; and his method is phanes, its founder, Parmenides, and induction. His system presents us with a number of coordinate sciences, each having its independent foundation, but no highest science which should compreno nighest science which should comprehend them all. The three schooly of Greek philosophy which followed the systems of Plato and Aristotle, and which mark the declining days of Greece, are those of the Stoics, Epicureans, and Skeptics. Rome had no philosophy properly its own; the universal character of Roman philosophysical was colored. ter of Roman philosophizing was eclec-ticism, of which Cicero was the most illustrious representative. In Aiexandria eastern and western philosophy, as also Judalsm, Christianity, and Paganism, came into contact. Neo-Platonism, founded by Ammonius Saccas (A. D. 193), strove to combine, in opposition to Christianity, the chief elements of classical and contacts. Successively and contacts of the chief contacts of the c sical and eastern speculation. Hellenic ideas were mingled with a vague symbolideas were mingled with a vague symbolism, and with theories of ecstasy and divine union. Christianity, in the apologists of the 2d century and the Alexandrine fathers, related itself very early to the philosophy of the time, but not until about the 11th century did there begin to manifest itself a distinctive Christian philosophy in scholasticism, which, agephilosophy in scholastlelsm, which, assuming the dogmas of the church to be absolutely true, sought to justify them to the reason in abundant tomes of oppo-site opinions of little philosophical importance.

Modern philosophy, which begins with the 15th century, is characterized by a freer, more independent spirit of inquiry. First the scholastic philosophy was at-tacked by those who called to mind the ancient Greek philosophy in its original purity. After this struggle new views were presented. Bacon and Locke on the one hand, and Descartes on the other, stand respectively at the head of the two systems — empiricism and idealism, which begin modern philosophy. Bacon greated no definite system of philosophy. created no definite system of philosophy, but gave a new direction to thought, the empiricism where he founded finally developing into ticism. The system of Descartes we posed by Gassendl, and received modifications at the hands of others, especially Malebranche. The others, especially Malebranche. The most important successor, however, of Descartes was Spinoza, who reduced the three Cartesian substances to unity, to one infinite original substance, the ground of all things, that excludes from itself all negation or determination, and

of a mind perceiving them is impossible, and a contradiction in terms. Granting perience, as the indispensable conditions of thought itself. Reid therefore directed his inquiries to an analysis of the various powers and principles of our constitution, in order to discover the fundamental laws of belief which form the roundwork of human knowledge. Dugatd Stewart, with some deviations, followed in the track of his master; but Thomas Brown departed on many points of fundamental importance from Reid's

however, chiefly concerned the history of political science, is regarded as the father of modern materialism and emplicism. As occupying the general position of Locke mention may be made of Lucke received. The philosophy of Lucke received a further development in France, where Condlliac sought to expiain the development of humanity by the simple development of the sensations. Then followed the materialism of Heivetius, d'Hoibach, La Mettrie, and others, Including several of the Encyclopedists. In opposition to this materialistic tendency arose the idealism of history Kantian philosophy, Jacobi, took the standpoint of faith in opposition to that of criticism, in order to give theoretic certainty to the postuiates of the practical idealism of Kant becomes also intelled idealism of the lack is give theoretic certainty to the postuiates of the practical idealism of Kant becomes also intelled idealism. 'Ail that Is, is ego'; this is the principle of the Fichtian system; the world is merely phenomenai, consciousness is a phenomenai consciousnes is a clopedists. In opposition to this materiallstic tendency arose the idealism of bination of the doctrine of the ego with Leibnitz and Berkeiey. The theories of Spinozism transformed it into the systematized by Woiff, and from his time to Kant German philosophy assumed no new standpoint. Berkeley (1684–1753), founding on Locke's principle that we are percipient of nothing but our own perceptions and Ideas, argued that the existence of bodies out one of a mind perceiving them is impossible. argued that the existence of bodies out of a mind perceiving them is impossible, and a contradiction in terms. Granting the premises of Berkeley, his conclusions could not be refuted; hut it was reserved for Hume to trace out the uitimate consequences of the Cartesian and Lockian philosophy, and thus, though unintentionally, by a sort of reductio adabsurdum, to produce the great metaphysical revolution of which Reid and Kant were the first movers. The Scottish or 'common sense' school of philosophy, with Reid (1710-96) at its head, has the merit of having first strongly incuicated the necessity of admitting certain principles independent of experience, as the indispensable conditions transitional form from the idealism of Kant to the realism at present prevaient. In opposition to Flchte's subjective idealism, and to Schelling's renewed Spinozism, Herbart (1776–1841) developed a philosophic scheme on the hasis of the realistic element in the Kantian philosophy, as also of Eleatic, Platonic, and Leihnltzian doctrines. After the death of Hegel, Feuerbach, Richter, Strauss, Arnold Ruge, and others developed. followed in the track of his master; but Thomas Brown departed on many points of fundamental importance from Reid's philosophy. The same occasion that gave rise to the Scottish school also produced the philosophy of Immanuel Kant. Kant (1724–1804), who may be justly regarded as the father of the philosophy of the 19th century, sought to bring together into unity the one-sided endeavors of his predecessors in the realistic and idealistic schools. He took up a critical standpoint, and from it instituted an inquiry into the origin of experience or cognition. (See hant.) The abiest opponent of the straus, Arnoid Ruge, and others deveioped, in an extreme manner, Hegelian thought, and recently Hegelianism has counted more adherents than any other system. Next to it has stood the Herbartian school; and more recently the modification of systems through a return to Aristotic or Kant, and the study of philosophy upon its historic side, have occupied the larger number of minds. While resting in part upon the basis of the doctrines of earlier thinkers, Trendelinstituted an inquiry into the origin of enburg, Lotze, and others deveioped, in an extreme manner, Hegelian thought, and recently Hegeiianism has counted more adherents than any other bartian school; and more recently the modification of systems through a return to Aristotic or Kant, and the study of philosophy upon its historic side, have occupied the larger number of minds.

In op-

of leladposed the sensualism and materialism so universal at the beginning of the century. Of these the one was theosophical and the other found expression in the eciectic and spiritualistic school founded by Royer-Collard as the disciple of Reid, and further built up by Cousin, who incorporated into its body of doctrines a number of German philosophical notions. Jouffroy attempted to unlte the philosophy of his predecessor Maine de Biran to that of the Scottish school, and became associated with the school, and became associated with the spiritualistic school, to which also be-long the names of Garnler, Janet, Rémusat, Franck, Jules Simon, and others. This school has contended valiantly against the pantheistic tendencles of the age. Independent systems are those of Pierre Leroux, Lamennals, Jean Reynaud, and Buchez. Materialism has its supporters in Cabanis, who sees in thought only a secretion of the hrain, Broussais, Gall, and others. Positiv-ism, founded by Auguste Comte, num-

bers not a few followers.

In Great Britain the Scottish school had later exponents in Sir James Mack-Intosh (1765–1832) and Sir William Hamllton (1788–1856), the last-named largely influenced in some points of his psychology by Kant. Mansel may be mentioned as a disciple of Hamilton. Ferrier (1808–64) assumed a polemical attitude towards the common-sense school in respect of its fundamental peculiarity, as he viewed it, of absorbing philosophy in the power of exciting to have the power of exciting love. The preparation was frequently associated with magic rites, and the ingredients were frequently of a harmless, fanciful, or disgusting kind. At times, however, poisonous drugs were employed, the death of Lucretius and the madness of Caligula being alike ascribed to philters administered by their wives.

Philbitis (fie-hi'tis; Greek, phleps, phlebos, a vein), inflammation of the veins. It may affect any of the veins of the body, but more into psychology, as well as on mluor detalls of the system. The associational psychology of Hartley, Priestley, and Dr. Darwin found representatives in the 19th century in James Mill (1773-1836) and his son John Stuart Mill (1806-73), who make the principle of association the sole explanation of psychical phenomena. Bain, Grote, and Lewes followed more or less in the same track. Herbert Spencer attempted, and with much success, to widen the general principal spencer at the general princ much success, to widen the general principles of science and philosophy into a universal doctrine of evolution. Among the chief leaders of philosophic thought opposed to the English school of empiricism may be mentioned the names of the late T. H. Green, Hutchison Stirling, and Edward Cairc.. In America, as in England, philosophy has been prosecuted more as an applied science, and in its special relations to morals, politics, and theology. Speculation there has been wldely influenced by Scottish philosophy. Among the best-known names of trans-

posed the sensualism and materialism land, and others. A modified scholastleism, mostly Thomism, prevails in the Catholic seminaries of France, Spain, and Italy. In most of the continental countries German philosophy has exerted no smail influence. In Italy a peculiar philosophical school, represented by Rosmini, Mamlanl, and Giobertl, flour-ished during the 19th century.

Philostratus (fii-os'tra-tus), Flaborn at Lemuos about the middle of the 2d century of our era. He taught rhet-orle at Athens and subsequently at Rome, where he obtained the favor of the emperor Septimius Severus, and he accompanied the empress Julia Domna in her travels. His principal work is his Life of Apollonius of Tyana, supposed by some critics to be a parody on the Gospels. His other works are the Heroica, a history in dlaiogue of the heroes of the Trojan war, Lives of the Sophists, Letters, etc.

Philter (fil'ter), a potion supposed to have the power of exciting

mation of the veins. It may affect any of the veins of the body, hut more usually manifests itself in the parts of the veins in the vicinity of wounds. The disease is indicated by great tenderness, tension, acute pain, and a knotted, cord-like swelling or hardness in the course of a vein or veins, sometimes attended, when the veins are swenty times attended, when the veins are superficial, with discoloration. In many in-stances the inflamed veins secrete pus, and If an artificial issue is not given to it the matter makes its way into the adjoining cellular tissue and forms abscesses, when it is peculiarly dangerous. The causes of the disease are numerous, but usually consist of external injuries of various kinds. Women are peculiarly liable to this disease after parturition.

Phlebotomy (fle-bot'u-ml; Greek, phleps, phlebos, a vein, and temnein, to cut), or VENESECTION, the act of letting blood by opening a vein; a method of treatment formerly applied to almost all diseases, but now chiefly confined to cases of general or atlantic philosophical writers are those of local plethora. Another mode of letting Jonathan Edwards, Ralph Waldo Emerblood is by cupping or by the application, Henry P. Tappan, Francis Way- tion of leeches. It has been one of the

Phlegethon (fleg'e-thon), in the Grecian mythology, a river of fire in the infernai regions.

Phlegmasia Mon, in medicine, a diffuse inflammation of the subcutanediffuse inflammation of the subcutaneous connective tissue in which the pus
has a tendency to spread itself through
the tissues. The name phiegmasia
dolens is given to what is otherwise
known as milk-leg, an aliment occurring
in women after delivery, and consisting
in a very painful swelling of the leg
accompanied hy fever.

Phiogiston (flu-jis'tun), a name appiled, before the time of
Lavoisier, to a hypothetical substance

Lavoisier, to a hypothetical substance supposed to be contained in ail combustible bodies, and constituting the source or element of heat.

Phloridzin (flor-id'zin), a giucoside obtained from the root of the appie, pear, cherry, etc. It destroys the maiarial parasite and is recommended as an antiperiodic in maiarla, but its chief medical use is in testing the functional activity of the kidneys; it producing glycosurla of renal origin, in addition to polyuria.

some of the species are to he met with in Asia. The flowers, which are favorltes ln gardens, are of a purple or violet color, more rarely white or red, with a salver-shaped corolla, and a narrow sub-cylindrical tube longer than the calyx. The tralling kinds are excellent for rock-work.

Phoca, PHOCIDÆ. See Seal.

(fo'kas), a Greek emperor, born in the 6th century, A.D., Phocas of obscure parentage, entered the army in the reign of Mauricius, and rose to be a centurion. At the head of a mutinous army he marched from the Danube to Constantinopie, and on the flight of Mauricius took possession of the throne, 602 A.D. The subsequent murder of Mauricius and his family involved him ln a war with Persia. He was captured and put to death ln 610 by Heraclius the younger and Nicetas, who hesieged Constantinople at the head of an expedition fitted out by Heraclius exarch of dition fitted out by Heracijus, exarch of Africa.

Phocion (fo'shl-un), an Athenian general, and one of the most virtuous characters of antiquity; sup- town of Dora, a little below the promposed to have been born about B. C. 402. ontory of Carmel, being about 120

processes of the medical profession from In the war with Philip of Macedon the the earliest times.

Athenians sent Phocion with some Athenians sent Photion with some troops to Eubea, where he obtained a complete victory over the enemy. Some time after he was despatched to sssist the cities of the Heilespont against Philip, whom he compelied to retire. According to Piutarch he was nominated commender forty-five times without once commander forty-five times without once applying for the office. He always ied a simple life, and cultivated his small farm with his own hands. As the leader of the conservative or arlstocratic party he opposed Demosthenes on the question of war with Phllip of Macedon, his advice, according to Grote, being eminently mischievous to Athens. He subsequently condemned the confederacy against Alexander the Great, and, after Alexander's death (323 B. C.), the war with Anti-pater. On each occasion Phoclon was employed to make terms with the victoemployed to make terms with the victorious Macedonlans; and though he seems to have used his influence with them to mitigate the burdens upon his country, his conduct readily laid him open to a charge of betrayal. He was accordingly put to death by the popular party in 317 B.C., but his remains were shortly afterwards buried at public expense and afterwards buried at public expense and

origin, in addition to polyuria.

Phlox (floks), a genus of perennial herhaceous plants of the natural order Polemonlaceæ, natives for the most part of North America, though some of the species are to be met with hetween Bootia on the east and Dorls and the Local Ozoiæ on the west. The principal rivers were the Cephissus and Pistus, and the principal mountain Parnassus, on which was situated Deiphl with its celebrated oracie. The country is mountained and unproduce country is mountainous and unproductive, the valley of the Cephissus being almost the only fertile tract in it. The Phocians were a hrave and Industrious people, and subsisted chlefly by agriculture. See Phthiotis.

See Apollo. Phœbus.

Phoenicia (fē-nish'l-a), in anclent geography, a country on the coast of Syria, bounded on the east hy Mount Lebanon, and containing the celebrated cities Tyre and Sidon. Phoenicia proper was a tract of country stretching along the eastern shore of the Mediterranean, not much more than 28 miles in length, and little more than 1 mile in average hreadth; Sidon heing situated near its northern, and Tyre not far from its southern boundary. In a wider sense Phœnicla was regarded as beginning on the north with the Island of Aradus, and extending south to the town of Dora, a little below the prom318

It is watered by several streams flowing from Lebanon to the sea, such as the Eieutherus, the Adonis, the Lycus, the Tamyras, the Leontes. The country is fertile in timber, corn, fruits, etc.; and besides the great citles of Sidon and Tyre, it was represently studded with numerous smaller. Ships, which took part in the battle of Salamis. The commerce of Tyre extended widely. It traded in the produce of the whole known world, from the ivory and 'bright iron' and ebony and cotton fabrics of India to the tin from Cornwali and Devorshire. Fishgreat citles of Sidon and Tyre, it was the Tyrians sold fish in Larusalem. The anciently studded with numerous smaller towns, forming aimost an unbroken line along the coast. Among these towns in earlier times were Arvad, Accho. Arka, Tripoiis, Berytus, Sarepta. Dora, etc. Many of the roadsteads or harbors were excellent, but are now silted up.

The question as to the original seat of the Phonicians has received no satisfactory solution; but that, like the Jews, they were Semites by race, is well known. Their immigration to the coast of the Mediterranean helongs to prehistoric times. The settlement of Israei in Canaan did not produce any great or permanent change on Phœnicia. The tribes of Naphtali, Asher, and Dan, to which it was assigned, did not conquer Phœnicia, but occupied only a small per-Phenicia, but occupled only a small portion of it; and the subsequent relations of Israel and Phœnicia were for the most part those of amlty, intercourse, and reciprocal advantage. The wealth and power of the Phoeniclans arose from their command of the sea, and it was their policy not to provoke any of the nations to the east of them, and not to quarrel unnecessarily with Israel, which was their granary. The relation between Hiram and David was probably the company of the sea. but a sample of such international treatles and intercourse. After the division of the Hehrew kingdom Phænicia would naturally cultivate alliance with the Ten Trihes nearest to it, and Ahab married a Phoenician princess. The country was afterwards successively incorporated

ing was also an important industry, and the Tyrians sold fish in Jerusalem. The Pheniclans excelled in the manufacture of the purple dye from the shell-fish murex, abundant on its coasts. The glass of Sidon was no less famous than the Tyrlan dye. Phenicia produced also articles of sliver and gold as well

also articles of silver and gold as well as of brass; its inhabitants were also skilled in architecture and in mining.

The marltime knowledge and experience of Phœnicia led to the plantation of numerous colonies in Cyprus, Rhodes, or numerous colonies in Cyprus, Knodes, and the islands of the Ægean—the Cyclades and Sporades—in Siclly, in Sardinla, the Balearic Islands, and in Spain. The most celebrated of the Phænician colonies, however, was Carthage, in Northern Africa, which extended its sway over the Spanish peninsula and disputed with Rome the supremacy of the Mediterranean

sula and disputed with Rome the supremacy of the Medlterranean.

As was the case in Canaan at the invasion, each Phænlclan city was governed by a king or petty chief. A powerful aristocracy existed in the chief towns, and there were also elective maglstrates, called hy the Romans suffetes, a disguised form of the Hebrew soffet. Sidon, and afterwards Tyre, exercised a hegemony over the other states. The

Sidon, and afterwards Tyre, exercised a hegemony over the other states. The relation of Phœnlela to her colonles does not seem to have been very close. Their rellgion, however, bound the mother country and the colonles in a common worship. Carthage often sent presents to the chief Phœnician god; so did Gades and other settlements.

The religion of the Phœnicians was a species of nature-worship, the objects of adoration heing the sun, moon, and five planets; or in another form it was the worship of male and female reproductive powers—the former represented as Baal and the latter as Baalith, storeth, or Astarte. The god called II, a sort of Phœnician Cronos or Saturn, resembling the Moloch or Milwas afterwards successively incorporated in the Assyrian, Bahylonian, and Persian empires, but the cities retained more or less their independence. It was next conquered hy Alexander the Great, and henceforth simply formed part of Syria.

From a very early period the Phenicians occupied themselves in distant voyages, and they must speedily have reached to a style of substantial shiphulding. Xenophon passes a high eulogy on a Phenician ship; and they were skilled in navigation and the nautical applications of astronomy. Lebanon supplied them with ahundance of timher, and Cyprus gave them all necessary naval equipments, from the keel to the top-sails. In the reign of Pharaoh-Necho these daring navigators even circumnavigated Africa, and the Phenicians furnished Xerxes with 300

The religion of the Phenicians was a species of nature-worshlp, the objects of adoration heing the sun, moon, and five planets; or in another form it was the worship of male and female reproductive powers—the former represented as Baal and the latter as Baalith, a sort of Phenician Cronos or Saturn, resembling the Moloch or Milcom of the Ammonites, had human sacrifices offered to him. Marine deities must have held a prominent place in their themicians was species of nature-worshlp, the objects of adoration heing the sun, moon, and five planets; or in another form it was the worship of male and female reproductive powers—the former represented as Baal and the latter as Baalith, a sort of Phenician Cronos or Saturn, resembling the Moloch or Milcom of the Ammonites, had human sacrifices offered to him. Marine deities must have held a prominent place in their themica

While the wealth and commerce of Phenicia must have brought art and refinement, the people were noted for their dissoluteness. As a people the Phenicians early obtained a reputation for cunning and faithlessness. They were often pirates; they were certainly siave-traders. They purchased slaves from the northern shores of the Black Sea, and they also kidnaped and sold the children of Israel — a practice which brought upon them the denunciations of brought upon them the denunciations of the prophets, and a just retaliation was predicted to fall upon them.

The language of ancient Phonicia was

closely akin to Hebrew. The famous passage in the Pœnulus of Plautus Illustrates the assertion. Of ninety-four words on a tablet discovered at Marsellles in 1845 relating to the sacrificial ritual no less than seventy-four are found in the Old Testament. Coins and seals also disclose the same affinity, as do the numerous inscriptions. Proper names can all be explained in the same way. The invention of letters is often ascribed to the Phænicians, being probably derived from the hieroglyphics of Egypt, some of which were aiphabetic in significance. The Greeks believed that letters had been brought to them from Phænicia by Cadmus. The socalled Caumean letters of the Greek alphabet are A B P A E F I K L M N O II P Z T, the sixth letter F being the digamma, which afterwards disappeared from the Greek alphabet. The names of these letters have no meaning in Greek, but they have each a significance and seals also disclose the same affinity,

Greek, but they have each a significance in Phonician or Hebrew. The affinity of the old Greek letters in form to the Phonician and early Hebrew can be easily traced. The literature of Phonicia has perished. See also Tyre, Sidon, the outer world by means of long breaths. Carthage, etc.

See Flamingo. Phœnicop'terus.

(fē'niks), a fabulous Egyptian bird, about the size of an eagle, with plumage partly red and an eagle, with plumage partly red and partly golden. Of the various stories told of it by Herodotus and others, the most popular is to the effect that the bird, at an age of 500 years, conscious of its approaching death, built a funeral pile of wood and aromatic gums, which it lighted with the fanning of its wings, and rose from the flames with a new and rose from the flames with a new life.

Phœnix, the scientific name of the date-palm genus.

Phœnix, a city of Arizona, and its capital since 1890; also the county seat of Maricopa Co., and the center of the Salt River Irrigation Proj-

ect. It is reached by the Southern Pacific and Santa Fé rallroads, and be-cause of its dry, mild climate, is a favorite winter resort. It is the center of a mining area. Pop. 20,000.

Phœnixville, a borough of Chester Co., Pennsyivania, on the Schuylkiil River at the mouth of French Creek, 28 miles N.w. of Philadelphia. It contains Iron-works of great extent, among the largest in the United States. They produce steel bridges, architectural and structural lron, rails, boilers, etc. There are also sitk-mills, underwear factories, etc. Pop. 10,743.

(fo'las), a genus of marine
Lamelibranchiate blyalves,

forming the type of the family Pholadidee, in which the shell gapes at both ends. The shell, which is of thin white texture, is studded over on its outer surface with numerous rasp-like prominences by means of which the animal excavates, burrows in wood, rocks, indurated clay.

the outer world by means, of long breathing-tubes or siphons with fringed edges. They are popularly known as 'piddocks,' and are eaten on many parts of the British coasts. These molluses appear to possess the power of emitting a phosphorescent light, P. Dactylus, the common special being specially noted the common species, being specially noted on this account.

Phonetics (fō-net'ikz), the science which treats of the various sounds pertaining to human speech, their distinctive characteristics, the voice-mechanism by which they are uttered, and the methods by which they may be hest represented to the events. may be best represented to the eye. Any system of writing is strictly phonetic when by it each different sound is represented by a different character, and the same sound always by the same charac11

Phonocinematograph (fo-no-sin-s-mat'o-graf), an instrument which combines sight and sound in motion pictures. Also called kinctophone (q. v.).

Phonocinematograph.

Phonograph (fö'nu-graf), an instrument by means of which sounds can be permanently registered, and afterwards reproduced from the register. It consists essentially of a curved tube, one end of which is first with a mouthpiece, while the other (about 2 inches in diameter) is cle in with a disk or diaphragm of exceeuingly thin metal. Connected with the center of this diaphragm is a steel point, which, when the sounds are projected on the disk from the mouthpiece, vihrates backwards and forwards. This part of the apparatus is adjusted to a cylinder which rotates on a horizontal axis. On the surface of the cylinder is cut a spiral groove, and on the axis there is a spiral screw of the same pitch, which works in a nut. When the instrument is to be used a piece of tin-foil is gummed around the cylinder, and the steel point is adjusted so as to be just touching the tin-foil and above the line. touching the tin-foil, and above the line of the spiral groove. If some words are now spoken through the mouthpiece, and the cylinder kept rotating either by the hand or by clock-work, a series of small indentations are made on the foil by the vibratory movement of the steei point, and each of these markings has an individual character of its own, due to the various sounds addressed to the mouthpiece. The sounds thus registered are reproduced by approaching the diaphragm and its steel point towards the tin-foli at the point where previously made now cause the steel signals, devised in 1915.

point to rise or fall or otherwise move as the markings pass under it, and the resuit is that the diaphragm is thrown into a state of vibration exactly corresponding to the movements induced by the markings, and thus affects the air around so as to produce sounds, and these vibrations being exactly similar to those originally made by the voice, necessarily reproduce these sounds to the ear as the words at first spoken. These marked strips of foil may be posted to any person with whom the speaker wishes to correspond, and who must, of course have a machine similar. must, of course have a machine similar to that of the sender. The contents of the strips may be reproduced at any iength of time, and repeated until the markings become effaced In Edison's improved phonograph, tunes of wax are used instead of tin-foil, the tubes fitting the cylinder, and the markings being made on the surface of the wax by a fine steei point. The wax cylinders can be shaved by a smail tool fitted to the machine and used several hundred times. The ma-chine has also been improved by fitting a smail electric motor, with a delicate governing device, as motive power. In case electric current is not available, spring motors of ingenious design are used. Machines of this type using wax records have been employed ith signai success in business, for the taking dictation and reporting. ectrotyping and other processes, it is possible to reproduce records in hard rubber which may he used many times without injury. This method is used in the preparation of records of music, dialogues, etc., of which duplicates are desired. Automatic phonographs are to be found Automatic phonographs are to be found in many amusement places, equipped with musical records, which may be operated by the coin-in-the-siot system. Perhaps the most valuable application of the phonograph is in the preservation of sounds impossible to duplicate, such as voices of great singers, and languages of American tribes rapidly becoming extinct American tribes rapidly becoming extinct, and the words of speakers, faithfui in accent and individuality, for future generations.

Phonography (fo-nog ra-ii), a system of writing by which the sounds of a language are accurately represented. The name is generally applied to Pitman's system of shorthand. See Shorthand.

Phonometer (fo-nom'e-ter), an in-strument for ascerit was when the cylinder originally taining the number of vihrations of a started, and then once more setting the given sound in a given space of time. Also cylinder in motion. The indentations an instrument for showing the direction of

(for minks), an ancient Grecian iute or lyre. See Flas, New Zealand. Phorminx Phormium.

Phosphate (fos'fât), in chemistry, the generic term for the saits formed by the union of phosphoric anhydride with bases or water or both. They play a leading part in the chemistry of animai and plant life, the most important in this connection being the phosphate of soda, phosphate of iime, and the hasic phosphate of magnesia. In agriculture the adequate supply of phosphates to plants in the form of phosphates to piants in the form of manures becomes a matter of necessity in all depienlshed soils. Thuse phosphatic manures consist for the most part of bones, ground bones, minerai phosphates (apatite, phosphorite, coproites), basic siag, superphosphates and reduced superphosphates (both prepared by treating booken-up bones with vitriol), bone-ash and phosphatic guano. See also Manures.

cailed also mari Phosphate-rock, caned rock, and phosphate. This material has found in large quantities in South Caro-

mctals. See Bronze. Phosphor-bronze.

Phosphorescence (fos-for-es'ens), the property which certain hodies possess of becoming luminous without undergoing ohvious comhustion. It is sometimes a chemical, sometimes a physical, action. Certain mineral substances exhibit the phenome-non when submitted to insolation, to ineat, to friction, to electricity, or to cleavage. Rain, water-sponts, and me-teoric dust sometimes present a self-luminous appearance. Several vegetathis kind of luminosity; but the most interesting cases of phosphorescence occur in the animal world, the species in which the luminous property has been observed helonging nearly to every main group of the zoölogical series. In some of the lowest life forms and in many of the jelly-fishes the whole surface of plants used by man as food and is a group of the zoulogical series. In some rocks, whose disintegration constitutes of the lowest life forms and in many very fertile soils. It exists also in the of the jelly-fishes the whole surface of plants used by man as food, and is a

the body is phosphorescent; in other organisms the phosphorescent property is localised in certain organs, as in the sea-pens, certain annellds, the giow-worms, fireflies, etc., while many deep-sea fishes have sinining bodies em-bedded in the skin. The phospitores-cence of the sea is produced by the scintlliating or phosphorescent light emitted from the bodies of certain microscopical marine animals, and is well seen on the surface of the ocean at night. It is an interesting fact that phosphorescence is a common feature in the deep-sea animals, which dwei in complete darkness except to the extent that they are themselves abie to illuminate their place of abode. Phosphorescence in animais appears to be a vital process, consisting essentially in the conversion of nervous force (vital energy) into light; just as the same force can be converted by certain fishes into electricity. See Fluorescence.

Phosphoric Acid (fos-for'ik) PH:04), an bone acid usuaiiy obtained by hurning phos-been phoreted hydrogen in atmospheric air or Caro- oxygen. It is also produced by the oxida-saie tion of phosphorous acid, by oxidizing found in large quantities in South Carolina, and Florida, and ground for saie as a fertllizer. Though mines of this rock are found elsewhere, those named are much the richer. The phosphate-rock, belongs to the Eocene formation, though found in post-pliocene basins. It is composed of the remains of fossilized animals, is rich in phosphates and forms an excellent fertilizing material.

Phosphides

(fos'fidz), compounds of phosphorus with one other element, more especially with the mctals.

Phosphorite (fos'for-it), a species of calcareous earth; a subspecies of apatite (which see). It is an amorphous phosphate of lime, and is valuable as a fertillzer.

(fos-for'o-skop). Phosphoroscope an instrument designed to show the phosphorescence of certain bodies that emit light hut for a very short period. By its means many substances hitherto unsuspected of phosphorescence have been proved capable of retaining light for very short periods. The name is also given to a philosophical toy for showing phosphorescent substances in the dark.

Phosphorus (fos 'fo - rus), a solid, non - metallic, combis-

utes the is a

never-falling and important constitu-ent in animal structures. It is manu-factured from bones, which consist in part of phosphate of lime, or from native mineral phosphate of lime. Common tailised. parent and colorless. At common temperatures it is a soft solid, easily cut trician parents in that city early in the with a knife, and the cut surface has a waxy luster; at 108° it fuses, and at 550° is converted into vapor. It is exceedingly inflammable. Exposed to the alr at common temperatures it undergoes slow combustion are solved to the solve the goes slow combustion, emits a white vapor of a peculiar, aliaceous odor, appears luminous in the dark, and is gradually consumed. On this account phosphorus should always be kept under water. A very sight degree of heat is sufficient to inflame phenous in the sufficient to inflame phosphorus in the open air. Gentle pressure between the fingers, friction, or a temperature not much above its point of fusion, kindles it readily. It burns rapidly even in the air, emitting a splendid white light, and cauring intense heat. Its combustion is far more vivid. The product of the perfect combustion of phosphorus is phosphorus pentoxide or phosphoric aninydride (P<sub>2</sub>O<sub>5</sub>), a white solld which readly takes up water, passing into phosphoric acid (which see). Compounds of phosphoric anhydride with basic bodies Phosphorus may be made to combine with most of the metais, forming compounds cailed phosphides. When dissolved in fat oils it forms a solution which he had been been a solution. which is luminous in the dark. It is chiefly used in the preparation of iucifer-matches, and also in the preparation of phosphoric acid. It is of all stimulants the most powerful and diffusible, but on account of its activity highly dangerous. It can be safely administered as a mediclne only in extremely minute doses and with the utmost possible caution. Phosphorus presents a good example of allotropy, in that it can be exhibited in at least one other form, known as In at least one other form, known as red or amorphous phosphorus, presenting completely different properties from common phosphorus. This variety is produced by keeping common phosphorus a long time slightly below the bolling-point. It is a red, hard, brittle substance, not fusible, not poisonous, and not readily inflammable, so that it may be handled with impunity. When heated to the bolling-point it changes back to to the boling-point it changes back to common phosphorus.

of being the most universally learned and accomplished man of his age. He became secretary of state under the emperor Michael III, and contracted an intimacy with the minister Bardas, uncle of the emperor. On the deposition of the patriarch Ignatius, Bardas persuaded the emperor to raise Phopersuaded the emperer to raise Pho-tius to the patriarchal dignity. The in-staliation was recognised by the metropolitans of the patriarchate, but was opposed by Pope Nicholas I, whom Photius soon after excommunicated Photius soon after excommunicated, thereby laying the foundation of the schism between the Eastern and Western churches. But the Emperor Michael having been murdered in 867 by Basii, who was raised to the throne, that prince immediately replaced Ignatius in his office, and banished Photius, who, however, resumed his dignity on the death of Ignatius in 878. On the accession of Leo, son of Basil, to the imperial throne in 886, Photius was again deposed, and banished to a monastery in Armenia, where he died in 891. Photius was an abie ecciesiasticai statesman, and a man of great intellect, erudition, and itterary power. His chief work is the Myriobiblion, which may be described as an extensive review of ancient Greek literature.

Photo-engraving, a common name of many processes, in which the action of light on a sensitized surface is made to change the nature of the parties of the pa the nature or condition of the substance of the plate or its coating, so that it may, by processes, be made to afford a printing surface corresponding to the original from which the photographic image was derived.

'fo-tog'ra-fi; Greek, Photography and grapho, I write) is the art of taking representations of objects by the action of light through the lenses of the camera obscura on a previously prepared surface. It is of comparatively recent origin, though, as early as the commencement of the 19th century, Mr. Thomas Wedge-wood had discovered a method of copying Phosphorus Acid (fos'fo-rus; wood had discovered a method of copying H.PO.), an paintings on glass and of making profiles acid produced hy exposing sticks of phos- by the action of light upon nitrate of

About 1814 M. Nicephore Niepce, in France, discovered a method of producing, by means of the camera obscura, pictures on plates of metal coated with asphaltum, and at the same time of rendering them permanent. In 1839 Daguerre announced the discovery of the daguerreotype. (See Daguerreotype Process.) In the meantime, bowever, Mr. Henry Fox Talbot bad discovered the process of obtaining pictures in the camera by the agency of light on paper coated with chloride and nitrate of silver. coated with chloride and nltrate of silver, and also of fixing them when so obtained. Mr. Talbot gave the name of calotype to bls process (from kalos, fair, and tupos or typos, an impression), and subsequently introduced various improvements on lt, and took out several patents, the earliest being in 1841. It has also been called after him talbotype, in the same manner as daguerreotype from Daguerre. Numerous modifications of the calotype were introduced, besides various new photographic processes, the most important being those of M. Niepce de St. Victor and Mr. Scott Archer, the former of whom introduced the use of albumen and the latter that of collodion as a substitute for paper, these substances being in either case thinly spread over a plate of glass. Mr. Archer perfected the wet collodion process, and published full working details in 1851. Collodion dry plates were introduced by Dr. Hill Norris in 1856; collodion emulsion dry plates by Messrs. Sayce and Bolton in 1864. In 1871 Dr. R. L. Maddox discovered that glass plates could be coated with an emulslon consisting of bromide of silver contained in gelatine. This gelatine dry-plate process was improved by Bennett in 1878, and came into general use about 1880. It is now almost the only process employed in ordinary photography.

Photographs may be either negative or

Photographs may be either negative or positive. Negative photographs are produced in the camera, and exhibit the lights and shades contrary to nature, that is, the lights dark and shades white. In order to obtain prints or positives several methods are used. In silver printing a paper sensitized by heing floated on a solution of albumen mixed with common salt, and then on a solution of nitrate of silver, is placed in close contact with the negative in a printing-frame, and exposed to light until the silver compounds have become sufficiently darkened. It is afterwards toned, fixed, and washed. In the platinotype process the paper is sensitized by ferric oxalate and a double salt of potassium and platinum. The latter process requires no toning, and produces

a permanent print.

In 1855 M. Poitevin devised a process by which pictures of great beauty and permanence were obtained. He combined carbon or any other pigment, in a fine state of division, with gelatine, starch, or gum, applied it over the surface of bls paper, dried it, submitted it to the action of light under a photographic negative, and so first produced what is now usually called a carbon print. In 1864 carbon-printing was brought to a bigh state of perfection by Mr. Swan, of Newcastle, whose plan was to prepare a solution of gelatine and bichromate of potash (the latter being the sensitizing agent), mixed with some black pigment, and apply the mixture as a coating to a sheet of paper, and print his positives on the black cake, or tissue as it is called, thus produced. One of the most important discoveries in connection with photographic printing was that of Mr. Walter Woodbury. By his process the hardened tissue is brought into contact with a plate of type metal under considerable pressure. The plate takes the impression of the relief, and pictures are printed from it instead of from the raised tissue. The autotype process, invented by Mr. Johnson, is a more simple and ready method of carbon-printing than the carbon process. process proper, but the principles involved are the same. It is used for book voived are the same. It is used for book illustrations and picture reproduction. Photolithography, the process of reproducing copies of a photograph from a lithographic stone, was discovered by Asser, of Amsterdam, in 1859. Various modes of multiplying photographic pictures by photolithography have been successfully tried. A common mode is to cessfully tried. A common mode is to take a print on paper sensitized with gelatine and bicbromate of potassium, and to ink it with a suitable oily ink. This ink adberes to the pai's where the gelatine has been acted on by light and has become insoluble, but where the gelatine is still soluble the ink cau be easily washed still soluble the ink cau be easily washed off. It is then transferred to a lithographic stone in the usual way. In photozincography the process consists in projecting an impression on a plate of prepared zinc by photography and then engraving it by etching with acids, so that copies can be printed from the plate. In 1887 it was announced that Mr. Mayall had discovered the secret of tak-Mayall had discovered the secret of taking photographs in natural colors, and since then much progress bas been made in this direction. While colors cannot be directly reproduced, interesting and effective indirect methods bave been discovered, and the problem is practically solved. Brilliant photographs of spectra have been produced, and photography has e

ment of photography in connection with the microscope has been of great assistance in chemistry and hiology. Its application in the various processes of bookillustration has also been very successful. Photography hy means of artificial light has also been brought to great perfection.

become a highly important agent in Photography is now a scientific and fashionable pastime, and men and women amateurs in many cases excel professionals. Photographic societies exist in most large towns, the object being the advancement or photography through the experiments and research of members. who include the leading amateur photographers. A rapid succession of photographs of an event is utilized in the popular moving pictures. When shown rapidly they yield virtually an uninterrupted reproduction.

(fo'tu-gra-vūr), Photogravure process of engraving in which hy the aid of photography subjects are reproduced as plates suited for printing in a copper-plate press. The process known as Heliogravure (which see) is essentially the same.

Photoheliograph (fō-tō-hēi'i-u-graf), an instrument for observing transits of Venus and other soiar phenomena, consisting of a telescope mounted for photography on an equatorial stand and moved hy suitable clockwork.

Photolithography. See Photogra-Photometer (fō-tom'e-ter), an instrument intended to in-

dicate relative quantities of light, as in a cloudy or bright day, or to enable two light-giving hodies to be compared. Photometers depend on one or other of the two principles, that the eye can distinguish whether two adjacent surfaces are equally illuminated, and whether two contiguous shadows have the same depth. Benson's photometer is hased on the former principie, Rumford's on the latter. The common unit for comparison is the light emitted by a sperm-candie hurning 120 grains of spermaceti per hour, other lights heing said to have the intensity of so many candles. Improved forms of photometers for more easily obtaining the illuminating power produced by coal-gas and the electric light have recently been introduced.

Photophone (fo'tu-fan), an instrument invented in 1880 by Aiexander Graham Beil, which resemhies the telephone, except that it trans-mits sounds by means of a beam of light instead of the counecting wire of the tele-phone. The success of the instrument depends upon a peculiar property of the rare metal selenium, that, namely, of offering more or less opposition to the passage of electricity according as it is acted upon or not by light. In its simplest form the apparatus consists at the receiving end of a plane mirror of some flexible material (such as silvered mica)

upon which a beam of light is concentrated, and the voice of a speaker directed against the back of this mirror throws the beam of light reflected from its surface into undulations which are received on a parabolic reflector at the other end, and are centered on a sensitive selenium cell in connection with a telephone, which reproduces in articulate speech the nudulations set up in the beam of light, by the voice of the speaker.

Photosphere (fö'tu-sfèr), the iuminous envelope, supposed to consist of incandescent matter, surrounding the sun. See Sun.

surrounding the sun. See Sun.

Photo-telegraphy (fō-tō-tē-ieg'ratransmission of facsimiles of photographs,
drawings, etc.; facsimile telegraphy.

physiologists that in animals a certain character and intelligence seemed to accompany a certain formation and size of skull. Lavater, in his system of physiognomy, went further than this, and gave to particular shapes of the head certain powers and passions: the conical head he terms religious; the narrow, retreating front, weak-minded; the broad neck, salacious, etc. But it was reserved to Drs. Gall and Spurzheim to expand this germ of doctrine into a minute system, and to map out the whole cranlum into small sections, each section being the dwelling-place of a certain faculty, propensity, or sentiment. Gall first started this so-called science; but to Spurzheim it is mainly indebted for its systematic arrangement, and to Dr.

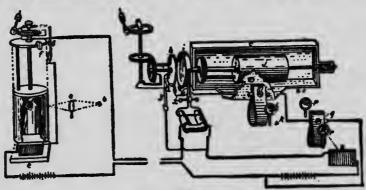

Photo-telegraphy.

Korn's apparatus for transmitting pictures by telegraph, using a selenium cell.

Photozincography. See Photography. Phragmites (frag-mi'tez), a genus of large grasses widely spread, and usually known as reeds. P. commūnis, the common reed, grows from six to ten feet high, on the borders of lakes and rivers.

Phrenology (fre-noi'ō-ji; Greek, phrēn, mind, logos, discourse), the term applied to the psychological theories of Gall and Spurzheim, founded upon (1) the discovery that the brain, as the organ of the mind, is not so much a single organ as a complex congeries of organs; and (2) observations as to the existence of a certain correspondence between the aptitudes of the individual and the configuration of his skull. Phrenology may therefore be regarded as a development, partly scientific and partly empirical, of the general idea that a correspondence exists between the physical structure and the psychical and mental traits of every individual man or animal. It was iong ago observed by

Combe, of Edinburgh, for its advocacy. Gall commenced giving private lectures on the subject in 1796. In 1800 he was joined by Spurzheim, who continued his colleague till 1813, both conducting their researches in common, and traveling together from place to place. At Paris their theories were investigated by a commission of the Institute of France, the result being an unfavorable report drawn up by the celebrated Cuvier. In 1814 Spurzheim came to Britain, where his lectures gained many disciples, among others George Combe, of Edinburgh, one of the best expounders and defenders of phrenology which it can boast. Spurzheim eventually went to America, where he died in 1832.

So far as phrenology was scientific, it undoubtedly was one cause which led to the minute anatomical investigations to which the brain has latterly been subjected; and Gall and Spurzhelm have high claims to be regarded as anatomical discoverers and pioneers. Previous to their dissections the brain had generally

lica)

to

been regarded as a single organ rather than a complex congeries of organs. Gall's view of the physiology of the brain was, that the convolutions are distinct nervous centers, each having its own special activity; that the frontal lobes are occupled by the perceptive group of centers; the superior lobes by the moral and æsthetic groups; the inferior lobes by the group mainly concerned in the nutrition and adaptation of the animal to external conditions; and the posterior lobes to the social instincts. To a considerable extent these views have been pronounced to be well founded by later specialists, and thus the leading positions of Gall and Spurzheim have taken a place in scientific psychology as represented by Bain, Carpenter, Ferrier, Wagner, Huschke, and others.

The empirical side of phrenology, sometimes called *craniology*, rests upon the assumption that the relative development of the centers of the brain can be accurately determined by an external examination of the protuberances and depressions of the skull. Craniology is admitted to have a certain degree of foundation in the general truths of physiclogy, but it cannot pretend to scientific exactness or well-reasoned theory, and in he hands of those who know it best it usually makes no such claim. Its conclusions, like its data, are uncertain and general, because in attempting to delineate a man mentally, morally, and psychically, there are many things other than the external shape of the skull which have to be taken into account, and also many things of essential importance of which it is impossible to take account. For example, the cranium may be small, and yet, owing to the depth of the furrows, the cortex or thinking membrane of the brain may be large; on the other hand, owing to the superficial nature of the furrows, a large cranium may co-exist with a very limited development of cortex. Such a fact as this, it is obvious, is unverifiable in any special instance, except a post mortem examination be made.

Phrygia (frij'i-à), in ancient geography a reglon comprising the western central part of Asia Minor, containing the citles Apamea, Laodicea, and Colossæ. The inhabitants were early civilized, and paid much attention to grazing and tillage. The early history of Phrygia is mythological. Several of its kings are mentioned of the names of Gordius and Midas. On the death of Adrasfus (B.C. 560) the royal family of Phrygia became extinct, and the kingdom became a province of Lydia. It after-

been regarded as a single organ rather wards formed a part of the Persian, and than a complex congeries of organs, still later of the Roman Empire.

Phryne (fri'në), a famous courtesan of Greece, mistress of Praxiteles, who employed her as a model for his statues of Venus. She offered to rebuild Thebes, if the inscription 'Alexander destroyed this city, and the courtesan Paryne restored it,' be put upon the walls; but the offer was rejected.

Phthiotis (thi-o'tis), a district of ancient Greece in the south of Thessaly, now forming with Phocis a nomarchy of Greece. Pop. 128,440.

Phthisis (thi'sis). See Consumption.

Phycology (fi-kol'u-ji), that department of botany which treats of the algo or seaweeds.

Phylacuery (fi-lak'tér-i), among the Jews a strip of parchment inscribed with certain texts from the Old Testament, and enclosed within a small leathern case, which was fastened with straps on the forehead just above and between the eyes, and on the left arm near the region of the heart. The four passages inscribed upon the phylactery were Ex., xiii, 1-10, 11-16; Deut., vi, 4-9; xi, 18-21. The custom was founded on a literal interpretation of Ex., xiii, 16; Deut., vi, 8; xi, 18. Phylacterles are the 'prayer-thongs' of the modern Jews. In their origin they were regarded as amulets, which protected the wearer from the power of demons, and hence their name, which is from the Greek phulassein, to guard.

Phyllium. See Leaf-insects.

Phyllodium (fi-iō'di-um), in botany, the name given to a leaf-stalk when it becomes developed into a flattened expansion like a leaf, as in some Australian species of acacia and certain other plants.

Phyllopoda (fil-op'u-da; 'leaf-footed'), an order of Crustacea possessing numerous feet, numbering eight pairs at least, the first pair being natatory in character. The feet are of foliaceous or leaf-like structure, and are provided with branchial appendages, adapted to subserve the breathing or respiratory function. The carapace, or shelly covering protecting the head and chest, may be well developed, or the body may be destitute of a covering. In their development the Phyllopoda pass through a metamorphosis; and in their earliest state the embryos appear as in the 'nanplius' form (see Nauplius). Aii the Phyliopoda are of small size. The order is represented by

the familiar 'falry shrlmps' (Chirocophalus), met with ln fresh-water ponds, and the curious 'brine shrimps' (Artemia), found ln the brlne-pans of saltworks, and ln the salt lakes of both the Old and New Worlds. The Phyllopoda are of high Interest to the palæontologist, on account of the affinitles they present to the extlnct trilohites (see Trilohite). The Phyllopoda themselves are represented as fossils in the Palæozoic rocks. Phyllostomidæ (fil-os-tom'i-dē), the vampire hats, a family of insectivorous bats. See Vampire Bat.

Phylloxera (fil-ok-se'ra), a genus of plant-lice, family Aphidae, order Hemlptera. The type of the genus is Phylloxera quercus, a species which lives upon oak-trees; but the Phylloxera vastatrix, or grape Phylloxera, a species which injuriously affects the ripe. species which injuriously affects the vine, has attracted 30 much attention of late years that it has come to be known as the Phylloxera. It presents Itself in two types, the one gall-inhabiting (gallicola), and the other root-inhabiting (radicola). Its proper home is North America, where It was known early in the history of grape culture, and where it doubtless exlsted on wild vines from time immemorial. It was discovered in England in 1863, and about the same time it made its appearance in Ernner, where it comits appearance in France, where it committed great ravages, inflicting immense loss upon the owners of vineyards. Widening its area not only by natural means, hut also by commerce in vines and cut-tings, it was carried from infected to non-infected districts, and spread to Spain, Portugal, Switzerland, Austrla, Prussla, and to all the grape-growing countries of Europe. Only where the soll was of a sandy nature did the vineyards escape. In 1885 its presence was discovered in Australia, at the Cape of Good Hope, and in Algeria; and, generally speaking, it has now obtained a footbold, at least in restricted localities, in every country where the grape-vine is cultivated. Vines attacked by Phylloxera generally show external signs the second year of attack in a sickly yellowish appearance of the fo lage and in stunted growth, and the third par they frequently perish, all the finer roots having decayed and wasted away. Many remedies have been proposed, but none is universally practicable or satisfactory.

Phylogeny (fi-loj'e-nl), a term applied to the evolution or genealogical history of a race or tribe. It is used in contrast to ontogeny, which are individual.

Physalia (fi-sā'll-a), a genus of marlne animals of the class Hydrozoa, of the subclass Slphonophora. The P. Atlantica is known by

nophora. The P. Atlantica is known by
the name of the Portuguese man - of - war.
These hydrozoa are
characterized by the
presence of one or
more large air-sacs,
by which they float
on the surface of the
ocean. Numerous tentacles depend from
the under side, one
class short and the
other long. The
shorter are the nutritive individuals of the
colony, the longer,
which in a Physalia
5 or 6 inches long
are capable of being
extended to 12 or 18

Physalia Atlantica (Portuguese man-of-war).

feet, possess a remarkable stinging power, and are probably used to stun their prey.

Physeter (fi'so-tir). See Sperm-whale.

Physical Geography embraces the geography which treats of the surface of the earth, or of any part of it as regards lts natural features and conformation, the changes that are constantly taking place and that have formerly taken place so as to produce the features now existing; lt points out the natural divisions of the earth into land and water, continents, islands, rivers, seas, oceans, etc.; treating of the external configuration of mountains, valleys, coasts, etc.; and of the relation and peculiarities of different portions of the water area, including currents, wave-action, depth of the sea, salt and fresh water lakes, the drainage of countries, etc. The atmosphere in lts larger features is also considered, including the questions of climate, winds, storms, rainfall, and meteorology generally. Finally It takes up various questions connected with the organic life of the globe, more especially the distribution of animals and plants, and their relation to their environment; tracing the influence of climate, soil, natural harriers or channels of communication, etc., upon the growth and spread of plants and animals. including in the latter the various races of man. The field of physical geography of man. The field of physical geography is thus by no means easy to confine within strict limits, as it is so closely connected at various points with geology, mineralogy, botany and zoölogy, chem-lstry, ethnology, etc. The term Physical er,

owes its origin to the exertions of Thomas Linacre, one of the physicians of Henry VIII, who, through the influence of Cardinal Wolsey, obtained in 1518 from that monarch letters patent incorporating himself with certain other physicians named, and all other men of the same faculty in London, as one body. Various privileges were accorded to them, the chief of which was that of prohibiting any one from practicing as a physician in London, or within a circuit of 7 miles round lt, unless he had first obtained a license from this corporation. A charter license from this corporation. A charter granted four years later confirmed the privileges of the body, except that graduates of Oxford and Cambridge were permitted to practice within the jurisdiction of the college without previously being examined by it. Various charters have been granted to the body subsequently, but since the passing of the quently, but since the passing of the Medical Act of 1858, the license of the college is not necessary to those practicing in London or within 7 miles round.

Physick (fis'ik), Philip Sing, sur-Physick geon, was born at Philade!phia, Pennsylvania, in 1768. He was graduated at the University of Pennsylvania in 1785 and in 1791 was licensed by the Royal College of Surgeons in London. In 1805 he became Professor of Surgery in the University of Pennsylvania; in 1825 was elected member of the vania; in 1825 was elected member of the French Academy of Medicine, and In 1836 honorary fellow of the Royal Med-ical and Chirurgical Society of London. One of bis most brilliant operations was that of enterotomy on Chief-Justice Marshall, which resulted in the removal of over 1000 calculi and a perfect cure. He introduced numerous valuable instru-ments and improved modifications of others, and applied novel methods of treatment. His skill brought bim the tltle of the 'father of American surgery.' He died in 1837.

Physic-nut, the seed of the Curcas purgans (Jatropha purgans), or the plant liself, a shrub helonging to the natural order Euphorbiaceæ, a native of intertropical countries, principally the East and West Indies. The seeds have acquired the name in virtue of their strong emetic and purgative properties, due to a fixed oil which resides principally in the embays. principally in the embryo. This oil is expressed and used in medicine ander the

geography is often replaced by Physicsraphy (which see).

ROYAL COLLEGE OF Curcas multifidus, a native of the same genus, the Curcas multifidus, a native of the same ones its origin to the exertions of Thomas called Oil of Pinhoen, and is similar in its properties to Jatropha-oil.

Physics (from Greek, physis, nature), or NATURAL PHILOSOPHY, is the study of the phenomena of the material world, or of the laws and properties of matter; more restrictedly it treats of the properties of bodies as bodies, and of the phenomena produced by the action of the various forces on matter in the mass. It thus has as its chief hranches the subjects dynamics, hydrostatics, heat, light, sound, electricity, and magnetism. (See the different articles.)

Physiognomy (fiz-i-og'nu-mi), the teaches the means of judging of character from the countenance. Aristotle is the first who is known to have made any attempts in physiognomy. He observed that each animal has a special predominant instinct; as the fox cunning, the wolf ferocity, and so forth, and he thence concluded that men whose features resemble those of certain animals will have similar qualities to those animals. Baptista della Porta, in his work De Humana Physiognomia (1586), revived this theory and carried it out further. theory was adopted and Illustrated by the French painter Lebrun, in the next century, and by Tischbein, a German painter of the 18th century. The physiologist Camper sought new data in a comparison of the heads of different types of the human species, and in attempting to deduce the degree of intelligence belonging to each type from the size of the facial angle. Lavater was the first to develop an elaborate system of physiognomy, the scope of which he enlarged so as to include all the relations between physical and moral nature of man. Lavater.) It is a subject of great interest, but one must be on his guard against a general application of the rules which experience seems to have furnished him. Physiography (fiz-i-og'ra-fi), a term often used as equivalent to physical geography (which see); hut otherwise used to embrace the aggregate of Information necessary to be

study of physical geography, or as an introduction to the study of naturand its forces. same as Bestiary. Physiologus, See Bestiaires. name of Jatropha-oil, for the same purposes has croton-oil, although it is less powerful. The name of French or Spanence, the department of inquiry which

acquired as a preliminary to the thorough

investigates the functions of living beings. In its wide sense the living functions of both animals and piants come within the scope of physiology, this division of the subject being comprehended under the terms comparative physiology and animal and vegetable physiology. When more specially applied to the investigation of the functions in man the appellation human physiology is applied to the science. The importance of physiological inquiry in connection with the observation of diseased conditions cannot be overrated. The knowledge of healthy functions is absolutely necessary for the perfect understanding of diseased conditions; and the science of pathology, dealing with the causes and progress of diseases, may in this way be said to arise from, and to depend upon, physiological inquiry. Physiology in itself thus forms a link connecting together the various branches of natural history or biology and those sciences which are more specially included within a medical curriculum. The history of scientific physiology may be said to begin with Aristotle (384-322 B.C.), who attained no mean knowledge of the subject. The Alexandrian school, flourishing about 280 B.C. under the Ptolemies, and represented by Erasistratus, Herophilus, and others, obtained greater opportunities for the acquirement of physiological knowledge through the investigation of the bodies of criminals who had been executed. Erasistratus thus threw much light on the nervous system and lts physiology; whilst Herophllus made important observations ou the pulse, and in addition discovered the lacteal or absorbent vessels and the de-pression in the back of the skull formed by the blood sinuses of the brain and called the torcular Herophili, or 'winepress of Herophilus.'

Congress (Therapeutics).

In the introduction and extensive use of the experimental mode of investigation in physiology; and of eiaborate and delicate Instruments and apparatus, such as the sphygmograph, or pulse-recorder; the ophthalmoscope; the laryngoscope; and the microscope. The different de-partments of physiology may be enumer-ated as comprehending the investigation of the three great functions which every living being performs, namely (1) nutri-tion, including all that pertains to digestion, the circulation, and respiration; (2) innervation, comprising the functions performed by the nervous system; (3) reproduction, which ensures the continuation of the species and includes also the phenomena of development. See the articles Digestion, Respiration, Skin, Eye, Ear, Larynx, Tongue, etc.

Phytolacca (ff-to-lak'ka), a genus of tropical or subtropical herbaceous plants, type of the nat. order Phytoloccaceæ. One species is the Amer-ican pokeweed (which see).

Phytopathology (fi-to-pa-thol'o-ji) oLOGY, the science of the diseases of plants, comprising knowledge of the symptoms, course, causes and remedies of the maladies which threaten the life of plants or which result in admirable control of the maladies. or which result in undesirable abnormalities. In its systematized form, as a branch of botanical study, it is of comparatively recent date. The subject first received special attention about 1850, though references to blights and mildews occur in the Bible and other early literature. Phytopathology covers several branches of study: (1) The observation and description of symptoms (Diagnosis); (2) the study of causes of disease (Aetiology); (3) the practice of preventive or

ress of Herophilus.'

After this there was a period of decline, but Galen, living in the 2d century after Christ, again raised the science to a respectable position, and effected a vast advance and improvement in physiological knowledge. The systems which succeeded Galen and his times consisted, until about 1543, of absurd speculations and theories, conducive in no respect to the advance of true knowledge. In 1543 Vesalius paved true knowledge. In 1543 Vesalius paved Romanesque style (mostly built between Romanesque style the way towards the more scientific epochs Romanesque style (mostly built between of modern times by his investigations into the anatomy and structure of the human town-house, of the 13th century, one of frame. In 1619 Harvey, the 'father of the finest structures of its kind; and the modern physiology, discovered the circu- Palazzo Farnese (now used as barracks). lation of the blood. Since this time the Piacenza is an important railway center history of physiology has gone hand in with manufactures. It was originally a hand with the general history of anatomy Roman colony and was founded in 218 (which see). One noteworthy peculiarity B.C. Between 997 and 1035 it was govof modern physiological research consists erned by its bishops. In 1447 it was

OV. Was captured and sacked by Francesco by an Italian of Padua, named Barto-Sforza; and in 1545 it was united with lommeo Cristofaii, about 1711. Among l'arma to form an hereditary duchy for the principal improvers of the pianoforte Pieriuigi Farnesc, son of l'ope l'aul III., are Sebastian Erard, the founder of the Pop. 39,658.—The province beiongs to the basin of the Po. and is generally celebrated firm still in existence; Roller et Blanchet, the French firm which introfertile; area, 965 sq. miles; pop. 245,126.

Pia Mater (pi'a mă'têr), one of the membranes investing the brain. See Brain. the brain. See Brain.

(pi-an'o; Italian), soft, iow; Piano used in muslc in contradistinctlon to forte. Pianissimo, the superiative of piano.

(pi-an'u-for-te), or PIANO, a musical Pianoforte stringed instrument, the strings of which are extended over bridges rising on the sounding-board, and are made to vibrate by means of small felted hammers, which are put in motion hy keys, and where a continued sound is not intended to be produced have their sound deadened immediately after the touch of the keys hy means of leathern dampers. Its name is compounded of two stalian words sig-nifying soft and strong, and it was so called in contradistinction to the harpsichord, the instrument which it superseded, and which did not permit of the strength of the notes heing increased and diminished at will. The mechanism hy which the movement of the keys is conveyed to the strings is called the action, and there is no part of the pianoforte in which the variations are more numerous. There are usually three strings in of steel wire. The lowest notes have their strings wound round with a double coil of hrass wire, and those next above with a single coil. Pianofortes are either in the form of the grand piano, in which the strings lie in the direction of the keys, or they have the strings stretched vertically perpendicular to the keys, which is now the most common form, and constitutes the upright piano. Recently a variety called the upright grand has also been introduced. Grand pianos are used as concert instruments, and have the greatest compass and strength. The common compass of the piano at present in six and seven-eighths or seven octaves.

182.

191/at), John James, poet, born at Milton, Indiana, in 1835.

He engaged in journalism, became clerk of the United States Treasury and of the House of Representatives, and was consul at Cork, Ireland, 1882-94. He published Poems by Two Friends (with Home, and other volumes of verse.—

SARAH M. B. PIATT, his wife, born in Acentucky in 1836, was also a poet of merit, and publish d A Woman's Poems, A Voyage to the Fortunate Isles, etc.

Piauhi (pi'at), John James, poet, born at Milton, Indiana, in 1835.

He engaged in journalism, became clerk of the United States Treasury and of the House of Representatives, and was consul at Cork, Ireland, 1882-94. He published Poems by Two Friends (with Mome, and other volumes of verse.—

SARAH M. B. PIATT, his wife, born in Acentucky in 1836, was also a poet of merit, and publish d A Woman's Poems, A Voyage to the Fortunate Isles, etc.

Piauhi (pi'at), John James, poet, born at Milton, Indiana, in 1835. is six and seven-eighths or seven octaves.

Piarists. Catholic religious order, Piana dei Greci (pē-ii'nā de-i-grā'- devoted to the gratuitous instruction of chē), a town in youth, instituted at Rome, about the end Sicily, in the province and 10 miles of the 16th century. The Piarists ress. s. w. of the city of Palermo. Pop. semble the Jesuits in their costume, and in their devotion to the service of the church and to education; but they do not meddle in political matters. Italy, Austria, Hungary, and Spain have been the chief seats of their activity.

Piassaba (pi-as-sa'ba), or Piassa'va, a strong vegetable fiber imported from Brazii, and largely used for making brooms. It is chiefly obtained from palms such as Attalea funifera and Leopoldinia piassaba. The fiber proceeds from the decaying leaves, the petioles of which separate at the base into long, coarse, pendulous fringes. It was first utilized in England, and the consumption is now large. Other European countries also consume considerable quantities.

Piastre (pi-as'tr), a name first applied to a Spanish coin, which, about the middle of the 16th century, obtained almost universal currency. The Spanish plastre had in later years the value of about 96 cents. The Turkish piastre, originally worth about 84 cents, has now declined in value to about 4 cents in Turkey and 5 cents in Egypt. ous. There are usually three strings in the pianoforte for each note in the higher and middle octaves, two in the lower, and one in the lowest notes. The strings are a large trade in grain and timber. Pop. 17,391.

coast-line is not above 10 miles in length. The soil, generally composed of alluvlum, is of great natural fertility; but there is very little agriculture. The rearing of cattle, esteemed the best in Brazil, constitutes the majorial section. stitutes the principal source of wealth. Capitai, Therezina; port, Parnahyba. Pop. 834,328.

Piazza (pl-as'a; Italian), in archi-tecture, is a square or other open space surrounded by buildings. The term is frequently, but improperly, used to signify an arcaded or colonnaded walk. Piazza-Armeri'na, a town of Italy, ln Slciiy, province of Caitanissetta, and 18 miles E. S. E. of the town of Caltanissetta, said to have been founded by Greeks from Platsea. Pop. (1910) 32,070. town of

Piazzi, GIUSEPPE, an Italian astron-omer, born in 1746; died in 1826. In 1780 he became professor of mathematics at Palermo, where he pro-moted the establishment of an observatory and compiled his Catalogue of the Stare. January 1, 1801, he discovered the planet or asterold Ceres, which opened the way

for the discovery of so many others.

Pibroch (pë'broh), a wild, irregular species of music peculiar to the Highlands of Scotland. It is performed on a bagpipe, and adapted to provide on a paging and particular to the second paging and particular to the second paging and particular to the second paging and excite or assuage passion, and particularly to arouse a martial spirit among troops going to battle. The pihroch produces by imitative sounds the different phases of a battle—the march, the confilct, the flight, the pursuit, and the lament for the falien.

(pi'ka), the name of a standard size of type. See Printing. the generic name of the mag-Pica, pies.

a depraved form of appetite.

Pica, See Appetite.

Picard (pi-kär), JEAN, a French
astronomer, born in 1620; died
astronomer, became Gassendi's French successor in the chair of astronomy in the Royal Coilege of France. The measurement of an arc of the meridian is the work by which Picard is now chiefly known—a measurement historically important in the science of astronomy, as it furnished Newton with the means of verifying his theory of gravitation.

Picard, Louis Benoer, a French writer of comedies, born in 1769; died in 1828. Before he was quite eighteen he became an actor, and aimost as early he began to write for the stage, his first play being Le Badinage Dangereus (1789). On account of his skilful de-lineation of character, he was called by the French Lo petit Melière. He was the

author of more than seventy larger and smaller pleces, besides several romances.

Picardy (pik'ar-dl), formerly a province of France, in the rorthern part of the kingdom, lying between the British Channel, Normandy, a Article normalistical among the department. tols, now divided among the departments of Pas-de-Caials, Somme, Alsne, Oise, and

Nord. The capital was Amiens.

Piccini (pit-che'ne), Niccolo, an
Italian musical composer, born in 1728; died in 1800. He composed comic and serious operas, chiefly for the stages of Rome and Naples, with such success that for many years he was without a rival in Italy. In 1776 he accepted an invitation, on very favorable terms, from the French court, and went to Paris, where he engaged in the famous musical contest with Gluck. (See Gluck.) In his later years he fell into misfortunes. He wrote over 150 operas, besides nu-

merous oratorios and cantatas.

Piccolo (plk'u-lo; Italian, little), a
small flute having the same compass as the ordinary flute, but pltched an octave higher.

Piccolomini (pik-u-lom'l-ni), a dis-tinguished Siennese famlly, still flourishing in Itaiy in two branches. The two most celebrated members are: — 1. ÆNEAS SYLVIUS BARTHOLOMÆUS, afterwards Pope Pius II. (See Pope Pius II.) — 2. OCTAVIO, a grand-nephew of the first, born in 1599; died in Vienna in 1656. He served in the armies of the German emperor, and became one of the distingulshed generals in the Thirty Years' war. He was a favorite of Walienstein, who entrusted him with a knowledge of his projects, when he purposed to attack the emperor. In spite of this he made himseif the chief instrument of Waiienstein's overthrow, and after the latter's assassination (1634) was rewarded with a portion of his estates. He is one of the principal characters in Schliier's drama of Wallenstein, to the second part of which he gives the titie. His son Max, who appears in the same play, is an invention of the poet's. (pis), a small East Indian coln. Pice

value about 1 cent. Pichegru (pēsh-grü), CHARLES, a Arbois, department of Jura, in 1761. Pichegru He was for some time a tutor at the College of Brienne, but soon exchanged this profession for that of a soldier. After the outbreak of the French Revolution he rose rapidiy; was commanderin-chief of the army of the Rhine in 1793, and of the army of the north ln 1794; subjugated Holiand, and entered Ametordam in January, 1795. was now at the height of his fame, and was honored by the convention with the title of savior of his country; but, disgusted with the anarchical state of affairs then prevailing in the capital, he entered into negotiations with the Bourbons, and became the soul of the party hostile to the Revolution. Having been proscribed in consequence of the events of the 18th Fructidor (September 4, 1797), he was transported to Cayenne, but the year foilowing escaped to England, where he entered into a conspiracy with George Cadoudai to assassinate Napoleon. Having gone to Paris for this purpose, he was captured by the police, and committed to the Temple prison, where he was found strangled on the 6th of April, 1804.

Pichincha (pē-chēn'chā), a volcano of Ecuador, in the West-ern Cordillera, northwest of Quito; height, 15,560 feet. It gives name to a province of Ecuador; capital, Quito.

See Pitchurim. Pichurim Beans.

Picidæ (pi'si-dē), the woodpecker family, so named from the chief genus Picus. See Woodpecker.

Pickerel (pik'er-el), the young of the fish known as the pike. In

the United States the name is given to

some of the smaller kinds of pike.

Pickering (pik'er-ing), a market town of England, in North Riding of Yorkshire, 32 miles northeast of York. It is a town of great antiquity. Its castle was the prison of Richard II in 1399. Pop. 3674.

Pickering, TIMOTHY, statesman, born at Salem, Massachusetts, in 1745; died in 1829. He took part in the battle of Lexington, served in the Continental army as adjutant-general and as quartermaster of the army, and after the war united with Patrick Henry and Alexander Hamilton in opposing the measure that drove the Tories Into exile. He negotiated a treaty with the Iroquois Indians in 1791, was appointed Postmas-ter-general in Washingto.'s cabinet and later was Secretary of State, serving un-der Washington and Adams. He was elected to the Senate in 1804, and from that time continued actively in politics.— JOHN PICKERING, his son (1777-1845), philologist, held many important posi-tions, was president of the American Academy of Arts and Sciences, and a number of other learned societies, and published many pamphlets on philological and other subjects.—CHARLES PICKER-ING. his grandson (1805-78), physician and ethnologist, wrote The Races of Men and their Geographical Distribution,

Chronological History of Plants, etc.-EDWARD CHARLES PICKERING, his greatgrandson, born at Boston in 1846, was graduated at Harvard in 1865, became professor of astronomy and geodesy at Harvard, and was director of its observatory after 1876. He made the study of the light and spectra of stars special features of his work and established an auxiliary station at Arequipa, Peru, for the observation of southern stars. He is a member of many learned societies, and author of Elements of Physical Manipulation and many volumes of Harvard Observatory annals .- WILLIAM HARRY PICKERING, brother of the preceding, born at Boston in 1858, also became an astronomer, and was appointed assistant professor of the Harvard Observatory. He conducted several expeditions to observe several solar eclipses, and had the itonor of discovering two new satellites of Saturn, Phœhe, the ninth, and Themis, the tenth. He established astronomical stations in Arizona and Jamaica, and has been an expert in mountain climbing, ascending more than 100 peaks. He is the author of a number of astronomicai and other works.

Pickles (pik'elz), vegetables and certain fruits first steeped in strong brine, and then preserved in close vessels. Wood vinegar is often used, but malt or wine vinegar produces the best pickles. Owing to the corroding effects of brine and vinegar, the use of metallic vessels should be avoided in making pickles. To give a green color to pickles verdigris or other poisonous compounds of copper are sometimes employed by manufacturers.

Pickett, George EDWARD, soldier, born at Richmond, Virginia, in 1825; died in 1875. He graduated at West Point in 1846, served in the Mexican war, and in 1861 joined the Confederate army as hrigadier-general, being made major-general in 1862. He took a prominent part in the main battles in Virginia, and led his division in the famous 'Pickett's charge' at Gettysburg.

Pico (pē'kō), one of the Azores, consisting of a single voicanic mounsisting of a single voicanic mounting of the single voi tain, which terminates in a peak (Ei Pico) 7613 feet high, that emits smoke and lava. It is fertile and well wooded. and produces an excellent wine, of which 25,000 pipes are exported annually. Area, 254 sq. miles; pop. about 130,000. Pico della Mirandola. randola.

See Carnation. Picotee'.

Picquet. See Piquet.

See Carbazotic Acid. Picric Acid.

Picton (pik'tun), SIR THOMAS, a British general, born in Pembrokeshire in 1758; entered the army in 1771, and, after serving in the West Indies, rose to the rank of colonel, and became governor of Trinidad in 1797. His next service was the capture of Flushing, of which he was appointed governor in 1809. He afterwards distinguished himself in the Peninsular war at Badajoz, Vittoria, Ciudad Rodrlgo, etc. He was killed at Waterloo, 1815.

Picton, a port of entry and capital of Prince Edward's county, Ontario, Canada, 40 mlles s. s. w. of Klngston. It has canning and packing indus-

tries. Pop. 3698.

a commercial town and sea-Pictou, port in the northern part of Nova Scotla, on a safe and commodious harbor. Bituminous coal is mined and largely exported, and a heautiful sand-stone is quarried. Pop. 3235.

Picts (piktz), the name given to the ancient Caicdonians, who inhablted North Britain till the beginning of the sixth century, usually regarded as a Celtic race, though some consider them to have been not even Aryans, but Turanians. See Scotland.

Picts' Houses. See Earth Houses.

Picul (plk'ul), ln China, a weight of 1331 lhs. It is divided into 100 cattles or 1600 taels.

(pi'kus), an old sylvan deity in Picus Italy, who was represented with the head of a woodpecker (Latin, picus), and presided over divination. This is also the scientific name of a genus of woodpeckers.

See Pholas. Piddock.

Piedecuesta (pl-ā-de-ku-es'tā), a town of the republic of

Colombia, on the Rio de Oro, with a university. In a coffee, sugar, and tobacco region. Pop. about 12,000.

Piedmont (pēd'mont; Italian, Piemonte), a department or territorial division of Italy, between Switzerland, Lombardy, Liguria, and France; area, 11,340 square miles; pop. 3,407,493. It forms the upper valiey of the river Po, and derives its name, signal. the river Po, and derives its name, signifylng foot of the mountain, from its situation at the base of the loftiest ranges of the Alps, by which it is enclosed on all sides except towards the Lombard plain. It forms one of the most beautiful and fertile portions of Europe, compared the portions of Europe, compared the portions of the most beautiful and fertile portions of Europe, compared to the porthwest in the porthwes majestic mountains, and thence descend- Island of Martinique, on the northwest

ing in magnificent terraces and finely undulating slopes to the rich plains of the Po, to the basin of which it all belongs. It is divided into four provinces - Turin, Alessandria, Cuneo, and Novara. The chief town in Turin. See Sardinia (Kingdom of), Savoy (House of), and Italy.

Pier (per; Fr. pierre, a stone), in architecture, is the name applied to a mass of masonry between openings in a wail, such as doors, windows, etc. solld support from which an arch springs or which sustains a tower is also called a pier. The term is also applied to a mole or jetty carried out into the see, intended to serve as an embankment to protect vessels from the open sea, and to form a harbor.

(pers), Franklin, fourteenth President of the United States, Pierce was born at Hillsborough, New Hampshire, in 1804; dled in 1869. He graduated at Bowdoin College, studied law, and began practice in 1827. He was elected to Congress by the Democratic party in 1833 and served in the House till 1837, when he was elected as a member of the Seugle. He resigned in 1842. ber of the Senate. He resigned in 1842, and In 1846-47 served in the Mexican war as a brigadler-generai. He was nominated for the Presidency in 1852 and was elected by a very large majority of electoral votes. His influence was used in favor of the proslavery party, and in 1863 he spoke against the coercion of the seceded states.

Pierian (pi-e'rl-an), an epithet given to the Pierides or Muses, from the district of Pieria in Thessaly,

which was sacred to them. BERNARDIN DE SAINT. See Pierre, Saint-Pierre.

Pierre (pl-ār), St., a small island near the southern coast of Newfoundland, forming with the adja-cent island of Miquelon a colony of France. The inhabitants subsist entirely by the cod-fisheries and the industries connected with them. The Islands of St. Pierre and Miquelon were first acquired by the French in 1763; and were finally confirmed to them at the general Peace of 1814.

a city, capital of South Da-Pierre, a city, capital of South Da-kota and county seat of Hughes Co., is situated on the Miasouri River, opposite Fort Pierre. It is the seat of a government industrial school for

It had fine churches, a botanical coast. garden, and was well fortified, but was totally destroyed, with its 30,000 inhabitants, by an eruption of Mt. Peice, May 8, 1902.

Pierrefonds (pi-fr-fon), a viliage of France, dep. Oise, near Complegne, remarkable for its castle, founded in 1300 and recently restored. Pop. (1906) 1482.

Pierre-les-Calais, ST. See Calais.

Pierrot (pi-er-ro), a comic character on the French stage, dressed like a harlequin, and playing the part of a cunning but cowardly rogue.

Pierrepont (për'pont), EDWARDS, statesman, was horn at North Haven, Connecticut, in 1817; died in 1892. Ile studied law and became eminent in his profession, was made a judge of the Superior Court of New York in 1857, and attorney-general of the United States in 1875. In 1876 he was appointed United States Minister to was appointed United States Minister to Great Britain.

See Langlande. Piers Plowman.

Pietà (pē-ā-tà'), in painting and representation of the Virgin embracing the dead Christ. In St. Peter's at Rome is a Pieta by Michael Angelo.

(pē - ter - mar' -Pietermaritzburg (pē-ter-mar-itz-burg), cap-itai of Natai, 45 mlles Inland from Durhan, with which it is connected by a railway. It was founded in 1843, and named after two of the Boer jeaders, Pieter Retlef and Gertz Maritz. It is regularly bullt, with wide streets planted with trees, contains the governor's residence and government hulldings, etc. 1'op. (1911) 30,555.

Pietism (pi'e-tizm), in German the-ology the religious views of the pictists, a name originally applied in derision to some young teachers of theology at Leipzig, who began in 1689 to deliver ascetic lectures on the New Testament to the students and citizens. The idea of imparting theological instrucfriend and teacher Spener (the German Fénelon), who had held religious meetings in Frankfort from the year 1670, at which the laity prayed, and were allowed to ask questions, etc. The Leipzig lectures were put a stop to as heing hostile to good government, but the influ-ence of the pietists led to the foundation (1695) of the University of Halle, which became the center of evangelical religion in Germany. The leading adherents of Spener were appointed its first professors,

among them Francke, the founder of the celebrated Waisenhaus or orphanage at Halie. The pictists were noted for their preference of practical as opposed to doctrinal religion, but they never formed a separate sect. The Jansenism and Quietism of France and the Methodism of England sprang from sources similar to

those of the German pietism.

Pietra-dura (pi-a'tra dö'ra), a kind
of mosaic executed in Italy, and especially at Florence, in hard stones, such as topazes, garnets, carneilans, rubies, etc.

(pi-e-zom'e-ter), an in-Piezometer strument for measuring the compression of water and other liquids under pressure. In Oersted's piezometer the pressure is gauged by the manometer, and the amount of compression indicated hy mercury in a glass tube. Pig. See Hog.

Pig.

Pigafetta (pē-ga-fet'a), Antonio, born at Vicenza towards the end of the 15th century, accompanied Magellan in the first circumnavigation of the globe (1519-22). He kept a journal of the voyage, of which a complete edition was first published only in 1800. Pigeon (pij'un), the common name of a group of birds, forming in some systems a section of the order of rasorial or gallinaceous hirds, in others a distinct order. The pigeons or doves as a group have the upper mandible arched towards its apex, and of horny consistence; a second curve exists at its hase, where there is a cartilaginous plate or piece through which the nostrils pass. The crop is of large size. The pigeons are generally strong on the wing. They are mostly arboreal in hahits, perching upon trees, and building their nests in the strength of t elevated situations. Both sexes incubate; and these birds generally pair for life; the loss or death of a mate being in many cases apparently mourned and grieved over, and the survivor frequently refus-ing to he consoled hy another mate. The song consists of the well-known plaintive cooing. The pigeons are distributed in every quarter of the globe, but attain the greatest iuxuriance of plumage in The pigeon warm and tropical regions. family is divided into various groups. The true pigeons or Columbida are represented by the stock-dove, the common wild pigeon, from which, it was once mon wild pigeon, from which, it was once supposed, most of the heautiful varieties of the  $Columbid\omega$ , which in a state of domestication are dependent upon man, derived their origin: but it is now believed the rock-dove is the parent stock. The passenger-pigeon was formerly very

abundant in North America. The numbers that sometimes moved together were vast beyond conception. Millions of these pigeons associated together in a single roost. They were, however, destroyed by hunters so indiscriminately that the property and the statements. that they have entirely disappeared. The that they have entirely disappeared. The house-pigeons, tumblers, fantails, pouters, carriers, and jacobins are the chief varieties of the rock-pigeon, and have been employed by Darwin (see his Origin of Species and his Animals under Domestication) to illustrate many of the points involved in his theory of 'descent by natural selection.' Other species of pigeons are the Treronida or fruit-pigeons of India, the Eastern Archipelago, and Australia; the Gourida or ground-pigeons, the largest of the group, including the crowned pigeon (Goura coronata) of the crowned pigeon (Goura coronata) of the Eastern Archipelago. See also Carrier Pigeon, Turtle-dove, etc. Same as Pokeweed.

Pigeon-berry. Pigeon English, conjectured to be a form of business English,' a conglomeration of English and Portuguese words wrapped in a Chinese idiom, used by English and American residents in China in their intercourse with the native traders.

Pigeon-pea, the fruit of the leguminous shrub Cajanus Indicus, a native of India, but now cultivated in tropical Africa and America. In India the plgeon-pea forms a pulse of general use. Called also Angola Pea and general use. Congo Pea.

See Iron. Pig-iron.

Pigment-cell, In physiology, a small cell containing coloring matter, as in the choroid coat of the eye.

Pigments (plg'mentz), materials used for imparting color, especially in painting, but also in dyeing or otherwise. The coloring substances used as paints are partly artificial and partly natural productions. They are de-rived principally from the mineral kingdom; and even when animal or vegetable substances are used for coloring they are nearly always united with a mineral substance (an earth or an oxide). In painting the colors are ground, and applied by means of some liquid, which dries up without changing them. The difference of the vehicle used with the method of employing It has given rise to the modes of painting ln water-colors, oil-colors, in fresco, ln distemper, etc. For oll-painting mineral substances are more suitable than lakes prepared with minerals, because the latter become darker by being mixed with oil.

The lake coiors have tin or aium for their basis, and owe their tint to animal or vegetable coioring substances. Indigo is a purely vegetable coior, as is also blue-black, which is obtained from burned the coioring the coiorin vine-twigs. Ivory black is a purely animal color, being nothing else than burned ivory. In staining porcelain and glass the metallic colors which are not driven off by heat and are not easily changeable are used.

Pika (pi'ka), the calling-hare (Lato the hares, and forming the family Lagomyde. It is found in Russia, Siberia, and North America, and is remarkable for the manner in which it stores up its winter provision, and also

for its voice, the tone of which so much resembles that of a quall as to be often mistaken for it.

Pike (pik), a genus of fishes belonging to the order Teleostel, and included in the Malacopterous division of the order. The pikes form the types of the family Faceldae in which group the of the family Esocide, in which group the body is lengthened, flattened on the back, and tapering abruptly towards the tail. One dorsal fin exists, this structure being placed far back on the body, and opposite the anal fin. The lower jaw projects. Teeth are present in plentiful array, and are borne by almost every bone entering into the composition of the mouth. The common pike (Esox lucius) occurs in the rivers of Europe and North America. It is fished chiefly for the sake of its fished is accounted exceedingly. flesh, which is accounted exceedingly wholesome. The pikes are very long-lived, and form the tyrants of their sphere, being the most voraclous of freshwater fishes. When fully grown the pike may attain a length of 5 or 6 feet, and there are numerous instances on record in which these fishes have greatly exceeded that length. The sea pikes (Esos belone), also known as garpikes, are also included in the family Esocide. (See Garfish.) The saury pike (Scombereson saurus) resembles the garpike in general conformation, but possesses the dorsal and anal fins in the shape of a number of divided 'finiets.' The bony pike (Lepi-dosteus osseus) of North American lakes and rivers belongs to an entirely different order of fishes - that of the Ganoldel. See Bony Pike.

Paraguay, near Asuncion, after forming the houndary between Paraguay and the Argentine Republic. Its entire length is between 1500 and 1600 miles. On account of its shallowness during the dry season and the great current in its narrow usefully navigable.

See Hemorrhoids. Piles.

Piles (pilz), in works of engineering, are used either for temporary purposes or to form a basis for permanent structures. In the former case they are usually squared logs of wood sharpened at the point, which is sometimes protected with an iron shoe to enable it to penetrate the harder strata which it may meet with in being driven into the ground. The most usual purpose to which piles are applied in temporary structures is to make coffer-dams. The permanent purposes for which piles are employed are various. In many cases the object is to secure a firm foundation in a loose or swampy soil. In these eases the piles used are alternately, this in extensive works heing accomplished by means of steam maehinery.

Pilewort. See Celandine.

an insur-Pilgrimage of Grace, rectionary movement in the north of England, in 1536-37, subsequent upon the proceedings of Henry VIII in regard to the prevails. church. The insurgents demanded the fall of Cromwell, redress to the church, and reunion with Rome. Mustering to the number of 30,000, they marched upon York, and within a few days were masters of England north of the Humber. Henry temporized, promising a free parliament at York; hut when the insurgents returned home all concessions were revoked, and a renewal of the revolt was suppressed with great rigor. Many perished by the block, the gibbet, and the stake.

Pilgrimage (pil'gri-mij), a journey to a sacred place. The practice of making pilgrimages to places of peculiar sanctity is as ancient as it is widespread. The ancient Egyptians and Syrians had privileged temples, to which worshipers came from distant parts. The chief temptes of Greece and Asia Minor swarmed with strangers. But it is in Christianlty and Mohambar the practice has attained The chief temples of Greece and medanism that the practice has attained its greatest development. The first Chris-

tian pilgrimages were made to the graves of the martyrs. By the end of the fourth and heginning of the fifth century the custom had become so general as to lead to ahuses. Throughout the middle ages, and especially about the year 1000, parts it does not appear likely to become the religious fervor of the people manifested itself in numerous pilgrimages, especially to Jerusalem. The outrages inflicted on the Christian pilgrims by the Saracens led to the Crusades, which were themselves nothing else than giof Our Lady of Loretto, near Rome, that of St. James of Compostella in Spain, of St. Martin of Tours la France, were all sacred spots to which, from the tenth to the thirteenth contains the tenth to the thirteenth century, and even much later, pilgrims resorted in innumerable crowds; and from the end of the twelfth century the shrine of St. Thomas A Becket at Canterbury had the same honor in England. After the Reformation the practice of making pilgrimages fell more and more into aheyance, and the spirit which led to it seems almost to have become extinct among now often of cast-iron, sometimes solid Christians, although there are still ocand sometimes hollow. Piles are driven casional outbursts of it among the land has a heavy block raised and let fall Roman Catholics, as in the modern piles. grimages to Paray-le-Monial, Lourdes, Iona, and Holy Island. In the Greek church Mount Athos is the chief shrinc of pilgrimage. For Mohammedans the great place of pilgrimage is Mecca, which was the resort of Arabian pilgrims long before the time of Mohammed. Among the Hindus and the Buddhists also the practice of performing pilgrimages largely

Pilgrim Fathers, to the emigrants the name given who, in order to escape from religious persecution, sailed from Southampton in the Mayflower, landing at what is now Plymouth in Massachusetts, in Decemher, 1620, thus colonizing New England. They numbered 100 men, women, and children.

Pilibhît (pē-lē-bēt'), a town in India, in the district of Bareilly, in the Northwest Provinces, 30 miles northeast of Bareilly city, on the Desha River, the entrepot for an extensive traffic be-tween the upper and lower countries. The most important industry is sugar refining. In 1740 it was seized by the Rohilla leader, Hafiz Rahmat Khan, who made it his capital. Pillau (pii'ou), a fortified seaport of East Prussia, at the entrance of the Frishes Haff, 25 miles w.s. w. of Königsberg, with which it forms one port. Large vessels for Königsberg are partially unloaded at Pillau. Pop. 7374.

Pillory (pil'u-ri), a frame of wood erected on posts, with movable boards, and holes through which were put the bread and hands of a criminal for punicament. In this manner prisons were formerly exposed to public charge of his duties. Pilotage fees depend on the distance and the draught of pend on the distance and the draught of water of the vessel piloted. Masters and mates passing the requisite examination are entitled to pilotage certificates to conduct their own vessels. Laws regulating pilotage have been enacted by the several maritime states—this power being controlled by Congress. The pilot laws of the states are different, some being unjust and burdensome, especially as to sailing vessels; while others are fair and equitable. A sailing or steamvessel engaged in foreign trade must pay for a pilot even when one is not employed. The compulsory pilotage system is heing aholished in many large foreign seaports, without detriment to the general safety of navigation.

(Naucrates or Scomber Pilot-fish (Naucrates or Scomber ductor), a genus of Tele-ostean fishes included in the Scom-beridæ or mackerel family, and someincluded in the same (Scomber) as the mackerel itself. The pilot-fish was formerly supposed to act as a pilot to the mariner, and is still

Pilot-fish (Naucrates ductor).

supposed to act as such to sharks. It often follows in the wake of ships for tract of liquorice, mucilage, syrup, often follows in the wake of ships for treacle, and conserve of roses. The long distances, associating with sharks coverings are liquorice powder, wheat and devouring the refuse thrown overflour, fine sugar, and lycopodium. In board. The average length is about 12 many cases pills are now enameled or inches. In general form it resembles the

r of lent tion for two years suffered rigorous confinement. In 1787 he was a member of the convention that framed the Constitution. Washington in 1795 offered him the place of Secretary of War, and afterwards that of Secretary of State, in his cabinet, both of which he declined. He was sent to France as minister in 1796, and met a suggestion of obtaining certain advantages for his country by bribery with the striking utterance, 'Millions for defense, but not one cent for tribute.' He was appointed a majorof the Federal party, with John Adams, for the presidency in 1800, but was defeated. He died in 1825.

B.C. At an early age he was instructed In neusic and poetry; and for the development of his poetical talent he was sent to Athens, where he became the pupil of Lasus of Hermione, the founder of the Athenian school of dithyrambic poetry. In afternish he alternation has alternated the school of the Athenian school of dithyrambic poetry. poetry. In after-life he showed himseif a great admirer of Athens and the Athenians, who rewarded him for the honors he paid to them by making him a public guest of the city and giving him a present of 10,000 drachmas, and after him death exected a status in his after his death erected a statue in his after his death erected a statue in his honor. He was held in great honor by many princes of Greek states, for who, he composed choral songs, and had close relations with Delphi. Little is known with certainty of his life; even the date of his death is doubtful. The most probable account appears to be that he died at the age of eighty, in which case his death would fall about 442 B.C. He practiced all kinds of lyric poetry, and excelled equally in all. His works embraced hymns to the gods, pæans, dithybraced hymns to the gods, pæans, dithyrambs, dancing and drinking songs, dirges, panegyrics on princes, and odes in honor of the victors in the great Grecian games, but the only poems of his which have come down to us entire belong to the last class, the Epinicla. Forty-five of the epinician odes of Pindar are still extant. Fourteen of these are in celebration of Olympic victors, twelve of Pythlan, eleven of Nemean, and eight of Isth-

Pindar, PETER. See Wolcott.

Pinckney (pink'ni), CHARLES COTES-born at Charieston, South Carolina, In 1746. In the Revolutionary war he displayed resolution and intrepidity, and for two years suffered rigorous confine-were descended mostly from the for two years suffered rigorous confineof Mohammedan warrlors, which for-merly received high pay from the In-dian princes, and they were secretly excited by the Indian tributaries to attack the company. In 1817 the British governor-general, the Marquis of Hastings, determined on the destruction of these robbers, whose force was estimated at 40,000 horse. Attacked on all sides, they were conquered and dispersed. Garisons were placed in some fortresses, and the native states of the infested district general about 1798 and was a candidate were formally taken under British protection.

Pind Dadan Khan, a prosperous Pindar (pin'dar; Pin'daros), the town, Jhelum district, Punjab, British greatest of the lyric poets of India, near the north bank of the Greece, born in Bæotia, in or near Jhelum River, with a trade in salt. Pop. Thebes, of a noble family, about 522

(pin'dus), the ancient name Pindus range of Northern Greece, forming the watershed of the country and the boundary between Thessaly and Epirus. It was, like Helicon and Parnassus, a seat Apollo and the Muses.

1e (pin), the popular name of trees of the genus Pinus, natural order which is divided into the

Coniferæ, which is divided into two suborders, namely, 1. Abietineæ, the fir tribe; and 2. Cuprcssineæ, the cypres; tribe. The pines belong to the former section, and are distinguished from the spruce, larch, fir, ccdar, etc., chiefly by having persistent leaves in clusters of two to five in the axils of membranous scales. All the European species, except P. Cembra, have only two leaves in a sheath; most of the Asiatic, Mexican, and California kinds have three. four. and California kinds have three, four, or five leaves, and those of the United States and Canada have generally three. The cones also afford an Important ready means of distinction and classification. The Scotch pine or fire the control of the co (P. sylvestris) is a tall, straight, hardy tree, from 60 to 100 feet high; a native tree, from 60 to 100 feet high; a native of most parts of Europe, flowering in May and June, and having many varieties. There are extensive forests of it in Russia, Poland, Sweden, Norway, Germany, the Alps, the Pyrenees, and the Vosges. In Scotland it grows at the height of 2700 feet on the Grampians. The Corsican pine (P. Laricio) grows to a height of from 80 to 100 feet, and in the island of Corsica it is said to

reach an altitude of 140 to 150 fest. The pinaster, or cluster pine (P. pinaster), is indigenous to the south of Europe, to the west of Asia, the Himalayas, and, it seems, even to China. It is a large, handsome, pyramidal tree, varying from 40 to 60 feet in height. Its cones point upwards, in star-like clusters, whence the name of pinaster or star pine. In France, especially between Bayonne and Bordeaux, it covers immense tracts of barren sand, in which it has been planted to prevent the sand it has been planted to prevent the sand from drifting. The stone pine (P. pinča) is a lofty tree in the south of Europe, where it is a native; its sprending head forms a kind of parasol; the trunk is 50 or 60 feet high, and clear of parasols. Sching's pine (P. Sching) branches. Sabine's pine (P. Sabini-āna) was discovered in California in 1826. The leaves are in threes, rarely in fours, from 11 to 14 inches long; the trees are of a tapering form, straight, and from 40 to 120 feet high, with trunks from 3 to 12 feet in diameter. The Cembran pine (P. Cembra) is a native of Switzerland and Siberia. The red Canadian pine (P. resinosa), or yellow pine, inhabits the whole of Canada from the Atlantic to the Pacific, and is also found in the northern and eastern parts of the United States. The trunk rises to the height of 70 or 80 feet by about 2 in diameter at the base, and is chiefly remarkable for its uniform size for two-thirds of its length. The wood is yellowish, compact, fine-grained, resinous, and durable. The true yellow pine (P. variabilis) abounds in the Atlantic states from New Jersey to Virginia, and rises to the height of 50 or 60 feet, by 15 or 18 inches in diameter at base. The cones are small, oval, and armed with fine spines. The timber is largely used in shipbuilding and for house timber. The white pine (*P. strobus*) abounds chiefly from lat. 43° to 47° and southward to the Alleghanies. The timber is not strong, but is easily wrought and durable, and its timber is consumed in much greater quantity and for a wider variety of purposes than any other. The demand for it has been so great that the former great white pine forests are almost denuded. The Labrador or Banks's pine (P. Banksiana) is usually a low, straggling tree, growing among barren rocks to a height of from 5 to 8 feet, but may attain three times that height. The cones are recurved and twisted, and the leaves are regularly distributed over the branches. In Nova Scotia and the state of Maine it is known as the over the branches. In Nova Scotia and Pine Bluff, a city, capital of Jeffer-the state of Maine it is known as the scrub pine. and in Canada as the gray situated on the Arkansas River, 71 miles

pine. The other American pines are the Jersey pine (P. inops), the trunk of which is small to be of any utility in the are the pitch pine (P. rigida), which is most abundant along the Atlantic coast, and the wood of which, when the tree grows in a dry, gravelly soil, is compact, heavy, and contains a large proportion of resin; the loblolly pine (P. tæda), the timber of which decays speedily on being exposed to the air; the long-leaved pine (P. palustris), which abounds in the lower part of the Carolinas, Georgia, and Florida, furnishing resin, tar, pitch, and turpentine, and timber which is hardly inferior to the white oak in naval architecture; and Lambert's pine (P. Lambertiana), which grows between the fortieth and forty-third parallels of latitude, and about 100 miles from the Pacific. It is of gigantic size, the trunk rising from 150 to upwards of 200 feet, and being from 7 to nearly 20 feet in diameter.

Pineal Gland (pin'e-al), in anatomy, is a body (not properly a gland) forming part of the brain. It is about the size of a pea, and is connected with the cerebrum at its base by four peduncles or stalks and by some few cross-fibers. Its function is not known. It was considered by the ancients to be the seat of the soul.

Pineapple (Ananassa sativa), a plant belonging to the nat. order of Bromeliaceæ, much esteemed for its

richly-flavored fruit, which somewhat resembles a pine-cone. A native of tropical America, it is now naturalized in many hot countries, is grown in the warmer regions of the United States, and is also cultivated in hothouses. It is largely grown in Hawaii and exported in the canned state to the United States. The common pineapple plant yields the fiber of which, in Manila, the beautiful piña cloth is made. (See Piña Cloth.) The fiber is also used for textile purposes in China and India.

Pineapple fruit.

rantroad snops, woodworking industries, iron works, etc. Pop. 17,060.

Pine-chafer, or Pine Beerle (Hyong shorts), a species of beetle which infests Scotch pines. It feeds on the young shoots of these trees and eats its way into the sheart, thus converting the shoot into a boiling with water the fruit of the Vaterial Indicates a tree common on the Malabar.

Pine-finch, or PINE-GROSBEAK (Pi-coast. It forms excellent candles. cleator), a genus of conirostral perching birds or Insessores, belonging to the suhfamily of the hullfinches (Pyrrhulina). It is of larger size than the common bullfinch, and measures from 8 to 9 inches in length. It occurs in the Arctic and northern regions of both Old and New Worlds. It is more rarely found in the temperate portions of Europe. Its song notes are agreeating the states in the early twentieth and its flesh is esteemed in Russia. hle, and its flesh is esteemed in Russia.

Pinel (pë'nel), Philippe, the Howard the United States in the early twentieth of the insane, was horn in 1745, century and for a time very popular. It at St. André, in the French department of Tarn, and studied at Toulouse (where he took his doctor's degree in 1773) and Montpellier. In 1778 he went to Paris, he took his doctor's degree in 1773) and Montpellier. In 1778 he went to Paris, and in 1791 came into notice by his treatisc Sur l'Aliénation Mentale. In the following year he was made directing physician at the Bicêtre and in 1794 at Salpêtrière. By his writings and by his management of these two asylums, in which he introduced the humane treatment of the insane. Pinel laid the founds.

Pingree (pln'grē), Hazen S., reformer, born at Denmark. Maine, in 1842; died in 1901. He served in the Civil war; engaged in the shoe husiness in Detroit, and became very successful. Elected mayor of Detroit in 1889, on the Reform ticket, he excited much attention hy his opposition to street railway methods, and Instituted an intersection of the insane. Pinel laid the founds. ment of the insane, Pinel laid the founda-tions of the great reform that has been effected in treating mental diseases. He died at Paris in 1826.

Pinero (pi-ne'rō), ARTHUR WING, actor and dramatist, son of a Edinhurgh in 1874, subsequently joining the Lyceum and Haymarket companies. He is the author of several successful plays, including The Squire, Sweet Lavender, The Second Mrs. Tangueray. The Princess and the Tanqueray, The Princess and the Butterfly, etc.

Pinerolo (pē-nā-rō'lō; French, Pignerol), an ancient city of Italy, province of Turin, 21 miles south-Italy, province of Turin, 21 miles southwest of the city of that name, at the mouth of the Val Clusone. It has a cathedral, blshop's palace, lyceum, tech-

above its mouth. It is in the heart of the principal cotton section of the state and chiefly cotton, woolen, and silk goods. has a large trade in cotton, also large It belonged to Savoy from 1042, but the railroad shops, woodworking industries, iron works, etc. Pop. 17,060.

French beld it for a series of years on several occasions; and its citadel was at several occasions.

ris Indica, a tree common on the Malahar

cleator), a genus of conirostral perching Piney Varnish, a resin used as a birds or Insessores, belonging to the obtained

esting plan for employing applicants for charity. He was elected governor of Michigan in 1897, and again in 1898.

Pinguicula (pin-gwik'u-la), a genus of plants of the natural Pine-resin, a resin contained in the juice which exudes from pines, firs, and other coniferous trees. These resins generally contain oxygen violet, or yellow flowers. See Butterwort. with volatile oils, and sometimes acid bodies.

Pinero (pi-ně'rō), ARTHUR WING, actor and dramatist, son of a solicitor, was horn in London in 1855, and made his début upon the stage at Edinhurgh in 1874, subsequently join-

(pin'yun), in machinery, a small wheel which plays in Pinion the teeth of a larger one, or sometimes only an arbor or spindle in the body of which are several notches forming teeth or leaves, which catch the teeth of a wheel that serves to turn it round.

temperate parts of the European conti-nent. Their roots are annual or peren-niai; the stems herbaceous and jointed; the leaves opposite and entire, and the flowers terminal, aggregate, or solitary, and always beautiful. The ciove pink or carnation, and the garden pink, of which there are many varieties, are familiar species.

Pinkerton (pin'ker-tun), ALLAN, detective, born at Glasgow, Scotiand, in 1819; dled in 1884. He migrated to Canada in 1840 and went to Chicago in 1850, where he joined the detective department. He subsequently organized the detective agency which bears his name. He wrote interesting stories of his experiences as a detective. Pinkerton, John, a Scottish anti-quary, born at Edinhurgh in 1758. He was articled to a writer to the signet, but in 1780 went to London to devote himself to literature, and by hls Letters on Literature obtained the acquaintance of Horace Walpole. His more valuable publications are: Ancient Scottish Poems, from the Manuscript Collection of Sir Richard Maitland of Lethington, with Notes and a Glossary (1786); Inquiry into the History of Scotland preceding the Reign of Malcolm II or 1056 (1790), containing a curious discussion of the 'Pictory of Frederic's Scottish Mcdallio History of England; Scottish Poems, reprinted from scarce editions; and a General Collection of Voyages and Travels in 19 large volumes. He died at Paris in 1826.

Pin-money, ar annual sum of money, sometimes provided for in a marriage settlement, to he paid hy the hushand to the wife for her separate use, and to be applied in the purchase of apparel, ornaments for her person, or

for private expenditure.

Pinna (pin'a). or WING SHELL, a genus of Lamellibranchiate Mollusca included in the famlly Aviculldæ. The genus is represented by the Pinna pectinata of the British coasts, by the P. nobilis of the Mediterranean Sea, by the P. bullata, P. rudis, P. nigrina, and by other species. Some species attain large dimensions, being as much as 2 feet long. The 'byssus,' by which they adhere to rocks, is remarkably long, and of strong, siky texture, and is capable of being woven into cloth upon which a very high value is set. This manufacture was known to the ancients, and is still

One of the boats of a manof-war, used to carry the officers to and from the shore, is also called the pinnace. It is usually rowed with eight oars.

Pinnacle (pin'a-ki), in architecture, any lesser structure that rises above the roof of a bullding, or that caps and terminates the higher parts of angles or of huttresses. The application of the term ls now generally limited to an ornamental pointed mass rising from angles, buttresses, or parapets, and usually adorned with rich and varied devices. They are usually square in plan, hut are sometimes octagonal, and in a few in-stances hexagonal and pentagonal. The tops are generally crocketed, and have finlals on the points.

ity Church, Cambridge.

Pinnate (pin'at), in hotany, formed like a feather. A pinnate leaf is a species of compound leaf

whereln a single petiole has several leaflets or pinnules attached to either side of it.

Pinnated Grouse, known also as the prairie hen, or prairie chicken, a common game hird in the Mississippi Valley, north of Louisiana. The male is remark-

able as possessing two erectile Pinnate tufts in the nape, and an air Leaf. bladder (connected with the windpipe, and capable of inflation) on each side of the neck, in color and shape resembling small oranges; general plumage brown, mottled with a darker shade. Pinnigrada (pin-i-gra'da), or PIN-NIPEDIA, a section of the carnivorous order of mammals, in which the fore and hind legs are short, and are

expanded into broad-webbed swimming paddles. The section comprises the seals and walruses.

PINOCHLE (pin'o-kl), a card Pinocle, game resembling the French game of bezique, of late years very popular in sections of this country. It is usually played with parts of two packs of cards, from the nines to the aces, or more recently from the sevens. The values range as follows: Ace, ten, king, queen, knave, and nine. Game is counted practiced in Italy to some extent.

Pinnace (pln'as), a small vessel used at sea. It is equipped with at sea. It is equipped with a small vessel used at sea, and also has two or suit), fours (aces, kings, etc.), pincele hree masts which are schooner-rigged (oueen of spades and knave of dia-

monds), deuce (nine of trumps), and by trump sequence (knave to ace). Each of these counts has its special value. Game is also counted from tricks taken, each ten, ace, and king counting ten points. When played hy three or more players, the melds or counts are declared before the play begins.

Pinos, ISLA DE. See Isla de Pinos.

Pinsk, a town of Western Russia, in the government of Minsk, on the navigable river Pina. It stands among marshes, and is huilt of wood. It has an active transit trade. Pop. 28,028. The Pinsk Marshes, which cover an immense extent of country, are now in process of heing drained.

Pint (pint), a measure of capacity used for both liquids and dry goods; it is the eighth part of a gallon, or 34.65925 cubic inches. The Scotch pint was equal to 3.0065 imperial pints. See Guinea-fowl.

Pintail Duck, a genus of ducks, so named from the elongated form of the tail-feathers. In size the common pintail duck (Dafila principality.

acūta) is equal to the mallard. These birds are common to the Mississippi Valley, and they occur on the Mediterranean coasts, in the Gulf of Mexico, in studied under Glovanni Bellini and Giorgian West Indian Islands and in Africa whose fine coloring he imitated the West Indian Islands, and in Africa. They breed in confinement, and the flesh is savory.

(pēn'tō), Major Serpa, a Por-Pinto tuguese traveler, horn in 1846, and educated at the Royal Military College, Lishon; entered the Portuguese army in 1863. In 1877-79 he crossed Africa from Benguela to Durhan, and described his journey in a work entitled How I Crossed Africa (London, 1881), which procured him many honors, especially from geographical societies. He has led several exploring expeditions, and his proceedings in the Zamhesi district led in 1890. trict led in 1890 to a vigorous and successful protest hy Britain against the claims of Portugal in that quarter.

Pinturicchio (pin-tu-rik'yō; 'the ittle painter'), an eminent Italian painter of the Umbrian

school, whose real name was BERNARDINO DI BETTO, was horn at Perugia in
1454; died at Siena in 1513. He
llved for a time at Rome, and while
there was engaged on the frescoes of
the Sistine Chapel, being at this time
under the influence of Perugino. His
chlef work was a series of mural paintings illustrating the life of Pope Pius
II (Æneas Silvius), in the cathedral
library at Siena. There are also fine school, whose real name was BERNAR-

frescoes by him in the Buffaiini Chapel of the Church of St. Maria in Araceii, Rome. He left many exquisite altar-pieces and other works in tempera; he never painted in oil.

See Pine. Pinus.

Pinzon (pēn-thon'), a family of Spanish navigators, natives of Paios, who were associated with Columbus in the discovery of America.— MARTIN ALFONSO, the eldest, was of great assistance to Columbus in fitting out his fleet, and in the voyage commanded the Pinta.—VICENTE YAMEZ, his brother, commanded the Niña in the first voyage of Columbus.—Francisco Martin, the third hrother, was pilot of the Pinta in the first voyage of Columbus. From him descended the nobie Spanish family of Pinzon.

Piombino (pē-om-bē'no), a town of Italy, province of Pisa, on the seacoast opposite the island of Elba. It has old fortifications, a good harbor. and manufactures of Bessemer steel and military projectiles. Pop. 5979. Piombino was formerly the capital of a smail

gione, whose fine coloring he imitated. Coming to Rome about 1512, he was induced by Michael Angelo to enter into rivalry with Raphael. When Raphael rivalry with Raphael. When Raphael painted his celehrated Transfiguration, Schastiano attempted to surpass it by painting the Raising of Lazarus, which is considered his greatest work, and is now in the National Gailery, London. Other important works are The Scourging of Our Lord, and A Holy Family. His chief merit, however, iay in single figures and portraits, such as his Clement VII. He was high in favor with Clement, who created him keeper of the papal seals. From this circumstance he derived his surname Del Piombo, the seals attached to the papal hulls being at that time of lead (piombo). He died in 1547. He preferred oil painting to fresco, and some of his later works are executed on slate.

Plotrkov (pyotr'köf), a town of Russian Poland in the government of same name, one of the oldest towns of Poland. It was at one time places them in the female's back. Each the seat of the Polish diet, and the kings cell appears to be closed by a lid-like were elected here. Pop. 41,181.—The government has an area of 4729 sq. miles. In the cells the eggs are like moderately fertile, and has considerable manufactures of cottons and wools. erable manufactures of cottons and wool-

ens. Pop. 1,406,951.

Piozzi (pē-oz'ē), Hester Lynch SalUBBURY, an English authoress,
the daughter of John Salusbury of Bodville, Carnarvonshire, was probably born
in 1741; died at Clifton in 1821. Early
in life she was distinguished by her
beauty and accomplishments. In 1763
she was married to Henry Thrale, a
wealthy hrewer of Southwark, London,
which horough he then represented in
parliament. Soon after her marriage parliament. Soon after her marriage she gathered round her a brilliant circle, including above all Dr. Johnson, who lived with the Thrales for sixteen years.

Mr. Thrale dying in 1781, his widow, who was the mother of four daughters, married in 1784 Piozzi, a Florentine music married in 1784 Piozzi and Pio sic-master, then resident in Bath. This alliance was keenly resented by all her friends, and Johnson entirely gave up her society. Her Anecdotes of Dr. Johnson appeared in 1786, and her Letters to and from Dr. Johnson in 1788. She also wrote a few poems, an autobiography, etc.

(pī'pa), a genus of toads, of Pipa

Pipa Toad (P. surinamensis).

most repulsive looking of the toads, and is noted as exemplifying, in the case of the female animals, an anomalous mode the back of the female pipas at the hreeding season. In each cell an egg is de-Pipes with painted porcelain bowls are fa-posited, the eggs being first deposited by vorites in northern Europe. The Eastern

Pipe (plp), a wine measure, usually containing very nearly 105 lmperial or 126 wine gallons. Two pipes or 210 imperial gallons make a tun. In practice, however, the size of the plpe varies according to the kind of wine it

used for a great variety of purposes in the arts and in domestic economy. The materials of which pipes are made are also very various, wood, stoue, earthen-ware, iron, lead, copper, leather, gutta-percha, etc., being all employed. Drain-age and sewerage pipes of great strength and size (measuring from 1 or 2 up to 54 inches in diameter) are now usually made of fire-clay, glazed on their outer and inner surfaces. Large iron pipes are usually cast, and are used for the supply of water and gas. Pipe Tobacco, a bowl and connecting

Pipe, Tobacco, a bowl and clay, wood, tube, made of baked clay, wood in stone, or other material, and used in smoking tobacco. The chief processes in which the best known species is the manufacture of clay pipes are mold-the Pipa Americana of Surinam and ing and baking. Finer and more expensive pipes are made of meerschaum, a toad. The tongue and teeth are wanting in this family. The pipa is one of the soft, greasy feel. Meerschaum pipe making is considered. ing is carried on to the greatest extent by the Germans, and Vienna may be said to be the ceuter of the manufacture. Sometimes the bowl alone (which is frequently artistically carved) is of meerschaum, the stem being of wood, the hest sorts of which are got from the young stems of the Mahaleh cherry, grown near Vienna, the mock orange of Hungary, and the jessamine sticks of Turkey. The stem, whether of the same Turkey. The stem, whether of the same material as the bowl or of wood, is usually provided with a mouthpiece of ivory, silver, or amber, the last being preferred. Briar-root pipes, with the bowl and stem of one piece of wood, and provided with amber, ivory, or bone mouthpieces, are now very common. of developing the eggs and young. A They are made of the roots of a large number of pits or depressions termed variety of heath (Fr. bruyère). Corn-cob dorsal cells' appear to be formed on pipes, made from the ears of maize, have attained wide popularity in America. ıl

a. ลm hookah is a pipe of great size, the bowl of which is set upon an alr-tight vessel partially filled with water, and has a small tube wblch passes down into the water. The long flexible smoking-tube is Inserted in the side of the vessel, and the smoke is made to pass through the water, being thus cooled and deprived of some noxlous properties. Upon the American continent pipes have been in use from a very remote period. Indlan plpes, with elaborately carved soapstone bowls and ornamented wooden stems, or entirely of baked clay, have been found in the ancient mounds of the West, together with other relics of an unknown racc. See Calumct.

Pipe-clay, a fine white clay which is used for making tobaccopipes and articles of pottery, also for cleaning soldiers' belts, etc. See Clay and Pipe (Tobacco).

(Syngnathus), a genus of fishes included in the Pipe-fishes suborder Lophohranchil and nearly allled to the curious little fishes popularly known as 'sea-horses' (see Hippocampus). They are distinguished by a long and tapering body, and by jaws united to form a tube or pipe, bearing the mouth at the tip. The Syngnathus acus is one of the most familiar species. It averages 20 inches in length. The largest of the pipe-fishes is said to attain a length of 3 feet. A very remarkable circumstance in connection with the pipe-fishes consists

Great Pipe-fish (Syngnathus acus).

In the males of some species possessing a pouch-like fold, situated at the base of the tail, in which the eggs are contained after being extruded from the body of the females, and in which the young, after hatching, continue to reside for a time. The name pipe-fish is also applied to the members of the genus Fistularia, included In the Acanthopterous division of the Tcleostei. The bones of the face are prolonged to form a tubular structure, at the extremity of which the mouth opens. The Fistularia tabacaria of the Antilles, averaging about 3 feet in length, repre-

particularly India and South America. The general properties of the order are aromatic, pungent, and stimulant. The dried unripe fruits of Piper nigrum constitute black pepper. (See Pepper.) The fruit of Cubeba officinalis, a climbing plant of Java and other Indian Islands, is the Cubeb pepper. (See Cubebs.) The leaves and unripe fruit of Piper angustifolium constitute the aromatic, fragrant, and astringent substance called matico or matica, which has been recommended for checking hemorrhage. The leaves of Piper Betle (Chavica Bette) are chewed in the East as a means of intoxication. (See Betel.) The root of Macropiper methysticum is the kava of the South Sea Islanders, and is used in the preparation of a stimulating beverage.

Pipette (pi-pet'), an Instrument used by chemists, druggists, etc., consisting of a glass tube with a buiging expansion about the middle, into which a certain quantity of liquid may be sucked hy the mouth or a rubber bulb, so as to be transferred from one vessel to another.

Piping Crow, a bird of New South Wales, remarkable for its musical powers, and for its power of minicipal the voices of other birds. of mimleing the voices of other birds. It is the Barita tibicen, and hy some naturalists is placed among the shrikes (Laniidæ), by others among the crows (Corvidæ).

Pipistrelle (pip-ls'trel; Vespertilio Pipistrella), the famillar little bat which makes its appearance and filts about during twilight. It is of small size, and possesses a mouse-like body covered with hair, from which resemblance its popular name of Flittermouse has been derived. It passes the winter, like most other bats, in a state of torpidity; but appears to hibernate for a shorter period than other and larger species.

(pip'lt), or TITLARK (Anthus), a genus of perching birds pos-Pipit sessing striking affinities with the larks, which they resemble in the large size of the hinder claw, but commonly classed with the wagtails, which they closely resemble in their habits of running swiftly on the ground. The meadow pipit or titlark (Anthus pratensis) is the commonest British species. The shore pipit, or rock lark (A. petrõsus), frequents the sea-beach, and feeds on molluscs and crustacea. The tree pipit molluscs and crustacea. sents this genus.

Piperaceæ (pI-pėr-ā'se-ē), the peppers, a natural order of shrubby or herbaceous exogenous plants, ground. The song in all censists of a inhabiting the hottest parts of the globe, clear, simple note. The Anthue ludoviclasse, 6 to 7 inches long, is common

ples, probably hecause the trees were raised from the pips or seeds, and bore the appies which gave them celebrity without grafting. The Ribston, Goiden, and Newton pippins are favorite varieties, well known in the United States.

Piqué-work (pô-kā'), a fine kind of iniaid work, resembling buhi-work (which see), but much more expensive and elaborate, the iniay being minute pieces of goid, silver, and other costly materials.

Piracy (pî'ra-si), those acts of robbery and depred depr

(pip'ra), a genus o' passerine birds which inhabit South See Manakin. Pipra America.

Piqua (pik'wa), a city of Miami county, Ohio, on Miami River, and Miami and Erie Canai, 90 miles northeast of Cincinnati. It has manufactures of flour, shafts, furniture, sheetsteel and tin-piate, corrugated iron, straw board, etc. Pop. 13,388.

Piquet (pi-ket'), a game at cards played hetween two persons

150

with thirty-two cards, all the plain cards below seven heing thrown aside. In playing, the cards rank in order as foi-lows: the ace (which counts eieven), the king, queen, and knave (each of which counts ten), and the plain cards, each of which counts according to the each of which counts according to the number of its pips. The player who first reaches 100 has the game. The score is made up hy reckoning in the following manner: — Carte blanche, the point, the sequence, the quatorze, the cards, and the capot. Carte blanche is a hand of tweive riain cards, and counts ten for the piayer who holds it. The point is the suit of highest value, the value being determined by the number it makes up determined by the number it makes up when the cards heid are added together. The sequence is composed of a regular succession of cards ln one suit. The quatorze is composed of four aces, four kings, four queens, four knaves, or four tens, and counts fourteen. The winner of the greatest number of tricks counts ten ln addition (the 'cards'); if he hoids ali the tricks he counts forty in addition (the 'cards'). If a piezer ground true. (the 'capot'). If a piayer scores twenty-nine in hand and one for the card he ty-nine in hand and one for the card he leads, before his opponent counts anything, he at once adds thirty to his score; this is called 'pique.' Should a has grown up, which is connected with piayer score thirty hy the cards in his hand, by scores that reckon in order before his adversary can count, he obtains the 'repique,' which enables him to add sixty to his score. The scores are recorded according to the following take of precedence: 1, carte blanche; 2, point; 3, sequences; 4, quatorzes and trios; 5, points made in piay; and 6, the cards. If one player scores a hundred iiberated from Turkish ruie the Piræus was merely a scene of ruins. Since then a flourishing industrial and trading town has grown up, which is connected with Athens hy a railway. Pop. 42,167.

Pirai, or Piraya, (pi-rā'ya), the Serbestor of tropical America. It is 3 or 4 feet in length, and its jaws are armed with sharp, lancet-shaped teeth, from which cattie when fording rivers sometimes suffer terribiy.

Pirai (pi-ra-nā'sē), GIOVANNI BAITESTA, an Italian archi-

before the other obtains fifty he wins

Piracy (pl'ra-si), those acts of robbery and depredation upon the high seas, or other places where the admirated has jurisdiction, which, if committed upon land, would have amounted to feiony only. This is substantially the definition of this offense by the law of the nations, which, on conviction, is pun-ished with death in the United States, and generally in other civilized countries It is an offense against the universal law of society, a pirate being, according to Coke, hostis humani generis. Piracy in the common sense of the word is distinguished from privateering by the cir-cumstance that the pirate sails without any commission, and under no national flag, and attacks the subjects of ail nanag, and attacks the subjects of all nations ailke; the privateer acts under a commission from a belligerent power, which authorizes him to attack, piunder, and destroy the vessels which he may encounter belonging to the hostile state. Piracy has existed from a very early period, heing considered a reputable pursuit by the ancient Greeks and Phonical Constant of the state of the

(pi-re'us; Greek, Peiraieus), the principal port of hoth anthe principal port of hoth ancient and modern Athens, is situated about 5 miles from that city, on a peninsuia. It has three harbors: two on the east side, ancientiy named Zea (now Stratiotiki) and Munychia (now Phanari), and one on the west side, called simply Piræus, or the Harbor, the largest of the three. The Piræus was anciently connected with Athens by wails known as the Long Walls. When Greece was liberated from Turkish rule the Piræus was merely a scene of ruins. Since then

views of Rome and its buildings. His representations are not always faithful, on account of the scope which he gave to his lmagination. He died in 1778.

Pirano (pē-rii'nō), an Austrian seaport in Istria, near the head of the Adrlatic, 13 miles southwest of Trieste. There is good anchorage for the largest vessels in the well-sheltered road-The principal objects of comare wine and olive-oil. Pop. 13.339.

Pirmasens (per'mi-sens), a town of Bavaria, la the Palatinate, 22 mlles w. s. w. of Landau. It is lng the railway. It is surrounded by

tect, engraver, and antiquary, was born Opera, and his first piece was Aridonia at Venice in 1720, but passed the greater Deucation, composed in two days. His at Venice in 1720, but passed the areated part of his life at Rome. His chief work, success induced him to persevere, the Antiquities of Rome, was in 20 vols., after writing several pieces, he produced with about 2000 copper plates giving in 1738 his sincf-d'auvre, Métromanie, a comedy which Laharpe characterizes as a comedy which Laharpe characterizes as a comedy which style, humor, and vivaclty almost every other composition of the kind. Piron afterwards wrote Fernand Cortes, a tragic drama, and some other pieces, which obtained some success. He died in 1773.

(pe'za; the ancient Pisa), a town of Northern Italy, capital Pisa of the province of the same name, 6 mlles from the Mediterranean, and 44 miles west of Florence, on both banks of the Arno, here crossed by three stone

Baptistery, Cathedral, and Campanile, Pisa.

well built, has a good town-house and manufactures of shoes, musical instruleather, machinery, etc. Pop. (1910) 38,463.

Pirna (per'na), a town of Saxony, 10 miles from Dresden, on the right bank of the Elbe. It has manufactures of stoneware, chemicals, cigars, beer, etc., and a considerable trade on the Elbe. Pop. (1910) 21,035

Piron (peron), ALEXIS, a French wit, poet, and dramatist, born at Dljon in 1689. He studied law at Besançon; but having gone to Paris he wrote for the Theater of the Comic

walls and dltches, and defended by a citadel, the fortlfied circuit having a length of nearly 6 miles, much of the space inclosed being unoccupled. The river is lined by handsome quays on both sides (known as the Lungarno); the streets are spacious and well paved; and the houses are remarkable for the profusion with which marble has been employed in their construction. In the northwestern part of the city is a remarkable group of buildings consisting of the Duomo or Cathedral, the Baptistery, the famous Leaning Tower, and the Campo Santo. The Cathedral, begun in 1063, conse-

crated in 1118, is one of the noblest ecclesiastical structures of Italy, built of until 1417 that the schism can be said marble, in the form of a basilica, with a rich façade and a dome of peculiar pisano (pē-sa'nō), Niccolo, an Italshape; the Baptistery, begun in 1153 and faished in 11778 and the said that the schiem can be said to have terminated. finished in 1278, is a large rotunda, adorned externally by a series of arcades with decorated canopies, and crowned by a dome of peculiar design, 190 feet high; the Campanlie, or 'Leaning Tower,' is of cyilndrical shape, bullt of wilte marble, and has the whole exterior enriched by a succession of arcades extending from a succession of arcades extending from base to summit: its helgit is 179 feet, and it devlates 13 feet from the perpendicular. The Campo Santo, or cemetery, is the most remarkable structure of the kind in existence, consisting of a court surrounded hy arcades of white marbie, adorned with sculptures and frescoes, by the earlier Italian masters, and full of remarkable manuments. and full of remurkable monuments. Other edifices are the town-house (Palazzo dei Commune); the courthouse (Palazzo Pretorio); and the university, lazzo dei Commune); the (Palazzo Pretorio); and the university, region contains some interpretation of the same name; it contains some interpretation, and still one of the same name; it contains some interpretation, and cotton goods. The population, which reached 150,000 when the city was in its zenith, is now only 66,432. The province of Pisa has an area of 1180 heen practiced from very remote ages, square miles, and a population of 320,-square miles, and a population of 320,-squa compelled by famine to submit to the Florentines (June 8, 1509), and thus ceased to be independent. On the ruins of Plsa was founded the power of the Grand-duchy of Tuscany.

Pisa, COUNCIL OF, a special council of the Roman Catholic Church, held to consider the pretensions of the rivai to consider the pretensions of the rival fish in the streams. The American Fish popes of Avignon and of Rome, opened Commission has successfully introduced March 25, 1409. The rival popes, Benedict XIII (of Avignon) and Gregory California trout, the brook char, the XII (of Rome) were summoned to shad, and various other fishes, and piscingpear within a stated period, but refused to comply. After mature deliberation both popes were formally departed by the Line of Canada, and Canada,

Pisano (pē-sa'nō), Niccolo, an Italian sculptor and architect, born at I'lsa about 1205 and spent the most of his ilfe there; died in 1278. He holds an Important place in the history of Italian art, inasmuch as his works presented a sudden and new development and far surpassed those of his immediate predecessors. Among his famous works are the reliefs of the haptistery of Pisa, the choir of the cathedral of Slena, and the beautiful sarcophagus of St. Dominic in Bologna. His chief architectural works are churches in Pisa, Pistoja, and Volterra.

Pisces, or Fisites. See Ichthyology.

Pisces (pls'ez: the Flahes), a sign of the zodiac, which is entered by the sun about the 19th of February. The constellation which occupies the zodiacai

federation. In 180 B.C. it became a perfecting of natural conditions under Roman coiony. About the beginning of the Christian era it was a flourishing fering directly with the ordinary proceeding. On the fall of the Roman Empire it was pillaged by the Goths, and afterwards subjected by the Longohards. In the tenth century it had succeeded in taking a lead among the Itaiian states; but, after protracted and unsuccessful wars with Genoa at the end of the thirteenth, and with Florence at the end of the fifteenth century, it was finally compelled by famine to submit to the Florentines (Juna 8, 1500), and thus perfecting of natural conditions under which fish ilve and thirlye, without interdering directly with the ordinary processes of nature, has thus always been more or iess practiced. But the recent discovery that the ova of fish can be taken from the hody of the female parent, impregnated with the male milt and hatched in tanks, has led to a great extension of the art. One great point in modern pisciculture is the propagation and rearing of young fish in artificial ponds with the view of introducing fish into some locality where they were not perfecting of natural conditions under which fish live and tirrive, without interponds with the view of introducing ash into some locality where they were not previously found. The art has now come into general favor and is widely followed, very many rivers having on their hanks breeding and rearing establishments for the purpose of increasing the stock of fish in the streams. that altogether the art is every year attaining a greater development, and promises to become an important department of commercial industry. Many millions of young fish are planted yeariy, and as a result the evils of over-tishing have been in considerable measure obviated.

Piscidia (pis-sld'i-a), a genus of plants, nat. order Leguminosse, the species being West Indian trees. The bark of the root of P. Erythring (dogwood tree) is a powerful narcotic, and is used as a substitute for oplum, and also for poisoning fish. The oplum, and also for poisoning fish. The timber makes excellent piles for docks and wharfs, being heavy, resinous, and almost Imperishable.

(pl-si'na), a niche, generally on the south side of the altar Piscina in churches, containing or having attached a stone basin or trough, with a channel leading to the ground. It is used to hold the water in which the priest washes his hands, and for rinsing the chalice.

Pise (pë'sā), materiai for forming the walls of cottages, agriculturai bulldings, etc., consisting of stiff clayey materials usually mixed with gravel well rammed into a frame, and when dry forming a good strong wall. These walls are thicker at bottom than at top. They

must not be built too rapidly.

Pisek (pē-sek'), a town of Bohemia, on the right bank of the Wottawa, 52 miles south by west of Prague. It is surrounded by an old and lofty wali, flanked with numerous towers; is well

built, and contains the remains of a royal castle. Pop. 13,608.

Pisidia (pl-sid'i-a), in ancient geography, a province of Asia Minor, situated between Phrygia, Cillcla, Pamphylla, Lycla, and Caria. The inhabitants were mountaineers, and were never really subdued by the Romans, being protected by the mountains and ravines which intersect the country.

Pisistratus (pI-sis'tra-tus; Greek, Peisistratos), 'tyrant' of Athens, was descended from Codrus, the last kirg of Athens, and was born not later than 612 B.C. He was rich, handsome, and eloquent, and being by nature ambitious he soon placed himself at the head of one of the three parties Into which Attica was then divided. By putting himself forward as the patron and benefactor of the poor, and by advo-cating civil equality and a democratic constitution, he was able (notwithstanding the opposition of Solon) to seize upon the acropolis (citadel) in 560 B.C., or central seed-bearing orand thus to make himself master, or, as gan of a phanerogamous

the Greeks termed it, 'tyrant' of the city. But though a tyrant in the Greek sense, his use of power was by no means tyrannical. He made no attempt to abolish the wise laws of Solon, but confirmed and extended their authority. He was, however, twice driven from Athens; but in the eleventh year of his second banishment succeeded in making himself master of the sovereignty for the third tlme. Plaistratus erected splendid public bulldings at Athens, established a public library, and collected and arranged the poems of Homer, and conducted himseif with so much prudence and ciemency that his country scarcely ever enjoyed a longer term of peace and prosperity. He died 527 s.c., leaving two sons, Hippins and Hipparchus, to inherit his power. They were not, however, abie to preserve it. See Hippias.

Pi'solite. See Peastone.

Pistachio (pis-tā'shi-o), a tree of several species, of the genus Pistacia, nat. order Anacardiacem, grow-

Pistachio (Pistacia vera).

ing to the height of 15 to 20 feet. F. vera yields the well-known plstachio-nut, which contains a kernel of a pleasant taste, resembling that of the almond, wholesome and nutritive, yielding a pleasant oil. It is a native of Western Asia, but

is much cultivated in the south of Europe. The south of Europe. The gum named mastic is obtained from P. lentiscus, as well as from P. Atlantica. See Mastic.
Pistil (pis'tii), in botany, the female

flower, consisting of one or more carpels or modified leaves. There may be only a single pistil or several in the same flower. It consists essentially of two parts, the overy, containing the ovules or young seeds, and the stigma, a cellular secreting body which is either seated immediately on the ovary (as in the tulip and poppy), and is then called ses-sile, or is borne on a stalk called a style interposed between the ovary and stigma. It is on the stigma that the pollen falls by which fecundation takes place, after which the ovule develops into the seed. See Placenta, Botany.

Pistillidium (pis-til-id'i-um), an organ of cryptogamic plants, which seems to have functions anal-ogous to those of the pistil of of a phanerogamous flower. It is the young spore-case.

Pistoja (pis-tō'ya; ancient Pistoria), a town of Itaiy, in the province of Fiorence, and 20 miles northwest of the clty of that name, near the left bank of the Ombrone. It is surrounded by lofty walls, contains a Romanesque cathedral (twelfth to thirteenth century) and other notable churches and buildings, and has manufactures of iron and steel goods, firearms, linen, etc. Pistols were first made here, and received their name from the town. Pop. (1911) 67,653. Pop. (1911) 67,653.

(pis'tul), a small firearm with a curved stock, dlscharged with Pistol one hand, named from the town of Pistoja, where it was first made. Pistols were introduced into England in 1521. Mention is made of their use in 1544. The 'dag' mentioned by the Elizabethan writers was a kind of ciumsy pistol. Pistois are made of various sizes, ranging from 6 inches (the saloon and pocket pistol) to 18 and even 24 inches (the holster pistol). They have been remarkably developed in effectiveness, and the modern pistol is a formidable weapon in

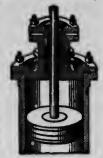

Close-hand fighting. See Revolver.

Pistole (pis-tōl'), a goid coin met with in several parts of Europe, more especially in Spain, value about \$4.00, but not now coined. It was originally a Spains coin, and was equivalent to a guestor of a double on to a quarter of a doubloon.

Piston (pis'tun), in machinery, a movable piece, generally of a cylindrical form, so fitted as to occupy the sectional area of a tube, such as the

barrel of a pump or the cylinder of a steam-engine, and capable of being driven alternately in two directions by

pressure on either of its sides. One of its sides is fitted to a rod, called the piston-rod, which it either moves backwards and forwards, as in the steamengine, where the motion given to the pistonrod is communicated to the machinery; or the piston is itself made to move by the rod, as in the pump. The piston is usually made to fit tightly by some kind of material used as

Piston and Cy!inder.

packing, the piston-rod being also made similarly tight by material closely packed in the stuffing-box (s s).

Pit, in horticulture, the name applied to an excavation below the surface

of the soil, generally covered by a giazed frame for protecting plants.

Pita Hemp (peta), a name given to the fiber of the agave or American aloe. See Aloe.

Pitaval (pita-val), François Gayor DE, a French jurist-consult and miscellaneous writer, born at Lyons and miscellaneous writer, born at Lyons in 1673; died in 1763. He was successively ablé, soldier, lawyer, and man of letters. The most important and best known of his works is a collection of criminal triais—Causes Célèbres et In-

téressantes (1734-43, twenty vols.).

Pitcairn Island (pit'karn), an isiand in the South Pacific, belonging to the Low Archipelago, lat. 25° 5′ s.; lon. 130° 5′ w.; length, 2‡ miles; breadth, about 1 mile. It was discovered by Carteret in 1767. Its coast is almost perpendicular throughout its whoie extent, fringed with formidable rocks and reefs, accessible only at two points, and not at all in stormy weather. It rises to the height of 1100 feet, and the soil, naturally fertile, yields good pasture, potatoes, yams, plantain and bread-fruit, pineapples, and other tropical fruits. The island is chiefly remarkable as the home of the descendants of the Bounty mutineers, nine of whom, together with six men and twelve women, natives of Tahiti, landed here in 1790. Violent dissensions soon arose and at the end of ten years the only survivors were John Adams, an Englishman (whose real name was said to have been Alexander Smlth), the femaies, and nineteen children. They were found in 1808 by the American, Captain Folger, who reported the dis-

The covery to the British government. interest thus aroused soon brought other visitors to the island, all of whom dilated with enthusiasm on the virtuous, sober, and industrious life ied by the inhabitants. They became, however, too numerous to subsist comfortably on this small island, and they were transferred, to the number of 194, to Norfolk Island in 1856, but about 40 soon returned. In 1881 the inhabitants numbered 96, and in 1900, 130. Whaiers and trading vessels occasionally call and exchange the products of civilization for the produce of the island. See Norfolk Island.

Pitch (pich), the residuum obtained by boiling tar till the volatile matter is driven off. It is extensively used for caulking the seams of ships, for preserving wood and ironwork from the effects of water, for making artificial

asphalt, etc.

h

s-of n Pitch, the acuteness or gravity of any particular musical sound, which is determined by the number of air-vibrations in a given time—the greater the number, the higher the note. In stringed instruments the pitch is dependent on the length, thickness, and degree of tension of the string; in wind instruments, such as the flute or organ, chiefly on the length of the column of air set in motion. (See Music.) The tuning fork is in common use to assist in giving some desired pitch.

In color it varies from brown to black, of man and the golina, and and occurs globular, reniform, massive, is like that of man.

disseminated, and puiverulent. Specific gravity, 7.5. It generally accompanies uranite and is the chief source of the uranite and is the chief source of the settled in Cincinnati, Ohio; nowly discovered element, radium.

uranite and is the chief source of the newly discovered element, radium.

Pitcher Plant (pich'er), a name given to several plants from their pitcher-shaped leaves, the best known of which is the Nepenthes distillatoria, a native of China and the East Indies, and belonging to the natural order Nepenthaces. It is a herbaceous perennial, and grows in marsby situations. The leaves are sessile, oblong, and ierminated at the extreminated at the extreminated at the extreminated at the extremities by a cylindrical point of the New Jersey supreme court, 1901-1908; and chancellor of the Supreme Court.

Pitcher-plant (No. points) are given to several post-leave supreme court, 1901-1908; and chancellor of the state, 1908-1912. In 1912 he was appointed Associate Justice of the Supreme Court.

a fluid secreted by the plant itself. The pitcher is furnished with a iid which generally opens in the day and shuts at night, and which is regarded as the true blade of the leaf. Wonderfui curative powers are ascribed to the fluid in the pitcher and to the leaf and the root of this plant, by the natives of the East Indies and Madagascar. There are numerous other pitcher-piants, varying in shape and the proportions of their parts, and found in all parts of the world.

Pitch-pine. See Pine.

Pitch-pine.

Pitchstone, a black, glossy, pitch-iike volcanic rock. It is found chiefly in the Hebrides, Southern Europe, South America, and Mexico, in veins and in dykes or bosses, sometimes forming whole mountains. Specific gravity, 2.29-2.64.

Pitchurim-beans (pich'u-rim), the name given to the lobes of the drupe of Nectandra puchury, a South American species of laurel, used by chocolate makers as a substitute for

vanilla.

Pith, the cylindrical or angular column of cellular tissue at or near the center of the stem of a plant, also called the medulla. It is not usually continued into the root, but is always directly con-nected with the terminal bud of the stem. Pithecanthropus Erectus (pithe-kan-Pitchblende, a mineral chiefly found thro'pus), the name given to the fossil wall, composed of 86.5 oxide of uranium, 1891. The portion of a cranium found 2.5 black oxide of iron, gaieua, and silex, is midway in size and form between those In color it varies from brown to black, of man and the gorilla, and the femur

Piton-bark. same as Caribbee-bark.

Pitt, Earl of Chatham. See Chatham (William Pitt, Earl of).
WILLIAM, second son of the Earl precocious intellect, but hls physicai powers were weak. He was educated privately till hls fourteenth year, when he entered Cambridge. He was called to the bar in 1780, and entered parliament the following year as member for Appleby. His success in the house was ment the following year as member for Appleby. His success in the house was of unparalleled rapidity. He supported Burke's financial reform bili, and spoke in favor of parliamentary reform; became chancellor of the exchequer at twenty-three, under the Earl of Shelburne, and in the following year attained the resition of prime minister. Although

William Pitt .- From the statue by Chantrey.

strongly supported by the sovereign, he stood opposed to a large majority of the stood opposed to a large majority of the House of Commons, and a dissolution took place in March, 1786. At the general election which followed the voice of the nation appeared decidedly in his favor, and some of the strongest aristocratical interests in the country were defeated, Pitt himself being returned by the University of Cambridge. His first measure was the passing of his India Bill, establishing the board of control, which was followed by much of that fiscal and financial regulation that gave so much éclat to the early period of his administration. The establishment of the delusive scheme of a sinking fund followed in 1786, and his Regency Bill in 1788. The French revolution now broke

and immense sacrifices and burdens on his country. In 1800 the Irish union was accomplished. In 1801 the opposition of the king to all further concession to the Irish Catholics caused Pitt to resign his post. The Peace of Amiens succeeded, and Pitt for a time supported the Addington administration which conciuded it, but afterwards joined the op-position. The new minister, who had position. The new minister, who had renewed the war, unable to maintain his ground, resigned; and in 1804 Pitt resumed his post at the treasury. Returning to power as a war minister, he exerted all the energy of his character to render the contest successful, and found means to engage the two great found means to engage the two great came chancellor of the exchequer at military powers of Russla and Austria twenty-three, under the Earl of Shel- in a new coalition, which was dissolved burne, and in the following year attained by the battle of Austriltz. This event the position of prime minister. Although tution, weakened by persisent gout, rapidly yielded to the joint attack of disease and anxiety. Biographers naturally differ as to his merits as a statesman; some assign him a most exalted place, while others represent him as entirely destitute of great ideas, as a man of expedients inof great ideas, as a man of expedients instead of principles, as a lover of place and royal favor. It is, however, universally granted that he was a distinguished orator, even amongst the very eminent speakers of that period, and that he was a man of strict personal honor. A public funeral was decreed to his honor, by parliament and a grant of honor by parliament, and a grant of £40,000 to pay his debts.

Pitta. See Ant-thrush.

> Pittacus (pit'a-kus), one of the so-cailed seven wise men of Greece, born about B.C. 652; died 569, at Mltylene, on the Island of Lesbos. He was highly celebrated as a warrior, a statesman, a philosopher, and a poet. In 589 the cltlzens raised him to the dictatorship, an office which he filled for

out, and in 1798 war arose between Great other rallroads. It is admirably sltu-Britain and France, a conflict which ated for trade, having ample river and brought a heavy responsibility on Pitt, railway connection with the great com-

port, Payta. Pop. about 12,000.

Pius II (pi'us; ÆNEAS SYLVIUS
PICCOLOMINI), pope, born in
1405; died in 1464. He was descended from an illustrious Tuscan family, and studled at the University of Siena. He became secretary to Cardinal Capranica, and the Council of Basel in 1431; to the anti-pope Felix V in 1439, and to Frederick III of Germany in 1442. The emperor sent him as an imperial ambassador to a dlet at Ratisbon, and in 1446 to Pittsfield (pitz'feld), a city, capital of Berkshire county, mission of Germany. He gained the family on the Housatonic River, vor of Eugenius, whom he had formerly

opposed, and by his successor was created bishop of Trieste in 1447, and cardinal In 1456. He succeeded Caiixtus III as pontiff in 1458. In 1460 he published a buil condemning the doctrine he had in former years so vigorously defended: the superiority of a general council to the pope. I'us II was one of the most learned men of his age, and left some valuable and interesting historical works, orations, and letters.

Pius V (MICHELE GHISLERI), pope, born in 1504; died in 1572. He was raised to the cardinalate by Paul IV in 1557, appointed inquisitor in Lomly in 1557, appointed inquisitor in Lombardy, then inquisitor-general, and chosen pope in 1565. He chiefly distinguished himself by his zeal for conversion of Protestants and Jews; the buil in Cana Domini was renewed by him, and the authority of the Index Expurgatorius enforced. In 1570 he excommunicated Elizabeth of England. He lent his influence and assistance to Charles IX of France against his Protestant subjects, and to the Venetians and Spaniards in their war against the Turks. He was their war against the Turks. He was canonized by Clement XI.

Pius VI (GIOVANNI ANGELO BRASCEI), pope, born at Cesena in 1717; died at Valence in 1799. He held important offices under several pontiffs, was raised to the cardinalate by Ciement XIV and succeeded him in 1775. Severai beneficent reforms were introduced by him in the finance department: he also improved the Vatican ment; he also improved the Vatican Museum, drained the Pontine marshes, reconstructed the port of Ancona, and embellished Rome. The French revolution, however, hastened the decay of the temporal power of the holy see. In 1791 Avignon and the county of Venaissin were reunited to France; by the treaty of Tolentino (1797) he jost the Romagna, Bologna, and Ferrara; and on the 15th of February, 1798, General Berthier established the Roman republic, deprived the pope of his authority, and conveyed him as a prisoner to France, where he died the following year.

Pius VII (GREGORIO BARNABA CHIARAMONTI), pope, born at Cesena in 1742; died in 1823.

At the age of sixteen he was received into the order of Benedictines, served as teacher in several abbeys, and subsequently became professor of philosophy in Parma, and of theology in Rome. Plus VI created him bishop of Tivoli,

aimed at re-establishing the oid order of things, and to gain it he tried to conciliate Napoleon by attending his coronation. He aroused the open enmity of the emperor by refusing to be present at the coronation in Milan, and to recognize his brother Joseph as king of Napoleon the recognizer the results his protection. pies; the resuits being another occupation of Rome by French troops (February 2, 1808), the incorporation of the papal cities, and shortly after of Rome itseif, with the Kingdom of Italy, and the arrest of the pope (July 6, 1809) and his confinement in Savona and afterwards at Fontainebieau. In 1814 he was released and restored to the possession of ail the papal territories except Avience and and restored to the possession of all the papai territories except Avignon and Venaissin in France, and a narrow strip of iand beyond the Po. His subsequent government was politically and ecclesiastically of a reactionary character.

Pius IX (GIOVANNI MARIA MASTAI FERRETTI), pope, born in 1792, was destined for a military career, and on the restoration of Ping VII en.

and on the restoration of Pius VII en-tered the Guardia Nobile of the Vatican, but soon after adopted the cierical profession. He held various ecclesiastical offices under Leo XII, who appointed him Archbishop of Spoleto in 1827, and to the see of Imola in 1832. Here he acquired much popularity by his liberal tendencies. He further showed his benevolent nature during a mission to Napies at the time of a choiera epidemic, when he soid his plate, furniture, and equipage to relieve the sufferers. Although raised to the cardinalate in 1840, he resided in his dlocese until his election to the pontificate in 1846. His accession to the pontificate in 1846. His accession was signalized by the release of 2000 political prisoners, followed by a complete amnesty; and Italy was to be free and independent under a liberal constitution. But the Italians, who wanted to be free of the Austrians, flocked under the banner of Charles Albert, and Pio Nono, as pontiff, found himself obliged to interfere. Disaster, bloodshed, and anarchy followed, and he had himself to seek safety in flight. A Roman republic seek safety in flight. A Roman republic was prociaimed (Feb., 1849), with Mazzini at its head. Louis Napoieon, president of the French republic, sent an expedition to Rome, which defeated the taiian patriots under Garibaldi, and occupied the city (July 3). The pope returned in Aprii, 1850, but he left the direction of state affairs principally in the hands of his secretary of state, Cardinal Antoneiii. On the death of that distinguished project. cardinal and bishop of Imola; and his dinal Antoneili. On the death of that friendly attitude towards the Cisalpine distinguished preiate, Pio Nono again Republic secured him the favor of bestowed his whole attention on the France, and the election to the papal church. He recalled the Jesuits, canonchair in 1800. After his accession he ized saints, countenanced miracles, and

Pius X (Giuseppe Sarto), pope, was born of humble parents at Riese, near Venice, in 1835. He studied at Treviso and Padua and was ordained priest in 1858, being soon after made chancellor of the diocese and vicar of the chapter of Treviso. Leo XIII appointed him bishop of Mantua in 1884, and cardinal and patriarch of Venice in 1893. The papal nomination to this office was for a time disputed by the Italian government, which claimed the right to nomination. But the new patriarch's simplicity of life, vigorous repression of ahuses, and sympathy with the poor endeared him to the people, and on the death of Leo VI in 1903 he was a prominent; canding for the papace. He was elected in August 1903 heater the research of the chapter of the general, strangled Almagro. Hernando Pizarro, and Almagro. Hernando Pizarro, and Almagro. Hernando Pizarro, and Almagro murdered Francisco Pizarro in his palace at Lima was founded hy Pizarro in 1535, and his remains are interred in the cathedral of that city, also founded hy him.

Pizarro, Gonzalo, half-hrother of the preceding, was born in 1502. His hrother appointed him governor of Quito in 1540, and after the assassination of Francisco, he raised an army against the new viceroy, Blasco heater was elected in August 1903 heater the preceding has success, being being heater was elected in August 1903. he was a prominent candi e for the did not long enjoy his success, being papacy. He was elected in August, 1903. beaten, taken prisoner, and beheaded in As a pope he was distinguished rather for 1548. piety and administrative activity than for

defined new dogmas. The immaculate soldier. The spirit of adventure which at conception of the Virgin was settled by that time pervaded Spain prompted him a papal decree in 1854, and the dogma of to seek fortune in the newly-found cona papal decree in 1854, and the dogma of papal infallibility was established by the ecumenical council of 1870. By this time in various military and trading expeditions. While resident near Panama he poral power was secured by the presence of French troops at Rome. But the downfall of Napoleon III caused their withdrawal; the Italian troops took possession, and the political rule of the holy see was at an end. The Vatican was left to the pope, and his independence see was at an end. The Vatican was left to the pope, and his independence insured. The later years of his 'cap-tivity' were cheered by the proofs of reverence displayed by Roman Catholic Christianity, which accorded him magnificent ovations as his period of juhiles began to fall due. The twenty-fifth anniversary of his pontificate was celebrated with great splendor in 1871; for he was the first pope to reach the traditional 'years of Peter.' He died in February, 1878.

(GIUSEPPE SARTO), pope, hut finding their force inadequate for conquering the country, Pizarro returned to Spain for assistance. He arrived in Settlement as small force, and recrossed the Atlantic in 1531. The following year he arrived in Peru during a civil war, treacherously seized the person of the reigning inca at a friendly interview, and after extorting an immense ransom, put him to death. The whole empire was gradually conquered without much opposition, but its settlement was long in aheyance owing to a feud between Pizarro

piety and administrative activity than for learning. His term of service was one long zealous effort to comhat the doctrines of modernism, at which the encyclical known as Pascendi of September 8, 1907, was especially directed. Further condemnation of modernism and the prescription of the duty of the teaching clergy to oppose heretical tendencies were published by him from time to time. He died August 20, 1914.

Piute, or Paiute (pf-ūt) Indians, the latter include only the two orders Monotremata and Marsupialia. Southwestern Utah, but generally given to a number of Shoshone tribes of Utah, Nevada, Arizona and southeast California. number of Shoshone tribes of Utah, in connection with the development of the Nevada, Arizona and southeast California. Young of some species of sharks and Pizarro (pē-zar'ō), Francisco, a dogfishes. The human placenta presents Spanish adventurer, the discoverer and conqueror of Peru, was born in 1471, the illegitimate son of a Spanish and the ovum. By the end of pregnancy officer, under whom he served as 8 it forms a disk-like mass, measuring 72

inches across, a inch thick, and about 20 os. in weight. Connected with it near the middie is the umhilical cord, by means of which the growing embryo is attached to the piacenta. Through the piacenta and the umbilical cord the blood of the embryo comes into close communi-cation with the blood of the mother, by means of which its purity and nourishing qualities are maintained, and the requisite supply of material furnished for the embryo's continued life and growth. At the end of pregnancy the placenta is thrown off as the after-birth, after the child itself has been expelled.

Placenta, in botany, a development of ceiluiar tissue at the inner or ventrai suture of a carpel, to which the ovuies or seeds are attached either immediately or by umbilical cords, as in the pod of the pea. The placenta is formed on each margin of the carpei, and is therefore essentially double. When the pistii is formed by one carpei the inner margins unite in the axis, and usually

Transverse and Vertical Sections to show Placenta.

1. Central Placenta. 2. Axile central Placenta. 3, Parietal Placenta. a a, Placentse.

form a common placenta. When the pistil is composed of several carpels there are generally separate placentas at each of their margins. The term parietal placenta is applied to one not projecting far inwards, or one essentially constituted of the waii of the seed-vessel. The form of piacentation forms an important distinction between the various orders of plants. Placentalia

See Placenta. See Piacenza. Placentia.

Placentitis (pla-sen-tī'tis), inflammation of the placenta, a disease which occurs acute or chronic, more frequently the latter. It may result from a blow, fall, fright, sudden and violent emotion, and other serious shocks to the system. The fœtus is injuriously affected, and may be destroyed by it: any stage of pregnancy.

Placoid (piak'oid), a term used to designate a variety of scales covering the bodies of the Elasmobranchiate fishes (sharks, skates, rays, etc.), the *Placoidei* of Agassiz. These struc-tures consist of detached bony grains, tubercies, or piates, of which the latter are not uncommonly armed with spines.

Plagal (plagai), in music, the name given by Gregory the Great to the four collateral scales which he added to the four authentic scales of Ambrose. (See Gregorian Tones.) The term plagal is now applied to meiodies in which the principal notes lie between the fifth of the key and its octave. The piagai cadence consists of the chord of the subdominant followed hy that of the

tonic. See Music.

Plagiostomi (pia-gi-os'to-mi; Gr. plagios, oblique; stoma, mouth), a suborder of fishes of the order Elasmobranchii, distinguished by the bodies of the vertebræ being either bony or at any rate containing osseous elements; the skuii gristly or cartilaginous; the mouth a transverse slit, situated on the workers of the bodies of the bodies. the under surface of the head; and the teeth numerous. The Plagiostomi include three groups: the Cestraphori, represented soiely by the Cestracion Phillipi or Port-Jackson shark; the Selachii (sharks and dogfishes); and the Batides, represented by the skates, rays, and sawfishes.

Plagium (plā'ji-um), in the Roman law, is the crime of stealing the siave of another, or of kidnaping a free person in order to make him a siave. By Scotch law the crime of stealing an adult person (plagii crimen) was punishabie with death, and the same punishment has been applied to the stealing of children.

Plague (plag), a contagious and very fatai fehrile disease characterized by entire prostration of strength, stupor, delirium, often nauses and vomiting, and certain local symptonic orders of plants. toms, as buboes, carbuncles, and livid (pla-sen-ta'li-a), the spots (petechiæ). Like all other maligplacental mammals. nant fevers, the plague has its various stages, but most frequently runs its course in three days, although death may a few hours of the its presented. ensue a few hours after its appearance. If the patient survive the fifth day, he wili, under judicious treatment, generally recover. There is no specific remedy against the disease, and a variety of treatment has been adopted on different occa-sions and by different medical men. The piague appeared in the most ancient times, aithough historians have used the abortion frequently results, and at almost terms indiscriminately for other epidemics. The first recorded visitation of the

The town has again claimed its victims in the succeed-manufactures of cottons, woolens, yarns, lng centuries, and in 1593 it was brought etc. Pop. 6719. to England by an army returning from the Continent. Before the true nature of the disease became known It had gained a firm footing in London, and there were 11,503 deaths. London iost by the plague 36,269 lives in 1603; 35,500 in 1625; 13,480 in 1636; and 68,600 in 1665. The plague in Marselles in 1720 caused the death of over 60,000 in seven months, and in Messina (1743) of 43,000 ln three months. In 1771 it nearly swept off the whole population of Moscow. Subsequently it appeared locally in Europe at a number of points. Its last appearance in Europe was in 1878-79, fleas convey it from rats to men. On its recent appearance in San Francisco an active crusade against rats and squirrels in California went far to prevent lts spread.

Plaice (plas; Pleuronectes or Pla- jected wo 'Flat-fishes.' The common plaice (Pleu-Planarida (plan-ar'i-da), the Planarida platessa or Platessa vulgāris), Planarida (plan-ar'i-da), the Planarida platessa or Platessa vulgāris),

known also as steppes, savannas, prairies,

Plain-song, the name given to the ecclesiastical chant in its most simple state, and without harmonic appendages. It consists largely of monotone, and its inflections seidom exceed the range of an octave. Ambrose of Milan and Gregory the Great introduced certain reforms into the church music of their day, regarding which see Gregorian Tones.

(plan'tif), in law courts, the person who commences Plaintiff a suit against another in iaw or equity. last Plan, in architecture, a drawing show-79, ing the design of a building, a (Asterm chiefly used in reference to hori-epi-zontal sections showing the disposition on the hanks of the Lower Volga (Astrakhan and neighborhood). An epitrakhan and neighborhood). An epitrakhan and neighborhood of plague broke out in the Bombay Presidency, India, in 1896, and long building, and of the doors and windows, continued, though with lessened virulence. Recent research has traced the disease to vertical sections. A geometrical plan is the effect of a micro-organism, and dis- one wherein the several parts are reprecovered that rats are subject to it and that sented in their true proportions. A per-fleas convey it from rats to men. On its spective plan is one, the lines of which follow the rules of perspective, thus reducing the sizes of the more distant parts. The term is also applied to the draught or representation on paper of any projected work, as the plan of a city or of

ronectes platessa or Platessa vulgāris), a well-known food fish, attains an averlage iength of 12 or 18 inches. The dark or upper side is colored hrown, shape, and not unlike the foot of a gastomparatively smooth; the ventral fins most part, aquatic in their habits, occurare situated on the throat and are thus ring in fresh water or on the reschere are situated on the throat, and are thus jugular in position; the mouth is of small size, and provided with small teeth. These fishes are all 'ground-fishes,' that is, feed and swim near the bottom of the sea. They are caught chiefly by means of trawi-nets.

Dlair (piān), a tract of country of the sease of tract of the sease of the sease of tract of the sease of means of trawi-nets.

(piān), a tract of country of verse fission.

nearly uniform elevation; Planché (plang'shā), James Romn-nearly uniform elevation; Planché son, an English dramatist

and miscellaneous writer, was born in 1796; died in 1880. He came forward early as a writer of pieces for the theater, and also occupied himself, with archæelogy, heraidry, etc., being appointed a pursuivant in the heraids' college, and latterly Somerset heraid (1864). He wrote a vast number of extravaganzas, pantomimes, and other light pieces, while among his more serious productions were:
History of British Costume; Introduction to Heraldry; The Pursuivant at
Arms, a treatise on heraidry; Recollections and Reflections; The Conqueror and
his Companions; The Cyclopædia of

Planchette (pian-shet'), an instru-ment used in spiritualistic seauces. It consists of a heartshaped board, with wheels under its broad end, and a hole at the pointed end through which a pencil may be thrust. It moves readily when the fingers of sensitives are placed on it, and often writes freely, many long and often very surface communications being thus recurious communications being thus received.

Plane (plan), r joiner's tool, consisting of a smooth-soled solid block, through which passes obliquely a piece of edged steel forming a kind of piece of edged steel forming a kind or chisel, used in paring or smoothing boards or wood of any kind. Planes are of various kinds, as the jack plane (about 17 inches iong), used for taking off the roughest and most prominent parts of (P. orientalis), resembles the preceding, the wood; the trying plane, which is and is pientiful in the forests of Westnead after the jack plane; the smoothing to line form being able to withstand the plane (7½ inches iong) and block plane (12 inches iong), chiefly used for cleaning off finished work, and giving the utmost degree of smoothness to the surface of the wood; the compass plane, which has its under surface convex, its which has its under surface convex, its use being to form a concave cylindrical surface. There is also a species of plane called a rebate plane, being chiefly used for making rebates. The plough is a plane for sinking a channel or groove in a surface, not close to the edge of it. Molding planes are for forming moidings, and must vary according to the design. Planes are also used for smoothsign. Planes are also used for smooth-

sing metal, and are wrought by machinery.
See Planing Machine.

Plane, in geometry, a surface such that if any two points in it are joined by a straight line the line will like wholls within the surface.

or cotton-tree of the West), abounds in American forests, and on the banks of the Ohio attains sometimes a diameter of from 10 to 14 feet, rising 60 or 70 feet without a branch. The bark is paie green and smooth, and its epidermis de-taches in portions; the fresh roots are a beautiful red; the leaves are alternate, palmated, or lobed; and the flowers are united in little globular, pendant bails. The wood in seasoning takes a dull red color, is fine grained, and susceptible of

folia, from being able to withstand the deleterious influences of a smoky atmosphere, are among the trees most suitable for planting in towns. The Acer Pseudo-platănus, the common sycamore or greater mapie, is called in Scotland the plane-tree.

Planet (pian'et), a celestial body which revolves about the sun as its center (primary planets), or a body revolving about another planet as its center (secondary planets, satellites, or moons). The known major planets are, in the order of their proximity to the sun, Mercury, Venus, the Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. Mercury, Venus, Mars, Jupiter, and Saturn were known to the ancients. re joined by a straight line the line will lie wholly within the surface.

is annually increased by fresh discoveries; over 700 are now known. Mereury, Venus, the Earth, and Mars closely resemble each other in many respects. They are all of moderate size, with great densities; the earth weighing as much as five and a half times an equal bulk of water. They shine only by reflected sunlight. Jupiter, Saturn, Uranus, and Neptune, on the other hand, are of enormous size, of small densities, some of them weighing iess than an equal bulk of water, and probably exist at a high temperature, and give out in addition to reflected sunlight a considerable amount

Plankton (plank'tun), a name given reflected sunlight a considerable amount of light and heat of their own. Nearly all the planets are attended by moons, varying from one to ten in number. The most colossal of the planets is Jupiter; its volume exceeds that of the earth about 1200 times. Saturn is next in size. Mars, Jupiter, Saturn, Uranus, and Neptune, being outside the earth's orbit, are tune, being outside the earth's orbit, are sometimes called the superior planets; branch of broom (plante de genét) in his Venus and Mercury, being within the earth's orbit, are called inferior planets. The family of major planets has also been subdivided into intra-asteroidal planets.—Mercury, Venus, the Earth, Mars; and estra-asteroidal planets—Jupiter, Saturn, Uranus, and Neptune, the character of the two being very different as above described. The planet which approaches nearest to the earth is Venus, the least distance in round numbers being 23 millions of miles; the most distant is Neptune, least distance 2629 million miles. We give here a comparative table of the planets; see also the million miles. We give here a compara-tive table of the planets; see also the separate articles.

Plankton (plank'tun), a name given to the small animals of the ocean or other waters, taken collectively.

See Botany. Plant.

Plantagenet (plan-taj'e-net), a sur-Geoffrey, Count of Anjou, and said to have originated from his wearing a branch of broom (plante de genét) in his cap. This name was borne by the four-

suffrutescent, plants, with alternate or radical, rarely opposite, leaves, and in-

IJУ ITS Plato

he gave himself en-tirely to philosophy. Until the death of Socrates (B.C. 399) he appears to have been his constant and favorite pupil; but after that event Piato is supposed to have ieft Athens with a view to improving his mind hy travel. He is said to have visited Cyrene (in North Africa), Low-er Italy, and Sicily. Various other jour-neys are attributed to him, hut without About B.C. 389 or

and from this time

hy Schlelermacher, who adopted an arrangement into three divisions, according to the leading doctrines he believed they were intended to inculcate. The chief works in the first section are Phædrus, Protagoras, Parmenides, Lysis, Laches, denies all permanent authority to the evi-Charmides, Euthyphron: in the second, dence of sense. Having discovered or Theætetus, Sophistes, Politicus, Phædo, created the realm of ideas, he surveyed it Philehus, Gorgias, Meno, Euthydemus, throughout. He defined its most ex-Cratylus, Symposium; in the third, the cellent forms as beauty, justice, and Republic, Timeus, Critias, and the virtue, and having done so he determined Republic, Timeus, Critias, and the virtue, and having done so he determined Leges or Laws. Hermann has attempted what was the supreme and dominant to make out a chronological arrangement, and other scholars who differ from the Good. The harmony of intelligence Schielermacher have attained various throughout its entire extent with good-theories of constructive arrangement. These schemes in general proceed on the Plato's philosophy. His ethical system was in direct dependence upon his diagram. assumption that each clalogue, being an was in direct dependence upon his dia-artistic whole, forms a link in a chain. lectics. He believed that the ideas of all Grote and others, however, do not admit existing things were originally contained

(pla'to), an ancient Greek phi-that Plato foilowed any plan either artis-iosopher, founder of one of the tic or didactic. Apart from their philogreat schools of Greek philosophy, was sophical teaching the dialogues of Plate born at Athens in n.c. 429; dier in a are admirable as works of literature, essentially and exhibit Greek prose in its highest he was well connected and carefully equipped and exhibit Greek prose in its highest rated. About his twentieth year he came directive under the influence of Secretary and are influence of Secretary and are lively appears as one of the speakdirectly under the influence of Socrates, ers. They contain also lively and accurate accounts of previous systems of Greek philosophy and their teachers, introduced not merely for historical pur-poses, hut as incidental to the analysis of their opinions. There is an excellent English translation of the whole by

Jowett. The philosophy of Plato must be regarded as one of the grandest efforts ever made hy the human mind to compass the problem of life. After the example of Socrates, he held the great end of philosophic teaching to be to lead the mind of the inquirer to the discovery of truth rather than to impart it dogmatically, and for this end he held oral teaching to be superior to writing. This preference appears to have determined the conversaabout B.C. 380 or Plato originated the distinction of philosophical system in a gymnasium known as the Academy, his subsequent life being unbroken, except by two visits to Sicily. He appears to have had a patrimony sufficient for his wants, and taught without remuneration. One of his pupils was Aristotie.

The reputed works of Piato consist of Dialogues and Letters, the latter now regarded as spurious; but the genuineness of most of the Dialogues is generally admitted. The chronology of the latter is a matter of uncertainty. The first attempt at a critical arrangement was made to the latter into the derive from that source is unsatisfactory and uncertain. Plato, therefore, maintains that degree of skepticism which denies all permanent authority to the evidence of sense. Having discovered or created the realm of ideas, he surveyed it throughout. He defined its most ex-

in God. These ideas were each the perfection of its kind, and as such were viewed by God with approval and iove. God bimself being infinitely good was the object of all imitation to intelligent beings; bence the ethics of Plato had a double foundation, the imitation of God and the realization of ideas, which were in each particular the models of perfection. To his cosmical theories be attributed only probability, holding that the dialectical method by which truth alone could be discovered was applicable only to ideas and the discovery of moral principles. The most valuable part of Plato's cosmogony is its first principle, that God, who is without envy, planned all things that they should be as nearly as possible iike himself. Piato's political treatless are the application of his ethical principles to social organization. His genius was more adapted to huild imaginary republics than to organize real ones; hence his judgment of statesmen is also faulty and often unjust, as, for instance, in the case of Pericles and Themistocles. He was guided by one grand principle, which is mentioned in several of his writings, that the object of the education and instruction of young people, as well as of the government of nations, is to make them better; and whoever loses sight of this object, whatever merit be may otherof the

wise possess, is not really worthy of the esteem and approbation of the public.

The followers of Plato have been divided into the Old, Middle, and New Academies; or into five schools: the first representing the Old, the second and third the Middle, and the fourth and fifth the New Academy. In the first are Speusippus, Xenocrates, Heracildes, and others. Of these, the first reverted to pantheistic principles, the second to mysticism, and principles, the second to mysticism, and the last was chiefly distinguished as an astronomer. In the Middle Academy, of which were Arcesllas and Carneades, the founders of the second and third school, skeptical tendencies hegan to prevail. The New Academy hegan with Philo of Larissa, founder of the fourth school. Its

teachings, however, deviated widely from his views.

(pla'tof), hetman of the Cos-Platoff Russian cavalry officer, born about 1763-65; died 1818. He successfully fought the Turks in Moldavla, and largely contributed to the great disaster which befell the French army retreating from Moscow in 1812.

(pia-ton'ik), a term by which is generally Platonic Love understood a pure spiritual affection between the sexes unmixed with carnal de-

sires, and regarding the mind only and its excellences

Platoon (pla-ton'), in military lansmall body of men in a battalion of foot, etc., that fired aiternately. The term is now applied to two files forming a subdivision of a company; hence also platoon-firing, firing by subdivisions.

Platt, THOMAS COLLIER, political ieader, born at Oswego, New York, in 1833; died in 1910. He was political. elected to Congress in 1873 and to the Senate in 1881, hut resigned the same year, with his colleague Conkling, from opposition to President Garfield's civil service policy. In 1880 he became president of the United States Express Company. His time was largely devoted to political management, and for years be was the autocrat of the Republican party in New York. He was re-elected to the Senate in 1896 and again in 1903.

Plattdeutsch (plat'doich), or Low GERMAN, is the language of the Newbern County of t

guage of the North German Lowlands, from the borders of Holland to those of Russlan Poland. The Dutch and Flemish ianguages also belong to the Low German dialects, hut being associated with an independent political system, and having a literature of their own, are reck-oned as distinct languages. The Low German dialects agree in their consonantal system not only with Dutch and Flemish, but also with English and the Scandinavian tongues. (See *Philology*.) Until the Reformation Low German was the general written language of the part of the continent above mentioned; hut from that time Low German works befrom toat time Low German works became gradually fewer, owing to the position now taken by the High (or modern classical) German. Even as a spoken language High German has ever since been slowly superseding the Low. In recent times, however, Low German literature has received a new impetus from Klaus Groth and Fritz Reuter. Linguistically the Low German dialects have received a good deal of attention and received a good deai of attention, and many valuable lexicographical works bave appeared.

Platte (piat), a river of the western United States, which rises in the Rocky Mountains by two hranches, called respectively the North and South Forks of the Piatte. The united stream falls into the Missouri after a course of about 1600 miles. It is from 1 with the course of the co about 1600 miles. It is from 1 mile to 3 miles broad, shallow, encumbered with islands, bas a rapid current, and is therefore not navigable.

Plattner (plat'ner), CARL FRIEDRICH, a German metailurgist, born in 1800; died in 1858. From 1842-57 he heid the professorship of metallurgy at Freiberg, and taught and experimented with great success. He is best known for his application of the blowpipe to the quantitative assay of metals.

Plattsburg (platz'burg), a town of New York, county seat of Clinton Co., on Cumberland Bay, Lake Champiain, at the mouth of Saranac River, 168 miles N. by E. of Albany. It is a lake port of entry, with a good harbor; lumber, iron, pulp, paper, automobile angines, and grain being the chief articles. engines, and grain heing the chief articles of export. The river supplies water power, and iron, flour, sewing machines, pulp, paper, etc., are manufactured. Plattshurg is a military post, with one of the largest barracks in the United States.

Plattsmouth, a city, capital of Cass Co., Nehraska, on the Missouri River, 22 miles s. of Omaha. A steel bridge 2900 feet iong here crosses the river. There are railroad shops, flour milis, etc., and a trade in grain and cattle. Pop. 4287.

Platypus (piat-i'pus). See Ornitho-

Plauen (plou'en), a thriving manufacturing town in Saxony, circie of Zwickau, in a beautifui valley on the ieft hank of the Eister, 60 miles s. of Leipzig, 78 miles w. s. w. of Dres-den. It is waited and has a castie. Man-

Plautus one of the oidest and best Roman comic writers, and one of the founders of Roman literature, born at Sarsina, in Umbria, about B.C. 254; died B.C. 184. We have few particulars of his life. He is said to have been first connected with a dramatic company at Rome; then to have engaged in business, hut losing his means was at one time in a very destitute condition, and com-pelled o earn his livelihood by turning a baker's handmili. At this period he became a successful writer of comedies. The purity of his ianguage, his genuine essays have recently been collected and

humor, and his faithful portrayal of mid-dle and lower class Roman iife made him a great favorite with the Roman public; and his piays successfuily held the stage for some centuries. He was much admired by Cicero and Varro. For his characters, piots, scenes, etc., he was chiefly indebted to the poets of the new Attic comedy, but the language was his own. Some twenty of his plays have been preserved to us, a few of them more

or iess mutilated.

(pla'far), John, a Scot-Playfair tish naturai philosopher and mathematician, born in Forfarshire in 1748; died at Edinhurgh in 1819. He entered the University of St. Andrews at fourteen, where he soon displayed special talent for mathematics and natural philosophy. philosophy. Having entered the church the largest barracks in the United States. he heid a living for some years. In 1785 Near here, on Sept. 11, 1814, Commodore he was chosen assistant professor of McDonough gained a victory over the British lake fleet, and an army which had attacked the town was also repulsed. In 1802 appeared his Illustrational Account of the Huttonian Theory of the Earth, and in the following year a Biographical Account of Dr. James Hutton. In 1805 he obtained the chair of natural in Edinburgh University. philosophy The Royal Society of London elected him a member in 1807. He paid a visit to the continent in 1815, and spent some seventeen months in France, Switzcriand, Platyelmia (pia-ti-el'mi-a; 'Flat-and Italy. He published Elements of Euclid and Outlines of Natural Philosthet class Scoiecida. They are represented by the tapeworm, 'flukes,' etc.

Platypus (piat-i'pus). See Ornitho-rhynchus.

Society of Edinburgh, the Royal Society of London, and the Edinburgh Review.

His providers are medical of compositions. Platyrhina (plat-i-ri'na). See Mon-His writings are models of composition and argument.

Playfair, SIR LYON, a British scientist and politician, son of Dr. G. Playfair, inspector-general of hospitals in Bengai, was born at Meerut, Bengai, in 1819, and educated at St. Andrews and Edinburgh universities. He ufactures machinery, paper, ieather, calistudied chemistry under Graham in Glascoes, and extensively all kinds of emproidered goods. Pop. (1910) 121,272. Giessen. His able reports on the sanisplantus (pig'tus), Titus Maccius, tary condition of the large towns of gow and London, and under Liehig at Giessen. His able reports on the sani-tary condition of the large towns of Britain, and his valuable services as special commissioner at the London Exhibition of 1851 first brought him promi-nently before the public. He became connected with the science and art department at its establishment in 1853, inspector-general of government museums and schools of science in 1856, and was professor of chemistry at Edinburgh University, 1858-69. Besides his scientific memoirs he published numerous important papers on political, social, and educational subjects. Most of these economical

published under the title Subjects of placed as stars in the sky, and the loss social Welfare. He died in 1898.

Playing Cards. See Card. placed as stars in the sky, and the loss of the seventh was variously accounted for. In reality the cluster consists of Playing Cards. See Card.

Plebeians (pie-bē'anz), or Plebs, in ancient Rome, one of the great orders of the Roman people, at first excluded from nearly all the rights of citizenship. The whole government of the state, with the enjoyment of all its offices, belonged exclusively to the Patricians with whom the Plebeians could not cians, with whom the Plebeians could not even intermarry. The civil history of Rome is to a great extent composed of the struggles of the Piebeians to assert their ciaim to the piace in the commonwealth to which their numbers and social importance entitled them, and which were crowned with complete success when (B.C. 286) the Lex Hortensia gave the plebiscita, or enactments passed at the piebeian assemblles, the force of iaw. From this time the privileges of the two classes may be said to have been equal. Plebiscite (pleh'i-sit), a vote of a whole nation obtained by universal suffrage, a form of voting introduced into France under the Napoleonic régime, and named after the Roman plebiscita. (See above article:) The term is also used in a more general sense. Plectognathi (piek-tog'na-thi), a suborder of Teleostean fishes, distinguished by the maxillary and intermaxillary bones on each side of the jaw being firmly united together hy bony union. The head is large, and the union of its bones firmer than in any other Teleostean fishes; the body generally short, skin horny, fins small and soft. As examples of the chief fishes included in this group we may cite the trunk-fishes, the gists. Its neck was of enormous length, file-fishes, the globe-fishes, the sun-fishes,

Pledge (piedj), or PAWN, in law, ls a species of hailment, being the deposit or placing of goods and chat-tels, or any other valuable thing of a personal nature, as security for the pay-ment of money borrowed, or the fulfillment of an ohligation or promise. If the money is not pald at the time stipulated the pawn may be soid hy the pawnee, who may retain enough of the proceeds to pay the deht intended to be secured. See Paunbroker.

Pleiades (pil'a-dez), the so-called seven stars' in the neck of exceeding that of its body; it possessed

far more than seven stars.

Pleistocene (plis'to-sen; Gr. pleistos, most, and kaimos, recent), in geology, the lower division of the Post-tertiary formation. It is also known as the GLACIAL SYSTEM, and rests the please of the upon the Pliocene, being the latest of the fossil-bearing formations. The fossil remains belong almost wholly to existing species. The Pleistocene moliusca ali belong to still living species, but its mammals include a few extinct forms. It is also known as the 'glacial' or 'drift' period, owing to the great prevaience of glaciers and icebergs at that period. See Pliceene.

Plenipotentiary (pien-i-pō-ten'shador appointed with fuil power to negotiate a treaty or transact other husiness. See Ministers.

Pleonasm (ple'u-nazm), in rhetoric, is a figure of speech hy which we use more words than seem absolutely necessary to convey our meaning, in order to express a thought with more grace or greater energy; it is sometimes also applied to a needless superahundance of words.

Plesiosaurus (pie-si-o-sa'rus), a genus of extinct amphihious animals, nearly aliied to the Ichthyosaurus. The remains of this curious genus were first brought to light in the Lias of Lyme Regis in 1822, but over twenty species are now known, and they have formed the subject of important they have formed the subject of important memoirs hy Owen and other palæontoio-

Plesiosaurus, partially restored.

the constellation Taurus, of which only a trunk and tail of the proportions of an six are visible to the naked eye of most ordinary quadruped; to these were added persons. They are regarded by Müdler the paddles of a whate. The neck veras the central group of the Milky Way. tehree numbered forty or fewer. From Ancient Greek legends derive their name twenty to twenty-five dorsai segments expersons. They are regarded by Müdler the paddles of a whale. The neck veras the central group of the Milky Way. tehræ numbered forty or fewer. From Ancient Greek legends derive their name twenty to twenty-five dorsal segments exfrom the seven daughters of Atias and isted; and two sacral vertehræ and from the nymph Pleione, fabied to have been thirty to forty caudal segments completed Mesozoic age.

the spine. No distinct breastbone was developed. The head was not more than 1-12th or 1-13th of the length of the body; the snout of a tapering form; the orbits large and wide. The teeth were conical, siender, curved inwards, finely striated on the enameled surface, and hollow throughout the interior. These animals appear to have lived in shailow seas and estuaries, and, in the opinion of some, they swam upon or near the surface, having the neck arched like the swan, and darting it down at the fish within reach. Some of the Piesiosauri were upwards of 20 feet iong. Their remains occur from the Llas to the Chalk rocks inclusive, these forms being thus exclusively of the

Plethora (pieth'u-ra), in medicine, an excess of blood in the human system. A fiorid face, rose-colored skin, swollen blood-vesseis, frequent nose-bleeding, drowsiness and heavy feeling in the iimbs, and a hard and fuli pulse are symptoms of this condition, habitual in many persons, and which, if not actually a disease, yet predisposes to inflammations, congestions, and hemorrhages. Piethora may, however, develop in persons of ail conditions and ages as the result of too much stimulating food (as an excessive meat-diet), overeating, large consumption of mait and spirltuous idquors, residence in northern and elevated regions with sharp, dry alr, want of exercise, too much sleep, amputation of a iimh—in short, of any action tending to unduly increase the volume of hiood. Piethora of a mild form may be reduced hy copious draughts of diluents, a vegetahle diet, and plenty of exercise;

reduced by copious draughts of difficults a vegetable diet, and plenty of exercise; but in cases requiring prompt relief ieeches or hieeding must be resorted to.

Pleura (piö'ra), the serous membrane lining the cavity of the thorax or chest, and which also covers the iungs. Each iung is invested by a separate pieura or portion of this membrane. In the thorax each pleura is found to consist of a portion lining the walls of the chest, this foid being named the parietal layer of the pleura. The other fold, reflected upon the iung's snrface, is named in contradistinction the visceral layer. These two folds inciose a space known as the pleural cavity, which in health contains serous fluid in just sufficient quantity to iubricate the surfaces of the pleura as they glide over one another in the movements of respiration. The disease to which the pieura are most subject is pleurisy (which see).

the whoie, and even to both pieure (double pieurisy). Acute, it is a very common compiaint, due to a vriety of causes, but most frequently us sudden chilis. It invariahly commences with shivering, its duration and intensity generally Indicating the degree of severity of the attack: favor and its attacket. the attack; fever and its attendant symptoms succeed the shivering. A sharp, lancinating pain, commonly called stitch in the side, is felt in the region affected at each inspiration. A short, dry cough aiso often attends this disease. While the inflammation continues its progress a sero-alhuminous effusion takes place, and when this develops the fehrile symptoms subside, usually from the fifth to the ninth day. Acute pleurisy is seidom fatal unless complicated with other diseases of the lungs or surrounding parts, and many patients are restored simply by rest, moderate sweating in bed, spare and light diet, mild and warm drinks, and the application of hot mustard and linseed-meal poultices to the affected part. Opiates to relieve pain are often needful. When acute pieurisy is treated too late or insufficiently it may assume the chronic condition, which may last from six weeks to over a year, and result in death from gradnal decay, as in the case of consump-tives, or from asphyxia. Chronic pleurisy is characterized by effusion, which accum-ulates in the pieural cavity, and soon tends to produce lesions and compileations in the surrounding organs. Besides iocal freatment purgatives and diuretics are used, but if the disease does not yield to these remedies, the liquid must be evacuated by operation. Pieurisy, acute and chronic, sometimes also appears without accompanying pain; it is then called latent pieurisy.

Pleurisy-root. See Butterfly-weed.

Pleuronectidæ (plö-rō-nek'a-dē), the group of fishes incinded in the section Anacanthini of that order, and represented by the soies, fiounders, brill, turbot, halibut, plaice, etc. The scientific name Pieuronectidæ therefore corresponds to the popular designation of 'Flat-fishes' applied to these forms.

indicate the surfaces of the pleure as they glide over one another in the movements of respiration. The disease to which the pieure are most subject is pleurisy (which see).

Pleurisy of the pieura. It may be acute or chronic, simple or complicated pleuris as the pleure as the pleu

tory exudation of thick plastic matter. The lungs become rapidly filled with this matter, and increase greatly in weight. Whether pleuro-pneumonia is specifically a local or general disease is disputed, as also the manner of treatment. On the one hand, bleeding and mercurial treatment, as in pleurisy and pneumonia, are recommended. On the other, evacuating remedies, maintaining the strength of the animal, and promoting the action of the skin, bowels, and kidneys, are employed.

Plevna (plev'na), the chief town of Plevna

one of the new districts into which the principality of Bulgaria is divided. It lies a little over 3 miles east of the Vid, a tributary of the Danube, and commands a number of important roads, being hence of some strategetical importance. It is noted for the gallant resistance of its garrison under Osman

Nubia Pasha during the last Russo-Turkish war. Pop. (1910) 23,049.

Pleyel (pla'el), IGNAZ, composer, was born in Austria in 1757; died at Paris in 1831. He studied under Haydn, and rapidly created a reputation in Italy, France, and England. He founded a musicai establishment at Paris, which became one of the most important in Europe, and edited the Bibliothèque Musicale, in which he inserted the best works of the Italian, German, and French composers. His own works, chiefly instrumental pieces, are light, pleasing, and expressive.

Plica Polonica (ple'ka po-lon'i-ka), or TRICHOMA (tri-kō'ma), a disease peculiar to Poland and the immediately adjacent districts, but which at one time was also common in many parts of Germany. The roots of the hair swell, a nauseous, glutinous fluid is secreted, and the hair becomes completely matted. It is generally confined to the head, but other parts of the body covered with hair may also be affected; and sometimes the nails become spongy

and blacken.

Plim'soll, Samuel, known as 'the sailor's friend,' a legislator, born at Bristol, England, in 1824. In 1854 he started business in the coal trade in London, and shortly afterward began to interest himself in the sailors of the mercantile marine, and the dangers to which they were exposed, especially through overloading, and the employment of unseaworthy ships. He entered Parliament in 1868, and succeeded in getting passed the Merchant Shipping Act in 1876. In 1890 the fixing of the load line was taken out of the owner's discretion and made a duty of the Board of Trade. He died in 1898

Plinth, in architecture, the iower square member of the base of

à column or pedestal. In a wall the term plinth is applied to the plain projecting band at its lowest part.

Pliny (plin'i), Caius Plinius Secundus, a Roman writer, commonly called Pliny the Elder, was born A.D. 23, probably at Comum (Como). He came to Rome at an early age, and having means at his disposal availed himhaving means at his disposal availed him-self of the best teachers. He served with distinction in the field, and after having been made one of the augurs of Rome, he was appointed governor of Spain. Every leisure moment that he could command was devoted to literature and science, and his industry was so great that he collected an enormous mass of notes, which he utilized in writing his works. He adopted his nephew, Pliny the Younger, A.D. 73, and perished in the eruption of Mount Vesuvius which overwhelmed Pompeii and Hercuianeum ite 79. The only work of Pliny which is now extant is his Natural History, a work containing a mass of information on physics, astronomy, etc., as well an natural history proper, fable and fact being intermingled.

Pliny, CAIUS PLINIUS CECILIUS SE-nephew of the former, was born A.D. 61 at Comum (Como). Having lost his father at an early age, he was adopted by his uncle, and inherited the latter's estates and MSS., and also his industry and love of literature. He filled several public offices, and was consul in A.D. 100. In A.D. 103 he was appointed proprætor or governor of the province of Pontica, which office he administered for aimost two years to the general satisfac-tion. He was one of the most distinguished and best men of his age. The time of his death is unknown, but it is supposed that he died about the year 115. As an author he labored with ardor, and attempted both prose and poetry. Of his writings only a collection of letters in ten books, and a panegyric on Trajan,

Pliocene 'pil'u-sēn; Gr. pleion, more; kainos, recent), a geological term applied to the most modern of the Tertiary epoch. The the divisions of the Tertiary epoch. The Tertiary series Sir C. Lyeil divided nato four principal groups, namely, the Eocene and the Miocene (which see), the Older Pliocene, and the Newer Pliocene or Pleistocene, each characterized by containing a very different proportion of fossii recent (or existing) species. The Newer Pliocene, the latest of the four, contains from 90 to 95 per cent. of recent

mediately preceded the recent era; and by the latest system of classification it has been removed from the Tertiary and epoch. The Post-tertiary or Quaternary epoch. The Pliocene period proper, or the Crag period, is that which intervened between the Miocene and the Newer Pliocene. Both the Newer and the Older Piiocene exhibit marine as well as freshwater deposits.

Plock, Plotzk (plotsk), capital of the government of the same name in Russian Poland, on the right hank of the Vistuia, 78 miles N. W. of Warsaw. It has a handsome cathedrai, dating from the tenth century, and a bishop's palace. Its manufactures are unimportant, but it has a large trade. Pop. 30,771.—The province has an area Pop. 30,771.—The province has an area of 3674 square miles, mostly level, and marshes and lakes abound. Fully one-third of the area is forest. Corn and potatoes are the chief agricultural products, and sheep and cattle are extensively

reared. Pop. (1906) 619,000. ied him to Ammonius Saccas (which see). He spent eleven years near this excellent master, and the knowledge he had acquired created an ardent desire in him to know also the teachings of the Persian and Indian philosophers. For this purpose he joined the expedition of the Emperor Gordian to the East in 242, hut after the latter's death he reached Anticoch with difficulty and returned to Rome, where he subsequently lived and taught. At first he taught orally, but after ten years he was prevailed upon to commit his doctrines to writing, and he composed twenty-one books, which were only put into the hands of the initiated. About 262-264 Porphyry became his pupil, and during his six years' stay in Rome, twenty-four books were written by Piotinus, and nine more after Porphyry had left for Sicily. On account are seldom very dissimilar in appear of the weakness of his sight Piotinus ieft the correction of his works to Porphyry. the correction of his works to Porphyry, ceptibly into one another that their classi-who also was his literary executor, and has arranged his works in six Enneads, which form the bihie of the New Piaton-ists. His teaching secured him great respect and popularity among the Romans. How which form the bihie of the New Piaton-ists. His teaching secured him great respect and popularity among the Romans. Pione various species pass so imperceptibly into one another that their classification is often attended with difficulty. All nestie on the ground. They run much have been proven the worms, etc. The goiden piover (Charadrius pluvidis), also called popularity among the Romans.

fossils; the Oider Piiocene contains from that parents left their children to his 35 to 50 per cent. of recent fossils. The care. He enjoyed the favor of the Em-Newer Piiocene period is that which imperor Gailienus, and he even succeeded in inspiring the fair sex with a desire to study philosophy. The writings of Plotinus are often obscure and even incomprehensible, hut on the whole they exhibit a fertile and elevated mind and close reasoning. His system depends less upon the intrinsic truth it contains than upon its historical value, which is great both in its antecedents and consequents. Piotinus was well acquainted with the older Greek philosophy, with the Ionian and the Eleatic schools, with Plato and Aristotle and other founders of systems, and according to the eciectic tendencies of his day he believed there was a fundamental unity in these various systems. It was to Plato, however, that Piotinus looked as his great authority. He believed himself a strict follower of Plato, and his own system a legitimate development of the principles of that great phiiosopher.

(piuv'er), the common name of several species of graia-Plover toriai birds belonging to the genus Cha-Plotinus (piō-ti'nus), the systematic founder of Neo-Platonism, born in 205 A.D., at Lycopolis, in Egypt; them are partial to the muddy borders of died in the Campagna, Italy, 270. Little is known of his early life. In his twenty-eighth year the desire to study philosophy awoke in him, hut he got no retisection from him teachers till a friend day straight compressed; noatrie has in total and the compressed; noatrie has a friend day straight compressed; noatrie has a friend day at the compressed of the genus Characteristics of the genu ophy awoke in him, hut he got no Their general features are: bill long, slen-satisfaction from his teachers till a friend der, straight, compressed; nostriis basai and longitudinai; legs iong and siender,

known, and its flesh and its olive-green, dark-spotted eggs are considered a deil-

Plow (piou), an implement drawn by animal or steam power, by which the surface of the soll is cut into longitudinal siices, and these successively raised up and turned over. The object of the operation is to expose a new surface to the action of the air, and to render the soil fit for receiving the seed or for other operations of agriculture. Plows drawn by horses or oxen are of two thief kinds: those without wheels, commonly called swing-plows, and those with one or more wheels, called wheel-plows. The essential parts of both kinds of plows. are, the beam, by which it is drawn; the stilts or handles, by which the plowman guides it; the coulter, fixed into the beam, by which a longitudinal cut is made into the ground to separate the silce or portion to be turned over; the share, by which the bottom of the furrow-silce is cut and raised up; and finally, the moid-board, by which the furrow-slice is turned over. The wheel-plow is merely the swing-plow with a wheel or pair of wheels attached to the beam for keeping the share at a uniform distance beneath the surface. Besides these two kinds there are subsoilplows, drill-plows, draining plows, etc. Every part of a plow of the modern type is made of iron. Double mold-board plows are common piows with a moldboard on each side, employed for making a large furrow in loose soil, for earthingup potatoes, etc. Turn-wrest plows are plows fitted either with two mold-boards, one on each side, which can be brought into operation alternately, or with a moid-board capable of being shifted from one side to the other, so that, beginning at one side of a field, the whole surface may be turned over from that side, the furrow being always iaid in the same direction. One of these plows with two mold-boards is so constructed as to be dragged by either end alternately, the horses and plowmen changing their posi-tion at the end of every furrow. Such piows are useful in piowing hillsides, as the furrows can all be turned towards the hlil, thus counteracting the tendency of the soil to work downwards. In the most improved style of wheel-plow there are a iarger and a smailer wheel, the former to run in the furrow, the latter on the land. for drink. These have also a second or skim couiter. Plum for use in lea plowing, to turn over more effectually the grassy surface. What is called a gang-plose is essentially a number

horses, such piows being used on very large farms.— Steam-plows on various principles have also been adopted. Some are driven by one engine remaining sta-tionary on the headland, which winds an endless rope (generally of wire) passing round pulleys attached to an apparatus called the 'anchor,' fixed at the opposite headiand, and round a drum connected with the engine itself. Others are driven by two engines, one at either headland, thus superseding the 'anchor.' As steamplowing apparatus are usually beyond both the means and requirements of single farmers, companies have been formed for hiring them out. In steam-plowing it is common to use piows in which two sets of piow bodles and couiters are attached to an iron frame moving on a fulcrum, one set at either\_extremity, and pointing different ways. By this arrangement the plow can be used without turning, the one part of the frame helng raised out of the ground when moving in one direction, and the other when moving ln the opposite. It is the front part of the frame, or that farthest from the driver, which is elevated, the plowing apparatus connected with the after part being inserted and doing the work. Generally two, three, or four sets of plow bodies and coulters are attached to either extremity, so that two, three, or four furrows are made at once. In addition to the stationary engine, gasoline motors have been introduced to draw plows, one of these taking the piace of a considerable number of horses. The plow, as originally used, was a very rude and ineffective instrument, and plows of this imperfect character are still in use even in parts of Europe. Small plows are made for hand-plowing. Plow-land, is an equivalent expression with a hide of land. It is defined as containing as much land as may be tilled in a year and a day by one piow. It was fixed by 7 and 8 Wil-iam III cap. xxix, for the purpose of repairing highways, at an annual value of £50. The quantity contained in a plowgate appears to differ in different charters.

Plow Monday, the next Monday after Twelfth Day. On Plow Monday the plowmen in the northern part of England used to draw a plow from door to door, and beg money

(Prunus), a genus of plants beionging to the natural order Rosacese, suborder Amygdaiese. About a dozen species are known, all inhabiting of plows combined, four, six, or eight the north temperate regions of the globe. shares being fixed in one wheeled frame. They are small trees or shrubs, with alterand dragged by a sufficient number of nate leaves and white flowers, either soli-

(P. domestica), introduced from Asia Minor, is the most extensively cultivated, and its fruit is one of the most familiar of the stone-fruits. The varieties are very numerous, differing in size, form, color, and taste. Some are mostly eaten fresh, some are dried and sold as prunes, others again are preserved in sugar, alcohoi, sirup, or vinegar. They make also excellent jams and jeilies, and the sirup from stewed piums forms a refreshing drink for invalids, and a mild aperient for children. Perhaps the most esteemed of all varieties is the green gage. (See Green Gage.) A very popular and easily grown sort is the P. damascena or damson. The wood of the plum-tree is hard, compact, traversed with reddish veins, susceptible of a fine polish, and is ffequently employed by turners and cabinet-makers. The sloe or black-thorn (P. spinosa) is a species of wild plum bear-ing a species of wi ing a smail, round, biue-black, and extremely sour frult. Its juice is made into prune-wine, which is chiefly employed by distiliers, wine and spirit merchants, etc., for fining, coloring, purifying, and meilowing spirits.

Plumbaginaceæ (pium-ba-jin-ā'se-ē), PlumbaGIN'EE, a nat. order of exogens, consisting of (chiefly maritime) herhs, somewhat shrubhy below, with alternate
ieaves, and regular pentamerons, often
blue or pink flowers. As garden plants chestnut ate the ninemic. blue or pink flowers. down at the end of a cord to regulate were prohibited by the Councils of Chalany work in a line perpendicular to the horizon, or to sound the depth of any-thing. Masons, carpenters, etc., use a church are forbidden excepting in parpiumb-line fastened on a narrow board or plate of brass or iron to judge whether walls or other objects are perfectly perpendicular, or plumb, as the artificers each being smail.

tary or disposed in fascicies in the axils call it. Near a range of high mountains of the leaves. The common garden plum the plumb-line, as can be shown by speciai arrangements, is not perfectly true, but inclines towards the mountains; and officers in charge of the United States Coast and Geodetic Survey among the Hawaiian Islands, have recently observed that the deviation of a piumb-line from the vertical is greater in the case of mountains in an island than in that of continental mountains, and greater in the neighborhood of extinct voicances than in that of active voicances. In given iccalities the piumb-line also varies according to the ebb and flow of the tide.

Plumptre (plump 'ter), EDWAED HAYES, Dean of Weils, born in 1821. He was graduated from Oxford, appointed chaplain at King's Coilege, London, and was made professor of pastoral theology in 1853. He held various pastoral positions, and as an able theologies and prescher was chosen. theologian and preacher was chosen a member of the Old and New Testament Revision Companies in England, select preacher at Oxford (several times), Boyle lecturer, 1866-67, and Grinfield lecturer, 1872-74. He wrote a number of valuable works on theology, and we have from his pen several translations, including Soph-

dication of development ls

P, Plumule.

the appearance of the pinmule, which is a collection of feathery fibers hursting from the enveloping capsule of the germ, and which proceeds immediately to extend itseif vertically npwards.

Plurality (plö-rai'i-ti), in ecclesias-tical iaw, signifies the Plumbago (plum-hā'go). See Graphite.

Plumbet (plum'et), Plumbline, a leaden or other weight iet ing dispensations to hold them. They Plus (L., more), in mathematics, sig-different writers and periods, and in later nifies addition; the sign by which ages he was confounded with Plutus, it is indicated is +; thus A + B, which The worship of Piuto was extensively is read A plus B, denotes that the quanspread among the Greeks and Romans. tity A is to be added to the quantity B. Pius, or its sign +, is also used to indicate a positive magnitude or relation, in opposition to minus —, which indicates a negative.

Plush, a fahric similar to veivet, from which it differs only in the length and density of the nap. The nap may be formed either in the warp or woof, the one in which it is being donhie, there being a warp and a woof for the body of the cioth, and a warp or a woof for the nap. Plushes are now made almost exclusively of sik. The cheaper qualities have a cotton backing. Some qualities have a cotton hacking. Some of the finest dress plushes are produced in London, piushes for gentlemen's hats come chiefly from Lyons, while common or imitation plushes are largely manufactured in Germany. Piush is now also extensively used in uphoistery and decorative work.

Plutarch (piö'tark; Greek, Plou-TARCHOS), a learned Greek writer, born at Cheronæa in Bœotia, where he also died. Neither the year of where he also died. Neither the year or his birth nor that of his death is accurately known, but it is generally heid that he lived from the reign of Nero to that of Adrian (54-117 A.D.). He appears from his writings to have visited Italy, lectured there on philosophy, and stayed some time at Rome, where he actabilished a school during the reign of established a school during the reign of Domitian. His Parallel Lives of Illustrious Greeks and Romans is the work to which he owes his fame. The lives are nearly all written in pairs, one Greek and are Pomen followed by a companion of one Roman, followed hy a comparison of the two, and are models of hiographical portraiture. We have numerous editions portraiture. and translations of them. Plutarch's other works, about sixty in number, are generally classed as Moralia, though some of them are narrative. His writings show that he was well acquairied with the literature of his time, and with history, and that he must have had access to many books.

Pluto (plö'tō), in classical mythology, the god of the infernal regions, the ruler of the dead. He was a son of Cronus and Rhea, a brother of Zeus (Jupiter) and Poseidon (Neptune), and to him, on the partition of the world, fell the kingdom of the shades. He married Persephone (which see). By the Greeks he was generally called Hades and hy the Romans Orcus, Tartarus, and Dis Pater. As is the case with all other pagan dei-

ages he was confounded with Plutus. The worship of Pluto was extensively spread among the Greeks and Romans. The cypress, the box, the narcissus, and the plant adiantum (maiden-hair) were sacred to him; oxen and goats were sacrificed to him in the shades of night, and his priests were crowned with cypress. He is represented in gloomy majesty his He is represented in gloomy majesty, his forehead shaded by his hair, and with a thick beard. In his hand he holds a twoforked scepter, a staff, or a key; by his side is Cerberus. He is often accom-panied by his wife.

Plutonic Rocks (plö-ton'ik), un-stratified crystalline rocks, such as granites, greenstones, and others, of igneous origin, formed at great depths from the surface of the earth. They are distinguished from those earth. They are distinguished from those cailed voicanic rocks, although they are both igneous; piutonic rocks having been elaborated in the deep recesses of the earth, while the voicanic are solidified at or near the surface.

Plutus (piö'tus), in Greek mythology, the god of riches. Ze us struck him hlind because he confined his gifts to the good; and he thenceforth conferred them equally on the good and the had. His residence was under the earth.

Plutus is the subject of Aristophanes's comedy of the same name.

Pluviose (piö'vi-ōs), the fifth month of the French Republican calendar, extending from January 20 to February 18 or 19. See Calendar.

Plymouth (pilm'uth), a seaport of England, in Devonshire, at the head of Plymouth Sound, between the estuaries of the Plym and Tamar Taken in its largest sense, it comprehends what are called the 'Three Towns,' or Devonport on the west, Stonehouse in the center, and Plymouth proper on the east. Plymouth proper covers an area of about 1 square mile, the site being nneven and somewhat rugged, consisting of a centrai hollow and two considerable eminences, one on the north, forming the suhurbs, and the other, cailed the Hoe, on the south, iaid out as a promenade and recreation ground. The old Eddystone Lighthouse has been re-erected in Hoe Park, which also contains a handsome statue of Sir Francis Drake hy Boehm. The top of the Hoe offers magnificent land and sea views. The older parts of the town consist of narrow and irregular streets devoid of architectural beanty, hut the newer parts and suhurbe display an ahundance of elegant buildings. The guild-hail, a Gothic hallding, is the ties. the accounts of Piuto vary with finest modern edifice (1870-74), and has

other buildings are St. Andrew's Church, the postoffice, the Royal Hotel, theater, and the athenseum. The citadei, an obsoiete fortification built by Charles Ii, is another object of interest. Plymouth is well defended both land- and sea-wards by a series of forts of exceptional strength provided with heavy ordnance. Charitable and educational institutions abound: the latter include a marine biological laboratory. The manufactures are not very extensive, and chiefly connected with ships' stores; but the fisheries are valuable, and Plymouth has a large export and coasting trade. Its chief importance lies in its posi-

tion as a naval station. Thanks to extensive and sheltered harbors, Plymouth rose from a mere fishing village to the rank of foremost port of England under Elizabeth, and is now as a naval port second only to Portsmouth.
To secure safe
anchorage in the Sound a stupen-dous breakwater has been constructed at a cost of about £2,000,000. The Western Harbor, or the Hamoaze (mouth of the Tamar), is specially de-voted to the royal navy, and here (in Devonport, which see)

are the dock-yard, and Keyham steam-yard; the victualing yard, marine barracks, and naval hospital being in Stonehouse. The mercantile marine is accommodated in the Eastern Harbor, the Catwater (200 acres), or estuary of the Plym, and in Sutton Pool, and the Great Western Docks in Mill Bay. Plymouth is supplied with water from Dartmoor by a leat or channel constructed by Sir Francis Drake. Pop. (1911) 112,042.

Plymouth, a seayort of Massachusetts, the seat of Plymouth county, 37 miles s. s. r. of Boston. It is situated in a capacious but shallow bay, and has extensive fisheries, rope and

canvas factories, also ironworks, cotton, wooien, and sllk mills, naii, tack, and wire factories, etc. Plymouth is the oidest town in New England, the place where the Pilgrims landed from the Mayfovor in 1620, 'Plymouth Rock' still marking the place of ianding. Pligrim Hall, and a colossal monument to the pilgrims, on the top of the adjoining hill, are the chlef sights of the place. Pop. 12,141.

Plymouth, a town of Luzerne on the Susquehanna River, 4 miles below Wilkes-Barre. Coal-mining is extensively carried on, and there are hosiery mills, and manufactures of mining drills, miners squibs, etc. Pop. 16,996.

Plymouth

a town (township) in Litchfield county, Connecticut. It has various manufactures, including iumber, hardware, etc. Pop. 5021.

## Plymouth Brethren,

PLYMOUTHITES, a sect of Christians who first appeared at Plymouth, England, in 1830, but have since considerably extended over Great Britain, the United States, and among the Protestants of France, Switzerland, Italy, etc.

They object to national churches as being too lax, and to dissenting churches as too sectarian, recognizing all as brethren who believe in Christ and the Holy Spirit as his Vicar. They acknowledge no form of church government nor any office of the ministry, all males being regarded by them as equally entitled to 'prophesy' or preach. At first they were also called Darbyites, after Mr. Darby, originally a barrister, subsequently a clergyman of the Church of England, to whose efforts their origin and the diffusion of their principles are much to be ascribed. The Plymouth Brethren professedly model themselves upon the primitive church.

and at an early stage of the movement there was a tendency towards the adoption of the principle of community of goods. They also, in general, hold millennarian views, and Darby is exceedingly minute in carrying out the allegorical interpretation of the ceremonial and other figurative parts of the Old Testament. The interpretation of prophecy, as filling up in detail the entire role of history, is a feature of the views of Darby and the Plymouthists. They baptize adults and administer the sacrament, which each takes for himself, each Sunday. At their meetings a pause of unbroken silence ensues when no one is moved to speak. They sues when no one is moved to speak. They hold both civil governments and ecclesiastical organizations to be under divine reprobation, the former as atheistic, the latter as in a state of apostasy. Theological differences early caused a split among the Plymouthists, and even during the lifetime of Darby there were three distinct divisions.

Plymouth Sound, an arm of the southwest coast of England, between the counties of Devon and Cornwall. It is about 3 miles wide at its entrance, bounded by elevated land, which descends abruptly to propelled from the central office by presting and the calculated Plymouth by a resulting six inches in diameter. Englithers in the sound inch tubes are most common.

In the European system, as distinct from the American, the carriers being propelled from the central office by presting and the calculated Plymouth by a resulting six inches in diameter. Englithers in the sound inch tubes are most common.

of wide variety, ranging from simple air-filled cushions to engines. Compressed air was first used as a motive power by Dennis Papin in England about 1700. It was first used successfully on a large scale in 1861 in connection with the construction of the Mont Cenis Tunnel. In 1867, A. E. Beach, an American, constructed a working model of an atmospheric railroad, but all attempts at pneumatic street traction in America failed. In 1886 J. G. Pohle, of Arizona, applied compressed air to the lifting of water, a method frequently used in connection with Artesian wells.

The foundation for docks and the piers for bridges are often sunk to the required depth by means of cylinders from which water is excluded by compressed air; and the same method is used in tunneling. Air is also used in pumping water for supply or drainage; in regulating temperature in steam-heated buildings, and in a wide variety of apparatus in which a simple mechanical push or puil is required. For use as a motive power in locomotives and automobiles air is stored at high pressnre

tral station a steam-engine compresses the air and forces it into one of the tubes, along which it rushes, returning by the other, a constant current being kept up. The tubes are worked at a pressure of six pounds per square inch, and for a distance of 4500 feet require about 30 horsepower, the transit speed being about 30 miles per hour. The system was first tried in Philadelphia in 1893, the tubes used being six inches in diameter. Eight-

is fortified, and the celebrated Plymouth by a vacuum. In London, Paris, Berlin, Breakwater. See Plymouth.

Pneumatic Appliances (hū'matof wide variety, ranging from simple airavarent airavarent see the control of these main tubes, 2¼ in. in diameter, averaging nearly one mile in length, radiative control of the control ate from the central station. Different offices in the same building are also commonly connected by a number of short tubes, the whole system being supplied with power from one main station.

Pneumatic Gun, a gun which derives its power from compressed air. It is fired by pulling a lanyard, which releases the air. Pneumatics, a former name for that branch of physics which

treats of the properties of gases. See Air, Air-pump, Atmosphere, Barometer, Gas,

Pump, etc.

Pneumatic Tools, a class of portable mechanical appliances operated by compressed air. The motor is self-contained, and they are generally worked by the hand. They are of two types—percussion and rotary. In the former the work is accomplished by rapidly repeated blows, and in the latter hy a boring action. They are used for a great variety of mechanical operations permitting the actions of percussion and rotation, such as drilling, ramming, hamin a steel reservoir carried on the car, rotation, such as drilling, ramming, hamand is thence admitted into the driving mering, riveting, caulking, boring, screw-cylinder. The force of suction obtained by exhausting the air in a confined space A good representative of the percussion is used in grain elevators. Suction pumps tools is the pneumatic hammer. It conn n

sists of a cylinder in which a piston inflammation of the smaller bronchi, works with a reciprocating (back and forth) action, actuated by compressed air admitted to and exhausted from the cylinder by suitably arranged openings. A sion of the lung by micro-organisms. No toose-fitting tool (such as a rivet-set, in case the appliance is employed as a rivet-set, in case the appliance is employed as a rivet-set, in case the appliance is employed as a rivet-set, in case the appliance is employed as a rivet-set, in case the appliance is employed as a rivet-set, in case the appliance is employed as a rivet-set, in case the appliance is employed as a rivet-set, in case the appliance is employed as a rivet-set, in case the appliance is employed as a rivet-set, in one organism has, however, been conecific, as in lobar pneumonia; the influence of the lung by micro-organisms. No stantly found which can be said to be specific, as in lobar pneumonia; the influence of the lung by micro-organisms. No one organism has, however, been conecific, as in lobar pneumonia; the influence of the lung by micro-organisms. No one organism has, however, been conecific, as in lobar pneumonia; the influence of the lung by micro-organisms. No one organism has, however, been conecific, as in lobar pneumonia; the influence of the lung by micro-organisms. No one organism has, however, been conecific, as in lobar pneumonia; the influence of the lung by micro-organisms. No one organism has, however, been conecific, as in lobar pneumonia; the influence of the lung by micro-organisms. work. The operator then admits the airpressure into the cylinder by pressing on
the throttle lever, and starts the reciprocating hammer, which strikes the tool or
rivet-set at each forward stroke. The
action is similar to that of driving a chisel
with a mallet or hammer, with the exception that the successive strokes are delivered with great rapidity, at a rate of signs are not distinct, being mixed up action is similar to that of driving a chisel creased difficulty in breathing. The cough with a mallet or hammer, with the exception that the successive strokes are delivered with great rapidity, at a rate of signs are not distinct, being mixed up speed as high as 20,000 blows per minute, with those of the antecedent bronchitis; livered with great 1,000 blows the efficiency of the appliance being queto the efficiency of the strokes rather than to the power of each individual stroke. Pneumatic percussion tools, in general, are made small enough to be operated by hand, and they are adapted for various uses by simply replacing the tool piece at the front end of the cylinder by tools specially shaped to fit the particular kind of work.

(nû-mô'ni-a), a name given to various diseases are marked chiefly by the growth of nucleated fibroid tissue around the walls of the bronchi and vessels, and in the invasicular septa, which proceeds to such a such are very similar.

associated with consolidation of portions of the lung tissue. Formerly the disease was divided into three varieties: (1) Acute croupous or lobar pneumonia; (2) Catarrhal or broncho-pneumonia; (3) Interstitial or chronic pneumonia.

Acute croupous or lobar pneumonla (pneumonia fever) is now classed as an

The symptoms are generally well marked from the beginning. The attack is usually ushered in by a rigor (or in children a convulsion), and the speedy development of the febrile condition, the temperature rising to a considerable degree—101 to 104 or more. The pulse is the confiner of France 101 to 104 or more. temperature rising to a considerable degree—101 to 104 or more. The pulse is quickened, and there is a marked disturbance in the respiration, which is rapid, shallow and difficult, the rate being usually accelerated to some two or three times its normal amount. The lips are livid, and the face has a dusky flush. Pain in the side is felt, especially should any amount of pleurisy be present, as is often the case. The term 'broncho-pneumonia' for the lesser waters that flow north principal affluents are, on the left, the

to those of chronic phthisis (see Tubercu-losis). The malady is usually of long duacute infective disease of the lung, characterized by fever and toxemia, running a going temporary improvement in mild definite course and being the direct result weather, but the tendency is on the whole of a specific micro-organism or micro-organisms.

The symptoms are generally well Pnomment (p'num pen'), the chief town of Cambodia at the course of the property of the property

baltea, Sesia, Ticino, Adda and Mincio; on the right, the Tanaro, Trebbia and Panaro. The Po, in spite of embankments, etc., is the cause of frequent inundations, especially near its mouth. In some places, owing to the silt carried down its channel is now raised above the down, its channel is now raised above the country through which it flows. Fish are plentiful in it, including the shad, salmon,

and even sturgeon.
Pon See Mesdow-grass.

Poaching (pōch'ing), the trespass-ing on another's property for the purpose of killing or stealing game or fish. For the law relating to the poaching of game see Game Laws. According to the law of England, when a person's land adjoins a stream where there is no ehb and flow that person is assumed to have an exclusive right to fish in the stream as far as his land extends, and up to the middle of the stream; and so also when a person's land incloses a pond, the fish in that pond belong to him. Where several properties are contiguous to the same lake the right of fishing in that take belongs to the proprietors, in proportion to the value of their respective tities. Exclusive right of fishing in a public river, that is, one in which there is ebh and flow up to the tidal ilmit, or a portion of the sea, is heid by some proprietors hy virtue of held by some proprietors hy virtue of royal franchises granted prior to the Magna Charta. Any person, not an angler, found fish-poaching on private property is liable to a maximum fine of 25, in addition to the value of the fish; an angler's fine does not exceed £2. If the act is committed on land belonging to the dwelling-house of the owner it becomes a misdemeanor and such a fish. becomes a misdemeanor, and such a fish-poscher, when caught in the act, may be arrested by anybody. Anglers cannot be arrested, even in the latter case, but the penaity extends to £5. The owner or his servant may deprive the angier of his fishing gear in lieu of a fine. The same law applies also to Ireland. In Scotland, as a general rule, the right of catching fish other than samon belongs to the fish other than saimon belongs to the owner of the land on the banks of the waters. As to property in salmon fishings, that is held to be originally vested in the crown, not only for the rivers of Scotland hut also for the coasts, and no person, accordingly, is allowed to fish for saimon unless he possesses a grant or charter from the crown enabling him to do so. The fact is, however, that nearly all the chief landed proprietors do possess such rights. The punishment for poach-typical form and one of the best known ing salmon in Scotland is a fine not is the F. fering, the common pochard, less than 10s, nor more than £5, together variously called dunbird, red-headed

with the forefeiture of the fish taken, and the boat, tackie, etc., employed by the poacher, if the sheriff or justice think fit. Anyone not an angier poaching trout or any other fresh-water fish renders himself ilable to a penalty of £5, besides forfeit-ing the fish caught. If he be caught in the act of using a net for poaching such fish he may be arrested, but not unless; but even when he may not be arrested his boat and fishing implements may be seized. A person who merely angles for trout in pisces where he has not got leave to fish is only liable to an action at law. Poaching in the British islands was formerly much more severely punished than at the present day. In the United States game laws are of comparatively recent adoption and fighing and tively recent adoption and fishing and hunting are largely free.

Pocahontas (pō-ka-hon'tas), daughter of Powhatan, a celebrated American-Indian warrior of Virginia, born about the year 1595. Some romantic incidents are told of her iife, hut there seem to be considerable doubts as to their truth. She is said to have shown a great friendship for the English who colonized Virginia, and to have rendered them substantial services. In 1607 she prevailed on her father to spare the life of Captain John Smith, his prisoner, and two years later frustrated a plot to destroy him and his party. After Captain Smith had left the colony she was kept as a hostage by an English expeditionary force (1612). During this detention she married Mr. Roife, an English lishman, who in 1616 took her on a visit to England, where she was baptized and assumed the name of Rebecca. She died the following year, and left one son, who was educated in London, and whose descendants are said to exist still in the State of Virginia.

Pocatello (pô-ka-tel'o), a city, county seat of Bannock Co., Idaho, 177 miles N. of Sait Lake City. It has railroad shops and other industries, good

rain as shops and other industries, good schools, academies, and a government experiment station. Pop. 12,000.

Pochard (pō'chard: Fuligüla), a subfamily of Anatide or ducks, inhabiting the Arctic regions. They migrate southwards in winter to the coasts of Europe and North America: and they even occur in Asia and in ica; and they even occur in Asia and in the southern hemisphere. They are marine in habits, and feed upon crustaceans, worms, moliuses, and aquatic plants. There are numerous species, and the fiesh of several is much prized as food. A

poker, red-headed widgeon or duck. The of which, Cuvier's podargus (P. Cuvieri), head and neck are bright chestnut; eyes is known among the Australian settlers red; bill long; a broad, transverse, and dark-blue band on the upper mandible; strange cry. length 16 to 17 luches; weight 1 to 2 long it lied duck; the scene of the control of the latin population. pochard (F. marita); the tufted pochard (F. marita); the tufted pochard (F. marita); the tufted pochard (F. cristata); and the canvas-backed duck of North America (F. Valisneria), so highly esteemed by epicures.

Poco (pö'kö; Italian for 'a little'), a term used in muslc in such phrases as soco forta (a.f.) rather journey.

phrases as poco forte (p. f.), rather ioud; poco enimato, with some animation; and

so forth.

Pocock (po'kok) Edward, an English o'lental scholar born at Oxford in 1604; 'led a 1301. He as graduated from Oxford, and was ordained graduated from Axford, and was ordified priest in 1628. While at the universe rule a tast for oriental literature which he was the to relative se chapters to the English among are to collect manuscripts and wins for the University of Oxford, and in 1630 cross him to nil the newly-founded Araba variessorship at that university. The years between 4037 and 40 he spent at Constantinona studying and collecting A to manuscripts. Aithough a man of mode, are views in church and state matters, he suffered from the troubles of his times. He was appointed to the Hehrew chair at Oxford in 1648, together with the rich canonry of Christ Church; but from 1650-60 he was deprived of his church preferment. His works are of great value to oriental and blhlical students.

in botany, a general term ap-Pod, ressels of plants, such as the legume, the

est pressure, or even the agitation occasioned by a strong draught of air, causes torture. The pain can be assuaged hy reducing the inflammation, promoting the secretion of the gouty matter, and hy sultahie dlet and mode of living. See Gout.

Podargus (po-dar'gus), a genus of Australasian nocturnal birds of the goatsucker family. Like the

testas, power, equivalent o its original meaning to a holder of power or authority. In the middle ages the podesta wielded almost dictatorial power in many of the Italian cities. In the modern king-dom of Italy he is the chief official of a commune, corresponding to the French

Podgoritza (pod'gō-rē-tsa), formerly a Turkish stronghold against Montenegro, but incorporated with that principality since 1880. It lies about 85 miles north of Scutari, at the foot of a range of mountains. Pop. 7000.

See Grebe. Podiceps.

Podiebrad (pod'ye-hrad), GEORGE, King of Bohemia, born in 1420 of a nobie family; died in 1471. When a mere youth he entered into the Hussite movement. In the war against Albert V of Austria he rendered eminent services, and secured the highest esteem of the Calixtines or Utraquists. In 1444 he was chosen head of the party, became one of the two governors of Bohemia during the minority of Ladisias, Albert's posthumous son, then king of the country, and, after overcoming the Cath-olic opposition, sole regent in 1451. Ladisias died in 1457, and Podlebrad was preferment. His works are of great value elected to the Girone in the following year, and crowned by the Catholic hishops in 1459. He inaugurated his reign by the introduction of various beneficent laws, wise administration, and a policy of conciliation towards the Catholics; but Podagra (po-dag'ra), that species of he was not allowed to carry out his reforms in peace. The pope, Paul II, publicly denounced him as a heretic in 1463, ular intervals, generally in spring or excommunicated him, and his legate soon autumn, attacking the joints of the foot, particularly of the great toe, attended with a sharp, hurning pain, and rendering the whole foot so sensitive that the slightest pressure, or even the agitation occasion. ( winus, king of Hungary and son-in-lay of Podiehrad, at the instigation of the pope and the Emperor Frederick in-vaded Moravia; but Podiehrad'a general-ship was again successful, and in 1469 he hemmed in the Hungarian army at. Willemow. In order to secure the aid of the Poles he assembled a diet at Prague, and declared the successor to the throne of Poland to be his own succe goatsuckers, their mouths have a very while his sons should only lpherit the wide gape. By day they are excessively family estates (1469). The Poles were drowsy. There are several species, one thus immediately drawn to his side; the while his sons should only inherit the family estates (1469). The Poles were

Emperor Frederick also declared in his favor; and his Catholic subjects became reconciled to him. Shortly after he de-stroyed the infantry of the Hungarians, which had again taken the field, and Mat-thias Corvinus hastly fled with his cavairy. He thus saw himself at last completely secured in his kingdom; hut no sooner was this accomplished than he dled; being succeeded by Ladislas, eldest son of Casimir IV, king of Poland, who

thus united the two crowns.

Podium (pō'di-um), in architecture,
a long pedestal supporting a series of columns. It is called a stylobate when the columns stand on projecting parts of it.

Podolia (po-do'll-a), a government of Southwestern Russia; area, 16,224 sq. mlles. The country is mostly flat, but a low branch of the Carpathlans extends through it in an easterly direction. The principal rivers are the Dniester and the Bug. The climate is temperate and salubrious, the soil generally very fertile; in fact, Podolia forms one of the most valuable agricultural processions of the Busham possessions of the Russlan Empire. Manufactures are spreading rapidly, and beet-sugar, spirits, flour and tobacco are produced in great quantities. The trade with Germany, Austria and Odessa is ex-tensive. Capital, Kamenetz. Pop. 3,543,-

Podophthalmata (po-dof-thal'ma-ta; 'stalk-eyed'), a division of the Crustacean class, primarily distinguished by compound eyes supported upon movable stalks termed peduncles. This division includes the orders Stomapoda and Decapoda, the former of which is represented by the 'locust,' 'glass' and 'opossum' shrimps, while the latter includes the familiar crabs, lobsters, common shrimps, hermit crabs, and their allies. See also Crustacea, Crab, Lobster, Shrimp, etc.

Podophyllin (pod-ō-fil'in), a resin obtained from the root-

stock of the May apple (Podophyllum peltatum. See May apple). It is of a brownish-yellow color, dissolves readily in alcohol, and has been admitted to the pharmacopælas of many countries as a purgative; it is particularly beneficial in cases of sluggish liver, having much the same effect as mercury, but in some con-

same enect as metetry, as stitutions produces severe griping.

Poduridæ (po-dű'ri-dē), a family of apterous (wingless) insects belonging to the order Thysanura, they are enabled to effect considerable leaps; hence their popular name of spring-talls. Their scales are favorite test objects for mlcroscopes.

Poe (pô), EDGAR ALLAN, poet and ro-mantle writer, born at Boston, Massachusetts, in 1809; dled at Baltlmore In 1849. His father and mother were actors, and being left an orphan when a mere child he was adopted by Mr. Allan, a wealthy Richmond merchant. His a weathy kichmond merchant. his early education he received at Stoke-Newington, London, 1816-21, and on his return to America attended a school at Richmond, Virginia, and finally entered the University of Charlottesville. Here he displayed extraordinary talents, but also contracted a taste for fast living which considered a taste for fast living which considered a taste for fast living the considered at which occasioned quarrels with his benefactor, and caused him to quit America for Europe. He took part in the struggles of the Greeks for independence, and for a few years led an erratic life on the continent. In 1829 he returned to America, a reconciliation with Mr. Allan took lca, a reconcillation with Mr. Allan took place, and he was sent as cadet to the military academy at West Point. Further irregularities brought about a complete rupture with Mr. Allan, and Poe enlisted as a private soldier, however only to desert later on. His literary career may be said to have begun in 1835, when he gained the prize offered by the Baltimore Saturday Visitor for a tale and a poem. He then became successively editor of the newly-founded Southern Literary Massenger at Richmond, con-Literary Messenger at Richmond, con-tributor to the New York Review at New York, and editor of Burton's Gentleman's Magazine and Graham's Magazine at Phlladelphia. For these periodicals he wrote a number of tales, exhibiting a weird yet fascinating lmagination. He also added to his reputation hy poems of while at Richmond, in 1836, he married his cousin, Virginia Clemm, a beautiful and amiable girl. The great event in Poe's life was the publication at New York in 1845 of his poem. York in 1845 of his poem, The Raven, York in 1845 of his poem, The Raven, which spread his fame to the whole English-speaking world. For this remarkable production Poe is said to have received \$10. He was subsequently connected with The Home Journal and The Broadway Journal. In 1848 his wife died. Passing through Baltimore in 1849, on his way to New York to make preparation for a second marriage, he was led to excessive drinking, and died was led to excessive drinking, and died from its effects at the hospital. Poggio Bracciolini (pod'jō brât-chō-lē'ni), an Italian scholar and prolific writer, porn in 1380; dled in 1459. He came early

finance, minister of public instruction, the etc. In 1912 he assumed the post of prem-

means of Imaginative and passionate language, and of language generally, though not necessarily, formed into regular numbers. It has also been defined as the tive to South America and Mexico and concrete and artistic expression of the much cultivated in conservatories, is conservatories, is conservatoried. concrete and artistic expression of the much cultivated in conservatories, is conhuman mind in emotional and rhythmical spicuous for the large scarlet floral leaves language. It is the earliest form of literature, and also the final and ideal form of all pure literature; its true place lying between music, on the one hand, and prose or loosened speech on the other. The two great classes of poetry the ends or extremities of lines. If a point is epic or narrative way, it will by its motion describe a line. French W. Indian island Guadeloupe, on the southwest coast of Grande Terre, and one of the most important commercial towns of the Antilles. The town, mostly huilt of wood, was destroyed hy fire in 1780, hy an earthquake in 1843, and again by fire in 1871. Pop. 16,506. Pointed Architecture, a name for Gothic (which see).

Pointer Dog (poin'ter), a hreed of sporting dogs, nearly allied to the true hounds. The original hreed is Spanish, hut a cross with the foxhouth should generally used. It is specified to the second the second specified and the second specified to smooth, short-halred, generally marked black and white like the foxhound, hut occasionally a uniform black. It derives its name from its habit of stopping and pointing with the head in the direction of game, discovered hy a very acute sense of smell. The dog once having pointed remains perfectly quiet. This faculty in the pointer is hereditary, but is better de-

veloped by training.

Poison (poi'zn), any agent capable of producing a morbid, noxious, dangerous, or deadly effect upon the animal economy, when introduced either by mal economy, when introduced either by chancous absorption, respiration, or the digestive canal. Poisons are divided, with respect to the kingdom to which they belong, into animal, vegetable, and mlneral; but those which proceed from animals are often called venoms, while those that are produced by disease have the name virus. With respect to their the name virus. With respect to their effects they have been divided into four classes, namely, irritant, narcotic, nar-cotico-acrid, and septic or putrescent. Many poisons operate chemically, cor-roding the organized fiher, and causing Inflammation and mortification. To this class belong many metallic oxides and salts, as arsenic, one of the most deadly poisons; many preparations of copper, mercury; antimony, and other metals; the mineral and vegetable acids; the substance derived from some plants, as the spurges and mezereon; and cantharides, from the animal kingdom. Other polsons exercise a powerful action upon the nerves and a rapid destruction of their energy. These are the sedative or stnpefying poisons, and belong for the most part to the vegetable kingdom. Oplum, hemlock, henhane, belladonna, are the best-known forms of this poison.

Pointe-à-pitre (pwant-à-pë-tr), the hoth kinds, as the common foxgiove, and principal port of the monkshood or aconite. An alkaloid is extracted from the latter, 75th of a grain of which has proved fatal. Another class of poisons suddenly and entirely cause a cessation of some function necessary to life. To this class belong all the kinds of gas and air which are irrespirable, suffocating vapors, as car bonic acid gas, fumes of sulphur and charcoal, etc. Many preparations of lead, as acetate or sugar of lead, carbonets or white lead at a rest. bonate or white lead, etc., are to be counted in this class. The effects of polsons materially depend on the extent of the dose, some of the most deadly polsons being useful remedics in cer-tain quantities and circumstances. Antidotes naturally vary with the different kinds of poisons. They sometimes pro-tect the hody against the operation of the polson, sometimes change this iast in such a manner that It loses its lnjurious properties, and sometimes remove or remedy its violent results. Thus in cases of poisoning hy acrid and corrosive substances we use the fatty, mucilaginous stances we use the fatty, mucilaginous substances, as oil, milk, etc., which sheathe and protect the coats of the stomach and bowels against the operation of the poison. Against the metallic or the poison. Against the metallic poisons substances are employed which form with the polson insoluble compounds, such as freshly prepared hydrated oxide of iron, or dialyzed iron for arsenle, alhumin (white of egg) for mercury; Epsom or Glanher's salts for lead. Lime, chalk, haking soda, and magnetic are the heat remedies for the powers. nesia are the hest remedies for the powernesia are the nest remedies for the powerful acids. For cantharides, mucilage, gruel, and hariey-water are employed. We oppose to the alkaline poisons the weaker vegetable acids, as vinegar. Prussic acid is neutralized by alkalies and freshly precipitated oxide of iron. To arouse those poisoned by opium, we use coffee and ammonia, and belladonna as coffee and ammonia, and belladonna as an antagonistic drug, the person being kept walking. Chloral-hydrate poisoning is similarly treated by the drug mentioned; and for strychnia or nux vomica, animal charcoal in water and chioralhydrate are used. Poisoning was a common crime in ancient Rome, and in France and Italy during the seventeenth century. See Aqua Tofana, Brinvilliers.

Poison Ivy, or Poison Oak (Rhus towicodendron), a species of sumech which hears three leaflets. cies of sumach which bears three leaflets and usually has the climbing habit. It Prussle acid, a polson obtained from is very irritating to sensitive skins, prothe kernels of severai fruits, the cherry-ducing an itching eruption which is highly laurel, etc., is one of the most rapid annoying. Another species, Rhus vene-destroyers of life. Among piants there nata, the Poison-ash, Poison-elder, or are many which unite the properties of Poison-sumach, is still more poisonous.

It is a handsome tree, but fortunately is Poitiers, largely confined to marshes.

Poison-nut, a name for Strychnos nux-vomica, an evergreen tree of the nat. order Loganiaceæ, the seeds of which yield strychnine. (See Nux vomica.) Also a name for the Tanghinia venenifera, of the nat. order Apocynaceæ, the fruit of which is a drupe enciosing a kernei extremely poisonous. It used to be applicated in Madasonous. It used to be employed in Madagascar as an ordeal-test of guilt or inno-cence, the result generally being the death of the suspected person.

(pwa-tya), or Poictiers, Postiers town of France, on the Clain, formerly capital of the province of by Henry II of England about 1162. Politiers is one of the most ancient towns

Façade, Church of Nôtre Dame, Poitiers.

of France, and the vestiges of a Roman palace, of Roman baths, of an aqueduct, and an amphitheater still remain. Two famous battles were fought in its vicinity, that in which Charles Martei defeated the Saracen army in 732, and that between the French under their king John II and the English under Edward the Biack Prince in 1356. The manufactures are unimportant, but there is a large trade. Pop. (190": 31,780.

DIANA OF. See Diana of

Poitiers. (pwa-tö), one of the oid provinces of France, between Brit-Poitou tany and Anjou on the north, Berry on the east, the Atlantic on the west, and Angoumois and Saintonge on the south. The departments of Vienne, Deux-Sèvres and Vendée have been formed out of this province. Henry II of Engiand acquired possession of Poitou by his marriage with Eleanor, heiress of the last Duke of Aquitaine. Philip Augustus conquered it. Poker (po'ker), an American game of cards for two or more persons, originally played with only twenty cards, all below the tens being excluded, but now played with the full pack. It is a space, the houses being often surrounded by gardens and orchards; the streets are narrow and ill paved. The principal edifice is the cathedral, founded by Henry II of England about 1169 Pokeweed (pok'wed), the Phyto-lacca decandra, a North nat. order Phytolaccaceæ, which is nat-uralized in some parts of Europe and Asia. Its root acts as a powerful emetic and cathartic, but its use is attended with rarcotic effects. Its berries are said to possess the same quality; they are employed as a remedy for cbronic and syphilitic rbeumatism, and for allaying syphiloid pains. The leaves are extremely acrid, but the young shoots, which iose this quality by boiling in water, are eater in the United States

as a substitute for asparagus. (po'la), a town on the Adriatic, Pola the principal naval port of Austria-Hungary, 55 miles south of Trieste. It is an ancient place, and was for a iengthened period the principal town of Istria. Its former importance is well attested by architectural remains, chief among which are a colossai and well-preserved amphitheater and two tempies. Pola bad sunk to the level of a mere fishing-place with some 800 or 900 inhabitants, when the Austrian government, tempted by excellent barbor accommodation, selected it as its chief naval station; and by the erection of dockyards, of an arsenal, barracks, and other government establishments, infused new life into it. The entrance to the harbor is narrow, but the water is deep, and within it expands into a large basin, landlocked and safe. Forts and batteries on bills forming the background protect the harbor. Pop., including garrison, 45,052.

Polacca (pō-lak'a), or Polacre, a three-masted vessel used in the Mediterranean. The masts are usually of one piece, so that they have

Polacca. See Polonaise.

Poland (pô'iand), an extensive terri-tory of Central Europe, which existed for many centuries as an independent and powerful state; but having failen a prey to internal dissensions, was violently seized by Austria, Prussia and Russia as a common spoil, partitioned among these three powers, and incorporated with their dominions. In its greatest prosperity it had at least 11,000,000 Inhabitants, and an area of 350,000 square miles, and immediately before its first partitlon had an area of about 282,000 square miles, stretching from the fron-tiers of Hungary and Turkey to the Baltic, and from Germany far east into Russia, forming one compact kingdom. With the exception of the Carpathians, forming its southwestern boundary, and a ridge of moderate elevation penetrating into it from Silesia, the country presents the appearance of an almost unbroken plain, composed partly of gently-undulating expanses, partly of rich alluvial flats, partly of sandy tracts, and partly of extensive morasses. Its principal streams are the Vistula, the Niemen and the Dwina, all belonging to the hasin of the Baltic; and the Dniester, South Bug and Dnieper, with its tributary, Pripet, helonging to the basin of the Black Sea. culture. Next to grain and cattle lts

neither tops, caps, nor crosstrees. It tablished the dynasty of the Jagellons, carries a fore-and-aft sail on the mizzen-which lasted from 1386 to 1572. During mast, and square salls on the mainmast this period Poland attained its most powerful and flourishing condition. In powerful and nourishing condition. In 1572 the Jagellon dynasty became extinct in the male line, and the monarchy, hitherto elective in theory, now became so in fact. The more important of the elective kings were Siglsmund III (1587-1637), Wiadislaw or Ladisiaus IV (1632-48), John Casimlr (1648-69), and the Polish general Sobieski, who became king under the title of John III (1674-96). He was succeeded by Augustus 96). He was succeeded by Augustus II, Elector of Saxony, who got entangled in the war of Russia with Charles XII, and had as a rival in the kingdom Stanislaus Lesczynski. Augustus III (1733-63) followed, and hy the end of his reign Internal dissensions and other causes had brought the country into causes had brought the country into a state of helplessness. In 1772, under the last feeble king, Stanislaus Augustus (1764-95), the first actual partitlon of Poland took place, when about a third of its territories were seized by Prussia, Augustus and Pussia, the respective Austria and Russia, the respective shares of the spoil heing Prussia 13,415 square miles, Austria 27,000 square miles, and Russia 42,000 square miles. What remained to Poland was completely under Russian influence. Another partition in 1793 gave Russia nearly 97,000 square miles and Prussia 22,500 square miles and Pr A third partition took place in 1795 after the heroic attempt of Kosciusko to save his country, and the last king of Poland The physical configuration of the country makes it admirably adapted for agriculture. Next to grain and cattle lts culture. Next to grain and cattle lts most important product is timber.

The Poles, like the Russians, are a Slavonic race, and are first spoken of as the Polani, a tribe or people between the Vistula and Oder. The country was divided lnto small communities until the reign of Mieczyslaw I (962-992) of the Piast dynasty, who renounced paganism in favor of Christianity, and was a vassai of the German emperor. He was nomic institutions retained by the people in favor of Christianity, and was a vassai of the German emperor. He was succeeded by Boleslaw the Great (992-1025), who raised Poland into an independent kingdom and increased its territories. In succeeding reigns the country was involved in war with Germany, the heathen Prussians, the Teutonic knights, and with Russia. The last of the Piast dynasty was Casimir the Great (1364-70), during whose reign the material prosperity of Poland greatly increased. He was succeeded by his nephew, Louis of Anjou, klng of Hungary, whose forces had aiready taken control and for a daughter, Hedwig, was recognized as time there was a deadlock. Peace came with the appointment of Paderewski Jagello, prince of Lithuania, thus ese

oider than any other Slavonic language Polar Expeditions. except the Bohemian. The oldest monuexcept the Bohemian. The oldest monuments consist of warlike, historical, poli-ditions and South Polar Expeditions. ments consist of warlike, historical, political and religious poems, more especially the latter class; but the Latin language, fostered by the church, was used exclusively by Polish writers for several centuries. The 'goiden age' of Polish literature was from 1521 to 1621. To this period belong Nicolas Rej (died 1568) and Jan Kochanowski (died 1584), who hoth attained eminence as poets, the former in satire, allegory, didactic poetry, etc., the latter as a lyrist of the highest rank. Among the other poets of the century were lyrist of the highest rank. Among their polarizing power, other poets of the century were ing their polarizing power. Szarzynski (died 1581), and Szymono-The important portions of wicz (Simonides), author of Polish the instrument are the loyals. It was in the sixteenth century polarizing and analyzing plates or prisms, and the the first histories in the lan-plates or prisms, and also that the first histories in the lan-guage of the people were written. This these are formed either of flourishing period of Polish literature natural crystalline struc-was followed by a period of Jesuit tures, such as Iceland supremacy and ilterary decline, which spar and tourmailne, or of was followed by a period of Jesuit supremacy and iterary decline, which lasted till about the middle of the eighteenth century. Ahout that time the influence of the French civilization was widely felt in Poland, and prepared the way for the revival of letters. The most vistinguished authors of the latter part of the eighteenth century are Naruszewicz, who wrote odes, idylls, satires, etc., and Krasicki (1734-1801), who also distinguished himself in various fields. A nong modern Polish poets may he acted Michiewicz (1798-1855), Krasinski (1809-49), Zaieski (1 have been successfully cultivated by modern Polish writers, hut comparatively few peculiar have attained a European reputation. See Bear.

See Polarization of Light.

Polarity (pō-lar'i-ti), that quality of a body in virtue of which a body in virtue of which peculiar properties reside in certain points cailed poles; usnaily, as in elec-trified or magnetized bodies, properties of attraction or repuision, or the power Polar Circles, two imaginary circoff the earth polarity of the magnet or magnetic parallel to the equator, the one north and the other south, distant 23° 28' from elther pole. See under Arctic.

Polar Coördinates. See Coördinates. needle and repeis the other.

Polarization of Light, an alteration on a sphere from one of its poies; more produced upon light by the action of cerespecially the angular distance of a tain bodies hy which it is made to change heavens. It is measured by the inter-cepted arc of the circle passing through the same properties on all sides, but any reflected or refracted ray, or it and through the role or by the corrections. sides, and is said to be poiarized. The polarization of light may be effected in various ways, but chiefly in the following:—(1) By reflection at a proper angie (the 'poiarizing angie') from the surfaces of transparent medla, as glass, water, etc. (2) By transmission through crystals possessing the property of double refraction, as Iceland spar. (3) By transmission through a sufficient number of transparent uncrystallized plates piaced at proper angies. (4) By transmission through a number of other number of transparent uncrystallized plates piaced at proper angies. (4) By transmission through a number of other number of transparent uncrystallized plates piaced at proper angies. (4) By transmission through a number of other ness occurs as the analyzer and observing whether any change of brightness occurs as the analyzer is rotated. There are two positions, differing by two slices of the semitransparent mineral tournaline cut parallel to the axis of the crystal. If one is laid upon the other in the positions A B (see fig. helps of the crystall. If one is laid upon the other in the positions A B (see fig. helps of the crystall. If one is laid upon the other in the positions A B (see fig. helps of the crystall. If one is laid upon the other in the positions A B (see fig. helps of the crystall. If one is laid upon the other in the positions A B (see fig. helps of the crystall. If one is laid upon the other in the positions A B (see fig. helps of the crystall introduced by the peculiar action of polarized light: as for example, introduced by the polarizer and analyzer of any polarizing arrangement introduced between the polarizer and analyzer of any polarizing arrangement introduced between the polarizer and analyzer of any polarizing arrangement introduced between the polarizer and analyzer of any polarizing arrangement introduced between the polarizer and analyzer of any polarizing arrangement introduced between the polarizer and analyzer in the called in the called in the called in the called introduced between t

position corresponding with a b (which represents the natural position they originally occupied in the crystal), an intermediate stage being that shown at b'. The light which has passed through the one plate is polarized, and its ahility to pass through the other plate is thus altered. Reflection is another very common cause of polarization. The plane of polarization is that particular plane in which a ray of polarized ilght incident at the polarizing angle is most copiously reflected. When the polarization is produced hy reflection the plane of reflection is the plane of polarization. According to Fresnel's theory, which is that generally received, the vibrations of light polarized in any plane are perpendicular to that plane. The vibrations of a ray reflected at the polarizing angle are accordingly to he regarded as perpendicular to the plane of incidence and reflection, and therefore as parallel to the reflecting surface. Polarized light cannot be distinguished from common light by the naked eye; and for all experiments in polarization two pieces are distinguished in a state of ordinary permanent strain. A plate of ordinary

looking at it through the analyzer, and observing whether any change of brightness occurs as the analyzer is rotated. There are two positions, differing by 180°, which give a minimum of light, and the two positions intermediate between these give a maximum of light. The extent of the changes thus observed in a measure of the completeness of t is a measure of the completeness of the polarization of light. Very beautiful colors may be produced by the peculiar action of polarized light; as for example, If a piece of selenite (crystallized gyp-sum) about the thickness of paper 14 introduced between the polarizer and analyzer of any polarizing arrangement and turned about in different directions and turned about in different directions it will in some positions appear brightly colored, the color being most decided when the analyzer is in either of the two critical positions which give respectively the greatest light and the greatest darkness. The color is changed to its complementary by rotating the analyzer through a right angle; but rotation of the selenite, when the analyzer is in either of the critical positions, merely alters the depth of the color without changing its tint, and in certain critical positions of the selenite there is a compositions of the selenite there is a com-plete absence of color. A different class of appearances is presented when a plate, cut from a uniaxial crystal hy sections perpendicular to the axis. is lnserted between the polarizer and the analyzer. Instead of a hroad sheet of uniform color, there is exhibited a system of colored rings, interrupted when the analyzer is in one of the two critical positions hy a black or white cross. Observation of this phenomenon affords in many cases an easy way of determining the position of the axis of the crystal, and is therefore of great service in the study of crystalline structure. Crystals are distinguished as dextrogyrate or izevogyrate, according as their colors ascend hy a right-handed or left-handed rotation of the analyzer horizontally. Glass in a state of strain exhibits coloration when placed between exhibits coloration and coloration when placed between exhibits coloration when placed between exhibits coloration are colorated as a coloration when placed between exhibits coloration are colorated as a coloration and coloration are colorated as a coloration are colorated as a colorated as a

the Netherlands to an area of a lake hy artificial drainage, protected by dykcs, and brought under cultivation. The polders were for the most part formerly permanently submerged areas. The usual method of procedure in the formation of a polder is to enclose the postion to be reclaimed by an embankportion to he reclaimed hy an emhankment, and construct a channel having its hed sufficiently high to cause a current towards the sea or river. The water is then pumped into this canal by means of apparatus driven hy steam or otherwise. See Netherlands.

Pole (pôl), the name given to either the earth revolves. The northern one is called the north pole, and the southern the south pole. Each of these poles is 90° distant from every part of the equator. In astronomy, the name is given to each of the two points in which the axis of the earth is supposed to meet the sphere of the heavens, forming the fixed point about which the stars appear to revolve. In a wider sense a pole is a point on the surface of any sphere equally distant from every part of the circumference of a great circle of the sphere; or a point 90° distant from the plane of a great circle, and in a line passing perpendicularly through the center, called the axis. Thus the senith and nadir are the poles of the evolution of the varies of the sphere; or the poles of the ecliptic are two points of the sphere; or of the ecliptic, or they are 90° distant from every part of the circumference of a great circle of the sphere; or a point 90° distant from the plane of a great circle, and in a line passing perpendicularly through the center, called the axis. Thus the senith and nadir are the poles of the borlson. So the poles of the ecliptic, or they are 90° distant from every part of the ecliptic, or they are 90° distant from every part of the ecliptic, or they are 90° distant from every part of the ecliptic, or they are 90° distant from every part of the ecliptic, or they are 90° distant from every part of the ecliptic, or they are 90° distant from every part of the ecliptic, or they are 90° distant from every part of the ecliptic, or they are 90° distant from every part of the ecliptic, or they are 90° distant from every part of the ecliptic, or they are 90° distant from every part of the ecliptic, or they are 90° distant from every part of the ecliptic are two points of a body at which its attractive or repulsive energy is concentrated, as the poles of a magnet, the north pole of a needle, as in the compass, or the poles of a battery.

Pole, Pench, or Reo, a measure of length containing 161 feet or 151 yards Pole (pol), the name given to either

glass may be strained by a force applied denoting 5\2x5\2 yards, or 30\2 square

state of strain may be varied during the examination of the plate by polarized light. A plate of quartz (a unlaxial crystal) cut at right angles to the optic axis exhibits, when placed between an analyzer and polarizer, a system of colored rings like any other uniaxial crystal; but we find that the center of the rings, instead of having a black cross, is brightly colored — red, yellow, green, blue, etc., according to the thickness of the plate.

Polder (pöl'der), the name given in lake hy artificial drainage, protected by dykc3, and brought under cultivation. The polders were for the most part formerly permanently submerged areas. The usual method of procedure in the stationard polarizer. The polders were for the most part to the continent for safety, was at tainted, and his mother and brother were formerly permanently submerged areas. The usual method of procedure in the stational part of the plate of quartz (a unlaxial to the optic man, born in Staffordshire in 1500; dled in 1558. He was the son of Sir Richard Pole, Lord Montacute, daughter of the Duke of Clarence, daughter of the Duke of Clarence, brother to Edward IV. He was educated at Oxford, and had several benefices conferred on him by Henry VIII, with whom he was a great favorite. In 1519 he visited Italy, and fixed his residence at Padua. He returned to England in 1525, but about 1531 lost the favor of Henry hy his opposition to the divorce of Queen Catherine. He retired to the continent for safety, was at tainted, and his mother and brother were executed. On the accession of Mary (1553) he returned to England as papal legate, and on the death of Cranmer belegate, and on the death of Cranmer became Archbishop of Canterbury, and was at the same time elected chancellor of the universities of Oxford and Cam-bridge. He died in Lambeth Palace the day after Mary's death. He seems to have been noted for his mildness, gen-erosity, and comparative moderation, in an age when persecution was deemed an age when persecution was deemed lawful on all sides.

of theological learning which pertains to the history or conduct of ecclesiastical controversy.

Polemoniacea (pol-e-mon-i-a'se-a), a natural order of monopetaious exogens with a trifid stigma, three-ceiled fruit, and seeds attached to an axile piacenta, the embryo lying in the midst of albumen. They consist for the most part of gay-flowered, herbaceous plants, natives of temperate countries, and particularly abundant in the northwestern parts of America. They are of no economical importance. Some are cultivated for their beauty, the weil-known phiox being one.

Polemoscope (po-iem'u-skōp), a sort of stand or frame high enough to rise above a parapet or other similar object, having a piane mirror at top so fitted as to reflect any scene upon another mirror below, and thus enable a person to see a scene in which he is interested without exposing himself.

Polenta (pō-ien'ta), a preparation of either semolina, Indian cord,

Polenta (pō-ien'ta), a preparation of either semoiina, Indian corn, or chestnut-meai, made into a porridge and variously flavored; a common article of diet in Italy and France. It is ailowed to boil until it thickens, and is then poured into a dish, where it becomes firm enough to be cut into siless.

poured into a dish, where it becomes firm enough to be cut into siices.

Pole-star, the star a of the constellation Ursa Minor, situated about 1° 20′ from the north ceiestiai pole, round which it thus describes a smail circle. It is of the second magnitude, and is of great use to navigators in the northern hemisphere. Two stars called the pointers, in the constellation Ursa Major (the Great Bear, commonly called the Plow), always point in the direction of the poie-star, and enable it to be found readily.

Polianthes (poi-i-an'thus), a genus of piants belonging to the nat. order Amaryllidaceæ. They are natives of the East Indies and S. America, and mostly require the aid of artificial heat, under shelter of frames and glasses, to bring them to flower in perfection. The P. tuberosa or tuberose is well known for its delicious fragrance. See Tuberose.

Police (po-iës'), the system instituted by a community to maintain public order, liberty, and the security of life and property. In its most popular acceptation the police signifies the administration of the municipal laws and regulations of a city or incorporated town or borough. The primary object of the police system is the prevention of crime and the pursuit of offenders; but it is also subservient to other purposes,

such as the suppression of mendicancy, the preservation of order, the removal of obstructions and nuisances, and the enforcing of those iocal and general laws which relate to the public health, order, safety and comfort. The term is also applied to the body of men by which the laws and regulations are enforced. A police force may be either open or secret. By an open police is meant officers dressed in their accustomed uniform, and known to everybody; while by a secret police is meant officers whom it may be difficult or impossible to distinguish from certain classes of citizens, whose dress and manners they may think it expedient to assume, in order that they may the more easily detect crimes, or prevent the commission of such as require any previous combination or arrangement. This latter class of officer is termed in Britain and America a detective. See Constable.

Police Burgh.

Policinello. See Punchinello.

Policy of Insurance. See Insurance.

Polignac (poi-in-yak), Jules Auguste Armand Marie, Prince de, a French statesman, belonging to an ancient French family, born at Paris in 1780; died at St. Germain in 1847. After the restoration he was appointed adjutant-general to the king, and entered the chamber of peers. In 1820 he obtained from the pope the title of a Roman prince. In 1823 he succeeded Châteaubriand as ambassador at London; but after the accession of Charies X spent the greater part of his time in Paris. He was successively minister of foreign affairs and president of the council. At the revolution of 1830 he was apprehended and condemned to perpetuni imprisonment. He remained in the fortress of Ham till the amnesty of 1836 allowed him to take up his residence in England. He was uitimately permitted to return to France. He was the author of Considérations Politiques (1832). Several other members of the family were men of some note.

Polignano (po-ië-nyä'no), an Italian town, province of Bari, on the Adriatic, 26 miles E. S. E. of Bari, on the Bari-Brindisi railway. There is a trade in iemons and oranges. Pop. 8341.

Polillo (pō-lēi'yō), one of the Philippine Islands, E. of Luzon; iength, 30 miles; breadth, 20 miles. Rice, maize, sesame, cotton, hemp and timber are produced.

Polishing (pol'ish-ing) is the name given to the process by

0 9

d. Ŋ 8

q

which the surface of a material is made to assume a perfectly smooth and glossy appearance, usually by friction. The article to be polished must first be made smooth and even, after which the polishing begins. In the case of wood the process is commonly effected by rubbing with French polish (which see). In metals, by polishing-steel or bloodstone, or by wood covered over with leather, and on which pulverized tripoli, chalk, tin-putty, etc., is sprinkled. In glass and precious stones, by tin-putty and lead siftings; in marble, by tin-putty and tripoli; iu granlite and other bard stones, by tripoli and quicklime. which the surface of a material is made ame a perfectly smooth and glossy quickiime.

Polishing-powder, a preparation for polishing iron articles; also a composition variously made up for cleaning gold and silver plate. See Plute-powder. Polishing-slate, a gray or yellow-of microscopic infusoria, found in the of microscopic infusoria, found in the coai-measures of Bohemia and in Auvergne, and used for polishing glass, marbie and metals.

Politian (po-lish'e-an), ANGKLO AM-BROGINI, an Italian scholar, known also as Poliziano or Politianus, born in 1454; died in 1494. The first production which brought him into notice was a Latin poem on the tournament of Giulio de Medici. He assumed the eccle-siastical habit, and acquired the favor of Lorenzo de' Medici, who made him tutor to his children, and presented him with a canonry in the cathedral of Florence. In 1484 he visited Rome, and after his return to Fiorence he lectured with distinguished tinguished success on the Latin and Greek ianguages, and likewise on philosophy. He wrote an Account of the Conspiracy of the Pizza; a Latin translation of Herodian; and a collection of Greek Eplgrams; besides Latin odes and eplgrams, and a Latin poem entitled Rusticus. He also contributed greatly to the correction and illustration of the Pandects.

Political Economy, the science of the social ordering of wealth, or the science which has as its aim the investigation of the social conditions regulating the production, dis-tribution, exchange, and consumption of wealth, the term wealth being understood to mean all articles or products possessing value in exchange. While, however, political economy is susceptible of wide definition on these lines, the exact scope

regulation of wealth, and the place of the systematic examination of these as departmental to a larger science investigating the natural laws of the formation and progress of civilized communities, it is impossible to sunder it entirely from physical, intellectual, and moral considerations tending to enjage indefinitely its ations tending to enlarge indefinitely its scope. The varying extent to which these elements have entered into the treatment of the subject by economists has given rise to controversy not only as to whether economics is to be considered as a physicoeconomics is to be considered as a physicomental or a purely mental science, but even as to its ciaim to be considered an independent science at all. By most economists it is urged, that as the reasoned and systematic statement of a particular class of facts it may rightly claim to be considered a science, while, as dealing with inanimate things only incidentally as the measure of motives of desire, it is to be classed with the moral or social sciences. Of more importance, as affecting the whole bistory of the science, have been the questions arising from the been the questions arising from the method employed in economic inquiry. The modern English school of economists, including the names of Adam Smith, Ricardo, Miil, Cairns, Fawcett and Marchall bare here and marchall bare here. shall, have been mainly guided by the deductive method, its more extreme representatives, such as Senior, asserting this method to be the only one applicable this method to be the only one applicable to the science. In point of fact political economy has necessarily availed itself of both methods. It has been deductive in so far as it has assumed at the outset certain hypotheses, and derived from these by a dialectical process the guiding principles of the science; but even the oider economists, working under the immediate influence of the mathematical mediate influence of the mathematic physical sciences chiefly, cannot be justly accused of having overlooked, though they tended to underestimate, the necessity of supplementing deduction by induction. The hypothesis on which the economic system was founded, was that in the economic sphere the principal motive of human action was individual self-interest, leading men to seek to obtain the greatest amount of wealth with the least expenditure of effort; this hypothesis being followed out to its logical conclusions, under lowed out to its iogical conclusions, under assumed conditions of perfectly free competition, in connection with the facts of the limitations of the earth's extent and productiveness, and the theory of a tendency in the race to multiply to an incalculable extent in the absence of natural of the science within the terms of the or artificial obstacles. On this basis the definition has been the subject of much ories of value, rent, and population were confused debate. From the nature of the formed having the character of laws, but actual conditions of the production and of laws which were hypothetical merely

true only under the assumed conditions of an environment in which competition was free and frictionless, unhampered by inertness, ignorance, restrictive customs, and the like. In this respect the method adopted and the results arrived at found analogy in those physical sciences the laws of which are only applicable in actual fact under large and variable modification. There was, however, an indisputable tendency among the earlier economic writers to regard these hypothetical laws as in a greater degree repthetical laws as in a greater degree representative of actual fact than they were, and even, when the actual facts fell short of the theoretic conditions, to regard these as prescriptive and regulative. The their of the theoretical protest against this tendency found in the development of a strong support in the development of the group of biological sciences, opening up new conceptions of organic life and growth; and as the result of these and other influences the oid rigidity in the application of theory has largely dis-appeared. Where the older economist tended to look upon the subject matter of economics as more or less constant and of economics as more or less constant and of economics as more or less constant and furnishing laws of universal application, the modern economist, having regard to the complexity and variability of human motives and the development of the race both in the matter of character and institutions has come to recognize that the abstract conception of a frictionless competitive atmosphere, in which self-interested motives worked with mechanical regularity, can never hear other than a regularity, can never bear other than a qualified application to actual economic conditions, and that laws relating to the economic aspects of life at one stage of human development seidom apply at an-other without large modification. He realizes clearly what the older economists only imperfectly perceived, and even more imperfectly expressed, that the system they were elaborating was to be considered rather as an instrument to assist in the discovery of economic truth than a body of truths representing any actual or desirable social state. When regarded in this light—as a means to assist in the disentanglement of the complex motives operative in actual economic relations the isolation of one set of economic forces. and the tracing of the logical issues of these become of the highest value, de-spite the danger in careless use of neg-iecting necessary modification and of translating its hypothetic statements into prescriptions for conduct and social organization. It has been this neglect, the assumption of didactic authority, and the extent of the modifications often neces-

school into discredit at the hands of Comte, Cliff Lesie, Ruskin, and a large number of foreign econemists—some compiaining with Comte of the tendency to vicious abstractions, and the impossibility of Isolating to any useful end the special phenomena of econemics from other social phenomena; some, like the German and American historic schools, arguing that it is desirable and necessary to reason direct from historic facts to facts without the intervention of any formal economic theory. So far, however, the opponents of the older method of dealing with economic problems, though they have accomplished an admirable work in clearing the older economics of many confusions and misapprehensions, have falled to supply a superior method of analyzing the phenomena constituting the subject matter of the science, while many of them have not scrupled to avail themseives largely of the results arrived at by the method they condemn. On the grounds of difference in method, and in conception of the scope of the science the economists of to-day may be classified as forming four principal groups:—

1. The modern orthodox philosophic school, working, as indicated above, on the basis of a body of hypothetical principles, constituting the statics of exchange and distribution, deductively arrived at by the consideration of the operations of motives of self-interest in an environment of free and frictionless competition—principles imperfectly representing actual economic conditions, but of assistance, under due precautions, in

the accurate analysis of these.

2. A group of mathematical economists ailed to the philosophic school as working on the deductive basis, and largely engaged in translating philosophic theory into symbolic formulæ for retranslation

into theory.

3. The historical school, denying the value of deductive economics, and seeking to confine the work of the economist to the description of the various stages of economic civilization as they have arisen, and the indication, under due conditions of time, place, and natural development, of such relative principles as may be discoverable in them.

these become of the highest value, despite the danger in careless use of negic iecting necessary modification and of translating its hypothetic statements into prescriptions for conduct and social organization. It has been this neglect, the assumption of didactic authority, and the extent of the modifications often necessary in the practical application of theory which have tended to bring the older.

4. A group of economic students who approach political economy from the point of view of a previous training in 'the sciences of inorganic and vital nature' (physics and hiology as opposed to metaphysics), and who wish to include within of wealth as measured, not by subjective emotions and desires, but by the objective which have tended to bring the older

in the maintenance and evolution of socity, the definitely determinable capacities ety, the definitely determinable capacities they may possess of supplying physical energy and improving the physioiogleai constitution of the race. From this point of view, economics is to be regarded as 'the direct study of the way in which society has actually addressed itself, and now addresses itself, to its own conservation and evolution through the supply of its material wants' (Ingram) — a study, therefore, inseparable from the study of sociology as a whole, and to be followed up under the immediate guidance or bias of a moral synthesis and a therapeutic of a moral synthesis and a therapeutic

The general scope of the science from the neo-orthodox standpoint may be

broadly indicated under four heads:

I. Production: dealing with the requisites of production.— Land (natural agents), Labor, and Capitai; the law of fertility of land (Law of Diminishing Returns); the laws of the growth of population and capital; the organization of industry, division of labor, etc.

II. The pure theory of values or theory.

II. The pure theory of values or theory of normal (natural) values, i. e., of values as they would arise in a market where competition was free and undisturbed. Under this head are discussed the reiations of vaiue and utility; the laws of supply and demand; cost and expenses of production; the law of rent and the relation of rent to vaiue; the considerations determining the normal share of the various classes of producers in the value of the product; the iaws of supply and demand in relation to skilled and unskilled iabor and to capitai; the laws of wages and earnings, etc.

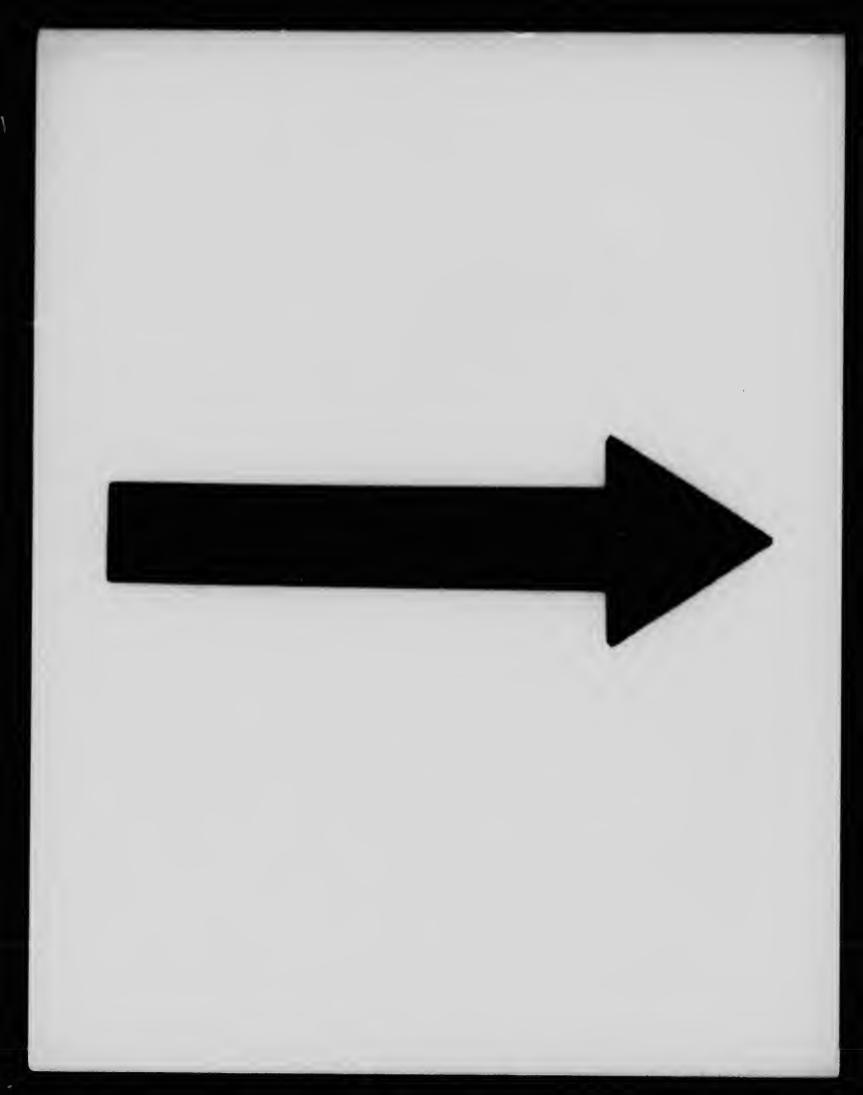

III. The application of the pure theory of values under the conditions of actual trade — internal and international: treating of the medium of exchange; the influence of changes in the purchasing power of money; influence of modern credit systems; the influence upon prices and wages and profits of local customs, monopoiles, comb nations, trades unions, cooperation, etc.; the conditions of foreign exchange; the competition of different countries in the same market, and

the like. IV. The economic functions and Influence of government: dealing with Taxation, direct and indirect; the opposing principles of Protection and Lalsser-faire,

In the last division the treatment inevitably takes the form not merely of setting forth what is, but of discussing what ferrato, Jean Buridan and Nicolas ought to be; in other words, the method Oresme, the latter the author of the is no longer that of a science aiming at fullest treatles on money written up till the systematized representation of facts, his time. Gabriel Biel, F. Patrizzli, and

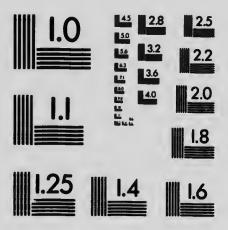

but rather that of an art, seeking to prescribe and regulate for ethical and pru-dential reasons the industry and commerce of nations. In this respect a large portion of the discussions usually ranged under this head might well be considered as forming with certain other pressing problems of economic reform a distinct branch of the subject, which may be provisionally described as prescriptive or regulative or therapeutic economics. To this branch would belong the various problems touching the fair share of the different productive classes in the value of the product, and indeed the investigation of the whole question of property in relation to the various schemes of distribution—individualistic, socialistic portion of the discussions usually ranged distribution - Individualistic, socialistic and communistic. The frequent mixture of these considerations of practical economic reform with the non-moral and indifferent systematization of contemporary economic fact has been a most fertile source of confusion and misunderstanding.

As a separate scheme of knowledge meriting the title of a science, political economy is little more than a century old, but the germs of modern economic doctrines are to be traced long previous. In Greece, Plato, Xenophon and Aristotic aiike conducted investigations in economics from an ethical point of view and in subordination to the theory of the state, the iast, however, showing a per-ception of the difference between value in use and value in exchange, of the advantages of division of inbor, of the func-tions of money as a measure of value and an instrument of exchange, of the desirability of maintaining a proportion between population and territory. The Romans followed, without advancing upon, the economics of the Greeks. Cicero opposed manufactures and trade, uphoiding, in the main, like Cato and Varro, an agrarian ideal; Pilny condemned the effects of service labor and the exportation of money, and discussed some of the problems connected with value. After the fail of Rome It is not till the latter part of the middle ages that we find the emancipation of the towns and the development of the burgher ciass admitting of industry and commerce on a wide scale. In the thirteenth cen-tury St. Thomas Aquinas paraphrased the doctrines of Aristotie on money and interest, establishing on them a condem-nation of interest. His influence lasted into the next century, among the principal writers of which were Bartolo di Sassoferrato, Jean Buridan and Nicolas Oresme, the latter the author of the

1653 East Main Street Rachester, New York 14609 USA (716) 482 - 0300 - Phane (716) 288 - 5989 - Fax Diomede Caraffa are the chief names of the fifteenth century, the study of economics being chiefly pursued by ecclesiastics until the collapse of mediævalism in the sixteenth century. The main economic topics continued to be the nature and functions of money, the legitimacy of usury, institutions of credit, and montion in France, and in England the writer deductive method in seeking to formu W. S. (probabiy William Stafford), who worked in part from Bodin, Sir Walter Raieigh, Gilbert, Hackluyt and Peckham. The characteristic doctrines developed at this time came to be known as the mercantile system, or Coihertism, icai), Sidgwick (eciectic), and Ingram as the mercautlle system, or Coihertism, and found expression in the close of the sixteenth and beginning of the seven-sixteenth and beginning of the seven-teenth centuries chiefly in the writings views concerning the distribution of of Antonio Serra in Itaiy, Antoine de wealth and ownership of property which Montchrétien in France, and Thomas are (especially the former) attracting Mun in Engiand. They were opposed by wide attention. a few early advocates of free trade, in-cluding Emérique de Lacroix in France and Alberto Struzzi in Spain. In the second haif of the seventeenth century considerable advancement was made hy Hohbes, Locke, Sir Joshua Chiid, Sir Wiiiam Petty and Sir Dudiey North, and the foundation of the Bank of England gave rise to much controversy early in the eighteenth century, leading to more eniarged conceptions of the operations of credit. In France Boisguilebert and Vauban opposed Coihertism, and Montesquieu endeavored to work out the economics of government finance. The foundation of the physiocratic school hy Quesnay was, however, the chief eco-nomic movement of the eighteenth cennomic movement of the eighteenth century in France, among its exponents being the eider Mirabeau, De ia Rivière, Baudeau, Le Trosne, Dupont de Nemours, Gournay, and especially Turgot, the greatest of the group. It made some little way in Italy and Germany; but its direct influence was not marked in England, where Hume's Economic Essays land, where Hume's Economic Essays were followed by Adam Smith's epochmaking Wealth of Nations, directed against mercantilists and physiocrats against mercantinus and physicitals aike. New elements were introduced hy the population theory of Malthus, and the theory of rent enunciated hy Ricardo on the lines indicated by Anderson and West; and the statistical side was developed. oped by Thomas Tooke. In reducing the teaching of Adam Smith to system, the French economist Say played an influential part, and the work was advanced stiii further by the iabors of Torrens, James Mill, McCuiloch, Whately, Senior, and other minor writers. No work, howand other minor writers. No work, how- ties there are but two political parties, ever, after the Wealth of Nations exer- the Liberal and the Conservatives or

deductive method in seeking to formulate and apply a pure theory of values Among other recent writers of importance have been W. Stanley Jevons (mathematical and statistical group), Carl Marx (Socialist), Roscher (historical), Sidgwick (eclectic), and Ingram (Positivist). The Socialistic and Anapolistic hypotheses are two modern

Political Offenses, are those of considered injurious to the safety of the state. or such crimes as form a violation of the allegiance due by a subject to the recognized supreme authority of his country. In modern times the crimes considered political offenses have varied at different periods and In different states. In Britain the most serious political offenses are termed treason (see Treason and Treason-Felony), and those of a lighter nature, which do not aim at direct and open violence against the laws or the sovereign, but which excite a turbulent and discontented spirit which would likely produce violence, are termed sedition. (See Sedition.) Political offenders of foreign countries are by English law not included in extradition treaties. In the United States also, and in most of the countries of Europe, the extradition treaties do not include the giving up of political offenders. political offenders.

Political Parties, divisions of people in a state marked off by the particular views they hold as to the public policy to be pursued in the best interests of the people at large. In the United States the chief political parties at present are the Dem-ocrats and Republicans, the former favoring a tariff for revenue only, the latter a tariff for the protection of industries. Various minor parties have from time to time arisen, but the principies advocated hy the two parties named have heen prominent throughout nearly the whole history of the country.

The former are advocates of progressive reform, and are subclassed as Whigs or Radicals, according as their views are moderate or advanced. The Irlsh question has for the and Unionists, that is, those advocating common on all the British coasts, as well an Irish legislature for home affairs, and those opposing this view. French political parties are broadly divided into Re-publicans and Reactionaries, both of which are subdivided into numerous antagonistic sections, the latter including Bonapartiets and Monarchists, or those who favor a restoration of the old monarchy. In German politics there are the Ultramontanes, the Conservatives, the Reichspartei or Imperialists, the National Liberals, the Progressists, the Social as on the shores of Norway. Democrats, the Volksparts or Democrats, ern coasts of Britain appear etc.

the art of government, or the science whose subject is the regulation of man in all his relations as the member of a state, and the application of this science. In other words, it is the theory and the practice of obtaining the ends of civil society as perfectly as possible. In common parlance we understand by the politics of a country the course of its government, more particularly as respects its relations with foreign nations.

See Politian. Poliziano.

Polk (pōk), James Knox, president of the United States from 1845-49, was born in 1795 in North Carolina; died at Nashville in 1849. He studied law and entered Congress as representative of Tennessee in 1825. He was Speaker of the House of Representatives from 1835 to 1839, when he was elected Governor of Tennessee, but was defeated for this office in 1841. His advocacy of the annexation of Texas led to his nomination by the Democratic party for the Presidency in 1844, Henry Clay being the Whig candidate. The contest was a very close one, but Polk was elected. The annexation of Texas, the Mexican war, the acquisition of Upper California and New Maries and the actilement of the New Mexico, and the settlement of the Oregon boundary were the chief events

of his term of office.

Polka (pôl'ka), a species of dance of
Bohemlan origin, but now unlversally popular, the music to which is

distinctively ily. The pollack beiongs to the same orm, and are genus as the whiting (M. vulgāris); the members of this genus possessing three dorsal fins and two anals. The lower vanced. until they reach the ovary. The cut shows the poilen-grains of (1) manna-ash Frazinus ornus), (2) clove (Caryophylus aromaticus),

(3) strong-scented lettuce (Lactuca virosa).

Pollenza (pol-yen'tha), a town of Spain, in the Island of Majorca, 28 miles northeast of Palma. It has a fine Jesuit college, partly ruinous; and manufactures of linen and woolen

cloth. Pop. 8368. (poi'll-o), CAIUS ASINIUS, a Roman of plebeian family, born Pollio B.C. 76; died A.D. 4. He took a prominent part in the civil war, and accompanied Julius Cæsar to Pharsalia, and then to the African and Spanish wars. After obtaining the consulship he commanded in Illyria and Dalmatia, and for his victories was honored with a triumph B.C. 39. He afterwards devoted most of his time to ilterary pursuits, but acted both as a senator and an advocate. His works, consisting of speeches, tragedies, and a history of the civil war in seventeen books, have all been lost. He was the friend of Virgil and Horace, and founded the first public library in Rome. Pollok (poi'lok), ROBERT, a Scottish been translated into French, English and poet, was born at Muirhouse, in the parish of Eaglesham, Renfrewshire, in 1799; died at Southampton in 1827.

MARCO, a Venetian traveler, was born about the year 1256. His

means of tubes (poilen-tubes) which issue studied divinity, and was licensed as a preacher by the Associate Presbytery of Edinburgh in the spring of 1827. He is the author of a series of Tales of the Covenanters, and a blank verse poem, The Course of Time, which in spite of many coults has an overed a menderful popular. faults has enjoyed a wonderful popularity both in Britain and America. He died of pulmonary disease soon after the publication of his poem.

Pollokshaws (pol-iuk-shaz'), a town of Scotland county of

Renfrew, a little to the southwest of Glasgow, on the White Cart. The inhabitants are principally employed in the manufacture of cotton fabrics, iron-founding, englneering, papermaking, etc. Pop. 11,183.

Poll-tax (pōi'taks), a tax ievied per head in proportion to the rank or fortune of the individual; a capitation tax. This tax was first ievied in England in 1377 and 1380, to defray the expenses of the French war; its coilection in 1381 led to the insurrection of Wat Tyler. In the United States a polltax (varying from 25 cts. to \$3 annually) Is levled in about half the states, as a requirement for the suffrage.

Polling See Castor and Pollum.

Pollux.

Pollux 'pol'luks), Julius, a Greek sophist and grammarlan, born at Naucratis, Egypt, about the year 135 A.D. He went to Rome during the relgn of Marcus Aurelius, who appointed him one of the preceptors of his son Commodus. He wrote several works, all of which have perished except his Onomas-ticon, dedicated to Commodus, and there-fore published before 177. This work is of great value in the study of Greek antiquity.

Polo (po'lo), a game at bail resembling hockey. The players are mounted on ponies, and wield a 'maliet' 4 feet 4 inches in length (a hickory rod with a mallethead at the end). It is played by sides, and the object is to drive the ball from the center of the ground through either of the goals, the side gaining the most goals being the winner.

Polo, GASPAR GIL, a Spanish poet, born at Valencia about 1517;

died in 1572. Hls reputation was established by his Diana Enamorada. a pastorai romance, partly in prose and partly In verse. Cervantes excepts the Diana of Polo from his ilst (in Don Quixote) of works condemned to be burned. It has

father, Nicolo, was the son of Andrea researches which led to the discovery of Poio, a patrician of Venice. Shortly beradium. So named from Poland, her native country. brother Matteo set out on a mercantile expedition, and ultimately arrived at Kemenfu, on the frontiers of China, where they were favorably received by Kubilai, the grand-khan of the Mongols. In 1266 the khan sent the brothers on a wission to the pope, and they arrived in Venice in 1269. Two years later they again set out for the East, this time accompanied by the young Marco. After reaching the court of Kubilai, Marco rapidly learned the language and customs of the Mongols, and became a favorite with the khan, who employed him on various missions to the neighboring princes. Soon afterwards he was made governor of Yang-tchou, in Eastern China, an appointment he held for three years. In 1292 the three Poios accompanied an except of a Mongolian princess panied an escort of a Mongolian princess to Persia. After arriving at Teheran they heard of Kubiai's death, and re-soived to return home. They reached Venice in 1295. In the following year Marco Poio took part in the naval battle Marco Polo took part in the naval battle of Curzoia, in which he was taken prisoner. During his captivity he dictated to a feliow-prisoner, Rustichelio or Rusticiano of Pisa, an account of ali his travels, which was finished in 1298. After his liberation he returned to Venice, where he died in 1323. His book—known as the Book of Marco Polo—created an immense seusation among the scholars of his time, and was regarded scholars of his time, and was regarded by many as pure fiction. It made known to Europeans the existence of many nations of which they were formerly totally ignorant, and created a passion for voyages of discovery. It has gone through numerous editions in the various European ianguages, but the best is that of Col. (Sir Henry) Yule, accompanied with a great amount of learned elucidation and illustration. It was originally written in French, but Latin and Italian MSS. of it are more common.

Polonaise (pō-lu-nāz'; Italian, Po-lacca) is a Polish national dance, which has been imitated, but with much variation, by other nations. The Polonaise, in music, is a movement of three crotchets in a bar, characterized by a seeming irregularity of rhythm, produced by the syncopation of the last note in a bar with the first note of the bar following, in the upper part or melody, while the normal time is preserved in the bass.

Polonium (pō-lō'ni-um), the name given a radio-active substance discovered by Madame Curie in the

radium.
tive country.
Polotzk (po'lotsk), a town in RusPolotzk sia, government of Vitebsk, at the confluence of the Polotka and the Dwina. The most remarkable edifices are a diiapidated castie built by Stephen Bathory, King of Poland, in the sixteenth century, and the oid Jesuit convent and college. It has an increasing trade, especiaily with Riga, in corn, flax, linseed, etc., and tanning is carried on to some extent. A battie took place here between the Russians and the French in 1812, in which the latter were defeated. Pop. 20,751.

Poltava (pål-tä'vå), or Pultawa, a government of Russia, bounded by Czernigov, Kharkov, Ekaterinoslav, Kherson and Kiev; area, 19,265 sq. miles. It consists of an extensive and somewhat monotonous flat, watered by several tributaries of the Dnieper. It is one of the most fertile and best cuitivated portions of the Russian Empire, and grows large quantities of grain. Live stock and bee rearing are important branches of the rural economy. Both manufactures and trade are of very limited extent. Education is much neglected. Pop. 3,312,400.— POLTAVA, the capital, at the confluence of the Poitava with the Worskla, has straight and broad streets, a cathedral, important educational institutions, etc. As a place of trade Poitava derives importance from the great fair heid on July 20th each year. Wool is the great stapie of trade. Horses, cattie, and sheep are likewise bought and sold in great numbers. It contains a monu-ment to Peter the Great, who here de-feated Charles XII in 1709. Pop. 53,060.

Polyadelphia (poi-i-a-dei'fi-a), the name given by Linneus to the eighteenth class of his sexual system, in allusion to the stamens being

collected into several parcels.

Polyandria (pol-i-an'dri-a), or POLYANDRY (Greek polys, many, and aner, andros, 1 man) denotes the custom of one woman having several husbands (generally brothers) at one time. This system prevailed among the Celts of Britain in Cæsar's time, and occurs yet in Southern India, in Tibet, among the Eskimo, the Aieutians, some tribes of American Indians, and in the South Seas. The practice is believed to have had its origin in unfertile regions in an endeavor to check the undue pressure of population on the means of subsistence.

rope, growing in woods and copses in moist, ciayey soil. The leaves are ohovate, oblong, toothed, rugose, and villous beneath. The flowers are in umbeis on a scape or flowerstaik 3 to 6 inches or more length. In addition to propagating from seeds polyan-

thuses may also be readily increased by division. The seeds should be sown in June. The plants should be potted in August. Some will show flowers the same autumn, and many in the following spring. The plants are very hardy, and require to be transplanted every two years.

Polybasic Acids (poi-i-bā'sik), acids which possess more than one hydrogen atom capable Polybius (po-lib'i-us), a Greek historian, was born at Megaiopolis, in Arcadia, about 204 B.C.; died in 122. His father, Lycorias, was one of the leaders of the Achæan League, and the confidential friend of Philores. and the confidential friend of Philopæmen. Educated for arms and political life, he entered, at the age of twenty-four years, into the military and political service of the League. After the subjugation of Perseus, king of Macedonia, by the Romans (168), Polybius found him-seif among the 1000 Acheans summoned to Rome to answer before the senate why the League had not aided the Roman army in Macedonia. While in Italy he formed an intimate friendship with Scipio Æmilianus, whom he accompanied on his African campaign, and witnessed the destruction of Carthage. He returned to Greece in 146, just after the fail of Corinth, and exerted himself successfully to obtain moderate terms from the Romans for his countrymen. His prin- the middle ages polychrome architecture cipai work is his *History* of *Rome*, in was adopted by the Arabs and Byzan-forty books, from 220 to 140 B.C., with tines. A fine example of Byzantine archian introduction giving a sketch of the tecture in polychrome style is the Palatine

rise of the city from its conquest by the Gauis to the outbreak of the second

Punic war. Only the first five books and fragments of the rest are extant.

Polycarp (poi'i-karp), one of the Christian fathers, and, according to tradition, a disciple of the apostle John, was born probably in Smyrna about 69 or 70; martyred 155 or 156. According to a legendary fragment ascribed to a writer named Pionius, he was consecrated bishop of his native city by St. John. During the persecu-tion under Marcus Aurelius, Polycarp was seized and brought before the Roman proconsul at Smyrna. Having refused to renounce his faith, he was condemned to the flames. He wrote several letters, which were current in the early church, but all have perished except one addressed to the Philippians, which appears to have been written about 115, and is valuable for its quotations from the apostolic writings.

Polychrome Printing. See Color Printing. Polychromy (poi'i-krō-mi), they of decorating works of sculpture and architecture with different colors. The custom of painting statues is as ancient as sculpture itself; the Egyptians, Assyrians, Phenicians, Babylonians, and Persians all painted their statues in various colors, especially in red Polychromy colors, especially in red. Polychromy, however, only reached the dignity of a real art among the Greeks. Instead of employing colors, the sculptors of the age of Pericies generally used marbles of different colors fitted together, and the ornaments of their statues were made of various metals and of ivory. Thus the nude parts were, in some cases, of Persian marble, the draperies of streaked onyx, the eyes of goid or ivory, the shields and other arms of bronze, and so forth. Architectural polychromy may be divided into natural polychromy, in which the materiais employed produce certain effects by their natural coiors; and artificial polychromy, which is simply the application of coats of paint, whether on the exterior or interior parts of the edifice. Both natural and artificial polychromy were used by the Egyptians, Assyrians, Babylonians, and Artificial polychromy were used by the Egyptians, Assyrians, Babylonians, and Artificial polychromy were used by the Egyptians, Assyrians, Babylonians, and Artificial polychromy which is simply the application. lonians, and Persians. Polychromy was cultivated by the Romans in a much more restricted style. In the public buildings of the later Romans gold decorations and facings of variegated stone were used instead of mere colors. le'do-nus), those plants of which the embryos have more than two cotyledons or of this order seed-lobes. Instances occur in plants of or astringent. the cruciferous order, and in coniferous plants.

of Samos during the time of the elder Cyrus. He made himself master of the island hy violence, and having secured absolute sway selzed upon several of the nelghboring islands and some towns upon the mainland. In 522 B.C. the Persian satrap Oroetes treacherously invited Poly-crates to his palace, and there cruci-fied him. Polycrates seems to have had much taste for learning and the arts, and greatly promoted the refinement of the Samlans.

Polycystina (poli-sis-tě'na), a group of Protozoa, division Rhlzopoda, order Radiolaria, consisting of mlnute organisms allied to the Foraminifera, hut their shells are of siliceous matter, while those of the latter are calcareous. The bodies of the Polycystina are composed of a brownish sarcodematter apparently containing yellow globnles, which protrudes in the form of elongated filaments (pseudopodia) through apertures in the shells. The Polycystina inhabit the sea-depths, and are ahundantic statements. dantly represented as fossil organisms, as in the 'infusorial earth' of Barbadoes.

Polydeuces (pol-i-du'sez), or Polydeuces (peukes, the Greek name of Pollnx. See Castor and Pollux. Polydipsia (pol-i-dip'si-a), a applied to diahetes. term

Polyembryony (pol-i-em'bri-o-ni), in hotany, a phenomenon occurring, sometimes regularly and sometimes ahnormally, in the develop-ment of the ovules of flowering plants, consisting in the existence of two or more

embryos in the same seed.

Polygala (po-lig'a-la), a genus of plants of the natural or-

Chapel at Palermo, erected in 1232. On der Polygalacese. The species abound in milky juice, and are found in most parts of the world. The root of P. Senega (senega or seneca root or Virginian snake-root) is a stimulating diuretic, useetus (pol-i-kle'tus) of Sicyon, ful in pneumonia, asthma, and rheuma-a Greek sculptor and artism. P. vulgāris, the common mllkwort, who flourished about 452-412 is a beautiful plant, found in dry pas-

flowers; diadelphous or monadelphous self.

Polycotyledonous Plants (pol-i-kō-tl-are comprised in the genus Polygala, and le'do-nus), those plants of which the emark very generally distributed. The plants of this order are mostly hitter, and acid

Polygamy (po-llg'a-mi) consists in a man's having more Polycrates (pol-lk'ra-tez), a Greek than one wife at the same time. In tyrant or absolute ruler ancient times polygamy was practiced by ancient times polygamy was practiced hy all the Eastern nations, and was sanctioned or at least tolerated by their religions. It was permitted to some extent among the Greeks, hut entirely disappeared with the later development of Greek civilization. To the ancient Romans and Germanle races it was unknown. It prevalled among the Jewish patriarchs hoth hefore and under the Mosaic law. But in the New Testament we meet with no trace of lt. Polygamy has never heen tolerated among Christians, although the New Testament contains no injunction against it. It is, however, practiced by the Mohammedans and was common among the Mormous of early days, though now prohihited hy law. See Mormons.

Polyglot (pol'i-glot; Greek, polys, many, and glotta, language), a work which contains the same matter in several languages. It is more particularly used to denote a copy of the Holy Scriptures in which two, three, or more translations are given, with or without the original. The first great work of the sort is the Complutensian polyglot, prepared under the direction of Cardinal Ximenes, and splendidly printed (1514-17), in 6 follo volumes, at Alcala de Henares, called in Latin Complutum, whence the name of the work. It contains the Hehrew text of the Old Testament, with the Vulgate, the Septuagint, a literal Latin translation, and a Chaldee paraphrase (which is also accompanied by a Latin translation). Another cele-hrated polyglot is that of Antwerp, called the Royal Bible, because Philip II of Spain bore part of the cost of publication. It was conducted by the learned Spanish theologian, Benedict Arias Montanus, assisted by other scholars. It appeared at Antwerp in 8 folio volumes (1569-72). The Paris polyglot appeared in 1645, in 10 folio volumes. The London or Walton's polyglot, in ten intragages, appeared in 6 volumes folio, with two supplementary volumes (London, 1654-57). It was conducted under the care of Bryan Walton, afterwards Bishop of Chester, and contains all that is in the Paris polyglot, but with many additions and improvements. It contains the original text according to several copies, with an Ethiopic and a Persian translation, and the Latin versions of each. Bagster's polyglot (folio, London, 1831) gives eight versions of the Old Testament and nine of the new.

Polygnotus (poi-ig-no'tus), a Greek painter, who flourished from 450 to 410 B.C. He was a native of the Island of Thasos, and was instructed in his art by his father, Aglaophon. Cimon, the rival of Pericles, brought him to Athens and employed him to decorate the Stoa Pocile, or painted portico, at Athens. His works were prohably on wood. Polygnotus is represented as being the first who made paint-

ing independent of sculpture.

Polygon (pol'i-gon; Greek, polys, many, gonia, an angle). In geometry, a plane figure of many angles and sides, or at least of more than four sides. A polygon of five sides is termed a pentagon; one of six sides, a hexagon; one of seven sides, a heptagon, and so on. Similar polygons are those which have their several angles equal each to each, and the sides ahout their equal angles proportional. All similar polygons are to one another as the squares of their homologous sides. If the sides, and consequently the angles, are all equal, the polygon is said to be regular; otherwise, it is irregular. Every regular polygon can be circumscribed hy a circle, or have a circle inscribed in it.—Polygon of forces, in mechanics, the name given to a theorem which is as follows:—If any number of forces act on a point, and a polygon be taken, one of the sides of which is formed by the line representing one of the forces, and the following sldes in succession by lines representing the other forces in magnitude, and parallel to their directions, then the line which completes the polygon will represent the resultant of all the forces.

Polygonaceæ (pol-ig-o-nā'se-ē), a forms helonging to the monoclinic system; natural order of her-carhonate of calcium exists as calcspar, baceous plants, with trigonal fruit, and usually with stipules united into a tube or ochrea, through which the stem passes.

They have astringent and acid properties; some are purgative, and a few are acrid. Among the best-known species are rhubarb, the docks, and the sorreis. See Polygonum.

Polygonum (pol-ig'o-num), a genus of herbaceous piants, natural order Polygonaceæ. They are found in the temperate regions of Enrope, Africa, North America, and Asia. They are herbaceous, rarely shrubby piants, with aiternate stipulate or exstipniate leaves, and spikes of small, pink flowers. Several British species are known by the name of persicarias. See Bistort, Buckwheat, Knot-grass.

Polygynia (poi-i-jin'i-a), one of the orders in the fifth, sixth, tweifth, and thirteenth classes of the Linnæan system, comprehending 'those plants which have flowers with many pistils, or in which the pistils or styles are more than twelve in number.

Polyhedron (pol-i-he'drun), in geometry, a hody or solid bounded by many faces or planes. When all the faces are regular polygons similar and equal to each other the solid becomes a regular body. Only five regular solids can exist, namely, the tetrahedron, the hexahedron, the octahedron, the dodecahedron, and the icosahedron.

Polyhymnia (pol-i-him'ni-a), or Polym'nia, among the Greeks, the muse of the sublime hymn, and according to some of the poets, inventress of the lyre, and of mimes. She is usually represented in art as covered with a white mantle, in a meditative attitude, and without any attribute.

tude, and without any attribute.

Polymerism (pol-im'er-izm) is a particular instance of isomerism (which see). Polymerization is a name given to the process hy which a chemical compound is transformed into another having the same chemical elements combined in the same proportions but with different molecular welghts: thus the hydrocarbon amylene, C<sub>5</sub>H<sub>10</sub>, when acted on hy strong sulphuric acld, is converted into the polymer paramylene, C<sub>10</sub>H<sub>20</sub>.

Polymorphism (pol-i-mor'fizm), the property possessed by certain bodies of crystallizing in two or more forms not derivable one from the other. Thus, mercuric iodide separates from a solution in tables belonging to the dimetric system; if these crystals are heated they sublime and condense in forms helonging to the monoclinic system; carhonate of calcium exists as calcspar, which crystallizes in rhombohedral forms, and as aragonite, which crystallizes in trimetric forms.

See Mango-fish. Polynemus.

Polynesia (poi-i-ne'si-a; Greek, polys, many, nesos, is-land), a general name for a number of distinct archipelagoes of small Islands scattered over the Pacific Ocean, extending from about iat. 35° N. to 35° S., and from long. 135° E. to 100° W., the Philippines, New Guinea. Australia, and New Zealand being excluded. (See Oceania.) The islands are distributed into numerous groups, having a general direction from N. w. to S. E. The groups north of the equator are the Pelew, Ladrone or Marl-anne, Caroline, Marshali, Glibert or Kingsmill, Fanning and Hawaii or the Sandwich Islands. South of the equator are New Ireland, New Britain, Solomon Islands, New Hebrides, Flji, New Caledonia, Navigator, Friendly, Cook's or Harvey and the Society Islands, the Low Archipelago, the Marquesas Islands, and the isolated Easter Island. The term Polynesia is sometimes restricted to the groups most centrally situated in the Pacific; the New Hehrides, Solomon Islands, New Britain, New Ireland (Blamarck Archipelago), etc., heing classed together as Melanada, whereas the Carolinean and together as Melanesla, whereas the Carolines, Ladrones, Marshall Islands, etc., form Micronesia. The Islands may be dlvided lnto two chief ciasses, volcanle and divided into two chief classes, voicanic and coral islands. Some of the former rise to a great height, the highest peak in the Pacific, Mauna Kea, in Hawaii, reaching 13,895 feet. The principal groups of these are the Friendly, the Sandwich, the Marquesas, and the Navigator Islands. The coral islands comprise the Carolines, Cilbert, and Marshall Islands on the Gilbert, and Marshall Islands on the northwest, and the Soclety Islands and Low Archipelago in the southeast, in both of which groups the atoli formation is very common, hesides numerous other groups where coral reefs occur. The elevations of these groups do not exceed 500 feet. Polynesia has a comparatively moderate temperature, and the climate is delightful and salubrious. The predominating race, occupying the central and eastern portion of Polynesia, is of Malay orlgin, with ovai faces, wide nostrils, and large ears. The hair and complexion vary greatly, but the latter is often a light hrown. Their language is split up into numerous dialects. The other leading race is of negroid or Papuan origin, with negro-like features and crisp, mop-like halr. They are confined to Western Polynesla, and speak a different lan- and shut in the unhappy captives, guage, with numerous distinct dialects. Ulysses then contrived a plan for their Christianity has been introduced into a escape. He intoxicated the monster with great many of the islands, and a large wine, and as soon as he fell asleep bored number of them are under the control out his one eye with the blazing end of a

of one or other of the European powers. Many atrocities have been practiced on the natives in recent times in connection with the luring or kidnaping of them to work in the European settlements. The commercial products consist chiefly of cocoanuts, cotton, coffee, sugar, fruits, pearis and trepang. The Ladrones were discovered by Magellan in 1521, the Marquesas by Mendaña in 1595, but it was not until 1767 that Walia, and subsequently Cook, explored and described the chief islands. Since the natives came in contact with the whites their numbers in the contact with the wall in the con have greatly decreased. For further information see articles on the individual groups and Islands.

See Eteocles. Polyni'ces.

Polyp (pol'ip), a term which has been very variously and indiscriminately applied to different animals. It has thus been used to designate any animal of low organization, such as the sea-anemones, corals, and their allies; or it has been employed to indicate animals which, like the collenterate zoophytes or Hydrozoa, and the molluscoid Polyzoa, bear a close resemblance to plants. It is now generally applied to any single member of the class Actinozoa, represented by the sea-anemones, corais, and the like; or any member (or zooid) of a compound organism helonging to that class. The term polypide is employed to designate each member or zooid of the compound forms included in the Polyzoa. The name polypidon applies to the entire outer framework or skin-system of a compound form such as a hydrozoan zoophyte. The word polypite refers to each separate zoold or member of a compound zoophyte or hydrozoon. The polypary of a hydrozoön specially refera to the horny or chitinous skin secreted by the Hydrozoa.

Polyphemus (pol-i-fe'mus), in Greek mythology, the most famous of the Cyclops, who is described as a cannibal giant with one eye in his forehead, living alone ln a cave of Mount Ætna and feeding his flocks on that mountain. Ulysses and his companions having been driven upon the shore by a storm, unwarily took refuge in his cave. Polyphemus, when he returned home at night, shut up the mouth of the cavern with a large stone, and hy the next morning had eaten four of the strangers, after which he drove out his flocks to pasture,

stake. He then tied himself and his com-panions under the belies of the sheep, in which manner they passed safely out in the morning. Polyphemns was the de-spised lover of the nymph Gaiatea. Polyphonic (pol-i-fon'ik), a term ap-plied to a musical com-pasition in two or more parts, each of

position in two or more parts, each of which forms an independent theme, progressing simultaneously according to the laws of counterpoint, as in a fugue, which is the best example of compositions of the polyphonic ciass.

Polypodiaceæ (poi-i-pō-di-a'ze-ē), a natural order of ferns, which may be taken as the type of the whole. They constitute the highest order of acrogenous or cryptogamic vegetation, and are regarded as approaching more nearly to cycadaceous gymnosperms than to any other group of the vegetable kingdom. They are usually herbaceous plants with a permanent stem, which either remains hurled or rooted beneath the soil, or creeps over the stems of trees, or forms a scarcely movable point of growth, round which new leaves are an-nually produced in a circle, or it rises into the air in the form of a simple stem, bearing a tuft of leaves at its apex and sometimes attaining the height of 40 feet, as in the tree-ferns.

Polypodium (pol-i-pô'di-um), a genus of ferns, the largest of all, comprising over 450 species, including plants of different modes of growth, and from almost all climates. They bear spore-cases on the hack of the trond, distinct, ring-shaped, in roundish sori, destitute of indusium. P. calaguala, a native of Peru, possesses important medicinai properties, solvent, deobstruent, sudorific, etc.

Polyporus (po-lip'or-us), a genus of parasitical fungi. The P. destructor is one of the pests of wooden constructions, producing what is sometimes termed dry rot, aithough the true dry rot is a different plant (Merulius lacrymans). P. igniarius is known hy the name of amadou, touchwood, or spunk. Polypterus (po-lip'ter-us), a genus of fishes inhabiting the Nile, Senegal, and other rivers of Africa, and included in the Ganoid order of the and included in the Ganoid order of the ciass. They form types of a special family, the Polypteridæ. Their most singular characteristic is the structure of the dorsal fin, which instead of being continuous is separated into tweive or sixteen strong spines distributed along the back, each

(pol'i-pus), in medicine, a name given to tumors chiefly Polypus found in the mucous membranes of the nostriis, throat, ear, and uterus; rarely in the stomach, hladder, and intestines. Polypi differ much in size, number, mode of adhesion, and nature. One species is the mucous, soft, or resicular, because its substance consists of mucous membrane with its embedded giands; another is cailed the hard polypus, and consists of fibrous tissue. Polypi may be mailgnant in character, that is, of the cancerous type. The form polyp is also used.

Polysyndeton (poi-i-sin'de-ton), is the name given to a figure of speech by which the con-junctive particles of sentences are accumulated, contrary to usual custom, for the purpose of giving greater emphasis to the terms connected by them, as when Schlier says, 'And it waves, and boils, and roars, and hisses.'

Polysynthetic Languages. Phi lology.

Polytechnic School. See Ecole Polytech. nique.

Polythalamia (pol-i-thal-a'mi-a), a group of Protozoa occupying compound chambered ceils of microscopical size. In some instances each ceil of the common shell presents only one external opening, but more common the common components. monly it is punctured with numerous minute pores or foramina, through which the animal can protrude filaments. Their remains constitute the bulk of the chaik and tertiary limestone. See Foraminifera.

Polytheism (pol-i-thē'izm; Greek, god), the belief in and worship of a plurality of gods; opposed to monothelism, the belief in and worship of one god. It is still a matter of dehate whether polythelism is a primary form of human belief or the degeneration of an original monothelistic idea. It is a regued on the monotheistic idea. It is argued, on the one hand, that the sense of personal dependence, the feeling that there was an undefined power, a mysterious something around and above him, did not primarily present itself to the mind of man except under a form of unity. His earliest re-igion would therefore be of a monotheistic character, but of a highly unsta-bie nature, and eminently liable, a nong races of rude faculties and little power of abstraction, to assume a polytheist form, the idea of one Supreme Beina bordered behind by a small soft fin. In form, the idea of one Supreme Beina the young there is an external gill. The being readily obscured by the multiplicity Polypterus bickir attains to a length of of the visible operations of that being on earth. Those who affirm that polytheism

argue that man, ignorant of the nature of his own life, and of the nature, origin, and properties of other objects, could at first only attribute vaguely to all visible things the same kind of conscious existence as that which belonged to himself. Thus the sun, moon, and stars would all be living beings; and their influence, from the absence of any idea of a natural order, would be seen in the working of the material world and in all the accidents of human life. As being beyond human control, and as affecting the con-dition of men, they would be loved or feared; and with the growth of the idea that they might be propitiated or ap-peased the system of polytheism would be complete. See Monotheism and Mythologs.

Polyzoa (pol-i-zō'a; Gr. polye, many; Moliuscoida or Lower Mollusca, generally known by the popular names of 'sea-mosses' and 'sea-mats.' They are ingrowths or coionies of animals produced by gemmation from a single primordial individual, and inhabit a polyzoarium, or aggregate of cells, corresponding to the polypidom of the composite hydroids.

A Polyzoon (l'ugula avicularia). Natural size. 2, Portion of same magni-fled. s, Cells. b, Ovicells. c, Avicularia.

The polypide, or individual polyzoon, resides in a separate celi or chamber, has a distinct alimentary canal suspended freely in a body cavity, and the repro-ductive organs contained within the hody. The body is enclosed in a double-wailed sac, the outer layer (cctocyst) of which tunity to banish the whole order of is chitinous or calcareous, and the inner Jesuits from the kingdom in 1759. (cndocyst) a delicate, membranous layer. Pombai reorganized the army, and was On the ectocyst are seen certain peculiar active in his efforts to improve the processes called 'bird's-head processes,' country in every relation; he paid paror cvicularia, from their shape, the use ticular attention to education. Joseph I

was a primary form of religious belief of which is unknown. The mouth-openargue that man, ignorant of the nature of ing at the upper part of each cell is his own life, and of the nature, origin, surrounded by a circlet of hollow, clitated and properties of other objects, could at tentacies, which perform the function of respiration, and are supported on the lophophore; and the ceil may be closed by a sort of valve cailed the epistoma. Aii the Polysoa are hermaphrodite. In many cases there are ovicells or sacs into which the fertilized ova pass. From these proceed free-swimming clilated emthese proceed free-swimming these hryos which develop into polypides. Contlnuous gemmation exists in all. The Polyzoa are classed into three groups: Ectoprocta, Entoprocta, and Aspidoph-ora. The Ectoprocta are divided into two orders of Phylactolæmata, with a crescentic lophophore and an epistome; and Gymnolemats, or Infundibulats, with a circular lophophore and no epistome. They are all aquatic in their habits, the marine Polyzoa being common to all seas, but the fresh-water genera are mostly confined to the north temperate zone.

(po-mā'se-ē), or Po'MEE, to division of the natural or-Pomaceæ der Rosacem, to which the apple, pear, quince, and mediar beiong. It differs from Rosacem proper in having an inferior ovary. The fruit is always to pome, with a crustaceous core or bon; stones.

(pom-hål'), SEBASTIÃO JOSÉ CARVALHO, MARQUIS OF, n Pombal Portuguese statesman, horn ln 1699; died in 1782. After studying law at Coimhra, Pomhai served for some time in the army. In 1739 he was appointed amhassador in London. He was recalled in 1745, and the queen sent him to Vlenna to act as mediator between the pope and Maria Theresa. Under Joseph I he became secretary of state for feelgn affairs. He soon rendered the king entirely subject to his influence, and proceeded to the accompilshment of his favorite objects — the expuision of the Jesults, the humiliation of the greater nohles, the restoration of Portugal's pros-perity, and the absolute command of the state in the name of the monarch. He deprived the leading nobles of their princely possessions in the colonies, and ahridged the powers of the prelacy. In 1757 he deprived the Jesuits of the piace of confessors and ordered them to retire to their colleges. A conspiracy against the life of the king afforded him oppordied in 1777, and was succeeded by his daughter, Maria I, who immediately deprived Pombai of his offices.

Pomegranate (pom'gra-nat; Punics grandtum, order Myrtacem), a dense, spiny shrub, from 8 to 20 feet high, supposed to have belonged originally to the north of Africa, and subsequently introduced into Italy. It was called by the Romans malum Punioum, or Carthaginian apple. The leaves are opposite, ianceolate, entire, and

Pomegranate (Punica grandtum).

smooth; the flowers are large and of a brilliant red; the fruit is as large as an orange, having a hard rind filled with a soft puip and numerous red seeds. The pulp is more or less acid and slightly astringent. The pomegranate is extensively cultivated throughout Southern Lurope, and sometimes attains a great size. Another species (P. nana) inhabits the West Indies and Guinna.

Pomerania (pome-ra'ni-a; German, Orkney.

Pommern), a province of
Pompadour

Pompadour

siderable general and ...ansit trade is carried on. The center of trade is Stettin, which ranks as one of the chief commercial cities of Prussia. Pomecommercial cities of Prussia. Pomerania appears to have been originally inhabited by Goths, Vandais, and Slavs. The first mention of it in history is in 1140. It iong remained an independent duchy, and in 1637, on the extinction of the ducal family, it was annexed to Sweden. On the death of Charles XII it was ceded to the electoral hours of it was ceded to the electoral house of Brandenburg, with the exception of a part which subsequently was also obtained by Prussia. For administrative purposes it is divided into three governments, Stettin, Kösiin, and Straisund. Pop. (1905) 1,084,125. Pomfret (pom'fret), John, an English poet, born in 1667; died

in 1703. He was rector of Mauiden in Bedfordshire, and published a volume of Poems in 1699, one of which, The Choice,

was iong very popular.

Pomona (po-mō'na), among the Romans, the goddess of fruit, Pomona and wife of Vertumnus.

Pomona, a city of Los Angeles Co., California, 33 miles E. of Los Angeles. Its industries include fruit raising, canning, pipe, planing, and iron works, and the manufacture of well pumps, etc. Pop. 10,207.

Pomona, or MAINLAND, the largest or most populous of the Orkney Islands; length from northwest to southeast, 23 miles; extreme breadth about 15 miles; area 150 square miles; pop. 17,165. It is extremely irregular in shape, and on all sides except the west is deeply indented by have and assets. is deeply indented by bays and creeks, The surface is covered in great part by moor and heath, but good pasture is also to be found, and in the valleys a good loamy soli occurs. The principal towns are Kirkwail and Stromness. See

Pompadour (pon-pa-dör), Jeanne Antoinette Poisson, Marquise De, the mistress of Louis XV, was born in 1721, and was said to he P. ussia, bounded by the Baitic Sea, Meckiemburg, Brandenhurg, and West Prussia; ar a, 11,622 square miles. The coast is low and sandy and lined by numerous is down and sandy and lined by numerous is flat and, in parts, marshy. The principal rivers are the coast are Rügen, Usedom, and Wollin. The interior is flat and, in parts, marshy. The principal rivers are the d'Etiolles. A few years later she succeded in attracting the attention of the generally sandy and indifferent, but there are some rich alluvial tracts, producing a quantity of grain. Flax, hemp, and tobacco are also cultivated. Domestic animals are numerous. The forests are of large extent. Fish are abundant. There are few minerals. Manufactures to state affairs. Her favorites filled the most important offices, and she is said let 10-

to have brought about the war with Frederick II. She died in 1764, at the age of forty-four, hated and reviled by the nation.

(pom-pē'yi), an ancient city of Italy, in Campanls, near Pompeii the Bay of Naples, about 12 mlies southeast from the city of that name, and at the base of Mount Vesuvius on its southern side. Before the close of the republic, and under the early emperors, Pompell became a favorite retreat of wealthy Romans. In A.D. 63 a fearful earthquake occurred, which destroyed a great part of the town. The work of the excavations, and a regular plan has rebuilding was soon commenced, and the been adopted, according to which the new town had a population of some ruins are systematically explored and 80,000 when it was overtaken by an-carefully preserved. The town is built

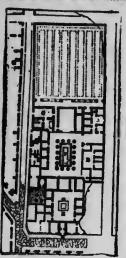

now prosecuted, and in 1755 the amphitheater, theater, and other parts were cleared out. Under the Bourbons the excavations were carried out on a very unsatisfactory plan. Statues and articles of value alone were extricated, while the buildings were suffered to fall into decay or were covered up sgain. To the short reign of Murat (1808-15) we are indebted for the excavation of the Forum, the town walls, the Street of Tombs, and many private houses. Recently the government of Victor Emmanuel assigned \$12,500 annually for the prosecution of

Pompeii - House of the Tragic Poet, so-called.

other catastrophe on August 24, A.D. 79. This consisted in an eruption of Mount Vesuvius, which suddenly helched forth tremendous showers of ashes, red-hot pumice-stone, etc. These overwhelmed the clty and buried it to a considerable depth. The present superincumbent depth. The present superincumbent mass is about 20 feet in thickness. A portion of this was formed by subsequent eruptions, but the town had been buried hy the first catastrophe and entirely lost to view. Pompeil was lost in oblivion during the middle ages, and it was not until 1748, when a peasant in sinking a well discovered a painted chamber with statues and other objects of antiquity, that anything like a real interest in the locality was excited. Excavations were

in the form of an irregular oval extending from east to west. The circumference of the walls measures 2925 yards. The area within the walls is estimated at 160 acres; greatest length, a mile; greatest breadth, a mile. There are eight gates. The streets are straight and narrow and paved with large polygonal blocks of lava. The houses are slightly constructed of concrete, or occasionally of bricks. Numerous staircases prove that the houses were of two or three stories. The ground floor of the larger houses was generally occupied by shops. Most of the larger houses are entered from the street hy a narrow passage (vestibulum) leading to an internal hall (atrium), which provided the surrounding chambers with light and was the medium of communication; beyond the latter is another large public apartment termed the tabulinum. The other portion

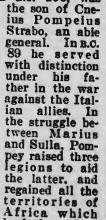

House of Pansa, Pompeii.

of the house comprised the private rooms of the family. Ail the apartments are small. The shops were smail and all of one character, having the business part in front and one or two small chambers behind, with a single large opening serving for both door and window. The chief public buildings are the so-called Temple of Jupiter, the Temple of Venus, the Basilica, the Temple of Mercury, the Curia, and the Pantheon or Temple of Augustus. There are

several interesting private bulldings scattered through the town, including the villa of Diomedes, the house of Sallnst, and the house of Marcus Lucretius. The and the house of Marcus Lucretius. The Museum of Naples owes many of its most interesting features to the ornaments, etc., found in the public and private edifices above mentioned. The site of the city has been largely cleared. Much care is now taken for the preservation of the buildings and their contents, which are kept in place where found.

(pom'pi), ln full CNEIUS POMPEIUS MAGNUS, a dis-Pompey tinguished Roman, born B.C. 106, was the son of Cne-

Pempey .- Antique Gem.

the Interest of Sulla. This success excited the jeaiousy of Sulla, who recalled him to Rome. On his return Sulla greeted him with the surname of Magnus (Great). Pompey demanded a triumph, to which Sulla reluctantly consented. He entered Rome in triumph in September, 81, and was the first Roman permitted to do so without possessing a higher dignity than that of countries park. that of equestrian rank. After the death of Sulla, Pompey put an end to the war which the revolt of Sertorius in Spain had occasioned, and in 71 obtained a second triumph. In this year, although not of legal age and having no official expensions. of legal age and naving no omcial experience, he was elected consul with Crassus. In 67 he cleared the Mediterranean of pirates, and destroyed their strongholds on the coast of Cilicia. In four years, 65-62, he conquered Mithridates, Tigranes, and Antiochus, king of Syria. At the same time he subdned the Lews and took Jarusalem by storm. He Jews and took Jerusalem by storm. returned to Italy in 62 and disbanded his army, but did n t enter Rome until the following year, when he was honored with a third triumph. He now, in order to strengthen his position, united his interest with those of Casar and Crassus, and thus formed the first triumping. and thus formed the first triumvirate. This agreement was concluded by the marriage of Pompey with Cæsar's daughter Julia; but the powerful confederacy was soon broken. During Cæsar's absence in Gaul Pompey ingratiated himseif with the senate, was appointed sole consul, and the most important state offices were filled with Cæsar's enemies. Through his influence Cæsar was proclaimed an enemy to the state, and his rival was appointed general of the army of the republic Cæsar allowed the republic Cæsar allowed the constitution of the republic Cæsar allowed the republic Cæsar allowed the republic Cæsar allowed the constitution of the republic Cæsar allowed the resulting the constitution of the republic Cæsar allowed the constitution of the central constitution of of the republic. Cæsar, alarmed by this, marched to Italy, crossed the Rubicon in 49 (see Cæsar), and in sixty days was master of Italy without striking a blow. Pompey crossed over to Greece, and in this country, on the plains of Pharsalia, occurred the decisive battie the result of which made Cæsar master of the Roman. which made Cæsar master of the Roman world. Pompey fied to Egypt, where he hoped to find a safe asylum. The ministers of Ptolemy betrayed him, and he was stabbed on ianding by one of his former centurions in B.C. 48.

tlement of the same name, on the east 1855.

rounded on the land side by the British district of South Arcot, and has an area of 115 square miles; pop. about 200,000. The town, with a pop. of 47,972, stands on a sandy beach, and consists of two divisions separated by a canai. The 'White Town,' or European quarter, on the east, facing the sea, is very regulariy iaid out, with well-huilt houses. The 'Black Town,' or native quarter, on the west, consists of houses or huts of hrick or earth, and a few pagodas. There is an iron pier, and railway communication with the South Indian statem was communication. with the South Indian system was opened in 1879. The settlement was purchased by the French from the Bejapoor rajah in 1672 and has been repeatedly in the hands of the British.

Pondoland (pon'do-iand), a maritime territory of S. Africa, between Cape Colony and Natal, measuring about 90 miles from N. E. to s. w., and about 50 from N. w. to s. E. Pop. ahout 200,000. It was the last remnant of independent Kaffraria, and became a British protectorate in 1884.

Pondweed. See Potamogeton.

Poniatowski (pō-nē-a-tov'skē), an illustrious Polish family. STANISLAUS, Count Poniatowski, born in 1678; died in 1762, is known for Spaniards, and drove them to their his connection with Charies XII, whom spanards, and drove them to their ships. In the combat Ponce de Leon received a wound from which he soon afterwards died.

Ponce de Leon, Luis, a Spanish iyric poet, horn in Stanislaus Augustus, horn 1732, the 1527, probably at Granada; died in 1591. He entered the order of St. And at the age of sixteen, and became professor of sacred literature at Salamanca. Against the Russians in the strength of the residue of the sacred literature at Salamanca. Against the Russians in the strength of the residue of the sacred literature at Salamanca. Against the Russians in the strength of the residue of the sacred literature at Salamanca. Against the Russians in the strength of the residue of the sacred literature at Salamanca. Against the Russians in the strength of the residue of the residue of the residue of the residue of the Russians out of the country, and commanded a division at the sieges of Warsaw. In 1809 he commanded the Polish army against the superior Austrian force which was sent to occupy the Duchy of Warsaw, and compelled it to retire. In 1812 he led the Polish forces against Russia. During the hattle of Leipzig Napoleon created him a marshall. of Poiand in 1764.—JOZEF, the nephew of King Stanislaus, born in 1762, served against the Russians in 1792, and ln 1794 joined the Poles in their attempt

Ponsard (pon-sar), FRANÇOIS, a French dramatist, born at thick woolen cloth of rectangular form, Vienne, in Dauphine, in 1814; died in from 5 to 7 feet long and 3 to 4 feet 1867. His first success was his Lucrèce, broad, with a hole in the center for the produced in 1843, and welcomed as a Pondicherry (pon-di-sher'i; French, pieces are Agnès de Méranie, Charlotte Pondichéry), a town, Corday, L'Honneur et l'Argent, etc. He capitai of the French East Indian settlement of the same pame or the same

or Coromandel coast, 85 miles south by Ponta-Delgada (pōn'ta-dāl-gāl'da), west from Madras. Its territory is sur-

a seaport on the south side of the island of St. Michael, one of the Azores. It is built with considerable regularity, and the houses are substantial. A recently constructed breakwater has much improved the anchorage, and it has now an excellent harbor. The chief exports are wheat, maize, and oranges. Pop. 17,675. Pont-à-Mousson (pon-tà-mö-son), a town of France, dep. of Menrthe-et-Moselle, 16 miles northwest of Nancy, on both sides of the Moselie, here crossed by a bridge. It has a handsome Gothic church dedicated to St. Martin; the old abbey of St. Mary, now converted into a seminary; a coilege, etc. Pop. (1906) 12,282.

Pontchartrain (pont-char'tran), a lake of Louisiana, reaching within 5 miles of New Orleans, about 40 miles long from east to west, and nearly 25 in breadth. It is from 12 to 14 feet deep, and communicates with Lake Borgne on the east, with Lake Maurepas on the west, and by means of a canal with New Orleans on the

of a canal with New Orleans on the south.

Ponte-Corvo (pon'tā-kor'vō), a town of S. Italy, province of Reform School. Pop. 6090.

Caserta, 20 miles southeast of Frosinone, in an isolated territory on the left bank of the Garigliano. It is the see of a bishop, has manufactures of macaroni confluence of the Landak and Kapuas, almost on the equator. It has some and plastic ware, and the whole district is rich in Roman remains. It was the capital of a principality created by Napoleon I, and from which Bernadotte had his title of Prince de Ponte-Corvo. Pop. 10,518.

Arno; manufactures cotton goods. Pop. 7499.

Pontefract (pom'fret, or pon'te-frakt), a municipal and parliamentary borough of England, in the county and 24 miles s. s. w. of York, near the confluence of the Aire and Calder. Pop. (1911), 15,960.

(pon-te-vā'drā), a town in Northwest Spain, Pontevedra capital of a province of the same name. Pop. 22,806.—The province produces in abundance meize, rye, wheat and millet, flax, fruit and wine, and rears great num-

the Indians. For several months he be-sieged Detroit and captured many forts. In 1766, at Oswego (q. v.), he entered into a treaty of peace with Sir William Johnson (q. v.). He was murdered in 1769 by a Kaskasia Indian who was bribed with liquor and money. Consult Parkman's 'History of the Conspiracy of Pontiac and the War of the North Americand can Tribes against the English Colonies.' Pontiac, a city, county seat of Oakland county, Michigan, 26 miles N. N. W. of Detroit in the center of a beautifui lake region. It is an important industrial city. Among the manufactures are automobiles, gas engines, tractors, farm machines, foundry products, wagons, paints, varnishes, etc. There is a large trade in wool and farm produce. It was named in honor of the Ottawa Indian chief Pontiac (q. v.), settled in 1818, chartered as a city 1861. Estimated pop. 18,000.

Pontiac, a city, capital of Livingston Co., Illinois, on the Vermil ion River, 93 miles s. s. w. of Chicago.

almost on the equator. It has some trade in gold dust, diamonds, sugar, rice, coffee, cotton, and edible birds'-nests. Pop. 18,000.

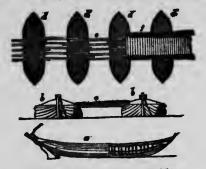

Pontifex (pon'ti-feks), among the ancient Romans a priest who Pontedera (pon-tā-dā'ra), a town of served no particular divinity. The Roltaly, province Pisa, on man pontifices formed the most illustrious the Era, not far from its mouth, on the among the great colleges of priests. Their institution was ascribed to Numa, and their number varied at different periods from four to sixteen. The pontifex maximus, or chief pontiff, held his office for life, and could not leave Italy. The emperor afterwards assumed this title until the time of Theodosius, and it subsequently became equivalent to pope.

Pontine Marshes, an extensive marshy tract of land in Italy, in the s. part of the Roman Campagna, extending along the shores of the Mediterranean for about 24 miles, with a mean breadth of 7 miles. The Romans, bers of cattle. Area, 1730 square miles; by the construction of the Appian way pop. 457,262. Pontiac (pon'ti-ac), chief of the Ottawa Indians (1720-69), born on the Ottawa River. On the allical claiming of the marshes. In 1899 the ance of the Chippeways, Pottawattomies Italian government set aside \$1,400,000 and the Ottawas, he became chief of the for the purpose of draining these marshes three tribes. He attempted to drive out -a work estimated to occupy 24 years. the English and recover the country for The vast tract is inhabited by a scanty

population of husbandmen and shepherds, who, if possible, spend only a part of the year here.

Pontoise (pon-twäz), a town in France, department of Seine-et-Oise, at the confluence of the Viosne with the Oise. It has manufactures of chemical products, hosiery, etc. Pop. (1906) 7963.

Pontoon (pon'tön'), in military engineering, a flat-bottomed boat, or any light framework or floating body used in the construction of a temporary hridge over a river. One form of pontoon is a hollow tin-plate cylinder, with hemispherical ends, and divided by severai iongitudinal and transverse partitions to act as braces and to prevent sinking if pierced by a shot or hy accl-dent. Another is in the form of a decked canoe, and consists of a timber

Pontoon and Pontoon Bridge.

Pontoon, external and internal structure. b b, End of same, supporting the roadway. c, Plan of bridge. d d, Pontoons. e, Raiters for supporting the roadway. f, Roadway complete.

It is frame covered with sheet copper. formed in two distinct parts, which are locked together for use and dislocated for transportation, and is also divided into air-tight chambers. The name is also given to a water-tight structure or frame placed heneath a submerged vessel and then filled with air to assist in refloating the vessel; and to a water-tight structure which is sunk by filling with water and raised by pumping it out, used to close a sluice-way or entrance to a dock.

Norway, Annals of the Danish Church, etc.

Pontus (pon'tus), a kingdom in Asia Minor (so-called from the Pontus Euxinus, on which it iay), which extended from Halys on the west to Colchis on the east, and was bounded on the north hy the Euxine Sea, and on the south hy Gaiatia, Cappadocia and Armenia Minor. The first king was Artabazes, son of Darius. The kingdom was in its most flourishing state under was in its most flourishing state under Mithridates the Great. But soon after his death (B.C. 63) It was conquered by Cæsar, and made tributary to the Roman Empire. In 1204 Aiexius Comnenus founded a new kingdom in Pontus, and in 1461 Mohammed II united it with his great conquests.

Pontus Euxi'nus, the ancient name for the Black

Sea (which see). Pontypool (pon'ti-pöi), a town and important railway center of Engiand, in the county and 151 miles southwest of Monmouth. The greater portion of the population is employed in ironworks and forges and works for making tin-plate. Pop. 6126.

Pontyprydd (pont-ë-prith'), a town of South Wales, in Giaat the confluence of the morganshire, Rhondda with the Taff. It has rapidly increased in recent times owing to the adjacent coal and iron mines. Pop. (1911), 43,215.

(pō'ni), a term applied to the young of the horse and also to Pony several subvarieties or races of horses, generally of smaller size than the ordinary horses, and which are bred in large flocks and herds in various parts of the world, chiefly for purposes of riding and of lighter draught work. Among weil-known breeds are the Weish, Shetland, Iceiand, Canadian, etc.

(pö'dl), a smail variety of Poodle dog covered with long, curling hair, and remarkable for its great intelligence and affection. The usual color is white, hut hlack and hiue, if good in other points, are highly valued.

Poole (pöi), a seaport of Engiand, county of Dorset, on the north part of Poole Harbor, an ancient place. The old town is being surrounded by handsome suburbs at a rapid rate, and there are many fine public huildings. Pontoppidan (pon-top'pē-dan), The old town is being surrounded by handsome suburbs at a rapid rate, and there are many fine public huildings. The manufactures consist chiefly of cordage and sail-cloth; there are aiso potteries, iarge flour-mills, and two iron foundries. The harbor is iarge and combagen University. Pontoppidan wrote several works of historical and scientific interest, including Natural History of are clay for the Staffordshire potteries, and manufactured clay goods. Pop.

Poole, MATTHEW, the compiler of the Synopsis Criticorum Biblicorum, was born at York about 1624; died at Amsterdam in 1679. He studied at Emmanuel College, Cambridge, and took orders. In 1662 he was ejected by the Act of Uniformity from his church of St. Michael-le-Querne in London, and subsequently retired to Holland. He devoted ten years to his Synopsis, which is an attempt to condense into one work all biblical criticisms written previous to his own times.

Poole, WILLIAM FREDERICK, blbllographer, was born at Salem, Massachusetts, in 1821; died in 1894. He was a librarian in Cincinnati, Boston, and Chicago. His chief work is his very useful Index to Periodical Literature.

(pö'nuk), the substance left Poonac after cocoanut oil is expressed from the nuts, used as manure and for feeding stock.

Poonah (pö'na), or Puna, a city and district of Hindustan, in the presidency of Bombay. It is about 119 miles east of Bombay by the Great Indian Peninsular Railway. The city is well built, and has the Deccan college for classics, mathematics, and philoso-phy, and a college of science with special training in civil engineering, also training college, female normal school, and other schools, public library, hospital, arsenal, harracks, etc. It was the capital of the Peishwa, or head of the Mahratta confederacy. It is a health resort, and for part of the year the seat of the Bombay government. Manufactures include gold and silver jewelry, had power to levy rates on the inhabit-small ornaments in brass, copper, and ants of the parish. This Elizabethan act lvory, and silk and cotton fabrics. It is the basis of the present English pooris an important military station (the law system. The statute of 1601 was cantonments lying to the north of the modified by a law of Charles II in 1662 town), and good roads connect it with and from this period till 1834 the admintown), and good roads connect it with Bombay, Ahmednagar, Sattarah, etc. istration of relief was entrusted to the Fop. 153.200, of whom 30,129 are in the sum nents.—The district has an area 48 sq. miles, and a pop. of 995,330. It is an elevated tableland, watered hy the Bhima and its tributaries, and abounding in isolated heights, formerly crowned with very strong fortresses. The inhabitants chiefly are Mahrattas. are Mahrattas.

seed yields an oil called dilo, poon-seed oll, etc.

Poop (pop), the aftermost and highest part of the hull in large vessels; or, a partlal deck in the aftermost part of a ship above the deck proper. Poor (pör), those who lack the means necessary for their subsistence. At no period in the history of the worid, and among no people, can there be said to have existed no poor, and probably in ail civilized communities some provision, however inadequate, has been made for their support. In Rome, in its earlier days at least, the contest between the plebeians and patricians partook very much of the nature of a struggle between poverty and riches, and in later times corn or bread was often doled out free to needy citizens. During the middle ages the great majority of the people were maintained in a state of bondage by their feudal superiors, and many freemen, in order to avoid destitution, surrendered their liberty and became serfs. In all the countries of modern Europe laws have been enacted relative to the maintenance of the poor. In England, up to the time of Henry VIII, the poor subsisted entirely on private benevolence. Numerous statutes were passed in the reign of Henry VIII and following reigns to provide for the poor and 'impotent,' but these were far from sufficient and other measures were adopted, overseers of the poor being appointed in 1601 in every parish. Their chief duties were: first, to provide for the poor, old, impotent; and, secondly, to provide work for the able-bodied out of employment. For these purposes they

of the northern European countries, but Poon (pön), or Poona Wood, is the in others no such edict as a poor law wood of the poon tree (Calophylwar are of local enactment. General laws tifolium), a native of India. It is of a light, porous texture and is much used in the East Indies in shipbuilding for lations for the care of the poor. Several plants and many. The Caloutta poor is states, have passed what are called planks and spars. The Calcutta poon is states have passed what are called preferred to that of other districts. Poon 'tramp laws,' making it a criminal ofЮІ

fense for the class of paupers generally styled 'tramps' to wander through the state without 'visible means of sup-port.' In some states the farming out to support him.

(pö'rē), or Puri, commonly Pooree called Juggernaut, a town in the province of Orissa (India). The town is 250 miles s. w. from Calcutta, and 595 miles N. of Madras. It contains the shrine of Juggernaut, to whose worthing the shrine of Juggernaut, to whose worthing the shrine of Juggernaut, to whose worthing the shrine of the shr

Poore (pör), BENJAMIN PERLEY, journalist, was born near Newburyport, Massachusetts, ln 1820. His lifework was that of Washington correspondent. His letters to the Boston Journal and to other papers gained him a national reputation by their trustworthy character. He was an industrious collector of historical matter, and published several works, some of which had large circulation. In 1867 he hegan to edit the Congressional Directory;

bestowed upon the metropolitan hishops, hut in the struggle for pre-eminence the claim to be recognized as the only pope was enforced by the Bishop of Rome.

sequently from the very earliest times the Bishop of Rome was the first among the five patriarchs or superior bishops of Christendom. A decree of the emperor Vaientian III (445) acknowledged the Bishop of Rome as primate, but until of the town poor to the lowest bidder is Vaientian III (445) acknowledged the still practiced. The town in which a Bishop of Rome as primate, but until pauper has legal settlement is required the eighth century many measurement of the popes met with violent opposition. Leo the Great (440-461) did not fail to hase his claims to the primacy on divine authority by appealing to Matt., xvi, 18; and he dld much to establish the theory that bishops in disputes with their metropolitaus had a right of appeal to The Eastern Church early reship crowds flock from every part of Rome. The Eastern Church early re-India. Pop. ahout 30,000. slsted the see of Rome, and this mainly Doore (pör), BENJAMIN PERLEY, occasioned the schism that In 1054 divided Christendom into the Greek and Latin Churches. Non-Catholics ailege that several circumstances contributed to open to the popes the way to supreme control over ail churches. Among these they cite the establishment of missionary churches in Germany directly under Rome, the pseudo-Isidorian decretals, which controlled many forced documents support tained many forged documents supportlng the general supremacy of the Roman pontiff, the gradations of ecclesiastical brought out the annual ahridgment of rank, and the personal superiority of the public documents for many years; some popes over their contemporaries. also made a compilation of United States Leo the Great (440-461), Gregory I, treaties with different countries. He died in 1887. Popayan (pō-pa-yan'), a city of Co-creased the authority of the papal title. iomhia, and capital of the Much violence and politics marked papal state of Cauca, situated near the river elections in the tenth and eleventh cencauca, and 228 mlles s. w. of Bogota. turies. In 1059 the dignity and indetermined in the see of a hishop, and has a pendence of the papal chair were height-university, a cathedral, a hospital, and other public buildings. In 1834 it was nearly destroyed by an earthquake. Pop. (1906 estimate) 10,000.

Pope (pop; Latin papa, Greek, papas, father), the title given to the head of the Roman Catholic hierarchy. Bishop of Rome: he also enforced a Pope (pop; Latin papa, Greek, papas, ally prohibited the use of the title of father), the title given to the head of the Roman Catholic hierarchy. Bishop of Rome; he also enforced a It seems to have heen used at first in the celihate life upon the clergy, and proearly church as a title of reverence given hihited lay investiture. The reign of the ent time it is applied in the Greek Church ent time it is applied in the Greek Church papai see to the highest degree of power to all priests. In the early Western and dlgnlty; and having galned almost Church the title of pope was ultimately unlimited splring idominlon, the popes bestowed upon the metropolitan hishops, now began to tend their temporal power also. : dominions under the pope's temporal rule had at first conwas enforced by the Bishop of Rome. slsted of a territory granted to the This claim of preëminence was founded papai see by Pepin in 754, which was on the belief, supported by the early tradi-subsequently iargely increased. The tions of the church, that the Apostie popes, however, continued to hold to Peter planted a church in Rome, and some extent the position of vassals of the that he died there as a martyr. This German Empire, and until the twelfth that he died there as a martyr. This German Emplre, and until the twelfth tradition, taken in connection with the century the emperors would not permit alleged preëminence of Peter among the election of a pope to take place with-Christ's disciples, came to he regarded as out their sanction. Innocent III, howsufficient reason for the primacy of the ever, largely increased his territories at Bishop of Rome in the church. Con- the expense of the empire, and the power

of the emperors over Rome and the pope may now be said to have come to an end. Favorable circumstances had already made several kingdoms tributary to the papal see, which had now acquired such power that Innocent III was enabled both to depose and to proclaim kings, and put both France and England under an interdict. France was the first to resist successfully the papal authority. In Philip the Fair Boniface VIII found a pelitical superior, and his successors from 1307 to 1377 remained under French influence, and held their courts at Avignon. Their dignity sunk still lower in 1378, when two rival popes appeared, Urhan VI and Clement VII, causing a schism and scandal in the church for thirtynine years. This schism did much to lessen the influence of the popes in Christendom, and it suhsequently received a greater hlow from the Reformation. During the reign of Leo X (1513-25) Luther, Zuinglius and Calvin were the heralds of an opposition which separated almost half the West from the popes, while the policy of Charles V was at the same time diminishing their power, and from this time fluence, and heid their courts at Avlgnon. ishing their power, and from this time neither the new support of the Society of Jesuits nor the policy of the popes could restore the old authority of the papal throne. The national churches obtained their freedom in spite of all opposition, and the Peace of Westphalia (1648), hringing to an end the Thirty Years' war and the religious struggle in Germany, gave public legality to a system of toleration which was in direct contradiction to all earlier conduct. The hulls of the popes were now no longer of avail beyond the states of the church without the consent of the sovereigns, and the revenues from foreign kingdoms decreased. Pius VI (1775-99) witnessed the revolution which not only tore from him the French Church, hut even de rived him of his dominions. In 1801, and again in 1809, Pius VII lost his liberty and possessions, and owed his restoration in 1814 to a coalition of temporal princes, among whom were two heretics (English and Prussian) and a schismatic (the Russlan). Nevertheless he not only restored the Inquisition, the order of the Jesuits, and other religious orders, hut advanced claims and principles entirely opposed to the ideas and resolutions of his liherators. The same spirit that actuated Pius VII actuated in like manner his successors, Leo XII (1823-29), Pius VIII (1829-30), and above all Gregory XVI (1831-46). The opposition of the latter to all changes in the civil relations of the papal dominions St. Caius

contributed greatly to the revolution of 1848, which obliged his successor, Pius IX, to flee from Rome. The temporal power of the papacy was further weakened by the events of 1859, 1860, and 1866. And after the withdrawai of the French troops from Italy in 1870, King Victor Emmanuel took possession of Rome, and since that time the pope has lived in almost complete seclusion in the Vatican.

By the decrees of the Vatican Council of 1870 the pope has supreme power in matters of discipline and faith over all and each of the pastors and of the faithful. It is further taught by the Vatican Council that when the pontiff speaks ex cathedra, that is, when he, in virtue of his apostolic office, defines a doctrine of faith and morals to be held by the whole church, he possesses infallibility by divine assistance. The pope cannot annul the constitution of the church as ordained by Christ. He may condemn or probibit books, after the rites of the church, and reserve to himself the canonization of saints. A pope has no power to nominate his successor, election being entirely in the hands of the cardinals, who are not bound to choose one of their own hody. The papal insignia are the tlara or triple crown, the straight crosler, and the pallium. He is addressed as 'Your holiness.'

We subjoin a table of the popes, according to the Roman Notlzle, with the dates of the commencement of their pontificates. The names printed in italics are those of anti-popes:

Pope, ALEXANDER, a celebrated English poet, was born at London in 1688. His father was a London merchant and a devout Catholic. Soon after his son's birth the father retired to Bindral Windows Windows Processing States of the field, near Windsor. Pope was smail, delicate, and much deformed. His education was a desuitory one. He picked up the rudiments of Greek and Latin from the family priest, and was successively sent to two schools, one at Twyford, the other in London. He was taken home at the age of tweive, received more priestly instruction, and read so eagerly that his feeble constitution threatened to break down. Before he was fifteen be break down. Before he was fifteen he attempted an epic poem, and at the age of sixteen his *Pastorals* procured him the notice of several eminent persons. In 1711 he published his poem the Essay on Criticism, which was followed by The Rape of the Lock, a polished and witty narrative poem founded on an incident of fashionable life. His next publications were The Temple of Fame, a modernization and adaptation of Chaucer's House of Fame; Windsor Forest, a pastoral poem (1713); and The Epistle of Eloisa to Abelard (1717). From 1713 to 1726 he was engaged on a poetical translation of Homer's works, the Iliad (completed in 1720) being wholly from his pen, the Odyssey only half. The pecuniary results of these translations showed a total profit of nearly \$45,000. In 1728 he published his Dunciad, a mock-heroic poem intended his Dunciad, a mock-heroic poem intended to overwhelm his antagonists with ridicuie. It is distinguished by the excessive cuie. It is distinguished by the excessive vehemence of its satire, and is fuii of coarse abuse. This was followed by Imitations of Horace (among the most original of his works), and by Moral Epistles or Essays. His Essay on Man was published anonymously in 1733, and completed and avowed by the author in the next year. This work is distinguished by its poetry rather than by its reasonings, which are confused and contradictory. In 1742 he added a fourth book to his Dunciad. in which he attacked tradictory. In 1742 he added a routen book to his Dunciad, in which he attacked then poet-laureate. He Colley Cibber, then poet-iaureate. He died in 1744, and was interred at Twickenham. Pope was vain and irascible, and seems to have been equally open to flattery and prone to resentment; yet he was kindhearted and stanch to his friends, among whom he reckoned Swift, Arbuthnot, and Gay. His great weakness was a disposition to artifice in order to was a disposition to artifice in order to jury and other crimes. See Oates. acquire reputation and applause. As a poplar (pop'iar; Popülus), a weil-ther correctness of versification. by the Rev. W. Elwin and W. J. Courthope.

Pope, John, soldier, born at Louisville, Kentucky, in 1822; died in 1892. He was graduated from West Point in 1842, served in Florida and in the Mexican war, and was appointed brigadier-general of volunteers in the Civil war. He captured New Madrid and Island No. 10 in the spring of 1862, and in June was given the command of the Army of the Potomac. His army suffered a severe defeat by Lee and Jackson August 29 and 30, 1862. He resigned his command, and was afterwards employed against the Indians in Minnesota. After the war he was put in command of several military departments.

Poperinghe (pō-per-an), a town in Beigium, province West Flanders, with some trade in hops and hemp. It has manufactures of woolens,

Popish Plot, an imaginary conspiracy which Titus
Oates pretended to have discovered in
1678, and by which he succeeded in deluding the mind of the nation over space of two years, and causing the death of many innocent Catholics. Oates ai: leged that the piot was formed by the Jesuits and Roman Catholics for the purpose of murdering the king, Charies II, and subverting the Protestant religion. Godfrey, a justice of the peace to whom Oates gave evidence, was found dead in a ditch (Oct. 17, 1678), and the papists were accused of his murder, though nothing transpired to substantiate the charge. Parliament met soon afterwards, and the Commons passed a bili to exclude the Catholics from both houses. Oates received a pension, and this encouraged Bedice, a noted thief and impostor, to come forward and confirm Oates's statements. He also accused several noblemen by name of a design to take up arms against the king. Coleman, secretary to the Duchess of York, a Jesuit named Ireiand, and others were tried, condemned, and executed on the testimony of Oates and Bedioe. In 1680 Viscount Stafford was impeached by the Commons, condemned by the Lords, and executed (Dec. 29) as an accomplice of the plot, on the evidence of Oates and two of his associates. Soon after the accession of James II (1685) Oates was convicted of per-

Some of the poplars are the most rapid growers of all hardy forest trees. They growers of ail hardy forest trees. They thrive under a variety of conditions as regards soil, etc., but do best in damp situations. The timber of the poplar is white, light, and soft, and not very valuable. P. fastigiāta, the common Lomhardy poplar, is well known as a tali tree with slender hranches almost upright; it reaches a height of 100 to 150 feet. P. nigra is the common hlack pople. P. nigra is the common black pop-P. tremula is the aspen. P. alba, the white popiar, often attains a height of 100 feet. P. balsamifera is the haisam-popiar or tacamahac of the United States; P. monilifera, the cottonwood of the United States; P. candicane, the On-

line of Iron Mountain Route. It has large stave works, adding-machine factory, and other industries. Pop. 6916.

Poplin (pop'lln), a kind of finely woven fabric, made of silk and

worsted. In the hest popilns the warp ls of silk and the west of worsted, a combination which imparts peculiar softness and elasticity to the material; in the cheaper makes cotton and flax are substituted for slik, which produces a corresponding deterioration in the appearance of the stuff. The manufacture of popiln was introduced into Ireland from France in 1775 by Protestant refugees, and Ireland is still famous for its pro-

duction.

Popocatepetl (po-pō-ka-tā'pet'i, or -tā-pet'l; Aztec, po-poca, to smoke, and tepetl, a mountain), an active voicano in Mexico, in the province of Puehla; lon. 98° 33' w.; lat. 18° 26' x 36' N. Its height has been estimated at 17,884 feet. The crater is 3 miles in circumference and 1000 feet deep. For-Its height has been estimated at ests cover the base of the mountain, hut Poppy (pop'i), the common name for piants of the genus Papaver, type of the order Papaveraceee. The species of poppy are herhaceous plants, all hearing large, hrilliant, hut fugacious flowers. The white poppy (P. somniferum) yields the well-known opium of commerce. (See Opium.) Most of ratio. And in examining the bearing on the species are natives of Europe. They often occur as weeds in fields and waste places, and are frequently also cultivated of supporting it, he has deduced a law in gardens for ornament. The seeds of to the proof of which a considerable por-

flattened vertically, the leaves having the white poppy yield a fixed harmless generally more or less of a tremulous oil employed for culinary purposes; and motion. About eighteen species have the oil-cake is used for feeding cattle. been observed, natives of Europe, Central and Northern Asia and North America.

The roots of the poppy are annual or perennial; the cally is composed of two perennial; the calyx is composed of two leaves, and the corolia of four petals; the stamens are numerous, and the capsule is one-ceiled, with several iongitudinal partitions, and contains a multitude of seeds.

climate, and food (that is to say, if not crowded and interfered with by others), would not ln a small number of years overspread every habitable region of the globe. To this property of organized be-ings the human species forms no excep-Poplar Bluff, a city, county seat of its power of increase if we assume only 73 miles s. w. of Cairo, Iliinols, on trunk generation might be deviated as the conditions, each large at an analysis of the conditions and the conditions are conditions. generation might he double the number of the generation which preceded it. Taking maukind in the mass, the individual desire to contribute to the increase of the species may be held to be universal, hut the actual growth of population is nowhere left to the unalded force of this motive, and nowhere does any community increase to the extent of its theoretical capacity, even though the growth of population has come to be commonly considered as an indispensable sign of the prosperity of a community. For one thing, population cannot continue to increase beyond the means of subsistence, and every increase beyond actual or lmmediately attainable means must lead to a destruction of life. But if population is thus actually limited by the means of subsistence, it cannot be prevented by these means from going further than these means will warrant; that is to say, it will only be checked or arrested after it has exceeded the means of subsistence. It hecomes then an inquiry of great importance hy what kind of checks population is actually brought up at the point at which it is in fact arrested. This inquiry was first systematically treated in an Essay on the Principle of Population, published in 1798 by the Rev. T. R. Maithus. (See Malthus.) Maithus points out that population increases in a geometrical while the means of subsistence increase only in an arithmetical

is that the energy of reproduction rises above aii the ordinary accidents of human iife, and the inevitable restraints imposed by the various organizations of human society, so that in all the various countries and cilmates in which men have ived, and under all the constitutions by which they have heen governed, the nor-mai tendency of population has always been to press continuously upon the means of subsistence. Maithus divides the checks on the increase of population into two ciasses, preventive and positive; the one consisting of those causes which prevent possible births from taking place, the other of those which, by abbreviating ife, cut off actual excesses of popula-tion. In a further analysis of these checks he reduces them to three—vice, misery, and moral restraint. The proof of his main position is historical and sta-tistical. tistlcai. In regard to the subsidiary inquiry, the most striking point brought out is the rarity of moral restraint and the uniform action, in innumerable forms, of vice and misery. In order that the latter should be weakened in their action, and the former strengthened, it is desirable to have the general standard of living in a community raised as high as possible, and that ail may look to the attainment of a position of comfort by the exercise of prudence and energy. In an article roof before the state of article read before the Académie des Sciences of Paris in 1887, hy M. Levasseur, the following figures were quoted showing the density of population in the great divisions of the world: -

	Ares in thousands of sq. miles.	Pop. in millions.	Density per sq.mile.
Europe Africa Asia Oceania N. America S. America	3,861	347	90
	12,124	197	16
	16,217	789	47
	4,247	38	9
	9,035	100	8·8
	7,066	32	4·6

It may be stated that the conclusion reached by Malthus has been vigorously contested, on various grounds, and still more important is the fact that the story of the human race, since his period, does not sustain his argument. The restraints upon increase imposed by human society are much greater in effect that he estimated. It is true that the population of the earth, and especially of Europe, has made a very great increase within a century past, reaching by the opening political agency of Kattyawar, Bombay

tion of his work is devoted. This iaw of the twentieth century the great total is that the energy of reproduction rises of about 1,500,000,000. The effects of above ail the ordinary accidents of human life, and the havitable restraints in real all minested, and madical enterty iargely eliminated, and medical science has to-day reached a stage of development that goes far to remove one of the great checks to increase of populathe great checks to increase of population. But this growth in numbers has been accompanied by a greater increase in the means of subsistence and the peopie of to-day live in superior comfort and security, and with a considerably longer span of life, than their ancestors of a century ago. Moreover, the foodraising capacity of the earth is increasing at an encouraging rate, and no one can predict to what a high level it may reach in the future. Despite this, however, the limit of comfortable life would certainly be reached and passed were certainly be reached and passed were there not a failing off in fecundity as a result of modern conditions of society, that seems ilkely to operate as an effective check to a serious overpius of population. In recent decades the hirth-rate has been falling off in all progressive countries in a very significant manner. This is indicated in various parts of Europe, and in France has reached such a level that there is an actual decrease of population. A similar condition exists elsewhere. Thus in Massachusetts, from 1883 to 1897, the birth-rate of native married women was only five-ninths of that of women of foreign hirth, a fact due prohably to their constitutions condition of life. to their superior condition of life. Several causes lead in this direction. It is weil known that any stratum of population that is hopeless of bettering its condition is very apt to breed recklessly, and this fact has kept such countries as China and India at or near the starvation limit for generations past. But where comfort exists through the great hulk of a population and the prospect of better conditions leads to the conditions to the conditions leads to the conditions to the condi ditions leads to the exercise of prudence and restraint, there is sure to be a fall-ing off in the birth-rate. In this the opening of widespread industrial careers to women aids. Later marriages take place, celibacy increases, care is taken to prevent the birth of an undue number of children, and other influences act to reduce the birth-rate. For these reasons it would appear that, when prosperity extends widely over the earth, the increase of population seems sure to decline, while the development of the food cline, while the development of the food supply promises a steady enhancement of the conditions of human comfort and

It is built on a creek on the s. w. coast of Gujerat, and maintains a considerable trade with Bombay and Maiabar. Pop. 24,620.

Porbeagle (por'bē-gai), a fish of the Lamnidæ family of sharks. Three species have been described; the best known is Lamna cornubica, which occurs in the North Atiantic. It attains to a length of 10 feet, and feeds chiefly on fishes. The porbeagle has two dorsal fins, a wide mouth, lanceolate teeth, and very wide gili-openings.

Porcelain (pors'lan). See Chinaware and Pottery.

Porcelain Crah (Porcellana), a

Porcelain Crab (Porcellana), a name for certain crustacea, typical of the family Porcelianide, small, smooth crabs, of which two are British: P. platycheles, the hairy, and P. longicornis, the minute, porcelain crab. Porch (porch), an exterior appendage to a building, forming a covered approach to one of its principal doorways. The porches in some of the older churches are of two stories, having an upper apartment to which the name parcis is sometimes applied.—The Porch was a public portico in Athens (the Stoa Poikile), where the philosopher Zenotaught his disciples. Hence The Porch is equivalent to the School of the Stc.

Porcia (por'she-a), an ancient Romandy, a daughter of Cato of Utica. She first married M. Bihulus, Casar's colleague in the consulship (B.C. 59), hy whom she had three children. Bibulus died in B.C. 48, and in B.C. 45 she married M. Brutus, who afterwards became the assassin of Casar. After the death of Brutus she put an end to her life.

Porcupine (por'kū-pīn), a name of a family of rodent quadrupeds, the hest-known species of which helong to the genus Hystrix. The body ls covered, especially on the back, with the so-cailed quills, or dense solid splne-like structures, intermixed with bristles and stlff hairs. There are two incisors and eight molar teeth in each jaw, which continue to grow throughout life from permanent pulps. The muzzle is generally short and pointed, the cars short and rounded. The anterior feet possess four, and the hinder feet five toes, ail provided with strong, thick nails. The common or crested porcurine, Hystrix cristata, found in Southern Europe and in Northern Africa, is the best-known species. When fully grown it measures nearly 2 feet in length, and some of its spines exceed 1 foot. Its general color is a grizzled, dusky black. The spines in their usual position lie nearly flat, with their points

directed backwards; but when the animal is excited they are capable of being raised. The quiils are ioosely Inserted in the skin, and may, on being violently shaken, become detached—a circumstance which may probably have given rise to the purely fabulous statement that the animal possessed the power of actually ejecting its quiils like arrows or darts at an enemy. These animals burrow during the day, and at night search for food, which consists chiefly of vegetable matter. Of the American species, the Canadian or North American porcupine (Erethison

Porcupine (Hystrix cristate).

coreata) is the best known. It is about. 2 feet iong, and of slow and sluggish habits. The quilis in this species are short, and are concealed among the The ears are short, and hidden by Tur. The tall is comparatively short, are genus Cercolabes of South America possesses a distinctive feature in the elongated prehensile tall, adapting it for arboreal existence. These latter forms may thus be termed 'tree porcupines.' In length the typical species of this genus averages 1½ feet, the tail measuring about 10 inches.

December 2 feet and sluggish habits and sluggish habits after short, and are seen as a series of the second and are short. The second are short, and are seen as a second are short, and are seen as a second are second ar

Pordenone, birthplace, Pordenone, birthplace, Pordenone, birthplace, Pordenone, birthplace, Pordenone, birthplace, Pordenone, birthplace, Pordenone, a painter of the Venetlan school, born about 1484. He executed many works for his native place; some also for Mantua, Vicensa, and Genoa; but his greatest works were for Venice. He died at Ferrara in 1540. Specimens of his works are to be found in many of the principal gaileries of Europe.

are to be found in many of the principal gaileries of Europe.

Porgie (por'ji; Pagrus argirops), a tish of the family Sparlde, with an oblong body, scaly cheeks, and one dorsai fin, found off the coasts of the United States. It is one of the most important food fishes, and attains a length of 18 inches and a weight of 4 lbs. The name is also given to the Menlbe. The name is also given to the Menhaden, which see.

Porifora (po-rif'e-ra; 'pore-bear-ing'), a term occasionally employed to designate the sponges. Porifera

Porism (po'rism), a name given by ancient geometers to a class of mathematical propositions having for their object to show what conditions will render certain problems indeterminate. Playfair defined a porism thus: 'A proposition affirming the possibility of finding sch conditions as will render a certain problem indeterminate, or capable of innumerable solutions.

the flesh of swine, is one of the Pork, the flesh of swine, is one or the most important and widely-used species of animal food. Pork is coarser and ranker than beef or mutton, but when of good quality and well cured lt develops a richness and delicacy of flavor in marked contrast with the dry-ness and inslpidity of other salted meat. The abundance and digestive quality of its fat render it a sultable dlet for coid climates. The swine was forbidden to be eaten by the Mosaic law, and is regarded by the Jews as especially typical of the unclean animals. Other Eastern nations had similar opinions as to the use of pork. Pork contains less fibrin, alluminous and galatingue matter than albuminous and gelatinous matter than beef or mutton. It is largely produced in the United States and exported in great quantities to Europe.

length of its legs. It feeds on seeds and

Porphyrio hyscinthinus (Purple Gallinule). other hard substances, and lives in the neighborhood of water, its long toes enabling it to run over the aquatic plants with great facility. It is about 18 inches long, of a beautiful blue color, the bill and feet red.

Porphyry (por'fi-rl), originally the name given to a very hard stone, partaking of the nature of granite, susceptible of a fine pollsh, and consequently much used for sculpture. In the ine arts it is known as Rosso Antiquo, and by geologists as Red Syenitic Porphyry. It consists of a homogeneous feispatbic base or matrix, having crystaia of rose-colored feispar, called ollgoclase, with some plates of blackish hornbiende, and grains of oxidized iron ore embedded, giving to the mass a speckled complexion. It is of a red or rather of a purple and white color, more or less variegated, the shades being of all gradations from violet to a claret color. Egypt and the East furnish this material in abundance. It also abounds in Minorca, where it is of a red-lead color, variegated with black, white, and green. Pale and red porphyry, varlegated with black, white, and green, is found in separate nodules in Germany, England, and Ireland. The art of cutting porphyry as practiced by the ancients appears to be now quite lost. In geology the term porphyry is applied to any unstratified or igneous rock in which detached arrests of fire terms. tached crystals of feispar or some other Forosity (pō-ros'i-tl), the name given mineral are diffused through a base of other mineral composition. Porphyry is all bodies, in consequence of which their known as felspar porphyry, claystone pormolecules are not immediately contigumineral are diffused through a base of other mineral composition. Porphyry is

ritic greenstone. In America it is often

Associated with gold.
Pornhyry (Porphyrios), Porphyry (Porphyrios), a Greek philosopher of the Neo-Platonic school celebrated as an antagonist of Christianity, born about 233 A.D. He studied under Longinus at Athens, and at the age of thirty placed himself under the teaching of Plotinus at Rome. Greek About 208 he went to Sicliy, where he is said to have written his treatise against is said to have written his treatise against the Christians, which was publicly hurned by the Emperor Theodosius, and is only known from fragments in the authors who have refuted him. Porphyry recognized Christ as an eminent philosopher, but he charged the Christians with corrupting his doctrines. He was a voluminous writer, hut few of his works are extant. The most important are his lives of Piotinus and Pythagoras. Porphyry died about 304 or 306.

Porpoise (Phocana communis).

very short. The forelimbs project from the body. No hind limbs are developed. The teeth are small with blunted crowns. The stomach is in three portions. No olfactory nerves exist. The porpoise feeds aimost entirely on herrings and other fish, and herds or 'schools' of porpoises follow the herring-shoals, among which they prove very destructive. An allied species is the round-headed porpoise, or 'casing whale' of the Shetlanders. These latter measure from 20 to 24 feet in length, and are hunted for the sake of the oil. See Casing Whale.

Port, a harbor or haven, or place where ships receive and discharge cargo. A free port is one at which the goods imported are exempted from the payment of any customs or duties, as long as they not conveyed into the interior of the country. olfactory nerves exist. The porpoise feeds

Ariens e Tesco, was brought out at Vienna, in 1717. By 1722 he had composed five operas and an oratorio. In 1725 he went to Vienna, and subsequently paid professional visits to Home, Venice, and Dresden. In 1720 a party in London, which was discontented with Händel, opened a second opera house, and called I'orpora to take the direction of it. Por-I'orpora to take the direction of it. Porpora was successfui, and Händel after a heavy pecuniary loss gave up the theater, and devoted himself to oratorio.

Porpora afterwards returned to the continent, and died in great poverty at Naples in 1767.

who have refuted him. Porphyry recognized Christ as an eminent philosopher, but he charged the Christians with corrupting his doctrines. He was a voluminons writer, hut few of his works are extant. The most important are his lives of Plotinus and Pythagoras. Porphyry died about 304 or 306.

Porpoise (por'pus), a genus of cetaces mammalia, belonging to the fsmily Deiphinidæ (dolphins, etc.). The formout of the head is convex in form, and has the spiracle or hlowhole in the middle line. The eyes and ears are small. The caudal fin is horizontal and flattened. The neck is Porpoise (Phocans commands).

Porpoise (Phocans commands). greek works, especially four of the dramas of Euripides, and enjoyed the reputation of being one of the best Greek scholars and critics of the age, notwithstanding which he experienced little patronage, a circumstance partly attribu-table to his intemperate habits. In 1805 he was appointed iihrarian to the Lon-don Institution. Ie was familiar with English literatur and wrote for some

The term is also applied to an analogous system of vessels in the kidney.

Port Arthur, a seaport of Man-churia, at the s. w. extremity of Liao Tung peninsula, with a splendid, nearly landlocked harbor, icefree for nearly the whole year. It is of special interest for its history. Forti-fied and made the chief naval station of China in 1891, it was taken in 1894 by the Japanese, who destroyed its fortifications. Japan was obliged to restore it to China, and in 1898 it was leased to Russia, which country fortified it and made it a great naval station, and the chief terminus of the Transsiberian Railway. Though apparently well-nigh impregnable, it was taken by the Japanese

Port Arthur, a city and seaport of Jefferson Co., Texas, on Sabine Lake, 12 miles from the Gulf of Mexico, which is reached through a ship canal 270 feet wide and 27 feet deep.

Port-au-Prince (por-to-prans), capital of the Republic of Hayti, on the western side of the island, at the southeast extremity of the bay of the same name. It is built in a iow and unhealthy spot, consists chiefly of wooden houses, and contains an ungainly palace, a senate-house, a Roman Catholic church, a custom-house, mint, the Wisconsin River, at head of naviga- Catholic church, a custom-house, mint, tion, 30 miles N. of Madison. It is on a hospital, lyceum, etc. The chief exthe ship canai that connects the Wis- ports are manogany and red-wood, coffee,

resembling a harrow, made to slide in vertical grooves in the jambs of the entrance-gate of a fortified place, to protect

trance-gate of a formation the gate in case of assault.

Port Darwin (där'win), an inlet on the northern coast of Australia, the chief harhor of the Northern Territory of South Australia, about 2000 miles from Adeiaide. The port town is Palmerston.

Port Durnford (durn'ford), a good harbor on the east coast of Equatorial Africa, in iat. 1° 13' s., at the mouth of the Wabuski River.

Porte (port), Ottoman, or Sublime Porte, the common term for the Turkish government. The chief office of Turkish government. The chief office of the Ottoman Empire is styled Babi Ali, lit. the High Gate, from the gate (bab) of the palace at which justice was administered; and the French translation of the term being Sublime Porte, this has come into common use.

Port Elizabeth, a seaport in the east of Cape Colony, on Aigoa Bay. It contains many fine bniidings, including a town-house, custom-house, hospitals, etc., and is the great emporium of trade for the eastern and he was found not guity and was portion of the colony as well as for a reinstated as colonel in 1886. He was great part of the interior, being the terminus of rallways that connect it with Kimberiey and other important inland dying in 1901. Kimberley and other important inland towns. It is now a greater center of trade than Cape Town. Pop. 32,959.

Porter (port'er), Anna Maria, was born about 1781. She produced a number of nevels, which enjoyed considerable popularity in their day. Died in 1832

Porter, DAVID, naval officer, was born at Boston, Massachusetts, in 1780. Entering the navy, he was put in command of the frigate Essex in 1813, and captured the British war vessel Alert and a number of merchantmen. In 1813 he cruised in the Pacific and took a large number of prizes. In March, 1814, the Essex was attacked at Valparaiso hy two British war vessels and was captured 1843.

Porter, David Dixon, naval officer, son of the preceding, was born in Chester, Pennsylvania, in 1813. He entered the United States navy as midshipman in 1829. He served during the Mexican war, and was in every action of the logistic field. on the coast. At the beginning of the Civil war he was placed in command of the steam-frigate Powhatan. In command of a mortar fleet he took an active part in the reduction of Forts Jackson and St. Philip on the Mississippi; also aided in the capture of Vickshurg and Civil war, destroyed the iron-clad ram Arkansas in 1862, and was promoted commodore.

FITZ-JOHN, soldier, was born Porter, in New Hampshire, and was graduated from West Point in 1845. He became a captain in 1856 and a colonel in 1861. For his courage at the bat-tles of Gaines's Mill and Malvern Hill in 1862 he was appointed major-general of volunteers. Though present with his corps at the second battle of Bull Run, he took no part in the contest, and was accused of delinquency by General Pope, tried by court-martial, and dismissed from the service. The charges against him were re-examined under President Hayes

Porter, JANE, an English novelist, was born at Durham in 1776; died in 1850. Her Thaddeus of Warsaw and Scottish Chiefs were long popular.

Porter, NoAH, philosopher and writer, born at Farmington, Connecticut, in 1811. Graduating at Yale College in 1831, he was ordained pastor of the Congregational Church, New Milford, Conn., in 1836, and in 1843 settled at Springfield, Mass. Returning to Yale in 1846 as professor of metaphysics and moral philosophy he was elected presimoral philosophy, he was elected president in 1871, and continued to hold that position till 1886. Among his works are Historical Discourses, The Human British war vessels and was captured Intellect, Books and Reading, The Sciafter a long and desperate resistance. He was naval commissioner 1815-23, The Elements of Intellectual Philosophy, chargé d'affaires at Constantinople in The Elements of Moral Science, etc. He 1831, and minister in 1839. He died in also edited an edition of Webster's Dictionary, He died in 1899. tionary. He died in 1892.

Porter, Sir Robert Ker, artist and traveler, born at Durham about 1775; died at St. Petersburg in 1842. He was brother to Jane and Anna Maria Porter, became a student at the Royal Academy, painted several large battle-pieces, and in 1804 was invited to Russla by the emperor, who made him his historical painter. In 1808 he joined the British forces under Sir John Moore, aided in the capture of Vickshurg and Arkansas Post. For these services he aided General Terry in the capture of Fort Fisher. In 1866 he was promoted vice-admiral, and in 1870 appointed admiral, the highest rank in the navy. He died in 1891.— His brother, WILLIAM D. (1800-64), also served in the capture of the princess Sherbatoff. In 1813 he obtained the honor of knighthood. Porter, WILLIAM SYDNEY (pseudonym the became a journalist and later a short of the princess Sherbatoff. In 1813 he obtained the honor of knighthood. Portland, a city, capital of Jay Co., large elevators, etc. Under the city is and the star and st gas. Pop. 18,863.

Portici (por'tl-chē), a town in Southwood-working industries. Pop. 5130.

Napies, at the base of Vesuvlus. It is about 5 miles east from the city of Co., situated on the Willamette Rick, Naples, but is connected with it by the about 12 miles from its confluence with long village of S. Giovanni a Teducolo.

(See plan at Naples) It is delightfully the columbia and at the head of navigations.

umns number four, six, eight, or ten.

Port Jackson (jak's'n), a beautiful and extensive inlet on on the south shore of which Sydney stands. See Sydney.

Port Jervis (jervis), a town and summer resort of Orange Co., New York, on the Delaware River, above the mouth of the Neversink, 88 miles N. w. of New York. It is surrounded by attractive scenery, and has extensive railroad shops, iron foundries, glassworks, glove and shoe factories, silk-mills, etc. Pop. 9564.

Portland (port'land). a seaport of Maine. capital of Cumber-Portland (portland), a seaport of between it and a bank called the Shamland Co., on a peninsula at the western extremity of Casco Bay, 108 miles N. Lreakwater. by E. of Boston. It is a picturesque and well-built city, with handsome public buildings, and abundance of trees in many of its streets. This has given it and a bank called the Shambles is a dangerous current called the Shambles is a dangerous current

is beautifully situated at the base and on the declivity of the hills overlooking the lake. It has active industries, and a good trade in timber, grain and flour. Pop. (1911) 5089.

Port Huron (hū'run), a city of Mlchigan, capital of Mlchigan, capital of St. Clair Co., on the St. Clair River, at the couthern extremetry of Lake Huron is easy of Clasgow, and a large coastwise trade. It the couthern extremetry of Lake Huron is easy of capacious, deep enough for the largest vessels, and never obstructed with ice. Shipbuilding is largely carried on, and it has a valuable foreign trade, especially with London, Liverpool and Glasgow, and a large coastwise trade. It is also extensively engaged in the cod and mackerel fisheries. Its industries include extensive canning and packing works, oil refining, engine and stove works, car and locomotive shops, heavy

oil wells, lumber and flour wills and

(See plan at Naples.) It is delightfully tion. It is the jobbing and financial slutated, has many elegant villas, and is center of the Pacific Northwest and is surrounded by fine country seats. It possesses a royal palace, now the property of the municipality of Naples. An active tion with San Francisco and other coast fishery is carried on. Pop. 14,239. fishery is carried on. Pop. 14,239.

Portico (por'ti-kō), in architecture, a kind of porch before the entrance of a huilding fronted with columns, and either projecting in front of the building or receding within it. Porticoes are styled tetrastyle, hexastyle, octostyle, decastyle, according as the columns number four, slx, eight, or ten.

Port Jackson (jak's'n), a beautiful tion with San Francisco and other coast cities, also with Asiatic ports. It is extensively engaged in slaughtering and packing, in ship and boat building, and has numerous manufactures. Its exports allowed the salmon, etc. The city is attractively built, and was the seat of the Lewis and Clark exhibition of 1905. Pop.

Portland, isle or, a pennoun, posed to have been forthe east coast of Australia in New South merly an island in the county of Dorset. Wales, forming a well-sheltered harbor 50 miles w. s. w. of Southampton, in the on the south shore of which Sydney British Channel. It is attached to the malnland by a long ridge of shingle, called the Chesil Bank, and it consists chiefly of the well-known Portland stone (which see), which is chiefly worked by convicts, and is exported in large quantitles. One of the most prominent objects in the island is the convict prison, situated on the top of a hill. It contains about 1500 convicts. The south extremity of the island is called the Bill of Portland, and between it and a bank called the Sham-

Tortiand Breakwater, the greatest of the kind in Britain, runs from the northeast shoulder of the Isle of Portiand (which see) in a northeasterly direction, with a bend towards the English Channel, and forms a complete protection to a large expanse of water hetween it and Weymouth, thus forming an important harbor of refuge. It consists of a sea-wall 100 feet high from the bottom of the sea, 300 feet thick at the harmonism to the sea, 300 feet thick at the harmonism to the sea, 300 feet thick at the harmonism to the sea, 300 feet thick at the harmonism to the sea, 300 feet thick at the harmonism to the sea, 300 feet thick at the harmonism to the sea, 300 feet thick at the harmonism to the sea, 300 feet thick at the harmonism to the sea, 300 feet thick at the harmonism to the sea, 300 feet thick at the harmonism to the sea, 300 feet thick at the harmonism to the sea, 300 feet thick at the harmonism to the sea, 300 feet thick at the harmonism to the sea, 300 feet thick at the harmonism to the sea, 300 feet thick at the harmonism to the sea, 300 feet thick at the bottom the sea of the glass, which has been cut down in the manner of a cameo, so as to give on each side groups of figures delicately executed in reilef, representing the marriage of Peieus and Thetis. In 1810 it to be placed in the British Museum, where it remained intact till the year 1845, when it was mallciously broken. The pieces were carefully collected and very successfully reunited.

Port Louis (1671s), the capital sea, which has been cut down in the manner of a cameo, so as to give on each side groups of figures delicately executed in reilef, representing the marriage of Peieus and Thetis. In 1810 it to be placed in the British Museum, where it remained intact till the year 1845, when it was mallciously broken. The pieces were carefully collected and very successfully reunited. a sea-wall 100 feet high from the bottom of the sea, 300 feet thick at the base, and narrowing to the summit, and consists of two portions, one connected with the shore, 1900 feet in length, and another of 6200 feet in length, separated from the former by an opening 400 feet wide, through which ships can pass straight to sea with a northerly wind. It is protected by two circular forts, the principal at the north end of the longer portion. The work, which was carried out by government, occupied a period of hearing twenty-five years, ending with 1879. It is constructed of Portland stone.

Portland Cement, a well-known and largely used cement, which derives its name from

its near resemhlance in color to Portland stone. It is made from chalk and ciay or mud in definite proportions. These materials are intimately mixed with water, and formed into a siudge. This is dried, and when caked is roasted in a kiln till it hecomes hard. It is afterwards ground to a fine powder, in which

state it is ready for market. This cement is much employed along with gravei or shivers for making artificial stone. A month after it is set it forms a substance so hard as to emit a sound when struck. Portland Stone, is an odlitic lime-stone occurring in great abundance in the Isie of Portland, Engiand. (See Portland.) Portland Vase (or BARBERINI), a has an celebrated ancient 100,000,

resting on light-colored sands which contain fossils, chiefly mollusca and fish, with a few reptiles. They are named from the rocks of the group forming the isie of Portland in Dorsetshire, from whence they may be traced through Wiltshire as far as Oxfordshire.

Container and fish, after Christ, found in the tomb of the Emperor Alexander Severus. It is of transparent, dark-hiue glass, coated with opaque, white glass, which has been cut down in the manner of a cameo, so as to give on each side groups of figures deli-

the northwest coast, beautifully situated in a cove formed by a series of basaitic hills, partially wooded, varying in height from 1058 to 2639 feet. The site is rather unhealthy. The streets, though rather narrow, are iaid out at right annual arrow, are laid out at right annual arrow, are laid out at right annual arrow, are laid out at right annual arrows. gles and adorned with acacias. A mountain stream traverses the town, and an open space like a racecourse lles behind it. There are barracks, theater, public lihrary, hotanic garden, hospital, etc., hut no huildings of architectural importance. The town and harbor are protected by hatteries. Pop. 53,978.

Port Lyttelton. See Lyttelton.

Port Mahon (må-on'), the capital of the island of Mi-

norca, situated on a narrow inlet in the S. E. of the Island. The harbor, pro-tected by three forts, is one of the finest in the Mediterranean, and is capable of accommodating a jarge fleet of ships of the heaviest tonnage. Pop. 17,-975.

Port Natal. See Durban.

Same as Oporto. Porto.

(å-lā'gre), a town in Brazil, capitai of Porto Alegre the province of Rlo Grande do Sul, near the province of the Grande do Sui, hear the northwest extremity of Lake Patos, 150 miles N. N. W. of Rio Grande. It is weil and regularly built. The harbor is much visited by merchant vessels, and it has an important trade Pop. about Portobello (pōr'tō-bel'lō), a parliamentary burgh (Leith district) of Scotland, 3 miles east of the city of Edinburgh on the Firth of Forth, much frequented as a summer resort. Pop. 9200.

Porto Bello, a seaport of Panama, on the Carlbbean Sea, 40 miles N. N. W., of Panama. Formerly of some importance, it is now a poor and miserable piace, although its fine harbor still attracts some trade.

Porto Cabello (ka-bā'yō), a town of Venezuela, on the Caribbean Sea. It has a capacious and safe harbor. Pop., with district surrounding, about 14,000.

Porto Ferrajo (fer-ra'yō), chief town of the Island of Eiba, on the north coast. Pop. 4222. Napoleon I resided here from May 5, 1814, to February 26, 1815.

Port of Spain, the chief town of the island of Trinleded It is a recent with the chief.

Port of Spain, the chief town of the island of Trinldad. It is a pleasant, well-bullt town; has two cathedrals, government house, town-hall, courthouse, theater, barracks, etc. It is a railway terminus, and has an active trade. It is a port of call for many lines of ocean steamers. Pop. (1911) 59,658.

Port Orchard (changed from name of Sidney in 1894), capital of Kitsap Co., Washington. It is situated on Port Orchard Bay, an inlet of Puget Sound, 18 miles w. of Seattle. It is a naval station of the United States, with a very large dry dock, 600 feet long by 75 wide, and capable of holding vessels with a draught of 30 feet. Pop. 682.

Porto Rico (por'to re'ko; Sp., Puerto Rico), formerly

Porto Rico (por to re ko; Sp., Puerto Rico), formerly one of the Spanish West Indian Islands, the fourth in size of the Antilles, east of Hayti; area, with subordinate isles, 3596 square miles. The Island is beautiful and very fertile. A range of mountains, covered with wood, traverses it from east to west, averaging about 1500 feet in height, but with one peak 3678 feet high. In the interior are extensive savannahs; and along the coast tracts of fertile land, from 5 to 10 miles wide. The streams are numerous, and some of the rivers can be ascended by ships to the foot of the mountains. There are numerous bays and creeks. The chief harbor is that of the capital, San Juan de Porto Rico; others are Mayaguez, Ponce, and Arecibo. The climate is rather healthy except during the rainy season (Sept.—March). Gold is found in the mountain streams. Copper, iron, lead, and coai have also been found; and there are saline or salt ponds. The chief prod-

ucts are sugar, rum, molasses, coffee, cotton, tobacco, hides, live stock, dyewoods, timber, rice, etc. There are extensive phosphate deposits along the south coast. The island was discovered by Columbus in 1493, and was settled by the Spaniards in 1510, who soon exterminated the natives. Invaded by the United States, July, 1898, it was ceded by Spain to that government by the treaty of peace. Since its occupation by the United States a good school system has been introduced, attendance being made compulsory, and various steps have been taken for the advancement of the people, including the establishment of a legislative assembly and trade advantages which have led to a large commerce with this country. Pop. 1,118,012.

Porto Rico, SAN JUAN DE, the capital and principal sea-

Porto Rico, SAN JUAN DE, the capport of the above island, on its north coast, stands upon a small island connected with the mainland by a bridge, is surrounded by strong fortlications, and is the seat of the government. Pop. 48,716.

Port Phillip, Australia. See Mel-

Port Royal (roi'al), a fortified town on the southeast coast of Jamaica, on a tongue of land, forming the south side of the harbor of Kingston. Its harbor is a station for Britlsh ships of war, and it contains the naval arsenal, hospital, etc. It has been often damaged by earthquakes. Pop. 14,000.

Its harbor is a station for Britlsh shlps of war, and it contains the naval arsenal, hospital, etc. It has been often damnged by earthquakes. Pop. 14,000.

Port Royal, a Clstercian convent in France, which played an important part in the Jansenist controversy. It was situated near Chevreuse (department of Seine-et-Oise), about 15 miles s. w. of Paris, and was founded in 1204 by Matthieu de Montmorency, under the rule of St. Bernard. Port Royal, like many other religious houses, had fallen into degenerate habits, when in 1609 the abbess Jacqueline Marie Angélique Arnauld undertook its reform. The number of nuns increased considerably under her rule, and in 1625 they amounted to eighty. The building thus became too small, and the insalubrity of the situation induced them to seek another site. The mother of the abbess purchased the house of Cluny, in the Faubourg Saint Jacques, Paris, to which a body of the nuns removed. The two sections of the convent were now distinguished as Port Royal des Champs and Port Royal de Paris. About 1636 a group of eminent literary men of decided religious tendencies took up their residence at Les Granges, near Port Royal des Champs, where they devoted themselves to religious exercises, the education of youth, etc. These were re-

garded as forming a joint community Portsea, and several villages, and is conwith the nuns of Port Royal, among nected with the mainland by a bridge at whom most of them had relatives. Its north end. See Portsmouth. Among the number were Antolne Arnauld, Arnauld d'Andilly, Lemalstre de Sacy and his two brothers, all relatives of the abbess; Nicole, and subsequently Pascal, whose sister Jacqueline was at Port Royal. The educational institution, thus founded, which flourished till 1660, became a powerful rival to the institution of the Jesults, and as the founders adopted the views of Jansenius (see Jansenists), subsequently condemned by the pope, a formidable quarrel ensued, in their male friends, became subject to the side of the town of Portsmouth is a fa-

reientless opposition of the Jesults, which culminated in the complete subversion of their Institu-tion. Port Royal des Champs was finally suppressed by a bull of Pope Clement (1709), and its property given to Port Royal de Parls. The iatter continued its existence to the Revolution. when its house converted WAS

into a prison, and subsequently (1814) into a maternity hospital.

Portrush (port-rush'), a small sea-port in the north of Ireland, 5 miles north of Coleraine; much resorted to for sea-bathing. It is connected with the Giaut's Causeway by an electric tramway. Pop. 1196.

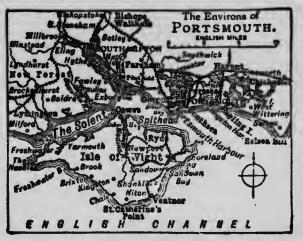

Port Said (port-sa-ed'), a town in Egypt, on the Mediterranean, at the northern entrance of the Suez Canal. It was begun simultaneously with the canal in 1859, being designed for its terminal port. There is an outer harbor formed by two piers jutting out into the sea, each terminated by a small lighthouse. This admits large ocean steamers, which thus sail into the inner harbor and from It Into the canai. Near the entrance to the inner harbor is a lofty

Portsmouth (ports'muth), the principal station of the British navy, a seaport of England, in Hampshire, on the southwest extremity of the island of Portsea. It consists of the four districts, Portsmouth proper, Portsea, Landport, and Southsea. Portsmouth proper is a garrison town. The best street is the High Street, which contains the principal shops, hotels, and places of business. Portsea is the seat of the naval dockyard; Lundport is an which the Port-Royalist nuns, siding with artisan quarter; and Southsea on the east

vorite seaside resort, and com-mands fine views of Splthead and the Isle of Wight. Southsea Castle with adjacent lts earthworks, the batteries of the Gosport side, and the circular forts built out in the roadstead, command the entrance to Portsmonth Harbor. The island of Portsea, which is separated from the mainland by

a narrow creek called Portsbridge Canal, is bounded on the east by Langston Harbor, on the west by Portsmouth Harbor, and on the south by Spithead and the Harbor Channel. The royal dockyard covers an area of about 500 acres, and Is considered the jargest and most magnificent establishment of the kind in the world. Enclosed by a wall 14 feet high, and entered by a lofty gateway, it includes vast storeliouses, con-taining all the materials requisite for navai archiecture; machine shops, with all modern appliances; extensive slips and docks, in which the largest ships of the navy are built or repaired; ranges of handsome residences for the officials, and a Royal Naval College, with accommodation for seventy students. Ontside the dockyard an area of 14 acres cutains lighthouse with a powerful light. Pop. (1907) 49,884.

Portsea (pört'sē), an island of and an armory with 25,000 stand of Hampshire, England, about small arms. Portsmouth has no manufactures the towns of Portsmouth and immediately connected with its naval establishment.

tablishments, and a few large breweries. Its trade, both coasting and foreign, is of considerable extent. Of late years an extensive and systematic series of fortifications has been under construction for the complete defense of Portsmouth. They extend along a curve of about 1½ miles at the north side of Portsea Isiand. A series of hills, 4 miles to the north of Portsmouth, and commanding its front to the sea, are well fortified with strong forts. On the Gosport side a line of forts extends for 4 miles. The municipal and parliamentary borough includes nearly the whole of the island of Portsea. Pop. (1911) 231,165.

Portsmouth, a seaport of Rocking-ham County, New Hampshire, on the right bank of the Piscataqua River, three miles from its mouth, and 58 miles N. hy E. of Boston by water; first settled in 1624. The Government maintains at this port a navy yard with immense dry docks, and the harbor is one of the safest and most commodious in the United States, with a depth sufficient for the largest battleships. The North America, the first ship-of-line launched in the Western Hemisphere, was huilt in this harbor, and 'Ranger,' commanded hy Captain John Paul Jones and 'Kearsarge' of Civil War fame, were huilt here. Shoes, huttons, etc. are manufactured. Portsmouth was the scene of the peace conference between the representatives of Russia and Japan in 1905. Pop. 11,269.

Portsmouth, a city, county seat of Scioto County, Ohio, on the Ohio above the mouth of Scioto River, 95 miles s. of Columbus. It is an important mannfacturing town, its products including lumber, shoes, iasts and laces, tops for tables, dressers, sideboards, etc., underwear, gas engines, flour, prepared hominy, etc. There are also foundries, machine and railroad shops, etc. Pop. 27,000.

Portsmouth, county seat of Norfolk county, Virginia, occupies the western or mainland side of the harbor of Norfolk-Portsmouth, 8 miles from Hampton Roads, on the Elizabeth River, with a channel 800 feet wide and 35 deep to the ocean. Here is a large United States navy yard, covering 350 acres. The city has railroad shops and mannfactures and an important export trade in cotton, lumber, early garden vegetables, oysters, clams and fish. There is here a large naval hospital and other institutions. Pop. 36,496.

Port Stanley, port and capital of the Falkland Islands, en Port William Inlet, on the N. E. coast

of East Falkland. It exports wool, hides, seal-fur, etc. Pop. 900.

Port Talbot. See Abergron.

Portugal (pōr'tū-gal), a republic in the southwest of Europe, forming the west part of the Iberian Peninsula; bounded east and north by Spain, and west and south by the Atlantic; greatest length, north to south, 365 miles; greatest hreadth, 130 miles. It is divided into eight provinces: Minho, Traz-os-Montes, Beira, Estremadura, Alemtejo, Algarve, Azores and Madeira, with a total area of 35,490 sq. miles, and a population of 5,500,000. The Azores and Madeira Islands are regarded as integral parts of the nation. The Portuguese are a mixed race—originally Iberian or Basque, with later Celtic admixture. Galician blood (derived from the ancient Gallaici, presumahly Gallic invaders) predominates in the north; Jewish and Arahic hlood are strongly present in the center, and African in the south. The principal Portuguese colonies are Goa, Macao, and Timor (part) in Asia; and Cape de Verde Is. Portuguese Guinea, the islands of Sao Thome and Principe, Angola, and Portuguese East Africa in Africa—the total area amounting to nearly 803,000 sq. m., and the total pop. to 15,000,000.

Physical Features.—Portugal is only partially separated from Spain hy natural boundaries. Its shape is nearly that of a paralieiogram. The coast-line, of great length in proportion to the extent of the whoie surface, runs from the north in a general s. s. w. direction till it reaches Cape St. Vincent, where it suddenly turns east. It is occasionally bold, and rises to a great height; hut far the greater part is low and marshy, and not infrequently lined by sands and efs, which make the navigation dangerous. The only harbors of any importance, either from their excelience or the trade carried on at them, are those of Lisbon, Oporto, Setubal, Faro, Figueira, Aveiro, and Vianna. The interior is generally mountainous, a number of ranges stretching across the country, forming a succession of independent river basins, while their ramifications form the watersheds of numerous subsidiary streams, and enclose many heautiful valleys. The loftiest range is the Serra d'Estreila, a continuation of the central chain stretching across Spain, which attains the height of 7524 feet. The nucleus of the mountains is usually granlte, especially in the north and middie. The minerais include lead, iron, copper, manganese, cobait, hismuth, antimony, marble, siate, salt, saltpeter, lithographic stones, mill-

only large river which flows mainly south. Portugal cau only claim as peculiarly her own the Vouga Mondego, and Sado. Climate and Productions.—The climate

is greatly modified by the proximity of the sea and the height of the mountains. In general the winter is short and mild, and in some places never completely interrupts the course of vegetation. Early in February vegetation is in full vigor; during the month of July the heat is often extreme, and the country assumes, particularly in its iower levels, a very parched appearance. The drought genparched appearance. The drought generally continues into September; then the rains begin, and a second spring unfolds. Winter begins at the end of November. In the mountainous districts the loftier Portugal. The number of species has been estimated to exceed 4000, and of these more than 3000 are phanerogamous. In the central provinces chestnuts are prevaient: in the south both the date and the American aloe are found; while ln the warmer districts the orange, lemon, and olive are cultivated with success. The mulberry affords food for the silkworm, and a good deal of excellent silk frage for three years. The senate is is produced. The vine, too, is cultivated, and large quantities of wine are sent to Britain (especially port wine), and also to France, being in the latter country converted into Bordeaux wine. Agriculture generally, however, is at a low culture generally, however, is at a low for a period of four years. He cannot be ebb, and in ordinary years Portugai fails to raise cereals sufficient to meet its own consumption. Among domestic anisation of the republic is elected by direct sufficient sufficient. The senate is elected by the municipal councils, half the two chambers nuited constitute the Control of the republic is elected by both chambers for a period of four years. He cannot be re-elected.

History.— The Phœuicians, Carthaginians, and Greeks early traded to this own consumption. Among domestic animals raised are mules of a superior breed, sheep, goats, and hogs; but up to a very few years ago little attention was paid to their improvement. In consequence of recent reforms, however, there has been

stones, and porcelain earth. No rivers of importance take their rise in Portugai. Portugai is not a manufacturing country; The Minho in the north, the Douro, and the Tagus ail rise in Spain and flow from east to west. The Guadiana is the and Oporto. In all, some 500,000 persons and Oporto. In all, some 500,000 persons are engaged in industrial pursuits, and of these nearly 50,000 are employed weaving wooi. The rest cut cork, manufacture cottou, iinen, siik, ieather, glass and porcelain, paper, and gold and silver filigree, and carry on various other industries. Besides wine, the principal general exports are cork, copper, ore, live cattle, sheep, horses, and pigs, wool, sardines, olive-oii, eggs, potatoes and onions. The total imports of Portngal in 1912 reached a total of \$745,000,000; the exports in the same period being worth \$345,000,000. The coast fisheries employ a large number of records the sardine and transports being of people, the sardine and tunny being the principal fish taken.

In the mountainous districts the loftier summits obtain a covering of snow, which they retain for months; but south of the crown hereditary both in the male and Douro, and at a moderate elevation, snow female line. The constitution recognized does not lie long. The mean annual temperature of Lisbon is about 56°. Few executive, judicial, and moderating, the countries have a more varied flora than last vested in the sovereign. There were executive, judicial, and moderating, the last vested in the sovereign. There were two chambers, the Chamber of Peers and the Chamber of Deputies. The House of Deputies consisted of 149 members elected Many of the mountains are clothed with directly by all citizens above twenty-one forest trees, among which the common years of age who possess certain qualificak and the cork oak are conspicuous, cations of property or status. In external cations of property or status. In external affairs the new government professes to remain faithful to traditional alliances and responsibilities. Under the constitution of 1911, there are two legislative chambers—a National Council and a Senate. The council is elected by direct suf-frage for three years. The senate is elected by the municipal councils, half the

History.— The Phœuicians, Carthaginians, and Greeks early traded to this part of the peninsula, the original inhabitants of which are spoken of as Lusitanlans, the country being called Lusitanla. It was afterwards con; nered by the Romans, who introduced into it their a marked Improvement in most branches of industry. More horned cattle have been raised and of a better quaiity, and in undated by Aians, Suevi, Goths, been raised and of a better quaiity, and in undated by Aians, Suevi, Goths, and Vandals, and in the eighth century live stock now figures with timber and wine among the chief exports. The fisheries, so iong neglected, have also been revived in recent years.

Manufactures, Industry, etc.—Manufactures are of limited amount, although

son of Hugh Capet, came into Spain about 1000, to seek his fortune in the wars against the Moors. Alphonso Vi gave him the hand of his daughter, and appointed him (1005) count and governor of the provinces Entre Douro e ernor of the provinces Entre Douro e Minho, Traz-os-Montes, part of Belra, etc. The count, who owed feudal services to the Castillan kings, was permitted to hold in his own right whatever conquests he should make from the Moors heyond the Tagus (1112). Henry's son, Alphonso I, defeated Alphonso, king of Castile, in 1137, and made himself independent. In 1139 he gained the hrilliant victory of Ourlque over the Moors, and was saluted on the field as King of I'ortugal. The cortes convened hy Alphonso in 1143 at Lamego confirmed him in the royal title, and in 1181 gave to the kingroyal title, and in 1181 gave to the king-dom a code of laws and a constitution. Alphonso extended his dominions to the borders of Algarve, and took Santarem in 1143. The capture of Lisbon (1147) which was effected by the aid of some English Crusaders and others, was one of the most brilliant events of his warlike of the most brillant events of his warnae life. The succeeding reigns from Alphonso I to Dionysius (1279) are noteworthy chiefly for the conquest of Algarve (1251) and a conflict with the pope, who several times put the kingdom under interdict. Dionysius' wise encouragement of commerce, agriculture, manufactures, and navigation laid the manufactures, and navigation laid the foundation of the future greatness of Portugal. He liberally patronized learning, and founded a university at Lisbon, transferred in 1308 to Coimhra. By these and other acts of a wise and beneficent administration he earned the title of father of his country. He was succeeded by Alphonso IV, who in conjunction with Alphonso II of Castile defeated the Moors at Salado in 1340. He murdered Inez de Castro, the wife of his son Pedro (1355) (see Inez de Castro), who succeeded him. Dying in 1367, Pedro I was succeeded by Ferdinand, on whose death in 1383 the male line of the Burgnndlan princes became extinct. His daughter Beatrice, wife of the King of Castile, should have succeeded him; but the Portuguese were so averse to a connection with Castile the John I, natural son of Pedro, grand-master of the order of Avis (founded in 1162), was saluted king by the estates. In 1415 he onnection with Castile thr. John I, were nnited to the already splendld acnatural son of Pedro, grand-master of the order of Avis (founded in 1162), was saluted king by the estates. In 1415 he took Ceuta, on the African coast, the first of a series of enterprises which resulted in those great expeditions of discovery on which the renown of Portugal Portuguese of the Moluccas, of their rests. In this reign were founded the first Portuguese colonies, Porto Santo (1418), Madeira (1420), the Axores 1640, and her va t colonial possessions were nnited to the already splendld acquisitions of her rival. But these now began to fall into the hands of the Dutch, who, being provoked by hostile measures of Phillip, attacked the Portuguese as well as the Spanish possessions both in India and America. They deprived the settlements in Guinea, of Malacca, and of Ceylon. They also acquired about half of Brazil, which, after the rest.

(1433), and those on the Geld Coast. The reigns of his son Edward (1433-38) and his grandson Alphonso V were less brilliant than that of John I; but the latter was surpassed by that of J II (1481-95), perhaps the ablest of a continuous funding religious for his relevant and a continuous funding the surpasses of the continuous funding religious continuous funding religious continuous funding funding religious continuous funding funding religious continuous funding fu gal's rulers. In his relgn began a vio-lent struggle with the nobility, whose power had become very great under his indulgent predecessors. The expeditions of discovery were continued with ardor and scientific method. Bartolommeo Diaz doubled the Cape of Good Hope in 1487, and Vasco da Gama reached Indla in 1498. In 1500 Cabral took possesin 1498. In 1500 Cabral took possession of Brazil. (See Colony.) While these great events were still in progress John Ii was succeeded by his cousin Emanuel (1495-1521). The conquests of Alhuquerque and Almeida made him master of numerous possessions in the islands and mainland of India, and in 1518 Love de Sparge opened a commerce. 1518 Lope de Soares opened a commerce with China. Emanuel ruled from Bab el Mandeb to the Stralts of Malacca, and the power of Portugal had now reached its height. In the reign of John III, son of Emanuel (1521-57), Indian discovering and commerce were still further. coveries and commerce were still further extended; hut the rapid accumulation of wealth through the importation of the precious metals, and the monopoly of the commerce between Europe and India, proved disadvantageous to home industry. The wisdom which had hitherto so largely guided the counsels of the kings of Portugal now seemed to forsake them. The Inquisition was introduced (1536), and the Jesuits were admitted (1540). Sehastian, the grandson of John III, who had introduced the Jesuits, having had his mind inflamed by them against the Moors of Africa, lost his life in the hattle against these infidels (1578), and Moors of Africa, lost his life in the hattle against these infidels (1578), and left his throne to the disputes of rival candidates, of whom the most powerful, Philip II of Spain, ohtained possession of the kingdom by the victory of Alcantara. The Spanish yoke was grievous to the Portuguese, and many efforts were made to hreak it; but the power of Philip was too great to be shaken. Portugal continued under the dominion of Spain till 1640, and her vat colonial possessions. 1640, and her va t colonial possessions

the zobies, Portugai recovered her independence, and John IV, Duke of Bragansa, reigned till 1650, when he was succeeded by Aiphouso VI. Alphouso ceded Tangier and Bombay to Engiand as the dowry of his daughter, who became the queen of Charles II. Pedro II, who denoted Aiphone VI concluded a treaty deposed Aiphonso VI, concluded a trenty with Spain (1668), by which the independence of the country was acknowiedged. During the long relgn of John V (1706-50) some vigor was exerted in regard to foreign relations, while under the country was exerted in the country with the second relations. his son and successor Joseph I (1750-77) the Marquis of Pombal, a vigorous reformer such as Portugai required, administered the government. On the accession of Maria Fraucisca Isabeila, eldest daughter of Joseph, in 1777, the power was in the hands of an ignorant power was in the hands of an ignorant nobility and a not less ignorant ciergy. In 1792, on account of the sickness of the queen, Juan Maria José, Prince of Brazil (the title of the prince-royal until 1816), was declared regent. His connections with England involved him in war with Napoleon; Portugal was occupied by a Erench force under Junet, and the royal french force under Junot, and the royal famliy fied to Brazil. In 1808 a British force was landed under Wellington, and after some hard fighting the decisive battle of Vimeira took place (August 21), which was followed by the Convention of Cintagorian and the convention and the convent vention of Cintra and the evacuation of the country by the French. The French soon returned, however; hut the operations of Wellington, and in particular the strength of his position within the ilnes of Torres Vedras, forced them to retire. The Portuguese now took an active part in the war for Special in the war f active part in the war for Spanish independence. On the death of Maria, in 1816, John VI ascended the throne of Portugai and Brazii, in which iatter country he still continued to reside. The absence of the court was viewed with dislike by the nation, and the general feeiing required some fundamental changes in the government. A revolution in favor of constitutional government was effected without bloodshed in 1820, and the king invited to return home, which he now did. In 1822 Brazii threw off the yoke of Portugai, and prociaimed Dom Pedro, son of Luin VI emperor John VI died in John VI, emperor. John VI died in 1826, having named the Infanta Isabella

tablishment of Portuguese independence, Maria da Gioria, imposing on her the they restored for a pecuniary compensa-condition of msrrying her uncie Dom tion. In 1640, by a successful revolt of Miguel, who was entrusted with the gov-Aliguel, who was entrusted with the government as regent; but the absolutist party in Portugal set up the claim of Dom Miguel to an unilmited sovereignty, and a revolution in his favor placed him on the throne in 1828. In 1831 Dom Pedro resigned the Brasilian crown, and returning to Europe succeeded in overthrowing Dom Miguel, and restoring the crown to Maria in 1833. restoring the crown to Maria in 1833, dylng himself in 1834. In 1836 a successiui revolution took piace in favor of the restoration of the constitution of 1820, and in 1842 another in favor of that of 1826. Maria died in 1853. Her husband, Ferdinand of Saxe-Coburg (Dom Ferdluand II), became regent for his and her son, Pedro V, who himself took the rains of soverment in 185%. took the reins of government in 1855.
Pedro died in 1861, and was succeeded
hy his brother, Louis I. Louis died in
1889, and was succeeded by his son,
Carlos I. During these latter reigns the
state of Portugal was generally fairly prosperous and progressive. King Carios was assassinated by revolutionists Feb. 1, 1908, with his oldest son, the second son, born 1889, ascending the throne under title of Manuei II. In the recent division of Africa between the nations. Portugal lost part of her territory in that continent.

The dissatisfaction of the people with the methods pursued by the government, which was manifested in the assassina-tion of Carlos i, grew still more marked under his injudicious youthfui successor and the corrupt and expensive administration of the departmental officials, and on October 3, 1910, a sudden revolutionary movement broke out in the streets of Lisbon. Socialistic and republican sentiment had invaded the army, many of the troops joining the revolutionists, and the outbreak made such rapid and successful progress that by the 5th Manuel had fled the kingdom and a republic was proclaimed, under the presidency of Theophile Braga, a poet and historian. Dr. Bernardino Machado was elected president August 6, 1915.

When the European war broke out in 1914 the government declared that Portugal would stand by her oid treaty of alliance with England and the forces of the John VI died in Portuguese colonies were strengthened the Infanta Isabella and co-operated against German West Maria regent. She governed in the name African territory. An attempt to restore of the Emperor of Brazii, Dom Pedro IV the monarchy was made in 1915, hut was of Portugai, who granted a new constitution, modeled on the French, in 1826. In this year he abdicated the Portugal and Germany, denouncing the act as a puese throne in favor of his daughter violation of treaty obligations, declared war on Portugal March 9. Portuguese troops were used on the western front as well as in Africa. See European Wor.

Language and Literature.— The differences between Portnguese and Spanish languages are of comparatively modern origin, the two languages being very nearly alike in the time of Alphonso I. The dialect of Spanish spoken in Portners and the spanish spoken in Portners and Spanish spoken tugal at the beginning of the monarchy was the Galician, which was also that of the court of Leon; hut that court subsequently adepted the Castilian, which beame the dominant language of Spain. The decline of the Galician dialect in Spain and the formation of the Portuguese language finally determined the separation of Spanish and Portuguese, and from cognate dialects made them distinct languages. Portuguese is considered to have less dignity than the Spanish, but is superior to it in flexibility. In some points of pronunciation it more resembles French than Spanish. It is also the language of Brazil. The oldest monnments of Portuguese literature do not go hack further than the twelfth and thirteenth centuries, and the native literature could then boast of nothing more than popular songs. The first Portuguese collection of poetry (cancioneiro) was made hy King Dionysius,
and was published under the title of
Cancioneiro del Rey Dom Diniz. Some
poems on the death of his wife are attributed to Padro I husband of lorg detributed to Pedro I, husband of Inez de Castro. The sons and grandsons of John I were poets and patrons of the trouba-donrs. Så de Miranda marks the transition from the fifteenth to the sixteenth century and the separation of the Portuguese from the other Spanish dialects and from the language of the trouhadours. The sixteenth century is the classic era of Portuguese literature. The chief names are Så de Miranda, Antonio Ferreira, Camoens, Diego Bernardes, Andrade Caminha, and Alvares do Oriente. chief self. The principal epic and the greatest poem in the Portuguese literature, almost the only one which has acquired a European reputation, is Os Lusiadas (The Portuguese) of Camoens (1524-80), which has placed its writer in the rank of the few great poets of the highest class whose genius is universally recognized. After Camoens as an epic writer comes Cortereal, who has celebrated the siege of Din and the shipwreck of Sepulveda. Vasco de Lobeiro, Francisco Moraes, and Raymardim Pibeiro are among the lead-Vasco de Lobeiro, Francisco Moraes, and the coast of Senegambia, W. Africa. It Bernardim Ribeiro are among the leading romance writers. The drama also produces rubber, wax, ivory, hides, rice, began to be cultivated in the clateenth palm oil, etc. Its capital is Bulama on century. Så de Miranda studied and imitated Plautus. Ferreira composed the about 300,000.

first regular tragedy, Ines de Castro, Camoens wrote several theatrical pieces among which are Amphitryon and Seleuamong which are Amphitryon and Seleucus. Barros, also a romance writer, wrote a History of the Conquest of India. The Commenteries of Alphonso d'Albuquerque, by a nephew of the conqueror; the Chronicle of King Manuel and of Prince John, hy Damian de Goes; the History of the Discovery and Conquest of the Indies, by Lopes de Castanheda; the Chronicle of King Sebastian, by Dlego Bernardo Cruz, are all works of merit. By the opening of the seventeenth century Portugal's literary greatness had been succeeded hy one of great activity, though of little real power. A crowd of epics were stimulated into being by the success of the Lusiad. During by the success of the Lucied. During this period the native drama became almost extinct, being overshadowed by the Spanish. In the eighteenth century the influence of the French writers of the age of Louis XIV so completely dominated Portuguese literature that it Lecame almost entirely imitative. Towards the close of this century two writers appeared who have formed schools, Francisco Manoel do Nascimento (1784-1829), an elegant lyrist, and Barbosa du Bocage, who introduced an affected and hyperbolicai style of writing. Among more recent poets possessing some claim to originality may be mentioned Mouzinho de Albuquerque, Feliciano Castilho, Herculano de Carvalho, Almeida Garrett, Thomas Ribeiro and Theophile Braga; among novelists are Carvalho, Garrett, Julio Diniz, and Rebello de Silva. Among historians Braga stands first. Through the efforts of these and others Portuguese literature has again begun to assume an aspect of native vigor. In art Portugal has never distinguished hercame almost entirely imitative. Towards art Portugal has never distinguished her-

Portuguese East Africa, a colony of Portugal, on the E. coast of Africa, is bounded on the N. by German East Africa, w. hy British Central Africa Protectorate, Lake Nyassa, Rhodesia, and the Transvaal Colony, and s. by Natal. Its area is 301,000 sq. m. The region contains the ports of Mozambique, Ibo, Quilimane, Chinde, Beira, Inhambane, and Lorenco Marquez, the last named being the seat of government. Pop. 3,120,000.

Portuguese India, consists of three W. coast. (1) Goa, 250 m. s. s. r. of Bombay. Area, 1460 sq. m. (2) Damao, 100 m. N. of Bombay. Area, 160 sq. m. (3) The small isl. of Diu, 120 m. W. of Damao. Area, 2 sq. m. Total pop. 605,-

(por-tu-la'ca), a small nat. order of polypeta-Portulaceæ lous exogens, consisting of annual, perennial, herbaceous, or shruhhy plants. The only species of any importance is Portulios oleracea, or common pursiane, which

is a fleshy, prostrate annual.

Port Wine, is a very strong, full-flavored wine produced in the upper vailey of the Douro, Por-tugal, and has its name from the place of shipment, Oporto. It is slightly astringent, and has a color varying from pink to red. It requires three or four years to mature, and with age becomes tawny; it receives a certain proportion of spirit to hasten the process of preparation. Large quantities of artificial port are made, particularly in the United States.

(po-si'don), the Greek god of the sea, identified by the Poseidon Romans with the Italian deity Neptunus. A son of Kronos and Rhea, and hence a hrother of Zeus, Hera, and Demeter, he was regarded as only inferior in power to Zeus. His usual residence was in the depths of the sea near Ægæ, in Eubœa, and the attributes ascribed and most of the myths regarding him have reference to the phenomena of the sea. The horse, and more particularly the war-horse, was sacred to Poseidon, and one of the symbols of his nower. Durone of the symbols of his lower. Dur-ing the Trojan war Poseldon was the constant enemy of Troy, and after its close he is described as thwarting the return of Ulysses to his home for his having killed Polyphēmus, a son of the god. Poseldon was married to Amphitrite. His worship was common throughout Greece and the Greek colonies, but especially prevailed in the maritime towns. The 1sthmian games were held in his honor. In works of art Poseidon is represented with features resembling those of Zeus, and often bears the trident in his right hand. A common representation of him is as drawn in his chariot over the surface of the sea by hippocamps (monsters like horses in front and fishes

(monsters like horses in front and names behind) or other fabuious animais.

Posen (p5'zen), a town of Poland, formerly in Prussia, capital of the province of the same name, situated on the Warthe, 149 miles east by south of Berlin. It is surrounded by two philosophical and religious system prolines of forts, is built with considera-

bie regularity, has generally fine wide streets, and numerous squares or open spaces. The most noteworthy public buildings are the cathedrai, in the Gothic style (1775), the town parish church, a fine building in the Italian style, both a fine building in the Italian style, both Roman Catholic; the town-house (1508), with a lofty tower; the Racsynski Lihrary; the municipal archive building, etc. The manufactures consist chiefly of agricultural machines, manures, woolea and linen tissues, carriages, leather, lacquerware, etc. There are also breweries and distilieries. Pop. 156,091.—The province is bounded by West Prussia, Russian Poland, Silesia, and Brandenhurg; area, 11,178 sq. mlles. The surface is flat, and extensively occupied by lakes and marshes. A small portion on the northeast belongs to the hasin of the Vistula; all the rest to the basin of the Vistula; ail the rest to the basin of the Oder. The soil is mostly of a light and Oder. The soil is mostly of a light and sandy character, yielding grain, millet, flax, hemp, tohacco, and hops. Forests occupy 20 per cent. of the surface. The inhabitants include many Germans, especially in the towns, but considerably more than haif are Poles, Posen being more than haif are Poles, Posen being one of the acquisitions which Prussia made hy the dismemberment of Poland. By the peace of 1919 (see Treaty), it became part of Poland. Pop. 1,888,055. Posidonius (pos-i-dō'ni-us), a Stoic philosopher, born in Syria, about 135 B.C. He settied as a teacher at Phodes whence he is called

teacher at Rhodes, whence he is called the Rhodian. The most distinguished Romans were his scholars, and Cicero was initiated by him into the Stoic philosophy. Removing to Rome in 51 B.C. he died not long after. In his physical

he died not long after. In his physical investigations he was more a follower of Aristotic than of the Stoic school.

Posilipo (po-ze'lip-po), an eminence which bounds the city of Naples on the west. It is traversed by a tunnel called the Grotto of Posilipo, 2244 feet long, from 21 to 32 feet wide, with a height varying from 25 to 69 feet, through which runs the road to Pozzuoil. This tunnel is remarkable for its antiquity, being constructed in the its antiquity, being constructed in the reign of Augustus. A second tunnel has recently been constructed for the tramway from Napies to Pozzuoii.

Positive (poz'l-tiv), in photography, a picture obtained by printing from a negative, in which the lights and shades are rendered as they are in nature. See Photography.

de Philosophie Positive, 1830-42, and his posthumous Essays on Religion). The distinguishing idea which lies at the root of this twofold system is the conception that the anomalies of our social system cannot be reformed until the theories upon which it is shaped have been brought into complete harmony with acience. The leading ideas of Comte's philosophy are (1) the classification of the sciences in the order of their development, proceeding from the simpler to the more complex—mathematics, astronomy, physics, chemistry, blology and sociology; and (2) the doctrine of the 'three stages,' or the three aspects in which the human mind successively views the world of phenomena, namely, the theological, the metaphysical. Sud the scientific. This theory of the three stages, one of the most characteristic of Comte's system, is thus succinctly stated by George Henry

Every branch of knowledge passes successively through three stages. 1st, the supernatural or fictitious; 2d, the metaphysical or abstract; 3d, the positive or celentific. The first is the necessary point of departure taken by human in-telligence; the second is merely a stage of transition from the supernatural to the positive; and the third is the fixed and definite condition in which knowledge is alone capable of progressive development. In the supernatural stage the mind seeks after causes, aspires to know the essences of things and their modes of operation. It regards all effects as the productions of supernatural agents, whose intervention is the cause of all the apparent anomalies and irregularities. Nature is animated by superhuman beings. Every unusual phenomenon is a sign of the pieusure or dispicasure of some being adored and propitiated as a God. In the metaphysical stage, which is only a modification of the former, but which is important as a transitional stage, the supernatural agents give place to abstract forces (personified abstractions) supposed to inhere in the various substances, and capable themseives of engendering phenomena. The highest condition of this stage is when all these forces are brought under one general force named nature. In the positive stage the mind, convinced of the futilities of all involves the stage the stage the mind. tility of all inquiry into causes and essences, applies itself to the observa-tion and classification of laws which regulate effects; that is to say, the invariable relations of succession and similitude which all things bear to each other. The highest condition of this stage would be to be able to represent all phenomena

as the various particulars of one governi

The religious side of positivism has somewhat the nature of an apology or afterthought. After doing away with theology and metaphysics, and reposing his system on science or positive knowledge alone, Comte discovered that there was something positive in man's craving for a being to worship. He therefore had recourse to what he calls the cultus of humanity considered as a corporate being in the past, present, and future, which is spoken of as the Grand Etro. This religion, like other forms of worship, require for its full development an organ priesthood, temples, etc. Under the regime of positive religion Comte would include the political and social side of his system. Hence some of his followers look forward to the establishment of an international republic, composed of the five great western nations of Europe, destined uitinately to lead the whole world. Society in this great commonwealth will be reorganized on the basis of a double direction or control, that of the spiritual or educating body.

Among leading thinkers of the last generation Comte's philosophy found, many admirers and some adherents, partly, doubtless, on account of its striking originality, partly by reason of the author's powerful personality. They included such intellects as George Henry Lewes, John Stuart Mill, Richard Congreve, Harriet Martineau, and others. Later investigators, however, have not sustained the favorable verdict of those who judged from a nearer mental perspective. The critiques of Herbert Spencer, Professor Huxley, John Fiske, and Dr. McCosh are specially important; also the reply of M. Littré, the foremost French disciple of Comte, to Mill's elaborate critique of positivism. Though there is still a faithful following of the positive philosophy, it is not so distinguished as formerly; while the professed disciples of the religion of humanity are few and rare.

Posse Comitatus (pos'e com-i-tă'-tus), in law, 'the power of the county,' that is, the cltizens who are summoned to assist an officer in suppressing a riot or executing any legal process.

Postal Savings Banks. The system of postni savings banks, adopted for the United States by Act of Congress in 1910, has long been in existence, with very satisfactory results, in many foreign countries. The deposits in 1908 in Great

Britain were \$781,704,533; in Italy, \$285,442,004; in France, \$27ti,055,000; in Beigium, \$134,040,070; and in Russia, \$128,873,100. They extend to many other countries, with deposits under \$100,000,000. The total for the world aggregated \$1,080,200,815, the depositors numbering 40,320,303. Comparison showed that in ten years the number of depositors have doubled and that deposits had increased 75 per cent. Under the new law in the United States an experimental bank was opened in each State on January 1, 1911. The response has been so satisfactory that many others have been added. Any sum from \$1 to \$100 is accepted, and in-· terest paid at the rate of 2 per cent.

Postern (pos'tern), in fortification, is a small gate usually in the angle of the flank of a hastion, or ln that of the curtain, or near the orillon, descending into the ditch.

See Post-tertiary. Post-glacial.

Posting (post'ing), traveling by means of horses hired at different stations on the line of journey, a system established in England as early as the reign of Edward II.

Postmaster-General, the chief of Postoffice Department of the executive branch of the government of the United States. His duties are to establish postoffices and appoint postmasters, and, generally, to superintend the business of the department in all the duties assigned to It.

Post-mill, a form of windmill so constructed that the whole fabric rests on a vertical axis, and can be turned by means of a lever. See

Post-obit Bond, a bond given for curing to a lender a sum of money on the death of some specified individual from whom the borrower has expectations. Such loans are not only generally made at usurious rates of interest, but usually the borrower has to pay a much larger sum than he has received in consideration of the risks the lender runs in the case of the obliger predeceasing the person from whom he has expectation. If, son from whom he has expectation. If, however, there is a gross inadequacy in the proportions amounting to fraud, a court of equity will interfere.

ers had concocted more or less effective ers bad concocted more or less effective systems of postal communication throughout their dominions; but the 'post' as we know it to-day is an institution of very modern growth. The first traces of a postal system in England are observed in the statutes of Edward III, and tha postoffice as a department of government took its rise in the employment of royal messengers for carrying letters. The first English postmaster we hear of was Sir Brian Tuke, his date being 1533. was Sir Brian Tuke, his date being 1533. in 1543 a post existed by which letters were carried from London to Edinburgh within four days, but this rate of transportation, rapid for that period, iasted but a short time. James I improved the postal communication with Scotland, and set on foot a system for forwarding ietters intended for foreign iands. In 1607 he appointed Lord Stanhope post-master for England, and in 1619 a separate postmaster for foreign parts. Up to within a short time of the reign of Charles I, merchants, tradesmen, and professional men availed themselves of any means of conveyance that offered, or employed express messengers to carry their correspondence. The universities and principal cities had their own posts. The foreign merchants settled in London contluued to send their foreign letters hy private means long after the estabishment of the foreign post. In 1632 Charies I forbade letters to be sent out of the kingdom except through the postoffice. In 1635 he established a new system of posts for England and Scotland. land. All private and local posts were abolished, and the income of the post-offices was claimed by the king. Interrupted by the civil wars, peace had no sooner been restored than a more perfect postal system was established. In 1683 a penny post was set up in the metropolis. During the government of William III acts of parliament were passed which regulated the internal postal system of Scotland; and under Queen Anne, in 1711, the postal system of England was arranged on the method of England was arranged on the method on which, with some modifications, it continued till near the middle of the nine-teenth century. Sir Rowland Hill, the author of the system at present existing, gave the first intlustion of his plan in a pamphlet in the year 1837. He soon had the satisfaction of seeing the legis-Postoffice, a department of the soviet adopt his plan, in its principal fee rement of a country charged with the conveyance of letters, are at least, and on the 10th Janu-newspapers, parcels, etc., and also since recent times with the transmission of telegrams. From the time of Cyrus the scheme was vastly favored by the invested and the satisfaction of seeing the legislature adopt his plan, in its principal fee research and on the 10th Janu-newspapers, parcels, etc., and also since to for prepaid letters came into operation. The success of Rowland E. The suc

idea of which would seem to be due to Mr. James Chaimers, of Dundee. Subsequently many important improvements have been made in the management of the postoffice business. One of these was the adoption of postal carriages on railways, by which the delivery of letters was greatly 'accelerated. These carriages are fitted with an apparatus into which letter-bags are thrown without stopping or even materially slackening the speed of the train; while the sorting of letters, etc., proceeds during the transit. The reduction of the cost of carriage, the great increase in the rapidity of transmission, the immense development of commerce, together with the increase of population, have had the effect of enormously increasing the work done hy the postoffice. In recent years an im-mense stride has been taken in the improvement of postai communication hetween different countries by the formation of the International Postal Union in 1885. Ali the states of the Union form a single postal territory, having a uni-form charge for the letters, etc., passing between the several states of which it is

composed. In France a system of postal messengers for administrative purposes was established under Louis XI in 1464, and it is to France that the term post is due. A general postal system in France was set on foot in 1576. Up to near the end of the eighteenth century the French posts were farmed out. The postai re-form introduced into England by Sir Rowland Hill was to some extent adopted in France in 1849, but it is only recently that the French postal arrangements have been rendered satisfactory. In Germany the first post was established in Tyrol about the latter half of the fifteenth century by the Count of the fifteenth century by the Count of Thurn, Taxis, and Vaisassina, and the administration of the postal system of the empire, with the revenues attached, remained until 1803 as a fief to this family. Many of the German states, however, had also a separate post of their own. The connection of the telegraphic with the postal system of Germany began in 1849. Since the establishment of the German Empire a uniform system of Italy arose in Piedmont about rates were reduced to 3 cents for ail

the year 1560, when the Duke of Savoy farmed out the transmission of letters to a postmaster-senerai. This arrange-ment continued until 1697, when Duke Victor Amadeus added the income of the postoffice to the revenue of the state, and from 1710 the administration was carried on directly by the state. Since the unification of Italy a reorganized system, including telegraphic and parcel transmissions, has been extended to the whole of the kingdom. In most of the other states of Europe a very perfect system also now obtains. The develop-ment of a postal system in the American colonies followed in the lines of that aiready established in Britain. The earliest mention of a postoffice in the coionies is in 1639, a postoffice for foreign letters being then established at Boston. In 1683 a postoffice was established in Pennsylvania by William Penn. In 1692 a postmaster-general for the American coionies was appointed, and a general postal system was soon after organized. Benjamin Franklin was postmaster-general in 1753-74, and numerous reforms were instituted under his management. In 1760 he arranged a stage-wagon to convey the mail from Philadelphia to Boston once a week, starting from each city on Monday morning and reaching its destination by Saturday night. In 1789 the Constitution conferred upon Congress the exclusive control of postai matters in the states. In 1790 there were but 75 postoffices in the country were but 75 postoffices in the country, and the whole sum received for postage was \$37,935. At the close of the Civil war, in 1865, there were 20,000 postoffices, 140,000 miles of post route, and receipts of \$14,500,000. In 1910 there were over 60,000 postoffices, 450,000 miles of postai routes, and a revenue of about \$225,000,-000. The number of pieces of ail kinds which passed through the mails was over 14,000,000,000. The annual aggregate of letters for all the postoffices of the world is estimated at 30,000,000,000 and of newspapers at 15,000,000,000. The early post rates in this country were based more on the distance carried than the weight of the letter. Until 1816 the rate for a single letter (composed of a single piece) was, under 40 miles, 8 cents; unpostal and telegraphic system has been der 90, 10 cents; under 150, 12½ cents; organized for the whole of Germany. The under 300, 17 cents; under 500, 20 cents; Germans have paid great attention to over 500, 25 cents. Some modifications their postal arrangements, and in some were made in 1816, and in 1845 new rates respects they are ahead of other countries. To Germany is due the introduction of post-cards, which were first promises, 5 cents; over 300, 10 cents; and posed by Prussia at a postai conference an additional rate for every extra half held at Karlsruhe in 1865. The postai out e of action thereof. In 1853 the

distances under 3000 miles, and 10 cents for all over that distance. In 1863 the rate was fixed at 3 cents for all letters within the United States of not more than haif an ounce weight. The 1-cent postai card was sdopted in 1873, and the 2-cent letter rate in 1883, the weight being increased in 1885 from a half ounce to an ounce. Rural free delivery has since been adopted, also delivery of mercanadisc parcels. In 1909 the 2-cent postal rate for letters was extended to letters for Gr at Britain and Germany, in the latter esse carriage in German mail ships being required. Also to Canada, Maxico. Cuba, Panama, and Shanghai.

In the United States, under present regulations, all mail matter is divided into four classes. The first class includes ietters, post-cards, and anything closed against inspection: postage, 2 cents each oz. or additional fraction of an oz.; post-cards, 1 cent; registered letters, 10 cents in addition to postage. Second class matter includes all newspapers, periodicals, etc., issued as frequently as four times a year; postage, 1 cent per lb. or fraction thereof. When the newspapers, etc., are sent by persons other than the publishers the charge is 1 cent for each four tion. In geometry, the enunciation of a ounces. Mail matter of the third class self-evident problem. Euclid has conincludes photographs, circulars, proof-structed his elements on the three followsincludes photographs, circulars, proofstructed his elements on the three followsheets, etc.; postage, 1 cent for each 2 ing postulates: 1. Let it be granted that ozs.; limit of weight, 4 lbs. each packase. The fourth class, or Parcel Post, one point to any other point. 2. That a embraces merchandise and all matter not terminated straight line may be produced included in the other three classes: post-to any length in a straight line. 3. That age varying according to weight and distance. Prepayment of postage by stamps at any distance from that center. for ail classes of matter is required.

A hrlef synopsis of offenses against the postal laws follows: No article may be mailed intended or adapted for any indecent or immoral use, or printed matter describing where such may be procured; aiso any letter or circular concerning any kind of lotteries, or any scheme for de-frauding the public. It is uniawful, aiso, to send any threatening, inflammatory or llbelous matter; thus dunning notices may not be sent on postal cards. The use of the mail to offer for sale any spurious or counterfeit note or money is a crime punishable hy fine, Imprisonment, or hoth. It is forbidden to open the letters, though unsealed, of other persons. To know-ingly and willfully obstruct the mail renders ilable to a fine of \$100.

mammaiiferous crag. It may be restricted so as only to include accumula-tions and deposits formed since the close of the giaclal or boulder drift systems, and has been divided into three sections historic, prehistoric, and post-glacial. The first comprises the peat of Great Britain and Ireland, fens, marshes, river deposits, lake sllts, accumulations of sand drift, etc., containing human remains, canoes, metal instruments, remains of domestic animals, etc. The prehistoris comprises similar or nearly similar deposits, but the remains found in them are oider, comprising stone implements, pile-dwellings, and extinct animals, as the lrish deer, mammoth, etc. To the post-glacial belong raised heaches, with shells of a more horeai character than those of existing seas, the sheil-mari under peat, many dales and river valleys, as well as the common brick-clay, etc., covering submarine forests or containing the remains of seals, whaies, the mammoth, rhinoceros, urus, liyæna, hippopotamus, etc.

a circle may be described from any center

Potamogeton (pot-a-moj'e-ton), a genus of a quatic piants belonging to the nat. order Naiadaceæ. It has a perfect flower, a four-pointed perianth, four sessile anthers, four ovaries, and four drupes or nuts. Several species are indigenous to Britain, where they are known by the name of pond-weed.

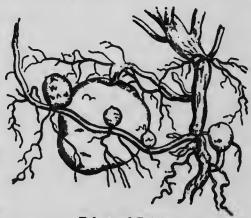

Potash (pot'ash), or Potassa, an alkaline substance obtained from the ley of vegetable sshes which is mixed with quicklime and hoiled down in iron pots, and the residuum ignited, the substance remaining after ignition being common potash. It derives its name from the askes and the pots (csiled potash ketties) in which the lixivium is (or used to be) boiled down. An old name was vege-Post-pleiocene (post - pli'o - sen), or table alkali. Potash in this crude state post-pliocene, in geing an impure carbonate of potassium, which when purified is known in commerce Post-tertiary (post - ter'sha - ri), in as pearl-ash. It is used in the making of geology, the Lyellian glass and soap, and large quantities of it term for all deposits and phenomena of are now produced from certain 'potash more recent date than the Norwich or minerals' (especially carnalite), instead caustic potash (hydrate of potasslum, KHO) is prepared from ordinary potash. It is solld, white, and extremely caustic, eating into animal and vegetable tissues with great readiness. It changes the purple of violets to green, restores red-dened litmus to blue, and yellow turmeric to reddish brown. It rapidly attracts humidity from the air, and becomes semi-fluid. It is fusible at a heat of 300°, and is volatilized at low ignition. It is used in surgery under the name of lapis infernālis or lapis causticus for destroylng warts, fungoid growths, etc., and may be applied beneficially to the bites of dogs, venomous serpents, etc. In chemistry it is very extensively employed, both in manufactures and as an agent in analysis. It is the basis of the common soft soaps, for which purpose, however, it is not used in its pure state. See Potassium.

Potash Water, an aerated water produced by mixing bicarbonate of potash with carbonic acid water in the proportion of 20 grains to each bottle of the water, or about half an ounce to the gallon. Bisulphate of potash, as being cheaper than tartaric acid, is sometimes used (but should not be) with carbonate of soda to produce the common effervescing drink. A valuable medicinal water is compounded of a certain proportion of bromide of potassium. See Aerated Waters.

Potassium (po-tas'i-um; a Latinized term from potash), a name given to the metallic basis of potash, discovered by Davy in 1807, and one of the first fruits of his electro-chemical researches: symbol K: etc. researches; symbol, K; atomic weight, 39.1. Next to lithlum it is the lightest metallic substance known, its specific gravity being 0.865 at the temperature of gravity being 0.865 at the temperature of 60°. At ordinary temperatures it may be cut with a knife and worked with the fingers. At 32° it is hard and brittle, with a crystalline texture; at 50° it becomes malleable, and in luster resembles polished silver; at 150° it is perfectly liquid. Potassium has a very powerful affinity for oxygen, which it takes from many other compounds. A freshly exposed surface of potassium instantly becomes covered with a film of oxide. The metal must therefore be preserved under metal must therefore be preserved under a liquid free from oxygen, rock-oil or naphtha being generally employed. It conducts electricity like the common metals. When thrown upon water it decomposes that liquid with evolution of hydrogen, which burns with a pale violet flame, owing to the presence in it of potash this esculent to western Sonth America, vapor. Chloride of potassium (KCl) is where it still grows wild, chiefly in the known in commerce as 'muriate of pot-region of the Andes, producing small,

of from wood ashes. What is known as ash,' and closely resembles common salt (chloride of sodium). It is obtained from potassic minerals, the ashes of marine plants (kelp), and from sea-water or brine springs. It enters into the manufacture of saltpeter, alum, artificial manures, etc. Bromide and iodide of potassium are useful drugs. (For the carbonate of potassium see Potask.) Bi-carbonate of potassium is obtained by exposing a solution of the carbonate to the air, carbonic acid being imbibed from the armosphere, and crystals being de-posited; or it is formed more directly by passing a current of carbonic acid gas through a solution of the carbonic e of such a strength that crystals form spontaneously. It is much used in med-icine for making offerworseing drinks icine for making effervescing drlnks. Nitrate of potassium is niter, or saltpeter. (See Niter.) Sulphate of potassium (K2SO4) is used medicinally as a mild laxative, in making some kinds of glass and alum, and in manures. The bisul-phate (KHSO<sub>4</sub>) is used as a chemical reagent, and in calico-printing and dyeing. Chlorate of potassium (KClO2) is employed in the manufacture of lucifer matches, in certain operations in calico-printing, and for filling friction-tubes for firing cannou. It is a well-known source of oxygen. The bichromate (K<sub>2</sub>C<sub>1</sub>O<sub>7</sub>) is also used in calico-printing and dyeing. Cyanide of potassium (KCN<sub>7</sub>) is much used in photography.

Potato (pō-tā'tō; Solānum tuberō-sum), a plant belonging to the nat. order Solanaceæ, which also includes such poisonous plants as nightshade, henbane, thorn-apple and tobacco.

Tubers of Potato.

first introduced into Europe by the Spaniards after the conquest of Peru, by whom ing of the shoots soon after their first it was spread over the Netherlands, Bur- appearance. After that they make little it was spread over the Netherlands, Burgundy, and Italy before the middle of the
sixteenth century. In Germany it is first
heard of as a rarity in the time of Charles

Drake, and Sir Walter Raleigh are all
credited with the first introduction of the
with brown spots on the outside while heard of as a rarity in the time of Charles V. Sir John Hawkins, Sir Francis Drake, and Sir Walter Ralelgh are all credited with the first introduction of the tuber into England (1565). Although the potato was tolerably widely distrib-uted on the continent of Europe before its appearance in Britain, it seems to have been cultivated more as a curiosity than as an article of food, and Ireland is said to have been the country in which It was first cultivated on a large scale for food. In the course of the eighteenth century it became a favorite article of ford with the poorer classes in Germany; but in France there existed so violent a prejudice against it that it did not come into general use untll towards the end of the century. The potato is a perennial plant, with angular, herbaceous stems, growing to the height of 2 or 3 feet; leaves pinnate; flowers pretty large, numerous, disposed in corymbs, and colored violet, bluish, reddish, or whitish. The fruit is globular, about the size of a gooseberry, reddish brown or purplish when ripe, and contains numerous small seeds. The tubers, which furnish so large an amount of the food of mankind, are really underground shoots abnormally dilated, their locrease in size having been greatly fos-tered by cultivation. Their true nature ls proved by the existence of the 'eyes' upon them. These are leaf-buds, fro a which, if a tuber or a portion of it con-taining an eye is put into earth, a young plant will sprout, the starchy matter of the tuber itself supplying nutriment until throws out roots and leaves, and so attains an Independent existence. The potato succeeds best in a light, sandy loam containing a certain proportion of vegetable matter. The varieties are very numerous, differing in the time of ripenlng, in their form, size, color, and quality. lng, in their form, size, color, and quality. New ones are readily procured by sowing the seeds, which will produce tubers the third year, and a full crop the fourth. But the plant is usually propagated by sowing or planting the tubers, and it is only in this way that any one variety can be kept in cultivation. Like all plants that are extensively cuitivated, and under very different circumstances of soil, cilmate, and artificial treatment, the potato is extremely subject to disease. tato is extremely subject to disease. Among the diseases to which it is liable are the 'curi,' the 'scab,' the 'dry rot,' the (which see), from the 'wet rot,' besides the more deby it to the potato.

tasteless, watery tubers. The potato was structive potato disease proper. The first introduced into Europe by the Span-principal feature of the curl is the curlwith brown spots on the outside, while underneath the skin is a fungus called Tubercinia scabics. The dry rot is characterized by a hardening of the tissues, which are completely gorged with mycelium (the vegetative part of fungi). In the disease called wet rot the potato is effected much in the same way as hy affected much in the same way as by the dry rot; but the tubers, instead of becoming hard and dry, are soft. The fungus present in wet rot is supposed to be the same that accompanies dry rot. The potato disease par excellence was prevalent on both sides of the Atlantic in the year 1845. Usually the first sign. of this disease is the appearance of brown patches upon the haulms and leaves. These spots appear about the time the plants attain their full growth, and when carefully examined are found to be surrounded by a ring of a paler color. The whole of this outer ring is infested with e fungus called the Botrytis or Peronosthe a infestans, which is a constant accomment of the disease, if not its cause. If the weather be dry the prog-ress of the disease is slow, but if a moist warm day supervene it will be found that the mold spreads with great rapidity, and sometimes the whole plant becomes putrid in a few days. The disease first shows itself in a tuber by appearing as a beownish and and the most affects. a brownish spot, and the part affected may be cut out, leaving the remainder quite wholesome. None of the plans adopted for mitigating the potato disease have been very effective. The potato is also attacked by various insects, the most destructive being the Colorado beetle. The tubers consist aimost entirely of starch, and being thus deficient in nitro-gen, should not be too much relied on as a staple article of dlet. Potatoes are extensively used as a cattle-food, and starch is also manufactured from them. In Maine, Vermont, and Northern New York this is an important industry. Enormous crops of this valuable esculent are grown in the United States, and much attention has been given to their improve-ment. Its cultivation has also extended widely over the earth.

Potato-bug, a name given in Amer-ica to the Colorado beetle (which see), from the injury caused

Potchefstroom (pot'shef-strom), a town in the Transvaai, South Africa, on the Mooi River, about 25 miles N. of the Vaai River. Pop. (1904) 9348.

Potemkin (po-tem'kin), GREGORY ALEXANDROVITCH, a Russian general, a favorite of the Empress Catharine II, horn in 1736; died in 1791. Descended from an ancient Polish family, and early trained to the military profession, he soon after her accession attracted the attention of Catharine, who appointed him colonel and gentieman of the chamber. Soon after he gained the entire confidence of Catharine, and became her avowed favorite. From 1776 till his death, a period of more than fifteen years, he exercised a boundless sway over the destinies of the empire. In 1783 he suppressed the khanate of the Crimea, and annexed it to Russia. In 1787, being desirous of expelling the Turks from Europe, he stirred up a new war, in the course of which he took Oczakoli by storm (1788). In the following year (1789) he took Bender, but as the finances of Russia were now exhausted Catharine was desirous of peace. Potemkin, however, resolved on conquering Constantinople, resisted the proposal to treat with the enemy, and went to St. Petersburg to win over the empress to his side (March, 1791); but during his absence Catharine sent plenary powers to Prince Repnin, who signed a treaty of peace. When Potemkin learned what had been done he set out for the army, resolved to undo the work of his substitute; but he died on the way, at Nicolaieff.

(pō-ten'shui), a term in physics. If a body attract, Potential according to the law of universal gravitation, a point whether external or of its own mass, the sum of the quotients of its elementary masses, each divided by its distance from the attracted point, is called distance from the attracted point, is called the potential. The potential at any point and suborder Sanguisorbese. P. Sangui-quantity of work necessary to britan quantity of work necessary to bring a unit of positive electricity from an infinite distance to that point, the given distribution of electricity remaining unaltered.

Potential Energy, that part of the energy of a system of bodies which is due to their relative position, and which is equal to the work which would be done by the various forces acting on the system if the way with Tifis, but the trade is being bodies were to yield to them. If a stone drawn away by Batoum. Pop. 7666. is at a certain height above the earth's surface the potential energy of the system consisting of the earth and stone, in 6 to 8), used for making various large virtue of the force of gravity, is the work vessels employed in the arts. Also a kind

which might be done by the falling of the stone to the surface of the earth. Poten Mood, that mood of a verb which expresses an action, event, or circumstance

as merely possible, formed in English by means of the auxiliaries may or can.

Potentilla (pō-ten-tii'a), a genus of herbaceous perenniais, nat. order Rosaceæ, found chiefly in the temperate and coid regions of the northern hemisphere, containing about 120 species. They are tail or procumbent herbs, rarely undershrubs, with digitate or unequally pinnate leaves, and yellow, red, purple, or white flowers. Some are favorite garden flowers. P. anserina is also called silver-weed, goose-grass, or wild tansy, the leaves of which are greedily devoured by geese; and P. fragarias-trum, barren strawberry. P. reptans is a weli-known creeping plant with con-spicuous yellow flowers. The roots of P. anscrina are eaten in the Hebrides, either raw or boiled. P. Tormentilla is used in Lapland and the Orkney Islands both to tan and to dye leather, and also to dye worsted yarn. It is also employed in medicine as a gargie in the case of enlarged tonsils and other diseases of the throat, and for alleviating gripes in cases of diarrhœa.

Potenza (pō-tent'sa), a town of Southern Italy and a bishop's see, capital of the province of the Potenza same name, on a hill of the Apennines near the Basento, 85 miles E. S. E. of Naples. It is wailed, and is indifferently huilt. It suffered severely by earthquake in 1857, most of the buildings having fallen and many lives were lost. Pop. (1911) 16,672.—The province is partly bounded by the Gulf of Taranto and the Mediterranean. Its chief productions are maize, hemp, wine, silk, cotton.

is said to be native about Lake Huron. It is valuable for fodder, and is used in salad. It has pinnate leaves and tall stems surmounted by dense heads of small flowers.

Poti (pō'tyē), a Russian town in Transcaucasia, on the eastern coast of the Black Sea. It has extensive harbor works, and is connected by railway with Tiflis, but the trade is being drawn away by Batoum. Pop. 7666.

of stained giass in which the colors are incorporated with the substance hy being added while the glass is in a state of fusion.

Potocki (po-tots'ki), an ancient Poish family, taking its name from the castle of Potok, and still holding possessions in Gallcia and the Ukraine. Among its most distinguished members was Count Ignatius, grand marshal of Lithuania before the downfall of Poland, and a fellow-patriot of Kosciusko, born 1751. In 1791 he took refuge in Saxony, and published a political tract upon the establishment and fall of the constitution, returning, however, to share in the iast struggle for independence. He then passed some time in the prisons of St. Petersburg and Warsaw, and died at Vienna 1809.

Potomac (pō-tō'mak), a river which forms the houndary between Maryland and Virginia, passes Washington, and after a course of nearly 400 miles flows into Chesapeake Bay, being about 8 miles wide at its mouth. The termination of the tidewater is at Washington, about 125 miles from the sea, and the river is navigable for large ships for that distance. Above Washington are several falls which obstruct navigation.

Pot'oroo. See Kangaroo Rat.

Potosi (pot-o-sē'; common pronunciation, po-tō'sē), a city of Southern Boiivia, in the department of same name, on the slope of the mountain mass of Cerro de Pasco, more than 13,000 feet above the sea-level, in hare and barren surroundings. It is regularly built, and has a cathedral, a mint, etc. It has long been celebrated for its silver mines, which were at one time exceedingly productive, and have again hegun to show an improved return. The city was founded in 1547, and the nopulation increased serapidly that in 1611 it amounted to 150,000, but the 1906 estimate was 23,-450.—The department has an area of 50,000 square miles, and is celebrated for its mineral wealth, especially silver. Pop. 325,615.

Pot-pourri (pō-pō-rē; French) signifies the same as olla podrida (which see); also, and more generaily, a musical medley, or a literary composition made up of parts put together without unity or bond of connection.

Potsdam (pots'dam), a town in Prussia, a bishop's see, capital of the province of Brandenburg, and the second royal residence of the kingdom, is charmingly situated in the midst of wooded hills, 17 miles southwest of Ber-

iin, on the Havei, which here has several lakes connected with it. It is, on the whole, one of the handsomest and most regularly built towns in Germany, and with its suburbs now covers a large space. The principal edifices are the royal pai-ace (remodeled 1750), with interesting memorials of Frederick the Great; Garrison Church, containing the tombs of William I and Frederick the Great; the Nikolal Church, the French Protestant Church, built after the model of the Pantheon at Rome; the town-house; and the Barberlni Palace, erected hy Frederick the Great in imitation of that at Rome, but rehuit in 1850-52. Immediately to the west, outside the Brandenhurg Gate (resembling a Roman triumphai arch), are the palace and park of Sans Souci. The palace, a building of one story, was erected under the direction of Frederick the Great; the grounds are finely laid out, and contain various fountains, etc., and an orangery 330 yards long. In the same neighborhood is the New Palace, a vast brick building archibiting much sends vast hrick huilding exhibiting much gaudy magnificence. A third palace in the environs of the town is called the Marble Palace. Potsdam was an unimportant place till the Great Elector selected It as a place of residence and built the royal palace (1660-71). Pop. (1910) 62,243.

Potstone (pot'ston; Lapis oldaris), a species of talc containing an

Potstone (pot'stōn; Lapis ollāris), a species of talc containing an admixture of chlorite. Its color is green of various shades; it is greasy and soft, hut becomes hard on being exposed to the air. It derives its name from its capability of being made into vases, etc., hy turning. It was obtained hy the ancients from quarries in the island of Siphnos and in Upper Egypt. It is now quarried in the Valals in Switzerland, in Norway, Sweden, Greenland, and the neighborhood of Hudson Bay.

Pott (pot), AUGUST FRIEDRICH, a German philoiogist, born in 1802. He studled at Göttingen, became a teacher in the gymnasium at Celie, and subsequently privat-docent in the University of Berlin. He wrote Researches in the Etymology of the Indo-Germanic Languages, etc. He died in 1887.

of Beriin. He wrote Researches in the Etymology of the Indo-Germanic Languages, etc. He died in 1887.

Potter (pot'er), Henry Codman, author and divine, was horn at Schenectady, New York, in 1835. He entered the Protestant Episcopal ministry, and became bishop of New York City in 1887. He published numerous works and was an energetic social reformer. In 1900 he visited the Philippines and published his views thereon. He died in 1908.

Potter, John, an English classical scholar and divine, primate of

all England, born in 1674, was the son of a linen-draper of Wakefield. In 1706 he became chaplain to Queen Anne. In 1708 he was appointed regius professor of divinity at Oxford, in 1715 was raised to the see of Oxford, and in 1737 appointed Archbisbop of Canterbury. He died in 1747. died in 1747. His works include Archaologia Graca, a work on Greek antiquities,

A Discourse on Church Government
(1707), an edition of Clemens Alexandrinus (1714), and theological works
(Oxford, 1753).

Potter, PAUL, a celebrated Dutch painter of animals, born at Enkhuisen in 1625. He received bis first instruction in art from his father, Pieter Potter (1587-1655), a painter of some rete. He devoted himself specially to the study of animais, producing bis first-

signed picture, The Herdsman, in 1643. His works, specimens of which are in the more important European galleries, are bighly esteemed. His coloring brilliant, and the separate parts are delicately exe-cuted, yet with-out stiffness or mannerism. His pictures are generally of smail size, but there is celebrated one of large size in the museum of The Hague. It represents a man

and cattie, with a bull in the foreground, and is known as Paul Potter's bull. He died at Amsterdam in 1654, at the early age of twenty-nine. His engravings are much esteemed, and his paintings command a bigh price.

See Clay. Potter's Clay.

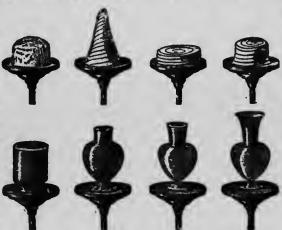

Pottery (pot'er-i), the art of forming vesseis or utensils of any sort in clay. This art is of high antiquity, being practiced among various races in prehistoric times. We find mention of earthenware in the Mosaic writings. The Greeks had important potteries at Samos, Athens, and Corinth, and attained great perfection as regards form and ornamentation. Demaratus, a Greek, the father of Tarquinius Priscus, king of Rome, is said to have instructed the Etruscans and Romans in this art. Glazed earthenware the ware, and render it less liable to

was iong supposed to be of no oider date than the ninth century of our era, and to have originated with the Arabs in Spain; but the discovery of glazed ware in Egypt, of giazed bricks in the rulns of Babyion. of enameled tiles and giazed cottins of earthenware in other ancient citles proves that this is not the case. The Arabs, however, seem to be entitled to the credit of having introduced the manufacture of or naving introduced the manufacture of glazed ware into modern Europe. The Italians are said to bave become acquainted with this kind of ware as it was manufactured in the island of Majorca, and hence they gave it the name of majolica. They set up their first manufactory at Faenza in the fifteenth century. In Italy the art was improved, and a new kind of giaze was invented, probably by Luca deiia Robbia. The French derived their first knowl-

edge of glared ware from the Italian manufactory at Fae.za, and on that sc-count gave it the name of faicnee. About the middie of the sixteeuth century the manufactory of Bernard Paissy at Saintes in France became famous on account of the beautiful glaze and rich orna-ments by which lts products were distinguished.

little iater the Dutch began to manufacture at Delft the more solid but less beautiful ware which thence takes its name. The principal improver of the potter's art in Britain was Josiab Wedgwood in the elghteenth century. Porcelain or cblnaware first became known in Europe about the end of the sixteenth century through the Dutch, who brought it from the East.

See Faïence and Chinaware. Though the various kinds of pottery and porceiain differ from each other in the details of their manufacture, yet there are certain general principles and processes which are common to them ail. first operations are connected with the preparation of the potter's paste, which consists of two different ingredients, an earthy substance, which is the clay proper; and a sillceous substance, which is necessary to increase the firmness of

reduced to the consistency of cream, when It is run off through a set of wire, gauze, or silk sieves into cisterns, where It Is diluted with water to a standard density. The other ingredient of the potter's material is usually ground flints, or flint powder, as it is called. The flint nodules are reduced to powder by being heated and then thrown into water to make them brittle. They are then passed through a stamping mill and ground to fine powder; which treated in much the same way as which, treated in much the same way as the clay, is finally passed as a creamy liquor into a separate cistern. These liquors are now mixed in such measure that the dry flint-powder hears to the clay the proportion of one-sixth or one-fifth, or even more, according to the quality of the clay and the practice of the manufacturer. The mixture is then forced into presses, lined with cioth, by means of a force-pump, the cloth retaining the clay and allowing the water to escape. The clay now forms a uniform inelastic mass, which is cut into cubical lumps and transferred to a damp celiar, where it remains until a process of fermentation or disintegration renders it finer in grain and not so apt to crack in the baking. But even after this process the Ingredients composing the paste are not intimately enough in texture until another operation has been undergone, called slapping or wedgthe lumps across and striking them together again in another direction, dashing them on a board, etc. This final process of incorporation is now most frequently performed by machinery.

In making earthenware vessels, if they are of a circular form the first operation after the paste has been made is turning, or what is technically called throwing them on the wheel. This is an apparatus resembling an ordinary turning-lathe, except that the surface of the chuck, or support for the clay, is horizontal instead of vertical. The chuck is, in fact, a revolvlng circular table, iu the center of which a piece of clay is placed, which the potter begins to shape with his hands. The rotary motion of the table gives the clay a cylindrical form in the hands of the potter, who gradually works it up to the intended shape. It is then detached from called slip. The articles are now re- a brush over the glaze.

shrink and crack on exposure to heat. moved to a room in which they are dried. The ciay is first finely comminuted, and more thoroughly at a high temperature. When they have reached what is called the green state they are again taken to a iathe and more truly shaped, as weii as smoothed and burnished. When the articles are not of a circular form, and accordingly cannot be produced by means of the wheel, they are either pressed or cast in molds of plaster of Paris. In the former case the paste used is of the same consistence as that employed on the wheei; in the latter molds of the same sort are used, but the clay mixture is poured into them in the condition of siip. By the absorption of the water in the parts next the dry mold a crust is formed of greater or less thickness, according to the time that the liquid is allowed to remain. The molds are in two or more pieces, so as to be easily detached from the molded articie.

When shaped and dried the articles are ready for the kiln, in which they are exposed to a high temperature until they acquire a sufficient degree of hardness for use. The paste of which the earthenware is composed is thus converted into what is called bisque or biscuit. While undergoing this process of baking the articles are enclosed in larger vessels of baked fire-cluy, called saggers, to protect them from the fire and smoke, and to distribute the heat more uniformly. The whole firing lasts from forty to forty-two hours. After the kilns have heen allowed to cool very slowly, the prices are taken out, and if they are not to be decorated in color, and sometimes also when they are to be so decorated, they are immersed in a vitrifiable composition called glaze, which, after the vessels have been a second time subjected to heat in giazed saggers, is converted into a coating of giass, rendering the vessels impermeable to

These processes are all that are necessary to complete a plain earthenware vessel, hut very frequently the vessels are adorned with printed or painted decora-tions executed in colors, such as may be burned into the substance of the article. There are two methods of printing on earthenware: press-printing, which done on the bisque, and bat-printing, done on the giaze. In both cases an engraving is first executed in copper, and thence transferred, by means of a sheet of paper containing an Impression, to the article the revolving table and dried, after which, containing an Impression, to the article if intended for finely-finished ware, it is requiring to be printed; but the processes taken to a lathe and polished. It is at this stage that the handles and other vessel has received its impression it is prominent parts are fitted on, which is ready to be fired in the enamel kiin. done by means of a thin paste of clay Painting on eartherware is effected with Ail the numerous varieties of earthenware are made in the manner just described, with only slight modifications in the nature of the ingredients of their composition or the processes of manufacture. Stoneware may be formed of the ciays which are used for other vessels, with the addition of different sorts of sand, and sometimes of cement. A greater degree of heat is applied than in the case of ordinary earthenware, and when some fluxing substance is added it has the effect of producing that state of semifusion which is the distinguishing quality of stoneware. A kind of semivitrified ware, first made by Wedgwood, takes its name from him. It is made of two different kinds of pastes, both very pastic. This ware is incapable of taking on a superficial glaze; but by a process called smearing, which is simply baking at a slaze, acquires a remarkable internally with a glaze, acquires a remarkable internal

a glaze, acquires a remarkable luster. Porcelain or chinaware is formed only from arglllaceous minerals of extreme dellescy, united with siliceous earths capable of communicating to them a certain degree of translucency by means of their vitrification. Porcelain is of two kinds, hard and tender. Both consist, like other earthenwares, of two parts—a paste which forms the biscuit, and a glaze. The biscnit of hard porcelain is composed of kaolin or china clay, and of decomposed felspar. The giaze consists of a felspar rock reduced to a fine powder, and mixed with water, so as to form a milky liquid into which the articles are dipped after a preliminary baking. Tender porcelain biscuit is made of a vitreous frit, composed of siliceous sand or ground flints, with other ingredients added, all baked together in a furnace till half-fused, and then reduced to a condition of powder. then reduced to a condition of powder. The glaze of tender porcelain is a speclally prepared glass ground fine, and made into a liquid by mlxlng with water. The processes employed in manufacturing porcelain wares are very much the same as those used for other kinds of earthenware, hnt requiring more delicacy and care. The blscuit paste even of hard porcelain has so little tenacity compared with that of earthenware that it cannot easily or biack soap must be added before it can be worked even in molds. During the baking, too, it becomes so soft that every part of an article must be supported. Tender porceiain receives two coats of

Metallic oxides incorporated with some fusible flux, such as borax, flint, etc., are used for painting on porcelain. The coiors are mixed with essential olis and turpentine, and applied by means of a camel's-hair brush. When the painting is finished the vessels are baked in a peculiar kind of ove a cailed muffes, which are also used for fixing the printed figures on the giaze of stoneware. By the operation of the furnace most of the colors employed in painting porcelain become quite different, and the change which takes place in them is usually through a series of tints, so that the proper time will not be obtained unless the baking is stopped precisely at the proper time. Sometimes porcelain has designs etched on it by means of fluoric acid. Scuiptures also are executed by casting in molds in various kinds of porcelain, cailed statuary porceialn, Parisn, Carrara, etc. The most important seats of the manufacture of earthenware in the United States are at Trenton, New Jersey, and East Liverpool, Ohlo.

Pottinger (pot'in-jer), ELDRED, a British officer, famed for his defense of Herat in 1838, was born in Ireland in 1811, and went to Bombay at the age of 17 as artillery cadet. In 1837 he traversed Afghanistan In disguise, and reached Herat after many risks. The city was then heid hy an Afghan prince, and was besieged hy the Persians for nearly a year, when it was relieved by a British diversion In the Persian Gulf. The credit of the defense was given to Pottlinger. Major Pottinger took a leading part in the disastrous Afghan war of 1841-42, and as political agent had to sign terms with the rehels, which were afterwards repudiated hy Lord Ellenborough. A trial by courtmartial only served to show his conduct in hrighter colors. He died in 1843 at Hong-Kong.

Pottinger, Sir Henry, Bart., a distingulshed soldier and diplomatist, nucle of the above, born in 1789. He went to India as a cadet in 1804, and soon became known for his energy and administrative ability. Risching gradually to the rank of major-general, he was, after the Afghan campalgn in 1839, raised to the baronetage as a reward for his services. In 1841 he went as minister-plenipotentiary to China, and contributed much to hring hostilities to a conciusion. He was successively governor and commander-in-chief of Hong-Kong (1843), governor of the Cape of Good Hope (1846), governor and commander-in-chief of Madras (1850-54).

w. w. w. of Philadelphia, is a thriving manufacturing town, with extensive iron and other industries, including numerous rolling mills, nailworks, steel mills, hosiery and silk factories, etc. Pop. 15,599.

Pottsville (pots'vii), a city of Pennsylvania, capital of Schuric kili Co., on the Schuyiklii River, 93 miles N. W. of Philadelphia. It is in the center of the great anthracite coal-field, with extensive blast-furnaces, forges, foundries, roiling mllis, steam-engine and machine factories, also manufactures of brass, hosiery, velvets, silk, flour, iumber, etc.
The annual product of the neighboring

plied externally to some part of the body either hot or cold, but generally the former. The simple poultice is made with linseed meal and boiling water, spread out with uniform thickness on a cloth or rag, and is used where it is decloth or rag, and is used where it is desired to hasten the progress of inflammation. Its molsture causes relaxation of the skin, and thereby iessens the discompaper, now superseded by blotting-paper. fort or pain. It acts also as a counter-

Pottstown (potr'toun), a borough of irritant, producing a redness and congestion of the skin. Disinfecting poultices vania, on the Schuylkiii River, 40 miles are made with charcoal or some non-irritating antiseptic lotion. Bread-and manufacturing town, with extensive iron milk poultices are also common. The best-known ponitice, however, is the mus-tard-plaster. This may be made by mix: ing linseed-meal with water, and adding mustard. It produces a rapid but mild counter-irritation, indicated by a redness of the skin, and is useful in cases of bronchitis, lumbago, and similar affections.

Poultry (pöi'tri), a general name for all birds bred for the table or kept for their eggs. The birds most commonly included under this designation are the common fowl, the pea-fowl, the

roiling mills, steam-engine and machine factories, also manufactures of brass, factories, also manufactures of brass, controlling factories, also manufactures of brass, controlling factories, silk, flour, iumber, etc. The annual product of the neighboring foai mines is several million tons. It is on several railroad lines and is an important shipping point. Pop. 20,236. The product of prepare, is pulverulent, of a brown roior, and almost incolorous. It contains on an average about 25 per cent. of fixed saits. for weight, is five times that of cow dung. Largely made in France, it is in demand in all quarters, being found particularly useful for gardens. Its efficacy, weight for weight, is five times that of cow dung. Poughkeepsie (po-kip'si), a city in the state of New York, capital of Dutchess County, situated on the east bank of the Hudson River, 70 miles north of New York City capital of Dutchess County, situated on the east bank of the Hudson for feeding fowls has been widely dispertity situated. It is distinguished for pretity situated. It is distinguished for the first industries include blast furnaces, and the manufacture of farming implements, as the City of Schools. These include vassar College for women, one of the chief institutions of the kind in America. Its Industries include blast furnaces, and the manufacture of farming implements, milk separators, horseshees, machinery, automobiles, etc. Pop. 32,000.

Poultice (pol'tis), in medicine, a politic externally to some part of the body either hot or cold, but generally the either hot or cold, but generally the weighing from one and a half to two are the common fowl, the pea-fowl, the which are unfattened and sold when weighing from one and a half to two pounds, are usually reared in confinement, being killed at the weight of seven or eight pounds.

The term is also applied to charcoal dust

or some other powder used in embroidery or engraving, to trace a design or pattern by being sifted through pinhoies in the paper.

Pound, in English iaw, an enclosed place for keeping cattle which have strayed on another man's ground, until they are redeemed. A pound may belong to a parish or village or to a

Pound, an English weight of two dif-ferent denominations, avoirdupois and troy. The pound troy contains 5700 grains, and is divided into 12 ounces; the pound avoirdupois, contains 7000 grains, and is divided into 16 ounces. The pound, or pound sterling, the highest monetary denomination used in British money accounts, and equal to 20 shillings, was so-called from its originally being equal to a quantity of silver weighing one pound. The pound is used strictly as a money of account, the coin representing it heing the sovereign. Money.

Poundage, a rate of so much per pound, sometimes a percentage deducted from wages paid in advance. Also, a tax formerly levied on merchandise by weight.

See Pushkin. Poushkin.

Poussin (pö-san), Gaspar, a French iandscape painter, born in Rome in 1613. His real name was Dughet; but having been piaced under the instructions of the celebrated Nicolas Poussin, who had married his sister, he assumed the surname of his master. He iived mostly in Rome or its neighborhood, and had extraordinary facility of execu-tion, so that his works are very numer-ous, specimens being found in all the chief collections in Europe. His paintings are distinguished by grandeur and rather somher characteristics, and storms or high winds were subjects in which he excelled, though he was also highly successful with morning and evening effects. The pictures of his maturer period owe much to the influence of Claude. Many of his figures are said to have heen supplied by Nicolas Poussin. He died about 1675.

Poussin, NICOLAS, a distinguished French historical and landscape painter, born at Andeiys, in Normandy, in 1594. He first studied in his native piace, and then at Paris, under masters of little merit; but he made astonishing progress. He had already acquired considerable properties.

and attended the school of Domenichino, At Rome he feli into great want, but was assisted by a Frenchman, Jacques Dughet, and by him tended through an illness brought on by overwork. In 1630 Poussin married the daughter of his benefactor.

About this time his affairs began to im-About this time his affairs began to improve. He found liberal patrons in Cardinai Barberini and in the Cavaliere Cassiano dei Pozzo, for whom he painted the celebrated Seven Sacraments, now at Beivoir Castie. He was also invited to paint the great galiery of the Louvre; and his successes gained him the position of first painter to Louis XIII, with a pension of 3000 livres. From 1040 to 1042 he resided in l'aris; hut the rivairy of Franch painters and the want of apprecia of French painters and the want of appreciation of his works evinced by the l'arisians induced him to return to Rome, where he lived until his death in 1665. He modeled statues and reliefs with great skiii, and might have become an eminent sculptor. Historicai and landscape paintings, however, were the chief subjects of his genius; in these his style is grand and heroic, and his invention fertile. He has been called the Raphaei of France. Among his more celebrated works are the Seven Sacraments, the Death of Germani-cus, the Capture of Jerusalem, the Plague of the Philistines. Abraham's Servant and Rebecca, the Adulteress, the Infant Moses, Moses and the Daughters of Jethro at the Well. Moses bringing Water from the Rock, the Worship of the Golden Calf. John Baptizing in the Wilderness, etc., and many fine landscapes. Pout. See Bib.

Pouter (pou'ter), a variety of fancy pigeon, the chief character of which is its very projecting hreast.

Povoa de Varzim (pō-vō'a dā vārzen'), a seaport and bathing place of Portugal, about 16 miles northwest of Oporto. Pop. 12,623. (pou'an; Coregonus clupe-oides), a fish inhabiting Loch Powan Lomond, in Scotland, and also known as the fresh-water herring.

Powderly (pou'der-ii), TERENCE VIN-CENT, was born at Carbondale, Pennsylvania, in 1849, became a machinist, and was master workman of the Knights of Labor 1879-93. He was elected mayor of Scranton for three terms, and was made commissioner-general of immigration in 1897. He was admitted to the bar in 1894, and to the bar of the U. S. Supreme Conrt in 1901. In 1906 acquired considerable reputation when, in he was sent abroad to study causes of 1624, he went to Italy for the purpose immigration, and in 1907 was made chief of improving himself in his art; there he lodged with Du Quesnoy, the scuiptor, Bureau of Immigration. He wrote Thirty he was sent abroad to study causes of immigration, and in 1907 was made chief of the Division of Information in the

Years of Labor, and History of Labor Day.

Powell (pou'el), John Wesley, geologist, was born in Mount Morris, New York, in 1834. In the Civil war he rose to be lieutenant-colonei, iosing an arm at Shiloh. In 1807 and years following, under direction of Smithsonian Institution and Department of the Interior, he conducted the geographical and geological survey of the Rocky Mountain region, and was the first to make the perilous journey down the Colorado River, and through its cafion. His Contributions to North American Ethnology are embraced in 3 vols. In 1881 he was appointed Director of the United States Geological Survey. His publications include many scientific papers and addresses, and numerous government volum's. He served as President of the Anthropological Society of Washington and of the American Association for Advancement of Science. He died in 1902.

Power of Attorney, in law, is a deed or written instrument whereby one person is authorized to act for another as his agent or attorney, either generally or in a special transaction.

Powers (pow'ers), Hiram, scuiptor, the son of a farmer, was born at Woodstock, Vermont, in 1805. He early displayed great ingenuity in mechanical matters, and hecame somewhat noteworthy on this account while acting as a shopman and assistant to a ciockmaker of Cincinnati. He next obtained employment in a museum in that city. At this period he formed the acquaintance of a German sculptor, and having been taught modeling by him, determined to become himself a scuiptor. In 1835 he went to Washington, and had sufficient success there to enable him to proceed to Italy. He now settled in Fiorence, where he resided until his death in 1873. He is distinguished in portraiture, and produced husts of many of the most noted American statesmen. His most famous ideal works are the statue of Eve, the Greek Slave and the Fisher Roy.

Greek Slave, and the Fisher Boy.

Powhatan (pow'ha-tan), an Indian chief of Virginia, born ahout 1550; was the father of Pocahontas (which see). He died in 1618. He was friendly to the settiers, but after his death the confederacy of tribes of which he was chief became hostile, and in the conflicts that ensued they were nearly all destroyed.

Powers, The Great, a term of modern diplomacy, by which have long been meant Britain, France, Austria, Germany, Italy, and Russia, and to which

must now be added the United States and Japan.

Poynings' Law (poi-nings'), or the statute of Drogheda, an act of the Irish Parilament, passed in 1495, whereby all general statutes before that time made in England were deciared of force in Ireland. It was so named from Sir Edward Poynings, deputy of Ireland under Henry VII in 1494, when he suppressed the revoit of Perkin Warbeck. See Ireland (History).

Poynter (poin'ter), Sir Edward Poynings, of Ambrose Poynter, an architect, was born in Paris in 1836; received his art training at the schools of the Royal Academy and under Gleyre in Paris; gained a reputation by his Israel in Egypt, exhibited in 1867, and The Catapsit (1868); painted the cartoons for the mosaic of St. George in the Westminster Paiace (1869). He produced various other notable paintings. He was elected an associate in 1869 and a Royal Academician in 1876, was the first Slade professor of art at University Coilege, London, and was director for art at South Kensington for some years. He was made President of the Royal Academy in 1896. He died July 26, 1919.

Pozoblanco (pō-thō-hlan'kō), a town in Spain, in the prov. of and 36 miles north of the city of Cordova. Its inhahitants are chiefly empioyed in agriculture and as muleteers. Pop. 12,792.

Pozzolana, or Pozzuolana (pot-sō-u-produced in Italy and formed of voicanic ashes. When mixed with a small portion of lime it quickly hardens even under water. This singular property renders it very useful as a cement in the erection of moles and other huildings in maritime situations. It is much used in Italy as a substitute for mortar, and has received its name from Pozzuoli, the port from which it is shipped.

Pozzuoli (pot-sō-ē'lē), the ancient Psteoli, a city and seaport of Southern Italy, 6 miles w. s. w. of Napies, on the shore of the Bay of Baise (Goifo di Possuoli), the northwestern portion of the Bay of Napies. (See Naples.) The coast forms a natural harbor, which is well sheitered; and a considerable trade and an active fishing is carried on. Pozzuoli is a city of great historic interest. It was founded by the Greeks about 520 s.c., and became under Rome a great center of commerce. St. Paul landed here in the course of his journey to Rome. Pozzuoli was destroyed by the Goths more than once, rebuilt by the Byzantine Greeks, and finally devas-

tated by earthquakes and voicanic eruptions. It abounds in ancient ruins. The cathedral stands on the site of a temple of Augustus, and in one of the lateral wails six Corinthian columns of the old temple are preserved. A ruined Temple of Berapis also remains, enclosed by forty-eight marble and granite columns. On an eminence behind the town stands the ruined amphitheater, resting on three series of arches. In the neighborhood are series of Avernus, the Grotto of the Sibyi, the baths of Nero, the ruins of Baise and Cums, etc. Recently Pozzuoli has been prominent part in opposing the passing of the reform bill. He died in 1830. His poems are mostly of a light and elegant character, belonging to the class known as vers de société, but they also comprise others in a more serious vein.

Præfect (prê fect; præfectus), the title of various functionaries of ancient Rome. Of these, the most important was the præfectus urble or urble (prefect of the city). During the kingly period and the early republic the præfectus urble or urble (prefect of the city). During the kingly period and the early republic the præfectus urble or urble (prefect of the city). ruined amphitheater, resting on three series of arches. In the neighborhood are Lake Avernus, the Grotto of the Sibyi, the baths of Nero, the ruins of Baiss and Cums, etc. Recently Pozsuoii has been considerably aftered by the establishment of Armstrong, Mitcheil, & Co.'s works for sunniving guns, armorphists, and machine supplying guns, armor-plates, and machin-ery to the Italian government. Pop. (1906) 17,017.

Practice (prak'tis), in arithmetic, a rule for expeditiously solving questions in proportion, or rather, for abridging the operation of muitiplying quantities expressed in different denominations, as when it is required to find the value of a number of articles at so many pounds, shillings, and pence each.

Pradier (pra-di-a), Jacques, an eminent sculptor, born at Geneva in 1702. in 1792. Having gone to Paris in 1800, and studied art in 1813, he gained the prize of the Academy for a bas-reijef of Philoctetes and Ulysses. This work procured him admission into the French Academy at Rame. From 1823 he worked constanting at Paris, where his popularity constantly at Paris, where his popularity was very great and where he was admitted to the Institute in 1827. His works sre of various kinds: religious, monumentai, but mainly classical. In execution he ranks as a scuiptor of the first ciass, but his invention and conception are defective, and there is, according to some critics, a decided meretriciousness in his style. He died in 1844. His works comprise: Centaur and Bacchante, Psyche, Venus, Phryne, The Three Graces, twelve colossal Victories on the monument of Napoleon I in the Hotel des Invaildes, statue of Rousseau at Geneva, etc.

Praed (prād), WINTHROP MACKWORTH, a poet, born in London, Eng-

land, in 1802. He was educated at Eton, where in 1820 he became one of the principal contributors to a magazine published there called *The Etonian*. From Eton he went to Trinity College, Cambridge, where he obtained for two years

powers of the king or consuls in their absence. After the foundation of the practorship (see *Practor*) this office lost its dignity and privileges; but under the empire it was revived as that of chief permanent magistrate of the city, with important military functions. The præfectus prætorio, an officer under the empire, was general of the imperial life empire, was general of the imperial lite guards. His position was one of great power, for the troop, under his command frequently decided the succession of the imperial throne. (See Pratorians.) Many other Roman functionaries bore the title of præfect, such as the præfectus aquarum, who had charge of the water supply of the city; the præfectus ærarii, who managed the public treasury, etc.

Drawn nine (prë-mū-nī're), in Eng-

Præmunire (prē-mū-ni're), in English iaw, a name given to a kind of offense of the nature of a contempt against the monarch and the government. The term is derived from the opening words of the writ preparatory to the prosecution of the offense - pramonere or premunire facias A. B. (Cause A. B. to be forewarned that he appear before us, etc.). The punishment is forfeiture and imprisonment during the sovereign's pieasure. Many of the stututes are now repealed, and prosecutions upon præmunire are unheard of in our times; the last took place during the reign of Charles II.

Præneste (prē-nes'te), the ancient name of Palestrina (which see).

Prætor (pre'tor), an important official in the ancient Roman state. Up to 367 B.C. the title was merely an adjunct to that of consulibut when at that date the consulship was thrown open to the piebeians, the judiciai functions of the consul were separated from his other duties and given to a new patrician magistrate, who in succession the chancellor's prize for an English poem. At this time, like was entitled the prætor. In 337, ter Macaulay, he contributed both in prose a struggle, the plebelans were also adamid verse to Knight's Quarterly Magazine. In 1829 he was called to the bar, and in 1830 and 1831 was returned by St.

Germans to Parliament, where he took a settling disputes between foreigners and

translatable into action. The hest authorities on the subject are John Dewey. Studies in Logical Theory (1903), and William James, Pragmatism (1907).

Prague (prāg; Bohemian, Praha, German, Prag), the capital of Czecho-Siovakia, a prosperous and wellhuit city of central Bohemia, on both sides of the Moidau, here crossed by seven bridges; 153 miles northwest of Vienna and 75 miles southeast of Dresden, with both of which it is connected by railway. Its site is a regular basin, cut in two Its site is a regular basin, cut in two by the river, from the hanks of which the houses rise on both sides till they are terminated and enclosed by hills of con- urh of Melbourne. Pop. 41,161. See siderable height. When viewed from the Melbourne.

between foreigners and citizens; and in Karlsbrücke, or old bridge, the city distinction from him who ...ded this office the other functionary was termed in the other function of the other functions. After election the two fosses, but these defenses have been demolished. Among the public buildings of Prague are the old eastle, or paiace of the Bohemian kings; the Roman Catholic cathedral, a Gothic structure (founded 1344), somewhat shapeless from having been only partly finished, though an effort is now being made to complete it; the Jesuit college, called the Clements. creased to four; afterwards to six and eight; and under the empire the number varied from twelve to eighteen. After the Jesuit coilege, called the Ciementicompleting his year of office the prætor num, consisting of churches, chapeis, and was often sent as proprætor to govern a province. See Proconsul.

Prætorians (prē-tor'l-ans), the body-guard of the Roman empire attablished as a standing the university interesting as containing the university interesting the containing the university in the conta perors, first established as a standing Hussites, interesting as containing body by Augustus. Under him only a statues and other works of art and the small number of them were stationed in hurial place of the astronomer Tycho Rome, the rest being in the adjacent Brahe; the palace of Wallenstein, originally a magnificent structure, but now Rome, where they were used to queli much dilapidated, etc. The manufacany sudden popular disturbance. The tures of Prague are of great variety, insurable of cohorts was relied by Vital. Rome, where they were used to quell much dilapidated, etc. The manufacany sudden popular disturbance. The three of Prague are of great variety, innumber of cohorts was raised by Vitellius from nine to sixteen, and under the ciuding gold and silver embroidery, slik, woolen, cotton, and inen goods, porceiain, later emperors they became powerful and jewelry. The suburbs of Karoenough to decide the succession to the throne. They were reorganized and their powers curtailed by Septimius Severus are quite modern, and are busy industrial centers. From its position on the banded by Constantine the Great, 312 a.d. river Moldau, Prague has free community of the community Pragmatic Sanction, a public and cation with the Elbe, which gives it great facilities for transport in addition to its cree pronounced by the head of a legistrature. In European history several important treaties are called pragmatic sanctions, but the one best known by this was founded in 1348, and had at one name is the instrument by which the time about 10,000 students. Recently it was divided into two universities, a output to secure the Correct and Cor German Emperor Charles VI, being without male issue, endeavored to secure the succession to Maria Theresa.

Pragmatism, a name given to a The city was long greatly disturbed by iogical development of the scientific method as applied to meta-olics and the Hussites. It suffered separated problems, or to the mental atti-order to the scientific method as applied to meta-olics and the Hussites. It suffered separated problems are to the mental atti-order to the scientific method as applied to meta-olics and the Hussites. It suffered separated problems are to the mental atti-order to the mental a who were driven out a few months later by Waiienstein. Since that date it has passed through many vicissitudes. In 1742 it was taken by the French and Bavarians, and two years later capitu-lated to Frederick the Great. After the Seven Years' war the city made rapid strides. During the Austro-Prussian war in 1866 Prague was occupied by the Prussians, and here the trenty of peace was signed August 23. In 1918 it passed out of Austrian control, becoming the capital of the new state of Czecho-Siovakia (q. v.). Pop. 223,741.

(prà-ran'), a town in Vic-Prahran

See Calendar. Prairial.

Prairie (pra'rl; French 'meadow'), the name given in the United States to the vast natural meadows or pialns of the Mississlppi vailey, especially lying between It and the Rocky Mountains, and extending northwards into Central Canada. Throughout this immense territory the differences of level are sufficient to produce a steady flow of the rivers, but not so great as to obstruct their navigation, thus securing a unique system of easy intercommunication between all sections of the interlor. There is a great sameness in the features of the topography the vegethe features of the topography, the vege-table productions, the soil, and geological features. Some of the prairies that have a peculiarly undulating surface are known as rolling prairies. The prairies were formerly treeless, except along the streams, and the annual burning of their dried grass by the Indians is supposed to have given rise to the autumnal mistiness visible in the 'Indian Summer.' They have now much more woodland. Vast herds of huffaloes used to roam over the prairies, but these have been destroyed. Immense tracts are now cultivated, and produce large crops of wheat and maize with little outlay of labor on the part of the farmer, the soil being deep and rich. They constitute, in fact, the great grain-raising region of the United States.

Prairie-dog, or Prairie Marmor, a s m a il rodent animai, the wistonwish (Cynomys ludovicianus), allied to the marmot as well as to the squirrel, and found on the North Amerlcan prairies west of the Mississippi and east of the Rocky Mountains. These animals live gregariously in burrows, and are characterized by a sharp bark, like that of a small dog, whence their popular name. They are about 1 foot in length exclusive of the tail, which is rather short. Their hurrows are quite close together, and have a mound of excavated earth near the entrance, on which the little animals are wont to sit and look around them. These communities are termed 'villages.' A second species, C. columbianus, inhabits the region west of the Rockies. The prairie-dog is not to be confounded with the prairie-squirrel, to which it is ailied.

Prairie-hen, the popular name of the pinnated grouse of the United States (Tctrao cupido). The neck of the male is furnished with neck-tufts of eighteen feathers, and is re-markable also for two loose, pendulous, wrinkled skins, which somewhat resemble an orange on inflation. The prairiehen is much prized for the table.

Prairie-squirrel, or GOPHEE, a animals of North America, of the genus Spermophilus, found in the prairies in great numbers. They live in hurrows, and not on trees, and much resemble the prairie-dog or marmot. They have cheekpouches, in which their food is carried. This consists of prairie plants with their roots and seeds.

Prairie-wolf, or Coyote (Canis latrans), the smail wolf which is found on the prairies in North America, helieved by many to be a mere variety of the European wolf. It is a cowardiy animal, and only dangerous to many them in page 1970. gerous to man when in packs and pressed

hy hunger.

Prâkrit (prâ'krit), the name of cer-tain Hindu dialects, which acquired greater prominence as the older Sanskrit passed gradually out of use. The modern tongues of India have sprung from the Prakrit just as the Romance languages have sprung the lattice and literate and not from the the old Italian dialects, and not from the literary Latin.

Prase (praz), a dark leek-green variety of quartz, the color of which is due to an admixture of horn-

blende.

Pratique (pra-tēk'), a term used to signify a kind of limited quarantine, which the captain of a vessei is held to have performed when he has convinced the authorities of the port that his ship is free from infectious diseases; more generally, the license to trade after having performed quarantine.

Prato (prä'tō), a town of Italy, in Tuscany, 11 miles northwest of Florence, in a fertile plain, on the right bank of the Bisenzio. It dates from the twelfth century, is surrounded by ancient walls, and is a well-built, cheerful-looking place. The cathedrai is very heautiful; it was begun by Nicolo Pisano, and completed after his designs in 1450 with a façade furnishing a beautiful specimen of Italian Gothic. Prato has manufactures of woolen, cotton, slik, etc. Pop. (1906) 20,199.

Pratt, CHARLES, philanthropist, born at Wintertown, Massachusetts, ln 1820; died ln 1891. He became wealthy through the Introduction and sale of astral oll, and ln 1887 founded the Pratt Institute in Brooklyn, to which he added an immense tenement house and left it by will an endowment of \$2,000,000.

Pratt, Enoch, philanthropist, born at North Middleboro, Massachu

setts, in 1808; died in 1896. He grew wealthy in the iron business in Baitimore and founded various benevolent institutions, including the free public library of Baltimore, to which he left an endowment of over \$1,000,000.

Prawn (pran; Palamon), a genus of

crustaceans, order Decapoda, section Macrura ('long-tailed'). The common prawn (Palamon serratus) is the most familiar species, and resembles the shrimp. It attains an average length of from 3 to 5 inches. The tail is hroad and flat, and its terminal plates are fringed with long hairs. The color is light gray spotted with purple, which is hrightest in the antennæ. It is well known and esteemed as an agreeable article of food.

Praxiteles (praks-it'e-iez), one of the greatest sculptors of ancient Greece, a citizen, if not a native, of Athens, flourished ahout 364 B.C. He and his contemporary Scopas stand at the head of the later Attic school, so called in contradistinction to the earlier Attic school of Phidias. Without attempting to rival Phidias in grandeur, Praxiteles chose subjects which demanded a display of the human form, especially in the fe-male figure. The finest is said to have been the Cnidian Aphrodite (Venus), whom he was the first to represent naked. The group of Niobe and her Children, now in existence at Florence, is by some attributed to Praxiteles and hy others to Scopas. His two statues of Eros (Cupid) were also celebrated. One of them, placed in the Temple of Eros at Thespia, and the statue of a satyr were considered by Praxiteles, according to Pausanias, as his finest works. An excellent copy of the latter still exists. Among his works were also statues of Apollo, Dionysos, Demeter, etc., in marble and in bronze, which served as models to succeeding artists. Quite recently, a marble statue of Hermés by Praxiteles has been discovered at Olympia.

Praying Wheel, an apparatus used of Tihet and other parts of the East, as a mechanical aid to prayer. The

Prayer (prār), a petition offered to a divinity. The Scriptures The Scriptures tacitly assume that prayer was offered to God from the heginning of the world; and although we read that 'men began to call upon the name of the Lord' after Seth was horn, we are forbidden by all commentators to connect this statement with the origin of prayer. It is not, however, until the time of Abraham that prayer comes first distinctly into notice.

the time of the dedication of Soiomon's temple the Jews appear to have there to pray, and to have turned their faces towards it if they were prevented from going there; and this custom prevails among the Jews at the present time, as does the similar custom among the Mohammedans, who turn their faces towards the sacred Kaaba at Mecca. When we come to New Testament times we meet with synagogues established as places for the public worship of God, and for reading his word. Christ taught that prayer should be offered to God in his name in order to ensure an answer. Henceforward Christ became to the Christian what the temple was to the Jew. The posture of the body in prayer is left undecided in Scripture, and aithough Christ gave his disciples a form of prayer of the most universal application, it does not follow that men may not pray according as each experiences special wants.

Prayer for the dead is a practice rejected by Protestants as having no scriptural warrant, but which prevails in the Roman Catholic, and the Greek and other Eastern churches. The custom seems to have existed in most ancient religions. The doctrine and practice came to the Christian Church through the Jews (2 Maccahees, xii, 43, 45). The first of the Christian fathers who mentions prayer for the dead is Tertullian; hut he speaks of the usage as long established in the church; such prayers are frequently alluded to by St. John Chrysostom, Cyril of Jerusaiem, and St. Augustine. In the buriai service of the first Book of Common Prayer of the English Church some prayers for the dead appeared, but they were deleted from the second book, and are not found in the subsequent revisions.

prayers are inscribed on a cylinder or wheel, fixed on an axle, every turn of which counts as a prayer uttered. To facilitate this holy duty they are often set in the bed of a running stream to be turned incessantly hy the water, or may be placed in such a way as to be turned by the current of cool air flowing. turned by the current of cool air flowing into a tent.

Pre-Adamites, traditional inhabit-As the altar appears to have been the prior to the creation of Adam. Ancient special piace for prayer in the patriarchai age, so was the tabernacie under of nations and empires existing before the Mosaic covenant until the temple, Adam's creation, and of a line of kings the house of prayer, was built. From who ruled over them. In modern times

the subject was taken up by Isaac de ia Peyrère, who, in a work published in 1655, maintained that the Jews were the descendants of Adam, and the Gentiles those of a iong anterior creation, founding his opinions on Romans, v, 12-14.

Prebend (preh'end), a yearly stipend paid from the funds of an ecciesiastical establishment, as of a cathedral or collegiate church. Prebendary is the person who has a prebend. A simple prebend is restricted to revenue only; a dignitary prebend is one which

has a jurisdiction annexed.

follow each other according to rank or dignity in a state procession or on other public occasions. In England the order of precedence depends partly on statutes, and partly on ancient usage and established custom. Questions arising on matters of precedence depending on usage are hardly considered as definitely set-tled, and are in a great measure left to the discretion of the officers of arms. The sovereign, of course, is always first in order of precedence, after whom in descending order follow the Prince of Wales, sons of the sovereign, grandsons of the sovereign, hrothers of the sovereign, uncles of the sovereign, the sovereign's hrothers' or sisters' sons, the Archbishop of Canterbury, the Lord High Chancellor, and so on through the high state dignitaries, the various ranks of the peerage, etc. The order of precedence among women follows the same rules as that among the men. By the acts of Union of Scotiand and Ireland the precedence in any given degree of the peerage has been established as follows: -1. Reers of England; 2. Peers of Scotland; 3. Peers of Great Britain; 4. Peers of Ireland; 5. Peers of the United Kingdom and Peers of Ireland created subsequent to the Union. Rules of precedence are also strictly observed in some of the European states, hut are of minor importance in the United States.

Precedent (pres'e-dent), in law, a judicial decision which serves as a rule for future determinations in similar cases. Precedents, strictly speaking, are hinding on trihunais only when they are actual decisions of the point in question; what is termed an extrajudicial opinion or obiter dictum—
the opinion of a judge pronounced where it was not called for to decide the issue—can have authority only from the character of the judge, and not as a precedent. Precedents are now of as much authority in courts of equity as in those

of common law.

Precentor (pre-sen'tur), in eid re-ilgious foundations, an important official in a chapter, whether cathedral or collegiate, who ied the singing. He ranked generally, although not universally, next to the dean; but in modern cathedrai foundations he is usuaily a minor canon, and in consequence has lost much of his prestige. He is still, however, everywhere the conductor of the choral service, and superintendent of the choir.

Preceptory (pre-sep'tu-ri), in medi-sevai history, a religious Precedence (pre-se'dens), the order house of the Knights Templars, subording which men and women nate to the temple or principal house of the order in London. It was under the government of one of the more eminent knights appointed by the grand-master.

Precession of the Equinox,

a slow motion of the line of intersection of the celestial equator or equinoctial and the ecliptic, which causes the posi-tions occupied by the sun at the equinox (the equinoctial points, which see) to move backward or westward at the mean rate of 50.25" per year. This motion of the equinox along the ecliptic carries it, with reference to the diurnal motion, continually in advance upon the stars; the place of the equinox among the stars, with reference to the diurnal motion, thus precedes at every subsequent moment that which it previously held; hence the name. This sweeping round in the heavens of the squinoctic line. in the heavens of the equinoctiai line indicates a motion of the axis of rotation of the earth, such that it describes circles round the poles of the ecliptic in 25,791 years. Nutation (L. nutatio, a nodding) is a similar, hut much smailer gyratory motion of the earth's axis, whose period is about nineteen years. From these two causes in combination the axis follows a singular near incombination. the axis follows a sinuous path, instead of a circle, about the pole of the ecliptic. Nutation causes the equinoctiai points to be alternately in advance of and behind their mean place due to precession by 6.87". At present the vernai equinoctial point is in the zodiacai sign Pisces, and it is moving towards the sign Aquarius.

Precious Metals, a name commonly applied to gold and silver in contradistinction to such ordinary and ahundant metais as iron, copper, iead.

See Gems. Precious Stones.

Precipitate (pre-sip'i-tat), in chemistry, a solid body produced by the mutual action of two or more liquids mixed together, one or other of them hoiding some substance in solute

puiverulent form. Substances that settle or sink to the bottom like earthly matters in water are called sediments, the operating cause being mechanicai, not chemical. Red oxide or peroxide of mer-cury is often cailed red precipitate.

Precognition (pre-kog-nish'nn), ln Scotch iaw, the examination of a witness at some time previous to his appearance in court. Precognitions may be taken in civil or crininal cases, and may be taken by the agents or counsel for any of the parties. In criminal trials the precognitions for the crown are generally taken by the procurator-fiscal and the signature of the witness is affixed; but those acting for the defense may take precognition from the crown witnesses also if they please. Precognitions are rarely taken in presence

of a magistrate, or on oath.

Predestination (predes-tl-na'shun), in theology, the term used to denote the decree of God, whereby the elect are foreordained to salvation. The theory of predestination represents God's absolute will as determining the eternal destiny of man, not according to the foreknown character of those whose fate is so determined, but according to God's own choice. This doctrine has been the occasion of many disputes and controversies in the church in all ages. On the one side, it has been observed that the doctrine of predestination determined introduces for the characteristic of the control of the characteristic of the characteris stroys moral distinction, introduces fatalism, and renders all our efforts useless. On the other side, it is contended that if God's knowledge is infinite he must have known everything from eternity; and that the permission of evil under such circumstances is indistinguishable from a plan or decree under which it is foreordained. The first great champions of these opposite views were Pelagius and Augustine. The former held that there was a possibility of good in man's nature, and that the choice of saivation iay in man's will. Augustine maintained that apart from divine grace there is no possibility of good in human nature, and that since the fall man's will has no power of choice. Predestination forms one of the peculiar characteristics of the Calvinistic theology; the question is left an open one by the Anglican Church, and also by the Roman Catholic Church since the Reformation.

Predicables (pred'i-ka-biz), in logic, predicates, of other terms. The predica-bies are said to be five: genus, species, difference, preperty, and accident. The

tion. The term is generally applied first two name the higher and lower when the solid appears in a flocculent classes of the things classified: a genus includes more than one species. The other three express the attributes on which the classification is founded.

Predicament. See Category.

Predicate, in logic, what is affirmed or denled of the subject.

Preëxistence, Doctrine of, the doctrine sometimes maintained that the soul of every man has an existence previous to that of his body. This opinion has for ages been prevalent in Hindustan, and was held by several Greek philosophers, more especially by the Pythagoreans, Empedocles, and also apparently by Plato. A similar doctrine has found some countenance in Christian tlmes as an explanation of the union of soul and body. In favor of this theory appeal is made to these peculiar sensations which are sometimes raised by sights or sounds, which we feel conscious of having had a former familiarity with, though reason would persuade us we had seen them for the first time. The doctrine is supported by some modern German philosophers, particularly the younger Fichte, and is maintained by the modern Theosophical Society, which now has a considerable membership in Europe and the United States.

Préfet (prā-fā; L. præfectus), the title of an important political functionary in France, whose office was created in 1800 at the instance of Napoleon. There is a prefet at the head of each department, who is entrusted with the whole organization and management of the police establishments; but not with the punishment of police offenses. Within this sphere of action the prefets are unchecked; the sous-prefets, who are appointed by them, and who stand at the head of the districts, are entirely subject to their commands; and the authorities of the communes, as well as the justices of the peace, can set no limits to their activity. In time of thmult they can call out the military, or provisionally declare a state of slege. The council of the prefecture is a court in which are settled all disputes respecting the taxation of Individuals, engagements with the state for building, the indemnlication of those who have had to give up anything to the public, etc. Of this court the prefet is president, and in it he has a casting vote. The appeals against its lecisions lie to the council of state.

Pregnancy (preg'nan-si), the state of a female who is with

child. It iasts in the human subject from Prelude 274 to 280 days; that is to say, that time should elapse from the moment of conception to the time of birth. Among the earliest signs of pregnancy are the stoppage of the monthly discharge, and sickness, usually felt in the early part of the day, and thus called 'morning sickness.' The latter usually begins about the fourth or fifth week, and may lest all the three but often diminisher in iast all the time, but often diminishes in course of the fourth month. Changes in the hreast are evident during the second month, the nipple becoming more prominent, and the dark circle round it being deeper in tint by the ninth week, little elevated points in it heing more marked. Towards the fourth month enlargement of the belly becomes noticeable. and continues to increase regularly till delivery takes place. About the six-teenth or seventeenth week quickening occurs; that is, the mother becomes aware of movements of the child. None of these signs are, however, absolutely con-ciusive, as various conditions may give rise to similar signs or signs resembling them. The only conclusive evidence is the detection of the sounds of the child's heart, heard hy applying the ear to the beily of the mother, midway between the navel and the iine of the groins, a little to the right or left of the middle line. They may be detected about the eighteenth week. During pregnancy women should take regular meals of plain, nourishing food, avoiding rich and highlyseasoned dishes, and should restrain un-wholesome cravings, which sometimes exist. Gentie hut regular and moderate exercise should be engaged in, all undue exertion, effort, and fatigue being avoided. Ciothing should he warm, wooien next the skin, and nowhere tight. Prudence in haths must be exercised, too hot or too cold water helng avoided, and the bowels must he kept well regulated, only the mildest medicine being used. Above all, a caim and equable frame of mind should be cultivated, and there should be no hesitation in asking advice of the doctor. Prejevalski. See Przhevalski.

Prelate (prel'at), in church iaw, one of those spiritual dignitaries who exercise jurisdiction in their own name. These were originally only the bishops, archbishops, patriarchs, and the pope. The cardinais and legates, abhots and priors, also obtained certain privileges of jurisdiction by grant or prescription. The term is now commonly used merely to signify one of the higher dignitaries of the church.

Prelude (prei'ad), in music, originally the first part of a sonata; though, as the name impiles, it may be an introduction to any piece of music. Bach and his contemporaries elaborated preludes considerably; and Chopin wrote several plano works which, though complete in themselves, he designated preludes. More recently the term has been applied to operatic introductions when they are shorter than the usual overture. Wagner in particular has prefaced most of his operas with a prelude.

Premises. See Logic, Syllogism.

Premonstratensians, or Norder Tines, a religious order, founded at Prémontré, near Laon in France by St. Norbert in 1120, who gave them the ruie of St. Augustine with some additionai rigor. The order was introduced into England in 1146, and its members were there regularly known as the White Canons. Before the Reformation they had 2000 monasteries, among which were 500 nunneries, mostly in Germany, the Netherlands, France. England, and the north of Europe. The order is now very small. Prentiss (pren'tls), Sergeant S., orator, born in Portland, Maine, in 1808, removed to Mississippi in 1827. As a lawyer he was in the front rank; as a speaker was remarkable for wit, sarcasm, and argumentative power. His manner of speaking was at once natural and dramatic. He died in 1850.

Preposition (prep-u-zish'un; from L. prapositus, placed before), a part of speech which is used to show the relation of one object to another, and derives its name from its heing usually placed before the word which expresses the object of the relation. In some languages this relation is often expressed merely by changes of the termination.

Presburg. See Pressburg.

Presbyopia (pres-bi-o'pi-a), or Pres'-BYOPY, that is, 'oid-sightedness,' an affection of the eye common at an advanced stage of life; Its effect is to render objects near the eye less distinct than those at a distance. Persons affected with preshyopia generally have to use convex spectacies.

Preshyter (pres'hi-ter; Gr. presby-

Presbyter (pres'hi-ter; Gr. presbyteros, an elder), an officebearer in the early Christian Church, the exact character and position of whom is differently regarded by different authorities. Presbyterians generally maintain ig

that originally bishop and presbyter were one and the same; Episcopalians generally maintain that from the first they were different, as was certainly the case second century the presbyters held a position in connection with the congregations intermediate between that of bishop and deacon, and represented the

Presbyterian (pres-bi-të'ri-an), a name applied to those Christians who hold that there is no order in the church as established by Christ and his apostles superior to that of presbyters (see Presbyter), and who vest church government in presbyteries, or associations of ministers and elders, possessed aii of equal powers, without any superiority among them. The Presbyterians believe that the authority of their ministers is derived from the Holy Ghost hy the imposition of the hands of the presbytery; and they oppose the Independent scheme of the common rights of Christians by the same arguments which are used for that purpose hy the Episcopalians. They affirm that all minlsters, being amhassadors of Christ, are equal by their commission; and that Episcopacy was gradually established upon the primitive practice of making the moderator, or speaker of the preshytery, a permanent officer. These positions they maintain against the Episcopalians by the general argument that the terms bishop and preshyter are used as synon-ymous terms in the New Testament, and that they were used simply to designate the minister appointed by the apostles to take charge of a new church on its foundation. They therefore claim validly for the ordination after the Presbyterian form, as there was 'ginally no higher ecclesiastic than a shyter in the church.

The first Preshyterian church modern times was founded in Geneva by John Caivin about 1541; and the constitution and doctrines were thence introduced, with some modifications, into Scotland by John Knox about 1560, though the Presbyterian was not legally recognized as the national form of church government until 1592. For nearly a century after this date there was a continual atruggle in Scotland between thrusi struggle in Scotland between Episcopacy and Presbyterlanism; until ultimately by the Treaty of Union in 1707 it was agreed on the part of England and Scotland that that form of church government should be the national

by law .- The constitution of the Scotch Church, and of the Presbyterian Church generally, is as follows: — The kirk-session is the lowest court, and is composed of the parochiai minister, or ministers, if more than one, and of lay eiders (usually from six to twenty); the min-ister, or senior minister where there are more than one, being president or moderator. This court exercises the religious discipline of the parish; but an appeal may be made from its decisions to the preshytery, and again from the preshytery to the synod. A preshytery consists of the pastors of the churches within a certain district, and of an elder connected with each, while the synod comprises the preshyteries within a certain area, their ministers and representative elders. (See Preebytery, Synod.)
The General Assembly is the highest ecclesiastical court, its decisions being supreme. (See Assembly, General.) Besides the Established Church of Scotland there are others whose constitution is Presbyterian, but who decline being connected with or receiving emoluments from the state. The chief of these, the Free Church and the United Presbyterian, united in 1900 as the United Free Church of Scotland.

Shortly after the Reformation Presby-terianism was in considerable strength terianism was in considerable strength. In England, a large number of the Puritans preferring this system to episcopacy; but it subsequently declined in strength. The rule of the Stuarts, however, did much to renew its vigor, and in 1642 the Long Parliament aboiished episcopacy, a measure followed by the meeting of the famous Assembly of Divines at Westminster the following year. In 1646 presbytery was sanctloned by parliament, but it was never generally adopted; or but it was never generally adopted, or regularly organized, except in London and Lancashire. Soon after the Resto-ration episcopacy was restored, and about 2000 Preshyterian ciergy were ejected from their cures in consequence of the Act of Uniformity in 1662. Presbyte-rianism has ever since been simply one rianism has ever since been simply one of the forms of dissent in England, and has heid no prominent position, though many Presbyterian churches are scat-tered throughont England. Of these by far the greater number are united to form a single body, the Presbyterian Cburch of England.—The Presbyterian Church in Ireiand originated through the settlement of Scottish colonists in Ulster land and Scotland that that form of in the reign of James I. When Charies church government should be the national II attempted to force Preiacy upon the form of ecciesiastical government in Scotland, and that the Scotch Church should north of Ireiand, which gave the cause be supported as the only one established of Presbyterianism in that country a

fresh impulse. The favor shown them by William III was of great assistance to them; which they repaid by the part they played in the rebeilion under James II, particularly in the memorable siege of Londonderry. As a test of his gratitude the king doubled the sum given for the support of their ministers, hence known as Regium Donum. The Presbyterian Church was early introduced into the United States, and has, including its the support of shout several branches, a membership of about 2,000,000. The body is an important one also in Canada and other British colonies, and in Europe, its membership in the world being estimated at 12,250,000. Among Protestant churches it is surpassed in numbers only by the Episcopalians and the Methodists. The Methodists and Baptists largely exceed it in membership in the United States.

Presbytery (pres'bi-ter-i), a judica-tory, consisting of the pastors of ail the churches of any par-ticular Presbyterian denomination within a given district, along with their ruling (i.e., presiding) eiders, there being one ruling eider from each church session commissioned to represent the congregation in conjunction with the minister. The functions of the presbytery are, to grant licenses to preach the gospel, and to judge of the qualifications of such as apply for them; to ordain ministers to vacant charges; to judge in cases of reference for advice, and in compiaints and appeals which come from the church sessions within the bounds of the presentation. bytery; and generally to superintend whatever relates to the spiritual interests of the several congregations under its charge, both in respect of doctrine and discipline. Appeals may be taken from the presbytery to the provincial synod, and thence to the general assembly.

Prescot (pres'kut), a manufacturing and market town in England, county of Lancaster, 8 mlles east of Liverpool. Prescot has long been noted for the manufacture of watch-toois, watch-movements and hands, small files, etc. Earthenware, glass bottles, etc., are also manufactured. Pop. (1911), 8154.

Prescott, WILLIAM HICKLING. historian. born in Saiem, Massachusetts, in 1796; died in 1859. Hls father was a lawyer, the son of Colonei William Prescott, who com-manded the American forces at the battle of Bunker Hill. In 1811 he entered Harvard Coilege, and was graduated in 1814. While at college he met with an accident to his left eye, completely depriving him of its use for ever afterwards, and ren-

during the latter haif of his life ne could scarcely use it. After two years spent in traveling through England, France, and Italy, chiefly for health, he returned to his native country, where he married, and set himself assiduously to literary labor. The earliest fruits of this were contributions to the North American Review; and for many years his only productions were essays and magazine articles. Acquaintance with Spanish during the latter haif of his life he could articles. Acquaintance with Spanish iterature, which he began to cultivate in 1824, ied him to attempt his first great work on Spanish history, The Reign of Ferdinand and Isabella, published in 1837. It was received with enthusiasm both in America and Europe; was rapidly translated into French, Spanish, and German; and its author was elected a member of the Royai Academy at Madrid. Prescott's next Academy at Madrid. Prescott's next work was the History of the Conquest of Mexico, with a Preliminary View of the Ancient Mexican Civilization, and the Life of the Conqueror Hernando Cortes, which appeared in 1842, and was received with an equal degree of favor. In 1847 he published the History of the Conquest of Peru, with a Preliminary View of the Civilization of the Incas. In 1855 the first two volumes of the iong-expected History of the Reign of Philip II, King of Spain, appeared, and proved to the public equally acceptable with Prescott's former works. In 1858 was published a third volume; but the sudden death of the author from apoplexy sudden death of the author from apoplexy put a stop to his iabors. Prescott affords a remarkable instance of the success of indomitable industry and perseverance, carried out in spite of the affiction of partial and latterly almost total blindness.

Prescott, county seat of Yavapai Co., Arizona, 134 miles N. of Phonix. It is an important mining center, being in the rich gold, silver and copper mining region of the Bradshaw mountains; also a trade center. Pop. 6000. Prescription (pre-skrip'shun), in law, is a right or title acquired by use and time; the object being to secure the title to property to him who has had the possession of it for the term fixed by the law, and to prevent any one from disturbing his possession after such term has expired. In the English common iaw the term prescription is applied only to incorporeal hereditaments, as a right of way, a common, etc., and requires immemorial time to establish it. This rule was modified fied, however, by a statute under William of its use for ever afterwards, and ren- IV, which provides that no right of com-dering the other eventually so wenk that mon shall be defeated after thirty years'

enjoyment, and after sixty years the right deemed absolute and indefeasible, unices had by consent or agreement. In claims of right of way, of water-course, and similar easements the periods are twenty and forty years. Claims to the use of light to any dwelling-house or building enjoyed for twenty years are indefeasible, unless shown to have been by consent.

By the iaw of Scotiand prescription has a much wider operation than by the iaw of Engiand. It not only protects individuals from actions which other parties might have brought against them, but in some instances creates a positive titie to property. The prescription by which a right of property can be established is that of forty years. Whatever adverse right is not cut off by the other speciai prescriptions of shorter other speciai prescriptions of shorter periods is destroyed by the iong prescription, as this is called. To create a title to reai property, the iong prescription must be both positive and negative. The party hoiding the property must have been forty years in unchailenged possession, and be ahie to show a prima facie valid titie; while a ciaimant must have been forty years without an ostensihie titie, and must, hy not legally challenging it, have tacitly acquiesced in the possessor's title. By Scotch law, but not hy English, a vicenniai prescription applies to crimes, no prosecution being comto crimes, no prosecution being competent after a period of twenty years. In American practice prescription presupposes a jost grant, and can therefore give a title to those things only which can pass by grant. In almost all the States of the American Union there are express statute provisions regulating the doctrine of prescription. Generally an uninterrupted possession of twenty years is required for the acquisition of real rights. In some States a notifica-tion by the owner of the land to the occupant that his intention is to contest the titie may defeat prescriptive acquisition.

Prescription, in medicine, is the form, with directions, is the in which a medicine or medicines are ordered or prescribed by a medical man. The several medical substances which may be contained in a prescription are distinguished by names indicative of the office performed by each. These are—

1. The basis, which is the principal or most active ingredient. 2. The adjusters of the office performed by the contact of the contact o vent, or that which is intended to promete the action of the basis. 3. The corrective, intended to modify its action. 4. The escipient, or that which gives the whole a commodique or agreeable

form. To these certain writers add a fifth, the intermedium, which is the substance employed to unite remedies which do not mix with each other or with the excipient, such as yolk of eggs and mucilage, employed in the preparation of emuisions. In choosing the form of a prescription it should be borne in mind that solutions and emulsions generally act with more certainty and rapidity than powders diffused through water; and these again than the semisoiid and solid forms of medicine. See also Pharmacy. Presentation (prez-en-tā'shun), the

several candidates to a vacant office; commoniy used in the case of a patron to a church. In Engiand the ciergyman is presented to the hishop to be instituted in a benefice; in Scotland, before the abo-

ition of church patronage, he was presented to the presbytery for induction.

Presentment (pre-zent'ment), in law, is, properly speaking, the notice taken by a grand jury of any offense, from their own knowledge or observation without any hill of indict or observation, without any hill of indictment being iaid before them at the sult

of government.

Preserved Provisions, PRESERVES.
The preservation of dead organic matter from the natural process of decay is a most useful means of increasing and diffusing the food supply of the world. Animals, vegetables, and fruits may all be easily preserved for this purpose. The preserving of fruits is an old and familiar process. This is generally effected by boiling or stewing, though drying is also frequently resorted to, where the fruit is meant to be kept intact. Fruits intended for confectionery are preserved in four different ways—1. In the form of jam, in which the fruit is boiled with from three-fourths to about equal its weight of sugar. 2. In the form of jeily, in which the juice only is preserved, by being carefuily strained from the solid portions of the fruit, and boiled with about haif of weight of sugar. 3. By candying, which consists in taking the fruits whole or in pieces, and boiling them in a clear They absorb the syrup, which is then crystailized by the action of a gentie heat. 4. By stewing them in a syrup of sugar and water till they become soft but not broken, and transferring them with the syrup to jars. Many add naise with the syrup to jars. Many add pale brandy equal in quantity to the syrup. Several kinds of vegetables, as canbages, cucumbers, cauliflowers, onlons, are preserved by pickling. (See Pickles.) Antiseptics are used to preserve meat also,

salting being the most common process. But to preserve large quantities of veg-etable and animal products for food purposes, and at the same time to keep them nearly in their fresh state, they must be subjected to one of three processes. These are — drying, refrigeration, and exciusion of air and microbic germs. With vegetables, which contain so large an amount of water in proportion to their collisions of the process. solid and nutritious material, the process of drying is peculiarly applicable, and it is iargely employed as the means of furnishing fresh vegetable food for ships in a compact and portable form, when, in addition to desiccation, compression is

also employed.

The preservation of articles of food by the apilication of coid is the simplest of all known methods, and in such climates as the United States, Russia, etc., it is iargely taken advantage of; while of late it has generated a large and increasing trade between the countries of the north and south temperate zones. In 1875 ice began to be used to preserve fresh meat in considerable quantities, which was sent from America to Europe. The use of ice has been largely replaced by refrig-erating machines, by which a temperature best suited to the preservation of the material is maintained. The result is that the distribution of meat over the surface of the giobe is being revolutionized. The trade between Great Britain and New Zeaiand in fresh mutton is now immense, and a large trade exists between Argentina and northern countries. The modern methods of refrigeration for carrying purposes consist of an air-tight room on board ship, where the meat is kept, and through which dry coid air is made to circuiate by means of special machinery driven by steam, the air being first compressed and cooled by the refrigerating machines spoken of, a further cooling taking place when it is again allowed to expand.

The process of preservation by exclusion from the action of atmospheric air is yearly assuming more importance and being more largely practiced. The most perfect method, and that which is now most generally resorted to, is the enclo-sure of the food in air-tight cases from which the air is then expelled; upon the perfection of the air-excluding process depends entirely the preservation of the article. The first successful attempt to article. The first successful attempt to vote, and who subsequently meet and preserve fresh meat in this way was made elect the President. In his legislatin 1809 by M. Appert, a Frenchman, tive capacity the President has the The pian now generally adopted is commonly known as canning, and is applicable alike for flesh-meats, vegetables and them to the house in which they originates. The process is usually as follows: nated, with his reasons for non-approval.

- The provisions of whatever kind are packed into a tin cylinder, and the interstices filled in with water or other appropriate fluid, as gravy in the case of flesh-food. The iid, which is perforated with a smail aperture or pinhoie, is soidered carefully down. The cases are then set in a bath of solution of chioride of calcium; heat is applied untii the whoie boils, and the air is thus expelled through the pinholes. These holes are then hermetically closed, and the canister and its contents are once more subjected to the operation of heat until the provisions are perfectly cooked. When it has become cooi the canister is coated over with paint and removed to the proving room, an apartment the temperature of which has been raised to the degree of temperature most favorable to decomposition. If the operation has been successfully performed, the ends or sides of the canisters will have faien in to some extent from the out-faien in to some extent from the out-ward pressure of the air. If, after the interval of some days, the ends bulge out, it is a certain sign that the process has not been successful, the liberated gases causing the outward pressure. Such cases should be rejected or submitted again to the process. Not only may boiled pro-visions be preserved in this way, but visions be preserved in this way, but roast meats also. An improvement on this process has been effected by introducing into the canisters a small quantity of sulphite of soda, which causes the absorption of any traces of free oxygen which may lurk in the cases. Giass botties are also largely used in piace of tin cans, especially for household preserving. Fruits may be preserved without cooking, other than is done by pouring hot syrup into the jars and setting them, when closed, in boiling water, this being apparentiy sufficient to destroy the microbes. The effectiveness of the process depends on the exclusion of fermentative germs and the killing of those aiready present by the application of heat.

President (prez'i-dent), one who presides: a presiding officer.

The supreme executive officer of the United States is styled President. The qualifications of a person raised to this dignity are, to be a natural-born citizen of the age of 35 years, and to have resided 14 years within the States. The election is by an electoral college, the members of which are elected by popular 10 - 0 - h

If he retains a bill for ten days without signing it becomes a law, unless an ad-journment of Congress prevents its re-turn, when it fails to become a law. In his executive capacity he is commanderin-chief of the army and navy; he has the power of making treaties, subject to the concurrence of two-thirds of the Senators; of appointing amhassadors, ministers, con-suls, judges of the Supreme Court, and other public officials not otherwise pro-vided for; of convening Congress in extra session when deemed necessary, and performing other executive duties. The salary of the President was originally \$25,000. It was increased to \$50,000, and there was added to it for traveling expenses \$25,000. In 1909 it was made \$75,000. He holds his office for four traveling adjusted for resilection. The years and is eligible for reëlection. similar officers in Switzerland and France, and recently in Portugal, hear the same title. See Succession, Presidential.

Press, LIBERTY OF THE, the liberty of every citizen to print whatever he chooses, a privilege which does not prevent his being amenahie to justice for the ahuse of this liberty. The right of printing rests on the same abstract grounds as the right of speech, and It might seem strange to a man unac-quainted with history that printing should be subjected to a previous censorship, as it is in some countries, and has been in ail, any more than speaking, and that the liberty of the press should he ex-pressiy provided for in the constitutions of most free states. But when we look to history we find the origin of this, as of many other legislative anomalies, in periods when politics, religion, and indi-vidual rights were confusedly intermin-gled. It is only since men's views of the gled. It is only since men's views of the just iimits of government have become clearer that the liberty of the press has been recognized as a right; and to Engiand we are particularly indehted for the establishment of this principie. The existence of a censorship of the press was for centuries, however, deemed an essential to the safety of all European governments. ments. Liherty of printing, as we nu-derstand it, is a comparatively modern notion; Milton's plea for a free press met with no response from his own party, nor for very many years later was it the cue of any party in the English commonwealth to refrain from suppressing the writings of their political opponents. In England the liberty of the press, soon after printing was introduced, was regulated by the king's proclamations, prohibitions, charters of license, etc., and finally by the court of Star-chamber. The Long Parliament, after their rupture to France and the Tyrol to Bavaria war

with Charies I, assumed the same power. The government of Charies II imitated their ordinances, and the press did not really become free till the expiration of the statutes restricting it in 1693, after which it was found impossible to pass new laws in restraint of it, and it has remained free ever since, the last restriction in Engiand ceasing with the abolition of the newspaper stamp duty, in 1856. Such legal checks as remain are merely intended to prevent outrages on religion or decener to restrict a protect and in the second contract of the second contract and in the second c merely intended to prevent outrages on religion or decency, to protect subjects from defamation, and to conserve the copyright of authors. The constitutions of many of the United States declare, as we should expect, for liberty of the press, and one of the notable events of colonial history was a suit in New York which established liberty of the press in that colony. Within the United States as a nation there has been no question of the full liberty of the press, subject to the operation of the law for libel. The same may be said of all the South Amersame may be said of ail the South American tepuhiics. Among European countries, it may be generally said the liberty of the press is found most predominant among the weaker powers, such as Spain, Turkey, Sweden and Norway, Switzeriand, and Roumania; while in Germany, Austria and Americally in Burster and Austria, and particularly in Russia, there are still many restrictions. In the British colonies the law is as in England, but in India the governor-general exercises a censorship. See Books (Censorship of).

Press, Printing. See Printing.

Pressburg, or Pressburg (pres'burg), a town in Hungary, 35 miles east of Vienna, beautifuily situated on the left bank of the Danube, and on spurs of the Littie Carpathians. The most striking edifice is the ruined royal palace, on the top of an eminence, hurned in 1811. The cathedral is a large Gothic structure, dating from the eleventh century, which has latterly been considerably modernized; here the kings of Hungary were crowned. The Franciscan church (thirteenth century) is also noteworthy. There are also several palaces, incinding There are also several palaces, incinding that of the primate of Hnngary. The river is here crossed by a bridge of boats. The manufactures are various. The trade, particularly transit, and chiefly in corn and timber, is extensive. Pressburg is a place of very great antiquity, and was long a fortress of some strength.

aigned here in 1805. Pop. 78,223, more than half of whom are Germans and several thousand Jews.

Pressensé (pra-san-sa), Edmond DE, ister, born at Paris in 1824. After studying under Vinet at Lausanne, and at Halle and Berlin, he became pastor of Taitbout Chapei, Paris, where he gained a high reputation as a preacher. He sat in the National Assembly (1871-75), and was made life senator in 1883. He the author of many religious works s the author of many religious workshistorical, evangelical, etc., some of which, including his Life of Christ, have been translated into English. He died in 1801. Press-gang, the name given in Engempowered, in time of war, to iny hold of seafaring men and compel them to serve in the king's ships. This practice became obsoicte during the iast century, though the iaws permitting it have never been repealed. No such practice has ever existed in the United States.

Prester John (Priest or Presertary personage of some note. In the middle ages it was reported by travelers that there was a Christian prince who reigned in the interior of Asia under this name, and the same story was also known seamen who (under a navai officer) were

name, and the same story was also known to the Crusaders. Who this Prester John was it is not easy to decide; the suppo-sition that he was the Daiai Lama, or one of the chief priests of the Lamaites, does not agree with the position assigned to his residence by traveiers. The Portuguese in the fifteenth century picked up a story of a Christian prince in Central Africa, and hy some confusion of names they transferred thither the throne of Prester John. Hence in recent times the home of this mythical prince and Presto (pres'tö; Italian), quick, used in music to designate a faster rate of movement than is indicated by allegro. Presto assai denotes very quick, and prestissimo the highest degree of quickness.

England, in Lancashire, 27 miles north-sumptio juris et de jure. The præsumption as true, and is England, in Lancashire, 27 miles north-sumptio juris et de jure. The præsumptast of Liverpool, agreeably situated on a tio juris is a presumption established in height above the right or north bank of law till the contrary be proved, e. g. the the Ribble, near the head of its estuary.

The environs of the town exhibit much pleasing scenery, and the town possesses three fine public parks. Among the churches Christ Church is admired for the purity of its Norman architecture; in a minor with guardians to act without the partsh church, which has been rebuilt their consent.

in the decorated style of the fourteenth century, is also a fine huilding; and one of the Roman Catholic churches, St. Waiburga's, is considered the finest in the town. The town-hall is a splendid structure; and generally the architecture of I'reston is good. The river is spanned by five hridges, two of them railway bridges, one of which cost £40,000. The railway station (recently reconstructed) is very large, and is one of the most important junctions on the London and Northwestern Railway. The original sta-pic manufacture of the town was ilinen, which is still woven to some extent, but has been completely eclipsed by the cotton manufacture, of which Preston is now one of the chief centers. Preston also has machine-shops, iron and hrass foundries, rallway-carriage works, hreweries, maithouses, roperies, tanneries, etc. Some shipping trade is carried on, and extensive harbor and river diversion works have much improved the town as a port. In 1323 Preston, originally Priest's-town, was taken and hurned by Robert Bruce; was taken and nurned by Robert Bruce, in the great civil war it espoused the royalist cause, and was twice captured by the Parijamentarians; in the rebellion of 1715 lt was occupled by the Jacobite forces; in that of 1745 the Highlanders, hended by the Pretender, passed through Preston both on their march to London and on their retreat. Preston was the and on their retreat. Preston was the birthplace of Arkwright. Pop. (1911), 117,113.

Prestonpans (pres-tun-pans'), a small town in Scotiand, in the county of Haddington, near the south shore of the Firth of Forth. It used to have a flourishing manufacture of salt: hence the name. In the vicinity is the scene of the famous battle in 1745, when the Jacobltes defeated Sir John Cope and the royal forces. Pop. 2614. Prestwich (prest'wich), a town of England, ln Lancashire,

4 miles northwest of Manchester, a favorite residence of Manchester merchants. Pop. (1911) 17,195.

Presumption (pre-zum'shnn), in law, is the assuming Preston (pres'tun), a municipal and of a fact or proposition as true, and is

See Charles Edward Pretender. Stuert, and Stuert

(James Edward Francis).

Pretoria (pre-to'ri-a), a city of South vaal Province and of the Union of South Africa, 35 miles N. E. of Johannesburg. It was founded in 1855; named after the Boer general, Pretorius, first president of the South African Republic. Captured by the British in 1900. Pop. 50,000.

Prevention of Cruelty to Ani-See Animals (Cruelty to). mals.

(prevä-zä), a fortified town of European Turkey, in the Prevesa pashaiic of Janina, on the northern side of the Guif of Arta, 18 miles southwest from Arta. It has a stormy history, having been frequently blockaded and captured, and on one occasion piliaged by the Turks, it being then under France. Pop. (1905) 6500.

Prévost D'Exiles (pra-vo deg-zei), cois, a French writer, born in 1697. Originally a member of the Jesuit order, he soon quitted it for the military service. After alternating several times between the church and the army, he gave up both professions, and in 1729 he went to Hoiland, where he published his Mémoires d'un Homme de Qualité. After a sojourn of two years in England he returned to France, and was appointed almoner and secretary to the Prince of Conti. From this period till his death in 1763 he pursued an active literary life, editing a journal cailed Pour et Contre, and publishing many romances, of which the best known are the Histoire de M. Cleveland, and the Histoire du Chevalier des Grieus et de Manon Lescaut.

Prévost-Paradol ATOLE, a French writer and member of the Academy, was born at Paria in 1829. In 1855 he obtained the chair of French literature in the faculty of Aix, but soon resigned, and next year became one of the editors of the Journal des Débats, a paper with which he never broke his connection. In 1870 he went as ambassador to the United States; hut soon after his arrival put an end to his own life — his mind being, it is believed, unhinged by the news of the declaration of war by France against Prussia. He wrote Etudes sur les Moralistes Français, Essai de l'His-toire Universelle, La France Nouvelle, Du Rôle de la Famille dans l'Éducation, etc.

Priam

Laomedon. By his second wife, Hecube, he had, according to Homer, nineteen children, the most famous being Hecter, Paris, Cassandra, and Troilus. His name has been rendered famous by the tragical fate of himself and his family, as a result of the Trojan war. When he was extremely oid the Greeks demanded of him the restoration of Heien, who had been carried away by Paris, and on his refusal to give her made was a spirite. to give her np they made war against Troy, and took and destroyed the city, after a siege of ten years. Homer gives no account of the death of Priam; but other poets represent him to have been siain at the aitar of Zeus by Pyrrhus the Greek.

Priapus (pri-a'pus), a Greek delty, aysus and Aphrodite, a god of gardens, fruits, etc., considered by mythologists to represent fertility in nature. He was worshiped in all parts of Greece, and also in Rome.

Pribram (pre'bram; Boh, prehe'bram), a town of Central
Bohemia, in a district where are ich
lead and silver mines. Pop. 18,576.

Pribylov Islands (pre? -lot), or PRI TLOFF, or group of islands on the coast of Alaska, in Behring Sea, belonging to the United States. The largest are St. Paul, St. Wairus and Beaver Islands. George, They are frequented by numbers of fur-seais. The natives are Aleutians.

See Value. Price.

rice detil his death in 1763 he puractive literary life, editing a ailed Pour et Contre, and pubars romances, of which the best et he Histoire de M. Cleveland, Histoire du Chevalier des Grieus anno Lescaus.

t-Paradol (prā-vō-pā-rā-dol), Lucien Antoined the chair of French writer and member of emy, was born at Paria in 1829. The obtained the chair of French in the faculty of Aix, but soon and next year became one of the the Journal des Débats, a paper ch he never hroke his connection. he went as ambassador to the tates; hut soon after his arrival and to his own life—his mind a believed, unhinged by the news leclaration of war by France Prussia. He wrote Etudes surlistes Français, Essei de l'Histoirelle, La France Nouvelle, de la Famille dane l'Education, (pri'am), in Greek legend, the last king of Troy, the son of the figure preduced Burke's Reflections.

in which Dr. Price was severely treated. He died in London in 1791.

Prichard (pritch'ard), JAMES COWLES, ethnologist, born a: Ross, in Herefordshire, in 1785; died at London in 1848. He studied medicine, and took the degree of M.D. at Edinand took the degree of M.D. at Edinburgh; commenced practice as a medical man at Bristoi, and in 1810 received the appointment of physician to the Ciifton Dispensary and St. Peter's Hospitai. In 1813 he published his great work, Researches into the Physical History of Mankind, and in 1843 appeared his Natural History of Man. He wrote many minor works on ethnology, besides treatises on various medical subjects. In 1845 he left Bristol for London, where he died. be died.

Prickly Ash, a name given to several prickly shrubs of the United States, genus Xanthosylum, order Rutacese. They have an aromatic and pungent bark, which from being used as a remedy for toothache gains them the

name of toothache-tree.

Prickly Heat, the popular name of an eruptive skin disease occurring in hot weather or in hot climates. It is characterized by the elevation of the papules of the skin and intense itching. While annoying, it is not in the least dangerous. One familiar variety of it is known as Lichen tropicus. See Lichen.

Prickly Pear, Opuntic vulgaris, nat. order Cactaceæ, etherwise cailed Indian fig. The opuntia is a fleshy and succulent plant, destitute

of leaves, covered with clusters of spines, and consisting of flattened joints inserted upon each other. The fruit is purpiish in color, covered with fine prickies, and edibie. The flower is large and yellow. It is a native of the tropical parts of America, whence it has been introduced into Europe, Mauritius, Arabia, Syr-ia, and China. It is easily propagated, and in some countries is used as a hedge-plant. It attains a height of

Prickly Pear (Opuntie vul-

7 or 8 feet.

Prideaux (pri'do), HUMPHREY, an English divine, born at Padstow, Cornwall, in 1648. He was suc-

of Suffoik, vicar of Trowne, and dean of Norwich. His chief works were The Old and New Testaments Connected in the History of the Jews and Neighboring Nations, and a Life of Mohammed. He died in 1724.

Sec Melia. Pride of India

Priest (prest; Hebrew, kohen; Greek, hiereus; Latin, sacerdes), in its most general signification, a man whose function is to inculcate and expound reiigious dogmas, to perform religious rites, and to act as a mediator between worshipers and whatever being they worship. In some countries the priesthood has formed a special order or caste, the office being hereditary; in other countries it has been elective. In sacred history the patriarchai order furnishes an exampie of the family priesthood. Abraham, Issac, and Jacob perform priestly acts, and 'draw near to the Lord,' as also does Job, and the Arab sheikh to this hour unites in his person the civil and reigious headship. The Mosaic priest-hood was the inheritance of the sons of Anron, of the tribe of Levi. The order of the priests stood between the highpriest on the one hand and the Levites on the other. (See High-priest and Levites.) The ceremony of their consecration is described in Exodus xxiv and Leviticus viii. They wore a special dreas, and their actions were in many cases pre-scribed strictly by the Mosaic law. Their chief duties were to watch over the fire on the altar of hurnt offerings, and to keep it burning continually; to offer a lamb morning and evening, and two lambs on the Sabbath, each accompanied with a meat-offering and a drink-offering at the door of the tabernacle. These were fixed duties which never varied, but their chief function was their being always at their post to do the priest's office for any guilty, penitent, rejoicing, or thankful Israelite. As their functions necessarily took with the priest's color of their colors. sarily took up the greater part of their time, a distinct provision had to be made for them by tithes, a share of spoil taken in war, of the offerings, etc. On the set-tlement of the Jews in Canaan the priestly order had thirteen cities allotted to them, with pastures for their flocks. In the time of David the priestly order was divided into twenty-four courses, each of which was to serve in rotation for one week, while the further assignment of special services during the week was de-termined by iot. The division thus instituted was confirmed by Soiomon, and con-Padstow, Cornwall, in 1648. He was suctinued to be recognised as the typical sessively prebendary of Norwich, rector number of the priesthood. In the New of Bladen, rector of Soham, archeeacon Testament believers generally are regarded

is held by many Protestants that the idea of a consecrated priesthood invested with sacrificial functions is repugnant to Christianity. In some churches, 'herefore, the name priest is not used, r', pastor, etc., being the term emple a stead. Those Christians, however, and like the Roman Catholics, Greeks, etc., look upon the eucharist as a sacrifice, regard the priest as performing sacrificial duties, and as standing in a special rela-tion between God and his fellow-man. The priests of the Church of Itome are bound to a life of cellbacy; but in the Greek Church a married man may be consecrated a priest. In the Anglican and other Episcopal churches the priests form the second order of clergy, bishops ranking first. Diverse views of the priestly office are beid in the Angilcan and ailied churches.

Priestley (prest'li), Joseph, an English scientist and divine, was born in 1733 near Leeds. His father was a clothier, of the Calvinistic persuasion, in which he was also himself brought up. At the age of nineteen he was placed at the Dissenting academy at Daventry, with a view to the ministry, where he spent three years. He there became acquainted

Joseph Priestley.

with the writings of Dr. Hartiey, which made a great impression upon his mind; and he was gradually led into a partiality for Arianism. On quitting the academy in 1755 he accepted an . itation to become minister at Needhan Market, in Suffolk, where he had to live as best he

as having the character of priests, and it atable to his congregation, who mostly deserted him, and in 1758 he undertoo the charge of a congregation at Nantwich, in Cheshire, to which he joined a school. About this time he published his first work, The Scripture Doctrine of Remission. In this he rejected the doctrines of the Trinity and the Atonement. In 1761 he became a teacher in the Dissenting academy at Warrington, and while here wrote a History of Electricity, which gained him admission to the Royal Society, and the degree of LL.D. from the University of Edinburgh. In 1767 he became minister of the Mill Hill chapel at Leeds, where his religions opinions became decided to the second of the Mills of the second came decidedly Socinian. While here he published his History and Present State of Discoveries relating to Vision, Light, and Colors (1772), his next important work being Institutes of Natural and Revealed Religion (1772-74). After a residence of six years at Leeds he accepted an invitation from the Eari of Shelburne, afterwards Marquis of Lansdowne, to reaide with him as a companion in the nominal capacity of librarian, with a salary of £250, an appointment which gave him ample opportunities for prosecuting scientific research. In 1774 he discovered oxygen, or 'dephiogisticated air,' as he called it, a result which was quickly followed by other important discoveries in chemistry. Among his works belonging to this period are Experiments and Observations on Different Kinds of Air; An Examination of Dr. Reid's Inquiry into the Human Mind; Hartley's Theory of the Human Mind; The Doctrine of Philosphical Nacceptains of the sophical Necessity; etc. Some of his philosophical works brought about differences between himself and his patron, and the connection was dissolved in 1780, Priestley retaining an annity of £150 per annum. He next removed to Birningham, where he became once more minister of a Dissenting congregation, and wrote History of the Corruptions of Christianity; History of Early Opinions concerning Jesus Christ; General History of the Christian Church; etc. Owing to his favorable opinions regarding the French revolution a mob assembled and set fire to Dr. Priestley's house, and in the conflagration his apparatus and manuscripts were destroyed. For this insane ontrage he received compensation, but according to his own estimate too little by £2000. On quitting Birmingham he became president of the Dissenting college at Hackney, hat was goaded by party enmity to seek an asylum in the United Suffolk, where he had to live as best he States in 1794. He took up his residence could on an average wlary of £30 a year. at Northumberland, in Pennsylvanis, His views did not, however, prové pal- where he died in 1804. He is regarded

as the founder of Unitarianism in the United States. As a man of science he stands high, while as a theologian, and especially as a historical theologian, he ranks low. As a metaphysician he holds a respectable position. But his great nat-ural powers were so distributed in attack-ing subjects the most varied that he never attained such excellence in any one branch as his talents deserved.

(prē-lö'kē), a town of Russia, ln the government of Priluki

Poltava, on the Udai. Pop. 19,055. Prim, Juan, Marquis De Los Castil-Lejos, Count De Reuss, Field-marshal and Grandee of Spaln, was born at Reuss, in Catalonia, in 1814. He was destined for the law, but on the outbreak of the civil war which followed the death of Ferdinand VII (September 29, 1833) he joined the volunteers who had taken up arms in the cause of the infant queen Isabella, and rose so rapidly that in 1837 he was appointed a colonel in the regular army. When Queen Maria Christina quitted Spain he allied himself reditionally of the clvll war which followed the death quitted Spain he allied himself politically with the Progresista party, and vigorously opposed Espartero, who had assumed the regency, May 8, 1841. During the next two years he was engaged in more than one Insurrectionary movement. On the downfall of the Espartero ministry Prim was appointed by the queen a brigadier-general, and afterwards Primary created Count de Reuss and governor of Madrid (1843). On the occasion of a democratic rising at Barcelona he was sent to restore order, but with little success. The revolt soon began to attain wide proportions, and Prim was accused of dilatoriness and dismissed from his command. In November, 1844, he was brought to trial for his share in a conspiracy for the assassination of Narvaez, president of the assassination of Narvaez, president of the council, and convicted and sentenced to six years' seclusion in a fortress, a sentence which was revoked by the queen in January, 1845. After some years of service under the Turks he returned to Spain, and was in 1857 promoted to the rank of lieutenant-general, and in 1858 reject to the senate. In the and in 1858 raised to the senate. In the following year, war having broken out between Spain and Morocco, Prim was appointed to the command of the reserve, and his successes in this war gained him the title of Marquis de los Castillejos, the 'Primate of England.' the 'Primate of England.' The name of England.' T Spanish contingent, which, along with others from England and France, was sent out to Mexico, but he withdrew along with the English. In January, cause he ranked man among the primates. 1866, he headed a revolt against the government of O'Donnell; but the insurerce
Primaticcio (prē-mā-tich'o)

France Casco, an Italian tion was speedily suppressed, and he was

compelled to fice. He succeeded in over-threwing Queen Isabella in 1868, after which he was appointed minister of war. He was shot by assassins in 1870.

Primary (pri'ma-ri), in geology a pelwosoio, the name given to the oldest known group of stratified rocks, including the Cambrian, Silurian, Devonian, Carbonlferous and Permian. See Geology.

Primary Elections, nominating elechave come to take the place of county and state nominating conventions. In 1860 the Republicans of Crawford county, Pennsylvania, discarded the county convention of delegates, choosing their county candidate by a direct election patterned in methods after the general election. Other local groups from time to time followed a similar plan, and in 1899 the state of Minnesota tried the direct primary for parties in the city of Minneap-olis. Success there led to its adoption throughout the state. Other states folthroughout the state. Other states fol-lowed, and in some direct nominations are mandatory for practically all offices. Every voter in theory may nominate whomever he pleases, but direct nomination laws tend to exclude from the primary ballot names not presented by a petition bearing a certain percentage of signatures.

Primary Schools, the same as ele-mentary schools. See Education.

(pri'mat), in the early Christian Church the title assumed by a bishop holding a position of pre-eminence. In Africa the title belonged to the bishop who had been longest ordained. At a later date 'primate' became the official title of certain metropolitans who obtained from the Pope a position of episcopal authority over sev-eral other metropolitans and who were at the same time appointed vicars of the Holy See. The title is still retained by the bishops of Armagh, Lyons, Malns, Toledo, Pisa, etc., though none of these possess any primatial jurisdiction. In the Church of England both the archbishops still retain the title of primate, the Archbishop of Canterbury being disthe Archbishop of Canterbury being dis-tinguished as the 'Primate of all Eng-iand,' and the Archbishop of York as the 'Primate of England.'

eyhen

painter of the Boiognese school, born at Boiogna in 1400. He received his first instruction from Innocenzo da Immola, and completed his studies under Giulio Romano. In connection with several of the pupils of the latter he painted the Palazzo dei Tè, in Mantua, from Giulio's Through the recommendation of Frederick, duke of Mantua, Primaticcio was taken into the service of Francis I of France in 1531. He did much to improve the paiace at Fontainebleau, and gave a new impetus to French art. He made a coilection of antique statues in Italy for Francis, and was appointed successor to Rosso as royai painter. He died in 1570.

(prim), in the Roman Catholic Church one of the canonical Prime hours, and also the service in the breviary which fails to be performed at that time. The term is derived from the Latin prima (that is, prima hora, first hour), because prime begins with the first hour of the day according to the Eastern mode of reckoning, namely, 6 o'clock.

Prime Conductor, that part of an electric machine from which sparks are usually taken.

Prime Minister, or PREMIER. See

Prime Number, a number which can be divided exactiy hy no number except itseif and unity.

(prim'ing), in steam-en-gines, the entrance of water Priming spray along with steam into the cylinder of an engine. It always causes great annoyance. The use of muddy water, insufficient steam-room, carelessly constructed flues and pipes, etc., in the boiler, give rise to priming. Superheating the steam is one remedy. Priming valves, a species of spring vaives, fitted to the cylinder, are so adjusted as to eject prim-

rimogeniture (pri-mō-jen'i-tūr), the right of the eidest son and those who derive through him to succeed to the property of the ancestor. The first-born in the patriarchai ages had among the Jews a superiority over his hrethren, hut the 'insolent prerogative of primogeniture,' as Gibbon denominates it, was especially an institution deveioped under feudalism. Before Norman conquest the descent of lands in Engiand was to ail the sons ailke, but the Guif of St. Lawrence, and separated later the right of succession by primogeniture came to prevail everywhere, except in Kent, where the ancient gaveikind on the south; greatest length, from east tenure still remained. The right of primogeniture is entirely aboitshed in France and Belgium, but it prevails in some square miles. The coast line presents a and Belgium, but it prevails in some square miles. The coast line presents a

degree in most other countries in Europe. The rule operates only in cases of intestacy, and is as follows: — When a person dies intestate, ieaving real estate, his eldest son is entitled by law to the whole. If the eidest son is dead, but has left an eldest son, the latter succeeds to the whole of the property. If the whole male line is exhausted then the daughters succeed not in the same way, however, hut jointly, except in the case of the crown, to which the eldest succeeds. In the United States no distinction of age or sex is made in the descent of estates to lineal descendants.

Primrose (primros; Primale),

Primrose (prim'ros; Primale), a genus of beautifui low Aipine piants, nat. order Primulaces. Some are among the earliest flowers in spring, as the common primrose, the oxip, and cowsip; and several Japanese and other varieties are cultivated in gardens as ornamental plants. The varieties of the common primrose which have arisen from cuitivation are very numer-

Primrose League, THE, a political society of English women founded for the furtherance of conservative opinions in England, and named after the favorite flower of Earl Beaconsfield, one year after his death, April 19, 1881. This anniversary is observed by the wearing of the primrose and the annual meetings in each great center of population.

(prim-u-la'se-ë), the Primulaceæ primrose order of piants, a nat. order of monopetalous exogens, distinguished by the stamens being opposite to the iobes of the coroila, and having a superior capsuie with a free central piacenta. It consists of herbaceous plants, natives of temperate and coldregions. Many have flowers of much beauty, and some are very fragrant. See Primrose.

(prins; Latin, princeps), literally one who holds the first Prince piace. In modern times the title of prince (or princess) is given to all sovereigns generally.

Prince Albert, a town of Saskatche-Canada, on Saskatchewan River. It has lumber, grain and cattle interests. Pop 6254. Prince Edward Island, an island, forming a province of the Dominion of Canada, in

projecting headlands. The surface undulates gently, nowhere rising so high as to become mountainous or sinking so low as to form a monotonous flat. The island is naturally divided into three peninsulas, and the whole is eminently agricultural and pastoral, the forests now being of comparatively limited extent. The capital is Charlottetown. The public affairs of the island are administered by a lieutenant-governor nominated by the crown, who appoints an executive council of nine members. There is also a legis-lative council of thirteen and a house of assembly of thirty members, both chosen by the people. There is an excellent educational system, the elementary schools being free. The island is supposed to have been discovered by Cabot. It was first colonized by France, captured by Britain in 1745, restored and recaptured, and finally, in 1873, was admitted to the Dominion of Canada. Pop. 93,728.

Prince of Wales, the title of the heir-apparent of the British throne, first conferred by Edward I on his son (afterwards Edward II) at the time of his conquest of the Principality of Wales.

See Amaran-Prince's Feather. thaceæ.

Prince's Metal, or PRINCE RUmixture of copper and zinc.

(prins'tun), a city, county, seat of Gibson county, Princeton Indiana, 27 miles N. of Evansville, in fields of coal, oil and gas. It is an impor-tant grain and cattle market, and has repair shops and manufactures of clothing hangers, carriages, canned goods, etc. Pop. 8500.

Pop. 8500.

Princeton, a town of Mercer county, New Jersey, 40 miles N. E. of Philadelphia and 10 miles N. E. of Trenton. It has gained distinction as the seat of Princeton University and Princeton Theological Seminary (q. v.). The town was first settled in 1696 and received its present name in 1724. It was here that the first State Legislature of New Jersey assembled. The Battle of Princeton was fought near the present site of the Graduate School January 3, 1777, when an American force under General Washington defeated the British and forced Cornwallis to fall back to New York, leaving New Jersey in the hands of the Americans.

Princeton Theological Seminary.

Theological Semi-Princeton

remarkable succession of large bays and in the United States. The seminary was established at Princeton, New Jersey, in 1812, with the Rev. Archibald Alexander as its first professor. The teaching force consists of a president and eleven professors, with several additional instructors. All professors are required to subscribe to the Westminster Confession of Eaith. The teaching is along strictly or-Faith. The teaching is along strictly orthodox lines, as distinguished from Union Theological Seminary (q. v.), New York, where more freedom of thought is permitted teachers and students. The library contains over 100,000 volumes.

Princeton University, a leading institution leading for the higher education of men at Princeton, N. J., established in 1746. It was called originally the College of New Jersey, and was located at Elizabethtown, sey, and was located at Emzapetinews, N. J. The first president was Rev. Jonathan Dickinson. In 1748 the college was removed to Newark, and in 1752 land was purchased at Princeton, and the correct of the first building—the famous was pare-hased at 17 heeton, and the con-ner stone of the first building—the famous Nassau Hall—was laid in 1754. Instruc-tion was first given in Nassau Hall in 1756. During the revolutionary war the college suffered heavily, but although the forces of England and the colonists surged across Princeton, the work of the institution went on, only one commencement, that of 1777, being omitted. From time to time many handsome buildings have been added. Among these may be mentioned West College, Reunion Hall, Vitherspoon, Edwards, Dod, Brown, Blair and Stafford Little Halls, Upper and Lower Pyne Buildings. Seventy-nine Hall. Lower Pyne Buildings, Seventy-nine Hall, Patton, Cuyler, Campbell, Holder and Hamilton Halls. Other beautiful buildings on the campus are the Isabella Mc-Cosh Infirmary, Dickinson Hall, Marquand Chapel, Alexander Hall, McCosh Recitation Hall, the University Library and Gymnasium, Graduate College, the Cleveland Memorial Tower (completed in 1912), the Palmer Memorial Stadium, and the University Dining Halls. An artificial lake, formed by flooding the low-lands near the university Was presented. lands near the university, was presented by Andrew Carnegie.

Instruction is given in philosophy, art and archeology, language and literature, mathematics and science. The Princeton Theological Seminary (q.v.) is a separate and distinct institution, though closely affiliated. The presidents of Princeton University have all been clergymen with the exception of Woodrow Wilson, who was head of the university from nary, of ministers for the Presbyte-rian Church, the oldest school of its kind off, owing to the war, a great number of

Princeton men volunteering for service. In 1916 the enrolment was 1555. A new Athletic Field, to be called Poe Field, has been planned.

Principal (prin'si-pai), the term used in the United States to designate the proprietor, chief, or head of an academy or seminary of learning.

Principal and Agent, a designaiaw, applied to that hranch of questions which relate to the acting of one person for another in any commercial transac-

Printing (print'ing), in a general sense, is the art of stamping impressions of figures, letters, or signs, with ink, upon paper, veilum, cloth, or any similar substance; hut the term is also applied to the production of photographs from negatives, where neither ink nor pressure is used. Printing may be done (1) from engraved metal plates, in which the ink is stored for transference in the sunk or incised lines of the pattern (see Engraving); (2) from a level surface, as polished stone, where the ink is confined to the lines hy a repellent medium (see Lithography); or (3) from surfaces in relief, where the ink is transferred from the raised characters, which may be either on one block or on separate or movable types. The latter method is so much the more important that it gives its restricted meaning to the term printing, unless where otherwise qualified.

History.—The rudiments of the art of

typography or letterpress-printing were undonhtedly known to the ancients so far as the taking of impressions from blocks is concerned, and this method is still practiced in China. The ancient Romans made use of metal stamps, with characters engraved in relief, to mark their articles of trade and commerce; and Cicero, in his work De Natura Deorum, has a passage from which Toland imagines the moderns have taken the hint of printing. Cicero orders the types to be made of metai, and cails them forma literarum, the very words used by the first printers. In Virgii's time, too, brands with letters were used for marking cattle, etc., with

the owner's name.

Block-printing in Europe, from single pieces of wood, can he traced back as far as the thirteenth century. In these hlocks the lines to be printed were in relief as in modern wood-engraving, and each leaf of the book was printed from a single hlock. The leaves were usually printed only on one side of the paper, the blank sides being afterwards pasted to-gether so as to give the volume the ordi-nary book appearance. By the middle of

the fifteenth century block-book making was a distinct craft in Germany and the Netherlands. Among the earliest species of German origin is an Apoca upsis, containing forty-eight illustrations on as many leaves; and among the of Netherlandish origin, the Biblia P., perum of forty leaves, both works of the early

fifteenth century.

It is a matter of much dispute to whom is due the merit of adopting movahie types. The invention has long been popularly credited to Johan Gutenberg, hut critical examination of early Dutch and German specimens and historical evidence would seem to point to Laurens Janszoon Coster, of Haarlem, as the first inventor. (See Coster, Gutenberg.) The date of the Haarlem invention is variously placed hetween 1420 and 1430. Coster's types were first of wood, then of lead, and lastly of tln; the first book printed from movahle types being probably one entitled Speculum Nostræ Salutis. Gutenberg in 1449 connected himself with a rich citlzen in Malnz, named Johann Fust or Faust, who advanced the capital necessary to prosecute the husiness of printing. Soon after (prohably in 1453) Peter Schöffer, who afterwards became Fust's son-in-law, was taken into copartnership, and to him helongs the merit of inventing matrices for castling types, each Individual type having hitherto been cut in wood or metal. The oldest work of any considerable size printed in Mains with cast letters, hy Gutenberg, Fust, and Schöffer friehed about 1455 is the Latin Schöffer, finished about 1455, is the Latin Bible, which is called the Forty-two-lines Bible, because in every fuil column it has forty-two lines; or the Mazarin Bible, from a copy having heen discovered in the library of Cardinal Mazarin in Paris. Fust having separated from Gutenberg in 1456, and obtained the printing-press for his own use, undertook, in connection with Peter Schöffer, greater typographical works, in which the art was carried to higher perfection. Fust was particularly engaged in the printing of the Latin and German Bible, the first copies of which, hearing date, were printed in 1462. Fust is said to have died of the plague in 1466 at Paris, upon which Peter Schöffer continued the printing husiness aione at Mains. After the separation of Guten berg and Fust the former had found means to procure a new printing-pra means to procure a new printing parameters and had printed many works, of which the most remarkable is the Astrological and Medical Calendar (in folio, 1457). In 1462 the city of Mainz was taken and sacked by Adolphus, count of Nassau, and this circumstance is said to have so deranged the establishment of Fust an

Printing

printers, established themselves at Rome. In 1469 we find printing at Venice and Milan; in 1470 at Parls, Nuremberg, and Verona; and by 1472 the art had become known in all the important cities of the continent. In 1490 it had reached Constantinents and by the middle of the stantinople, and by the middle of the next century had extended to Russia and America.

At the invention of printing the character of type employed was the old Gothic or German. The Roman type was first introduced by Sveynheim and Pannartz at Rome in 1407, and the Italic by Aldus Manutlus about 1500. Schöffer, in his edition of Clcero's De Officiis, produces for the first time some Greek cherecter. for the first time some Greek characters, rudely executed; but the earliest complete Greek work was a grammar of that language printed at Milan in 1476. The Pontateuch, which appeared in 1482, was the first work printed in the Hebrew character, and the conflict known Polyadet acter, and the earliest known Polyglot Bible — Hebrew, Arable, Chaldale, Greek, Latin — Issued from the press of Genoa become famous not only for the beauty of their types, but also for the general excellence of their productions. Among these may be noted: The Aidi of Venice (1490-1597), Baden of Parls (1495-1535), Estlennes or Stephens of Parls (1502-98), Plantin of Antwerp (1514-89), Wechel of Parls and Frankfort (1530-72), Elzevir of Leyden and Amsterdam (1580-1630), and Bodoni of Parma (1768-1813). in i516. Several printers' names have ma (1768-1813).

The art of printing was first introduced into England by William Caxton, who established a press in Westminster Abbey in 1476. (See Caxton.) in the midst of a busy mercantile life, while resident in the Netherlands, he began about 1468 to translate Le Recueil des Histoires de Troye of Raoulle le Fevre. This work was finished in 1471, and Caxton set about into England by William Caxton, who established a press in Westminster Abbey in 1476. (See Caxton.) in the midst of a busy mercantile life, while resident in the Netherlands, he began about 1468 to translate Le Recueil des Histoires de Troye of Raoulle le Fevre. This work was finished in 1471, and Caxton set about learning the new art of printing, with the view of publishing his book. The Recueil, the first English printed book, appeared in 1474, printed either at Bruges or Cologne. In 1475 The Game and Playe of the Chesse, the second English book printed, appeared at Bruges, of Goed Huebandry; and in 1597 the De-

Schöffer that many of their workmen were obliged to seek employment elsewhere. The truth seems to be that the inventor of the new art was Coster; that Gutenberg and Schöffer made Important Gutenberg and Schöffer made Important November, 1477. Between that date and improvements on it, and aided by Fust widely spread the results of the new art. From this period printing made rapid progress throughout Europe. In 1465 we find works printed at Naples; and in 1476 he began to practice the new art at Westminster. The first book printed in England, the Dictes and Sagrings of the Philosophers, was printed in 1401 Caxton printed upwards of seventy widely spread the results of the new art. Gower, Chaucer, Malory, etc. Upwards of twenty-two of these were translated by himself from French, Dutch, or Latin originals. The whole amounted to more than 18,000 pages, nearly all of follo size, some of the books having passed through November, 1477. Between that date and 1401 Caxton printed upwards of seventy volumes, including the works of Lydgate, Gower, Chaucer, Malory, etc. Upwards of twenty-two of these were translated by himself from French, Dutch, or Latin originals. The whole amounted to more than 18,000 pages, nearly all of follo size, some of the books having passed through three editions and a few through three. two editions, and a few through three. Caxton distinguished the books of his printing by a particular device, consisting of the initial letters of his name, with a cipher between. His first performances were very rude, the characters resembling those of English manuscripts before the Conquest. Most of his letters were joined together; the leaves were rarely numbered, the pages never. At the beginning of the chapters he only printed, as the custom then was, a small letter, to intimate what the initial or capital letter should be, leaving that to be made by the Illuminator, who wrote it with a pen, with rcd, blue, or green ink.

Caxton's two most distinguished successors were Wynkin de Worde and Richard Pynson. The former, a native of the Dukedom of Lorraine, served under Caxton, and after the death of his master successfully practiced the art of printing on his own account. The books which he printed are very numerous, and display a rapid improvement in the typographical art. He died in 1534. Pynson was a native of Normandy, and it is supposed that he also served under Caxton. The works which he printed are neither so numerous nor so beautiful as those of Wynkin de Worde. He was the first printer, however, who introduced the Roman letter into England. To Wynkin de Worde and Pynson succeed a long ilst of ancient typographers, into which we can-

not enter here. The first Scottish printers of whom we have any anthentic account were Walter monologie of King James VI. Edward Rabau, a native of Gioucestershire or required to reproduce the words in the Worcestershire, introduced the art into Aberdeen about 1620-22, and continued printing there tili 1649. In 1638 George Anderson, by special invitation of the Stick held in the left. The composing and having one end movable to enable it to be adjusted to any required in the left. The composing and having one end movable to enable it to be adjusted to any required in the left. The composing and having one end movable to enable it to be adjusted to any required in the left. The types are lifted by the composing and having one end movable to enable it to be adjusted to any required to any required to any required to a Edinburgh during the first half of the eighteenth century, was one of the most learned printers which any country has produced. Printing was introduced in the New England States of America in 1639, the first known print being the Freeman's Outh; in 1640 what is known as the Bay Psalm-book was printed in Camhridge, Massachusetts. Benjamin Franklin was one of the first to study and practice the art of printing at Boston, and afterwards practiced it for a long time in Philadelphia.

long time in Philadelphia.

Processes .- The various letters and marks used in printing are cast on types or rectangular pieces of metal, having the sign in relief on the upper end. These types, with the low pieces required to fiil up spaces, are placed in ceils or boxes ln a shallow tray or case in such way that any letter can be readily found. The cases are mounted on a stand or frame, so that they may lie before the person who is to select and arrange the types, technically styled a companion. who is to select and arrange the types, technically styled a compositor. The Roman types used are of three kinds: an alphabet of large capitals (A B C, etc.), one of small capitals (A B c, etc.), and one of small letters (a h c, etc.), called lower-case by the compositor. Of Italic characters only large capitals and lower-case are used. Besides these there are many varieties of letter, such as Old English, and imitations of manuscript letters, the mention of which could only be serviceable mention of which could only be serviceable to the practical printer. Types are of various sizes, the following being those in various sizes, the following being those in nee among British printers for hook work:

— English, Pica, Small Pica, Long Primer, Bourgeois, Brevier, Minion, Nonpareil, Pearl, Diamond. English has 5½ lines and Diamond 17 lines in an inch. Type is now cast on the standard point system, pica, or 12 point, being the standard, Six pica ems measure 1 inch. Brevier type is equal to 8 point, nonpareil 6 point. The other types named above are irregular sizes as measured by the point irregular sizes as measured by the point system. All sizes from 5½ to 12 point are made. Large, display type fonts are multiples of 6 point. (This Encyclopedia is set in Minion, or 7 point.)

The matter so set up is now proofed; that is, an impression is printed from it, and this goes into the hands of the printer's render. The reader compares the proof with the author's manuscript, marks all deviations, and corrects the composi-tor's errors. When these have been put right a fresh proof is taken and is sent to the author for his inspection. When the pages of a book are finally passed by the author as correct, they may be arranged either for casting (done by stereotype or by electrotype process) or for going to press to be printed from. If the former, they are fixed, probably singly, in a rectangular frame of iron, or chase, as it is called, by means of wedges, and sent to the foundry. If the latter, so many of them as are required to cover one side of the sheet of paper to be printed on are fixed in a correspondingly. printed on are fixed in a correspondingly larger frame and sent to the printing press or machine. The pages thus arranged and fixed in the chase is called a forme. They are placed in such order that when the impression is taken off, and the sheet folded the pages will follow each other in proper order.

when there are more sheets than one in a work it is advisable to have these readily distinguishable from each other. To secure this, letters (called signatures) are placed at the bottom of the first page of each sheet, A for the first sheet. B for the second, c for the third, and so on through the alphabet. Thus, by merely looking at the signature the binder of the book can be sure that the sheets follow in proper sequence.

In proper sequence.

When the required number of copies have been printed from a forme of movable type, or when casts have been taken able type, or when casts have been taken Composing.—The main part of the able type, or when casts have been taken work of a compositor consists in picking from a page, the chase is carried back done, by distributing ail the types, that is, putting them back into their respective ceils in the case. They are then ready for further combinations as required.

Composing Machines.—Several attempts have been made to expedite the work of the compositor by calling in the aid of machinery. A large portion of the compositor's work consists in correcting the reader's and the author's

proofs, in arranging the types in pages, in imposing these pages in formes, and in dress-ing the formes for press. These processes are so varied and in-tricate as to be beyond the range of machinery. For composing newspapers, where the work is piain and speed is of the first consequence, composing ma-chines of different sorts have proved themselves efficient aids,

and have come into use to an extent that a few years ago was considered very unlikely. same method has been applied to bookmaking and the oid system of 01 hand-setting of types has been largely replaced

by machine-set-ting. Various ma-chines designed for this purpose have been in-vented, in the earlier ones the types being in different ways made to fall mechanically into place. But all these have been set aside by the linotype machine, the inven-

to the composing room, and the compos-itor undoes the work that was formerly somewhat like a typewriter's by the com-done, by distributing all the types, that is, positor. When a line of matrices is putting them back into their respective composed it is removed to another part of the machine, where it is automatically spaced out, then moiten metal is injected into it, a 'ine-o'-type' cast in one piece is produced; this line, dressed by cutters to correct thickness and height, takes its piace in a coiumn, while the matrices themseives go back along rails, and drop off into their

respective channels as they are reached. When it is remembered that after the compositor

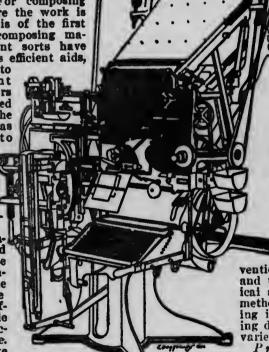

has set up the line of matrices, checked it as correct, and turned a switch, the whoie of the subsequent operations indicated above are purely automatic, some idea may be formed of the amount of ingenuity expended on this piece of mechanism. It is used almost univer-sally in newspaper offices throughout omces throughout
the entire world,
and is very largely
employed in bookmaking. Another
machine, the Mon-

otype, of later invention, casts single types, and thus forms a mechanical successor to the older methods, and is now coming into extersive use, being distinguished by a rich

variety of type faces.

Printing.—When the form of types has been prepared for press by the compositor it is passed over to the pressmen, who form a distinct craft. The act

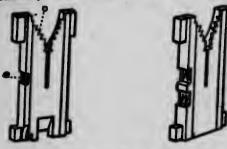

Mergentbaler, this being not only a composing but a type-casting machine. In its main features the linotype is wholly unlike any previous machine. No types are used; metal matrices similar to those employed by typefounders take their place. The few matrices used are stored in vertical channels as types are in other matrices, and they are similarly brought to the special channels as types are in other matrices, and they are similarly brought to the type by means of a sheet of paper on the types with such weight as to cause the ink to adhere to it. The ink used is a thick, viscid fluid made of boiled linseed-oil and lampblack. It is applied to the type by means of a relier covered with an elastic compound together into words and lines on the

under them and receive ink in passing. In hand-printing the paper is placed and the pressure given hy a second workman. In machine-work the sheet may be placed by an assistant, or taken in by the machine itself, or otherwise supplied by a continuous web from a reel.

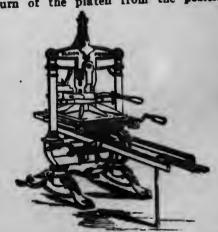

These operations, purely mechanical, have, however, to be preceded by a stage of preparation called making ready, which calls for more or less skill and taste from the workway. the workman. His craft in plain work is to produce printed sheets the letters or reading on which shail be sharp yet soild, with the color or depth of black uniform all over the sheet, and each sheet uniform an over the sheet, and each sheet uniform with the others which are to form the book. This is attained partly hy properly regulating the supply of ink, but mainly by getting uniformity of pressure, as any portion of a sheet more firmly impressed than another will hring off more coior. When there are illustrations in the forme the printer's craft is the reverse of this for he reverse. is the reverse of this, for he seeks to give artistic effect to the pictures by ali shades of color, from deep black in the shadows to the lightest tints in the skies. shadows to the lightest tints in the science. These effects are got entirely by variations in pressure, the dark parts being the screw requiring to be turned back; heavily pressed, while the paper barely hut it was not till the year 1620 that touches the inked surface in the light touches the lig tints.

Mechanism of Printing.—The mechanism of printing, at first of a very simple kind, has latterly attained to great perfection and efficiency. Three methods

are followed for obtaining the impression which produces the printed sheet. The first and simplest is by the advance toward each other of two flat surfaces, one (the hed) carrying the type-forme, one (the hed) carrying the type-forme, the other (the piaten) carrying the blank sheet to be printed. The second is hy the rotation of a cylinder above a type-table traveling hackwards and forwards, the table helng in contact with the cylinder in advancing and free in returning. The third and most recently adopted method is the contact of two cylinders revolving continuously in the same direction, one carrying the type-surface and tion, one carrying the type-surface and the other hringing against it a continuous weh of paper, which it afterwards cuts into sheets. Presses or machines of the first class are called plates.

the first class are called platen, the second cylinder, and the third rotary.

The press used by Gutenberg was of a very rude description, the ink being applied by means of leather-covered bails stuffed with soft material, and having suitable handles, and the pressure being obtained by a screw which hrought down a flat block or platen. The first improvement on this device seems to have been the construction of suides analysis. been the construction of guides, enabling the type-forme to be run under the impressing surface and withdrawn with facility. Other necessities soon after arose, chiefly that of obtaining a rapid return of the platen from the position

Albion Press.

Janssoon Blacu, a native of Amsterdam. Charles Mahon, the third earl of Stanhope, was the author of the next great improvement in printing-presses, about 1800. He devised a combination of levers, which he applied to the sid screw-press. These levers brought down the platen with greatly increased rapidity, and what was of still greater importance, converted at the proper moment that motion into direct pressure. The pressure was under control and capable of easy adjustment. The press was of iron, not of wood as was the case with all previously constructed presses, and it exhibited a number of contrivances of the most ingenious character for facilitating the work of the pressman. In tating the work of the pressman. In 1818 John Ruthven, a printer of Edinburgh, patented a press on the lever principle, with several decided improvements. The Columbian Press, invented in 1814 by G. Clymer, of Philadelphia, and the Albion Press, were the latest contriv-ances. Even in its best form the handpress is iaborious to work and slow in operation, two workmen not being able to throw off more than 250 impressions in an bour. It therefore became imperative, especially for newspapers, to devise a more expeditious and at the same time a more easy method of taking impressions

from types. So early as the year 1790 Mr. Nicholson took out letters-patent for printing by machinery. His printing-machine never became available in practice, yet he de-terves the credit of being the first who suggested the application of cylinders and inhing-milians. About the present the and inking-roilers. About ten years later König, a printer in Saxony, turned his attention to the improvement of the printing-press, with a view chiefly to accelerate its operation. Being unsuccessful in gaining assistance in his native country to bring his scheme into operation, he came to London in 1806. There he was received with equal coldness but ultireceived with equal coldness, but ulti-mately, with the assistance of Mr. Bensiey, he constructed a machine on the platen or hand-press principle. Afterwards he adopted Nicholson's cylinder principle, and succeeded in producing a machine which so satisfied Mr. Waiter, proprietor of the *Times* newspaper, that an agreement was entered into to erect two to print that journal. On the 28th of November, 1814, the reader of the Times was informed that he heid in his hand a paper printed by machinery moved by the power of steam, and which had been produced at the rate of 1800 improvembers per hour. This is commonly pressions per hour. This is commonly supposed to be the first specimen of printing executed by steam machinery; but König's piaten machine was set to work in April, 1811, and 8000 sheets of signature H of the Annual Register for 1810 were printed by it. That was un-

ered with cloth, round which the paper was led by tapes, each paper or impression cylinder having a feeding apparatua and two boys tending. The type used was the ordinary kind, and the form was placed on a portion of the large cylinder. The surface of the type formed a portion of a polygon, and the regularity of the impression was obtained by pasting slips of paper on the impression cylinders.

Few machines, however, of this construction were made, a formidable rival having appeared, devised by Messrs. How & Co., of New York. It was constructed with from two to ten impression cylinders, each of them printing from a set of types piaced on a horizontal central cylinder of about 6½ feet in diameter, a portion of which was also used as a cylindrical ink-table, each of the encircling cylinders having its own inking rollers and separate feeder. A machine of this construction, having ten impression cylinders, threw off at the rate of 18,000 impressions an hour.

Repeated attempts were made by inventors to construct a machine which would print from the continuous roll or web in which paper is supplied by the paper-making machine. Experiments were conducted successfully by Nicholson, Stanhope, Sir Rowland Hill, Applegarth, and others, but the difficulties for the time proved insurmountable. These, however, were at length overcome, and the result is the construction of a class of machines which possess the merit of being at once simpler, more expeditious, and more economical in requiring less attendance than any previous contrivance

The first machine on the web principle that established itself in the printing-office was the 'Bullock,' an American contrivance. It was, however, speedily ecilpsed by the 'Waiter Press,' invented and constructed on the premises of the London Times. Since them several other rotary machines have been invented and brought into extensive use. The 'open-delivery' machine (that is, unprovided with an apparatus for foiding the papers) of the latter firm may be taken as a type of rotary machines, and is shown in the figure. The roll of paper P is placed im-

mediately above the type cylinders, which are fitted to a horisontal frame. The are fitted to a horizontal frame. The web is printed on one side by the forme on the cylinder T, then on the other on cylinder T', and thence passes between two cutting cylinders CC which are of the same diameter as the printing cylinders. The sheets thus severed then travel upward over a drilling and when any desired The sheets thus severed then travel upward over a drum, and when any desired number of sheets are gathered they are directed by a switch down the flyers F and deposited on the taking-off board D. E is the impression cylinder for the printing cylinder T, and E' for T'. The cylinder E' is made of large diameter in order that the blanket with which it is covered may absorb the surplus ink of the first-printed side of the web. The inking apparatus consists of two drums parallel to each other, each provided with the necessary inking-rollers II. The producing

the carriage, brings down the platen and returns it, then runs out the carriage, the tympan being lifted by attendants, who remove the printed sheet, replace it with another, turn down the tympan, and leave the machine to go through its motions over again. The great improvements recently made on cylinder machines, especially of the 'French' class, having made them capable of producing book work of the finest quality, the use of the platen is now confined to special sorts of work.

Up to 1840 there was no press strong enough to print properly a wood cut of

enough to print properly a wood cut of 48 square inches in size; now cuts of 2000 square inches, or 50 by 40 inches, are printed in the most perfect manner. The colored sappiements of the pictorial inches. journals are often admirable reproduc-

tions of works of high art.

Open-delivery Web Machine of Hoe & Co.

power of this machine is from 12,000 to 15,000 perfect eight-page papers per hour. Machines of later origin very greatly monastery, designated a priory. Similarly the term prioress was applied to the papers of 8 to 12 pages being printed at a speed of 24,000 per hour, and 4 to 6 page papers at 48,000 per hour.

The machines hitherto described have been of the cylinder class and of the

been of the cylinder class and of the outcome of that class—the rotary. Prior, MATTHEW, an English poet, the Prior, son of a joiner, born in 1644, and educated at Westminster School. He early found a patron in the Earl of Dorset, through whose good offices he was enabled to enter, in 1682, St. John's College, Cambridge, where he was graduated as B.A. in 1686, and was shortly after chosen failow. brought him into fame, and in 1690 he was appointed secretary to the English embassy at The Hague. In 1697 he was nominated secretary to the pienipotentiaries who concluded the Peace of Ryswick, and on his return was made secretary to the iord-lieutenant of Ireiand. In 1701 he entered Parliament as a Whig, but soon after changed his politics and joined the Tory party. He was in consequence excluded from office during the régime of Marlborough and Godolphia, and he employed himself in writing and publishing another volume of poems. In 1711, when the Tories again obtained the ascendency, he was employed in secretly negotiating at Paris the terms of the Treaty of Utrecht, and he remained in France until 1714, at first as a secret agent, afterwards as ambassador. On the accession of George I, when the Whigs were once more in power, Prior was recalled and examined before in negotiating the Treaty of Utrecht, and was kept in custody on a charge of high treason for two years, although uitimately discharged without triai. During his imprisonment he wrote Alma, or the Progress of the Mind, which, together with his most ambitious work, Solomon, was published in 1718. He died in 1721 and was buried in Westminster Abbey. Prior was endowed with much wit and power of satire; and many of his lighter pieces are charming, but his serious performances faii in moving either the feelings or the fancy.

Priscianus (prish'i-an-us), usually known as Priscianus, a celebrated Roman grammarian, who lived in the latter half of the fifth century of our era, and of whom little more is known than that he was born at Cæsarea, tanght grammar at Constantinople in the time of Justinian, and wrote the Institutiones Grammaticæ, an exposition of Latin grammar. His work, successively abridged by several writers, formed the basis of instruction in Latin up to the fifteenth century, and there exist at present about one thousand MSS. of it, none dating before the ninth century. It contains numerous quotations from Latin authors now just

Priscillian (pris-il'i-an), the founder of a sect in Spain, known as Priscillianists, in the middle of the fourth century, their doctrines being a mixture of Gnosticism and Manicheism. Priscillian was himself a weaithy and accomplished man, of very temperate and strenuous habits. His foilowers did not leave the Catholic Church, and he was actually at one time made a bishop him-

seif. He was uitimately executed at Treves in 385, after a prolonged struggle with the orthodox clergy. The most distinctive part of his creed was the beilef in an evil spirit as the supreme power. His sect lasted until about 600 A.D.

Prism (prism), in geome ry, a solid figure which might be generated by the motion of a line kept parallel to itself, one extremity of it being carried round a rectilinear figure. A 'right prism' is one in which the faces are at right angles to the ends. In optics a prism is a transparent body having two plane faces not parallel to one another, and most commonly it is made of glass, and triangular in section, the section forming either a right-angled, equilateral, or isosceies triangie. The two iatter

Light passing through Prism.

varieties are most familiar. If a ray of light, sI, enter such a prism by one of the two principal faces, it is bent in passing through so as to take the direction by SIEB. The angle which the ray in the prism makes with the normal, NI, is always smaller than the angle of incidence, NIS, and the angle which it makes with the normal, EN', is smaller than the angle of emergence, N'EB, the ray being always bent towards the base of the prism. Not only is the ray thus bent, but it is also decomposed, and by suitable arrangements could be exhibited as made up of what are usually known as the seven primary colors: violet, indigo, blue, green, yellow, orange, and red. See Color, Light, Optics, Spectrum.

Prison (priz'n), a house in which a person is confined and thereby deprived of his personal liberty; especiaily a building for the confinement or safe custody of criminals, debtors, or others. Imprisonment is now one of the recognized methods of judiciaily punishing certain crimes; but formerly it was employed in nearly every coun-

try in Europe for purposes of injustice and oppression. Men were hidden in dark dungeons, where in a short time they perished, through the infliency of the law to protect those who were offensive to the powerful; and even in Great Britain, where the laws have always condemned the incarceration of the innocent, the prison was, by the connivance of the authorities, made subservient to gross injustice and cruelty. To the eighteenth century belongs the honor of initiating the proper regulation of imprisonment. In Britain parliamentary inquiries hrought out strange mentary inquiries hrought out strange revelations as to the horrors of the debtors' prisons; hut public interest in the subject was only effectually aronsed by the extraordinary exertions of the ceiebrated John Howard, who in 1773 began, without any official standing, to make inspections of the chief English prisons. He found these piaces not only inprisons. He found these places not only insanitary and ill ventilated, hut filthy, poisonous, and in nearly every case overcrowded. Disease was rampant, and no measures were taken to prevent its spread; many of the prisons were utterly unfit for human creatures to live in; and, to crown all, such intercourse was allowed between the prisoners as ensured the reduction of all to the level of the most corrupt and criminal. Howard's revelations caused such a feeling throughout the country that prison reformation could no longer he delayed. The result was that parliament entrusted a committee of three (of whom Howard was one) with the duty of framing a suitable scheme for the future management of the prisons. Their recommendations were embodied in the Act 19, Geo. III c. 74 (1779), which seta forth distinctly the principles that were to govern future prison discipline in Britain. The chief features amphasized sanitary and ill ventllated, but filthy, poiforth distinctly the principles that were to govern future prison discipline in Britain. The chief features emphasized are—solitary confinement, cleanliness, medical help, regular work, and the enforcement of order—the same principles, indeed, which are now adopted by every civilized state in the world. Up almost to this time many criminals had been sent as convicts to America; but this being no ionger possible, the new scheme was intended to provide accommodation for such at home. Anstralia. almost to this time many criminals had been sent as convicts to America; but this being no longer possible, the new scheme was intended to provide accommodation for such at home. Anstralia, however, now presented itself as a new field for transportation, and the legislature hailed with joy this new receptacle for criminals. The newborn seal of the public died out with the absence of any need for change, and the whois scheme dropped for eleven years, to be revived again by the earnest enthusiassm, of a single individual. In 1781 Bentham

published a work, in which he constructed (on paper) a model prison, which he called the Panopticon. Next year he proposed himself to construct the building in reality. His ideal prison was not unlike Howard's; but Bentham trusted greatly to publicity and free communication between criminals and the public for the protection of the inmates. communication between criminals and the public for the protection of the inmates from oppression. In 1794 the government adopted his scheme, but the construction of the prison was put off till 1810, when Sir Samuel Romiliy moved Parliament to take up the matter once more. This time it was pushed to a auccessful issue; and in 1811 was erected the famous penitentiary of Milibank, virgonia protection of the protection of the immates and the public protection of the immates and the public protection of the immates and the public protection of the immates and the immates and the protection of the prison was put off tiling the protection of the prison was put off tiling the prison was put off tiling the protection of the prison was put off tiling auccessful issue; and in 1811 was erected the famous penitentiary of Milibank, virtually on Howard's plans, and destined to be the precursor of the modern prison. This was only the beginning of reform, and the credit of carrying it on is largely due to the Prison Discipline Society, and to Mr. Buxton and Mrs. Fry, its leading members. The latter began her work at Newgate in 1813, and found that prison in a state as had as can be imagined. Among the prisoners themthat prison in a state as had as can be imagined. Among the prisoners themselves she effected a reformation, perhaps only temporary; but among the public her efforts inangurated a desire for improvement which resulted in the abolition of all such scandals. In 1824 and 1825 the legislature passed important acts for the regulation of prisons, containing provisions for moral and sanitary care of prisoners, separation of the tary care of prisoners, separation of the sexes, etc. The nse of irons was partially forbidden, and separate ceils for each prisoner recommended. These laws, though not carried out to the letter at first, were very helpful to future reformers. In 1831 a committee of the House of Commons reported in favor of House of Commons reported in favor of separate ceils in all cases, and this suggestion was adopted. The gradual work of modernizing prisons then went on until the cessation of transportation to New Scuth Wales in 1840 and the general defects of this system rendered it necessary to look out for new ways of disposing of the criminal population. The chief features of the new scheme now brought into operation consisted of men, and these had uitimately to be liberated at home. At present the system of imprisonment in Britain stands thus: When the convict is sentenced for a period of two years or less, the punishment is technically termed imprisonment. The criminal passes the time in a local prison, where he lives in solitary confinement and works at the tread-wheel for a month; if his conduct is good he receives marks which entitle him to improved conditions as the close of his term approaches. Penal servitude is the title applied to terms of imprisonment which exceed two years. It is passed in a convict prison, and is divided into three periods. The first lasts nine months, is one of solitary confinement, and during it the convict is set to work at some industry. The second period is also distinguished hy celinlar isolation, but the convict works along with others at one of the great convict prisons, such as Portland or Dertmoor. The final period is that of release on ticket-of-leave, during which the convict is ohliged to report himself at intervals to the police.

In the United States prison horrors in the early days differed only from those

In the United States prison horrors in the early days differed only from those of the mother country in the fact that prisons were rare. Connecticut for more than fifty years had an underground prison in an oid mining pit. In Philadelphia ail grades of criminals and both sexes were huddled together. In Boston debtors were confined with criminals in common night-rooms. Every village had its stocks, pillory, and whipping-post. Reform began in Philadelphia, where in 1776 was formed 'The Society for Alleviating the Miseries of Public Prisons.' The Boston 'Prison Discipline Society' of 1824, and the 'Prison Association of New York,' organized later, are still active. The 'National Prison Association of America' was formed in 1870, now one of the most efficient in the world. Prison reform congresses have been held in ail large cities, where the humanitarian influences of state officials have been unified in one body. One of the misfortness of the prison systems in many of the States is a disposition to regard convicts as slaves of the state, the profit of whose labor is so much clear gain to the state treasury. Competition with labor outside the prison wails being thus forced, troubles have ensued of great peril—as in Tennessee in 1890-98 among iron and coal miners, and in other Southern and Western States. In some of these States the convicts are made to perform outdoor labor and at times hired out to centractors by whem they are often treated very harshly specifications.

crueily. The evils of this system have of late been made evident, and earnest efforts to reform or do away with the system are being made. See also Punishment.

Privateer, a vessel of war owned and dividuals to seize or plunder the ships of an enemy. Such a vessel must be licensed by government and under a letter of marque, otherwise she is a pirate. The letters of marque were first granted in England during the reign of Henry V, in view of the war with France; and they were issued to aggrieved subjects in order that they might compensate themselves for injury done by foreigners. In the sixteenth century it became common to grant commissions became common to grant commissions to privateers. England, Holland, and Spain, as the three principal naval powers, used this effective weapon freely; and France also sent out privateers in every war in which the was engaged. A neutral is not forhidden by the law of nations to accept a commission for privateering; but he may be, and generally is, by treaty. In 1818 Congress passed a law forbidding enlistments on foreign privateers. By the Declaration of Paris, 1856, the great powers of Europe mutually agreed to abandon the right to arm privateers in case of war; but several nations, chief of them being the United States and Spain, have not agreed to this, and it is doubtful whether it will be always strictly acted upon even by the partles to the declaration. The German volunteer fleet of 1870 can not be very clearly distinguished from a collection of privateers. The practice of privateering, while nsefni to maritime nations to accept a commission for privaprivateering, while nsefni to maritime countries, and necessary at one period to Engiand, is very harassing to trade, and gives endiess opportunities for private plunder. It was probably in deprecation of irresponsible warfare of any kind that the powers agreed to ahandon privateering in 1856. At the Hague Conference of 1907, the question of privateering was considered, and strict precautions taken against the revival of this practice in navai war, hy insisting that when merchant vessels are converted into cruisers they shall be formally enrolled on the naval list and pisced under the command of a commissioned naval officer, with a crew subject to naval discipline. Privet (privet; Ligueirum), a genus of plants of the order Oleacem.

The common privet (L. vulgëre) is a native of Europe, growing 8 or 10 feet high; the leaves are elliptico-ianceolate, entire, and smeoth; the flowers slightly odorous, white at first, but soon change dark purple, approaching black. This species is much used in English gardens for ornamental hedges. It is found in woods from Virginia to Mississippi, and is now widely the for hedges and other ornamental purposes in the United States.

There are numerous other species.

Privilege (priv'i-lij; Latin, privelegium), a particular exemption from the general rules of law. This exemption may be either real or personal: real, when it attaches to any place; personal, when it attaches to persona, as ambassadors, members of Congress, clergymen, is yers, and others. Real privilege is not a intro importance; personal privilege, havever, is guaranteed to many indiviousle. Sentor and counsels are except from a est like in court; and Congressmen while a steendance in and ging and recurring from their respective Pouses.

Privilege ! Commonnestion. See Confinerial ( min. vicetic t.

Privy-chemibe: GANTLENEN or royal honsehold of England, is stituted by Henry VII. Their duties is to attend the sovereign; but their appointment is now merely a result in the source. now merely a matter honor, neither service nor salary being attached to their

Privy-council, the council of state ereign, convened to concert matters for ereign, convened to concert matters for the public service, and for the honor and safety of the realm. The English prlyy-council may be said to have existed from times of great antiquity; but the councilium ordinarium, established hy Edward I, was the parent of the modern institution. It consisted of the chief ministers, judges, and officers of state, and grew in power and influence rapidly, though repeatedly checked hy jealons Blankinments. Since the time of the Long though repeatedly checked by jealons Parliaments. Since the time of the Long Parliament the power of the council has been much reduced, and the rise of the cabinet has effectually blotted out all the more important functions of the earlier body. The privy-council of Scotland was absorbed in that of England at the union; but Ireland has a special privy-council still. As it exists at present, the number of members of the privycouncil is indefinite; they are nominated by the sovereign at pleasure, and no pat-ent or grant is necessary, but they must be natural-born subjects. The list of privy-councilors (some 200 in number) now embraces, besides the members of the royal family and the members of the royal family and the members of the

cabinet, the archbishops and the Bishop of London, the great officers of state, the lord-chancellor and chief judges, the speaker of the House of Commons, the commar der-in-chief; and other persons who has or have filled responsible offices und the crown, as well as some who may not have filled all in the lord-president of the council, who is appointed by patent, and who manages the debates and reports results to the sovereign. A and reports results to the sovereign. A member of the privy-council has the title of 'right honorable.' It is only on very extraordinary occasions that all the members attend the council, and it is not now usual for any member to attend unle specially summoned. The attendance of at least six members is necessary to constitute a council. Privy-councilors are by their oath bound to advise the crown without partiality, affection, or dread; to keep the council accrete to avoid council. keep its counsel secret, to avoid corruption, and to assist in the execution of what is resolved upon. While the political importance of the privy-connell, once very great, has been extinguished by the growth of the system of party covernment, it still retains functions bata administrative and indicial. ministrative and judicial.

ministrative and judicial.

Orders in council are orders issued by the sovereign, by and with the advice of the privy-council, either by virtue of the royal prerogative, and independently of any act of Parliament, or by virtue of such act, authorising the sovereign in council to modify or dispense with certain statutory provisions which it may be expedient in particular conjunctures to aiter or suspend.

aiter or suspend.

Privy-purse, officer of the royal household of Great Britain, whose function it is to take charge of the payment of the private expenses and charities of the sovereign.

Privy-seal, a seal appended by the British sovereign to such grants or documents as are afterwards to pass the great seal. Since the time of Henry VIII the privy-seal has been the warrant of the legality of grants rom the crown, and the anthority for the lord-chancellor to affix the great seal; such grants are tarmed letters-nates. such grants are termed letters-patent. The officer who has the custody of the privy-seal is called lord privy-seal, and is the fifth great officer of state, having also generally a seat in the cahinet.

Prize (pris), anything captured in virtue of the rights of war. Property captured on land is usually called booty, the term prize being more particularly used with reference to navai captures. The right of belligereuts to

as the right to prevent violation of the law of nations by neutrals, so long as the independence of other nations is not interfered with. It is accordingly settled as a principle of the law of nations that every belligerent has a right to establish tribunais of prize, and to examine and decide upon all maritime captures; and likewise that the courts of prize of the captors have exclusive jurisdiction over all matters relating to captures made under the authority of their sovereign; excepting only in cases where the capture was made upon the territory of a neutral, or hy vessels fitted out within a neutral's limits. These cases involve an invasion of the neutral's sovereignty, and must be adjudicated in his court. The decisions of the prize courts are final and conclusive upon the rights of property involved; and if their judgments work injustice to the subjects of other powers their claims must be adjusted between the sovereigns of their respective states. Prior to the entrance of the United States into the European war (1917), the American government protested against the British procedure of taking neutral vessels into port for examination, contending that the appropriation should be tending that the examination should be carried out on the high seas; Great Britain pleaded that because of Ger-many's unlawful employment of the submarine the prize rules must of necessity be altered. The decisions of national prize courts may properly be subjected to international review.

ously constructed, but regularly has one side gulte flat, on a line with the stem and stern. while the other side is curved in the usual way; and helng equally sharp at stem and stern, it salls equally well in either di-rection with-

out turning.

(prob'a-hli-istz), a Probabilists name applied to those philosophers who maintain that certainty is impossible, and that we must be satisfied with what is probable. This was the doctrine of the New Academy at Athens, particularly of Arcesilaus and Carneades.

(prob-a-bil'i-ti), in al-Probability sehra, the mathematical investigation of chances; the ratio of the number of chances; the ratio of the number of chances by which an event may happen to the number by which it may both happen or fail. If an event may happen in a ways and fail is be ways, and all these ways are equally likely to come the number likely to the number l likely to occur, the probability of its

-, and the probability happening is -

'certainty' of its failing is being represented by unity. When the probability of the happening of an event is to the probability of its failing as s to b, the fact is expressed in popular language thus—the 'odds' are a to b for the event, or b to a against the event. If there are three events such that one must happen, and only one can happen, and suppose the drst event can happen in a ways, the second in b

that it will be

black is 4/12 or 1/3, the probability that sdlis), a native of Borneo, distinguished it will be red is 5/12. The theory of probabilities is a complicated and extensive shortened thumbs, and its elongated one and has been much utilized in actuarial science; it has also been used in These monkeys are arboreal in habits, and appear to frequent the neighborhood probate Court (probat) is a tribunal exercising troops.

[Probate Court Augusting to the Dealers (probas) Marcus Augusting in principles. jurisdiction in questions relating to the probate of wills, the administration of property left by intestates, the management of testamentary trusts, the guardianship of infants, and similar matters. A probate judge is commonly called a surrogate, and in some states the tribunal itself is known as a surrogate's court. The ordinary courts of common law and the probate courts have as a rule concurrent jurisdiction in removing trustees Germanic campaigns brought him into and guardians. In England a probate stiii more prominent notice. On the

Probation (pro-ba'shun), in penology a plan wherehy criminals or delinquent children are set at liberty by the court under the supervision of a probation officer, who is responsible to the court for the good conduct and progressive reform of the offender. If the latter fails to meet the conditions of the probation he may be brought back to court and consigned to a prison or reformatory. When he fulfills them he is released from probation and becomes a released from probation and becomes a civil suit throughout its various ity reformation is much more provable if the individual is permitted to live under normal conditions with the advice of an intelligent and sympathetic person.

Proboscidea (pro-bo-side-a), an orguished, as implied by this name, by the possession of the characteristic proboscis or trunk. Of this class the eighant alone exists; but there are several ex-tinct animals comprised in it.

Proboscis (pro-bos'is), the term applied to the longer or shorter flexible muscular organ formed by the elongated nose of several mammais. Although seen in a modified degree in the tapirs, etc., the term is more generally restricted and applied to indicate the flexible 'trunk' of the elephant. Proboscis Monkey, Larvatus no-KAHAU

current jurisdiction in removing trustees and guardians. In England a probate court was constituted in 1858 which superseded the ecclesiastical courts in matters relating to wills and successions. The Judicature Acts of 1873-75 transferred its jurisdiction to the Probate, Divorce and Admiralty Division of the High Court of Justice.

Probation (prō-bā'shun), in penology a plan wherehy criminals or delinquent children are set at liberty by the court under the supervision of a probation officer, who is responsible to the court for the good conduct and product of marshes. His skiiful admin-

formatory. When he fulfills them he is free citizen. The probation system is in a civil suit throughout its various in a civil suit throughout its various stages. In the United States, when rehased on the theory that the reformation stages. In the United States, when rehased on the criminal rather than his punishment dress is sought for a civil injury, the is the most effective protection to society, injured party brings an action against the injured that in the early stages of criminal party whom he alieges has done the injury. The person who raises an action is jury. termed the plaintiff, and he against whom the action is brought the defendant; in Scotiand the terms are pursuer and de-fender. It is usual hefore the suit is commenced for the plaintiff's attorney to acquaint the defendant with the demand of his client, and state that unless complied with legal proceedings will be insti-tuted. Should this not have the desired effect, the action is begun as a rule by issuing against the defendant a writ of summons, commanding him to enter an appearance in court, failing which an appearance will be entered for him by the plaintiff. (See Non-appearance.) When an appearance has been entered both parties to the suit are now said to be in court, and judgment may be proceeded with. The next stage is the pleadings or the statements in legal form of the

a demurrer, or on matter of fact, where the fact only is disputed. A demurrer is determined by the judges after hearing argument on both sides, but an issue of fact has to be investigated before a jury, and this is denominated trial by jury. (See Jury and Jury Trials.) After the judge has summed up to the jury the verdict follows and then the judgment of the court where there is no jury, of the court; where there is no jury, of course, judgment is pronounced by the judge after hearing counsel.

Procellaridæ (pro-sel-lar'i-dē), the petrel family of hirds, of which the typical genus is Procellaria. Process (pro'ses), in iaw, a term applied in its widest sense to the whole course of proceedings in a cause reai or personal, civil or criminal.

Processional (pro-sesh'un-al), a service-book of the Roman Catbolic Church, for use in religious processions. Some of the processionals of ancient date are very rare and highly valued by book-fanciers.

Procession of the Holy Ghost.

See Holy Ghost. Procida (prochida; anciently, Proches (prochida; anciently, Prowest coast of S. Italy, lying nearly midway between the island of Ischia and the coast of the province of Naples. It is about 3 miles long and 1 mile broad, flat in surface, and fertile. The principal process of the island is Procide or Castello piace of the island is Procida, or Castello di Procida, which has a harbor, a castle, and a considerable trade. Pop. 13,964. Proclamation (prok-ia-mā'shun), a public notice made by a ruler or chief magistrate to the people, concerning any matter which be thinks fit to give notice about. It may consist of an authoritative announcement of some great event affecting the State, but is most commonly used in Britain for the summoning, prorogation, and dissolution of Parliament. A royal proclamation must be issued under the great seal. In the United States the President issues proclamations as to treaties, days of thanksgiving, admission of new States, etc. Proclamations are issued in the United States for election days, the President. Governors, mayors, and sheriffs acting by au-Proclus (pro'kius). a philosopher of the Nee-Platonio school, born

cause of action or ground of defense at Byzantium in 412; died at Atbens in brought forward by the respective sides. 485. He was educated at Alexandria and The next stage of precedure after the pleadings is the iesue, which may be branches of philosophy and theology. As either on matter of law, when it is called a teacher at Athens he was very successfui. His system aimed at the widest comprehensiveness. He not only endeavored to unite ail philosophical schemes, but made it a maxim that a philosopher should embrace also all religions by becoming infused with their spirit. In bis writings he professes to return to Plato, and to hring down Neo-Platonism from the misty heights to which it was raised by Piotinus. M. Cousin piaced him on a level with the most distinguished philosophers of Greece, but this estimate is generally considered extravagant. His extant works include a Sketck of Astronomy, in which he gave a short view of the systems of Hipparchus, Aristarchus, and Ptoiemy; The Theology of Plato, Principles of Theology, a Life of Homer,

Proconsul and Proprætor,

originally, in the ancient Roman system of administration, a consul or prætor whose command (or imperium) was proionged for a particular purpose after bis demission of office. In course of time the terms came to be applied to anyone wbo was entrusted with some special service, and with magisterial authority for the purpose of performing it. Proconsuis and proprætors were generally men who had been consuls or prætors, but were not always so. There were four varieties of proconsui: 1. A distinguished statesman, formerly consul, appointed for a special duty. 2. An individual, who had never been consul, was sometimes agreeted precensul to be sent on some imcreated proconsui to be sent on some important mission. 3. A consui occasionaliy had bis imperium prolonged, in order to complete some undertaking he bad commenced. 4. A consul appointed after his term of office to the government of a province. The proconsuls under the republic had no authority within the wails of Rome, and they just their imperium on entering the city. Under the emplre the emperor was aiways invested with proconsular authority.

Proconsular authority.

Procopius (pro-kō'pi-us), Andrew, a Hussite leader of the fifteenth century. He succeeded Ziska in 1424 as commander of the Taborites, the chief section of the Hussites, and became the dread of the troops of the Emperor Sigismund. He made bimself master of a large part of Bohemia, and ravaged Moravia, Austria, and Silesia. His principal military triumphs were the battle of Aussig in 1426, and his campaigns in

Silesia and Saxony in the following year. His expeditions were marked with great courage and slaughter, and with the destruction of many cities, of which Dresden was the chief. In 1431 he gained a great victory over the Elector of Brandenburg, who was in alliance with Sigismund, and in 1433 he appeared with a large following at the Council of Basel, and demanded, in the name of the Hussites, various reforms in religious matters. As the section of the Hussites led by Procopius were not satisfied with the concessions made by the council war was resumed, hut Procopius was killed soon after in a battle fought at Böhmischhrod (1484).

Procopius of Cæsarea, a Greek historian, a native of Cæsarea, in Palestine, where he is supposed to have been born about 500 A.D. He first attracted the notice of Bellsarlus, who appointed him his secretary: and about the year 541 he was appointed hy the Emperor Justinian a senator and afterwards (562) prefect of the city. He died at Constantinople about 565 A.D. His works are a history of his own times and a history of the edifices hullt or repaired by Justinian. A scandalous chronicle of the court of Justinian, entitled Anecdota, has also been attributed to him hy some writers.

Procrustes (pro-krus'těz; 'the Stretcher'), a celebrated robber of ancient Greek legend, whose bed is still proverhially spoken of. The legend of him is, that if his victims were too short for the bed, he stretched them to death, while, if they were too tall, he cut off their feet or legs.

Procter (prok'ter), BRYAN WALLER, an English poet and prose writer, born about 1789; died at London in 1874. He was educated at Harrow, where he was the schoolfellow of Byron and Peel. His first published work was entitled Dramatic Scenes and other Poems, and appeared in 1819 under the pseudonym of Barry Cornwall, which remained Procter's pseudonym in his future writings. This volume being well received, he published shortly thereafter A Sicilian Story and Marcian Coloma. In 1821 he produced a tragedy, Mirandola, which was performed with great success at Covent Garden. Procter also wrote several other hooks of poetry and a variety of prose works; the most interesting of bese latter heing a Memoir of Charles Lamb, of whom he was an intimate personal friend. Procter's poems exhibit

many years held the post of a commissioner in lunacy, which, however, he resigned in 1860.— His daughter, Adelaide Anne, born in London in 1825; died in 1864, was a poetess of some note. Her songs and hymns show much taste and feeling, but she never attempted anything on a large scale. Her best-known volume is Legends and Lyrics, published in 1858.

Proctor (from the Latin procureter), a person who in the ecclesistical and admiralty courts in Engiand performs the duties of an attorney or solicitor. The proctors were formerly a distinct body, but any solicitor may now practice in these courts. The queen's proctor is a grown official charged with the duty of conserving the public interests in certain classes of private lawsuits. In the Universities of Oxford and Camhridge the proctors are two officers chosen from among the masters of art, whose office is to preserve discipline.

from among the masters of art, whose office is to preserve discipline.

Proctor, Redfield, statesman, was mont, in 1831; died in 1908. He was elected to the legislature of Vermont in 1867, lieutenant-governor in 1876, and governor in 1878. He was made Secretary of War hy President Harrison in 1889, and was elected United States Senator for Vermont in 1891.

Proctor, RICHARD ANTHONY, an English astronomer, born at Chelsea in 1837, and educated at King's College, London, and Cambridge University. Having devoted himself specially to the study of astronomy, be published a number of valuable works on the subject, including Saturn and its System, Handbook of the Stars, Half Hours with the Telescope, Half Hours with the Stars, Other Worlds than Ours (a very popular work), Light Science for Leisure Hours, etc. He died in 1888, in the United States. In 1893 a monument was erected to his memory by George W. Chiids in Greenwood Cemetery.

Greenwood Cemetery.

Procurator (prok'ū-rā-tur), among the ancient Romans, a provincial officer who managed the revenue of his province. In some of the small provinces, or in a part of a large province, the procurator discharged the office of a governor, and had the power of punishing capitally, as was the case with Pontius Pilate in Judga, which was attached to the province of Syria.

ety of prose works; the most interesting of 'bese latter heing a Memoir of Charles Lamb, of whom he was an intimate personal friend. Procter's poems exhibit much delicate grace and refinement, but have never attained great popularity. He was called to the province of Syria.

Procurator-fiscal, in Scotland, an officer appointed to act as the public prosecutor in criminal cases before the sheriff, magistrates, or justices of the peace belonging to his district. He is allowed to practice private of the province of Syria.

mation of a crime committed within a procurator-fiscai's district has been laid before him, it is his business to ascertain the truth of the charge, to obtain a war-rant for the apprehension of the accused, to see that the warrant is carried out, and in general to do whatever else is necessary to protect the innocent, and bring to justice the guilty. All precognitions of witnesses are taken by him before the sheriff or sheriff-substitute of the district. The procuretor from her also in trict. The procurator-fiscal has also, in conjunction with the sheriff, to discharge the duties of a coroner in making lnvestl-gations with regard to persons who are. suspected to have died from other than natural causes. The duties are somewhat similar to those of district attacks. similar to those of district attorneys in the United States.

Procyon (pro'si-on), the genus of animals to which the raccoon

beiongs. Producer-gas (pro-du'ser). When a limited stream of air is driven through glowing coke, car-bonic acid gas first arises from the coke, the oxygen of the air being consumed. As this passes through the coke it takes up new carbon and is iargely converted into carbonic oxide. There resuits a gaseous mixture composed of about 26 per cent. of carbonic oxlde, 70 per cent. of nitrogen from the air employed, and 4 per cent. of carbonic acid. This mixture is combustible, burning with a clear flame, and under the name of producer-gas is and under the name of producer-gas is iargely employed in various processes. The gas from the producer is very hot, and if passed at once into the furnace a iarge proportion of the heat of the coke may be utilized; if allowed to cool, a iarge percentage of the heat is iost. Coai yields about 160,000, coke about 175,000 cubic feet of this gas per ton. If steam be mixed with the air driven through the coke hydrogen is added to the gases produced, and the heating value is higher than in the former case.

Production, Cost of, a phrase used in political economy, not aiways in the same sense even by the same writer. The confusion generally arises from a want of clearness in distinguishing between cost and expenses of production. The cost of production in its original meaning signifies the amount of inconveniences and exertions necessary for the production of any commodity. Used as equivalent to expenses of production, it signifies the wages and profits expended on the production of the article. It is the uitimate basis of value of articles It is the uitimate basis of value of articles which can be indefinitely muitiplied, and regulates the minimum value of articles which are limited in quantity.

Prognathic (prog-nath'ik), or Prog-nath'ik), or Prognathic (prog-nath'ik), or Prognathic (prog-nath'ik), or Prog-nath'ik), or Prog-nath'ik),

Profession (pro-fesh'un), the act of taking the yows by the member of a religious order after the novitiate is finished. See Monastic Vows.

Professor (pro-fes'ur), a term applied in the United States to saiaried teachers in universities and similar institutions who are appointed to dents in some particular branch of learning. In Oxford and Cambridge, England, the professors, and the instruction which they convey by lectures, are only auxiliaries instead of principals, the necessary business of instruction being carried on by the tutors connected with the several colleges. In the universities of Scotland and Germany, on the other hand, the professors are at once the governing body deliver icctures for the instruction of stufessors are at once the governing body and the sole recognized functionaries for the purposes of education.

Profit (prof'it), the gain resulting to the owner of capital from its employment in buying and selling, in manufacturing, or in any commercial under-taking.— Net profit is the difference in favor of a seiler between the seiling price of commodities and the original cost after deducting all charges.— The rate of profit ls the proportion which the amount of profit derived from an undertaking bears to the capital employed in it .- Profit and loss, the gain or ioss arising from goods bought or soid, or from any other contingency. In bookkeeping both gains and losses are titled profit and loss, but the distinction is made by placing the former on the creditor side, and the latter on the debtor side.

Profit-sharing, a system now many manufacturing and mercantile establishments, by which a certain percentage of the annual profits is divided among the employes. It is argued that this system, by giving the employes an interest in the prosperity of the establishment, inin the prosperity of the establishment, increases the quality and quantity of the product, and lessens the danger of strikes and labor disputes generally. While recognized as a desirable principle by Targat in 1775, it was first put in practical operation in 1842 by Leclaire, a prosperous painter and decorator of Paris. It proved in his case highly successful, and also in several other French establishments. Of recent years it has been somewhat widely adopted in the United States, Great Britain, France, Switzerland and elsewhere, and has proved as a rule very advantageous. advantageous.

Prognosis (prog-no'sis), in medicine, the prejudgment of the physician regarding the probable course

and result of a disease.

Progression (pro-gresh'un), ln mathematics, a regular or proportional advance in increase or decrease of numbers. In arithmetical progression terms increase or decrease by equal differences, as, 2, 4, 6, 8, 10, and 10, 8, 6, 4, 2. In geometrical progression terms increase or decrease in a certain constant ratio, as 2, 4, 8, 16, 32, 64, and 64, 32, 16, 8, 4, 2, or, generally, a, ar, ura, ara, ara, etc.

-, etc.,

where a is the first term, and r the common ratio in the one case, and 1 + r the

which Roosevelt was nominated for president and Hiram W. Johnson for vice-president. The party was defeated in the ensuing election. In 1916 it again nominated Theodore Roosevelt, but on his face, especially the representation of any declination it accepted the candidate of object on a perspective plane, or such a delination as would result were the chief the Republican party. the forbidding by law

Prohibition, of the manufacture or sale of alcoholic liquors for beverages. The first prohibition state was Maine (1846). By the end of 1917 full prohibition was in force in half the states and partial prohibition in others. In December, 1917, Congress submitted to the several states for ratification a constitutional amendment prohibiting the manufacture, sale, transportation, import or export of intoxicating beverages, the amendment to is to be projected. See Map. become law on the approval within seven years of three-fourths of the states of the Union, or 36 states. The first state to ratify the amendment was Mississippi; Nebraska was the thirty-sixth state to ratify, on January 16, 1919, on which date Missouri and Wyoming also ratified. The amendment was certified by Frank L. Polk, acting secretary of state, January 29, 1919, to take effect one year hence.

ing liquors. 23-U-5

which treats of the motion of bodies thrown or driven some distance by an impelling force, and whose progress is affected by gravity and the resistance of the air. The most common cases are the balls projected from cannon or other fire-arms. If thrown horizontally, the body will move in a curved path, because it retains unchanged (leaving out of account the resistance of the air) its horizontal velocity, while it falls faster and faster towards the ground. A body projected obliquely has initially a certain horizontal velocity and a certain vertical velocity. It retains its horizontal velocity unchanged, but its vertical velocity is altered by the force of gravity, and in both of these cases we find that the path of the projectile is a parabola. With a given where a is the first term, and r the common ratio in the one case, and 1+r the common ratio in the other.

Progressive Party, a new political  $45^{\circ}$  with the vertical. The actual path of a bullet is always within the parabola ized in the United States in 1912. At meetings held in Chicago, June 22-23, range of a gun is much less than what the 1912, part of the progressive forces at the Republican National Convention formed also upon the shape and weight of the projectile and there is also its initial a new party. A more representative con-projectile and there is also its initial vention was assembled in August, in velocity to be taken into consideration.

Projection (pro-jek'shun), the ren-resentation of something delineation as would result were the chief points of the object thrown forward upon the plane, each in the direction of a line drawn through it from a given point of sight or central point. This subject is of great importance in the making of maps, in which we have to consider the projection of the sphere or portions of lt. jections of the sphere are of several kinds, according to the situations in which the eye is supposed to be placed in respect of the sphere and the plane on which it

Prolapsus Ani (pro-lap'sus a'nl), the lower part of the rectum through the anus, caused by straining in costlveness, piles, etc. Persons liable to this accident should be careful to regulate their bowels so as to prevent costiveness and consequent straining. Regular bathing of the parts with cold water may also be found

organized at Chicago in 1860 as an outwomb, or 'bearing down,' a common ing liquors. large families, but sometimes occurring

in virgins, and in very rare cases in infants. What renders the failing down of the womb possible is a general laxity of the parts supporting it, and it may be of various degrees, from the slightest downward displacement to such a descent as canses external protrusion of the womb.
When the falling down once begins it always tends to increase, unless means are taken to prevent it. In all cases of this affection the first requisite for cure is prolonged rest in the horisontal position, with the use, under surgical direc-tion, of cold or astringent injections and the various forms of pessary.

Proletarii (prō-ie-tā'ri-i), the name which was given to those Roman citizens who, in the classification of their means by Servius Tniiins, stood in the sixth or lowest class. The term has been revived in modern times as a designation of the lowest class of the community; but more frequently the collective appellation proletariat is used. A proletarian is a member of the proletariat.

Prologue (pro'log), the preface or introduction to a dramatic play or performance. It may be either in prose or verse, and is usually pro-nounced by one person. Prologues some-times relate to the drama itself, and serve to explain to the andience some circumstances of the action, sometimes to the situation in which the author or actor stands to the public, and sometimes have no immediate connection with either of these persons or subjects.

Prome (prom), a town of Lower Burmah, capitai of a district of same name, is situated on the Irrawaddy. It is a large town surrounded by a waii, with extensive suburbs, and, owing to the flat ground on which it is built, it is liable to be inundated by the liver. It has a spiendid nagoda which river. It has a spiendid pagoda which attracts many Buddhist pilgrims. There are manufactures and an active trade.

Pop. 27,375.

Promerops (prom'e-rops), a genus of insessorial birds, many of which are remarkable for the beauty of their plumage. They have a longish bill, an extensible tongue, and feed upon insects, soft fruits, and the saccharine

insects, soft fruits, and the saccharine juices of piants. One species, P. superba, is a native of New Guinea; another, P. crythrorhynchus, is a native of Africa.

Prometheus (prō-me'thūs), in Greek mythology, one of the Titans, brother of Atias and of Epimetheus, and the father of Deucaiion. His name means 'forethought,' as that of his brother Epimetheus signifies 'afterthought.' He gained the enmity of Zeus by bringing fire from heaven to men, and by bringing fire from heaven to men, and

by conferring other benefits on them. punish this offense Zeus sent down Pan-dora, who brought all kinds of diseases

Promerops superba.

into the world. He caused Prometheus himself to be chained by Hephestus (Vulcan) on a rock of the Caucasus (the eastern extremity of the world, according to the notions of the earlier Greeks), where his liver, which was renewed every night, was torn by a vuitnre or an eagle. He was ultimately delivered by Heracles, who destroyed the vuiture, unlocked the chains, and permitted Prometheus to return to Olympus. That is the tradition as shaped by Æschylus, who has a noble tragedy on the subject, the Promethous Vinctus ('Prometheus Bound'), while Sheliey has also a drama, the Prometheus Unbound. A different version is given by Hesiod.

Promise (prom'is), in iaw, an engagement entered into by one person to perform or not perform some particular thing. When there is a mntual promise between two parties it is termed a contract. A promise may either be verbai or written. A verbai promise is in the United States called a promise by parole, and a written promise is in technical language there called a covenant. By English iaw no promise is binding unless it was made for a consideration, but by Scotch iaw it is aiways binding, whether a consideration was given or not.

Promissory Note. See Bill. Promissory Note.

Prompter (promp'ter), one placed behind the scenes in a theater, whose business is to assist the actors when at a loss, by nttering the first words of a sentence or words forgotten.

lope, the Antilocopes Americans, or A. furcifor, which inhabits the western parts of the United States. It frequents the plains in summer and the mountains in winter. It is one of the few hollowhorned antelopes, and the only living one in which the horny sheath is hranched, branching being otherwise peculiar to deer which have bony antlers.

Pronoun (pro'noun), in grammar, a word used instead of a noun or name, or used to represent an object merely in relation to the act of speaking; thus it neither designates its object in virtue of the qualities possessed by it, nor aiways designates the same object, but designates different objects according to the circumstances in which it is used. The personal pronouns in English are I, thou or you, he, she, it, we, ye, and they. The last is used for the name of things, as well as for that of persons. Relative pronouns are such as relate to some noun going before, called the antecedent; as the man who, the thing which. Interrogative pronouns are those which serve to ask a question, as who? which? what? Possessive pronouns are such as denote possession, as my, thy, his, her, our, your, and their. Demonstrative pronouns are those which point out things precisely, as this, that. Distributive pronouns are each, every, either, neither. Indefinite pronouns are those that point out things indefinitely, as some, other, any, one, all, such. Pos-sessive, demonstrative, distributive, and indefinite pronouns, having the properties both of pronouns and adjectives, are commonly called adjective pronouns or pronominal adjectives.

(pro-nun-si-a-Pronunciamento men'tō), ln Spain and Spanish America, a proclamation against the existing government, intended to serve as a signal of revolt.

Proof (prof). See Evidence.

Proof Impression, in printing, a rough impression from types, taken for correction. first proof is the impression taken with all the errors of workmanship. After this is corrected another impression is this is corrected another impression is printed with more care to send to the author; this is termed a clean proof. When this is corrected by the author, and the types altered accordingly, another proof is taken and carefully read over: this is called the press proof. In engraving, a proof impression is one taken from an engraving to show the state of it during the progress of the work; also, an early impression, or one of a limited number, taken before the letters to be inserted are engraved on the plate. inserted are engraved on the

Proof states of engravings are usually distinguished as (1) Artists' Proofs, with no engraved title, sometimes signed in pencil by the painter or engraver, or both. Remorque artists' proofs have some mark, frequently a minute part left white, or a design slightly engraved on the margin.
(2) Proofs before Letters, still without title, but with artist's and engraver's names inserted close to the bottom of the work, and the publisher's name near the lower margin of the plate. (3) Lettered Proofs, with title engraved lightly in such a manner as to be easily erased, or in a manner as to be easily erased, or in open letters ready for shading, when the title is finally put on the plate for the

ordinary impressions.

The reading of printed matter for printed matter for correction, the necessary corrections being made on the margin of the proof-sheet, an established set of signs being used. It is the purpose of the proofreader to make the printed matter conform to the author's MSS., but as this frequently needs correction a good proofreader will needs correction, a good proofreader will endeavor to correct errors or inconsistencies due to the author. Several readings are necessary to yield a good result, one of these being usually made by the author. A final revision is made to see if all the corrections have been made by the com-positor. See Correction of the Press.

Propaganda (propagan'da), an association, the congregation de propaganda fide (for propagating the falth), established at Rome by Gregory XV in 1622 for diffusing a knowledge of Roman Catholicism throughout the world near the read with the provider of the propagation of the prop the world, now charged with the management of the Roman Catholic mission In close connection with it stand the seminaries or colleges of the Jesuits, and the great majority of the members of the propaganda are Jesuits and Franciscans.

Propagation (propagation), the multiplication or continuation of the species of animals or plants. As a technical term it is used chiefly in regard to plants. The most common method of propagating plants is of course by their seed. There are other ways, however, by which plants are propagated naturally. Some, for example, throw off runners from their stems which creep along the ground, and these runners take root at the bads, and send up new plants. The commonest artificial methods of propagating plants are budding, because the various forms of grafting, including inarching or grafting by approach, propagation by offsets and hy slips. Some plants (as the patato) are propagated by dividing the tutures or underground stems, each 'eye' or leaf-but of which sends

up a new plant, while a few are propagated by cuttings of the leaves. See Screw-l'ropeller. Propeller.

Propertius (pro-per'she-us), Sextus Aurelius, a Latin elegiac poet, the date of whose birth is variously given as 57 and 46 B.C. After the end of the civil war he found a patron at Rome in Meccenas; obtained the favor of the emperor; devoted himself to poetry; became the bosom friend of Ovid; lived mostly in Rome, and died there about 12 B.C. His elegles, of which we have four books, are not so highly esteemed as those of his friends Ovid and Tibullus.

Property Tax (prop'er-tl), a rate or duty levied by the State, county, or municipality on the property of individuals, the value of the property being fixed by assessment.

Prophets (prof'etz) a mone the Taxon and Taxon and Taxon are the Taxo

Prophets (prof'etz), among the Hebrews, inspired teachers sent by God to declare his purposes to his people. The ordinary Hebrew word for a prophet is nabhi, generally interpreted as one who pours forth or announces. There are two other words applied to the prophets, namely, roëh and chozeh, both of which literally signify seer, and are uniformly so translated in the Authorized Version of the Scriptures. In the Septuagint the word nabhi is always rendered prophētēs, and in the Authorized Version prophet. The literal algulfication of the Greek word prophētēs is 'one who speaks for another'; but the word was generally used as meaning one who speaks for or interprets the will of a god. In the common acceptation of the word its sense has become narrowed to that of a foreteller of future events, but the wider acceptation still remains side by side with this narrower one. From the time of Samuel frequent mention is made of a body of men bearing the general name of prophets. They were members of a school in which young men of all the tribes were instructed in the law, and apparently been set up by Samuel at Ramah, and there is mention of others at Bethel, Jericho, Gligal, and elsewhere. It is prohable that these schools of the prophets were formed to strengthen the attachment of the Jews to their religion, and to maintain that religion pure. The prophetic order seems to have continued in existence down to the close of the Old Testament canon. Sixteen of them are the writers of books that are admitted into the Old Testament canon. These may be divided into four groups in such a manner as to cells, etc.

give us a partial chronological arrangement. First, there are three prophets who belong to the Kingdom of Israel as distinct from that of Judah—Hosea, Amos, Jonah; secondly, there are eight prophets of the Kingdom of Judah—Joel, Isalah, Jeremlah, Chadlah, Misch Joel, Isalah, Jeremiah, Ohadiah, Micah, Nahum, Habakkuk, Zephaniah; thirdly, two prophets of the captivity— Ezekiel and Daniel; and fourthly, three prophets of the return— Haggai, Zechariah, and Malachi. To the first group belong also Elijah and Elisha, the two great prophets, who are not the authors of any books in the canon. The chief function of the prophetic order was to maintain the Mosaic theocracy in its purity, and the patriotism which strongly characterizes all the Hebrew prophets was closely connected with their religious zeal. The Jewish people being the chosen of God and the immediate subjects of the divine ruler, it is the constant cry of the prophets that the people should turn to righteousness In order to be delivered from the hands of their enemies. The predictive powers of the prophets have been the occasion of much controversy. The ability of the prophets to foretell the future was generally believed in by the Jews, and in one passage of the Old Testament, Deut., xvili, 22, is made a negative test of the justness of a person's ulaim to be a prophet. The of a person's claim to be a prophet. The main controversles with regard to this predictive power turn upon two points first, the reality of the power, which is hy some altogether denicd; and, secondiy, the reference of the prophecies. With regard to the reference of the prophecies the chief controversy is connected with the prophetical writings of the Old Testament supposed to relate to the Mes-slah. Regarding these prophecies three different positions are taken up by dif-ferent schools of Biblical critics. Those who deny to the prophets the power of foretelling future events altogether necessarlly deny also the reference of the prophecies in question to Christ as the Messiah. Another school, while admitalso in sacred poetry and music. The ting the reference of at least some of the first school of this nature appears to have passages to historical events, contend that passages to historical events, contend that in their secondary meaning they have also a reference to the Messiab. The third school hold undevlatingly to the theory that none but the Messianic Interpretation is permissible.

Propolis (prop'u-lis), a red, reslnous, some resemblance to wax, collected from the viscid buds of various trees ly bees, and used by them to stop the holes and crevices in their blves to prevent the entrance of cold air, to strengthen the ts

nd he he Propontis (pro-pon'tis), the ancient name of the Sea of Marmeta, from being before or in advance of the Pontus Euxinus or Biack Sea.

Proportion (pro-por'shun), in mathematics, the equality or similarity of ratios, ratio being the reiation which one quantity beats to another of the same kind in respect to magnitude; or proportion is a relation among quanti-ties such that the quotient of the first divided by the second is equal to the quo-tient of the third divided by the fourth. Thus 5 is to 10 as 8 is to 16; that is, 5 bears the same relation to 10 as 8 does Proportion is expressed by symbois, thus: -a:b::o:d, or a:b=o:d,

The above is sometimes called or -= -.

geometrical proportion in contradistinction to arithmetical proportion, or that in which the difference of the first and sec-ond is equal to the difference of the third and fourth. Harmonical or musical pro-portion is a relation of three or four quantities such that the first is to the jast as the difference between the first two is to the difference between the last two; thus 2, 3, 6 are in harmonical proportion, for 2 is to 6 as 1 is to 3. Reciprocal or inverse proportion is an equality between a direct and a reciprocal ratio, or a proportion in which the first term is to the second as the fourth is to the third, as 4:2::3:6 inversely, that is as

S e e Proportional Compasses. Com-

passes. Proportional Representation,

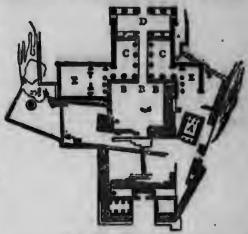

in politics, a system of representation by which political parties are repre-sented according to their numbers, and not in such a manner as that the majority elects all the representatives. Two pians for securing proportional representation have been tried, the one being by providing that voters shall only vote for a proportion of the representatives, say two out of three, or haif when the number is even; the other being to give each elector a vote for every one of the representatives, those with the highest votes being elected according to the number each party is entitled to in proportion to the total vote cast.

Proposition, in grammar and logic, a sentence or part of a

and hypothetical; secondly, according to quality, into affirmative and negative; thirdly, according to quantity, into universal and particular.

See Prætor, Proconsul. Proprætor.

Propylæa (prop-i-ie'a), in Greek architecture, the entrance to a tempic. The term was employed par-ticularly in speaking of the superb ves-tibules or portices conducting to the Acropolis of Athens. This magnificent

The Propylesa, Athens. A, Temple of Nike. B, Gateway. C, D, Posticum. E, Wing buildings. C, Court.

work, of the Doric order, was constructed under the direction of Pericies (B.C. 437-433) after the designs of Mnesicies, one of the most celebrated architects of his

## Prorogation of Parliament.

the continuance of parliament from one session to another. Parliament is prorogued by the sovereign's authority, either by the iord-chancellor in the royal presence, or hy commission, or by prociamation.

Proscenium (prō-sē'ni-um), the part in a theater from the curtain or drop-scene to the orchestra; aiso applied to the curtain and the ornamental framework from which it hangs. In the ancient theater it comprised the whole of the stage.

Proscription (pro-skrip'shun), in Roman history, a mode sentence consisting of a subject and a predicate, and in which something is of getting rid of enemies, first resorted affirmed or denied of a subject. Logical to by Suila in S2 B.C., and imitated more propositions are said to he divided, first, than once afterwards in the stormy years according to substance, into categorical that closed the republic. Under Suila,

cutor.

lists of names were drawn out and posted up in public places, with the promise of a reward to any person who should kill any of those named in the lists, and the threat of death to those who should aid or shelter any of them. Their property also was confiscated, and their children were declared incapable of honors.

Prose (pros), ordinary spoken or written language, untrammeied by poetic measure, and thus used in contradistinction to perse or poetry. The true character of prose can be clearly conceived only by considering it in relation to poetry. The two chief states of the inward man may be called the thinking and the poetical states, and depend upon the predominance of the understanding, the predominance of the understanding, or the imagination and feelings. If we think (in the narrower sense of the word) we combine ideas according to the iaws of reason; and prose, which is the ianguage of sober thought, is characterized by the abstractness and precision beionging to ideas that occupy the understanding. Artistic and finished prose is among the latest attainments both of nations and individuals, and it would appear that with individuals, and it would appear that with most nations classical prose writers are fewer than ciassical poets.

Prosecution (prose-ku'shum), CRIM-INAL. The law of America and of England differs from that of other countries in having no office analogous to what is termed in France ministers public for the prosecution of offenses. At common law, therefore, and in the great majority of cases, the so-cailed prosecutor is merely the person injured by an offense, who in the first instance obtains a summons or warrant against the accused. The result of this is that many criminals are allowed to go free merely because there is no prose-

Proselyte (pros'e-iIt; Greek, prosd-lytos, a stranger or new-comer), a person who leaves one religion for the profession of another. The Jews, in New Testament times at least, had two classes of proselytes, namely, the 'proselytes of the gate,' as they were termed; and the 'proselytes of righteousness,' or of the covenant. According to the rabble, the proselytes of the gate were those who renounced idolatry and worshiped the only true God according to the (so-cailed) seven laws of the children of Noah, without subjecting themseives to circumcision and the other commands of the Mosalc iaw. The proselytes of righteousness were persons who had been fully converted from paganism to Judaism, had been circumcised, and bound themselves to observe the Mosaic law.

Proscrpine (pros'er-pin). See Per-ecphons.

Prosimise (pro-sim'i-s), a name ap-piled to the lemurs and their alijes.

Prosobranchiata (pros-u-brank'i-a-ta), an order of gasteropeds comprising the whelks, peri-winkies, etc., mostly marine, though some inhabit (resh water.

Prosody (pros'u-di), that part of grammar which treats of the quantity of syliables, of accent, and of the laws of versification. Though chiefly restricted to versification, it may also be extended to prose composition. In the Greek and Latin insurance are accelerated. Greek and Latin languages every syllabic had its determinate length or quantity, and verses were constructed by systems of recurring feet, each foot containing a definite number of syllabies, possessing a certain quantity and arrangement. The versification of modern European languages, in general, is regulated mainly by accent and number of syllables, though the weight or otherwise the quantity of syllables has also to be taken into ac-count if harmonious verse is to be produced.

Prosopis (pro sō pis), a genus of tropical ieguminous trees of the suborder Mimosee, having their pods filled between the seeds with a pulpy or mealy substance. Some of them yield useful products, as resin or tannin, food for cattle, etc. See Mesquite, Algarobilla.

Prosopopæia (pros-o-po-pe'ya), a figure in rhetoric by which things are represented as persons, or by which things inanimate are spoken of as animated beings, or by which an absent person is introduced as speaking, or a deceased person is represented as alive or present. It includes personifica-tion, but is more extensive in its signification.

Prosper of Aquitaine, a Chriser who ilved during the early part of the fifth century, but of whom little is per-sonally known. A large part of his life seems to have been spent at Marseilles, where he was connected with an ascetle order. It was here that he wrote his poiemical poem Adversus Ingratos, and it is supposed that he finished his Chronicon Consulare (a continuation of Jerome's chronicle) at Rome about 455.

Prossnitz (pros'nits), a town Austria, in Moravia, 11 miles s. s. w. of the town of Olmütz. has manufactures of woolens and linen cloth and one of the largest corn-markets in Moravia. Pop. (1910) 34,100.

Prostate Gland (pros'tat), a red-mass, situated in the peivic cavity, and which surrounds the neck of the bladder and urethra in maies. It is liable to en-largement, especially in old age, and is often the seat of various diseases.

Prostyle (pro'stil), in architecture, applied to a portice in which the columns stand out quite free from the

wall of the building to which it is attached; also applied to a temple or other structure having pillars in front only.

(pro-Protagoras ras), a Grecian phliosopher, born at Abdera, in Thrace, apparently about 480 B.C. He was the first to assume the title of Sophist, and as such he taught principally at Athens. In 411 B.C. he was accused of athe-

Plan of Prostyle

ism, for beginning one of his works (Peri
Theon — Concerning the Gods) with the words, 'Respecting the gods, I am unable to know whether they exist or do ante to know whether they exist of do not exist.' He seems to have died soon after, perhaps in the same year. He was the author of a large number of works, all of which are lost.

(prot-e-a'se-e), a natural order of arborescent apetaious exogens, chiefly natives of Australia and the Cape Colony. They are shrubs or small trees, with hard, dry, opposite or alternate leaves, and often large heads of showy and richly-colored flowers, which render them favorite objects of cultiva-tion. The typical genus Protes is African and contains numerous species.

Bankeis is a well-known Australian species bearing the popular name of honey-

Protection (pro-tek'shun), a term applied in economics to an artificial advantage conferred by a government or legislature on articles of home production, either by means of bounties or (more commonly) by duties Imposed on the same or similar articles introduced from ahroad. Such duties may be simply protective, that is, such as that the foreign and home articles can compete in the market on nearly equal terms; or prohibitory, that is, such as to exclude foreign competition altogether. The principle of protection has iong been applied in the United States, as one of were Strasburg, Nürnberg, Ulm, and Con-

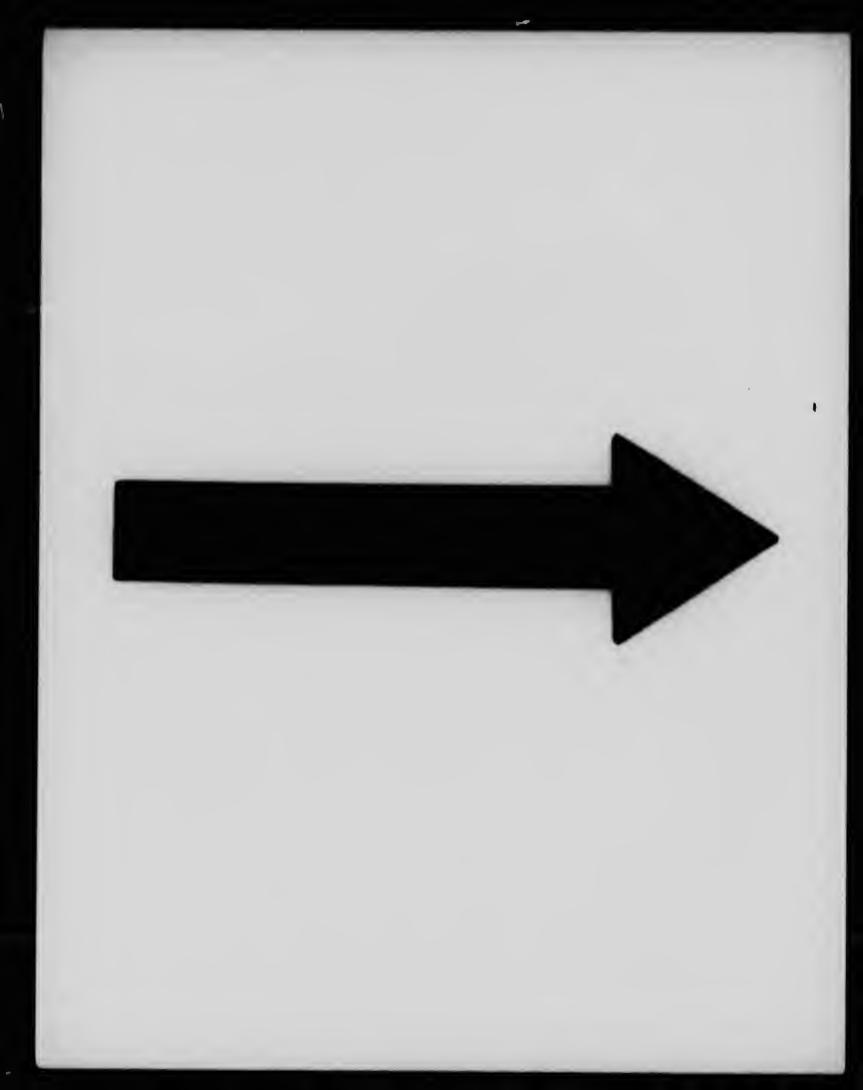

the main elements of Republican party politics, as opposed to the dogma of tariff for revenue only, maintained by the Democratic party. Of late years, however, the dietlection in this respect between the policies of the two parties is much less pronounced than of old, and the tariff has become a less exclusive party issue than formerly. See Free-trade.

Protector (pro-tek'tur), a title con-ferred on several occasions by the English parliament upon those apby the English parlisment upon those appointed to act as regents, generally during the minority of the king. Among those who have held this office are Richard, duke of York (1454); Richard, duke of Gloucester (1483); and the Duke of Somerset (1547). In 1653 the title of lord-protector was bestowed upon Cromwell, as head of the Commonwealth of England, and after his death (1658) his son Richard also held the title for a short period. period.

Protestant Episcopal Church.

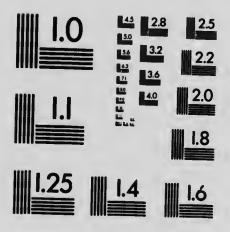

For the origin and early development of this church see England, Ecclesiastical History. Its origin in the United States reaches far back into the sixteenth century, when it was established in Virginia. and afterwards made its way into some of the other colonies, although it was not formally organized until 1785. Ite doctrinal symbol in this country is the Thirtrinal symbol in this country is the Thirty-nine Articles of the Church of England, slightly altered. The legislative authority is vested in a general convention, which meets triennially, consisting of a house of hishops and a house of clerical and lay deputies. Each diocese has a convention consisting of the clergy and lay representatives, having power to iegislate in diocesan matters not regulated by the general canons of the church. hy the general canons of the church. This church has not made the progress in America of several of the other church organizations, but it has a membership of more than 900,000, and over 7500 churches, with about 105 bishops, regular and missionary.

Protestants (prot'es-tants), a name given to the party who adhered to Luther during the Reformation in 1529, and protested against, or made a solemn declaration of dissent from, a decree of the emperor Charles V and the diet of Spires, and appealed to a general connoil. The protesting members were the electors John of Saxony and George of Brandenburg, Princes Ernest and Francis of Brunswick-Lüneburg, Philip, landgrave of Hesse, and Wolfgang, prince of Anhalt, together with fourteen imperial cities, the chief of which

## MICROCOPY RESOLUTION TEST CHART

1653 East Main Street Rochester, New York 14609 USA (716) 482 - 0300 ~ Phane

(716) 482 - U300 - Phone (716) 288 - 5989 - Fax stance. (See Reformation.) The name is now applied generally to those Christian denominations that differ from the Church of Rome and that sprang from the Reformation.

thology, a marine delty who fed the flocks (seals) of Poseidon (Neptune) in the Ægean Sea. He is represented as a soothsayer who prophesied only when compelled by force and art, and who tried every means to elude those who consulted him, and changed himself, after the manner of the sea gods, into beasts, trees, and even into fire and water.

Proteus, a genus of perenuibranchiate batrachians. One species only has been hitherto discovered, namely, the Proteus anguinus, which is found in subterranean lakes and caves in Illyria and Dalmatia. It attains a length of about 1 foot. The body is smooth, naked, and eel-like, the legs four in number,

Proteus anguinus.

small and weak, the forefeet three-toed, the hinder four-toed, and, in addition to permanent external gills, it possesses lungs in the form of slender tubes. From its inhabiting places devoid of light the power of vision is unnecessary, and in point of fact its eyes are rudimentary and covered by the skin.

Prothonotary (pro-thon'a-tā-ri), a term for certain functionaries connected with the papal court who receive the last wills of cardinals, etc. In some of the United States the name of prothonotary is given to the principal clerk of some of the courts.

Protococcus (proto-kok'us), a genus of algae. P. nivālis (red-snow) appears on the surface of

Protecoccus nividis (Red-snow), magnified and natural size.

snow, tingeing extensive tracts in the masses through closed membranes without Arctic regions or among the Alps, in an these masses thereby losing their identity incredibly short space of time, with a of form. In the form of cells, the skin

deep crimson. This plant, which may be regarded as one of the simplest forms of vegetation, consists of a little bag or membrane forming a cell. A large number of these are commonly found together, but each one is separate from the rest, and is to be regarded as a distinct individual.

Protocol (pro'tu-kul), in diplomacy, a document serving as a preliminary to, or for the opening of, any diplomatic transaction; also, a diplomatic document or minute of proceedings, signed by friendly powers in order to secure certain political ends peacefully. A notable instance was the protocol bringing an end to hostilities in the war between the United States and Spain, and preceding the regular treaty of peace.

Protogene (pro'tu-jen), a species of

spar, quartz, mica, and talc or chlorite; so-cailed because it was supposed to have been the first-formed granite. It occurs abundantly in the Alps of Savoy, and is found in Cornwall, where, on decomposition, it yields china-clay or porcelainearth. It is also called Talcose-granite.

Protogenes (prō-toj'e-nēz), a Greek painter, contemporary with Apelles, born at Caunus in Caria, flourished between 332 and 300 B.C. Protogenes is said to have lived in comparative obscurity at Rhodes till the fiftieth year of his age, when his merits were made known to his fellow-citizens through a visit of Apelles.

Protophytes (prō'to-fitz), a name given to the lowest

Protophytes (pro'to-fitz), a name given to the lowest organisms in the vegetable kingdom, consisting either of a single cell or of several cells united by a gelatinous substance but without any essential mutual dependence, and corresponding to the Protozoa of the animal kingdom.

Protoplasm (pro'to-plazm), a substance consisting of carbon, oxygen, nitrogen, and hydrogen, nearly identical with the white of an egg, and constituting the most elementary living matter in animal and plant structures. It is colorless, transparent, and apparently destitute of structure, and is seen in its simplest form in some of the lowest types of animal life, as in the Protozoa. When unrestricted by an imprisoning envelope it is endued (as is seen in Amaba diffluens) with the power of extending itself in all directions in the form of mutable processes which can be withdrawn spontaneously, and it has also the power of passing or flowing in minute masses through closed membranes without these masses thereby losing their identity of form. In the form of cells, the skin

of which is merely dead and hardened protoplasm, and enciosing a nucleus, or with a nucleus embedded in its substance, it is the structural unit of all organized bodies, constituting not only the basis of the ovum of both plants and animals, hut of the tissues themselves in their perfect state, which are mere multiples of such cell-units variously modified. As the protoplasm in our hodies is continually undergoing waste, a continuous renewal of the material is essential to the continuance of life. Animals, however, cannot elaborate protoplasm from mineral substances for themselves, they being able only to convert by the process of digestion dead protoplasm into living. Plants can, on the other hand, manufacture protoplasm from mineral compounds and the atmosphere, and so they are the storehouse of protoplasmic matter for the animal kingdom. Some biologists prefer the term Bioplasm to that of Protoplasm, as being more expressive of its function. Sarcode is also used similarly.

Protornis (pro-tor'nis), the name given to the earliest fossil passerine hird yet known. In size and structure it approaches the lark, and it occurs in the Eocene strata of Glarus.

Protosaurus (pro-tu-sa rus), the name given to a fossil monitor lizard, which occurs in the Durham Permian rocks. It was long the earliest known fossil reptile.

Protozoa (pro-tu-zo'a), a subkingdom including the most lowly organized members of the animal kingdom. The Protozoa may be defined to be animals composed c' a nearly structureless jelly-like substance termed sarcode or protoplasm, not possessing permanent distinction or separation of parts, and without a definite body cavity or trace of a nervous system. The animals present the appearance of a transparent, gelatinous cell containing a nucleus. In many, contractile vesicles have been observed which perform the office of a heart. The organs of locomotion are varied. In some of the higher forms movements are effected hy means of cilia, in others hy long, whip-like hristles termed flagella, but the most characteristic organs of locomotion are processes named pseudopodia, consisting simply of prolongations of the sarcodic substance of the hody, which can be emitted and retracted at pleasure. The Protozoa are single-celled animals and, with the exception of a few inhabiting the bodies of animals, are aquatic in their habits. They are of very minute size. They have not the usual reproductive organs, this function being fulfilled by means of simple cleavage or 'fission.'

and, except in the higher forms, they have no differentiated mouth, the food being simply absorbed. From this fact the Protozoa have been divided into those that have a distinct external mouth and those that have no distinct mouth; hut this classification has no great value. A better mode of division is into the three classes of Gregarinida, Rhizopoda and Infusoria. See these terms.

Proudhon (pro-don), PIERRE Jo-SEPH, a French publicist, born at Besançon, in 1809; died there in 1865. He was the son of poor parents, who were unable to pay for his education, hut he was enabled to attend gratuitously the college of his native town. At the age of nineteen he entered a printer's office, afterwards became a press reader, and in this way acquired considerable iinguistle knowledge, with the result that he wrote an Essai de Grammaire Générale. As a reward for his studious labors he had conferred on him hy the Academy of Besancon the pension Suard, which ylelded him an income of 1500 francs for three years. Political economy now became his chief study, and in 1840 apcame his chief study, and in 1840 appeared his famous work, bearing on the title-page the question: Qu'est-ce que la Proprieté? ('What is property?'), to which the first page of the treatise contains the answer, C'est le Vol ('it is theft'). For this treatise, and two others which followed, he was prosecuted at Besançon, but was ultimately acquitted. In 1843 he managed a system of water transport on the Rhône and Saône; settled in Paris in 1847; started various newspapers, and became a jeader various newspapers, and became a leader in the revolution of 1848; was elected a representative for the Seine in the Constituent Assembly; attempted with no success to found a Banque du Peuple; and for his outspokenness in the press he was imprisoned for three years. Besides those already noticed his more important tres-tises are: Discours sur la Célébration du Dimanche, De la Création de l'Ordre dans l'Humanité, and Système des Contradictions Economiques.

effected hy means of cilia, in others hy long, whip-like hristles termed flagella. but the most characteristic organs of locomotion are processes named pseudopodia, consisting simply of prolongations of the sarcodic substance of the hody, which can be emitted and retracted at pleasure. earnest members of the Society of Fainters in Water-coiors. In 1818 he visited the continent, after which he made repeated artistic tours; he became famous for his drawings of street scenes and the quaint medieval architecture of Europe. Some of his sea-coast scenes exhibit great power. His drawings are held in much

repute.

Provençal (pro-van-sal') Lan-guage and Litera-TURE, strictly the language and literature of that portion of Southern France known as Provence, but in its widest application the Provencai ianguage includes the Romance form of speech belonging to the inhabitants of a geographical scea which comprises the whole south of France (especially Provence, Limousin, Auvergne), with Catalonia and Valencia in Spain. This language was the earliest cultivated of the Romance languages (or those hased on the Latin), and at one time was extensively used in literature. It was also called langue d'oc in contradistinction to the kindred speech of Northern France, the langue d'oui; and yet again it received the name of lengua lemosina prohably from the wide fame of a few Limousin troubadours. Provençai, as a new and distinct language, appears in historicai records about the tenth century, and continued as a medium of living literary expression until about the end of the thirteenth century. In 1350 a few scholars of Toulouse attempted to revive its decaying glory, and for this purpose composed a treatise on grammar and poetry called the Leys d'Amors. About the middle of the fifteenth century the language ceased to be used both for ad-ministrative and literary purposes, and it has long been reduced almost to the condition of a patois. In the last century such poets as Jasmin and Mistral have poems of no small value written in the modern form of it; while a society of iterary men and scholars (lou Felibrige) exists for the purpose of furthering this object. Still Provencal is a language whose interest as a vehicle of literature is mainly in the past. This interest hegins in the early part of the eleventh century with a didactic poem, based by its unknown author on the De Consolatione Philosophic of Bectius; but Provencial iiterature in its development found most characteristic. endeavored to resuscitate Provençal as a characteristic expression in the amorous zations, and in this way they are interiprics of the troubadours. The earliest esting in a study of the spread and of these lyric poets was Wiiiiam IX, structure of language, as it has been count of Poitiers, about the close of the pointedly applied to changing manners eleventh century, who was followed in and customs. Greek and Latin prove be

from 1803 to 1827, and was one of the France, Italy, and Spain by an innumer-earliest members of the Society of Paint able band of poets in the Provencal tongue. Most of this poetry was intended to be sung, and not infrequently the poet also composed his own music. Besides the lyric poetry, of which there were various classes, Provençal poetry also existed of a narrative character, in which intended and alternative character, in which intended and alternative character, in which iegendary and historical themes were treated in epical detail. The rapid decay of this Provençal iiterature, which was aimost exclusively the possession of the upper classes, was largely due to political causes. During the war with the Alhigenses the social condition of the feudal pobility in the south of France suffered such downfall that thenceforth the art of the trouhadour and the min-strel\_ceased to be incratively attractive. See Troubadour.

Provence (pro-vans), one of the old provinces of France, lying in the southeastern part of the country, on the Mediterranean, bounded on the north by Dauphine and Venaissin, on the east hy Piedmont, and on the west by Languedoc. It now forms the departments of Bouches-du-Rhône, Var, and Rasses-Aipes, with parts of Vaucluse and Alpes Maritimes. The capital was Aix, and the province was divided into Upper and Lower Provence. Greek coionies were founded here at an early period; and the Romans having conquered all the southeast of Gaul (B.C. 124-123) gave it the name of Provincia Gallia, or simply Provincia (the province), whence its later name was derived. It passed successively into the hands of the Visigoths, Ostrogoths, Franks, and in 879 became part of the kinglem of Burgandy. It part of the kingdom of Burgnndy. It subsequently was ruled by the counts of Aries, and the counts of Barcelona, then hy Charles of Anjou (hrother of Louis IX of France) and his descendants, and passed to Louis XI of France in 1481.

were collected by Erasmus in his Adagia; English proverbs have been colhis lected by Camden, Howell, Ray, Kelly, Bohn (an enlarged and Improved edition of Ray), and Hazlitt; Scotch by Ailan Ramsay and by A. Hlsiop; French by De Llncy; German by various collectors, more especially Wander; Arabic by Burckhardt and by Freytag; Bengali by

Proverbs, one of the canonical books of the Oid Testament, nsually in the main ascribed to Solomon, in accordance with the superscriptions in in accordance with the superscriptions in chap. i, 1; x, 1; xxv, 1, which, if not written by Solomon himself (as the first two of them may have been), at least represent the traditional views of the ancient Jewish Church. According to modern Biblical critics, the book of Proverbs is composed of several sections written by different authors and at different times, and finally collected into ferent times, and finally collected into a single book at some period subsequent to the return from the captivity. All seem to be agreed that some part of the book is to be ascribed to Solomon, but book is to be ascribed to Solomon, but there is great diversity of opinion as to how large his share is. With regard to the other two contributors to Proverbs named in the book itself, Agur and Lemuel, nothing whatever is known; and in the case of Lemuel it is even suspected that the name is not that of a real personage. The canonicity of the book of Proverbs is represented as a subject of dispute in the Talmud, some having objected to receive the book as canonical on account of the contradictions it contains. It ultimately found its place, however, in all the Jewish lists of the sacred writings. sacred writings.

Providence (prov'i-dens), a city and capital of the state of Rhode Island and county seat of Providence county, situated on both sides of the Providence River, at the influx of the Seekonk, Moshassuck and Woonasquatucket rivers. It is 45 miles S. S. W. of Boston on the New York, New Haven and Hartford R. R. The west side of the and Hartford R. R. The west side of the and Hartford R. R. The west side a plateau city is a low plain; the east side a plateau city is a low plain; the mannfacturing of the mannfacturing of the mannfacturing of the century, etc. establishments are on the banks of the Moshassnck and Woonasquatucket. There are many fine public and private buildings. Of the former the most important are the State honse (1900), city hall, It derives its modern reputation from library building, conrt honse, Rhode Island and Butler Hospitals, the buildings of Brown University, etc. With Brown University, etc. With Brown University (founded in 1764), there is a library of about 200,000 volumes. At the south end of the city is Roger Williams Park, containing a statue of woolen, and knitting mills, and is sur-

Roger Williams, the founder of the city. Providence is notable for its manufactnring industries, it being one of the great centers of manufacture of the country. Prominent among its productions are sliverware, screws, tools, locomotives, etc., with many others, including flour and saw mills, cotton and woolen factories, foundries, steam-engine and boller facfoundries, steam-engine and boller factories, machine-shops, printing, bleaching, calendering, and dye works, etc. Providence has a safe and commodious harbor, though somewhat difficult of access, and the coasting trade is important. It was at one time an important seat of foreign commerce, but this has declined. Providence was first settled in the year 1636, incorporated in 1649, and has rapidly increased in size since 1820. Province. (provins), or ig in all very

Province (prov'lns), o riginally a country of considerable extent, which being reduced under Roman dominion was new modeled, subjected to the command of a governor sent from Rome, and to such taxes and contributions as the Romans saw fit to impose. In modern times the term has been applled to colonies or to independent countries at a distance from the metropcountries at a distance from the metropolis, or to the different divisions of the kingdom itself. Thus the Low Countries belonging to Austria and Spain were styled provinces. The different governments into which France was divided previous to the revolution were also called provinces. The name has sometimes been retained by independent states. Thus the Republic of Holland, after it had thrown off the Spanish yoke, was called the United Provinces; and the Argentine Republic nsed to be cailed the United Provinces of the Plata. In the canon law the term is applied to In the canon law the term is applied to the jurisdiction of an archbishop. In the Roman Catholic Church it is also given to the territorial divisions of an ecclesias-

Provins is mentioned in a capitulary of Charlemagne in 802, and in the thirteenth

Provost (prov'ust, pro'vo), a title given to the president of certain bodies, as the heads of several of the colleges in the Universities of Oxford and Cambridge, equivalent to principal in ether colleges. In the Scotch burghs the provost is the chief magistrate, corresponding to the English mayor. The chief magistrates of Edinburgh and Glas-The sow are styled lord provost. In the United States there is a limited use of the term provost, applied to the chief officer of an educational Institution.

Provost-marshal, in the army, is an officer of the rank of a captain, who deals with of-fenses against discipline, brings the offenders to punishment, and sees the sentence executed. In the navy there is

a similar office.

Prudentius (pru-den'she-us), Aure-LIUS CLEMENS, one of the early Christian poets, born at Calagurris in Spain in 348 A.D.; died after the beginning of the fifth century. In his latter years he composed a great number of hymns and other poems of a religious nature in which he successfully

imitated classical models.

Prudhon (prü-dön), PIERRE, a the sap begins to flow in spring.

French painter, horn in Prunus (prö'nus), a genus of arho1758; died in 1823. He studied his art
at Dijon and in Rome, where he came under the influence of Correggio and of the cherry, bird-cherry, plum, damson, the afterwards settled in the same begins to flow in spring.

Prunus (prö'nus), a genus of arhonat. order Rosaceæ, and comprehending the cherry, bird-cherry, plum, damson, sloe, huliage, apricot, etc. Parls, where he gradually made bls way, and at length became famous by his Carried off by Zephyr, Crime Pursued by Justice and Divine Vengeance, etc. His importance consists in the fact that, in opposition to David, he accentuated the purely pictorial element and the effect of black scahs. light in his works.

woolen stuff of which clergymen's gowns were once made, and which is still used for the uppers of ladies' boots and shoes. Prunella is also the name of a genus of plants, order Labiacew, with one American species, known as Blue-curl or Self-heal, at one time in repute as a febrifuge. It is mildly aromatic and slightly astringent. Prunello (diminutive of prune) is the name given a kind of plum.

Pruneg See Plum.

Pruning of portions of the stem, branches, shoots, leaves, or roots of a plant for the purpose of removing ex-

rounded by a fertile farming country, crescent or unprofitable growths, and Pop. 8925. nutrition of the valuable parts of the plant. The immediate effect of pruning is to reduce the growth of a plant In as far as it depends on the amount of follage duly exposed to the light; but as hy judiclous pruning the parts left have not only a greater share of sap, hut are better exposed to the light, its uitlmate effect is to produce a larger and stronger plant. From the tendency of sap to flow in increased quantity into the parts immediately adjoining those where its flow has been interrupted, an where its flow has been interrupted, an almost unlimited power is given to the gardener of controlling the direction of the growth of a plant. The season for pruning varies with the nature of the tree and the purpose for which it is pruned. In general it may be said that autumn and winter are the best seasons for extensive pruning in summer and for extensive pruning; in summer an excess of vigor in the plant may require a little pruning, but in spring it not only weakens the plant, but is liable to induce disease. Root-pruning is employed to check rapidity of growth and to induce development of flower-hyds. The best season for this operation is after the leaves have fallen in autumn or hefore

Prurigo (prö-rl'gō), a papular eruption of the skin in which the Truth Descending from Heaven, Psyche papules are diffuse, nearly of the color of the cuticle, intolerably itchy, the itching being increased by sudden exposure to heat, and when ahraded oozlng out a fluid that concretes into minute

(prush'a; German, PREUS-SEN), the leading state of Prussia Prunella, Prunello (prö-nel'a, o), the German Empire, comprising the northern part of Germany. The following table is from the 1901 census. By the peace of 1919 (see Treaty), Prussia lost W. Prussia and Posen.

Provinces.	Area — sq. miles.	Population.
East Prussia	14,275	1,996,623
West Prussia		1,563,658
Brandenburg		3,108,554

5,759,798 66,780 1,888,848 Rhineland ..... 10,418 Hohenzollern ...... Berlin (clty) ..... 136,488 84,472,509

The census of 1910 indicated that the population of Prussia had increased to 40,157,573. The revised boundary of 1919 (see map of Germany) reduced the area by about 25,000 square miles and the population by about 4,000,000. The consisting of the greater part of West-consisting of the greater part of West-

Harz Mountains cover a considerable area, the latter rising in the Brocken to lagoons, on the Baltic coast cailed Haffs, have heen formed, communicating with the sea by narrow outlets. The chief bays or guifs are Danzig Bay, Pomera-nian Bay, and Kiei Bay, ail on the Baltic coast; and on the Baltic coast are the islands of Rügen, Usedom, Woilin, etc.; in the North Sea the North Frisian Islands and East Frislan Islands. The principal river which drains this portion islands of Rügen, Usedom, Woilin, etc.; in the North Sea the North Frisian Islands and East Frislan Islands. The principal river which drains this portion of Prussia is the Elhe, which enters it from the Kingdom of Saxony, flows northwestward, and enters the North Sea between Hanover and Holstein. The Weser, with its trihutary the Aiier, and the Ems. are the principal rivers west of the Eibe. The Oder lies almost wholiy within Prussian territory, and enters the Baitic by the Pommerische Haff. The Vistula or Weichsei flows in a northern direction through Eastern Prussia, and throws off two iarge branches which enter the Frische Haff, while the main stream passes into the Guif of Danzig. The other more important rivers are the Passarge, the Pregel, and the Niemen or Memci.

Lakes abound in almost every province, but more especially in those of East and West Prusala, Pomerania, and Branden-burg. The chief coast lagoons are the Pommerische Haff, Frische Haff, and Kurlsche Haff. The ciimatic conditions

capital is Berlin. Other important cities consisting of the greater part of Westare Breslau, Chariottenhurg, Coiogne, Düsseldorf, Frankfort, Hanover, Kiel, Magdehurg, Königsberg, and Stettin.

Physical Features.—The whole of present a striking contrast to it. In Physical Features.—The whole of present a striking contrast to it. In northern and eastern Prussia. from Hoisiand on the west to Russia on the east, belongs to the great plain of Northern belongs to the great plain of Northern Europe, and may be described generally directions, and from numercus valieys, belongs to the great plain of Northern Europe, and may he described generally as a vast plain, elevated in the south and southwest, and thence descending towards the Baltle and the German Ocean. The loftiest summits are on the southern frontiers, where the Riesengebirge and the Sudetic Mountains form the houndary between Prussia and the Austrian dominions. The highest Prussian mountain is the Scinneekoppe in the Riesengebirge (5257 feet). Further to the hasin of the Rhine, which, entering the southern frontiers, where the Riesengebirge and the Sudetic Mountains form
the houndary between Prussia and the
Austrian dominions. The highest Prussian mountain is the Schneekoppe in the
Riesengehirge (5257 feet). Further to
the west the Thuringian forest and the

the west the Thuringian forest and the
There are numerous streams tributary to There are numerous streams tributary to the height of 3742 feet. On the shores the Rhine, the largest being the Moselie, of the Baltic and North Sea, large tracts with its tributary the Saar. There are are only saved from injundation by low on lakes worth mention in this portion sand hills. Behind these hills extensive of Prussia. As compared with the lagoons, on the Baltic coast called Haffs, division already described, the climate of this part of Prussia is milder in winter and cooler in summer, the mean annual temperature being about 1° higher.

Agriculture, etc.—The land in Prussia is much subdivided, especially in the more

populous districts, smail farms of 3 or

exported from the maritime provinces, and in West Prussia and Pomerania sheep are raised in large numbers. Along the Baitic and the North Sea a considerable number of the lnhahitants are empioyed in the fishing industry. The forests cover about 20,000,000 acres, nearly one-fourth of the total area, and are a great source of wealth, forestry being nowhere better understood than in Prussia. The best wooded provinces are Brandenhurg, Silesia, and Rhenish Prussla. In some of the forests the wild hoar

is common, other wild animals heing the wolf, lynx, wild-cat, etc.

Mining and Manufactures.— Mining is one of the chief hranches of Prusslan industry; the most important mineral products being coal and lignite, iron, copper, iead, silver, and zlnc, while other minerals produced to a greater or less extent are cohalt, nickel, arsenic, antimony, manganese, rocksalt, kainit and other potash saits, alum, and copperas. About a third as much coal is raised in Prussia as in Britain, the chlef coal-fields russia as in Britain, the chlef coal-fields being in the Rhine province, Westphalia, and Silesia. Iron is found in all parts, the principal areas helng Westphalla, Silesia, the Rhine province, and the Harz; copper is found chiefly in the Harz and Westphalia; silver chiefly in Hanover; lead is found in Silesla, the Rhenish province, Westphalia, and Saxony; zinc in the same localities, except textlle manufactures are those of linens, cottons, and woolens. Silesia, Brandenhurg, and Westphalia are the provinces in which the linen industry is chiefly developed; the cotton manufacture is most extensive on the Rhine; the woolen manufacture has its chlef seats in Branand steel ware the chief manufacturing centers are Essen, Solingen, Aix-la-Chapelle, and Burtscheid. At Essen are located the great Krupp ordnance and armor-plate works, nowhere surpassed in output. The manufacture of porcelain and the finer kinds of ware is extensive, and leather and paper making are large industries. Other manufactures of national importance are heet-root sugar,

iive stock, wool, chemicals, spirits, coal, tlmber, leather, stoneware and glass, etc.; and the imports are chiefly in the raw materials connected with the textile and other manufactures, and tea, coffee, sugar, and other colonial products. Besugar, and other colonial products. Besides the ordinary road and canal communication, Prussia has an extensive system of railways, nearly all national property. The principal ports are Stettin, Pillan, Königsberg, Straisund, Kiel, and Flenshurg on the Baitic; and Altona on the North Sea. In many of these ports, and particularly in Stettin. shipbuilding is carried on with considerable activity. The system of money, weights activity. The system of money, weights and measures in Prussia is the same as that of the rest of Germany. See Germany.

Administration, Government, Prussla is a monarchy heredltary in the male line, the present constitution of which was framed by the government, with the aid of the constituent assembly, in 1850, and subsequently modified by royal decrees. The king is assisted in the executive by an irresponsible privycouncil and hy a cahinet which is nominally responsible to a legislative assembly composed of two chambers. The upper chamber (Herrenhaus) is composed of princes of the blood of the relgning and former soverelgn families of full are the heads of the mediations. of full age, the heads of the mediatized ony; zinc in the same localities, except principalities, the territorial nobility Saxony; cohalt in Westphalia and Saxony; arsenic in Silesia. Amber is found along the shores of the Baltic. The chief hy resident land-owners, etc. The sectextile manufactures are those of linens, ond chamber or House of Deputies (Haus der Ahgeordneten), since the enlargement of the kingdom, consists of 433 members. The primary qualification of electors is based on taxatlon, and the primary electors are divided into three classes. The first division consists of denhurg and the Rhenish province; those who pay the highest taxation, the while silk and velvet are made in the second of those who pay the medium, and Rhine valley, as also at Berlin. In iron the third of those who pay the lowest and steel ware the chief manufacturing amounts. The indirect electors (Urcenters are Essen, Solingen, Aix-la-wähler) elect the direct electors (Wahlerselle and Burkecheid at Feren are minute). minner), who choose the representatives. The deputies are chosen for three years. The principal items of revenue are direct taxes, state railways, domains and for-ests. For local administrative purposes ests. For local administrative purposes the kingdom is divided into provinces, governmental departments, circles, and communes, and all recent legislation has chocolate, chicory, chemical products, and tobacco.

Trade and Commerce.— Prussia carries of each province is a president or govorn a large trade both by sea and with its inland neighbors. The principal exports are textile fahrics, yarn, metals and metal wares, agricultural produce and communes, and all recent legislation has communed to reinforce local authority and discourage centralization. At the head of each province is a president or governor and also a military communes, and discourage centralization. At the head of each province is a president or governor and also a military communes, and discourage centralization. vd ...

Vıt. nt be than haif the total number). Although the reigning family and nearly two-thirds of the total population are Prot-estants, absolute religious liberty is guar-anteed by the constitution. The clergy, both Protestant and Roman Catholic are both Protestant and Roman Catholic, are paid by the state. A complete system of primary, secondary, and university education exists, all grades of schools being linked together according to a definite scheme or schemes of study. Elementary education is enforced hy law, maintained by local taxes, and administered by local taxes, and administered by local authority. Prussia has ten universities — Berlin, Bonn, Breslau, Göttingen, Greifswald, Halle, Kiel, Königsherg, Marhurg and Münster, attended by some 15,000 students in all. All private as well as public educational establishments are placed under the superintendence of the minister of public instruction, and ail public teachers are regarded as servants of the state. The Prussian army and navy form an integral

part of those of Germany in general.

See Germany.

History.— The historical development of the Prussian Kingdom is closely associated with three important elements.

The first of these is found in the grow-line newer of the Electorate of Branden. lng power of the Electorate of Brandenburg, which formed the nucleus of the future kingdom; the second relates to the acquirement of the province of Prussla, which gave its name to the new heterogeneous territory; and the third is associated with the rule of the Habercollery. clated with the rule of the Hohenzollern family, under whose skilful diplomatic and military guidance the small Brandenand military guidance the small Branden-burg electorate has grown into what is now considerably the larger portion of the German Empire. Brandenburg, the Wistula and the Niemen the Poies, endeavored magne in 789, was erected into a margraviate by Henry I (the Fowler), emperor of Germany in 926. Alhert the Bear, who received Brandenhurg as a fief from the Emperor Lothaire (1134), conquered the Slavonian Wends, and took in 1157 the title of Margrave of Brandenhurg. His dynasty continued to bear hurg. His dynasty continued to bear rule till 1320, and during this period German civilization was gradually extended in Pomerania, Saxony, Brandenhurg, and Silesia. After its extinction there followed a period of anarchy, during which Brandenhurg fall as a lenged for rule for three electorates it was subsequently ceded to the honse of Juxem-treaty of Xanten (1614) Cièves, Laburg, and Charles IV, the first imperia Marck, etc., were assigned to Branden-representative of this house, gave it and burg, and in this manner was laid the

it sends 17 members, while to the Reichcessively to his sons Wenceslaus (1373) stag or Diet it sends 236 deputles (more and Sigismund (1378). The latter being in debt received from Frederick, the burgrave of Nürnberg, a loan of 400,000 gold florins, for which Frederick held Brandenhurg in pawn, and subsequently acquired it in fuli. This burgrave was the descendant of Conrad of Hohenzollern, a cadet of a Suablan family to whom belonged a small territory surrounding the ancestral castie of Hohenzoliern, of which they traced their lordship back to the time of Charlemagne. Brandenhurg, which Frederick had thus acquired, was covered with feudal strongholds, which he gradually reduced, and he in debt received from Frederick, th holds, which he gradually reduced, and he also added the two small territories of Anshach and Balreuth. Frederick II, who succeeded his father in 1440, extended the possessions of his family by policy as well as by valor. In 1470 he abdicated in favor of his brother Aibert III, surnamed Achilles, who, hy a family ordinance, prepared the way in an important respect for the future greatness of his house by providing for the undivided descent of the dominions in conundivided descent of the dominions in connection with the electorate. His grand-son, Joachim II, who succeeded in 1535, embraced the Reformation, and estab-lished Lutheranism in 1539. In 1537 he acquired the reversion of the principalities of Liegnitz, Brieg, and Wohlan.

John George succeeded in 1571. Joachlm Frederick, who succeeded in 1598, married his son John Sigismund to the daughter of Frederick Albert, duke of Prussia; and in 1618 John Sigismund united the duchy of Prussia to the electorate, thus hringing it about that the whole country became known as Prussia.

The Prussians were a Slavonic people labelities the country territory to the country territory than the country territ

tahlished themselves in castles and walled cities. Their rule, which was a despotic oligarchy, was finally overturned by the combined forces of the Prusslans and the Poles, and in 1466 West Prussia was ceded to Poland and East Prussia made hurg, and Silesia. After its extinction ceded to Poland and East Frussia made there followed a period of anarchy, during a fief of the Pollsh crown under a grand-which Brandenburg fell as a lapsed fief master, and later under a duke. It was to the empire, and Louis of Bavaria gave as successor to Duke Frederick Albert, it to his son. Remaining nuder Bavarian rule for three electorates it was subsequently ceded to the honse of Juxem-treaty of Xanten (1614) Clèves, La

John Sigismund was succeeded in 1619 by his son George William, who was a weak and vacillating ruler, unequal to encounter the terribic crisis that now occurred in the affairs of Germany, the Thirty Years' war. During this war the electorate became the battleground of the electorate became the battleground of the contending forces, and suffered severely, being at the death of the elector in 1640 occupled by Swedish troops. A very different man was his son Frederick William (which see), cailed the Great Elector, who may be regarded as the virtual founder of the Prussian monarchy. He found his country weak, and left it strong and with its boundaries extended and provided with a well-equipped tended, and provided with a well-equipped army and a well-filled treasury. Dying in 1688, he was succeeded by his son Frederick, who in 1701 had himself crowned as king, being the first King of Prussia. Under his rule the Prussian troops fought side by side with the English at Bienhelm, Ramillies. Oudenarde, and Maiplaquet. Frederick I was succeeded by his son (1713) Frederick William I, who governed Prussia till 1740. His reign was on the whole peaceful, and the country grew greatly in tended, and provided with a well-equipped fui, and the country grew greatly in population, industry, and wealth. He went to war with Charles XII, and acquired part of Pomerania, with Stettin, from Sweden. At his death he ieft a prosperous country, a weli-supplied treasury, and an army of 80,000 men to his successor.

Frederick II, surnamed the Great (which see), succeeded to the crown on the death of his father in 1740. In less than a year after his accession he procialmed war against Maria Theresa in order to enforce his claim to the Silesian principalities, and invaded Silesia. At the persuasion of England Maria Theresa accepted into prescriptions with him but entered into negotlations with him, but entered into negotiations with him, but failed at first to come to an understanding. Ultimately, however, by a treaty concluded at Berlin (1742) Frederick obtained the cession, with the exception of some specified districts, of both Upper of some specified districts, of both Upper and Lower Silesla, and of Glatz. Conceiving that the Austrians might seek to regain this territory, Frederick in already been declared by the French authorities against the empire, the 1744 invaded Bohemia, and commenced what is called the Second Sileslan war. He was at first compelled to retreat, but subsequently gained such successes that, afterwards Frederick William withdrew when peace was concluded in 1745, Austria confirmed the cession of Silesla, had been the affairs of Holland, and in 1791 intervention in the affairs of Holland, and in 1791 intervention in the affairs of Holland, and in 1791 intervention in the affairs of Holland, and in 1791 intervention in the affairs of Holland, and in 1791 intervention in the affairs of Holland, and in 1791 intervention in the affairs of Holland, and in 1791 intervention in the affairs of Holland, and in 1791 intervention in the affairs of Holland, and in 1791 intervention in the affairs of Holland, and in 1791 intervention in the affairs of Holland, and in 1791 intervention in the affairs of Holland, and in 1791 intervention in the affairs of Holland, and in 1791 intervention in the affairs of Holland, and in 1791 intervention in the affairs of Holland, and in 1791 intervention in the affairs of Holland, and in 1791 intervention in the affairs of Holland, and in 1791 intervention in the affairs of Holland, and in 1791 intervention in the affairs of Holland, and in 1791 intervention in 1792, war having the france of Louis XVI. In 1792, war having the france of Louis XVI. In 1792, war having the first of Louis XVI. In 1792, war having the first of Holland, and in 1791 intervention in 1792, war having the first of Louis XVI. In 1792, war having the first of Louis XVI. In 1792, war having the first of Louis XVI. In 1792, war having the first of Louis XVI. In 1792, war having the first of Louis XVI. In 1792, war having the first of Louis XVI. In 1792, war having the first of Louis XVI. In 1792, war having the first of Louis XVI when peace was concluded in 1745, Australia and the war with France, in which he trial confirmed the cession of Silesia, had been the most active promoter. which was guaranteed by Great Britain. Then followed a second and a third parprussia now enjoyed an interval of prostition of Poland (1793, 1795), by which perous peace, which the king was desirous to maintain. But his continued sion of territory. By the treaty of

foundation of the Prussian Rhine prov-ince. success had aroused the fear of Austria and the enmity of France and Russia, so that these powers projected a scheme of conquest which embraced the parti-tion of Prussia. Before their plans could be matured Frederick invaded Saxony, entered Dresden, and published the despatches which proved the existthe despatches which proved the exist-ence of the scheme. England now openly entered into a defensive alliance with Frederick, and subsidized him. The allies, whose plans had been discovered (Austria, France, Russia, and Sweden), prepared for immediate hostilities. In the Seven Years' war (which see) foilowing upon this movement, the immense lowing upon this movement, the immense forces which his enemies were able to bring into the field reduced Frederick to the greatest straits, and gave opportunity for the development of his strategic genius. Towards the ciose of the war the English cabinet began to draw off from the Prussian alliance, but the death of the Empress Elizabeth (1762) broke up the alliance against Prussia, and the Peace of Hubertsburg (1763) put an end to the war. According to Frederick's calculation, 880,000 men had perished in a war which falled in effecting ished in a war which falled in effecting any territorial change; but it transformed Prussia into one of the chief European powers. Frederick determining again to extend his boundaries, entered into an alliance with Austria, and invaded the territories of Poland. Negotlations followed with Russia, and in 1772 the partition of the weak kingdom of Poland was arranged in a treaty between the three powers. In this way Prussia obtained most of Pomerania and a large portion of Poland. (See Poland.) Frederick died in 1786, and was succeeded by his nephew Frederick William II.

The new king had nelther the mllitary skill nor the strength of character possessed by his predecessor. He continued the absolutism, but curtailed some of the freedom of the former reign. In 1788 he made a useless armed intervention in the affairs of Holland, and in 1791 ine i-

Basel, concluded in 1795 with the French Republic, Prussla openly abandoned her connection with the other European connection with the other European concluded at Kalisch, and the league thus formed was joined afterwards by Austria. In the great struggle for the overlawing year France was permitted to advance her frontier to the Rhine, while a new line of neutrality was formed by Erance), an important part was taken Republic, Prussia openly abandoned her connection with the other European powers, and in a secret treaty of the following year France was permitted to advance her froutier to the Rhine, while a new line of neutrality was formed by which Saxony and other South German states withdrew their support from the empire. Frederick William died in 1797, and was succeeded by Frederick William III. Continuing his father's policy in regard to France, he courted the French directorate, and at the Peace of Lunéregard to France, he courted the French directorate, and at the Peace of Luncville (1801) Prussla was indemnified by 4116 square miles ceded at the expense of the empire. In 1804 Prussla recognized Napoleon as Emperor of France, and in the campaign which ended in the overthrow of Austria at Austerlitz (1805) remained neutral. This attitude was at first successful, but ultimately it led to distrust among the German states, and by the formation of the Confederation of the Rhine Prussla was isolated and left to the mercy of Napoleon. At the instigation of the latter Prussla had occupied Hanover, but Napoleon treated this fact with con-Napoleon treated this fact with contemptuous indifference when he offered to restore Hanover to England. In his indignation at this insult Frederick William declared war against France without an ally. Although the Prussian army numbered 180,000 men, the French army numbered 180,000 men, the French in the field. On October 14, 1806, the armies met at Jena and Auerstädt, where the Prussians were completely defeated, and the whole country was soon in the hands of Napoleon, who entered Berlin in triumph. At the Peace of Tilsit (June, 1807), concluded between of Tilsit (Jun defeated, and the whole country was soon in the hands of Napoleon, who entered Rerlin in triumph. At the Peace of Tilsi\* (June, 1807), concluded between the Rhine and the Elbe were ceded to Napoleon for his free disposal, a war Indemnity of 140,000,000 francs was imposed on the mutilated kingdom, and Frederick William was also put under treaty obligation not to maintain an army of more than 42,000 regular troops during the next ten years. The years which followed this national disaster were chiefly remarkable for the sweepwing internal reforms which the crisis necessitated, carried out under Baron Stein and Baron Hardenberg, and almost amounting to a revolution. The restriction of the army to 42,000 was evaded by replacing rapidly the drilled men by another body of undrilled men. Thus, after Napoleon's disastrous Russian campaign of 1812, Prussla was prepared to take prompt advantage of her opportunity. The king issued a general

France), an important part was taken by the Kingdom of Prussia, and the Prussian troops were similarly important in the Waterloo struggle. At the Congress of Vienna (1815), when the map of Europe was rearranged, Prussia, though losing some possessions, was indeputified with others more extensive and demulfied with others more extensive and valuable, and was placed in a more advantageous position than before. She now also formed one of the states in the new German Confederacy.

After the restoration, Frederick William III leaned to the despotic counsels of Austria and Russia, supported heartly the Holy Alliance, and entered upon a reactionary policy which continued until his death in 1840. He was succeeded by Frederick William IV, who was expected to grant a constitution to his subjects, but refused the demand of his states to this effect in 1841. In 1847 he tried to anticipate the revolu-

obligations in regard to the duchies of Schleswig and Holstein, the Prussians, under General Wrangel, entered Schleswig (1864), and Denmark was overpowered. By the Treaty of Vienna, signed October 30, 1804, Denmark gave up Schleswig, Holstein, part of Jutiand, and Lauenburg to Germany. In the and Lauenburg to Germany. In the following year Prussia purchased the ciaims of Austria over the Duchy of Lauenburg, and it was agreed that Schieswig and Hoistein should be administrative. istered separately by both powers. But this settlement did not last long. Prussia, which had determined on ap-Prussia, which had determined on appropriating them, wished to bny out Austria, but the latter would not cede her ciaims for money. This led to war between the two powers and to the break-up of the German Confederation, some of the states of which sided with Prussia, others with Austria. On June 15, 1866, the Prussian troops took the offensive, and the brief campaign which ensued is known as the Seven Weeks' war. The Prussian forces were armed with the new needie-gun, and the whole with the new needle-gun, and the whole movements were directed by the chief of staff, Connt von Moitke. The Austrians, under General Benedek, were completely where on July 3d was fought the decisive battle of Sadowa; and peace soon followed. A subordinate campaign against Hanover, Bavaria, and other states had been conducted by the Prussians with complete success. After the was struggling with a deadly the throne, was succeeded by his son, William II, who announced that he ruled by disciplinating the charged Blamarck from the chancellorship policy on the whole German Empire, terminating in the catestant was succeeded by his son, war Prussia imposed a fatal war ready belonged to the royal family. The K. 1888, he was succeeded by his son, was succ defeated near Königgrütz in Bohemia, where on July 3d was fought the decisive battle of Sadowa; and peace soon K...g of Prussia now invited the States of North Germany to form a new confederation, which was established on the the other German states suffered defeat. basis of proposals made by Prussia. The Prussian Blue (prush'an), a cyanide of iron (Fe-Cy11) powerful confederation, and in 1367 possessed of a deep-blue color, and much poverful confederation, and in 1001 powerful confederation, and in 1001 the question of the disposal of Luxemused as a pigment. It is also used in

This, when washed and dried, but that the King of Prussia should brown. This, when washed and dried, but that the King of Prussia should brown. This, when washed and dried, but that the King of Prussia should brown. This being refused, permanency. It is being refused, war was declared by France on July 15, 1870, with a most disastrous result to herself. (See Franco-German War.) Scheele in 1782, but first prepared in the After the German arms had proved entirely successful, on the invitation of the a colorless liquid which solidifies at 5° F.

North Garman parliament supported by the South German states, the King of Prussia assumed on January 18, 1871, the

title of German Emperor.

From this point the history of Prussia is, to a great extent, merged in that of the German Empire. In the hands of I'rince Bismarck, acting as premier of I'russia as weil as chancellor of the empire, a strong, central, autocratic gov-ernment was maintained. Externally his policy was to secure Germany from attack by France or Russia, and in order attack by France or Russia, and in order to this ailiances were made with Austria and Italy. Internally the legislation of Prussia has been chiefly remarkable in recent years for its anti-clerical and anti-social laws. In 1873 many cierical privileges were suppressed by the laws introduced and carried by M. Falk; but in 1880 an amendment to these was promoted by the premier, and later he greatly modified his opposition to the nitramontanes. The social-democrats also evoked the special antipathy of the Prussian premier, and their success at Prussian premier, and their success at the elections, especially in Berlin, caused him to promote an anti-social law, which was vigorously applied. In his policy, both home and foreign, Prince Bismarck was supported by the Emperor William minating in the catastrophic European war (q. v.), 1914-18, when Prussia and

80 y he to feathery crystals, and boils at 80°. Its specific gravity is about 0.7. It dissoives in ail proportions in water, forming a liquid which reddens iltmus-paper but slightly. It is found in the kerneis but slightly. It is found in the kernels of bitter aimonds, peaches, apricots, plums, cherries and quinces; the blossom plums, cherries and quinces; the blossom of peaches, sioes, etc.; the leaves of the beech, cherry, iaurel; and various parts of other plants. Pure prussic acid is prepared by passing a stream of dry suiphuretted hydrogen over dry cyanide of mercury. This acid, which is one of the strongest poisons known, is used medicinaily to remove various forms of irritation; but in all cases it must be used with extreme caution. When an appropriate is administrated death is instanused with extreme caution. overdose is administered death is instantaneous, and with a lesser dose the symptoms are convuisions or paraiysis. The nature of its action is not clearly understood, hut the best antidotes are found to be ammonia, chlorine-water, or a subentaneous injection of atropine. See Cyanogen.

Pruth (pröth), a river of Enrope which rises on the eastern side of the Carpathlan Mountains, ln the southeast of Gailela, flows circulcously east past Czernowitz, then S. S. E., forming the boundary between Roumania and the Russian government of Bessarabia, and enters the Danube on the left, shout 12 miles below Galatz

severity to attack prevailing fashions. For a volume denouncing stage-playing, entitled *Histrio-Mastia*, which was supposed to be leveled at the queen, he was condemned by the Star-chamber to pay a fine of £5000, to stand in the pillory and have both ears cut off, and to remain a prisoner for life. While in prison he wrote another book, News from I pswich against Laud, and being condemned again to another fine of £5000, and to lose the remainder of his ears, had the stnmps cut off, and was hranded on both cheeks. The Long Parliament in 1640 granted his release. Soon after he entered Parliament and took a prominent part in the triai of Laud. After the fall of Charles I Prynne opposed Cromwell, who had him again imprisoned. high opinion of his character and abiliAt the Restoration he was appointed ties.

Reeper of the records at the Tower, and died in 1669. He was a most voluminous writer. He had much learning and in
psalmody (så'mu-di, sal'mu-di), the art and practice of singing psalms. The composition of psalm tunes

defatigable industry, but was very deficient in judgment.

Prytaneum (prit-a-ne'um), a public Prytaneum haii in ancient Greek states and cities serving as the common home of the community. That of Athens was the most famous. Here the city exercised the duties of hospitality both the later and citizens and attraces. to its own citizens and strangers. prytanes or presidents of the senate were entertained in it, together with the citizens who, whether from personal or ancestral services, were honored with the privilege of taking their meals at the pubile cost.

Przemysł (prshem'isi), a town of Austrian Gailcia, on the river San, 51 miles west of Lemberg, and 140 east of Cracow. It has two ancient cathedrais and several cioisters; and has been strongly fortlied. It was taken by the Russians in 1914, and lost again to the Germans. Pop. 54,800. Przhevalski, or Pajevalski (pshā-

Przhevalski, or Przez (prince przhevalski, vaijske), Colonel N., a Russian traveler, born in 1830. He became an army officer and was employed on numerous and important government expioring expeditions, usually accompanied by an armed force. The resuits of his expiorations in Asia are of the highest value. He died in 1888.

rabla, and enters the Danube on the left, about 12 miles below Galatz.

Prynne (prin), William, pamphieteer and politician, born at
Swanswick, Somersetshire, in 1600, and educated at Oxford, where he took his degree in 1620. He then removed to Lincoin's Inn, where he became a harrister, and in 1627 began with Puritan severity to attack prevailing fashions. tutor; became a common vagrant, and at iength assumed the character of a Japanese convert to Christianity, a character which he changed to that of a converted heathen native of the island of Formosa. At this time he became acquainted with a ciergyman named Innes, who brought him to London as a convert to the Church of Engiand. Under the patronage of Bishop Compton he translated the Church Cottonism into a innerest which he in Catechism into a language which he invented and called Formosan, while he also puhilished a so-called anthentic History of Formosa. Various scholars had donhts of his pretensions, and at last he confessed his imposture. For many years after he resided in London, and employed his pen in writing for the bookseifers. His Autobiography, published after his death, expresses great penitence for his deceptions. Dr. Johnson had a high opinion of his character and abili-

and the performance of psalmody appears to have been practiced and encouraged in Germany, France, and the Low Countries before it was introduced into Britain. In France psalmody was popularized at the Reformation by Clement Marot and Claude Goudimel, the former of whom translated the Psalms of David in verse, while the latter set them to music. Psalm-singing was Introduced by the Reformers; but Calvin discouraged any but simple melody, while Luther practically. tleed and favored part harmony, as did also John Knox in his psalter. The first English version of the Psalms of David, which appeared soon after that of the French, was made in the reign of Henry VIII, by Thomas Sternhold groom of the robes to that monarch, and John Hopklns, a schoolmaster, assisted by William Whittyngham, an English divine. It was afterwards superseded by the version of Nahum Tate, the poet laureate, and Dr. Nicholas Brady. The first important compilation of psalm tunes for four voices was published in 1621 by Thomas Ravenscroft, Mus. Bac., and included such well-known tunes as Bangor, St. David's, Norwich, York, etc. Sternhold and Hopkins' version of the Psalms was first used in Scotland, and was afterwards superseded by the version now in use, founded on that of Francis Rous, provost of Eton, a member of Cromwell's government.

Psalms containing the llturgical collection of hymns used by the Jews In the temple service. Each psalm in the collection, with a few exceptions, has a particular superscription, such as Maschil, instruction, michtam, memorial, etc. The chronology of the psalms is much disputed. The earliest (Psalm xc) is sald to have been written by Moses, many are attributed to David, a few are supposed to have been written on the return of t have been written on the return from the captivity, and some are assigned to the time of the Maccabees, but evidence as to their actual origin is greatly lacking. There is an ancient division of the psalms into five books, viz. i-xli; xlii-lxxii; lxxiii-lxxix; xc-cvi; cvii-cl, which many critics look upon as indicating five distinct collections. Those who take this view place these collections in chronological order as they stand; but this method is considered by the latest criticism to be unwarranted by the intermethod is considered by the latest criticism to be unwarranted by the internal evidence of each particular psalm. Archipelago, 7 miles northwest of Sclo, Nearly eighty are popularly assigned to David, twelve to the singer Asaph, some fourteen to the sons of Korah, two have the name of Solomon, and one is supposed to have been written by Moses tional writings). A term applied in bib.

The opinion that some of the psalms are of the time of Samuel has no historical authority, while those by unknown authors are apparently of the latest date. In the Old Testament there are 150 psalms, but in the Septuagint and Vulgate psalms ix and x and civ and cy are united, while cxvi and cxlvil are divided, so that the numbering differs from the English version. In structure the psalms have the strophe and anti-strophe which is so characteristic of Hebrew poetry. It would also seem that many of them were meant to be sung in parts, the chief part by the officiating priest, and a responsive part by the people. The Book of Psalms as we have it is essentially the hymn-book of the second temple, and according to the latest criticism, was ascribed to David, merely because the order of the worship in the second temple was the same as that pre-

Psalter (sal'ter), specifically, the version of the Psalms in the Book of Common Prayer; also applied in the Roman Catholic Church to a series of devout sentences, 150 ln number, and to a large chaplet or rosary with 150 beads, agreeing with the number of the psalms.

Psaltery (sal'ter-i), or Psalterion an instrument of music used (samz), Book of, one of the books of the Old Testament, a flat instrument in the form of which is now used is the Illustrated and a flat instrument in the form of which is now used is zium or triangle truncated at the top, strung with thirteen chords of wire, mounted on two bridges at the sldes, and struck with a plectrum or crooked stlck, thus resembling the dulcimer (which see).

Psammetichus (sam-met'i-kus), a king of Egypt who died about 617 B.C. He was one of the twelve kings who reigned simultaneously in Egypt for fifteen years after the expulsion of the Æthiopian dynasty; but being suspected by the other kings of aiming at sole sovereignty he was driven into banishment. With the ald of some Greek mercenaries, however, he defeated the other kings in a battle fought at Momemphis, on the east side of Lake Mareotis, after which he became the sole king of Egypt (671 or 670 B.C.), and the founder of a new dynasty.

liography to a great number of books and fragmentary writings whose claim to a place in the Old and New Testament canons has heen denied. Unlike the apocryphal and deutero-canonical books, the pseudepigrapha have no value unless to prove the capacity for forgery which was possessed by the Jew, Gnostic and Christian of ancient and medieval times. Among these Old Testament forgeries may be mentioned, The History of Asenath, The Preaching of Noah, The Book of Elias, The Testament of the Twelve Patriarchs, The History of Antiochus, Book of Lamcch, Apocalypse of Adam, etc.; while among the New Testament books are the false gospels of James, Matthias. Thomas, Nicodemus, Andrew, History of Joseph th. Carpenter, Nativity of Mary, Acts of the Apostles, etc. the pseudepigrapha have no value unless

Pseudomorph (sū'dō-morf), a min-eral having a definite form, belonging not to the substance of which it consists, but to some other sub-stance which has wholly or partially dis-appeared. Sometimes quartz is found in the form of fluorspar crystals, the fluorspar having been changed by a process of replacement or substitution into quartz. Pseudopodia (sū-do-pō'di-a), in zo-ology, the organs of locomotion characteristic of the lower Protozoa. These consist of variously-shaped filaments, threads, or finger-like processes of sarcode, which the animal can thrust out from any or every part of its hody. See Protozoa. See Guava.

Psid'ium. Psittacidæ (sit-as'i-dē), the parrot ever united with her beloved. rial hirds, comprising over 300 species, of which the genus Psittācus is the type. See Parrot.

Pskov (pskof), or Pleskov, a government of Russia, bounded by those of St. Petersburg, Novgorod, Tver, Smolensk, Vitebsk, Livonia; area, 17,069 Smolensk, Vitebsk, Livonia; area, 17,069 square miles. The whole government belongs to the basin of the Baltic, the South Dwina, which drains the southeast, car-rying its waters into the Gulf of Riga, and the Velikaia, Chelon and Lovat, with other small tributaries, carrying the rest of the drainage into the Gulf of Finland. PLESKOV, the capital, is situated on the tigation hy prominent members of the so-Velikaia, on which there is regular comciety. Of these, many members of high munication by steamer with Dorpat. It standing have accepted the theory of

consists of the Kremlin, the Central city. the Great city, and a considerable sub-urb. Among the chief buildings are the cathedral, and the palace of the ancient princes of Pskov, now occupied by the archbishon. The principal manufacture ls Russian leather. Pop. (1913) 36,000.

Psoas (sō'as), an important muscle of the human body which extends from the lumhar region to the thighbono, and assists in the movements of the thigh.

Psoralea (so-ra'le-a), a genus of leguminous plants, one species of which (P. csculenta) is the hreadroot of N. America.

Psoriasis (sō-ri'a-sès), a kind of skin disease, in which elevated red patches appear covered with large scales, there heing often cracks or fissures between, from which blood may ooze. In some cases it is a syphilitic affection.

The name is also given to the itch.

Psyche (si'kë; Greek, psychë, the soul), a sort of mythical or allegorical personification of the human soul, a beautiful maiden, whose charming story is given by the Latin writer Appulcius. She was so beautiful as to be taken for Venus herself. This goddess, becoming jealous of her rival charms, ordered Cupid or Love to inspire her with love for some contemptible wretch. But Cupid fell in love with her himself. Many were the trials Psyche underwent, arising partly from her own indiscretion, and partly from the hatred of Ven.1s, with whom, however, a reconciliation was ultimately effected. Psyche hy Jupiter's command became immortal, and was for ever united with her heleved.

Psychical Research (si'ki - kal), an English society, founded in 1882, for the purpose of making an organized attempt to investigate that large group of debatable phenomena designated by such terms as mesmerle, psychical, and spirltualistic.' This society in its early period gave its chief attention to telep-athy (or the power of one mind to influence another mind at a distance and without the usual organs of sense), the results of which have been published in Reports and Proceedings, as well as in a book called Phantasms of the Living. In its more recent period the investigation of The soil is throughout of poor quality, more recent period the investigation of wheat is seldom grown, and the principal spiritualistic phenomena has been very crops are oats and harley. Forests are extensive, and the pine furnishes the means of manufacturing large quantities of Mrs. Plper, an American medium who of pitch. Pop. 1,136,540.—Pskov, or for many years was under careful investigation by prominent members of the so-

to the methods of the Emmanuel Movement and Christian Science. Psychotherapy has its hasis in the power of suggestion, and cannot be said to he a new science, since Æsculapius and other early physicians and philosophers recognized the power of mind over hody.

The Emmanuel Movement derives its name from the Emmanuel Church, Boston and the control of the c

ton, where in 1906 the rector, Elwood Worcester, first organized a class for the teatment of nervous disorders. The rules provide that the sick are to be received only after examination by a physician. While the Emmanuel Movement declares the active agent in all recoveries to he faith, it makes free use of subsidiary aids, such as electricity. See *Christian* Science.

Ptarmigan (tar'mi-gan), a hird of the grouse family (Te-traonidæ), distinguished from the true grouse by having the toes as well as the tarsi feathered. The common ptarmigan (called also white grouse) is the Lagopus vulgāris. The male is about 15 inches long, the female about an inch less. In summer the predominant colors of its plumage are speckled hlack, brown, or gray, but in winter the male hecomes nearly pure white, and the female entirely so. The willow-ptarmigan (L. salicati) is common in the Arctic regions tirely so. The willow-ptarmigan (L. saliceti) is common in the Arctic regions of America and in Norway.

Pterichthys (te-rik'this), a fossil perichthys (te-rik'this), a fossil pterichthys was peculiarly characterized by the form of its pectoral fins, which called fox-bats, from their long and were in the form of two long, curved spines, something like wings (whence the name—'wing-fish'), covered hy finely tuberculated ganoid plates.

Pteris (ter'is), the genus of ferns to which the bracken helongs.

Pterocarpus (ter-o-kar'pus), a genus of leguminous plants, species of which yield kino, dragon's hlood, red sandal-wood, etc.

Pteroceras (ter-o'se-ras), a genus of molluma inhebition the

spiritualism, including such distinguished scientists as Alfred Russell Wallace and Sir Oliver Lodge. The society has short. The shell is oblong, the spire branches in the United States.

Psychology (sI-kol'u-ji) is the science or department of philosophy which deals with the phenomena of mind. See Mind, Metaphysics, are known.

Psychotherapy, (si-kō-ther'a-pi), the Pterodactyl (ter-o-dak'til; 'winged finger'), a genus of exforms of mental healing that have resauria, found in the Jura Limestone forcently come into prominence, especially mation, in the Lias at Lyme-Regis, in the Oölite slate of Stonefield, etc. The pterodactyls had a moderately long neck, and

1, Pterodactyl (restored). 2, Skull of Pterodactylus longirostris.

a large head; the jaws armed with equal and pointed teeth; most of the bones, like those of birds, were 'pneumatic,' that is, hollow and filled with air; but the chief character consisted in the excessive elongation of the outer digit (or little finger) of the forefoot, which served to support a flying membrane. A number of species have been discovered, most of them small or of moderate size, but one must have had an expanse of wing of at least 20 feet.

called fox-bats, from their long and pointed fox-like head. The type genus is Pteropus. See Fox-bats.

Pteropoda (ter-op'o-da), a class of molluses, comprehending those which have a natatory, wing-shaped expansion on each side of the head and neck, being thus a sort of 'winged snails.' They are all of small size. are found floating on the surface of the ocean in all Pteroceras (ter-o'se-ras), a genus of parts of the world, and in the Arctic and molluscs inhabiting the Antarctic regions furnish much of the Indian Ocean; the scorpion-shells. The food of the whale. They are all hera e e . e d

Pterosauria (ter-o-sa'rl-a), an extinct order of reptiles, represented chiefly by the Pterodactyls (which see). This group is especially noted as containing forms which possessed the represented of district.

the power of flight. Pterygotus (ter-i-go'tus), a gigantic fossil crustacean occurring chiefly in the passage-beds between the Silurian and Devonlan systems. It has a long, lobster-like form, composed in

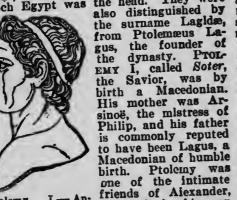

the main of a cephalo-thorax, an abuominal portion of several segments, and a somewhat oval telson or tail-plate.

Pthah, or PHTHA (ftha), an ancient Egyptian divinity, the creator of aii things and source of life, and as such father and sovereign of the gods. He was worshiped chiefly at Memphis under the figure of a mummy-shaped male, and also as a pygmy god.

Ptolemaic System (tol-e-ma'ik), that maintained by Claudius Ptolemy, the astronomer, who supposed the earth to be fixed in the center of the universe, and that the sun and stars revolved around lt. This long-received theory was eventually rejected for the Copernican system. See Astronomy.

See Acre. Ptolema'is.

Ptolemy (toi'e-mi; PTOLEMAIOS), the name of a line of Græco-Egyptian kings, who succeeded, on the division of the empire of Alexander the Great, to the portion of his dominions of which Egypt was the head. They were also distinguished by

maphrodite. Their food consists of minute animals.

Pterosauria (ter-o-sa'rl-a), an expresented chiefly by the Pterodactyls seif as a liberator; but he made illtle progress, and having garrisoned Corinth and Sleyon, which he lost some years later, he returned to Egypt. Antigonus resolved to wrest Cyprus from Ptoiemy (B.C. 307), and in a sea-fight at Saiamis the Egyptians were defeated, and Cyprus feli into the hands of the victor, who assumed the title of king. Antigonus now advanced against Egypt through Syria with a powerful army, supported by a fleet; but he was ultimately com-pelled to retire, while a few years later Cyprus was recovered and became a permanent dependency of Egypt. Ptoiemy died in B.C. 283. He was a great patron of art, learning, and literature, and founded the celebrated Alexandrian library.—PTOLEMY II (Philadelphus), born B.C. 309, succeeded his father, and reigned in almost complete peace. His chief care as ruler was directed to the internal administration of his kingdom. He spared no pains to fill the library of Alexandria with all the treasures of ancient literature, and among the erchitectural works erected during hls reign were the lighthouse on the island of Pharos, the Alexandrian Museum, and the royal burylng-place. He founded numerous citles and colonies, and during his reign the dominion of Egypt extended into Ethiopia, Arabia, and Libya, and embraced the provinces of Phenicia and cele-Syrla, besides tracts in Asla Minor and some of the Islands of the Mediterranean. Ptolemy died in 247, and was succeeded by his son—Prolemy III, surnamed Exergetes ('benefactor'). He was early engaged in an important war against Syria, in which he advanced without opposition to Antioch, then turned out opposition to Antioch, then turned eastward, subduing Mesopotamia, Baby-ionia, etc. The fleets of Ptolemy had at the same time subdued the coasts of Asia Minor, and carried his arms to the Heliespont and to the coast of Thrace. emy took some part in the affairs of Greece against the rulers of Macedonia, and maintained friendly relations with Rome. Like his predecessors, he was the patron of scholars, and his court was the Ptolemy I.— Antique gem.

friends of Aiexander, attended the king on his expedition to Asia, was admitted into the bodyguard, and in 329 B.C. commanded one of the chief divisions of the army. On the death of Aiexander he attached himself to the party of Perdiccan, and secured for himself the government of Egypt. He patton of scholars, and his court was the resort of the most distinguished men of his day. He died in B.C. 222, being succeeded by Prolemy IV, surnamed Philopatron of Scholars, and his court was the resort of the most distinguished men of his day. He died in B.C. 222, being succeeded by Prolemy IV, surnamed Philopatron of Scholars, and his court was the resort of the most distinguished men of his day. He died in B.C. 222, being succeeded by Prolemy IV, surnamed Philopatron of Scholars, and his court was the resort of the most distinguished men of his day. He died in B.C. 222, being succeeded by Prolemy IV, surnamed Philopatron of the most distinguished men of his day. He died in B.C. 222, being succeeded by Prolemy IV, surnamed Philopatron of the most distinguished men of his day. He died in B.C. 222, being succeeded by Prolemy IV, surnamed Philopatron of the most distinguished men of his day. He died in B.C. 221, being succeeded by Prolemy IV, surnamed Philopatron of the most distinguished men of his day. He died in B.C. 221, being succeeded by Prolemy IV, surnamed Philopatron of the most distinguished men of his day. He died in B.C. 222, being succeeded by Prolemy IV, su

up completely to debauchery, and died B.C. 205.—PTOLEMY V (surnamed Epiphdnes), his son and successor, was under five years old at his father's death, and this led Philip of Macedon and An-tiochus III (the Great) of Syrla to combine to dispossess Ptolemy, and divide his dominions. To avert this danger the guardlans of the young king placed him under the protection of Rome, which thus had first an occasion for interfering in the affairs of Egypt. Ptolemy was poi-soned B.C. 181.—PTOLEMY VI (surnamed Philometer) was a child at the death of his father. His reign was much disturbed by the rivalry of a brother, and being expelled from Alexandria he repaired to Rome B.C. 164, by whose intervention he was replaced. He died in B.C. 146. During the reigns of the succeeding process of the Romans in Ptolemies the influence of the Romans in Egypt gradually increased, with a corresponding decrease in the independence of the native sovereigns. The personal character of the Ptolemies also degenerated, a fact to be probably connected with the common practice in the family for brothers to marry sisters .- PTOLEMY XI (Auletes, 'flute-player') was driven from (Autèles, 'flute-player') was driven from his kingdom by his subjects, who were ground down by taxation; but he was restored by the Romans (to whom he gave great sums of money), and died B.C. 51.—PTOLEMY XII (Autètés), son of the preceding, reigned jointly with his sister Cleopatra till B.C. 48, when Cleopatra was expelled and, raising an army in Syria, invaded Egypt. On the arrival of Carar. Cleopatra by her charms acquired Cæsar, Cleopatra by her charms acquired an ascendency over him. Ptolemy put himself at the need of the insurgents, was defeated by Cæsar, and drowned in attempting to make his escape, in B.C. 48 or 47.—PTOLEMY XIII (Aulētēs), the youngest son of Ptolemy XI, was delared king by Cæsar in conjunction with clared king by Cæsar in conjunction with his sister Cleopatra in B.C. 47. He was married to his sister, but being only a boy possessed more than the name of husband or Cleopatra caused him to be put to .h, and the line of the Ptolemies ended when Cleopatra perished by her own hands after Octavius defeated Autony at Actium, and Egypt became a Roman province, B.C. 30.

Ptolemy (CLAUDIUS PTOLEMEUS), a Greek astronomer and geographer of the second century after Christ, He appears to have resided in Alexandria, where he made astronomical observations in 139, and he was alive in 161. Ptolemy's great astronomical work is entitled Megale Syntamis tes Astronomias, and is more commonly known by the Arabic title Almagest. His system, founded on the

apparent movements of the heavenly bodies, and which is still known by his name, was finally superseded by that of Copernicus. See Ptolemaic System, Astronomy.

Ptomaine (tö'ma-in, man), one of a class of alkaloids or organic bases, which are generated in the body during putrefaction, during morbid conditions prior to death, and even, it is said, during normal healthy conditions of life. It is considered highly poisonous, and has been mistaken for strychalne and other vegetable polsons by toxicologists.

other vegetable polsons by toxicologists.

Puberty (pu'ber-vi), the period in both male and female marked by the functional development of the generative system. In males it usually takes place between the ages of thirteen and sixteen; in females somewhat earlier; and, as a rule, in very warm climates puberty is reached somewhat sooner than elsewhere. In males puberty is marked externally by the deepening of the voice, the first appearance of the beard, greater firmness, fullness of the body, etc.; in females, by the enlargement of the Lecasts and by the general rounding out of the frame, and most unequivocally of all by the commencement of menstruation.

Publicans (pub'ii-kanz), Publicani (from publicus, belonging to the state), the farmers of the taxes levied in the territories of ancient Rome. Naturally they belonged to the wealthier classes, and were from their functions unpopular. Far more unpopular were the subordinates whom they employed to collect the taxes for them. In l'alestine, from the strong spirit of nationality among the Jews, many of whom denied the lawfulness of paying tribute, these were specially obnoxious as the agents of the foreign rulers. To this detested class, and not to the publicani proper, the 'publicans' of the New Testament generally belonged.

Public Houses. See Inn and License.

Publicist (pub'li-sist), a term originally applied to a writer on International law, now used to denote a writer on current politics.

a writer on current politics.

Public Lands. The United States possessed originally a vast area of public lands, the property of the government, added greatly to by every accession of territory, and given very freely to settlers for the purpose of development. Large quantities of these lands have also been donated to railroads, as in the instance of the Central Pacific. In 1860 the public domain included 1,055,911,288 acres. In addition to homestead

creased in consequence. Recently the discovery of valuable coal, phosphate, petroleum and other deposits in the unsettled territory, and of sites suitable for water-power development, has led the government to withdraw large tracts from entry, under the newly developed idea that these treasures of the earth helong that these treasures of the earth helong to the nation at large and should be held in the interest of all the people. Withdrawals of coal lands made during the administration of President Roosevelt amounted to 14,374,695 acres, and were added largely to hy President Taft. The total withdrawal of coal lands, in addlition to the large are: withdrawn in Alaska, amounts to 36,073,164 acres, distributed through North Dakota. South trihuted through North Dakota, South Dakota, Colorado, Utah, Washington and Arizona. Other large withdrawals made by President Taft, under an act of Congress of 1910, were as follows: water-power sites, 1,454,499 acres, phosphate sites, 2,594,113 acres, and petroleum sites, 4,447,119 acres. This action has been taken to prevent these very valuable lands from being pre-empted by speculators, and awaiting legislation regarding their disposal. If handled in the public interest they may add enormously to the revenue of the government.

Public Library.

Public Schools, the schools established under any national system of education. In the United States the administration, organization and support of these schools de-pend upon the State Legislatures and city councils. Boards of Education in many States and cities have special charge of the schools. Three grades are commonly recognized — the primary, grammar, and high. Normal schools for the training of teachers are established in nearly all the States. The public schools of this country have made marked progress since their first institution less than a century ago, and are now in many citles in a high state of efficiency. Public school systems prevail in many of the countries of Europe, those of Germany heing the most celebrated for their efficient management. They are of late introduction in the Brit-ish Islands, where elementary education has long been under church control.

and railroad grants, much of this was given to new states, when admitted, for school and other purposes. In 1912 there remained, not including Alaska, 327,389,-la, was carried as a slave to Romc 12 and 12 the middle of the first century B.C., and is arid or semi-arid, yet the extension of 12 lrigation has rendered a considerable portion of it suitable for agricultural purposes, and the area of settlement has increased in consequence. Recently the terspersed with moral sentences, and a collection of them was used by the Romans as a schoolhook. A number of apothegms, not all composed by him, have been published as Publii Syri Sententia. Puccinia (puk-sin'i-a), a genus of fungi well known to farmers under the name of mildew. The rust,

Puck, a celebrated elf, the 'merry wanderer of the night,' whost character and attributes are depicted in Shakespere's Midsummer Night's Dream, and who was also known by the names of Robin Goodfellow and Friar Ruch. He was the chief of the domestic fairles, and many stories are told of his nocturnal exploits.

Pückler-Muskau (puk'ler mös'-kou), Hermann Ludwig Heinrich, Prince of, a German traveler and author, was born in 1785. He served in the Tuscan and Russian armies, and after the peace of 1815 devoted himself to literature, landscape gardening, and travel. One of his works was dening, and travel. One of his works was translated into English hy Mrs. Austin as Tour in England, Ireland, and France by a German Prince. Other English translations of works hy him are Semilasso in Africa, 1837; A German Sketch-Book (Tutti Frutti), 1839; and Egypt under Mehemed Ali, 1845. He died in 1871. the herries of the

Pudding-be 98, Canadian doginadensis), common wood (Cornus inadensis throughout North America.

Pudding-stone, or PLUM - PUDDING considered synonymons with conglomerate, hut originally applied to a mass of fint pebbles comented by a siliceous paste. When select specimens are cut and pollshed they resemble a section of a plum pudding, and are used for ornamental purposes. It is very common in and around Boston, Massachusetts.

## Puddling Furnace.

Pudsey (pud'zi), a town in the West Riding of Yorkshire, 6 miles west of Leeds. Wooien and worsted manufactures are extensively carried on, and there is also a large manufacture of boots

there is also a large manufacture of boots and shoes. Pop. (1911), 14,027.

Puebla (pweb'la), in full LA PUEBLA DE LOS ANGELES, the capital of a Mexican state of the same name, situated on a piateau 76 miles s. E. of Mexico. It has spacious streets and solidly-hulit houses, the cathedrai being a magnificent structure. It contains a large number of religious edifices, many of them highly decorated. There are also several highly decorated. There are also several colleges, a museum, and a theater. It is one of the chlef seats of Mexican manufacturing industry, and its chlef products are cotton and woolen goods, leather, glass, earthenware, and soap. Puebla was built by the Spaniards in 1533-34. Pop. 93,152. The state consists of an elevated plateau, and contains much fertile soil. On the western frontier is the volcano of Popocatepetl, the highest mountain in Mexico. Area, 12,042 square miles; pop. 1,021,133.

the Arkansas River, an important railway center. Its position at the entrance of the various passes connecting the eastern during pregnancy or after childbirth, and and western slopes of Colorado, makes it is invariably the effect of exhaustion or

and western slopes of Colorado, makes lt an excellent distributing point, and large jobbling houses and manufacturing plants are located here. Here are Iron and steel works, smelters, foundries, stock yards and saddle factories. Puehlo ls the principal city of the Arkansas Vailey of Colorado, which is the largest single irrigated area in the world. It was the camp of Pike's expedition in 1806. Pop. 55,600.

Pueblos, a semicivilized f am 11 y of Cadiz, on the Guadalete, near its mouth in the Bay of Cadiz. The town is pleasantly situated and is well huilt. There are several convening in Arizor. and New Mexico. Their name is deried from pueblo, Spanish for 'village,' and they are peculiar in dwelling in enormous single habitations, some of them large enough to contain a whole trihe. These edifices are often 5 or 6 storles high, and from 400 to 1300 feet long, with a large number of rooms or windows, entrance to its rooms being ohtained by means of a ladder leading to the second story. Indoor ladders take the place of stairways. Each successive the place of the pl the place of stairways. Each successive Puerto Principe (prën'së-pā), an story recedes a few feet from the line of the one helow it, thus giving the bullding interior of Cuba, early in the century the a somewhat pyramidal aspect. Each seat of the central government and sufamily has a separate apartment and preme courts of justice of the Spanish

there are large rooms used for council chambers and tribal dances. In New Mexico there are 19 such villages, with over 8000 occupants. These till the land with much skiii, irrigating their fields extensively. In addition to field crops, they raise have the arts of spinning and wears are the arts of spinning and wears. aiso have the arts of spinning and weav-lng and pottery-making. The Moquis of Arlzona are a related tribe, about 1800 in number, who live in villages huit on the summit of mesas or steep, isolated hills, rendering assault by enemies diffi-cuit. These people were once far more numerous than at present, as is shown by the wide area over which the ruins of old pueblos and remains of pottery are found. They were first discovered in 1540 by Vasquez de Coronado, a Spanish adventurer, who had heard exaggerated storles of the splendor and riches of the 'seven citles of Cibola.'

Puerperal Fever (pū-er'per-al), a dangerous contagious disease peculiar to women in chiidbed, and due to the absorption of poison-ous material by the raw surface of the volcano of Popocatepetl, the highest nountain in Mexico. Area, 12,042 square mountain in Mexico. Area, 12,042 square womb. The poison may originate from decomposing material in the womb itself, then called sapræmia; but is generally of Puehlo Co., Colorado, on the Arkansas River, an important rallway puerperal Mania, is a form of incenter. Its position at the entrance of

It is connected by railway with its port, San Fernando de Nuevitas, and its the capitai of the province of Puerto Principa also known as Comparitor, a for-Principe, also known as Camaguey, a fertile region of 10,500 square miles area. Pop. (1907) 29,616.

Puerto Real (re'ai), a Spanish sea-port in the province and 7 miles east of Cadiz. Pop. 9683. See Porto Rico. Puerto Rico.

Pufendorf, or Puffendorf (pö'fen-BARON NON, a German writer on the law of nathre and nations, born in 1632. He studied theology and law at Leipzig and Jena, and in 1660 appeared his Elementa Jurisprudentia Universalis. In 1661 he became professor of the law of nature and of nations at Heidelberg. In 1677 he published his work De Statu Reipublica Germanica, which, from the boldness of its attacks on the constitution of the German Empire, caused a profound sensation. In 1670 he went to Sweden, became professor of natural law in the University of Lund, and hrought out his chief work, De Jure Natura et Gentium, and in 1675 an abstract of it, De Officio Hominis et Civis. In 1677 Pufendorf went to Stockholm as historiographerroyal. There he wrote in Latin his vigorous vindication of Professantism. On orous vindication of Protestantism, On the Spiritual Monarchy of the Pope, a History of Sweden from the Campaign of Gustavus Adolphus in Germany to the Abdication of Queen Christina, a History of Charles Gustavus, and in German his Interduction to the History of the Principles Introduction to the History of the Principal States of Europe. In 1686 he received a summons to Berlin from Frederick William, elector of Brandenbutz, a the rays of the sun. history of whom Pufendorf wrote for his son, the first king of Prussia. In 1694 the son of a Don Cossack, son, the first king of Prussia. In 1694 the son of a Don Cossack, son and in the same year he died at sweden, and in the same year he died at Berlin. There are English translations During the Seven Years' was he served. ceived a summons to Berlin from Fred-Berlin. There are English translations of his principal works.

Puff-adder (Vipera or Clotho arietons), a serpent found in South and Central Africa. Its popular name is derived from its power of puff-

name is derived from its power of puffing out the upper part of the neck when irritated o. alarmed. It is very thick, attains a length of 4 or 5 feet, and is extremely conomous. The Bosjesmen poison the arrows used by them in battle

with its venom. so cailed from their giobu-Puff balls, lar shape, and because if they are struck when they are ripe the dry spores fly out in powder like a puff

or cooked, some of them are very good eating. See Barbets. Puff'birds.

Puffin (puf'in), the name for the marine diving birds of the genus Fratercula. The common puffin (F. Arctics) is a native of the Arctic and northern temperate regions. It can fly with great rapidity when once upon the wing. It is about a foot in length, and from the singular shape and enormous size of

Common Puffin (Fratercula arctica).

its bill, which is striped with orange upon binish gray, is often called the sen-parrot or the coulterneb. Their piu-mage is giossy black, with the exception of the cheeks and under surfaces, which are white. It breeds upon rocks and in the rahhit warrens near the sea, and lays one egg, which is white. It iives on fish, crustacea, and insects, and is a gregarious

and migratory hird.

Pugaree (pug'a-rē), Puggerie, the name in India for a piece of muslin cioth wound round a hat or heimet to protect the head by warding off

During the Seven Years' war he served in the Russian, Prussian, and Austrian armies successively. Returning to Russia, he attempted to stir up an insurrection, but was arrested and imprisoned. Having made his escape, he pretended to be the murdered czar, Peter III, to whom he bore a strong personal resemblance. He was joined by numbers of the peasantry, to whom he promised deliverance from their oppression. After several considerable successes, accompanied by frightfui cruelty on his part, he found himseif at the head of 15,000 men, and was threatening Moscow itseif when, betrayed by his followers and separated from his army, he was captured, and in tune 1775 evented at Moscow. of smoke, form the genus of fundi Lyco- from his army, he was captured, perdon. When young, and whether raw June, 1775, executed at Moscow.

Pug'dog, a smail dog which bears a clay is thrown in at the top of the cylin-miniature resemblance to der, and by the revolution of the shaft the bulldog, and is only kept as a domestic pet.

Puget Sound (pu'jet), a large inlet, or arm of the Pacific Ocean, on the northwest coast of the State of Washington, forming the southwest continuation of Juan de Fuca Stralt, with which it is connected by Admiralty Inlet. It is navigable by large ships, penetrates far into the interior, and is divided into several branches, which afford great facilities for navigation. On its shores are Seattle, Olympia, and other rising towns.

Pugilism. See Boxing.

Pugin (pû'jln), Augustin Nort H-MORE WELBY, architect, was born in 1811, the son of Augustus Pugln (see next article), from whom he imbibed a love of Gothic architecture, to promote the revival of which became early the object of his ilfe. In 1834 he became a Roman Catholic, and designed a large number of ecclesiastical buildings for that communion, among them a church at Ramsgate, which was built at his own expense. He assisted Sir Charles Barry in the designs for the new houses of parliament, especially in those for their interior fittings and decorations. The Contrasts, or a Parallel between the Architecture of the Fifteenth and Nineteenth Centuries (1836), the True Principles of Pointed or Christian Architecture (1841), and The Glossary of Ecclesiastical Organient and Contains Ecclesiastical Ornament and Costume (1844), are among his principal works. He died at Ramsgate in 1852.

Pugin, Augustus, architectural draughtsman, father of the above, was horn in France in 1762, but settled early in life in London, where for settled early in life in London, where for many years he acted as assistant to Nash, the architect. The revival of Gothic architecture in England was much alded by his Specimens of Gothic Architecture (1821-23) and others of his works. Among these were the Picturesque Tour of the Scine (1821) and Specimens of the Architectural Antiqui-Specimens of the Architectural Antiqui-ties of Normandy (1825-28). He died in 1832. His representations of Gothic architecture, for beauty, accuracy, and thorough mastery of the subject, have never been excelled.

Pug-mill, a machine for mlxing and tempering ciay. It consix simple machines or mechanical powsists of a hollow iron cylinder, generally ers. and is used for raising weights.

der, and by the revolution of the shaft is brought within the action of the knives, by which it is cut and kneaded in its downward progress, and finally forced out through a hole in the bottom of the cylinder.

of the cylinder.

Puket (pö-ket'), a town on the island of Salang or Junkseylon, belonging to Slam. There are rich mines of tin. Pop. (1910) 179,600.

Pulaski (pu-las'ki), Count Casimir, a Polish patriot and American Revolutionary officer; born in 1747. Going into exile in 1772, he came to this country and joined the patriot army in country and joined the patriot army in 1777. As commander of the cavalry he was killed in 1779 at the siege of Savannah.

Pulci (pul'chē), LUIGI, an Italian poet, born in 1431, lived in intlmacy with Lorenzo de' Medici and his literary circle. His poem Il Morgante Maggiore, is a burlesque on the romantic epic. Pulci died in 1487.

Pulicat (pul-é-kat'), a town of Indla, in Madras Presidency, on an island 23 mlles north of Madras city. Pop. about 5000.

Pop. about 5000.

Pulitzer (pû'lit-zêr), Joseph, American editor and publisher, born in Budapest, Hungary, in 1847; died in 1911. In 1864 he drifted to the United States, entered newspaper work in St. Louis and became rapidly successful. In 1883 he bought the New York World and made it the first successful exponent of papular journalism. Four years later of popular journalism. Four years later he lost his sight. He endowed a school of journalism at Columbia University.

Pulley (pul'i), a small wheel movahle about an axle, and having a groove cut in its circumference over which a cord passes. The axle is supported hy a kind of case or hox cailed the block, which may either he movable or fixed to a firm support. The pulley is one of the

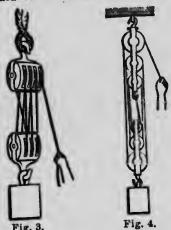

Fig. 1.

set upright, with a revolving shaft in the line of its axis, carrying a number of direction of motion, but several of them knives projecting from it at right angles, may be combined in various ways, by and arranged in a spiral manner. The which a mechanical advantage or pur-

chase is gained, greater or less, according to their number and the mode of combination. The advantage gained by any combination or system of pulleys is readily computed by comparing the velocity of the weight reject with that of the

is movable. In the single fixed pulley Pulmobranchiata (fig. 1) there is no mechanical advan-(fig. 1) there is no mechanical advantage, the power and weight being equal. It may be considered as a lever of the first kind with equal arms. In the single movable pulley (fig. 2) where the cords are parallel there is a mechanical advantage, there being an equilibrium when the power is to the weight as 1 to 2. It may be considered as a lever of the second kind, in which the distance of the power from the fulcrum is double that the power from the fulcrum is double that sumption. of the weight from the fulcrum. In a Pulmona'ta.

system of pulleys (figs. 3, 4) in which the same

1 to that power of 2 whose index is the number of movable pulleys (in the case here illustrated 1:2° or 1:8). Whatever be the mechanical arrangement of combination. The advantage of preadily computed by comparing the velocity of the weight raised with that of the moving power, according to the principle of virtual velocities. The friction, however, in the pulley is great, particularly ever, in the transmission the transmission that the transmission the transmission that the loss of force consequently ever, in the transmission that the transmission

tracted for removing warehouses on the Erie canal; afterwards in Chicago for raising entire blocks of brick and stone buildings. In 1859 he made his first sleeping-car, now developed into the car known all over the world—especially adapted for sleeping in, or as a drawing-room or dining-car. The industrial town of Pullman, in the State of Illinois, was founded by him, to improve the social surroundings of his workmen. He died in 1897.

(pul-mo-brank-i-ā'ta), an order of gasteropod molluscs (also called by some naturalists Pulmonata), in which the respiratory organ is a cavity formed by the adhesion of the mantle by its margin to the neck of the animal. The greater part of them are terrestrial, among these being the snails and slugs. Pulmonary Consumption.

See Pulmobranchiata.

3, 4) in which the same string passes round any number of pulleys, and the parts of it between the pulleys are parallel, there is an equilibrium when the power is to the weight as 1 to the number of strings at the lower block. In a system in which each pulleys hangs by a separate cord and the strings are parallel (fig. 5), there is an equilibrium when the power is to the weight as 1 to the number of strings at the lower block. In a system in which each pulley hangs by a separate cord and the strings are parallel (fig. 5), there is an equilibrium when the power is to the weight as

Pulo-Nias, same as Nias

Pulo Penang. See Penang.

Pulpit (pul'pit), the elevated enclo-sure or desk in a church from which the preacher delivers his discourse. The pulpitum of the ancient Roman theaters was that part of the stage where the actors performed.

Pulque (pui'kā), or Octu, a favorite dripk in Mexico and Central America, made from the juice of various species of agave, pleasant and harmless until after protracted fermentation, when

it becomes an intoxicant. A kind of brandy is also distilled from it.

Pulse (puls), ieguminous piants or their seeds, including all kinds of beans, pease, lentils, etc. The considerable proportion of nitrogen which they contain makes them very nutritious, and on that account they are much eaten, with or without rice, in India, where the chick-pea (Cicer arietinum) is one of these very iargely used. The Hebrew word translated pulse in the authorized version of the Bible, Daniel, i, 12, 16, probably means edible seeds in general.

to twenty about 70; while in old age it may sink to about 60. In females it is somewhat higher than in males, and during certain fevers it reaches sometimes 140 beats per min-In arteries which lie immediately under the skin it can be feit with the finger, as is the case with the radial artery, the pulsation of which is very perforce and frequency of the action of the heart.

Pulsometer.

e-ter), an instru-

(which voir, the water rushing up into the vacuum formed by the condensation.

b'rom the accompanying figure it will be seen that it consists essentially of a double chamber, or two connects from nected chambers, AA, having a ball-valve secourse. 1 at top (which shuts eitner chamber alternately) and clack-valves EE at bother where town. Steam is admitted at K to one tom. Steam is admitted at K to one of the chambers and presses out the water contained there through r to the pipe P to be carried away. Condensation then takes place, a vacuum is formed, and the ball falis over and closes the opening through which the steam entered, and through which the steam entered, and water flows up through the clack-valves and again fills the chamber. The steam in the meantime is now acting upon the water in the adjoining chamber, condensation then taking place there, the ball falls back to that side, and the operations go on aiternately, the result being a steady stream of water sucked into one chamber after another, and then forced out and upwards by the steam.

Pulta'wa. See Poltava

version of the Bible. Daniel, i, 12, 16, probably means edible seeds in general.

Pulse, the throbbing movement of the passing waves of blood-vessels, from the passing waves of blood due to the beats of the heart. It is limited in healthy conditions to the arteries. In the newlyborn child the healthy pulse registers 130 to 140 beats a minute; at two years of age 105, at ten years about 90, at fifteen to twenty about 70; while in old age it retired from public life.

See Poltava.

(pult'ni), WILLIAM, an English politician, was En retired from public life.

Pultusk (pöl-tösk'), a town of Rus-Narew, 32 miles N. N. E. of Warsaw. The Saxons were here defeated by Charles XII in 1703, and the Russians had to retreat before the French in 1808. Pop.

15,878. Pulu (pö'lö), a silky, fibrous substance obtained from ferns of the genus Cibotium, and exported from the Sandwich Islands; used for stuffing mat-tresses, etc. Other species growing in the East Indies, Mexico, etc., yield a similar substance.

Pulza-oil (pol'za). the oil yielded by the physic-nut (which see).

Puma (pū'ma). See Cougar.

Pumice (pū'mis), a substance frequently ejected from volcances, of various coiors, gray, white, reddish brown or black; hard, rough and ment of the pump kind for raising water, reddish brown or black: hard. rough and especially when that liquid is mixed with solid matter. It acts by the condensation of waste steam sent into a resertion furnace. Pumice is really a loose, spongy, froth-like lava. It contains 75 parts silica and 17 alumina, with some iron, ilme, soda, etc., and the pores being generally in parallel rows, it seems to have a fibrous structure. Pumice is of three kinds glassy common and analysis. three kinds, glassy, common, and porphy-ritic. It is used for polishing lvory, wood, marhie, metals, glass, etc.; also for smoothing the surface of skins and parchment.

Pump, a contrivance for raising iiquids or for removing gases from vessels. The alr-pump is dealt with in a separate article. Though the forms under which the hydrauic pump is constructed, and the mode in which the power is applied, may be modified in a great variety of ways, there are only four which can be considered as differing from each other in principle. These are the each other in principle. These are the sucking or suction pump, the lift-pump, the force-pump, and the rotary or centrifugal pump. Of these the suction or common household pump is most in use,

and for ordinary purposes the most convenient. usual form and construction of this pump are shown in the annexed engraving. A piston & is fitted to work airtight within a hollow cylinder a to in having a side or barrel b b; it is moved up and down hy a handle connected with the piston-rod, and is provided with a valve e, opening upwards. At the bottom of the barrel is another valve f, also opening npwards, and which covers the orifice of a tube c c, called the suction-tube, fixed to the hottom of the harrely and reaching to the bottom of the well from which the water is to be raised. When the piston is drawn up from the bottom of the harrel the air below is rarefied, and the pressure of the articles. ure of the external air acting Suction- on the surface of the water in the well, causes the water to rise in the suction-tube until

the equilibrium is restored. After a few strokes the water will get into the barrel, the air below the piston having escaped through the piston-valve e. By continuing, the water will get above the plston and be raised along with it to the elstern d, at the top of the barrel, where it is discharged by a spout. The lift-pump has also two valves and a piston, both opening upwards; hnt the valve in the cylinder instead of being placed at the bottom of the cylinder is placed in the body of it, and at the height where the water is intended to be delivered. The

bottom of the pump is thrust into the weii a considerable way, and the piston being supposed to be at the bottom, as its vaive opens upwards there will be no obstruction to the water rising in the cylinder to its height in the well. When the piston is drawn up its vaive will shut, and the water in the cylin-

and the water in the cylinder will be iffted up; the valve in the harrel will be opened, and the water will pass through it and cannot return, as the vaive opens upwards; - another stroke of the pis-ton repeats the same process, and in this way the water is raised from the well: but the height which it may be raised is not in this as in the suction-pump iimited to 32 or 33 feet. The force-pump differs from both of these in

having its piston soild,

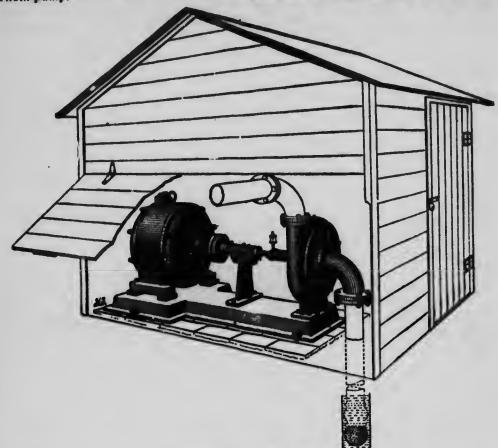

or without a vaive, and with a valve opening outwards, ugh which the water is forced to any sht required, or against any pressure that may oppose it. In such pumps the plunger or solid piston is frequent ployed instead of the ordinary piston.

Force-pump of

Steamengine.

arrangement is represented in the accompanying figure, which shows a section of the feed-pump of a steam-engine. The plunger a works air-tight through a stuf-fing-box b at the top of the barrel, and on being raised produces a vacuum in the pump-barrei into which the water rushes by the pipe c, and is discharged, on the descent of the pinnger through the pipe d, the valves o and f serving to intercept the return of the water at each stroke. The side pipe d, however, requires the addition of an air-vessel. 'Double-acting' pumps are often employed for hons-hold purposes. (See Steam Engine.) Centri. all pumps are notiversally employed wherever the lift is not too great, and the quantity of water is considerable. A wheel, shaped like an ordinary fan, has passages leading from its center to its circumference; It is made to rotate very rapidly in a casing. Its circumference communicates with a delivery pipe, and its center with a pipe ieading to the water which is to be pumped. The rapid revolution of the wheel causes by centrifugal action a constant flow of water from center to circumference of the wheel; and in this

way the water is sucked up to the center genus Cucurbita, the C. Pepo, nat. order of the wheel, and leaves the circumfer-ence by the eduction pipe. See also is originally from India, but is at present cultivated in most parts of Europe, and

Centrifugal Pump and Motor.

Pumpelly (pum'pel-i), RAPHAEL, ge- in America. The fruit is red, and some ologist, born at Oswego, times acquires a diameter of 2 feet.

New York, in 1837. In early life he con- There are two varieties of the plant, one ducted explorations for the governments of China and Japan, and in 1866 became of China and Japan, and in 1800 became professor of mining engineering in Harward. He was on the geological survey of Michigan 1870-71, State geologist of Missouri 1871-73, and on the United States geological survey 1879-81 and 1884-91. In 1903-04 he was engaged in explorations in Central Asia. He is the author of America and Asia and author of Across America and Asia and other works.

Pumpernickel (pum'per-nik-el), a coarse brown bread made in Westphalia from unbolted rye. with roundish, the other with oblong Pumpkin (pump'kin), a climbing fruit. The fruit is eaten in a cooked plant and its fruit of the state.

Pumpkin (Cucurbita Pepo).

uiar comic exhibition performed by puppets, who atrangies his chiid, beats to death Judy his wife, belabors a police-officer, etc. The puppet-show of Punch seems to have been first popular in Engiand during the reign of Queen Anne. The hero was sometimes called Punchinelio, a semi-angicised form of the Neapolitan Puicinello. See Punchinello.

Punch, a beverage introduced into received its name from India, where it received its name from the Hindu word pench, five, this being the number of its ingredients, arrack, tea, sugar, water, and Ilme-juice. In a common brew of

ingredients, arrack, tea, sugar, water, and lime-juice. In a common brew of the beverage its ingredients are rum, hrandy, sngar, boiling water, and lemon-

Punch, a tool worked by pressure or percussion, employed for makares, in cutting out shapes from plates of various materiais, in impressing dies, etc. Punches are usually made of st.el, and are variously shaped at one end for different uses. They are solid for stamping dies, etc., or for perforating holes in metaliic plates, and hollow and sharp-edged for cutting ont blanks, as for buttons, ateel pens, jewelry, and the like.

Puncheon (pun'shun), a iiquid measure of capacity containing

from 84 to 120 galions.

Punchinello (pun-shi-nei'o), a popular Neapoiitan exhibiular Neapoiitan Punch. tion, the origin of the English Punch, and to be derived from a humorous peasant from Sorento, who had received the nickname (about the middle of the seventeenth century) from his bringing chickens (pulcinelle) to market in Naples, and who, after his death, was personated in the puppet-shows of the San Carijno theater for the amusement of Cariino theater, for the amusement of the people, to whom he was well known. According to another account, it is a corruption of Puccio d'Anieilo, a favorite

buffoon of the Neapoiltan populace.

Punctuation (pungk'tū-ā-shun), the
art of employing signs by which the parts of a writing or dis-course are connected or separated as the course are connected or separated as the sense requires. and the elevation, depression, or suspension of the voice indicated. Sometime of law. The punishments Punctuation serves both to render the meaning intelligible and to aid the oral delivery. Our present system of punctuation came very gradually into use son for a crime or olense, by the anthority to which the offender is subject; a penalty imposed in the enforcement or application of law. The punishments for criminal offenses now known to hanging or electrocution, imprisonment with and without hard labor, solitary Punctuation serves both to render the meaning intelligible and to aid the oral

Pun, which depends on a resemblance tian printers, the Manutii, contributing in sound between two words of different and perhaps contrary meaning, or on the use of the same word in different senses.

Punch (contracted from punchinello), (:), period or full stop (.), note of interrogation (?), note of interrogation (?), note of eaclamation or uiar comic exhibition performed by puppets, who atrangies his child, beats to death Judy his wife, beiabors a policeofficer, etc. The puppet-show of Punch separating the several members of a separating the several members of a series, and the aubordinate clauses from the main clause. The semicolon indicates a longer pause than the comma, hut requires another member or members to complete the sense. The colon denotes a still longer pause, and may be inserted when a member of a sentance is com-plete in itself, but is followed by some additional illustration of the aubject. The period indicates the end of a sentence, and is also used after contracted words, headings, titles of books, etc., and somstimes after Roman numerals. The note of interrogation is placed at the end of a direct interrogatory sentence. The note of exclamation or admiration is placed at the end of such words or clauses as indicate surprise or other emotion. The dask is employed where a sentence The dash is employed where a sentence breaks off ahruptly, and the subject is changed; where the sense is suspended, and is continued after a short interruption; after a series of clanses leading to an important conclusion; and in certain cases to indicate an eilipsis. The parenthesis encloses a word or phrase introduced into the body of a sentence, with which it has no grammatical connection. which it has no grammatical connection. In modern usage the dash is frequently need to replace the parenthesis.

Pundit. (pun'dlt). See Pandit.

Punic (pū'nik), the language of the ancient Carthaginians, an off-shoot of Phonician, and alied to Hebrew.—Punic wars, wars waged between Kome and Carthage, the first B.C. 264-241; the second B.C. 218-202; and the third, which ended with the destruction of Carthage, p. 140-147. of Carthage, B.C. 149-147.

Punica (pū'ni-ka), a genna of plants which consists only of a single species, the pomegranate (P. grand-tum). See Pomegranate.

Punishment (p 2'ish-ment), a penal Inflicted on a peral

son for a crime or o tense, by the anthor-

confinement, detention in a reformatory school, subjection to police-supervision, and putting under recognizance. The methods of punishment differ in different states, but the general character of punishment for offenses, as now in use, does not greatly vary in civilized countries generally. In England, in cases of feiony and of certain specific misdemeanors, when a previous conviction for a simiiar offense is proved, the sentence may include police supervision for seven years or iess, to commence at the expiration of the offender's term of imprisonment. On its expiry be must notify to the police within forty-eight hours his place or any subsequent change of residence, and re-port himself once a month, a breach of any of these regulations rendering him liable to imprisonment for tweive months with or without hard labor. When the offender is ordered to find recognizances, personal or other, he may, in default, be imprisoned. In army punishment a commissioned officer must be tried by courtmartial, which may sentence him to death, or cashier him, or place him at the very bottom of the officers of his grade. Privates may for minor offenses be ordered short imprisonments, or punishment-drill, or stoppage of leave or pay. For grave offenses they are tried by court-martial, and may be sentenced to dismissal from the service, or to imprisonment, to penal servitude, or to death. In the navy, for officers the chief additions to the punishments inflicted in the army are forfeiture of seniority for a specified time or otherwise, dismissal from the ship to which the offender beiongs, and reprimand more or less severe. For men the punishments in the case of grave offenses are of the same character as in the army, flogging being practically abolished. For less serious offenses there is a system of summary punishments, inciuding short terms of imprisonment which can be awarded by captains of ships. Within recent years the severity of punishment by imprisonment has been mitigated to some extent in the United States. Ten of the States bave adopted the principle of indeterminate sentences, the time depending on the conduct of the convict. The severity of prison discipline has been reduced and recreation provided for the prisoners in some lustances, and in others the convicts have been allowed to do outdoor work without guards, their word of honor being taken, and in very few instances broken.

Punjab (pun-jäb'), or Panjab (the name means 'Five Rivers'), province of British India, under the administration of a lieutenant-governor,

so-called because it was the region intersected by the five tributaries of the Indus, the Sutiej, the Beas, the Ravi, the Chenab, and the Jueium. The present is dieutenant-governorship of the Punjab, however, is larger than the Punjab proper, and is bounded on the west by Afghanistan and Beluchistan; on the north by Kashmir; on the east by the Northwest Provinces; and on the south by Sind and Rajputana. The area, exclusive of native states, is 97,209 square miles; the pop., according to the census of 1901, 24,754,737; inclusive of native states, the area is 133,741 square miles, and the pop. 29,179,135. It consists of thirty-two British districts and forty native tributary states. For administrative purposes it is divided into the divisions of Delhi, Hissar, Ambaia, Jaiandhar, Amritsar, Lahore, Rawai Pindi, Multan, Derajat, and Peshawar. Lahore, situated near the center of the province, is the capital of the Punjab, but its principal city is Delhi, the ancient metropolis of the Mogul sovereigns of Indla. sected by the five tributaries of the Indus, principal city is Delhi, the ancient metropolis of the Mogul sovereigns of India. The extreme northern portion of the Punjab is rendered mountainous by spurs, or offsets, of the great Himalaya system; but for the most part the province consists of a series of extensive plains. These are divided into eastern and western, which may be roughly defined as iying east and west of the meridian of Lahore. The eastern plains include the most fertile and populous portion of the Punjab, with the three great cities of Delhi, Amritsar, and Lahore. Their population is largely urban; trade and manufactures flourish, and the cultivable area is generally under the plow, with the exception of the southwestern portions, where flocks and herds pasture in extensive jungles. The western plains, on the contrary, and with the czception of a comparatively narrow zone which is fertllized by irrigation, and which produces some of the finest wheat in the world, are covered by stunted bush, with short grass in dry seasons, and by saiine plants which afford nourishment to great herds of camels. These, with cattle, sheep, and goats, are tended by a nomad population. The difference between the Inhabitants of these two series of piains is also very marked, those in the eastern partaking of the character of the Hindu inliabltants of India, while those in the western resemble more the Mussulman peoples of the Transsuleiman country Though numerically small, the Sikh ele-ment in the population is very important. The Sikhs constituted the dominant class when the Punjab became Britist, and they still compose the mass of the gentry

between the five rivers. Since the mutiny in shallow waters. the Punjab has made great progress in commerce and general industry, partly through the construction, under British rule, of irrigation and and railways. One of the most important products of the Punjab is rock-salt. In addition to the manufactures common to the rest of India the industries of the Punjab include such special products as the silks of Multan and the shawls and carpets of Lahore. The province enjoys an extensive trade with adjacent countries, and sends its products to Deihi by railways, and by the Indus and the Indus Valley Railway to Sind and the sea. Its imports from Britain are chiefly piece-goods, cutlery, and other metal works. The Punjab has had a rather eventful history from the time of Alexander the Great downward. After being long held by rulers of Afghan or Tartar origin, the Sikhs under Runjit Singh established themselves here early with the British, and after the second Sikh war, in 1849, the country was brought under British administration.

Punjnud (punj'nud), the name given to the stream which pours into the Indus, about 70 miles above the Sind frontier, the combined waters of the five rivers, the Sutlej, the Beas, the Ravi, the Chenab, and the Jhelum. Punkah (pung'ka), in its original sense a portable fan made

sense a portable fan made from the leaf of the palmyra, but in Angio-Indian parlance a large fixed and swinging fan formed of cioth attached to a rectangular frame suspended from the ceiling and pulled backwards and for-wards by means of a cord, thus causing a current of air in the apartment.

Punnah (pun'na), a native state of India, in Bundeicund, by the British agency of which it is politically superintended, formerly very prosperous from the yield of its diamond mines. Estimated area, 2568 sq. miles; pop. about 200,000.—PUNNAH is the chief town. Pop. 14,676.

(pö'nō), a town of Peru, capitai of the department of the Puno same name, on the west shore of Lake Titicaca, about 12,430 feet above sealevel. Pop. about 6000 .- The department is distinguished by the extent and richness of its pastures, and was formerly famous for its silver mines. Its principal exports are the wool of the sheep, liama,

The most common mode of propulsion is by pushing with a pole against the bottom of the river, etc., a process which is hence cailed punting. Punta Arenas (pön'ta a-rā'nas), a convict station and capitai of the Chilean colonial territory of Magelian, which most of the steamers passing through Magelian Strait call at, there being coal in its vicinity. Pop. 8397.

Puntas Arenas, the principal port trai America, on the Gulf of Nicoya. Pop. (1904) 3569.

Pupa, same as Chrysalis (which see).

See Eye. Pupil.

Pupilage (pū'pi-iāj), the period dur-ing which one is a minor. (pū'pin), MICHAEL IDVORSKY, scientist, born at Idvor, Hun-Pupin in the last century. At a later date the gary, in 1858, was graduated from Co-country fell into a very distracted state; lumbia University, New York, in 1883, its Sikh rulers came into warlike contact and became adjunct professor of mechanics there in 1889. In 1901 he announced the discovery of a method of practicable ocean telephony. He wrote Propagation of Long Electrical Waves, and other

papers. Puppets and Puppet-shows

(pup'etz), the performances of images of the human figure moved by fingers, cords, or wires, with or without dialogue. Puppets in English, French marionettes, Italian fantoccini, are of great antiquity. In early times in England puppet-shows were called motions, and generally represented some scriptural subject. In later times they have ranged from Punch and Judy to representations of shipwrecks and battles.

See Sanskrit. Pura'nas.

Purbeck (pur'bek), ISLE or, south of Dorsetshire, England, a peninsula so separated from the mainland on the north by Poole harbor and the Frome as to be connected with it by only a very narrow isthmus. It is about 12 miles iong by 7 miles broad. The prevailing rock is imestone.

Purbeck Beds, the uppermost mem-bers of the Ociite proper, or according to other writers the basis of the Wealden formation, deriving their name from the peninsula of Purbeck, where they are typically dis-played. They consist of argillaceous and aipaca, and vicufia. Area about 42 sq. caicareous shales, and fresh-water limemiles; pop. 537,345.

Punt, an oblong, flat-bottomed boat 300 feet thick. They are noted for their layers of fossil vegetable earth (direction).

enclosing roots, trunks, hranches of cycades and conifers. Purcell (pur'sel), HENRY, an

in 1658; died 1695. He studied music under Dr. Blow and became organist of Westminster Abbey in 1679. His best known works include Dido and Eneas (1680), the music for Dryden's version of The Tempest (1690). the music for Dryden's King Arthur (1691), The Jubilante and the Te Deum (1694), and the music to Bonduca (1695). Purcell was accelled the property of th

equally great in church music, chamber music, and music for the theater.

Purchas (pur'chas), SAMUEL, was born in 1577, at Thaxted, in Essex, and cducated at Cambridge. He took orders and hecame in 1604 rector of Eastwood in Essex, the duties of which office he left for some years to be discharged by a brother, while he devoted himself in London to the self-imposed task of collecting geographical, historical, and miscellaneous information. In 1613 he issued Purchas his Pilgrimage, or Relations of the World and the Religions observed in all Ages and Places discovered from the Creation unto the Present, etc. In 1615 he was appointed rector of St. Martin's, Ludgate Hill, London, a position favorable to the pur-suit of his multifarious researches. The MS. remains of Hakluyt having come into his hands he gave to his next work, published in 1624, the title Hakluytus Posthumus, or Purchas his Pilgrims, containing a History of the World in Sea Voyages and Land Travels by Englishmen and others, which is valuable as containing the narratives of voyagers, explorers, and adventurers as written by themselves, the language of the previous work, the *Pilgrimage*, on the other hand being Purchas's own. The *Pilgrims* have

Purchase (pur'chas), in law, is the act of obtaining or acquiring the title to lands and tenements hy money, deed, gift, or any means except by descent. To be worth so many years' purchase is said of property that would bring in, in the specified time, an amount equal to the sum paid. Thus to buy an estate at twenty years' purchase is to buy it for a sum equivalent to the total

and of commissions were fixed as follows: £450 for a cornetcy or ensigncy; £700 for a lieutenancy; £1800 for a captaincy; £3200 for a majority; and £4500 for a lieutenant-colonelcy, which was the highest rank that could be obtained by purchase. In theory an officer wishing to retire from the service might sell his commission for the price affixed to the rank he occupied. When a superior officer 'sold out' the next officer inferior to him might purchase promotion to the rank of the former by merely paying the difference between the prices of their respective commissions. The rank of the second might be reached in the same manner by his next inferior, and so on down to the ensign or cornet. No commission could be purchased by one officer unless another officer vacated his commission by its sale. The abolition of the purchase system took place in 1871, but the officers who were deprived of a able interest in their commissions vere compensated by giving them a sum of money, the payment of which was to be extended over twenty-nve years, and which, it was estimated, would amount to £8,000,000. Promotion has since been through seniority, tempered by selection.
The Regimental Exchange Act of 1875
permitted the exchange of commissions
through purchase under such conditions as the crown might deem expedient for the time being. No such system was ever introduced into the United States army, in which promotion has always depended solely upon merit, real or claimed. Pure Food Law. This law passed by Congress in 1906, is entitled 'An act for preventing the manufacture, sale or transportation of adulterated or misbranded or poisonous or deleterious foods, drugs, medicines and liquors, and for regulating traffic therein, and for other purposes. been much utilized by subsequent compilers of voyages and travels. Purchas died in London in 1626.

The regulating traffic therein, and for other purposes. It makes it unlawful for any person to manufacture within the District of Comanufacture within the District of Columbia or any Territory any article of food or drug which is adulterated or misbranded, under a penalty not to exceed \$500, or one year's imprisonment, or both, at the discretion of the court, and not less than \$1000, or one year's imprisonment, or hoth, for each subsequent offense. The act also applies to any food or drug in-troduced into any State from any other tate, or from or to any foreign country. return from it for twenty years.

Purchase, a system formerly comabolished, by which more than half the
first appointments and much of the subsequent promotion of officers in the British army used to be effected. The prices

terms of weight, measure or numerical count. By a subsequent act it was provided that after May 1, 1916, the use of the legend, 'Guaranteed under the Food and Drug Act,' was declared misleading and deceptive and the use of a serial number on food and drugs was prohibited. It was required that guarantees of compilance with the law should be given directly to dealers and should be incorporated in the invoice or hill of sale.

Purgative (pur ga-tiv), a medicine used for the purpose of producing the evacuation of the bowels. The following is a common classification: -(1.) Laxative or Mild Cathartics, employed when the least possible irritation is desired, such as manna, sulphur, cassia, castor-oii, tamarinds, prunes, honey, ripe fruit. (2.) Saline or Cooling Laxatives, giving rise to more watery evacuations than the first group, such as Epsom salts, Glauber's salt, phosphate of soda, Seidlitz powders, etc. (3.) Active Cathartics, occasionally acrid, frequently Cathartics, occasionally acrid, frequently tonic and stomachic, such as rhubarh, senna (often in the form of black draught), and aloes. (4.) Drastic or violent Cathartics, such as jalap, scammony, gamboge, croton-oil, colocynth, elaterium, which in large doses act as retaining too much of the discipline, irritant poisons, and are employed in ritual, and ceremonial of the Church of Rome. Many of them, who were driven have failed to be moved by milder purgatives. (5.) Mercurial Purgatives, such as calomel, blue plll, and gray powder.

Purgatory (pur'ga - to - r i), as believed ln by the Roman

Catholic Church, is an intermediate state after death in which the souls of the righteous expiate, through temporary suffering, sins committed in this life, and not fully atoned for before death. According to the Council of Trent, they are 'assisted by the suffrages of the faithful, hut especially hy the most acceptaable sacrifice of the mass,' to be enabled to enjoy the happiness of heaven. Catholics claim that this belief in purgatory ls upheld by the general teaching of Scripture without being specifically declared in any particular passage; they also claim that it is in harmony with the faith and practice of the early Christian ages.

Puri. See Pooree and Jagannatha.

Purification (pur-I-fi-kā'shun), the Jewlsh rite of, was mainly one through the performance of who treated as sinful the most of the which an Israelite was readmitted to amusements and diversions of the society the privileges of religious communion, around them. The drama was specially lost through uncleanness. The chief ohnoxious to them, and the dramatists varieties of such uncleanness, and the repsid the hatred of the extreme Puritan methods of purification from it required, by ridiculing and caricaturing him on

are detailed in Lev., xii, xiv, xv, and Numb., xix. The necessity of purifica-tion was extended after the captivity to a variety of cases not included in the Mosaic legislation, such as the washing of cups and pots, etc., referred to in Mark, vii, 4.

Virgin Purification of the

Mary, FEAST OF THE, cailed also the feast of the Presentation of the Child Jesus, is a festival of the Christian church held on the 2d of February, in commemoration of the event related in Luke's gospei, chap. ii. The festival dates from very early times, and is said to have heen formally instituted by Pope Gelaslus in A.D. 494. See Candlemas.

Purim (pū'rim), a Jewish festival observed on the 14th and 15th of Adar (March), instituted to commemorate the preservation of the Jews in Persia from the destruction threatened them by the schemes of Haman (Esther,

Rome. Many of them, who were driven into exile under Queen Mary, and who returned to England after the accession of Elizabeth, hrought back a zealous desire to remodel the Church of England in the spirit of continental Protestantism, especially that of Geneva. In 1572 a preshytery was set up at Wandsworth in Surrey, and before many years Presbyterianism found adherents both among the clergy and the laity. Meanwhile the Brownists, the Independents of later days, whose Congregationalism was as much opposed to Presbyterianism as to Episcopacy, began to be organized and to make some progress. In doctrine these two Puritan partles differed little from each other, or from many Anglicans who remained contented with the Church of England as it was. During the later years of Elizabeth the nickname of Puritan was popularly bestowed on ail in the church, or out of it, whose views of religion ied them to adopt a great austerity of life and gravity of demeanor; who made constant use of Bihllcal phraseology in their ordinary conversation, and who treated as sinful the most of the

the stage. Though the Puritans were aiways steadfastly loyal to Elizabeth, the legislation which she favored visited with severe penaities all Protestant nonconformity to the Established Church, and in 1592 several leading Brownists were brought to the scaffold. The hopes with which the accession of James I inspired the Puritan party in the church were grievously disappointed when their moderate demands for a reform of river erate demands for a reform of ritual and a slight modification of episcopal authority were rejected at the Hampton Court Conference. During his reign the prelates and many of the clergy became less Protestant, while the Puritan element in the church, and out of it, increased in intensity. Nonconformity was pursued by new penal statutes, and num-bers of Puritans emigrated to New Engiand. This emigration continued during the reign of Charles I and the ascendency of Laud. The Parliamentarlans who took arms against Charles I were mainly Puritans, and the hulk of them were Presbyterians. Preshyterianism in England reached its height with the meeting of the General Assembly of Divines at Westminster. (See Presbyterians.) With the downfall of the Anglican system Independency again reared its head in Eugland. The Independents now combined with their congregationalism the desire for a theological latitude, which widened the gulf hetween them and the Presbyterians. The army hecame leavened with Independency, and Oliver Cromwell its champion. With his as-Cromwell its champion. With his ascendency the influence of Presbyterianism as a power in the state dwindled, and Independency hecame the dominant element in English Puritanism. After the restoration of Charles II and of the old Anglicanism, the Presbyterians, Inde-pendents, and Baptists were the three chief denominations into which Puritanism had split up. Since then Nonconformists or Dissenters has been the term generally used where Puritanism would formerly have heen employed. The settlement of New England by Puritans brought that section of the American ism to the extent of persecution and expulsion of other sects. The Puritans long reigner supreme in New England, and especially in Massachusetts, where they displayed an intolerance equal to that of the Anglican church from the dominance of which they had escaped.

Purl, is the name now given to hot and ginger.

Purl of Cassius. See Cassius, Purple of.

Purples, EAR Cockle, or Perpersence ears of wheat, produced by the Tylenchus or Vibrio tritici ('wheat eel'), one of the Infusoria. The Infected grains of wheat at first assume a dark-green and hecome rounded like small corns. The huses

and ginger.

vision of the ileutenant-governorship of Bengal. Rice and indigo are its chief products. Area, 4956 square miles; pop. 1,874,794.—PURNIAII, the chief town, stands on the east hank of the Saura River. It is an unhealthy piace, but does a considerable trade in jute. Pop. 14,007. Purple (pur'pl), a secondary color compounded by the union of the primaries blue and red. Of all the various kinds in use, the Tyrian dye was anciently the most celebrated. This color was produced from an animal juice found in a sheilfish called murex hy the ancients; and as it was thus obtained only in small quantities, its use was re-stricted to the great and wealthy. It became the distinctive color of imperialism, and the later emperors of the East for-hade its use hy subjects. Hence their offspring were called porphyrogeniti, horn in the purple. In modern times, and from the red or scarlet hat, cassock, and stockings worn by them, cardinals are sometimes said to have obtained the purple. With the genal disuse of the purple obtained from saellfish, archil and cudhear, yielded by various species of lichens, were employed in the dyeing of silk and wool; hut they have been superseded by the purples obtained from aniline. For cotton the chief purple dye was furnished by madder, but the alizarin to which madder owed its dyeing properties is now prepared from coal-tar. common shades of purple with which wool is dyed are obtained from logwood with a mordant of alum and tartar.

Purple-black, a preparation of madder used as a

pigment.

Purple Emperor, the Apatura or Nymphalis Iris, a large, somewhat rare, and richly-colored British butterfly; so called from the splendid purple, iridescent color of its fore-wings.

Purple Grackle. See bird. See Crow-black-

of cottony consistence. A single grain (pur'nē-a), the northeastern of wheat may contain 50,000 young district of the Bhagaipur di-vibrios. These forms may he dried, and

water, destroys the vibrio effectually.

Purples, The, or Purpura, spots of a livid red on the body, the resuit of extravasation of blood from the skin. In ordinary purpura, which is not dangerous, tonics, especially quinine and iron, are the most effective remedies. In the purpura hamorrhagica, or bleeding purpura, there is hemorrhage from nu-cous membranes, sometimes terminat-ing fatally. In this form of the disease with copious bleeding, benefit may be de-rived from the use of ergot, given either by the mouth or hypodermically, as a solution of ergotine.

the Purple-wood, Copaifera heart-wood and C. bracteata, Imported from the

ery. Purpura (pur'pū-ra), a genus of gasteropod molluses, of which the greater number are littoral. Many of these molluscs secrete a fluid which is of a purplish color, but one in particular furnished that celebrated and costly dye of antiquity called the Tyrian purple.

See Purples. Pur'pura.

Purqueira Oil, same as Pulza Oil.

Purse-crab, a name for decapod crustaceans of the genus Birgus, allied to the hermit-crabs. A species, B. latro (the robber-crab), found in the Mauritius and the more eastern Islands of the Indian Ocean, is one of the largest crustaceans, being sometimes 2 to 3 feet in length. It resides on land, while paying a nightly visit to the sea, often burrowing under the roots of trees, lining its hole with the fibers of the cocoanut husk and living on the nuts, which (according to some writers) it climbs the trees to procure, and the shells of which it certainly breaks with

Purse: (pur'ser), in the navy, the officer who kent the accounts officer who kept the accounts of the ship to which he belonged, and had charge of the provisions, clothlng, pay, etc. He is now designated paymaster.

Purslane (purs'lan), a plant of the cos), with fleshy, succulent leaves, naturalized throughout the warmer parts of the world. Purslane was formerly more 1838 the Tracts for the Times began used than at present in salads as a pot- to appear, but he was not prominently

Pursuivant (pur'swl-vant), an attendant on the heraids, one of the third and iowest order of heraidle officers. There are four pursuivants belonging to the English College of Arms, Rouge Croix, Blue Mantle, Rouge Dragon and Portcullis. In the court of the Lyou King-of-Arms in Scotland there were formerly six pursulvants. Unicorn, Carrick, Bute, Kintyre, Ormond and Dingwall, but the last three have been abolished.

Puru (pö'rö), or Purus, a river of South America, which rising in the east of I'eru enters Brazll, and flowling northeast after a course of 400 miles joins the Amazon about 100 miles above the confluence of the Madeira with the latter.

Brazils, well adapted for mortar-beds and gun-carriages, and also used for ramrods, buhl-work, marquetry and turn-cise by officials called purveyors of the royai prerogatives, involving a right of preëmption, by which the king was authorized to buy provisions and necessaries for the use of his household at an appraised value, in preference to all his subjects, and even without the consent of the country it included the right of imthe owner; it included the right of impressing horses and carriages, etc., for the use of the soverelgn. It was also practiced by many of the great English nobles. It led to much oppression and many exactions, and a number of statutes were passed to prevent them. There was until recently a class of purveyors in the British army, who superintended the army hospitals. Their duty is now ex-

ercised by the army service corps.

Purwa (pör'wä), a town of India,
with manufactures of shoes and leatherwork. Pop. about 11,000.

Pus. the white or yellowlsh matter

Pus, the white or yellowish matter found in abscesses, and formed upon the surfaces of what are sometimes mlsnamed healthy sores. It consists of dead and dying white blood corpuscles infected with pyogenic germs and tissue cells and with dissolved tissue and blood serum.

Pusey (pu'si), EDWARD BOUVERIE, after whom the Tractarlan movement in the Church of England became designated Puseyism, was born in 1800. He was educated at Eton and Christ Church, Oxford, of which he became a feliow in 1824. In 1828 he was appointed to the regius professors' ip of Hebrew at Oxford, to which was at-tached a canonry of Christ Church. In 1833 the Tracts for the Times began connected with the Tractarian movement until 1835-36, when he contributed to the Tracts one on baptism which excited much attention. He published a defense of the famous Tract No. 90, and in 1843 he was suspended by the vice-chanceilor of Oxford from preaching for three years, on account of the very high sacramental doctrine inculcated in his sermon on the Eucharist, preached before the university. The prominence thus given to him, his position in the university, his reputation for scholarship, and his thoroughgoing advocacy of 'Anglo-Catholic' principles, procured the general adoption of the term Puseyism as a

Rev. Dr. Pusey.

synonym of Tractarianism; and with the secession of Newman to Rome, Pusey hecame the acknowledged head of the new church party. During the rest of his life he lived very retired, though a continual flow of books, pamphlets, etc., came from his pen. He died in 1882. Among the more substantial of his works, in addition to his Library of English Fathers and Anglo-Catholic Library, are his Councils of the Church, from the Council of Jerusalem, A.D. 51, to the Council of Constantinople, A.D. 381 (1857); Daniel the Prophet, nine iectures (1864); and the Minor Prophets, with a commentary and introduction to the several books (1860-77).

Puseyism. See Tractarianism.

Pushkar (push'kar), a town of India, in Ajmere-Merwara. Rajputana, the only oue in India containing a tempie dedicated to Brahma. A great fair in October and November is attended by about 100,000 piigrims. Pop. 3750.

Pushkin (push'kin), ALEXANDER, Count of Sergejevitch, a Russian poet, born at St. Petersburg in 1799; died in 1837. At an early age he was, on account of his liberal opinions, sent to Odessa, where he discharged various offices, but was restored to favor on the accession of Nicholas in 1825, who appointed him imperial historiographer. He made a study of foreign literatures, and was much influenced hy Byron. His first poem was Ruslan and Liudmila (1821); this was followed by the Prisoner of the Caucasus; the Fountain of Bakhtchisarai; Eugene Onegin; the Gypsies; and Poltava. He was also the author of a dramatic poem, Boris Godoonof. He feel in a duel with his brother-in-law. His works have been translated into German, French and English.

Pushtu (push'tö; of which Pukhtu is a dialectic variation) is the vernacular language of the Afghans proper wherever they may be settled, and by the best authorities Is regarded as an Aryan language, more or less allied to the Iranian group. Persian is the ianguage of the educated classes in Afghanistan, and is also known to the people, who, however, prefer the use of Pushtu. Pustule (pus'tûl), a small and nearly rounded elevation of the cuticie, with an inflamed hase, and containing pus. Diseases known as 'pustular diseases' are those that are characterized by true pustules. Smallpox and chicken-pox are accompanied hy pustules, but these are regarded as febrile, not pustular diseases, the eruption being not primary hut secondary.

Putchock, Puchuck (puchuk), the root of Aplotaxis Lappa, a composite plant growing on the Himalayas in the vicinity of Cashmer. It is exported to the Malay countries and to China, where it forms a main ingredient in the Chinese pastille-rods known as joss-sticks. In Upper India it is given as a medicine in various complaints ranging from coughs to cholera.

Puteaux (pu-to), a town of France, in the department of the Seine, on the left bank of the Seine. Pop. (1906) 28,718.

Putnam (put'nam), Israel, soldier, was born in Salem, Massachusetts, in 1718, and took an active part as an officer in the French and Indian war, in which he displayed the greatest hardihood and courage. At the outbreak of the Revolution he left his farm and hastened to Boston, where he became active in the siege, commanding at the battle of Bunker Hill. He

was energetic throughout the war and Putteala, See Patials. was appointed by Congress one of the four major-generals under Washington.

Putrefaction (pu-tri-fak'shun), such a decomposition of dead organic matter as is generally accompanied by the evolution of fetid gases, now regarded as due to the agency of bacteria or other organisms floating in the atmosphere, which find a nidus ln the putrescible matter and grow and mui-tlply in it. The substances in which these micro-organisms are thus developed are reduced either to much more simple compounds or to their original separate elements. The putrefaction, or putrefactive fermentation, of animal substances is usually attended by more fetid and noxious exhalations than those arising from vegetable products, chiefly through the more abundant presence of nitrogen ln the former. The formation of ammonia, or of ammoniacai compounds, is a characteristic of most cases of animai putrefaction, while other combinations of hydrogen are also formed, especially carburetted hydrogen, together with complicated and often highly poisonous vapors or gases, in which sulphur and phosphorus are frequently present. These putrefactive effluvia are, for the most part, easily decomposed or rendered innocuous by the agency of chiorine. The rapidity The manufactures are chiefly lace, tuile, of putrefaction and the nature of its and woolens. Pop. 20,507. products are to a great extent influenced **Pny-de-Dôme** (pu-è-dè-dôm), a deby temperature, moisture, and access to air. A temperature between 60° and 80°, a dne degree of humidity, and free access of air are the circumstances under which it proceeds most rapidly. Hence the actlon of the minute organisms which produce putrefaction can be checked or aitogether prevented by a very high, or a very low, temperature, by the exclusion of air, and by the absence of moisture. Antiseptics prevent and to some extent arrest the progress of putrefaction by killing the germs. Boiling destroys most of them. True disinfectants prevent putrefaction, destroy the germs, and dissipate the noxious products.

four major-generals under Washington. Puttenham (put'ten-am), Gronge, He died in 1790.

Putnam, a city, capital of Windham garded as the author of The Art of Co., Connecticut, is on the Poesie, which appeared anonymously in Quinnebaug River, 33 miles N. N. E. of 1589. If its author, he was, from indications of cotton actions given in that and another anoth Quinnebaug River, 33 miles N. N. E. of 1059. It its author, he was, from individual Norwich. It has manufactures of cotton, cations given in that and another work woolen and silk goods, shoes, cutlery, from the same pen, born about 1530 trunks, boxes, steam heaters, phonograph and became a scholar of Oxford. In needles, tire duck etc. Pop. 7280.

Putney (put'ni), a suburb of London, Queen Elizabeth, to whom he was a genof the Thames. It is the birthplace of ancient as well as modern poetry, and Clibber the histories and here the Oxford. Glbbon, the historian, and here the Ox-ford-Cambridge boat races are rowed. struct in versification. Its author wrote Pop. (1911) 28,246. several other pieces which have been jost.

Putty (put'i), a kind of paste or cement compounded of whiting or soft carbonate of lime and linseed-oil, beaten or kneaded to the consistence of dough. In this state it is used by glaziers for fixing in the squares of glass in window frames, etc., and also by house-painters to stop up holes and cavities in woodwork before painting.

Putty-powder, a pulverized oxide mixed with oxide of lead. It is extensively used for poilshing and other purposes in giass and marble works; the best kinds are used for poilshing piate.

Puy (pu-ē), LE, calied aiso LE PUY-EN-VELAY, and LE PUY-NOTRE-DAME, a town of France, chief town of the department of Haute-Loire, 270 miles s. s. E. of Paris. It is built on the steep slope of an isolated craggy hiii, and viewed from a distance has a most striking and picturesque appearance. Over-topping the houses is a conical rock crowned by a small chapel and a colossal statue of the Virgin. The cathedral, an ungainly Romanesque building, dates from the sixth to the tweifth century.

Puy-de-Dôme (pu-è-dè-dôm), a de-partment of Centrai France; area, 3070 square miles; takes its name from a voicanic cone (4805 reet) which overlooks it. The highest point in the department, Puy-de-Sancy, 6188 feet, is the most elevated peak of Central France. The department, with its numerous extinct voicances and voicanic formations, is geologically very interesting, the voicanle formations giving the scenery a very distinctive character. Of a total area of 3073 sq. miles, much the largest proportion is good arable and pasture land, the fertile plains of Limagne, more than 70 miles in length, consisting of alluvial deposits of volcanic

origin, making it one of the richest regions of France. There are coai and other mines in the department, which also contains a number of springs, some of which have been resorted to by heaith-seekers since the days of the Romans. The industries of the department include manufacture of various textile fabrics. Pop. (1906) 535,419.

Pu-Yi (HSUANTUNG). Emperor of China. He was born February 11, 1906, and acceded in 1908, in his third year, on the death of the emperor Kwang Hgsu. His father, Prince Chun, acts as

See Pozzolana and Ce-Puzzola'na. ments.

Pwllheli (pül-hā'iē), a parllamentary and municipal borough and seaport of Waies, in Carnarvoushire, on Cardigan Bay, 21 miles s. w. of Carnarvoushire, on the control of the c ing place. It belongs to the Carnarvon district of parliamentary boroughs. Pop. (1911) 3791.

Pyæmia (pl-e'mi-a), a form of biood-poisoning, a dangerous dis-ease resuiting from the introduction of decaying tissue, forming pus (which see), into the blood circulation. Such matter may be introduced through an ulcer, wound, an imperfectly closed vein, or a mucous membrane, as that of the nose. This disease was common after severe Britain, who dwell in rock ciefts and operations in crowded hospitals, whose atmosphere was loaded with purulent or contaminated matter. It has been much checked of iate years by the improved ventilation of hospitals, and by the application of antiseptics in the performs ance of surgleai operations and the dressing of wounds.

Advant race has been reported in New Britain, who dwell in rock ciefts and steal fruit. There are also very short people in the Bismarck Archipelago, the Solomon Islands, and the Malay peninsula, but these indicate a race mixture. The Busbmen of South Africa are a plication of antiseptics in the performs and the dressing of wounds.

mais, but the common species, P. littorale, is free when adult, and does not appear to be parasitic during any period of its existence. P. Balanarum attaches itseif parasitleaily to the wbale.

Pye (pl), HENRY JAMES, a poet laure-ate of England, was born in 1745, of an oid Berkshire family. In 1784 be entered parliament as member for Bucks. Having in 1775 published a translation of six odes of Pindar, in 1778 one of Frederick the Great's Art of War. and in 1786 another of the Poetics of Aristotie, with a commentary, he was, in 1790, appointed poet laureate. In 1792 he was appointed a Westminster police

magistrate. In 1801 appeared his Alfred, an epic. He died in 1813.

Pye, John, an English engraver, born in 1782; died in 1874. Eavly in the century he gained a high rep for his engravings of Turner's landscapes, a number of which he executed, beginpapermaking, sugar production, and the ning with Pope's Villa in 1811. He aiso engraved works by Claude, Michael Angelo, Gasper Poussin, Landseer, etc. He passed much of bis life in l'aris, and was elected a corresponding member of the French Institute.

Pygmalion (pig'mā-ii-on), in Greek mythology, a king of Cyprus, who, having made an ivory image of a maiden fell in love with hils own work, and entreated Venus to endow it with life. His prayer was granted, and the maiden became his wife.

Pygmy (pig'mi), one of a race of dwarfs, first mentioned by Homer as dweiling on the shores of Ocean, and baying to sustain a war Ocean, and Daving to sustain a war against the cranes every spring. Later writers piace them mainly in Africa, and Aristotle at the sources of the Nile. Recent travelers have found tribes of dwarfs in many parts of Africa, in the Andaman and Philippine Islands (See Negritos), and also related tribes elsewhere in that region. A tribe of Pygmies has recently been discovered in New Guines, averaging 4 feet. 3 inches in Guinea, averaging 4 feet, 3 inches in height and extremely wild. In addition a dwarf race has been reported in New

Pycnogonum (pik-nog'o-num), a Pylades (pī'la-dēz), in Greek mythology, son of Strophlus, the sea-splders. Some species are para-of Agamemnon, after whose music upon fishes and other masing at the sea-splders. of Agamemon, after whose murder by Clytemnestra, their son Orestes, being carried secretiy to the court of Strophius, formed the friendship with Pylades which has become proverbia. He assisted Orestes in rurdering Ciytemnestra, and eventually me rried his sister Electra. Pyle (pil), H. WARD, American artist and writer, born at Wilmington, Delaware, in 1853; died in 1911. His brilliant work as an illustrator made him one of the foremost of American artists.

Pylon (pi'lon), in Egyptian architecture, the name given to towers or masses of masonry, somewhat resemblished. bling truncated pyramids, piaced one on each side at the entrance of tempics. and having a very imposing appearance.

(pī - iō 'rus), the lower and right orifice of the stomach Pylorus through which the food passes on to the

rintestine. See Stomach.

Pylos (pi'los), a town of ancient Greece, memorable in the Peloponnesian war, and represented by the modern Navarino.

(plm), John, an English statesman and leader of the popular party during the reigns of James I and Charles I, was born in Somersetshire in 1584; studied at Oxford and became famous as a lawyer. He entered Parliament in 1614, and during the reign of James he attained great influence by his opposition to the arbitrary measures of the king. He was a zealous Puritan. In 1626 he took part in the impeachment of

John Pym.

Buckingham and was imprisoned. In the Short Parliament of 1640 Pym and Hampden were exceedingly active as leaders of the popular party, and in 1641 Pym was offered the chancellorship of the explosure. He have a bed. Strategical and the chancel of the chancellorship of the explosure. the exchequer. He impeached Strafford, and at his trial appeared as accuser. He was the main author of the Grand Remonstrance, the final appeal presented in 1641, and one of the five members to arrest whom the king went to the House of Commons in January, 1642. When sivil war became inevitable Pym was appointed one of the committee of safety, and while he lived was active in resist-

Behind them in the larger temples there was often a large open court, and in front there might be an avenue with sphinxes on either side. An entrance of which these pylons form part is somewhich the paritamentary army to keep the field. In Nov. 1843, he was which these pylons form part is some-skill that enabled the parliamentary army times called a propylon. See Egypt to keep the field. In Nov., 1643, he was made lleutenant-general of ordnance, and in the following month he died, and was

Pymma-wood, the wood of the Lagrania regina.

See Bloodwood. Pyramid (pir'a-mid), in geometry, is strictly a soild contained by a plane triangular, square, or polyg-onal hase, and other planes meeting in a point. This point is called the vertex of the pyramid; and the planes which meet in the vertex are called the sides, which are necessarily all triangles, hav-ing for their bases the sides of the base of the pyramid. Every pyramid is one-third the solid content of a prism that has the same base and altitude as the pyramid. Pyramids are denominated triangular, square, pentagonal, etc., according as the base is a triangle, a square, a pentagon, etc.

in architecture, a colossal Pyramid, structure of masonry having a rectangular base and four triangular sides terminating in a point, used by the ancients in various parts of the world for sepulchers or for religious purposes, especially in Egypt. The largest and most remarkable of the Egyptian pyramlds occur in several groups on the west side of the Nile, on the border of the Libyan desert, extending for a distance of about 25 miles from north to south, the farthest north being opposite Cairo. They are built chiefly of the hard limestone of the adjacent hills, but large blocks of granite brought from a distance are also used, especially on the outside. The four sides are so placed as to face the four cardinal points. Some of these structures belong to a very ancient date in the empire. The stones used varied in in the empire. The stones used varied in size, but are mostly large, and have required great mechanical skill to quarry them, transport them, and raise and adjust them in their proper places. An almost incredible number of laborers were engaged in erecting the chief Egyptian pyramids, of which the group of Gizeh, 4 miles s. w. of Calro, in the neighborhood of the ancient Memphis, is the most remarkable. This group consists of nine pyramids, among them the three most celebrated of all, the pyramid of Cheops (Khufu), called the Great Pyramid; of Cephren (Khafra); and of Mycerinus Cephren (Khafra); and of Mycerinus (Menkauru). According to Herodotus, the Great Pyramid took 100,000 men

working for ten years to make a causeway 3000 feet long in order to facilitate the transport of the stone from the quarries; and the same number of men for twenty years more to complete the pyramid itself. Its hase forms a square, each side of which was originally 768 feet though now by the removal of the feet, though now, by the removal of the coating, only 750 feet long, occupying 18 acres. The outer surface forms a series of steps, each of the average height of 8 feet or more. When the structure was perfect this step formation was hidden by the coating which removes was hidden by the coating, which rendered the sides quite smooth, and the apex, where there is now a space of 12 sq. yards, was no doubt originally quite sharp. The height was originally about 480 feet, but is now only 451. The interior, entered 49 feet above the base of the north face, contains several chambers, one of which, called the King's Chamber, is 341 feet long, 17 wide, and 19 high, and contains a sarcophagus of red granite. The second pyramid is 600 feet square and 447 feet high. The third pyramid is only 354 feet square and 203 feet high, and is the best constructed of the three The all smaller practice. the three. The six smaller pyramids which complete the Glzeh group are of much inferior interest. The pyramids are supposed to have been built by the

Pyr'amus and This'be, a pair of efficacy. lovers, who, as their story is told by Ovid (Met., iv, 55-165), resided in Babylon, and being prevented by their parents from meeting openly, were in the habit of secretly conversing through an opening of the wall, as their bouses adjoined.

(pē-rā-nā), the French name of the Pyrenees, giving name to three French departments.

— Basses-Pyrénées (büs-pē-rā-nā) is a department of Southwestern France, at the angle of the Bay of Biscay. Its in-

having immediately before killed an ox. Pyramus appearing on the scene, and concluding from the blood-besmeared robe that Thisbe was dead, killed himself. Thisbe returning soon afterwards, and finding the body of her lover, also killed herself. The story was very popular in the time of Shakespeare, who made It the subject of the burlesque Interlude

Pyrenees (plr'e-nez), a lofty trountain range, the crest of the main chain of which forms the boundary between France and Spain. It abuts with one extremity on the Mediterranean, with one extremity on the Mediterranean, and with the other on the Atlantic. Its length, from Cape Creux on the Gulf of Lyons to Fontarahla on the Bay of Blscay, is about 280 miles, and its greatest hreadth little more than 50 miles. It consists of two lines, which form parallel ridges about 20 miles from each other, except near the center, towards which the range rises both from the cast and west. The descent on the south side is much more abrupt than on the north. Its loftiest summits are near its center, where its culmits are near its center, where its cul-minating point, Maladetta, or Pic de Néthou, reaches a height of 11,424 feet. The principal passes in the Pyre-nees, formed by the meeting of valleys from opposite sides of the axis, take in respective kings as tombs and memorials from opposite sides of the axis, take in of themselves; and it is conjectured that they were begun at the beginning of each reign, and that their size corresponded with the length of it. Ahout 350 yards southwest of the Great Pyramid is the celebrated Sphinx. Ruins of pyramids are to be found at Benares in India and in other parts of the East. Certain monuments of the ancient inhabitants, found in Mexico, are also called pyramids. These seem to have been intended to serve as temples, the tops of them being flat and surmounted by a house or chamber in which sacred rites were probably performed. The largest and perhaps the oldest of them is that of Cholula, which is said to have a base of 1770 feet and a height of 177 feet.

Pyr'amus and This'he, a pair of the calm the east part of the chain the name of the calm to the calm towards the center that of Cols, and towards the center that of restriction of the said to much to shorten the journey and to promote traffic between France and Spain. In the Pyrenees is to he found some of the finest scenery in France. The climate, genial and warm, banishes perpetual snow to 1300 feet higher french Pyrenees abound in mineral in connection with which are some of the gayest watering places in de Luchon. Barège is in a dreary gorge, but its waters are celebrated for their efficacy.

the angle of the Bay of Biscay. Its industry is mainly agricultural. The sur-They agreed one day to meet at the tomb face is diversified, there is much fine of Ninus, when Thisbe, who was the scenery, and the forests are extensive and first at the rendezvous, was surprised by a lioness and took to flight. In her place, is well known as a health resort, haste she dropped her garment, which especially in winter. Pan is the capital the lioness seizing, covered with blood, of the department. at , at inpop. 426,347.— HAUTES-PYRÉNÉES (ôtpē-rā-nā) is a department of Southern France, bounded partiy by Spain, partiy by Basses-Pyrénées, and other depart-ments. To it in the south belong some of the ioftiest summits of the Pyrenees. The fine scenery and the mineral springs of the department attract many visitors.

Area, 1749 square miles; pop. 212,173.

Tarbes is the capitai.— Pyrénées-Orien-TALES (pë-rā-nā-zo-rē-an-tāl), a department of Southern France, bordering on the Mediterranean and the Spanish frontier. Its chief wealth lies in its wines, of which the well-known Roussillon is The department is also very rich in lron. Perpignan is the capital. Area, 1592 square miles; pop. 212,121.

Pyrenees, Peace of THE, concluded hetween France and Spain by Cardinal Mazarin and De Haro, on the Ile des Falsans, in the river Bidassoa, on the borders of the two countries, November 7, 1659, terminated a war which had lasted for twenty-four years. By this treaty Spain ceded to France Roussillon, with the fortress of Perpignan, etc., so that the Pyrenees have since formed the boundary of the two kingdoms; and in the Netherlands, Artols, and part of Flanders, Hainault, and Luxemburg, with a number of fortified Luxemburg, with a number of fortlied towns.

Pyrethrum (pi-reth'rum), a genus of herbaceous plants nearly ailied to Chrysanthemum. P. Parthenium is known as feverfew; from P. roseum is made the well-known Persian insect-pow-

Pyrgos (pir'gos), a town of Greece, near the west coast of the Morea, and not far from the mouth of the Ruphla (Alpheios). Its harbor is at Katakolo, to which there is a rallway, and it carries on a considerable trade. Pop. (1907) 13,690.

Pyrheliometer (per-he-ll-om'e-ter), an instrument devised by M. Poulllet for measuring the intensity of the heat of the sun. It consists of a shallow cylindrical vessel of thin silver or copper, containing water or mercury in which a thermometer is plunged. The upper surface of the vessel is covered with lamphlack recovered is covered with lampblack, so as to make it absorb as much heat as possible, and the vessel is attached to a support in such a way that the upper surface can be always made to receive the rays of the sun perpendicularly. The actual amount of heat absorbed by the instrument is calculated by ordinary calorimetrical means. The area of the exposed blackened surface and the amount of water or mercury which has been raised through a certain crystallized and massive in Devonshire, The area of the exposed blackened surface

number of thermometric degrees being both of them known, the absolute heating effect of the sun, acting upon a given area

under the conditions of the experiment, can be readily found.

Pyrites (pi-ri'tez), a name given in mineralogy to various metallic sulphides, chiefly to the sulphides of cop-per and iron. Pyrites is largely used as a source of suiphur in the manufacture of suiphurle acid. It is a widely diffused and plentiful mineral, occurring in many different kinds of rocks. It is abundant in many coal seams, and is apt to be-come so heated by the action of water and alr, which change it into suiphate of iron, as to set fire to the coal. Copper pyrites, cailed also yeilow copper and chalcopyrite, is the most abundant of all the ores of copper, and yields a considerable portlon of the world's copper. The color of pyrites has often caused it to be mistaken for gold, of which there is a notable instance in the early history of Virginia. For iron pyrites see Iron.

Pyritz (peritz), an ancient town of Prussia, 24 miles southeast of Stettln. Its chief industries are machinery, sugar manufacture, and agriculture. Pop. (1905) 8600.

Pyrmont (pir'mont), a watering place of Prussia, in the principality of Waldeck and Pyrmont (which see), 34 mlles s. s. w. of Hanover. Small but well built, with several fine promenades, it contains a palace, and a very complete bathing establishment. The water is chalybeate, possessing valuable medicinal properties. Over 100,000 bottles of water are annually exported. Pop.

Pyro-electricity (pi'rō), a name given to electricity produced by heat, as when tourmaline becomes electric by being heated between 10° and 100° Centigrade.

Pyrogallic Acid (pi-rō-gal'ik; obtained by the dry distillation of gallic acid (which see). It forms crystais that have neither smell nor color, is readily soluble in water, alcohol and ether, has a neutral reaction, readily absorbs oxygen In an alkaline solution, and becomes of a dark brown color. It is used in photography, and sometimes as a hair-dye. See Wintergreen. Pyr'ola.

Pyroligneous Acid (pf-ru-lig'nepure acetic acid obtained by the distiliation of wood.

Warwickshire, Thuringia, Brasil and other places. It is the bluoxide, dioxide, dioxide, and is much and or peroxide of manganese, and is much

used in chemical processes.

Pyrometer (pi-rom'e-ter), any in-atrument, the object of which is to measure all gradations of temperature above these indicated by the mercurial thermometer. Wedgwood's pyrometer, the first which came into extensive use, was used by him for testing the heat of his pottery and porcelain kiins, and depended on the property of clay to contract on exposure to beat. Many different modes have been proposed or the line appropriate the line which actually employed for measuring high temperatures; as by contraction, as in Wedgwood's; by the expansion of bars of ail other explosive substances obtained by different metals; by change of pressure in immersing vegetable fiber in nitric or confined gases; by the amount of heat introsulpinuric acid, and then suffering it imparted to a color as red and white attentions. point of soilds; by color, as red and white atives of cellulose.

Pyrope (pi'rop), fire-garnet or Bohemia. It dance, which consisted chiefly in such pieces of Bohemia. It dance, which consisted chiefly in such pieces of the body riety of garnet, found embedded in trap tufa in the mountains of Bohemia. It occurs also in Saxony in serpentine.

Pyrophone (pi'ru-fon), a musical instrument, in which the various notes are produced by the hurning of hydrogen gas within glass tubes of various sizes and lengths.

Pyroscope (pl'ru-skop), an instru-ment for measuring the intensity of heat radiating from a hot body or the frigorific influence of a coid body.

Pyrosis (pi-ro'sis), in medicine, a disease of the stomach attended with a sensation of burning in the epigastrium, accompanied with an eructation of watery fluid, usually insipid, but sometimes acrid. It is commonly called Waterbrash.

Pyrosoma (pi-ru-sō'ma), a genus of phosphorescent Molluscoida, of the group Tunicata, compound ascidians inhabiting the Mediterranean and Atlantic. They unite in great numbers, forming a large hollow cylinder, open at one end and closed at the other, swimming in the ocean by the alternate contraction and dilatation of its compo-

nent individual animais.

Pyrotechny (pi-ru-tek'ni), the science of making and using artificial fireworks, the chief ingredients of which are niter, sulphur, and charcoal. Iron filings yield bright red and white sparks. Steel filings and castiron borings contain carbon, and give a more brilliant fire with wavy radiations. Copper filings give flame a greenish tint, those of zinc a fine bive color; the sui- erals of antiquity, was born about 318

phuret of antimony gives a less greenish blue than sinc, but with much smoke; amber, realn, and common sait give a yellow fire. Lampblack produces a very red color with gunpowder, and a pink with niter in excess. Verdigris imparts a paie green, suiphate of copper and sai ammoniac a paim-tree green. Lycopo-dium, used also in the manufacture of stage-lightning, hurns with a rose color nnd a magnificent flame. See Fireworks.

Pyroxylic Spirit (pi-roks-ii'ik), a common name for methylic alcohol or wood-spirit. See Methyl.

, line (pf-roks'i-iin), a term embracing guncotton and

an adroit and nimble turning of the body as repre ented an attempt to avoid the strokes of an enemy in hattle, and the motions necessary to perform it were looked upon as a kind of training for war.

Pyrrho (pir'rō), a Greclan philoscopher of Eils, founder of the Pyrrhonian or skeptical school, flourished about 340 a.c. He was early led to apply himself to philosophy by the writings of Democritus, and, accompanying his master, Anaxarchus, to India, in the train of Alexander the Great, he there became acquainted with the doctrines of the Brahmans, Magi, and other easter philosophers. Spending a great part of his life in solitude, and abstaining from ali decided opinions concerning morai and physical phenomena, he endeavored to attain a state of tranquility not to be affected by fear, joy, or sorrow. He died in his ninetieth year; the Athenians erected a statue in honor of him, and his countrymen, who had made him a highpriest, raised a monument to his memory. His chief doctrines were the uncertainty of ail human knowledge, and the belief that virtue is the only good. Pyrrho ieft no writings. It is only from the works of his later followers, particularly Sextus Empiricus, that we learn the principles of his school. A disposition to doubt is often cailed, from this philosopher, Pyrrhonism.

Pyrrhus (pir'rus), king of Epirus, one of the most notable gen-

hood. He was placed on the throne of appears to ows very much to a vivid im-his ancestors when about twelve years agination acting upon the then prevailing of age, and reigned peacefully five years, ignorance respecting the order of nature, when advantage was taken of his absence. What was not known was guessed at, to transfer the crown to his great-uncie, Neoptolemus. After serving with his brother-in-law, Demetrius Poliorcetes, and greatly distinguishing himself at the but-tie of Ipsus, against Antigonus, B.C. 301, Pyrrhus recovered his dominions, which he shared with his rival, and then caused the latter to be put to death. He next contended for possession of Macedonia, and in 280 passed over into Italy to assist the Greeks against Rome. He defeated the Romans in two battles, but with severe loss to himself; then passed over into Skilly, returned to Italy again. and was defeated at Beneventum 275 B.C. He now retired to Epirus, took part in the Greek troubles, and was killed at

Argos, B.C. 272.

Pyrus (pl'ris), a genus of ornamental and fruit trees, the latter forming the chief of our orchard fruit, and belonging to the pomeous section of the nat. order Rosacese. There are about forty species, nutives of the north temperate and cold regions. The pear (P. communis), the apple or crab (P. Malus), service-tree (P. torminalis and domes tica), mountain-ash or rowan-tree (P. Aucuparia), beam-tree (P. Aria), etc., all belong to this genus.

Pythagoras (pi-thag'o-vas), a Gre-posed to have been born about 586 B.C. at Samos. He went to Scyros, and was a scholar of Pherecydes till the death of the latter; others make him also a scholar of Thales and Anaximander. He is said to have gathered knowledge from the philosophers or learned men of Phœnicla, Syria, Egypt, Babylon, Indla, etc., but eventually settied at the Greek city of Crotona in Lower Italy, prohably about 529 B.C. His abilities and character led great numbers, chiefly of the noble and wealthy classes, to adopt his views. Three hundred of these were formed into a select frateruity or order, and were bound by vow to Pythagoras and each other, for the purpose of cultivating the rites and observances enjoined by their master, and studying his philosophy. They thus formed at once a philosophical school and a religious order. The politi-cal influence of this body became very considerable, and was exerted in the in-terest of the aristocratic party. The democratic party strenuously opposed the growing power of the order, and their then, continuing his journey northward, enmity caused Pythagoras to retire to to have arrived at Thuie (supposed t Metapontum, where he died about 506 be Iceiand). In a second voyage he en-

B.C., and was left an orphan in child- B.C. So far as we can judge, his system ignorance respecting the order of nature. What was not known was guessed at, with the usual result. In the case of Pythagoras, as in that of other teachers of those early times, the popular effect of this partial knowledge was heightened by mingling it with secret doctrines. One of these doctrines was the transmigration of souls; and Pythagoras is said to have believed himself to have previously lived in several bodies. He had also abstruse theories respecting numbers, geometry, and music, which he valued very highly as fitting the soul for contemplation. The effect of his teaching, however, was such that it disciples are said to have paid him divine honors after his death. In appearance he was grave, command-ing, and dignified. He abstained from ail animal food, limiting himself to a vege-table diet. His public instruction con-sisted of practical discourses in which he recommended virtue and dissuaded from vice, with a particular reference to the various relations of mankind, as those of husbands and wives, parents and children, citizens and magistrates, etc. His disciples were required to practice the greatest purity and simplicity of manners. He imposed upon them, it is said, a silence of from two to five years, according to circumstances. He alone who had passed through the appointed series of trials was allowed to hear the word of the master in his immediate presence. To the initiated the doctrines were not delivered. as to others, under the mask of images and symbols, but unveiled. Pythagoran left no writings, the Golden Sentences extant under his name having been composed or complied by later hands.

Pythagorean Bean (pith-ag-u-re'an), the Nelumbium speciosum. See Nelumbium. Pythagorean Theorem.

the forty-seventh proposition of the first book of Euclid's Elements, which shows that in any right-angled triangle the square of the hypotenuse is equal to the sum of the squares of the other two sides.

Pytheas (pith'e-as), a famous navigator of the Greek colony of
Massilia, now Marsellles, supposed to have lived about the time of Alexander the Great (say 330 B.C.). He is reputed to have sailed along the west coast of Et "of e, entered the English Channel, and sereled some distance in Britain,

tered the Baitic, where he proceeded as far as a river which he called Tanais, and on the banks of which amber was found. We only know of him through found. We only know of Strabo, Pliny, and others.

Pythian Games (pith'i-an), one of the four great Grecian games, instituted in honor of Apolio, and ceichrated at Delphi. Until about 586 B.C. they were under the management of the Delphians, and took place every eighth year; but after they were conducted by the American Conducted by the Conducted by t they were conducted by the Amphictyons, and ceichrated every fourth year, prizes being given for flute-piaying, athietic sports, and horse and chariot racing. Eventually contests in tragedy, painting, scuipture, etc., were added. At first prizes of sliver or gold were awarded, but effertwards the simple laural wreath and afterwards the simple laurel wreath and palm hranch were substituted. They continued to be ceichrated until the end of

Pythias, KNIGHTS of, a henevoient and friendly order, founded in the United States in 1864, and now strong in this country and flourishing in some other countries. It had a member-ship in 1911 in the United States of 711,381. It has an insurance department with a membership numbering 69,-989, representing an aggregate life insurance of \$98,527,523.

Python (pl'thon), a genus and family of serpents allied to the family Boidse or Boas. They are not venomous, hut kili their prey hy compression. The pythons belong exciusively to the Old World, and are of enormous size, assay offices. Sometimes attaining a length of 30 feet.

They are found in India and in the island. They are found in India and in the island. They are found in India and in the island. sometimes attaining a length of 30 feet. **Pyxidium** (piks-id'i-um), in hotany, They are found in India and in the islands of the Eastern Archipelago, in Africa and seen in henhane and in the fruit Lecyin Australia. A rudimentary pelvis and this Ollaria, the monkey-pot tree, a large traces of hinder limbs exist in the pythons, forest tree of Brazil. The term is also these structures terminating externally in applied to the theca of mosses.

a kind of hooked ciaw. The head exceeds the neck in thickness, and the mouth is extremely large. Aided by their prehensile tails and rudimentary hinder limbs, the pythons suspend themseives from the hranches of trees and iie in wait near water for animais which come to drink. The genus Python contains various species, the hest known of which is the West African python (P. sebæ), common in menageries. The femaie python hatches her eggs hy the heat of her hody.

Pythoness (pi'thon-es), the priestess of Apoilo at his temple at Deiphi, who gave oracuiar answers. See Delphi.

Pyx (piks; Greek, pyxis, a box), a covered vessei used in the Roman Catholic Church to contain the consecrated host. In ancient times, although generally rectangular in shape, it some-times had the form of a dove, and was suspended ahove the altar. It is now cylindricai, cup or heii shaped, with a cross-surmounted cover, and is frequently

Pyx, TRIAL OF THE, the final trial hy weight and assay of the gold and siiver colns of the United Klngdom, prior to their issue from the mint, a certain number being taken and tested hy way of sample of the whole. The trial takes place periodically hy a jury of goldsmiths summoned hy the iord-chancellor, and constitutes a puhiic attestation of the standard purity of the coin. The term is also applied to the assaying of gold and silver

the same sound as k or hard c. It is a superfluous letter in English, as the combination qu, in which It always occurs, could be equally well expressed by kw or k alone when the w is slient. It did not occur in the Anglo-Saxon alpha-bet, the sound qu ln Anglo-Saxon words heing regularly written cw or cs, hut was borrowed from the French-Latin alphabet. JOHN (kwak'in-hos), Quackenbos at New York in 1848. He hecame a doctor; a tutor in rhetoric at Columbia College in 1870; professor of rhetoric at Columbia and at Barnard College for Women after 1891; professor emeritus at Columbia in 1894. He has written numerous school hooks and other works, including Hypnotic Therapeutics and merous school house Therapeutics cluding Hypnotic Therapeutics Enemies and Evidences of Christianity.

Enemies and Evidences of Christianity.

Teutonic tribe

(kwa'dē), a Teutonic tribe Quadi (kwa'dē), a Teutonic tribe whose ancient territory was on the Danuhe, extending to the Theiss on the Danune, extending to the Theiss on the east and to the Carpathian Mountains on the north. They long waged destruc-tive wars with the Romans, particularly under Marcus Aurelius, but cease to be heard of in the fifth century, having

probably migrated further west with the Suevl. Quadragesima (kwod-ra-jes'i-ma), nlfying fortieth, and used to denote the torty days of fast (Lent) preceding Easter. Quadragesima Sunday is the first Sunday in Lent. See Lent.

Quadrangle (kwod'ran-gl), in geometry, a quadrilateral ngure; a plane figure having four sides, and consequently four angles. In ordinary language it is a square or quadrangular court surrounded by buildings, as often seen in the hulldings of a college, school, or the like.

(kwod'rant), an instru-Quadrant ment for measuring angular altitudes, variously constructed and mounted for different specific uses in asmounted for different specific uses in as-tronomy, navigation, surveying, etc., con-sisting originally of a graduated arc of instead of four.

26-U-5

the seven centh letter in the Eng- 90°, with an index or vernier, and either lish alphaet, a consonant having plain or telescopic sights, along with a same sound as k or hard c. It is plumb-line or spirit-level for fixing the vertical or horizontal direction. Its principle and application is the same as that of the sextant, by which it is superseded. It See Sextant.

Quadrate Bone (kwod'rāt), a bone developed in reptiles and birds, by means of which the lower jaw is articulated or joined to the skull. The lower jaw of these forms is thus not articulated directly or of itself to the skull, as in mammals.

Quadratic Equations. See Equa-(kwod'ra-tūr), in Quadrature position tronomy, the of the moon or a planet when its longitude differs from that of the sun by 90°; that is, when it is 90° distant from the sun.— Quadrature of the circle, the squarling of the circle. See Circle.

Quadriga (kwod-ri'ga), an ancient two-wheeled car or charlot drawn by four horses abreast. It was used in racing in the Greek Olympian games, and in the games of the Roman classes.

man clrcus. Quadrilateral ('wod-ri-lat'er-al), a space inclosed between, and defended by, four fortresses in Northern Italy famous in Austro-Italian history, namely, Peschiera and Mantua on the Mincio, and Verona and Legnago on the Adige.

Quadrille (kwod-rll'), a dance of
French origin, which consists generally of five consecutive figures or movements, danced by four sets of

couples, each forming the side of a square. Quadrille, a game at cards, played by four persons, with a pack of forty cards, the eight, nine and ten of each sult being thrown aside. Quadrille was very popular and fashion-able in England about the beginning of the century, but is now almost forgotten.
Ombre, the game celebrated by Pope in Quadrivium (kwod-riv'i-um), the name given hy the schooimen of the middle ages to the four mathematical branches of study, arithmetic, music, geometry, and astronomy.

tlc, music, geometry, and astronomy.

Quadrumana (kwod-rö'ma-na, or 'four-handed'), the name applied by Cuvier and others to denote the order of mammalia represented by the lemurs, monkeys, and apes, from the fact that these forms agree in possessing a great toe so constructed as to he capable of opposing the other digits of the feet, instead of heing placed parallel with the other toes, thus forming a kind of 'hand' adapted for supporting the foot on the ground. This conversion of the feet into hand-like organs presented to Cuvier's mind so different and remarkable a structure from the disposition of the feet and toes of man, that he separated man as a sole and single genus to

The Mandrill (Papio maimom).

represent the distinct and opposing order of Bimana or 'two-handed' mammalla. But in modern zoology this distinction is held not to exist anatomically, and man is generally included in one order with the apes and monkeys—the order Primates, of which man constitutes a distinct family or section. As limited to the apes, monkeys, and lemurs, the Quadrumana are characterized by the following points:—The hallux (innermost toe of the hind-limb) is separated from the other toes, and is opposite to them, so that the hind-feet become prehensile hands. The pollex (innermost toe of the fore-limbs) may be wanting, but when present it also is usually opposable to the other digits, so that the animal becomes truly quadrumanous, or four-handed. The teats are two in number, and the mammary giands are on the chest as in man, See Lemurs, Monkeys, Apes, etc.

Quadruped (kwod'rō-ped), the name populariy a pplied to those higher vertebrate animals which possess four developed limbs. The name is usually restricted to four-footed mammals.

Quadruple Alliance (kwod'rö-pl), an alliance, so-called from the number of the contracting parties, concluded in 1718 hetween Great Brita!n, France, and Austria, and acceded to hy Holland in 1719, for the maintenance of the Peace of Utrecht. The occasion of the aillance was the seizure by Spaln of Sardinia in 1717, and Sicily in 1718, both of which she was forced to give up. Another quadruple alliance was that of Austria, Russia, Great Britain, and Prussia, in 1814, originating in the coaiition which had effected the dissolution of the French Empire.

Quæstor (kwēs'tur), the name of certain magistrates of ancient Rome whose chief office was the management of the public treasure, helng receivers of taxes, tribute, etc. Quæstors accompanied the provincial governors and received taxes, paid the troops, etc. The office could at first he held only by patricians until 421 s.C., when the number, which had formerly been two, was doubled, and pleheians became eligible. The number was further increased to eight after the out reak of the first Punic war. As province after province was added to the Roman territory the number of quæstors was again lucreased, till under Sulla it reached twenty, and in the time of Julius Cæsar forty.

Quasga (kwaga; Equus Quagga), a species of the horse genus, nearly allled to the zehra, and formerly found ahundantl, on the plains of Southern Africa, south of the Vaal River. Though striped like the zehra, it possessed no bands on the limbs; of a dark or blackish-brown on the head, neck. and shoulders, the back and hind quarters were of a lighter brown, while the croup was of a russet gray. The under parts of the hody were white, the upper parts of the legs and tail heing marked by whitish hars. The quagga was of smaller size than the zebra, and in general conformation bore a closer resemblance to the borse. Gregarious in habits, the quagga is said to have mingled indiscriminately with the zehra herds. Its food consisted of grasses and mimosa leaves. It is now said to he absolutely extinct, having been hunted indiscriminately by the Boers, who killed thousands of them for their skins. In this respect its fate resembles that of the bison of America. The ani-

ga ed W en ir 68 piled is Burchell's zebra. See Dauw.
Quail (kwāl; Coturniw), a genus of
rasorlal birds, included in the family of the partridges, to which they are nearly aliied, but from which they differ in being smailer, in having a relatively shorter tali, no red space above the eye, longer wings, and no spur on the legs. The common quail (C. vulgāris) is a migratory hird, and is found in every country of Europe, and in many parts of Asia and Africa. It is about 8 inches in length. The color of the upper parts is brownish with lighter and darker markings, of the under parts yeliowish. The quall is very pugnacious, and in some places quail fights are a form of amusement, as was the case also in ancient times. Its flesh is deemed excellent food, and large numbers are brought anve and dead from the Continent to the British markets. In Britain these hirds arrive early in May, and depart southwards in

Common Quail (Coturnix vulgăris).

October. There are several other species, in appearance and habits not greatly dirfering from the common quail, as the Coromandel quail (C. textilis). the Anstralian quall (C. australis), the white-throated quail (C. torquata), the Chlnese quall (C. excalfactoria), an elegant lit-tie species measuring only 4 inches in length, etc. The name quail is given in the United States to some hirds of other genera, as the Virginia quail, or partridge (Ortyx). and the Californian or crested quail (Lophortyx). The Virginian quail is common throughout North America, and extends as far south as Honduras. It is rather larger than the European quail. The flesh is very white and tender,

mai to which the name quagga is now ap- immediately feli under persecution. But persecution, as usual, enlisted the sympathies of many in his cause. After making muititudes of converts he organized them into a church, which became, aithough not until after severe persecution, one of the recognized sects of Christianity. Among the eminent members of the society in its early days we may mention William Penn. Robert Barclay, George Whitehead, Stephen Crisp, Isaac Pennington, John Crook, Thomas Story, etc. The early Quakers were marked as a peculiar people by their testimonies against oaths, a paid ministry, and tithes; their use of the singular pronouns when addressing only one person; their refusal to take off the hat as a compliment to men; the plainness of their apparel; and their disuse of the ordinary names of the months and days. The name Quakers was given to them in derision, and though they accepted the name they call themselves by that of Friends. A Derby magistrate was the originator of the derisive epithet according to Fox himself—'because I made him tremble at the word of God.' The persecution and intellegation of the property of which they report the victimes. tolerance, of which they were the victims both in England and America, only tended to confirm the faith and strengthen the bond of union among the members the rising society; and in neither try could it induce the sufferers to re...quish their conformity to what they regarded as duty. From the diffusion of more enlightened views on the subject of religious liberty, acts were successively passed by the English parilament relieving Friends from the oppression under which they suffered, tolerating their mode of worship, marriage, etc., and allowing them in a court of justice to make an affirmation in piace of taking an oath in the usual way. The same liberal policy was pursued in America. One of the brightest chapters in the annals of the sect is that relating to the founding of the colony of Pennsylvania. (See Penn, William, Pennsylvania.) But, as In other reforming sects, so among the Friends, success in the course of time gradually undermined their zeal, and deprived them of many of their characteristic qualities. Gradually the spread of wealth modified the stringency of their 'sumptuary' rules, and there was in consequence a rapid decline of the anquail. The fiesh is very write and tender, and is unequaied in delicacy by any other member of its order in America.

Quakers (kwā'kerz), or Friends, a consequence a rapid decline of the ancient discipline. Coincident with these took its rise in England about the middle of the 17th century. George Fox, a native of Drayton, in Leicestershire, was the first to teach the religious views which distinguish the society. He commulgating opinions denying the miracument of the stringency of their summittees. Gradually the spread of their summittees, and there was in consequence a rapid decline of the ancient discipline. Coincident with these doctrine. About the year 1827 Elias thicks, a native of the state of New York, the first to teach the religious views which distinguish the society. He commulgating opinions denying the miracument menced his ministerial labors in 1647, and lous conception, divinity, and atonement

of Christ, and also the divine authority of the Scriptures. One-fourth the sect in America followed Hicks, and have since been known as Hicksite Friends. The schism made much stir among Friends in Great Britain as well as in America, and a movement was begun in favor of higher education, and of a relaxation in the formallty of the society. This movement, headed by Joseph John Gurney of Norwich, was strenuously opposed by a body of Friends in America, and the result was a division among the Orthodox Friends themselves, and the origin of a new sect, known as Wilbur-ltes, from John Wilhur, its founder. The society, or the orthodox section of

it, believes that, under the gospel dispensation, all wars and fightings are strictly forhidden; the positive injunction of Christ, 'Love your enemies,' etc., entirely precluding the indulgence of those passions from which only such contests can arise. They also believe that tests can arise. They also helieve that the express command, 'Swear not at all,' prohihits the Christian from the use of judicial as well as other oaths. In like manner, following the spirit of the Scripmanner, following the spirit of the Scriptures, they believe that a special call is necessary to constitute a true minister of the gospei, that the falthful mlnister should not preach for a pecuniary reward, that the essential haptism is of the Holy Ghost, not hy water, and that the Lord's supper is also entirely of a spiritual nature. They therefore renounce both these sacraments so far as the ordinary outward forms are concerned. As nary outward forms are concerned. As to the cardinal doctrines of Christlanity, the incarnation, crucifixion, resurrection, redemption through Christ's death, justifi-cation, etc., their beliefs are similar to those of orthodox Christians generally. The Friends were one of the first sects to allow women to teach publicly. As early as 1727 they censured the traffic in slaves, and the efforts of the society had a great influence in bringing about their emancipation. They object to halls, gaming places, horse races, theaters, and music; also to the reading of plays, romances, and novels; and enjoin plalnness of dress and the avoidance of ornaments.

The society is governed by its own code of discipline, which is enacted and supported by meetings of four degrees dlscipline - namely, preparative, monthly, quarterly, and yearly meetings. The preparative digest and prepare the business for the monthly meetings, in which the executive power is principally lodged, subject, however, to the revision and control of the quarterly meetings, which are again subject to the supervision Quappelle (ka-pel'), a small town and direction of the yearly meetings.

There are about 60,000 members and adherents in Britain, 120,000 in the es, besides smail numbers in United 5 other co .. ries.

Quaking Grass (Briza), a genus of grasses, so-named from their splkelets being always in a state of tremulous motion, in consequence of the weakness of the footstalks by which they are supported. Briza maxima, a native of Southern Europe, has iong been cultivated as a garden annual on account of its large and handsome drooping spikeiets. B. media, a perennial plant, is naturalized in the vicinity of Boston its flowers forming elegant of Boston, its flowers forming elegant panicles.

Quamash (kwam'ash), the North American name of Camassia esculenta, a plant of the lily family with an edihle bulh. These hulhs are much eaten hy the Indians, and are prepared hy baking in a hole dug in the ground, then pounding and drying them into cakes for future use.

Quamoclit (kwam-ok'lit), a genus of climbing ornamental plants, nat. order Convolvulaceæ, chlefly found in the hot parts of America, hut some species are indigenous both in India and China.

Quandang (kwan'dang), the edible fruit of a species of sandalwood tree, Santalum acum called in Australia native peach. Santălum acuminātum,

See Kwangsi. Quangsee.

See Kwangtung. Quangtung.

Quantity (kwon'ti-ti), that property of anything, in virtue of which it is capable of being measured, increased, or diminished, relating to hulk, weight, or number. In mathematles a quantity is anything to which mathematical processes are applicable. In grammar it signifies the measure of a syllahle, or the time in which it is pro-nounced—the metrical value of sylla-hies as regards length or weight in pronunciation. In Latin and Greek poetry quantity and not accent regulates the measure.

Quantock Hills (kwan'tok), a range of low elevation in England, in the county of Somerset, extending from the Bristoi Channel, near Watchet, northeast to between Bridgewater and Taunton, and rising at their highest point to an elevation of 1428 feet above the sea-level.

Quanza, a river of Africa. See Co-anza.

Quarantine (kwor'an-ten; It. quarantina, a space of forty days), the period (originally forty days) during which a ship coming from a port suspected of contagion, or having a port suspected of contagion, or having a contagious sickness on board, is forbidden intercourse with the piace at which she arrives. This form of quarantine is confined to countries where cholera, yeilow fever, etc., have to be guarded against. By act of Congress passed in 1888 national quarantine stations were established; and it is made a tions were established; and it is made a misdemeanor, punishable by fine or imprisonment, or both, for the master, pilot, or owner of any vessei entering a port of the United States in violation of the act, or regulations framed under it. Quarantine was first introduced at Venice in the fourteenth century. In Britain it is now practically abolished, the port sani-tary authorities dealing with any case reported to them.

(ka-ren-yon), a com-Quaregnon mune and coiliery district of Belgium, province of Hainaut, 4

miles west of Mons. It has coal mines and hlast furnaces. Pop. 16,033.

Quarles (kworlz), Francis, an English poet, horn in 1592, near Rumford in Essex, educated at Cambridge, and entered at Lincoin's Inn. He was for some time cup-hearer to Eliza-heth, queen of Bohemia, and in 1621 went to Duhiin, where he became under-secretary to Archhishop Ussher. He was driven from Ireiand, with the loss of his property, hy the rebellion of 1641, and was appointed chronologer to the city of London. At the commencement of the civil wars he wrote a work entitled the Loyal Convert, which gave offense to the parliament; and when he afterwards joined the king at Oxford his property was sequestrated, and his books and MSS. plundered. He was so much affected by his losses, that grief is supposed to have hastened his death in 1644. Of the works of Quaries, in prose and verse, the most celebrated is his Emblems, a set of designs lilustrated by verses. Among his poems are Divine Poems, Divine Fancies, and Argalus and

Raiiway, in the district of Assinibola, a closed leewards by the islands of Cherso short distance east of Regina; also, the and Veglia, and communicates with the name of a river tributary to the Assiniof that region dread the gulf on account of the terrific storms to which it is subject.

Quarrel (kwor'el), a bolt or dart to be shot from a cross-bow, or

thrown from a catapult, especially one with a square head and pyramidal point.

Quarry (kwor'i), an open ex-cavation made for obtalning stone, such as granite, marhie, sandstone, ilmestone, and slates. Stones suitahie for Important huilding purposes are usually found at a good distance helow the surface. In the case of unstratified rocks, such as granite, whlnstone, etc., the stone is most frequently detached from the mass Quarrel.

by hlasting, a process by which much valuable stone is wasted, and a different method is employed whenever it is found possible. This is frequently the case with some stratified rocks, such as sandstone, from which blocks are separated by hand-tools alone. Small hoies a few inches asunder are cut along a certain length of rock, into which steel wedges are inserted. These are driven in by heavy hammers until the stratum is cut through. The large blocks necessary for monumental purposes are generally obtained in this way, and before they leave the quarry they are usually reduced as nearly as possible to a rectangular form.

Quart (kwort), a measure of capacity, being the fourth part of a gallon, or eight gills.

Quartan Ague. See Ague.

Quarter (kwor'ter), the name of two measures, one of weight and the other of capacity. The first is the fourth part of a hundredweight, or 28 lhs. The second contains 8 busheis of 4 pecks.

Quarter, that part of a ship's side which ites towards the stern, or which is comprehended between the aft-most end of the main chains and the sides of the stern.

Quarter-days, in England, the day Poems, Divine Fancies, and Argalus and Parthenia. His Enchiridion is a collection of brief essays and aphorisms, in vigorous and occasionally eloquent language.

Quarnero (kwār-nā'rō), Gulf of, in the Adriatic Sea, between latria and the Croatian coast, 15 mlles in length and breadth. It is nearly in15), and Martinmas (November 11); the conventional terms Candlemas (February 2), and Lammas (August 1) make up the quarter-days.

Quarter-deck, the upper deck, or aftermost part of the upper deck, of a vessel, extending from the main-mast to the stern, or to the poop (when there is one). In ships of war it is specially set apart for the officers.

Quartering (kwor'ter-ing), in her-aldry, is dividing a coat into four or more quarters or quarterings, by perpendicular and horizontal lines, etc. See *Heraldry*.

Quarter-master (kwor'ter-mas'ter), in the army, an officer who attends to the quarters for the soldiers, their provisions, fuel, forage, etc. There is a quarter-master on the staff of each regiment, in which he holds the relative rank of lieutenant. A quarter-master in the navy is a petty officer appointed by the captain, who, besides having charge of the stowage of ballast and provicions, coiling of ropes, etc., attends to the steering of the ship.

Quartermaster-general, a staff staff of high rank in the army, whose department is charged with all orders relating to the marching, embarking, disembarking, billetlag, quartering, and cantoning of troops, encampments and camp equipage. The quartermaster-general is attached to a whole army under a commander-in-chief, and holds the rank of brigadler-general.

Quartermaster-sergeant is a noncommissioned officer who acts as assistant to the quarter-master.

(kwor'tern), a term some-Quartern times used to designate the fourth of a peck, or of a stone; as the quartern-loaf. In liquid measure it is the fourth part of a pint.

Quarter-sessions, in England, a geninal inrisprudence held quarterly by the justices of the peace in counties, and by

with Iron at both ends. It was grasped by one hand in the middle, and by the other between the middle and the end. In the attack the latter hand shifted from one quarter of the staff to the other, giving the weapon a rapid circular motion, which brought the loaded ends on the adversary at unexpected points.

Quartet, or QUARTETT (kwor-tet'), musical composition for four instruments, generally stringed in-struments (that is, two violins, one viola or tenor violin, and one violoncello); also a composition for four voices, with or without accompaniment.

Quarto (kwor'tō; 4to), a book of the size of the fourth of a sheet; a size made by twice folding a sheet, which then makes four leaves.

Quartz (kwortz), the name given to numerous varieties of the native oxide of silicon, called also silicle acid. Quartz embraces a large number of varieties. When pure its composition is expressed by the formula SiO. It occurs both crystallized and massive, and in both states is most abundantly diffused throughout nature, and is especially one of the constituents of granlte and the older rocks. When crystallized lt generally occurs in hexagonal prisms, terminated by hexagonal pyramids. It scratches glass readily, gives fire with steel, becomes positively electrical by friction, and two pieces when rubbed together become luminous in the dark. The colors are various, as white or milky, purpose the property of the property gray, reddish, yellowish or brownish, pur-ple, blue, green. Quartz veins are often found in metamorphic rocks, and frequently contain rich deposits of gold. The principal varieties of quartz known by distin a names are the following: 1, rock-crystal; 2, smoky quartz; 3, yellow quartz; 4, amethyst; 5, siderite or blue quartz; 6, rose quartz; 7, milky quartz; 8, irised quartz; 9, common quartz; 10, fat (greasy) quartz; 11, flint; 12, horn-stone; 13, Lydian stone; 14, floatstone (swimming stone); 15, fibrous quartz; 16, radiating quartz; 17, chalcedony; 18, carnelian; 19, chrysoprase; 20, agate. instices of the peace in counties, and by the recorder in boroughs. The jurisdiction of these courts, originally confined to matters touching breaches of the peace, has been gradually extended to the line masses which are translucent and smailer misdemeanors and felonies, but of a brown color. Yellow quartz, somewith many exceptions. Similar courts times called Bohemian or Scotish topaz, have been introduced into the United States, and are closely connected with courts of Oyer and Terminer (which see). Quarter-staff, an old English weap-regular crystais. Rose quartz is of a pole about 62 feet long, generally loaded translucent, and of a milk-white color.

t

Irised quartz exhibits the colors of the altered by heat, etc. It is generally of a rainbow. Fat or greasy quartz has the grayish or pinkish-gray color, from a appearance of having been immersed in slight trace of iron. off. Flint has a more compact texture than common quartz, is dull, only transiucent on the edges, of a brownish color, ing warm water on rye or barley meal, and breaks with a concholdai fracture. Hornstone resembles flint, hut its conchoidal fracture is less distinct. Lydian stone differs from flint chiefly in having Fibrous quartz consists of those varieties which are in distinct parallel concretions. Radiating quartz is like fibrous quartz, except that the fibers diverge from a common center, and resemble the radii of a circle, instead of being parallel. Chal-cedony includes those varleties of radiatlng quartz where the thickness of the individuals becomes so much diminished dony merely in having a blood-red color. lar instead of fibrous; its col' is applegreen. Agate implies the occurrence of two or more of the above varieties existing together in intimate union. Cat's eye, avanturine, prase, plasma, heliotrope, Compostella hyacinth, jr per (red, Lrown, striped, and vorcelain, jasper again, Mocha stone, Venus-hair agate, etc., formerly included under quartz, are only mixtures of this mineral metrical Elements; and as expressible by with other substances. Several various and manufactures. The ancients regarded rock-crystal as petrified water, and made use of it for the fabrication of vases. At present it is employed not bolically expressed, and is applied to vases. At present it is employed not only for cups, urns, chandeliers, etc., but for scals. spectacle-glasses, and optical composition of glass, both white and colored. In the manufacture of porceiain it is added in the state of an impalpable powder, and forms part of the paste; it is also used in other kinds of pottery. Quartz is used as a flux in the melting of several kinds of ores, particularly selections, so as to discover many new theorems, and to arrive at the many new theorems, and to arrive at the solution of many difficult problems.'

Quatte-Bras (kå-tr-brii), a viliage of Relgium, in the province of South Brabant, 20 miles solve of several kinds of ores, particularly selection of the main roads between Remanufacture at the many new theorems, and to arrive at the many new theorems, and to arrive at the solution of many difficult problems.' of several kinds of ores, particularly those of copper, and in other metallurgical processes. Touchstone is a hard velvety-black variety of Lydian stone.

Quartzite

(kwort'zit), QUARTZ
BOCK, a metaphoric strati-

fied granular-crystalline rock consisting entirely, or almost entirely, of quarts. It is usually a sandstone which has been JEAN LOUIS ARMAND DE, a French

and drunk by the peasantry of Russia.

Quassia (kwash'i-a), a genus of South
American tropical plants, consisting of trees and shrubs, natural order Simarubacese. The wood of two species stone differs from flint chiefly in naving a darker color, less translucency, and a fracture somewhat slaty; when black it is known in commerce by the name of fracture somewhat slaty; when black it is known in commerce by the name of fracture somewhat slaty; when black it is known in commerce by the name of Quassia; Q. amara, a native of Panama, sists of a delicate tissue of minute crystals, visible only under a powerful a small tree with handsome crimson as mall tree with handsome crimson flowers; and Q. excelsa (Picrona caccles, magnifier. Owing to the cavities it conflicts it will sometimes float on water. ter furnishes the lignum quasaw of the British Pharmacopeia. Both sinds are imported in billets, and are inodorous, but intensely bitter, especially the Jamalca quassia. Quassla is a pure and simple bitter, possessing marked tonic properties. An infusion of quassia sweetened with sugar is useful to destroy flies. On excellent were formerly sub-Individuals becomes so much diminished as to render them nearly or altogether impalpable. Carnelian differs from chalce- is now prohibited under severe penaltica. (kwa-ter'ni-unz), Chrysoprase also resembles chalcedony in composition, except that it is granular instead of fibrous; its cole is applementation investigation discovered name given by Sir Wilbolically expressed, and is applied to

> section of the main roads between Brussels and Charleroi, and from Niveile to Namur. It is famous for the battle fought here (June 16, 1815) between the English under Weilington and the French under Ney, in which the former were victorious.

> various classes of algebraicai, geometricai,

Quatrefages de Bréau (kä-tr-fäsh de brā-ō),

and ethnology at the Musée d'Histoire Natureile. He was elected a member of the Royal Society, London, in 1870. His contributions to science include His contributions to science include numerous researches into the lower grades of life, and a valuable series of anthropoiogicai studies. Among his more important works are Souvenirs d'un Naturportant works are Souvenirs d'un Naturaliste (1854), Crania Ethnica (1875-79), De l'Espèce Humaine (1877), Hommes Fossiles et Hommes Sauvages (1883), La Distribution Géographique des Négritos (1883), l'Homme Tertiaire (1885), les Pygmées (1887), and Introduction à l'Étude des Races Humaines (1887-89). He died in 1892.

Quatrefoil (kwa'tèr-foii), in architecture, an opening or a panel divided by cusps or foliations into

panel divided hy cusps or foliations into four leaves, or more correctly the leaf-shaped figure formed by the cusps. It is an ornament which has been supposed to represent the four leaves of a cruciform flower, and is common in the tracery

Quatrefoils.

of Gothic windows. Bands of small quatrefoils are much used as ornaments in the perpendicular Gothic style, and sometimes in the decorated. The same name is also given to flowers and leaves of similar form carved as ornaments on moldings, etc.

(kwā'ver), a note and meas-Quaver (kwā'ver), a note and meas-ure of time in music, equal to haif a crotchet or the eighth of a semi-

hreve. See Music.
Quay (kē), a landing-place substantially huilt along a line of coast or a river hank, or round a harbor, and having posts and rings to which vessels may be moored, frequently also cranes and storehouses for the convenience of merchant ships.

Quay (kwā), Matthew Stanley, politicai ieader, born at Dillsburg, Pennsylvania, in 1833; died in 1904. He graduated at Jefferson Coilege, was admitted to the har, hecame a colonel in the Civil war, and was afterwards private secretary of the governor of Pennsyivania. Elected to the legislature in 1861, after holding other positions, he was elected State treasurer in 1885 and United States Senator in 1887. Shrewd trade in timber, immense quantities of

naturalist, born in 1810; took his M.D. and alert in political movements, he degree at Strashurg in 1838; and became gradually gained leadership in and conprofessor of zoology at Toulouse, the Lycée at Paris, and professor of anatomy Pennsylvania, what is called the 'political at the Marce of Marce Pennsylvania, what is called the 'political machine' reaching its highest development in his hands. In 1889 he was tried for misapproprution of public funds, but was acquitted. He was regarded as the ahiest of leaders in machine' politics.

Quebec (kwë-hek'), a city and shipping port of the Dominion of Capada capital of the province of the

Canada, capitai of the province of the same name, situated on a promontory near the confluence of the St. Charies with the St. Lawrence, terminating ahruptiy in Cape Diamond, which has a height of 333 feet, and on the hanks of both streams. It is ahout 400 miles from the mouth of the St. Lawrence and 140 miles north-east of Montreai, to which the river is navigable for iarge vesseis. It is divided into the upper and lower towns. The former, piaced on the summit of the promotory, is strongly fortified, the fortifications comprising a citadei and other works. The view from the heights here iooking down the river is one of the finest in the world. The lower town, the great seat of husiness. lies under the cliffs, along the St. Lawrence and the St. Charies. The streets are mostly narrow, irregular, and frequently steep, excepting in the suhurhs, which are modern and huit upon a more regular pian.
Among the principal edifices are the parilament huildings, the Roman Catholic
cathedrai, the Protestant cathedrai, the
new court-houses, the new town-hail, and the Scotch church. The chief educational irstitution is Lavai University, with faculties of iaw, medicine, theology, and arts, and a library of nearly 80,000 volumes. Another great educational institution is the Grand Seminary. The chief convent is the Ursuine convent. covering 7 acres of ground, and having connected with lt an extensive establishment for the education of females. It has huildings dating from 1686. Much of the town has an antique aspect. On the Piains of Ahraham, west of the upper town, a coiumn 40 feet high has been erected to the memory of Generai Woife; while in the upper town there is a hand; some obelisk, 65 feet high, to the joint memory of the two commanders, Wolfe and Montcalm, who both fell in the 1759 capture of Quebec. Shiphuilding is the chief industry. There are also manufactures of iron-castings, machinery, cutiery, nails, ieather, paper, india-ruhher goods, rope, tobacco, beetroot-sugar, etc. Quebec is the chief seat of the Canadian

The great center span, 640 feet long and weighing 5,600 tons, is being hoisted into place to complete the structure. It was a similar span which fell in 1916, warrying 90 men to do the completed bridge is the largest of its type in the world. It cost \$16,876,000, is 3,239 feet long, 88 feet wide and 163 feet high from the base of rail to high water level. It carries two railroad tracks, a driveway for vehicles and two coarete test to the feet high THE GIGANTIC CANTILEVER BRIDGE WHICH SPANS THE ST. LAWRENCE RIVER AT QUEBEC

he on-in iit-de-vas olic re-in 

Lawrence, immediately below the town, where it is 2500 yards wide, affords excellent anchorage for ships of large tonnsge, while the wharves along the hanks of both rivers afford accommodation for the largest vessels. The river is free from ice usually from the 1st of April till the middle of December. Quehec was founded in 1608 hy Champiain, who was sent on an exploring expedition from France. In 1629 it came into the hands of the English, but was restored in 1632 France. In 1629 it came into the hands of the Engiish, but was restored in 1632 to the French, in whose possession it remained tili 1759, when it feli into the liands of the British in consequence of Wolfe'z famous victory on the Plains of Abraham. The great huik of the inhabitants (more than five-sixths) are Roman Catholics, chiefly French Canadians, and French continues the common innand French continues the common inn-guage of the city and province. Pop. (1911) 78.190.

Quebec, an eastern province of the Dominion of Canada, extending from Hudson Strait on the north to New Brunswick, Malne, New Hampshire, Vermont and New York on the south, and from Labrador and the Gulf of St. Law-rence on the east to Ontario on the west. It is Canada's largest province, there being 703,653 square miles of land and neing 705,005 square miles of land and 16,000 miles of water area, exclusive of the Gulf of St. Lawrence. By the Federal Act of 1912 Quebec gained 354,961 square miles, formerly included in the Northwest Territories. The province is 1000 miles from E. to W., 1200 from N. to s. The surface of the country is very varied, being diversified by mountains. rivers. mountains are the Notre Dame or Shickshock Mountains, extending along the south side of the St. Lawrence, and forming a table-land 1500 feet high, with peaks rising to the height of 4000 feet; and the Laurentian Mountains, or Laurentides, which streets are the south side of the streets and the Laurentian Mountains, or Laurentides, which streets are the south side of the streets and the Laurentian Mountains, or Laurentides, which streets are the south side of the streets are the streets are the south side of the streets are the streets are the south side of the streets are the streets are the south side of the streets are the streets are the south side of the streets are the s rentides, which stretch from the coast of Labrador to the Ottawa River, and rise to a height of from 1200 to 4000 feet. The chief islands are Anticosti, at the mouth of the St. Lawrence, and the Magdaien Islands, in the Gulf of St. Lawrence. The chief river is the St. Lawrence, which flows through the entire iength of the province. Next to it in importance is its chief trihutary, the Ottawa, over 7000 miles in length. The other largest rivers are the St. Maurice and the Saguenay, this stream and the Ottawa being notable for grand and beautiful scenery. The province boasts many products are rice, pepper, ivory, and tin.

which are here accumulated, so that at certain seasons rafts moored within booms may be seen extending along the water's edge for 6 miles. The basin of the St. The climate is variable, though saluhrious, the temperature ranging from 20° where it is 2500 yards wide, affords expectation of the state of the town, where it is 2500 yards wide, affords expectation of the state of the temperature ranging from 20° below zero ir winter to 90° above in summer. The soil is generally fertile, and well suited for the growth of cereals, bay, etc.; maize, flax, and tobacco are also grown, especially to the west of the ion-gitude of Quebec, while grapes, meions, peaches, and tomatoes in this region come to maturity in the open air. to maturity in the open air. A large por-tion of the province is still covered with forest, the white and red pines and the oak being the most valuable trees for tim-ber. The fisheries are extensive and val-uable. The minerals worked include apatite, asbestos, goid, copper, iron, piumhago, etc. The manufactures are steadily increasing, and include furniture, leather, paper, chemicais, boots and shoes, woolen goods, steam and agricultural machinery. The chief exports are timber and fish. The educationai system embraces institutions of ail grades, from primary schools upwards, at the top being three universities

— Lavai University, Quebec (Roman
Catholic); Macgill University, Montreai
(Protestant); and Bishop's Coilege, Lennoxylle (Angiican). The affairs of the province are administered by a lieutenantgovernor (appointed by the governor-general) and an executive council composed of 8 members, assisted by a legislative assembly of 65 members and a legislative council of 24 members. The latter hold their appointments for life; the former are elected by the people for five years. The capital is Quebec, but Montreal is the largest town. Population 2,002,712, of whom 1.429,186 are Roman Catholics, mostly of Franch descent.

The red quehracho (Loxopterygium Lorentii, famliy Anacardiaceæ) is very
hard, hut splits easily. The bark and
wood are used in tanning. The white
quebracho (Aspidosperma quebracho) is
used for wood-engraving. The hark contains six alkaloids, and is used therapeutically as a remedy for asthma, being empiowed as a doccation and a tingture

Pop. 30,000. The capital, of the same name, has a population of 6000.

Quedlinburg (kwed'lin-burk), a town queen-of-the-meadows. See Mead-ony, at the foot of the Harz Mountains, by Margaret of Anjou, queen of Henry eminence above the town is an old castie.

VI. and again in 1465 by Elizabeth eminence above the town is an oid castie,

sort, or merely wife of the reigning king, and is in general (unless where expressly exempted by law) upon the same footing with other subjects, being to all intents the king's subject, and not his equal; or queen-regent, regnant, or sovereign, who holds the crown in her own right, and has the same powers, prerogatives, and duties as if she had been a king, and whose husband is a subject; or queen-dowager, widow of the king, who enjoys most of the privileges which belonged to her as the provinces. In Pression Standard Relationship

queen-consort. In Prussia, Sweden, Belgiu., and France there can be no queenregnant. See Salio Law.

Queen-bee, the sovereign of a swarm of bees, the only fullydeveloped and prolific female in the hive, all the other inhabitants being either maies (that is drones) or neuters. The queen alone gives birth to new swarms. See Bec.

Queen Charlotte Islands, a group of 1 s i. ands in the North Pacific Ocean, off the mainland of British Columbia, north of Vaneouver Island, discovered by Cook about 1770, and annexed to the British crown in 1787. The northernmost of the two larger islands is called Graham Island, and the southernmost Moresby Island. The greatest length of the two together is about 160 miles, and the greatest breadth (of the northern island) about

British America on the north, and form-divided into twelve large districts, ing the commencement of a long series namely, Moreton (East and West).

by Margaret of Anjou, queen of Henry VI, and again in 1465 by Elizabeth, queen of Edward IV. The coilege build-

beet-root sugar, wine, leather, chemicals, etc. Pop. (1910) 27,200.

Queen (kwen; Angio-Saxon, owen, a woman), the wife of a king.

In Britain the queen is either queen-consort, or merely wife of the reigning king. that it gets its name. The subsequent foundations of John Michel, Sir Francis Bridgman, and Lady Margaret Hungerford were consolidated into one with that of Eglesfield in 1858.

Queen's Colleges, Ireland, colleges, three in number, situated respectively at Belfust, Cork, and Gaiway, and established in 1849 by an act of parliament passed in 1845. They are at present regulated by the charters of 1863. Students of the Queen's Colleges may obtain degrees in arts, medicine, and law from the Royal University of Ireland (which see).

a county of Ire-Queen's County, a county of Ireland, in the province of Leinster, with an area of 664 sq. miles. The surface is generally flat, but rises in the northwest into the Slieve-Bloom Mountains, whose highest summit is 1734 feet above sea-level. Iron, copper, and manganese are found, but not worked. Limestone abounds, and in a few places marble is obtained. The soil is generally fertile, although bogs are numerous towards the center of the county. The rivers Barrow and Nore both rise in the Sileve-Bloom Mountains. Agriculture is not generally in an improving state, drainage in particular being much wanted. The principal crops are oats, barley, potatoes, turnips, and mangel-wurzel. Pop. 57,417.

70 miles. All the islands are covered queensland (kwenz and), one of with magnificent forests; gold-bearing quartz of rich quality has been found, and monwealth of Australia, comprising the quartz of rich quality has been found, and monwealth of Australia, comprising the copper and iron ores and a fine vein of northeastern part of the continent north anthracite coal also exist. There are of New South Wales and east of South numerous creeks suitable for harbors. Australia and Northern Territory, being the climate is excellent. The islands form part of British Columbia.

Queen Charlotte Sound, a channel in tropies, the most northern part forming the North Pacific Ocean, separating Vanage and a part of 670,500 square niles, and is the North Pacific Ocean, separating van a pennish of 670,500 square niles, and is couver Island from the mainland of an area of 670,500 square niles, and is couver large districts,

Darling Downs, Burnett, Port Curtis, steam saw-mills, sosp-works, agricultural Maranoa, Leichhardt, Kenner /, Mitcheli, impiement works, and distilieries. Edu-warrego, Gregory, Burke, and Cook. catlon is free and secuiar in the public schools, and is under a special department controlled. Towards the west a large controlled by the minister for education. portion of the surface is dry and barren, A Queensiand university is about to but towards the east, and for a long stretch along the coast, boundless plains or downs, admirably adapted for sheep-walks, and ranges of hills, generally well imports are apparel and haberdashery, cottons and intersected by fertile valleys, tons and woolens, flour, iron and steel, to the course and sheet to applies bardware. form the prevaling features of the country. The coast is skirted by numerous Islands, and at some distance is the Great Barrier Reef. The highest mountains are near the coast, the greatest cicvation being about 5400 feet. The principal rivers are the Brisbane, the Burnett, the Ploneer, the Fitzroy, and the Burdekin flowing into the Pacific, and the Flinders and Mitchell into the Gulf of Carpentaria. Some of these streams are navigable for a considerable distance inland. The coast ls Indented with many noble bays, affordlng some capacious natural hariors, which have aiready been hrought into practical use as the outlets for the produce of the adjacent districts. The climate is healthy, and the temperature comparatively equable. The mean temperature at Brisbane is 69°, the extreme range being from 35° to 106°. In the more northern parts the climate is tropical. The rainfail in the interior is scan y and variable; the mean at Brisbane is about 35 Inches. The indigenous animais and plants are similar to those of the rest of Australia. Crocodlles may be mentioned as lnhabiting some of the northern rivers. There are many kinds of valuable timber trees, and a rare thing in Australia, a few good indigenous fruits. Sheep-farming is the chief industry, but agriculture (including sugar-growing), cattie rearing, and mining are also important. The soil and cilmate are well suited for the production of all the ordinary cereals, as well as malze, tobacco, coffee, sugar, cotton, etc. The chlef products are sugar, maize, hagllsh and sweet potatoes, arrow-root, and seml-tropical fruits. Sugar-growing is becoming a very important industry. Gold, tin, lead, and copper are the principal minerals. The gold-fields extend over an area of 15,000 sq. miles. Coal and piumbago are found in large quantities: quantitles; and clnnabar, antimony, and manganese are also among the mineral products. The coal-measures cover about 24,000 sq. mlies; annual product about 600,000 tons. In the north pearl-fishing is actively carried on. The and at the entrance of the harbor, which manufactures are unimportant. The is large and well sheltered. It is the principal manufactories, or works that port for the transmission of American may be classed as such are successful. may be classed as such, are sugar-milis, malls, and a chief emigration station. tons and woolens, flour, Iron and steei, boots and shoes, tea, spirits, hardware, machinery, winc, etc.; and the principal exports, wooi, gold, tin, sugar, preserved meat, cotton, wood, hides and skins. The steal anything of apparent to the Traited staple articles of export to the United Kingdom are wool, tallow, and preserved meats. A duty of 5 per cent. is charged on imports of yarns, woven fabrics, paper, stationery, etc.; and duties at other and even higher rates on other articles. first settlement of Queensland took place In 1825, when the territory was used as a piace of transportation for convicts, who continued to be sent there till 1839. In 1842 the country was opened to free settlers. It was originally a part of New South Walcs, and was organized as a separate colony in 1859. The constitution for the new Australian Commonwealth was ratified by Queensland in 1899. The state has a separate parllament of two Houses, the Legislative Council and the Legislative Assembly, the Counciliors being nominated by the crown, the members of the Assembly elected for three years. Women have voted since 1905. Queensland elects ten members to the Commonwealth House of Representatives. The chlcf towns are Brisbane, Cooktown, Maryborough, Bundnberg. Population in 1914, exclusive o. 15,000 aboriginals, 678,864.

Queen's Metal. See Britannia Metal.

Queen's-pigeon, a magnificent ground-pigeon inhabiting the islands of the Indlan Ocean, named after Queen Victoria. It is one of two species constituting the genus Gourg (G. Victoriæ), and is the largest and most beautiful species of the order. Queenstown (kwenz'town), former-ly Cove of Cork, a maritime town of Ireiand, and an important navai station, 9 miles southeast of Cork, on the south side of Great Island, which rises abruptly out of Cork harbor to a considerable elevation. The streets rise above one another and present a very picturesque appearance. Queenstown is defended by fortifications on Splke Island

1

has little trade and no manufactures, being aimost solely dependent on the military and navai establishments in its vicin-

ity, and on the numerous visitors attracted by the singular beauty of the place, and hy its delightfui climate. Pop. 7909. Queen's-yellow, the yellow subsulphate of mercury;

used as a pigment.

Quelpart (kwei'pärt), a rock-bound island, 60 miles iong hy 17 broad, off the south coast of Corea, of which it is a penal settlement. The soil is fertile, the climate temperate, and there is a large population. The interior is mountainous, and one summit, the voicanic Mount Auckland, is 6500 feet high.

Quentin, St. (san kan-tan), an ancient town of France, dep. of Aisne, on a height above the Somme. 87 miles N.E. of Paris, which from its position on the frontlers between France and the Low Countries figures much in history. The French were defeated here in 1557 by the Spaniards. In 1871, in the Franco-Prussian war the French were driven out of the town after a sanguinary struggle. St. Quentin was shattered in the European war, 1914-18, many of its Gothic buildings, dating back to the 13th and 15th centuries, being destroyed. It was taken by the Germans in August, 1914, and became the center of the strongly fortified Hindenburg line. It was recaptured from the Germans on October 2, 1918, in the great Allied drive that cuiminated in the armistice of November 11. The staple manufactures of St. Quentin are cotton and woolen textiles, machinery and sugar. Pop. 55,571.

Querard (kā-rär), Joseph Marie, a
French bibliographer, born at Rennes in 1791: died at Paris in 1865. He was author of La France Littéraire, in which he gives a complete bibliography of France for the 18th and the beginning of the 19th century; La Littérature Francaise Contemporaine 1827-49; and other blbilographical works.

Quercitron (kwer'si-trun), the internal bark of the Quercus tinctoria, a species of oak used in manufactures for tanning leather and dyeing yellow.

Quercus. See Oak.

Querétaro (kā-rā'tā-rō), a city of Mexico, capital of the state of the same name, on a piateau C365 feet above sea-ievel, 110 miles northwest of Mexico City. Among the more noteworthy public edifices are the principal church, a magnificent and richly-decorated structure, and an aqueduct about 2 miles long, with arches 90 feet high, which hy communicating with a tunnei in the opposite hills, hrlngs a copious supply of water from a distance of 6 miles. Maximilian of Austria, made emperor of Mexico by Napoleon III, was made prisoner and executed here in 1867. Pop. 33,152.—The State of Querétaro has an area of 3207 sq. miles, and forms part of the central plateau of the Cordillera, presenting a very rugged surface, traversed hy mountain spurs and iofty heights. Grain and cattle form the chief wealth of the state. The minerals are comparatively unimportant. Pop. 232,-389.

Querimba Islands (kā-rēm'bā), a chain of low coralline islands extending along the east coast of Africa, and comprised in the Portuguese territory of Mozambique. There is a town and fort on the chief of

them, Iho.

Quern (kwern), a hand-miii fer grinding corn, such as is or has been in general use among various primitive peoples. The simpiest and most primitive form of the quern is that in which a large stone with a cavity in the upper surface is used to contain the corn, which is pounded rather than ground with a small stone. The most usual form consists of two circular flat stones, the upper one pierced in the center, and revoiving on a wooden or metai pin inserted in the lower. In using the quern the grain is dropped with one hand into the central opening, while with the other the upper stone is revolved by means of a stick inserted in a small opening near the edge. Hand-mills of this description are used in parts of Scotiand and Ireiand to the present day.

Quesnay (kā-nā), François, a French physician of some eminence, hut chiefly noted as a writer on political economy, born in 1694, died in 1774. He was appointed surgeon-in-ordinary to the king, and subsequently, having taken the degree of M.D., physician to Madame de

Quesnel (kā-nei), PASQUIER (PAS-CHASIUS), a theologian and moralist, born at Paris in 1634; died at Amsterdam in 1719. He became a member of the order of the Fathers of the Oratory in 1657, at that time a great nursery of Jansenism, and wrote a number of devotional works, one of the most important of which was Réflexions Mo-rales sur le Nouveau Testament, consisting of thoughts on some of the most heautifui maxims of the evangelists. This work brought him under suspicion of the church on account of its Jansenistic tendencies, and in 1685 he had to quit French territory aitogether. Going to Brusseis, he there applied himself to the continuation of his work on the New Testament, which was published entire in 1693-94. In this some leading points in Roman Catholicism were freely questioned. Bossuet and Noailies, archbishop of Paris, rather approved of the book; hut the Jesuits obtained from Pope Clement XI a buil condemning 101 of Quesnei's propositions as heretical. This huil, known as the Unigenitus (promulgated in 1713), not only stirred up the Jansenists (see Jansenists), hut awoke hitter dissensions in the bosom of the Gallican Church. Meantime Quesnei had been compelied to seek refuge (1703) in Holland, where he resided for the rest of his life.

Quetelet (kāt-iā), LAMBERT ADOLPHE ACQUES, a Belgian statistician and astrouomer, was born at Ghent in 1796, and studied at the iyceum of his native town, where, in 1814, he became professor of mathematics. In 1819 he was appointed to the same chair in the Brussels Atheuæum. In 1828 he became iecturer in the Museum of Science and Literature, holding the post tili 1834, when the institution was merged in the newly-established university. Quetelet superintended the erection of the Royal Observatory, and became its first director (1828). A member of the Belgian Royai Academy, he became its perpetual secretary in 1834. Queteiet's writings on statistics and kindred subjects are very numerous. He also published many pa-

and on the road from Candahar through the Pishin Valley to Shlkarpur on the sician to the king. He was the author the Pishin Valley to Shlkarpur on the of various surgical and medical works; of Indus. It thus commands the southern several articles in the *Encyclopédie*, in route from India to Afghanistan. By which he expounds his economical views; treaty with the Khan of Keiat (1877). which he expounds his economical views; treaty with the Khan of Keiat (1877), and tracts on politics, including a treatise on the *Physiocratic System* (1768). In whose territory it is, Quetta was furnished with a British garrison and Quesnel (kā-nei), Pasquier (Pastrongiy fortified. It contains extensive magazines of war material, and was in 1885 counected with the Indus hy a line of railway. Quetta lies 5500 feet above the sea-level, and is surrounded hy mountains from five to slx thousand feet high.

Quetzalcoatl (kāt-zai-kō-wat'i), the god of the air of the god of the air of the ancient Mexicans, who presided over commerce and the useful arts, and was said by the Toltecs to have predicted the coming of the Spaniards to Mexico. This tradition aided the Spaniards in their invasion. A heneficent deity, he was finally superseded by the terrible Aztec God of

War. Quevedo y Villegas (ke-vā'dō ē vil-Francisco de, a Spanish poet and prose writer, was born at Madrid in 1580, died in 1645. In consequence of a duei, in which his adversary feil, he fled to Itaiy, where his services gained him the confidence and friendship of the Duke of Ossuna, viceroy of Napies. After having visited Germany and France Quevedo returned to Spain, and on account of his connection with the duke, then in dis-grace, he was arrested and confined to his estate, La Torre de Juan, for three years (1620-23). After his liberation he lived for some years in retirement, occupying himself in writing political satires, bur-iesque poems, and pamphiets, which ob-tained an extraordinary degree of success. A second iong imprisonment for his satirlcai writings completely shattered his health, and he died soon after his libera-tion. His humorous productions are dis-tingulshed for piayfulness, wit, and in-vention. His prose works are mostly effusions of humor and satire. His Vis-ions ('Suefios') have heen translated into most European ianguages; his Vide del Gran Tacaño is a comic romance of the sort cailed picaresque. He also trans-lated the Enchiridion of Epictetus into Spanish.

(kë'zal), a most beautiful Cen-Quezal trai American hird of the Tro-Academy, he became its perpetual secretary in 1834. Queteiet's writings on statistics and kindred subjects are very numerous. He also published many papers on meteorology, astronomy, terrestrial magnetism, etc. He died in 1874.

Quetta (kwet'tä), a town of Beluchistan, strategically important as feathers (the color of which is black and

white), but are the upper tail coverts of the bird. The back, head (including the curious rounded and compressed crest), throat, and coest are of the same rich hue, the lower parts heing of a brilliant scarlet. The female iacks these long

Quezal (Trogon resplendens).

feathers, and is otherwise much plainer. The food of the quezai consists chiefly of fruits. It lives in forests of tail trees. There are several ailied species of hirds, but none with the distinctive feature of the quezal.

Quezaltenango (kā - sāl'tā - nān'gō), a town of Central America, in Guatemala, capitai of a department of the same name, with woolen manufactures and a considerable trade.

It was founded by Aivarado in 1524.
Pop. (1905) about 31,000.

Quibdo (kēh-dō'), a town in the state of Cauca, of the Republic of Coiomhia, South America, on the Alvalo. Pop. 6856.

Quiberon (kēh-rōṇ), a peninsula on the western coast of France, in the department of Morhihan, containing a market-town of the same name and several hamlets. The place owes its celebrity to the defeat of a smail army of Chouans and emigres which took place here in 1795.

Quibor (ke'bor), a town of Venezuela, in the State of Lara, division Barquisimeto. Pop. 7727.

Quichua (ke chu-a), the name of a native race of South America, inhabiting Peru, parts of Ecuador, gradually huried Quietism in oblivion.

Bolivia, etc. With the Aymaras the Quichuas composed the larger portion of the population of the empire of the Incas.

gradually huried Quietism in oblivion.

Quilimane (kii-i-mā'ne), a town in East Africa, in the Portuguese territory of Mozambique, unhealth-

The Quichua language, which was formerly the state language of the Incas, is still the chief speech of Peru, of a large portion of Bolivia, of the part of Ecuador bordering upon Peru, and of the northern section of the Argentine Republic. It is one of the most beautiful and at the same time comprehensive tongues of America.

Quick Grass, Quitch Grass, or See Couch

Quick Hedge, Quickset Hedge, an English term for a live hedge of any kind; but in a stricter sense the term is restricted to one planted with hawthorn.

See Lime. Quicklime.

Quicksand (kwik'sand), a large mass of loose or moving sand mixed with water formed on many seacoasts, and at the mouths of rivers, or at marshy inland places, dangerous to vesseis or to persons who trust themselves to it and find it unahie to support their

See Mercury. Quicksilver.

Quietism (kwi'et izm), a religious movement in the Roman catnolic Church at the close of the 17th and heginning of the 18th centuries, a protest against formality and worldliness, and largely of a mystic character. It owed its origin to such works as the Spiritual Guide, published at Rome (1675) by a Spanish priest named Michael Molinos, in which the devout were taught, hy resigning themselves to a state of perfect mental inactivity, to hring the soul into direct and immediate Catholic Church at the close of the 17th hring the soul into direct and immediate union with the Godhead, and receive the infused heavenly light, which was to accompany this state of inactive contemplation. The Spiritual Guide produced a number of similar works in Germany and France. The most noted promoter of Quietism in France was the celebrated Madama Guyan (which sae) who related Madame Guyon (which see), who gained adherents enough to excite the attention of the ciergy. Fénelon became the advocate of Madame Guyon and her writings in his Explication des Maximes des Saints sur la Vie intérieure (1697). Bossuet ohtained (1699) a papal brief which condemned twenty-three positions from Féneion's book as erroneous; but the humility with which the latter suhmitted deprived his enemies of the fruits of their victory; and it was the change in the spirit of the times and not violence that

rtulthily situated about 15 miles above the mouth of a river of the same name (the northern branch of the Zambesl). ivory, wax, etc., and coal of good quality is reported to be plentiful. Pop. about

English novelist and essayist (1863born in Cornwall. He was on the staff of the Speaker till 1899. In 1897 he was commissioned to finish R. L. Stevenson's noved St. Ives. He was knighted in 1910. Among his works are Dead Man's Rock, Among his works are Deud Man's Rock, The Splendid Spur, Green Bays (verses and parodies), From a Cornish Window, Nicky Nan, Reservist, On the Art of Writing, The Ship of Stars, The White Wolf, Poison Island, True Tilda, Wandering Heath, Foe-Farrell, etc. He wrote under the pen-name of 'Q.'

Quillota (kil-yō'tà), a town in Chile, in the province of Aconca-gua, 23 miles northeast of Valparaiso. The copper mines in the vicinity are regarded as the richest in Chile. The town

has suffered severely on different occa-slons from earthquakes. Pop. 9876. Quills (kwilz), the large wing-feath-ers of birds, and in a narrower sense the shafts or harrels of these. Quills are still in some localities used for making pens, although they have been generally superseded by steel and other metals for this purpose. The best quills for pens are those of the swan, but goosequills are commonly used. Crow-quills are used for fine writing and pen-and-lnk drawing. (See Pen.) Quills are also used for making hrushes, artificial flowers, imitative horse-hair work, and a numher of other articles, and the feather ends have even been woven into fine tissues.

Quiloa (kel'o-a), or Kilwa, a sea-port of East Africa on the Zanzlbar coast. Pop. 6000.

Quilon (kwe-lon'), a coast town in Madras, India, in the state of Travancore, 35 miles northwest of Trivandrum, the capital, with a considerable export trade. It has a barrack for European troops, a hospital, and an Episcopal church. Pop. 15.691.

Quilting (kwilt'ing), a method of sewing two pieces of slik,

linen, or stuff on each other, with wool or cotton between them, by working them all over in the form of checker or dia-

mond work, or in flowers. Quimper (kan-pār), a town and port in France, capital of the department of Finistère, 4 miles southeast of Brest, at the head of the estuary of the Odet, an old town partly surrounded middle.

with walls flanked by towers. The principal edifices are a fine Gothic cathedral (1239-1493); the ruins of a Cordelier church and cloister; the college, the pre-fecture, military hospitai, etc. The manls reported to be plentiful. Pop. about ufactures are earthenware, leather, cord-age, etc. The sardine fishery forms an important occupation. Pop. (1910) 21,051.

Quiller-Couch (kwil'er köch), SIR portant occupation. Pop. (1910) 21,051.

ARTHUR THOMAS, an Quimperlé (kan-par-la), a town of France, dep. Finistère, beautifully sltuated among hills at the confluence of the Isole and Eilé. Pop. 6093.

Quin (kwin), JAMES, an eminent actor, of Irish parentage, born at London in 1693; died at Bath in 1706. He made his first appearance on the stage at Dublin ln 1714; shortly afterwards he obtained an engagement in London, and gradually acquired celebrity as a tragic actor as well as in characters of comic and sarcastic humor, like Falstaff, Volpone, etc. He retained his preëminence until the appearance of Garrick in 1741. last performance was Falstaff (1753), in which character he is supposed never to have been excelled. He spent his latter years at Bath, where his fund of anecdote and pointed wit made him much sought after.

Quince (kwins), the fruit of the (ydonia vulgāris, nat. order Rosaceæ. The quince tree, which is supposed to be a native of Western Asia, is now cultivated throughout Europe, and in many parts of the United States, for its handsome golden yellow fruit, which, though hard and austere when plucked

Quince (Cydonia vulgāris).

from the tree, becomes excellent when boiled and eaten with sugar, or preserved in slrup, or made into marmaiade. Quincey, cey. THOMAS DE. See De Quin-

Quincunx (kwln'kungks), an arrangement of five objects, especially trees, in a square, one at each corner of the square and one in the also sash, blind, stove, furniture, and various other factories. A railroad bridge crosses the river at this point. Pop. 36,587. (2) A city of Norfolk Co., Massachusetts, on Quincy Bay, about 8 miles south from Boston. Its most important and lucrative industry is the working of the quarries, which furnish the weilknown Quincy granite. The fisheries also are important, and a considerable number are important, and a considerable number of vessels are fitted out in the building yards. Here John Adams, and his son, John Quincy Adams, both Presidents of the United States, were born. Pop. 32,642.

Josiah, an American writer, born at Boston in 1772; died Quincy, in 1864. Educated for the law, be made politics his profession, and was a member of Congress from 1804 to 1812. Then he was elected a member of the senate of the legislature of Massachusetts, a position which he held till 1821, in which year he held the office of Speaker of the House. From 1823 to 1828 he was mayor of From 1823 to 1828 he was mayor of Boston and effected various important reforms. From 1829 to 1845 he was president of Harvard College. His principal works are History of Harvard University; Municipal History of the Town and City of Boston During Two Centuries; and Life of John Quincy Adams.

Quinct (kē-nā), Eddar, a French philosopher, poet, historian, and politiclan, born in 1803; died in 1875. He first attracted attention by a translation of Herder's Philosophie der Ge-

tion of Herder's Philosophie der Geschichte in 1825. In 1828 he accompanied a scientific commission to the Morea; and in 1839 he became professor of foreign literature at Lyons, a position he changed in 1841 for a similar chair in the College of France. In consequence of the strongly democratic tone of the lectures delivered there from 1843 to 1846 his class-room was in the latter year closed by the government, and was not reopened till after the revolution of 1848. After the election of Napoleon as president Quinet was expelled from France, and refusing all Napoleon's amnesties, his exile lasted till after the revo-lution of 1870. His works, which number about thirty volumes, include poems, histories, religious mystical dramas, books, etc.

Quincy (kwin'si), the name of two cities and several villages in the United States. (1) A city, capital of Adams county, Illinois, on the left bank of the Mississippi, 160 miles northwest of St. Louls. It is an important railway center; has an extensive river traffic, and various manufacturing establishments, including extensive beer works, also sash, blind, stove, furniture, and various other factories. A railroad bridge crosses the river at this point. Pop. 36,587. (2) A city of Norfolk Co., Mastraordinary value of quinine in medicine as a febrifuge and tonic has given rise to a iarge trade in Peruvian bark, and has caused the cincbona tree to be extensively planted in India and elsewhere. Quinine in small doses is stomachic, in large doses it causes extreme disturbance of the nerves, headache, deafness, blindness, paraiysis, but seidom death.

Quinoa (kwi-nô'a), a South American plant (Chenopodium Qui-noa), of which there are two cultivated varieties, one yielding white seeds, and sometimes called petty-rice, the other red. The white seeds are extensively used in Chile and Peru as an article of food in the form of porridge, cakes, etc. The seeds of the other variety, red quinos, are used medicinally as an application for sores and bruises. for sores and bruises.

(kwin - kwa - jes'i-Quinquagesima ma), name of the Sunday before Lent, because fifty days

before Easter.

Quinsy (kwin'zi), the common name for cynanche tonsillaris or tonsillitis, inflammation of the tonsils. The inflammation is generally ushered in by a feeling of uneaslness in the part. The voice is thick, and there is often swelling of the glands of the neck, with loss of appetite, thirst, headache, and a considerable degree of general fever. The tonsils, uvula, and even the soft palate are swollen and vascular, and the tongue is foul and furred. In severe cases respiration is considerably impeded, and swallowing is always difficult and painful. The inflammation of the throat may terminate either in resolution or suppuration. The most frequent cause of quinsy is cold, produced by sudden changes of temperature. But in a great many cases it will be found that the patient has been predisposed to the disease. owing to a bad state of the digestive organs. The best treatment to ward off an attack is to administer a dose of some strong purgative saline medicine. Bland soothing drinks should be given during the course of the disease, and sucking small pieces of ice usually gives much to be tilted at with a lance. It was constructed in various ways; a common form in England consisted of an upright post, on the top of which was a horizontal bar turning on a pivot; to one end of this a

Ancient Quintain at Offham, Kent.

sand-bag was attached, on the other s broad board; and It was a trial of skill to tilt at the broad end with a lance, and pass on before the bag of sand could whirl round and strike the tilter on the back.

Quintal (kwin'tal), a weight of 100 lbs. or thereby, used in different countries. The old French quintal round and strike the tilter on the back. was equal to 100 livres, or nearly 108 lbs. avoirdupois. The quintal métrique, or modern quintal, is 100 kilogrammes, or 220 lbs. avoirdupols.

Quintana (kin-tä'na), NUEL Jose, a Spanish p., born at Madrid in 1772; died in 1857. He studied at Cordova and Salamanca, bestudied at Cordova and Salamanca, became an advocate, and filled various offices connected with the government at different times. Almost all the manifestoes in the war against the French were composed by him; he also wrote a series of patriotic poems, entitled Odas a España Libre. He was eventually appointed director-general of education, and became a senator. His poetical critical became a senator. His poetical, critical and historical works are held in high estimation.

Quintet (kwin-tet'; Italian, quin-tetto), a vocal or instrumental composition ln five parts, in which each part is obilgato, and performed by

a single voice or instrument.

Quintilian (kwin-tii'yan), MARCUS
FABIUS QUINTILIANUS, 27-U-5

Quintain (kwin'tan), a figure or a Roman rhetoriclan, born at Calagurris other object formerly set up (Caiahorra) in Spain, probably between (Caiahorra) in Spain, probably between 85 and 40 A.D.; died about 118. He began to practice as an advocate at Rome about A.D. 69, and subsequently became a teacher of rhetoric. Some of the most eminent Romans were his pupils, and the Emperor Domitian bestowed on him the consular dignity. His work, De Institutions Oratoric contains stitutione Oratoria, contains a system of rhetoric in twelve books, and includes some important opinions of Greek and Roman authors.

Quintus Cal'aber, or SMYRNÆ'US, Greek poet, author of a sort of continuation of the Iliad in fourteen books, a rather duli imitation of Homer. He probably flour-ished at Smyrna in the 4th century A.D. See Curtius. Quintus Curtius.

Quipo, Quipu (kwlp'o, kwip'o), a cord about 2 feet ln length, tlghtly spun from variously colored threads, and to which a number of smaller threads were attached in the form of a fringe: used among the ancient Peruvians and Mexicans for recording events, etc. The fringe-like threads were also of different colors. and were knotted. The colors denoted sensible objects, as white for sliver, yellow for gold, and the like; and sometimes also about a state of the sliver. tlmes also abstract ideas, as white for peace, red for war. They constituted a rude register of certain important facts or events, as of births, deaths, and mar-rlages, the number of the population fit to bear arms, the quantity of stores ln

the government magazines, etc.

Quire (kwir; French, cahier), twentyfour sheets of paper. Twenty quires make a ream.

Quirinal (kwlrl-nal), one of the seven hills of ancient Rome. There is a palace here, begun in 1574, and formerly a summer residence of the popes, but since 1871 the residence of the king of Italy. See Rome.

Quirinus (kwl-ri'nus), among the Romans, a surname of Romans, a surname of Romans, a surname of Romans, a surname of Romans, and the surname of the surname of

Romulus after he had been ralsed to the rank of a divinity. Hence Quirinalia, a festival in honor of Romulus, held an nually on the 13th day before the Kalends of March, that is, the 17th of February.

Quirites (kwi-rī'tēz), a designation of the cltizens of ancient Rome as in their civil capacity. The name of Quirites belonged to them in addition that of Romani, the latter designation contribute to the interview of the contribute to the contrib ignation applying to them in their poiiticai and mliltary capacity.

ture, a molding whose sharp and sudden return from its extreme projection to the re-entrant angle seems rather to partake of a straight line on the profile than of the curve.

Quit-claim, in law, signifies a reiease of any action that one person has against another. It signifies also a quitting of a claim or title to lands, etc.

Quito (kë'tō), the capital of Ecuador, In a ravine on the east side of the volcano of Pichincha, 9348 feet above the sea, a little to the south of the equator. Its streets, with exception of four which meet in the large central square, are narrow, uneven, hadly paved, and extremely dirty. The more important public huildings are the cathedral, several other churches and convents; the town-house, court-house, president's palace, the university, the episcopal palace, orphan asylum and hospital. The manufactures consist chiefly of woolen and cotton goods. From the want of good roads and railways trade is much hampered. Quito was originally the capital of a native kingdom of the same name, hut the modern town was founded by the Spaniards in 1534. It has repeatedly suffered from earthquakes. Pop. (1915) est. at 70,000, largely consisting of half-hreeds and Indians.

Quit-rent, in English iaw, a small rent generally payable by the tenants of manors, whereby the tenant goes gult and free from all other services. Quit-rents still existing are redeemable by law.

Quittah (kwit'ta), a town on the coast of W. Africa, in the British colony of the Gold Coast. Pop. 5000.

Quoin (koin), in artlllery, a wedge inserted under the hreach of a gun, for raising or depressing the muzsie. In architecture, one of the stones forming the solid corner of a building.

Quoits (kwoits), a game played with a flattish ring of iron, generally from \$\frac{1}{2}\$ to \$\frac{1}{2}\$ inches in external diameter, and between 1 and 2 inches in breadth. It is convex on the under side, so that the outer edge curves downwards, and is sharp clough to cut into soft ground. The game ': played in the foilowing manner: — Two pins, called hobs, are driven into the ground from 18 to 24 yards apart; and the players, who are divided into two sides, stand beside one hob, and in regular succession throw their quoits (of which each player has two) as near the other hoh as they can, glving the quoit an upward and forward pltch with the hand and arm, and at same time communicating to it a whiring motion so as to make it cut into the ground. The side which has the quoit nearest the hob counts a point towards game, if the quoit rests on the hoh it counts two, if thrown so as to 'ring' the hoh, it counts three.

Quorra (kwor'ra), a name given to the lower portion of the Niger (which see).

Quorum (kwö'rum), a term used in commissions, of which the origin is the Latin expression, quorum unum A. B. esse volumus ('of whom we will that A. B. be one'), signifying originally certain individuals, without whom the others could not proceed in the husiness. In legislative and similar assemblies a quorum is such a number of members as is competent to transact husiness. Quotidian Fever. See Ague.

Quo Warranto, the name of a writ summoning a person or corporation to show hy what right a particular franchise or office is claimed. In the rights of Charies II and James II this writ was used oppressively to deprive cities and boroughs of their liberties.

lish alphahet, classed as a liquid and semi-vowel. In the pronunciation of Gando, on the left hank of the Niger, Englishmen generally it represents two somewhat different sounds. The one is heard at the beginning of words and in slaves and ivory, and manufactures of syllahles, and when it is preceded by a consonant; the other less decidedly conconsonant; the other, less decidedly consonantal, is heard at the end of words and syllables, and when it is followed by a consonant. In the pronunciation of many English speakers, r, followed hy a rectangular recess, channel, or groove consonant at the end of a syliable, is cut along the edge of a board or the like scarcely heard as a separate sound, having merely the effect of lengthening the on the edge of another board, etc., reing merely the effect of lengthening the preceding vowel; when it is itself final, as in bear, door, their, etc., lt becomes a vowel rather than a consonant.—The three Rs, a humorous and familiar des-

three Rs, a humorous and familiar deslgnation for Reading, Writing, and
Arithmetic. It originated with Sir William Curtis, who, on heing asked to give
a toast said, 'I will give you the three
Rs, Riting, Reading, and Rithmetic.'
Ra (more properly Rê), the name of
the god of the sun among the ancient Egyptians. He is represented, like
Horus, with the bead of a hawk, and
bearing the disk of the sun on his head.
Tum, Harmachis, and other gods are
mere impersonations of the various attributes of Ra.

Raab (rab), or Györ (dyeur), a town in Hungary, at the confluence of the Raah and Rahnitz with the Danuhe, 67 miles w.n.w. of Buda. It is the see of a Roman Catholic hishop, and has a nine cathedral, an episcopal palace, diocesan seminary, etc. Its manufactures are woolen cloth, cutlery, and tobacco. Pop. 27,788.

Rabat (rä-bāt'), a maritime town in Morocco, in the province of Fez, on the Atlantic, at the mouth of the Buregreb, is surrounded with a wall flanked by numerous towers, and has a

Rabbet (rab'et), in carpentry a sloping cut made on the edge of a board so that it may join by lapping with another hoard similarly cut; also, a

quired to fit into it.

Rabbi (rah'i), a title of honor among the Hebrews, corresponding nearly to the English master. There are two other forms of the title, rabboni and rabbani, the former of which is found in the New Testament. It is supposed that this title first came into use at the period immediately preceding the hirth of Christ. In the time of our Lord it was applied generally to all religious teachers, and hence sometimes to Christ himself. the term rahhi or rahhin is applied to regularly appointed teachers of Talmudic Judaism.

Rabbinic Hebrew (ra-bin'ik) Hebrew in which the Jewish scholars and theologians of the middle ages composed their works. Grammatically it differs hut little from the ancient Hehrew, but in many cases new meanings are attached to Hebrew words already in use, in other cases new derivatives are formed from old Hehrew roots, and many words are borrowed from the Arabic. The rab-binical literature is rich and weil repays study.

Rabbit (rab'it; Lepus cuniculus), a cluded in the family Leporides, to which citadel and batteries. It has some manufactures (carpets, woolens, cottons, and
leather) and considerable trade in wool
and corn. Pop. about 35,000. On the
other side of the river mouth is the town
of Sallee.

The rabbit's fur in its
native state is of a nearly uniform brown
color, while under domestication the
color may become pure white, pare black, mestication. The rabbit is a native of ail temperate climates, and in its wild state congregates in 'warrens' in sandy pastures and on bill-slopes. Rabbits breed six or seven times a year, beginning at the age of six months, and producing from five to seven or eight at a birth.

They are so proific that they may easily become a pest, as in Australia, if not kept in check by beasts and hirds of prey.

They feed on tender grass and herbage, and sometimes do great damage to young trees by stripping them of their bark. They grow exceedingly tame under do-mestication, and sometimes exhibit considerable intelligence. Rabbits are sub-ject to certain diseases, such as rot — induced prohably by damp and wet parasitic worms, and a kind of madness. The skin of the rabhit is of considerable value; cleared of bair, it is used with other skins to make glue and size. The fur is employed in the manufacture of bats, and to imitate other and more valu-

able furs, as ermine, etc.

Rabelais (rab-ia), François, a humo.ous and satiricai French writer, born in or before 1495, the son of an apotbecary of Chlnon, in Touraine. He entered the Franciscan order at Fontenay-ie-Comte, in Poitou, and received the priesthood. His addiction to profane studies appears to have given offense to bis monastic brethren, and through the influence of friends be obtained the permission of Clement VII to enter the Benedictine, order (about 1524). He then exchanged the seclusion of the monastery for the comparative freedom of the residence of the Bishop of Maillezais, who made him his secreof Maillezais, who made him his secretary and companion. In the course of a few years we find him at Montpellier, where he studied medicine, having by this time become a secular priest; he was admitted a bachelor in 1530, and for some time successfully practiced and taught. In 1532 he went to Lyons, where he published a work of Hippocrates and one of Galen, and the first germ of his Gargantua (1532 or 1533). The first part of his Pantagruel appeared under the anagram of Alcofribas Nazier. under the anagram of Alcofribas Nasier, within a year or so after the former work, and its success was such that it passed through three editions in one year. Soon after its publication Rabelais accompanied Jean du Beliay on an embassy to Rome. On his return to France he went first to Paris; but not long after he is found once more at Lyons,

piebald, gray, and other hues. The tex- gantus and Pantagruel together form a ture of the fur also changes under do- single work professing to narrate the saysingle work professing to narrate the sayings and doings of the giant Gargantua and bis son Pantagruel. In 1536 Rabelais was again at Rome, and on this occasion he obtained from the pope absolution for the violation of his monastic vows, and permission to practice medicine and to hold benefices. Shortly afterwards be was granted a prebend in the abbey of Saint Maur-des-Fossés by Jean du Bellay. In 1537 be took bis degree of Doctor of Medicine at Montpellier, and lectured on Hippocrates. The next few years were as unsettled accepted bis abeliance. regards bis abode as any previous period of Rabelais' iffe, and it is difficult to foilow him. Probably he was in Paris in 1546, when the third book of bis Garganius and Pantagruel appeared, bur during most of 1546 and part of 1547 he was physician to the town of Metz. In the third book all the great moral and social questions of the day were discussed with the gayety and irony peculiar to Rabeiais, and with a freedom that roused the suspicion of the clergy, who endeavored to bave it suppressed. The favor of the king secured its publication, but it was with more difficulty that a light a chtained for the fourth book license was obtained for the fourth book from Henry II, who had succeeded Francis in 1547. This book did not appear complete till 1552. About 1550 Rabeiais was appointed to the cure of Meudon, but he resigned the position in 1552, and died a year later, according to most authorities. He left the whole of the fifth book of his remarkable romance in manuscript. By many Rabelais has been set down as a gross buffoon, and there is much in his writings to justify the harsb judgment, though we must re-member what was the taste of his times. As regards the purpose of his work, many have looked upon Rabelais as a serious reformer of ahuses, religious, moral, and social, assuming an extravagant masquerade for the purpose of protecting himself from the possible consequences of his assaults on established institutions. The earlier books were translated into English by Sir Thomas Urquhart (1653), who found a continuator in Motteux. There are also translations into German and Italian.

Rabies (rā'bi-ēz), the name given to a contagious disease with which dogs, borses, cats, welves, and other animals are attacked, and to which, indeed, all animals are said to he liahle. A bite from some rabid animals induces after he is found once more at Lyons, hydropbobia in man. a French tragédienne, of Jewish extraction, born in 1821; died in 1858. For Royal in 1664, as was also his next Alexatime she gained her living by singing andre, in 1665. His first masterpiece was in the streets of Lyons, but being taken andromaque, which on its performance notice of she was enabled to receive a at the Hôtel de Bourgogne, in 1667, proposed introduction at the Consequence of instruction at the C course of instruction at the Conservatoire, duced a profound impression. The imand made her début in 1837 on the stage mediate successor of Andromaque was of the Gymnase at Paris. She attracted Les Plaideurs (1668), a witty and deno special attention, however, until the lightful imitation of the Wasps of Arisno special attention, however, until the following year, when, transferred to the Théâtre Français, she took the Parisian Britannicus (1669); Bérénice (1670); public by storm by the admirable manner in which she impersonated the classic creations of Racine and Corneille. Her last plece that Racine produced exreputation was speedily established as the first tragic actress of her day. In 1841 tained a seat in the French Academy, she visited England, and was received His withdrawal from the theater in 1677 with the greatest enthusiasm. Her renown continued to increase, and for many years she reigned supreme at the Théâtre Français, making also tours to the provincial towns of France, to Pelgium, etc. vincial towns of France, to Relgium, etc. appointed, along with Boileau, historio-Later she visited America, but when grapher to the king, whom he accom-there caught a severe cold, which termi-panied in his campaign to Flanders, nated in consumption. She was of a After a silence of twelve years

Racine, at the solicitation of Madame de Maintenon, wrote two other pieces—
Esther (1689) and Athalis (1691). His death is said to have been hastened by grief at iosing the favor of the king. As a dramatist Racine is usually considered the model of the French classical tragic drama, and in estimating his powers in this field it is necessary to take into account the stiff conventional restraints to which that drama is subjected. What he achieved within these limits is extraordinary. Besides his dramas Racine is the author of epigrams, odes, hymns, etc.

Racing (ras'ing). See Horse-racing.

Rack (rak), an instrument for the judicial torture of criminais and suspected persons. It was a large open wooden frame within which the prisoner was laid on his back upon the floor, with his wrists and ankles attached by cords to two rollers at the end of the frame. These rollers were moved in opposite directions by levers till the body rose to a level with the frame; questlons were then put, and if the answers were not deemed satisfactory the sufferer was gradually stretched till the bones started from their sockets. It was formerly much used by clvii authorities in the cases of traitors and conspirators; and by the members of the Inquisition, for extorting a recantation from imputed heretical opinions. The rack was introduced into England in the reign of Henry VI, and although declared by competent judges to he contrary to English law, there are many instances of its use as late as the time of Charles I.

Rack, in machinery, a straight or slightly curved metallic har, with teeth on one of its edges, adapted to work into the teeth of a wheel or pinlon,

Rack and Pinton.

for the purpose of converting a circular into a rectilinear motion, or vice versa.

Rackets, or Racquers (rak'ets), a game played in a prepared court, open or close, with a small hard ball and a bat like that used for playing tennis. The close or roofed court is now generally preferred for playing in. It is an ohiong rectangular area, 80 feet long and 40 broad when of full dimensions, and having high walls. The floor is divided into two chief areas of unequal size by a line, called the short line, drawn

across it at two-fifths of the length of the court from the back wall, the smaller area being again divided into two equal parts by a line at right angles to this, and two smail areas being marked off in the other space next the short line, cailed service spaces. Two horizontal lines are also drawn across the front wall, one 2 feet 2 Inches above the floor, below which if a bail strike it is out of play, the other, the out line, 7 feet 9 inches above the floor. The game may be played with either one or two persons on each side. It is decided by lot which side goes ln first, and the first player assumes which side of the court be pienses (ususily the right), while the other stands in the op-posite corner. The first player then be-gins to serve, which consists in striking the bail with the bat so as to make it strike the front waii above the cut line, and then rebound into the opposite corner. If the hall is properly served the second player must strike it hefore it has made a second bound, so that it strikes the front wali above the lower line; but In returning the hall in this manner the player may if he likes first make it strike either of the side wais. The player may also return it before it touches the floor. The first player then returns the hall in the same way, and this goes on until elther player fails. If it is the first player who falls, it is then the turn of the second player to serve. If it is the second player, the first scores one (an ace), and continues to serve, but goes to the opposite side of

the court. In general fifteen is game.

Racoon, or Raccoon (ra-kör'), an anivorous mammal, the common raccoon being the *Procyon lotor*. It is about the size of a small fox, and its graylsh-brown fur is deemed valuable, being principally used in the manufacture of hats. This animal lodges in hollow trees, feeds occasionally on vegetables, and its flesh is

Common Raccoon (Procyon lotor).

palatable food. It inhabits North America from Canada to the tropics. The black-footed raccoon of Texas and California is P. Hermandesii. The agouara or crab-eating raccoon (P. cancrivorus) is found further south on the American continent than the above species, and is

Aithough denominated generally larger. Although denominated crab-eating it does not appear to be any more addicted to this dietary than the

Radautz (ra'douts), a town of Austria, in the duchy of Bukowina, with a government stud of horses

and mannfactures of machinery, glass, paper, beer, and spirits. Pop. 14,403.

Radcliffe (rad'kiif), a town in Lancashire, on the river Irweil, 7 miles N. w. of Manchester and 3 s. w. of Bury; does a considerable husiness in calico-printing, cotton-weaving, bleaching,

etc., and has extensive collieries in its vicinity. Pop. (1911) 26,085.

Radcliffe, ANN WARD, novelist, was born in London in 1764; She married at the age of died in 1823. twenty-three Mr. William Radciffe, afterwards editor and proprietor of the English Chronicle newspaper. She published in quick succession The Castles of Athlin and Dunbayne, a Highland story; Tho Sicilian Romance; and The Romance of the Forest. Her masterpiece is considered to be the Mysteries of Udolpho (1794), which was long very popular (1794), which was long very popular. The last of her novels published during her life was The Italian (1797). A posthumous romance, Gaston de Blondeville, was edited by T. N. Talfourd in 1826, together with some poetical pieces. Mrs. Radcliffe had considerable power in description, and knew how to arouse the description, and knew how to arouse the curiosity of her readers; but her characters are insipil, and the conclusion of her stories lame and impotent.

Radcliffe, John. a celebrated medical practitioner. born in 1050 at Wakefield, in Yorkshire, and educated at Oxford. Having studied medicine, and taken the degree of M.B., he became in taken the degree of M.B., he became in 1686 physician to the I'rlncess Anne of Denmark, and was frequently consulted by King William. He attended Queen Mary in 1694 when she was attacked by small-pox, but was unable to save her. Rough and blunt in manner, he lost the good graces of Anne, and also of William, by his plain speaking. In 1714, when the queen was seized with her last illness, he was sent for, but either could not or would not attend. This gave rise not or would not attend. This gave rise versity of Oxford for the foundation of him. The remainder of his life was a library of medical and philosophical spent at Milan.

Redeliffe College C See Harvard

Radcliffe College. Bee Harraity. Radcliffe Library, a library found-of in connec-tion with Oxford University out of funds 61, destined for the purpose by Dr. John the same name. Pop. 11,879.

Radciiffe, and opened in 1749. The building erected by the Radciffe trustees for the reception of the books forming the iibrary is now used as a reading-room in connection with the Bodieian Library. An observatory in connection with the university was founded in 1772 by the Radciffe trustees.

Radeberg (ril'de-berh), a town in Saxony, 0 miles N. E. of Dreaden, on the Roeder; has important manufactures of giass, paper, etc. Pop. (1905) 13,301

Radetzky (ra-det'skā), Joseph Wenceslaus, Count, a famous Austrian roidier, born at Trebnitz, in Bohemia, in 1766; died in 1858. Commencing his career in a Hungarian regiment of horse in 1784, he fought in most of the campaigns in which Austria was engaged from that date up to the time of his death, including Hohenlinden, Wagram, and Leipzig. But his most signal services were in Italy, whither he was enjied by the commettions following the called by the commotions following the French revolution of 1830, and where a great part of his subsequent life was spent. On the breaking out of the insurrection at Mllan in March, 1848, Radetzky maintained a fight for several days in the streets, and then retreated with his forces to Verona. On the Sar-dinian king Charies Albert taking the field he assumed the offensive, and after an arduous, and for a time doubtfui, campaign gained the victory of Custozza (July 25), which compelled Charles Alhert to retreat to Milan, and then evacuate the city after a short contest, thus preserving Lombardy to Austria. An armistice having been concluded with Sardinia he next occupied himself with the hiockade of the revolted city of Venice, but hurried from it in March, 1840, on the resumption of hostilities with Charles Albert. Assembling his army at Pavia he crossed the Ticino, and gained so decisive a victory at Novara, on March 23, that the king abdicated in favor of his son, Victor Emmanuel, and a treaty was concluded which secured for the time the Austrian supremacy ln Italy. Venice surrendered to Radetzky in August of the same year. Radetzky had been made field-marshal in 1836, and other honors

Radhanpur (räd'hun-pör). a petty state of British India. in the N. W. of Gujerat, with an area of 1150 square miles. The state came under British protection in 1819. Pop. 61,548.— The capital of the state has

The aliara 48)

can is Radiata (rā-di-ā'ta), the name given by Cuvier to the fourth great division of the animal kingdom, including those animals whose parts are arranged round an axis, and display more or less of the 'rayed' appearance or less of the 'rayed' appearance or conformation. In modern recology or conformation. In modern zoology Cuvier's division has been abolished, and the radiata have been divided into the Protozoa, Cœlenterata, and Annuioida or Echinozoa.

See Heat. Radiation.

(rad'i-kai; from L. radia, Radical root), the name adopted by a large section of the Liberal party in Britain, which desires to have all abuses in the government completely rooted out, and a larger portion of the democratic spirit infused into the constitution. The term was first used in 1818.

Radicles, or RADICALS (rad'i-klz), a name given in chemistry to certain groups of elements which remain united throughout many reactions. See Chemistry.

Radio-activity (ra'di-o), the power possessed by certain substances (and in high degree by radinm) of giving off electrons and other corpuscles at high velocity. This power point having at the extreme end thin disks

is of recent discovery, though as early as 1896 Becquerel discovered that compounds of uranium, when left in the neighborhood of a photographic plate in a dark room affected the plate. Some physicists be-lieve that it is possessed by all substances, and recent experiments with minerals and even common earth support the theory.

Radiograph

(-graf), a pic-ture of an ob-ject or objects obtained by means of the Roentgen rays instead of light rays; called also skiagraph.

Radiolaria (-lar'i-a), an order of Protosoa of the class Rhisopoda, characterised by possessing a central mass of sarcode inclosed in a porous, membranous, or chitinous capsule which is surrounded a sar-code envelope. They often possess a siliceous or filnty test or siliceous spicules, and are provided with pseudopodia, or prolongations of their soft protoplasmic bodles, which stand out ilke radiating filaments, and oc-casionally run into one another. The Polycystina (which see) belong to the

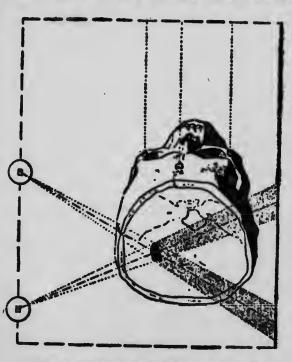

Radiometer (rā-diom'eter), an instrument designed for measuring the mechanical effect of radiant energy. It consists of four crossed arms of very fine glass, supported in the center by a needle-

Radioiarla.

of plth, biackened on one alde. The instrument ls placed in a glass vessel exhausted of alr. and when exposed to rays of light or heat the wheel moves more or less rapidly in proportion to the strength or weakness of the rays.

Radish (rad'-Raphanus sativus; natural order, Cruciferæ), a weilknown cruclferous plant, unknown ln a wild state, but cultivated for a number of cen-turles in Enrope, and for many years in America. The tender leaves

cists to experiments in this direction. In the hope of finding a substance in combination with uranium to which this property was due the Curies began a se-ries of chemical reductions of pitchries of chemical reductions of pitch-blende, a mineral containing uranium, and found the radio-activity to increase as this substance was reduced, until finally a minute quantity of a constituent of pitch-blende was obtained which proved im-mensely more radio-active than uranium. This material was thought to be a new element. It was at first obtained only in element. It was at first obtained only in combination with barium, but in 1910 Madame Curie succeeded in decomposing this compound and isolating radium, thus demonstrating its elementary character.
This remarkable element, originally ob-

tained from the pitch-biende of Central Europe, is vow found in the United States in greater quantity than eisewhere, being obtained from the mineral carnotite of Utah and Colorado. The ores of Paredise Valley, Colorado, are the richest radium producers in the world, but those of Green River Vailey, Utah, are principally worked on account of

cheaper transportation facilities.

This element has a high atomic weight (225 according to Curie, 257.8 according to Hertly), this being a characteristic of all known radio-active bodies. The study of radium proved it to be possessed of extraordinary powers previously unknown in any substance, and giving physicists new ideas as to the constitution of matter. Chief among these powers was that of emitting rays of three different kinds, which were thrown off at immense speed. One of these, which apparently consists of electrons (which see), is given off at a speed approaching that of light. A second, proaching that of light. A second, which appears to consist of helium, a substance heavier than hydrogen, is thrown off at a speed of 20,000 mics per second. The third kind is apper second. The third kind is apparently a radiation, perhaps equivalent to the Roentgen ray. Another strange property of radium is its ahility to maintain itself at a temperature a little higher than that of surrousing matter, a John Richardson in his Franklin search gramme of it giving out in an hour heat the or surrousing matter in the Orkneys, studied medical contents and the Hudson Bay Company's service in 1833, and made several exploring experiments and the Northwest and the Arctic coasts. He accompanied Sir John Richardson in his Franklin search (1848) in the Mackensie and Copper-

are used as a salad in early spring, the green pods are used as a pickle, and the succulent roots are much esteemed.

Radium (râ'di-um), an elementary chemical substance discovered by Madame Curie, a Polish reciest, with the aid of lier husband, in the property of radio-activity, the production of photographic enecks by certain substances without the aid of light, discovered by Becquerel in uranium in 1804, led a number of physicists to experiments in this direction.

sufficient to raise 100 grammes of water 1° C. This heat production may be the result of energetic changes going on in the atom, and giving rise to its radiant which have peculiar qualities. These are solidified at low temperatures, and are themselves temporarily radio-active. The radium emanation appears to change gradually into heilum, and the apparent emission of heilum as a ray would inemission of helium as a ray would in-dicate that it is a product of atomic changes within the mass. The whole quantity f radium so far isolated is quantity f radium so far isolated is very minute, and the cost of operation keeps it at a very high price, yet it possesses powers of action on organic substance which may possibly prove of great medical value when fully understood. When heedlessly kept near the skin its rays produce severe burns, which are difficult to heal, and it is thought that it may prove useful in treating cancer and other external affections. Experiment, other external affections. Experiment, however, has not yet gone far enough to demonstrate ita powers as a therapeutic agent.

(rā'diks; L, a root), in Radix which is arbitrarily made the fundamental number or buse of any system of numbers. Thus 10 is the radix of the decimal system of numeration; also in Briggs' or the common system of logarithms, the radix is 10; in Napier's it is 2.7182818284. See Logarithms.

Radnor (rad'nur), or RADNORSHIRE, an iniand county in South Wales; area, 471 square miles. Pop. (1911) 22.589. The chief towns are Presteign, New Radnor and Knighton, all small piaces.

Radom (rli'dom), a town in Russian Poland, on the Radomka, capital of the government of the same name. It has manufactures of oil, vinegar, and leather. Pop. 28,749.—The government has an area of 4768 square miles; forms the most elevated portion of the Polish plain; is much wooded; agriculture and cattle-raising are the chief occupations of the inhahitants. The iron industry is important. Pop. 820,363.

Rae (rh), JOHN, an Arctic traveler born in the Orkneys, studied medi-

name region; conducted an expedition in 1850, and again in 1853-54, when his party discovered the first traces of Frankiin's fate, for which he received the government grant of £10,000. He published Expedition to the Shores of the Arctic Sea in 1846-47 (1850). Died in 1893.

Raeburn (rā'burn), Sir Henry, an eminent portrait - painter, born at Edinburgh in 1756. Bound apprentice to a goldsmith, he was no sooner free than he devoted himself to potrait painting, and with the view of improving in his art repaired to London, afterwards spending two years in Italy. Returning in 1787, he established himself in Edinburgh, and soon rose to the head of his profession in Scotland. His portraits are distinguished by grasp of character, breadth of treatment, and excellent color. He was knighted by George IV in 1822, and dled the following year.

Raff (raf), Joachim, musical composer, born in Switzerland, of German parents, in 1822; died in 1882. He was encouraged by Mendelssohn and Liszt, and having gone in 1850 to live at Weiner Liest his operation of the page Liest his operation. mar, in order to be near Liszt, his opera, König Alfred, was first performed there at the Court Theater. His Dame Ko-bold, a comic opera, was produced in 1870, but his reputation rests chiefly on his symphonies (Im Wald, Lenore, etc.). He wrote also much chamber music of undoubted excellence. In 1877 he was He wrote also much chamber music of the was insects.

Ragatz

(rä'gatz), a town of Switzeriand, canton of St. Gail, sith ated at the junction of the Tamina with the Rhine. 1700 feet above the sea, and connected hy railway with Zürich and Coire. It is much resorted to both for its beautiful scenery and its mineral waters. Pipes are laid from Pfüffers, on the mountain side by which the water on the mountain side, hy which the water ls hrought down from the hot springs there to a spacious bathing establishment without losing its high temperature. without losing its high temperature. The permanent population is only ahout 2000, hut there is a large number of visitors, for the accommodation of whom large hotels, restaurants, etc., have been provided. There is also a bathing establishment near the springs, erected in 1704. The temperature of the water is 97°-100°, and it is impregnated with carbonate of lime, magnesia, and salt. The viliage of Pfüffers lies 2 miles south of Pagents at a height of 2696 feet. restaurants, etc., have been

of Ragatz at a height of 2696 feet.

Ragee (ra-ge'), RAGGEE, an Indian grain (Eleusine coracana), very prolific, but probably the least nutritious of all grains. In the form of cake or porridge it is the staple food of the poorer classes in Mysore and on the Neilgherries.

Ragged Schools, institutions supby voluntary contributions, which provide free education, and in many cases food, lodging, and ciothing for destitute food, lodging, and ciothing for destitute children, and so aid in preventing them from falling into vagrancy and crime. These schools differ from certified industrial schools in that the latter are for the reception of vagrant children and these spilts of slight offenses; but the for the reception of vagrant children and those guilty of slight offenses; hut the two institutions are frequently combined. The idea of forming such schools was due to a Portsmouth cohbier, John Pounds, who about 1819 began to take in the ragged children of the district in which he lived and teach them while he was at work. The name of Dr. Guthrie, of Edinburgh, is prominent among those who developed this scheme of rescue.

Raghuvansa (ra-gō-van'sa), the title of one of the most celebrated Sanskrit poems. Its subject

celebrated Sanskrit poems. Its subject making. is the legendary history of the solar collected kings, or kings descended from the sun. is important the solar collected in the sun. Ragian (rag'lan), FITZROY JAMES HENRY SOMERSET, LORD, born in 1788, youngest son of Henry, used for manure; hut those of a loose fifth duke of Beaufort, entered the army texture, and not too much worn, are unin 1804; was attached in 1807 to the rayeled by means of machinery, and Hon. Sir Arthur Paget's embassy to Turkey; and the same year served on Sir known as shoddy, with which cheap hey; and the same year served on Sir is known as shoddy, with which cheap hey; and the same year served on Sir is known as shoddy, with which cheap hey; and the same year served on Sir is known as shoddy, with which cheap hey; and the same year served on Sir is known as shoddy, with which cheap hey; and the same year served on Sir is known as shoddy.

to Copenhagen. He acted as military secretary to Wellesley during the Peninsular war, in which he greatly distinguished himself at the capture of Badajos. At Waterloo he jost his right arm. From 1816 to 1819 he acted as secretary to the embassy at Paris; and from 1819 to 1852 as military secretary to the Duke of Wellington. In 1852 he was made master-general of the ordnance, and was elevated to the House of Peers as Baron Raglan. On the hreaking out of the Crimean war he received the appointment of commander of the forces, and displayed much personal hravery as weil as an amiable and conciliatory temper; but he had no great fitness for the position in which he was placed, and the repulse of the allies in their attack on the Redan, allied with other causes, agravated the mild form of choiera from which he was suffering, and he expired which he was suffering, and he expired June 28, 1855.

Ragozin (rag'o-zin), Zenaide Alex-ess, who became a citizen of the United States in 1874 She wrote Siegfried, the Hero of the Netherlands; Beowulf, the Hero of the Anglo-Sazons, and sev-eral works for the Stories of the Nations series.

Ragman Roll, the name of the collection of those instruments by which the nohility and gentry of Scotland were constrained to subscribe allegiance to Edward I of England in 1296, and which were more par-ticularly recorded in four large rolls of parchment, consisting of thirty-five pieces sewed together, kept in the Tower of London.

Ragnarök (rag'na-rek), in Scandinavian mythology, literally twilight of the gods, or doom of the gods, the day of doom when the present world will be annihilated to be reconstructed on an imperishable basis.

Ragout (ra-go; French, ragout,) meat or fish stewed with vegetahies, and highly seasoned to excite a jaded appetite.

jaded appetite.

though valueless for most purtance in the arts, particularly in paper-making. (See Paper.) Besides the rags collected in the United States, the article is imported in large quantities from various foreign countries. Woolen rags not being available for paper, are much used for manure; hut those of a loose is pulverized and dyed various colors, to name, on the banks of the Sai, 48 miles form the flock used by paper-stainers s.r. of Lucknow. There is a bridge over for their flock-papers.

Ragstone (rag'ston), a stone of the siliceous kind, so-named from its rough fracture. It effervesces with acids, and gives fire with steel. It is used for a whetstone without oil or water for sharpening coarse cutting tools. It is abundant in parts of England, as Kent and Newcastle. The term is also applied to certain limestones which contain many fragments of shells resembling

Ragusa (rå-gö'zå), a seaport of Austria, in Dalmatia, on a peninsuia in the Adriatic, is surrounded by old walls flanked with towers, and has several forts. The streets rise terracewise, and none of the edifices are re-The trade is now insignificant compared with former times. Ragusa is snpposed to have heen founded by Greeks in B.C. 589. Failing successively nnder the dominion of the Romans and the Greek appropriate facilities. the Greek emperors, it finally asserted its independence, which it iong maintained, though having to pay tribute to one or other of its powerful neighbors. In 1814 it finally came into the possession of Anstria. Pop. 13,174.

Ragu'sa, a town of Sicily, 29 miles
w. s. w. of Syracuse, on the

right bank of the river of its name, divided into Upper and Lower Ragnsa. It has considerable manufactures of silk stuffs, and a trade in corn, wine, oil, etc. Pop. (1911) 30,850.

Ragwort (ragwurt), RAGWEED, the popular name of various species of composite plants of the genus Senecio, found in Europe, so-called from the ragged appearance of the leaves. The common ragwort (S. Jacobæa) is a perennial with golden yeilow flowers, growing by the side of roads and in pastures. It is a coarse weed, refused or disliked hy horses, oxen, and sheep, but eaten by hogs and goats.

Rahway (ra'wa), a city of Union Rahway River, 19 miles s. w. of New York. It has extensive manufactures of printing presses, woolen goods, cereals, cotton waste, automobiles, barrels, incquer

s.E. of Lucknow. There is a bridge over the Sai, several interesting ancient struc-tures, and the usual government build-ings. Pop. about 20,000.— The district forms the southernmost division of

Oudh, has an area of 4881 square miles, and a population of about \$,000,000.

Raibolini (ri-bo-id'në), Francesco DI Marco DI GIACOMO, usuaily called Francesco Francia, a famous Italian painter, engraver, medaiist, and goldsmith, was born at Bologna about the middle of the 15th century: about the middle of the 15th century; dled in 1533. He excelled particularly in Madonnas, and executed a number of admirable frescoes in the church of St. Cecllia at Bologna, but his most famous work is an aitar-piece exhibiting the Madonna, St. Sebastian, etc., in the church of St. Giacomo Maggiore in the same city. Three works of his are in the British National Gailery. He was also celebrated as a portrait painter. Raibolini had a son, Giacomo, who studied under him, and acquired con siderable celebrity.

(ra-i-gar'), a native state Ráigarh inces; area, 1486 square miler; pop. 128, **943**,

Raiidæ (rā'i-dē), the family of fishes to which the rays (skate, etc.) belong. See Ray.

Raikes (rāks), Robert, an English philanthropist, born at Gioucester in 1735; died in 1811. He was proprietor of the Gloucester Journal, and priginated the system of Sunday-schools. originated the system of Sunday-schools by gathering together a number of street children for secuiar and religious training.

Raikot (ri-kōt'), a town of Hindu-stan, in the Pnnjab, sur-rounded by a wali and substantially bnilt, formerly capital of a native state. Pop. 9219.

Rail (rai), the common name of the Raliidee, a family of grailatorial birds comprehending the rails proper (Rallus), the coots, water-hens, and crakes. They are characterized by possessing a iong bill, which is more or less curved at the tip and compressed at the rides by having the postrile in a market printing presses, woolen goods, cereals, cutron waste, automohiles, barrels, iacquer ware, chemicais, etc. Pop. 9337.

Raiatea (rI-ā-tā'ā), one of the Society Islands in southeastern Polynesia; area, 75 sq. miles; pop. 1400, who have been converted to Christianity by English missionaries, and are governed by their own chlefs.

Rai Bareli (rī ba-rā'iē), a town of Oudh, India, administrative headquarters of district of the same ail

brown color, marked with black above, that time forward the railroad system and of a bluish-ash color beneath, with white transverse markings on the beily, much esteemed for the table; the Virginian rali of America (R. virginianus), somewhat smaller than the water rail of Europe, but a favorite game bird; and the great-breasted rail or freshwater marsh-hen (R. elegans), about 20 inches long, which inhabits the marshes of the Southern States of America. The iand rall, so-named, is the corn-crake (Cres pratensis). See Corn-crake.

Railroad, Railway (rāl'rod, rāl'wā), placing on the ground, on a specially prepared track, continuous parallei iines of iron or steel ralls, on which cars with flanged wheeis are run with little friction and at consequent high velocities. These are usually called rallroads in the United States and rallways in other Engdish-speaking countries, though the use of the word railway is growing in the former. The necessity for railways originated in the requirements of the coal traffic of Northumberlandshire, where the first of these, formed on the law of making a distinct surface and plan of making a distinct surface and track for the wheels, were constructed. In 1676, near Newcastle-on-Tyne, the coais were conveyed from the mines to the banks of the river, 'by laying rails of timber exactly straight and parallei; and hulky carts were made, with four rollers fitting those ralls, whereby the carriage was made so easy that one horse would draw 4 or 5 chaldrons of coal.' Steam-power was first used on these tram-roads early in the nineteenth centram-roads early in the nineteenth century, but the inauguration of the present great rallway system of England dates from 1821, when an act was passed for the construction of the Stockton and Darlington Rallway, which was opened in 1825. The Liverpool and Manchester line was opened in 1830 and other lines guickly followed until 1846 when no quickly followed until 1846, when upwards of 250 acts for the construction of raliway lines were passed, the specu-iating mania culminating in a disastrous panic. The United States quickly fol-lowed Great Britain in rallway construction. Indeed, it preceded England in steam transportation, as Oliver Evaus, In England, the first road for passenger small quantity to form the embankment, traffic being the Baitlmore and Ohlo, recourse is had to an excavation along bullt 1828-38, an American-bullt locothe sides of the site of the latter to motive being used on it in 1830. From supply the deficiency. The line of rail-

was rapidity extended, until the United States reached and surpassed all other countries in this means of travel and freight carriage. There was no development of the railway system : France till about 1842, when several grattines were established; Beigium and the Netherlands foliowed, but Germany, Austria, and Russia were somewhat behind the Western European nations in their raliway development. Within recent years the system has developed with remarkable rapidity and is being introduced with considerable activity in Africa and Asia, where an extensive rallway construction

is now under way. The modern railway consists of one or more pairs of parallel lines of iron or steel hars, called rails, these bars joinlng each other endwise, and the parallel lines being several feet apart. The ends of the ralls are held together by two strips of metal known as fish-plates which are bolted, one on either side, to the ends of the rails. The width between ralls is called the gauge. What is known as the national or standard gauge used in the United States and the greater part of Europe, and formerly called the narrow gauge, measures 4 feet 81 Inches between the ralls; the broad gauge (now going out of use) being 7 feet. It is helieved to have originally represented the width sultable for the coal wagons of the north of England, and has been found on the whole very satisfactory. In Ireiand the gauge is 5 feet 3 inches, in India 5 feet 2 Names in India 5 feet 6. Narrower gauges are used in certain special lines in ali countries. A pair of parallel ilnes of rails constitutes a single line of railway, two pairs a double line, and so on. The rails are fastened by heavy splkes or bolts to wooden or iron (sometimes stone or concrete) supports called sleepers or ties, placed at frequent intervals and embedded in the material of the roadway. A rallway, in general, approaches as nearly to a straight line between its two extremes as the nature of the country and the necessities of the intermediate traffic will permit. It is carried over vaileys, either by embankments or viaducts, and through hills or elevated ground by deep trenches called cuts, or by tunnels. In favorable cases the surface line of Philadelphia, constructed a steam-deep trenches called cuts, or by tun-dredging machine in 1804 which propelled nels. In favorable cases the surface line itself on wheels a distance of 1½ miles of the railway is so adjusted that the through the streets. The use of steam materials excavated from the cuttings engines on railroad tracks in the United will just serve to form the embankments. States quickly followed their introduction Should the excavated materials be in too

way can seldom run for any distance on that by its weight and the friction of its a levei, and its various siopes are termed gradients, the arrangement of the rises and fails being termed the grading of the line. A more or less steep ascent is termed an incline. When the line is formed its surface is covered with hocken stones or clean gravel called ballasting, and in this the sleepers for sustaining the rails are embedded. The wooden sieepers are laid across the roadway 2 or 3 feet apart from center to center, and to them the rails are spiked. When the railway tack is thus completed the work is called the permanent way, and it furnishes the route over which railway cars of various kinds are drawn by a locomotive engine, a number of these vehicles

forming a train. In the railway of a single line of rail it is necessary to make provision for permitting meeting engines or cars to pass each other by means of sidings, which are short additional lines of rail iaid at the side of the main line, and so connected with it at each extremity that a train can pass into the siding in piace of proceeding along the main line. In double lines, in addition to sidings, which are in them also required at many places, it is necessary to provide for trains or cars crossing from one line of rais to another. This change in the direction of the carriage is effected by switches. Switches are short movahie rails close to the main rails connected by a work of the carriage is effected by switches. by rods to suitable handles, the extremities of these short rails being formed so as to guide the flanges of the wheels of a car from one line of rail to another. Switches are usually coupled or interiocked with the signals or signaling Switches are usually coupled signals or signaling apparatus, so necessary for properly carrying on the traffic—coupled when they are moved simultaneously with the signals, interlocked when the necessary movement of the switches is completed before the signal is moved. Signaling is effected hy means of semaphores in day

wheels on the rails a tractive force is provided sufficient to enable it to move at a high rate of velocity, and to drag great loads after it. In some particular cases a fixed engine is employed to give motion to a rope hy which the cars are drawn, the rope being either an endless a stratched over nulleys or one which rope stretched over pulleys, or one which winds and unwinds on a cylinder. Such engines are termed stationary engines, and are used chiefly on inclined planes, where the ascent is too steep for the locomotive engine. In some cases the cars are impelled by atmospheric pressure or hy electricity. (See Atmospherio Railway, Electric Railway.) The iocomotives, passenger cars, freight cars, etc., constitute the rolling stock of a railroad. In Britain the railway cars are usually from 20 to 30 feet in length, and are divided into compartments. There also, as in Europe generally, three classes of cars are used, to meet the varied demands of the traveling public. American cars are from 40 to 60 feet long with a center program of the care to the care with a center passage, the doors being at the ends — with the seats arranged transversely on each side. A piatform at the end enables a person to go from end to end of the train. There is generally in the United States only one class of passengers, though on iong journeys Pullman and other sieeping-cars are used at extra fares. (See Pullman Car.) Railways for the local service of large cities run usually on the street surface, hut a system of overhead railways exists in some cities, as in New York, and subways or underground railways are rap-

before the signal is moved. Signaling is effected by means of semaphores in daylight and lights of three colors, white, land, the Hoosac Tunnel in Enggreen or hlue, and red, at night. The setts, the Pennsylvania Railroad Tunnel telegraph is also used in regulating the under New York City and the Transtraffic. (See Block System.) The variens places along the line of railway, where trains stop for taking up or depositing freight or passengers are termed tagsians or denote. With the prefix of Bridge over the Menai Straits in Wales: positing freight or passengers are termed stations or depôts, with the prefix of Bridge over the Menai Straits, in Wales; freight or passenger, as they are allotted the Victoria Tuhular Bridge, Montreal; to the one or the other; the stations at the Eads hridge over the Mississippi the extremities of a railway are called terminals. ti-7e,

n-179 the railroads being owned by private companies, though to some extent controlled in their operation by Congress. In Europe generally the railways are owned and operated to a large extent hy the government, this system existing everywhere except in the United States and Britain. Rallways were at first local undertakings, but ln the United States and Britain they have now come under the control of a few giant companies. Generally the American railpanles. Generally the American railways have hitherto been of a much less solid and substantial character than those of Britain, but this condition is rapidly being changed in the great trunk lines, some of which have been made of very substantial structure. The transcontinental lines of the United States include the Northern Pacific, from Lake Superlor to the Pacific Coast; the Union Pacific, from San Francisco to the Eastern States; the Atchlson, Topeka & Santa-Fe, the Southern Pacific, and the Great Northern, five systems in all, these ranging from 5000 to over 10,000 miles in length of track controlled. The only railway which competes with these great lines is the Trans-Siberian, of nearly 7000 miles' length of main line. In Canada is the Canada in the the Canada in the Canada in the the Canada in the the Canada in the the the the the the the Dominion is the Canadian Pacific, of government construction, which, connecting with the Intercolonial at Montreal, forms

roads. Ahuses of the United States management in America led to a move-ment in 1871 which secured laws adverse to the companies, limiting rates and prohibiting discrimination. This led in prohibiting discrimination. This led in 1887 to the Interstate Commerce Act, passed to regulate rates, etc., and recently to an act prohibiting rehates in freight charges, Other legislation affecting railroad management has been passed by Congress, and the railroads are coming gradually under government control in the details of their operative methods. In 1910 Congress created a special court, called the Court of Commerce, having jurisdiction over railroad indicated cases, such as may be instituted by the Interstate Commerce Commission. road management

granted by act of psrliament, and the Within recent years there has been same is the case in the United States, great progress in railroad huilding, the construction of locomotives and care, and the adoption of safety appliances in rail-road operation. For an important in-stance of this see Block System. There has been great improvement in signal-ing, the telephone is beginning to super-sede the telegraph in train handling, and station accommodation has greatly im-proved. Notable instances are the manproved. Notable instances are the mag-nificent new Pennsylvania and Grand Central Stations in New York. The size and weight of locomotives have enor-mously increased over those of early days, some of the passenger locomotives weighing more than 200,000 pounds. The freight locomotives are still heavier, the Mallet compound weighing as high as 700,000 pounds. The same may be said of cars, both freight and passenger, which have increased greatly in weight and strength, steel sleeping cars now in use weighing over 150,000 pounds. In regard to speed the same may be said, the original 20 miles or less per hour having climbed up gradually until 60 miles per hour for considerable distances is not infrequent, while even greater meed has frequent, while even greater speed has been attained. The fastest time on record for a distance of over 440 miles was made hy the Lake Shore and Michigan Southern R. R. in 1905, running from Buffalo to Chicago, 525 miles, in 7 h. 50 m., an average of 69.69 miles per hour. For shorter runs speeds ranging from 70 with the Intercolonial at Montreal, forms a through line of 4200 miles from the a through line of 4200 miles from the greatest on record heing a run of 5 miles West coast of British Columbia to Haliway: to tax in Nova Scotia. (Other railway: to tax in Nova Scotia. (Other railway: to tax in Nova Scotia. (See the Pacific are now in operation. (See Canadian Pacific Railway.)

In all countries the government exercises the right of granting or refusing to construct and operate railway in the whole world was about 640,000 miles, so that world was about 640,000 miles, so that this country possesses about 40 per cent. of the total. America as a whole has about 300,000 mil s, Europe 200,000, Asia 60,000, Africa 20,000 and Australia 20,000. In 1918 the railroads of the United States were handled under contract the country of the states were handled and a country of the country of the states were handled to the country of th United States were brought under govern-ment operation and control for the dara-tion of the war and for twenty months thereafter. William Gibbs McAdoo was appointed director general of railroads.

Railroad Rates. For years past the United States have been accused of unjustly favoring large shlppers in freight charges, and efforts to restrain them from merce, having jurisdiction over railroad judicial cases, such as may be instituted by the Interstate Commerce Commission. The purpose of this court is to expedite the hearing of cases arising from rall. The purpose of this court is to expedite the hearing of cases arising from rall. The purpose of this court is to expedite the hearing of cases arising from rall. The purpose of this court is to expedite the hearing of cases arising from rall. The purpose of this court is to expedite this practice by legislation have been made. The giving of passes to favored by the legislation have been made. The giving of passes to favored by the legislation have been made. The giving of passes to favored by the legislation have been made. The giving of passes to favored by the legislation have been made. The giving of passes to favored by law, and a bill was passed in 1910 by which the road management. railroad freight rates and all discrimina-tions between shippers by the giving of at any given piace depends on a great rebates or in other ways strictly for-hidden, under penalty of fine and impris-onment. The government was given the right to control and adjust rates, and mountain ranges, exposure to the pre-preseribe just and reasonable rates, to vailing winds atc. When the values repates or in other ways strictly for-hidden, under penalty of fine and impris-onment. The government was given the right to control and adjust rates, and prescribe just and reasonable rates, to investigate abuses, and in other ways to oversee and control railroad operations,

Raimondi (ri-mon'de), Mark Antonio, a famous Italian engraver; born in 1488, died in 1534. He was a friend of Raphael, who employed him to engrave some of his paintings and was the first bullion and the first bullions. ings, and was the first Italian engraver

Rain (ran), the water that falls from the heavens. Rain depends upon the formation and dissolution of clouds. The invisible aqueous vapor suspended in the atmosphere, which forms clouds, and is deposited in rain, is derived from the evaporation of water, partiy from land, but chiefly from the vast expanse of the ocean. At a given temperature the atmosphere is capable of containing no more than a certain quantity of aqueous vapor, and when this quantity is present the air is said to be saturated. Air may at any time be brought to a state of ar turation by a reduction of its temperature. ture, and if cooied below a certain point the whoie of the vapor can no longer be the whole of the vapor can no longer be heid in suspension, but a part of it, condensed from the gaseous to the liquid state, will be deposited in dew or float about in the form of clouds. If the temperature continues to decrease, the vesicles of vapor composing the cloud will increase in number and begin to descend by their own weight. The largest of these falling fastest will unite with est of these falling fastest will unite with the smaller once they encounter during their descent, and thus drops of rain will be formed of a size that depends on the thickness, density, and elevation of the cloud. The point to which the tempera-ture of the air must he reduced to ofter ture of the air must he reduced in order to cause a portion of its vapor to form clouds or dew is called the dew-point. The use of the spectroscope has become to some extent a means of anticipating a fail of rain, since when light that has passed through aqueous vapor is decomposed by the spectroscope a dark band is seen (the rain-band), which is the more intense the greater the amount of vapor the sun is at the horizon the sun is at the horizon the rainbow is a semicircie. When perfect the rainbow presents the appearance of two concentric arches; the inner being called the primary, and the outer the accordary rainbow. Each is formed of the colors of the solar spectrum, but the colors are arranged in the reversed order, the rainbow is a semicircie. When perfect the rainbow is a semicircie. When perfect the rainbow presents the appearance of two concentric arches; the inner being the colors of the solar spectrum, but the rediction of the rainbow presents the appearance of two concentric arches; the inner being the colors of the solar spectrum, but the rediction of the rainbow presents the appearance of two concentric arches; the inner being the colors of the solar spectrum, but the rediction of the rainbow presents the appearance of two concentric arches; the inner being the colors of the solar spectrum, but the rediction of the rediction of the rediction of the rainbow presents the appearance of two concentric arches; the inner being the colors of the solar spectrum, and the outer the accordary rainbow. mountain

the latter, and is consequent with the coid mountain tops, and partly hy the consequent expansion of the air due to the greater elevation. The presence or absence of vegetation has also considerable influence on the rainfail of a district. Land devoid of vegetation has its soil intensely heated by the fierce rays of the sun, the air in contact with hold more and more moisture, so that the faii of rain is next to impossible. On the other hand, land covered with an abundant vegetation has its soli kept cool, and thus assists in condensation. Although more rain falls within the tropics in a year, yet the number of rainy days Is less than in temperate ciimes. Thus in an average year there are 80 rainy days in the tropics, while in the temperate zones the number of days on which rain falls is about 100. At the equator the falls is about 100. At the equator the average yearly rainfail is estimated at 95 Inches. At a few isolated stations the fail is often very great. At Cherrapungee, in the Khasia Hills of Assam, 015 inches fail in the year, and there are several piaces in India with a fall of from 190 to 280 inches. The rainfall at Paris is 22 in.; London 22.50.; New York, 43 in.; Washington, 41 in.; San Francisco, 22 in.; Sitka, Alaska, 90 in.; Honduras, 153 in.; Maranhão, 280 in.; Singapore. 97 in.; Canton. 78 in.; New South Wales, 46 in.; South Australia, 19 in.; Victoria, 30 in.; Tasmania, 20 in.; Cape Colony, 24 in. The greatest annual rainfali hitherto observed seems to be on the Khasia Hijis. be on the Khasia Hijis.

Rainbow (rān'bō), a how, or an arc of a circie, consisting of all the prismatic colors, formed by the re-fraction and reflection of rays of light from drops of rain or vapor, appearing in the part of the heavens opposite to the sun. When the sun is at the horizon 0W

secondary. The primary bow is formed of numerous small lakes from the east by the sun's rays entering the upper part and northeast, and empties itself by of the falling drops of rain, and under-Rainy River, about 90 miles iong, into going two retractions and one reflection; the Lake of the Woods. going two retractions and one reflection; and the secondary, by the sun's rays entering the under part of the drops, and undergoing two refractions and two reflections. Hence, the colors of the secondary bow are fainter than those of the primary.

Rain-gauge (rān-gāj), or PLUVIor PLUVIter), an instrument used to measure the quantity of rain which fails at a given place. It is variously constructed. A convenient form consists of a cylindrical tube of copper, with a funnel at the top where the rain enters. Connected with where the rain enters. Connected with the cylinder at the lower part is a glass tube with an attached scale. The water which enters the funnel stands at the

same height ln the cyllnder and glass tube, and being visible in the intter the height is read lmmediately on the scale, and the cylinder and tube being constructed so that the sum of the areas of their sections is a given part, for Instance a tenth of the area of the funnel at Its orifice, each inch of water in the tube is equivalent to the tenth of an lnch of water entering the mouth of the

Rain-gauge.

funnel. A stop-cock is added for drawing off the water. A simpler form of gauge consists of a funnel having at the mouth a diameter of 4.697 lnches, or an area of 17.33 square lnches. Now as a fluid ounce contains 1.733 cubic lnches, it foiiows that for every fluid ounce collected by this gauge the tenth of an lnch of has falien. Recently-constructed automatic gauges give a continuous record of rainfall, indicate the duration of each shower, the amount of rain that has failen, and the rate at which it feli. (rā-nēr'), MOUNT, or MOUNT TACOMA, a mountain of the Rainier Rainy Lake or Rene Lake, a body feudatories, governed a territory; subsecting the boundary between Minnesota and ernments, and in later times by the Brit-Canada. It is about 50 miles long, and ish government, to Hindus of rank. It of irregular breadth; receives the waters is now not unfrequently assumed by the

Raipur (ri-pör'), a town of India, headquarters of district of same name in the Chhattisgarh division, Central Provinces. It has an ancient fort, the usual government bulldings, important schools, and does a large trude in grain, lac, cotton, etc. Numerous water-tanks are in the vicinity. Pop. 32,114.— The district includes within Its limits four smail feudatory states with

Rais, or RETZ (rā or rās), GILLES DE Rais, LAVAL, SEIGNEUR DE, French marshal, born in 1396, dled in 1440. He distinguished himself in the wars with the English, and acquired a disgraceful celebrity for outraging and murdering 140 or 160 children, and for other atroction. He was hung and hurnt for his ties. He was hung and burnt for his crimes. See Bluebeard.

Raised Beaches. See B. Raised.

Raisins (rāz'nz), the dried fruit of various species of vines, comparatively rich in sugar. They are dried by natural or artificial heat. The natural and best method of drying is by cutting the stalks bearing the finest cutting the stalks bearing the niest grapes haif through when ripe, and allowing them to shrink and dry on the vine by the heat of the sun. Another method consists of plucking the grapes from the staiks, drying them, and dipping them in a bolling lye of wood-ashes and quicklime, after which they are exposed to the sun unou hurdles of heater-work. to the sun upon hardles of basket-work. Those dried by the first method are called raisins of the sun or sun-raisins, muscatels, or blooms; those by the second, lcxias. The inferior sorts of grapes are dried in ovens. Ralsins are produced in large quantities in the south of Europe, Egypt, Asla Minor, California, etc. Those known as Malagas, Allcantes, Vaienclas, and Denlas are well-known Spanish qualities. A kind without seeds, from Turkey, are called sultanas. The Corinthian raisin, or current, is obtained Cascade Range, in the southwestern part from a small variety of grape peculiar of the State of Washington, 40 miles from to the Greek islands. The uses of raising Tacoma. It is one of the highest peaks of as a dessert and culinary frult, and in the United States, being 14,363 feet above the manufacture of wine, are well known. the level of the sea. Sulphurous fumes Rajah, or Rājā (rā'jā), in India, issue from its crater, but it is regarded as the level of the sea. Well wooded below, longed to those princes of Hindu race there are 14 glaciers on the higher slopes, who, either as independent rulers or as

of Murshidabad, formerly an important place, now little more than a collection of mud-huts.

Rájmahendri (raj-ma-hen'drē), a town ln Hindustan, capital of the Godavari district, Madras Presidency, on the east hank of the Godavari, just above its subdivision into two arms, 40 miles from the sea. Pop. about 30,000.

Rájpipla (räj-pē'plu), a native state of India, in Bombay Presidency, watered by the Nerhudda. Area, 1514 sq. miles; capital Nandod.

Rájputana (räj-pö-tä'nu), a iarge province of India, under the suzerainty of Britain since 1817, In the west part of Hindustan proper, extending from the Jumna and Chumhui Rivers west to Sind and Bhawaipur, and comprising the greater part of the Indian Desert. It includes the British district of Aimera-Marwara and twenty district of Ajmere-Merwara and twenty autonomous states, each under a separate chief; has a total area of 127.540 square miles, and a pop. of 9,730,000. Rajputana is intersected by the Arayali Mountains, to the north of which the country is desert, and part of it wholly destitute of inhabitants, water, and vegetation.
The soil is remarkably saline, containing many salt springs and sait lakes, and much of the well-water is hrackish. To the south of the range the country is more fertile, being watered by the drainage of the Vindhya Mountains. The dominant race, though not the most numerous, is the Rajput, numbering about 700,000. They are the aristocracy of the country; and to a large extent that held the land either a large extent they hold the land either as receivers of rent or as cultivators. They are essentially a military people, and many of their institutions bear a strong resem-hlance to the feudal customs which prevailed in Europe in the middle ages. They have likewise been celebrated for their chivalrous spirit, so unlike the ef-feminacy and duplicity of many of the oriental nations. The province, which is traversed by two railway lines, is administered by a governor-general's agent.

semindars or iandhoiders, the title Maha-rajah (great rajah) being in our days generally reserved to the more or less powerful native princes.

Rájápur' (rä'jä-pör), two towns in India: (1) In the Bombay Presidency, at the head of a creek 15 miles: pop. 9,130,072.— Capital, Rámpur miles from the sea. Pop. 7448. (2) In the N. W. Provinces, on the Jumna. Pop. 7329.

Rájputs (rāj'pöts). See Rájputana.

Rájsháhi (rāj'-shā'hē), a division or commissionership of Benderick and Bhutan. Area, 17,428 square miles: pop. 9,130,072.— Capital, Rámpur Beauleah.

Rake (rāk), an impiement which in its simplest form consists merely

the N. W. Provinces, on the Jumna. Rake (rak), an impiement which in Pop. 7329.

Rájmahál (raj-ma-hai'), a town in thindustan, province of wooden or iron bar furnished with thindustan, province of wooden or iron teeth, and firmly fixed thindustan. In the Ganges, 68 miles w. N. w. at right angles to a iong handle. In

Horse-rake.

farming it is used for collecting hay, straw, or the like, after mowing or reaping; and in gardening it is used for smoothing the soil, covering the seed, etc. Large rakes for farm work are adapted for being drawn by horses; and there are many modifications both of the hand-rake and the horse-rake.

Rakoczy (rā-kō'tsi), a famous prince-iy famlly, now extinct in the male line, which for some time ruled the principality of Slehenhürgen o Transyivania, and by maintaining the civil and reilgious rights of the inhabitants made Itself equally serviceable to them and formidable to the house of Austria. The RAKOCZY, who obtained the government in 1606. The line ended with Prince FRANCIS LEOPOLD, horn 1676. He led the Hungarian insurgents against Austria in 1703, and died in exile in 1735.

Rakoczy March, a simple yet stir-ring march by an unknown composer, and a very favorite one with the army of Francis Rakoczy (see ahove). It was adopted by the

Magyars as their national march.

Rakshasas (rak'sha-haz), in Hindu
mythology, a class of evil spirits or genii, cruel monsters, frequenting cemeteries, devouring human beings, and assuming any shape at pleasure. They are generally hideous, hut some, especially the females, ailure by their beauty.

Râle (răi), in pathoiogy, a noise or crepitation caused by the air nessing through mucus in the brenchial

or ir tubes or sungs. There are various rales—the crepitent, the gurgling, the sibilant, the sonorous, etc. The rale or rattle which precedes death is caused by the air passing through the mucns, of which There are various rales the lungs are unable to free themselves.

Raleigh (ral'i), a city of North Carclina, capital of the State and county seat of Wake Co. It is near the center of the State, 143 miles N. N. W. of Wilmington. Among the principal public buildings are the Capitol in Union Square, the State Museum, and the Olivia Raney Public Library. It is an important cotton and tobacco center, and has varied industries, including cotton, oil, and hosiery mills, fertilizer and carworks, etc. Raleigh was first settled

works, etc. Raleigh was first settled in 1792. Pop. 19.218.

Raleigh (ral'i), or RALEGH, SIR WALTER, navigator, warrior, statesman, and writer in the reigns of Elizabeth and James I, was the second son of a gentleman of ancient family in Devention. Devonshire, and was horn in 1552. He studled at Oxford, and at the age of seventeen he joined a body of gentlemen volunteers raised to assist the French Protestants. Little is known of his adventures for some years, but in 1580-81

tributed to an act of gallantry, namely, his throwing his embroidered cloak in a puddle in order that the queen might pass. In 1584 he obtained a charter of pass. In 1584 he obtained a charter of but in extent of capacity and vigor of colonization and nnsuccessfully attempted mind he had few equals, even in an age the settlement of Virginia in the follow- of great men. His writings are on a

ing years, planting coionies on Roanoke Island, the colonists of which perished. In 1584, also, he obtained a large share of the forfeited Irish estates, and intro-duced there the cultivation of the potato. Through the queen's favor he obtained licenses to sell wine and to export woolens, was knighted and made fordwarden of the Stannaries or tin mines (1585), vice-admiral of Devon and Cornwall, and captain of the queen's guard (1587). In 1588 he rendered excellent service against the Spanish Armada, and subsequently vessels were fitted out hy him to attack the Spaniards. In 1592 he incurred the queen's displeasure by an amour with one of her maids of honor, the daughter of Sir Nicholas Throckmor-ton. Although he made the best rep-aration in his power, hy marrying that lady, he was imprisoned for some months, and banished the queen's presence. To discover the fahled El Dorado or region of gold he planned an expedition to Gulana, in which he embarked in 1595, and reached the Orinoco; but was obliged to return after having done little more than take a formal possession of the country in the name of Elizabeth. In 1596 he held a naval command against Spaln under Lord Howard and the Earl of Essex, and assisted in the defeat of the Spanish flect and the capture of Cadiz. (Next year he captured Fayal in the Azores; in 1600 he became governor of Jersey. James I, on his accession in 1603, had his mind soon poisoned against Raleigh, whom he denrived of all his Ralelgh, whom he deprived of all his offices. Accused of complicity in Lord Cohham's treason in favor of Arabella Stuart, Raleigh was brought to trial at Winchester in November 1603, found guilty of treason, and sentenced to death. He was, however, reprieved and confined to the Tower. Here he remained for twelve years, devoting himself to scientific and literary work. In 1616 he obtained his release by bribing the favorite, Villiers, and by offering to open a mine of gold which he believed to exist near the Orinoco. The enterprise proved disastrous. Raleigh's force had attacked the Sir Walter Raleigh.

Sir Walter Raleigh.

Spaniards, and on his return James, to favor the Spanish court, with his usual meanness and pusillanimity determined to execute him on his former sentence.

After a trial before a commission of the privy-council the doom of death tributed. pronounced against him, and was carried into execution October 29, 1618. As a politician and public character Raleigh is doubtless open to much animadversion;

variety of topics, besides a few poetical pieces of great merit. His History of the World is one of the best specimens of the English of his day, having at once the style of the statesman and the scholar. Rallentando (ral-en-tan'dô), also RITARDANDO, or LEN-TANDO (Italian), in music, indicates that

rando (Italian), in music, indicates that the time of the passage over which it is written is to be gradually retarded.

Rallidæ (ral'i-dē), the rail family of hirds. See Rail.

Ram, a steam iron-clad ship-of-war, armed at the prow below the water-line with a heavy iron or steel beak intended to destroy an enemy's ships by the force with which it is driven against them. The beak is an independent adjunct of the ship, so that, in pendent adjunct of the ship, so that, in the event of a serious collision, it may be either huried in the opposing vessel or carried away, leaving uninjured the vessel to which it is attached. By navai experts the ram is considered an important element in the solution of the problem of coast defense.

Ram, BATTERING. See Battering-ram.

Ram, HYDRAULIC. See Hydraulic Ram.

his first revelation. It is devoted to fasting and abstinence. From sunrise to sunset for the thirty days of its duration the Mohammedans partake of no kind of nourishment. After sunset nec-essary wants may be satisfied, and this permission is liberally taken advantage of. Believers are exempted in peculiar circumstances from observing the fast. As the Mohammedans reckon hy lunar time, the month begins each year eleven days earlier than in the preceding year,

days earlier than in the preceding year, so that in thirty-three years it occurs successively in all the seasons.

Râmâyana (râ-mâ'ya-nâ), the older of the two great Sanskrit epics (see Mahâbhârata) ascribed to the poet Valmiki, and dating probably from the 5th century B.C. The hero is Rama, an incarnation of Vishnu, as the son of the King of Oudh. It relates his marriage with Sita, their wanderings in the forests, the seizure of Sita by the the forests, the seizure of Sita hy the giants of Ceyion, her recovery, and the restoration of Rama to the throne of his ancestors. It contains 24,000 verses,

and is divided into seven books.

Rambootan (ram-bo'tan), the fruit of the tree Nephelium lappaceum, nat. order Sapindacem, much prized in the Maiayan A.chipeiago. It is about the size of a r.geon's egg, and of a red color. It is said to be rich and of a pleasant acid.

Rambouillet (ran-bö-ya), a town of France, department of Seine-et-Oise, in a beautiful valley near the extensive forest of same name, 27 miles southwest of Paris. It is remarkable only for its château, long the residence of the kings of France, and a fine park, in which the first model farm in Parance was certablished. Pop (1904) 3965. France was established. Pop (1906) 3965. Rambouillet (ran-bö-ya), Cather-INE DE VIVONNE, MAR-QUISE DE, born at Rome in 1588, died in 1665. In 1600, when only tweive years oid, she married Charles d'Angennes, son of the Marquis de Rambouiliet, to whose title and estates she succeeded on the death of the latter in 1611. Her residence at Paris, the Hôtel Rambouillet, for more than fifty years formed the center of a circle which exercised great influence on French language, literature, the name common to a personage appearing as three incarnations of Vishnu, all of surpassing beauty.

Ramadan (ramadan), Rhamazan, the ninth month in the Mohammedan year, during which it is said Mohammed received his first revelation. It is devoted to fasting and abstinance infinence on French language, literature, and civilization. Her circle is said to have suggested Molière's comedy of the Précieuses Ridicules, but this play was not so much directed against it as against the numerous ridiculous coteries which sprang up in imitation.

Rameau (ra-mō), Jean Philippe and abstinance in the devoted to fasting and abstinance in the month of the mame common to a personage and civilization. Her circle is said to have suggested Molière's comedy of the Précieuses Ridicules, but this play was not so much directed against it as against the numerous ridiculous coteries which sprang up in imitation.

Rameau (ra-mō), Jean Philippe and civilization. Her circle is said to have suggested Molière's comedy of the Précieuses Ridicules, but this play was not so much directed against it as against the numerous ridiculous coteries which is first revelation. It is devoted to fasting and abstingue and abstingue and abstingue and civilization. Her circle is said to have suggested Molière's comedy of the Précieuses Ridicules, but this play was not so much directed against it as against the numerous ridiculous coteries which is first revelation. It is devoted to the properties of the precieuse and civilization. Her circle is said to have suggested Molière's comedy of the précieuses Ridicules, but this play was not so much directed against it as against the numerous ridiculous coteries which is first revelation.

He was appointed organist in Clermont Cathedral, and in 1722 printed a treatise, entitled Traits de l'Harmonie, followed by Nouvelle Système de Musique, etc. His fame as a theorist chiefly depends on his Demonstration of the Principles of Harmony, published in 1750. This work procured him an invitation from the court to superintend the opera at Paris. He was also the author of several operas, and a great variety of hallets, concertos, gavottes, songs, etc. Louis XV acknowlgavottes, songs, etc. Louis XV acknowledged his merits by the grant of a patent of nobility and the order of St. Michael-

See Ramie. Ramee.

Ramée (ra-mē), Louise de La (Ouida), an English novelist of French extraction, horn at Bury St. Edmunds in 1840. She published her first novel, Held in Bondage, in 1863, and was subsequently a very prolific writer. Among her best works are Strathmore, Chandos, Puck, Moths, Princess Napramine, A House Party, Gilderoy,

Rameses (ram'e-sēz), or Ramses bant, 13 miles north of Namur, and 26 the Sun'), the name given to a number of Egyptian kings.—Rameses I was the first king of the nineteenth dynasty, but in no way notable.—Rameses II, grandson of the preceding, was the third king of the nineteenth dynasty, and was born in the of a centure.

Remists (ram'istz), the followers or disciples of Patern of a centure. of a century preceding the year 1400 B.C. He is identified by many with the Ses-ostris of Greek writers. (See Sesostris.) subsequent stage of the war took Jerusa-lem and other places. He was a zealous hullder and a patron of art and science. He is supposed to have been the king who oppressed the Hebrews, and the father of the king under whom the exodus took place.—RAMESES III, the Rhampsinitus of Herodotus, belonged to the twentleth dynasty, and was uniformly successful in war. He endeavored to surpass his ancestors in the magnificence of his hulldlings.

Rameses, one of the treasure citles of Egypt huilt by the Hebrews during the oppression, and probably named after Rameses II. It has been identified by Lepsius with Tell-ei-Maskhuta on the Fresh-water Canal (about 12 miles west of the Suez Canal), and by Brugsch with Tanis, the modern

Rameswaram (rii-mes'wu-rum), a low sandy Island in the Gulf of Manaar, between the malnland of India and Ceylon. It is about 11 mlles iong and 6 hroad, and contains one of the most venerated Hindu temples in India, the resort of thousands of pilgrims. Pop. 17,854.

Rámgarh (rām-gur'), a town of India, in Jaipur state, Rajputene.

Ramie, RAMEE (ra-me'), a name applied to various fiber-plants of the nettle family or to the fiber yielded by them. The chief of these are Bochmeria nivea, or China grass (also called Urtica nivea) and Boehmeria tenacissima (or U. tenacissima), which some maintain to be the true ramie plant. (See China Grass.) A kind of ramie has also been prepared from a common European nettle (Urtica Lioica), and from Leportea canadensis, a North American

She died in Italy, where she had nettie, introduced into Germany as a fiber

Rammohun Roy (ram'o-hun), an najah, founder of the Brahmo-Somaj (which see) sect of theists; born at Burdwan, He is identified by many with the Sesouters of Greek writers. (See Scsostris.) see) sect of theists; born at Burdwan, His first achievement was the reduction of Ethlopia to subjection. He defeated a confederation, among whom the Khita or Hittites were the chief, in a great hattle near the Orontes in Syria, and in a subsequent stage of the war took Jerusastudy of the sacred writings of the Hindus and the proposed states of the sacred writings of the Hindus and the proposed states of the sacred writings of the Hindus and the proposed states of the sacred writings of the Hindus and the proposed states of the sacred writings of the Hindus and the proposed states of the sacred writings of the Hindus and the proposed states of the sacred writings of the Hindus and the proposed states of the sacred writings of the Hindus and the proposed states of the sacred writings of the Hindus and the proposed states of the sacred writings of the sacred writings of the Hindus and the proposed states of the sacred writings of the sacred writings of the Hindus and the proposed states of the sacred writings of the sacred writings of the Hindus and the proposed states of the sacred writings of the sacred writings of the Hindus and the proposed states of the sacred writings of the sacred writings of the sacred writings of the sacred writings of the Hindus and the proposed states of the sacred writings of the sacred writings of the Hindus and the proposed states of the sacred writings of the sacred writings of the Hindus and the proposed states of the sacred writings of the sacred writings of the sacred writings of the Hindus and the proposed states of the sacred writings of the Hindus and the proposed states of the sacred writings of the Hindus and the proposed states of the sacred writing and the proposed states of the sacred writing and the sacred writi dus had convinced him that the original Hindu religion was theistic, and he became anxious to reform the creed and practice of his countrymen in this direction. From the perusal of the New Testament he found the doctrines of Christ more in harmony with his own opinions than any others which had come to his knowledge, and in 1820 he accordingly published a work entitled the Precepts of Jesus the Guide to Peace and Happiness, consisting chiefly of a selection of moral precepts from the Evangelists. Rammohun Roy, in his doctrinal views, was a Unitarian, or Arian, trinal views, was a Unitarian, or Arian, holding, however, the pre-existence and superangelic dignity of Christ. In 1833 he visited England as ambassador from the King of Delhi, and while there was seized with a fever, which proved fatal. Rámnád (räm-näd'), a town of India, presidency of Madras, near the Gulf of Manaar. It has a fort, a palace, a Protestant and two Roman Catholic churches. Pop. 14,000. Rán lagar (räm-nng'ur), a town of India, Benares district, Northwestern Provinces, about 2 miles

Northwestern Provinces, about 2 miles above Benares city. It is a considerable commercial center, and the residence of the Maharajah of Benares. Pop. about 10,000.

Rampant (ram'pant), in heraldry, standing upright npon its hind-legs (properly on one foot) as if

Rampant.

Rempent gardest-

attacking; said of a beast of prey, as the iion. It differs from salient, which means in the poeture of springing forward. Rampent gardant is the same as rempent, but with the animal looking full-faced. Rempent regardant is when the animal in a rampant position looks behind.

Rampart (ram'part), an elevation or mound of earth around a place, capable of resisting cannon-shot, and on which the parapet is raised. The rampart is built of the earth taken out of the ditch, though the lower part of the outer slope is usually constructed of masonry. The term in general usage includes the parapet itseif.

Ramphastos (ram-fas'tus), the generic name of the tou-

Rampion (ram'pi-un), Campanila Rapunculus, a plant of the nat. order Campanulacem, or beilworts, indigenous to various parts of Europe. Its root may be eaten in a raw state like radish, and is hy some esteemed for its picasant untty flavor. Both leaves and root may also he cut into winter sainds. Rampur (ram-por'), capital of a na-tive state of the same name, Northwestern Provinces of India, on the left bank of the Kosiia River, 18 miles E. of Moradabad. It is the residence of the nawab, and has manufactures of pottery, damask, sword-hiades, and jewelry. Pop. 78,758.—The state, which is under the political superintendence of the government of the Northwestern Provinces, has an area of 945 square miles and a pop. of 533,000.

Rampur Beauleah (be-a'ie-ii), a town of India, capital of Rajshahi district, Bengai, on the N. bank of the Ganges. It has a large traffic by river with the railway station of Kushtia on the opposite bank.

Pop. 21,589.

Ramree (rnm-re), or RAMEI ISLAND, in the Bay of Bengal, off the coast of Burmah, is 40 miles long and 15 in breadth. Produces rice, indigo,

Ramsay (ram'zē), Allan, a Scottish poet, born in 1686, at Leadhills, in Lanarkshire; died at Edinburgh in 1758. His father, who was superintendent of Lord Hopetoun's mines, died when Allan was yet an infant. He removed to Edinburgh in his fifteenth year and was apprenticed to a wig maker, an occupation which he followed till his thirtieth year. His poems, most of them printed as broadsides, soon made him widely known among all classes, and he now abandoned wig making, and com-

menced business as a bookseiler. He was the first to start a circulating library in Scotiand. In 1720 he published a coliection of his poems in one volume quarto. In 1724 the first volume of The Tee-Table Miscellany, a Collection of Songe, appeared. The rapid sale of this compilation induced Ramsay to publish another, entitled The Evergreen, being a Collection of Scote Poems wrote by the Ingenious before 1600, which was equally successful. His next publication established his fame upon a sure and lasting basis. This was The Gentle Shepherd (1725) — the best pastoral perhaps in any language. In 1728 a second quarto volume of his poems appeared; and in 1730 hls Thirty Fables, which concluded his public poetical labors. He did not give up his shop until within three years of his decease. He rendered great service to the vernacular literature has allier to the vernacular literature has all lite ular literature by editing and initating the old Scottish poetry, but his fame rests chiefly on the inimitable Gentle Shepherd.— His son Allan, born 1709, died 1784, became famous as a portrait painter in London. In 1767 he was appointed principal painter to George III. pointed principal palnter to George III.

Ramsay, Sir Andrew Crombie, geologist, born in Giasgow in
1814. He joined the Geological Survey

1814. He joined the Geological Survey in 1841; was appointed to the chair of geology at University College, London, 1848; was lecturer at the School of Mines 1851; president of the Geological Society 1862; director-general of the Geological Survey and of the Museum of Practical Geology from 1872 to 1881. He was the author of Physical Geology and Geography of Britain ato. He died and Geography of Britain, etc. He died

in 1891.

Ramsay, as the Chevalier Ramsay, was born in Ayr in 1686, died at St. Germain-en-Laye in 1743. After spending some time at the Universities of Edinhurgh and St. Andrews he went to Leyden. In 1710 he repaired to Cambray, where he was converted to the Roman Catholic faith hy Féneion. He procured the preceptorship to the Duke of Château-Thierry and the Prince of Turenne, and was afterwards engaged to superintend the education of Prince Charles Edward Stuart and his brother Henry, afterwards Cardinai York. He acquired distinction hy his writings, which are chiefly in French. The chief of these are a Life of Viscount Turenne, of these are a Life of Viscount Turenne, a Life of Féncion, the Travels of Cyrus, a romance, and a large work on the Principles of Natural end Revealed Religion.

Ramsay, Alle Williams, the hard, was Oct. 2, 1852, the gradue of at the Universities of Gusson and Tubinzen, and became Profes or at Clemistry at Unithe new aondou. versity College, atmospheric element argon was discovered by him in association with Lora Rayleigh, and he added to the the elements neon, krypton, and zenom the was knighted in 1902, and was considered one of the ablest chemists of the day. Died 1916.

Romedon (ramz'den), Jesse, opti

Ramsden (ramz'den), Jesse, optic-ian and philosophical in-strument maker, born at Hallfax, Yorkopticshire, in 1735; died at Brighton in 1800. He married a daughter of Dollond, the celebrated optician, and acquired a share of his father-in-law's patents. He gained great celebrity for his divided circles and transit instruments, and effected vast improvements in the construction of other instruments. He was chosen a fellow of the Royal Society in 1780, and of the Imperial Academy of St. Petershurg in 1794, and such was his reputation that he received orders for his instruments from every part of Europe.

Ramsey (ram'zi), a seaport on good from the season of the season of the season of the season of Man, 14 miles N. N. E. of Douglas. The attractive scenery, fine sands, promenade, and pier make it a favorite resort of tourists and pleasure-seekers. Pop. about

4729.

Ramsgate (ramz'gāt), a seaport and watering-place of England, county of Kent, in the Isie of Thanet, 67 miles east by south of London. The valley in the chalk cliffs that line this marked change took place in his charpart of the coast, while the newer por- acter. He demitted all his benefices ex-

tions occupy the higher ground on either side. It is a weli-built town, possesses a fine stretch of sand and a promenade pier, and is much frequented by visitors. The ha ..., which serves as a harbor of refuge the Downs, is nearly circular, comprises an area of the ut 50 acres, and includes a dry dock and a patent slip for the repair of vessels. It is protected by two stone piers 3000 and 1500 feet long, with an entrance of 240 feet. Shipbuilding and rope-making are carried on; there is some trade in coal and timber, and a considerable fishery. Ramsgate was formerly a member of the Cinque Ports, and attached to Sandwich; it is now a separate municipal borough. Pop. (1911) 29,005.

Ramson (ram'sun), Allium ursinum, a species of garile found wild in many parts of Britain, and for-

meriy cultivated in gardens.

Ramtek (riim'tek), a town of India,
Nagpur district, Central Provinces, 24 miles N. of Nagpur city, celebrated as a holy place, and the resort of great numbers of pllgrims. Pop. 7814.

Ramtil Oil (ram'tli), a bland oil similar to sesamum oil, expressed from the seeds of a composite annual herb, Guizotia oleifera, enitivated in Abyssinia and various parts of India. Ramus (ra-mus), Peter, or Pierre DE LA RAMÉE, a French iogi-cian and ciassical scholar, born in Vermandois in 1515; killed in the massacre of St. Bartholomew in 1572. He went to Paris about 1523, and studied under great difficuitles. He attacked Aristotie and the scholastics, and excited violent oppo-sition. In 1551 he was appointed royal professor of rhetoric and philosophy at In 1561 he became a Protestant. He published a Treatise on Logic in 1543, which obtained great success, as did also his other works on grammar, mathematics, philosophy, theology, etc. His doctrines were widely diffused. France, Eugland, and particularly Scotland were full of Ramists. His logic was intro-duced into the University of Giasgow by Andrew Meiville, and made considerable progress in the German universities. See Frog. Rana.

(ran-sa), Armand Jean LE Rance of the reformed order of La Trappe, born at Paris in 1626; died in 1700. county of Kent, in the Isie of Thanet, 67 heid no fewer than six benefices. Residmiles east by south of London. The ing at Paris, he gave himself up to a older parts occupy a natural hollow or ilfe of dissipation. In 1657, however, a

which have rendered his name famous. (See La Trappe.)

Ranch, a large farming area for the rearing of cattle and horses.

The word is derived from the Spanish, rancho, meaning mess-room, hut used in Mexico for a herdsman's hut and finally for a grazing farm. The business of ranching has iong been pursued in the thinly-settled region of the United States from the Mississippi westward, especially in Texas and the great plains of the West. The advance of the farming population is narrowing the ranching country, and threatens eventually to hring the ranching husiness to an end, farm animals replacing those of the

Rand, THE, or WHITE WATERS RANGE, the name given the gold mining trail of the Transvaal region, extending 25 miles on each side of Johannesburg, South Africa. The yield of gold here has developed untll now it surpasses any

nas developed until now it surpasses any other mining region of the earth.

Randal? (ran'dal), Samuel J., statesman, born in Philadelphia,
Pennsylvacia, in 1828. In 1862 he was elected to Congress, serving continuously until bis death. He was speaker of the House from 1876 to 1881. As much he used his influence in suiding the such he used his influence in guiding the House through the dangerous crisis produced by the uncertainty of the Presidential election of 1876. He died in 1890.

(ran'doif), EDMUND JEN-Randolph Williamsburg, Virginia, Aug. 10. 1753. He studied at William and Mary College and was admitted to the bar, becoming in 1775 the first Attorney General of Virginia. He helped to frame the constitu-tion of Virginia, was its governor 1786-88, and in 1787 a member of the convention that framed the Constitution of the United States. He entered Washington's Cabinet as Attorney General in 1789, and become Secretary of State in 1794. He died Sept. 13, 1813.

Randolph,
Virginia, in 1773. As member of Congress he was preëminent for his poetic cloquence, his absolute honesty, and the scathing wit with which he exposed every corrupt scheme. He died in 1833.

Range (rānj), in gunnery, the horizontal distance to which a shot or other projectile is carried. When a cannon lies horizontally it is called the point-biank range; when the muzzie is

cept the priory of Boulogne and the elevated to 45 degrees it is called the utabbey of La Trappe. Retiring to the most range. To this may be added the latter place in 1664, he began those re-ricochet, the skipping or bounding shot, forms which have madered his name with the place alevated from 2 to 6 demost range. To this may be added the ricochet, the skipping or bounding shot, with the piece elevated from 3 to 6 de-

Ranger (ran'jer), in England, forforest, appointed by the king's letters patent, whose business was to watch the deer, prevent trespasses, etc.; but now merely a government official connected with a royal forest or park. The word generally signifies a mounted soidier employed on foraging or exploring expeditions, or a forest keeper.

Range Finder, an instrument for jocating the position - direction and distance - of moving object, as a hostile war-vessel. Large guns, with an effective range of several miles, are often piaced behind an emhankment, and the gunners need some means of determining quickly and accurately the position of a vessel or other object which is to be fired at. system of triangulation is used, telescopes being placed on each side of the gun. the distance between them forming the baseiine of the triangle and the angles found with it and the object yielding the length and direction of the other lines. accurate information is attainable by these instruments and by their aid the waste of

projectiles is largely obviated.

Rangoon (rän-gön'), the capital of Lower Burmah, and the chief seaport of Burmah, is situated at the junction of the Pegu, Hlaing or Rangoon, and Pu-zun-doung rivers, about 21 miles from the sea. Since its occu-

Bank of Bengal, custom-house, Anglican and Roman Catholic churches, St. John's and Roman Catholic churches, St. John's Coliege, high-school, etc. A large and increasing commerce is carried on with British, Indian, and Chinese ports; and an extensive trade is conducted with inland towns as far as Mandalay. The chief exports are rice, timber, cotton, hides, gums and resins, mineral oil, ivory, precious stones; the imports being mainly precious stones; the imports being mainly manufactured goods. A number of rice-mills have been erected; there is a government, dockyard, and steam tram-cars have been introduced. Pop. 293,216.—The district of RANGOON produces rice, cot-

ton, catechu, gambier, etc.; has an area of 4236 sq. mlles, and pop. of 780,000.

Rangpur (rung - pör'), a district in the Rajshahl division of Bengal; area, 3486 sq. miles. This territory is flat and well-watered, the chief product being rice. RANGPUR, the capital, is situated on the Ghaghat river, 270 miles N. E. of Calcutta. Pop. about

Raniganj (rä-nē-gunj'), a town of India, in Bardwan district of Bengal, on the north bank of the Damodar river, 120 miles N. w. of Calcutta. It is notable chiefly for its bituminous coal, the seams of which are of great thickness. Pop. about 15,000

term rank and file thus comprising the whole body of the common soldiers.

Ranke (rån'kė), Leopold von, a German historian, born in 1795. He studied at Halle and Berlin, became a teacher in the gymnasium of Frankfurt-on-the-Oder in 1818, and professor of history at the University of Berlin in 1825. His first published work (1824) was a History of the Romance and Teutonic Nations from 1494, to 1535.

This was followed by other historical works, notably History of England in the Seventeenth Century (1859-68). He died May 23, 1886. died May 23, 1886.

pancy by the British in 1852 Rangoon In 1916 she was elected representative atpancy by the British in 1852 Rangoon has undergone such changes that it is practically a new town, and its population has increased fivefold. The principal streets are broad, and contain many large and not a few handsome buildings. There are the law-courts, post offices, Bank of Bengal, custom-house, Anglican and Roman Catholic churches, St. John's Catholic churches, St. John's labor and criticised the government for labor and criticised the government for falling to prevent the lynching of Frank H. Little, an Industrial Workers of the World leader, in 1917.

Rankin, a borough in Allegheny Co., Pennsylvania, in the vicinity of Braddock. It has steel, wire, chain,

and bridge works. Pop. 6042.

Rankine (rank'ln), WILLIAM JOHN
MACQUORN, clvii engineer,
born at Edlnburgh in 1820; died in 1872. He received his instruction in natural philosophy from Professor Forbes, his practical training as an engineer from Sir J. Macnelli, and he became himself professor of engineering at Giasgow University in 1855. His numerous contributions to the technical journals have been reprinted (London, 1881), and he was the author of text-books on Civil Engineering, The Steam Engine, Applied Mechanics, Shipbuilding, etc. He was especially successful in investigating mathematically the principles of mechanic especially successful in Investigating mathematically the principles of mechanical and civil engineering. He was also well known as a song writer.

Ransom (ran'sum), the money or price paid for the redemption of a prisoner, captive, or siave, or for goods captured by an enemy, and formerly a sum paid for prisoners of war. of great thickness. Pop. about 15,000.

Rank, a line of soldiers standing abreast or side by side: often used along with file, which is a line running from the front to the rear of a company, battalion, or regiment, the term rank and file thus comprising the whole body of the common soldiers.

Therefore, the members maintaining that they were seeking for the true church and its ordinances, and the Scriptures.

parts of the world, and unknown in hot Rankin, Jeannette, the first woman countries except at considerable elevations. They have radical or aiternate born at Missoula, Mont., in 1882; educated at the University of Montana, or irreguiar, often large and handsome School of Philanthropy, New York, and flowers, and fruits consisting of cnethe University of Washington at Seattle. species. They have usually poisonous qualities, as evinced by aconite and heliebore in particular. Some of them are objects of beauty, as the larkspurs, ranuncuius, anemone, and pæony. See next article.

Ranunculus (ra-nun'kū-ius), a genus

of herhaceous plants,
the type of the nat. order Ranunculacese.
They have entire, lohed, or compound
leaves, and usually panicled, white or
yeliow flowers. The species are numerous, and almost exclusively inhabit the
northern hemisphere. Almost all the specit is also used as a rich manure, and for northern hemisphere. Almost all the species are acrid and caustic, and poison-ous when taken internally, and, when externally applied, will raise hlisters. The various species found in the United States are known chiefly hy the common names of crowfoot, buttercup, and spearwort. R. fammüla and scelerātus produce a blister on the skin in about an hour and a half. Beggars use them for the purpose of forming artificial ulcers to excite the compassion of the public. R. Ficaria is the lesser celandine. R. aquatilis is the water crowfoot, a nutritive food for cattle.

Ranz-des-vaches (ranz-da-vash,) the and continued with that celebrated name of certain painter for six or eight years. The simple melodies of the Swiss mountaineers, commonly played on a long trumpet called the alpenhorn. They consist of a few simple intervals and bever sist of a few simple intervals, and have a beautiful effect in the echoes of the moun-

Raoul Rochette. See Rochette (Desiré Raoul). Rapallo (ra-pal'lo), a town of Italy, province of Genoa, on a small bay 18 miles E. S. E. of Genoa. It

is a winter residence for persons in deli-cate health. Pop. 5839.

Rape (rap), the carnal knowledge of a woman forcibly and against her will. By the English law this crime is felony, and is punishable with penal servitude for life. In the United States the crime is treated as a felony, and the punishment is imprisonment for life or a term of years.

Rape, a division of the county of Sus-sex, an Intermediate division be-

tween a hundred and a shire, and containing three or four hundreds. The like parts in other countries are called tithings, lathes, or wapentakes.

Rape (Brassica Napus), a plant of the cahhage family, cultivated in Europe and India for its seeds, from which oil is extracted hy grinding and pressure. It is also cultivated in England for the succulent food which its thick and fleshy stem and leaves supply to which oil is extracted by grinding and 1504 he visited his native town, and pressure. It is also cultivated in Eng-while there painted Christ Praying on land for the succulent food which its thick the Mount of Olives, a St. Michael, and a and fleshy stem and leaves supply to St, George, the last two of which are

There are about 30 genera and 500 sheep when other fodder is scarce. The species. They have usually poisonous oil obtained from the seed, which is much qualities, as evinced by aconite and heliebore in particular. Some of them are economical purposes, as for hurning in lamps, for luhricating machinery, in medicine, etc. The oil-cake is used as food for sheep and cattle, and as a fertilizer.

tis also used as a rich manure, and for this purpose it is imported into Britain in large quantitles. See Rape.

Raphael (rā'fa-el, raf'a-el; or RAF-FAELLO) SANZIO or SANTI, one of the greatest painters that ever lived, was born at Urhino, April 6, 1483. His father, Giovanni Sanzio, a painter of some merit, from whom young Raphael some merit, from whom young Raphael received his first instruction, died in 1494, and he was then intrusted to the care of an uncle. His studies, however, were not interrupted, and at the early age of twelve he was received into the studio of Perugino at Perugia as one of his pupils,

Raphael Sanzio.

master's work, and when he came to paint Independently he was seen to have acquired Perugino's manner. About this time the painting of the llhrary of the cathedral at Siena was intrusted to Pinturicchio, a fellow-pupil, and Raphael is said to have assisted in the work. In 'he ich

now in the Louvre. Towards the end of the same year he proceeded to Florence, attracted thitber by the fame of its numerous artists, and in this center of the bigbest artistic life of the time he studied diligently over a period of four years, with short intervals of return to his native city. In Florence he rapidly gained a wider knowledge of his art, and soon began to forsake the manner which he bad adopted from Perugino. The sources from which he sought and obtained the artistic knowledge which are tained the artistic knowledge which enabled him to develop his new style were varions. From Michaei Angeio he learned simplicity and strength of ontline, from Leonardo da Vinci he acquired grace of expression and composition, while from Fra Bartolommeo he gained a subtler depth of coloring, and from Masaccio a broader treatment of drapery and dramatic effects. During the last two years of his stay in Florence he painted, in what is known as his Florentine manner, many of what are now contained the artistic knowledge which entine manner, many of what are now considered his most important works. Of such may be mentioned the Madonna del Gran Duca (Figrance); Madonna del Giardino (Vienna); Holy Family (Madrid); Christ Bearing the Cross (Madrid); rid); Christ Bearing the Cross (Madrid);
Marriage of Joseph and the Virgin
(Brera, Miian); the Ansidei Madonna
(National Gallery); Madonna (helonging to Lord Cowper); Tempi Madonna
(Munich); and the Bridgewater Madonna (Bridgewater House). About
this time Pope Julius II had employed
Bramante in rebuilding St. Peter's and
in embellishing the Vatican, in which
work Raphael was invited to assist.
Here he executed the Disputa, or Dis-Here he executed the Dispute, or Dispute of the Fathers of the Church, on the wall of the second chamber, called the stanza della Segnatura, next to the great hall of Constantine. In this painting we recognize the transition to bis third we recognize the transition to bis third manner, which is stiil more clearly manifested in the School of Athens, the second painting in this chamber. Besides these he painted as Vatican frescoes (1508-11) the aliegorical figures of Theology, Philosophy, Justice, and Poetry, in the corners of the ceiling; the Fall of Adam, Astronomy, Apollo and Marsyas, and Solomon's Judgment, ail having reference to the four principal figures of the apartment; and, iastly, on the fourth wall, over the windows, Prudence, Temperance, and Fortitude; below the Jourth wall, over the windows, Frudence, Temperance, and Fortitude; below them the Emperor Justinian Delivering the Roman Law to Tribonian, and Gregory X Giving the Decretals to an Advocate, and under them Moses and an armed allegorical figure. After the accession of the new pope, Leo X, Raphael painted, tween the nucleus of an ovuic and the

in the stanza d'Eliodoro, his Leo the Great Stopping the Progress of Attila, the Deliverance of Peter from Prison, and, on the ceiling, Moses Victoing the Burning Bush, the Building of the Ack, the Sacrifice of Isaac, and Jacob's Dream. With the Configgration of the Borgo Extended by the Progress of Leo. Raphtinguished by the Prayers of Leo, Raphaei began the third stanza of the Vatican. aei began the third stansa of the Vatican. It was foiiowed by the Coronation of Charlemagne, Leo III's Vindication of Himself before Charlemagne, and the Victory of Leo IV over the Saracens at Ostia. During this time Rapbaei prepared designs for several palaces in Rome and other cities of Italy (notable among which were the series of designs in the Villa Farnesina to iliustrate the story of Cupid and Psyche), finished the Madonna for the church of St. Sixtus in Piacenza (now in Dresden), and in Piacenza (now in Dresden), and painted the portraits of Beatrice of Ferrara, of the Fornarina, of Carondelet (now in Engiand), and of Count Castiglione. It was probably at a later period that Raphael prepared for Augustino Chizi designs for the building and period that Raphael prepared for Augustino Ghigi designs for the building and decoration of a chapei in Sta. Maria del Popolo and for Leo X the ceiebrated cartoons for the tapestry of one of the chambers of the Vatican. Seven of these cartoons are now in the South Kensington Museum. To this period aiso beiong his easel-pieces of John in the Desert (of which there exist several copies); his Madonna and Child, on whom an angel is strewing flowers; a St. Margaret (Lonvre); the Madonna della Seggiola (Florence), and St. Cecilia (Boiogna). Raphaei's last and unfinished painting—the Transfiguration of Christ—is in the Vatican. Attacked by a violent fever, which was increased by improper treatment, this great artist died at the age of thirty-seven years, and was hurled with great pomp in the Pantheon. His tomb is indicated by his bust, executed by Naldini, and piaced there by Carlo Maratti. His hiography has been written by Vasari, Fuseii, Quatremère de Quincy, Passavant. Crowe and Cavaicaselle. by Vasari, Fuseii, Quatremère de Quincy, Passavant, Crowe and Cavaicaselle, and hy many others. He died at Rome, April 6, 1520.

Raphania (ra-fā'ni-a), a disease attended with spasm of the joints, trembling, etc., not uncommon in Germany and Sweden, and said to arise from eating the seeds of Raphanus Raphanistrum, or field radish, which often get mixed up with corn.

Raphanus. See Radish.

Talmudic literature was his father, who was chief rabbi at Worms. To perfect his knowledge he made extensive journeys through Italy, Greece, Palestine, Egypt, Persia, and Germany, where he was particular in visiting the towns which possessed learned Jewish schools. His most famous work is a Commentary on the Pentateuch; he also wrote commen-taries on the Prophets, the Talmud, and various treatises on miscellaneous subjects.

Rasht. See Resht.

Rask, RASMUS CHRISTIAN, a Danish philologist, born in 1787; died in 1832. After he had studied at the University of Copenhagen he journeyed through Sweden, Russia, and Iceland to increase his knowledge of northern lan-guages, with the result that he published guages, with the result that he published An Introduction to the Knowledge of the Icelandic or Old Norse Tongue (1811); an edition of Haldorsen's Icelandic Dictionary (1817); and an Anglo-Saxon Grammar (1817). In 1817-22 he made, at the expense of the government, a second journey to Russia, Persla, and India. ond journey to Russia, Persla, and India. Ing teeth, formed by the indentations of the then returned to Copenhagen in 1822, was appointed professor of literary history and subsequently professor of oriental languages and librarian to the university. During this period he published a Spanish Grammar, a work on the Frisian language, and a treatise on the Zendavesta, in which he showed that the language was closely akin to Sanskrit.

from the middle of the seventh century, when the liturgical books, etc., were revised under the patriarch Nikon. The Raskolniks clnng fanatically to the old and corrupted texts, and regarding the czar and the patriarch as the representatives of Antichrist, called themselves Staro-obryadtsy (old ritualists) or Starovertsy (followers of the old faith). They have split up into a large number of sects, which may be grouped generally in two classes; those who have a priesthood, and those who have none. The had betrayed, but recovered by aid of the tendency of the Raskolniks is communistic; and they have done much to nated in 1916 by enemies who feared his spread Russian influence hy advancing influence over the Czar. colonies on the outskirts of the empire. They have undergone much persecution at the hands of the government, but are allied to the civet, spread over a great now generally upmolested. They include extent of Asia, including Java, various

died in 1105. His first instructor in about one-third of the merchant class, Talmudic literature was his father, who and nearly all the Cossacks, but none was chief rabbi at Worms. To perfect of the noble or cultivated class. Their numbers are variously estimated at from 3 to 11 millions; the last number is perhaps not far from the truth.

Rasores (ra-so'rēz), gallinaceous birds or scratchers, an order of birds comprising the suborders Gallinacei, or fowls, turkeys, partridges, gronse, etc., and the Columbacei, or pigeons which are often made a distinct order. The common domestic fowl may be regarded as the type of the order. They are characterized by the toes terminating in strang claws for corrections. nating in strong ciaws, for scratching up seeds, etc., and hy the upper mandible being vaulted, with the nostrils pierced in a membranons space at its base, and covered by a cartilaginous scale. The rasorial birds are, as a rule, polygamons in habits; the pigeons, however, present an exception to this rule, and their young are also produced featherless and helpless.

Rasp, a coarse species of file, but having, instead of chisel-cut teeth, its surface dotted with separate protruding teeth, formed by the indentations of

For its sake the animal is often kept in captivity. It is savage and irritable, and when provoked can inflict a very severe hite.

Rastadt (rä'stat), or RASTATT, a town in the grand-duchy of Baden, on the river Murg, about 15 mlles southwest from Carlsruhe. Its only notable building is the old castie of the Margraves of Baden, and it derlves its chief modern importance from being a strong fortress commanding the Black

Forest. Pop. (1905) 14,404.

Rat, one of the rodent mammalia, forming a typical example of the family Murids or mice. The best known species are the (so-called) Norway or hrown rat (Mus decumānus), and the true English or hlack rat (Mus rattus). The hrown rat grows to about 9 inches in length, has a shorter tail than the other, small ears, is of a hrownish color above and white below, and is altogether a much larger and stronger animal, Supposed to have belonged originally to India and China, it became known in Europe only about the middle of the 18th century; hut it is now found in almost every part of the habitable globe, and where it has found a footing the black rat has disappeared. It is a voracious omnivorous animai, swims readily in water, breeds four or five times in the water, hreeds four or five times in the year, each hrood numbering about a dozen, and these again hreed in about six months. The hlack rat is usually about 7 inches in length, has a sharper head than the other, larger ears, and a much longer tail. It is much less numerous than the brown rat and more timid. To this Mus rattus variety heiongs the white rat, which is sometimes kept as a household pet. Various other animals are called rats. The rat is now helieved to disseminate the germ of the hubonic plague, and great numbers have hubonic plague, and great numbers have been killed in places where this disease has appeared. See Kangaroo-rat, Mole-rat, Musk-rat, and Volc.

Rata (ra'ta), a New Zealand tree. See Metrosideros.

(rat-a-fe'a), a fine spirituous ilquor flavored with the ker-Retefia neis of several kinds of fruits, particularly of cherries, apricots, and peaches. Ratafia, in France, is the generic name of liquors compounded with alcohol, sugar, and the odoriferous and flavoring principles of plants.

Ratan'. See Ratton Conce.

parts of India, Singapore, Nepāi, and other localities. Its perfume, which is secreted in a double pouch like that of in Peru and Bolivia, having an excesthe civet, is much valued by the Javanese. slvely astringent root. It is sometimes used as an astringent medicine in passing hloody or mucous discharges, weakness of the digestive organs, and even in putrid fevers. It has silver-gray foliage and pretty red starlike flowers. Written also Rhatany.

(rach'et), an arm or piece Ratchet of mechanism one extremity of which abuts against the teeth of a ratchet-wheel; called also a click, pawl, or detent. If employed to move the wheel it is called a pallet. See next article.

Ratchet-wheel, a wheel with pointed and angular teeth, against which a ratchet ahuts. used either for converting a reciprocating Into a rotary motion on the shaft to which it is fixed, or for admitting of

circular motion in one direction only, as in a winch, a capstan, etc. For both purposes an arrangement is employed similar to that shown in the figure, in which a ls the ratchet-wheel, b a reclprocating lever, to the end of which is joined the small ratchet or paliet c. This ratchet, when the lever is moved in one Ratchet-wheel.

direction, slides over the teeth, hut in returning draws the wheel with it. The other ratchet d permits of the motion of the wheel in the direction of the arrow, but opposes its movement in the other directiou.

Ratel (rā'tel), or Honey-Badger, a carnivorous quadruped of the genus Mellivora, and of the hadger family, found chiefly in South and East Africa, and in Iudia. The Cape or South

Honey-ratel (Mellivora ratel).

African ratel (M. ratel) averages about 3 feet in length, including the tail, which measures 8 or 9 inches in length. The fur is thick and coarse, the color is black

he ack on the under parts, on the muzzie, and one quantity is connected with two others honey of which it is very partial.

Rathenow, or RATHENAU (rä'tenou), a town of Prussia, province of Brandenburg, about 44 miles w. and hy N. of Berlin, on the Havei. It has a church of the 14th and 16th centuries and majors manufactures. 16th centuries, and various manufactures, especially of optical instruments, wooden wares, machinery, etc. Pop. 23,095.

(rath-kēl'), a market town of Ireland, in the Rathkeale county of Limerick, on the Deei, about 19 miles southwest of Limerick. Pop. 2549.

(rath'iin), or RACHLIN, an isiand of Ireiand, belonging Rathlin to the county of Antrim, 5 miles N. of Bailycastie. On it are the remains of a castle in which Robert Brnce took refuge when driven from Scotiand in 1306. The island is about 61 miles long by 11 proad.

Ratibor (rä'tē-bōr), a town of Prussia, in the government and 40 miles s. s. E. of Oppein, on the left bank of the Oder, about 10 miles from the Austrian frontier. It has a gymnasium and deaf and dumb institute, etc.; and manufactures of machinery and other

ron goods, sugar, paper, giass, tobacco, etc. Pop (1905) 32,690.

Ratification (rat-i-fi-kā'shun), in or approvai given by a person arrived at majority to acts done by him during arrived at the configuration of the conf minority, and which has the effect of establishing the validity of the act which

would otherwise have been voidable.

Ratio (ra'shi-ō), the numerical measure which one quantity bears to another of the same kind, expressed hy the number found by dividing the one by the other. The ratio of one quantity to another is by some mathematicians regarded as the quotient obtained by dividing the second quantity by the first; by others, as the quotient obtained by dividing the first by the second; thus the ratio of 2 to 4 or a to b may be called either

 $\frac{2}{4}$  and  $\frac{a}{b}$  or  $\frac{4}{2}$  and  $\frac{b}{a}$ . Proportion, in the mathematical sense, has to do with the comparison of ratios, proportion being the equality or similarity of ratios. Ratio in the above sense is sometimes called geometrical ratio, in opposition to arithmetical ratio, or the difference between two quantities. Ratio is of various kinds: Compound ratio. When the

iimhs, while the tail, upper surface, in such a manner that if the first be insides, and neck are of grayish hue. It creased or diminished the product of the is celebrated for the destruction it makes other two is increased or diminished in among the nests of the wild bee, to the the same proportion, then the first quantity is said to be in the compound retio of the other two.—Direct ratio. When two quantities or magnitudes have a certain ratio to each other, and are at the same time subject to increase or diminu-tion, if while one increases the other increases in the same ratio, or if while one diminishes the other diminishes in the same ratio, the proportions or comparisons of ratios remain unaitered, and those quantities or magnitudes are said to be in a direct ratio or proportion to each other.—Inverse ratio. When two quan-tities or magnitudes are such that when one increases the other necessarily diminishes, and vice versa when the one diminishes the other increases, the ratio or proportion is said to be inverse.

Ration (rashun), in the army and navy, the allowance of provisions given to each officer, non-commissioned officer, private, and sailor.

Rationalism (rash'un-ai-izm), the doctrine which affirms the prerogative and right of reason to decide on all matters of faith and morals whatever so-called 'authority' may have to say on the matter. Rationalism has had perhaps its chief center and widest success in Germany; hut its sonrce may fitty be found in the English deism of the seventeenth and eighteenth centuries. The first step taken by the English deists was to attempt to eliminate from the doctrines of Christianity whatever is above the comprehension of human reason; their next step was to discard from Christianity whatever in the way of fact was such as could not he verified hy any man's such as could not he verified hy any man's experience, and this ied to an attempt to get rid of Christianity altogether. German rationalism was also influenced hy the writings of Voltaire, the Encyclopedists, and the skeptical freedom of thought which obtained among the French sevents at the court (1740-86) of Fredrick the Great. It may be said to have begun with the translation into German of Tindal's Christianity as ald as the Creation (1741), the application as the Creation (1741), the application of a rationalistic method by Professor Wolf, of Halle University, to the philan-phy of Leihnitz (1736-50), and the al-vent of Frederick the Great. The initial movements of rationalism were followed movements of rationalism were followed up by such scholars and theologians as Eberhard, Eichhorn, Paulns, Teller, and Steinbart. With the beginning of the nimeteenth century, however, a new development occurred, when Schleiermacher

published in 1799 his Discourses on Religion. In his teaching he sought to es-tablish a distinction between the dry rationalism of the understanding and the spiritual rationalism of what he called the religious consciousness. Instead of accepting the Old and New Testaments as the supreme standard of religious truth Schleiermacher recognized them as only the recorded consciousness of the early church; instead of finding in revelation a divine mode of conveying doctrine, he found it to be that illumination which the human mind receives from historical personages who have a genius for religion. In this form of reconstructive rationalism he was followed by De Wette, Fries and Jacohi, and this second period continued until 1835. In this year Strauss published his Leben Jesu ('Life of Jesus') a work in which from the of Jesus'), a work in which, from the Hegelian standpoint, and in a destructive spirit, he discusses the origin of the New Testament. The movement which this originated has taken a tendency which is chiefly associated with scientific materialism, agnosticism, etc., and rationalism as a distinctive phase of religious controversy may he sald to have then

Ratisbon (rat'is-bon; German, Regensburg), a town of Bavaria, capital of the province of Oberpfalz or Upper Palatinate, stands on the right bank of the Danube, opposite the junction of the Regen, 65 miles N. N. E. of Munich and 53 miles S. E. of Nuremberg; 1010 feet above the sea. It is very irregularly huilt, and the streets are generally narrow and winding. The houses are more remarkable for their venerable appearance than for architectural merit, though some of them are imposing, having once heen residences of the mediæval nohies, and having towers the medieval nohies, and having towers intended for defensive purposes. There are, however, several spacious and handsome streets and squares, and numerous rats. It can easily be tamed.

The most remarkable public huildings are the cathedral, founded in the commercial name for the long trailing the commercial name for the long trailing trailing to the cathedral of the cathedral fountains. The most remarkable public huidings are the cathedral, founded in 1275, restored in 1830-38, a noble example of German Gothle, with a lofty and imposing front, flanked by two towers with open-work spires, and having a richly-sculptured portal; the Rathhaus, where the German diet held its sittings from 1645 to 1806; the Romanesque church of St. Emmeran; the palace of the princes of Thurn and Taxis (formerly the princes of Thurn and Taxis (formerly the dues) ahhey of St. Emmeran); the ducal and episcopal palace, the royal villa, the mint, theater, synagogue, public library, antiquarian museum, pleture-gallery, etc. The suhurb Stadt am Hof, on the op-

with Ratisbon by an old stone bridge. The manufactures embrace lead and colored pencils, porcelain and stoneware, hosiery, woolen cloth, leather, machinery, hardware, gloves, sugar, and tobacco. There are also breweries and other works. The river trade is important. About 6 miles to the east is the celebrated Walhalla (which see). Ratisbon existed under the Celtic name of Radasbona in pre-Roman times, and was a Roman frontier fortress under the name of Cratra Regina. Subsequently it hecame the residence of the old dukes of Bavaria, rose to the rank of an imperial city, and continued long to be the chosen seat of the imperial diets. The sieges which it has stood number no less than seventeen. Pop. (1910) 52,624.

Ratitæ (ra-tl'te), Huxley's second division of the class of Aves are high the other two heins the Saurusse.

r birls, the other two heing the Saurure and Carinate. See Ornithology.

Ratlam (rat'lam), a native Indian state, governed by a rajah and under the British Central Indian 1774 Agency; area, 729 sq. miles; pop. 87,314. It has a capital of the same name, which is the center of the Malwa opium trade. Pop. 36,321.

Ratlines (rat'linz), small lines which traverse the shrouds of a ship horizontally, at regular distances of about 15 to 16 inches, from the deck upwards, forming a variety of ladders reaching to the mast-heads.

Ratnagiri (rut-ni'jē-re), a maritime district of India in district of the Bombay

the Konkan division of the Bomhay Presidency. Are, 3922 sq. miles; pop. 1,167,927.—RATNAGIRI, the capital, on the Malahar coast, 170 miles s. of Bomhay. Pop. 16,094.

Rat-snake, a snake destitute of poi-

stems of various species of palm of the genus Calamus, such as C. Rotang, C. rudentum, C. verus, etc., forming a considerable article of export from India and the Eastern Archipelago. They have all perennial, long, round, solid, this contract and the complete the statement of the contract of the contr jointed, unhranching stems, extremely tough and pliable. All the species are very useful, and are employed for wickerwork, seats of chairs, walking-sticks, thongs, ropes, cables, etc.

1808, died in 1873. He practiced as an advocate in his native Piedmont; in 1848 was returned as deputy to the Chamber

Rattlesnake (rat'i-snak), a name of venomous American snakes of the genus Crotdlus, family Crotalldæ, distinguished from the ether members of the family by the tail terminating in a series of articulated horny pieces, which the animal vibrates in such a manner as to make a rattling sound. The function of the 'rattle' is dubious. The rattlesnake is one of the most deadly of poisonous servents the most deadly of poisonous serpents,

Rattlesnake (Crotalus durissus)

but hogs and pecearies kill and eat it, finding protection in the thickness of their hides and the depth of their layers of fat. A number of species belong to the United States and Mexico. East of the Mississippi the C. horridus, or banded rattlesnake, is the best known and most dreaded species. It is naturally a sluggish animal, ready to defend itself but seidom commencing the attack. It feeds on rats, squirrels, small rabbits, etc., and reaches a length of 5 or 6 feet. Other species are the C. durissus, or striped rattlesnake, found from Mexico to Brazil; C. adamanteus, the diamond rattlesnake; C. lucifer, the western black rattlesnake; C. confluentus, the prairie rattie-snake; C. cerastes, the horned rattlesnake of the American deserts. Other rattle snakes belong to the allied genus Candisona, as C. tergemina, the black rattlesnake; C. miliria, the ground rattlesnake.

Rattlesnake-root, a name for Poly-găla Senega, an American plant used to cure the bite of the rattlemake.

29-U-5

Rattlesnake-weed, the American plant Eryngium virginicum, used as a cure for the bite

in 1849 practically head of the government. He became prominently unpopular in 1862 on account of his opposition to Garibaidi's advance on Rome.

Rattlesnake.

Rattlesnake. the royal lackers, modeled a bust of the queen, and in 1804 went to Rome, where he made the acquaintance of Thorwaidsen and Canova, and obtained the patronage of Wilheim von Humboldt. He received an invitation in 1811 from the king of Prussia to design a monument of Queen Louisa, and produced a making the stabilished the fame nobie work which established the fame of the artist. From this time onwards he was the scuiptor of an immense number of works in all the branches of the statuary art. He was especially great in ideal figures and in portraiture. Among his chefs d' œuvre may be mentioned the monument of King Frederick William III and Queen Louisa in the Charlottenburg mausoleum, the colossal equestrian statue of Frederick the Great at Berlin. having the base surrounded by groups of his most distinguished contemporaries, and forming altogether one of the most notable monuments in Europe; the six colossal figures of Victory in the Waihalla, and a group representing Moses with his hands supported by Aaron and Hur.

Ravaillac (rå-vå-yåk), François, the murderer of Henry IV of France; born in 1578. He commenced life as valet to an attorney, and afterwards became attorney's clerk, and sehoolmaster. He afterwards took service in the order of the Feuillants, but was expelled as a visionary. His various disappointments and his religious fanaticism led him to plan the assassination of Henry IV, which he successfully accomplished May 14, 1616. Upon this he was seized, horribly tortured, and put to death.

Ravelin (rav'lin), a detached tri-engular work in fortification, with two embankments which form a projecting angle. In the figure BB is the ravelin with A its redout, and C C its ditch, D D being the main ditch of the fortress, and E the passage giving access from the fortress to the ravelin.

(rā'vn), a large bird of the Baven (ravn), a large genus Corvus (C. corax). Its plumage is entirely black; it is above 2 feet in length from the tip of the bill to the extremity of the tail, and about 52 inches from tip to tip of the extended wings. It can be taught to imitate human speech, and in a domes-

Ravelin.

tic state is remarkable for its destructiveness, thievisbness, and love of glittering things. It flies high, and scents car-rien, which is its favorite food, at the distance of several miles; it feeds also on fruit, small animals, etc. It is found in every part of the giobe.

Ravenala (rav-e-na'la), a fine large palm-like tree of Mada-gascar, order Musacem (plantains), with leaves 6 to 8 feet iong. It is called travelers' tree, because of the refreshing water found in the cup-like sheaths of the leaf-stalks. Its leaves are used for thatch and the leaf-stalks for partitions. The seeds are edible and the blue pulpy the seeds are edible and the blue pulpy. fiber surrounding them yields an essential oil.

Ravenna (ra-ven'na), a town of Italy, capital of the province of the same name, on the Montone,

St. Apollinare ad Classem, Ravenna.

general regular and spacious. The principal edifices are the eathedral, founder in the fourth but rebuilt during the seven teenth century, consisting of nave and aisles with a dome, and adorned with some of Guido's finest paintings; the ancient baptistery, an octagonal structure; the church of San Vitale, an octagonal building with a large dome in the pure Bysantine style, one of the earliest of Christian churches, having been consecrated in 547; the Basilica of San Giovanni Evangalista, founded in 414, but much eltered by restoration; the shurch of San altered by restoration; the church of San Apoilinare Nuovo (or San Martino), an excellent specimen of the ancient basilica; the mausoleum of the empress Gaila Placidia, daughter of Theodosius the Great, dating from the fifth century; the palace of Theodoric, king of the Ostro-Goths; the tomb of Dante; the town-house, library, museum, etc. The manufactures are of little importance. Its harbor was in early times large enough to contain the fleats of Augustus but it amountain alternative in the contain the state of Augustus but it amountain alternative transfer in the contain t fleets of Augustus, but it gradually silted up. . It is now connected with the Adriatic by the Canaie Navigiio at Porto-Corsini. Ravenna is an ancient place, and during the decline of Rome, A.p. 404, Honorius made it the seat of the Western Empire. In his reign and the regency of his sister Placidia it was adorned with many of its nobiest edifices. Thereafter it fell into the hands of Odoacer, who in his turn was expelled by Theodoric, under whom it became the capital of the Goths. It was recaptured by Belisarius, who made the town and its territory an exarchate. This exarchate was terminated by Astoiphus, king of the Lombards, who made Ravenna the metropolis of the Longobardic Kingdom in 752. Pepin and Chariemagne, having succeeded in expelling the Lombards, made a present of Ravenna and its exarchate to the pope, under whose control it remained till the year 1860. Pop. 35,543, or as commune 64,031. The province has an area of 715 square miles; pop. 235,485.

Ravenna, a viliage, capital of Portage Co., Ohio, 38 miles s. E. of Cieveland. It has iron works, carriage

It bas iron works, carriage and hearse factories, and other industries. Pop. 5310.

Ravensburg (rä'vens-börg), an old town of Würtemberg, in a valley on the Schussen, 22 mlies E. N. E. of Constance. It is irregularly built, and has manufactures of paper, silk, flax, cotton, etc. Pop. 14,614.

from Cambridge. In 1611 he published a collection of twenty-three part-songs, under the titie of Meliemata; in 1614 appeared another collection of part-songs, prefixed by an essay; and in 1621 he published his Whole Book of Peelme, containing a tune for each of the 150 psaims, harmonised in four parts by all the great musicians of the period musicians of the period.

Rawalpindi (rä'wäi-pin'de), a town Punjab, capital of the district of its own name, situated in the doab formed by the Indus and the Jhilam. The barracks, capable of accommodating 2500 soldiers, are separated from the native town by the smail river Leh. It has a good bazaar and a thriving transit trade between Hindustan and Afghanistan. Pop. 87,-**688.** 

(ra'vich), or RAWITSOH, a town of Prussia, in the goy-Rawicz ernment and 55 miles south of Posen. It has manufactures of machinery, furniture, etc., and a trade in corn, cattle, and wooi. Pop. (1905) 11,403.

Rawlinson (ra'iin-sun). GEORGE,

Rawlinson at Trinity College, Cambridge; took a first-class in classics; became public examiner in 1854; preached the Bampton Lectures in 1859; was elected Camden professor of ancient history in 1861, and made a canon of Canterbury in 1872. Besides various short works on antiquity he published a translation of Herodotus with a commentary (1858-60);
The Five Great Monarchies of the Ancient Eastern World (4 vols. 1862-67), tollowed by the Sisth (1873) and the Seventh Oriental Monarchy (1876); History of Ancient Egypt (2 vols. 1881);
Egypt and Babylon (1885); Phonicia (1889), etc. He died Oct. 6, 1902.

Development Sir Henry Creawicke.

Rawlinson, SIR HENRY CRESWICKE, brother of the above, born in 1810; educated at Ealing School; entered the Bombay army in 1827; went on a dipiomatic mission to Persia in 1833; proceeded afterwards to Afghanistan as political agent; became consul at Bagdad in 1844; a member of the Indian Council in 1858; sat in the House of Commons in 1865-68; and was appointed president of the Royal Geographical Society 1871-76. He published A Commentery on the Cuneiform Inscriptions of Babylon and Assyria (1850); Outline of the History of Assyria (1852); Notes on the Early History of Babylon (1854); and the Cuneiform Inscriptions of Western Asia, edited in association with E. Norris and G. Smith (5 vois. 1861 70). He was made a baronet in 1891 and died March 5, 1895.

Rawmarsh (ra'mārsh), a town of Engiand in Yorkshire, in the south of the West Riding, 2 miles from Rutherham, with iron-works and collieries. Pop. (1911) 17,190.

Rawtenstall (ra'ten-stai), a town of Lancashire.

(ra'ten-stai), a town of Lancashire, England, 8 miles north of Bury, with cotton and woolen manufactures and coal mines. Pop. (1911) 80,516.

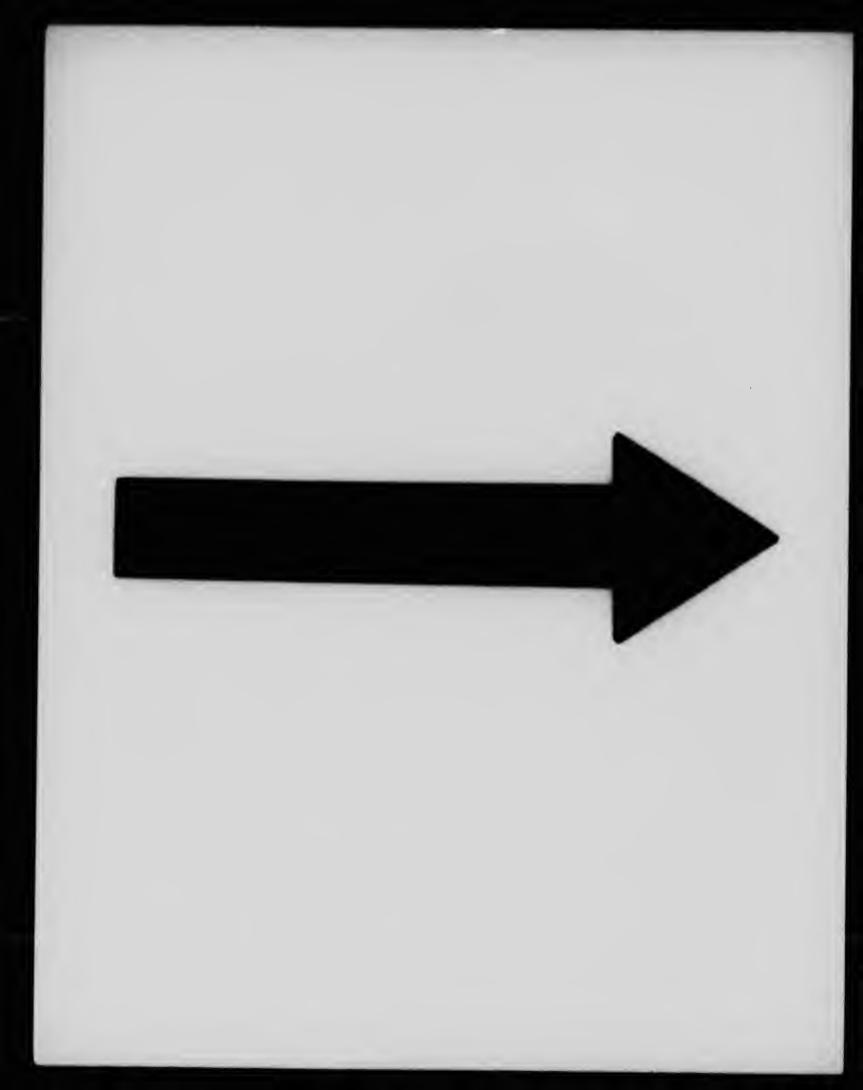

Ray (rā), a family of elasmobranchiate fishes, including the skate and allied forms, recognized by the flattened body and by the extreme broad and fleshy pectoral fins, which seem to be mere continuations of the body. These fishes produce large eggs which are in-

RAYS 1. skate (top view); 2. same form below; 3, thorn-back

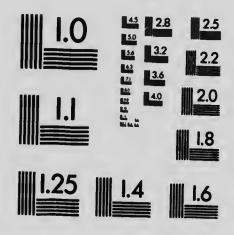

closed in cartilaginous capsules quadrilateral in form, with processes at the corners, and known familiarly as 'mermaids' purses,' ctc. The most common members of this group are the thornback ray or skate (Raia clavata), so named from the curved spines which arm the back and tail; and the common gray or blue skate (R. batis), which possesses an acutely pointed muzzle, the body being somewhat lozenge-shaped, and the color ashy-gray above. The starry ray (R. radidia) is so-called from having a number of spines on its upper surface rising from rayed or starlike bases; it reaches a length of 30 inches. The sting ray (*Trygon pastindea*) occurs in the Mediterranean sea, and has the tail armed with a long spine.

Ray, John, an English naturalist, born in 1628; died in 1705. He was educated at Cambridge, where he became a fellow. He was elected a member of the Royal Society. His chief scientific works are: Methodus Plantarum Nova

(London, 1703, 8vo); Historia Plantarum Generalis (three vols. folio, 1686-1704); Synopsis Methodica Animalium Quadrupedum et Serpentini Generis Vul-garium (1693. 8vo); Historia Insecto-rum (1710, 4to); Synopsis Methodica Avium et Piscium (1713, 8vo); the Ornithologia of Willughby, arranged and translated (1676, three vols.); also an edition of his friend's Historia Piscium (1686, two vols. folio). Besides his numerous scientific writings, Ray published several works on divinity and other subjects, the best known of which are: The Wisdom of God Manifested in the Works of the Creation, a work which has run through many editions; Collection of English Proverbs; Collection of Travels and Voyages, etc. In 1844 a society named after Ray, the Ray Society, was formed in London for the promotion of natural history by the printing of original works, new editions, rare tracts, translations, etc., relating to botany and

raisiations, etc., relating to botally and zoology, and which has issued a large number of valuable works.

Rayleigh (rā'h), John William Strutt, Lord, born Nov.

12, 1842, was educated at Trinity Coliege, Cambridge, where he was senior wrangler and first Smith's prizeman in 1865. He was president of the British Association in 1884-85, was professor of experimental physics at Cambridge, and succeeded Professor Tyndall as professor of natural philosophy at the Royal In-stitution. With Prof. Ramsay he dis-covered a new gaseous element, argon, for which they received the \$10,000 Hodgkins prize. They subsequently discovered the rare element krypton.

Raymond (rā'mond), HENRY JARVIS, journalist, was born at Lima, New York, in 1820. He became managing editor of the New York Tribune in 1841, and founded the New York Times in 1851. Elected to the Assembly in 1849, he was made speaker, was subsequently elected lieutenant governor of New York, and in 1864 was elected to Congress. He died June 18, 1869.

(rā-nö-ar), François Juste Marie, a French Raynouard poet and philologist, born at Brignoles, Provence, in 1761; died in 1836. He studied for the har; was elected as a deputy to the Legislative Assembly; took part in the revolution and the affairs of the first empire; and hecame a member of the Corps Legislatif. He wrote several tragedies, such as Scipion. Don Carlos, Charles I, and Les Templiers, but he is chiefly remembered as a philologist who revived the study of Provençal by his

dours (1816-21, six vols. 8vo); Levique Roman, ou Dictionnaire de la Langue des Troubadours, and a Comparative Grammar of the Latins and Romancists.

Razor (razur), the well-known keenedged steel instrument for shaving off the beard or hair. The edge and back of the hlade are more or less curved, and the sides are slightly hollowed in grinding. It is usually made with a tang, which is fastened to the handle hy a rivet. The handles are made of a great variety of materials. The great center of the razor manufacture has long been Sheffield, though great numbers of razors are now made in Germany and the United States. The savages of Polynesia still use two pieces of flint of the same size, or pieces of shells or shark's teeth ground to a fine eage. See Safety Razor.

Razor-back, one of the largest species of the whale tribe, the Balænoptera or Rorqualus borealis, the great northern rorqual. See Rorqual.

Razor-bill, an aquatic bird, the Alcatorda or common auk. See Auk.

Razor-fish, a species of fish with a prized for the table. It is the Coryphæna novucula.

Razor-shell (Solen), a genus of lamellibranchiate mollusca, forming the type of the family Solenidæ. They are common on both sides of the Atlantic; the shells are subcylindrical in shape; the hinge-teeth number two on each valve; and the liga-ment for opening the shells is long and external in position. The mantle is open external in position. The mantle is open in front, to give exit to the powerful muscular 'foot,' used by these molluscs for burrowing swiftly into the sandy coasts which they inhabit. The familiar species are the Solch siliqua, S. ensis, S. vagina, S. marginatus, and S. pellucidus.

Razzi (rât'sē), GIOVANNI ANTONIO (GIANANTONIO), surnamed Sodoma, an Italian painter, horn in 1479 at Vercelli in Piedmont: died in 1549 or at Vercelli in Piedmont; died in 1549 or 1554. At an early age he was brought to Siena, and as most of his life was spent there he is considered one of the painters of the Sienese school. He painted chiefly in fresco, and was employed by Julius II to decorate in the Vatican. hut his best

work is in the churches of Siena.

Ré, or Rhé (rā), Ile de, an island of France, in the Bay of Biscay, about 2 miles off the coast of department Charente-Inférieure, 6 miles west of Rochelle; greatest length, 18 miles; breadth, nearly 4 miles; area, 18,250 acres. The coasts Chein des Poesies Originales des Troubs- on the south and west are lofty and pr.

(rē'zn), a faculty of the mind by which it distinguishes Reason truth from falsehood, and which enables the possessor to deduce inferences from facts or from propositions, and to combine means for the attainment of particular ends. Reason is the highest facular ends. Reason is the highest fac-ulty of the human mind, by which man is distinguished from brutes, and which enables him to contemplate things spiritual as well as material, to weigh all that can be said or thought for and against them, and hence to draw conclus is and to act accordingly. In the le age of English philosophy the terms reason and age of understanding are sometimes nearly identical, and are so used by Stewart; but in the critical philosophy of Kant a broad distinction is drawn between them.

Réaumur (rā - ō - mir), RENÉ AN-TOINE FERCHAULT DF, a French physicist and naturalist, born in 1683 at La Rochelle; died in 1767. He is celebrated for the invention of an im-proved thermometer which proved thermometer, which he made known in 1731 (see Thermometer), in the scale of which the space between the freezing point and the boiling point of water is divided into 20 degrees. He also discovered the postelain named from him. His chief work is the Mémoires pour servir à l'Histoire Naturelle des

Insectes, 1734-42.

Rebate (re'bat), the term applied to a discount made to a purchaser in consideration of a cash or prompt payment; in the United States also popularly applied to discriminations made by common carriers in favor of large shippers: It is claimed that many corporations have been huilt up by secret arrangements with railroad and shipping companies, and that even outside the trusts rebate agreements have been made. Rebates in this restricted sense are illegal in the United States. (rē'bek), a medi-Rebec eval stringed instrument somewhat similar to the violin, having prop-

rangement the loose straw is caught and played with a bow. It was of Oriental origin and was introduced by the Moors

Rebellion (re-bel'yun), the taking up of arms, whether by natural of the arms by which it was compressed. Subjects or others, residing in the country. Other apparatuses are constructed so as against a settled government. By interto bind with cord, straw rope, etc. See adjusted a considered a criminal considered considered a criminal considered according to the considered foreigners. When a rebeliion has attained such dimensions and organization as to make of the rehel party a state de facto, and its acts reach the dimensions of war de facto, it is the custom of the state to yield to the rebels such belligerent privileges as policy and humanity require, and to treat captives as prisoners of war, etc.

> (re'bus), a group of words or a phrase written by figures or Rebus pictures of objects whose names resemble in sound the words or the syllables of which they are composed; thus, 'I can see you' might be expressed by pictures of an eye, a can, the sea, and a ewe.
>
> Recall (rc-kal'), in politics, the power of the people to dismiss from

> office an unsatisfactory public servant. A number of constituents—usually not less than one-fourth—must petition for a recall election, naming some person as successor. Other petitioners may present other names. The election is then held with the effection of the control of the held, with the offending officer as one of the candidates. In the United States the principle of recall has been adopted by many cities and a number of states. number of cities have used the recall against their executives and councilmen, among them Los Angeles, Seattle, Tacoma and Wichita. The chief grounds for the recall are incompetency, corrupt conduct, and failure to respond to the popular will. The advocates of the recall claim that it gives to the people the im-mediate means of aholishing abuses and makes officers more keenly conscious of their duties as public servants. The related questions of the Recall of Judges and Recall of Decisions are warmly advocated by those who seek to reform the character of the American judiciary, claiming that the courts have assumed political and legislative power and have shown themselves in sympathy with special privilege more than with the people. The Recall of Decisions is a popular referendum for court declarations that the tests of legislations. tions that acts of legislature are unconstitutional. It was a prominent issue in the presidential campaign in 1912.

Récamier (rā-kā-mi-ā), JEANNE FRANÇOISE JULIE ADÉerly three strings tuned in fifths. and LATOE, whose maiden name was Bernard,

was born at Lyons in 1777; died in 1849. ished by penal servitude or by imprison-At the age of sixteen she went to Paris, and was there married to Jacques Récamier, a rich hanker, more than double her own age. From this time her aim was to surround herself with personal admirers, From this time her aim was to and to attract to her salon the chief personages in French literature and politics. Her hushand becoming hankrupt, she went to reside with Madame de Staël in Switzerland, but in 1811 was banished from Paris by Napoleon on account of her intimacy with his enemies. At the downfall of Napoleon she returned to Paris and again opened her salon, which as before continued to be a resort of men of inteilect till her death. She had very inti-mate relations with Benjamin Constant and Chateaubriand.

Recanati (rā-ka-nā'tē), a town of Italy, province of Macerata, situated hetween Ancona and Rome. It contains many fine palaces, a Gothic cathedral, and a monument to Leopardi, who was horn here. Pop. 14,590.

Recaption (re'kap-shun), in law, the retaking, without force or violence, of one's own goods, chattels, wife, or children from one who has taken them and wrongfully detains them.

(re-set'), a written acknowledgment or account of some-Receipt thing received, as money, goods, etc. A receipt of money may he in part or in full payment of a deht, and it operates as an acquittance or discharge of the debt only as far as it goes. In Britain if a receipt for a sum of £2 or upwards does not bear the penny government stamp it is inadmissible as evidence of The stamp may be either adhesive or impressed on the paper. In the United States during and after the civil war receipts required internal revenue stamps, hut this tax was abolished in 1870.

Receiver (re-sev'er). a person specially appointed by a court of justice to receive the rents and profits of lands, or the produce of other property, which is in dispute in a cause in that court. The name is also given to a person appointed in suits concerning the estates of infants, or against executors, or between partners in business, or insolvents, for the purpose of winding up the concern.

Receiver Stolen 0f Goods,

one who takes stolen goods from a thief, knowing them to be stolen, and incurs

ment.

Recent, or Post-Glacial, a geoepoch which extends from the close of the Ice Age (or Pleistocene) to the present day. It is also called the Human, as the implements and weapons of man are its most characteristic and important fossils. Nevertheless, there is much evidence to show that in Europe, at least, man ex-isted in Pleistocene time. In America the existence of man has not heen so successfully traced. The principal sources of our knowledge of the epoch are the peat bogs, the calcareous formations and red earth of caves, the silt of fresh-water lakes, the gravel terraces of existing rivers, and the finer alluvial deposits.

Rechabite (rek'a-hit), among the ancient Jews, one of a family or trihe of Kenites whom Jonadab, the son of Rechab, bound to abstain from wine, from huilding houses, from sowing seed, and from planting vines (see Jer. xxxv. 6, 7). In modern application the Rechabites are a benefit society composed of total abstainers.

Recife (re-so'fa), or PERNAMBUCO, capital of the state of Pernambuco. The city, called the 'Venice of America,' is located at the mouths of the rivers Beheribe and Capaberibe, lying between the two farther shores of both rivers. It is the nearest South American port to Europe, and has an extensive maritime trade; it is the landing place for two trans-atlantic cahles and a coast-line cable. Pop. (1913) 125,000; with suhurhs, 225,000.

Reciprocal (re-sip'ru-kal), a term in mathematics. The reciprocal of a quantity is the quotient resulting from the division of unity by the quantity: thus, the reciprocal of 4 is 1/4, and conversely the reciprocal of 1/4 is 4; the reciprocal of 2 is 1/2, and that of

a+x is-

Reciprocity (res-i-pros'i-tl), a term in economics commonly applied in international relationships to the arrangement whereby two nations mutually agree to import to each other certain goods, either duty free or with duties which are equivalent. It has been frequently applied of late years in tariff relations between the United States and other countries, and in the Tariff hill of 1909 is a maximum and minimum clause the guilt of partaking in the crime. In as a means of obtaining trade concessions the United States the penalty is fixed by from foreign countries, on the reciprocal statutes in the several States; in Britain, principle of granting similar concessions. if the theft amounts to felony, it is pun- A bill in favor of reciprocity in trade

with Canada was passed by Congress in 1911, but the measure was rejected by Canada. See Free-trade.

Recitative (res-i-ta-tēv'), a species of vocal composition which differs from an air in having no definite rhythmical arrangement, and no decided or strictly constructed meiody, but approaches in tonal succession and rhythm to the declamatory accents of ianguage. It is used in operas, oratorios, etc., to express some action or passion, or to relate a story or reveal a secret or design. There are two kinds of recitative, unaccompanied and accompanied. The first is when a few occasional chords are struck hy an instrument or instruments to give the singer the pitch, and intimate to him the harmony. The second, which is now the more common, is when ail, or a considerable portion, of the instruments of the orchestra accompany, the singer.

Reclamation (rek-la-mā'shun), the reciaiming to fertillty of arid and semi-arid iands. A reclamation act was passed by the United States government in 1902, under which the government is building irrigation works and selling the water thus obtained to settiers at prices sufficient to repay the cost of construction, the funds set aside for this purpose heing the receipts from the saie of public lands. As a result ahout \$60,000,000 has heen received and \$48,000,000 spent up to 1910. The total cost of all irrigation projects now in view is estimated at about \$120,000,000, and the amount of land to be reclaimed over 3,000,000 acres. The cost per acre is less than \$40.

Reclus (rè-klü), Jean Jacques Elisée, a French geographical writer, born in 1830. He ieft France in 1851 and spent several years in travei, afterwards publishing a great number of works, the results of his voyages and geographical researches. Among his chief works are La Terre, the English edition of which, The Earth, has been very popular, and an exhaustive Géographic Universelle, which, voluminous as it is, he lived to complete. Being an extreme democrat, he hecame involved in the Paris commune of 1871, and was sentenced to transportation for life, hut was amnestied in 1879. He earned a certain notoriety from his extreme views on social questions. He died July 4, 1905. He had three hrothers, two of them writers of some distinction and one a distinguished surgeon of Paris, and three sisters who engaged in literary work.

Recognizance (re-kog'ni-zans), in law, an obligation of record which a man enters into before some court of record, or magistrate duly authorized, with particular conditions; as to appear at the assizes or quarter-sessions, to keep the peace, etc.

Recollet (rek'o-iā), or Rec'ollect, Friars or Nuns, the name given to a reformed body of Franciscans. The society was founded in Spair, and thence spread throughout Europe, so that in France, before the Revolution, they had 168 houses. The order still exists at a few places.

Reconnaissance (re-kon'a-sans), in military affairs, an examination of a territory or of an enemy's position, for the purpose of directing military operations. In future wars flying machines are likely to be used for this purpose. The term is also used in geodetics, etc., a reconnaissance being an examination of a region as to its general natural features, preparatory to a more particular survey, as for determining the location of a road, a railway, a canai, or the like.

Record (rek'ord), specifically, an official copy of any writing, or account of any facts and proceedings, whether public or private, entered in a book for preservation. In a popular sense the term records is applied to all public documents preserved in a recognized repository. The public records of Engiand have been regularly preserved since 1100. In 1857 the master of the rolls began the publication of the valuable series of chronicies and memorials known as the Roils Series. The records or archives of the United States are easily accessible, and proper recommendation will open them to any one who wants to use them for scientific purposes. In the legal sense of the term records are authentic testimonies in writing of judicial acts and proceedings, contained in rolls of parchment and preserved, the courts of which the proceedings are thus preserved being called courts of record. In Scots law the record consists of the written statements or pleadings of parties in a litigation, and the 'closing of the record' is a formal step, sanctioned hy the judge, after each party has put forward all he wighes to say hy way of statement and answer.

Recorder (re-kor'der), in England, the chief judicial officer of a borough or city, exercising within it, in criminal matters, the jurisdiction of a court of record, whence his title is derived. The appointment of recorders is

right angles and its opposite sides equal. Every rectangle is said to be contained

or sublimation, hy which the fine parts of a substance (as some kind of spirits) are separated from the grosser. To rectify liquors, in the spirit trade, is to convert the alcohol produced hy the distiller into gin, hrandy, etc., by adding flavoring materials to it. Thus in order to convert the spirlt into London gin, juniper berries and coriander seeds are added previous to the last rectlication. Enanthic ether and other things give the flavor of hrandy.

(rek'tur), in the English Church, a clergyman who has in the English the charge and cure of a parish, and has the parsonage and tithes; or the parson of a parish where the tithes are not impropriate. The heads of Exeter and Lincoln colleges, Oxford, are also so-called, and the chief elective officer of the Scottish universities receives the same title. In Scotland it is also the title of the head-master of an academy or important public school.

(rek'tum), in anatomy, the third and last part of the Rectum large intestine opening at the anus: so named from an erroneous notion of the old anatomists that it was straight.

Recurring Series (re-kuring), in algebra, a series in which the coefficients of the successive powers of x are formed from a certain number of the preceding coefficients according to some invariable law. Thus Several redans connected by curtains x + (x + 1) + (x + 2) + (x + 2) + (x + 2) + (x + 3) + (x + 4) + (x + 4)

Recusant (rek'ū-zant), in English history, after the Reformation, a person who refused or neglected to attend divine service on Sundays and

vested in the crown, and the selection is confined to barristers of five years' standing. The same name is given to similar legal functionaries elsewhere, as in some American cities.

Recorder, a musical instrument, formerly much used, resembling a flageolet in shape. The instrument was wider in the lower half than and the same reign it was enacted in the upper: its tones were soft and that if recusants did not submit within in the upper; its tones were soft and that if recusants did not submit within pieasing, and an octave higher than the three months after conviction they might, upon the requisition of four justices of Rectangle (rek'tang-gl), a right-angled parallelogram, or a quadrilateral figure having all its angles, right angles and its opposite sides and suffer death without hereft of clause. the peace, be compelled to abjure and re-Red, one of the primary colors, the color of that part of the spectrum hy any two of the sides about one of its right angles.

Rectify (rek'ti-f1), in chemistry, to refine by repeated distillation pigments or coloring matters include versions. milion, resigar, cochineal, lakes and madders, coal-tar colors, etc. The different forms of oxide of Iron are Indian red, which is pure, finely ground hæmatite; Venetian red and coloothar, which are coarser forms of the same substance.

Minium or lead oxlde, and another form of the same substance containing a little carbonate, are known as Paris red.

Red Admiral Butterfly (Vanessa ta), the popular name of a common hut-terfly. The anterior wings are marked by a broad red band, outside of which are six white markings, while a bluish streak follows the wing-margin. The posterior wings are hordered with red, dotted with hlack spots, and have two bluish markings.

Redan (re-dan'), in field fortifica-tion, the simplest kind of work employed, consisting of two para-pets of earth raised so as to form a salient angle, with the apex towards the enemy and unprotected on the rear.

Redbank, a town of Monmouth Co., New Jersey, on the Shrewshury River, 26 miles 8. of New

York. It has manufactures of iron, carbon paper, carriages, cigars, etc. Pop. 7398.

Since their institution they a duil yellowish-green color, and want the have done much to alleviate the horrors of war and have lent their aid in disasters of various kinds. (See Geneva Convention.) An association bearing the title of the American National Red Cross was incorporated by Congress in 1904, on the lines of the Geneva Red Cross Society of 1863. During the European war (q. v.) the American branch of this organization became marvelously active, bringing relief to every nation engaged in warlike operations. Before the entry of the United States into the war money and Africa. The nest is made of moss and last ined internally with feathers. The eggs number five or six, and are white, spotted with pale brown. The robin redbreast of America is a thrush, the Merüla migratoria, congeneric thrush, the Merüla migratoria, congeneric thrush. The Pritish blackbird; and one of the months thereafter an additional fund of over \$100,000,000 had been raised. The membership, 280,000 on Dec. 1, 1916, had become more than 3,500,000 in Sept., wheatears, and remarkable for the bright plumage, are called 'robins.

Red Cedar, a species of juniper Washington, with Woodrow Wilson as found in the United States and the West Indies; the heartwood is of a bright red, the United States materials for the use of the States materials for the use of the States materials for the use of the States and the United States materials for the Unit 1917, while 12,000 nurses were enrolled. the society were being diligently prepared, while throughout the warring countries of Europe the agents of the society were everywhere engaged in the work of relief.

Red Currant (Ribes rubrum), a decidence shows much deciduous shrub much cultivated for its fruit, indigenous in the

The juice of the fruit is used for making jelly, and a well-known fermented liquor called currant wine.

northern portions of Europe and America.

Redemption (re-dem'shun), in theology, the purchase of God's favor by the sufferings and death of Christ; the ransom or deliverance of sinners from the bondage of sin and the penalties of God's violated law by the atonement of Christ.

Redemption, Equity or. See Equity.

Redemptorists (re-demp'tor-ists).
a religious congregation founded in Naples by Liguori in 1732. They devote themselves to the education of youth and the spread of Roman Catholicism. They style themselves members of the congregation of the Holy Redeemer. By the law of 1872 they were expelled from Germany, and in the year 1880 France treated them in the same manner. They are also called Liguorists.

Red-fish, a species of fish (Sebastes marinus) found on the Atlantic coast of North America, a large red fish caught in considerable numbers for food. A smailer species (S. vivipărus) receives the same name, and is called also Red-perch, Rose-fish, etc. The bergylt (which see) is closely akin.

parus) receives the same name, and is called also Red-perch, Rose-fish, etc. The bergylt (which see) is closely akin.

Redgrave (red'grāv), Richard, born in London in 1804; became a student of the Royal Academy in 1826; his first notable picture was Gulliver at the Farmer's Table; in 1840, when he exhibited The Reduced Gentleman's Daughter, he was elected an Associate, and in 1851 became a Royal Academician. He produced other valuable paintings and from being headmaster of the Government School of Design he became inspector-general of art schools, and arranged the Museum of Art at South Kensington. He was joint author with his brother of A Century of Painters (1866.) Among his later pictures were Sermons in Stones (1871); The Oak of the Mill Head (1876); Friday Street, Wotton (1878); and Hidden Among the Hills (1881). He died Dec. 14, 1888.—His brother SAMUEL, born 1802; died 1876, is chiefly known for his Dictionary of Artists of the British School.

Red Gum, fibrid eruption usually occurring in infants before and during first

Red Gum, the popular name of a florid eruption usually occurring in infants before and during first dentition, and appearing on the most exposed parts, as the face, neck, arms, and hands. It is almost always an innocent disease, and seidom lasts over a month.

Red Gum-tree, one of the Austracalyptus resinifera), yielding a gum-resin valued for medicinal uses.

Red Hand, in heraldry, originally the Uister, but granted to baronets as their distinguishing badge on the institution of the order in 1611. It consists of a sinister (or left) hand, open, erect, showing the palm.

Red Indians. See Indians.

Redlands, a city in San Bernardino Co., California, 8 miles s. E. of San Bernardino. It is in the center of the orange country and has canning and packing industries, etc. Also a health resort. Pop. 10.449.

canning and packing Industries, etc.

Also a heaith resort. Pop. 10.440.

Red-lead (Pb<sub>2</sub>O<sub>4</sub>), an oxide of iead produced by heating the protoxide in contact with air. It is much used as a pigment, and is commonly known as Minium.

Red-Men, IMPROVED ORDER OF, a social and benevolent organization founded in the United States in 1763, and again in 1834. It is based on the customs of the American aborigines and is the oidest society of its kind founded in the United States. The order is composed of subordinate bodies called tribes, officered by sachems, sagamores, prophets, etc. There are over 5200 of these tribes, with a membership of nearly 500,000.

Redmond, John Edward, Irish statesman, born at Waterford in 1851, became a barrister at Gray's Inn 1886, and in Ireland 1887. He was a member of Parliament from New Ross, 1881-85; North Wexford, 1885-91, and Waterford since 1891. He was leader of the Irish Nationalist party and under his leadership the Home Rule Bill was passed in 1914. Redmond agreed to the postponement of the bill during the war. He dled March 6, 1918, John Dillon succeeding him as Nationalist leader. His brother, Major William Hoey Redmond, was killed in action in France in 1917.

Red Ochre, a name common to a variety of pigments, rather than designating an individual color, and comprehending Indian red, light red, Venetian red, scarlet ochre, Indian ochre, reddle, bole, and other oxides of Iron. As a mineral it designates a soft earthy variety of hæmatite.

Redondillas (red-on-dll'yas), the name given to a species of versification formerly used in the south of Europe, consisting of a union of verses of four, six, and eight syllables, of which generally the first rhymed with the fourth and the second with the third. At a leter period verses of six and eight syllables in general, ln Spanish and Portuguese poetry, were called redondil-

Redout (re-dout'), in fortification. a general name for nearly every ciass of works whoily inclosed and undefended by reentering or flanking angies. The word is, however, most generally used for a small inclosed work of various form — polygonal, square, triangular, or even circular, and used malniy

gular, or even circular, and used mainly as a temporary field work.

Red Pine, a species of pine (Pinus rubru), also called Norway Pine. Its wood is very resinous and durable, and is much used in house and shlp-building. It produces turpentine, tar, pitch, resin, and lampblack.

Red-pole, RED-POLL, a name given to several species of linnets.

The greater redpoie is the Linota cannabina; the mealy red-pole is the L. boredis or canescens; and the little red-pole is the L. linaria. The same name is given to the Sylvicola petechia of Amer-ica, also called the red-headed warbler and yellow red-pole.

Red River, a large river of the southernmost of the great tributaries of the Mississippi. It rises in northern Texas, and bas several sources, the chief, besides the main stream, being called the North and South Forks, which unite with it on the boundary line between Texas and eastern Okiahoma. The stream then flows E. S. E., forming the boundary between Texas, Okiaboma and Arkansas; cuts off a corner of the latter state, and then flowing through Louisiana, falls into the Mississippi, 125 miles northwest of New Orleans; total course estimated at 1550 miles; chief affluents—the Wasnita, which joins it in Louislana. and the Faise Washita, which it receives in Oklaboma. Much of its course is through rich prairies. About 1200 miles of the river are useful for navigation, but its mouth at low water can be entered

only by boats drawing 2 feet.

Red River, or Song-ka, a large river of Tonquin, formed by the junction of the Leteën and Song-shai, the former rising in China, the latter in Laos. It flows s. E., passes Hanol, and falls by several mouths into the Gulf of Tonquin.

Red River of the North, a river diminishes towards the extremities to 40 fathoms, which rises in Elbow Lake, in amounts to only 3 fathoms. From Minnesota, flows south and southwest, october to May, when the wind sets and then nearly north, crossing from the steadily from the south, a strong current United States into Manitoba, where it flows in from the Strait of Bab-elfalls into Lake Winnipeg. Its entire Mandeb: while from May to October. the

las, whether they made perfect rhymes or assonances only.

Red Orpiment.

Same as Realger.

Redout (re-dout'), in fortification. a the town of Winnipeg.

Red River Settlement, a settleed in 1812 in Canada by the Eari of Selkirk on the banks of the above river; repurchased by the Hudson's Bay Company in 1836; finally transferred to the Canadlan government in 1870, and now made part of the province of Manitoba.

Red Root, a name given to several plants, one of them Ceanothus Americanus, natural order kbamnacese. It has simple aiternate leaves and large red roots, and ls found in North America, where the leaves are used sometimes to make an infusion of tea.

Redruth (red'rutb), a market town of England, county of Cornwaii, 91 mllcs northwest of Falmouth. The inhabitants are principally employed in the tin and copper mines of the neighborhood. Pop. (1911) 10,815.

Red Sea, or Arabian Gulf, a branch of the Indian Ocean, communicating with it by the Strait of Babel-Mandeb, stretching in a N. N. w. direction between Arabia on the east, tion between Arabia on the east, Abyssinla, Nubia, and Egypt on the west, and connected with the Mediterranean on the north by the Suez Canai. It forms a long and narrow expanse, stretching for 1450 miles, with a breadth which averages about 180 miles, but diminishes gradually at its extremitles. At the northern end it divides into two branches, one of which, forming the Gulf of Akaba, penetrates into Arabia for about 100 miles, with an average breadth of 100 mlles, with an average breadth of about 15 miles; while the other, forming the Gulf of Suez, penetrates between Arabia and Egypt for about 200 miles, with an average breadth of about 20 miles. The shores consist generally of a low, sandy tract, varying in width from 10 to 20 miles, and suddenly terminated. 10 to 30 miles, and suddenly terminated by the abutments of a lofty table-land of 3000 feet to 6000 feet high. Occupying a long deep valley this water expanshas gradually been divided into three channels formed by coral reefs and islands. In the main channel the depth reaches in one place 1054 fatboms, but

Red-snow.

north wind continues to blow, which Red-top, gives the current a southern direction.

The result of this is to raise the sea- vulgarie, his level by several feet north and south level by several feet north and south aiternately. The atmosphere is excessively hot in the warm season. The principal harbors of the Red Sea are, on the African coast, Sues, Kosseir, Suakin, and Massowa; and on the Arabian coast, Jedda (the port of Mecca), Hodeida, and Mocha. The cross trade consists chiefly of slaves from Africa and pilgrims to Mecca, but the through traffic has been immensely increased by the Sues Canal. The Largelites are supposed to Canai. The Israelites are supposed to have crossed the Red Sea at its northern extremity in the Gulf of Sues, and near the town of that name, but opinions vary as to the precise spot.

Redshank, a bird of the genus To-tanus, the T. calidris, se cailed from its red legs. It is about 11 inches iong, and is known as a summer bird of passage in the northern parts of Europe and Asia, occurring in winter as far south as India. The spotted redshank (T. fuscus) visits Northern Europe in its spring and autumn migrations. See Protococcus.

Redstart, a bird (Rutioilla phoni-cars) belonging to the family Sylviade, nearly allied to the redbreast, but having a more slender form and a more slender bill. It is found in almost all rarts of Britain as a summer bird of passage, and has a soft sweet song. The tail is red, whence the

Redstart (Ruticilla phænicura).

name, start being Angio-Saxon steort, a tail. The forehead is white, the throat black, the upper parts lead-gray or brown. The black redstart (Phænicura brown. The black redstart (Phanicura tithus) is distinguished from the common redstart by being sooty black on the breast and belly where the other is reddish brown. The American redstart is a small bird of the family Musicapides or fly-catchers, common in most parts of North America.

a well-known species of oulgarie, highly valued in United States for pasturage and hay for cattle. Cailed also English Grass and Herd's-grass.

Reductio ad absurdum, cies of argument much used in geometry, which proves not the thing asserted, but the absurdity of everything which contradicts it. In this way the proposition is not proved in a direct manner by principles before laid down, but it is shown that the contrary is absurd or impossible.

Reduction (re-duc'shun), in arithmetic, the bringing of numbers of one denomination into annumbers of one denomination into another, as farthings to shillings, or shillings to farthings; pounds, ounces, penny-weights, and grains to grains, or grains

to pounds. a disease of cattie, and Red-water, in which the appetite and rumination become irregular, the bowels speedily be-come constipated, and the urine reddened with broken-down red globules of blood. It is caused by eating coarse, indigestible, innutritive food, by continued exposure to inclement weather, and other causes which lead to a deteriorated state of the blood. Called also Bloody Urine, Hamaturia, and Moor-ill.

a species of thrush (Tur-Redwing, dus iliācus), weil known as a winter bird of passage. It spends the summer in the northern parts of Europe and Asia, its winter range extending to the Mediterranean. It is about equal to the song thrush in size, congregates in large flocks, and has an exquisite song.

Redwing, a city, the capital of Good-hue Co., Minnesota, on the Mississippi River at the upper end of Lake Pepin, 41 miles s. E. of St. Paul. It is an important market for wheat, and has manufactures of flour, stoneware, lron, sewer-pipe, boats, furniture, etc. Pop. 9048.

Red-wood, the name of various sorts of wood of a red color, as an Indian dyewood, the produce of Pterocarpus santalinus; the wood of Gordonia Hamatoxylon, the red-wood of Jamaica; that of Pterocarpus dalbergio-Jamaica; that of Pterocarpus dalbergio-ides, or Andaman wood; that of Ceano-thus colubrinus, the red-wood of the Bahamas; that of Sequoia sempervirens, a coniferous tree of California, the red-wood of the timber trade; that of Soymida febrifuga, of which the bark is used in India for fevers, and has been amployed successfully in Furone for employed successfully in Europe for typhus. The Californian red-wood is the

orts olor, e of of d of rgioand-

the rens, redof k is been for best known. The tree reaches a very great size and forms forests in the coast mountains of California. It is closely related to the giant trees of California. The red-wood trees range from 4 to 6 feet in diameter. The lumber from it is of a deep red color, takes a heautiful polish, and is much valued for decorative purposes.

Ree, LOUGH, a lake of Ireland, formed by the Shannon, between the counties of Longford, Westmeath, and Roscommon, 17 miles long and 1 mile to 6 mlies broad, studded with Islands.

Recook (rā'bok; that is rochuck), a species of South African antelope, the Antilope capreolus. The horns are smooth, long, straight, and slender. The recook is 2½ feet high at the shoulder, of a slighter and more graceful form than the generality of other arts. form than the generality of other antelopes, and extremely swift.

Reed (red), a name usually applied indiscriminately to all tall, broad. leaved grasses which grow along the hanks of streams, pools, and lakes, and even to other plants with similar leaves, growing in such situations, as the hamhoo. Strictly speaking, however, it is the name given to plants of the genera Arundo. Psamma, and Phragnites, and especially to Phragmites communis (the common reed). This, the largest of all the grasses of northern climates, is used for roofing cottages, etc. It is exceeded in size by the Arundo donas of Southern Europe, which sometimes grows to the rolled up to contract the sail in propor-helght of 12 feet. The sea-reed or mat-grass (Ammophila (or Pjamma) area-aria) is often an important agent in binding together the masses of loose sand on sea-shores. The hur-reed (reed-grass) is of the genus Sparganium of the reed-mare order. Sea Reed-mare. reed-mace order. See Reed-mace.

Reed, in music, a vibrating slip or tongue in the mouthplece through which a hauthoy, hassoon, or clarinet is hiown, originally made of reed; or one of the thin plates of metal whose vibrations reduce the notes of whose vibrations produce the notes of an accordion, concertina, or harmonium, or a similar contrivance in an organpipe.

Reed, SIR EDWARD JAMES, naval architect, horn in 1830. He was at one time connected with Sheerness dock-yard, and having become an authority on navai architecture he was appointed chief constructor to the navy, for which he designed a number of iron-clads and

Reed,

in 1860 and studied law. Was a member of the Malne legislatu 188-70 and attorney-general of the state 1870-72. In 1876 he was elected to Congress, and was Speaker of the House for three terms. As such he proved an able parliamentarian, and became widely known for his energy and arhitrary de-cision in 1890 of counting a quorum of members present despite their declining to vote. This decision as to actual presence and constructive absence made him bitter enemies, hut was sustained hy the Supreme Court. He resigned in 1890 and engaged in legal business in New York, where he died Dec. 6, 1902. Reed Bird. See Rice Bunting.

Reed-mace (red-mas), a plant of the genus Typha, natural order Typhaces. Two species are common, T. latifolia, or greater reed-mace, and T. angustifolia, the lesser. These plants are also between the common transport of th plants are also known by the name of cat-tail, and grow in ditches and marshy places, and on the borders of ponds, lakes. and rivers. They are tall, stout, erect plants, sometimes 6 or 8 feet high, with creeping root-stocks, iong flag-like leaves. and long dense cylindrical hrown spikes of minute flowers. They are sometimes erroneousiy called huirush.

Reef (ref), a certain portion of a said hetween the top or hottom and a row of eyelet-holes running across the sail, one or more reefs being folded or

Wherry with fore-sail reefed, the main-sail showing reef-bands and reef-points.

other vessels. He wrote several books and the sall is also strengthened by reefon naval subjects. Died in 1906.

Beed Thomas Brackett, statesman, parallel to each other in the superior Oct. 19, 1839. He graduated at Bowdoin reefs parallel to the foot or bottom of

Reef, a chain, mass, or range of rocks in various parts of the ocean, lying at or near the surface of

the water.

(rel), a machine on which yarn Reel is wound to form it into hanks, skeins, etc. Also a skeleton harrel attached to the hutt of a fishing-rod, around which the inner end of the line is wound, and from which it is paid out as the fish runs away when first hooked. Reel, a lively dance originating in Scotland, in one part of which the couples usually swing or whirl round, and in the other pass and repass each other, forming the figure 8. The music for this dance, called hy the same name, is generally written in common time of four crotchets in a har, but sometimes in jig time of six quavers. A variation of this dance, known as the Virginia Reel, is popular in the United States.

Reem (rēm), the Hehrew name of an animal mentioned in Joh xxxix,

9. and translated as nnicorn. There is little doubt that a two-horned animal was intended by the name, and the common belief now is that the reem was the aurochs or nrus.

Re-entry (re-en'tri), in law, the re-suming or retaking the possession of lands lately lost. A proviso for re-entry is a clause usually inserted in leases, that upon non-payment of rent, etc., the term shall cease.

Rees (res), Abraham, editor, was born in Wales in 1743; died in 1825.

He was educated at Hoxton Academy, where he remained as tutor for over twenty years; became pastor of a Preshyterian church in Southwark, and afterwards in the Old Jewry. He edited E. Chamhers's Cyclopedia (1776-86); and used this as the hasis of a larger and very valuable work called Rees's Cyclopedia (1802-19, 45 vols.).

(rev), the name given to the female of the bird called the

ruff. See Ruff.

Reeve the title of the official, existing Reeve, in early times in England, who was appointed by the king to carry into execution the judgments of the courts presided over hy the ealdorman (earl) and other high dignitaries, to levy distresses, exact the imposts contributions, tithes, and take charge of prisoners.

Reeves, John Sims, tenor singer, born Reflection (re-flek'shun), specifically, at Shooters' Hill, Kent. in 1822; appeared as a baritone on the direction which a ray of light, radiant stage at Newcastle in 1839, and for heat, sound, or other form of radiant

Reference (ref'er-ens), in law, the process of assigning a cause depending in court, or some particular point in a cause for a hearing and decision, to persons appointed by the

court.

Referendum (ref - er - en' dum), a term used in the Swiss Confederation to denote the reference to the citizen voters of resolutions or laws passed by their representatives. If these, when so referred, are accepted by the majority of the voters of the canton, then they become part of the law of the land; hut if they are rejected, then the rejection is final. The referendum is ohligatory when the law or resolution affects the constitution; in other cases it is optional. The referendum has long been used in the United States for several purposes, such as the adoption of constitutions and of amendments to constitntions. As a constitutional provision giving the people the right to control and revise general legislation it was first adopted by South Dakota in 1898, and by Oregon in 1902. Since these dates other states have adopted it, the number though of these only five had effective measures, the others heing in various ways incomplete or defective. The question of referendum amendments to state constitutions was a prominent issue in 1911. While defeated in most cases, it was adopted by California and in the new constitutions of Arizona and New Mexico. Up to the date named it had been fairly tried only in Oregon, its operation there heing viewed as very satisfactory. This state alone adopted an effective system of informing the electors concerning the measures to be submitted to popular vote, a pamphlet containing an official copy of the measure, together with arguments for and against it, heing mailed to every voter prior to the election. See INITIATIVE AND REFERENDUM.

Refining of Metals, the processes various metals are extracted from their ores, and ohtained in a state of purity. See the articles on the several metals.

The condition of the Western Church, indeed, was such that a reformation of some kind was now inevitable. The great movement usually known as the Reformation was started by Martin Luther, an Augustine monk of Erfurt, professor of theology in the University of Wittenberg; and what impositions of the preschool of the presch mediately occasioned it was the preaching of indulgences in Germany by a duly accredited agent, Johann Tetzel, a Dominican monk of Lelpzig. Luther condemned Tetzel's methods, first in a sermon and afterwards in ninety-five theses or questions which he affixed to the door of the great church, October 31, 1517. This at once roused public interest and gained him a number of adherents, among them men of influence in church and

state. Luther arged his spiritual superiors and the pope to put a stop to the doings of Tetzei and to reform the corruptions of the church in general. In consequence a heated controversy arose, Luther was fiercely assailed, and in 1520 excommunication was pronounced against bim by Pope Leo X. (See Luther.) Upon this the dissenter appealed to a generai councii; and when his works were burned at Mainz, Cologne, and Louvain, burned at Mainz, Cologne, and Louvain, he publicly committed the bull of excommunication with the papal canons and decrees to the flames (December, 1520). From this time Luther formally separated from the existing Church, and many of the principal German nobles, Hutten, Sickingen, Schaumburg, etc., some very eminent scholars, and the University of Wittenberg, publicly deciared in favor of the reformed doctrines and discipline. Luther's bold refusal to and discipline. Luther's bold refusal to recant at the Dlet of Worms (April 17th, 1521) gave him increased power, while the edict of Worms and the ban of the emperor made his cause a political matter. By his ten months' seclusion in the Wartburg, after the Diet of Worms, Luther was secured from the first consequences of the ban of the empire and the consequences. pire, and the emperor was so much engaged by French and Spanish affairs that he aimost wholly lost sight of the

religious ferment in Germany.

Leo's successor, Adrian VI, now considered it necessary to interfere, but in answer to his demand for the extirpation of the doctrines of Luther he received a list of a hundred complaints against the papal chair from the German states assembled at the Diet of Nürnberg (1522). While Luther was publishing his transiation of the New Testament, which was soon followed by the translation of the Old; and while Meianchthon was engaged on his Loci Communes (the first exposition of the Lutheran doctrines) serious preparations for the reform of ecclesiastical abuses were made in Pomerania, Silesia, in the Saxon cities, in Suabla, etc., and the Reformation made rapid progress in Germany. Luther's Liturgy had no sooner appeared (1522), than it was adopted in Magdeburg and elsewhere. New translations of the Bible into Dutch and French appeared, and at Meux in France a Lutheran church was organized. In vain did the Sorbonne condemn the principles of

publicly declared themselves Lutherans. Aided in great measure by the state of political affairs, the movement continued to spread rapidly. In these circumstances the emperor convened the Diet of Augsburg (June, 1530), at which Melanchthon read a statement of the reformed doctrine, now known as the Con-fession of Augsburg. The Catholic pre-lates replied to this by requiring the re-formers to return to the ancient church within a certain period. The princes who favored the new movement refused to comply with this demand, and in March of the following year they assembled at Schmalkald and formed the famous league, in terms of which they allowed themselves to unheld the Protest pledged themselves to uphold the Protestant cause. This declsive step soon atant cause. This decisive step soon attracted powerful support, largely because of its political importance, and among others who joined the Schmalkald League were Francis I of France and Henry VIII of England. After the death or Luther (1540) war broke out, but at the Peace of Augsburg (1555) the Reformation may be said to have finally triumphed, when each prince was permitted to adopt either the Reformed or the Roman Catholic faith, and Protestthe Roman Catholic falth, and Protestantlsm thus received legal recognition.

The doctrines of the German reformer found a willing adherent in Gustavus Vasa, who in 1523 became King of Sweden. Gustavus induced the estates of the realm, in the Diet of Westeräs (1527), to sanction the confiscation of the monasteries, and declared himself supreme in matters ecclesiastical. The last remains of Catholic usages were abolished at a second Diet of Westerüs in 1544. The first systematic measures in favor of the Reformation in Denmark were taken by Frederick I, instigated by his son Christian, who had studied in Germany and became an enthuslastic Lutheran. At a diet held in 1536, at which no member of the clergy was alleged to be present the clergy was alleged to be considered. lowed to be present, the assembly decreed the abolition of the Roman Catbolic worship in the Danish dominions. In Hungary, where numerous Germans had settled, bringing Lutheranism with them, the new faith for a short time made rapid progress, especially in the cities and among the nobles. In Poland the Reformation found numerous adherents also. In Italy and Spain, however, Protestantism was mostly confined to the Luther, and powers political and eccle-siantical endeavor to stop this movement. In 1525 John, the successor of Luther's first patron Frederick in the Saxon elec-torate, Philip. isindgrave of Hesse, and Albert of Brandenburg, duke of Prussia.

the reformed doctrine. The New Testament was translated into French, churches to the number of 2000 were established by 1558, and the Hugnencts, as the Protestants were called, formed a large religious party in the state.

progress of Protestantism was of much in arresting the spread of the religious revolution. In the Swiss states the progress of Protestantism was of much more importance. It found a leader in Ulricb Zwingil, a preacher at Züricb, who, by sermons, pamphlets, and public discussions, induced that city to abolish the old and inaugurate a new Reformed Cburch. In this course Zürich was followed by Bâle, Berne, and other cities. Uitimately this movement was merged in political dissensions between the Reformed and the Catholic cantons, and Zwingil himself fell in hattle (1531). Between Luther and Zwingil there were differences of opinion, chiefly concerning the Lord's Supper, in which the former showed considerable acrimony towards his feliow-reformer. The Institutes of Calvin formulated the doctrines of a large body of the reformers, who also accepted his ordinances regarding church discipline. (See Calvin.) After many tedious contests Calvin's creed was virtually accepted in the Netherlands and the Statute of the Six Articles comtests Calvin's creed was virtually accepted in the Netherlands and selled all men, under negality of hurn-Calvin formulated the doctrines of a large body of the reformers, who also accepted his ordinances regarding church discipline. (See Calvin.) After many tedious contests Calvin's creed was virtually accepted in the Netherlands and elsewhere, and it was introduced into Scotland hy Knox. In France the Reformation seemed at first to find power-ful support. Margaret, Queen of Nature, sister of King Francis I, and many of the higher ecclesiastics favored the reformed doctrine. The New Testathe publication of the Litany and some forms of prayer in English. This move-ment was continued and the Reformation ment was translated into French, ment was continued and the Reformation churches to the number of 2000 were effected in all essential points during established by 1558, and the Hugnencts, as the Protestants were called, formed a large religious party in the state. Here also, however, the religious element was mixed with political and personal hatreds, and in the civil strikes adopted by the church; all images were something the religious element was mixed with political and personal hatreds, and in the civil strikes adopted by the church; all images were ment was mixed with political and personal hatreds, and in the civil strikes before and after the Massacre of St. Bartholomew (1572) the religious movement declined. The abjuration of Protestantism hy Henry IV (1593) was a blow to the Huguenots, and though they obtained toleration and certain privileges hy the Edict of Nantes (which see) this was finally revoked in 1685.

The Reformation in England was only indirectly connected with the reform movement in Germany. Wickliffe and the Lollards, the revival of learning, the writings of More, Colet, and Erasmus, the martyrdom of Thomas Bilney, had all combined to render the doctrine and discipline of the church unpopular. This feeling was greatly increased when the

is found in the martyrdom (1528) of Patrick Hamiiton; and this poiicy of suppression was continued (1539-46) with great severity by Cardinal Beaton, until he himseif became the victim of popular vengeance. Perhaps the most important resuit of this persecution, and the martyrdom of George Wishart, which Beaton had brought about, was that it determined John Knex to embrace the new reformer established himseif as Scottish reformer established himseif as preacher to the Protestant congregation which heid the castle of St. Andrews. When the castie was captured by the French fleet Knox was made prisoner and treated as a gailey-slave, but regained his liberty after about eighteen monthly bandship. months' hardship, and settied in Engiand. During the Marian persecutions he withdrew to the Continent and visited the churches of France and Switzerland, but returned to Scotland in 1559. Here he at once joined the Protestant party; preached in Dundee, Perth, and St. Andrews, amid public tumuit and the destruction of images, aitars, and churches; and finaily, under the protection of the Lords of the Congregation, he established himself as a preacher of Protestantism in St. Giles', Edinburgh. From this center there is a given Scot. this center Knox traveled all over Scotland teaching the reformed faith; and such was the roused spirit of the people, that when the Scottish parliament assembled (1560) a popular petition was presented demanding the abolition of popery. This was promptly accomplished, and at the assembling of the new Church of Scotland shortly afterwards Knox presented his reformed system of government under the name of the First Book of Discipline, which was adopted by the Assembly. (See Knox.)
The position thus secured by the reformer was maintained and the Reformation successfully established in Scotland. In Ireiand for various causes the Reforme' in never made much progress, Catholicism remained the prevalent sugion in that country, as it is to-day the established religious system in France, Spain and Italy.

Reformatory Schools, schools, instituted for the training of juvenile offenders who have been convicted of an offense punishable by imprisonment. The first reformatory managed under legislative control was the one established in New York in 1824, known as the New York reformatory managed under iegislative control was the one established in New originating in the latter part of the 17th York in 1824, known as the New York century. For upwards of sixteen years House of Refuge. Its success was so after they had publicly avowed their marked that at present there are fifty-principles they remained in an unsix institutions in the United States for organized condition and without a the refermation of the juvenile offenders.

The treatment is mostly educational, aithough in many institutions the in-mates are employed in productive labor nearly one-half of the time. In some reformatories, in late years, attention has been given to industrial training, with marked success, Reformatories throughout the United States compare favorably with the best in other countries, and are rapidly progressing, much attention having been given of late years to this means of dealing with the criminally inclined young. See Industrial Schools.

Reformed Churches, those bodies are in their standards and confessions markediy Calvinistic, and which usually adhere to the preshyteriai as distinguished from the episcopal form of church government. In Germany the term is used to distinguish the churches which follow the doctrines of Caivin rather than those of Luther. There are in the United States four reformed churches: The Reformed Church in the United States—for many years known as the German Reformed Church'-traces its origin chiefly to the German, Swiss, and French people who settled in America early in the 18th century. In 1916 it had 1217 ministers and 320,660 communicants. Its coctus was organized in 1747, and its synod in 1792. Its symbol is the Heidelberg Catechism. The Second Reformed church in the United States in size is the Dutch Reformed Church, now known as the Reformed Church in America, which was organized in 1628 under the Dutch control of New York. In 1916 it had 774 ministers and 127,000 communicants. Its symbols are the Heideiherg Catechism, the Beigic Confessions and the canons of Dort. The Christian Reformed Church originated from the Reformed Church of Holland in 1835. There is also a Hun-garian Reformed Church.

Reformed Episcopal Church, a religious body organized in New York City, December 2, 1873, under the leader-ship of Bishop George David Cummins, D.D., to perpetuate the old evangelical or low tendency in the Protestant Episcopal Church. In 1913 the church had 83 ministers and 10,800 communicants.

Reformed Presbyterians, or CA-

cised this office was the Rev. John McMillan, who in 1706 demitted his charge as parish minister of Balmaghie, and in 1743 he met with a coadjutor in the Rev. Thomas Nairne, whereupon these two constituted a Reformed Presbytery in 1743. In 1810 three presby-terries were formed and and in 1911 teries were formed, and in 1811 a synod was constituted. The number of presbyteries was afterwards increased to six, and the number of ministers rose to about forty. In 1876 a large portion of them united with the Free Church of Scot-land. The Reformed Presbyterians have established themselves in the United States but constitute a small fraction of the total Presbyterian membership.

Refraction (re-frak'shun), the de-flection or change of direction impressed upon rays of light obliquely incident upon and passing through a smooth surface bounding two media not homogeneous, as air and water,—or upon rays traversing a medium, the destiny of which is not uniform, as the atmosphere. (See Optics.)

A familiar instance of refraction is the A familiar instance of refraction is the broken appearance which a stick presents when thrust partly into clear water, the portion in the water apparently taking a different direction from the other portlon. Glass, water, and other solids and fluids each have a different power of refraction, and this power in each case may be expressed numerically by a number known as the index of refraction. Atmospheric refraction is the apparant angular elevation of the heavenly bodies above their true places, caused by the refraction of the rays of light in their passage through the earth's atmosphere, so that in consequence of this refraction the heavenly bodies appear higher than they really are. It is greatest when the body is entered to the refraction is the separation of a ray of light lint two separate parts, by passing through certain transparent mediums.

The maintacture of is now conducted on a large scale in cold-storage establishments, in which air cooled to a low temperature is employed as the agent.

Refuge (ref'ūj), Cities of Refuge.

(ref'ūj), a person who seeks safety in a foreign tenging or political opinions. A large cuntry to escape persecution for repraction is the apparant angular elevation of this kind occurred when the Edict of Nantes was repealed in France (1685). Such were estimated, sought refuge in England, Denmark, Holiand, Switzerland, and Germany, France suffering seriously by the forced emigration of its ablest intending to the left being used in workble refraction is the separation of a ray of light into two separate parts, by passing through certain transparent mediums, as Iceland-spar, one part being called the ordinary ray, the other the extraordinary ing the believes. All crystals except those whose three axes are equal exhibit double refraction.

Refractor, or REFRACTING TEL

ing drinks, saline purgatives, etc. Refrigerants in medicine and surgery are also applied externally in the form of freezing-mixtures prepared with salt and pounded ice for the purpose of lowering the temperature of any particular part of the body.

See Refrigerator. Refrigeration.

(re-frij'er-ā-tur), Refrigerator (re-frij'er-ā-tur), a name applied to cooling apparatus of various kinds. One kind is an apparatus for cooling wort, beer, etc., consisting of a large shallow vat traversed by a continuous pipe through which a steam of cold water is passed. The wort, etc., runs in one direction and the water in another, so that the delivery end of the wort is exposed to the coolest part of the stream of water. Another kind of refrigerator is a chest or chamber holding a supply of ice to cool provisions and prevent them spoiling in warm weather; or a Refrigerator them spoiling in warm weather; or a vessel surrounded by a freezing-mixture used in the manufacture of ice-cream, ices, etc. Refrigeration is now conducted

turies.

Regain (re-gā'li-a), the emblems or insignia of royalty. The re-TELE- galia of England consist of the crown, OPE. See Telescope. scepter with the cross, the verge or rod (rē-frij'er-ant), a cooling medicine, which ward the Confessor, several swords, the Refrigerant (re-frij'er-ant), a cooling medicine, which ward the Confessor, several swords, the directly diminishes the force of the circulation, and reduces bodily heat without any diminution of nervous energy. These are preserved in the jewel-room in The agents usually regarded as refrigerants are weak vegetable acids, or very greatly diluted mineral acids; effervesc-

Regal, from an old painting.

castle of Edinburgh. The term is also improperly applied to the insignia, decorations, etc., of orders, secret societies, etc., and similar institutions.

Regatta (re-gat'a), originally a gon-doia race held annually with great pomp at Venice, and now ap-

with great pomp at venice, and now applied to any important showy sailing or rowing race, in which a number of yachts or boats contend for prizes.

Regelation (re-jei-a'shun), refreezing, a name given to the phenomena presented by two pieces of meiting ice when brought into content at a temperature above the freezing. tact at a temperature above the freezing point. In such a case congelation and cohesion take piace. Not only does this occur in air, but also in water at such a temperature as 100° Fahr. The phenomenon, first observed by Faraday, is of importance in the theory of giacier movements. See Glaciers.

Regeneration (re-jen-er-ā'shun), in theology, is the equivalent used by the English translators of the Bibie for the Greek word palingen sid, which occurs only twice in the New Testament, in Matt. xix, 28 and in Titing iii. K. In the former reservation Titus iii, 5. In the former passage the term is applied generally to the gospe. dispensation as a process of renovation; in the latter it is used as descriptive of the latter it is used as descriptive of the latter it is used as descriptive. the process of individual salvation. An equivalent term is used in 1 Peter i, 3, where it is translated 'begotten us again;' and in one or two other passages regeneration, as a theological term, refers to the doctrine of a change effected upon the divine grace in order to fit

minority, absence, or disability of the king or queen. In most hereditary governments the maxim is, that this office beiongs to the nearest relative of the sovereign capable of undertaking it; but this rule is subject to many limitations.—In the English universities the nearest relative or the sovereign capable of undertaking it; name is given to members with peculiar duties of instruction or government. In the United States there are regents of various educational, benevolent and public institutions.

Regent-bird, or KING HONEYsocephalus), a very beautiful bird of Austraiia, belonging to the family Meliphagidæ or honey-eaters. The color of the piumage is goiden yeilow and deep velvety black. It was discovered during

Regent-bird Sericulus chrysocephalus).

the regency of George IV, and was named in compliment to him.

Reggio di Calabria (red'jō), (ancient. Rhegium Julii), a seaport of South Italy, capital of a province of the same name, on the east coast of the Strait of Messina, a handsome and beautifully-situated town. The principal edifice is the cathedrai, a spacious basilica. The seat of an archbishop, and with manufactures of silk lines, and the seat of an archbishop, and the seat of an archbishop and the seat of an archbishop archaecters. factures of siik, linen, pottery, perfume, etc., it was destroyed by a violent earthquake in December, 1908, together with many smaller places in the province, and the city of Messina, in Sicily. The greater part of its population of about 45,000 perished.

Reggio nell' Emilia (Rhegium Lepidi), a town of North Italy, capital of the province of the same name, 15 miles w. n. w. of Modena. It is surrounded by walls and refers to the doctrine of a change effected upon men by divine grace, in order to fit them for being partakers of the divine favor, and for being admitted into the kingdom of heaven.

cavalry, commanded by a colonel and other officers. A regiment is the largest permanent association of soldiers, and the third subdivision of an army corps, several regiments going to a brigade, and several brigades to a division. These combinations are temporary, while in the regiments the same officers serve continuaily, and in command of the same body of men. The strength of a regiment may vary greatly, as each may comprise any number of battalions. In the United States army an artilicry regiment consists of twelve batteries, and has 595 enlisted men; a cavalry regiment comprises tweive troops each numbering seventy-eight privates; an infantry regiment contains ten companies, the number of privates varying from fifty to one hundred men in each company. In Britain, under the new army organization, the country is divided into regi-mental districts.

Regina (rē-ji'na), capital of the Province of Saskatchewan, in the Canadian Northwest, a rising town on the Canadian Pacific Railway, situated near the fertile wheat district of the Qu'appelie Valley. Pop. (1911) 30,213.

Regiomontanus (rā-ji-o-mon-ta'-nus), a German astronomer, whose real name was Johann Mülier, was born at Königsberg (in Latin Regiomontum), in Franconia, in 1436; died in 1475. He was educated at Leipzig; studied mathematics at Vienna; accompanied Cardinal Bessarion to Rome, where Beza gave him further incructions in Greek literature, which enabled him to complete a new abridgment in Latin of the Almagest of Ptolemy (Venice, 1496). In 1471 he built an observatory at Nürnburg, but he returned to Rome on the invitation of Sixtus IV who employed him in the re-Sixtus IV, who employed him in the re-

Registration of Births, Deaths

and Marriages. Parish registers of and Marriages. baptisms, marriages, and burials were instituted by Lord Cromwell while he was vicar-general to Henry VIII, and subsequently regulated by various acts of parliament. No thorough system, however, existed until in 1836 a Registration Act was passed applicable to England and Wales, which has been amended by subsequent which has been amended by subsequent acts. Somewhat similar systems exist in Scotiand and Ireland. In the United States the record of deaths has always been tolerably accurate. The officiating minister, priest, or magistrate at a wedding, and the physician or midwife at a birth, are required, under penalty for failure to do so, to report to the proper office the name, age, sex, nativity, color, and social condition of the persons who marry, and the sex and color of children born, with nativity of the parents. As registration is not within the scope of federal legislation, much depends upon the co-operation of the States and cities.

of Electors. Registration In the United States there is no general law requiring the registration of voters; but 34 States have registration laws, without compliance with which no man can vote. Partial registration, as in cities, or citles and viliages is required in several other States.

Registration of Titles. See Tor-

Regius Professors (rē'ji - us), is the name given to those professors in the English uni-versities whose chairs were founded by Henry VIII. In the Scotch universities, the same name is given to those professors whose professorships were founded by the crown.

Regnault (re-no), Henri Victor, a French chemist and physicist, born in 1810; died in 1878.

He was educated at the Ecoie Polytechnique, Paris; became professor at this institution in 1840, and professor of physics at the Coilege de France the following year; chief engineer of mines in neighborhood. Pop. (1910) 36,850.

1841; and director of the porcelain manufacture at Sèvres in 1854. He published Cours Elémentaire de Chimie, and Premiers Elémenta de Chimie, both pop
midst of romantic scenery, on the Saal. ular works.

Regulus (reg'ū-lus), a name originaily applied by the alchemists to antimony. The term is now used in a generic sense for metals in different stages of purity, but which still retain to a greater or less extent, the impurities they contained in the state of ore.

MARCUS ATTILIUS, a Ro-Reg'ulus. made consul a second time in 256 B.C., and was engaged in a war with Carthage, in which he destroyed their fleet and landed his army in Africa. In the following year, however, he was defeated and taken prisoner by the Carthaginians. Sent to Rome on parole by his captors to negotiate peace, Reguius patriotically persuaded his countrymen to continue the war and returned to captivity, where he died under torture.

(ri'hen-bah), a town Reichenbach of Silesia, 30 miles southwest of Breslau, on the Peile. It has wooien and cotton manufactures. Pop. (1910) 16,581.

Reichenbach, a town of Saxony, in the circle and 7 miles southeast of Zwickau. It has manufactures of wooien and cotton goods; worsted and cotton mills; dye-works and bleachfields; machine works, foundries, etc., and a large trade. Pop. (1910) 29,685.

Reichenbach, CHARLES, BARON VON, a German scientist, born at Stuttgart in 1788; died BARON in 1869. He studied law and natural science at Tübingen; established extensive works in Moravia, at which machinery, castings (statues, etc.), wood vinegar, tar, etc., were produced; published a monograph on geology; and gave his attention to animal magnetism, in connection with which he believed he of paraffin and creasote.

Reichenberg (ri'hen-berh), a town of Bohemia, on the Neisse, 56 miles N. N. E. of Prague. It is gald Stewart and Sir William Hamilton.

the center of the wooien manufacture of Northern Bohemia, in connection with which industry there are a great number of establishments in the town and neighborhood. Pop. (1910) 36,350.

midst of romantic scenery, on the Saal. It has one of the most important saltworks in the kingdom, the sait being obtained from brine springs. The brine is also used for bathing purposes. Fop.

Reichstag (rihs'tah; German reich, a kingdom, and tag, a day, a diet), the imperial parisament of Germany, which assembles at Berlin. See

Bundesrath, Germany.

Reid (red). MAYNE, juvenile writer, born in the north of Ireland in 1818; died in 1883. His love of adventure took him to America, where he traveled extensively as hunter or trader; joined the United States army in 1845 and fought in the Mexican war. He afterwards returned to London, where he became well known as a writer of thriliing juvenile stories, many of them based on his American experiences, such as the Rifle Rangers, Scalp Hunters, The War Trail, The Headless Horseman, etc.

Reid, Thomas, a Scottish philosopher, born in 1710 at Strachan, Kincardineshire. He was educated at Marischal College, Aberdeen, and in 1737 was presented to the living of New Machar in Aberdeenshire. His first philosophical work was an Essay on Quantity (1748), in which he replied to Hutcheson, who had maintained that mathematical terms can be applied to measure moral qualitles. In 1752 the professors of King's College, Aberdeen, elected Reid professor of moral philosophy in that college; and in 1764 he published his well-known work, An Inquiry into the Human Mind on the Principles of Common Sense. The same year he succeeded Adam Smith as professor of moral philosophy in Glasgow University, a position which he occupied uniti 1781. His other writings are, Essays on the Intellectual Powers of Man and Essays on the Acregarding which he published various philosophy was directed against the works. This supposed discovery is no longer credited. He is credited with Hume, to which he opposed the doctrine some chemical discoveries, in particular of Common Sense (which see). He principles and inferences of Berkeley and Hume, to which he opposed the doctrine of Common Sense (which see). He was the earliest expounder of what is known as the Scottish School of Philos-

ties, under the leadership of Robespierre and Marat. It is generally considered to extend from January 21, 1793, the date of the execution of Louis XIV, to July 28, to reindeer, etc., in high northern latitudes, where and other sandless were entitled in the height of 1 foot. Its tests is eligible. guinary leaders were guillotined on the spot where their victims had been kliied.

or discharging the right or action he has branched, recurved, round antlers, the or ciaims to have against another or

Relics (rel'lks), remains of saints and martyrs or objects connected with them, and especially memorials of the life and passion of our Lord, to which worship or a special veneration is sanctioned and practiced both in the Roman Catholic and Greek Churches Roman Catholic and Greek Churches. The doctrine of the Roman Catholic Church in regard to reiics was fixed by Church in regard to relics was fixed by the Council of Trent, which decreed in 1563 that veneration should be paid to relics as instruments through which God bestows benefits on men; a doctrine which has been rejected by all Protestant churches. The veneration of relics is not peculiar to Christianity, hut has found a place in nearly every form of religion. Buddhism is remarkable for the extent to which relic-worship has been carried in it. The origin of relic worship or veneration in the Christian church is generally associated with the reverence pald by the early Christians to the tombs of the martyrs and to objects associated with their memory. Roman Catholics helieve that relics are sometimes made by God instruments of heaing and other miracles, and that they ing and other miracles, and that they are capable of bestowing spiritual graces. The Council of Trent required hishops to decide on their authenticity. In course of time great abuses grew up in regard to relics; and it is scarcely necessary to add that the articles venerated as reics multiplied beyond measure. Not only did those of which the supply was necessarily limited, as the wood of the true cross and the relics of apostles end early martyrs, become common and accessible to an astonishing degree, hut the most puerlle and even ridiculous ob-jects were presented as fitting symbols for veneration from their association with some saint or martyr, and were credited with the most astounding mira-

cies. Such abuses have heen greatly modified since the Reformation.

Relief (re-ief'), in sculpture and architecture, is the projection of a figure above or beyond the surface upon which it is formed. According to the degree of projection a figure is described as in high, middle, or low relief. High rellef (alto-rilievo) is that in which the figures project at least one-half of their apparent circumference from the surface upon which they are formed; low relief (basso-rilievo) consists of figures raised hut not detached from a flat surface; while middle relief (mezzo-rilievo) lies between these two forms. See Bas-relief, Alto-rilievo.

Religion (re-lij'un), the feeling of reverence which men enter-

order of beings conceived by them as demanding reverence from the possession of superhuman control over the destiny of man or the powers of nature; more especially the recognition of God as an object of worship, love, and obedience. Religion denotes the influences and motives to human duty which are found in the character and will of the deity, while morality, in its ordinary sense, is concerned with man's duty to his fellows. As distinguished from theology, religion As distinguished from theology, religion As distinguished from theology, religion is subjective, inasmuch as it relates to the feelings; while theology is objective, as it denotes the system of bellefs, ideas, or conceptions which man entertains respecting the God whom he worships. Religion in one sense of the word, according to Max Müller, is a mental faculty by means of which man is enabled to apprehend the Infinite under different names and under varying disculses, and names and under varying disguises, and this independent of, or even in spite of, sense and reason; being also a faculty which distinguishes man from the hrutes. Another, and a very common use of the term, applies it to a body of doctrines banded down by tradition, or in canonical books, and accompanied by a certain outward system of observances or acts of worship. In this sense we speak of the Jewish, the Christian, the Hindu, etc., religions. Religions in this sense are religions. Religions in this sense are divided into two great classes, polytheistic and monothelstic; that is, those recognizing a plurality of delties and those that recognize but one. (See Polytheism, Monotheism.) A dualistic class may also be established, in which two chief delties are recognized, and a henotheistic, in which there are one cheft and a number of minor deities. In some and a number of minor deitles. In some reilgions magic, fetishism, animal worship, belief in ghosts and demons, etc., play an important part. The most remarkable religious conquests in history are that of Judaism, which effected the establishment of a national religion, originally that of a single family, in a hostile territory by force of arms and expulsion or extinction of the previous inhabitants; that of Christianity, which, by the power of persuasion and in the midst of persecution, overthrew the polytheism of the most enlightened nations of antiquity; that of Mohammedanism, which, partly by persuasion, but more by force, established itself on the site of the eastern empire of Christianity, and extended its sway over a population partly idolatrous and partly Christian; and that of Buddhlsm, which, being expelled by persecution or otherwise from tair towards a Supreme Being or to any itself by conversion, spread itself by

"THE WINDKILL," BY REMERANDT

This famous painting was sold by Lord Lansdowne to the late P. A. B. Widener, of Philadelphia, for a reputed price of \$503,000.

It is one of the most noted of Rembrandt's landscapes.

moral sussion over the larger portion of Eastern Asia. All these religions, with the exception of Budblam, which may perhaps be considered atbeistic, are monotheistic systems.

Various estimates have been made of the diffusion of the various religious creeds over the world. These are necessarily very loose and often differ widely from each other. A recent estimate is the following: -

Roman Catholics,	230,000,000
Protestarts	150,000,000
Eastern Cimrches,	100,000,000
Mohammedans,	180,000,000
Buddhists	150,000,000
Brahmsnists,	200,000,000
Followers of Confucius,	260,000.000
Tavists,	43,000.000
Shinto Religion,	14,000,000
Jews,	10,000,000

Religion, ESTABLISHED, the form of religion recognized as national in a country. See Established nurch.

Religious Liberty, or LIBERTY OF CONSCIENCE, is the recognition and assertion by the state of the right of every man, in the profession of opinion and in the outward forms and requirements of religion, to do or abstala from doing whatever his individual conscience or sense of right suggests. Religious liberty is opposed to the Imposition by the state of any arbi-trary restrictions upon forms of worship or the propagation of reilglous opinions, or to the enacting of any binding forms of worship or bellef. The limit of religious liberty is necessarily the right of the state to maintain order, prevent excesses, and guard against encroachments upon private right. In the organization of clvii and ecclesiastical government which prevailed from Constantine to the Reformation persecution extended to all dissenters from the established creed, and universal submission to the dominant church became the condition of religious peace throughout Christendom, religious liberty being unknown. The contest of opinion begun at the Reformation had the effect of establishing religious liberty, as far as it at present exists, but the principle itself was so far from being understood and accepted in its purity by either party that it hardly suggested itseif even to the most enlightened reasoners of that age. In Great Britain and etcher of the Dutch school, was born even, civil ilberty, jealously maintained, June 15, 1606, at Leyden, where his was not understood, by the dominant father was a well-to-do milier. Early party at least, to impart religious liberty. displaying a passionate love for art. he active measures of intolerance were received instructions from Van Swaner-

adopted against Dissenters in the reign of Queen Anne. Even in the reign of George III conditions were attached to the toleration of Dissenting preachers; and civil enactments against Roman Catholics have been repealed only within the nineteenth century. Railicius liberte. the nineteenth century. Religious liberty was introduced in Prussia by Frederick the Great, but contravened by his immediate successor. The state at present in Prussia, without, perhaps, actually dictat-ing to private individuals, msintains a vigilant control over ecclesiastical organvigitant control over ecclesiastical organization, the education of the ciergy, and ail public matters connected with religion. Religious liberty has only been established in Austria by statutes of 1867-68. Italy first enjoyed the same advantage under Victor Emmanuel II. The government of France, over since the revolution, has always been of a neteric of the revolution of the resolution of the resolution of the resolution of the resolution of the resolution. paternai character, and practically religious liberty is limited there. In Spain, at one time the most despotic state in Europe, restricted liberty of worship was allowed in 1876. Religious conducted persecution Was activeiy against the Roman Catbolics in Russia during the reign of the emperor Nicho-las, and full religious liberty does not yet exist. Since the Crimean war religious liberty has been recognized in Turkey. Toleration has thus been Turkey. Toleration has thus been slowly advancing in Europe since the Reformation, and its recent progress has been extensive; yet even in the most advanced countries the state of public opinion on this subject is still far from being satisfactory. In the United States religious ilberty has always been recognized, and in this sense it is the freest nation on the earth. nation on the earth.

Reliquary (rei-i-kwar'i). a box or casket in which relics are

casket in which relics are kept. See Relica.

Remainder (re-man'der). in iaw, is a limited estate or tenure

in lands, tenements, or rents, to be enjoyed after the expiration of another particular estate.

Rembang (rem-bang'), a town of ava, in the province of same name, 60 mlies w. N. w. of Samarang. Its be bor is one of the best in the island; it he a good trade in ship-timber and in ship building, and near it are vaiuable sait-pans. Pop. 14,000.

Rembrandt (rem'brant), in full REMBRANDT HERMANS? VAN RYN, the most celebrated painter

burch of Leyden, a painter of little note, and afterwards studied in Amsterdam under Pieter Lastman. But he soon reunder Pieter Lastman. But he soon returned home, and pursued his labors there, taking nature as his sole guide, and confining himself to delineations of common life. In 1630 he removed to Amsterdam, which he never left again. In 1634 he married Saskia van Uilenburg, daughter of the burgomaster of Leeuwarden. Rembrandt has rendered her famous through numerous etched and painted portraits. She died in 1642. painted portraits. She died in 1642. Rembrandt became the master of numerous pupils, Gerard Douw being among the number. His paintings and etchings were soon in extraordinary demand, and he must have acquired a large income by his work, but his expenditure seems to have been greater; and in 1656 he was deciared bankrupt, his property remaining in the hands of trustees till his death. This took place at Amsterdam in 1669.

Rembrandt Van Ryn.

He had married a second time, but the second wife's name is not known. Rem-brandt excelled in every branch of painting, and his treatment of light and shade has never been surpassed. His works display profound knowledge of human nature, pathos, tragic power, humor, and poetic feeling. His eminence in portraiture may especially be noted, in portrait-Temple, Lesson in Anatomy (Tulp, the during the course of the twenty-four anatomist), and various character portraits of his wife as Queen Artemisia, patient. It differs from an intermittent Bathsheba, The Wife of Samson, etc. fever in this, that there is never a total To his middle period (1640-54) belong absence of fever. Kemittent fever is

The Night Watch, The Woman Taken in Adultery, Tobit and His Wife, The Burgomaster and His Wife, Descent from the Cross, Portrait of Coppenol, Bathsheba, and Woman Bathing. Among the works of his last period (1655-68) may be mentioned John the Baptist Preaching, Portrait of Jan Sia, The Adoration of the Magi, The Syndics of Amsterdam, and various portraits of himself. His etchings in technique and deep suggestion have not yet been equaled. He was the have not yet been equaled. He was the first and as yet the greatest master of this department of art. Some of them have been soid at large prices—Jesus have been soid at large prices—Jesus Healing the Sick, known as the Hundred-gueider Piece (1st state), having been soid at the Buccieuch sale in 1887 for 1300 guineas; and two others, a Coppenol and Jesus Before Pilate, bringing 1190 and 1150 guineas respectively. Their existing values are much greater than this. Of his works there are about 280 paintings and 320 etchings extant and accessible, dating from 1625 to 1668. Remigius of three eminent French ecclesiastics, the most famous of whom (St. Remigius or St. Remy) was bishop (St. Remigius or St. Remy) was bishop of Rheims for over seventy years, and in 496 baptized Clovis, king of the Franks, and founder of the French monarchy.

Remington (rem'ing-ton), FREDERICK, author and scuiptor, born in St. Lawrence Co., New York,
in 1861. He is best known in scuipture
for his faithful delineations of western
scenes, The Broncho Buster and The Wounded Bunkie. His works embrace Pony Tracks, Crooked Trails, Frontier Sketches, etc. Died 1909.

Remington, Philo, inventor, born at Litchfield, New York, in 1816; died in 1889. For 25 years he was superinter lent in the small arms factory of his father, and by his inven-tive skiil perfected the Remington breech-loading rifle and the Remington typewriter.

Remirement (re-mer-mon), a town of France, department of the Vosges, picturesquely situated at the foot of the Vosges, on the left bank of the Moselie. It is famous for its groups in particular. His artistic development may be broadly divided into muslin, lace, etc., with a considerable three periods. To the first of these trade, principally in cheese. Pop. 8582. (1627-39), which shows less mastery than the succeeding two, belong his St.

Remittent Fever (re-mit'tent), a fever which sufPaul, Samson in Prison, Simeon in the fers a decided remission of its violence. . . . .

Remora (rem'u-ra), a genus of fishes included in the Gohy family, and of which the common remora en Angleterre depais Bacon jusqu'à en Angleterre depuis Bacon jusqu'd Locke (1875).— His mother, CLAIRE ELIZABETH DE VERGENNES, COMTESSE DE on the top of the head a peculiar sucking-disk, composed of a series of cartilaginous plates arranged transversely, hy means of which they attach themselves to other death, received an academic couronne, and her Mémoires, published in 1879-80, are particularly valuable for the light which they throw on the court of the first empire.

Rémusat (rā-mu-zā), Jean Pierre ABEL, a French orientalist, born in 1788. He studied medicine, but devoted himself principally to the study of Eastern languages, especially Chinese. In 1811 appeared his Essai sur la Langue et la Littérature Chinoises, which at-tracted the attention of the learned. In 1814 he was appointed professor of Chinese and Manchy at the Coilège de France, a chair established specially for him. He died in 1832.

Renaissance (re-na'sans), a term applied, in its more specific sense, to a particular movement in architecture and its kindred arts, but in a general sense to that last stage of Remscheid (rem'shit), a town of the middle ages when the European races Rhenish Prussia, 18 miles began to emerge from the honds of ec-Remscheld Rhenish Prussia, 18 miles began to emerge from the honds of ecteristic to beight. It is the chief seat of the German hardware industry. Pop. 72,176.

Remsen (rem'sen), IRA, chemist, born largely influenced by the ancient classical arts and literature. It was a gradual transition from the middle ages to the modern, characterized by a revolution in the world of art and literature brought about by a revival and application of antique classical learning. The period was also marked by a spirit of exploration of lands beyond the sea, by the extinction of the scholastic philosophy, by the new ideas of astronomy promulgated by Copernicans, and by the invention of printing and gunpowder, etc. ophy, by the new ideas of astronomy promulgated by Copernicus, and by the invention of printing and gunpowder, etc. Renaissance Architecture,

a style which originated in Italy in the first half of the fifteenth century, and afterwards spread over Europe. Its main characteristic is a return to the classical forms and modes of ornamentation which had been displaced by the Byzantlne, the Romanesque, and the Gothle. The Florentlne Brunelleschl (dled 1446) may be said to have originated the style, having previously prepared himself by a careful study of the remains of the monuments of ancient Rome. His buildings are distinguished by the use of the three classical orders. by the use of the three classical orders, with much of the classical severity and grandeur, but in design they are made conformable to the wants of his own age. conformable to the wants of his own age. He sometimes retains, however, elements derived from the style which he superseded; as for instance in his masterpiece, the cathedral of Florence, where he makes a skilful use of the pointed Gothic vault. From Florence the style was introduced into Rome, where the noble and simple works of Bramante (died in 1514) are among the finest examples of it, the chief of these being the palace of the Chancellery, the foundations of St. Peter's, part of the Vatican, the small church of San Petro in Montorlo. It reached its highest pitch of torlo. It reached its highest pitch of grandeur in the dome of St. Peter's, the work of Michael Angelo (died in 1564), after whom it declined. Another Renalssance school arose in Venice, where the majority of the buildings of the sixteenth and seventeenth centurles are distingulshed by the prominence given to external decoration by means of pillars and pilasters. From this school sprung Palladlo (1518-80), after whom the distinctive style of architecture which he followed received the name of Pal'adian. The Renaissance architecture was introduced into France by Lombardic and Florentine architects about the end of Florentine architects about the end of the sixteenth century, and flourished This work, the publication of which there during the greater part of the following century, but especially in the first Europe, was the first part of a comprehalf under Louis XII and Francis I. hensive work on the History of the The early French architects of this Origins of Christianity, which includes period, while adopting the ancient classes. Les Aptires (1886), St. Paul (1867),

the slateenth century the Renalssance style degenerated in France as it had done in Italy, and after passing through the degenerate phase known as the Baroque style, it gave rise to the insipid and overdecorated productions of the so-called Rococo style. Into England the Renalssance style was introduced during the time of Elizabeth, and it is there represented by the works of Inigo Jones (1572-1652), Sir C. Wren (1'32-1723), and their contemporaries, ... Paul's, London, being a grand example of the latter architect. A great many of the princely residences of Germany belong to the Renaissance style, but not to its best perlod. Renalssance architecture presents many phases and varietles of style. It has been much used in modern work. The prevailing style employed in the rebuilding of Parls is Renalssance.

Renaix (re-nā; Flemlsh, Ronse), a town in Belgium, province of East Flanders, 24 miles south of Ghent; has manufactures of thread, lace, linen and woolen cloth, tobacco, etc. Renaix dates from the eighth century. Pop. (1904) 20,760.

Renan (ré-nan), Joseph Ernest, orientalist, historian, and essaylst, was born at Tréguler, in Brittany, Feb. 27, 1823, and studied at the seminary of St. Sulpice, Parls, but in 1845 gave up all intention of becoming a priest and devoted himself to historial priest, and devoted himself to historical and linguistic studies, especially the study of oriental languages. In 1848 he obtained the Volney prize for an essay on the Semitic languages. In 1849 he was sent by the Academy of Inscriptions and Relies Lettres on a mission to Inscriptions and Belles Lettres on a mission to Italy, and Belles Lettres on a mission to Italy, and in 1860 on a mission to Syria. In 1862 he was appointed professor of Hebrew, Chaldee, and Syrlac in the Collège de France, but the skeptical views manifested in his Vie de Jésus (1863) raised an outery against him, and he was removed from his chair, to he reserved again however in 1871 0 e e f e d h e )e e 3 s, e e 0

L'Antéchrist (1873), Les Evangiles century church and a quaint old town- (1877), L'Eglise Chrétienne (1879), and hall. Pop. (1911) 17,315.

Marc Aurèle (1880), aii written from the standpoint of one who disbelieves in the supernatural claims of Christianity. Second son of Louis II of Naples, duke Renan's latest important work is the of Anjou, and Ioiante, daughter of John, Renan's latest important work is the Renan's latest important work is the History of the People of Israel till the Time of King David. Other works are Histoire Générale et Système Comparé des Langues Sémitiques, and Études d'Histoire Religieuse. He became a member of the Academy in 1878. Died October 2, 1892.

Renand the Form (ren'ard), the

Fox'), and this subsequent modifications and enlarger Rostock, appeared. It was evidently taken from the prose version in Dutch, of which Caxton published an English translation. On this Low German version was founded Goethe's rendering (1794) into modern German hexameters. In France the history of Renard was enormously popular, and from the end of the twelfth to the middle of the fourteenth centuries many forms of it appeared. It relates the adventures of the fox at the court of the beast, the lion, and details with great the lion, and details with great in the court of the beast, and human the curning medical in the court of the lion. spirit and humor the cunning modes in which the hero contrives to outwit his enemies, and to gain the favor of his credulous sovereign. The poem may be regarded as 'a parody of human life.' There is no personal satire in it, but the allusions to the weak points in the social, religious, and political life of the

time are numerous and unmistakable.

Rendsburg (rents'börg), a town of Prussia, in the province of Schieswig-Holstein, on the Eider, 54 miles N. N. W. of Hamburg. It is advan-tageously situated for trade, being con-nected with the North Sea by the Eider, and with the Baltic by the Eider Canal, and being on the line of the Kaiser Wilhelm canal. It has a thirteenth miles W. N. W. of Glasgow, close to the

Renan's latest important work is the Ristory of the People of Israel till the History of the People of Israel till the Historie Générale et Système Comparé des Langues Sémitiques, and Etudes d'Histoire Religieuse. He became a member of the Academy in 1878. Died October 2, 1892.

Renard the Fox (ren'ard), the name of an epic fable in which the characters are animals, the fox being the hero, and which in various forms was extremely popular in Western Europe during the middle ages, and for many years afterwards. It is known in several forms, differing from each other in the episodes. In Latin it appears in a poem of considerable length belonging to about 1150; the oldest known German version is that of a minnesinger, Heinrich der Glichessere, telonging to a period not much later. An excellent Dutch version of the fabie appeared in Flandars about and under the polar of the fabie appeared in Flandars about and under the captured by Aifonso, king of Arago and the content of the government of which he gave up to his son Islam Islam is son of the fabie appeared in Flandars about and under the content of the fabie appeared in Flandars about and under the polar of the fabie appeared in Flandars about and under the polar of the fabie appeared in Flandars about and under the polar of the fabie appeared in Flandars about and under the polar of the fabie appeared in Flandars about and under the polar of the fabie appeared in Flandars about and under the polar and in 1427 rea minnesinger, Heinrich der Gilcheselle, René was unsuccessful, and in the leionging to a period not much later. Rennell (ren'ei), James, an English died in 1830. At thirteen he entered the navy, whence he passed into the East India Company's military service, in which he rose to the rank of major. He was chiefly employed in engineering and surveying work, and later held the appointment of surveyor-general of Bengal. He retired on a pension in 1776, returned to England in 1778, and hence-forth lived in London. The remainder of his long life he devoted to geographical labors, maintaining a correspondence with many of the most learned men of Europe, and giving to the world from tlme to tlme numerous geographical works of great value. These include Bengal Atlas, Memoir of a Map of Hindustan, Geographical System of Herodustan.

dustan, Geographical System of Herodotus, Treatise on the Comparative Geography of Western Asia, On the Topography of the Plain of Troy, Illustrations of the Expedition of Cyrus, etc.

Rennes (renn), a city of France, formerly capital of Brittany, at present capital of the department of Ille-et-Vilaine, situated at the confluence of the rivers Ille and Vilaine. It is traversed from east to west by the Vilaine, which divides it into the High and the Low Town, and is crossed hy four bridges. The High Town is handsome and regular, having been rebuilt some and regular, having been rebuilt after a dreadful conflagration which took place in 1720. The most remarkable buildings are the cathedral, a modern Grecian building, the Palais de Justice, the Hotel de Ville, and the Lycée. The industries include sail-cloth, linen, shoes, hats, stained paper, etc. Rennes is the seat of an archbishop, the headquarters of a corps d'armée, and has a large arsenal and barracks. Duguesclin and Sainte Foix were born here. I'op. 79,-

Rener et (ren'et), the prepared inner surface of the stomach of a young calf. It contains much pepsin, and has the property of coagulating the was a high authority in hydraulic engineers. in the strict economic sense, the Rent, in the strict economic conditions of free competition, an owner of land can obtain by lending out the use of it to others. This will be found to con-sist of that portion of the annual produce which remains over and above the amount required to replace the farmer's outlay, together with the usual profits. The explanation of the existence of a permanent surplus in the product beyond what is thus needed to replace with profits the productive outlay was first given by Anderson in 1777, the theory heing developed more at length hy Ricardo, with whose name it is com-nonly associated. In Adam Smith's opinion, the demand of food is always so great that agricultural produce can command in the market a price more than sufficient to maintain all the labor to hring it to market and to replace stock with its profits, the surplus value going naturally to the landlord. As against the insufficiency of this statement to meet the central difficulty in the prohlem, the Ricardian school of economists pointed out that agricultural produce is raised at greater or less cost according to the degree of fertility of different soils, and that even on the same soil, hy the law of diminishing returns, a more than proportionate outlay is, after a certain point, required for each additional increase in the produce. The uniform price of agricultural produce, however, as de-termined in a free market, tends inevi-tably to he such as to cover with ordinary profits the cost of that portion of the produce which is raised at greatest expense; and there will, therefore, be ca all that portion of the produce raised at less expense a surplus aver and above what is required to remunerate the farmer at the usual rate of profits. As a corollary to this theory, it will he apparent that rent does not determine the normal value of produce, hut is itself determined by it; in other words, that rent is no an element in the cost of production. The Ricardian theory of rent has been frequently called in questlon, as by Rogers in England and Carey etc. in America; hut it has obtained, with sertain obvious limitations in respect of

The climate is dry and healthful, the conditions of land tenure, the assent of the majority of modern economists.

Rent, as a legal term, is the consideration given to the iandlord hy a tenant for the use of the iands or buildings which he possesses under lease. There is no necessity that this should be, as it usually is, money; for horses, corn, and various other things, may be, and occasionally are, reudered by way of rent; it may also consist in manual labor for the landlord's benefit. It is incidental to rent that the landlord can distrain—that is, seize and sell the tenant's chattels in order to liquidate the rent. Sometimes the owner transfers to another hy deed or otherwise the right to a certain rent out of the lands, that is termed a rent-charge, and the holder of it has power to distrain for the rent, though ordinarily he has no right over the lands themselves.

Renwick (ren'wik), James, a Scottlsh Covenanter, horn at Minnihive, Dumfrlesshire, in 1662. He studied at Edinburgh University, where, on declining to take the oath of allegiance, he was refused a degree. On the advice of the Covenanters, with whom he threw in his lot after the execution of Cargill in 1681, he went to Holland, and was ordained at Groningen, immediately returning to Scotland, and engaging in the difficult and dangerous duties of a minister of the 'hill-folk.' On the proclamation of James II in 1685 he went with 200 men to San-quhar, and published a declaration dis-owning him as a papist, and renouncing his alleglance. A reward was then set upon his head, and after many wonderful escapes he was captured, condemned, and

executed, Feb, 17, 1688.

Renwick, James, physicist, born at Liverpool in 1792; died at New York in 1863. He was educated in Columbia College, New York, and from 1860. 1820 to 1850 was professor of physics and chemistry in that institution. He wrote a number of works connected with the sciences in which he had to give in-struction, such as Outlines of Natural Philosophy; Treatise on the Steam En-gine; Elements of Mechanics, etc.; also Life of John Jay and Alexander Hamilton; Life of De Witt Clinton; hesides editing various other works.—His son JAMES, born 1819, became a distinguished architect, designing many churches and other buildings, including the Roman Catholic cathedral of New York, the Smithsonian Institution, Vassar Coilege,

Rep, or REPP, a woolen dress fabric with a finely-ribbed surface, so

31-U-5

woven that the ribs run transversely and

not lengthways as in corded fahrics.

Repairs (re-pars'), in law, is the term denoting the repairs done to a house or tenement by the landlord or tenant during the currency of a lease. In England, unless there is an express stipulation to the contrary, repairs must be performed by the tenant; but it is usually stated in the lease which party is to do the repairs. In the United States, unless otherwise stlpulated, repairs are made by the landlord; he must keep the property in tenantable condition.

Repeal Movement (re-pēl'), the name given to the agitation for the repeal of the Union between Great Britain and Ireland. This agitation commenced almost at the moment of the Union, and has continued to the present time. Robert Emmet sacrificed his life to the cause of repeal in 1803. But the word repeal is most intimately connected with the name and career of Daniel O'Connell, the Irlsh 'Liberator.' O'Connell died in 1847, and Liberator.' O'Connell died in 1847, and the cause of repeal was taken up by the Young Ireland party of 1848; by the Fenians, whose operations came to a head in 1865-67; and finally by the Home Rule party, organized under the leadership first of Isaac Butt, in 1870, and afterwards under the leadership of C. S. Parnell. During the celebrated Parnell Commission of 1888-89, however, the Home Rule party, through their counsel, disclaimed all desire for repeal, maintaining that their alms were confined to the ing that their alms were confined to the obtaining of Home Rule in the strict, or restricted, sense of the word. A bill in favor of home rule in Ireland was finally passed in 1914, but the war in Europe delayed its establishment.

Repeat (re-pēt'), ln music, a sign that a movement or part of a move-

Replevin (re-plev'ln), in English brought to recover possession of goods illegally seised, the validity of which seizure it is the regular mode of contesting.

Replica (rep'll-ka), in the fine arts, is the copy of a picture, etc., made by the artist who executed the

debates and other public addresses are made known to the public. Previous to the year 1711 no regular publication of reports can be said to have been made. After 1711 speeches in the British Parliament, reproduced from notes furnished sometimes by the members themselves, began to appear regularly in periodicals. Boyer's Historical Register, an annual publication, gave a pretty regular account of the debates from the accession of George I to the year 1737. In 1735 the Gentleman's Magazine began a monthly subjection of the debates the a monthly publication of the debates, the names of the speakers heing suppressed, with the exception of the first and last letters; hut the reports were necessarlly very inaccurate, as muy be judged from the manner in which they were prepared. Cave, the bookseller, and his assistants gained admission to the houses of parliament, and surreptitlously took what notes of the speeches they could, and the general tendency and substance of the arguments; this crude matter was then hrought into shape for publication by another hand—work upon which Guthrie the historian and Dr. Johnson were employed. In 1729, and again in 1738, the House of Commons had characterized the publication of debates as 'an indignity to, and a breach of the privilege of this house,' and in 1747 privilege of this house, and in 1747 Cave was called to account; but the reports continued to appear without the ports continued to appear without the proper names of the speakers, and under the heading of 'Debates in the Senate of Lilliput.' In 1771 several printers were ordered into custody for publishing dehates of the House of Commons. The sympathy of the public was with the printers, the lord mayor and Alderman Diver were committed to and Alderman Oliver were committed to the Tower for refusing t recognize the Speaker's warrant for the arrest of the Repeat (re-per), in music, a sign that a movement or part of a movement is to be played or sung twice.

Repeater Watch, a watch that repulsively peats the hour, or hour and quarters, or even the hour, quarters, and odd minutes on the compression of a spring.

Repeater's warrant for the arrest of the printers, and the popular excitement was intense; hut in 1772 the newspapers published the reports as usual, and the House quietly gave up the struggle. Thenceforth the system of reporting partial see Revolver.

Repeater's warrant for the arrest of the printers, and the popular excitement was intense; hut in 1772 the newspapers published the reports as usual, and the House quietly gave up the struggle. Thenceforth the system of reporting partial it reached its present very perfect condition. For a long time it was concondition. For a long time it was con-siderably hampered by the want of any special place in the house for the re-porters; but in the new houses of parllament special galieries and rooms have been fitted up for them, and all nec-essary conveniences provided. The system quickly extended from England to the is the copy of a picture, etc., United States, in the Congress of which made by the artist who executed the original.

ing the sessions by an official corps of reporters and printed in the Congressional Record. The newspapers have their reporters also at hand to take down matters of interest to the general public and the art of reporting has are public, and the art of reporting has ex-tended in this country until it covers lectures, debates and public speeches of every kind. Every newspaper has a corps of reporters devoted to these various duties, and nowhere eise in the world is there such enterprise and activity shown in the gathering of news of this character as in the United States.

Reports (re-ports'), in regard to courts of law, are statements containing a history of the several cases, with a summary of the proceedings, the arguments on both sides, and the reason the court gave for its judgment. In England reports of law cases are extant from the relgn of Edward II. Up to the time of Henry VIII the reports were taken officially at the expense of the government, and were published annually under the name of Year-books; hut afterwards, until 1865, the reports were made by private individuals in the various wards, until 1865, the reports were made by private individuals in the various courts. In 1865 an improved system of iaw reporting was instituted by the Eng-lish bar under the superintendence of the Council of Law Reporting, who publish the 'authorized reports.' In the United States the Supreme Court Re-ports form a complete series from 1792 to date. Each State also publishes a regularly authorized series of Reports of decisions of its judicial tribunals of last resort. resort.

Repoussé (re-pö-sa') a kind of ornamental metal-work in re-lief. It resembles embossed work, but is produced by beating the metal up from the back, which is done with a punch and hammer, the metal being placed upon a wax block. By this means a rude resemblance to the figure to be produced is formed, and it is afterwards worked up by pressing and chasing the front surface. The finest specimens of this style are those of Benvenuto Ceilini of the sixteenth century.

Representative Government

(rep-re-zen'ta-tiv), is that form of gov-ernment in which either the whole of a nation, or that portion of it whose su-perior intelligence affords a sufficient guarantee for the proper exercise of the privilege, is called upon to elect representatives or deputies charged with the power of controlling the public expendi-ture, imposing taxes and assisting the executive in the framing of iaws. The most notable example of a government

of this kind is that existing in the United States. In Britain only the House o Commons is representative, the House of Lords being composed of hereditary legislators. In the nations of Europe also, except France and Switzerland, the legislative bodies are nowhere fully representative bodies are nowhere fully representative bodies. Reprieve of the people. See Constitution.

(re-prev'), the suspension of the execution of the sentence passed upon a criminal for a capital offense. A reprieve may be granted in various ways: — First, by the meropieasure of the executive; second, when the judge is not satisfied with the verdict, or any favorable circumstance appears in the criminal's character; third, when a woman capitally convicted pleads pregnancy; and, finally, when the criminal becomes insane.

Repri'sal, Letters of. See Merque,

Reprobation (rep-ru-ba'shun), in the doctrine that all who have not been elected to eternal life have been reprobated to eternal damnation. This doctrine was heid by Augustine and revived by Caivin; but most modern Calvinists repudiate it In the sense usually given to it.

Reproduction (re-pru-duk'shun), the process by which animals perpetuate their own species or race. Reproduction may take place in either or both of two chief modes. The first of these may be termed sessed, since in this form of the process the elements of sex are concerned — maie and female elements uniting to form the essential reproductive conditions. The second may be named ascanal, since in this latter act no elements of sex are concerned. The distinctive character of sexual reproduction consists in the essential element of the male (sperm-cell or sperms-tensis), being brought in contact with tozoon) being brought in contact with the essential element of the female (germ-cell, ovum, or egg), whereby the latter is festilized or impregnated, and those changes thereby induced which resuit in the formation of a new being. Whether these elements, male and femaie, be furnished by one individual or by two—or in other words whether the sexes be situated in separate indi-viduals or not—is a fact of immaterial consequence in the recognition and defi-nition of the sexual form of the process, The reproductive process, therefore, may be (1) Secural, including (A) Hermanh rodite or Monœcious parents possessing maie and female organs in the sume individual, and these may be (s) self-impregnating (for example, the tape; worm), or (b) mutually impregnating (for example, the snail); and (B) Dioccious parents, which may be (1) Oviparous (for example, most fishes, hirds, etc.), (2) Ovo-viviparous (for example, some amphibians and reptiles), or (3) Viviparous (for example, mammals).
Or the reproductive process may be (II)
Ascaud, including the processes of (A)
Gemmation or budding (internal, external, continuous, or discontinuous), and (B) Fission (transverse, longitudinal, irregular).
The most perfect form of the reproduc-

nal, irregular).

The most perfect form of the reproductive process is best seen in the highest or animals, where the male elevertebrate animals, where the male elements are furnished by one individual and the female elements by another. The male element, with its characteristic sperm-cells or spermatozoa, is brought into contact with the female ova in various ways. The ova when impregnated may undergo development external to the may undergo development external to the body of the parent, and be left to be developed by surrounding conditions (as In the eggs of fishes); or the parent may (as in birds) incubate or hatch them. Those forms which thus produce eggs from which the young are after-wards hatched are named ovipurous animals. In other cases (as in the land salamanders, vipers, etc.) the eggs are retained within the parent's body until such time as the young are hatched, and these forms are hence named ovo-vivip-arous; while (as in mammalla) the young are generally completely developed within the parent's hody, and are horn allve. Such animals are hence said to be viviparous. In the higher mammals, which exhibit the viviparous mode of reproduction in fullest perfection, the mother and embryo are connected by a structure consisting partly of feetal and partly of maternal tissues, and which is known as the placenta. (See Placenta.) In the tapeworms we find familiar examples of normal hermaphrodite forms. Each segment or proglottis of the tapeworm—which segment constitutes of ltself a separate zooid or part of the comself a separate zoold or part of the compound animal—contains a large branching ovary, developing ova or eggs, and representing the female organs, and also the male organ or testis. These organs between them produce perfect or fertilized eggs, each of which under certain favorable conditions is capable of developing into a part tensworm. The spells also into a new tapeworm. The snalls also

maphrodite form before the eggs of the latter can be fecundated. See also Figsion, Gemmation, Generation, Ovum, Parthenogenesis, etc. As to reproduction in plants, see Botan

Reptile (rep'til), or REPTILIA, a class of vertebrates, constituting with the hirds, to which they are most closely allied, Huxley's second dlvlslon of vertebrates, Sauropsida. Reptiles, however, are generally regarded as occupying a separate place in the animal kingdom, hetween birds and amphiblans. Reptlles differ from amphiblans chiefly heptiles differ from amphibians chieny in hreathing through lungs during the whole period of their existence; and from birds in being cold-blooded, in being covered with plates or scales instead of feathers, and in the forelegs (as far, at least, as living reptiles are concerned) never being constructed in the form of wings.

The class may be divided into ten orders, four of which are represented by living forms, while slx are extinct. living orders are the Chelonia (tortolses and turtles), the Ophidia (serpents and snakes), the Lacertlia (lizards), and Crocodlia (crocodiles and alligators). The extinct orders are: Ichthyopterygia (Ichthyosaurus), Sauropterygia (Plesiosaurus), Anomodontia (Rhynchosaurus, etc.), Pterosauria (Pterodactylus), Delnosauria (Megalosaurus, etc.), and Therlodontia. The class is also divided into two sections, Squamata and Loricata, according as the exoskeleton insists simply of scales or of bony plates in addition to the scales. living orders are the Chelonia (tortolses

dition to the scales.

The exoskeleton varies greatly in ite development throughout the class. As in the tortoises and turtles and crocodiles it may attain either separately or in com-hination with the endoskeleton a high development. In serpents and many lizards it is moderately developed, while in some lizards the skin is comparatively unprotected. The skeleton is always completely developed and ossified. The vertehral column in the quadrupedal forms is divided into four or five regions, less distinctly differentiated, however, than n the mammals. The rihs differ consic rably in their mode of attachment to the vertebræ, but are always present, and in a state of greater development than in the amphibians. The body, except in the case of the tortoises, is of an form good examples of hermaphrodite animals, and lllustrate organisms which require to he mutually impregnated in order
to produce fertilized eggs—that is to

limbs are developed, and not the others. In no case are the limbs developed to the extent to which they are developed in birds and quadrupeds, these members seidom being of sufficient length to keep the body from the ground. In some of the body from the ground. In some of the forms, living or extinct, the limbs are modified for swimming or for filght. The lower jaw is connected with the skull through the intervention of a quadrate bone, and, as this often projects backward, the opening of the mouth is very great, and may even extend beyond the base of the skull. Teeth, except in the turtles and toxtoless are present. fishes. The intestinal tract is generally differentiated into an œsophagus, stomtwo separate auricles and a single ventricular cavity, usually divided into two by an incomplete partition. Respiration is always performed by the lungs, which are highly organized, and often attain a great size. The ova are in general retained within the body of the parent until the development of the young bas proceeded to a greater or less extent, and then expelled and left to the heat of then expelled and left to the heat of the sun; but in some forms (as snakes and lizards) they are hatched in the in-terior of the body. Reptiles are found In greatest number, and in most typical form and variety, in the warm or tropical regions of the earth. During winter, or in the colder secons of the year, most reptiles hibernate, and snakes are notable as periodically molting their skin or epidermls. See the different orders in separate articles rate articles.

Republic (re-pub'lik; Latin, res pub-lica, the common weal, the state), a commonwealth in which the supreme power of the state is vested, not in a hereditary ruler, but in the citi-

preme power was vested in the whole body of the citizens, who met in common assembly to enact their iaws; though under them was a large slave population devold of all political rights. In the oligarchic republics of Genoa and Venice the supreme power was consigned to the nobles or a few privileged individuals. In all modern republics the representative system prevails. Possider the discontinuous content of the property of the discontinuous content of the discontinuous cont tive system prevails. Besides the di-minutive republics of San Marino, in jects backward, the opening of the mouth is very great, and may even extend beyond the base of the skull. Teeth, except in the turtles and tortoises, are present, but are adapted rather for seizing and holding prey than masticating food, and, except in the crocodiles, are not sunk in sockets. The skull possesses a single occipital condyle, by means of which it articulates with the spine. The brain is small compared with the size of until 1815; Great Britain was nominally the skull. The muscular system is developed more like that of the birds and mammals than that of the amphiblans or fishes. The intestival sessed a brief republican government, and Portugal has bad once since 1910. In the New World the republican form of government prevails universally among the ach, small intestine, and large intestine. independent states, the most important of it terminates in a cloaca, which is also all the republics there being the United common to the efferent ducts of the States. The same condition exists in others of the American republics. Argentine became a republic in 1816. Mexico bas been a republic since 1824, except during the short-lived empire from 1863 to 1867. Brazil has

been a republic only since November, 1889.

Republican Party, one of the two cai parties of the United States. The term was first used shortly after the formation of the Constitution, to replace that of the old Anti-Federalist party, composed of those who were opposed to the adoption of this great state paper. The name Republican was given to the new organization by Thomas Jefferson, who became its leader. During the French who became its leader. During the French Revolution many 'Democratic Clubs' were formed in this country, and during 1794-95 a union was made between these and the Republicans, the compound title of Democratic-Republican being adopted. The Federal party, to which this was opposed, died out after 1816, and the Democratic-Republican party exzens themselves. According to the constitution of the governing body, a republic may vary from the proudest aristocracy to the most absolute democracy. In the smail states of ancient Greece the su-that of Whig party. The Republican

adopted this title. Into it was merged the remains of the older Whig, Free Soil, American and other minor organizations. The new party advocated a high pro-tective tariff and favored a strong centective tariff and favored a strong central government, in opposition to the Democratic policy, which opposed the protective tariff and maintained the doctrine of state-rights. The new party also advocated the non-extension of slavery, this also being in opposition to the policy of the Southern and a large section of the Northern Democrats. But the result of the Civil war removed the slavery issue from the domain of party politics and there remained only those of centralization and protection. In the years which have passed since the two parties have in a measure approached and the rescripts of the popes concern principally each other on these questions and the marked distinction between them has passed away, both of them, for instance, now advocating tariff reduction, though to a different extent. Other issues between the two parties have arisen from to a different extent. Other tween the two parties have arisen from time to time, such as that of the gold and silver standard, but at present their difference in policy is far less strongly marked than formerly. The Republican party has been successful in electing all its candidates for the Presidency, except in 1856, 1884, 1892, 1912 and 1916.

(re-pū-di-ā'shun), a reparty of a limb which, though shortened, is in the majority of cases better than an Resection, which is one

government to pay the debts contracted by the governments which have preceded it. Repudiation has sometimes been resorted to by the smaller American re-publics and by some of the United States, and in Europe there are also instances of

a simllar kind. Repulsion (re-pui'shnn), in physics, is a term often applied to the action which two bodies exert upon one another when they tend to increase their mutual distance. It is manifested between two magnets when like poles are presented to each other, and by electrified bodies when like charges (positive to positive or negative to negative) are presented. There is no evidence of any other form of physical repulsion existing.

Requena (re-kā'nā), a town of Southern Spain, province of Valencia, 41 miles w. of that city; has industries connected with the culture of silk, saffron, grain, fruit and wine. Pop. 16,236.

musical mass for the dead, which hegins

party now existing in the United States in Latin, Requiem externam done ele, was formed in 1856, out of an organiza- ('Give to them eternal rest'). Mozart, tion known as 'Anti-Nebraska Men,' who Jomeili, and Cherubini composed famous requiems.

Reredos (rér'dos), in ecclesiasticai architecture, a screen or partition waii behind an aitar, which is invariably ornamented in some manner, and is frequently highly enriched with sculptured decorations, or with painting, gliding, or tapestry. The reredos of St. Paul's, London, the last English cathedral to be provided with a reredos, was unveiled in January, 1888.

Rescript (ré'skript; Latin, rescriptus, written back), in Roman iaw, the answers of popes and em-

rescripts of the popes concern principally theological matters.

Rescue (res'kū), in law, the forcible or illegal taking of a person or thing (as a prisoner or a thing lawfully distrained) out of the custody of

artificial one. Resection, which is one of the triumphs of modern surgery, became a recognized form of surgical operatlon in 1850.

Reseda (re-sē'da), a genus of annual, blenniai, and perenniai herbs and undershrubs, nat. order Reseducem, of which it is the type. Of the genus two species are quite familiar: R. odorāta (mignonette) and R. luteola (wild woad). The latter yields a beautiful yellow dye, for which it was formerly cultivated.

Resedaceæ (re-se-dā'se-ē), a smail naturai order of piants, consisting of annual or perennial herhs, more rarely shrubs, with aiternate or pinnately divided leaves, and small, irregular and small, irregular and small, irregular and small, irregular and small and sma ular, greenish-yellow or whitish flowers. It inhabits Europe and all the basin of the Mediterranean. With the exception of Resēda odorāta (mignonette) and R. luteola (wild woad), most of the species are mere weeds.

tracts have been thus donated for the support of public schools. Much larger tracts have been set aside for the use of Indian tribes, which have been removed to these locations, supported by the government and kept under supervision. The most notable of these reservations was the Indian Territory, now the State of Oklahoma hut still largely inhabited by Indian tribes. Other large reservations have been set aside, especially in the West, and the system has given rise to many evil practices, in which the Indians have been oppressed and robbed by dishonest agents and others. These evils are gradually being eilminated.

Reserve (re-serv'), in military matters, has several significations. In hettle the reserve consists of those troops not in action, and destined to supply fresh forces as they are needed,

Reserve (re-serv'), in military matters, has several significations. In hettle the reserve consists of those troops not in action, and destined to supply fresh forces as they are needed, to support those points which are shaken, and to be ready to act at declaive moments. The reserve of ammunition is the magazine of wariike stores piaced close to the scene of action to allow of the supply actually in the field being speedily replenished. The term reserves is also applied to those forces which are liable to be called into the field on great emergencies, for the purposes of national decense; which have received a military training hut follow the ordinary occupations of civil ilfe, and do not form part of the standing army. Such reserves now form a part of all national troops organized on a great scale. Liahility to serve in the reserves continues generally from about the age of twenty to forty-two. In Great Britain the reserves consist of the army reserve and the auxiliary forces, namely, the militla, the yeomanry, and the volunteers. In the United States the National Guards of the States constitute such a reserve, etc.)

Reserve, in banking and insurance, that portion of capital which is set aside to meet liabilities, and which, in hanking, is therefore not employed in discounts or temporary loans.

Reservoir (rez'ér-vwar), an artificial hasin in which a large quantity of water is stored. The construction of a reservoir often requires great engineering skill. In the selection of a site the great object should be to choose a position which will give the means for collecting a large supply of rainfall with as iltrie recourse as possible to artificial structures or excavations. The embankments or dams may be constructed either of masonry or earthwork.

Reservoirs in which the dams are built of earthwork must be provided with a waste-weir, to admit of the surplus water waste-weir, to admlt of the surplus water flowing over; in the reservoirs of which the dams are huit of masonry there is no necessity for a waste-weir, as then the water may be allowed to overflow the wall, there being no fear of its endangering the works. The outlet at the bottom, by which the water to be used is drawn off from the reservoir, may consist either of a tunnel, culvert, or iron pipes provided with suitable sluices. A vast system of reservoirs, cailed 'tanks,' exists in India, constructed for purposes of Irrigation. The reservoirs upon the irrigation canais of Spain are ail of masonry; they are circular or polygonal in shape, and the interior face of the wall, which in constructed of large ashiars, is vertical. In various other countries the preference is given to earthen dams. In the Western United States a series of immense reservoirs are now in process of construction, in which the waters of mountain streams are held back by great stone dams hullt which the waters of mountain streams are held back by great stone dams hullt across their ontiets. These are intended for irrigation purposes, for the reclamation of great areas of sterile lands.

In these cases means are adopted for raising or lowering the surface of the water, the difference between the lowest and the highest level of the surface, multiplied by the area of the lake, giving the measure of its available storage.

Distributing reservoirs for towns are reserved to higher the measure of the surface, multiplied by the area of the lake, giving the measure of its available storage. generally bullt of masonry, hut are some-times of iron. They are placed high enough to command the highest part of the town, and are capacions enough to contain half a day's snpply, their chief nse being to store the surplus water during the night. Reinforced concrete is now frequently employed in the building of reservoir dams. Several catastrophes have occurred from the bursting of imhave occurred from the bursting of imperfectly formed reservoirs. The hursting of the reservoir at Johnstown, Pennsylvania, in 1889 was a notable instance of this kind, 2200 persons being drowned and \$10,000,000 worth of property destroyed. The breaking of a concrete dam at Austin, Pennsylvania, in 1911, led to the death of hundreds of persons and the loss of thousands of dollars' worth of property. See Johnstown.

Reshid Pasha (re-shēd pasha), a Turkish statesman, born at Constantinople in 1800; died in 1858. He represented the Porte in the courts of France and Britain, was several times made grand vizier, supported the policy of Sir Stratford Canning, and

Resht (resht), a town of Persia, capital tai of the province of Glian, 150 miles northwest of Teheran, near the Caspian Sea. Resht is a weli-bulit town, and is the center of the silk trade of Persia, and through its port Enzelli, 16 miles distant, carries on a considerable trade with Russia. Pop. 41,000.

(re-zid'0-a-ri ieg'a-tē), in Residuary Legatee law, the person to whom the surpius of boards and the bodies of musical instruthe personal estate, after the disch-of all debts and particular legaci-left by the testator's will. .

Resine, (rā-sē'na), a town of Italy, in the province and 6 miles sontheast of Naples, on the Gulf of Naples. It is built over the ruins of Herculaneum, and is the usual starting-place for the ascent of Vesuvius, Pop. 19,766.

Resins (rez'inz), a class of vegetable substances insoluble in water, substances insoluble in water, soluble in alcohol, and easily softened or melted by heat. Resins are either nertral or acid; they are transparent or transincent; they have generally a yellow-brown color; are sometimes elastic, but more generally friable and hard. They become electric when rubbed. Resins may be divided into three classes:—(1) Those which exude spontaneously from piants, or from inclains in the stems and hranches. They are generally mixtures of gum-resins and volatile oils. The principal resins bevolatile oils. The principal resins belonging to this class are benzoin, drag-on's-blood, Peru baisam, storax, copaiba, copal, elemi, guaiacum, ialap, iac, myrrh, sandarach, and turpentine. (2) Resins extracted from plants by alcohols; myrrh, sandarach, and turpentine. (2) Respiration (res-pi-ra'shun), the Resins extracted from plants by alcohols; they generally contain definite carbon breathing. Respiration is that great compounds. The principal resing her physiological function which is described. compounds. The principal resins beionging to this class are gum ammoniacum, angelica-root, Indian hemp, cubebs,
manna, and squill. (3) Fossil resins,
occurring in coal or lignite heds, amber,

asphalt, copaline, fossil caoutchouc, etc.

Resist (re-zist'), in calico-printing, a
paste applied to calico goods to
prevent color or mordant from fixing on
the parts not intended to be colored. Resists may be used either mechanically

or chemically.

(re-zist'ans), ELECTRI-Resistance CAL, the opposition which a conductor offers to the flow of electricity, the conductor heing removed so far from neighboring conductors that their action will be very small, and maintained at the temperature of 0° C. The unit of resistance now in use is called ap ohm (which see),

was the chief of the party of progress Resolution (res-u-id'shun), in music, in Turkey. nance into the consonant harmony for which it creates in the ear an expecta-tion. This is effected by raising or depressing the note a tone or a semitone, according to the rules of harmonical progression.

Resonance (regu-nans), in acoussound. Resonance includes such strengthening of sound as occurs lu sounding-

ments.

Resonator (rez-u-na'tur), a device for analyzing compound sounds and for detecting a particular note by sympathetic vihrations. It was invented by Helmholtz, and in its simplest form consists of a hollow buil or round tube, with one aperture to be applied to th. ear, and an opposite aperture of a certain size which serves to admit the vibrations of one musical note to which it is adapted and to exclude all others. A set of these may be formed each of which corresponds to a note of the musical scale.—ELECTRICAL. A conductor having one open circuit, designed for detecting the electromagnetic radiation from a nearby circuit, which is manifested by a spark, as a resuit of sympathetic electrical vibrations.

Resorcin (re-zor'sin), a coloriess crystalline compound pre-pared on the large scale by the action of sulphuric acid on henzine, and by the treatment of the resulting compound with caustic soda. It yields a fine purple-red coloring matter and several other dyes used in dyeing and calico-printing.

physiological function which is devoted to the purification of the hlood by the removal, through the media of the breathing organs, of carhonic acid and other waste products, and at the same time to the revivifying of the hiood by the introduction of the overgree of atmosp the introduction of the oxygen of atmospheric air. It is thus partly excretory and partly nutritive in its character. The other waste products, besides car-bonic acid, which are given off in the process of animal respiration, are water. ammonia, and organic matters; but carbonic acid is by far the most important.

In man and the higher animais respiration is carried on by the breathing organs or iungs. The biood is conveyed to the breathing organs by special vessels, the right side of the heart in hirds and mammais being exclusively employed in driving blood to the lungs for purificamusic. disen-

puimonary or lung capiliaries in a steady stream, and passes through these minute stream, and passes through these minute vesseis at a rate sufficient to expose it to the action of the oxygen contained in the air-celis of the lung. The essential part of the function of respiration, namely, the exchange of carbonic acid gas for oxygen, thus takes place in the lung, where the dingy-hued venous blood becomes converted into the florid red arterial blood. Respiration includes the physical acts of inspiration and expiration, both involuntary acts, although they may be voluntarily modified. From fourteen to eighteen respiratory acts take may be voluntarily needs, although they imay be voluntarily modified. From fourteen to eighteen respiratory acts take place per minute, the average quantity of air inhaled hy a healthy adult man heling about 30 cubic inches, a slightly smaller quantity heling exhaled. This definite volume of air which ehbs and flows is termed tidal air. The quantity (about 100 cubic inches) which may be taken in a deep inspiration, in addition to the tidal air, is termed complemental air. The quantity of air (75 to 100 cubic inches) remaining in the chest after an ordinary expiration has expelled the tidal air is named supplemental or reserve air, and this may he in greater part expelled hy a deeper expiration; while a quantity of air always remains in the lungs after the deepest possible expiratory effort, and cannot be got rid of. This latter quantity is therefore appropriately named residual air. The difference in the mode of hreathing between the two sexes is clearly perceptihie. In man it is chiefly abdominal in its character; that is to say, the lower part of the chest and sternum, together with the abdominal muscles, participate before the upper portions of the chest in the re-

abdominal muscles, participate before the upper portions of the chest in the re-spiratory movements; while in women

the breathing movements are chiefly referable to the upper portions of the

reterante to the upper portions of the chest. In women, therefore, hreathing is said to he pectoral.

Every volume of inspired air ioses from 4½ to 5 per cent. of oxygen and gains rather less carbonic acid. The quantity of carbonic acid given off varies under different circumstances. More carbonic acid is avereted by males then carbonic acid is excreted by males than by females of the same age, and hy maies hetween eight and forty than in oid age or in infancy. An average healthy adult man will excrete more than 8 oz. ci carhon in 24 hours. Hence the necessity or repeated currents of fresh air in meet : 3 places and piaces of public entertainment, in hails and in churches, and for the proper ventilation of sieeping apart-ments. The breathing of an atmosphere vitiated by organic matter and carbonic

The blood is sent through the acld results in imperfect oxygenation of nary or lung capitiaries in a steady the blood, is accompanied or followed by headaches, drowsiness, and lassitude, and is the source of many serious and even

fatal disorders.

While in man and the more Lighty organized animals respiration is carried on hy the lungs, in fishes it is effected by the gliis. The essential feature of any hreathing organ is a thin membrane, having the blood on one side and air, or instant containing air on the other; and water containing air, on the other; and the essential feature of respiration is an interchange of products between the hiood and the atmosphere, oxygen passing from the atmosphere or water into the hiood, and carbonic acid and other excretory substances from the blood into the atmosphere or water. In the pro-tozoa no respiratory organs are special-ized, hut the protopiasm of which the bodies of these animals are composed has bodies of these animals are composed has doubtless the power of excreting waste matters, as well as of absorbing nutritive material. Even in comparatively high organisms, where no specialized breathing organs are developed, the function of respiration may be carried on by the skin or general body surface—the integument being, as in the highest forms, intimately correlated in its functions to the hreathing process. Thus in earthworms, lower crustacea, etc., the breathing appears to be solely subserved by the hody-surfaces.

Respiration goes on in plants as well

Respiration goes on in plants as well as in animals, the piant in the presence of light exhaling oxygen and inhaling carbonic acid, and thus reversing the action of the animal.

Respiration, ARTIFICIAL. Respirator (res-pi-ra'tur), a mouth-covering, which gives warmth to the air inhaled, and is used hy persons having delicate lnngs. It is constructed of a series of layers of very fine silver or gilt wires placed ciosely together, which are heated by the exhalation of the warm hreath, and turn heat the cold air before it is inhaled. Other respirators, designed to exciude smoke, dust, and other noxious substances, are used hy firemen, miners, cutiers, grinders, and the like. Recently a form of respirator has been adopted hy divers in which a store of compressed air or oxygen is contained in the helmet for hreathing purposes. A similar expedient has been adopted by firemen and those entering mines after an explosion to avoid the breathing of viti air or point of the store of the sto

poisonous gases, Respiratory Sounds, Line, the sounds made by the air when being in- May 29, 1660. The restoration was held haied or exhaied, as heard by the ear as a festival in the Church of England applied directly to the chest, or indirectly till 1859. through the medium of the stethoscope. The respiratory sounds are of the highest importance in the diagnosis of diseases a temporary future punishment, hut in of the chest and bronchiai tubes.

Respite (res'pit), the temporary suspension of the execution of a capital offender. See Reprieve.

Respondent (re-spon'dent), in iaw, the designation of the narty requiring to answer in a suit, particularly in a chancery suit.

Respondentia (res-pon-den'shi-a), a ioan on the security of a sbip's cargo. It is made on the condition that if the goods are iost, the iender shall iose his money. A similar ioan on the security of the ship itself is cailed bottomry.

Rest, in music, an interval of silence between two sounds, and the mark which denotes such interval. Each note has its corresponding rest. See Music.

Rest-harrow, a common ieguminous a common European piant (Ononis spinosa), akin to the brooms. It is plentiful in stiff clay land in some parts, and derives its name from its iong and strong matted roots arresting the progress of the harrow. The stems are annual, often woody or shrubby, and hairy; the ieaves are generally simple, entire towards the base; the flowers, mostly solitary, large, and handsome, are of a brilliant rose color. Rest-harrow is also coline agreed.

is also cailed cammock.

Restiaces (res-ti-a'se-e), a natural order of plants ailled to the Cyperacese or sedges, and confined to the southern hemisphere, being found chiefly in South Africa and Australia. They are herbs or undershrubs, with matted roots which bind shifting soil, hard wiry stems, simple narrow leaves, the sheaths of which are usually split, and inconspicuous brown rush-like panicies of flowers. Restio tectorum is empioyed in South Africa for thatching, and the stems of other species are manufactured into baskets and brooms.

Restigouche (res'ti-gösh), a river which separates New Brunswick from the province of Quebec, flowing N. E. into the Bay of Chaicurs at Dalhousic. It is 200 miles iong, is navigable for 16 miles to Camphaton, and forms a tidal estuary for 24 miles. It drains 4000 square miles, a its basin supplies great quantities of t. nber. Restoration (res-tu-ra'shun), in English history, the re-establishment of Charles II on the throne,

(res-tur-a'shun-ist), Restorationist a final restoration of all to the favor and presence of God. The name is applied to ail of whatever sect who hold this belief, including the Universalists and especially a particular sect of Universalists.

Resurrection (res-u-rek'shun), the rising again of the body from the dead to be reunited to the soui in a new life. It has formed a part of the belief of the Christian Church since its first formation, and has been embodied as an article in each of the creeds. There are traces to be found of such a belief among heathen nations from a very early period. There can be little doubt that the Jews of later times held the doctrine, though it would be difficult to point to any express indication of it in the Old Testament. It appears, however, to be aliuded to in Isaiah, xxvi, 19, and is distinctly affirmed in Daniel, chap. xii, 1-3. That the belief in the resurrection was generally held among the Jews at the time of Christ is evident, particularly from the position occupied by the Sadducees, a sect having as its most characteristic fea-ture the deniai of the resurrection. Be-yond doubt, however, it was the gospei that 'brought life and immortaity to light.' At best the notions of a resurrection and future state current prior to the advent of Christ were dim and undefined. With regard to the information conveyed to us in the New Testament on the doctrine of the resurrection, we are taught that it will be universal, extending to the wicked as weil as to the righteous, John, v, 28, 29; Rev., xx, 13; that there shall be identity, in some sense, between the body which died and the body which shall be raised, 2 Cor., v, 10; that, as regards the resurrection of the righteous the body though identical righteous, the hody, though identical, shall be wonderfully altered, Phil., ili, 21; 1 Cor., xv; Luke, xx, 35, 36; and that, as regards the time of the resurrection, it shall be at the end of this present earthly state, and that it shall be connected with the coming of our Lord to judge the world, 1 Thess, iv, 16.

Connected with this subject is the resurrection of Christ himself from the dead, the cornerstone of the Christian ystem. The evidence in support of it is marked by the following characteristics:—(1) The variety of circumstances under which the risen Saviour appeared.

(2) The circumstantiality of the testimony given by the different witnesses.
(3) The simplicity and apparent truthfulness with which the witnesses describe their impressions when the Serious Company of the their impressions when the Saviour appeared to them. (4) That the event borne witness to was completely uncapacted by the witnesses. Various at tennus have been made to explain away the resurrection of Christ. There is the supposition (1) of fraud; that, according to the statement of the Jews, the disciples stoic the body, and then published the story that their Lord was risen. (2) That Jesus had not really died on the cross that his apparent died on the cross; that his apparent death was only a swoon, from which he afterwards recovered. (3) That there had been no real resurrection, but that the disciples had been deceived by visionary appearances or hallucinations. (4) That the assertion of the resurrection was originally allegorical. With regard to the significance of the resurrection of Christ, it was (helievers assert) the crowning evidence of the divine character his mission, he himself had spoken of his mission, he himself had species of it as what should be the most convincing proof to the world that he really vincing proof to the world himself to be: was what he professed himself to be; and in this light it was constantly appealed to hy the aposties in addressing the world.

Resurrection, Congregation of the, Catholic priests founded at Rome in 1836. Resuscitation. See Drowning.

Retainer (re-tan'er), in iaw, the act of a ciient by which he engages an attorney or counselor to manage a case. The effect of a retainer is to confer on the attorney ail the powers exercised by the forms and usages of the court in which the suit is pending. It is special when given for the purpose of securing the counsel's services for a particular case; general, when for securing his services generaliy. The retainer is in all cases accompanied hy a preliminary fee called a retaining fee.

Retaining Wall, a wail erected for the purpose of confining a body of water in a reservoir, or for resisting the thrust of the ground behind it. As a general rule the thickness of retaining wails is one-third thickness of retaining wans is observed in their height; in reservoir and dock walls nibal's passage of the Aips.

of masonry the thickness is about one-half their height.

Retiarius (rë-shi-ā'ri-us), in Roman antiquities, a gladiator who half their height.

laws of retardation are the converse of those of acceleration.

Mucosum (re'te mū-kō'sum), in anatomy, the Rete deepest layer of the epidermis or scarfskin, resting on the cutis vera or true skin. It is the seat of the color of the skin and in the negro contains black plgment.

Retention (re-ten'shun), in law, a lien; the right of withholding a deht or of retaining property until a deht due to the person claiming this right is duly paid.

Retention of Urine, in medicine, condition in which the urine cannot be expelled from the hladder at ail, or only with great difficulty; to he distinguished from suppression of urlne, a condition in which the bladder is empty, the urine not hav-ing been secreted hy the kidneys. It may he due to some mechanical obstruction, as a caiculus, a clot of hiood, or a tumor, or to paralysis, etc. If not relieved hy means of the catheter or otherwise it may cause rupture of the hiadder and death.

(ret'ford), EAST, a municipal borough in Nottingham-Retford shire, England, 32 miles E. N. E. of Nottingham, on the Idle, here crossed by a hridge connecting East Retford with West Retford. It has foundries, machine-shops, paper and corn mills, etc. Pop. 13,336.

Rethel (ret-el), a town of France, de-Aisne, 23 miles N. E. of Rheims, with manufactures of merinos and cashmeres.

manufactures (1)
Pop. (1906) 5254.

Rethel (rā'tei), Alfred, a German
Rethel historical painter, born at
1816; studied at
Frankfort Aix-ia-Chapelie in 1816; studied at Düsseidorf (under Schadow), Frankfort (under Veit and Schwind), and Rome. He died at Düsseidorf in 1859. His greatest works are four frescoes in the town-house of Aix-la-Chapeile representing incidents connected with the life of Charlemagne, other four there being executed from his designs after his death. These are among the finest modern works of the kind. German history and the Bihle also furnished him with various subjects, and he painted in water-color a series of pictures illustrative of Han-

Retardation (re-tar-da'shun), in wore only a short tunic and carried a physics, the diminution of the velocity of a body from the friction of the medium in which the body moves or from the attraction of gravity. The

Reticulated Work, a species of masonry very common among the ancients, in which the stones are square and iaid iozenge-

Reticulated Work - Roman.

wise, resembling the meshes of a net, and producing quite an ornamental appearance. It is the opus reticulatum of the Romans.

Reticulum (re-tik'ū-ium), the honeycomb bag or second cavity of the complex stomach of ruminants.

Retina (ret'i-na), in anatomy, a membrane of the eye, formed by an expansion of the optic nerve, an so constituted as to receive and transmit to the nerve the impressions which resuit

in vision. See Eye.

Retinite (ret'l-nīt), a fossil resin found in the lignite beds of Devonshire, Hanover, and elsewhere.

(re-tir'ment), in the Retirement army and navy, is withdrawment from the service with the retention of ali or a portion of the pay. In the British army and navy the retirement of officers may be voluntary, but all officers must retire at fixed ages, according to their rank, receiving corresponding retired pay. In the United States army and navy officers are retired

Retort (re-tort'), a vessel, generally of glass, used in chemistry Retz, GILLES DE. See Rais.

Reticulated Molding (re-tik'a-for distilling liquids. Retorts consist of flask-shaped vessels to which long necks or beaks are attached. The liquid to be distilled is placed in the flask and like network. It is seen chiefly in buildings in the Norman style. and are collected in a suitable receiver.

In gasmating, retorts of iron or fire-clay are used for distilling the coal.

Retreat (re-trēt'), a military operation, in which an army retires before an enemy; properly, an orderly march, in which circumstance it differs from a flight. Also a military signal given in the army by beat of drum or sound of trumpet at sunset, or for retiring from exercise or from action.

Retriever Dog (re-trēv'er), a dog specially trained to seek and fetch game which has been shot, and greatly valued by sportsmen for its sagacity in the field and in the water. The larger and more familiar breed of retrievers is formed by crossing the Newfoundland and setter; the smaller breed is formed by crossing the water-spaniel and terrier. The typical retriever is 20 or more inches high, with a stoutly-built body, strong limbs, webbed toes, and black and curly fur.

Retrograde (ret'ro-grad), a term given to the apparent motion of a planet among the stars when it is in opposition to the motion of the sun in the ecliptic. The motion of a planet in the direction from right to left is sald to be direct.

Retrogression of the Moon's

Nodes (ret'ro-gresh-un), the motion of the moon's nodes—the two points in which the moon's orbit meets the plane of the ecliptic - in the direction opposite to that of the sun's motion in the ecliptic. The moon's nodes slowly change at each revolution of the moon, in the direction from left to right, and make a complete revolution round the earth in 18.6 years.

Return (re-turn'), in law, the send-ing back of a writ or other process to the court from which it issued by the officer to whom it was addressed, with a written account of what he has done in executing the process, to be filed for reference in the office of the clerk of the court.

States army and navy officers are return after forty years' service, or at sixtytwo years of age, as the case may be, or at any time for sickness or disablement, receiving 75 per cent, of their anjudge of election, he and the inspectors,
including the certificate of election.

he he )ra

Ketz Contrary to his own inclinations, he was designed by his father, who was general of the galleys, for the church. His instructor was the celebrated Vincent de Paul. As a young abbé he led a very Improper life, but his brilliant gifts, his and solve and his great eloquence, his audacity, and his great connections nevertheless enabled him to advance in his ecclesiastical career. In 1643 he received a doctorate at the Sorbonne, and was appointed coadjutor of his uncle, the Archbishop of Paris. He was the implacable enemy of Mazarin, and in 1648 became the most energetic and unscrupulous of the leaders of the Fronde. On the fall of Mazarin he was selected as minister by the queen-regent. Anne of Austria, and in 1651 received the cordinal's best but on Mazarin's the cardinal's hat; but on Mazarin's return to power in 1652 he was arrested and imprisoned, first at Vincennes, then at Nantes. He escaped, however, after two years' captivity, and for nearly eight years wandered through Spain, Italy, Holland, Germany, and England. After the death of Mazarin in 1661 he was allowed to return to France, on condition that he should resign his claims to the archbishopric of Paris, receiving instead the rich abbey of St. Denis. During t last seventeen years of his life he liver retired, paid his immense debts, and occupied himself with the composition of his Mémoires, which are inimitable for their historic truth and narrative skill.

(rech), Moritz, a Jerman artist, was born at Dresden Retzsch in 1779; died there in 1857. Le studied at the art academy of his native city, of which he was appointed a professor in 1824. His most celebrated works are his outline illustrations of Shakespere, Goethe, Schiller, Fouqué, and others.

Reuchlin (rolh'lin), Johann, a German scholar, born in 1455

at Pforzheim; died in 1622. He studied

at Freiburg, the University of Paris, Bale, and elsewhere, and became familiar with Latin, Greek, and Hebrew. He was patronized by several of the German princes, and was engaged on various political missions. From 1502 to 1513 he was president of the Swabian federal court. His opposition to the proposal to burn all Hebrew books except the Bible raised a host of fanatical enemies against him, but did him no harm. In 1519 he was appointed professor at Ingolstadt; in 1521 the plague drove him to Stuttgart. 1521 the plague drove him to Stuttgart. the family of Reuss. Reuss-Greiz, the During a great part of his life Reuchlin territory of the elder line, comprises and was the real center of all Greek and area of 122 square miles, with a pop. of Hebrew teaching in Germany. Several 70,603; the territory of the younger line,

(ra), JEAN FRANÇOIS PAUL DE of his works had considerable popularity MCLZ GONDI, CARDINAL DE, was born at in their time. He sympathized deeply Montmirall in 1614; died at Paris, 1679. with Luther in the earlier stage, but mainwith Luther in the earlier stage, but maintained his connection with the Roman Catholic Church to the last.

Reumont (rol'mont), Alfred von, a German historian, born

at Aix-la-Chapelle, in 1808, was educated at Bonn and Heidelberg, and entered the Prussian diplomatic service, filling posts at Florence, Constantinople, and Rome. From 1851 till 1860, when he retired into private life, he was successively Prussian minister at Florence. Modena, the died in 1887. and Parma. He died in 1887. He was the author of several valuable works on the history of Italy, including Contribu-tions to Italian History. The Carafas of Maddaloni, History of the City of Rome, etc. He also wrote on the history of art. Réunion (rā-u-ni-ōn), formerly Bour-Bon, an island in the Indian Ocean, between Mauritius and Madagascar, 115 miles from each; area, 1127 square miles. It was annexed by France in 1643, and is an important French colony, now sending a representative to the chamber of deputies, and forming practically almost a department of France. It is very mountainous, the Piton des Neiges reaching a height of 10,069 feet, and the Piton de la Fournaise, an active volcano, of 8294 f.... The soil produces tropical products, sugar being the principal crop. Coffee, cloves, and vanilla are also grown. Destructive hurricanes are frequent. There are no natural harbors, but an artificial harbor has been constructed at Pointe des Galets, at the northwest side of the island; and this harbor is connected by rallway with St. Denis (the capital), and all the principal places on the coast. The population, which consists of creoles, negroes, Indian coolies, Chinese, Malays, etc., is 173,315.

Reus (rā'ös), a city of Spain, in Catalonia, in the province and 10 miles west of Tarragona, in a plain at the base of a chain of hills, about 4 miles from the port of Salou on the Mediter-raneau. Reus is now, next to Barcelona, the most flourishing manufacturing town of Catalonia, the staples being silk and

cotton. Imitation French wines are largely made. Pop. 26,681.

Reuss (rois), two principalities of Central Germany, consisting of several separate territories situated be-tween Prussia, Saxony, and Bavaria, and belonging to an older and younger line of Reuss-Schielz-Gera, has an area of 319 square miles, with a pop. of 144,7 Both principalities have been memiof the German Empire since 1871, each sending one member to the federal council and one representative to the Relcbstag.

Reuter (roi'ter), FRITZ, a German humorist, was born in 1810, and educated at Rostock and Jena. He became an active member of the student society Germania, which cost him seven years' imprisonment in Prussian fort-resses. Returning home in 1840 be supported bimself first hy farming, then hy teaching, and finally by literary work. His first literary venture was a volume of humorous poems in Low German (Lauschen and Ricmels, 1853), which met with extraordinary success. His greatest work is Olle Kamellen, a series of prose tales, which stamped '... as the greatest writer of Plattdeutsch and one

of the greatest bumorists of the century.
He died at Eisenach in 1874.

Reuter (roi'ter), PAUL JULIUS,
BARON, born at Cassei in
1821, was connected with the electric
telegraph system from the beginning, and in 1849 established Reuter's News Agency at Aix-ia-Chapelle. In 1851, on the lay-lng of the cable between Calais and Dover, he transferred bis chief office to London, and became a naturalized Englisbman. As the telegraphic system extended be increased bis staff of agents, until the newspaper press, the foreign bourses, and all banking, shipping, and trading companies hecame dependent in a great measure on Reuter's Agency for the latest information from all parts of the world. In 1865 he converted bis agency into a limited liability company, of which he was managing director until 1878. In 1871 be received the title of haron from the Duke of Cohurg-Gotha. He has laid down several important telegraphic cables. Died Feb. 25, 1899.

Reutlingen (roit'ling-en), a town of Würtemberg, 20 miles south of Stuttgart; has manufactures of cottons, woolens, iace, leather, etc. It is of considerable antiquity, and long maintained the rank of a free imperial city. It was incorporated with Würtemberg in 1802. Pop. 23,850.

Reval, or Revel (re-vel'), a fortified seaport of Russia, capital of Esthonia, on a smail bay in the Guif of Finland. It consists of two parts, the old or upper town, surrounded by walls and situated on a rocky height, and the lower town on the beach. Reval was an important seaport of the Hanseatic League, and came into the possession of

Russia in 1710. Its trade is chiefly in grain, flax, beer, animals and machinery. The construction of a naval harbor was begun in 1912, and it was the base of the Russian Baltle fleet. The port was cap-tured by German forces in 1918 during the European war. The population in 1910 was 98,995, of whom one-fourth were Germans.

Reveillé (re-vel'ya, from French, re-veiller, to awaken), the sig-nal given in garrisons at break of day, by beat of drum or sound of bugle, for the soldiers to rise and the sentinels to

forbear challenging until the retreat is sounded in the evening.

Revelation (rev-e-lā'shun), the knowiedge of God and his reiation to the world, claimed to be given to men by God himself, and for the Christian contained in the Bible. The earliest revelations, made in the patriarchai age, were preserved till later times, and gradually enlarged during the Mosalc period by successive revelations to chosen individuals, with whom the Bibie makes us acquainted under the name of prophets, from Moses to Malachi, the revelations finally completed being through Christ. See Christianity.

Revelation, Book of See Apoc-

Revelganj (rev-el-ganj'), or Godna, a commercial town of India, in Bengal, near the junction of the Ganges and Gbagra. It has an important local trade. Pop. about 15,000.

Revels (rev'elz), Master of the, an officer formerly appointed in England to superintend the revels or amusements, consisting of dancing, masking, etc., in the courts of princes, the inns of court, and nohlemen's houses, during the twelve Christmas holidays. He ing the twelve Christmas holidays. He was a court official from the time of Henry VIII to that of George III.

Revenue (rev'e-nt), the income of a nation derived from taxes, duties, and other sources, for public uses. See articles on the different countries. also Tax, etc.

Revenue Cutter, a sharp-built singie-masted vessel, armed for the purpose of preventing smuggling and enforcing the customhouse regulations.

Reverberatory Furnace

(re-ver'ber-a-tu-ri), a furnace in which the material is heated without coming into contact with the fuel. Between the fireplace a and the bed on which the material to be beated b iles, a low partltion wail, cailed a fire-bridge, is piaced. The flame passes over this bridge, and

mounts the whoie, reflecting or reverberating the heat downwards. The rever-

Section of Reverberatory Furnace.

beratory furnace gives free access of air to the material, and is employed for oxidizing impuritles in metals, and for other similar purposes.

Revere (re-vēr'), PAUL, was born at Boston, Massachusetts, Jan. 1, 1735, was one of the earliest American engravers and an active patriot in the Revolution. He was one of those who destroyed the tea in Boston harbor, and he earned fame by riding from Charlestown towards Concord on the night of April 18, 1775, to give warning of the British expedition, which was resisted next day at Lexington and Concord; a service immortalized in Longfellow's poem, The Midnight Ride of Paul Revere. During the war he rose to be lieutenant-colonel of artillery. In 1801 he erected works for rolling copper at Canton, Massachusetts, still carried on hy his successors. He died May 10, 1818.

Revere. a village of Suffolk Co.,

Suffolk Co., Revere, Massachusetts, 4 miles N. E. of Boston, on Massachusetts Bay, is favorite place of resort. Pop. 18,219. (rev'er-end), a title of re-spect given to clergymen ecclesiastics. In England Reverend other

bishops are right reverend, archbishops most reverend, deans very reverend, and the lower clergy reverend. In Scotland the principals of the universities, clergymen, are very reverend, and like-wise the moderator of the General Assembly; ail the other clergy reverend, as also in the United States.

Reverse (re-vers'), in numismatics, the side of a medal or coin opposite to that on which the head or principal figure is impressed. The latter is called the obverse.

Reversion (re-ver'shun), in law, the residue of an estate left in the granter, to commence in possession ments of this nature, but of limited exafter the determination of the particular tent, have not been infrequent in the estate granted by him. The estate returns to the granter or his heirs after the but the great revival which originated in

plays along the flat arch which sur- grant is over. In insurance husiness a reversion is an annuity or other benefit, the enjoyment of which begins after a certain number of years, or after some specified event, as a death or birth.

Revetment (re-vet'ment; French, re-tion, is a retaining wali placed against the sides of a rampart or ditch. In fieldworks it may be of turf, timber, hurdles, and the like; but in permanent works it is usually of stone or brick. The exterior faces of these walls are considered as the scarp and counterscarp of the ditch.

Review (re-vû), an inspection of military or naval forces by an officer of high rank or by a distinguished personage, which may be accompanied with maneuvers and evolutions. See Periodicals. Reviews.

Revise (re-viz'), among printers, a second or third proof of a sheet to be printed, taken off in order to be compared with the last proof, to see that all the mistakes marked in it have heen corrected. See Proof Impression.

Revising Barrister. in England,

Revising Barrister, one of a numher of barristers appointed annually for the purpose of examining or revising list of parliamentary voters, and settling the question of their qualification to vote
—duties performed in Scotland by the
sherlff-substitute. The revising barristers' courts are held in the autumn.

Revival (re-vi'val), a term applied to religious awakenings in the Christian church, and to the occurrence of extensive spiritual quickening and conversion in the general community. The first great revival in Europe was the Reformation in the sixteenth century, which awoke the church from the sleep of When religion had degenercenturies. ated into formalism in England in the seventeenth century a second revival of spiritual interest was accomplished through the instrumentality of the Puritans. When the church had once more sunk into a state of sloth and apathy in the eighteenth century, it was aroused by the preaching of Whitfield, the Wesleys, Rowland Hill, and other earnest men. Coincident with this movement was the origin of missions to the heathen. But it was reserved for recent times to witness in the United States and Great Britain perhaps the most remarkable religious revival which has been witnessed since the era of the Reformation. Move-

motion, used in some chemical manufacfurnace has superseded the reverheratory furnace in many processes.

Revolving Light. See Lighthouse.

town of Rewa lies 75 miles s. w. of Allahahad; it is surrounded hy three ram-

Rewá Kántha (kän'tu), a political agency of India, subordinate to the government of Bombay. It was established in 1821-26, and has under its control 61 separate states, great and small, on the Nerhudda, most of which are trihutary to the Gaekwar of Baroda. Area, 4792 square miles; pop. 479,065.

Rewari (rē-wā rē'), a town in India, in Gurgaon district, Punjah, a place of considerable commercial importance, with manufactures of brass and pewter vessels and fine turbans, and a great trade in grain. Pop. 27,295.

(rik'yii-věk), a town, capital of Iceland. Pop. 8000.

See Renard. Reynard the Fox.

Reynolds (ren'oldz), John Fulton, a soldier, was born at Lancaster, Penraylvania, in 1820, was graduated from West Foint in 1841, served in the Mexican war, and in 1859 became commandant at West Point. He entered the Civil war in 1861 as lieutenant colonel of volunteers, was soon promoted brigadier general, and major-general in 1862, succeeding Hooker in command of the first army corps. He commanded in the first day's fight at Gettyshurg, July 1, 1863, and was killed on the field. and was killed on the field.

Paynolds Sir Joshua, an English

at Plympton, Devonshire, July 16, 1723, Reynolds, and was educated by his father, a clergyman and the master of the free grammar school of that place. He studied his art for two years under Thomas Hudson, a Devonshire man then popular in London as a portrait - painter. Subsequently, through the kindness of Captain (afterwards Admiral) Keppel, he was enabled to visit Italy, where he studied three years. Returning to London in 1753, and

Revolving Furnace, a furnace pel and Lord Edgcumbe, his studio was with a rotary thronged with the wealth and fashion of thronged with the wealth and fashion of the metropolis, and the most famous men tures of malicable iron. The revolving and the fairest women of the time were among his sitters, so that he rapidly acquired opulence, and was the acknowledged head of his profession. Among the Revolving Light. See Lighthouse.

Rewá (rã'wä), a native state in Central India, more or less under of Cumberland (1758), the Duke of Cumberland (1759). Miss Palbritish control since 1812. Area, about 10,000 square miles; pop. (chiefly Hindus) about 2,000,000. The state is rich in minerals and forest produce.—The town of Rewá lies 75 miles s. w. of Allabethold; it is surrounded by three ram-foundation of the Royal Academy, he was foundation of the Royal Academy, he was parts, the innermost of which encloses chosen president, and received the honor the palace of the maharaja. Pop. ahout of knighthood; and in 1784 he was appointed principal portrait-painter to the Rewá Kántha (kän'tu), a political king. As president of the Royai Acad-

Sir Joshua Reynolds.

emy he delivered his celebrated annual Discourses on Painting, the last of which was delivered in 1790. He was the intimate friend of Dr. Johnson, Goldsmith, Garrick, Burke, and other literary celebrities, with whom he was associated in founding the 'Literary Cluh' in 1764. His portraits are distinguished by dignity and grace, and above all by a peculiar power of color which he had caught in Italy from the great Venetian masters. Apart from portraiture the other pictures which may be mentioned are his Death of Cardinal Beaufort, Macbeth, Puck, and several Holy Families and Nativities. He died unmarried Feb. 23, 1792, and was interred in St. Paul's Cathedral. Rhabdomancy (rab'du-man-si; Greek rhaudos, a rod, and manteia, divination), divination

by means of the divining-rod (q. v.). finding generous patrons in Admiral Kep-

32--U-5

Rhadamanthus (rad-a-man'thus), in Greek mythology, a son of Zeus and Europa, and brother of Minos, king of Crete, whom he assisted in his sovereignty, and whose jealousy he aroused hy his inflexible integrity, which earned for him the admiration of the Cretans. Rhadamanthus then fled to Bootia, where he married Alcmene. After his death he became, on account of the supported invited one of the three his supreme justice, one of the three judges of the lower world.

Rhætia (rë'she-a), a province of the Roman Empire, which included great part of the Alpine regions between the vaileys of the Danube and the Po, and corresponded with the districts occupied in modern times by the Austrian province of Tyrol and the Swiss canton of Grisons. The Rhætians, who are generally supposed to have been of Etruscan origin, were subdued by Drusus and Tiberius, 15 B.C., and shortly afterwards Rhætia was incorporated as a provwards Rhætia was incorporated as a province in the Roman Empire. During the last days of the Roman Empire, when the barbarians devastated the provinces, Rhætia was nearly depopulated; and after the fail of the Roman Empire it was oc-

cupied by the Alemanni and Suevi. Rhætian Alps. See Alps.

Rhætic Beds (rē'tik), in geology, the uppermost strata of the triassic, or, according to others, the lowest of the ilassic group; weil represented in Engiand and Germany, but most extensively developed in the Rhætian Aips, whence their name. They are more highly fossiliterous than any of the other members of the triassic period.

See Ramadan. Rhamazan.

Rhamnaceæ (ram-nā'se-ē), a naturai order of exogenous plants, consisting of trees or shrubs, with simple, alternate, rarely opposite leaves, small greenish-yellow flowers, a valvate calyx, hooded petals, opposite to which their stamens are inserted, and a fruit which is either dry or fleshy. This order contains about 250 known species, distributed very generally over the globe. There is a remarkable agreement throughout the order between the properties of the inner bark and the fruit, especially in several species of Rhamnus, in which they are both purgative and emetic, and in some degree astringent. Many species, however, hear wholesome fruit; and the berries of most of them are used for dyes. (See French Berries.) The huckthorn and jujube belong to this order.

Rhapsodists (rap'su-dist; from the Greek shapto, to string

together, and 6de, a song), were the wandering minstreis among the ancient Greeks, who sang poems of Homer (these were also cailed *Homerides*) and of other poets. After he poems were committed to writing the rhapsodists lost their importance.

See Ré. Rhé.

Rhea (rê'a), in Greek mythology, the daughter of Uranos and Gê (Heaven and Earth), sister and wife of Cronos (Saturn), and mother of Hestia (Vesta), Dāmētēr (Ceres), Hera (Juno), Hades (Piuto), Poseidon (Neptune), and Zeus (Juniter). She was the symand Zeus (Jupiter). She was the symbol of the reproductive power of nature and received the appeliation of 'Mother of the Gods,' and 'Great Mother,' being later identified with Cybeie.

Rhea, same as Ramie or Ramee (which see).

Rhea, the generic name of the nandu, or South American ostrich, a close aily to the true ostrich, differing chiefly in having three-toed feet and each toe armed with a claw. The best-known species is R. Americana, the nandu, or nanduguaçu of the Brazilians, inhabiting the great South American pampas. It is considerably smaller than the true ostrich, and its plumage is much inferior. R. Darwini, a native of Patagonia, is still smailer. A third species is the R. macrorhyncha, so-called from its long hill. See Reggio. Rhegium.

Rheims, or REIMS (rems; French pron. ranz), a town of France, in the department of Marne, in an extensive basin surrounded by vine-clad hills, 82 miles E. N. E. of Paris. The principal edifices are the cathedral, erected in the thirteenth and fourteenth centuries, one of the finest Gothic structures now existing in Europe, specially remarkable for its western façade with three portals, rose-window, and numerous statues; the archiepiscopai palace (1498-1509), occupied by the French kings on the occasion of their coronation; the church of St. Remy (eleventh and twelfth centuries), the oidest church in Rheims, partly Romanesque, partly Gothic; the Porte de Mars, a Roman triumphal arch erected in honor of Julius Casar and Augustus; the town-house, of tures now existing in Europe, specially Cæsar and Augustus; the town-house, of the seventeenth century; and several ancient mansions, particularly the hôtei of the counts of Champagne, furnishing fine specimens of picturesque street architecture. The staple industries are the manufacture of the wine known as champagne, and of woolen fabrics, such as fiannels, merinos, hlankets, etc. Rheims was an

tapital of the Remi, and subsequently of Belgic Gaul. Here St. Remy converted and haptized Ciovis and aimost ail the Frankish chiefs in 496. It was made the seat of an archbishop in the eighth century, and from the time of Philip Augustus (1179) to that of Charies X the kings of France were crowned here. It has stone time in possession of the Engilsh, who were expelled by the Maid of Orieans in 1429. It was held hy the Germans in 1870-71. During the European war in was bombarded again and again by the Germans, and was the target for many aerial raids, the greater part of the city being reduced to ashes. The famous cathedral suffered irreparable damage; the interior was ruined and the roof and many of the beautiful windows were destroyed. Population in 1911, 115,178.

Rhenish Prussia (ren'ish prush'a; were derived by the ranges of the Elffei, Hochwald, etc. It is watered by the Rhine, the Moseile, and some affluents of the Meuse. A large proportion of the surface is in forest. Besides the usuai cereal crops, tobacco, hops, flax, rape, hemp, and beet-root are raised; fruit cuiture and the vine culture are aiso carefuily attended to. Cattle are extensively reared. It is the most important mineral district in Germany, abounding in coal, iron, lead, zinc, etc. It is likewise an active manufacturing district, there being numerous lronworks and machine-shops, textile factories, breweries, distilieries, etc. It is divided into the five governments or districts of Cobientz, Treves, Cologne, Aachen (Aix-la-Chapelle), and Düsseldorf. The city of Coblentz is the official capital of the province, but Cologne is the town of most importance. Pop. 5,759,798, the majority of whom are Roman Catholics.

Rhenish Wines, the general designation for the wines produced in the region watered by the Rhine, and specifically for those of the Rheingau, the white wines of which are the finest in the world. The red wines are not so much esteemed, being considered inferior to those of Bordeaux. Good wines are also produced in the valleys of the Neckar, Moselie, and other tributaries of the Rhine. The vineyards are mainly between Mannheim and Bonn, and the

most valuable brands of wines are those of Johannisberg, Steinberg, Hochheim, Rüdesheim, Rauenthai, Markobrunn, and Assmannshausen, the last being a red

Rheostat (rë'u-stat), an instrument for measuring eiectrical resistances, invented by Sir Charles Wheatstone. The rheostat is very convenient for measuring smail resistances; but for practical purposes, such as measuring the resistance of telegraph cables, Wheatstone's bridge (an apparatus of which there are several forms) is always used.

Rhesus Monkey (rë'sus), a name for two species of monkeys, the brush or pig-tailed monkey (Macacus nemestrinus), which inhabits the Maiay Peninsula and the islands of the Indian Archipelago, and is often domesticated; and the Macacus Rhesus, a species of monkey held sacred in India, where they swarm in large numbers about the tempies.

Rhetoric (ret'o-rik), in its widest sense, may be regarded as the theory of eloquence, whether spoken or written, and treats of the general ruies of prose style, in view of the end to be served by the composition. In a narrower sense rhetoric is the art of persuasive speaking, or the art of the orator, which teaches the composition and delivery of discourses intended to move the feelings or sway the will of others. In the wider sense rhetoric treats of prose composition in general, purity of style, structure of sentences, figures of speech, etc.; in short, of whatever relates to clearness, preciseness, elegance, and strength of expression. In the narrower sense it treats of the invention and disposition of the matter, the character of the style, the delivery or pronunclation, etc. Aristotie, Cicero, and Quintilian are the principal writers on rhetoric among the ancients. Those of modern times are numerous.

Rheumatism (rö'mà-tizm) is a systemic disease that affects the muscles, joints, and heart. It occurs in acute, chronic, and muscular forms. The acute form is characterized by heat, inflammation, serous effusion, and excruciating pain in the joints, increased by movement; fever, profuse acid sweats, great thirst, constipation, redness of the skin over the joints, and a condition of the skin akin to prickly heat. It suddenly ceases in some joints and immediately begins in others. It lasts from two to six weeks or even longer. The chronic form is marked by pain and stiff, ness in the joints or muscles, aggravated, hy stormy weather. It may become acute on slight provocation. Unless

thoroughly eradicated it may seriously impair the joints. The muscular form may affect almost any of the muscles. That of the muscles of the back, lumbago, is a well-known and frequent condition. Rheumatism is caused by chilling of the body by a coid and moist atmosphere, especially when following in succession to a warm one, such as occurs in spring or autumn, though it may occur at any season of the year. Acute cases or those of long duration may ave involvement of the heart as a consequence. A large percentage of heart diseases are caused by rheumatism, which ought never to be neglected. There seems to be a relation among rheumatism, St. Vltus' dance and tonsilitis. It is treated by rest in bed, heat, use of woolen bedclothes and clothing (to avoid chilling by linen and cotton), alkaline drinks and appropriate medication adapted to the particular case. Advertised rheumatic remedles are dangerous, as each case must be treated

Rheydt (rit), a town of Rhenish Prussia, on the Niers, 14 miles w. of Düsseldorf, has manufactures of cotton, silk, woolen, and mlxed fabrics. Rheydt is an ancient place, which has

risen to industrial importance during the last century. Pop. (1910) 43,786.

Rhigas (rē'gas), Constantine, a Greek poet, the Tyrtæus of modern Greece, the first mover of the war for Greclan independence, was born about 1753. He formed the bold plan of freeing Greece from the Porte by means embitter them against the Mussulmans. He was arrested and put to death by the Turkish authorities at Belgrade in May, 1798. During the Greek war of independence, his songs were in the mouth of every one.

Rhin (ren), Bas- and Haut-, that is Lower and Upper Rhine, former departments of France, on the west of the Rhine, now forming part of the German territory of Alsace-Lorraine.

Rhinanthus (rl-nan'thus), a genus of annual herbs, natural order Scrophulariaceæ, with opposite, serrate leaves and nodding splkes of yellow flowers. The species are parasitic on the roots of plants. Two of them grow in pastures in the United States, and are known as yellow rattle.

Rhindlander, (rin'lan-der), a city, capital of Oneida Co., Wisconsin, 65 miles N. E. of Wausau. Its industries include refrigerators, paper,

Rhine (rin; German, Rhein; Dutch, Rijn), the largest river of Germany, and one of the most important rivers of Europe, its direct course being 460 miles and its indirect course 800 miles (about 250 miles of its course being in Switzerland, 450 in Germany, and 100 in Holland); while the area of its basin is 75,000 square miles. It is formed in the Sylve square miles. It is formed in the Swlss canton Grisons by two main streams cailed the Vorder and Hinter Rhein. The Vorder Rhein rises in the Lake of Toma, on the S. E. slope of the St. Gothard, at a height of 7690 feet above the sea, near the source of the Rhone, and at Reichenau unites with the Hinter Rhein, which issues from the Rheinwald Glacier, 7270 feet from the Rheinwald Glacier, 7270 feet above sea-level. Beyond Relchenau, above sea-level. Beyond Relchenau, which is 7 mlles west of Coire, the united streams take the common name of Rhlne. acute condition, massage and passive and streams take the common name of acute active movements, judiciously attempted, From Coire the Rhine flows north through the Lake of Constance to the town of that name, between which and Bale it flows west, forming the boundary between Switzerland and Germany. At Bale it turns once more to the north and enters Germany; and, generally speaking, it pursues a northerly course until it enters Holland, below Emmerich, when It divides into a number of separate branches, forming a great delta, diked on both sides, and falling into the sea by many mouths, through sluice gates. The chief of these branches are the Waal and Lek, which unite with the Maas; the of a great secret association, and com-Yssel and Vecht, which diverge to the Zuyposed in his native language a number of der Zee; and that which retains the
patriotic songs, calculated to inflame the
imagination of the Greek youth and to Leyden and enters the North Sea. In Leyden and enters the North Sea. In the German part of its course the chief tributaries it receives on the left are the Ill, Nahe, Moselle (with the Saar), Ahr, and Erft; and on the right the Neckar, Maln, Lahn, Sieg, Ruhr, and Lippe. In Switzerland its tributaries are short and unimportant, and this part of its course is marked by the Falls of the Rhine at Schaffhausen, where the river is precipitated in three leaps over a ledge of rocks 48 to 60 feet in height, and by the cataracts of Lauterberg and the rapids of Rheinfelden. The chief towns on its banks are Constance and Bale in Switbanks are Constance and Bale in Switzerland; Spires, Mannhelm, Mainz, Coblentz, Bonn, Cologne, and Düsseldorf, with Worms and Strasburg not far distant, in Germany; Arnheim, Utrecht, and Leyden, in Holland. Its breadth at Bâle

to 1700 feet; and at Emmerich, where it enters the Netherlands, 2150 feet. Its depth varies from 5 to 28 feet, and at Düsseldorf amounts even to 50 feet. It abounds with fish, especially plke, carp, and other white fish, but the produce of its salmon fisheries have been seriously interfered with since the introduction of steam vessels. It is navigable without interruption from Bâle to its mouth, a distance of 550 miles, and much timber in rafts, coal, iron, and agricultural produce are conveyed by it. Large sums are spent every year in keeping the channel in order and in the erection or repair of in order and in the erection or repair of river harhors, both in Germany and Holland. The shipping has greatly increased since the introduction of steam vesseis, which also ply on the Main, the Neckar, the Maas, and the Moselle. The Rhine anciently formed the houndary hetween the Roman Empire and the Teutonic hordes. After the partition of the domains of Charlemagne in 843 it lay within the German Empire for nearly 800 years. the German Empire for nearly 800 years. France long cast covetous eyes upon the Rhine, and the Peace of Westphalia in 1648 gave her a footing upon the left hank. In 1801 the whole of the left bank of the Rhine was formally ceded to France. The Congress of Vlenna in 1815 restored part of the Rhenish valley to Germany, and the cession hy France of Alsace and Lorraine after the war of 1870-71 made the Rhine once more German. The Rhine is distinguished by the heauty of lts scenery, which attracts many tourists. For a large part of its course it has hills on both sides at less or greater distances. Pleasant towns and villages lie nestled at the foot; ahove them rise rocky steeps and slopes clothed at one time with vines, at others with natural wood, and every now and then the castles and fastnesses of feudal times are seen frowning from precipices apparently inaccessible. The finest part for scenery is between Bingen and Bonn; after entering Holland the views are generally tame and uninterest-ing on account of the lack of elevation in the bordering country.

Rhine, CONFEDERATION OF. See Confederation of the Rhine.

Rhine Province. See Rhenish Prussia.

Rhine Wine. See Rhenish Wines.

Rhinobatidæ (ri-no-bat'i-dē), the shark-rays or beaked rays, a family of fishes, of which the sawis the most remarkable member. Bee Bawfish.

is 750 feet; between Strasburg and Spires Rhinoceros (ri-nos'er-os), a genus from 1000 to 1200 feet; at Mains 1500 Rhinoceros of hoofed mammals, belenging to the perissodactylate or odd-toed division, allied to the elephant, hippopotamus, tapir, etc. They are large, ungainly animals, having short less and a very thick skin, which is usually thrown into deep folds. There are seven molars into deep folds. There are seven molars on each side of each jaw; there are no canines, hut there are usually incisor teeth in both jaws. The feet are furnished with three toes each, encased in hoofs. The nasal hones usually support one or two horns, which are of the nature of epidermic growths, somewhat analogous to halrs. These animals live in marshy places, and subsist chiefly on grasses and follage. They are excluslvely confined to the warmer parts of the eastern hemisphere. The most familiar species is the one-horned or Indian rhinoceros (Rhinoceros unicornis or indicus), which, like all the Asiatic species, has the skin thrown into very definite folds, corresponding to the regions of the

Indian Rhinoceros (Rhinoceros indicus).

body. The horn is hlack, and usually very thick. The upper llp is very large, and is employed by the animal somewhat as the elephant uses his trunk. Though possessed of great strength, it is quiet and inoffensive unless provoked. The Javanese rhinoceros (R. sondaicus) is distinguished from the Indian chiefly hy its smaller size. It has been trained to bear a saddle and to be driven. It occurs in Java, Sumatra, and Borneo. The Su-matran species (R. sumatrensis) is found in Sumatra and the Malay Peninsula. It has two horns, the foremost heing the longer and sharper. The typical African rhinoceros (R. bicornis), is found in Southern Africa generally. Like other African species, it possesses no skin-folda. The horns are of very characteristic conformation, the front horn being hroad and raised as on a base, sharp-pointed, and curved slightly backwards, while the hinder horn is short and conics!

This animal is of ferocious disposition, is quick and active, and greatly feared by the natives. Other ailied African species the natives. Other ailied African species are the keitica or Sioan's rhinoceros (R. Keitlos), the white rhinoceros (R. or Ceratotherium Simus), and the Kobabo or iong-horned, white rhinoceros (R. or C. Ostoelli). The keitlos can readily be recognized by the horns, which are of considerable length, and nearly equal to each other in measurement. This is always a morouse and ill-tempered animal, and on account of its size, strength, and length of horn is a dangerous opponent. and on account of its size, strength, and length of horn is a dangerous opponent. The common 'white rhinoceros is larger Lindley as forming a separate class, than the keitloa, but its temper is remark- which he places in a position intermetably quiet, and it is devoid of the restless diate between the Thallogens and the irritability and sudden rage that charac- Endogens. It consists of plants destitute than the keitloa, but its temper is remark-ably quiet, and it is devoid of the restiess irritability and sudden rage that characterises the keitloa. The foremost horn of true leaves, but with short, amorphous of this animal is of very considerable stems parasitical on roots, and is divided length; the second horn is short and conical. The kobaoba makes its home far in the interior of the continent. The long by other botanists these orders are placed born of this animal is over four feet in widely apart. length and is used by the Kaffirs to make Rhizobolaceæ (ri-zu-bu-la'se-a), the knobherries or knob-headed sticks, 'knobherries' or knob-headed sticks, which they employ as clubs to be used in hand-to-hand encounters or to be thrown at an antagonist after the manner of a hand grenade. Fossil species are numerous, and range from the Miocene tertiary through the Pliocene and Post-pliocene deposits. R. tichorhinus, the 'woolly rhinoceros,' formerly inhabited England and ranged over a great part of Europe.

Rhinoceros-bird, or RHINOCEROS.

Hornbille. Rhinolophidæ (ri-no-lof'i-dē), a family of insectivorous bats, including the greater and lesser horseshoe bats. See Bat.

Operation

Rhinoplastic (rin-u-pias'tik), the surgical operation of restoring the nose when partly lost by disease or injury (early of restoring iost by disease or injury (early practiced in India by the Brahmans), by means of a triangular piece of skin cut from the forehead, and drawn down to its new position while still attached to the face by the lower angle. A piece of skin belonging to the arm has been employed for the same purpose, and the extreme joint of a finger has been used See Mangrove. to support such an artificiai nose. It is popularly known as the Taliacotian operation, from the name of the Italian surgeon who in the sixteenth century first made it public.

Rhio, or Riouw (ri-ou'), a seaport be-ionging to the Dutch, in the Indian Archipelago, on an islet 50 miles as the sponges) attain considerable size. southeast of Singapore. It consists of a Structurally the rhizopods consist of a European town, and a Chinese or native mass of sarcode, are destitute of organs

town, and having a capacious haven where large vessels find anchorage, carries on a considerable trade. It is the capital of a Dutch residency, comrising the islands of the Rhio Archipela, o and other groups as well as districts on the east coast of Sumatrs. The population of the residency is estimated at 90,000. The Rhio Archipelago is a group of smail islands lying chiefly south and east of Singapore. Chief island Bintang.

Rhizanthese (ri-san'the-s), or RHIZ'OGENS, a remerk-

piants, of which only a few species are known, consisting of large exogenous trees growing in the forests of South America. One of them (Caryocar butyrosum), a gigantic tree of Demerara, violet the autyrosum or sound and the yields the suwarro, or souari nnt, the kernel of which is esteemed as the most agreeable of the nut kind. The timber in nsed in shipbuilding.

Rhizomania (ri-zn-mā'ni-a), in bot-any, an abnormal de-velopment of some plants, as the vine and laurel, by which they throw out adventitious roots, indicating that there is some-

thing wrong with the proper root.

Rhizome (rizom), or Roor-stock, in botany, a sort of stem running along the surface of the ground, or partially subterranean, sending forth shoots at its upper end and decaying at the other. It occurs in the ferns, Iris, the other. It occurs in the ferns, iris, etc.; and in the ferns it may be wholly covered with the soil.

Rhizophaga (ri-sofa-ga), roottions of the Mercupiclis (which see).

Rhizophora (ri-zof'u-ra), the mangrove genus of plants.

Rhizopoda (ri-zop'o-da), the lowest ciass of the Protozea, comprehending animals which are destitute of a mouth, are single or compound, and possess the power of emitting pseudopodia. They are mostly minute, frequently microscopical, but some (such for digestion, etc. The characteristic from which they have their name is their capability of protruding processes (pseudopodia) from any part of their substance, sometimes as filaments or threads and sometimes finger-shaped, and retracting them at pieasure. Some, as the Foraminifera, are invested with a calcareous shell, sometimes consisting of one ceil, but generally of an aggregation of minute chambers or ceils, through the pores of which they protrude their fiber-like processes. The class has been divided into five orders — Monera, Amœba, Foraminifera, Radioiaria, and Spongida, though the iast named, while resembling the protozoa in the character of their Rhode Island, an island situated the protozoa in the character of their ceils, being metazoin in structure, and nsually considered a separate class. See separate entries.

Rhode Island (rod' i'land), the smallest State of the American Union, bounded on the N. and American Union, bounded on the N. and E. by Massachusetts, w. hy Connecticut, and s. hy the Atiantic Ocean. Its total area is 1248 square mies, of which 197 are water. The surface, which in the north is hilly and rugged, hut eisewhere wenerally level, is penetrated in the east by Narragansett Bay, a fine body of water about 30 miles long hy 15 miles broad, and containing several islands, among them the one which gives the state its name. The estuaries which extend from the Bay, the Pawtuxet and Pawtncket or Blackstone Rivers, are the tncket or Blackstone Rivers, are the source of large water power development and maintain the great textile mills located along the hanks. The climate is mild and equable, and well adapted, from its pieasant summers and temperate win-ters, for invalids from the south. The principal mineral industry consists of granite, which is mined extensively at Westerly. Originally an agricultural Westerly. Originally an agricultural state, the growth of the cities has created many abandoned farms, but the increase in foreign population has caused many of these farms to be enitivated anew and extensive fruit orchards planted. Aquid-neck, or the Island of Rhode Island, has excellent soil and has developed farms of great wealth. Manufactures form the staple industry; they consist of cotton, woolen, worsted, and mixed textiles, jewelry, and foundry and machine-shop prodncts, silverware, rubber and clastic goods. from the British colonies and the United The higher education is provided for by States, also from Germany. Brown University at Providence, one of the colleges in the country. There Rhodes (rods), an island in the colleges in the country. is a state college at Kingston and a state key, off the southwest coast of Asia normal school at Providence. The chief Minor, from which it is separated hy a channel 10 miles broad; area, 424 sq. wocket, and Newport, the first three manuacturing cities. Rhode Island is one of by an elevated mountain range, the

Rhode Island, an island situated from which the state of Rhode Island takes its name. It is about 15 miles iong from north to south, and 3½ wide, and is divided into three townships— Newport, Portsmouth, and Middletown. It is fertile, pieasant, and healthful, and is a noted resort for invalids from southern climates.

Rhodes (rods), CECIL JOHN, a South African promoter, was born at Bishop-Stertford, England, July 5, 1853. Going to Natal for his health, he became interested in diamond mining, and eventually gained a controlling ownership in the Kimberley mines. He took an active part in South African politics, entered the ministry in 1884, and was prime-minister of Cape Colony 1890-96, when he resigned on account of charges of his connection with the Jameson raid. In 1889 he procured a charter for the British South Africa Company, conducted a war with the natives in Bechuanaiand in 1893, and in 1896 put down a formidable rights of the Matabales. His in 1893, and in 1896 put down a formidable rising of the Matabeles. His
services in securing this region for Great
Britain were acknowledged by its being
named Rhodesia. He was in Kimberley
during its siege by the Boers in 1890,
they being eager to capture him, as they
held him largely responsible for the war.
An ambitious project of his was the
huilding of a railway from the Cape to
Cairo, traversing the entire length of
Africa. This project has been in part
accomplished. He died March 26, 1802,
establishing by his will Rhodes Scholarships in Oxford University for students
from the British colonies and the United
States, also from Germany.

of more moderate elevation, which are covered with woods of ancient pines. The climate is delightful, and the soll fertile, producing grain, grapes, figs, pomegranates, oranges, etc. Steam navigation direct to the island has been established, and commerce is rapidly increasing. Pop. est. 30,000 to 35,000, of whom two-thirds are Greeks, the remainder Turks and Jews. Rhodes was a celebrated Island In antiquity. It was settled hy Dorlans from Greece, and the Rhodlans soon became an important maritime people, and for several centuries the island was a great seat of titres the island was a great seat of the literature, art, and commerce. In A.D. 44 it was made part of the Roman province of Asia. It is famous for its prolonged defense by the Knights of St. John from 1309 till 1522, when they were forced to abandon the island to the Turks, with whom it has remained ever since.—RHODES, the capital, stands at the northeastern extremity of the island, rising from the sea in the form of an amphitheater, with fortifications mainly the work of the Knights of St. John. There are few remains of the ancient city, which was founded by the Dorians 408 B.C., and became one of the most splendid of ancient Greek citles. The ceiebrated Colossus of Rhodes stood for fifty-six years, and was prostrated by an earthquake 224 B.C. (See Colossus.)
Pop. about 10,000.

Rhodesia (rō-dē'si-a), a division of South Africa annexed by the British in 1889 and so-called from Cecil Rhodes (q.v.), who was chairman of the British South Africa Company. The country is administered by this company. It is divided by the Zambesi into two sections: (1) Northern Rhodesia; area about 291,000 square miles; native population, 875,000; white population, 1500; the industries are maize, cotton, rubber, tohacco, zinc, gold, copper, lead and coal; (2) Southern Rhodesia, which consists of two provinces, Mashonaland and Matabeleland; area, 149,000 square miles; native population, 745,000; white population, 25,000; the industries are gold, coal, copper, silver, corn, tobacco. The chief towns in Southern Rhodesia are Buluwayo, Salisbury and Hartley. There The chief towns in Southern Rhodesia are Buluwayo, Salisbury and Hartley. There have been several uprisings of the native the canton of Valais, about 18 miles Matabele, but since 1897 the country has Matabele, but since 1897 the country has w. s. w. of the source of the Vorder-for the most part enjoyed peace. The Cape-to-Calro railroad, built north from Glacler, 5581 feet above the level of Bulawayo, was continued to the border of the Belgian Congo in 1909.

There is a Europe which rises in Europe whi

highest point of which, Atairo, reaches a height of 4560 feet. Great part of the island is occupied by hills of more moderate elevation, which are covered with woods of ancient pines. The climate is delightful, and the soil unaitered in the air at ordinary temperature. tures, but oxidizes at a red heat. It has been used for the points of metallic pens. Rhodium Oil, a balsamic, volatile oil ohtained from Canary Island rosewood, the woody root of Convolvulus scoparius and floridus. It is employed as a perfume, but there is also an artificial perfume so-called.

Rhododendron (rō-du-den'dron), a genus of evergreen shrubs with alternate, entire leaves, and ornamental flowers disposed in corymhs, belonging to a suborder of the Ericacese (heaths), and chiefly inhahiting the mountainous regions in Europe, North and South America, and Asia. The varietles are very numerous, and are much cultivated in gardens. The colors of the flowers range through rose, plnk, lilac, scarlet, purple, red and white. R. chrysanthum, a Siherian species, possesses narcotic properties; R. ferrugineum, found in Switzerland, is called the rose of the Alps. R. Dalhousiae is an epl-phytic species. Dr. Hooker found R. nivale on the Tihetan mountains at a helght of 16,000 to 18,000 feet. Major Madden states that in Kumaon R. arboreum grows to a height of 40 feet. Rhodope (ro'do-pē), the ancient name of a range of moun-

tains in European Turkey, partly forming the western houndary of Eastern Roumeiia, and now called Despoto-Pianina.

Rhombus (rom'bus), in geometry, a quadrilateral figure whose sides are equal and the op-

posite sides parallel, hut whose angles are unequal, two being acute and two

Rhumbs (rums), the points of the compass. See Compass. See Sumach.

Rhyl (ril), a watering-place of North Wales, in Flintshire, near the mouth of the Clwyd. It has pure air and a fine sandy heach, with aii the equipments of a watering-place, and possesses the charm of a most interesting country at the hack. Pop. 9005.

Rhyme (rim), more correctly RIME (A. Saxon, rim, number), in poetry, a correspondence in sound of the terminating word or syliable of one line of poetry, with the terminating word or of poetry with the terminating word or syliahie of another. To constitute this correspondence in single words or in syllahles it is necessary that the vowel and the final consonantai sound (if any) Rhône, a department in France, in should be the same, or have nearly the which it sends its waters by the Saone ing different. English writers have allowed themselves certain licenses, and we find in the hest English poets rhymes moderately fertile, and the wealth of the department is derived from its manufactures, the chief of which is silk, others being cottons and woolens, linens, machinery, and metal goods. The city of Lyons is the capital. Pop. 858,907.

Lyons is the capital. Pop. 858,907.

Rhône, Bouches Du. See BouchesRhone, du-Rhône.

Rhubarb (rö'harb; Rheum), a genus of plants helonging to the last order Polygonaceæ. The species of this genus are large-leaved, herbaceous plants, natives of a considerable portion of Central Asia, with strong branching, aimost fleshy roots and erect branching stems 6 to 8 feet high. They usually possess more or less purgative and aswhich strike an accurate ear as incorrect, Persians in their short odes (gazelles), in which the same rhyme, carried through the whoie poem, extends sometimes to four and more syllabies. The modern use of rhyme was not known to the Greeks and Romans; though some rhymed verses occur in Ovid. It has been used, on the other hard, from time immemorial among the Chinese, Hindus, Arabs, and other oriental mations. rhubarb comes from China, the piant yielding it being mostly R, officinale. English rhubarb is derived from R. Rhaponticum, which has long been cultivated for medical purposes in some parts of England as well as on the European continent, and is widely grown in the chinase, rhindent, among the Chinese, rhindent, rhubarb is derived from R. Rhyme began to be developed among western nations in the Latin poetry of the Christian church. It is found used as early as the fourth century. The early English, German, and Scandinavian poems are distinguished by alliterating the Chinese, rhindent, and state of the piant R and other oriental nations. tion instead of rhyme. (See Alliteration.) The Troubadours first attempted a variety of artificial combinations of rhyme in the sonnet, canzone, etc., and the Spaniards and Italians, with their musical languages and delicacy of ear, perfected the various forms of involved

Rhymer (rl'mer), Thomas, of Erceldoune, or Eariston, in Berwlckshire, otherwise called THOMAS THE RHYMER, was a half-iegendary Scottish poet or romancer of the thirteenth century. He is mentioned by Barbour, Blind Harry, and Wyntoun, was credited with prophetical powers, and his Prophetical powers, and hi ecies, a collection of oracular rhymes, were long popular in Scottish folk-lore.

(rin - ko - nel'la), Rhynchonella genus of brachiopodous moituses. As many as 250 fossil species are numbered from the lower Sliurian upward, but only two or three living species are known, inhabiting the deeper parts of the Arctle and Antarctic Oceans.

Rhynchops (rin'kops). See Soissor-

Rhythm (rlthm), in general, means a measured succession of divisions or intervals in written composi-tion, music, or dancing. The rhythm of poetry is the regular succession of accent, emphasis, or voice stress; or a cer-tain succession of long and short (heavy and light) syilables in a verse. Prose also has its rhythm, and the only difof similar cadences, or of a limited varlety of cadences, divided by grammaticai pauses and emphases into proportional ciauses, so as to present sensible responses to the ear at regular proportioned distances. In music, rhythm is the disposition of the notes of a composition in respect of time and measure; the measured beat which marks the character and

1741 by the Russian naturalist Steller on an island in Bering's Straits, on which he and a party of sailors had been shipwrecked. The animals were fish-like in shape, and of great size - specimens measuring 25 feet in length and 20 feet in greatest circumference. The head was small. The taii-fin was crescentle in form, and front iimbs only were deveioped.

(rē-al'tō). See Venice. Rialto

The old metrical romance of Sir Tristram is doubtfully ascribed to him.

Rhymney (rim'nl), a town in South Waies, chiefly in Monmouthshlre, partiy in Brecknock, on the river Rhymney, 22 miles N. of Cardiff, has large iron and steel works, including blast furnaces and rolling-mills. Pop. (rin che nolls) rich agricultural district, and has a large ally fertlie. Cereals of all kinds are produced for export. The principal manufactures are cotton, linen, leather, and spirits. Pop. 1,827,085.

Rib, the name given to the curved bones which in man and the other vertebrates spring from either side of the spine or vertebrai column, and which may or may not be joined to a sternum or breast-bone in front. The ribs ordi-narily agree in number with the verte-bree of the back or dorsal region. Thus In man tweive dorsai vertebra and tweive pairs of ribs exist. The true or sternal ribs are the first seven, which are articulated at one extremity of the spine, and at the other to the sternum also has its rhythm, and the only difference (so far as sound is concerned) cartilages to the cartilage of the last
between verse and prose is, that the true rib. The others are free at their
of similar cadences, or of a limited or by means of cartilages. The false or sternal extremity, and hence have been called 'floating ribs.' Ribs are wanting in such lower fishes as lampreys, lanceiets, etc., and in amphibians such as frogs and toads. The number of these bones may be very great in certain species, and they are occasionally developed in the cervical and pelvic regions in reptiles and birds respectively.

ured beat which marks the character and expression of the music.

Rhytina (ri-ti'na), a genus of mammalia, closely allied to the manatee and dugong, which has become extinct within the last century or so, the only known species of Rhytina ings of timber roofs, and those forming (Rhytina Stelleri) was discovered in tracery on walls and in windows,

m tt: he dag w. till it expands below Preston into an estuary of the Irish Sea. Since 1885 vast river diversion works, and the construction of a dock at Preston, have been going on, which, when completed, will greatly improve the navigation of the

Ribbon (rlb'un), a narrow web, gen-erally of sllk, used for tying and ornamental purposes. Ribbon-weav-ing is a special branch of the textile in-In modern iooms as many as forty ribbons are simultaneously woven in one machine. Ribbon-weaving was established near St. Etienne in France in the eieventh century. In England Coventry is an Important seat of this industry. industry, which is also carried on at Norwich and Leicester, and in various parts of the United States. Mixed fabrics of slik and cotton are now largely employed. The terms blue ribbon and ribbon and red ribbon. and red ribbon are often used to designate the orders of the Garter and Bath respectively, the badge of the former being supported by a bine ribbon, and that of the latter by a red ribbon.

Ribbon-fishes, the name of certain deep-sea fishes met with in ail parts of the ocean, generally found floating dead on the surface, or thrown ashore by the waves. The body is like a band from 15 to 20 feet iong, 10 to 12 inches broad, and an inch or two thick. These fishes are generally silvery in color. They live at such a depth that when they reach the surface the expansion of gases in the body so loosens all parts of the muscular and bony system that some portions are nearly always broken on lifting them out of the water. The fin rays in young ribbon-fishes are extraordinarily developed, some of them being several times longer than the body. The deal-fish (Trackypterus arcturus) is often met with in the North Atlantic, and is somewith In the North Atlantic, and Is sometimes found after gales on the Scottish coasts. See Deal-fish, Oar-fish.

Ribbon-grass. Canary-grass, a gar-

Ribbon-grass, den variety, striped white, of Phalaris with green and white, of Phalaris arundinacea, a grass which is found in its wild state by the sides of rivers. Called also gardener's garters.

Ribbonmen, the members of a secret the Roman Catholics in Ireland about the beginning of the last century in opposition to that of the Orangemen. It originated in Armagh, and spread thence to Down, Antrim, Tyrone and Fer.

Ribble (rib'l), a river of Yorkshire and managh. The organization of the society was similar to that of the Orangemen, Mountain, and flows generally s. and s. but by no means so complete. The was similar to that of the Orangemen, but by no means so complete. The membership from the first was drawn almost exclusively from the lowest classes of the population.

Ribbon-worms, a group of annulonging to the suborder Nemertida, a division of the order Turbeliaria of the Piatyeimia or 'Fiat-worms.' The leading abarratoriation of the leading characteristics of ribbon-worms are an elongated, worm-like body, an alimen-tary canal terminating in a distinct anus, and a protrusible proboscis. These forms are marine in habits, and are not parasitic. The sexes are generally separate, and reproduction may be subserved by ova, by germation or budding, or by division of the body substance.

Ribe (re'be), or RIPEN, a town of Denmark, ln the southwest of Jutland. on the Ribe, about 3 miles from its mouth. It has a cathedral of Ribe the tweifth century, and was once a flourishing port. Pop. 4243.

Ribeauville (ri-bo-vel). Si Rappoltsweiler. Ribe'ra, GIUSEPPE. See Spagnoletto.

Ribes (ri'bes), a genus of plants of the natural order Grossularia. cese, comprehending the gooseberry and the currants. A species with scarlet flowers (R. sanguineum), and a variety of this with white flowers, are much

cultivated as ornamental shrubs.

Ricardo (rē-kar'do), Davin, a celebrated writer on finance and political economy, was the son of a Jewish stock broker, and was born in London in 1772; died in 1823. In 1793 he embraced Christianlty and married a Christian wife. He then began business as a stock broker on his own account, and in a short time realized an immense fortune. His first publication was on the tune. His first publication was on the subject of the depreciation of the national currency (1810). He then published an Essay on Rent, and his name is usually associated with a certain distinctive view on this subject. (See Rent.) In 1816 he wrote a pamphlet entitled Proposals for an Economical and Secure Currency. But his most important work is his Treatise on Political Economy and Tasstion, which appeared in 1817. In 1819 he entered parliament as member for Portarlington. In 1822 he published a pamphlet on Protection to Agriculture. Though his mode of treatment is totally

name of Daniele Da Volterra, an Italian painter, born at Volterra in 1509. He studied painting at Siena, and afterwards repaired to Rome, where be was much indehted to the friendship of Michael Angelo, who not only instructed bim, but gave him designs for some of his most celebrated works. His fame rests chiefly on a series of frescoes in the church of La Trinità de' Monti, Rome; and of these the Descent from the Cross is well known by Toschi's admirable engraving. Ricciarelli was employed by Paul IV to partially drape the nude figures in Michael Angelo's Last Judgment in the Sistine Chapel of the Vatican. By this act he earned for bimself the soubriquet of Il Braghettone (The Breeches-maker). In the latter part of his iife Ricciarelli applied himself also to sculpture. He died at Rome in 1566 or 1567.

Riccio. See Rizzio.

Rice (ris; Oryza sativa), a cereal plant, natural order Graminaces or Grosses. This important food-plant was long known in the East before it was introduced into Egypt and Greece. It is now cultivated extensively in the low grounds of the tropical and subtropical parts of southeastern Asia, Egypt, Japan, part of the Southern United States, and in several districts of Southern Europe. The culm of the rice is from 1 to 6 feet high, annual, erect. simple, round, and

Rice (Oryza sativa).

Southern Europe. The culm of the rice is from 1 to 6 feet high, annual, erect, simple, round, and jointed; the leaves are large, firm, and pointed, arising from very long, cylindrical, and finely striated sheaths; the flowers are disposed in a panicle somewhat resembling that of the oat; the seeds are white and oblong, but vary in size and form in the numerous varieties. In the cultivation of this plant a high summer temperature is required, combined with abundance of water. Thus

the seaboard areas and river deltas which are subject to inundation give the best conditions, otherwise irrigation is necessary. The amount of water required by the plant depends upon its strength and stage of growth. In Egypt it is sown while the waters of the Nile cover the land, and the rice plant grows luxuriantly in the rich alluvial deposits left by the receding flood. The Chinese obtain two ceding a year from the same ground and

cultivate it annually on the same soil, and without any other manure than the mud deposited by the water of the river used in overflowing it. The young plants are transpianted into plowed furrows, and water is brought over them and kept on till the plants begin to ripen. The first crop is cut in May, and a second is im-mediately prepared for by burning the stubble, and this second crop ripens in October or November. In India two harvests are obtained in the year, especially in Bengal, and frequently two crops are taken from the same field. In Japan, the Philippines, Ceylon, and Java vice is cultivated much in the same manner. Mountain rice is a hardy variety which thrives on dry soil; and in India it is cultivated at an altitude of 8000 feet. Rice can be profitably cultivated only in warm countries, but has for some time past been grown in South Germany and Italy. In the United States it is grown chiefly in the swampy districts of South Carolina, Georgia, Louisiana and Texas. In the husk rice is known by the name of 'paddy.' Rice is more largely consumed by the inhabitant of the conduction. sumed by the inhabitants of the world than any other grain, the people of East-ern Asia and its islands largely living on it; but it contains less flesh-forming matter (nitrogenous), than the others, this element heing, in 100 parts of rice, only 6.5. At one period Europe was supplied from America, but this source has been almost entirely superseded by Lower Burmab, India, Siam, Japan, and Cochin-China. The inhabitants of the East obtain from rice a vinous liquor more intoxicating than wine; and arack is also made from it. See Arack.

Rice. Indian. See Canada Rice. Rice.

Rice-bunting, a name given to two distinct birds. The first, also known by the name 'bob-o'-link,' is the Emberiza oryzivŏra (or

Rice-bunting (Oryzornis oryzivora).

land, and the rice plant grows luxuriantly Dolichonya oryzivorus), a bird of the in the rich alluvial deposits left by the rebunting family, which migrates over N. ceding flood. The Chinese obtain two America from Labrador to Mexico, aperops a year from the same ground, and pearing in Massachusetts about the be-

ginning of May. Its food is insects, worms, and seeds, including rice in South Carolina. It is the reed bird of the Middie States, pausing in its migration to feed on the seed of the riverside reeds. The song of the male is singular and pleasant. When fat their flesh becomes little inferior in flavor to that of the European ortoian. The other species known as the rice-bunting is the Oryzornie oryzivora, also known as the Java sparrow and paddy bird. It belongs to sparrow and paddy bird. It belongs to the true finches, a group nearly ailied to the buntings. It possesses a largely-developed bill; the head and tail are black, the belly rosy, the cheeks of the male white, and the legs flesh-colored. It is dreaded in Southern Asia on account of the ravages it commits in the rice-fields. It is frequently brought to Europe, and is found in aviaries.

Rice-paper, a substance prepared of the snow-white pith of Aralia papyrifera, which grows in Formosa. Rice-paper is prepared in China, and is used in the manufacture of artificial decrease. in the manufacture of artificial flowers and by native artists for water-color

drawings.

Rich, EDMUND, an English ecclesiasRich, tic, born at Abingdon about
1195. He studied theology at Paris,
afterwards taught the Aristotelian logic
and scholastic philosophy in Oxford, and and scholastic philosophy in Uxford, and was prehendary and treasurer of Salisbury Cathedral 1219-22. He preached the sixth crusade in 1227, became archbishop of Canterhury in 1233, and exhibited great energy as a reformer. His authority was superseded by that of the legate, Cardinal to, and being unable to obtain redress. Rome he retired to France in 1240 and died in 1242. He was canonized in 1249. was canonized in 1249.

Richard I, King of England, sur-named Cœur de Lion, second son of Henry II by Eleanor of Aquitaine, was horn at Oxford in 1157. He severai times reheited against his father, and in 1189, supported by the King of France, he defeated the forces of Henry, who was compelled to acknowledge Richard as his heir. On Henry's death at Chinon, Richard sailed to England and was crowned at Westminster

Richard ieft Paiestine in 1192 and sailed for the Adriatic, but was wrecked near Aquiicia. On his way home through Germany he was seized by the Duke of Austria, whom he had offended in Palestine, and was given up a prisoner to the Emperor Henry VI. During his captivity his brother John headed an insurrection in England in concert with the King of France, but Richard, who was ransomed, returned to Engiand in 1194, and the movement came to nothing. Richard then passed over to Normandy, and spent the rest of his life there in warfare of no decisive character. He died in April, 1199, of a wound received while besieging the castie of Chalus. Richard

sieging the castie of Chalus. Richard was thoroughly neglectful of his duties as a king, and owes his fame chiefly to his personal bravery.

Richard II, King of England, son Prince, and grandson of Edward the Black was born at Bordeaux in 1366. He succeeded the latter in 1377. In 1381 took place the insurrection headed by Wat place the insurrection headed by Wat Tyler, in the suppression of which the boy-king showed considerable capacity and boldness, but his after life did not and boldness, but his after life did not correspond with this early promise. In his sixteenth year (1382) he married Anne, daughter of the Emperor Charies IV. Wars with France and Scotiand, and the ambitious intrigues of the Duke of Lancaster, one of his uncles, disquieted some succeeding years. The proper government of the kingdom was interfered with by contests for power between the king with his favorites, and his uncle, the Duke of Gloucester, backed by the parliament. In 1389 the king disby the parliament. In 1389 the king dismissed Gloucester and his adherents from his council, and took the reins of government himself. In 1394 Anne of Bohemia died, and two years later Richard married Isabelia of France. This marriage was strongly opposed by the Duke of Gloucester, who, in consequence, was suffocated in Caiais, where he had been sent for safe custody. A quarrel having sent for safe custody. A quarrel having broken out between Richard's cousin, the King of France, he defeated the forces of Henry, who was compelled to acknowledge Richard as his heir. On Henry's death at Chinon, Richard sailed to England and was crowned at Westminster (September, 1189). The principal events of his reign are connected with the third crusade, in which he took part, uniting bls forces with those of Philip of France. In the course of this crusade he married the Princess Berengaria of Navarre in Cyprus. In the crusade he showed him seif a warrior of great strength and boldness, but made enemies of his feliow prince by his autocratic demeanor. in the castle of Pomfret, where he is generally supposed to have been murdered in 1400.

Richard III, King of England, the Piantagenet kings, born at Fotheringhay Castie in 1450, was the youngest son of Richard, Duke of York, who was kilied at Wakefield. On the accession of his brother, Edward IV, he was created Duke of Gioucester, and during the early part of Edward's reign served him with great conrage and fidelity. He took for wife in 1473 Anne Neville, joint-beiress of the Earl of Warwick, whose other dangbter was united to the Duke of Ciarence, and gnarrels soon rose beof Ciarence, and quarrels soon rose beof Ciarence, and quarrels soon rose between the two brothers over their wives' inheritance. On the death of Edward in 1483, the Duke of Gloucester was appointed protector of the kingdom; and be immediately cansed his nephew, the young Edward V, to be declared king, and took an oath of fealty to him. But Richard soon began to pursue his own ambitious schemes. Earl Rivers, the queen's brother, and Sir R. Grey, a son by her first husband, were arrested and beheaded at Pomfret, and Lord and beheaded at Pomfret, and Lord Hastings, who adhered to his young sovereign, was executed without trial in the Tower. It was now asserted that the king and his brother were illegiti-mate, and that Richard had a legal title to the crown. The Duke of Buckingham snpported Richard, and a body of peers and citizens having offered him the crown in the name of the nation he accepted it, and on July 8, 1483, was crowned at Westminster. The deposed king and his brother were, according to general beilef, smothered in the Tower of Lonbeilef, smotbered in the Tower of London by order of their uncle. (See Edward V.) Richard governed with vigor and ability, but was not generally popular, and in 1485 Henry, Earl of Richmond, head of the house of Lancaster, landed with a smail army at Milford Haven. Richard met him on August 23d with an army of 15,000 men at Bosworth, in Leicestershire. Richmond had only 6000 men, but relied on the secret assurances of aid from Stanley, who commanded a separate royal force of 7000. In the midst of the battle, Stanley, by falling on the flank of the royal army, secured on the flank of the royal army, secured the victory to Richmond, Richard being slain on the field. (See Henry VII.) Richard possessed courage as well as capacity; but his conduct showed crueity, dissimilation, treachery, and ambition. He has been represented as of small stature, deformed, and of a forbidding aspect; but his personal defects have probably been magnified.

Richard, Earl of Cornwall and Emperor of Germany between 1256 and 1272, during the so-called interregnum, was a son of King John of England, and was born in 1209. In his youth he commanded with success the army of his brother Henry III in France. In 1236 he took the cross and went to the Holy Land, but was not able to effect much in the East. In 1256 he was chosen Emperor of Germany by a faction, and was crowned King of the Romans at Aix-ia-Chapelie in 1257. He was unable to obtain general recognition, and was more than once driven to take refuge in England, where he was taken prisoner by Simon de Montfort at the battle of Lewes in 1264. In 1268 be again visited Germany, and held a dief at Worms in the following year. He died in England April 2, 1272.

Richard of Cirencester, or RICARDUS
CORINENSIS, a monkish chronicler of tha fourteenth century, sometimes cailed the Monk of Westminster. He entered the Benedictine monastery of St. Peter's, Westminster, residing there during the remainder of his life; in 1391 he visited Rome. He died in his monastery about 1402. He is the author of a Latin history of England to the year 1348. The so-called Itinerary of Richard, 'De Situ Britannia,' published in 1758, and formerly much referred to as an authority on Roman Britain, was a forgery perpetrated by Dr. C. J. Bertram of Copenhagen.

Richards, WILLIAM FROST, painter, was born at Philadeiphia, Pennsyivania, Nov. 14, 1833; died Nov. 8, 1905. He studied art in Europe, had a studio in London 1878-80, and resided many years in his native city. Among his well-known pictures are Midsummes Woods in June, Old Ocean's Gray and Melancholy Waste, and The Wissahickon, the last exhibited at the Centenniai Exposition in 1876. His later works are chiefly marine pictures.

Richardson (rich'ard-son), SIR Richardson (rich'ard-son), SIR BENJAMIN WARD, was born at Somerby, Leicestershire in 1828, was graduated in medicine at St. Andrew's University in 1854. In 1885 he edited the Journal of Health; and he gained the Astiey Cooper prize by his treatise on The Cause of the Coagulation of the Blood, and the Fothergillian gold medal by a disquisition on the Diseases of the Fatus, in 1856. He originated the nse of ether spray for the local abolition of pain in surgical operations, and introduced methylene bichloride as a general ansesthetic. He was a fellow of the

Royal College of Physicians and of the Royal Society, and was the president of the Medical Society of London. He published several works upon medicine and hygiene, and was an earnest sanitary and temperance reformer. He was knighted in 1893 and diec in 1896. Richardson, CHARLES, lexicographer, was born in 1775; died

in 1865. He was trained as a barrister, but devoted himself to literature. In 1815 he published Illustrations of English Philology. In 1818 he undertook the lexicographical articles in the Encyclopadia Metropolitana, and afterwards published his great work. a New Dictionary of the English Language (2 vois. 1835-37). He also wrote a work on the Study of Languages (1854), and contributed frequently to the Gentleman's and other frequently to the Gentleman's and other frequently. Tourshe and was originally destined

Richardson, Sir John, naturalist and Richardson, Arctic traveler, born at Dumfries in 1787; died near Grasmere in 1865. After studying medicine at the University of Edinburgh he entered the royal navy, in 1807, as assistant-surgeon. He served on various stations till 1819, and was surgeon and naturalist to the magazines. and was surgeon and naturalist to the Arctic expeditions of 1819-22 and 1825-27, under Sir John Franklin, exploring on the latter occasion the shores of the Arctic Ocean between the Mackenzie and Coppermine rivers. He wrote Geognostical Observations as an appendix to the Narrative published hy Franklin (1829, London), and edited, along with Kirhy and Swainson, the Fauna Boreali-Americana (4 vois., 1829-37). In 1838 he was appointed physician to the fleet, and in 1846 was knighted. In March, 1848, he took charge of an expedition to search for Franklin, and on his return published The Arctic Searching Expedition (1851) and The Polar Regions (1861).

Richardson, Samuel, an English novelist, was born in 1689 in Derbyshire, and received only a common school education. He early Coppermine rivers. He wrote Geognoscommon school education. He early

manifested a taient for story-teiling and letter-writing, and at the age of thirteen was the confidant of three young women in their love secrets, and employed hy them in their amatory correspondence. At the age of slxteen Richardson was bound apprentice to Mr. John Wilde, a London printer, and afterwards set up as a printer for himself and developed a successful husiness. When he was nearly fifty he was asked by two bookseliers to compose a 'familiar letter writer.' In doing this he threw the

was its popularity that it ran through was its popularity that it ran through five editions in one year, and was even recommended from the pulpit. In 1749 the appearance of a second novel, Clerises Harlowe, fully established his literary reputation. The History of Sir Charles Grandison appeared in 1753, and was also received with great praise. In 1754 Richardson became master of the Stationers' Company, and in 1760 purchased tioners' Company, and in 1760 purchased a molety of the patent of law printer to the king. He died July 4, 1761, and was hurled in the Church of St. Bride, in Fleet Street.

in Touraine, and was originally destined for the army; but his brother, Alphonse, having resigned the hishopric of Lucon, this was bestowed on him by Henry IV (1606). He obtained from the pope a dispensation allowing him to accept the office though under age, and in 1607 was consecrated by the Cardinal de Givry in presence of the pope himself (Paul V). For several years he devoted himself to the duties of his see reforming abuses. the duties of his see, reforming abuses, and iaboring for the conversion of Protestants. But his ambition aiways made him turn his eyes towards the court, and having come to Paris in 1614 as deputy of the clergy of Poitou to the states-general, he managed to insinuate himself into the favor of the queen-mother, Marie de Medici, who obtained for him the post of grand-almoner, and in 1616 that of secretary of state for war and foreign affairs. When Louis XIII quarreied with his mother (1617) Richelieu fell with her, and was banished first to Blois and then to Avignon. In 1620, however, he managed to effect a reconciliation between Mary of Medici and her son. He now obtained, through the influence of now obtained, through the influence of the queen-mother, the cardinal's hat, and in 1624 was admitted into the council of state. From this date he was at the head of affairs, and he at once began systematically to extend the power of the crown hy crushing the Huguenots, and overthrowing the privileges of the great vassais; and to increase the influence of the French monarchy by undermining that of the Hapsburgs, both beyond the Pyrenees and in Germany. The rallying point of the Huguenots was Rochelle; and Richelieu laid slege to that city, comwriter.' In doing this he threw the manding the army in person. Rochelle, letters into the form of a story, which supported by supplies from England, he published (1741) under the title of held out for some time, but was companied, or Virtue Rewarded. But he was prepared at every point and his vengeance sure. During the Thirty Years' war the cardinal employed all the arts of negotiation and even force of arms to protect the Protestants of Germany, for the purpose of humbling the power of Austria. For the same object he deciared war against Spain in 1635, and the separation of Portugal from Spain was effected by his assistance (1640). He also endeavored to weaken Austrian influence in Italy, and procured the transfer of the duchy of Mantua to the Duke of Nevers. Among the last to be crushed hy him were Cinq-Mars and De Thou, who, with the king's approval, attempted to ruin the great minister. Before his death he recommended Cardinal Mazarin as his successor. Richelieu was a great statesman, but he was proud, arrogent, and winding but he was proud, arrogant, and vindictive. He was a patron of letters and art, and founder of the French Academy and the Jardin des Plantes.

Richmond (rich'mund), an ancient municipal borough of Engiand, in the county of and 42 miles north-west of York (North Riding), on the ieft bank of the Swale. It is picturesquely situated, and has numerous interesting remains of antiquity, the most remarkable of which is the castle, comprising an area of nearly 6 acres, and one of the most majestic ruins in Eng-

land. Pop. (1911) 3934.

Richmond, a town of England, in the county of Surrey, 12

the king's brother, was suppressed by tant industrial center, with manufactures the royal forces directed by Richelieu, and of farming implements, threshing mathe Duke of Montmorency was executed. chines, machinery, furniture, undertakers' The whole period of his government was supplies, hrass and iron goods, underwear, chines, machinery, furniture, undertakers' supplies, hrass and iron goods, underwear, automatic tools, etc. It is the seat of Earlham College and other institutions.

Richmond, a city of Kentncky, county seat of Madison Co., 25 miles S. E. of Lexington. Live stock is raised and shipped and there is a tobacco industry. The Central University (Presbyterian) and Madison Female Institute are situated here. Pop. 5340.

Richmond, the capital of Virginia, is finely situated on the north side of James River, at the head of tidewater, 100 miles s. hy w. of Washington. The streets are generally wide and well huilt, and mostly intersect each other at right angles. There are many fine buildings, including the capitol, governor's house, city haii, federai huildings, buildings of Richmond College, the Jefferson Davis Mansion (now a museum of Confederate relics), the Chief Justice Marshall residence, exposition huildings, Soidiers' Home, etc. The State House or Capitol contains Houdon's celebrated marble statue of Washington, and in the Capitoi grounds are Foley's bronze statue of Generai T. J. ('Stonewall') Jackson and Crawford's bronze statue of Washfeet high, on a pedestai 42 feet high, surrounded hy other bronze statues. There is a fine system of parks, a national cemetery and the famous Hollywood Cemetery in which are the graves of Presidents Monroe and Tyler, John Randoiph, Jefferson Davis, and others of note. There are a number of collegiate institutions. Water-power is almost unlimited, and the various mills and factories give employment to numerous workmen, the tobacco and iron industries miles w. s. w. of London, partly on an being of great importance. The trade acclivity of Richmond Hill, and partly on stapies are tobacco, iron, grain, and flour,

Richter (rik'ter), Eugen, a German dorf in 1838. He entered the Prusslan Diet in 1869, and the Imperlai Diet in 1871, and became the able and acknowledged leader of the Progressist Liberals.

Richter, Gustav, a German painter, born at Berlin in 1823; died

there in 1884. He was a member of the Academies of Berlin, Munlch, and Vienna; executed frescoes in the Berlin Museum, and attracted attention by his Raising of Jairus' Daughter and his Building of the Pyramids, a colossal picture (at Munich). It is on his portraits, however, that his fame chlefly rests, his altters having included many European colebrities. celebrities.

Richter, JEAN PAUL FRIEDRICH, commonly called JEAN PAUL, a German writer, was born March 21, 1763, German writer, was born March 21, 1763, at Wunsledei, in the Fichtelgebirge, and dled November 14, 1825, at Baireuth. His father was, at the time of his birth, a teacher and organist at Wunsiedel; at a later period pastor at Schwarzenbach on the Saale. In 1781 Richter entered the University of Leipzig in order to study theology, but soon changed his plan, and devoted himself to literature. In 1784 he was forced by poverty to leave Leipzig. In 1787-94 he was a private tutor, but in the meantime he had published his Grönlandische Processe ('Greenland Lawsuits,' 1783-84). Auswahl aus des Teufels Papieren ('Selection from the Devil's Papers,' 1789), and Die unsichtbare Loge ('The Invisible Lodge,' 1793). This brought him fame and money, and was followed by another romance, Hesperus (1795), and The Life and money, and was followed by another romance, Hesperus (1795), and The Life of Quintus Fixlein (1796), a humoristic idyi, works which made his name one of the best known in Germany. In 1798 he went to Weimar, and subsequently moved to other towns, finally settling at Balreuth in 1804. He shortly afterwards received

Paui's works (he wrote under this name) are characterized by a deeply reflective and philosophic humor, but are often whimsical and fantastic. They are fuil of good things, but show no sense of proportion, arrangement, or artistic finish. His writings, other than those noted above, include Blumen-, Frucht-, and Dornenstücke ('Fiower, Fruit, and Thorn Pieces,' 1796), Der Jubelsenior ('Parson in Jubilee,' 1797), Das Kampaner Thal (1797), Titan (1800), Flegel-jahre (translated by Cariyie 'Wild Oats,' 1804). Die Vorschule der Aesthetik ('Introduction to Æsthetics'), his first ('Introduction to Æsthetics'), his first important phllosophical work, appeared in 1804. It was followed by Levans, oder Erziehungslehre (1807), a work on education. His works connected with the history and politics of the time were: Friedenspredigt (1808), Dümmerungen für Deutschland (1809); Mars und Phöbus' Thronwechsel im Jahr 1814 (1814), and Politische Fastenpredigten (1817). (1817).

Richthoven (rik'to-fen), FERDIeier, born at Karlsruhe, Silesia, in 1838; dled in 1905. For twelve years, 1860-72, he traveled in Europe and the Western United States and was subsequently professor of geology at Rome, and of geography at Lelpzig and Beriin. In 1902 he was made director of the Institut für Meeneskunde. His works on the geography and geology of China are of high value.

Ricimer (ris'i-mer), a general of bar-barlan descent who ruled the western Roman Empire by emperors whom he set up and put down at will. He dethroned Avitus in 456, and appointed Majorianus emperor, whom he caused to be assassinated in 461. He then placed Livius Severus on the throne, and on his death in 465 he carried on the government for some time alone. In 467 Arthenius was put on the throne, and gave his daughter in marriage to Ricimer. The latter soon took up arms against his father-in-law, who was assassinated in 472. Ricimer dled soon after.
Ric'inus. See Castor-oil. Ric'inus.

(rik'ets), a disease peculiar Rickets (rikets), a discase the characters to infancy, chiefly characters ized by changes in the texture, chemical to the characters of th composition, and outward form of the a pension from the prince-primate. Dalbony skeleton, and by aftered functions berg, which was afterwards continued of the other organs, transient for the by the King of Bavaria. While staying in Beriin in 1801 he married Karoline The chief external features are the legs Mayer, a union which proved very happy. Bent outward, chest unduly projecting. His last years were saddened by the head large and forehead projecting, spine bony skeleton, and by aitered functions of the other organs, transient for the most part, but occasionally permanent. The chief external features are the legs sanitary and hygienic precautions generally. In the treatment of rickets all means are employed by which the system is invigorated, including good food, fresh air, and exercise. The use of splints for the legs is often beneficial, and as the child grows up nature often remedies the worst features.

Ricochet Firing (riku-shā, or shet), the firing of guns, mortars, or howitzers with smail charges and low elevation, so as to cause the bails or shells to bound along. It is very destructive, and is frequently used in sieges to clear the force of a variety heating or other work. (riku-shā, or face of a ravelin, bastion, or other work, dismounting guns and scattering men; and may also be used against troops in the field.

Rideau Canal (ri-do'), a Canadian canai constructed between Kingston on Lake Ontario and Ottawa as a through waterway by means of the river Ottawa to Montreal, the St. Lawrence route being interrupted by rapids. Canais have since been built aiong the St. Lawrence to avoid these, and the Rideau is now ittel Bergen Co.

Ridgewood, a village in Bergen Co., New Jersey, 22 miles from New York, and 5 miles N. E. of Paterson. Pop. 5416.

Ridgway, borough, capital of Eik Co., Pennsylvania, 118 miles

s. E. of Erie. Engines. machinery, dynamos, edge-tools, etc., are manufactured.

Rider's Bone, or RIDER'S STRAIN, a times forms on the inner side of the thigh in persons who ride much.

Riding (rid'ing) is the art of sitting on horseback with firmness, ease, and gracefulness, and of guiding the horse and keeping him under perfect command. Waiking, trotting, and gaiioping are the three natural paces of the horse, but these may be converted into artificial paces by art and skiii, by shortening or quickening the motion of the horse. The position of a rider should be upright in the saddle; the legs and thighs should be turned in easily, so that the fore part of the inside of the knees may press and grasp the saddle, and the legs hang down easily and naturally, the iegs hang down easily and naturally, the tried for treason and executed. feet being parallel to the horse's sides, neither turned in nor out, only that the toes should be kept a little higher than He was the son of a tavern-keeper, acthe heeis. The hand holding the reins quired a good education, and early dis-

often curved, joints large and prominent, is generally kept clear of the body, and general form stunted, etc. Rickets is immediately over the pummel of the sadchiefly a disease of large cities, and its die. A firm and well-kept balanced positive development is favored by want of nour-tion of the body is of the utmost ishing food, overcrowding, and neglect of consequence, as it affects the horse in every motion, and the hands and legs ought to act in correspondence with each other in everything, the latter being ai-ways subservient to the former. The art of riding is not difficult of attain-ment, but it is one which can only be mastered by practical instruction and constant practice.

Ridings (rid'ings), the three jurisdictions into which the English county of York is divided on account of its extent. They are called the North, East, and West Ridings.

Ridley (rid'ii), NICHOLAS, Bishop of London in the reigns of Ed-ward VI, and his successor Mary, was Ridley born about the commencement of the sixteenth century, and educated at Cambridge. He afterwards traveled on the continent for three years, and on his return filed the office of proctor to Cambridge University. In 1547 he was chosen to the see of Rochester, and in 1550 superseded Bonner as Bishop of London. On the death of Edward he was involved in an attempt to secure the Protestant ascendency by piacing the Lady Jane Grey upon the throne. This, together with his connection with Cranmer, led to his being tried for heresy, and after a formai disputation on the controverted points with a deputation of Roman Catholic bishops he was con-demned to the stake. This sentence he underwent with the greatest fortitude, in company with his friend and fellow-sufferer Latimer, Oct. 16, 1555, in Oxford.

Ridpath (rid'path), John CLARK, historian, born in Putnam Co., Indiana, in 1840; died Aug. 1, 1900.

He became professor of English literature in Asbury University, Ind., In 1867 and its vice-president in 1879. He published a History of the United States in 1875, a Cyclopedia of Universal History, 1880-84, and Great Races of Mankind, 1894. Riel, Louis, a Canadian revolutionist, born at Boniface, Manitoba, in 1844, son of a haif-breed Indian. He became a leader of revolts against the English, was elected to the Dominion

parliament, but not allowed to take his seat, and after this twice organized rebeilions among the Indians and western settiers. He was taken prisoner in 1880,

94. nist. tinguished himseif by his taients, and especially by his attacks on the tyranny of the nohies. In 1342 he endeavored to induce Pope Clement VI, then at Avignon, to initiate reforms, but nothing was done. In 1847, during the absence of the governor of Rome, Stefano Colonna, Rienzi summoned a secret assembly of his friends upon Monnt Aventine, and induced them ali to subscribe an oath for the estab-lishment of a pian of government which he cailed the 'good estate.' The people conferred upon him the title of tribune, with ail the attributes of sovereignty. He hanished several nobie families, and compelied Colonna to quit Rome. His strict regard to justice and the public good in the first exercise of his power induced even the pope to countenance him. But he subsequently became ambitious and haughty, and finding he had lost the confidence of the people he withdrew from Rome in 1348. He returned secretly to Rome in 1350, hut was discovered, and fell into the hands of Pope Clement at a light of the lands o Clement at Avignon, who imprisoned him for three years. Innocent VI released Rienzi, and sent him to Rome to oppose another popular demagogue named Boronceiii. But after a turbulent administratlon of a few months he was killed in

has a large river trade and various industries. Pop. (1905) 14,073.

Riesengebirge (re'sen - ge - hir - ge; Glants' Mountains), a mountain range of Europe, separating Silesia from Bohemia and Moravia, till it joins the Carpathians; hut the name is properly applied to that part of this range which lies between the sources of the Nelsse and the Boher. It contains the ioftiest mountains of the north or central parts of Carmany, the Schneekange tral parts of Germany, the Schneekoppe being 5257 feet high. The geological structure of the range consists of granite, gueiss, and mica slate, and in the valleys

Riesi (rē-ā'sē), a town in Sicily, province of Caltanissetta. It has large sulphur mines, and the olive and vine are here extensively cultivated. Pop. 11,914.

Riet-bok (rēt-bok), the Dutch name for an anteiope of South Africa, which lives in reely marshes (Electragus arundinaccus). Called also Reed-buck.

manufactures of silk and wooien stuffs, etc. Pop. 0845.

Riff, or EL Riv (ref), a district on the north coast of Morocco, long the home of pirates, who gave great trouble to the European powers by their depredations in the Mediterranean.

Rifle (ri'fl), a portable firearm, the interior surface of the barrel of which is grooved, the channels being cut in the form of a screw. The number of these spiral channels or threads, as well as their depth, varies in different rifles, the most approved form being with the channels and ridges of equal hreadth, and the spiral turning more quickly as it nears the muzzle. The hullet fired is now always of an elongated form. The great advantage gained by a weapon of this construction is that the hullet discharged from the piece, hy hat ng a ro-tatory action imparted to its axis coincident with its line of flight, is preserved in its direct path without being subject to the aberrations that injure precision of aim in firing with n-rifled arms. As a necessary consequence of the projectile being carried mo; directly in its line of alm, its length of range, as well as its certainty in hitting the object, is materially increased. Rifes were invented in Germany in 1498, and have been used as Riesa (re'za), a town in Saxony, on military weapons since 1631, but were the left bank of the Elbe. It not used in the British army until the burner than a large place that and regions industrial than held of the electron trade and regions industrial than held of the electron trade and regions industrial than held of the electron trade and regions industrial than the electron trade and regions in the el iatter haif of the eighteenth century; and tili 1851 the British infantry, with the exception of those regiments known as rife corps, was universally armed with smooth-bore musket. In 1851 the first rifle firing an elongated huilet came in under the name of the Minie. After this date came the general adoption of the breech-loading ride, the reduction in hore and weight of weapon, and subsequently the development of magazine rifles, now commonly in use in all armies. In the United States the Springfield rifle was the army weapon from 1873 to 1892, when it was replaced by a Scandinavian magazine rifle, the Krag-Jorgensen. In 1902 the Springfield, now converted into a magazine rifle, was adopted as the army weapon. In ordinary use the Winchester has long been a favorite. In European armies various weapons are in use. In Britain the Martini-Henry was adopted in 1869; now replaced by the Lee-Metford weapon. In Europe the Mauser is the weapon in use in several countries; the Chassepot, Krag-Jorgensen, etc., in others. This class of magazine rifle is being replaced Rieti (re-a'ts), a town in Italy, in the Krag-Jorgensen, etc., in others. This province of Perugia: 42 miles class of magazine rifle is being replaced n. n. e. of Rome. It is the see of a in some countries hy one which acts hishop, has an imposing cathedral, and automatically, ejecting the empty shell

the nion hls ized tern 880,

tive 312. acdis1906 a new sharp-pointed hullet has been adopted in the United States and several

other countries.

The repeating rifle is a development of a very oid type of weapon. In the Spencer, the first used with signal success, the cartridges are piaced in the stock of the arm; in the Winchester, the best known of repeating rifles, they are in a tube underneath the barrei. More mod-ern military magasine rifles draw their supply of cartridges from a reserve con-tained in a detachable magazine, the advantage being the greater efficiency of the weapon as a single loader. The Lebel rifles, originally furnished with a tuhular magazine, are now being converted to the more modern type. The breech mechthe more modern type. The breech mechanism usually preferred is that upon the 'door-boit' principle, of which the Chassepot and Prussian needle-gun are well-known types; the Winchester is one of the few actuated by an under lever, and the Coit is worked by a silding boss placed under the barrel. In the Mann-licher the boit is drawn back simply; in these to be turned to the left beothers it has to be turned to the left before it can be withdrawn. With the Lebel the breech-boit has two projections, which, when the boit is turned, securely lock the boit close to the hase of the cartridge; in the Enfield-Lee, a similar double-locking arrangement is placed where the projecting knob to actuate the mechanism joins the hreech-bolt. The magazine of the Enfield-Lee, containing eight cartridges, is placed under the stock behind the harrel, to the level of which a spiral spring in the magazine raises the cartridges. The hreech-bolt, which contains the firing mechanism and ex-tractor, when pushed forward forces the raised cartridge into the barrel. The magazine is detached by pressing a 'catch,' or blocked by a 'cut-off,' when

the rife may be used as a single loader.
When Whitworth produced his hexagonal bore rife of .450 caliber, it was thought that the bullet was of insufficient diameter, and the .577 was adopted in its bore has been still further reduced, chiefly owing to the discoveries of Hebier, whose Swiss rifle of 7½ millimeters was found to give increased velocity, greater range, equal accuracy, and at the same time permitted of lighter ammunition being president.

and bringing forward another cartridge thin steel, ferro-nickel or other hard by the force of the discharge. These will metal, so that it shall not strip in the fire 300 hulleta per minute, but their rifling, which has a sharp twist, one comweight and complexity and the waste of piete turn in less than 12 inches, and ammunition in this rapid scattering of leaves the muzzle at a velocity of 2000 bullets are objections to their use. Since or more feet per second, thus giving an rifling, which has a sharp twist, one com-plete turn in less than 12 inches, and leaves the muzzie at a velocity of 2000 or m's feet per second, thus giving an extreme range of 3500 yards. Improved explosives, almost smokeless and which do not foul the barrel, have added to the success of the small-bore rifle. Sporting rifles have a shorter range and inferior velocity to the best military ones.

The Mauser is a magazine rifle in which the cartridge-holder or clip consists from above. The breech mechanism has the ordinary sliding and turning boits for the operation of charging the rife. The hore is 0.250 in. A charge of 30 grains of smokeless powder ejects a huilet of 220 grains with deadly force to over 1000 yards. The hullet is a lead slug jacketed with a thin cover of steel, the length being about 3 calibers.

Riga (rē'gā), a seaport of Russia, capitai of the government of Livenia, on both sides of the Duna or Dwina, about 5 miles above its mouth in the Guif of Riga. It is situated on a sandy flat, and in the older parts consists of narrow, winding streets, huddled to-gether, while the more modern parts are much better built. The river is crossed by a hridge of boats, and on both sides are spacious quays, which afford excellent promenades. The public huildings are numerous, but few of them are deserving of particular notice, except the cathedral a Gothic building of the thirteenth and sixteenth centuries, St. Peter's Church, the castle or governor's residence, and the town-hall. The manufactures are not of great importance, but the trade is very extensive, the principal exports being flax, hemp, timber, linseed, grain, etc. Ships can come up to the town, or they may unload and take cargo in at Dünamünce, the port and fortress at the mouth of the When Whitworth produced his hexagoriver. Half of the trade is with Britain onal bore rifle of .450 caliber, it was Pop. 370,000, of whom nearly half are thought that the bullet was of insufficient Germans, and Protestants by religion. diameter, and the .577 was adopted in its About 23 per cent are Letts and 25 per stead; later, after twenty years' expercent Russians. The wealth of Riga is for lence with the .450 Martini-Henry, the the most part in the hands of German have been still further adverted tradegree and the hands of German tradesmen and bankers.

In the winter campaign of 1915 in the European war the Germana almost forced their way to Riga, but were halted by the stout resistance of the Russian troops. The seaport fell to the Germans two years being used. The bullet is coated with later following the revolution. On August Pri the mnd 000

Rimu (re'mu), a New Zealand tree (Dacrydium oupressinum) of the yew family. It grows to a height of 80 to 100 feet, and from 2 to 6 feet in diameter. Its wood is valued for general

huilding purposes.

Rinderpest (rin' der- pest; German name), or CATTLE-PLAGUE, a contagious disease which attacks animals of the ox family, and is attended with the most deadly results. The disease appears to be identical with what was formerly known as murrain, and is sometimes called the steppe-murrain, from the Russian steppes, which are its habitat. This disease has caused great havoc among cattle for at least a thousand years, spreading occasionally like a pestilence over Europe. In 1865-67 there was a very serious visitation of it. The treatment of the disease having proved a failure, the policy of 'stamping-out' or skilling all infected animais was adopted. During this outhreak between 200,000 and 300,000 cattle died of the piague in Britain, or were ordered to be killed on account of it. In 1896 a serious epidemic broke out in Africa, and spread with great rapidity, reaching South Africa with great rapidity, reaching South Africa countries in which the severe winters prehy the end of the year and destroying clude the possibility of its obtaining a thousands of antelopes and other wild due supply of food, and appears on the animals in addition to cattie. eastern coast, on a fine natural harbor formed by a bay of the same name. The city, which has a picturesque appearance from the bay, is built on flat ground along the shore or on the slopes of low hills.

Upon nearer approach it is found that the when the scalp is affected the ordinary methods are too slow and uncertain and are very likely to be abandoned by either patient or physician. The disease is not always the mild affair the older writers would have us believe; and as the hair follicles are the parts in which the infection is mainly found it becomes necessary to remove the hairs before there can be any possibility of a cure. In order to do this properly the patient requires the services of a physician or a nurse or other qualified attendant. The X-ray method, a very efficient means of cure, has been in tion is mainly found to the composition of the composition of a cure. In order to do any possibility of a cure. In order to do this properly the patient requires the particles of a physician or a nurse or other qualified attendant. The X-ray method, a very efficient means of cure, has been in steady use since 1904; and is a well-steady use si by hills covered by iuxurlant tropical vegetation, and affords safe anchorage for the largest vessels. Manufactures are unimportant, but there is an extensive trade in coffee, sugar, hides, tobacco, timber, etc. The principal imports are linen, woolen, and cotton tissues; iron and steel goods, and provisions and preserved meats. The city is the central terminus of the railways of the country; tramways have also been worked for some time. The first settlement in the neighborhood of Rio de Janeiro was formed hy some French refugees in 1555. A Portuguese force took possession of the settlement in 1567, and laid the foundations of a new city, which has grown into the present capital of Rio Janeiro. Pop. 1,128,632.

The state of Rio de Janeiro has an area of 26,660 sq. miles, and is decidedly Liountainous in the center. It is the best-cultivated section of Brazil, the chief crop being coffee. Immense herds of cattle are reared, and the forests are rich in timber. Pop. 1,300,000.

Rio Grande, a river of West Africa, which enters the Atlantic by an estuary opposite the Bissagos Islands; upper course not well known.

Rio Grande del Norte

(re'o gran'de del nor'te), a river of the United States, rising in s. w. Colorado, crossing New Mexico, and from El Paso to the gulf forming the houndary hetween the United States and Mexico. Its length is estimated at 1800 miles, but it is generally shallow and obstructed by rapids and sandbanks. Its waters are much used for irrigation in New Mexico. Rio Grande do Norte

(du nor'te; Grand River of the North), a maritime state in the northeast of Brazil; area 22,196 square miles. The surface is mountainous, and not generally fertile. Agriculture and cattle-rearing form the principal branches of industry. The capital is Natal or Rio Grande do Norte (pop. 10,000), a seaport at the mouth of the small river, Rio Grande do Norte, exporting some cotton, sugar, etc. Pop. estimated at 410,000.

Rio Grande do Sul (du söl), the most southern state of Brazil, bounded partly by the Atlantic, and bordering with Uruguay and the Argentine Republic, has an area of 91,336 sq. miles, and a pop. of about 1,500,000. It is well watered, contains much fertile land, and has a healthy climate. On the coast is the large lake or lagoon of Patos, besides others. The chief occupations of the linhalitants are cattle-rearing and agriculture. Among

the population are 100,000 Germans, there being a number of flourishing German settlements. There are some 600 miles of railway. Hides, tallow, horse-hair, bones, etc., are exported.—RIO GRANDE, or SÃO PEDEO DO RIO GRANDE, its former capital, is situated on a peninsula near where the Lake of Patos communicates with the Atlantic. Its houses are mostly of earth, and its streets unpaved. It has an active trade in hides, horse-hair, wool, tallow, etc. Pop. 19,000.

Rioja (re-5'ha), Francisco DE, a Spanish lyric poet, born at Seville about 1600; dled in 1659. He became assessor of the supreme tribunal of the Inquisition. As a poet he followed classic and Italian models, and his poems exhibit purity and grace of diction, deep feeling, and a vigorous imagination.

feeling, and a vigorous imagination.

Rioja (rē-ō'hā), LA, one of the western provinces of the Argentine Republic. It is well watered on the west, but in the east and south there are salt and sand deserts. The climate is dry and healthy. The inhabitants are chiefly engaged in agriculture and cattle-rearing. Excellent wheat, wine, and fruits are produced. Pop. 82,099.—Chief town, LA RIOJA, at the foot of the Sierra V lasco, in the midst of vineyards and cange groves. Pop. 8000.

Riom (re-on), a town of France, in the department of Puy-de-ome, 10 miles north of Clermont. The a reets are spacious, but the houses, being hullt of dark lava, present a somewhat gloomy appearance. The chief manufactures are linen, silk, and hardware. Pop. 7839.

Rion. See Phasis.

Rio Negro (ne'grō; Spanish 'black river'), the name of numerous streams, of which two are Important:—(1) A river of S. America, and principal trihutary of the Amazon. It rises in Colombia, and joins the Amazon after a course of about 1000 miles at Manaos, Brazil. Through its affluent the Cassiquiari, there is direct communication hetween the Amazon and Orinoco. See Cassiquiari. (2) A river of S. America forming the boundary between the Argentine Republic and Patagonia. It rises in the Andes in Chile, and is about 700 miles long. Its current is very rapid, and its bed obstructed with shoals and sand banks.

Rione'gro, a town in the S. American Republic of Colombia, prov. Antloquia, 12 miles s. w. of Medellin. Pop. 18.648.

The rlot acts of England are not in force in the United States, but it is conceived that by the common law the authorities have power to suppress riotous assemblies and punish those participating in them.

Rio Téodoro, a river of Brazil, which flows into the Madeira River after a tortuous course of over 900 miles. It was explored by Theodore Roosevelt (q. v.) in 1914. Also called The River of Doubt.

celebrated copper southwest of Spain, province of Huelva. Riparian Rights. See Rivers.

Ripley (rip'ii), GEORGE, editor, was born at Greenfield, Massachusetts, 1802; died July 4, 1880. He was educated at Harvard College and Cambridge Divinity School, became a Unitarian minister in Boston, lived some years lu Europe, and was one of the founders of the Transcendental magazine, the Dial (on which he had Emerson and Margaret Fuller as coadjutors), and the originator and conductor of the communistic exand conductor of the communistic experiment at Brook Farm. He became literary editor of the New York Tribune in 1849, and was joint editor with C. A. Dana of the American Cyclopædia (1858–63, 16 vols.; also of the second edition).

Ripon (rip'un), a cathedral city, formerly a parliamentary borough of Engiand, county of York (West Riding), on the Ure, 22 miles N. N. W. of York. It has a spaclous marketpiace of Engiand, county of York (West Riding), on the Ure, 22 miles N. N. w. of York. It has a spaclous marketplace and an elegant town-ball. The cathedral dates from the latter half of the twelfth century, and is partly Early Engish, partly decorated in architecture, with two towers, each 110 feet high. It was

Pottenza, at the foot of Mt. Volture. recently thoroughly restored, and is one of the finest churches in England. The other buildings include a free grammarschool (founded Queen Mary), an infirmary, and a echanics institution.

> ripple-marks and current ripple-marks, and it requires much discrimination to determine the producing cause.

Rishis (rish'ēs), certain sages of the Hindu mythology, sprung from the mind of Brahma. Seven of them are enumerated. The term afterwards came to be applied to all personages distinguished for piety and wisdom.

Rissole (ris'ol), in cookery, an entree consisting of meat or fish mixed with bread-crumbs and yolk of cores, all wrapped in a fine paste, so as

eggs, all wrapped in a fine paste, so as to resemble a sausage, and fried.

Ristori (restore), ADELAIDE, an Italian actress, born in 1822.

Rio Tinto Mines, mines in the At a very early age she played in comedy, but afterwards appeared in tragedy. She married the Marquis Capranica del Grilio in 1847, and afterwards played in ail the chief European capitals. She took her farewell of the English stage in Manchester, November 8, 1873. Among her chief characters were Medea, Francesca da Rimini, Marie Antoinette, Mary Stuart, and Lady Macbeth. She died October 9, 1906.

Ritchie (rich'i), ANNA CORA MOWATT, actor and author, born of American parents at Bordeaux, France, in 1819; died in 1870. She became a favorite actress on the American stage, and wrote Pelayo, a poem; Fashion, a comedy, and Armand, a drama.

Ritornello (rë-tor-nel'lo; Italian), in music, a short repetition as of the concluding phrases of an Ritschl (richl), FRIEDRICH WILHELM, born in 1806. After attending the symnasiums at Erfurt and Wittenberg he went to Leipzig and Haile, where he devoted himself to classical studies. In 1832 he was appointed extraordinary pro-fessor at Halie University. He subseressor at Halle University. He subsequently held professorships at Bresiau and Bonn, and in 1865 accepted a call to Leipzig University, where he remained until his death in 1876. His chief work is a critical edition of Plautus' Comedies (1848-54). His other works include Parerga Plautina and Terentiana, and Prisca Latinitatics Monumenta Epigraphics. Ritson (rit'sun), Joseph, an English iterary antiquarian, born in 1752; died in 1803. He hecame a conveyancer in Jondon and deputy high bailiff to the Duchy of Lancaster, and willed many old and rere books. He was edited many old and rare books. He was noted for his industry and integrity, hut was a quarrelsome critic. His chief works are: A Select Collection of English Songs (1783), Ancient Songs from the Time of King Henry II to the Revolution (1790), a Collection of Scottish Songs (1794), Robin Hood Poems (1795), Ancient English Metrical Romances (1802), etc.

Rittenhouse (rit'en - hous), DAVID, astronomer, born at Germantown, Pennsylvania, April 8, 1732; died in June, 1796. He learned the art of clockmaking, and worked at it while engaged in astronomical study. He subsequently engaged in making mathematical instruments, constructed an orrery, and observed the transit of Venus in 1769. He was elected treasurer of Pennsylvania in 1777, and in 1792 became the first director of the mint; was also employed in determining the boundaries of the State. He became president of the Philosophical Society in 1791 and a fellow of the Royal Society of London in 1795. He published many scientific papers in the Transactions of the American Philosophical Society.

Ritter (rit'er), HEINRICH, a German philosopher, born in 1791, dinary professor of philosophy in Berlin, accepted an ordinary professorship at Kiei in 1833, and subsequently occupied the chair of philosophy at Göttingen the chair of philosophy at Göttingen the chair of philosophy at Göttingen the comparative simplicity of University from 1837 till his death in 1869. Ritter's chief work is a general History of Philosophy. He also published a System of Logic and Metaphys-

ice; a Cyclopædia of the Philosophical Sciences; a popular Treatise on Immortality, and other works.

Ritter, Karl, a German geographer, born in 1779; died in 1859. He studied at Haile, became a private tutor in 1798, and in 1819 succeeded Schlosser as professor of history at the Frankfort Gymnasium. He then published an Introduction to the History of European Nations before Herodotus, 1820; and in the same year became professor extraordinary of geography at the University of Berlin, where he remained until his death. His great work is Die Erdkunde im Verhiltnisse zur Natur und Geschichte des Menschen ('Geography in its Relations to Nature and History'), the first two volumes of which appeared in 1817-18, hut it ultimately comprised upwards of twenty volumes. He wrote several other geographical works, and upwards of twenty volumes. He wrote several other geographical works, and contributed extensively to the journals of the Berlin Geographical Society.

Ritual (rit'û-al), the series of rites or ceremonies established in

connection with any religion; or the book in which religious services are prescribed

and detailed. See Liturgy.

Ritualism (rit'd-al-izm), a strict adherence to rites and ceremonies in public worship. The term is more especially applied to a tendency recently manifested in the Church of England, resulting in a series of changes introduced by various ciergymen of the High Church party into the services of the church. These changes may be described externally as generally in the direction of a more ornate warship and direction of a more ornate worship, and as to their spirit or animating principle, as the infusion into ontward forms of a larger measure of the symbolic element. They are defended on the grounds of law, ancient custom, inherent propriety, and divine sanction or authority. The Ritualists hold, with most others, that all authoritative and obligatory regulation upon ritual is not laid down in the New Testament, but they, or many of them, maintain that a knowledge of what is obligatory in ritual is derived from Ritter (rit'er), HEINRICH, a German apostolical tradition, going hack to apostudied theology and philosophy at sign of the institution of Christianity Halle, Göttingen, and Berlin from 1811 was not to ahrogate the external ceretion 1815. In 1824 he became an extraordinary professor of philosophy in Berlin, Mosaic dispensations in the Oid Testaal 11-

The volume of water which rivers contain varies with many condi-Various judgments have been given in ecciesiastical courts against extreme Ritualists, and some of their proceedings have been pronounced illegal. Ritualistic practices have been generally condemned by the hishops, and an act of parliament giving them power to restrain innovations of this kind came into force or July 1, 1875. The ritualistic movement in the Church of England arose out of the high church movement inaugurated by the Tractarians. See Tractarianism. Tractarianism.

Rive-de-Gier (rev-de-zhyā), or slm-ply Rive, a town of France, department of the Loire, 25 miles E. S. E. of Montbrison, on the Gier. The coal-field which surrounds the town is the most valuable in France. There are glassworks, spinning and other mills, foundries, machine and iron works, etc. Pop. (1906) 15,338.

River-crab, a name given to a genus (Thelphusa), inhabiting fresh water, and having the carapace quadrilateral and the antennæ very short. One species (T. depressa) inhabits muddy lakes and slow rivers in the south of European the south of Europe.

River of Doubt.

(riv'ers) rank high in impor-tance among the natural fea-Rivers tures of the globe, and are intimately connected with the history and condition of mankind. They have always (which see). Among the great rivers formed important highways of communication, and the great cities built upon their banks have constituted in ail ages the seats of empire. Every circumstance concerning rivers is therefore of important highways of communication, and the great cities built upon their banks have constituted in ail ages the seats of empire. Every circumstance concerning rivers is therefore of important highways of communication, and the great cities built upon their banks have constituted in ail ages the seats of empire. Every circumstance concerning rivers is therefore of important highways of communication, and the great cities built upon their banks have constituted in ail ages the Kiang, the Amoor, the Yang-time and their banks have constituted in ail ages the Kiang, the Amoor, the Yang-time and their banks have constituted in ail ages the Kiang, the Amoor, the Yang-time and their banks have constituted in ail ages the seats of empire. Every circumstance the limitation of the world are the Mississippi of the wor

contention are those which involve the tance, as their source, length of channel, adoration of Christ as present on the outlet, rapidity of current, depth, and altar under the forms of bread and wine. Other points are: the eastward position of the priest at consecration; lights on the holy table; the use of various vestments; the use of incense; mixing water with wine for communion; fasting before rivers contain varies with many condi-tions, dependent upon the nature of the sources by which they are fed and the amount of rainfall throughout their course. The periodical melting of the snows adds greatly, in some cases, to the volume of rivers which have their origin in mountain regions; the rainy season in tropical regions has a similar effect (as in the case of the Nile), often causing extensive inundations. In arid countries the so-called rivers are often mere surface torrents, dependent on the rains, and exhibiting merely the dry beds of water-courses during the season of drought. The 'creeks' of Australia and the 'wadies' of the Arabian Desert are of this character. The average fall of a river's bed is indicated by the difference between the altitudes of its source and its outlet compared with its length of channel. The fail of many great rivers is much less than might be supposed. The A hazo has a fail of only 12 inches in the last 700 miles of its course. The Note that the second state of the case of River-hog, the name occasionally than 2000 miles. The Aberdeenshire river Dee, which rises at a height of 4060 feet, has a course of only 87 miles to the hippopotamus. to its outiet, showing an average de-clivity of 46 feet per mile. Many rivers carry down immense quantities of earthy

miles in length; the Congo (3000 miles), the Niger (2600 miles), and the Nige (4200 miles), ln Africa; and the Danube (1670 miles), Volga (2200 miles), and Rhine (800 miles), in Europe.

By English and other iaw navigable rivers are held to be the property of the state (so far as navigation extends); non-navigable rivers belong to the pro-prietors through whose grounds they flow. The state has thus control and jurisdiction of the shores of navigable streams, while in the case of a non-navigable stream the proprietors of estates on opposite banks of it are supposed to own the ground over which it flows respectively to the center of its bed, and may fish it accordingly. They do not own the water, the property in which is shared by the owners above and below. A particular proprietor cannot dam up or divert the water, or after the banks so as to injure the property of his neighbor. Strict laws for the preven-tion of pollution of rivers have been enacted by the Legislatures of the dif-ferent States of the American Union, and in various European countries, this more especially in the vicinity of towns and clties, where the local authorities are charged with their enforcement.

Ro (ro), the name given a new artificial language, first proposed in 1906.

This rejects all root words and is based solely on the letters of the alphabet, making these absolutely phonetic. No accents or discritical marks are used. Thus initial 'A' denotes a pronoun, ab' indicating the pronoun of the first person, indicating the pronoun of the first person, 'abc,' this pronoun in the nominative case. So, 'E' denotes verb, and is similarly varied by added letters for the varied grammatical or other requisites. This is claimed to be the scientific manner of word building.

Roach (röch; Leuciscus rutilus), a species of fresh-water fish of the carp family (Cyprinidæ), found in many parts of Europe. Their average iength is about 9 or 10 inches. They are of a gravish-green color, the abdomen

of a grayish-green color, the abdomen being silvery white and the fins red. The average weight of the roach is under 1 lb., and though a favorite with anglers, it is not much esteemed for the table. Allied fishes receive the same name in

Road (rod), an artificial avenue of travel formed through a country for the accommodation of travelers and the carriage of commodities. Though the Romans set an example as road-builders, some of their public highways builders, some of their public highways being yet serviceable, the roads through-out most of Europe were in a wretched condition till towards the end of the eighteenth century. France was in ad-vance of other countries in roadmaking in Engiand and the United States a de-cided improvement of the highways did not begin until the pineteenth century. not begin until the nineteenth century. The first important point to be considered in roadmaking is the route to be followed, a matter in which natural obstructions and inequalities of level have to be taken into account, besides the question of directness of route, the deviations advisable in order to accommodate certain centers of population, the expense of upkeep, etc. Natural obstructions are overcome by special contrivances, such as bridges, embankments, trivances, such as bridges, embankments, or population. For other projects in this tunnels, etc. When diversities of level direction, under national and state enterprise, see Dixie Highway and Lincoln prise, see Dixie Highway and Lincoln Highway. In 1916 the national government inclination of a road to be 1 in ment appropriated \$85,000,000 for road improvement, \$10,000 of this being for roads in National Parks and Forests, considered better that it should not exceed 1 in 50. The sagle of repose, or ing five years in aid of state road buildmaximum slope on which a carriage will ing, each state aided by the government

favor the Lord Ruthven and others of his party were introduced by Darnley The width of the road is also a very important consideration as bearing both on the queen's apartment, where they portant consideration as bearing both on the original cost and on the permanent maintenance. A properly-constructthe original cost and on the permanent maintenance. A properly-constructed road, besides a foundation, consists of two layers, an upper and under. After a good foundation is obtained the laying a good foundation is obtained the laying of a base, the best material being concrete of gravel and lime, gives durability to the road. Upon this base the actual roadway is laid with a slight inclination from the center to the sides for the purpose of drainage. Before the time of McAdam it was customary to use broken stones of different sizes to form the roadway, the consequence being that in course way, the consequence being that in course of time the smaller stones sank, making the road rough and dangerous. McAdam early in the nineteenth century (see McAdam) introduced the principle of using stones of uniform size from top to bottom. (See also Pavement.) The general superintendence of roadways is usually exercised by the government of a country, but it entrusts the execution of its enactments to local authorities. Highways are public roads which every citizen has a right to use. They are constituted by prescription, by act of legislature, or by dedication to the public use. What is known as the rule of the road is that in passing other horses are a constituted. that in passing other horsemen or carriages, when going in the opposite direction, the rider or driver in America must pass on the right; if going in the same direction, he passes to the left; in England land he always passes on the left of the other. The development of roads is now attracting much attention in the United States, the national and state governments taking part in financing an extensive system of well-built roads, the cost of those being estimated in 1915 to have reached \$250,000,000. The general government has long taken part in this work and now proposes to add largely to its activity in this direction. Of such government roads the most notable was that begun in 1806, its first section running from Cumberland, Md., to Wheeling, Va.
It was continued until it finally was carried to the Mississippi by aid of state
funds, it constituting a broad and solid
road much used in the westward flow of population. For other projects in this

Co., now independent, is situated on the Roanoke River, 55 miles W. by S. of Lynchburg. It is in a stockraising, tobacco-growing and mining region and has a large trade. A village of a few hundred people in 1880, it had in 1910 a population of 34,874. It has extensive machinery, iron and steel, iocomotive and car works, tobacco and canning factories, etc. It has many mineral springs in its vicinity, and is a health resort with a large sanitarium. The Virginia College is located here.

Roanoke (ro-an-ōk'), a river, United States, in Virginia and North Carolina. It flows chiefly southeast, and after a course of about 250 miles falls into Albemarie Sound. It is tidal for 75 miles and is navigable for double that distance for small vessels.

Roaring (roring), in horses, is a disease of the nerves and muscles of the iarynx which causes an

obstruction to the passage of air, giving rise, when the horse is briskly exercised, to the peculiar sound from which the disease derives its name.

Roasting (röst'ing), the cooking of meat by the direct action of fire—that is, by dry heat, either before the fire or in an oven. Roasting before an open fire is considered preferable to roasting in an oven (which is able to roasting in an oven (which is analogous to baking), on account of the free ventilation to which it exposes the meat during the process. The apparatus in most kitchens for open roasting are a fire, a pit, a contrivance for turning the meat to present all sides of it alternately to the fire, a screen to economize the heat, and a saucepan to catch the dripping. The fire must be kept even and bright throughout. During the process of roasting the meat should be basted with the dripping to keep it soft and allow the heat to pene-trate. The desirability of roasting as compared with boiling is that it retains the saline ingredients of the meat. The time allowed for roasting is roughly estimated at a quarter of an hour to 1 lb. of meat. Longer time is required in winter than in summer, and for new than old killed meat,

being required to appropriate an equal sum from its own funds.

Roanne (ro-in), a town in France, department of the Loire, on the left bank of the Loire, which is never navigable, 40 miles N. w. of Lyons. It is an important railway center, and manufactures wooien, linen and cotton goods. Pop. (1911) 36,397.

Roanoke (rō-an-ōk'), a city of Virginia, formerly of Roanoke Co., now independent, is situated on the his property against his will. his property against his will. Highway robbery, or the forcible taking of property from travelers, in many countries is a capital offense, and in all civilised Robbia, LUCA DELLA.
Robbia.

Robert (rob'ert), Duke of Normandy, surname, the Devil, was the younger son of Duke Richard II by his marriage with Judith, a danghter of Count Godfrey of Brittany. In 1027 he succeeded his elder brother, Richard III. whom he is charged with having poisoned. The first years of his government were employed in bringing his rebellious vassals into subjection, and he then restored Count Baidwin of Fianders to his states, assisted Henry I, king of France, against his mother Constantia, and humbled Count Otho of Champagne. In 1034 his fleet was wrecked off Jersey while on its way to England to support his nephews Aifred and Edward against County who had against description. Canute, who had excluded them from the succession to the English throne. Hereupon he concluded a truce with Canute, by which the two princes were promised haif of England. In 1033 he set out to visit the holy places, and snbsequently made the pilgrimage to Jerusalem on foot. While returning he died suddenly at Nicæa in Asia Minor (1035), and is supposed to have been poisoned by his servants, His heroic deeds and penance have given rise to numerous stories. William the Conqueror was his son.

Robert T. See Bruce, Robert. Canute, who had excluded them from

See Bruce, Robert. Robert I.

Robert II, King of Scotland, was the son of Marjory, danghter of Robert Bruce, and of Waiter, steward of Scotland, and was thus the first of the Stewart or Stuart kings. He was born in 1316, and was recognized by parliament in 1318 as heir to the crown. On the death of David II he was crowned at Scone, March 26, 1371. He had iong acted as regent, and had done good service in the English wars. An act of parliament in 1375 settled the crown on his sons by his first wife Elisabeth Mure of Rowallan, though illegiti-

mate by escleciastical law. His reign was comparatively a peaceful one, one of the chief events being the battle of Otterburn. He died in 1890.

Robert III, King of Scotland, eld-ing, was born in 1340 and was originally called John, but changed his name on his coronation, in 1390. Having been lamed by accident, he was unable to engage in military pursuits, and he trusted the management of affairs almost entirely to his brother, whom he created Duke of Albany. In 1398
Albany was compelled to resign his office by a party who wished to confer it on the king's eldest son, David, Duke of Rothesay. War was renewed with England, and the battle of Homidon Hill, Section 1878, and utterly defeated Yakub on the king's eidest son, David, Duke of Rothesay. War was renewed with England, and the battle of Homidon Hill, September 14, 1402, resulted in a disastrous defeat of the Scots. In this year the Duke of Rothesay died in Faikland Castle, where he had been imprisoned; and it was commonly believed that he was starved to death at the instigation of Aibany. Dread of Aibany, who had recovered the regency, induced the king to send his second son, James, to France in 1406; but the vessel which carried him was captured by the English, and Henry IV long detained him as a prisoner. Soon after this event Robert died (1406). oner. 8 (1406).

Robert of Gloucester, an English historian, is supposed to have been a monk in the abbey of Gioucester during the reign of Edward I, but of his private history nothing is known. His History of England, in verse, extends from the period of the fabuious Brutus to about A.D. 1300, and its ianguage is the transition stage of English previous to Chaucer. Its chief value is as one of the monu-Its chief value is as one of the monu-

ments of the English of this period.

Roberts, a Canadian author, born at
Douglas, New Brunswick, in 1860. He was professor of literature at King's College, Nova Scotia, 1885-87, and of economics, 1887-95; associate editor of The Illustrated American, New York, 1895. His poems Orian, In Divers Tones, etc., brought him the title of 'The Longfellow of Canada.' He has also written works of history, novels, etc., and written works of history, novels, etc., and has been especially happy in dealing with stories of animal life. Among the latter are The Heart of the Ancient Wood, The Kindred of the Wild, Hunters of the

Roberts, Frederick Sieren, Lord, dia, in 1832. He entered the army and became a lieutenant in the Bengal Artillery in 1851; a captain in 1860. He gained the Victoria Cross in the Indian mutiny, and was made brevet-major. He took part in the Abyssinian campaign, 1867—68; served in the Lushai expedition; commanded a column in the Afghan War of 1878, and utterly defeated Yakuh War of 1878, and utterly defeated Yakub Khan. As a reward for these services he was created a baronet and received the command of the Indian army, 1885. He was afterwards commander-in-chief. of the Irish forces, and in 1900 was appointed to a like position of the British forces in the Boer War. He returned in 1901, was made an earl and succeeded Lord Wolseley as commander-in-chief of the British armies. He died November 14, 1914, while on a tour of inspection of the British army in France.

Roberts, EDMUND QUINCY, an Ameri-mouth, N. H., in 1796; died in 1864. He was the first American diplomatist to visit Asia.

Roberts, ELLIS HENRY, an American Utica, N. Y., in 1827. He was editor and part-proprietor of the Utica Morning Herald, 1851—89; served in Congress 1871—75, was assistant-treasurer of the United States, 1889—03, and treasurer, 1897—1905; war a delegate to the Republican National Conventions of 1864 and 1868.

Roberts, ORAN MILO, an American jurist and politician, born in Laurens Dist., S. C., in 1815; died in 1898. He was president of the convention which voted Texas out of the Union in 1861; served in the Confederate army; was elected to the U. S. Senate in 1866, but not permitted to take his seat; was for a number of years Chief Justice of the Supreme Court of Texas, and governor, 1879-83; and for ten years professor of law at the University of Texas.

are The Heart of the Ancient Wood, The Robertson (rob'ert-sun), Franchick Kindred of the Wild, Hunters of the Silences, etc.

Roberts, David, painter, was born in London in 1816. He matriculated at Oxford, in 1837; was born in 1864. He was apprenticed to a house painter, but, with a view to the higher Chapel, Brighton, in 1847; and held this

charge with increasing fame as a preacher till his death in 1853. His views on the Sabbath, the atonement, baptism, and in-spiration were assailed as unorthodox, and he was accused of preaching democ-

racy and socialism.

Robertson, Joseph, a Scottish anti-erdeen in 1810; died in 1860. He was educated at the school of Udny, at Aber-deen Grammar School, and Marischal College, Aberdeen. In 1835 he published a humorous Guide to Deceide, under the pseudonym of John Brown. After servpseudonym of John Brown. After serving as editor of severai Scottish newspapers he became curator of the historical department of the Register House. The University of Edinburgh conferred on him the degree of LL.D. in 1804. His works include the Book of Bon-Accord, an archeological and historical guide to Aberdeen (1830), Historica and Antiquities of the Counties of Aberdeen and Banff (1843-62), Inventory of Queen Mary's Jewels and Furniture (1863), and Concilia Scotiæ (1866).

Robertson Thomas William, an

Robertson, THOMAS WILLIAM, an English dramatist, born in 1820; died in 1871. His parents bein 1820; died in 1871. His parents being actors, he early went on the stage, but was never a success. In 1853 he settled in London, where for several years he struggled on with light literature. In 1864 he had considerable success with David Garrick, a play produced by Sothern; but his fame rests on a series of plays produced at the Prince of Wales' Theater (1860-70). including Ours, Casto, Play, School, and M. P. Though sneered at on their production by certain critics, and nicknamed cup-and-saucer dramas,' they deservedly secured a permanent place on the stage. His principal Dramatic Works (2 vols.) were published in 1890 by his son.

Robertson, WILLIAM, a celebrated born at Borthwick, in East Lothian, where his father was minister, Sept. 19, 1721. After the completion of his course in the theological class of Edinburgh, Robertson obtained a license to preach in 1741, and in 1742 was presented to the 1741, and in 1743 was presented to the iiving of Giadsmuir, in East Lothian. He soon obtained an ascendency in the General Assembly of the Church of Scot-

work led to the author's appointment as chaplain of Stirling Castle in 1759, one of the king's chaplains in 1761, and principal of the Un'rersity of Edinburgh in 1762. Two y are after he was made historiographer-royal of Scotland. His History of the Reign of Charles V appeared in 1769, his History of America in 1777, and in 1791 An Historical Disquisition Concerning the Knowledge which the American had of India. As an histhe Ancients had of India. As an historian he is admired for skilful and luminous arrangement, distinctness of narrative, and highly graphical description. His style is pure, dignified, and perspicuous. He died in June, 1793.

Robespierre (rob-es-pi-ār), FBANseph Isidore, was born at Arras in
1758, and was the son of an advocate.
He was educated at the College of Louisle-Grand at Paris. He afterwards practiced as an advocate at Arras, and heid for a short period the position of judge in the bishop's diocese. In 1780 he was elected deputy to the States-general, and was a zenious supporter of democratic measures. At this time he became a

Maximilien Robespierre.

prominent member of the Jacobins and other revolutionary clubs. In March, 1791, he was appointed public accuser to the New Courts of Judicature. He remained in the background during the General Assembly of the Church of Scotiand by his eloquence and great taients
for public business, which, exerted in
favor of Conservative principles, gave

ad h, to he he ne he gs elf opposed every proposal to avert or delay the fatal result. On March 19, 1794, the Hébertists (see Hébert) fell victims to his jealousy. Eleven days later he caused the arrest of Danton, who. after a trial of three days, was guillottned, together with Camille Desmoulins, on April 5th. Robespierre's power now seemed to be completely established, and the Reign of Terror was at its helght. On June 8, 1704, he, as president of the Convention, made the convention decree the existence of the Supreme Being; and on the same day he celebrated the Feast of the Supreme Being. In the meantime a party in the Convention was formed against in the Convention was formed against Robespierre, and on July 27 he was epeniy accused of despotism. A decree of arrest was carried against him, and he was thrown into the Luxembourg prison. He was released by his keeper on the night of the same day, and conducted to the Haii of Commune, where his supporters were collected. On the following the Hail of Commune, where his supporters were collected. On the following day Barras was sent with an armed force to effect his arrest. Robespierre's followers deserted him, and he was guiliotined on July 27, 1794, together with some twenty-three of his supporters. The tendency with modern writers is to modify the character for infamy which at one time obtained regarding Robespierre.

Robin (rob'in), a name given to several birds, more especially to the robin redbreast of Europe (see Rodbresst) and to an American species of blackbird (Meräla migratoria), as also to the hluehird of America. See Bluebird.

Robin Goodfellow. See Puck. See Hood, Robin. Robin Hood.

Robinia. See Locust-tree.

Robins (rob'ins), BENJAMIN, mothe-matician and artilierist, was born at Bath, England, in 1707. He was Rocambole (rok'am - bol; Allium self-educated, and attained an extraordiself-educated, and attained an extraordinary knowledge of mathematics, a subject which he taught in London. He also made experiments on projectiles, and his chief work, the New Principles of Gunnery, appeared in 1742. In 1749 he became engineer-in-chief to the East India Company, and fortified Madras, where he died of fever in 1751. He is believed to have had a share in the pren-

journey to the Holy Land, which gave rise to a work of great value, Bibliosi Researches in Palestine, Mount Sinei, and Arabis Petros (1841). He died in 1803.

Robinson, Henry Crare, an EngBury St. Edmunds in 1775; died in 1867.
He studied law in London, and German
ilterature and philosophy in Germany,
where he became intimate with Goethe,
Schilier, and most of the German men of
letters of the time. He was intimately
acquainted with almost every man ef
eminence in his time, and an intimate
friend of Wordsworth, Coleridge, and
others of mote, and his Diary, Reminiecences, and Correspondence, published in
1869, is a perfect mine to students of
ilterary and social history.

Robinson Crusoe, a celebrated re-

Robinson Crusoe, a celebrated re-by the well-known Defoe and published in 1719. See Defoe.

Rob Roy (rob roi; that is, 'Robert the Red'), a celebrated Highland freebooter, born about 1660, whose true name was Robert Macgregor, but who assumed bis mother's family but who assumed bis mother's family name, Campbell, on account of the outlawry of the cian Macgregor by the Scotch parliament in 1662. He became a partisan of the Pretender in the rebellion of 1715. The Duke of Montrose seized his estate, which caused him to engage in a brigandish war of reprisals for many years. He became widely celebrated for his exploits, and is the hero of one of the most popular of Scott's novels. He died in 1743.

ROC, a fabulous bird of immense size, and strength, which is mea-

tioned in the Arabian Nights Enterte which is me ments. A belief in it was spread in Europe during the middle ages, having been brought from the East probably as a consequence of the Crusades.

cies of onion, having bulbs resembling those of the garile. It is cuitivated for the same purposes, and is considered as having a more delicate flavor.

Roccella. See Archil.

India Company, and fortified Madras, where he died of fever in 1751. He is believed to have had a ahare in the preparation of the narrative of Anson's Voyage Round the World (1740-44).

Robinson (rob'in-son). ED WARD (Biblical s c h o lar), was born at Southington, Connecticut, in 1794. After serving as a professor of Biblical literature at Andover, he made a secame governor of Artois and Picardy 34—U—5

considerable antiquity, and was early noted for its woolen manufactures, which have remained a chief staple till the present day. Cotton is extensively manufactured, and there are also foundries, machine-shops, etc., while in the nelghborhood are quarries of freestone and extensive collieries. The town is irregularly built and has many narrow streats but tensive collieries. The town is irregularly built, and bas many narrow streets, but of late years has been much improved. The parish church (St. Chad), of the twelfth century, situated on an eminence, is approached from the lower part of the town by a flight of 122 steps. The townhall is a fine modern building, and there is a handsome free library. Rochdale is the center of the cooperative movement, which originated there in 1844. By means of canals it has a water communication with all the industrial centers of the north of England. Pop. (1911) the north of England. Pop. (1911) 01.437.

Rochefort (rosh-för), or Rochefort-fied seaport and naval arsenal of France, in the department of Cbarente-Inférieure, on the right ben't of the Charente, about 9 miles above its mouth, 20 miles south of La Rochelie. It stands mostly on a iow swampy flat, is regularly bnilt, and is surrounded by ramparts. In the military port the largest vessels float at all times. Attached to it are sbipyards, workshops, and storehouses of various kinds. A large naval hospital is outside the town. There is a good trade in colonial produce, wine, brandy, etc. Pop. (1911) 85,419.

Rochefort (rosh-för), Henri (Vic-

Rochefort (rosh-för), Henri (Vic-Rochefort Tor Henri, Marquis de Rochefort-Lucay), a French journalist, dramatist, and politician, born at Paris in 1830. Here he at first studied medi-cine, but on the death of his father, in 1851, he obtained a post in the prefecture. In 1859 he wrote for the Charivari, and he became one of the principal writers on the Figaro. Having been dismissed from the latter post by order of the ministry, he founded a weekly paper called La Lanterne in 1868, in which he vigor-

and subsequently of Alsace, was made a rondissement of Paris. He then started marshal in 1790, and commanded the answer paper, the Mosselloise, and for its attacks on the imperial family he was sentenced to six months' imprisonment in Jannary, 1870. After Sedan he became a member of the government of National Defense. He fled from Paris in May, 1871, when he foresaw the end of Manchester. Rochdale is a piace of considerable antiquity, and was early noted for its woolen manufactures, which rondissement of Paris. He then started a new paper, the Morseillaises, and for its attacks on the imperial family he was sentenced to six months' imprisonment in Jannary, 1870. After Sedan he became a member of the government of National Defense. He fled from Paris in May, 1871, when he foresaw the end of the Commune, of which he had been a vigorous supporter, but was arrested by the Versailles government and sentenced to transportation to New Caledonia. He to transportation to New Caledonia. He escaped in 1874, and after the general amnesty of 1880 returned to Paris (July 12), where he founded his new journal, the Intransigeant. He was returned as deputy by the department of the Seine, but resigned his seat in February, 1886. He published The Adventures of My Life (1896).

Rochefouoauld, FRANCOIS, Duc Rochefoucauld.

Rochejaquelein, Henri De La. See Rochejaquelein. Rochelle (ro-shell). La, a fortified town and seaport, France, capital of the department of Charente-Inférieure, on the Atlantic, 95 miles north by west of Bordeaux. The chief build-ings are the cathedral, town-ball, ex-change, courts of justice, hospital, ar-senal, and a public library. The harbor senal, and a public library. The harbor is easily accessible and commodions. The roadstead is protected by the islands of Ré and Oldéron. La Rochelle has an extensive trade in whees, brandles, and colonial produce. In the religious wars it was iong a Protestant stronghoid. It stood an eight months' slege in 1572, but stood an eight months' slege in 1572, but in 1628 was forced to surrender to Richelleu after a three months' slege. Pop. (1911) 36,371.

Roohelle Salts, the donble tartrate of sodium and potassium, crystallizing in large rhombic prisms. It has a mild, hardly saline taste, and acts as a laxative.

(rosh-mö-Roches-moutonnées ton-1), the name given to the rounded and smoothed humps of rock occurring in the beds of ancient glaciers, from their fancied re-semblance to the backs of sheep (moutonné, sheep-like). They bave received their form and smoothness from the action of ice.

Rochester (roch'es-tur), a city, par-liamentary borough, and river-port in England, in the county of onaly attacked the emperor and the minis- Kent, 29 miles southeast of London, on try. It was seized early in its career by the Medway, adjoining Chatham. It conthe police, and Rochefort was fined and sists of Rochester proper, on the right imprisoned. In 1869 he was returned to bank of the river, and of Strood and part the legislative assembly by the first ar- of Frindsbury parish on the left bank, il. 8 d

communication being kept up by an iron swing-bridge. Rochester consists principally of one spacious street, which traces it in a s. s. c. direction towards (witham, and of a number of miles streets. It was a piace of importance even before the Roman period. The see was founded by the Saxon king of Kent, Ethelbert, who also founded the cathedral early in the seventh century. This edifice was destroyed by the Danes, but was was destroyed by the Danes, but was rebuilt in the beginning of the tweifth century and renovated in 1827-34. The massive scene of the castle, built in the local of the Conqueror, still remains.

Pop. (1941) 31.28.

Rechester, edty of Minnesota, coun-le lis in a rich agricol ural region, and the windle, teachir shops, etc. Pop.

Roonsstor, a city of Strafford Co., w. W. of Dever. It has large industries mel dang woolens, blankets, shoes, bricks, ele. " p 33%.

Rochester, dor of County, New York to the sides of the Genesee River, York in the sides of the Genesee River, 7 miles above its entrance into Lake Ontario. The port of Rochester is called Charlotte. The Erle Canal, soon to be abandoned, crosses the river by an aqueduct originally built in 1823. The new thousand-ton barge canal will cross the river south of the center of the city. passing through Genesee Valley Park. The town was first settled in 1812 and has been the home of Frederick A. Douglas (negro leader) and Susan B. Anthony. It is credited with the social center idea. The institutions include St. Bernard's Seminary (Roman Catholic), Rochester Theological Seminary (Baptist), University of Rochester, Mechanics' Institute, Western New York Institute for Deaf Mutes, State Hospital for the Insane. The falls of the river within the city limits, comprising three drawith a total of 268 feet, develop abo 60,000 horsepower electrical energy. The city has immense nurseries and manufactures of boots and shoes, clothing, photographic material, supplies and cameras, ontical boots and shoes, clothing, photographic mineral matter, whether hard and masmaterial, supplies and cameras, optical sive, like granite, marble, etc., or friable and scientific measuring instruments, etc., and unconsolidated, like clay, sand, and and is called 'The Clty of Varied Industries.' It is noted for the architectural is confined to any large mass of stony tries.' It is noted for the architectural is confined to any large mass of stony that the story of the lake front and gravel attentions and for its fine lake front and gravel attentions. beauty and landscape gardening of its matter, as distinguished from soil, mud, factories, and for its fine lake front and sand, gravel, etc.

Rock-cod, a name in America for in 1812. Pop. 240,000.

Rochester, a borough in Beaver Co., Scorpana.

Book-crystal. See Querts.

Pittsburgh. It has natural gas and cilt wells, and glass, brick, pottery, etc., are produced. Pop. 5908.

Rochester, John Wilmor, Earl of, a witty and profigate nobleman of the court of Charles II, was born and Oxfordshire in 1647 or 1648, and educated at Wadham College. He succeeded to the title and estates in 1650. He served in the fleet under Lord Sand-He served in the fleet under Lord Sandwich, and distinguished himself at th attack on Bergen. On his return to Engiand he became the personal friend and favorite of the king. His constitution gave way under his habits of drunkenness and debauchery, and he died in 1680. His poetical works consist aimost wholly of satires, jove-songs, and drinking-songs, many of them being gems of wit and fancy, while many of them are dar-insign lamases. ingly lmmoral.

Roche-sur-Yon (rosh-sur-yon), LA, formerly NAPO-Léon Vendée and Bourson Vendée, a town of France, capital of the dep. of Vendée, on the rive Yon, 49 miles 8. of Nantes. It was really the capital of the Nantes. It was riske the capital of the department by Napoleon I, in 1807, being then a mere village. Pop. 10,965.

Rochet (roch'et), a lawn or lace garment, somewhat like the surplice in shape but with sign 6ttles.

pilce in shape, but with close-fitting sleeves, worn by bishops and other high ecclesiastical dignitaries.

(ro-shet), Disiri RAOUL, often called Recul-Rock-Rochette cite, a French archeologist, born in 1790, for a number of years keeper of medals and antiquities at the Royal Library, and professor in archeology at the College de France; from 1838 secretary of the Academy of Fine Arts. He died at Paris in 1854. His principal works are: Histoire Critique de l'Etablissement des Colonies Grecques (4 vois., 1815), Monuments Inédits d'Antiquités (1828), Mémoires de Numismatique et d'Antiquité (1840), Mémoires d'Archéologis Comparés. His Letters on Ancient Art were translated into English by H. M. Westropp, and published in 1854.

Rock. in geology, is a term applied to ette, a French archæologist, born in 1790,

Rock, in geology, is a term applied to any considerable aggregation of

Rockefeller (rok'e-fel-er), John imparted to it by means of three curved born at Richford, New York, July 8, the same side of each vent. (See the ac-1839. A poor boy, he became a clerk in a small oll-refinery at Cieveland, Ohio, at the age of 19, showed great husiness ahility, and soon after became partner in a firm engaged in the oll business. His husiness developed and enlarged with great rapidity, and in 1870 was consolidated with others as the Standard Oii Company. In 1882 the Standard Oii Trust, controlling the vast petroleum imparted to it by means of three curved shields fixed on the base so as to be on companying figure.) Rockets may be discharged from tubes or troughs, or even iaid on the ground. In war rockets are chiefly used for lncendlary purposes, for moral effect—especially frightening horses, and for various irregular operations. Signal and Rocket. Trust, controlling the vast petroleum trade of the United States, was organized, he being its leading spirit. Its methods were subsequently reprobated and sults against it were brought in the United States courts, hut it acquired vast wealth, and Rockefeller, as its head, finally retired from husiness with a fortune estimated at many hundreds of millions. Since his retirement he has given great sums from his enormous income for educational and other purposes, including a total of \$43,000,000 to the General Education Board, over \$30,000,000 to the University of Chicago, and large amounts to various institutions, including Har-ward University, Vassar Coliege, the In-stitute for Medical Research, New York, etc. A great gift of \$100,000,000, offered to be used towards the extirpation of poverty, was chartered as the Rockefelier Foundation in 1012 Foundation in 1913.

Rocket (Brassica erūca), a cruciferous piant of the cahhage genus growing wild in many parts of Europe. It has a strong, disagreeahie odor, an acrid and pungent taste, hut is much exteemed by some and expecially is much esteemed hy some, and especially hy the Itailans, who use it in their saiads. Its medicinal properties are antiscorbutic and stimulant. The stem is about 11 foot high, rough, with soft hairs, and hearing long pinnated leaves; the flowers are whitish or pale yellow, with violet veins. The term rocket is also applied to

the different species of Hespèris — cruciferous plants with purple flowers, often cultivated for ornament in gardens.

Rocket, a projectile consisting of an inflammable composition, the reaction of the garden of the garden projected by the compusation of the gases produced by the combustion of which, pressing on the head of the rocket, serve to propel it through the air. Rockets were first used in eastern countries. Sir W. Congreve first made them of iron, and introduced them into the British service under the name of Congreve rockets. They were kept point first by the use of a stick, which acted on the principle of an arrow's feathers. But the rocket now used in the British service has no stick, being kept point first by rapid rotation.

shields fixed on the base so as to be on the same side of each vent. (See the accompanying figure.) Rockets may be discharged from tubes or troughs, or even iaid on the ground. In war rockets are chiefly used for incendiary purposes, for moral effect—especially frightening horses, and for various irregular operations. Signal and sky rockets are

sky rockets are
small rockets formed of pasteboard
cylinders, filied with comhustihie materials, which, when the rocket has attalned its greatest height and bursts,
cast a hrilliant light which may be seen at a great distance. For another variety of rockets see Life-rockets.

Rock-fish, or BLACK GOBY (Gobius niger), a European fish belonging to the family of the gohles. This fish is found on rocky coasts chiefly and inhahits the deeper rock-poois left after the receding tide. The body is generaily covered by an ahundant mucous secretion, heneath which the small scales covering the body are almost concealed. Some of the wrasses are also occasionally known by the name of 'rock-fishes,' as are also American fishes of the genus Scorpana. See also Bass.

Rockford (rok'ford), a city of Illinois, capital of Winnehago Co., finely situated on the Rock River, 87 miles w. N. w. of Chicago. It has ahundant water-power, and numer-ous industries, including large hosiery works, many furniture factories, agricultural implement factories, wagon and carriage works. It is the seat of Rockford College for Women. Pop. 52,241.

Rockhampton (rok-hamp'tun), the Queensland, on the Fitzroy River, 35 miles from its mouth, connected with North Rockhampton by a handsome hridge. The streets are wide, lined with trees, and ornamented with numerous handsome huildings. Among the latter are several churches, town-hail, court huildings, government offices, grammarschool, hospital, asylum, puhic ilhrary, and museum. Port Alma, at the mouth of the Fitzroy, is a fine natural harbor, of the Fitzroy, is a fine natural harbor, where ocean-going steamers can load or discharge their cargoes, hut vessels of 1500 tons come up to Rockhampton. Rich gold-fields are in the vicinity. Pop. 15,461.

Rock Hill, a city of York Co., South Carolina, the seat of Winthrop College, a State normal and

industrial college for women. It has cotton industries and carriage works. Pop. 7216.

Rockhill, WILLIAM WOODVILLE, diplomatist, was born at Philadeiphia in 1814, and entered the dipiomatic service in 1884 as second secretary of legation at Peking, China. He was appointed first assistant Secretary of State in 1896, director of the Bureau of American Republics in 1899, United States minister to China in 1905, and ambassador to Russia in 1909. He has written according to the state of th written several works on oriental subjects.

Rocking-stones, or Logan Stones, large blocks of stone poised so nicely upon the point of a rock that a moderate force applied to them causes them to rock or oscillate. Sometimes a rocking-stone consists of an immense mass, with a slightly rounded base resting upon a flat surface of rock below, so that a single person can move or rock it. Some rocking-stones are evidentiy artificial, having had a mass of rock cut away round the center point of their bases; others are due to natural causes, such as decomposition, the action of wind and water, etc.

Rock Island, a city of Iiiinois, on the Mississippi River, at the foot of the Upper Rapids, deriving its name from an island in the river, on which there is now an extensive govern-ment arsenal. On the Illinois channel of the river is an extensive dam which sup-plies power to the arsenal and to the city manufactories, which are varied and numerous. The city is a great center of railway and river traffic, and is connected with Rock Island and with Davenport, on the opposite side of the river, by a railway and general traffic bridge. Pop. 24,335.

Rockland (rok'land), a seaport of Maine, capital of Knox Co., on the southwest side of Penobscot Bay. It has extensive lime-kiins, iarge granite quarries, ship-yards, and manufactures of iron and brass goods, ax handles, stone-cutting toois, etc. It has steamboat connection with Boston and other ports on the coast. Pop. 8174.

other ports on the coast. Pop. 8174.

Rockland, a viliage of Plymouth Co.,
Massachusetts, 19 miles
s. s. e. of Boston. It has extensive
manufactures of boots, shoes and tacks. Pop. 6928.

Rockling (Osnos or Motelle vul-the cod family, and known also as the three-bearded rocking, from the barbs on its snout; two other species are the four-bearded and five-bearded.

a pigeon that builds Rock-pigeon, its nest in hollows or. crevices of rocks and ciffs, especially the. Columba livia.

Rock River, a river of the United States, which rises in Wisconsin, 50 miles west of Lake Michigan, and fails into the Mississippi 2 miles below Rock Island City. Length, 330 miles, about 225 of which have been ascended by small steemboats. ascended by small steamboats.

See Cistus. Rock-rose.

Rock-salt, native chioride of sodium, that is, common sait, in the solid form, in masses or beds. See Salt.

(Buthus or Scorpio Rock-scorpion afer), a species of scorpion found in Africa, averaging about 6 inches in length. The bite of this animai, aithough not absolutely fatai, is yet considered to be dangerous.

Rock-snake, or NATAL PYTHOR (Python Natalensis), a non-venomous African snake, attaining a length of over 25 feet.

Rockville (rok'vil), a city of Tolland Co., Connecticut, 15 miles E. of Hartford. It has abundant water power and manufactures of silk and woolen goods, envelopes, etc. Pop 7977.

Rocky Mount, a town in Edge-counties, North Carolina, 41 miles N. of Goidsboro. Its industries include fer-tilizers, machinery, yarns, lumber, etc. Pop. 8051.

Rocky Mountains, a name indefi-nitely given to the whole of the extensive system of mountains which covers a great portion of the western haif of North America, but more properly applied to the eastern border of this mountain region, commencing in New Mexico in about 32° 30' N. lat., and extending throughout the continent to the Poiar Sea; terminating west of the Mackenzie River, in lat. 69° N., ion. 135° W.
The Rocky Mountains in the United States are divided into two parts in Southern Wyoming by a tract of elevated piateaus. The chief groups of the southern balf are the Front or Coiorado Range. ern half are the Front or Coiorado Range, ern half are the Front or Coiorado Range, which in Wyoming has a mean elevation of 9000 feet (at Evans' Pass, where it is crossed by the Union Pacific Railway, 8269 feet). In Coiorsdo it increases to a mean height of 13,000 feet, its highest points being Gray's Peak (14,341 feet), Long's Peak (14,271 feet), and Pike's Peak (14,147 feet). The Sawatch Range, south of the Arkansas River, has its highest peak in Mount Harvard (14,375 feet), with passes at an elevange (14,875 feet), with passes at an eleva-

outh of and tion of from 12,000 to 13,000 feet. The 'Parks' of Colorado are high mountain valleys known as North, Middie, South, and San Luis parks, with an elevation of from 6000 to 10,000 feet, surrounded hy ranges 3000 to 4000 feet higher. The west border of the San Luis Park is formed hy the San Juan Range with at least a dozen peaks over 14,000 feet, and between one and two hundred above between one and two hundred above 13,000 feet. On the northeastern side this park is bounded by the Sangre de Cristo Range, in which is Bianca Peak (14,464 feet). The Uintah Range, directly west of North Park, has several points above 13,000 feet; and the Wahsetch Range, which forms the western satch Range, which forms the western limit of the southern division of the Rocky Mountains, rises to a height of 12,000 feet just east of Sait Lake City. The northern division of the Rocky Mountains, with the exception of the Wind River Range and the Yeijowstone (see Yellowstone) is joyntained by region (see Yellowstone), is iower and has less impressive scenery than the southern. In Idaho and Montana the groups are more irregular in outline than in the south, and the division into ranges more uncertain. Of these the Bitter Root Mountains in part of their course form the divide between the Missouri and the Columbia. There two ranges reach siti-Columbia. There two ranges reach aiti-tudes of upwards of 9000 feet, and are tudes of upwards of 9000 feet, and are crossed by a number of passes at elevations of from 5500 to 6500 feet. The Northern Pacific Railway crosses at Muilan's Pass (5548 feet) through a tunnel 3850 feet iong. The Crazy Mountains, north of the Yeiiowstone, reach a height of 11,000 feet; other groups are the Big Horn Mountains and the Biack Hiiis, whose highest point is Mount Harvey (9700 feet). In Canada the highest known peaks are Mount Brown (16,000 feet) and Mount Hooker (15,650 feet), lying about 53° N. iat.; the general aititude of this part of the range varying from 10,000 to 14,000 feet. The pass leading between Mount Brown and Mount leading between Mount Brown and Mount Hooker, cailed the Athahasca Portage, has a height of 7300 feet. The Rocky Mountains contain some of the finest scenery in the world, and are specially rich in deposits of gold, sliver, iron, coprich in deposits of gold, silver, iron, copper, etc., which are worked extensively.

The Alaskan Mountains have the highest peaks on the continent. Mt. McKiniey, 20,464 feet; St. Elias, 18,016 feet, etc.

Rock Springs, a city in Sweetwater Co., wyoming, on Bitter Creek, 258 miles w. of manent pulps, thus being continually reLeramic. There are extensive deposits produced and shoved outwards from their ing, on Bitter Creek, 258 miles w. of Laramie. There are extensive deposits produced and shoved outwards from the pulps, thus being continually reproduced and shoved outwards from the produced and shoved outwards from the couter faces of the incisors are covered with the Louis-Quatorze style hard enamel, but not the inner ones,

Rococo Ornament.

work, wrought into ail sorts of irregular and indescribable forms, without individuality and without expression. Same as Annatto (which see). Recou.

Rocroi, or Rocroy (rok-rwa), a smail fortified town of France, dep. Ardennes, near the Beigian frontier, cele-hrated for the victory gained (1643) hy the Duke d'Enghien (afterwards the the Duke d'Enghien (afterwards the great Condé) over the Spaniards. Pop. 2900.

Rod, a measure of length equal to 161/2 feet. (See Pole.) A square rod is the usual measure of hrick-work, and

is the usual measure of the sequal to 272¼ square feet.

Rodentia (rō-den'shi-a), or Robentia (rō-den'shi-a), or mambents, an order of mambents, an order animals, maiia, comprising the gnawing animais, such as rats, mice, squirreis, rahhits, etc. They are distinguished by the following characteristics: the teeth are limited to moiars and incisors, canines being en-tirely absent; the molars have tubercu-iated or flattish crowns, and are espe-cially adapted for the attrition of food;

perrehelr uter with thence the latter are soft and wear away faster than the anterior surfaces, thus keeping a sharp edge on the teeth. The digits are generally four or five in number, and are provided with claws. The intestine is long, and the cucum generally large. The brain is almost destitute of convolutions. The eyes are placed laterally. The rodentia are divided into two main divisions or suborders, viz. Simplicidentata, represented by mice, ratx, squirrels, marmots, beavers, porcupines, etc., having the incisors strictly limited to two in each jaw; and Duplicidentata or Lagomorpha, comprehending hares and rabbits, distinguished by four incisors in the upper jaw and two in the lower.

Roderick (rod'er-ik), last of the Visigoth kings of Spain,

Roderick (rod'ér-ik), last of the Vlsigoth kings of Spaln, an almost legendary personage. On the deposition of King Witiza in 710 he was elevated to the throne. Shortly after his reign began, a conspiracy was formed against him by the sons of Witiza and others. Roderick met them at Xerxes de la Frontera, where his army was completely defeated with heavy loss, and he was killed in the battle. His fate is the theme of several old Spanish romances, and of poems by Scott and Southey.

Rôdez, or Riodez (rō-dās), a town of France, capital of the department of Aveyron, on a height above

partment of Aveyron, on a height above the Aveyron, 85 miles northwest of Montpeliier. It has steep narrow streets and mean houses, mostly of wood; a cathedral, with a lofty and singularly-constructed tower, episcopal palace, public library, town-houses, etc. Pop. 11,234.

Rodin (ro-dan'), Auguste, French sculptor, painter and etcher, born in Paris in 1840. By his intense realism and by his impressionistic methods he may be considered the leader of the modern school of sculpture. He revolted against the stereotyped kind of sculpture which he insisted was 'too far removed from the actualities of life.' Against this he opposed a brilliant impressionistic realism that arrested the attention of the world. One of his most noted creations, full of esthetic beauty and with a strong appeal to the imagination, was La Penseur, a somber bronze, seated brooding on the steps of the Pantheon. Down to the day of his death he was the object of bitter attacks by critics, who charged him with vulgarity. His sculptures include Balzao, Victor Hugo, The Kiss, The Age of Brass, The Hand of God, etc. Rodin had other qualities besides that of the artist. His was a charming talker, the friend of youth and progress.

He did not marry till he was 77, his bride being Rose Beurre, his old companion and model for many of his works. He died November 17, 1917, just missing the crown of his career, the French Academy, to which he was to have been elected the following week.

Rodney (rod'ni), George Brydges,
Baron Rodney, a British naval hero, born in 1718 at Walton-uponThames. He became a lieutenant in the
navy in 1739, and in 1749 went to Newfoundland as governor. In 1759 he bombarded Havre de Grâce in face of the
French fleet. In 1779 he was appointed
to the chief command on the West India
station, and in January, 1780, completely defeated a Spanish fleet under
Langara off Cape St. Vincent. He sailed
for the West Indies again in 1781, and on
April 12, 1782, obtained a decisive victory over the French fleet under De
Grasse. A barony and a pension of £2000
were bestowed upon him for his services.

were bestowed upon him for his services. Rodney died May 21, 1792.

Rodolph I (ro'dolf; or Rudolf), or Hapsburg, Emperor of Hapsburg, Emperor of Hapsburg and landgrave of Alsace. On the death of his father he succeeded to territories of a very moderate extent, which, in the spirit of the times, he sought to augment by military enterprises. In 1273 he was elected emperor, and was crowned at Aix-la-Chapelle. In consequence of Ottocar, king of Bohemia, refusing to do homage, war ensued, and Ottocar was defeated and slain. The emperor then employed himself to restore peace and order to Germany, and put down the private fortresses. After having laid a permanent foundation for the prosperity of his family he died in 1291, leaving Austria and other possessions to his son Albert, who was also elected emperor. (See Albert I). Few princes have surpassed him in energy of character and in civil and military talents.

Rodolph II (or Rudolf), Emperor of Germany, son of Maximilian II, was born at Vlenna In 1852. He was elected emperor in 1576, having already been crowned king of Hungary and Bohemia. He was a weak ruler, neglected State affairs, and, being a rigid Roman Catholic, adopted severe measures against his Protestant subjects. War with the Turks broke out, and discontent everywhere prevailed. In 1607 his brother Mathias was elected king of Hungary, and in 1611 Rodolph was compelled to cede the crown of Bohemia also to his

ceeded by Mathias.

Rodosto (rō-dos'to), a town of Tur-key in Europe, on the north shore of the Sea of Marmora, with some handsome streets, large caravanseries, and public haths. The environs are covered with vineyards, producing an excellent

wine. Pop. about 35,000.

Rodriguez (rō-dré'gez), an island in the Indian Ocean, 344 miles east of Mauritius, of which British colony it is a dependency; area about 100 square miles. The climate is healthy, square miles. hut there are frequent hurricanes. The nut there are frequent nurricanes. The soil is very fertile. Exports include maize, beans, cattle, fish, poultry, and frult. Rodriguez was annexed in 1810. Pop. (1907) 4231.

Roe (rō), EDWARD PAXSON, novelist, was born at New Windsor, New York, March 7, 1838; dled July 19, 1888.

He was educated for the ministry and became a Preshyterlan minister, and was a nurseryman and fruit grower 1874-84.

Among his works are Barriers Burned
Away, Opening of a Chestnut Burr, Najure's Serial Story, Success with Small Fruits, etc.

Roebling (röb'ilng), John Augus-Tus, engineer, was born at Mülhausen, Prussia, in 1806, and in 1831 came to the United States and settled in Pittshurgh. He became distinguished as a constructor of suspension hridges, his first great work being a railroad suspension hridge across the Niagara River, completed in 1855. His greatest work was the famous suspension bridge across the East River, connecting New York and Brooklyn. He died July 22, 1869, while this bridge was in progress, its completion being left to his son, Washington Augustus Roehling, born at Saxonburg, Pennsylvania, in 1837. The lutter served as an engineer officer during the Civil war, attaining the rank of colonel of volunteers. He completed the Wast River bridge in 1883, and afterwards became superintendent of a large wire factory at Trenton. Died in 1917. ROE-DEER (ro'buk; Capre-

Roebuck, deer of small size, the adult measuring about 2 feet at the shoulders. The horns or antiers are smail, and provided with three short branches only. The general body-color is hrown, whitlsh beneath.

These animais inhabit mountainous and wooded districts. When irritated er alarmed they may prove very dangerous adversarles, and are able to inflict severe wounds with their antlers.

Roebuck, lieh politician, was born JOHN ARTHUR, an Eng-

He died in 1612, and was suc- at Madras in 1802; died in 1879. He was called to the bar in 1832, and became a queen's counsei in 1843. In the re-formed pariiament of 1832 he was re-turned for Bath as an advanced Liberal. He lost his seat in 1837, regained it in 1841, only to lose it again in 1847. Sheffield returned him in 1849, and he represented that city for twenty years. He defended the Crimean war, and it was hy his motion to appoint a committee to luquire into the condition of the army before Sebastopoi that the Aherdeen ministry was overthrown. His denunciation of trades-unions lost him his seat in 1868, hut he regained it in 1874. He gave his support to the Eastern policy of Lord Beaconsfield.

Roentgen Rays, discovered in 1895 gen. See Röntgen and X Rays.

Roermond (rör'mond), a town of Holland, prov. Limburg, at the confluence of the Roer and Maas, 28 miles north by east of Maestricht. It is well huilt, has a large and beautiful parish church; an old abbey church, the Munsterkerk, built in the thirteenth century, etc. Pop. 12,348.

(reu'skil-de), a seaport of Denmark, in the Island Roeskilde of Zealand, 18 miles west of Copenhagen, formerly among the most important towns of Denmark. It contains a beautiful cathedral, huit ln 1047. Pop. 8358.

Roestone (rö'stön), a variety of

Roestone oölite composed of smali

rounded particles ilke fish roe.

Rogation Days (ro-gā'shun; Lat. rogatio, a request), the Monday, Tuesday, and Wednesday before Holy Thursday or Ascension Day, so-called from the supplications or litanies which are appointed in the Roman Catholic Church to he sung or recited in public procession by the clergy and people. In England, after the Reformation, this procedure was discontinued but it supplies the supplications of the supplies of the this practice was discontinued, but it survives in the custom (observed in some places) of perambulating the parish boundaries.

Roger I (roj'er), Count of Sicily, one of the numerous sons of Tancred de Hauteville, a Norman haron in France, was born about 1031. He joined his brother Robert Guiscard in Apulla in 1057, and assisted him to found the kingdom of the Two Sicilles. He captured Messina in 1061, Paiermo was reduced in 1072, and Agrigentum in 1087, the conquest of the island being thus compieted. Upon the death of Robert in 1085 Southern Italy as well as Sicily came into Roger's hands. He died in 1101.

min Roger II, King of Sicily, second son ther's death was only five years of age. When he came of age Roger executed his task of governing Sicily with great ability and courage, and his sway was gradually extended over a great part of S. Italy. By the antipope Anacietus in 1130 he was honored with the title of king. In spite of repeated revolts of the barons. spite of repeated revolts of the barons, and although the German emperor Lothair and the Greek emperor Emmanuel were leagued against him, and Innocent II excommunicated him, he defended himself with success and defeated the pope's forces at Gaiiuzzo, taking Innocent prisoner. Peace was made, the pope annulled all excommunication against Roger, and recognized his title of king. Roger afterwards fought with success against the Greeks. He died in 1154, and was succeeded by a son and a grander.

iish chronicler of the tweifth century. He was a cierk and a member of the royal household of Henry II, and seems to have been well versed in law.

an early Roger of Wendover, English chronicler, of whom ilttle ls known, exchronicier, of whom little is known, except that he was a monk of St. Albans, afterwards prior of Belvolr, and dled at St. Alban's Abbey, May 6, 1237. He was the writer of the work entitled Flores Historiarum ('Flowers of Histories').

Rogers (roj'erz), Fairman, engineer, born at Philadelphia in 1833; died Aug. 23, 1900. He was lecturer on mechanics at the Franklin Institute 1853-65. and professor of clvil engineer-1853-65, and professor of civil engineering at the University of Pennsylvania 1855-70. He was one of the original members of the National Academy of Sciences. In addition to scientific works, Rogers, HENRY H., capitalist, born he published a useful Manual of Coaching. Jan. 29, 1840; died May 19, 1909. He began his business career by selling newspapers; then took a position in his father's grocery store at three dollars a week. On the discovery of the Pennsylvanla oil wells he sought that locality, made himself familiar with the business, entered the oil establishment of Charles Pratt, of Brooklyn, and when the Standard Oil Company was formed, he and Mr. Pratt became trustees of this great organization. In 1890 he was president of the company, and iong continued the greatest force in its management, being a man of remarkable financial and business. ness capacity. He was connected with other business concerns, and acquired

before his death an estate worth considerably over \$100,000,000.

Rogers, James Edwin Thorold, economist, born at West Meon, Engiand, in 1823; died in 1890. He was graduated at Oxford, where he was professor of political economy 1862-67. He was in Paritament 1880-86. His most important was his Sychuma Matagarian important work is his 8-volume History of Agriculture and Prices in England (1866-93).

Rogers, John, scuiptor, born at Sa-iem, Massachusetts, Oct. 30, 1829; died July 27, 1904. He studied art in Parls and Rome, and won fame by a large number of small genre groups, homely, unconventional, but entirely true to nature. Among the best known are The Checker Players, The Charity Patient, The Town Pump, The Country Partient, Office and reviews similar subjects wards fought with success against the Greeks. He died in 1154, and was succeeded by a son and a grandson.

Roger of Hoveden den), an Eng.

iich chronisler of the tweifth continue He.

RANDOLPH, sculptor, born at Waterioo, New York, in 1825; died in 1892. He made Rome his chief place of residence after 1855. His most important works are the bronze doors of the Capitol at Washington, with scenes from the life of Columbus in relief, a statue of Lincoln, in Falrmount Park, Philadelphia, and monuments and statues in other cities.

statues in other cities.

Rogers, Samuel, an English poet, born at Stoke-Newington, London, July 30, 1763; died December 18, 1855. His father was a leading member of a Dissenting congregation, and a banker by profession. After completing attendance at school yours. Rogers, his attendance at school, young Rogers entered the banking establishment as a clerk, but his favorite pursults were poetry and literature. His first appearance before the public was in 1786, when he gave to the world his Ode to Superstition, and other Poems. The Pleasures of Memory with Philab his name is principal. Memory, with which his name is principally identified, appeared in 1792, and An Epistle to a Friend (1798). In 1812 he published The Voyage of Columbus, a fragment; in 1814, Jacqueline, a tale; in 1819, Human Life; and in 1822, Italy, a descriptive near in heart verse. a descriptive poem in blank verse. He was, until within a few years of his death, a man of extremely active habits, and his benevolence was exerted to a large extent on behalf of suffering or friendless talent. He formed a remarkable collection of works of art, etc., and issued sumptuous editions of his own works, with engravings on steel from drawings by Turner and Stothard. A volume of his Table Talk was published by his friend Alexauder Dyce (London, 1856). Roggeveld Mountains (rogerange in the southwestern division

Rogue (rog), in law, a vagrant or vagabond. Persons of this character were, hy the ancient laws of England, to be punished hy whipping and having the ear bored with a hot iron. The term rogues and vagabonds is given to various definite classes of persons, such as fortune-tellers, persons collecting aims under false pretenses, persons deserting their families and leaving them chargeahie to the parish, persons wandering about as vagrants without visible means of subsistence, persons found on any premises for an unlawful purpose, and other improper idlers.

Rohan (rō-ān), HENRI, DUKE OF, a in 1579. In his sixteenth year he joined in 1579. In his sixteenth year he joined the court of Henry IV, and after the death of the latter, in 1610 became chief of the Huguenots. After the fall of Rocheile (1628), and the peace of 1629, Rohan withdrew from France, and in exile wrote his Mémoires sur les Choses Advenues en France Depuis la Mort de Henri IV (Paris, 1630). He commanded the Venetlan troops against Austria until the peace of Cherasco in 1631. tria until the peace of Cherasco ln 1631. In 1638 he joined the Protestant army on the Rhine, and died of wounds received at the hattle of Rheinfeiden on April 13, 1639. He was the author of Mémoires sur la Guerre de la Valteline (1638), Les Intérêts des Princes (1649), and Discours

Politiques (1693).

Rohan, Louis René Edouard, Prince
Louis René Edouard, Prince
hurg, was born in 1734 at Paris. In
1772 he went as ambassador to the court of Vlenna. He derives his notorlety, however, chiefly from the affair of the necklace. (See Lo Motte.) He was then grand aimoner of France, and belng thrown into the Bastille, continued in prison more than a year, when he was acquitted and released by the parliament of Paris, August, 1786. He died in Germany in 1803.

Rohilkhand (rô-hii-kund'), or Ro-HILCUND, a division of British India, N. W. Provinces; area, 10,... square miles; pop. 5,479,688. The surface is a plain, with a gradual siope south, in which direction its principal streams, Ramganga, Deoha, and others, flow to the Ganges. It takes its name from the Robilias, an Afghan tribe, who gained possession of it early in the eighteenth century. It is subdivided into the districts Bijnur, Muradabad, Budaon, statesman, born in 1734. Previous to

Bareli, Terai, and Shahjahanpur. It incloses the native principality of Rampur.

Rohlfs (rolfs), Friedrich Gerhard, celebrated African traveler. born in 1831 at Vegesack, Germany. He studied medicine, and in 1855-60 he served with the French in Algiers as snrgeon in the foreign legion. In 1860 he traveled through Morocco dressed as a Mussuiman, and explored the Taillet Oasis ln 1862. In 1863, and again ln 1865, he traveled ln North Africa, making his markets. 1800, he traveled in North Africa, making his way on the latter occasion from Tripoll to Lake Tchad, Bornu, etc., and finally to Lagos on the west coast. He joined the English Abyssinian expedition in 1867. In 1868 he traveled in Cyrenalca, and in 1873-74 he conducted an expedition through the Lihyan Desert. He traveled across North America in 1875-76, and in 1878 he undertook a new 1875-76, and ln 1878 he undertook a new 1875-76, and ln 1878 he undertook a new journey to Africa, and penetrated to the Kufra Oasis. In 1880 he visited Abyssinia. He was appointed German general-consul at Zanzibar in 1884, and returned to Germany in 1885. His works include Journey Through Morocco (1869), Land and People of Africa (1870), Across Africa (1874-75), Journey from Tripoli to the Kufra Oasis (1881), My Mission to Abyssinia (1883), etc. He died in 1896. Vice-admiral

Rojestvensky, novl Born 1849. Entered Russian navy and distinguished himself in Russo-Turkish war in 1877. Commanded the Russian fleet In the hattie of the Sea of Japan in the hattie of the Sea of Japan in the Russo-Japanese war, which was defeated by the Japanese fleet under Vice-admirai Togo, May 27 and 28, 1904. Later he was tried by court-martial for cowardice in surrendering his vessel, but acquitted. Died January 14, 1906.

Roland (rō'land), or Orlando, a celebrated hero of the romances of chivairy, and one of the paladins of Charlemagne, of whom he is

dins of Charlemagne, of whom he ls represented as the nephew. His character is that of a brave, unsuspicious, and loyal warrior, but somewhat simple in his disposition. According to the Song of Roland, an oid French epic, he was killed at the battle of Roncesvalles after a desperate struggie with the who had attacked Charle-rear-guard. The celebrated Saracens, celebrated magne's rear-guard. The romantic epics of Boiardo magne's Ariosto Innamorato) and Furioso) relate to Roland and his exploits.

the revolution he was engaged in manufactures, but, being sent to Paris by the city of Lyons, on official business, he became connected with Brissot and other popular leaders, through whose influence he was appointed minister of the interior in 1702. He was dismissed by the king after a few months; hut on the fall of Louis he was recalled to the ministry. After the proscription of the Girondists he was arrested, and on receiving news of the death of his wife he kilied himself. Roland was author of a Dictionary of Manufactures, and of other works.—His wife, Marie Jeanne Philipon, was born at Paris in 1754. After her marriage in 1779 she took part in the studies and tasks of her husband, and accompanied him to Switzerland and England. On the appointment of her husband to the ministry she participated in his official duties, and took a share in the political councils of the leaders of the Girondist party. On the fall of her husband she was arrested, and was executed Nov. 8, 1793. Her Mémoires and Letters have was arrested, and was executed Nov. 8, 1793. Her Mémoires and Letters have heen puhllshed.

Rolfe, WILLIAM JAMES Shakespear-ean editor, was born at New-huryport, Massachusetts, in 1827. He became noted as a Shakespearean scholar, and published valuable annotated editions of Shakespeare's plays, also editions of the works of various English poets, etc., also wrote Cambridge Course of Physics, Life of Shakespeare, etc.

etc., also wrote Cambridge Course of Physics, Life of Shakespeare, etc.

Rolland (rō'län'), Romain (1866-), Rolls, Master of the rollers. See Iron.

Clamecy, Department of the Niève, France. His best known work is Jeon Christophe, a three-volume novel whose central character is a musical genius. It has been translated into several languages. He was a lover of peace and when the war broke out in 1914 he wrote An dessus do la Mélée ('Above the Battle'). This book, which lacked the martial spirit, was coldly received by his fermer admirers, and he left France to reside in Switzerland. In 1915 he received the Nobel prize for literature. He wrote a history of European opera and biographics.

generally of small size. The common roller (Coracias garvila) is found in Europe as a summer visitor, though Africa appears to be its native country. In size the roller averages the country. The plumage is in general as assembling the size that the roller averages the country in the roller averages the country. The voice is noisy and in the roller averages the roller averages the country.

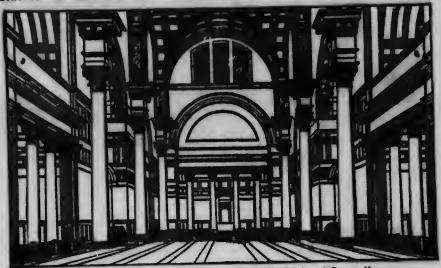

manufacture of maileanie from and other metals of the same nature. It consists of one or more pairs of iron rollers, whose surfaces are made to revoive nearly in contact with each other, while the heated metal is passed between them, and therehy subjected to a strong pressure. The first rolling is to expei the seconds and other impurities, after which scorize and other impurities, after which the mass of metal is cut into sultable lengths, which are piled on one another and reheated, when the mass which has been partially fused is again passed through the rollers. This second rolling determines its form into a hoop, rail, bar, or plate according to the form given

in Switzerland. In 1915 he received the Nobel prize for literature. He wrote a history of European opera and biographies of Haendel, Millet, etc.

Roller (rôl'er; Coracias), a genus of fissirostral insessorial hirds, generally of small size. The common roller (Coracias garrále) is found in Europe as a summer visitor, though Africa appears to be its native country. ly and harist, is reso be-Mary ind inon are n sacptism enance, relating to Charlemagne and his peers; the Arthurian, or that concerned with King Arthur and his knights; and the classical, dealing with Troy, Alexander the Great, etc. The oldest is the Chancon de Roland, dating from the eleventh century and treating of the deeds of Charlemagne's nephew Roland. Fore-bres or Fiersbres, dating from the beginning of the thirteenth century, belongs to the same cycle. Other chancons worthy of mention are: Ogier le Danois, written about the beginning of the thirteenth century; Huon de Bordeaus (twelfth century; Huon de Bordeaus (twelfth century); Beuves d'Hanstonnes (thirteenth cen their origin to the lays of the Welsh bards, supposed to be as old as the sixth and seventh centuries, but they are directly based on the Latin History of Geoffrey of Monmouth, which was versified in Franch by Waco (1155-58) and amount of the Latin History of Geoffrey of Monmouth, which was versified in Franch by Waco (1155-58) and amount of the Latin History of Geoffrey of Monmouth, which was versified in Franch by Waco (1155-58) and amount of the Latin History of the Welsh hards, supposed to be as old as the Sixth and Sixth History of the Welsh hards, supposed to be as old as the Sixth and Si Geoffrey of Monmouth, which was versified in French by Wace (1155-58) and amplified and translated into English by Layamon about 1204. One of the most prolific of Arthurlan poets is Chrétien de Troyes (born about 1140). His poem Li Chevalier au Lyon is the Ywain and Gawain in Ritson's English Metrical Romances. Another poem belonging to this cycle is the Morte d'Arthur (fourteenth century). The Arthurlan romance spread from France to Provence, Spain, Italy, and the Netherlands, and was again transplanted into England. was again transplanted into England. The most important romance of the classical cycle is Le Romans d' Alicandre, written by Lambert Il Tors and Alixandre de Bernay in the twelfth century; lt contains upwards of 20,000 twelvesyllable lines. This chanson first brought the Alexandrine line into vogue and gave it its name. The English Kyng Alisaunder, in 8034 eight-syllable lines, dates from the fourteenth century. The chief poem of the Trojan section is the *Troje* of Benoist de St. More, an Anglo-Norman poet of the twelfth cen-tury. This chronicle consists of upwards of 30,000 octosyllables, and was translated into Dutch and German verse in the thirteenth century. Founded upon it was the Latin Historia Trojans of Guldo de Colonna, which was translated into most European languages. It was turned into English and Scotch verse no fewer than four times. The most celebrated of these is Lydgate's Troye-Boke (1414-20). Besides the romances dealing with the subjects mentioned, we find also a class in which mances dealing with the subjects mention; the latter, while based on Roman tioned, we find also a class in which form, is Gothic in spirit, has a pre-exploits of Teutonic heroes are celebrated, dominance of vertical lines, and intro-

Southern Europe which owe their origin to the language of Rome—the Latin—and to the spread of Roman dominion and civilization. They include the Italian, French, Provençal, Spanish, Portuguese, Roumanian, and Romansch. Their basis was not, however, the classic Latin of literature, but the popular Roman language—the Lingua Romans rustica spoken by the Roman soldiers, colonists, and others, and variously modified by uneducated speakers of the different peoples among whom it became the general ples among whom it became the general means of communication. In all of these tongues Latin is the chief ingredient, and a knowledge of Latin helps very greatly in acquiring a knowledge of them.

Romanes (rô-man'es), GEORGE JOHN, hiologist, born at Kingston, Canada, in 1848; died in 1894. He was educated at Cambridge University, became Fullerian professor in the Royal Institution, London, and in 1890 removed to Oxford, where he founded a Romana. to Oxford, where he founded a Romanes lectureshlp. In scientific views he was an advanced Darwinian, giving his ideas on this subject in Darwin and After Darwin. He also wrote Mental Evolution, Animal Intelligence, etc.

Romanesque Architecture

(rō-man-esk'), a general and rather vague term applied to the styles of architecture which prevalled in Western Europe from the fifth to the twelfth century. The Romanesque may be separated into two divisions: (a) the debased Roman, in use from the fifth to the eighth century; and (b) the later Romanesque of the eighth to the twelfth century, which comprises the twelfth century, which comprises the Lombard, Rhenish or German and Norman styles. The former is characterized by a pretty close imitation of the features of Roman, with changes in the mode of their application and distribution; the letter while heard or Pornar nlied d by ation art re of uperthose

MOMANS (ro'manz), EPISTLE TO THE, the most elaborate, and, in a doctrinal point of view, the most important composition of St. Paul. It sets forth that the gospel doctrine of justification by falth is a power unto salvation to all men, both Jews and Gentiles. The writer then deplores the rejection of the Jews, and in the practical part admonishes the Romans to exercise the various gifts bestowed upon each in a spirit of love and humiliary and in the practical part admonishes the Romans to exercise the various gifts bestowed upon each in a spirit of love and humiliary the reigns being as foilows: Romuius, 753—716 B.C.; Numa Pompilius, 715—676; Tulius Hostilius, 674—642; Ancus Martius, 642—618; L. Tarquinius Priscus, 618—578; Servius Tullus, 578—534; and Tarquinius Superbus, 534—509. The last three were of Etruscan origin, pointing to a temporary supremacy at least of Etruria over Rome.

From the commencement of Priscus, 618—678; Servius Tullus, 578—534; and Tarquinius Superbus, 534—509. The last three were of Etruscan origin, pointing to a temporary supremacy at least of Etruria over Rome. spirit of love and humility; he especially urges the strong to bear with the weak, and concludes with various salutations and directions. In modern times doubts have been thrown upon the authenticity of the concluding portion of this epistle, some critics regarding the whole of chapter xvi, as spurious.

Romansch (rō-mansh'), Rumonsch, one of the Romance famlly of languages, spoken in parts of Switzerland (Grisons), the Tyrol, etc. In some parts it is known as the Ladin, that is Latin, which forms the basis of lt. The literature is mainly religious.

Romantic (rō-man'tik), a term used in literature as contradis-

The tingulshed to antique or classic. name romantic school was assumed about the beginning of the nlneteenth century by a number of young poets and critics in Germany, the Schlegels, Novalls, Tleck, etc., whose efforts were directed to the overthrow of the artificial rhetorlc and unlmaglnative pedantry of the French school of poetry. The name is also given to a similar school which arose in France hetween twenty and thirty years later, and which had a long struggle for supremacy with the older classic school. Victor Hugo, Lamartine, etc., were the leaders.

Rome (rom; Latin, Roma), the most famous nation of ancient times, famous nation of ancient times, originally comprising little more than the city of Rome (see next article), iater an empire embracing a great part of Europe, Northern Africa, and Western Asla. The origin of Rome is generally assigned to the year 753 B.C., at which time a band of Latins, one of the peoples of Central Italy, founded a small town on the left bank of the Tiber, about 15 miles from the sea, the population being subsequently augmented by the addition of Sabines and Etruscans. The weight of tradition places it beyond weight of tradition places it beyond doubt that in the earliest period the government of Rome was an elective mon-archy, the king being chosen hy an as-sembly of patres (fathers) or heads of families who formed the senate. According to tradition these kings were seven in number, their names and traditions

Etruria over Rome.

From the commencement of Roman history the people are found divided into two classes, the patricians or aristocracy (a kind of oligarchy), and the plebeians or common people, besides a class called clients, immediate dependents of the patricians. All political power was in the hands of the patricians. All matters of importance had to be laid before them in their comitia curiata or assembly, in which they voted by divisions called curia. (See Comitia.) From and by them also were elected the members of the senate or council of the elders, as it may he called, which advised the king. By reforms instituted by Servius Tullius the way was at least prepared for altering this state of affairs. He introduced a division of all the people, according to their property, into five classes, and these again into centuries. With the first or highest class was sometimes reckoned a body called equites or horsemen, but these were sometimes regarded as above all the classes. The lowest section of the people, cailed proletarii, were sometimes reckoned as a sixth class, and sometimes as forming part of the fifth. Thus originated a new sixth class, and sometimes as forming part of the fifth. Thus originated a new assembly, the comitia centuriata, which include plebelans as well as patricians though the latter had the great preponder ance. The plebeians got also an assem hly of their own with certain iimited

nly of their own with certain limited powers, the comitia tributa, in which they met by local divisions called tributa. The last of the kings, Tarquinlus Superbus, by his tyrannical government excited the hatred of all classes, and the was raised to the highest pitch by an ac of violence perpetrated by his younges son Sextus. (See Lucretia.) The people then rose in rebellion, and abolished forever the kingly government (509 R. c.) Upon the expulsion of the kings the royal power was intrusted to one may who held it for a year, and was called dictator. Afterwards two yearly officers called at first prators, afterwards consuls, wielded the highest executive power in the state both in civil and militar affairs.

Almost ail political power still remained with the patricians, however, an for more than 200 years the internal his tory of Rome is mainly composed of the

ards con-

endeavors of the plebeians to place them-seives on a political equality with the patricians. In 494 s.c. the plebeians succeeded in securing a measure of justice. Two magistrates cailed tribunes were chosen from the ranks of the ple-beians. Their persons were inviolable; and they had the right of protecting every plebeian against injustice on the part of an official. Later they were admitted to the senate, where they had the right of vetoing resolutions and preventing them from becoming iaw. Their number was afterwards increased to five, and finally to ten. The tribunes, through ignorance of the laws, which were kept secret by the patricians, were often thwarted in their endeavors to aid the plebeians. The plebs demanded the publication of the laws, and at last the senate yielded. It was agreed that in place of the regular magistrates ten men (decenviri) should be nominated, with unlimited power to govern the state and limited power to govern the state and prepare a code of written laws. These men entered on office in 451 B.C., and in the first year of office they had compiled ten tables of laws, and to these in the ten tables of laws, and to these in the second year they added other two tables, making up the famous Laws of the Twelve Tables. But when the second year had elapsed, and the object for which they had been appointed was accomplished, they refused to lay down their office, and were only forced to do so by an insurrection. The Immediate occasion of this rising was, according to the well-known story made popular by Macaulay in his lay of Virginia. an act Macaulay in his lay of Virginia, an act of infamy attempted by one of the ten. (See Appius Claudius.) After the overthrow of the decemvirate two chief magistrates were reappointed, but the title was now changed from prætors to consuis (449 B.C.). In 444 another change was made by the appointment of military tribunes with consular power (from three to six or even eight in number), who might take the place of the consuls. To this office both classes of the community were eligible, although it was not till 400 B.O. that a plebeian was actually elected. In 443 B.O. a new patrician office, that of censor, was created. (See Censor.) No plebeian was censor till 351 B.O.

During this period of internal conflict Rome was engaged in defensive wars, chiefly with the Æquians and Voiscians, who lived close by. With these wars are connected the legends and traditions of Coriolanus, the extermination of the Fabii, and the saving of the Roman army by Cincinnatus. (See Coriolanus, Fabii, and Cincinnatus.) Towards the end of

the fifth century B.C., after extending her territory to the south, Rome turned her arms against Etruria in the north. For ten years (405-896) the important city of Veil is said to have been besieged, till in the latter year it was taken by Camilius, and the capture of this city was followed by the submission of all the other towns in the south of Etruria. But just at this point Rome was thrown back again by a total defeat and rout on the banks of the Ailia, a small stream about 11 miles N: of Rome, and the capture and descruction of the Cauls retired with their booty the city was hastily reconstructed, but the destitution and suffering of the people rendered domestic tranquillity impossible. After a struggle, however, the Licinian laws were adopted in 367, the plebeians being now admitted to the consulship, and a fairer distribution of public lands being brought about.

During the period 343-264 Rome was engaged in many important wars, the chief of which were the four Samnite wars, the great Latin war, the war with the Greek cities of Southern Italy, and the war with Pyrrhus, the Invader of Italy from Greece. The chief events of this protracted struggle were the defeat of the Romans by the Samnites under Pontius at the Caudine Forks, and the passing of the Romans under the yoke in acknowledgment of their subjugation (321 B.C.); the defeat of the Samnites, Umbrians, Etruscans, and Gauls at Sentinum (295 B.C.); and the final defeat of Pyrrhus at Beneventum (275 B.C.). In 272 B.C. the city and fortress of Tarentum surrendered to the Romans, and the defeat of the Sallentini in Calabria (266) made the Romans masters of all Italy south of the Rubicon and Macra.

Rome, having had leisure to conquer Italy, now felt at liberty to contend for the possession of Sicily, at this time almost entirely under the dominion of the great maritime power of Carthage. An opportunity for interfering in Sicilian affairs was easily found, and in 264 s.c. the First Punic or Carthaginian war began. It iasted for more than twenty years, caused the loss of three large fleets to the Romans, and the defeat of a Roman army under Reguius ln Africa; but in 241 a great victory over the Carthaginian fleet caused the latter power to sue for peace. This was finally concluded on the conditions that Carthage should give up Sicily, and pay a great sum as a war indemnity. The larger western part of Sicily became the first Roman province; the smailer eastern

lied to Rome. also extended over ail the Islands which Carthage had possessed in the Medlterranean. About the same time the Romans wrested the Island of Corcyra (Corfu) and some coast towns from the piratical Illyrians. From 226 to 222 B.o. they were engaged in a more difficult war with the Gauls Inhabiting the Po basin; hut the Romans were again successful, and the Gallic territory was reduced to a Roman province under the name of Gallia Cisalpina (Gaul on this

side the Alps). Meanwhile the Carthaginlans had been making considerable conquests in Spain, which awakened the alarm and envy of the Romans, and induced them to enter into a defensive alliance with the Greek colony of Saguntum, near the east coast of that country. In 221 B.C. Hannihal, the son of Hamilcar Barca, who had bravely and skilfully maintained the Carthaginlan arms in Siclly, and had afterwards founded and in great part establishment. lished a Carthaginian empire in Spain, succeeded to the command of the Cartha-ginlan forces. The taking of Saguntum, a city allied to Rome, occasioned the second Punic war, during which Hannibal traversed Gaul, crossed the Alps, and invaded Italy. The war continued in Italy for fifteen years (218-204 B.C.); and was carried on with consummate generalship on the part of Hannibal, who in-flicted on the Romans one of the most disastrous defeats they ever sustained, at Cannæ, in 216 B.C. This great man was ill supported by his country, and the war terminated in favor of the Romans through the defeat of Hannibal by P. Cornelius Sciplo at Zama in Africa in 202 B.C. (See Hannibal.) One of the results was that the power of Carthage was broken and Spaln practically became a Roman possession. Upper Italy was also again subjugated, and Transpadane Gaul acquired. A third Punlc war hroke out on slight pretext in 149 B.C., and ended in 146 in the capture of Carthage hy Sciplo (the younger) after a severe struggle, and the conversion of the Carthaglnian territory into the province

of Africa.
Philip V of Macedonia had favored Philip V of Macedonia had favored Hannihai, and thus gave Rome a pretext to mlx in Grecian affairs. The result was that Macedonia was made a Roman province (148 B.C.), while in the same year that Carthage fell Corinth was sacked, and soon after Greece was organized into the province of Achala. (See Greece.) Previously Antiochus the

part continued under the supremacy of Great of Syria had been defeated by the the Greek city Syracuse, which was allied to Rome. The sway of Rome was Minor brought into vassalage to Rome. In the east Rome intrigued where she could, and fought when she was compelled, and by disorganizing states made them first her dependencies and then her provinces. In 130 B.C. she received hy bequest the dominions of Attalus III of Pergamus (Mysia, Lydia, Caria, and Phrygla), which was formed into the province of Asia.

By this time strife between different classes within Rome again began to classes within Rome again began to be hiter, hut it was now not between patricians and plehelans, hut between rich and poor. The conquests which had been made, and the lucrative posts which were now to be had, as well as the wide field generally available for money-making, had produced a wealthy privileged class partly consisting of patriprivileged class partly consisting of patriclans, partly of pleheians, without benefitlng the other classes of the citizens. The agrarian laws which formerly protected the people were generally unohserved, great landed estates were accumulated in few hands, and the cultivation of the land hy swarms of slaves left war the only occupation of the citizens. Thus vast numbers of the middle class of citizens were reduced to absolute want, and driven from their homes. To remedy this the two Gracchi, Tiberius and Calus, successively proposed measures for the better distribution of the land, and in general for the relief of the destitute classes. They thus incurred the violent hatred of the nobles or men of position, and both of them lost their lives in the

party struggles that ensued (in 133 and 121 B.C. respectively).

Previously to this the Romans had formed an alliance with the Greek colony of Massilia (Marseilles), and in ald of their allies they were twice called in to quell the neighboring Gallic tribes (first in 154 B.C., and next in 125 B.C.). On the second occasion, after putting down the Gauls (125-123) they kept possession of the conquered country, and made this part of Gaul a Roman province (Provincia Gallia - Provence). The next war was in Africa, with Jugurtha, who had usurped the throne of Numidia, and against whom the assistance of Rome had heen asked. It was brought to an end by Calus Marius, who had risen from an obscure rank to the consulship (104 B.C.). Marius also repelled invasions of the province of Gaul by the Cimbri and Teutones in 102-101 B.C. A serious war, almost of the nature of a civil war, followed with the Roman allies in Italy, the who rose in 90 B.C. to demand the right

prevent another rising.

Th'4 war had been concluded by Sulla, between whom and Marius great rivalry prevailed; and now sprang up the first Roman civil war, a struggle between the party of Marius (the people) and that of Sulla (the nobies). Suila, the consult for 88, was on the point of starting for Asia to attack Mithridates, king of Pontus, a war that promised both glory and treasure. Marius was eager for the same command, and through intrigue on same command, and through intrigue on his behaif the populace deprived Sulia of the chief command and gave it to Marius. Thereupon, Sulia marched on Rome with his legions, forced Marius to flee to Africa, and then proceeded to the Mithridatic war. In his absence Marius returned, wreaked a bioody vengeance on the partisans of his rivai, and died after being appointed consui for the seventh time (86 B.C.). Three years later Sulla came hack from Asia, having brought the Mithridatic war to a satisfactory conciusion, and now felt himself at liberty to take his revenge on the Marian party for the atvocities of which it had been guilty towards his own party in his been guilty towards his own party in his absence; and he took it in full measure. Four thousand of his opponents he caused to be massacred in the circus in one day; and then got rid of ail the chief men of the democratic party hy proscription. He was now appointed dictator for an unlimited term (81 B.C.), and as such passed a series of measures the general object of which was to restore to the con-stitution its former aristocratic or oli-

object of which was to restore to the constitution its former aristocratic or oligarchical character. In the heginning of 79 B.C. Sulia retired into private life, and he died in the year foilowing.

The man who now came most prominently hefore the public eye was Pompey, one of Sulia's generals. His first important achievement was the subjugation of the remnant of the democratic or Marian party that had gathered round Sertorius in Spain (76-72 B.C.). On his return to Italy he extinguished all that remained of an insurrection of slaves, return to Italy he extinguished all that remained of an insurrection of slaves, already crushed by Crassus (71), and in 70 B.C. was consul along with Crassus. In 67 B.C. he drove the pirates from the Mediterranean, and afterwards reduced Ciicia, which he made into a Roman province. He was then appointed to continue the war that had been renewed against Mithridates, king of Pontus, whom he finally subdued, forming part were Octavianus, the grand-nephew and adopted son of Cæsar, then only nine-teen, and Mark Antony, one of Cæsar's teen, and Mark Antony, one of Cæsar's teen, and Mark Antony as the second tribution. In 43 B.C. these two formed with a second tribution and putting an end to the republican party in the hattle of Philippi (42), Octavian and Antony, casting off Legislavia, who was a weakling, divided the empire between them, the former taking

of equal citizenship with the people of Rome. This war, known as the Social Roman province, and distributing the war, lasted for two years (90-88 B.C.), rest among kings who were the vassals war, lasted for two years (90-88 B.C.), and ended in the victory of the Romans, of Rome. In 64 B.C. Pompey put an end who, however, found it advisable to control to the dynasty of the Seleucides in Syria, and converted their kingdom into a provented the franchise to the Italian tribes to and converted their kingdom into a province, and in 68 B.C. advanced southwards into Judea, which he made tributary to Rome. Aii these arrangements were made by him on his own authority. In the very year in which they were completed a member of the aristocratic party, the great orator Cicero, had earned great distinction by detecting and frustrating distinction by detecting and frustrating the Catilinarian conspiracy. (See Cati-

line.) Only three years after these events (60 B.C.) a union took place at Rome of great importance in the history immediately subsequent. Caius Julius Casar, a man of aristocratic family who had attached himself to the democratic party and had become very popular, joined Pompey and Crassus in what is called the first triumvirate, and practically the three took the government of Rome into their own hands. On the part of Cæsar, who was now elected consul, this was the first step in a career which culminated in the overin a career which culminated in the over-throw of the republic, and his own ele-vation to the position of sovereign of the empire. After the death of Crassus (53 B.C.) came a struggle for supreme power between Cæsar and Pompey. Cæsar had gained great glory hy the con-quest of Gaui, but now at Pompey's in-stigation was called on to resign his com-mand and dishand his army. Upon this he entered Italy, Pompey sied into Greece, and the short civil war of 49 48 B.O., and the great battie of Pharsalia in the latter year, decided the struggle in latter year, decided the struggle in Cæsar's favor. Pompey's army was utteriy routed; he himself was compelled to fiee, and having gone to Egypt was there murdered. In a short time Cæsar utterly subdued the remains of the Pompeian party and hecame virtually king in Rome though he did not assume the title. Cæsar was assassinated hy republicans in 44 B.C., and the main result of the conspiracy hy which he feil was that the first place in Rome had again to he contested. The competitors this time were Octavianus, the grand-nephew and adopted son of Cæsar, then only nineteen, and Mark Antony, one of Cæsar's generals. In 43 B.C. these two formed with Lepidus what is known as the accord friEast. In ten years, in consequence of Antony's obsession by Cieopatra of Egypt, war broke out between the two, and in the navai hattie of Actium (31 B.C.) Antony was defeated, and the whole Roman world iay at the feet of the conqueror, Egypt being also now incorporated. Not long after this Octavian re-ceived the title of Augustus, the name by which he is known in history as the first of the Roman emperors.

In his administration of the empire

Augustus acted with great judgment, ostensihiy adhering to most of the republican forms of government, though he contrived in course of time to obtain for himself all the offices of highest au-thority. The reign of Augustus is chiefly remarkable as the golden age of Roman literature, but it was a reign also of conquest and territorial acquisition. Be-fore the annexation of Egypt Pannonia had been added to the Roman dominions (35 B.C.), and by the subsequent conquest of Mæsia, Noricum, Rhætia, and Vinde-iicia, the Roman frontier was extended to the Danube along its whole course. Gaui and Spain also were now finally and completely subdued. The empire of Angustus thus stretched from the Atiantic to the Euphrates, and from the Rhine and the Danube to the deserts of Africa. This emperor died in 14 A.D. His reign is above ail memorable for the hirth of Christ in B.C. 4.

Angustus was followed by a series of emperors forming, when he and Julius Casar are included, the sovereigns known as the Twelve Casars. The names of his successors and the dates of their deaths are: Tiberius, 37 A.D.; Caiiguia, 41; Ciaudius, 54; Nero, 63; Gaiha, 69; Otho, 69; Vitellius, 69; Vespasian, 79; Titus, 81; and Domitian, 96. Most of these were sensual and hioodthirsty tyrants, Vespasian and his son Titus heing the chief exceptions. Vespasian's reign was noted for the taking and destruction of Jerusaiem; that of Titus for the destruction of the cities of Pompeli and Hercuas the Twelve Casars. The names of his tion of the cities of Pompeii and Hercuianeum by an eruption of Vesuvius (A.D. 79). After Titus his tyrannicai brother

Domitian reigned tiii his death by assassination in A.D. 96, when an aged senator, Nerva, was proclaimed as his successor.

Nerva's reign was short (96-98) hut beneficent, and he was followed by four emperors, Trajan, Hadrian, Antoninus Pius and Marcus Aurelius, who together resigned for more than eighty were and reigned for more than eighty years, and under whom the countries making up the Roman Empire enjoyed in common more good government, peace, and prosperity than ever before or after. Trajan (98-

Rome and the West and the latter the 117) was a warinke prince, and added East. In ten years, in consequence of several provinces to the Roman Empire. Hadrian (117–138), the adopted son of Trajan, devoted himself entirely to the internal affairs of his empire. It was in his reign that the southern Roman waii, or rampart between the Tyne and the Soiway Firth, was erected. Antoninus Pius (138-161) was likewise the adopted son of his predecessor. In his reign the northern waii in Britain, between the Forth and Ciyde, was constructed. The next emperor, Marcus Aureiius (161–180), was both the sen-in-iaw and the adopted son of Antoninus Pius. He combined the qualities of a philosopher with those of

an abie and energetic ruler. Commodus (180-192), the son and successor of Aureijus, inherited none of his father's good qualities, and his reign, from which Gibbon dates the decline of the Roman Empire, presents a complete contrast to those of the five preceding emperors. During his reign an era of military despotism ensued. The prætorian guard (the imperial body-guard) bewitten in the contract of the co came virtually the real sovereigns, while the armies of the provinces declared for their favorite officers, and the throne became the stake of hattie. In the iong list of emperors who succeeded may be noted Septimius Severus, who reigned from 193 to 211, during which time he restored the empire to its former prestige. H: reconquered Mesopotamia from the Parthlans, but in Britain he confined the Roman province to the limit of Hadrian's Wai', which he restored. He died at York. Alexander Severus, who reigned from 222 tili 235, was also an ahie ruler, and was the first emperor who openly extended his protection to the Christians. His death was followed by a period of the greatest confusion, in which numerous emperors, sometimes elected by the senate, sometimes by the soidiers, foiiowed one another at short intervals, or claimed the empire simultaneously. This period is known as the era of the Thirty Tyrants. Meanwhile the empire was ravaged on the east by the Persians, while the Cormon tribes and confederations. the German tribes and confederations (Goths, Franks, Alemanni) invaded it on the north. The empire was again consolidated under Aurelian (270–275), who subdued all the other claimants to the imperial dignity, and put an end to the Kingdom of Paimyra, which was gov-

erned by the heroic Zenohia.

The reign of Diocietian (284-305) is remarkable as affording the first example of that division of the empire which ulti-mately ied to the formation of the empire of the West and the empire of the East Finding the number of the barbarian

(5) is ampie ultimpire East bariap son-in-law, Constantius Chlorus. These four now divided the empire between them. Diocietlan assumed the government of the East with Thrace, allotting to Galerius the Illyrian provinces; Maximian assumed Italy, Africa, and the isiands of the Mediterranean; and ieft to Constantius Spain, Gaul, and Britain. This arrangement temporarily worked well, but in 323 Constantine, the son of Constantius, was left sole master of the

empire. Ever since the time of Augustus and Tiberius, Christianlty had been spreading in the Roman Empire, notwithstanding terrible persecutions. The number of churches and congregations had increased in every city; the old mythologic religion had iost its strength, very few belleving in its are result Constantine deemed it in it: as a result Constantine deemed it expedient to make the Christian faith the religion of the empire. He also removed the seat of government from Rome to Byzantium, which was given the name of Constantinopie (330), and completely reorganized the imperial administration. Constantine died in 337. The empire was left among his three sons, of whom Constantius became sole ruler in 353.

The next emperor. Julian the Apostate.

The next emperor, Julian the Apostate, The next emperor, Julian the Apostate, sought to restore the old religion, but in valn. He was an abie ruler, but fell in battle against the Persians in 363. He was succeeded by Jovian, who reigned iess than one year; and after his death (364) the empire was again divided, Valens (364-378) obtaining the eastern portion, and Valentinian (364-375) the western. From this division, which took place in 364, the final separation of the eastern and western empires is often dated. In the reigns of Valens and Valentinian great hordes of Huns streamed entinian great hordes of Huns streamed into Europe from the steppes of Centrai Asia. After subduing the Eastern Goths. Asia. After subduing the Eastern Goths. (Ostrogoths) they attacked those of the west (Visigoths); but these, since they had already been converted to Christianity, were allowed by Valens to cross from the left to the right bank of the Danube, and settle in Mæsia. In their new homes they found themselves exposed to the oppression and rapacity of the Roman governors, and when they could no longer brook such treatment they rose in longer brook such treatment they rose in years after the death of Attiia, Eudoxla, rebellion, and defeated Vaiens in the the widow of Vaientinian, the successor sangulary battie of Adrianopie, in the of Honorius, invited the assistance of flight from which the emperor lost his the Vandais from Africa, who under their life (378). His son Gratianus created leader Genseric proceeded to Rome,

violators of the Roman frontier too great the heathen Theodosius co-regent, and infor him he adopted as joint-emperor trusted him with the administration of Maximian; and in 292 each of these associated with himself another, to whom the title of Cæsar was allowed. Diotelian took Galerius, and Maximian his them as allies in their abodes in Mæsia son-in-law. Constantius Chlorus. These and Thrace. In 394 the whole ampire the heathen Theodosius co-regent, and intrusted him with the administration of the East. Theodosius became a Christian, fought successfuily against the Western Goths, but was obliged to accept them as alies in their abodes in Mosia and Thrace. In 394 the whole empire was reunited for the last time under Theodosius. After his death (395) the empire was divided between his two sons, Honorius and Arcadius, and the eastern and western sections became permanent divisions of the empire, the latter being now under Honorius. For the further history of the Empire of the the further history of the Empire of the

East, see Byzantine Empire.
In 402 Alaric, king of the Visigoths who were settled on the south of the Danube, was incited to invade Italy, but count of the iosses he suffered in battle (403). Scarcely had these enemies retreated when great hosts of heathen Teutonic tribes, Vandals, Burgundians, Suevi, and others, made an irruption into Italy on the north: but these also were overcome by Stilicho, the guardian of the he was soon forced to withdraw on acon the north; but these also were over-come by Stilicho, the guardian of the youthful emperor Honorius, in the battie of Fæsulæ (or Fiorence), and compelied to withdraw (406). The Burgundians now settled in part of Gaul, while the Vandals and Suevi crossed the Pyrenees into Spain. In 408 Alaric marched into into Spain. In 408 Alaric marched into Italy, advanced to the walls of Rome, and nitimately took the city by storm (410). Shortly after Aiaric died, and his brother-in-iaw Athaulf (Adolphus) conciuded a treaty with Honorius, and retired into Gaul, where the Visigoths founded in the southwest a kingdom that extended originally from the Garonne to the Ebro (412). About this time also the Romans practically surrendered Britain, by withdrawing their forces from it and thus leaving it a prey to Teutonic and Scandinavian sea-rovers. In 429 the Vandals wrested the province of Africa from the empire and set up a Vandalic kingdom in its piace. In 452 the Huns left their settlements in immense numbers under their king Attila, destroyed Aqulicia, took Milan, Pavia, Verona, and Padua by storm, laid waste the fruitful valley of the Po, and were already advancing on Rome when the Roman bishop, Leo I, succeeded in inducing them to conclude a page with Valentinian to conclude a peace with Valentinian, and withdraw. Soon after their leader Attila died (453), and after that the Huns were no longer formidable. Two years after the death of Attila, Eudoxla, the widow of Valentinian, the successor of Honorius, invited the assistance of the Vandais from Africa, who under their leader Generic proceeded to Rome. which they took and afterwards piundered for fourteen days, showing so little regard to the works of art it contained as to give to the word vandalism the sense it still expresses (455). They then returned to Africa with their booty and prisoners. After the withdrawai of the Vandals, Avitus, a Gaul, was instailed emperor. Under him the Suevian Richmer, the commander of the foreign mercenaries at Rome, attained such influence as to be able to set up and depose emperors at his pleasure. The last of the so-cailed Roman emperors was Romulus Augustulus (475-476 A.D.). His election had been secured through the aid of the German troops in the pay of Rome, and these demanded as a reward a third part of the soll of Italy. When this demand was refused, Odoacer, one of the boidest of their leaders, deposed Romulus, to whom he allowed a residence in Lower Italy with a pension, and assumed to himself the title of King of Italy, thus putting an end to the Western Roman Empire. Ap. 476. (See Italy.)

Roman Empire, A.D. 476. (See Italy.)

Language.—The language of the Romans was the Latin, a language origi-naily spoken in the plain lying south of the Tiber. Like the other ancient Italian dialects (Oscan, Umhrian, etc.) it is a hranch of the Indo-European or Aryan family of languages, and is more closely allied to the Greek than to any other member of the family. At first spoken in only a small part of Italy, it spread with the spread of Roman power, till at the advent of Christ lt was used throughout the whole empire. The Latin lan-guage is one of the highly-inflected languages, in this resembling Greek or Sanskrit; hut as compared with the former it is a far inferior vehicle of expression, heing less flexible, iess adapted for forming compound words, and altogether less artistle in character. The earliest stage of Latin is known almost wholly from inscriptions. During the period of its ilterary development many changes took place in the vocabulary, inflection, word formation, and syntax. formation and syntax. In particular, considerable additions to the vocabulary were made from the Greek. At the same time the language gained in refinement and regularity, while it preserved all its peculiar force and majesty. The most perfect stage of Latin is that represented by Cicero, Horace, and Virgil in the first century B.C.: and the classical period of the Letin language ands in the second of the Latin language ends in the second century A.D. The decline may be said to date from the time of Hadrian (117-138). In the third century the deterioration of the language proceeded at a very rapid rate. In the fourth and

fifth centuries the popular speech, no ionger restrained by the influence of a more cuitivated ianguage, began to experience that series of transmutations and changes which formed the transition to the Romance ianguages. Latin, however, still remained, through the influence of the church and the iaw, the literary language tili far on in the middle ages; hut it was a Latin iargely Intermixed with Celtic, Teutonic, and other elements, and is now usually called Late or Low Latin. The study of Latin is of great assistance in acquiring an accurate knowledge of English, as a great part of the English vocahulary is of Latin origin, heing either taken from the French or from classical Latin directly.

Literature.— The history of Roman iterature naturally divides itself into three periods of Growth, Prime, and Decline. The first period extends from ahout 250 B.C. to about 80 B.C. The second period ranges from 80 s.c. to the second period ranges from 80 s.c. to the death of Augustus in 14 A.D., and includes the greater part of the Roman literature usually studied in schools and coileges. The period of decline then followed. Poetry in this language, as in all others preceded press. The oldest all others, preceded prose. The oldest forms of Latin poetry were the Fescennine verses, which were poems of a jocular and satirical nature sung at marrlages and country festivais; satires or improvised dialogues of miscellaneous contents and various form; and the Atellang, fabulæ, a species of grotesque comedy sup-posed to resemble the modern Punchi-nelio. The first known writer was Livius Andronicus, a Greek freedman taken prisoner at Tarentum (272 B.C.) and afterwards emancipated, who about 240 B.C. exhibited at Rome a drama translated from the Greek, and subsequently brought out a translation of the Odyssey. He was followed by Nævlus, who wrote an historical poem on the first Punic war, hesides dramas; hy the two tragic writers Pacuvius and Accius or Attius; and hy Encuvius and Accius or Attius; and hy Ennius, author of eighteen books of metrical annals of Rome and of numerous tragedies, and regarded hy the Romans themselves as the founder of Roman poetry. Mere fragments of these early works alone remain. The founder of Roman comedy was Piautus (254–184 B.C.), who was surpassed for force of comic thuman by none of his successors. Next humor hy none of his successors. Next followed Cæcilius; and then Terence (195-159 B.C.), a successful imitator and often mere translator of the Greek dramatlst Menander and others, and, although an African by hirth, remarkable for the purity and excellence of his Latinity. These three comic writers took the New b, of a ations sition howluence terary ages; ments, Low curate art of origin. ich or Roman ad Defrom The to the Roman is and en folas in oldest Fescena jocres or us conellang, dy sup-Punchias Liv-

Comedy of the Greeks as their model (Comadia palliata); and we still possess a number of piays by Plautus and Terence. On the other hand, Afranius, with a few others, introduced Roman manners upon the stage (Comædia togata)
Lucilius (148-130 B.C.) was the originator
of the Roman poetical satire, the only of the Roman poetical satire, the only kind of literary composition among the Romans which was of native origin. Lucretius (B.C. 98-55), a writer full of strength and originality, has left us a philosophical poem inculcating the system of Epicurus, in six books, entitled De Rerum Natura. Catulus (94-54 B.C.) was distinguished in lyric poetry, in elegy, and in epigrams. With the age of Augustus a new spirit appeared in Roman literature. The first of the Augustan poets is Virgii (B.C. 70-19), the greatest of the epic poets of Rome, author of eclogues or pastoral poems; the of eclogues or pastoral poems; Georgics, a didactic poem on agriculture, the most finished of his works; besides the most nuisned of his works; besides the famous epic poem entitled the Encid. Contemporary with him was Horace (B.C. 65-8), the favorite of the lyric muse, and also eminent in satire. In the Augustan age Propertius and Tibullus are the principal eiegiac poets. Along with these flourished Ovid (B.C. 43-18 A.D.), a prolific and sometimes exquisite. with these flourished Ovid (B.C. 43-18 A.D.), a prolific and sometimes exquisite, but too often slovenly poet. During the age of Augustus the writing of tragedies appears to have been a fashionable amusement, but the Romans attained no eminence in this branch.

After the death of Augustus the department of poetry in which greatest excelience was reached was satire, and the most distinguished satirists were Persius, and after him Juvenal (flourished about

and after him Juvenal (flourished about and after him Juvenal (flourished about 100 A.D.), both of whom expressed, with unrestrained severity, their indignation at the corruption of the age. In Lucan (A.D. 38-65), who wrote the *Pharsalia*, a historical epic on the civil war between Cesar and Pompey; and Statius (flourished about 85 A.D.), who wrote the *Thebaid*, we find a poetic coldness which vainly endeavors to kindie itself by the fire of rhetoric. In the epigrams of Martial (about 43-104 A.D.) the whoie social iffe of the times is mirrored with

rhetorician. Here also we may mention the Satyricon of Petronius, a contemperary of Nero; for although this work, a rary of Nero; for although this work, a kind of comic romance in which the author depicts with wit and vivacity the corruption and bad taste of the age, is written mainly in prose, it is interspersed with numerous pieces of poetry, and cannot be classed with any other prose work belonging to Roman literature. After a iong period of poetic lifelessness Ciaudian (flourished about 400) wrote poems inspired with no little of the spirit and grace of the earlier literature. In the Roman prose literature, eloquence, history, philosophy, and jurisprudence are the principal departments. Prose composition really began with Cato the Censor (234 B.C.), whose work on agriculture, De Re Rustica, is still extant. Among the great Roman prose writers the first place belongs to Cicero (106-43 B.C.), whose orations, philosophical and other treatises, letters, etc., are very numerous. Varro's Antiquicative. Comparis Commentaries: the Lines

sophical and other treatises, letters, etc., are very numerous. Varro's Antiquities; Cæsar's Commentaries; the Lives of Illustrious Generals, of Cornelius Nepos, probably an abridgment of a larger work; and the works of Sallust, are among the more important historical productions down to the Augustan period. Livy the historian (B.C. 59-11 A.D.), author of a voluminous History of Rome, is by far the chief representative of Augustan prose. Under Tiberius we have the inferior historian Veileius Paterculus, the anecdotist Vaierius Maximus, and the anecdotist Vaierius Maximus, and Cornelius Celsus, who has left a valuable treatise on medicine. The most important figure of the period of Nero was Seneca the philosopher, put to death by that tyrant in 65 A.D. His chief works are twelve books of philosophical 'dialogues' two books on alements, addressed and after him Juvenal (flourished about 100 A.D.), both of whom expressed, with unrestrained severity, their indignation at the corruption of the age. In Lucan (A.D. 38-65), who wrote the Pharealia, a historical epic on the civil war between Cæsar and Pompey; and Statius (flourished about 85 A.D.), who wrote the Thebaid, we find a poetic coldness which vainly endeavors to kindie itself by the fire of rhetoric. In the epigrams of Martial (about 43-104 A.D.) the whoie social iffe of the times is mirrored with attractive clearness. Valerius Fiaccus (about 70-80 A.D.), who described the Argonautic expedition in verse, endeavored to Nero, seven on investigations of nature, and twenty-two books of philosophical 'dialogues,' two books on clemency addressed to Nero, seven on investigations of nature, and twenty-two books of philosophical 'dialogues,' two books on clemency addressed to Nero, seven on investigations of nature, and twenty-two books of philosophical 'dialogues,' two books on clemency addressed to Nero, seven on investigations of nature, and twenty-two books of philosophical 'dialogues,' two books on clemency addressed to Nero, seven on investigations of nature, and twenty-two books of moral letters. Quintus Curtius compiled a history of Alexander the Great, and a contemporary writer, Columella (about 50 A.D.), a treatise on agriculture. The leading prose writers of the next period were of the n ture, but unfortunately only a part of it is in existence. Pliny the younger has eft ten books of Epistles, and a panegyric in honor of Trajan. C. Suetonius, secretary to Trajan, has left lives of the twelve Casars; Cornelius Fonto, the tutor to Marcus Aurelius, a collection of letters discovered only early in the nine. ietters, discovered only early in the nine-teenth century; and with the Attio Nights of Auius Gellius (second century) --a literary, grammatical, and antiqua-rian miscellary — the classic Roman prose writers come to a close. Roman

Religion of Ancient Rome.— The ancient religion of the Romans was quite distinct from that of Greece. Though Greek and Etruscan elements were early imported into it, it was, in fact, a com-mon inheritance of the Italians. To-wards the end of the republic the theology of Greece was imported into the literature, and to some extent into the state religion. Later on all forms were tolerated. The Roman religion was a polytheism iess numerical in deities and with less of the human element in them than that of Greece. The chief delties were Jupiter, the father of gods and men; his wife Juno, the goddess of maternity; Minerva, the goddess of intellect; Mars and Bellona, god and goddess of war; Vesta, the patron of the state, the god-dess of the national hearth where the jacred fire was kept hurning; Satnraus and Ceres, the god and goddess of agricuiture; Ops, the goddess of the harvest and of wealth; Hercules, god of gain, who also presided over contracts; Mercury, the god of traffic; and Neptunus, god of the sea. Venus was originally a goddess of agriculture, but was early identified with the Greek goddess of love, Aphrodite. There were also a host of lesser delties presiding over private and public affairs; domestic gods, the Lares and Penates, etc. The worship consisted of ceremonies, offerings, prayers, sacrifices, games, etc., to secure the favor, avert the anger, or ascertain the intentions of the gods. In private life the ceremonies were performed in the family; in matters concerning the whole community, hy the state. The highest religions power in the state was the College of Pontifices, which had control of the calendar, and decided upon the action made necessary by the auguries. The chief of this in-stitution was the pontifes maximus. The members of the College of Augurs

Roman history—the Histories and the in omens. The College of Fetiales con-Annals. The latter, giving the history of ducted treaties, acted as heralds, and the period between the death of Augustus generally superintended the relations be-and the death of Nero, is one of the greatest works of the kind in any litera-ture, but unfortunately only a part of it who presided in the various tempies; the Salli, or dancing priests of Mars; the Vestal Virgins, who had charge of the sacred fire of Vesta; the Luperci, sacred to Pan, the god of the country; the Fratres Arvaies, who had charge of houndaries, the division of lands, etc. In addition to their sales. addition to their other duties the priests had charge of conducting the various public games, etc.

Rome, the capital of the Roman King-dom, republic, and empire, and recently of Italy, and long the religious center of western Christendom, is one of the most ancient and interesting cities of the world. It stands on both sides of the Tiber, about 15 miles from the sea, the river here having a general direction from north to south, but making two nearly equal hends, the upper of which incloses a large alluvial flat, little raised above the ievel of the stream, and well known hy the ancient name of Campus Martius. A large part of the modern city stands on this flat, but the ancient city lay mostly to the east and southeast of this, occupying a series of eminences of small elevation known as the seven hills of Rome (the Capitoline, the Palatine, the Aventine, the Cuiring the Palatine, the Aventine, the Quirinai, the Viminai, the Esquiline, and the Cælian hliis), while a small portion stood on the other side of the river, embracing an eighth hili (Janicuium). The city is tolerably healthy during most of the year, but in late summer and early autumn malaria prevails to some extent. It has been greatly improved in cleanliness and heaithfulness since it became the capitai of modern Italy.

Ancient Rome. Topography, The streets of ancient Rome were crooked and narrow, the city having heen rehuilt. after its destruction by the Gauis in 390 B.C., with great haste and without regard to regularity. The dwelling-houses were often very high, those of the poorer classes being in flats, as in modern continental towns. It was greatly improved hy Augustus, who extended the limits of the city and embellished it with works of splendor. The Campus Martius dur-ing his reign was gradually covered with public buildings, tempies, porticos, the-aters, etc. The general character of the city, however, remained much the same till after the fire that took place in Nero's reign, when the new streets were made both wide and straight. In the consulted the will of the gods as revealed reign of Augustus the population is bee con-, and

and a district between it and the river, whereas the more modern wall on that side (that of Urban VIII), embraces also the Vatican Hill. The wall of Aurelian was about 11 miles in length, that of modern Rome is 14 miles. Ancient Rome had eight or nine hridges across the Tlber, of which several still stand. The open spaces in ancient Rome, of which there were a great number, were distinguished into campi, areas covered with grass; fore, which were paved; and areæ, a term applied to open spaces generally, and hence to all those which were neither campi por fore auch as the covered to campi nor fcra, such as the squares in front of palaces and temples. Of the campi the most celebrated was the camps the most celebrated was the Campus Martius, already mentioned, and after it the Campus Esquilinus, on the east of the city. Among the fora the Forum Romanum, which lay northwest and southeast, between the Capitoline and Palatine Hills; and the Forum of Trajan, hetween the Capitoline and Quirinal, are the most worthy of mention. The first was the most famous and the second the most splendid of them all The first was the most famous and the second the most splendid of them all. The great central street of the city was the Via Sacra (Sacred Way), which began in the space between the Esquiline and Cælian hilis, proceeded thence first southwest, then west, then northwest, skirting the northeast slope of the Palatine, and passing along the north side of the Forum, and terminated at the base of the Capitoline. The two principal

iieved to have amounted to about 1,300,000, and in that of Trajan was not far
short of 2,000,000. Rome is said to have
been surrounded by wails at three different times. The first of these was
ascribed to Romuius, and inclosed only
the original city on the Palatine. The
second wall, attributed to Servius Tullius,
was 7 miles in circult, and embraced all
the hills that gave to Rome the name of
the Clty of Seven Hills. The third wall
is known as that of Aurellan, because it was begun and in great part
finished by the emperor of that name.
It is mostly the same with the wall that
still bounds the city on the left or east
bank of the Tiber; hut on the right or
west bank, the wall of Aurelian embraced only the summit of the Janleulum
and a district between it and the river, stone 140 feet wide and 140 feet high, a marvei of construction, being 2 feet wider than the great dome of St. Peter's. The interior is lighted by a single aperture in the center of the dome. (See Pantheon.) Other temples were the Temple of Apollo, which Augustus bnilt of white marhle, on the Palatine, containing a splendid library, which served as a piace of resort to the peets; the Temple of Minerva, which Pompey built in the Campus Martius, and which Angustus covered with bronze; the Temple of Peace, once the richest and most beautiful temple in Rome built hy Vespasian, in the Via Sacra, which contained the treasures of the temple of Jerusalem, a splendid library, and other curiosities, hut was burned under the reign of Commodus; the temple of the Sun, which Aurelian erected to the east of the Quirinal; and the magnificent temple of Venus, which Cæsar caused to he hullt to her as the origin of in ancient. temple of Venus, which Cæsar caused to he hullt to her as the origin of his family. The principal palace of ancient Rome was the Palatium, or imperial palace, on the Palatium, or imperial palace, on the Palatium Hill, a private dwelling-house eniarged and adopted as the imperial residence by Augustus. Succeeding emperors extended and beautified it. Nero huilt an immense palace which was burned in the great fire. He began to replace it by another of similar extent, which was not completed till the relgn of Domitian. Among the theaters, those of Pompey, Cornellus Balbus, and Marcelius were the most celebrated. That of Pompey, in the Campus Martius, was of Pompey, in the Campus Martius, was capable of containing 40,000 persons. Of the Theater of Marcelius, completed B.C. 13 a portion still remains. The most magnificent of the amphitheaters was began in the space between the Esquiline and Cælian hilis, proceeded thence first southwest, then west, then northwest, known as the Coliseum or Colosseum of the Forum, and passing along the north side of the Forum, and terminated at the base of the Capitoline. The two principal roads leading out of Rome were the Via principal roads leading out of Rome were the Via mus, between the Palatine and Avenflaminia (Flaminian Way) or great tine, which was capable of containing north road, and the Via Appia (Appian Way) or great south road.

Macient Buildings.—Ancient Rome magnificent of the amphitheaters was that of Titus, completed A.D. 80, now (which see). Although only one-third of the circus was the Colosseum or Colosseum or Colosseum of the gigantic structure remains, the ruins are still stupendous. The principal of the circuses was the Circus Massimus, between the Palatine and Avenflusting and Avenflusting and the via Appia (Appian Way) or great south road. Ancient Buildings.—Ancient Rome hut its form is still distinctly traceable. was adorned with a vast number of (See Circus.) The porticos or colon-splendid buildings, including temples, palaces, public halis, theaters, amphitheaters, batha, porticos, monuments. acc., of many of which we can now form

(See Besilios.) Among them may be places and meeting-places, chiefly by the noted the spiendid Basilica Julia, comearing Christians, and which extend under memoral to Omear and completed by Authorizing the city itself as well as the neighboring gustus; and the Basilica Porcia, which country. The chief are the catacombe of was built by Cato the censor. The public baths or therms in Rome were also very numerous. The largest were the Therms of Titus, part of the substructure of which may still be seen on the Esquiline Hill; the Therms of Caracalla, even larger, extensive remains of which still exist in the south-ast of the city; and the Therms of Diocletian, the largest and most magnificent of all, part of which is converted into a church. Of the triumphal arches the most celebrated are those of Titus (A.D. 81), Severus (A.D. 81 (A.D. 203), and Constantine (A.D. 811), all in or near the Forum and all wellpreserved structures; that of Drusus (B. c. 8), in the Appian Way, much mutilated; that of Gallienus (A.D. 262) on the Esquiline Hill, in a degraded style of architecture. Among the columns the most beautiful was Trajan's Pillar in the Forum of Trajan, 117 feet in height, still standing. The bas-reliefs with which it is enriched, extending in spiral fashion from base to summit, represent the exploits of Trajan, and contain about 2500 half and whole human figures. A flight of strirs within the pillar leads to the top. The most celebrated of the ancient sewers is the Closes Masima, ascribed to Tarquinius Priscus, a most substantial structure, the outlet of which is still to be seen. The Roman aqueducts were formed hy erecting one or several rews of arches superimposed on each other across a valle, and making the structure support a waterway or canal, and by piercing through hills which interrupted the watercourse. Some of them brought water from a distance of upwards of 60 miles. Among others, the Acque Paola, the Acque Trajans, and the Acque Marsia, still remain, and contribute to the supply of the city, and tribute to the supply of the city, and also its numerous important ornamental fountains. Among the magnificent sepulchral monuments, the chief were the mausoleum of Augustus in the Campus Martius; and that of Hadrlan, on the west bank of the Tiber, now the fortress of modern Rome, and known as the Castle of St. Angelo. The city was also rich in splendid private hulldings, and in the treasures of art, with which not only the public places and streets, but likewise the residences and gardens of the principal citizens, were ornamented, the principal citizens, were ornamented, Tiber within the city. Several of these and of which comparatively few vestiges have been erected since the occupation have survived the ravages of time. The catacombs of Rome are subterraneal others are in construction. A vast galleries which were used as burial-scheme of river embankment has been

Calintus; of St. Pretextatus on the Via Appla; of St. Priscilla, 2 miles beyond the Porta Salora; of St. Agness, out-side the Porta Pia; of St. Sebastiano, beneath the church of that name; etc.

(See Catacombs.)

Modern Rome, General Features. -- It was not till the seventeenth century that the modern city was extended to its present limits on the right bank by a wail built under the positicates of Urban VIII (1623-44) and Innocent X (1644-55), and inciosing both the Janiculum and the Vatican hills. The boundary wall on the left or east bank of the river follows the same line as that traced by Aurelian in the third century, and must in many parts be identical with the original structure. The walls on both banks are built of brick, with occasional portions of stone work, and on the outside are about 55 feet high. The greater part dates from A.D. 271 to 276. The city is entered by twelve gates (several of those of earlier date being now walled up) and several railway accesses. was not tili the seventeenth century that walled up) and several railway accesses. Since Rome became the capital of united Italy great changes have taken place in the appearance of the city, many miles of new streets being huilt, and much done in the way of paving, drainage, and other improvements. It has thus just other improvements. It has thus lost much of its ancient picturesque appear ance, and is rapidly acquiring the look of a great modern city, with wide, straight streets of uniform-looking tenements having little distinctive character, It is still, however, replete with evervarying and pleasing prospects. The extensive excavations recently carried out have laid at last completely bare the remains of many of the grandest monuments of ancient Rome, notably the whole of Forum Romanum and the Via Sacra, the remains of the Temples of Saturn and of Castor and Pollux, the Temples of Vespasian, of Antoninus and Faustina, the Temple of Vesta, etc. A great number of villas and palaces and countless works of art have been brought to light. The villa-gardens, which have been for ages a distinctive feature of Rome, are rapidly disappearing, and are being covered with tenement houses, and new auburbs are springing up on every side. There are seven bridges across the by the under

Tiber, with a fine Egyptian obelisk in its center, and two handsome churches in front, standing so far apart from each other and from the adjoining buildings as to leave room for the divergence of three principal streets, the Via di Ripetta, the Corso and the Via del Babuino. The Corso, recently widened and extended, stretches for npwards of a mile in a direct line to its termination at the Piazza di Venezia, not far from the Capitol, and is the finest street in the city. The appearance of the Capitol has been entirely altered to permit the orection of a monument to Victor Emmanuel. The Via del Babuino proceeds first directly to the Piazza di Spagna, thence to the Quirinal, and hy a tunnel opens out on the Esqulline. It contains a large number of handsome edifices. The whole of the city to the east of this street, and in the triangular space included between it and the Corso, is well aired and healthy, and is regarded as the aristocratic quarter. The Ghetto, or Jews' quarter, which occupied several mean streets paraliel to the river and connected by narrow lanes, was cleared away by the municipal improvements in 1889. The city is supplied with good water partly by the above-mentioned aqueducts, which, constructed under the greatest difficulties five-and-twenty centries ago, still serve the purpose for which they were built, and remain monuments of engineering skill. The chief open spaces besides the Piazza del Popolo which they were built, and remain monu-ments of engineering skill. The chief open spaces besides the Piazza del Popolo are the Piazza S. Pietro, with its ex-tensive colonnade; the Piazza Navona, adorned with two churches and three fountains, one at each extremity and the third in the center; the Piazza di Spagna, adorned by a monumental pillar and a magnificent starcase of travertine. Spagna, adorned by a monumental pillar and a magnificent staircase of travertine, leading to the church of Trinith de Monti, conspicuously seated on an eminance above it; the Piazza Berberini, beside the palace of the same name, adorned by a beautiful fountain; the Piazza Colonna, in the center of the city, with column of Marcus Aurelius; near it, in the Piazza di Monte Citoria, is the spacious Chamber of Deputies. is the spacious Chamber of Deputies. Larger spaces for amusement or exercise have been formed in only a few spots. One of the finest is the Pincio, or 'hill of gardens,' everlooking the Piassa del

carried out to prevent the lower-lying parts of the city from being flooded as in former times.

Extrects, Squerce, etc.—Among the principal streets and squares of modern Rome are the Plazza del Popolo, immediately within the Porta del Popolo on the north aide of the city near the Tiber, with a fine Egyptian obelisk in its center, and two handsome churches in front, standing so far apart from each other and from the adjoining buildings as to leave room for the divergence of three principal streets, the Via di

Churches, stc.- The most remarkable of these is, of course, the cathedral of St. Peter, the largest and most imposing to be found anywhere, for the history and description of which see Peter's (St.).

Another remarkable church is that of Another remarkable church is that of San Giovanni in Laterano, on an isolated spot near the south wall of the city. It was built by Constantine the Great, destroyed by an earthquake in 366, restored and decorated by Giotto. Again hurned in 1860, it was rebuilt by Urban IV and Gregory XI, and has undergone various alterations and additions from 1430 till the present façade was erected in 1734. A modern extension has involved the destruction of the ancient apse. rolved the destruction of the ancient apse. From the central halcony the pope pronounces his benediction on Ascension Day; and the church is the scene of the councils which bear its name. The residence of the popes adjoined this church until the migration to Avignon; it is now occupied by the Gregorian Museum of the Lateran. Santa Maria Maggiore, which ranks third among the basilicas, was founded by Pope Liberius (352–368), but has since had many alterations and additions, the more notable being those of the fifteenth and sixteenth centuries. Its interior, adorned with thirty-six Ionic pillars of white marbie supporting the nave, and enriched with mosaics, is well preserved, and one volved the destruction of the ancient apse. with mosaics, is well preserved, and one of the finest of its class. Santa Croce of the finest of its class. Santa Croce in Gerusalemme, the fourth of the Roman basilicas, takes its name from its supposed possession of a portion of the trne cross, and a quantity of earth which was hrought from Jerusalem and mixed with its foundation. Other churches are those of San Clemente, on the Esquiline, a very ancient church, said to have been founded on the house of Clement, St. Paul's fellow-laborer, by Constantine, and containing a number of interesting frescoes by Massaccio. It consists of a lower and an upper church and from an archeological point of view is one of the most interesting in Rome. Il Gest,

on the Corso, the principal church of the Jesuits, with a façade and cupola hy Giacomo della Porta (1577), and an interior enriched with the rarest marhles and several fine paintings, decorated in the most gorgeous style, and containing the monument of Cardinal Bellarmine; Sta. Maria-degli-Angeli, originaliy a part of Diocletian's Baths, converted into a church hy Michael Angelo, one of the most imposing which Rome possesses, and containing an altar-piece by Muziano, a fine fresco by Domenichino, and the temposity Reluction Possesses. the tomh of Salvator Rosa; Sta. Maria in Ara Cœli, on the Capitollne, a very ancient church approached by a very long flight of stairs, remarkable for its architecture and for containing the figure of the infant Christ called the santissimo Cosmedin, at the northern hase of the Aventine, remarkable for its fine Alexandrine pavement and its lofty and heautlful campanile of the eighth century;

Sta. Maria sopra Minerva, so called from occurring the site of a temple of from occupying the site of a temple of that goddess, begun in 1285 and restored 1848-55, remarkable as the only Gothic church in Rome; Sta. Maria in Dominica or della Navicella, on the Cælian, is remarkable for eighteen fine columns of granite and two of porphyry, and the frieze of the nave painted in camaies hy Giulio Romano and Perino del Vaga. Among other notable churches are Sta. Maria della Pace, ceiebrated for its paintings, particularly the four Sihyls, considered among the most perfect works of Raphael: Sta Maria del Popolo in of Raphael; Sta. Maria del Popolo, interesting from the number of its fine sculptures and paintings (Jonah hy Raphael, ceiling frescess by Pinturicchio, and mosaics from Raphael's cartoons by Aloisio della Pace); Sta. Marla in Trastevere, a very ancient church, first Trastevere, a very ancient church, first mentloned in 449, re-erected hy Innocent III in 1140, and recently restored; San Paolo fuori le Mura, erected to mark the place of St. Paul's martyrdom, founded in 388, and restored and embellished hy many of the popes, burned in 1823, and since rebuilt with much splendor. It is of great size, and has double aisles and transepts borne by columns of granite. Above the columns of the pave, aisles, and transepts there is of the nave, aisles, and transepts there is a continuous frieze enriched by circular pictures in mosaic, being portraits of the popes from St. Peter onwards, each 5 feet in dlameter. Between the windows in the upper part of the nave are large medern pictures representing scenes from the life of St. Paul.

the old and new palaces of the popes and the library (220,000 vols. and over 25,000 MSS.). (See Vatican.) The palace on the Quirinal was formerly a favorite summer residence of the popes. hut is now occupled hy the King of Italy. (See Quirinal.) The Palazzo della Cancelleria is the only palace on the left bank of the river still occupied. the left bank of the river still occupied by the ecclesiastical authorities. The huilding was designed by Bramante, and is one of the finest in Rome. A series of palaces crowns the summit of the Capitol. and surrounds the Plaza del Campidoglio. It is approached from the northwest by a flight of steps, at the foot of which two Egyptian llons, and at the summit two colossal statues of Castor and Pollux standing beside their horses, are conspicuous. In the center of the piazza is a bronze equestrian statue of Marcus Aurelius (161-181). On the southeast side of the piazza is the Senatorial Palace, in which the senate holds its meetings. The building also contains the offices of the municipal administration of the senatorial palacetric states. ipal administration and an observatory. Its façade was constructed by Giacomo della Porta, under the direction, it is sald, of Michael Angelo. On the southwest side of the piazza is the palace of the Conservatori, containing a collection of antique scuipture, including objects of art discovered during the recent excavations and a gallery of pictures. Opposite is the museum of the Capitol. with interesting chiefts of ancient sculpture. interesting objects of ancient sculpture and a picture-gallery. Among private palaces may he noted the Palazzo Barberini, on the Quirinal, with a collection of paintings. The library attached to it has numerous valuable MSS., with some other literary curiosities. The Palazzo Borghese, begun in 1590, has a fine court Borghese, begun in 1590, has a fine court surrounded by lofty arcades, but is chiefly celebrated for its picture-gallery. containing the Aldohrandi Marriage and some other works of great renown. Palazzo Colonna has a picture-gallery and a heautiful garden containing several remains of antiquity. The Palazzo Corsinl has a picture-gallery and garden, and a collection of MSS., and printed books of great value. The Palazzo Farnese, one of the finest in Rome, was built under the direction of Antonio da Sanfrom the life of St. Paul.

Palaces, Picture-galleries, etc.— The Vatican, adjoining St. Peter's, comprises tiquities it once contained (Farnese Bull.

valuable art treasures; among others, on the ceiling of a casino in the garden is Rossini, Costanzi, etc. the celebrated fresco of Aurora by Guido. Trade and Manufa Villa Ludovisl, situated in the north of the city, the ancient gardens of Sallust, contains a valuable collection of ancient Villa Farnesina, on the right sculptures. hank, contains Raphael's charming creations illustrative of the myth of Cupid

and Pysche. Educational Institutions, Charities, etc. -Among educational institutions the first place is claimed by the university, founded in 1303. The most flourishing

period of the university was the time of Leo X (1513-22), under whom the building still occupied by it was begun. Attached to the university are an anatomical and a chemical theater, and cabinets of physics, mineralogy, and zoology, as also botanic gardens and an astronomical observatory. The university is attended by about 1000 students. The Collegio Romano, formerly a Jesuit college, now contains the Archæological Museum and the recently established library. Bibliothe recently established library, Biblioteca Vittorlo Emanuele — consisting mostly of the old library of the Jesults, augmented by the Ilhraries of suppressed monasteries (about 500,000 vols.). The Colleglo de Propaganda Fide has acculated exact collegiste of the catalylish. quired great celebrity as the establishment where Roman Catholic missionaries are trained. (See Propaganda.) The Accademia di San Luca, for the promotion of the fine arts, is composed of painters, sculptors, and architects, and was founded in 1595, and reorganized in 1874. Connected with it are a nicturewas founded in 1090, and reorganized in 1874. Connected with it are a picture-gallery and schools of the fine arts. Other associations and institutions connected with art, science, or learning are numerous; one of them, the Accademia de' Lincei, founded in 1603 by Galileo and his contemporaries, is the earliest scientific society of Italy. Besides the Vatican and Vittorio Emanuele libraries nentioned above, the chief are the Vatican and Vittorio Emanuele libraries mentioned above, the chlef are the Biblioteca Casanatense, 200,000 vols.; the Biblioteca Angelica, 150.000 vols.; the Biblioteca Barberini, 100,000 vols. and over 10,000 MSS., etc. For elementary education much has been done since the papal rule came to an end. Hospitals and other charitable foundations are numerous. The principal hospital, called Spirito Santo, a richly-endowed institution situated on the right hank of the Tiber, combines a foundling hospital (with accommodation for 3000), a lunatic asylum (accommodation for 500), an Grdinary infirmary (accommodation for 500).

Hercules, Flora, etc.), are now in the 1000), and a refuge for girls and aged Museum of Naples. The Palazzo Rospigand infirm persons. The chief theaters losi, erected in 1603, contains some are the Teatro Apollo, Teatro Argentina, are the Teatro Apollo, Teatro Argentina, Teatro Valle, the Capranica, Metastasio,

Trade and Manufactures. The external trade is unimportant, and is carried on chiefly by rall, the Tiber being navigated only hy small craft. There are railway lines connecting with the general system of Italy; and steamers from Civita Vecchia to Naples, Leghorn, and Genoa. A ship canai is projected to connect the city with the sea, and extensive embankment works are in progress in prevent inundation by the progress to prevent inundation by the Tiber. The chief manufactures are woolen and sllk goods, artificial flowers, earthenware, jewelry, musical strings, mosaics, and objects of art. The trade is chiefly in these articles, and in olive-oil nictures and entitudies.

oil, pictures, and antiquities.

History.— The ancient history of
Rome has already been given in the preceding article. From the downfall of the empire its history is mainly identified with that of the papacy. (See Popes, Papal States, Italy.) An important event in its history was its capture and sack hy the troops of the Constable of Bourbon in 1527. In 1798 Rome was occupied by the French, who stripped the palaces, churches, and convents of many works of art and objects of value. Pope Pius VI was taken prisoner to France, where he soon afterwards died, and a Roman republic was set up. In 1848 Pope Pius IX was driven from Rome, and another Roman republic formed and another Roman republic formed under Mazzini and Garibaldi. A French army was sent to the pope's assistance, and after a determined resistance Rome was captured by the French in July, 1849, and the pope returned and resumed his power under the protection of French bayonets (April, 1850). The rule of the pope continued till Oct. 1870, when Rome was occupied by the Italian when Rome was occupied by the Italian troops on the downfall of the French empire, and in June, 1871, the 'Eternal City' became the capital of united Italy. The king took up his residence in the Quirinal; and to accommodate the legislature and various public departments.

23,000.

Romford (rom'furd), an ancient market-town in Essex, Eng-land, is situated on the Rom, about 12 miles E. N. E. of London. It is ceichrated

for its aie, and is surrounded by market-gardens. Pop. (1911) 16,972.

Romilly (rom'ii-li), SIR SAMUEL, an English lawyer, born in 1757; died in 1818. He was called to the bar in 1783, and gradually rose to be leader in the Court of Chancery. In 1805 he was appointed chancellor of In 1805 he was appointed chancellor of Durham, and next year he hecame solicitor-general under Fox and Grenville, though he had not previously sat in parliament. At the same time he was knighted. When his party went out of office he remained in parliament, where he became distinguished hy his taient in debate, and particularly by the eloquence with which he urged the amelioration of the cruel and barharous penal code which then prevailed. His efforts, which then prevailed. His efforts, though not attended with great success during his life, certainly hastened the inst and necessary reforms which subsequently were effected, and entitle him to the name of a great and merciful reformer. Sir Samuel Romilly was at the height of popularity and reputation, when, in a fit of temporary insanity, caused by grief at his wife's death, he committed suicide in November, 1818. See Gypsics. Rommany.

Romney (rom'ni), GEORGE, an Engilsh painter, born near Dalton, in Lancashire, in 1784; died at Kendai in 1802. He was the son of a carpenter, and at first worked at his father's trade, but he afterwards was apprenticed to an itinerant artist ramed Steele, and at the age of twenty-three began the career of a painter. After a certain amount of iocal success he went to London in 1762, and next year won a prize offered by the Society of Art for a historical composition. He steadily rose in popularity, and was finally recognized as inferior only to Reynolds and postraits; but perhaps the most beauti- still wanting. He, therefore, invited the

Rome, a city and one of the county ful of his sitters was Emma Hart, afteron the Mohawk River and the Eric Canai, 15 miles N. w. of Utica. It has large and varied industries, including manufactures of machinery, iron, and builders' woodwork, copper and copper products, metallic beds, etc. It is the seat of several products, and other institutions. Pop. It is his torical compositions: but omy in his historical compositions; but he atones for these fauits by fine color, a subtle sense of beauty, and by his originality. Fine examples of his work command high prices.

Romney, New, a small but ancient town of England in Kent,

one of the Cinque Ports, formerly on the coast, hut now some distance inland.

Romorantin (ro-mo-ran-tan), a town of France, in the department of Loir-et-Cher, 28 miles s. E.

Romulus (rom'ū-ius), the mythicai founder and first king of Rome. The iegend teils us that his mother was the Vestai virgin, Syivia or Iiia, a daughter of Numitor, king of Aiba. By the god Mars she hecame the mother of the twins Romuius and Remus, who were evidend by Amuius the who were ordered by Amuius, the usurping brother of Numitor, to be thrown into the Anio. The basket containing the two boys was stranded betaining the two boys was stranded beneath a fig-tree at the foot of the Palatine Hiii, and they were suckied hy a she-woif and fed hy a woodpecker, until they were accidentaily found hy Faustulus, the king's herdsman, who took them home and educated them. When they had grown up they organized a hand of enterprising comrades, hy whose heip they deposed Amullus and reinstated Numltor on his throne. They next resolved to found a city, but as they disagreed as to the best site for it, they resolved to consult the omens. The decision was in favor of Romulus, who cision was in favor of Romulus, who immediately began to raise the waiis. This is said to have happened in the year 753 (according to others 752 or 751) B.C. Remus, who resented his defeat, leaped over the rude rampart in the same and the same and the same and the same are the same and the same are the same and the same are t scorn, whereupon Romuius siew him. This ied to a war, which was, however, ended at the entreaties of the Sabine wives, and the two states coniesced. Romulus is said finally to have miraculously disappeared in a thunder-storm (B.O. 716).

Rom'ulus Augus'tulus, the last of natural manner to the first strain. man emperors of the West. See Rome.

Ronaldshay (ron'ald-sha), North
and South, respectively the most northerly and the most southerly of the Orkne; Islands. They have small populations, engaged chiefly in the cod and herring fishery.

Roncesvalles (ron-thes-val'yes), a valley in Spanish Navarre, between Pampeluna and St. Jean de Port, where the rear of Charlemagne's army was defeated by the Gascons or Basques in 778, the paladin Roland being killed. Tradition and romance erroneously ascribe the victory to the Moors.

Ronciglione (ron-chēl-yō'nā), a small Italian town in the province of Rome, 35 miles N. w. from the capital; contains a Roman triumphal arch and a ruined castle. Pop.

Ronda (ron'da), a town of Southern Spain, in Malaga province, 40 miles west of Malaga, romantically situated on a sort of rocky promontory sur-rounded on three sides by the Guadalvin, which flows through the 'Tajo,' a deep chasm separating the old Moorish town, with its narrow tortuous ianes and from the modern Moorish towers, from the modern quarter. Over this ravine there are an old and a modern bridge, the latter about 600 feet above the water. Ronda is famous for its buil-fights, for which it has one of the largest bull-rings in Spain. It has manufactures of steel wares, cloth, etc., and is celebrated for its fruits. Pop. 20,905.

Rondeletia (ron-de-let'i-a), a genus biacese, characterized by having a caiyx with a subgiobular tube. They occur chiefly in tropical America and the West Indies. A kind of fever bark is obtained at Sierra Leone from Rondeletia febrifuga. A perfume sold as rondeletia takes
its name from this piant, but is not prepared from any part of it.

Rondo (ron'do; Italian), or RonRondo (ron'do; Italian), or Ronpart (ron-do; French), a
poem of thirteen lines, usually octosyllasquare parts.

Sabines with their wives and daughters bic, written throughout on two rhymes to a religious festival, and in the midst and arranged in three unequal stansas; of the festivities he and his followers while the two or three first words are repeated as a refrain after the eighth and thirteenth lines. The term is also applied to a musical composition, vocal or instrumental, generally consisting of three strains, the first of which closes in the original key, while each of the others is so constructed in point of modulation as to reconduct the ear in an easy and as to reconduct the ear in an easy and

Rönne (ren'ne), chief town of the Danish Island of Bornhoim, is a seaport with several ship-buliding yards, a mercantile fleet and considerable trade. Pop. 9292.

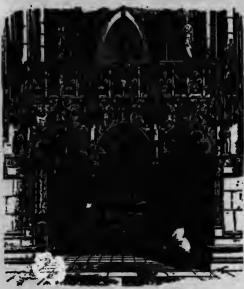

Ronneburg of Germany, in Saxe-Aitenburg, 14 miles southwest of Altenburg, contains an oid château, and has some manufactures. Pop. 6187.

Ronsard (ron-sär), Pheres DE, a French poet, born in 1524; died in 1585. At the age of tweive he became page to the Duc d'Orleans; and in 1537 he accompanied James V of Scotiand and his bride, Madeiens of France, back to their kingdom. He also France, back to their kingdom. He also spent six months at the English court, and after his return to France in 1540 was employed in a dipiomatic capacity in Germany, Piedmont, Flanders and Scotland. He was compelled, however, by deafness to abandon the dipiomatic career; and he devoted himself to literary studies, and became the chief of the band of seven poets afterwards known band of seven poets afterwards known as the 'Piéiade.' Ronsard's popularity and prosperity during his life were very great. Henry II, Francis II, and Charies IX esteemed him, and the last bestowed accorded abbasies and priories on the poet. several abbacies and priories on the poet. His writings, consisting of sonnets, odes, hymns, eclogues, elegles, satires and a fragment of an epic poem, La Franciade, were read with enthuslastic admiration. Ronsard combines magnificent language and imagery with a delicate sense of harmony.

Röntgen (reunt'gen), WILLIAM Kon-RAD, physicist, born at Len-nep, Prussia, in 1845. He studied at Zürich, where he took his doctor's degree in 1869, and was professor of physics at Strasburg, Giessen, and after 1885 at Würzburg. In 1895 he became widely known by his signal discovery of the Röntgen rays, or X-Rays (which see).

Röntgen Rays.

Rooke (riik), Sie George, an English admiral, was born near received the nomination for Vice-President
Canterbury in 1650; died 1709. He entered the navy at an early age and rose
to be vice-admiral in 1692. For his galto be vice-admiral in 1692. For his galtered the navy at an early age and rose to be vice-admiral in 1692. For his galcommand of the expedition against Cadiz in 1702, the destruction of the French and Spanish fleets in Vigo Bay (1702), and a share in the capture of Gibraltar in July, 1704. In the following August he fought a French fleet of much superior force, under the Comte de Toulouse, off Malaga. The result was undecisive, and this fact was used against Rooke by his political opponents. Sir George quitted the service in disgust in 1705. He served in several parliaments as member for Portsmouth.

Roosevelt (rös'e-velt), Theodore, twenty-sixth President of the United States, was born in New York City of a prominent family of Dutch descent, October 27, 1858; died January 6, 1919, at Oyster Bay, New York. He graduated at Harvard University in 1880; engaged for a time in local study, and was graduated at Harvard University in 1880; engaged for a time in legal study, and was a Republican member of the New York Legislature 1882-84, winning distinction as a leader in reform. He subsequently spent some time in scouting and hunting life in te West, was candidate for mayor of New York in 1886, and was an active member of the United States Civil Service Commission 1889-95. He was appointed President of the New York Police Board in 1895 and in this duty showed an energy in 1895 and in this duty showed an energy in enforcing the laws that gave him a national reputation. In 1897 he was appointed Assistant Secretary of the Navy, adding to his reputation by his foresight in preparing the navy for the threatened war with Spain. On the outbreak of the war he at once resigned, recruited a regi-ment (the First Volunteer Cavalry), pop-ularly known as the 'Rough Riders,' and showed marked daring and skill in leading them in the brief campaign in Cuba. Returning as the popular hero of the war, he was nominated and elected Governor of New York in 1898, and filled this office with an energetic spirit of reform that greatly enhanced his reputation. Among his notable acts as governor were the investigation of the state and greatly with vestigation of the state canal system with regard to which there had been much talk of fraud during the previous administra-tion, the checking of predatory corpora-tions through taxation of franchises and the extension of the civil service system to include many state offices previously under political control. He desired a second term as governor in order to complete the reforms inaugurated, but in the Re-

lantry in a night attack upon the French ley on Sept. 14, 1901, raised Vice-Presificet off Cape La Hogue he was knighted dent Roosevelt to the presidency. His in 1692. His further services include the animated and picturesque career, and the position of an earnest and energetic re-former which he had filled, had made him a popular favorite, and much interest was felt as to how he would act in this elevated position. His unshakable stand against the illegal acts of the great corporations, the purchase and active developments and active developments. porations, the purchase and active development of the Panama canal, the ringing tone of reform in his messages to Congress, and his open defiance of political domination, added greatly to his standing in public esteem, and in 1904 he was nominated for President and elected by much the highest popular majority which any President ever received. During his four years' term he succeeded in having a number of bills passed which gave the government a considerable degree of control over the corporations and carried through successfully various measures of reform. The semiforeign requirements of the Panama canal and the government of the Philippine Islands were managed with ability and success, and such international questions as the Venczuela dispute and the calling of a second Hague conference added to his prestige in Europe. This was redoubled by his useful service in bringing about a treaty of pages between bringing about a treaty of peace between Russia and Japan, and at the close of his term on March 4, 1909, President Roosevelt was looked upon as one of the ablest and most forcible among the rulers of the world. His several movements in the interest of peace were acknowledged by the award to him in 1906 of the \$40,000 Nobel Peace prize. With this he endowed a Foundation for the Promotion of Industrial Peace.

Declining a second nomination for the presidency, he set out at the end of his term on a hunting excursion to eas Africa. He had previously show marked love for hunting and other door pursuits, and his year's hunting adventures in Africa were notably successful and supplied the Smithscnian Institution with a fairly complete collection of the wild game of that continent. Mrs. Roosevelt joined him at Khartoum and there began a sort of triumphal journey through the capitals of Europe unequaled since Grant's. He was greeted everywhere as the representative American and received by the rulers of the various countries with royal honors. He made a number of and delivered notable lectures at the Sorbonne,

Paris, and at Berlin, Oxford and Christiania Universities, all of which conferred degrees upon him. During his stay in England the death of King Edward VII occurred and Mr. Roosevelt was appointed the special ambassador of the United States at the funeral. On June 18, 1910, he landed at New York to re-18, 1910, he landed at New York to receive the greatest welcome ever accorded an American citizen returning to his native land. Among the many thousands who marched in the great parade of welcome was his old regiment, the Rough Riders. During his absence a split had occurred in the Republican party occasioned by the Ballinger-Pinchot controversy and resulting in a division of the party into Conservatives, supporting Taft, and Progressives, opposing him. Both parties tried to secure Roosevelt's support as the recognized leader of the Republican party. After an unsuccessful effort to party. After an unsuccessful effort to carry New York for the Republicans, he withdrew for a time from public activity, devoting himself to editorial work on the oevoting nimself to entorial work on the Ostbook. His support of Pinchot (Taft supporting Ballinger) led to a gradual widening of the split in the party. In 1910 he made a tour in which he expounded the theory of the New Nationalism, a program of reform, and in 1912 he added to the program in his famous Charter of Democracy speech before the Charter of Democracy speech before the Ohio Constitutional Convention. In 1912 he emerged as Republican candidate for president. He vigorously denounced the methods of the Republican National Convention. the methods of the Republican National Convention, from which his supporters withdrew and organized a Progressive party, nominating him as its candidate. While making a round of campaign speeches he was shot by a lunatic at Milwaukee on October 14, and narrowly escaped a fatal wound. He was defeated in the November election, receiving 38 also waukee on October caped a fatal wound. He was used the November election, receiving 38 electoral and 4,168,564 popular votes. He subsequently made a journey of exploration in South America, where he made a number of addresses before universities and learned societies, and explored the River of Doubt [which was later named the Rio Téodoro (q. v.) in his honor], the discovery of which he announced on his speaker, his style was forceful, fluent and return to New York in 1914. He was nominated by the Progressive Party for president in 1916, but declined the nomipresident in 1916, but declined the nomipr didate. Ts.ing up editorial work again he became an extensive contributor to magazines and newspapers. From the outbreak of the World war (see European Wer) he was an ardent champion of American preparedness and of the cause of the Allies against the Central Powers, and after the sinking of the Lucitania

strongly urged the declaration of war by the United States against Germany. On the entry of the United States into the World war, Colonel Roosevelt offered to raise and lead to France a complete divi-sion. Denied this opportunity, he devoted his great powers to the arousing of Amer-ican patriotism, the sale of Liberty Bonds and to counteracting the spread of Gerand to counteracting the spread of German propaganda in the United States. Of his four sons, Lieutenant-Colonel The-Or his four sons, Lieutenant-Colonel The-odore, Jr., Captain Archibald, and Lieu-tenant Quentin won commissions in the United States Army and Captain Kermit in the British Army. The death of Quen-tin, who was killed in an erial battle over the German lines, July 17, 1918, threw a shadow over the last months of Colonel Rossavalt's life and various ille-Colonel Roosevelt's life and various ill-nesses led to his removal on several occa-sions to the Roosevelt Hospital. He re-turned home on Christmas Day, 1918, from the last of these, and on January 6, 1919, the great American passed away. Almost as one man the nation stood Almost as one man the nation stood united in a sense of deep regret and personal bereavement. A period of mourning was ordered by President Wilson for the Army and Navy and government departments. The funeral rites were very simple and the body was laid to rest in the little cemetery at Oyster Bay, Long Island, near his home.

Aside from his official life, Roosevelt's career of great activity along diversified

career of great activity along diversified he impressed his personality to an ex-traordinary degree on the American peo-ple. His literary output was of a high order and included not only scholarly can university and many foreign ones.
He was a member of the American Academy of Arts and Letters, and in 1912 was elected president of the American Historical Association. Among Roosevelt's published works elt

Roosevelt, a borough in Middlesex miles s. of Elizabeth. It was founded in 1906, when the districts of Carteret, Chrome and East Rahway were consolidated. Pop. 8083.

the most important Roosevelt Dam, the most in the Salt feature of the Salt River Project (q. v.), an undertaking of the U. S. Reclamation Service for the irrigation of land in the valley of the Salt River, Arizona. The Roosevelt Dam is located in the mountains, 75 miles northeast of Phonix, Arizona, in a narrow gorge of the Salt River. The dam is built on a curve upstream, is 286 feet high from foundation to parapet, 235 long at

the base and 1080 feet long on top.

It contains about 340,000 cubic yards of masonry, and is constructed of broken range cyclopean rubble thoroughly bonded together. The reservoir outlet is through a tunnel about 500 feet long, in which six gates are placed, which are used for ships. gates are placed, which are used for sluic-ing and for regulating the flow from the reservoir. With the reservoir full to reservoir. With the reservoir full to capacity, these gates can discharge about capacity, these gates can discharge about 10,000 cubic feet of water per second. Two spillways, each about 200 feet long, carry the flood waters around the dam. The dam backs up the waters of Salt River and Tonto Creek for a distance of about 16 miles, forming a lake 45 miles long and from one to two miles wide, containing about 450,000,000,000 gallons of water, sufficient to irrigate 240,000 acres of land. The cost of the dam was \$6,500,000. It was completed on February 5, 1911, and opened on March 18, 1911, by President Theodore Roosevelt, for whom the dam was named. the dam was named.

Root, George Frederick, song writer, born at Sheffield, Massachusetts, in 1820; died in 1895. He wrote

numerous popular songs, some of which were Hazel Dell; Rosalie, the Prairie Flower; Tramp, Tramp, Tramp, etc.

Root, ELIHU, statesman, born at Clinton, New York, Feb. 15, 1845. He graduated in law at the New York University Law School in 1867, became eminent as a lawyer, and was United States district attorney for the southern district of New York 1883-85. He entered President McKiniey's cabinet as Secretary of War in 1899, resigning in January, 1904. In July, 1905, he succeeded John Hay as Secretary of State, and in 1909 was elected United States senator from New York.

Rope (rop), a general name applied

(rop), a general name applied to cordage over 1 inch in cir-Rope cumference. Ropes are usually made of hemp, fiax, cotton, coir, or other vegetable fiber, or of iron, steel, or other metallic wire. A hempen rope is composed of a certain number of yarns or threads which are first grown or twisted into which are first spun or twisted into strands, and the finished rope goes under special names according to the number and arrangement of the strands of which it is composed. A hawser-laid rope is composed of three strands twisted lefthand, the yarn being laid up right-hand. A cable-laid rope consists of three strands of hawser-laid rope consists of three strands of hawser-laid rope twisted right-hand; it is called also water-laid, or right-hand rope. A shroud-laid rope consists of a central strand slightly twisted, and three strands twisted around it, and is thus called also four-strand thus called also four-strand rope. A flat rope usually consists of a series of hawser-laid ropes placed side by side and fastened together by sewing in a zigzag direction. Wire ropes are made of a certain number of wires twisted into the requisite number of strands, and are now extensively used in the rigging of ships as well as for cables. For greater flexi-bility hempen cores are used; thus for instance we may have a rope of six strands around a hempen core, each strand consisting of six wires around a smaller hempen core. Steel wire makes a considerably stronger rope than iron wire. Coir ropes are much used on board ships,

as, though not so strong as hemp, they are not injured by the salt water.

Ropes (ropz), John Codman, historian, born of American parents at St. Petersburg, Russia, April 28, 1836.

He studied at Harvard Law School and was admitted to the bar in 1861. He organised the Military Historical Society of Massachusetts, and was active in inducing the United States government to

Rosamond (rös'a-mond), commonly called Fair Rosamond, the mistress of Henry II of England, was the daughter of Walter de Clifford, a knight of property in various shires. She died in 1176 or 1177, soon after her connection with the king was openly avowed, and was huried in the church of Godstow Nunnery, whence, however, Hugh of Lincoin caused her body to be removed in 1191. Aimost everything eise related of Rosamond is legendary. The fable of the dagger and poison with which the jealous Queen Eleanor is said to have sought out her rival has not heen traced higher than a hailad of 1611.

Rosaniline (rō-zan'a-lin; C<sub>20</sub>H<sub>12</sub>N<sub>2</sub>), an organic hase, a derivative of aniline, crystallizing in white needles, capable of uniting with acids to form saits, which saits form the well-known rosaniline coloring matter of commerce.

Rosario (rō-sä'rē-ō), a town of the Argentine Republic, in the province of Santa Fé, on the right bank of the Parana, 170 miles northwest of Buenos Ayres. Founded in 1725 as an Indian settlement Indian settlement, it was still a humble village in 1854 when it was made a port of entry, but since then its progress has been marveious, and it is now the second city in the republic. It has communication hy rail and river with Buenos Ayres, and also hy rail and river with Buenos Ayres, and also hy railway with the interior provinces. The town is iaid out on the rectangular plan, and is provided with gas, tramways, etc. It contains foundries, brick-works, jam factories, breweries, tanneries, soap works, timber and flour mills, etc., but its commerce is of greater importance then its manufactures. greater importance than its manufactures,

large quantities of wooi, hides, and grain being exported. Pop. (1914) 224,838.

Rosary (rō'za-ri), among Roman Catholics the recitation of the Ave Maria and the Lord's Prayer a certain number of times. The name is also commonly given to the string of beads by means of which the prayers are counted. The complete or Dominican rosary consists of 150 small beads for the Aves, divided into groups of 10 by 15 twee of Southern Europe, and Memoirs large beads for the Paternosters. The ordinary rosary has only 50 small beads to of Lanzi's History of Painting in Italy; in 1839, Life and Writings of Ceratain Thomas, fifth son of William Roscoe, horn uear Liverpool in 1791; died at London in 1871; author, translator, and editor. In 1823 he published translations of Sismondi's Literative of Southern Europe, and Memoirs of Benvenuto Cellini; in 1828 a translation of Lanzi's History of Painting in Italy; in 1839, Life and Writings of Ceratain number of times. The name is also commonly given to the string of t

apple, pear, plum, cherry, peach, almond, makes up the full rosary. A doxology is nectarine, apricot, strawberry, raspberry said after every tenth Ave. The use of and similar fruits, are produced by species are also important as medicinal plants. The genera of this order are divided by Viner into six tribes, viz., Roses, Spirses, Amygdaless, Sanguisorbess, Dryadess and garded as the institutor in the Roman said after every tenth Ave. The use of rosaries was probably introduced by the Crusaders from the East, for both Mohammedans and Buddhists make use of strings of beads while repeating their prayers; but St. Dominic is usually regarded as the institutor in the Roman Church Church.

Roscelli'nus, or Roscelin (ros-lan), Joannes, a heretical theologian of the tweifth century, was a native of Northern France. A nominalist in philosophy, he was a tritheist in theology, but was forced to recant hy the synod of Soissons in 1092, while Anselm refuted him in his De Fide Trinitatis. After an attempt to make capital out of Anseim's quarrei with William Rufus, Rosceiin settled at Tours, where he entered into a violent theological controversy with Abeliard, who had been his pupil. His subsequent history is not known.

Roscius (ro'she-us), QUINTUS, most celebrated comic actor at Rome, born a siave about 134 B.C. He realized an enormous fortune hy his acting, and was raised to the equestrian rank by Sulia. He enjoyed the friendship of Cicero, who in his early years residual instruction from the great actor. ceived instruction from the great actor.

Roscius died about 62 B.C.

Roscius died about 62 B.C.

Roscoe (ros'kō), SIR HENRY ENFIELD, a distinguished chemist, horn in London, January 7, 1833, a
grandson of Wiiliam Roscoe. Educated
at Liverpool High School, University
Coilege, London and Heidelberg, Roscoe
on his return to England devoted himself
to science, especially chemistry, in which on his return to England devoted himself to science, especially chemistry, in which he did useful and brilliant work. From 1858 til 1886 he was professor of chemistry at Owens College, Manchester, and from 1885 to 1895 represented South Manchester in parliament in the Liberal interest. Honors of all kinds have flowed in upon him from the universities, and learned societies, and in Nov. 1884. and iearned societies, and in Nov., 1884, he was knighted. His works include Investigations on the Chemical Action of Light; Lessons in Flementary Chemical Action istry; Lectures on Spectrum Analysis; and, with Professor Schoriemmer, a Treatise upon Chemistry (3 vols., 1877-

centes. He edited the Novelist's Library (16 vols. 12mo, 1831-35), and translated a series of foreign novels, besides writing several books of travels.

ROSCOC, WILLIAM, historian and mission new Liverpool, March 8, 1753; died June, 1831. After a not very extensive education he was, in 1769, apprenticed to an attorney in Liverpool; and in 1774 he entered into partnership with Mr. Aspinall. He felt strongly on the question of the abolition of slavery and published a poem (The Wrongs of Africa) and several controversial pamphiets on the subject. In 1796 his great work, Life of Lorenso de Medici, was published, and at once gained him a high reputation, which was perhaps neither lessened nor enhanced by his Life and Pontificate of Leo X (1805). In 1796 Roscoe retired from the business of an attorney, and he eventually became a partner in a Liverpool banking house in 1800. For about a year, in 1806-07, he represented Liverpool, his native town, in parliament. In 1816 the bank fell into difficulties, which resuited in bankruptcy in 1820. Roscoe spent his last years in literary and scientific pursuits. and scientific pursults.

Roscommon (ros-kom'un), an in-land county of Ireland, in the east of the province of Connaught, has an area of 950 sq. miles. The sur-face is undulating or flat, except in the north. The Shannon bounds most of the county on the east. and the Suck on the north west. The chief of the numerous lakes is Lough Ree, an expansion of the Shannon. Roscommon contains iron and coal, hut limestone is the only mineral now worked. Many districts are highly fertile, and the pastures are among the best in Ireland. The chief crops are oats and potatoes. The chief towns are Roscommon, Boyle, and Castlerea. Pop. 101,-640.— The county-town, Roscommon, 80 miles from Dublin, contains the ruins of an abbey founded in 1257, and of a fine castle of about the same date. It gives the title of earl to the Dilion family. Pop. 1891.

Roscommon, WENTWORK OF, an WENTWORTH DILLON, English minor poet, was born in 1633; died in 1685. He was a favorite at the court of Charles II. His chief poems are Essay on Translated Verse, a translation of Horace's Art of Poetry, and some smaller places.

the ruins of two castles and an abbey, and a well-preserved round tower 80 feet high. Pop. about 2500.

Rose (ros), the beautiful and fragrant flower which has given name to the large natural order Rosaces, seems to be confined to the cooler parts of the northern hemisphere. The species are northern hemisphere. The species are numerous, and are extremely difficult to distinguish. They are prickly shrubs, with pinnate leaves, provided with stipules at their base; the flowers are very large and showy; the calyx contracts towards the top, where it divides into five lanceolate segments; the corolla has five petals, and the stamens are numerous; the seeds are numerous, covered with a sort of down, and are attached to the interior of the tube of the calyx, which, after flowering, takes the form of a fleshy, globular or ovoid berry. The rose is easily cultivated and its realistics are almost and vated, and its varieties are aimost endless. In the natural state the flowers are single, but double varieties, such as the damask rose (R. damascéna), Provence rose (R. centifolia), and musk-rose (R. moschâta) were introduced into Britain 800 years ago. Upwards of 1000 named varieties of rose are rose and recorded. varieties of rose are now recorded. The North American species of roses, and especially those of the United States, are few, those grown in our gardens being mostly of foreign origin. Rose, a disease. See Erysipelas.

Rose Acacia (Robinia hispida, nat. order Leguminosse), a highly ornamental flowering shrub in-habiting the southern parts of the Alle-gheny Mountains, and now frequently seen in gardens in Europe. It is a species of locust; the flowers are large, rose-colored, and lnodorous; the pods are glandular-hispid. See Locust.

Rose-apple, or Malabar Plum, a rice, a native of the East Indies. The fruit is about the size of a hen's egg, is rose-scented and has the flavor of an application. apricot.

Rose-bay, the name of several plants; as, (a) the Nerium Oleander. See Oleander. (b) The dwarf rosebay, a plant of the genus Rhododendron, having handsome flowers. (c) Epilobium angustifolium, or French willow. See Epilobium.

some smaller pleces. He has been called the only moral wrater of the reign of Charles II.

Roscrea (ros'kra), a market town of Educated at Eton and Oxford, and succeeded his grandfather in 1868. He beparary, 95 miles 8. w. of Dublin, contains

WARS OF THE, the fierce strug-Roses, Wars of the, the nerce struggle for the crown of England between the Lancastrians (who chose the red rose as their emblem) and the Yorklsts (who chose the white); it lasted with short intervals of peace for thirty (1485, 85) beginning with the batyears (1455-85), beginning with the bat-tle of St. Albans and ending with Bos-worth Fleld. See England, section His-

tory. Rosetta (ro - zet'ta; Egyptian, Rosetta hid, the ancient Bolbitine). a city of Egypt, near the mouth of the Rosetta branch of the Nile, 30 mlles w. of Alexandria. Rosetta at one time en-joyed a large transit trade, which, how-ever, has now been almost entirely di-verted to Alexandria. The town is well built and attractive in appearance. Pop.

about 196 B.C. It is of great importance from the fact that it furnished the key for the deciphering of the hieroglyphic inscriptions. The stone, discovered by the published early in the British Museum. See Hieroglyphics. Rosetta-Wood, a handsome furnitury in two books to J. V. Andrew, of Württemberg. writings as merely own times, and denormally from the East Indies. It is of durable texture, but the colors become dark by exposure.

Rose-water, water tinctured with roses by the process of distiliation. The gathering of rose-leaves for this purpose is quite an industry in the United States.

circuiar window, Rose-window, a circular window, divided into compartments by muliions and tracery radiating from a center, also cailed Catharine-wheel, and marigold-window, according to modifications of the design. It forms a fine feature in the church architecture of the thirteenth and fourteenth cen-

Rose-window, St. David's.

turles, and is mostly employed in the triangular spaces of gahles. In France It is much used, and, notwithstanding difficulties of construction, attained great size. Some examples, as that at Rheims Cathedral, are over 40 feet in diameter. Rosewood, a wood obtained from Dalbergia nigra and other trees belonging to the nat. order Leguminosee, so named hecause some kinds of it when freshly cut have a faint smell of roses. Most rosewood comes from Brazil, but it is also found in Hondura and Jamalca. The name is sometimes given to timber from other sources.

(rös - i - krö' shi - ans), members of a secret society, the first account of which was published early in the seventeenth contury in two books now generally ascribed to J. V. Andrew, a Lutheran ciergyman of Württemberg. Many regard Andrew's writings as merely a veiled satire on his writings as merely a veiled satire on his own times, and deny altogether the actual existence of any such society, in spite of the fact that since his day many persons (e.g., Cagliostro) have professed to belong to it. The aim of the Rosicrucians, or Brothers of the Rosy Cross, was said to be the improvement of humanity by the discovery of the 'true phiicsophy,' and they claimed a deep knowledge of the mysterles of nature, such as the permutation of metals, the prolongation of life. mysteries of nature, such as the permuta-tion of metals, the prolongation of life, the existence of spirits, etc. According to Andreæ the society was founded in the fourteenth century by a German baron named Rosenkreuz (i.e., 'rosy cross,') who was deeply versed in the mysterious love of the East, and who assembled the lore of the East, and who assembled the initiated in a house called the Sancti Spiritus Domus. The secret of the order, if any ever existed, was faithfully guarded hy its members; and the general cloud of mystery shrouding its history and objects has led to its heing connected in public opinion with the Cabalists, Illuminatl, etc. Some regard Rosicrucianism as the origin of Freemasonry.

Rosin (roz'in), the name given to the resin of coniferous trees employed in a solld state for ordinary purposes. It is obtained from turpentine hy distillation. In the process the oil of the turpentine comes over and the rosin remains helind. There are several varietles of rosin, varying in color from the palest amber to nearly black, and from translucent to opaque. It differs somewhat according to the turpentine from which it is derived, this being obtained from numerous species of pine and fir. Rosin is a brittle solld, almost flavorless, and having a characteristic odor. It is and having a characteristic odor. It is used in the manufacture of scaling-wax, varnish, cement, soap, for soldering, in plasters, etc. Colophony is a name for plasters, etc. the common varieties. See Raskolniks.

Roskolnicians.

Roslin (roz'iln), or Rosslyn, a small village in the county of Midlothian, about 7 miles south of Edinburgh, from Brazil, but it is also found in Hondras and Jamalca. The name is some interesting chiefly for its ruined castic interesting chiefly for its ruined cast Rosewood, OIL or, same as oil of century. The present huildings were Rhodium. See Rhodium. mostly erected since the burning of the a.

castle by the Earl of Hertford in 1554. Roslin Chapel was founded in 1654.
Roslin Chapel was founded in 1450 by Sir William St. Clair, and is a tiothic etructure forming the chancel and part of a transept of a church, no more of which was ever built. The interior is richiy adorned with exquisite carving.

Rosmini-Serbati (ros-mě'ně sér'-ba-té), Antonio, a modern Italian philosopher, born at

a modern Italian philosopher, born at Roveredo, Tyrol, in 1797; died in 1855. He entered the priesthood and founded the charitable order of Rosminians, which has branches in Italy, France, Britain, and America. He is regarded as the and America. He is regarded as the founder of modern Idealism in Italy. The chief points of his system are fuily treated in h. New Essay on the Origin of Ideas, translated into English, 1883. He was a most voluminous writer on religious and miscellaneous subjects as well as an philosophy. as on philosophy.

Rosolio Aoid (ro-zoi'ik; C. H., O.), treating hydrochloride of aniline with nitrate of soda and then boilty with sui-phuric acid. It is used in paring a bine dye.

Ross, a town near the Wye, in Herefordshire, Engiand, 11 miles s. E. of Hereford. The philanthropic John Kyrle (died in 1724). Pope's 'Man of Ross,' ls buried in the handsome parish church. Pop. (1911) 4682.

Ross, Alexander, a Scottish poet, born in 1690; died in 1784. He was schoolmaster at Lochlee in Fortarshire, and author of Helenore, the Fortanate Shepherdess, a pastoral poem in the

nate Shepherdess, a pastoral poem in the Scottish dialect, formerly very popular in the north of Scotland.

ROSS, Scotiand, ln 1783; died at Red River Settiement (Winnipeg), in 1856. He went to Canada in 1805; joined Astor's expedition to Oregon in 1810, and was afterwards a fur-trader in the Hud-son's Bay service. He is the author of Adventures of the First Settlers on the Oregon, Fur Hunters of the Far West, and the Red River Settlement.

Ross, MIEXANDER MILTON, naturalist, in 1832; died in 1897. He served in the United States army as a surgeon during the Civil war. He wrote many works on the natural history of Canada, etc., and made large collections of animals and

voyages in search of a northwest passage, and in the interval between them, accompanied Captain William Parry in his three Arctic voyages. He was promoted to the rank of post-captain in 1834, particularly for the discovery of the north magnetic pole in 1831. He commanded the expedition in the Erchus and Terror to the Antarctic Ocean in 1839-43; and on his return published a narrative of on his return published a narrative of that voyage, which had contributed largely to geographical and scientific knowledge generally. Captain Ross was knighted for his services, and received numerous other honors. In 1848 he made a voyage in the Enterprise to Baffin's Bay in search of Sir John Franklin.

Ross, in Wigtonshire, Scotland, in 1777; died in 1850. In 1786 he entered the navy, and he saw abundant service before the peace of 1815, which found him with the rank of commander. In 1817 he accepted the command of an admiralty avandation to search for a northmiralty expedition to search for a north-west passage, and in April, 1818, set sail in the Isabella, accompanied by Lieut. Parry in the Alexander. After passing through Davis' Straits and Baffin's Bay the vesseis entered Lancaster Sound, and proceeded up it for a considerable distance, when Ross conceived the erroneous idea that the sound was here brought to a termination by a chain of mountains, and accordingly returned to England. Shortly after landing he was advanced to the rank of post-captain, and the foliowing year published an account of his years. His next expedition in the iowing year published an account of his voyage. His next expedition, in the steamer Victory, was equipped by Sir Feiix Booth, and set out in May, 1829. Ross entered Prince Regent's Inlet, and discovered and named Boothla Felix and King William's Land. In 1832 he was forced to abandon his ships, and he and his crew suffered great hardships before they were picked up in August, 1833, by his oid ship the Isabella. In 1834 Captain Ross was knighted, and in the foilowing year published a narrative of his lowing year published a narrative of his second voyage. From 1839 tili 1845 Sir John Ross was consui at Stockholm. In 1850 he made a last Arctic voyage in the Felix, in a vain endeavor to ascertain the fate of Sir John Frankliu. He became a rear-admiral in 1851.

Ross and Cromarty, two northern counties of Scotiand, but generally treated of as one, Ross, Sir James Clark, Arctic and the inter consisting merely of detached the interest merely detached the interest merely detached the interest merely detached the interest merely detached

Area of the whole 8876 square islands. Area of the whoie 3876 square miles. The west coast is bold and rugged, and deeply indented with any and inlets. A great portion of Ross and Cromarty consists of irregular masses of iofty rugged mountains, some of which are from 3500 to 4000 feet in height. Sheep farming and grazing are extensively carried on. There are several fine lakes, the principal of which is Loch Maree, about 12 miles long by 2 miles hroad. Pop. 76,400.

Rossano (ros-sii'nō), an ancient town of Southern Italy, province of Cosenza, 3 miles south of the Gulf of Taranto. In the neighborhood are quarrles of aiahaster and marble. Pop. 13,-354.

(ros'bah), a village in the Prussian province of Sax-Rossbach ony, between Naumhurg and Merseburg, famous for the decisive victory which Frederick the Great obtained there, during the Seven Years' war, over the imperial and French troops under Mar-shal Souhlse, November 5, 1757.

Ross-Church, FLORENCE MARRYAT, novelist, was horn at Brighton, England, July 9, 1837, the daughter of Capt. Frederick Marryat (which see). She became editor of London Society in 1872. Among her many novels are: Too Good for Him, Her Lord and Master, How Like a Woman, The Hampstead Mystery, etc. Also, There is No Death and other works dealing with spiritualism. She died Oct. desling with spiritualism. She died Oct. 27, 1899.

Rosse (ros), WILLIAM PARSONS, THIRD of, was born at York in 1800; died in 1867. His chief attention was devoted to the study of practical astronomy, and in 1827 he constructed a reflecting telegrone. reflecting telescope, the speculum of which had a diameter of three feet, and the success and scientific value of this ina speculum twice as large. After many difficulties, he succeeded, in 1845, in perfecting machinery which turned out the huge speculum, weighing 3 tons, without warp or flaw. It was then mounted in his park at Parsonstown, on a telescope 54 feet in length with a tube 7 feet in diameter. The sphere of observation tion was immensely widened by Lord Rosse's instrument, which was chiefly

need in observations of nehulæ.

Rossetti (ros-et'të), Gabriel Charles
Dante, hetter known as DANTE GABRIEL, painter and poet, was the first successful one of which was born in London about 1828; and dled Tancredi (1813), and enjoyed a high in Aprii, 1882. His father, Gabriele degree of reputation and weaith. In Rossetti (1783-1854), a native of Itaiy 1824 he visited London, and from 1824 and an Italian poet of considerable distill 1836, he resided at Parls, where he

tinction, was a political refugee in London, where he became professor of Italian in King's College, and was known as an able though eccentric commentator upon Dante. Dante Gabriei early showed a predllection for art, studied in the Royal Academy, then became a pupli of Ford Madox Brown; and in 1848 joined Holman Hunt, Thomas Woolner, Millais, and others in founding the so-called Pre-Raphaelite Brotherhood, to whose organ, the Gorm, he contributed several poems. In 1849 he exhibited his painting of the Girlhood of Mary Virgin; but his later works, numerous as they were, were rarely seen by the public until the posthumous exhibition of a collection of his paintings in 1883, at the Royal Academy. His principal paintings are: Dante's Dream, the Salutation of Beatrice, the Dying Beatrice, La Pia, Proserpine, Sibylla Palmifera, Monna Vanna, and Venus Verticordia. His reputation as a painter was surpassed by his fame as a poet, and his poems are characterized by the same vivid imagination, mystic beauty and sensuous coloring as his paintings. In both arts he appears as a devotee of mediævalism. His chief poems are the mediævalism. His chief poems are the House of Life, a poem in 101 sonnets; the Kiny's Tragedy and other Ballads, Dante at Verona, Blessed Damozel, etc. In 1861 he published the Early Italian Poets, a series of translations in the original meters, afterwards relssued under the title of Dante and his Circle. His wife dled in 1862, two years after marriage, and from this grief he never entirely recovered.—His sister, Christina Georgina (born 1830), was a poet of high merit. Her chief works are: Goblin Market and other Poems (1862), The Prince's Progress and other Poems (1866), The Pageant and other Poems (1881), besides prose stories, books for children, and several devotional books for children, and several devotional works. She dled in 1894.— His hrother, WILLIAM MICHAEL (born 1829), an assistant-secretary in the Inland Revenue Office, distribution of the interval of the control of the critic and literary editor.

Rossini (ros-së'në), Gioachino An-Tonio, an Italian operatic composer, was born at Pesaro, Feb. 29, 1792; died Nov. 13, 1868. The son of a musician in humble life, he began to learn music very early, and hy the kindness of a patron hecame a pupil in the Lyceum at Bologna. He wrote a great number of both comic and serious operas, n.

times be found. The disease is promoted by a humid state of atmosphere, soii, or herbage. It has different degrees of rapidity, but is aimost invariably fatal.

Rot, Dry. See Dry-rot.

Rota (rō'ta), a seaport in Spain, in Andalusia, opposite and 7 miles from Cadiz. It has trade in frult and vegetables, and manufactures 'tent wine. Pop. 7471.

Rota Roma'na, the highest eccleslastical court of appeai for all Christendom during the supremacy of the popes. With the dwindling temporal power of the popes it gradually lost all authority in foreign countries.

Rotation (rō-tā'shun), in physics, is the motion of a body about an axis, so that every point in the body describes a circular orbit, the center of which lies in the axis. It is thus distinguished from revolution, or the progressive motion of a body revolving round another body or external point. If a point, which is not the center of gravity, be taken in a solid body, all the axes which pass through that point will have different moments of inertia, and there must exist one in which the moment is a maximum, and another in which it is a minimum. Those are called the principal axes of rotation. When a solid body revolves round an axis its different particles move with a velocity proportional to their respective distances from the axls, and the velocity of the particle whose distance from the axis is unity is the angular velocity of rotation.

Rotation of Crops, in agriculture and horticulture, is the system or practice of growing a recurring series of different annual crops upon the same piece of land. The system is based on the fact that different crops absorb different quantities of the various inorganic constituents of the soil, thus impoverishing it for crops of the same kind, but leaving it unimpaired, or even improved, for crops feeding upon other constituents. Different soils and climates require different schemes of rotation, but it is a tolerably universal rule that cuimiferous or seed crops should alternate with pulse, roots, herb-age, or fallow. Where land is to be for a number of years, as in permanent church dates from the time of Edward pasture, the plants composing the crop IV; the grammar school from 1483. should be of several different kinds, seek-ing a different kind of aliment; hence and extensive iron-works and mannfagard.

the propriety of sowing clover or ribwort among pasture-grasses. Rotatoria. See Rotifera.

Rotche, SEA-DOVE, or LITTLE AUK (Mergulus melanoleucus), an aquatic bird belonging to the family of auks or Alcidæ, about the size of a large pigeon. It frequents the Arctic seas, and comes to land only during the breed-

ning season. Its plumage is black on the back and wings, white on the breast.

Roth (rot), Rudolf von, a German Sanskritist, born in 1821; from 1856 professor of oriental languages at

1856 professor of oriental languages at Stuttgart, as well as university librarian. His chief work is a great Sanskrit dictionary in collaboration with Böhtingk (which see). He died in 1895.

Pothe (rö'tè), Richard, a German Protestant theologian, born in 1799. From 1823 till 1828 he was chaplain to the Prussian embassy at Rome. He afterwards held various professorial posts at Wittenberg (1828professorial posts at Wittenberg (1828-37), Heidelberg (1837-49), and Bonn (1849-54), and finally returned to Heidelberg, where be died in 1867. The work upon which his fame principally rests is his Theologische Ethik, a complete system of proculative theology. plete system of speculative theology, published in 1845–48, occupying a middle position between the rationalistic and orthodox schools of theology. According to Rothe the rational man is developed by the processes of animal evolution, but spirit is a superphysical development.

Rothenburg - ob - der - Tauber

(rō'ten-burh; 'above the Tauber'), a town of Bavaria, in Mlddle Franconia, on a beight above the Tauber, 29 miles s. s. e. of Würzburg. Its position is naturally strong, being on a promontory, and baving a deep valley on two of its sides. The walls, towers of defense, and gateways are still complete as in the days of bows and arrows. The mass of the town may be said to date from 1560, but two churches and some private dwellings are of much earlier date. Altogether it is one of the most perfectly preserved examples of a small medieval town. Pop. (1905) 8436.

Rotherham (roth'r-am), a borough of England, in the West Riding of Yorkshire, b mies northeast of Sheffield, on the Don at its junction with the Rother. The fine Perpendicular

crossed by a great railway-bridge and another for carriages and foot-passengers. Retterdam received town rights in 1340, and in 1573 it obtained a vote in the Estates of the Netherlands; hut its modern prosperity has been chiefly developed since 1830. Population, including the former town of Delfshaven, with which it was incorporated in 1886, 462,481.

Rotti, or Rottee (rot'te), one of the Dutch Sunda Islands, separated from the s. w. end of Timor by the Rotti Strait, 5 miles wide; area, 385 sq. miles;

Strait, 5 miles wide; area, 385 sq. miles; pop. about 70,000, ruled by native chiefs under the Dutch resident.

Rottlera (rot'le-ra), a genus of trop-ical hushes or moderate-sized trees, nat. order Euphorhiaceæ. R. tinctoria affords a dye. See Kamala. Rottweil (rot'vil), a town of Würt-temberg, on the Neckar, 49 miles s. s. w. from Stuttgart. It has manufactures of gunpowder and locomotives. It was an ancient free town of the empire. Pop. (1905) 9008.

Rotumah (rō'tō-mà), an island of the Pacific, nearly 300

miles N. N. w. of Fijl, 4 to 5 miles wide and about 16 long; hilly, of volcanic origin and generally fertile, producing cocoanuts in especial perfection. It was ceded to Britain by the native chiefs in 1879, and is governed by a commissioner 1879, and is governed by a commissioner as a dependency of the Fiji group. The natives are now Christians, and number about 2600.

Roubaix (rö-bā), a town of France, department Nord, 6 miles N. E. of Lille, is a highly important seat of the French textile industry, remarkable for its rapid growth, most of it being not more than fifty years old. Woolens, cottons and slik or mixed stuffs are chiefly made; also beet-sugar, machinery, etc. In 1804 it had 8700 inhabitants; in 1911 122.723.

Roubillac (rö-bi-yak), Louis Fran-cois, a French sculptor, was born at Lyons in 1695, and settled ir England in the reign of George I. In the dearth of native talent which prevailed at that period he long stora at the head of his profession. He executed a number of monuments in Westminster Ahbey, the most remarkable being that of Mrs. Nightingale. He also produced statues of Handel, Shakespere, Sir Isaac Newton, George II, and a large number of portrait busts. He had much skill in portraiture, hut his figures are often marred by striving after dramatic effect. He died in London in 1762.

Rouble (rö'hl), a silver coin, the standard of money in Russia, with a legal weight (since Jan. 1, 1886)

of 19.99 grammes, equal to about 80 cents of American money. A rouble is divided into 100 copecks. Haif and quarter roubles and smailer silver coins are also issued; but in actual circulation there is ilttle but paper money, current at about 30 per cent. below its nominai value. The gold imperlal is worth 10 roubies, the half-imperial 5 roubles.

Rouen (rö-än), the oid capital of Normandy, now chief town of department Seine-Inférieure, in France, is sluated on the Seine, 80 miles from the sea and 87 miles N. N. w. of Parls. It is the seat of an ambhichen and the is the seat of an archbishop, and the

Church of St. Ouen, Rouen.

lourth port in France. In its older parts the streets are narrow, picturesque and ill-huilt, hut interesting to the lover of mediæval architecture. The cathedral, erected in the thirteenth-fifteenth centuries, is one of the finest Gothic monuments in Normandy, though it is surpassed in beauty by the exquisite church of &.. Ouen, hegun in 1318 and finished at the close of the fifteenth century. St. Maclou (fifteenth century) is a fine example of flori Gothic. Among the secular buildings are the Palals de Justice (late fifteenth century), exuberant ln decoration; the Hotel de Ville, formerly a part of the monastery of St. Ouen; the Hotei de Bourgthérouide (fifteenth century), with fine reiiefs; the archbishop's paiace; and the distinctive Tour de ia Grosse-Horloge (1389). The new Musée, huilt in 1888, contains a large coilection of paintings, chiefly of the French school. The municipal library has 140,000 voiumes and 2500 MSS. Rouen is a husy trading piace, and has important manufactures of rouenneries (a kind of coarse striped or checked fahric) and other cottra goods. It has also manufactures of chemicais, beetroot-sugar, earthenware, confectionery, etc.; and bleach-fields, dye-works, foundries, etc. The channel of the Seine has been deepened and regulated, so that vessels of 21 feet draught can ascend to the extensive harhor and docks. Rouen is the Rotomagus of Roman times. In the ninth century it became the capitai of the Northmen or Normans; and after the Norman Conquest it remained in the possession of England tiii 1204. The English retook it in 1418, hut finally iost it in 1449. In 1431 it was the scene of the triai and execution of Joan of Arc. Corneille, Fonteneile, Géricault, and other famous men were natives of Rouen. Pop. 105,043; or including the faubourgs, 124,987.

Rouge (rözh), a very fine scarlet powder, used hy jeweiers for polishing purposes, and prepared from crystais of sulphate of iron exposed to a high temperature. The name is also given to a cosmetic prepared from safilower (which see).

Rouge Croix (rözh krwä), Rouge Dragon, pursuivants of the English Herald's College, the first so-called from the red cross of St. George; the second from the red dragon, the supposed ensign of Cadwaiadyr, the last king of the Britons. See Pursuivant.

posed ensign of Cadwaiadyr, the last king of the Britons. See Pursuivant.

Rouge-et-Noir (rözh-è-nwär; Fr. red and black'),
TRENTE - UN (trant - un; 'thirty - one'),
or Trente ET Quarante (trant-è-ka-rant; 'thirty and forty'), a modern game of chance played with the cards belonging to six complete packs. The punters or players stake upon any of the four chances: rouge, noir, couleur, and inverse. The banker then deais a row of cards for noir, until the exposed pips number hetween 30 and 40 (court-cards count 10, aces 1), and a similar row for rogue. That row whis which most nearly approaches the number 31, and players staking on the winning color receive their stake douhied. Couleur wins if the first card turned up in the deal is of the winning color; in the contrary case inverse wins. When the num-

a part of the monastery of St. Ouen; the ber of pips in both rows are equal it is a Hotel de Bourgthéroulde (fifteenth century), with fine reliefs; the archbishop's both happen to count exactly 31 it is a palace; and the distinctive Tour de is refait de trente-et-un, and the hanker Grosse-Horloge (1389). The new Musée, claims one-haif of all stakes. This iast huilt in 1888, contains a large collection condition piaces the banker at an advance paintings, chiefly of the French school. The municipal lihrary has 140,000 voiper cent. on all sums staked.

Rouget de Lisle. See Marseillaise

Rough Riders, a name coined by William F. Cody ('Buffaio Bill'), for use in his 'Wild West' show, indicating the men who carried messages over the West in early frontier times. The name was given to the cowhoy regiment organized hy Theodore Roosevelt for the Spanish-American war; aiso to the 2d United States voiunteer cavalry. These were made up largely of western ranchmen.

Roulers (rö-lär; Fiemish, Rousse-laere), town of Belgium, in West Flanders, on the Mandei, 17 miles south of Bruges. The chief industrial establishments are cotton and wooien factories; and it has an important linear market. Pop. (1904) 24.548

tories; and it has an important linen market. Pop. (1904) 24,548.

Roulette (rö-let'; Fr. 'iittle wheel'). a game of chance, in which a small ivory bail is thrown off by a revolving disk into one of 37 or 38 compartments surrounding it, and numbered from 1 to 36, with one or two zeros. Players who have staked upon the number of the compartment into which the hall fails receive thirty-six times their stake; less if they have staked upon more than one number. There are also other chances on which stakes may be placed.

Roumania (rö-mā'ni-a), a European kingdom, bounded by Austria-Hungary, Servia, Bulgaria, the Black Sea and Russia; area, 52,760 sq. miles. It includes the former Danubian principalities of Wailachia and Moldavia and the province of the Dobrudsha on the Biack Sea. Pop. estimated 7,400,000. The capital is Bukharest; other chief towns are Jassy, Galatz, Bralla, and Giurgevo. The surface is mainly occupied by undulating and well-watered plains of great fertility, gradually sloping upwards to the Carpathians on the N. and W. borders, where the summits range from 2650 to 8800 feet above sealevel. The entire kingdom is in the basin of the Danube, which has a course of 595 miles in Roumania, forming the boundary with Bulgaria nearly the whole distance. Its chief Roumanian tributaries are the Olta or Aluta, Ardjis, Jalomitza. Sereth, and Pruth (on N. W. border). The Danube forms a number of marshy lakes as it approaches the alluvial region of the

e the ereth, Danas it tho Dobrudsha, through which it discharges itself into the Biack Sea hy the St. George, Sulina and Kilia channels. The climate is much more extreme than at the same latitude in other parts of Europe; the summer is hot and rainless, the winter sudden and very intense; there is almost no spring, but the autumn is long and pleasant. Roumania is an essentiality agricultural and pastoral state, fully 70 per cent. of the inhabitants heing directly engaged in hushandry. The chief cereal crops are maize, wheat, harley, rye and oats, enormous crops of wheat and maize heing produced; to-hacco, hemp, and flax are also grown; and wine is produced on the hiiis at the foot of the Carpathlans. Cattle, sheep, and horses are reared in large numbers. Excellent timber ahounds on the Carpathians. Bears, wolves, wiid hoars, large and small game and fish are plentiful. The country is rich in minerals of nearly every description, but salt, petroleum, and lignite are the only minerals worked. Manufactures are still in a rudimentary

rrade, Railways, etc.— Trade is falrly active, but is aimost entirely in the hands of foreigners; the internal trade is chiefly carried on by Jews, whose numbers and prosperity are constant sources of anxiety to Roumanian statesmen, and who are in consequence subject to certain disabilities. The chief exports are grain (especially maize), cattle, timber, and fruit; the chief imports manufactured goods, coal, etc. Germany, Great Britain and Austria-Hungary appropriate by far the greatest share of the foreign trade, the buik of which passes though the Black Sea ports. Railways, begun in 1869, have a tral length of about 2300 miles, nearly all in the hands of government, which also monopolizes salt and tohacco. The French decimal coinage has been introduced, the franc being called leu (pi. lei), the centime bani. The metric system of weights and measures has also been officially recognized, but a hewildering diversity of local standards is still common.

weights and measures has also heen officially recognized, hut a hewildering diversity of local standards is still common.

People.— The Roumanians, who cail
themselves Romani, claim to he descendants of Roman colonists introduced by
Trajan; but the traces of Latin descent
are in great part due to a later immigration, about the twelfth century, from the
Alpine districts. Their language and
history both indicate that they are a
mixed race with many constituents.
Their language, however, must he classed
as one of the Romance tongues, though
it contains a large admixture of foreign
elements. The population includes, in
addition to the Roumaniaus, large num-

bers of Jews and gypsies, and smaller numbers of Bulgars, Magyars, Greeks, Germans and Armenians. Three-fourths of the population are peasants, who until 1864 were kept in virtual serfdom by the bolars or nohles. In that year upwards of 400,000 peasant families were made proprietors of small hoidings averaging 10 acres, at a price to be paid hack to the state in fifteen years. About 4½ millions of the people belong to the Greek Church. Energetic efforts are being made to raise education from its present iow level. Ronmania has two universities (at Bukarest and Jassy), several gymnasia, and a system of free primary schools, at which attendance is compulsory.

dovernment, etc.—Roumania is a heredltary constitutional monarchy, with a
bicamerai legislature. The senate consists of various dignitaries and officials
and 110 elected members; the chamber
of deputies has 183 memhers, elected hy
all citizens paying taxes or possessed of
a certain standard of education. The
constitution, revised in 1884, closely resembles that of Beigium. The king is
assisted by a ministry of eight members.
The army is modeled on the German
system, service being compulsory from
the age of 21 to 46, the war strength being computed at 320,000. The peace
strength is about 70,000.

History.—The country that is now

strength is about 70,000. History.—The country that is now Roumania was anciently part of Dacla, which was conquered hy Trajan and made a Roman province in 106 A.D., a great many Roman colonists being then settled in it. In the third century it was overrun hy the Goths, and subsequently hy Huns, Buigars, Avars and Slavs, all of whom have left more or less distinct traces on the land and people. At the beginning of the ninth century Roumania formed part of the great Buigarian kingdom, after the fall of which, in 1019, it nominally belonged to the Eastern Roman Empire, although soon taken possession of hy Turkish tribes. Wallachia and Moldavia were long divided. About 1241 Radu Negra, 'duke' of Fogeras, is said to have founded a voivodeship in Wallachia, which finally feil under Turkish supremacy after the battle of Mohacs in 1526. The bolars ret...ned the nominal right of electing the voivodes until 1726: but thenceforward the sultan openly solution of the infortunate province so long as their power lasted. In Moldavia, Dragosh or Bogdan about 1854 founded a kingdom, much as Radu had done in Wal-

27-U-5

lachia, and it too fell under the over-lordship of the Porte after the death of the voivode Stephan the Great in 1504. The Turks subsequently introduced the same custom of selling the hospodarship or voivodeship. In both provinces the government was most frequently pur-chased by Phanariotes, Greek inhabitants of the Phanar district of Constantinople. The successive wars between Russia and Turkey were on the whole beneficial to Roumania, for the Russians gradually established a kind of protectorate over their fellow-Christians on the Danube. their fellow-Christians on the Danube. The Treaty of Paris in 1856, after the Crimean War, confirmed the suzerninty of the Porte, but preserved the rights and privileges of the Dannbian principalities, and added to them part of Bessarabia. In 1858 the two provinces, each electing Prince Couza as its hospodar, were united by a personal union, which in 1861 was formally converted into a real and national union. Couza, who assumed the title of Prince Alexander John I in 1860, was forced by a revolution to abdicate in 1866, and Prince Charles of Hohenzollern-Sigmaringen was elected in his place. In the Russo-Turkish War of 1877-78 Roumania sided with Russia, and proclaimed its independence of Tur-key. This claim was recognized by the Treaty of Berlin in 1878, but Roumania was compelled to retrocede to Russia the part of Bessarabia which it acquired at the close of the Crimean War, and to receive the Dobrudsha in exchange. In 1881 the principality declared itself a kingdom. Roumania joined in the Balkan War in 1913 (q. v.). King Charles did October 10, 1914, his nephew, Ferdinand, succeeding. Roumania remained neutral in the European war until August 28, 1916, when it joined the cause of the Entente Allies. It made a brief successful forward movement, but a complete repulse followed, the whole country being overrun. With Russia, Roumania cwas compelled to sign a treaty of peace in March, 1918, with Germany and her allies. With the collapse of the central powers in November, 1918, Roumania rentered the war and was represented in the peace conference in Paris. By the peace of 1919 her territory was nearly doubled, at the expense of Hungary and Russia. (See map of Balkan States.)

Roumelia.

Tatlermty of kinghts by Uther Pendragon, father of King Arthur, and when it was complete to have had 150 knights of approved valor and virtue. King Leodegraunce, was father of Guinevere, and assigned it as part of her dowry when she wedded Arthur. The fellowship of the Round Arthur. The fellowship of the Round Arthur. The fellowship of the Round as part of her dowry when she wedded Arthur. The fellowship of the Round as part of her dowry when she wedded Arthur. The fellowship of the Arthur himself, who admitted only 12 knights to it. All, however, unite in describing it as the center of a fellowship of valiant, pious, and noble knights. First mention of it is made in the Brut of Wace.

Round Towers, a class of tall narpowers, tapering somewhat from the base upwards, and generally with a conical top, from 60 to 130 feet in height, and from 20 to 30 in diameter. With the exception of three in Sectland, they are popular to Ireland. The doors are from powers in Fraction of the control of three in Sectland, they are popular to Ireland. the close of the Crimean War, and to re-

Round, in music, a short composition in which three or more voices starting at the beginning of stated successive phrases sing the same music in unison or octave (thus differing from the

Rounders (roun'ders), a game played with a bat and a ball by opposing teams on a piece of ground marked off into a diamond. Nine play on each side. It is very similar to baseball, which superseded it in America, though the game in its original form of rounders is still popular in England.

Round-fish, rilateralis) of the salmon

family, found in many of the lakes and rivers of the Northern United States and Canada. When in good condition it is very fat and of exquisite flavor, weighing about 2 lbs.

Roundheads, a name formerly given by the Cavaliers or adherents of Charles I, during the English civil war, to members of the Puritan or parliamentary party, who distinguished themselves by having their hair closely cut while the Cavaliers wore theirs in long ringlets.

a written protest or Round Robin, remonstrance, signed in a circular form by several persons, so that no name shall be obliged to head the list. This method of bringing grievances to the notice of superiors was first used by French officers, whence its derivation from rond ruban, 'round ribbon.'

Round Table, THE, famous in the Arthurian legends, a table for the accommodation of a select fraternity of knights, said to have been established by Uther Pendragon, father of King Arthur, and when it was complete to have had 150 knights of approved yelor, and wirtne. King Ladgerannee

ception of three in Scotland, they are peculiar to Ireland. The doors are from 6 to 20 feet from the ground, the windows small. The interior contained no stairs, but the successive stories were reached, like the doors, by means of lad-

agreed that these towers were the works of a Christianized race erected as places
refuge and as watch-towers. They
date from the eighth or ninth to the
thirteenth century. In the Irish records after 950 A. D. they are invariably called bell-towers because often mentioned as objects of attack by the Northmen. About 118 of these towers still exist in Ireland, twenty of them being in a good in 1743 obtained the post at Venice. This office he threw up, and returned to Paris in 1745, to lead a precarious life, copying music and studying science. About this time he became inthe monument to O'Connell in Glasnevin Cemetery, this being 160 feet high. The form of architecture led the way to the Romanesque style in West Germany, as instance the Cathedral at Worms. Consult Dr. George Petrie's Ecclesiastical Architecture of Ircland Anterior to the Anglo-N. rman Invasion (Dublin, 1845), and Daniel Wilson's Prehistoric Annals.

Rousay (rö'sā), or Rowsa, one of the long by 4. miles broad of Kirkwall. Pon Rousay. state of preservation. They are usually capped by a conical roof and divided into

Rousay (rö'sā), or Rowsa, one of the Orkney Islands, 5¼ miles long by 4 miles broad, and 10 miles N. of Kirkwall. Pop. about 800.

Rousseau (rō-sō), Jean Baptiste, a French poet, born in Paris

in 1670. His quarrelsome disposition and turn for ill-natured satire involved him in almost constant trouble, and he was condemned to exile in 1712 for contumacy in refusing to appear before the law courts. He spent the remainder of his life chiefly in Vienna and the Netherlands and died at Brussele in 1741. His lands, and died at Brussels in 1741. His works consist of sacred and secular odes, cantatas, epigrams, operas, comedies, epistles, etc.

Rousseau, Jean Jacques, one of the most celebrated and most influential writers of the eighteenth century, was the son of a watchmaker at Geneva, where he was born in 1712. For the first thirty-five years of his life the chief authority is his own painfully frank, but perhaps not absolutely accurate, Confessions, first published in 1782 and 1789. His youth gave little promise of his future eminence, and after a desul-

Authorities are now pretty well He now fell under the notice of Madame He now fell under the notice of Madame de Warens, a lady residing at Annecy, who sent him to a Roman Catholic institution at Turin, where he abjured Protestantism. After several fits of eccentric wandering he went to live with Mme. de Warens at Les Charmettes, a country-house near Chambéry, where they appear to have lived happily for nearly three years. From a short absence at Montpellier, however, Rousseau returned to find his place at Les Charmettes occupied by another, whereupon he departed to beby another, whereupon he departed to become a tutor at Lyons. In 1741 he went to Paris, and in 1743 obtained the post

Jean Jacques Rousseau

in which he adopted the negative side of the question whether civilization has contributed to purify manners, won a prize offered by the Academy of Dijon, and hrought him for the first time into general notice. In 1752 he brought out a successful operate (the music hy himself). and soon after a celebrated Letter on French Music. In 1754 he revisited Geneva, where he was readmitted a free Geneva, where he was born in 1712. For the first thirty-five years of his life the chief authority is his own painfully tantism. Having returned to Paris, he rank, but perhaps not absolutely accurrant, but perhaps not absolutely accurrant not accurrant perhaps not absolutely accurrant not accurran

The confession of faith of the Bayoyard vicar in Hmile was declared a dangerous attack upon religion, and the book was burned both in Paris and Geneva. Persecution, exaggerated by his own morbid sensibility, forced Rousseau to flee to Neufchâtei, then to the lie St. Plarre in the Lake of Riemes and finalism. Pierre in the Lake of Bienne, and finally Fiere in the Lake of Bienne, and finally to England, where he was welcomed by Hume, Bosweil, and others in 1766. A malicious letter by Horace Waipole unluckily roused his suspicions of his English friends, and in May, 1767, he returned to France, where his presence was now tolerated. He lived in great poverty, supporting himself by conving music and supporting himself by copying music and publishing occasional works. In May, 1778, he retired to Ermenonville near Paris, where he died in the following July, not without suspicion of suicide. His celebrated Confessions appeared at Geneva in 1782. Rousseau united an enthusiastic passion for love and freedom with an inflexible obstinacy and a strange spirit of paradox. His life was clouded by a gloomy hypoc'.ondria, often developing into suspicion of his truest friends, and embittered by an unreasonable sensitiveness, which some have described as almost actual insanity. The chief importance of his works iles perhaps in the fact that they contain the germ of the doctrines which were carried out with such authors. ried out with such ruthiess consistency in the French revolution. Rousseau was also a musical author and critic of some importance.

Roussette (rö-set'), a name some-times applied to the fru-

givorous bats generally.

Roussillon (rö-se-yon), a former prov-cupied by the department of the Pyrénées Orientales. It gave name to a family of counts. \*

Rove-beetles, or Cocktails, the popbeetles. The common species is the Ocypus olens, the black cocktail, or devil's coach-horse.' These beetles are carrion-feeders.

Roveredo (rō-vā-rā'dō), a town of Austrla, in Tyroi, 34 miles north of Verona, on the Leno, near its junction with the Adige. It is an important center of the Austrian silk manufacture and sllk trade. Pop. 10,180.

Rovigno (rō-yēn'yō), a seaport of Austria, on the s. w. coast of Istria, 40 miles south of Trieste; has two harbors, and a considerable shipping trade. The cathedral dates from the

Revigo (rō-vē'gō), a town in Italy, 28 miles s. w. of Padua, capi-

tal of a province of its name, on the Adigetto, an arm of the Adige. The town-house contains a picture-gallery and a library of 80,000 volumes. There is a handsome court-house and two leaning towers belonging to a castic erected in the tenth century. Pop. 11,174.—The province has an area of 685 sq. miles; pop. 221,904.

Rovuma (rō-vō'ma), a river of East
Africa, which rises on the
E. of Lake Nyassa, and flows nearly due
E., with a course of about 500 miles, to
the Indian Ocean. The Rovuma is not well adapted for navigation. It marks the boundary between the territory of Germany and Portugal.

Rowan-tree (rou'an), ROAN-TREE, or MOUNTAIN-ASH (Pyrus Auguparia), nat. order Rosaces, ROAM-TREE, is a native of Europe and Siberia, common in Britain, particularly in the High-iands. Its icaves are pinnate, icaflets uniform, serrated, giabrous. It has numerous white flowers in corymbs. The fruit consists of clusters of small red berries, bitter to the taste. The tree attains a height of from 20 to 40 feet, and affords timber much used by tooimakers and others. The bark is used by tanners and the berries yleid a dye. The rowan-tree was formerly regarded as an ob-ject of peculiar veneration, and a twig of it was supposed to be efficacious in warding off evil spirits. It is also called

quicken-tree and quick-beam.

Rowe (ro), Nicholas, an English dramatic poet, born in 1678 at Little Barford, Sedfordshire, was a king's scholar at Westminster under Dr. Busby, studied iaw at the Middie Tempie, but on his father's death devoted himself to literature. He filled several lucrative posts, and in 1715 he was made poet-laureate in succession to Nahum Tate. He died in 1718, and was buried in the Poets' Corner in Westminster Bowe's Poets' Corner in Westminster. Rowe's tragedies are passionate and forcible in ianguage, and his piots well conceived. His minor pieces are unimportant, but his translation of Lucan's Pharsalia has been deservedly praised. His best plays are the Fair Penitent and Jane Shore; others are the Ambitious Stepmother, Tamerlane, Ulysses, The Royal Convert, and Lady Jane Grey. His comedy of the Biter was a failure.

Rowing, is the art of propelling a boat by means of oars, which act as levers of the second order, the work being done between the power (i.e., the rower) and the fulcrum (i.e., the water, of which the actual displacement is very slight). That part of the operation during which the power is actucarrying it thus through the air into po-sition to repeat the stroke. Much skill is required to perform these operations sat-isfactorily; and in fact rowing can be icearned only from observation and practice. Technically the word 'rowing' is used by boating-men only when each oarsman has hut a single oar; when he has one in each hand he is said to 'sculi,' and the oars are cailed 'scuils.' Although rowing is certainly one of the most ancient methods of propeiling vesmost ancient methods of propeiling vessels, it has only comparatively recently come into prominence as a form of sport. Boat racing practically dates from the first quarter of the nineteenth century, and its development has lain aimost entirely in the hands of the Angio-Saxon races. The Thames has always been the leading resort of amateur oarsmanship, which had attained some little vigor before the first boat race between Oxford and Cambridge universities took place in 1829. The second took place in 1836; and since 1856 the contest has been annual, the course the contest has been annual, the course (since 1864) heing from Putney to Mort-lake, ahout 4½ miles. Of the very nu-merons amateur regattas which are held all over Great Britain, the chief is that at Heniey-on-Thames, held annually since 1839. In the United States the first amateur rowing ciuh was founded in 1834, but the sport did not make much progress until the universities of Yale (in 1843) and Harvard (in 1844) took it up, followed by other universities.
Yale and Harvard have competed annually since 1878 and most of the other universities have rowing clubs. The chief regatta is held on different courses in different years by the National Association of Amateur Carsmen, founded in ciation of Amateur Parsmen, rounded ciation of Amateur Parsmen, and other 1873. Holland, Germany, and other countries have rowing clubs of imporcountries have rowing clubs of

Honesdale, Pennsylvania, in 1845; died June 16, 1901. He became professor of physics at Johns Hopkins University in 1876 are was made a member of the National Academy of Sciences in 1881. Calls are in operation throughout the variance ous States.

Royal Household, those persons in connection with the household of the British sovereign, including the keeper of the privy-phrse and private secretary. National Academy of Sciences in 1881.

ally being applied, i.e., when the oar is He made important discoveries in magine the water, is specifically called the netic activities and invented a process stroke; while feathering is the act of for ruing diffraction gratings which is turning the blade of the oar so as to be of much value in spectrum analysis.

Rowley Regis (rou'il rê'jis), a town parallel to the surface of the water, and the surface of the water of of t Rowley Regis (rou'il re'jis), a town of Staffordshire, England, partly within the parliamentary borough of Dudley and similar to it in its industries. Pop. 37,000.

Rowlock (rô'iok), a contrivance on a boat's gunwaie on which the oar rests in rowing; as, a notch in the gunwaie, two short pegs, an iron pin, etc.

Roxa'na. See Alexander.

Roxburgh (roks'burg), Roxburghiniand border county of Scotiand, is bounded by Dunfries, Cumberiand and Northumberland, Berwick, Midlothian and Selkirk. Area, 665 sq. miles. The Cheviot Hills stretch along the south border, where the ioftiest summit is Auchope-cairn (2382 feet). The chief river is the Teviot, a tributary of the Tweed, which also traverses part of the county. The minerals are unimportant, though limestone and sandstone are abundant. Roxhurghshire is chiefly occupied by valuable sheep walks, but its arable farms are also among the best in Scotland. The important woolen manufacture is confined to the towns, of which the chief

are Hawick (county town), Jedburg and Meirose. Pop. 48,804.

Roxbury of Suffolk Co., Massachusetts, 3 miles s. w. of Boston. It was incorporated with Boston in 1867. It has many handsome residences and controlled the second second controlled to the county town. has many handsome residences and gar-dens and numerous manufactures.

Roy (roi), WILLIAM, antiquarian and geodesist, was born in 1720, near Lanark in Scotland; died in 1790. He entered the army and attained the rank of major-general. In 1746 he made the survey of Scotland afterwards known to

master of the household, lord chamberlain, vice-chamberlain, master of the horse, captains of the gentlemen-at-arms and yeomen of the guard, master of the buckhounds, eari-marshai, grand falconer, lord high almoner, hereditary grand almoner, mistress of the robes, maids of honor, lords-in-waiting, master of ceremonies, physicians in ordinary, poet-laureate, etc.

Royal Institution of Great

Britain, founded in 1790, incorporated by royal charter in 1800, for diffusing knowledge and facilitating the general introduction of mechanical inventions, and for teaching the application of science to the common purposes of life. The members are elected by bailot, and pay an admission fee and annual subscription. The hulidings at Albemarie St., Piccadilly, London, contain a laboratory, library, and museum, and among the lecturers occur the names of Dr. Thomas Young, Sir Humphry Davy, Faraday, Tyndail, Huxley, Carpenter, Lord Rayleigh and other eminent men.

Royal Society (London), The, the oidest learned society ont of Italy, was founded for the study and promotion of natural science. It owes its origin to a ciuh of learned men who were in the habit of holding weekly meetings in London as early as 1045, but the year 1600 is generally given as the year of its foundation. Charies II took much interest in the proceedings of the society, and in 1682 granted a charter to the 'President, Council, and Feilows of the Royal Society of London for Improving Natural Knowledge.' Lord Bronncker was first president of this incorporated Royal Society. Meetings are held weekly from November to June for the purpose of reading and discussing scientific papers; and the more important of these are published in the annual Philosophical Transactions, first issued in 1605, and now forming a most valuable series. Accounts of the ordinary meetings, with abstracts of papers, etc., appear also in the periodical Proceedings, begun in 1800. Scientific research has at all times been both initiated and enconraged by the Royal Society, and many of the most important scientific achievements and discoveries have been due to its enlightened methods. It deservedly enjoys an influential and semiofficial position as the scientific adviser of the British government, and not only administers the £4000 annually voted by parliament for scientific purposes, but has given suggestions and advice which have borne valuable fruit, from the voy-

age of Capt. Cook in the Endeavor in 1708 down to the Challenger expedition, more than a century later. The society has an independent income from property of less than £5000, besides the annual subscriptions of £4 from each fellow. It awards the Copley, Davy and two royal medais annually, and the Rumford medal bienniaily, for distinction in science; the first being the hiue riband of scientific achievement, and bestowed both on foreign and British savants. The Royal Society met in Gresham Coliege until 1710, with the except of eight years after the great fire c. ondon, in 1666, when they found a welcome in Arnudei House from Henry Howard, who presented his learned guests with the library purchased by his grandfather, Earl of Arundei, thus forming the nucleus of the present valuable library of the Royal Society, which contains about 50,000 volumes. From 1710 till 1780 the meetings of the society were held in Crane Court, thereafter in Somerset House, and finally since 1857 in its present quarters at Burlington He ise. The roll of the Royal Society contains practically all the great scientific names of its country since its foundation. Among its presidents have been Lordchancelior Somers. Samuel Pepys, Sir Isaac Newton, Sir J. Banks, Sir Hans Sloane and Sir Humpiry Davy.

Powel Society (Edinauger) 2, 50-

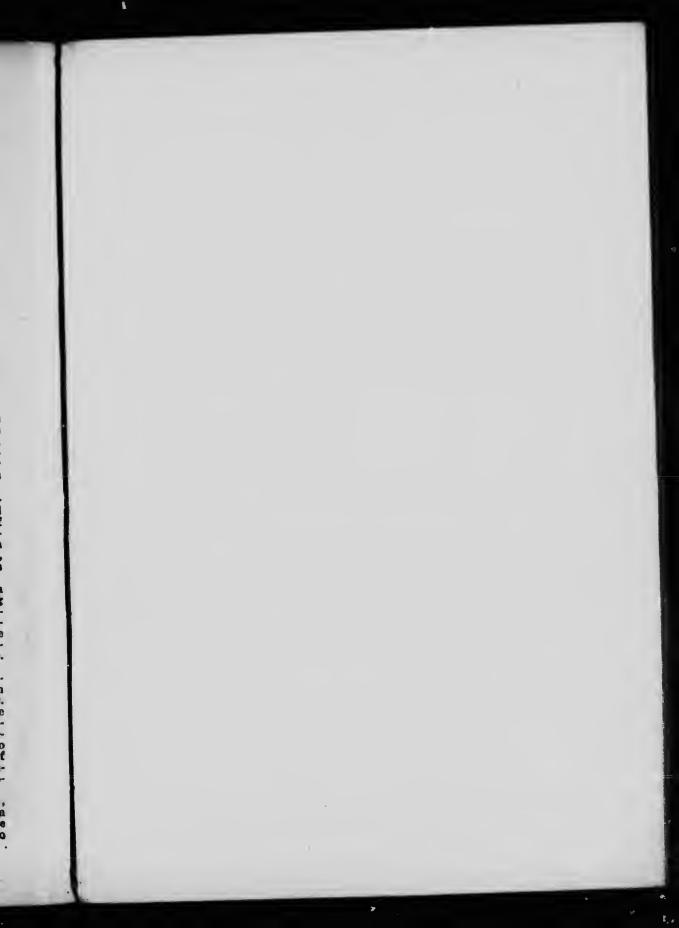

Royal Society (EDINEURGE:) A society founded and chartered in 1783 for the promotion of all hranches of physical and literary research. Among its presidents have been Sir Walter Scott, Sir David Brewster, the Duke of Argyll, and Sir William Thomson.

Royat-les-Bains (rwa-ya-la-ban), a popular bathing place of Central France, dep. Puy-de-Dôme, charmingly situated a short distance from Ciermont, 1380 feet above the sea, with warm springs, rich in hicarbonate of soda and common salt. Pop. (1906) 1451.

Roye (rwa'y), a town in the Department of the Somme, France, on the Avre River, 26 miles s. E. of Amiens. It was almost obliterated during the great war which broke out in 1914. Captured first hy the Germans, it was retaken by the French, and fell again into German hands in the great drive of March, 1918. In 1913 Roye had a population of 4600. The industries were copper, jewelry, sugar, oil and corn.

forms with more or less exactness.

Rubefacient (rö-be-fa'shi-ant), in medicine, agents which, when applied externally as stimu-

the political vortex of the period, and after playing the part of a moderate liberal, withdrew into private life. In 1810 he became professor of philosophy Siegen in Westphalla, though his childhood was spent chiefly at Cologne. After the death of his father, in 1587, Rubens' mother returned with him to Antwerp, where he received a liberal ducation, laying the foundation for his ater reputation as one of the most learned and accomplished men of his time. His bent towards painting early revealed itself, and under his first masters, Verhaegt, Adam Van Noort and Otto Van Veen, he made rapid progress, and in 1598 was admitted as a master of the guild of painters in Antwerp. In 1600 he went to Italy, where he remained till 1608, chiefly at the court of the Duke of Mantua. On his return to the Netherlands his reputation was already great, and the Archduke Albert attached him to his court, with a salary of 500 llvres. Rubens married his first wife, Isabella Brant, in 1609, and settled down in Antwerp to a successful and brilliant career, his studio crowded with pupils, to whose assistance, indeed, his detractors attributed the surprising number of pictures he turned out. In 1621 he was employed by Marle de' Medici to design for the gallery of the Luxembourg the well-known series of magnificent allegorical pictures illustrating the ilfe of that princess. After the death of his wife, in 1626, he was employed by the Archduchess Lusheila in and avoring to arrange a Isabella in endeavoring to arrange a truce between Spain and the Netherlands; ln 1628 he was engaged in the Important private negotiations of a peace between Spaln and England, in the course of which he visited Madrid and England (in 1629). He was knighted by Charies I, and his brush, never idle either in Madrid or London, decorated the celimate the course of Whitehail Rubble Walls, are walls constructhewn stones, either with or without mortar. In 'coursed rubble-work' the stones are roughly dressed and iaid in the stones are roughly dressed and iaid in who appears in many of his later works, and settled once more in Antwerp, where herizontal courses; in uncoursed rubble has continued to a more in Antwerp, where he continued to produce numerous pictures until his death in May, 1640. Rubens was indisputably the most rapid of the great masters, and was remarkable Rubefacient (rö-be-fā'shi-ant), in medicine, agents which, when applied externally as stimulants to the skin, occasion also a redness. The most commonity used rubefacients are ammonia, mustard, Cayenne pepper, oil of turpentlne, powdered ginger, etc.

cloudberry.

Ruby (rö'bi), a precious stone of a deep-red color, of which there are two varieties—the oriental and the spinel. The oriental ruby or true ruby ls a corundum formed nearly exclusively of alumina. of great hardness, and the most valuable of all preclous stones. A ruby of five carats, if perfect in color, is said to be worth ten times as much as a diamond of the same weight. Oriental rubies are found chiefly in Burmah and Sinm; inferior specimens have also oc-curred in North America and Australia. Spinel rubies consist of an aluminate of and his numerous tours formed a series magnesium, and are much inferior to the of unbroken successes. In 1858 he true rubies in hardness and value. They stablished his headquarters at St. are found in Burmah, Ceylon and Aus-

A lighter-colored variety, discovered in Badakshan, is known as the balas ruby.

Ruby-tail (Chrysis ignita), a brll-liantly coiored small in-sect, called also golden-wasp, helonging to the suborder Hymenoptera. They are sometimes called 'cuckoo-flies,' from their parasitic habit of depositing their eggs in the nests of bees and other hymenoptera.

Ruby-throat (Trochilus colubris), a species of hummingbird, so named from the brilliant rubyred color of its chin and throat. In summer it is found in all parts of North America, up to 57° N. lat., being thus remarkable for its extensive distribution. Rückert (rük'ért), FRIEDRICH, a German poet, distinguished especially for his translations of oriental poetry, and his original poems composed in the same spirit, was born at Schweinfurt in Bavaria in 1788. After some years spent in teaching he became one of the editors of the Morgenblatt in Stuttgart in 1816–17. In 1826 he became professor of oriental languages at Erlangen, and in 1841 removed in the same capacity to Berlin. After his retirement in 1849 he lived on his estate near Cohurg till his death in 1866. His near Cohurg till his death in 1866. His poems are very numerous and he claims a place among the best lyrists of Germany. Die Weisheit des Brahmanen (6 vols. 1836–39) is among his most important Eastern works; the Geharnischte Sonnetten among the hest known of his lyrical poems.

Rūdagī, FARID-EDDIN MAHOMMED ABary genius of modern Persia, died in 954. He was invited to the court of Samanid Nasr II bin Ahmad, ruler of Khorasan and Transoxiana, where he lived for many years, enjoying the highest honors. His didactic odes and epigrams express a sort of Epicurean philosophy, and his lyrics in praise of love and wine are rica in beauty. He survived his royal friend and died poor and forgotten.

Rudd (rud); Leuciscus erythrophthalhaving the back of an olive color; the

having the back of an olive color; the sides and belly yellow, marked with red; the ventral and anal fins and tail of a deep-red color. It is common throughout Europe. Its average length is from 9 to 15 inches. Called also Red-eye.

Rudder (rud'er), that part of a helm or steering appliance which acts directly on the water. See Steering.

Rudder-fish (Coreno Corangue), a fish allied to the mackerel, very common in both the Atlantic United States. The root is perennial,

and Pacific Oceans, so named from its hahlt of swimming around the sterns of ships, attracted, doubtless, by the refuse thrown overboard. The flesh is said to he coarse in flavor.

Ruddiman (rud'i-man), Thomas, a celebrated Scottish scholar, was born in 1674 in Boyndie parish, Banffshire. where his father was a farmer. He was graduated at Aberdeen University in 1694, and became schoolmaster at Laurencekirk. After engaging in various duties, from 1730 till 1752 he was keeper of the Advocates' Lihrary. He had previously won recognition 22 He had previously won recognition as one of the leading scholars of his day. His best-known work is his famous Rudiments of the Latin Tongue (1714), a ments of the Latin Tongue (1714), a book which immediately superseded all previous treatices of a similar kind, and long remained in use in the schools of Scotland. In 1715 he edited the first collected edition of George Buchanan's works, with severe strictures dictated by his own Jacohite leanings. He died in 1758 1758.

Rudolstadt (rö'dol-stat), a town in Germany, capital of the Thuringian principality. Schwarzhurg-Rudolstadt, on the Saal. To miles s. of Weimar. It manufactures cloth, porcelain, and chemicals. The prince resides in the Heideckshurg. in the Heidecksburg, on an emlnence overlooking the town. Pop. 12,407.

Rue (rö), a strong-scented herbaceous plant of the genus Ruta, nat. order Rutaceæ, a native of S. Europe,

woody; the stems about 2 feet high; the leaves alternate, petiolate and divided; and the flowers yellow. The odor of rue and the flowers yellow. The odor of rue is strong and penetrating, and the taste acrld and hitter. It has useful medicinal properties. This plant is an ancient emhlem of remembrance from its evergreen quality. The old names 'herbgrace' or 'herb of grace' refers to this fact, or perhaps to its common use in sprinkling the people with holy water, and as a charm against witchcraft. About 20 species of rue are known.—Oil of rue is obtained hy distilling garden rue (Ruta aravečlens) with water; has rue (Ruta graveolens) with water; has a strong, disagreeable odor and slightly bitter taste; and is used as an ingredient in aromatic vinegar.

Ruff (ruf; Machetes pugnas), a bird belonging to the grallatores or waders, length, 10½ to 12½ inches; plumage, which varies greatly in color, generally varlegated brown on back and wlngs, white on helly. In the hreeding season the male has its neck surrounded by long plumage which when raised form by long plumes, which when raised form

Ruff (Machetes pugnax).

a kind of tippet or ruff, whence its name. The scientific name ('pugnacious fighter') is derived from its pugnacious habits at the same season. The females are called reeves. These birds nest in swamps; the eggs, three or four in number, are pale green hlotched with brown. The ruffs are birds of passage, and are often killed on Long Island.

Ruffe (ruf; Acerina vulgāris or cernua), a European fresh-water fish of the perch family. Though rarely more than 6 or 7 inches in length it is much esteemed for the tahie. It is sometimes called the pope, though the origin of this name is unknown.

Ruffed Grouse (ruft grous; Bo- landscape painter.
North American species of grouse of the same family as the hazel-grouse of Europe and the pinnated-grouse or prairie-chicken of the Western prairies. It is 1723; died 1798. The son of rich par-

named from the tufts of feathers or sides of its neck, and frequents fe sis and thickets in the Eastern and Central United States.

Rufiji (rö-fe'ji), or Lufiji, a river of Eastern Africa which rises to the northeast of Lake Nyassa, and enters the Indian Ocean opposite the island of Mafia.

Rugby (rug'bi), a town in Warwickshire, England, on the Avon, 15 miles N. E. of Warwick, Is an Important railway junction and the seat of a famous hoys' school, one of the great 'public schools,' founded in 1567, of which Dr. Arnold hecame head-master In 1728, and had as successors Tait, afterwards archishop of Cantariums and wards archhishop of Canterbury, and Temple, bishop of London. The number of pupils is ahout 400. The town has some handsome churches, a town-hali, and number of charities. Pop. (1911) 21,762.

Rugeley (röj'li), a town in Stafford-shire, England, on the Trent, 7 miles northwest of Lichfield, has lronfoundries and extensive collieries. Pop. 4504.

Rügen (rü'gen), an island in the Bal-tic belonging to Prussia, near the coast of Pomerania; area, 377 square the coast of Pomerania; area, 371 square miles; exceedingly irregular in shape. The surface is fertile, unduiating, and in many places covered with heautiful beech forests. Wheat and rape-seed are grown, large numbers of cattle and horges are ralsed, and the fisheries are of importance. The Stubbenkammer, a sheer chalk cliff (400 feet high) at the northeast extremity, is frequently visited. chair cliff (400 feet high) at the northeast extremity, is frequently visited. The capital is Bergen. Many of the coast villages are popular sea-bathing resorts. From 1648 tili 1815 Rügen belonged to Sweden. Pop. 46,270.

Rugendas (rö'gen das), George Phillipp, a German battlepainter, was born at Augshurg in 1666. He often exposed himself to great danger studying his subjects on the field. His

studying his subjects on the field. His paintings and engravings are very numerous; among the latter are six representing the siege of Augshurg, at which he was present. His compositions are spirited and unstrained; he also executed engravings in mezzotint and etchings. He died at Augsburg in 1742. His three sons are also known as engravers; and his great-great-grandson, Johann Moritz Ruoendas (1802-58), as a genre and landscape paints.

0% er-TR arin 1761 professor of history and rhetoric at Leyden University. Ruhnken published valuable and erudite editions of Timeus' Lexicon Vocum Platonicarum Timæus' Lewicon Vocum Platonicarum (1754), Velleius Paterculus (1779), and other learned works.

Ruhr (rör), a river of Prussia, joins the Rhine at Ruhrort, about 19 miles north of Düsseldorf. It rises in Westphalla, and has a tortuous course of about 200 miles, the iower part being through the busy and prosperous Ruhr

Ruhrort (rör'ort), a town of Prussia, in the government of Düsseldorf, at the confluence of the Ruhr with the Rhine, has a large harbor, and is one of the chief centers for the coal and other trade of the important industrial district of Westphalia. Pop. 12,407. Rule Nisi (ni'si), or Rule To Show CAUSE, in English and American law, an order granted by the court on an interlocutory application (formerly always ca parte), directing the party opposed to the applicant to do or abstain from some act, unless (nisi) he can show cause why the order should not be obeyed. If cause is shown the order is 'discharged,' otherwise it is made 'absolute,' and the party ruled must obey on pain of attachment for contempt. Rule of the Road. See Road. As to the rule of

the road at sea, see Collisions.

Three Three The, an application Rule of Three, of the doctrine of proportion to arithmetical purposes by which we are enabled to find a fourth proportion to three given numbers, that is, a number to which the third bears the same articles the first doctrine. same ratio as the first does to the second. The rule is divided into two cases, Simple and compound; now frequently termed simple and compound proportion. Simple proportion is the equality of the ratio of two quantities to that of two other quantities. Compound proportion is the equality of the ratio of two quantities to another ratio, the antecedent and consequent of which are respectively the products of the antecedents and consequents of two or more ratios.

Ruling Machine, a machine for fine, accurately-spaced lines. It operates by 1753. He was apprenticed for a time the movement of a carriage driven by in a store at Saiem, then studied median accurately adjusted screw. If the cine, and finally became a school teacher, screws have 100 threads to the inch and the carriage be stopped in a line widow laid the foundation of his fortune.

ents, he was able to devote his life to ruled every 10th of a turn of the screw, the study of the classics, especially of 1000 lines will be ruled within the inch. This number may be greatly increased time after 1743 at Leyden. In 1757 he became assistant professor of Greek, and it is claimed that 20,000 lines to the became assistant professor of Greek, and linch have been ruled for diffraction This number may be greatly increased and it is claimed that 20,000 lines to the inch have been ruled for diffraction gratings. To rule graduations and circles and arcs a large, slowly-moving horizontal wheel is used, a diamond traction of the country to the cou ing point being arranged to descend at regular intervals and make a scratch or graduation. Still finer rulings can be made by a second rotation, in which the lines come midway between those first made.

Rum, the liquor obtained by distillation from the skimmings and the molasses formed in the manufacture of cane sugar. The pure distilled spirit is colorless, and receives its brown tint from the addition of caramel. Rum is obtained chiefly from the West Indies. obtained chiefly from the West Indies and British Guiana; the best sort is named Jamaica rum, no matter where manufactured. Pine-apple rum is ordinary rum flavored with sliced plne-apples; tafia is an inferior French variety of rum variety of rum.

Rum, a rocky and hilly island of the Inner Hebrides in Argyleshire, Scotland, south of Skye, greatest elevation 2553 feet, is about 20 miles in circumference. Only about one-twentieth of the surface is under cultivation; the rest is surrendered to sheep and deer. See Roumania. Rumania.

Rumelia (rö-me'li-a), or Ru'mili (land of the Romans), a former political division of Turkey in Europe, comprising ancient Thrace and part of Macedonia, and including Constantinople and Salonica. See Eastern Roumelia.

(rö'men), the upper or first stomach of ruminants (which Rumen see).

Rumex (rö'meks), a genus of plants belonging to the nat. order Polygonaceæ, occurring chiefly in the temperate zones of both hemispheres, the species of which are known by the name of docks and source. of docks and sorrels. Many are troublesome weeds. Some have been used as a substitute for rhubarb-root, and others are cultivated for their ples ant acid foliage.

Rumford (rum'ford), SIR BENJAMIN THOMSON, COUNT, natural philosopher and philanthropist, was born in Woburn, Massachusetts, March 2ti. 1753. He was apprenticed for a time in a store at Saiem, then studied mediAmerican war, and became a major; and on going to England in 1776 received a government post. In 1784 he was knighted and received permission to enter the service of the Elector of Bavaria. As a minister of war and afterwards of police, he reorganized the Bavarian army, suppressed mendicity, and carried through other important social reforms. He was made count of the Holy Roman Empire in 1791, and took his title from Rumford (now Concord) in New Hampshire, his wife's home. From 1797 till 1804 he lived chiefly in England; hut he afterwards settled in France, where he married the widow of Lavolsier, the chemist, from whom he soon separate. He died at Auteui' in 1814. Rumford was interested in science from an early period, and was the first to demonstrate the fact that heat is a mode of motion.

Rumford, a town (township) in Oxford Co., Maine, containing the ciliage of Rumford Falls. This has large water power and varied manufactures. Pop. of town 6777.

Rumi, Jalal-updin, the greatest Sufferment of Persia, born in 1207:

Rumi, Jalal-Uddin, the greatest Sufice poet of Persia, born in 1207; died in 1273. At Iconium he devoted himself to the study of mystic philosophy, founding the order of Maula ai dervishes. His works include many matchless odes and an immense collection of moral precepts in The Spiritual Mathnawi.

Ruminants (rö'mi-nantz), or Ruminants, included in the Artiodactyle or 'even-toed' section of these, and comprlsing the five families Camelidæ (camel and liama), Tragulidæ (chevrotain), Cervidæ (true deer), Camelopardalidæ (giraffe), and Bovidæ or Cavicornia (ox, sheep, goat, antelope). The faculty of ruminatlon, though it gives name to this order, is not quite peculiar to it. (See Rumination.) Ruminants are distinguished from other orders hy certain peculiarities of dentition. The most typical of the group, the ox, sheep, antelope, etc., have no incisor or canine teeth in the upper jaw, hut have instead a hardened or callous pad against which the six lower incisors bite. In the lower jaw are two canines quite similar to the incisors, and the Camelidæ and Tragulidæ possess also upper capines. In both jaws are six grinding teeth on either side, separated by an interval from the front teeth. The feet of ruminants are cloven. Horns, developed in pairs, are present in the majority of the species; either solid, as in the antlers of the true

deer, or hoilow, as in the horns of the ox, etc. The alimentary canal is very long. The stomach is d'olded into four compartments, frequently spoken of as four stomachs. The first and largest (rumen or paunch) receives the food roughly bruised by the first mastication and transmits it to the second (reticulum or honeycomb), whence it is sent hack in peliets to the mouth to he rechewed. This second mastication is called 'chewling the cud.' The food is then reswallowed into the third stomach (psaltcrium, omasum, or manyplies), and passes finally into the true digestive cavity (abomasum). Fluids may pass directly into any part of the stomach. In young ruminants, which feed upon milk, the first three 'stomachs' remain undeveloped until the animal hegins to take vegetable food. Most of the ruminants are suitable for human food. They are generally gregarious, and are represented by indigenous species in all parts of the world except Australia.

Rumination (rö-mi-nā'shun), the faculty possessed hy some mammals, notably ruminants (which see), of 'chewing the cud'—that is, of returning the ford to the mouth from the stomach for remastication prior to final digestion. Some marsupials and certain other mammals prohably share this faculty with the ruminants.

Rump Parliament, is the name by end or remainder of the Long Parliament (1640-60) was known after the expulsion of the majority of its members on Dec. 6, 1648, hy Clomwell's soldiers, commanded by Colonel Pride. Only sixty members, all extreme Independents, were admitted after this Pride's Purge, as it was called; and they, with the army, brought about the condemnation of Charles I. The Rump was forcibly dissolved by Cromwell in 1653, for opposing the demands of the army. Twice after this it was reinstated, but both times only for a hrief perlod, and finally, on March 16, 1660, it decreed its own dissolution.

Rum Shrub, a liquor prepared with rum, orange and lemon

juice and sugar.

Runciman (run'si-man), ALEXANDER, historical painter,
was born at Edinburgh in 1736. He
studied in Glasgow, and in 1766 went to
Rome, where he formed an acquaintance
with Fusell. Hitherto he had devoted
himself to landscape without much success; but about this time he turned his
section to historical painting, in which

he enjoyed some reputation at Edinburgh, where he settied in 1772. His chief work was a series of frescoes from Ossian's poems, executed for Sir J. Clerk, of Penicuik. He died in 1785.—His hrother John (1744-66) was also a painter of considerable promise.

Runcinate (run'sl-nāt), in botany, plnnatifid, with the lohes convex before and straight behind, pointing backwards, like the teeth of a double

saw, as in the dandeiion. Runcorn (run korn), an English river-port, in Cheshire, on the Mersey, 12 mlles above Liverpool, has ship-building yards and various fac-

has ship-building yards and various factories. It lies near the terminus of the Bridgewater Canai, from the completion of which, in 1773, the prosperity of the town may be dated. Pop. 17,354.

Runeberg (rö'ne - burg), Johan Kuborn at Jakohstad, Finland, in 1804; died at Borgå, Finland, in 1877. In 1837 he became professor of Latin at Borgå College, where the rest of his life was spent. His works, which hold a high rank in the literature of Sweden, inhigh rank in the literature of Sweden, include the Grave in Perrho, a poetic romance; the Elk Hunters, an epic; Hanna, an Idyllic poem; Nadeshda, a Russian romance; Kung Fjalar, a series of romances; Ensign Stal's Stories; several volumes of lyrics, comedies and prose essays.

(rönz), the letters of the Runes (rönz), the letters of the alphabets peculiar to the ancient Teutonic peoples of Northwestern Europe, found inscribed on monuments, tomb-stones, clog-calendars, bracteates, rings, weapons, etc., and only rarely and at a late period in MSS. They are formed almost invariably of straight lines, either single or in combination. Three runic alphahets (or 'futhorks,

a

y

h n

r, le o e cis

as they are sometimes called from the first six letters) have hitherto been usually recognized; the Norse, with sixteen characters, the Anglo-Saxon, with forty, and the German; hut modern researches have traced the common origin of these in an older primary Germanic or Teutonic futhork with twenty-four characters. The name is generally believed to be the same as A. Saxon ran, a mystery, implying a magical or heiro-

giyphic character, which doubtiess runle writings acquired when the lapse of time had rendered them unintelligible to the common people; and runic wands or staves were smooth wlliow-wands in-scribed with runic characters, and used in Incantations. The period of origin and the source of runes are not known. Scandinavian and Anglo-Saxon tradition ascribes their invention to Woden. Some have believed that the Scandinavians learned the art of writing from Phonician merchants trading to the Baitic; Dr. Isaac Taylor recognizes in the Greek alphabet the prototype of the the Greek alphabet the prototype of the futhorks; while others find it in the Latin. Runic inscriptions abound in Scandinavia, Denmark, Iceland, and the parts of England once known as Northumbria, Mercia and East Anglia, but they are also found heyond these limits. Weapons and instruments, inscribed with runes, and dating from 300-400 A.D., have been dug up in Norway. The use of been dug up in Norway. The use of runes gradually disappeared under the influence of the early Christian mission-aries, who proscribed them on account of their magical reputation; but in England some Christian inscriptions have been found in the runic characters. The latest runic inscriptions in Sweden date ahout 1450.

Runjeet Singh (run-jet' sing), the Runjab' and founder of the Sikh kingdom, was born in 1780; and died in 1839. His father, a Sikh chieftain, died in 1792, and the government fell into the hands and the government fell into the hands of his mother. At the age of seventeen, however, Runjeet rehelled against his mother's authority, assumed the relns himself, and began a career of ambition. The Shah of Afghanistan granted him possession of Lahore, which had been taken from the Sikhs, and Runjeet soon subdued the small Sikh states to the north of the Sutlej. The chiefs to the south of that river invoked the protection of the British, who made an arrangement with Runjeet in 1809, hoth accepting the Sutlej as the south boundary of his dominions. The ambitious prince now organized his army after the European model with the help of French and English officers, and steadily extended his power, assuming the title of rajah in 1812. In 1813 he took Attock, and in the same year assisted Shah Shuja, then a refugee from Afghanistan in return for the same year assisted Shah Shuja, then a refugee from Afghanistan, in return for the famous Koh-i-noor diamond. In 1818 he captured Mûltan; ln 1819 he annexed Cashmere, and in 1823 the Peshawur Valley. He was now ruler of the entire Punjab, and ln 1819 had already assumed the title of Maharajah, or king of kings.

In 1836 he suffered a heavy defeat from the Afghans, but he retained his power See Punjab. (run'ni-med), the meaduntil his death.

Runnimede ow on the right bank of the Thames, now a race-course, in Surrey, Engiand, 4 miles below Windsor, where King John met the barons who compelled him to sign Magna Charta, June 15, 1215. The actual signing is said to have taken piace on Magna Charta Isiand opposite Runnimede.

Rupar (rö-pär'), a manufacturing and trading town of Hindustan, in Umbalia district, Punjab, is situated on the Sutiej, 43 miles N. of Umbalia. Pop.

Rupee (rō-pē'), the standard silver coln of British India, the sterling value of which, nominaily 2s., has, owing to the depreciation of silver, of late years varied between about 1s. 11d. and 1s. 5d. A rupee equals 16 annas; is 10.326. and i rupee are also coined in silver. 100,000 rupees are called a lac; 100 iacs,

a crore. Rupert of Bavaria (rö'pert), a tinguished as a cavalry leader in the English civil war, the third son of Freder-ick V, elector paiatine and king of Bohemia, by Elizabeth, daughter of James I, of England, was born in 1619 at Prague. After some military experience on the Continent he went to England to assist his uncle, Charles I, and in 1642 was made general of the horse. He distinguished himself at Edgehiil and Chalgrove, captured Birmingham and Lichfield in 1642, and Bristol in 1643, and displayed his courage at Marston Moor and Naseby in 1645, though his impetuosity and imprudence contributed to the disastrous results of these engagements. His feeble defence of Printel excipat Value feeble defense of Bristol against Fairfax invoived him in temporary disgrace with Charies; but in 1648 he was made admiral of the English royalist fleet. He carried on a predatory navai war against the Parliament in European waters, un-tll Blake forced him to escape to the West Indies, where he preyed upon English and Spanish merchantmen somewhat after the manner of a buccaneer. In 1653 he joined Charies II at Versailles. After the Restoration he was appointed lord-nigh-admirai, and served with Monk against the Dutch. He became governor of Windsor Castle, and died in London in 1682. Many of his latter years were deveted to scientific study and he is credited with the invention of mezzotint Pop. about 20,000.

engraving, which at least he introduced into England. (See also Prince Rupert's Drops.) He was one of the founders natives of the forests of India and the devoted to scientific study, and he is

and the first governor of the Hudson's Bay Company. See Rupertsland.
Rupertsland (rö'pertz-land), an extensive but indeterminate region in the interior of Canada, named in honor of Prince Rupert, and transferred to the Hudson's Bay Company, of which that prince was one of the founders, by Charies II in 1670. This region is now included in Manitoba and the region surrounding, but its name still gives the title to the Bishop of

Rupertsland, who resides at Winnepeg.

Rupia (rö'pi-a), a skin disease, consisting of an eruption of small flattened and distinct bulks surrounded by informed are surrounded by inflamed areolæ, containing a serous, purulent, sanious, or dark bloody fluid, and foliowed by thick, dark-colored scabs over unhealthy ulcers. It is a chronic disease; and though not dangerous, is often very obstinate and tedious. It is not contagious.

Ruppin, Neu (nol-röp-en'), a manu-province of Brandenburg, on a lake of the same name. Pop. 18,556.

Rupture. See Hernia.

Rural Credit Banks, a banking lished in 1016 closely following the lines adopted for the Federal Reserve Banks. They, however, do not conduct a banking system, but confine themselves to loaning funds on farm property under sultable restrictons. Borrowers give mortgages, but these run for 40 years and can be paid in small instalments. See Federal Farm Loan Act.

Rurik (rö'rik), the founder of the Russian monarchy, who flourished in the ninth century, is generally considered to have been a Varangian or Scandinavian, and to have led a successful invasion against the Siavs of Novgored about 862. He was assisted by his brothers, who consumed tarritories to his brothers, who conquered territories to which he afterwards succeeded. He died in 879, and his famliy reigned in Russla till the death in 1598 of Feodor, son of Ivan the Terrible, when It was succeeded by the house of Romanoff. Many Russian families still clalm a direct descent

Rurki (rur'kė), or Rookkee, a manu-facturing town in Sahāranpur district, Northwest Provinces, Hindustan, on the Solāni, is the seat of the Ganges Canai workshops and iron-foundry, and the Thomason Civii Engineering College. Pop. about 20,000.

Eastern Archipelago. They may be described as large cags with round antiers, scribed as large "ags with round antiers, having an anterior basal snag, and the top forked, but the antiers not otherwise branched. The great rusa (R. hippelaphus) is a native of Java, Sumatra, etc.; it has brown, rough hair, the neck in the male being covered with a mane. The samhur (R. Aristotelis) aiso belongs to this genus. It is a large and powerful animal, inhabiting the forests and mountains of North India, generally morose and savage in disposition.

(rus'kus), a smail genus of piants, nat. order Liliacese.

See Butcher's-broom. the common term for some of Rush, the common term for some of the different species of Juncus, a genus of plants, nat. order Juncaces. The rushes have a giumaceous perianth of six sepals, glabrous filaments, three stigmas and a three-ceiled many-seeded capsule. The leaves are rigid, mostly roundish, and smooth. Rushes are found chiefly in moist hoggy situations in the colder climates. Juncus effusus is in the colder climates. Juncus effusus is very common in the United States. The leaves are often employed to form matting and the hottoms of chairs, and the pith for the wicks of candles. The name is also given to plants of various other genera hesides Juncus, and by no means

to ail species of Junous. BENJAMIN, a famous American Rush, physician, was born near Philadelphia, Dec. 24, 1745. In 1766 he went to Edinburgh, and took his degree of M. D. there in 1768. He began to practice at Philadelphia in 1769, hecoming at the same time lecturer in chemistry at the medical school of that city. He afterwards filled the chair of the theory and practice of physic in the University of Pennsylvania. He early identified himself with the patriotic party, was one of the signers of the Deciaration of Inde-pendence, and in 1787 was a member from Pennsylvania of the convention for the adoption of the federal constitution. In 1774 he was one of the founders of the first antislavery society in America. He died in 1813. Dr. Rush was a voluminous and versatile writer. His chief medical works are his Medical Inquiries and Observations, Diseases of the Mind, and Medical Tracts.

Rush, RICHARD, statesman, son of the preceding, was born at Philadelphia, Aug. 20, 1780. He was graduated at Princeton College in 1797, engaged in

to Engiand. He was recalled by President Adams in 1825 and made Secretary of the Treasury. In 1828 he was a candidate for Vice President on the ticket with President Adams. He was appointed to obtain the Smithsonian legpointed to obtain the Smithsonian legacy in 1837 and succeeded in obtaining the entire amount. In 1847 he was appointed minister to France. He retired at the close of President Poik's term, and died July 30, 1859.

Ruskin (rus'kin), John, art critic and political economist, and one of the most elegaent English prose

one of the most eloquent English prose writers of the last century, was born at London in Feb., 1819. He studied at Christ Church, Oxford; gained the New-digate prize for his poem on Salectic and Elephanta in 1839, and was graduated in 1842. His subsequent life was the very 1842. His subsequent life was the very 1842. His subsequent life of a writer and teacher. In 1867 he was appointed Rede lecturer at Cambridge, and in 1870–72, 1876–78, 1883–85 he was Siade professor of fine art at Oxford, where in 1871 he gave £5000 for the endowment

John Buskin,

of a university teacher of drawing. From 1885 Mr. Ruskin lived in seclusion at his residence of Brantwood, on Coniston Lake. He was an LLD. of Cambridge (1867), and a D.C.L. of Oxford (1871). In 1843 appeared the first volume of Modern Painters, by a Graducate of Oxford, in which Ruskin maintained the superiority of modern landscape painters, especially Turner, to the older masters, and at the same time advocated a complete revolution in the revocated a complete revolution in the reat Princeton College in 1797, engaged in ceived conventions of art and art criticates of the United States under President Madison 1814-17. In 1817 he was temporary Secretary of State under President Monroe, who appointed hip minister vocated a complete revolution in the received conventions of art and art criticals. The subsequent volumes, of which the fifth and last appeared in 1860, expanded the subject into a most compredent Monroe, who appointed hip minister underlie, or should underlie art, while similar criticism was extended to another domain of art in his Seven Lamps of Architecture (1851), and his Stones of Venice (1851-53). In 1851 Ruskin appeared as a defender of pre-Raphaelitism, which had found inspiration in his words. As a political economist and sociai reformer he was an outspoken, uncomproformer he was an outspoken, uncompromising foe of what he considered the selfish and deadening doctrines of the so-cailed Manchester school, his chief works in this sphere being Unto this Last (1862), Munera Pulveris (1872), and Fors Clavigera (1871-84), a periodical series of interest to the workingment and Fors Clavigera (1871-84), a periodical series of letters to the workingmen and laborers of Great Britain. The Guild of St. George, a kind of cultured socialistic society, founded by him in 1871, with its headquarters at Sheffield, may also be taken to represent his views. His other works were very nnmerous and varied in subjects, among the more important of them being Sesame and Lilies, The Ethics of the Dust, The Crown of Wild Olive, The Queen of the Air, etc. Elioquence, force, and subtle analysis are the prevailing characteristics of Ruskin's the prevailing characteristics of Ruskin's literary style, while his works are at the same time permeated with lofty enthusiasm for truth and beauty, and with a generous sympathy for the poor and the weak. Sometimes, however, he is betrayed into exaggeration, and not unfrequently his propositions are needlessly violent and paradoxical, occasionally even contradictory. Met at the outset with keen and even bitter criticism, he nevertheless gave the impulse to a not unimtheless gave the impulse to a not unimportant renaissance in British art, though the new birth, is in many respects, very different from the ideal he held up. very different from the ideal he held up. Scarcely less may be said of his work in political economy. He spent large sums instituting a kind of primitive agricultural community for the purpose of carrying out his views of social and industrial reform. It did not prove a success. He died Jan. 19, 1900.

Russell (rus'el), House of, an ancient English family, the head of which is the Duke of Bedford, has

Russell (rus'el), House of, an and cient English family, the head of which is the Duke of Bedford, has iong been conspicuous in English political history for its devotion to iiberal or whig principles. It claims descent from Turstain, one of the Norse invaders of Normandy, who took possession of Rozei Castle, near Caen. His descendants, Hngh de Rozel and his brother, accompanied William the Conqueror to England, where their name assumed its present form about 1200.— John Russell was constable of Corfe Castle in 1221.—Sir John Russell was speaker of the House of Commons under Henry VI, and his grandson was

created Earl of Bedford in 1550.—
WILLIAM RUSSELL, the 5th eari and father of Lord William Russeii (see below), was created Marquis of Tavistock and Duke of Bedford in 1694.—John, 4th duke (1710-71), held office in the Newcastle and Grenville ministries, and was iord-lieutenant of Ireland in 1756-62.—Francis, 5th duke (1765-1802), was distinguished fo. his services to agricuiture.—Francis, 7th duke (1788-1861), eidest brother of John, Earl Russeli (see below), was summoned to the House of Lords in 1832 before the death of his father in 1839, but held no office.—Admiral Edward Russeil, who defeated the French at the battle of La Hogue in 1692, was also a scion of this house.

Russell, John, Earl Russell, an English Liberal statesman, was the third son of the sixth duke of Bedford, was born in London in 1792; and died at Richmond in May, 1878. Educated at a private school and at Edinburgh University, he entered parliament in 1813 hefore attaining his majority. In 1819 he made his first motion in favor of parliamentary reform, the great question of which through life he was the champion. His influence in the Liberal

John, Earl Russell.

party steadily increased, and though temporarily unseated in 1826, owing to his advocacy of Catholic Emancipation, he carried a motion in 1828 against the Test Acts and thus ied to their repeal. In 1831 he was paymaster-general in Lord Grey's administration, and though not in the cabinet introduced the first Reform Bill to the House of Commons. In the exciting struggle that followed Lord John Russell was popularly accepted as

the great champion of reform. In Lord Melbourne's second cabinet (1835-41) Russeil was home secretary, and in 1839 he became colonial secretary. From 1841 till 1845 he ied the opposition against till 1845 he ied the opposition against Peel, with whom, however, he was in sympathy on the Corn Law question; and when Peel resigned, in 1846, Russeil formed a ministry and retained power, though with a small and uncertain majority, until February, 1852. He reëntered office in December, 1852, as foreign secretary under Lord Aberdeen, and in 1855 became coioniai secretary in Lord Paimerston's cabinet. He represented Great Britain at the Vienna conference, but incurred by his negotiations so much unpopularity that he resigned office in unpopularity that he resigned office in July of the same year. A period of rivairy between Lord John Russeil and Palmerston now ensued, which, however, ended in 1859, when the former became foreign secretary under his old chief, by foreign secretary under his old chief, by whom he was raised to the peerage in 1861. In 1865 Earl Russell succeeded Lord Paimerston in the leadership of the Liberal party, but when his new reform bill was rejected in 1866 the Liberals resigned. Thenceforward Earl Russell held no further office, though he warmly advocated all liberal measures. He was the author of numerous books and pamphiets, including lives of Thomas Moore, Lord William Russell and Charles Fox and Recollections and Suggestions

Moore, Lord William Russell and Charles Fox and Recollections and Suggestions (1813-73), published in 1875.

Russell, John Scott, engineer and near Giasgow in 1808. After graduating at Glasgow at the age of sixteen he became a science lecturer in Edinburgh, and in 1832-33 temporarily fliled the chair of natural philosophy at Edinburgh University. Next year he began his important researches into the nature of waves, which ied to his discovery of the wave of translation, on which he founded the waveline system of navai construcwave of translation, on which he founded the waveline system of naval construction introduced into practice in 1835. He was manager of a large ship-building yard on the Ciyde for several years, and in 1844 established a yard of his own on the Thames. He was one of the earliest advocates of iron-ciad men-of-war, and was joint-designer of the War-rior, the first English seagoing armored frigate; but the most important vessel he frigate; but the most important vessel he designed and constructed was the Great Eastern. One of his chief engineering works was the vast dome of the Vienna Exhibition of 1873, which had a clear span of 360 feet. He died at Ventnor in 1882. He was the author of The Modern System of Naval Architecture (London,

1964-65; 3 vols. folio), and other writ-

Russell, Loan William, an English statesman and political martyr, was the third son of the fifth Earl Russeli, and was born in 1639. He entered parliament in mediately after the Restoration, and in 1669 married Rachel, second daughter of the Earl of Southsmpton and widow of Lord Vaughan. He now began to take a prominent part in politics as a leader of the Whigs, animated by a bitter distrust of the Roman Catholics and a strong love of political liberty. For a brief period in 1679 he was a member of the new privy-council appointed by Charles II to ingratiate himself with the Whigs, Resigning, however, in 1680, he rendered himself conspicuous in the efforts to exclude the king's brother, the Roman Catholic Duke of York from the succession to king's brother, the Roman Catholic Duke of York, from the succession to the throne, but retired from public life when the Exclusion Bill was rejected. When the Ryehouse Plot was discovered in 1683 Russeli was arrested on a charge of high treason, and though nothing was proved against him the law was shamefully stretched to secure his conviction. He was sentenced to death and no effective the secure of the secur He was sentenced to secure his conviction. He was sentenced to death, and no efforts of his friends availed to save him. Russeii met his fate with dignity and firmness. He was beheaded in Lincoln's Inn Fields, London, in July, 1683. An act was passed in 1689 (1 William and March) reversing his attainder.

act was passed in 1689 (1 William and Mary) reversing his attainder.

Russell, William Clark, novelist, born of English parents at New York in 1844, his father being Henry Russel', the popular singer and composer. He went to sea at an early age, but abandoned his nantical career in 1865 and took to literature. He was connected with the newspaper press, but earned fame as the writer of sea stories, which are written with spirit and originality. Of these The Wreck of the Grosvenor is considered the best. Died in 1911.

Russell, Sir William Howard, war Dublin in 1821; educated at Trinity Col-Dublin in 1821; educated at Trinity Coliege, Dublin; called to the English bar in 1850. His connection with the London Times began in 1843; he was war correspondent during the Danish war of 1848, but it was his letters written from the Crimea in 1854-55 that first made him famous. He was present at Alma, Balaciava, Inkerman, and the assaults on Sebastopol, and his letters were the chief means of making public the condition of means of making public the condition of the army. He was similarly engaged during the Indian Mutiny, the American Civil war, the Prusso-Austrian war and

le-In rd the Franco-German war. He accompanied the Prince of Waies to India in 1874. He was knighted in 1895. His publications comprise The British Especition to the Crimea, Diary in India, My Diary North and South, My Diary in the Last Great War, Prince of Waies' Tour, Doctor Brady, a novel, A Visit to Chile, The Great War with Russia, etc. He died Feb. 10, 1907.

Russia area in the world and the second in population, it being surpassed only

Russia (rush'a), the largest empire in area in the world and the second in population, it being surpassed only by China (this leaves out of consideration the so-called British empire, which is simply a kingdom with colonies). Russia comprises much the greater part of Eastern Europe and of Northern Asia, and is bounded N. by the Arctic Ocean; w. by Sweden, the Gulf of Bothnia and the Baltic, Prussia. Austria and Roumania; s. by the Black Sea, Turkey in Asia, Persia, Afghanistan and the Chiuese Empire; E. by the Pacific and Behring's Strait. The total area has been officially estimated at 8,647,657 sq. miles, of which 1,862,524 are in Europe, the remainder in Asia. The population as estimated for 1908, is as follows:

Russia in	Europe	(including	125,201,900
Winland			2,000,000
Caucasian	Provinc	es	10,908,400
Siberia Central A			1,020,200

155,433,300

European Russia consists almost wholly of immense plains, the Valdal Hills between St. Petersburg and Moscow, averaging 500 feet and never exceeding 1200 feet above sea-level, formling the only elevated region of the interior and an important watershed. The mountains of Taurida, lining the southern shores of the Crimea, have a height of about 4000 feet; the Caucasus, running from the Black Sea to the Caspian, reach the height of 18,500 feet; the Urals, stretching from the Caspian to the Arctic Ocean and separating European from Asiatic Russia, have their greatest height below 7000 feet. Beyond the Urals are the vast Siberian plains slightly inclining to the N. and becoming mountainous in some parts towards the S. and E. Part of the Thian-Shan Mountains and of the Altai Mountains, on the boundary between the Russian and Chinese Empires, belong to Siberia. (See Siberia.) Russia is watered by numerous and important rivers, some of great magnitude and running a course of theusands of miles. The Petehera,

are the principal rivers of European Russia which send their waters to the Arctic Ocean; the Neva, Volkhoff, Soir, Narova, Velikaya, Duna, Niemen and Vistuia belong to the Baltic basin; the Black Sea basin comprises the Pruth, Dniester, Dnieper and the Don; while the Caspian receives besides other rivers the Volga, the largest of all Russian rivers. Asiatic Russia has also a number of very large rivers, as the Obi, Yenisel, and Lena in Siberia, and the Amur towards the Chinese frontier. This extended river system is of incalculable value to Russia. as by its means internal communication is largely aided. Canals connect the navigable rivers, so as to form continuous water-ways, the nearly level surface rendering them easy of construction. River steam navigation has been much developed of recent years. The lakes are also on a gigantic scale. Lake Ladoga, near St. Petersburg, is the largest in Europe. Other large lakes in Europe are these of Onega, Pelpus and Ilmen. In Asia there is the Sea of Aral, larger than any of those mentioned, also Baikal, Balkash and others. The Caspian Sea now also forms almost a Russian lake. From the extent of the plains and steppes, the swamps, moors, desert wastes and forests of Russia, the scenery as a whole is very monotonous, its mountainous elevations occupying a comparatively small portion of its surface.

Climate and Soil.—As might be expected from its vastness this empire offers soils and climates of almost every variety. There is a polar, a cold, a temperate and a warm region; in the first vegetation is all but extinct, in the latter the vine, the olive, and even the sugar-cane grow to perfection. Extreme cold in winter and extreme heat in summer are, however, general characteristics of the Russian climate. In the cold region the thermometer varies from 80° in summer to 30° below zero in winter. The temperate zone, situated between lat. 57° and 50° N., has a mean annual temperature of from 40° to 50°, and includes within it by far the finest part of Russia. The warm region from 50° southwards is exposed to a summer heat often exceeding 100°. As regards soil, large sections of Russia are sandy, barren wastes and vast morasses. The most productive portion is that between the Baltic Sea and Gulf of Finland, and the Volga, on the N. and the Black Sea on the s. This has, generally speaking, a soft black mold of great depth, mostly on a sandy bottom, easily wrought and very fertile. The more

southerly portion of Siberia, as far east as the river Lena, has, for the most part, a fertile soil, and products, notwithstanding the severity of the climate,

withstanding the severity of the climate, most kinds of grai...

Vegetable Products, Agriculture.— Immense forests exist, especially in the morthern Enropean provinces and the more temperate parts of Siberia, the area of the forest land in Enrope being 42 per cent. of the total area. The fir, iarch, alder and birch predominate. In the sonth, forests are less ahundant, and the tracts around the Biack Sea and the Caspian, and the immense steppes of the south and east, are almost wholly destitute of wood. The reckless cutting down of trees has in many parts rendered wood scarce, especially in the vicinity of great cities. Most of the forest land is now under government control, and waste is prevented. Agriculture has long been the chief pursuit of the bulk of the population. For some years it has, however, remained stationary, while manufacturing industries are steadily developing. The chief crops are rye, wheat, bariey, oats, potatoes, hemp, flax and tohacco. Vine and beet culture is rapidly increasing and the breeding of cattie, horses and sheep, is also extensively carried on. Two-fifths of the land of Russia proper are held by the state, mostly forest and waste, one-fourth by landed proprietors, and about one-third by peasants.

Zoology.—Among wild animals may be mentioned the bear, the wolf, wild hog, eik, and various animals which are hunted for their furs. Wild fow abound, particularly near the months of rivers. Both on the coasts and in the rivers a great number of productive fisheries are carried on. In the Arctic Ocean great numbers of seals are taken. The rivers of the Caspian, particularly the Ural and Volga, and the Sea of Azoff, are celebrated for their sturgeon. In the same quarters are also important salmon fisheries. In the regions bordering on the Arctic Ocean large herds of reindeer are kept; and in the south, among the Tartars of the Crimea and the inhabitants of the Cancasus, the camei is often seen.

Minerals.— Russia is rich in minerals. Gold, platinum, silver, copper, iron, lead, zinc, manganese, coal, salt and saltpeter all exist in ahundance, and there are copions petroleum springs in the Caspian region. The precious metals are chiefly obtained in the Ural and Altai regions, the annual production averaging: gold in the Ural and Altai regions, the annual production averaging: gold in the Ural and Altai regions, the annual production averaging: gold in the Ural and Altai regions, the annual production averaging: gold in the Ural and Altai regions, the development of the vast natural resources and trade of Russia is prevented by transport difficulties. The magnificent river and canal system is not available for a good part of the year, and rail-ways are comparatively limited. In 1910 there were about 50,000 miles of railway are rich and numerons, exceeding all

others in proce-tiveness. Copper is mest abundant in the government of Perm; lead in the Ural and some parts of Poland; saltpeter in Astrakhan. Of the coal-mines those of the Don basin are the principal at present, those of Kielce ranking second; the mines around Moscow come next. The annual output is over 20,000,000 tons. About 60,000 tons of manganese ore are annually extracted in the Ural and the Cancasus. The peroleum wells of Baku on the Caspian now send their products all over Enrope, their output being second to that of the United

Manufactures.— Prior to the accession of Peter the Great, Russia had no mannfactories; he started them, and nnder the more or less fostering care of his successors they have steadily grown. Especially since 1805 a number of important industries have developed, this being mainly due to Russia's protective policy. The latest statistics give over 1,800,000 persons as heing employed in the various manufacturing industries. Two-fifths of the entire production come from the governments of St. Petersburg and Moscow. Next in importance as industrial centers rank Viadimir, Kieff, Perm, Livonia, Esthonia, Kharkoff and Kherson in the order indicated. The various manufactures include the following: spirits, sugar, cottons and yarns, flour, tohacco, fonndry products, flax, yarn and linen, leather, woolen cioth and yarn, iron, machinery, beer, soap, timber, paper, cll, glass, chemicais, agricultural implements.

woolen cloth and yarn, iron, machinery, beer, soap, timber, paper, cll, glass, chemicais, agricultural implements.

Trade.— The hulk of Russia's external trade is carried on through the Enropean frontier, and the Baitic and Black Sea ports. The chief exports are: grain (about one-haif of entire exports), fax, linseed and other oleaginous seeds, timber, hemp, wool, hutter and eggs, spirits, hristles and furs, in the order indicated. The chief imports and coke, cotton yarn, metal goods, wine, olive-oil, raw siik, herrings, textile goods, fruit, coffee, tobacco. The import trade is heaviest with Germany, Great Britain, China, United States, in order named. In the export trade Great Britain takes the lead, Germany, the Netherlands, France, Austria, Hungary foliowing. The value of the annual commerce is ahout \$1,300,000,000. The development of the vast natural resources and trade of Russia is prevented by transport difficulties. The magnificent river and canal system is not available for a good part of the year, and railways are comparatively limited. In 1910 there were about 50,000 miles of railway in operation in the Russian Empire, in-

cluding Europe, Siberia and Turkestan. Chief among the recent undertakings in the great Siberian rallway, from Tomsk to Valadivostok, with branches to important centers. Another important Asiatic line is the Transcaspian rallway, from Michellowsk on the southern shore from Michaliovsk, on the southern shore of the Casplan, to Samarcand via Bokhara. The latter, while intended as a military line, has largely stimulated trade in the heart of Asia. There are over 120,-000 mlles of telegraph, nearly all owned by the state. Trade is further assisted by immense fairs, which are much frequented by European and Aslatic merchants. The principal is that of Nijni-Novgored, with an annual product of \$150,000,000. Russia in Europe has more than a dozen citles with a population exceeding 100,000, the largest being St. Petershurg, Moscow, Warsaw, Odessa, Riga, Kharkoff, Kieff and Lodz. St. Petershurg, and Moscow are the two capitain tersburg and Moscow are the two capitais of the empire. The leading ports are Archangel and Onega on the White Sea; Abo, Helsingfors and Viborg in Finland; Abo, Helsingfors and Viborg in Finland; Cronstadt, St. Petersburg and Reval on the Gulf of Finland; Riga on the Gulf of Riga; Libau on the Battlc; Odessa and Nicolaies on the Black Sea; Kertch in the Crimea; Taganrog on the Sea of Asosf; and Astrakhan, Baku, and Kizliar on the Casplan. Other ports are being fostered by government in the south. The silver rouble, containing 278 grains of fine silver, is the money unit, value about 58 cents. It is divided into 100 kopecks. In actual circulation there is little else than paper money. little else than paper money.

Government, etc.—Russla has iong been an absolute monarchy, the emperor (czar or tsar) being the supreme ruler and legislator, and the final trihunal in all matters political or ecclesiastical. His all matters political or ecclesiastical. His title is Emperor and Autocrat of all the Russias, Czar of Poland and Grandprince of Finland. In August, 1905, as a result of the revolutionary spirit of the people, an elective legislature was granted, known as the Duma and consisting of members elected for five years, and representing the provinces and the and representing the provinces and the greater cities. A second legislative body is the Council of the Empire, half of whose members are elected, half nominated by the emperor. These two bodies have equal legislative powers. Laws passed by them must receive the sanction of the emperor, but no law can come into effect without the approval of the Duma. (Finland excepted, which has all hut In its operation, however, the Duma has universal education) is still nearly a century health other European nations, perhaps Spain and Portugal excepted. Only trusted to great boards or councils, including the Committee of Ministers, the

Council of Ministers, the Senate - a Superior Court of Appeal — and the Holy Synod, a body of high-church dignitaries. The president of the committee and the Council of Ministers rank with the premiers of other countries. Finland's national descriptions of the countries of the count tional parliament, formerly consisting of four estates, now consists of one elective Chamber, every Finnish citizen (man or woman) possessing the suffrage. Some of the Baltic provinces also possessed certaln privileges, but these are being gradually curtailed. Each government of the empire is under a governor and vice-governor; there are also a few general-governors, who have more than one government under them. The communes into which the provinces and districts are divided possess a certain amount of local government, and elect their own local dignitaries, but these are again subject to dignitaries, but these are again subject to an all-powerful police. Russia is heavily in debt, chiefly abroad, Germany in particular holding large amounts of Russian stocks, its total deht being about \$4,600,000,000. The revenue amounts to about \$1,850,000,000. The hulk of the revenue is obtained by indirect taxation, reprints formerly furnishing about onespirits formerly furnishing about one-third of it. It is now supplied by taxes, licenses, custom duties, etc.

Army and Navy.—Russla possesses one of the most powerful armies in the world. On a peace footing it is 1,200,000 men, the war strength 4,500,000. Besides these it is calculated that in an Besides these it is calculated that In an emergency the territorial reserve could supply 2,000,000 more men, the national mllitia 1,200,000, making a total force of over 7,500,000 men. Liahility to military service is universal from the age of 20 to that of 43; and five years must be passed in active service. The naval strength was greatly reduced as a result of the war with Japan, but is being rapidly re-developed.

Religion and Education.— The established religion of Russia is the Eastern or Greek Church, and one of the funda-

or Greek Church, and one of the fundamental laws of the state is that the emperor must belong to that church, and none of the Imperial family may marry a wife belonging to another religion without the express sanction of the emperor. out the express sanction of the emperor. Most religions are tolerated, hut Roman Catholics, and especially Jews, are frequently subject to Interference and even persecution. Education in spite of many obstacles is progressing, but Russia (Finland excepted, which has all hut universal education) is still nearly a century hehind other European nations, perhaps Spain and Portugal excepted. Only 2.5 per cent. of the aggregate population 18

People.—As regards language (and so far also race) the peoples of Russia are comprised under the two great divisions of Aryans and Mongolians; the former Include Slavonians, Germans and Greeks, the latter the Finnish and Tartar races. the latter the Finnish and Tartar races. The Slavonlans form about 75 millions of the population, including 5½ million Poles. There are in addition large numbers of Finns, Lithuanians, Jews, Germans, Roumanians, Servians, Georgiars, Armenians, etc. The Turco-Tartars count about 10 millions. A gradual absorption by the Slavonic races is going count ahout 10 mlllions. A gradual absorption by the Slavonic races is going en. The political divisions of the Russian people comprise numerous grades of nohility, which are partly hereditary and partly acquired by military and civil service, especially the former, military rank heing most highly prized in Russia. The clergy, hoth regular and secular, form a separate privileged order. Previous to the year 1861 the mass of the people were serfs subject to the proprietors of the soil. The emperors Alexander I and Nicholas took some initial ander I and Nicholas took some initial steps towards the emancipation of this class; but a hold and complete scheme of emancipation was begun and carried

out hy Alexander II in 1861. out hy Alexander II in 1861.

Language.— A number of languages and a considerable variety of dialects are naturally spoken in a country comprising such a heterogeneous population, but the Russian is the vernacular of at least the Russian is the vernacular of at least four-fifths of the inhabitants, the llterary and official language being specifically the 'Great Russian,' or that belonging to Central Russia surrounding Moscow. It is one of the Slavonic family of the Aryan or Indo-European languages, and as such is a sister of Greek, Latin, Sanskrit, German, English, etc. (See Philology.) Modern Russian has been much modified by the introduction of Greek, Tartar and Mongolian terms. It has an alphabet of thirty-seven letters, a written and printed character of a peculiar form (see Cyrillian acter of a pecullar form (see Cyrillian Letters), and a provinciation which it is hardly possible for any hut natives to master. Its flexions are both numerous and Irregular; hut it is soft, sonorous, remarkable for its coplousness, and affect when the college for the college f

fords unbounded facility for rhyme.

Literature.— The introduction of Christianlty in 988 first created a taste for letters among the ancient Siavonians, but the chief remains of that early literature are some fragments of traditionary while on its opposite frontler it was extales in rhythmic verse, which have recently excited much attention on account Teutonic knights. In 1328 the seat of

passed in 1888 to spread technical edu- of their similarity to the English, Spanish and Scandinavian bullads. Among the earliest works reduced to writing is a book of the Gospels dating from 1056 or 1057. The Tartar invasion arrested the progress of literature, and Russia fell hack into barbarism, whence she only emerged again after the accession of the house of Romanoff (see below). The revival of literature was at first confined to some crude and feehle dramatic performances, and towards the close of the formances, and towards the close of the seventeenth and the beginning of the eighteenth centuries, to poor imitations of French, German and other foreign works. Lomonosof (1711-65) wrote a number of works both in prose and verse and hy his precepts and example did much to originate a national literature, and to fix the grammar of the language.

Hls contemporary, Sumarokoff, carried the drama to a high degree of perfection;

Derzhawin (1743–1816) distinguished himself highly in lyrical and other poetry; and since then many writers have dis-tinguished themselves in all departments. It is, however, principally to Karamsin (1725-1826) that Russia owes the more general spread of literary taste. The foundation of the Russlan Academy ln 1783, and the issue of its great dictionary, also contributed largely towards it. The same perfection which Karamsin grave to profess Direktrick grave to profess. gave to prose, Dimitrieff gave to poetry. Of the more modern authors particular mention is due to Alexander Pushkin, Russia's greatest poet, and Michael Lermontoff, not far his inferior. The most eminent novelists are Nicholas Gogol, Ivan Turgenleff, Feodor Michailovitch, Dostoieffsky, Alexander Herzen and Count Leo Tolstoi, the last the greatest of the fiction writers of Russia. est of the fiction writers of Russla. Russla possesses a number of valuable libraries. The first Russian press was set up at Moscow in 1554.

History.—The origin of the Russian empire is involved in much obscurity, hut it is usually regarded as having been founded by Rurik, a Scandinavian (Varangian), about 826, his dominions and those of his immediate successors comprising Novgorod, Kieff, and the surrounding country. Vladimir the Great (980-1015), the Charlemagne of Russia, introduced Christianity, and founded several cities and schools. But from several cities and schools. But from this period down to 1287, when the country was overrun by the Tartars, Russia was almost constantly the scene of civil war. For more than two centuries Russia continued subject to the Tartars,

government was transferred from Nov-gorod to Moscow; and in 1481 the Tar-tars were finally expelled under Ivan the Great (1462-1505). Ivan extended the Russian dominions, married the niece of the last Byzantine emperor, and ever since the rulers of Russia have looked with longing eyes upon the territories of which the Ryzantine empire consisted. which the Byzantine empire consisted. Ivan the Terrihle (1533-84) did much to extend and consolidate the Russian territory, and in particular began the conquest of Siberia, which was completed in 1699. In 1613 the house of Romanoff, whence the present czar is descended, was raised to the throne, and from this period the empire gained greater strength and consistency. Under Aiexis Mikhaiioand consistency. Under Aiexis Mikhaiiovitch (1645-76) White Russia and Little Russia were conquered from the Poies, and the Cossacks of the Ukraine acknowledged the supremacy of the czar; various were effected, and internal improvements were effected, and the power of Russia began to be felt and feared hy all her neighbors. But Russia's real greatness may be said to date from the accession in 1696 of Peter the sia's real greatness may be said to date from the accession in 1696 of Peter the Great, who first secured the country the attention of the more civilized nations of Enrope. His first military achievement was his conquest of Azoff from the Turks in 1699, which, however, he lost again in 1711. He also completed the conquest of Siberia; and, what was of equal importance, ohtained from Sweden by the Peace of Nystadt in 1721 Livonia, Esthonia, Ingria, or part of Kareiia, the territory of Viborg, Oesel and all the other islands in the Baltic from Courland to Viborg. Catharine I, widow of Peter I, succeeded en the death of the latter, but died after a reign of only two years. The throne was then occupied successively by Peter II, 1727-30; by Anna, 1730-40; hy Ivan VI, 1740-41; hy Elizabeth, 1741-62; hy Peter III, about six months in 1762; hy Catharine II, one of the ahlest of its rulers, 1762-96; hy Paul, 1796-1801; by Alexander II, 1851-94; by Nichoias, 1825-55; hy Alexander III, 1855-81; hy Alexander III, 1881-94; by Nichoias II, since 1894. During all these reigns the growth of the empire was continuous. The Kirghis Cossacks were subdued in 1731, the Ossetes in 1742; the Finnish province of Cossacks were subdued in 1731, the Ossetes in 1742; the Finnish province of Kymenegard was gained by the Treaty of Abo in 1743. The three partitions of Poland took place under Catharine II in 1772, 1793, and 1795. Russia acquired nearly two-thirds of this once powerful country. By the Peace of Knt-chuk-Kainarji, in 1774, the Turks gave up Assel, part of the Crimea (the other part was taken possession of in 1783), Nihilism (see Nihilists). Alexander II nihilism (see Nihilists).

and Kabardah; and by the Peace of Jassy, in 1792, Oczakov, Georgia also came under the protection of Russia in 1783, and Conriand was incorporated in 1795. A portion of Persian territery had already been acquired; and in 1801 the formal annexation of Georgia was effected. The peace of Frederickshaven, 1809, robbed Sweden of the whole of Finland, which was record to Pussia: the lead, robbed Sweden of the whole of Finland, which now passed to Russia; the Peace of Bnkarest, 1812, took Bessarahia from the Turks; that of Tiflis, 1813, deprived the Persians of parts of the Cancasus; and then the Vienna Congress of 1815 gave the remainder of Poland to Russia. After fresh wars the Persians lost the provinces of Erivan and Nakhichevan in 1828; and the Turks lost Anapa. Poti, Akhalsik, etc., by the and Nakhichevan in 1828; and the Turks lost Anapa, Poti, Akhalsik, etc., hy the Peace of Adrianople in 1829. The desire to possess further dominions of the Sultan led to a war against Turkey in 1853, in which England, France and Sardinia also took part in 1854, and which ended in the Peace of Paris, 1856. (See Crimean Wer.) The Russians were compelled to restore to Moidavia the left hank of the Danube in Bessarahia. This district, however, was again restored to Russia hy the Congress of Berlin in 1878, which foilowed the Russo-Turkish war of 1877-78. (See Ottoman Empire.) In 1858 Russia acquired hy agreement with China the sparsely populated but widely extended district of the Amnr; the subjection of Cancasia was accomplished in 1859 and 1864, and considerable conquests were made after 1866 both in Turkestan and the rest of Central Asia. A nkase of 1868 annihilated the last remains of the made after 1866 both in Turkestan and the rest of Central Asia. A nkase of 1868 annihilated the last remains of the independence of Poland hy incorporating it completely in the czardom. On the other hand, Russian America was sold to the United States in 1867. The following table will show at a glance the extent of these continuous accessions of territory:

ceno the p in er 11 was killed by their agency, and attempts tion, and when this was not done, dewere made to murder the succeeding emperor. Within the present century the activity of the Nihilists has abated. Since the advent of the twentieth century events of great importance have taken place in Russia. Among those of dynasty, the Ozar abdicating on behalf of himself and the heir apparent at midentification. was killed by their agency, and attempts were made to murder the succeeding emperor. Within the present century the activity of the Nihilists has abated. Since the advent of the twentieth century events of great importance have taken place in Russia. Among those of internal moment may be named the oppressive measures against the Jews. Finland also suffered from oppressive measures aimed against the partial independence in government which Russia had pledged to observe. Externally the great event was the war of 1904-05 between Russia and Japan. The former persisted in occupying Manchuria after the Boxer outbreak (see China, War in), despite treaty obligations with China and the protests of Japan. The latter, fearpersisted in occupying Manchuria after the Boxer outbreak (see China, War'in), despite treaty obligations with China and the protests of Japan. The latter, fearing aggressive movements against its own territory, declared war against Russia on Feb. 6, 1904. This war was prosecuted with unexpected vigor and military skill on the part of the Japanese, the Russian being defeated in every engagement, their stronghold of Port Arthur taken, their freet completely destroyed, and their army driven back from point to point in Manchuria. Their case seemed aimost hopeless when, in June, 1905, President Rocsevelt offered the services of the United States in bringing about a peace between the combatants. This offer was accepted, a peace conference between the combatants. This offer was accepted, a peace conference between the combatants. This offer was accepted, a peace conference between the combatants. This offer was accepted, a peace conference between the combatants. This offer was accepted, a peace conference between the combatants. This offer was accepted, a peace conference between the combatants. This offer was accepted, a peace conference between the combatants. This offer was accepted, a peace conference between the combatants and the conference of the conference of the combatants. This offer was accepted, a peace c

of himself and the heir apparent at mid-night of March 15. A provisional govern-ment was established, with Prince Lvoff as President of the Council, and Paul Milyukoff as Foreign Secretary. A num-ber of reforms were announced, and the United States, Great Britain and France and Italy hastened to recognize the new government. But a desire for peace had grown in the country, and the Council of the Workmen's and Soldiers' Delegates met in defiance of the government and de-

Korniloff and ordered his arrest. General Kaledines, hetman of the Cossacks, had intended to join General Korniloff in a march on Petrograd, but the march collapsed without bloodshed. On September 14 Russia was proclaimed a republic by the provisional government, Kerensky being premier of a cabinet of five members. The Soviet had proclaimed the right of all nationalities to govern themselves, and rne soviet nad proclaimed the right of all nationalities to govern themselves, and the break up of Great Russia promptly began. The great province of Finland declared its independence, as did the Ukraine. Lithuania agitated for self-government. Esthonia, Livonia and White Russia followed suit. Bessarabia, in the southwest, set up a parliament of its own. The Tartars in the Crimea convened a Tartar Congress. The Cossacks formed a loose fedset up a parliament of its own. The Tartars in the Crimea convened a Tartar Congress. The Cossacks formed a loose federation. The Mohammedan tribes of the Northern Caucasus and Transcaucasia; the peoples of Siberia on the Amur River; on the Transcaspian territories and elsewhere, set up forms of independent government. Disorder was perpetual; landowners were dispossessed; machinery was wrecked. Early in October the German Baltic fleet captured Oesel Island at the mouth of the Gulf of Riga; one or two Russian ships were sent to the bottom in Moon Sound and Dago and other islands were taken, with 15,000 prisoners. Kerensky petulantly asked, 'Where is the British Navy?' Disturbances broke out afresh in Petrograd. Lenine instructed the troops to disregard all orders except those given through the Soviet committee which he controlled. The only force that could be trusted to protect the Winter Palace, where Kerensky lived, was a detachment of the Battalion of Death, some 200 women from the woman's battalion. 200 women from the woman's battalion. 200 women from the woman's battalion. Kerensky appealed for support, but he saw the end had come, and on November 7 he disappeared in disguise to Bykoff on the railway to Kiev. He managed to make his escape from Russia, and visiting London and other places he endeavored to secure help in arresting the progress of Poleberick. Bolshevism.

His supporters attempted a stand against Lenine, who had now taken the reins of government, but the counter-rebellion was speedily vanquished, and Lenine and his Bolshevik followers were supreme in Petrograd and Moscow. Trotaky, the new Foreign Minister, is-

viewed his victorious troops, congratulating them on a success that had been bought from traitors.

This disaster did not waken the revolutionists from their dreams. On September 2d, tionists from their dreams. On September 2d, tionists from their dreams. On September 2d, tionists from their dreams. On September 2d, Russia would hold herself free to act alone. The Allies protested, but Russia had resolved upon peace, and Lenine was determined to obtain it at any price. On December 1 a cessation of hostilities was Kaledines, hetman of the Cossacks had arranged on the northern and Gallician arranged on the northern and Gallician fronts, and the preliminary peace parley began in Brest-Litovsk on December 5, in the presence of German, Austrian, Turk-ish and Bulgarian representatives. An armistice was agreed upon, and negotiations were continued. Trotzky protested against the severity of the German peace terms, and while the delegates debated, the armistice was extended till Tebruary 18, 1918. Meantime, on February 9, peace was signed between Germany and the result delegate republic of Ukraine. peace was signed between Germany and the newly declared republic of Ukraine, a state of between 200,000 and 300,000 square miles, with a population of thirty or forty millions. The Ukrainian peace was followed by a cryptic message from the Russian Bolsheviki, dated February 10, stating that they 'refused to sign a peace which would bring with it sadness, oppression and suffering to millions of workmen and peasants. workmen and peasants . . also cannot and must not continue a war

which was begun by czars and capitalists.

Russia declares the war with
Germany, Austria-Hungary, Turkey and
Bulgaria at an end. Simultaneously the
Russian troops have received the order for demobilization on all fronts.

This did not satisfy the Germans, who failed to understand how there could be failed to understand how there could be neither peace nor war. If the Russians wanted peace they must sign the treaty: if not, war would be resumed. Acting upon this declaration German troops advanced on February 18 along the whole northern Russian front, crossing the Dwina and taking Dvinsk, while disorganized forces fled before them, abandoning guns by the thousand, rolling stock, thousands of motor cars, rubber and copper which the Allies had placed in Russian hands. On February 24 Lenine desian hands. On February 24 Lenine de-clared in the Soviet, 'Their knees are on our chest; our position is hopeless. This peace must be accepted.' While action of the government was still delayed, the Germans continued their resistless march. They were in Reval, the great Baltic base of the Russian navy; they were in the important railway junction of Pskoff, only eight hours from Petrograd. They were in Finland. The Aland Islands in the Baltic had been seized. Simultaneously the Turks were pressing on in Armenia. Trebisond was reoccupied, Erzerum, Kars RUSSIA AS PARTITIONED BY THE TREATY BETWEEN THE GERMANS AND THE BOLSHEVIKI SIGNED AT BREST LITOVSK. MARCH 14. 1918,

and the whole Caucasian coast were open and unguarded. Negotiations again began with the German war lords, and a peace

with the German war lords, and a peace treaty was finally signed on March 3, 1918, and ratified by a vote of 458 to 80 by the All-Russian Congress of Soviets, meeting at Moscow March 14.

The first clause of the treaty declares the state of war between the Central Powers and Russia ended. The second deals with the civil populations in occupied regions. The third agrees to a new frontier line to be settled by a commission. In the fourth Russia undertakes the evacuation of the Anatolian provinces and their return to Turkey. The fifth provides for the demobilization of the Russian army. The sixth, seventh, eighth and ninth clauses are as follows:

Sixth. Russia undertakes immediately to conclude peace with the Ukraine Peo-

to conclude peace with the Ukraine People's Republic and to recognize the peace treaty between this state and the Powers of the Quadruple Alliance. Ukrainian territory will be immediately evacuated by the Russian troops and the Bolshevik guard. Russia will cause all agitation or guard. Russia will cease all agitation or propaganda against the government or the public institutions of the Ukrainian People's Republic.

Ple's Republic.

Esthonia and Livonia will likewise be evacuated without delay by the Russian troops and the Bolshevik guard.

The eastern frontier of Esthonia follows in general the line of the Narova River. The eastern frontier of Livonia runs in general through Peipus Lake and Pekov Lake to the southwesterly corner. Pskov Lake to the southwesterly corner of the latter, then over Lubahner (Lubau) Lake in the direction of Lievenhof, on the

Esthonia and Livonia will be occupied by a German police force until security is guaranteed by their own national institutions and order in the state is restored. Russia will forthwith release all arrested or deported inhabitants of Esthonia and Livonia and guarantee the safe return of deported Esthonians and Livonians.

Finland and the Aland Islands will also forthwith be evacuated by the Russian troops and the Bolshevik guard and Finnish ports by the Russian fleet and Russian naval forces.

So long as the ice excludes the bringing of Russian warships to Russian ports only small detachments will remain behind on the warships. Russia is to cease all agitation or propaganda against the government or the public institutions in Finland.

The fortifications erected on the Aland Islands are to be removed with all possible dispatch. A special agreement is to be made between Germany, Russia, Fin-

land and Sweden regarding the permanent non-fortification of these islands, as well as regarding their treatment in military, shipping and technical respects. It is agreed that at Germany's desire the other states bordering on the Baltic are also to be given a voice in the matter.

Seventh. Starting from the fact that Persia and Afghanistan are free and in-

Seventh. Starting from the fact that Persia and Afghanistan are free and independent states, the contracting parties undertake to respect their political and economic independence and territorial in-

tegrity.

Eighth. Prisoners of war of both sides will be sent home.

Will be sent home.

Ninth. The contracting parties mutually renounce indemnification of their war costs; that is to say, state expenditure for carrying on the war, as well as indemnification for war damages; that is to say, those damages which have arisen for them and their subjects in the war regions through military measures, inclusive of all requisitions undertaken in the enemy country. enemy country

The tenth clause provides for resumption of diplomatic relations. The concluding five clauses refer to economic affairs, restoration of public and private relations, questions of amnesty, merchant slips in enemy hands, provision for rati-

Rust, the reddish-brown or orange-colored substance which forms on iron or steel exposed to a moist atmosphere, a hydrated ferric oxide. It is apparently the result of the combined action of carbon dioxide, moisture and oxygen, and it is possible that hydrogen peroxide plays a part in its formation. The pre-

vention of rust is effected by galvanizing the iron, that is, coating it with zinc.

Rust, a disease which attacks cereals and many pasture grasses. It is most common on the leaves, on which it is visible in the form of orange-colored mealy spots, but is by no means confined to them. Rust may be prevented or the loss greatly reduced by thorough and repeated spraying with fungicide.

Rustchuk (rös'chök), a town of Bulgaria, situated on the right bank of the Danuba, where that river is

bank of the Danube, where that river is joined by the Lom. Pop. 33,632.

Rust-mite, one of certain mites of gall-mites, which do not produce galls, properly speaking, but live in a rust-like substance which they produce upon the leaves or fruit of certain plants. Many of these rusts are characterized as rust. of these rusts are characterized as rustfungi.

(rö-ta-bag'a), a name for the Swedish turnip. See Rutabaga

are shrubs or trees, rarely herbs, the simple or compound leaves dotted with Rutaceæ glands, often having a strong heavy smell.

About 700 species are known, occurring most abundantiy ln Australia and South Africa. A South American species produces the Angostura-bark. The bark of a Brazilian species, the *Ticorea febrifaga*, is a powerful medicine in Intermittent fevers. The species known as dittany abounds in volatile oil and diffuses a powerful fragrance. It exhaies so much abounds in volatile oil and diffuses a Death prevented him from answering the powerful fragrance. It exhaies so much charge before pariiament. His Familiar oil in dry, hot weather that a slight flash Letters, puhiished after his death, have takes place when a candie is brought near it.

Rutharden (rutharden)

Ruth, Book of, a canonical book of the Old Testament. It is a kind of appendix to the Book of Judges, and an introduction to those of Samuel, and in the office of Samuel, and an Introduction to those of Samuel, and is therefore properly piaced between them. The story of Ruth records in simple language the ancient rights of kindred, redemption, and other interesting customs of Hehrew antiquity. The date of the history and the name of its writer are unknown, but is prohably of a date subsequent to the captivity.

Ruthenians Sin'ians. Russniaks.

Ruthenians (10-the m-anz), R USSNIAKS, RED or LITTLE RUSSIANS, numerous Slavonic tribes inhahiting Eastern Gaicia, Bukowina and Northeastern Hungary, closely allied to the inhahitants of Podolia and Volhynia. The number of Puthenians In the Austrian Empire of Ruthenians In the Austrian Empire amounts to 3,000,000, of whom about 500,000 are settled in Hungary. They ilve almost exclusively hy agriculture, and their state of civilization is still very low. They helong for the most part to the United Greek Church, and in politics often prove trouhiesome to the Austro-Hnngarian Empire on account of their Russian procivities.

Ruthenium (rö-thē'ni-nm), a metal occurring in platinum ore. Symbol Ru; atomic welght, 104; specific gravity, 11 to 11.4; color, whitlsh-gray. It is very infusible, and forms a series of salts which are analogous to those of platinum.

(rö-tā'se-ē), a nat. order of account of his strong Presbyterian views polypetalous exogens. They he was deprived of his living ln 1636 and imprisoned for two years, when he was restored. He took a prominent part in the drawing up of the National Covenant. In 1639 he became professor of divinity, and in 1649 principal of the new college, St. Andrews. He published numerous politico-theological treatises. The most famous of these is Les Res, which on the Restoration was publicly burned, and he himself charged with high treason.

monly called RUGLEN, a burgh of Scotland, county of Lanark, 2 miles southeast of Glasgow, on the left bank of the Ciyde. It consists chiefly of one wide street, on which stands a fine baronial structure, the municipal buildings and town-hall. There are chemical works and dye-works, a papermili, a pottery, a bullding-yard for small steamers; and in the vicinity coal-mines. Rutherglen was erected into a royal Rutherglen was erected into a royal burgh by David I about 1126. Pop. 18,280.

Ruthin (ruth'in), RHUDDIN, or RHUTHYN, a horough in North Wales, on the Clwyd, in the county of Denhigh. Near it are the remains of

a magnificent oid castie called Rhyddin, or Red Fortress. Pop. 2824.

Ruthven (ruth'ven), RAID or, in Scottish history, an act of treachery by which the Earl of Gowrie and his party, on the 22d of August, 1582, secured themselves for ten months the control over the parson and nower of the control over the person and power of James VI. The king, then only sixteen years of age, was surrounded at Ruthven Castle, the seat of the Earl of Gowrie, where he had gone on a hunting expedition. He was set free hy the opposition party at St. Andrews (June 29, 1583), and the Earl of Gowrie was beheaded.

Rutile (rö'til), red oxide of titanium, a brown, red, yeliow, and somea series of salts which are analogous to those of platinum.

Rutherford a borough of Bergen North America, and the Urals, chiefly in the velns of primitive rocks. It is residence for New York merchants, and has some manufactures. Pop. 8000.

Rutherford (ruth'er-ford) or Property of the plate of primitive rocks. It is infinished before the hlow-pipe without a finz. Potters have used the metal to give a yellow color to porcelain.

Rutherford, (ruth'er-ford), or RUTH-tish divlne, was born about the year 1600 English counties, surrounded hy the in Rozburghshire; dled at St. Andrews in 1661. He studied at Edinburgh University, and in 1627 was appointed minimum of Anweth in Kirkcudbright. On give a yellow color to porcelain.

Rutland (rut'land), or RUTLAND-SHIRE, the smallest of the counties, surrounded hy the counties of Lincoln, Leicester, and North-ampton; area, 152 sq. miles. The surface is beautifully diversified hy gently-rising hills. The soil is almost every-

Ruve di Puglia (pui'ya), town of Ruve di Puglia (pui'ya), town of province Bari, with a handsome cathedral and manufactures of pottery. Pop. 23,776.

Ruysdaal (rois'dal). or Ruysdael, Jacob van. one of the most distinguished Dutch landscape-painters, born at Haarlem prohably about 1628; died in the poorhouse of his native place 1682. His paintings, hut little appreci-ated during his lifetime, now bring great prices. Fine examples of his works are to be seen in the National Galiery at London, and in the Louvre at Paris. Landscapes with dark clouds hanging over them, lakes and rivulets surrounded by overhanging trees, etc., are his subjects, and are represented with true poetic feeling and admirable technique. The subjects of ce in of his mountain pictures seem to he taken from Norway. It is said that the figures in his paintings were executed by A. van de Velde, Philip and Pieter Wouwerman, C. Bergham and others.

Ruyter (roi'ter), Michiel Adrianished with awns like harley. It is a nadied in 1676 in the port of Syracuse hut has been cultifrom a wound received in an engagement with the French. He rose to his rank time immemorial. It from the situation of cahin-boy, and distinguished himself for remarkable seamasship and brave. manship and hravery in many naval hat-tles, but more especially in 1653, in 1666 less manure, and ri-and in 1672, against the British fleet. pens faster. It is ex-

and in 1672, against the British fleet.

Ryan (ri'an), PATRICK JOHN, Roman
Catholic archbishop, was born
near Thures, Ireland, in 1831. He was
ordained deacon in 1853, completing his
ctudies in St. Louis Miscouri and reject tudies in St. Louis, Missouri, and raised to the priesthood in 1854. In 1872 he was elected coadintor archhishop of St. Louis. His administration was energetic to the priesthood in 1854. In 1872 he of many parts of was elected coadintor archiehop of St. Rusia. Sweden, Nor-Louis. His administration was energetic and successful. He was nominated archiehop of Philadelphia in 1884, a post which he filled with much ability. He died in 1911.

Rye (Seedle coredle).

Unmalted rye-meal mixed with barley mait and fermented forms the wash whence is distilled the died in 1911.

where loamy and rich. The west part of the county is under grass, and the cast chiefly in tillage. It is famous for its sheep, wheat, and cheese, much of the latter being sold in Stilton. Pop. (1911)

20,347.

Rutland, a city, county seat of Rutland, land County, Vermont, on Otter Creek, 67 miles s. hy E. of Burlington. There are fine quarries of marble in the vicinity, the trade including about three-fourths of the marble mined in the United States. There are manufactures of scales, stone-working machinery, marble monuments, building marble, etc.

Pop. 13,546.

Rybinsk (rf-bensk'), or Rueinsk, a town in Russia, government of the Rybinska. It is a husy place in the open season. Pop. 25,200, increased the open season. Pop. 25,200, increased in 100,000 during the shipping months.

Rycaut (ri-kat'), Sir Paul, an English writer and diplomat, born about 1630; died in 1700. From 1061-69 he acted as secretary of legation at these diplomatic offices he acquired eon-siderable knowledge of the East, which he emhodied in several historical works, as The Present State of the Ottoman Empire, The Present State of the Greek and Armenian Churches, etc.

and Armenian Churches, etc.

Rydberg (rid'bar-y'), Abraham Vikror, a Swedish poet, novelist and archæologist, born at Jonkoping, in 1828; died at Stockholm in 1895. His skill as a master of Swedish prose is well shown in his novels, and his poetry ranks high. Most of his works have been

translated into English.

Ryde (rid), a municipal borough and watering-place of England, on the northeast side of the Isle of Wight. It consists of several regular and wellbuilt streets, and numerous detached villas surrounded hy gardens, rising in terraces from the sea, and presenting a very pleasing appearance. A park on a rising ground to the east of the town, and the pier, form delightful promenades. Pop. (1911) 10,608.

Rye (ri; Secale cereale, nat. order Graminess), a species of grain of which there are several varieties. It is

which there are several varieties. It is an esculent grain bearing naked seeds

grown in tensively Northern Europe, and rye bread forms the chief subsistence of the laboring classes of many parts

spirit known as Holland gin. The straw is long, flexible, does not rot easily, and is used by brick-makers and thatchers, also for stuffing horse-coliars, mattresses, etc., and for making baskets, straw hats and bonnets. Rye is subject to a disease called ergot, which renders it dangerous for food. See Ergot.

Rye, a municipal borough and seaport Bye, of England, in Sussex, one of the 1692, as historiographer rovai, he was en-

the mouth of the river Rother. Pop.

Rye-grass, the common name of a number of grasses belonging to the genus Lolium, which presents the botanical anomaly of associating the most important herbage and forage grasses with the most pernicious weeds of agriculture. These grasses are readily known by the many-flowered sessile spikeupon a zigzag rachis, and supported by a single herbaceous glume arising from the base, and pressing against the outer edge. The useful species are the Lolium perenne and the Lolium Italicum or Italian rye-grass. The latter is the most valuable. The perniclous varieties of rye-grass are the L. temulentum, or common darnel and its allies.

Ryotwar (rI-ot-war'), in India, and especially in the Madras Presidency, the system of land tenure by which the ryots or cuitivators of the soli are directly under government, paying so much annually according to assessment.

Rysbrach (risbrak), John Michael, a sculptor, born at Ant-wern in 1602 and 1604 and

mon darnel and its allies.

Rye-house Plot, in English history,
a conspiracy,
planned in 1683, the immediate object of which was to assassinate Charles II and his brother, the Duke of York (after-wards James II), as they returned from the Newmarket races. This plan was to have been executed on the road to London, near a farm called Rye-house, belonging to one of the conspirators named Rumbold; but it was frustrated by the king and his brother happening to return from Newmarket earlier than was ex-pected. The detection of the plot led to the arrest on a charge of high treason of Lords William Russell, Essex and Algernon Sidney, who were in no way connected with it. Essex put an end to

Byc, a municipal borough and seaport bar in 1673. Succeeding Shadweii, in of England, in Sussex, one of the 1692, as historiographer royai, he was enclinque Ports. It is situated 64 miles trusted by the government with the task s. s. s. from London on an eminence at of making a collection of public treaties. of making a collection of public treaties from the year 1101, which he began to publish in 1704, under the title of Fædra, Conventiones, et onjuscunque Generis Acta Publics, inter Reges Angliæ et alios Principes. Of this work he completed fifteen volumes, and five more were afterwards added by Robert Sanderson. This work is a valuable source of history for the period it covers. Rymer, Thomas The. See Rhymer. Rymer,

came to England early in life, and derived considerable reputation and profit from the exercise of his art, of which

Westminster Abbey and other cathedrai churches contain specimens.

Ryswick (ris'wik; property Rijswijk ris'wik), a village and castle situated in South Holland, not far from The Hague, where the Peace of Ryswick, which terminated the war waged against Louis XIV by a league consisting of Holiand, the German Empire, Britain, and Spain, was signed (Scotember 20 and October 30, 1697).

nas sometimes been reckoned among the linguals (as the tongue is essential in its pronunciation), sometimes among the dentals (as the teeth cooperate in producing the hissing sound). More descriptively it is classed as a sibilant. It has a twofold pronunciation—sharp or hard as in sack, sin, this, thus; and soft or something the sin succession of the solution of the sin succession. in muse, wise.

See Sadi. Saadi.

Saale (zä'lė), the name of several German rivers, the most important of which is that which rises on the north side of the Fichtelgebirge, in the northeast of Bavaria, and joins the Elbe after a course of above 200 miles. It passes the towns Hof, Jena, Naumburg, Merseburg, Halle, etc., and is of great commercial importance.

Saalfeld (zäl'felt), a town of Germany, duchy of Save-Mein-

many, duchy of Saxe-Meiningen, on the left bank of the Saale. It has several considerable industries. Pop.

Saar (zär; French, Sarre), a river of Alsace-Lorraine and Rhine Province, about 150 miles long, from Vosges mountains to Moselle river near Treves. The coal fields in its basin were ceded to France by Germany in 1919. 14,400.

France by Germany in 1919.

Saarbrücken (zär'brük'en; French Sarrebruck), a town of the Rhine Province on the Saar, ceded with adjoining territory in the Saar, ceded with adjoining territory in the Saar Basin to France by Germany in 1919 as compensation for the destruction of the coal wines in the north of France during the European war (q. v.). It is the center of a rich coal-mining region. Across the river, connected with Saarbrücken by two bridges, is the old town of St. Johann. The first engagement in the Franco-The first engagement in the Franco-Prussian war took place at Saarbrücken, August 2, 1870. Pop. 105,097. Saardam. See Zaandam. Saardam.

S, the nineteenth letter of the English alphabet, representing the hissing sound produced by emitting the breath between the roof of the mouth and the tip of the tongue placed just above the upper teeth. From this circumstance it has sometimes been reckoned among the linguals (as the tongue is constill in its goods. Pop. 8313.

Saaz (zäts), or SAATZ, a town of Bohemia, on the right bank of the Eger, which is crossed here by a chain-bridge. It is in a fertile district and has an important trade in hops. It is an old town and has a church dating from 1206. Pop. 16,168.

Saba (sä'bä), a small West Indian island, belonging to Holland, and governed as a dependency of Curação. It consists of a single volcano cone, furrowed by deep, wooded and fertile valleys, pro-ducing sugar, cotton and indigo. Area, 5 sq. miles; pop. 2254.

Sabadell (sä-bà-del'), a manufactur-ing town in Spain, province of Barcelona. Wool and cotton spinning and weaving are chiefly carried on. Pop. 23,294.

Sabadilla (sa-ba-dil'a), CEBADILLA, or CEVADILLA, the name given in commerce to the pulverized seeds of two plants, the Asagras officinalis of Lindley, and the Veratrum Sabadilla, both belonging to the nat. order Melanthacese. Mexico now supplies the bulk of the sabadilla seeds employed in pharmacy. The seeds of both plants are long, triescales bleckish however outside white triangular, blackish-brown outside, white inside, of an acrid and burning taste, but without smell. Sabadilla powder is used as a vermifuge. The alkaloid extracted from the seeds, and known as veratrine, is applied externally in cases of neuralgia, rheumatism, gout, dropsy and also as an insecticide. Large doses of veratine act as a most irritant and energetic poison, while small doses prove a rapid cathartic and diuretic.

(sa-bē'anz), the ancient name of the inhabitants of Sabæans the modern Yemen, in Southwestern Arabia. Their capital was Saba.

Sabæans, Saraism. See Sabiana

Sabbatarians (sah-a-tā'ri-ans), a namo formeriy applied to the sect of Baptists now called Seventh-

day Baptists. Sabbath (sab'ath; a Hebrew word signifying rest), the day appointed by the Mosaic iaw for a total cessation from iabor, and for the service of God, in memory of the circumstance that God begins of the circumstance that God, having created the world in six days, rested on the seventh. Sabbath is not strictly synonymous with Sunday. Sunday is the mere name of the day; Sahbath is the name of the instituday. Sunday is the mere name of the day; Sahhath is the name of the institution. Sunday is the Sahbath of Christians; Saturday is the Sabhath of the Sabellians have been extinct since the Sabath of the Jews and some minor Christian sects. The first notice in the Old Testament pointing to the Sabbath occurs in Gen. if, 2, 3; hut the first formal institution of the day as a holy day and a day of star-worshipers. It is also given to a of the day as a holy day and a day of star-worshipers. It is also given to a rest is recorded in Exod. xvi, 22-26, on sect which arose about 830, and whose the occasion of the children of Israei members are also called Pseudo-Sahians, the occasion in the wilderness. Soon of Syrian-Sabians, from the fact that the other the chromatopa and the day of starting of the chromatopa and the day of starting of starting of the chromatopa and the starting of starting of the chromatopa and the starting of starting of the chromatopa and the starting of the starting of the chromatopa and the starting of the starti after the observance of the day was re-enacted still more expressly and emphatlealiy in the tables of the law. Prior to the captivity the Jews kept the Sahbath very indifferently, but after their return from Egypt Nehemiah exerted himself to secure the true observance. Gradually the original law became encumbered with a long list of petty pharisaical and rabbinical regulations. The Sabhath began at sunset on Friday and ended at sunset on Satset on Friday and ended at sunset on Saturday. On the Sabbath the Jews were not allowed to go out of the city further than 2000 cubits, that is, about a mile, and this distance was called a Sabbathday's journey. And as every seventh day was a day of rest to the people, so was every seventh year to the land. It was uniawful in this year to plow or sow, or prune vines; and if the earth brought forth anything of Its own accord. these forth anything of its own accord, these spontaneous fruits did not belong to the master of the ground, but were common to all. This year was called the Sabbatical year, and was also to be a year of release for Jewish debtors. In the Gospeis the references to the Sabbath are numerous, and they show us that Christ always paid respect to the institution, although he did not regard the minnte prohibitions that had heen added to the original law. The desire of distinguishing the Christian from the Jewish observance early gave rise to the celebration of Sunday, the first day of the week, instead

Sabal (sa'bal), the genus to which the paimetto belongs.

Sabanilla (sa-ba-nel'ya), a seaport duty of Christians to keep the Jewish Sabanilla of Colombia, serving as the port of Barranquilla. See Barran-Saballians. See Sabellians.

Sabellius (sa-bel'i-us), a Christian teacher at Ptolemais in Upper Egypt, who lived about 250, and is known as the founder of a sect who considered the Son and Holy Ghost only as different manifestations of the Godhead, but not as separate persons. He taught that as man, though composed of body and soul, is hut one person, so God, though he is Father, Son and Holy Ghost, is but one person. Dionysius of Alexandria wrote against Sabellius, and Popel Dionysius condemned him in a council

sect originated among the Syrians of Mesopotamia. Their religion is described as the heathenism of the ancient Syrians, modified by Hellenle Influences. This sect flourished for about two centuries. See also Ohristians of St. John.

Sabicu (sa-bi-kū'), or Savicu', a leguminous tree, Lysiloma Sabicu, native of Cuba. It furnishes an exceedingly heavy and hard wood, with a texture as smooth, close and firm as lyory almost, and of a rich, warm, red color. It is much employed fer ship-building and cabinet-making. building and cahinet-making.

Sabine (sa-bēn'), a river which rises in the northeastern part of Texas, and after a course of some 500 miles flows into the Gulf of Mexico through Sabine Bay. It is too shallow to be of much use for navigation.

collected numerous data regarding the length of the pendulum and the variations of the magnetic needle. He made other voyages to tropical and Arctle regions to investigate these and allied subjects, and published his researcies in the Philosophical Transactions, and the Transactions of the British Association and the Royal Society. From 1861-71 he presided over the itoyal Society, and in 1860 he was created a K.C.B.

Sabines (sab'inz; Sabini), an ancient people widely apread in

Sabines (sab'inz; Sabini), an anclent people widely spread in Middle Italy, allied to the Latins, and already an important nation prior to the foundation of Rome. Originally they were confined to the mountain districts to the N. E. of Rome, and their ancient capital was Amiternum, near the modern Aquila. As an independent nation they ceased to exist in 200 B.C., when they were incorporated with the Roman state.

See Rome (History).
Sabines, RAPE OF THE. See Romulus.

Sable (sā'bl), a digitigrade carnivorous mammai, nearly aliled to the common marten and pine marten, the Mustela zibellina, found chiefly in Siberia and Kamchatka, and hunted for its fur. Its length, exclusive of the tail, is about 18 inches. Its fur, which is extremely lustrous, and hence of the very highest value, is a nerally brown, grayish-yellow on the throat, and with small grayish-yellow spots scattered on the sides of the neck. It is densest during winter, and owing to the mode of attachment of the

Bable (Mustela sibelina).

hairs to the skin it may be pressed or smoothed in any direction. Two other species of sable are enumerated, the Japanese sable (M. melanopus) and a North American species (M. leucopus). The Tartar sable (M. siberics) is the name given to a species of the weasei genus found in Northern Russla and Siberia, and the pekan (M. canedensis) of North America is sometimes known as the Hudson Bay sable. The skins of all these varieties are frequently dyed and otherwise manipulated to instate the true

20-U-5

Russian sable. Sable hair is also used in the manufacture of artists' pencils. Sable fur has been of great value from very early times.

Sable, in heraic ack, one of the in blazonry. In engraving it is expressed by perpendicular crossed by horizontal lines. See Heraidry.

Sable Island, a low treeless sandy island in the North Atlantic, off the east coast of Nova Scotia, 25 miles long and 1 to 5 broad.

Sables (sä-bl), or Sables D'Olonne, a seaport in France, department of Vendée, on the Atlantic. It is built partly on an eminence in the form of an amphitheater, and partly on a flat, and has a good harbor, valuable fisheries of oysters and sardines, and a considerable trade. It is much resorted to for sea-bathing. Pop. 12,244.

Sabotage (så-bō-tāj), the wilful injury or destruction of

Sabotage (sa-bo-taj), the wilful injury or destruction of machinery or materials by workmen through apparently accidental means. The word sabotage is of French origin, and tradition has it that a workman in a rage one day threw his wooden shoe (sabot) into some machinery. Others, seeing the result, adopted similar means. Sabots (sa-bō), wooden shoes made each of one piece holiowed out by boring-tools and scrapers. They are largely worn by the peasantry of several Enropean countries. In France their mannacture forms an important industry.

Saber (så'ber), a broad and heavy sword, thick at the back and somewhat curved at the point. It is the chief weapon of cavairy regiments.

Saber-tache (-tash), a leathern case

chief weapon of cavairy regiments.

Saber-tache (-tash), a leathern case or pocket worn by cavalry officers at the left side, suspended from their sword-beit.

Sacbut (sak'but), or SACKBUT, a musical instrument of the trumpet kind with a slide; in fact an old

Assyrian Sacbut, from bas-relief.

variety of trombone (which see). The instrument calied sabbeka in the Hebrew Scriptures has been erroneously rendered as sacbut by the translators. The exact form of the sabbeka has been much disputed, but that it was a stringed Instrument is certain, for the name passed over into Greek and Latin in the forms sambuke, sambuca, a harp-like instrument of four or more strings. The instrument shown in the accompanying illustration is believed to represent a form of the sacbut of Scripture.

Saccatoo. See Sokoto.

Saccharides (sak'ar-Idz), a name It inhabits the depths of the Atiantic, is group of carbon compounds formed from sugars hy the action of various organic acids.

Saccharin (sak'ar-in), an artificial sugar prepared from coaitar, first introduced to commerce in 1887 by its discoverer, Dr. Constantin Fahiberg, of Saibke (Germany). Its sweetening properties are enormous; one grain of saccharin is said to sweeten distinctly 70,000 grains of distilied water. It is not a fermentable sugar, and is already in common use in the treatment of disease, as diabetes, for instance; and in many cases in which the palate craves for sweets, but in which ordinary sugar is apt to cause trouble. The French Conseil d'Hygiène et de Salubrité appointed a commission to inquire into the properties of saccharin, and their report, issued in 1888, states that its use in food would seriously affect the digestive functions and recommends the government to prohibit its employment in alimentary substances. The discoverer and many eminent chemists, Continental and British, deny that saccharin is injurious to the human system, and it is also asserted that the hostility to the new sweetening substance emanates from those interested in the French sugar industry. It is largely in use in Germany in the manufacture of confectionery, brewing, etc., and is used by many for sweetening beverages, as tea and coffee. It has recently been strongly condemned in the United States as a dangerous substance, though the indication is that it is not very actively injurious.

Saccharometer (sak-a-rom'e-ter), or Saccharimeter, an instrument for determining the quantity of saccharine matter in any solution. One form is simply a hydrometer for taking the specific gravity of the solution; another is a kind of polariscope, so arranged that the solution may be interposed between the polarizer and analyzer, and

by observing the angle through which the piane of polarization is turned in passing through the solution the datum is given for the calculation of the strength. (See Polarization.) Several saccharometers acting on this principle, but varying somewhat in construction, are now in use.

Saccharum (sak'a-rum), a genus of grasses. See Sugar-cane.

Saccopharynx (sak'o-far-inks), or EUBYPHARYNX, a genus of ceis, family Murænidæ. The best-known species (S. pelecanoides or Eurypharynx pelecanoides) was discovered in the latter part of the last century. It inhabits the depths of the Atlantic, is

Saccopharynx pelecanoides.

of a perfectly black coior, is sometimes 9 feet in length, and but seldom met with. It owes its name to its pouch-like pharynx, which enables it to swallow other fish of large dimensions. It is also known as pelican fish. The muscular system is but little developed, and the bones are thin and soft.

Sacheverell (sa-shev'ér-el), Henry, an English divine, horn in 1674; died in 1724. While preacher at St. Saviour's, Southwark, he in 1709 delivered two bitter sermons against dissent, and accused the existing Whig ministry of jeopardizing the safety of the church. He was impeached in the House of Commons, tried in the spring of 1710, and suspended for three years. This persecution secured him at once the character of a martyr, and heiped to stimulate the aiready fierce passlons which then divided the Whig and Tory parties. Sacheverell became the popular hero of the hour; while the Godoiphin (Whig) ministry was overthrown. Parliament thanked him for his defense of the church, and as soon as his suspension expired Queen Anne presented him with the rich living of St. Andrew's, Holborn. Sacheverell, having no merit to keep him permanently before the public, now feil back into obscurity.

Sachs (zaks), Hans, the most distinguished meistersinger of Germany in the sixteenth century, born at Nuremberg in 1494; dled in the same city in 1576. He learned the trade of a shoemaker, and after the usual wanderjahre, or period of traveling from place to place, commenced husiness in his native elty, married (1519), and prospered. An enthusiastic admirer of the Minnesingers, he took lessons under one of the chlef melstersingers of Nuremberg, and to while away the tedium of the cohhler's art made verses himself. In this he soon surpassed all his contemporaries. Thousands of all his contemporaries. verses flowed from his fertile brain, crude, but full of imagery and humor. As a staunch follower of Luther, and an ardent advocate of his teachings, Sachs succeeded in Imparting to his hymns a fervor which considerably aided the spread of the Reformation. A hronze statue to his memory was erected in 1874 at Nuremberg, where his house may still be seen. Sachsen (zak'sen), the German form of Saxony (which see).

Sachsen-Sachsen-Altenburg,

Coburg-Gotha etc. See Same-Al-

Sack (Spanish, ecco; French, sec, dry'), formerly a general name for the different sorts of dry wine, more especially the Spanish, which were first extensively used in England in the circumstance. extensively used in England in the sixteenth century. See Sokoto.

See Sacbut. Sackbut.

Sackville (sak'vil), Thomas, Lord Buckhurst and Earl of Dorset, an English statesman and poet, son of Sir Richard Sackville of Buck-hurst, born in 1536; died in 1608. At Oxford and Cambridge he distinguished himself by his Latin and English poetry, and as a student of the Inner Temple he wrote, in conjunction with Thomas Norton, the tragedy of Gorboduc, or Ferman and Pages (published in 1861) rew and Porrew (published in 1561), remarkable as the first example in English of regular tragedy in hiank verse. The Mirror of Magistrates, and the Complaint of Henry, Duke of Buckingham, the introduction to an intended series of poems on the tragic lives of famous men, make one regret that he was induced to ahan-don literature for politics. He took a don literature for politics. He took a prominent and creditable part in some of the chief events of Elizabeth's reign. He fornia. It rises in Lassen Co., flows was a member of the court which tried west, then south and drains the central Mary Queen of Scots; he succeeded Lord Burleigh as lord-high-treasurer; and pre-Burleigh as lord-high-treasurer; and presided at the trial of the Earl of Essex. are navigable for small vessels. Leicester. In 1566 he had succeeded to his father's ample estate; was raised to the peerage as Baron Buckhurst shortly afterwards; and James I created him Earl of Dorset in 1604. He was huried at Westminster Abbey.

Saco (sa'kō), a river rising in the White Mountains in New Hampshire and running southeast into the Atlantic below Saco, Maine. It is 160 miles long, and has falis of 72 feet at Hiram, of 42 feet at Saco, and numerous minor

ones. Saco, a city of York county, Maine, 14 miles s. w. of Portland, and on the river of the same name, which supplies water-power to large cotton fac-

supplies water-power to large cotton factories, cotton machinery works, and other manufactures. It is connected by hridge with Biddeford, on the opposite side of the river. Pop. 6583.

Sacrament (sak'ra-ment; Latin, sacrament, in particular the military oath of alleglance. This word received a religious sense, in the Christian Church, from its having been used in the Vulgate to translate the Greek musterion, a mystery. late the Greek mysterion, a mystery.

Among the early Latin ecclesiastical writers sacramentum, therefore, signifies a mystery, a symbolical religious ceremony, and was most frequently applied by them to the rite of haptism. In modern Christian theology secrement is deern Christian theology sacrament is defined as an ontward and visible sign of an inward and spiritual grace, a solemn religious ceremony enjoined by Christ to he observed by his followers, and by which their special relation to him is created, or their obligations to him renewed and ratified. In early times the church had also sacramentals, as many as thirty being enumerated in the first half of the twelfth century. The Roman Catholic and Greek churches recognize seven sacraments: Baptism, Confirmation, the Eucharist, Penance, Extreme Unction, Orders and Marriage. Protestants in general hold Baptism and the Eucharist to be the only sacraments. The Socinians regard the sacraments merely as solemn rltes, having no divine efficacy, and not necessarily binding on Christians. The Quakers consider them as acts of the mind only, and have no outward ceremonies connected with them.

The only large town on it is Sacramento. It is navigable to this town, and for small vessels to Red Bluff, about 300 miles.

Sacramento, the capital of California and county seat of Sacramento County; located at the junction of the Sacramento and American rivers; natural distributing center for central and northern California; with three trans-continental lines of railroad and a large number of interurban lines. It is the trade center of an agricultural empire—the Sacramento Valley—of about faning of sacred things; more strictly the empire—the Sacramento Valley—of about faning of sacred things; more strictly the 12,000,000 acres of fertile land. In the alienating to laymen, or common purposat few years fully \$200,000,000 have been invested in irrigation, reclamation sons and pious uses. Church robbery, or the taking things out of a boly place, is recribed and by the common law was and a large number of interurban lines. and power development projects in the territory tributary to Sacramento. It is rapidly becoming a manufacturing center. Both the Southern Pacific and the Western Pacific maintain their main shops here. The Capital Park, of thirty-four acres, in which stands the \$4,700,000 capitol building, is to be enlarged by two additional blocks proceed by the standard by two additional blocks presented by the city, upon which additional buildings will be erected. Pop. 75,000.

Sacred Fires, THE, of India have been in continuous ex-Istence for more than twelve centuries.
They were consecrated by the Parsees on their emigration from Persia. The flame is fed five times each two hours with sandal-wood and other fragrant combustibles. The priests in attendance are descendants of the Zoroasters of ancient

Babylon. See Zoroasters.

Sacrifice (sak'ra-fis), a gift offered with some symbolic intent to the Deity, generally an immolated victim or an offering of any other kind laid on an altar or otherwise presented in the way of religious thanksgiving, atonement, or conciliation. The origin of sacrifice is a point much disputed; the two opposed views being that of a primeval appointment by the Deity, and that of a spontaneous origination in the instinctive desize of man to draw near to God. The symbolic character of sacrifice may be represented under three heads: (1) Prorepresented under three heads.

pitlatory, or designed to conciliate generity it is well pitlatory, or designed to conciliate generity it is well ally the favor of the Deity; (2) Eucha- adapted to ally the favor of the Deity; (2) Eucha- adapted to the continuous server as the ristic, or symbolical of gratitude for favors received; (3) Expiatory, or offered ln atonement for particular offenses. To a different class may he assigned depreca- ing wedtery sacrlices designed to avert the wrath between or appeare the wicked disposition of del- articulating ties. The customs of the Jews regarding with the haunch-bones. In most mamsacrifice are noteworthy on account of mals the number of vertebræ forming their very express and explicit chalms to the sacrum is smaller than in man, a divine origin, and because of their connection with the Christian religion. The nection with the Christian religion. De- ten. Fishes possess no sacrum at all.

tails are amply given in the Book of Levitleus. Few religions, whether ancient or modern, have omitted sacrifices from among their rites. The ancestors of all the existing races in Europe practiced human sacrifices, and similar usages widely prevailed throughout the world. Among Christians the Roman Catholic and Creek shumber assembled to the Roman Catholic and Cathol and Greek churches regard the mass as a mysterious sacrifice; but with Protestants

It is not generally so regarded.

Sacrilege (sak'ri-lej), in a general sense, the violation or prosacrilege, and by the common law was formerly punished with more severity than other thefts, but it is now put by statute on the same footing with burglary or house-breaking.

Sacristan (sak'rls-tan), the same as section, which is corrupted from it, an officer in a church whose duty

lt is to take care of the church, the sacred vestments, utensils, etc.

Sacristy (sak'ris-ti), the apartment ln or connected with a church intended for the keeping of the sacred vestments and utensils while not in use, and in which also the clergy and others who take part in religious ceremonies array themselves for so doing.

Sacrobosco (sa-krō-bos'kō), or John Holywood, a mathema-tician and astronomer of the thirteenth or fourteenth century. He was a native of Britain, but lived chiefly in France, and died at Paris as professor of mathematics at the university.

Sacrum (sā'krum), in anatomy, the bony structure which forms the basis or inferior extremity of the vertebral column. The human sacrum forms the back part of the pelvis, is roughly

triangular in shape, consists of five united vertebræ, and from its solidserve keystone of the pelvic arch, being wedged in and

Pelvic Bones. ., Sacrum

The sacrum in man is fully ossified and completed in development from the twenty-fifth to the thirtleth year of life, but the component parts can generally be perceived even in the most aged individuals.

Sacy (sa-so), ANTOINE ISAAC, BARON SILVESTRE DE, a French philologist, born in Paris in 1758; died in 1838. After acquiring a thorough knowledge of the Greek and Latin classics, he studied Hebrew, Syriac, Chaldee, Samaritan, Arabic and Ethiopic; mastered the prin-cipal European languages, including Turkish, and later on also Persian; was appointed professor of Arabic in the School of Oriental Languages in 1795, and in 1806 professor of Persian at the College of France. In 1808 he was elected to the Corps Législatif. He was one of the most active members of the Aslatic Society and of the Academy of Inscriptions, and a pro-lific contributor to the learned *Transac-*tions of the period. Napoleon created him a baron in 1813, and under Louis Philippe he became a member of the chamber of peers in 1832. His teaching gave a powerful impetus to the study of

Oriental languages in Europe.

Saddle (sad'), a kind of seat for a hors s back, contrived for the safety and come rt of the rider. In early ages the rider at on the bare back of his horse, but it course of time some kind of covering was placed over the back of the animal. Such coverings became afterwards more costly, and were sometimes richly decorated. The modern riding saddle consists of the tree, generally of beech, the seat, the skirts and the flaps, of tanned pigskin, and the construction and weight vary according to the purposes for which it is to he used. Among the varieties are racing saddles, military saddles, hunting saddles and side-saddles for iadies. The name saddle is also given to a part of the harness of an animal yoked to a vehicle, being generally a padded structure by means of which the shafts are directly or indirectly supported.

Saddleworth (sad'l'wurth), a town of Yorkshire, England,

in the valley of the Tame, 11 miles s. w. of Huddersfield. Has cotton and woolen manufactures. Pop. (1911) 12,605.

Sadducees (sad'n-sis), one of the two chief sects or parties

existing among the Jews in the time of christ. Various accounts are given of their origin. Some critics recognize in the Sadduces the descendants and adherents of the Zadok mentioned in 1 Kings i, 39. For the knowledge we possess about them we are indebted to the New Testament and to Josephus, a Pharlsee,

hut comparatively little of their actual position is certainly known. They were a less numerous, but more aristocratic party than the Pharlsess; they possessed the largest share of wealth, and, in consequence, generally held the highest dignities. A constant feud existed between the true seets. The Saddycess were disthe two sects. The Sadducees were distlnguished for three special hellefs or doctrines: they repudiated the oral law, they denied the resurrection of the dead, and disbelieved in the existence of angels and spirits (or at least did not hold the current views regarding these). 'The Sadducees rapidly disappeared after the first century of the Christian era.

Sadi (så'dē), or SAADI, the most cele-hrated didactic poet of Persia, horn at Shiraz about the end of the twelfth; died about the end of the thirteenth century. In his youth he visited Hindustan, Syria, Palestine and Ahyssinia, and made several pilgrimages to Mecca and Medina. While in Syria he was taken by the Crusaders, and actually compelied to labor as a slave at the fortlicatlons of Tripoii. After about fifty years of wandering he returned to his native city, delighting everybody with his poems and sage precepts. The best of his works are: Gunstan ('Garden of Roses'), a moral work, comprising stories, anecdotes, and observations and reflections, in prose and verse; and Boston ('the Orchard'), a collection of histories, fables and moral

instructions in verse.

Sadler (sad'ler), or Sadler, Sir Ralph, an English statesman, born in 1507; dled in 1587. Thomas Cromwell, earl of Essex, in whose family he had been employed for some time, hrought him under the notice of Henry VIII and the king charged him with any VIII, and the king charged him with several important missions to Scotland, and created him a knight in 1543. As a staunch Protestant he relinquished public life during the reign of Mary, but on the accession of Elisabeth in 1558 he entered Parliament, hecame a privy-councilor, and the queen employed him again in Scot-land. During Queen Mary's imprisonment at Tutbury, Sadier was for a time her keeper, and after her execution in 1587, and just about a month before his own death, he had to perform the duty, of carrying Elizabeth's letter of condolence and apology to James VI of Scotland.

nated in the decisive battle of Königgräts. The whole conflict is also known as the battle of Sadowa.

Safe (saf), a receptacle for valuables, of iron or steel, or both combined. A safe to answer ail requirements should be fire, explosive, acti, drill and wedge-proof. A fire-proof safe need only be so constructed that, although exposed to the constructed that, although exposed to the intense heat of a conflagration, its inner recesses remain at a sufficiently iow temperature to prevent combustion of the contents. A burglar-proof safe needs many other safeguards, and the history of safe-making is mainly a record of struggles between the safe manufacturer and the burglar; the requires that safe. and the burglar; the result is that safes can now be obtained which are ail hut lmpregnable. The safe consists of an outer and an inner wail, the space between being filled with some fireproof material such as a sheeter, silicate action materiai such as asbestos, silicate cotton, gypsum, etc. The outside casing, which gypsum, etc. The outside casing, which may be single or compound, naturally receives the greatest attention, and various are the devices of mannfacturers to render it sufficiently hard and solid to resist the fine! — tempered drills of the hurgiar. To prevent wrenching, the door is secured by bolts moving straight or diagonally into slots on one or on all sides. These holts are moved by the door handie, and the iock-key fixes them in their positions. With the modern safe of the best kind, the iock may be said to be the only vulnerable point, hence much care and ingenulty have been expended on its mechanism. The first great improvements in iocks, as applied to safes, are due to Chubb of London, a name which still stands in the front ranks of safe-lock makers; but numerous passages. makers; hut numerous patents, mostly of American origin, have in recent years been introduced. Of these the keyless permutation locks deserve particular mention, as they ohvlate the danger which arises from lost or faise keys. Such locks allow of opening only after an indicator has been moved in accordance with a certain combination of numbers arranged. certain combination of numbers arranged before closing the safe. Some safe-locks are so constructed that to be freed they require different keys on different days, some can only be opened at a certain hour, this being fixed on before the door is closed. is closed; while others again require two or more keys in charge of different persons; in fact, the arrangements contrived to render the piundering of safes next to impossible are too numerous even to men-tlon. The connection of safes with electric alarms ln a variety of ways forms another safeguard.

sons traveling in an enemy's or in a foreign country to secure them against moles-

tation. These special safe-conducts have in modern times been mostly superseded by the passport system.

Safed (saf'ed), a town of Palestine, the most eievated place in Galiice, lying 2700 feet above the sea. Here are the rulns of a castle hullt by the Crusaders. It lies 6 miles N. W. of the Sea of Gaillee, and is one of the four holy cities of the Jews in Palestine; a Jewish coiony has been settied here since the sixteenth century, and of its 25,000 inhabitants about haif are Jews.

Safed Koh (sa-fed' kö) ('White Mountains'), a mountain

range ln Afghanistan. The westeriy por-tion of the chain separates the Herat river valiey from the Murghab, while the easterly Safed Koh forms the southern boundary of the Cabui basin. These mountains are quite alpine in their character, and some of the peaks exceed 15,000 feet in neight. Among the spurs of the eastern section are the passes leading from Cahnl to Jaialahad, and from Jaialahad to Peshawur, famous in the annals of British military expeditions into Afghanistan. Safety-ink, an ink for use on checks or other important papers, which if tampered with will disciose the fact in some way, as hy change of color.

Safety-lamp, a lamp for lighting coal-mines without exposing the miners to explosions of firedamp. The first safety-iamp was invented by Sir Humphry Davy in 1816, and until a quite recent period his system, with some slight modifications, was in general use. It consists principally of a cistern to hold the oil, in the top of which the wick is placed. Over the cistern a cylinder of wire-gauge is fixed so tern a cylinder of wire-gauze is fixed so as to envelop the flame. The iamp is ciosed by a boit passing through both parts, and to prevent the miner from exposing the flame a locking arrangement exists. The diameter of the gauze wire is from \( \frac{1}{40} \) to \( \frac{1}{60} \) of an lnch, and the apertures do not exceed the \( \frac{1}{42} \) of an lnch square. The Stephenson lamp, better known among miners as the 'Geordie,' has a glass chimney as well as the wire-gauze, \( \tau \) at the air to feed the flame enters through a perforated ring flame enters through a perforated ring just below the wick. This lamp, though safer than the Davy, if used with care, becomes a source of danger if the perforated ring is allowed to get clogged and the glass chimney overheated. Asseries of trials with safety-lamps, made in Britain by a committee of the Midland Safe-conduct, a protection granted in Britain by a committee of the Midland to per- Institute, led to the condemnation of the

ordinary Davy and Stephenson lamps, and to the introduction of the Mueseier, Marto the introduction of the Mueseier, Mar-ant, and several other lamps, which had been used with satisfaction in Belgian and French mines. They are, however, all modifications of the principle which underies the original invention of Sir Humphry Davy. A safety-lamp recently brought before the public is the Thorne-bury, which is said to be self-extinguish-ing in an explosive mixture of fire-damp ing in an explosive mixture of fire-damp and air, to give a strong light, to be simple in construction, and absolutely safe. There are also several electric miner's lamps in the market. In additlor to safety-lamps many other safety appliances are in use ln mines and Amer-

ignite only by friction with a specially prepared surface. Matches of this kind are now largely in use, as being free from the dangers of the older style of friction matches.

a pin for fastening cloth-Safety-pin, a pin for fastening clothing, the point of which a sort of sheath to prevent its pricking or scratching, and is held in place by a spring.

a shaving implement Safety-razor, a shaving in which the blade rests in a frame so formed as to prevent the cutting edge from abrading or cutting the skin. It is of common use for home shaving.

calculated strength of the containing vessel. The commonest form of safety-valve sel. The commonest form of safety-valve on steam-boilers is a lid (valve), pressed against a hole (seat) by either a spring or a weight; the spring or weight not exerting a greater force than can be overcome by the pressure of the steam inside, part of which then escapes and obviates any danger. The valve is round, is beveied round the edge, and is furnished with a spindie which moves loosely in a gulde attached to the seat; the seat is beveied to fit the edge of the valve. On beveied to fit the edge of the vaive. On. iocomotive and on ships' boilers the valve is pressed against the seat by a spring arrangement; but on stationary boilers a weight should always be employed. Fig. lcan inventors have produced various use1 shows a safety-vaive, in which a weight
is employed. Here a is the vaive, b b
ful devices.

Safety-match, a match tipped with
a substance that will like the valve ltself, made of gun-metai, d the lever turning upon a fixed center at c, and pressing upon a fixed center at c, and pressing upon the valve by a steel point, f a guide for the lever, g a weight which may be shifted backwards and forwards according to the pressure desired. Fig. 2 shows a form of spring safety-vaive, in which a series of bent springs h h h are placed alternately in opposite directions, their extremitles sliding apon the rods i and the springs ing upon the rods i i, and the springs being kept down! 7 the cross-bar k; a being the valve, c the valve-seat, and b b part of the boiler.

Safi (sa'fa), Safie, or Azfi, an ancient seaport in Morocco, on the west coast, at one time an emporium of the European trade with Morocco. The Portuguese held it from 1508-1641. Pop. about 10,000.

OF BASTARD Safflower (safflou-er), or Bastard torius), a large thistle-like plant with orange-colored flowers, nat. order Compositæ. It is cultivated in China, India, Egypt and in the south of Europe. An oii is expressed from the seeds, which is used as a lamp-oii. The dried flowers afford two coioring matters (aiso cailed safflower), a yellow and a red, the latter (carthamine) being that for which they are most valued. They are chiefly used for dyeing silk, affording various shader of pink, rose, crimson and scarlet. Mixed with final metals and scarlet. with finely-powdered talc, safflower forms a common variety of rouge. In some places it is used in lieu of the more expensive safron, and for adulterating the latter. The oil, in large doses, acts as a purgative.

(saf'run; Crocus sativus, nat. Saffron order Iridacem), a low ornamental plant with grass-like leaves and large crocus-like purple flowers, cultivated in the East and in Southern Europe for

the sake of its stigmas. These when dried form the saffron of the shops, which has a deep-orange color, a warm bitterish taste, and a sweetish penetrating odor. Its orange-red extract is used by painters and dyers, and the saffron Itself aiso in rookery and confectionery as a coloring and flavoring substance. Bastard saffron least flower meadow saffron Colchicum ls safflower; meadow saffron Colchicum

(wai'den), a mu-Saffron-Walden nicipal borough of England, county of Essex, 38 miles N. N. E. of London. It is a piace of great antiquity, and carries on a considerable trade in mait, grain, cattle, etc. Pop. 6311.

Sagan (zii'gan), a town of Prussla, province of Siiesla, government Liegnitz, on the Bober. It was formerly the capital of the principality of Sagan, and has still a ducal castle with fine garden and park. Various manufactures are carried on, especially that of linen. Pop. (1905) 14,208.

Sagapenum gum-resin brought gum-resin brought to be furnished by some species of the genns Ferüla. It occurs either in tears or irregular masses of a dirty brownish coior, containing in the interior white or yeliowish grains. It has an odor of garlie, and a hot, acrid, bitterish taste. It is occasionally used in medicine as a lit is occasionally used in medicine as a lataline soils of the N. American plams. It is widespread over the arid regions. Sagapenum (sag-a-pē'num), a fetid gum-resin brought from

narrative. Some detail particular events relating to politics or religion, some the history of a particular family, and others the lives of kings and other eminent ln-dividuals. The sagas have been much studied by modern writers and critics, ity organization, child-heiping, and child-history, and antiquities of the Morth to an eminent degree. Originally they were composed for oral recitation, and prior to the twelfth century they lived only in the memories of the people, hence the varying versions of the same events. Between the twelfth and afteenth centuries the Gulf of Tartary, opposite the memories of the people of many particular family, and others improvement of social and living conditions in the United States. Important researches have been made in the characteristic in the characteristic in the first organization, child-heiping, and child-heiping, tween the twelfth and fifteenth centuries numbers of these detached tales were coitailed, and worked into a series of flora and fauna are almost Siberian. The consecutive narratives. The sagas of the inhabitants consist of Ainos and other west of the island are most elegant in aborigines, Russians, Japanese, etc., alsorigines, and this circumstance is attributed to Ceitic influence. Among the more important sagas are: the Saga of Gisii, the portant sagas are: the Saga of Gisii, the later to Japan. In 1875 the Russians obtained it, but after the Russo-Japanese the Eyrbyggia Saga, a saga of very mixed contents; the Laxdella Saga, the story

of the Icelandic heroine Gudrun; the Saga of Grettir the Strong; the Saga of Niai, of great legal and historical value.

Sagasta (sag-as'ta), PRAXEDES MATERO, a Spanish statesman, born at Torrecilla, in 1827. He became an insurrectionist and twice had to fee to France. In 1868 he became a member of Prim's cabinet, supported Amedeus Aug. Prim's cabinet, supported Amadeus during his brief reign, held office under Serrano, and became leader of the Liberals under the new monarchy. He was erals under the new monarchy. He was premier, 1897-99, during the Spanish-American troubles. He died January 15,

Sage (saj), the common name of piants of the genns Salvia, a very large genus of monopetalous exogenous plants, nat. order Labieta, containing about 450 species, widely dispersed through the temperate and warmer regions of the giobe. They are herbs or shrubs of widely varying habit, usually with entire or cut leaves and various colored (rareiy yeilow) ficwers. The best known is the S. officinalis, or garden sage. This plant is much nsed in cookery, and is supposed to assist the stomach in digesting fat and luscious foods. Sage-

Saghalien, Saghalin (sak'a-len), a Saghalien, long island in the North Pacific, separated from Manchuria by the Gulf of Tartary, opposite the mouth of the Amoor; area, 24,560 square miles. The center is mountainous. Climate, flora and fauna are almost Siberian. The lected, written down, amplified or cur- The center is mountainous. mpire; esians panese ia and Saginaw (sag-i-ng), a city of Michigan, county seat of Saginaw
County, and an important railway center,
96 miles N. w. of Detroit, on the Saginaw
River, which is here navigable for the
largest lake craft. Saginaw is the center
of the large beet sugar industry of the
state and is extensively interested in coal,
lumber and salt production. There are
numerous industrial establishments, including large glass works, railroad and cluding large glass works, railroad and machine shops, boiler works and many other Industries. Pop. 67,495. East Saginaw is consolidated with it.

Sagitta (sa-jit'a), a genus of anne-lids, forming the order Cha-tognatha. This animal is a transparent marine form, straight and slender, attaining the length of about an lnch. The head carries a series of setse or bristles surrounding the mouth, and the hinder margin of the body is fringed with a sort of fin. The species are found living in the open sea all over the world.

Sagitta'ria.

Sagitta'ria.

Sagittarius (saj-i-tar'i-us; the Arch-er), ln astronomy, the nlnth sign of the zodiac, into which the sun enters November 22. The constel-iation consists of eight visible stars. It ls represented on celestial globes and charts by the figure of a centaur in the

act of shooting an arrow from his bow.

Sagittate (saj'i-tat), in botany, a term applied to the form of leaf shaped like the head of an arrow; triangular, hollowed at the base, with

angles at the hinder part. Sago (sa'gō), a starchy product obtained from the trunk of several species of a genus of palms named Sagus, and chiefly by S. Rumphii and S. lavis. The latter, from which the finect sago is prepared, forms immense forests on nearly all the Moluccas, each stem yielding from 100 to 800 lbs. of sago. The tree is about 30 feet high, and from 18 to 22 inches in diameter. It is cut 18 to 22 inches in diameter. It is cut down at maturity, the medullary part extracted and reduced to powder like sawdust. The filaments are next separated by washing, and the meal laid to dry. For exportation the finest sago meal is mixed with water, and then rubbed into small grains of the size and form of coriander seeds. The Malays have a process for refining sago, and giving it a fine pearly luster, the method of which is not known to Europeans; but there are strong reasons to believe that heat is employed, because the starch is parare strong reasons to believe that heat is employed, because the starch is partially transformed into gum. The sage the Ebro, about 3 miles from the coast. so cured is in the highest estimation in It is famous in Roman history; its siege all the European markets. of soluble cocoas, and for adulterating the common sorts of arrewroot. For

Portland-sago see Arum.

Sagoïn (sā'gö-in), or Sacouin, the native South American name of a genus (Callithria) of Brasllian monkeys of small size, and remarkably light, active and graceful in their movements.

Bee Hauger. Sagor.

Saguenay (sag'e-nā), a river of Can-formed by two outlets of Lake St. John, which unite about 9 mlles below the lake, from which point the river flows lake, from which point the river flows s. E., and falls into the St. Lawrence at Tadousac Harbor; length about 100 miles. For many miles of the latter part of its course the banks are very iofty, and in some parts there are precipices more than 1000 feet high. Ships meor at rings fixed inte some of the precipitous walls of rock, the water being so deep as to be unsuitable for anchorage. The Saguenay is navigable for vessels of any Saguenay is navigable for vessels of any size to Ha Ha Bay, a distance of about 50 miles to 60 miles from the St. Lawrence, and at high-water for vessels of large dimensions from 15 miles to 18 miles farther. It is visited by many tourists on account of its remarkable scenery.

rise to the second Punic war. The site is occupied by the modern town of Murviedro.

Sahara (sa-hā'ra; properly sā'hs-rā), THE, that vast and mainly desert tract of Northern Africa iying north and south of the Tropic of Cancer, between the Atlantic and the Nile. In the north it extends to and forms part of Morocco, Algeria, Tunis, Tripoii and Egypt; in the south it is chiefly bounded by the Soudan. This improvements the structural length of which mense area, the greatest length of which is over 3000 miles and its area probably not less than 2,000,000 square miles, is not less than 2,000,000 square miles, is not, as popularly supposed, a great level desert; eon the contrary, it offers considerable variety of configuration and vegetation. The surface ranges from beliow sea-level to 8000 feet above it. There are the extensive and elevated plateaus of Tasili, Tibesti, etc., about the center of the Sahara, running from the north in a southeasterly direction, and north in a southeasteriy direction, and presenting some high mountain masses.
Between Tibesti and the Niger we have
the elevated region of Air, and towards
the Atlantic Adrar. These plateaus are
intersected by many fertile valleys fit for agriculture and pasture. Other parts of the desert are broken by large oases with a most luxuriant vegetation, such as Twat, Wargla and Fezzan. On the borders of Algeria oases have been created artificially by means of artesian wells. A vast tract of true desert, El Djuf, lles in the west-central reglon, and unites all the worst characters of the desert—want of water, intense heat and moving sands. In the desert proper there is little of animal or of vegetable life. A few species of antelopes, the wild ass, the mountain sheep, the hyena, the baboon, the tortoise and the ostrich, are met with in favored spots. Lizards, jerboas and serpents of many kinds retain undisturbed possession of the burning sands. Where herbage exists it is mainly composed of such plants as require but little moisture. The vegetable wealth of the desert-dweiler lles in the date-palm. The population, estimated at about 2½ mil-A vast tract of true desert, El Djuf, lles desert-dweiler iles in the date-palm. The population, estimated at about 2½ millons, consists of various tribes of Arabs, Berbers and negroes. The Berbers are almost confined to the west-central, and the negroes to the east-central parts, while the Arabs predominate in the other regions. Camel breeding, slave and salt dealing, caravan conducting and brigandage form the chief occupations of a large section. A number of caravan routes through the Sahara connect Timbuctoo and the Soudan with the maritime countries in the north. Recent explorations have finally disposed of the idea that the

Sahara is the dried-up bed of a former inland sea, and that it could be restored to its former condition by admitting the waters of the ocean. The diluvial sea theory is now limited to the low-lying districts, Ei Djuf and Kufra, which abound in rock-salt deposits. Spain annexed in 1887 the coast between Morocco and Senegai, and by treaty secured considerable territory inland. France controls a large section of it.

Saharunpur (sa-hā-ran-pur'), a town in Hindustan, capitai of the district of the same name, in the Northwest Provinces. It has many handsome residences in the European style, a government stud, a botanic garden, and a large sugar and grain trade. Pop. 66,254.

Sahib (sa'lb), the usual term of address by natives of India towards a European gentleman.

Sai (sa'l), the name applied to the weeper-monkey of Brazil. See Sa-

Saiga (si'ga; Antilope Saiga), a species of antelope found on the steppes of Russia and on the Russian borders of Asia. It forms one of the two European species of antelopes; the other species being the chamois. The saiga is about 2½ feet in height, with spiral horns, tawny colored in summer, light gray in winter.

Saigon (si-gon'), capitai of French Cochin-China, of which it is the chief trading emporium, on the right bank of the river of the same name, 35 miles from its mouth in the China Sea, one of the finest cities in the East. The bulk of the business is carried on in the suburb of Cholon. Saigon is connected by canal with the Me-kong, and by rail with Mytho, situated on one of the arms of that river. The Saigon River is navigable, even at ebb-tides, by the largest vessels up to the town, and an active trade with China, Siam, Singapore, Java, etc., is carried on, rice being the staple article of export. The population is estimated at 72,000, (1913).

Saikio.

Sail (sāl), a piece of cloth or tissue of some kind spread to the wind to impel or assist in impelling a vessel through the water. Sails are usually made of several breadths of canvas, sewed together with a double seam at the borders, and edged all round with a cord or cords called the bolt-rope or bolt-ropes. A sail extended by a yard hung by the middle is called a square sail; a sail set upon a gaff, boom, or stay, so as always to hang more or less in the direction of

It is a pretty piant with narrow pinnate leaves and long spikes of bright pink flowers; stem 11-2 feet high.

Saint Albans (sant albanz), a city, lin Co., Vermont. 3 miles E. of Lake Champiain, and about 30 miles N. by E. of Burlington. It has extensive railroad shops, rolling mills, a large overall factory and other industries, and is the center of a rich farming country, and it ships large quantities of milk, condensed is largly increased by visitors in the milk, etc. Pop. 6381.

milk, etc. Pop. 6381.

Saint Albans, a municipal borough
Hertfordshire, England, 24 miles northwest of London. It stands close to the
site of the ancient Verulamium, and
owes its name to St. Albans, the protomartyr of Britain. St. Albans figures
prominently in English history, and two
battles were fought here (1455 and 1461)
between the rival houses of York and
Lancaster. The cathedral is a large and
beautiful structure recently restored, and beantiful structure recently restored, and St. Michaei's contains the remains of and a monument to Lord Bacon. Strawpiaiting and siik-throwing are the chief industries. By a readjustment of the dioceses of Rochester and Winchester, the e of St. Albans was created in 1877. Pop. (1911) 18,132.

Saint-Amand-les-Eaux (san-ta-man-la-28), a town in France, department of Nord, on the Scarpe, 7 miles northwest of Vaienclennes. It is famous for its hot sulphnrous springs, and has manufactures of fine cotton yarns, etc. Pop. 10,195. —There is another Saint-Amand — ST. A.-MONT-ROND, in dep. Cher; pop.

Andrews Saint Andrews. (St.).

See Ery-Saint Anthony's Fire. sipelas. Saint-Arnaud (san-tär-nō), ACHILLE LE ROY DE, a French marshal, born in 1801; died in 1855. He entered the army in 1831, distinguished himself in Algiers by leading a successful expedition against the Kabyles in 1851, and was made general of division. Recalled to Paris the same year he was created minister of war by Louis Napoleon, and was the chief tool in the coup d'étét of December 2, receiving as reward the haton of a marshal. In 1854 he was commander of the French forces in the Crimes, but died from aboless. in the Crimea, but died from choiera a few days after the battle of Alma.

Saint Augustine (a gus ten), a city and seaport of Florida, the seat of St. John's county, on an inlet of the Atlantic, and a fashionable health resort during winter. It is the oldest town in the United States, having been founded by the Spanish architecture remain, including the city gate, the fort of San Marco, (new Fort Marion), and a Huguenot house, the eldest building in the United States. There are a number of large

Saint Austell (sant as'tel), a town Cornwall, with a large trade in potters' clay, known as kaolin. Pop. 3365.

Saint Bartholomew. See Bartholomew. omew.

Saint Bernard (sant bernard), a mountain pass in Pledmont and the canton of Valais, Switzerland. Its fame is due to its hospice, said to have been founded as a monastery in 962, by Bernard de Menthon, for the succor of travelers. The famous breed of St. Bernard dogs, used by the monks for the rescue of travelers across the icy pass, have been replaced by a Newfoundland stock. This pass was traversed by armies in Roman and medieval times, but is chiefly notable for the passage of Napoleon's army in May, 1800.

Saint Boniface, a town in the provaint Boniface, ince of Manitoba,

Canada. Pop. (1911) 7483.

Saint Catharine's, a town of CanOntario, 12 mlies northwest of Niagara
Falls, and near Lake Ontario. It is
ceiebrated for its mineral springs (artesian), is the center of a large and increasing trade, and contains flour and saw mills, foundries, etc. Pop. 12,484.

Saint Chamond. See Chamond, St.

Saint Charles, the capital of St. Charles Co., Missouri, is on the N. hank of the Missouri River, 22 miles N. w. of St. Louis. It has extensive car works, a large shoe factory, hrick and tile works. Pop. 9437.

Saint Christopher's. See Christopher's, St.

Saint Clair (-klar'), a lake in North America, situated between Lake Huron and Lake Erie, and connected with the former by St. Ciair River, with the latter by Detroit River. It is 30 miles iong, greatest breadth 24 miles, area 360 square miles. It contains several for island. tains several fine islands. The river Saint Clair, which separates Canada and the United States, is about 40 miles iong, 1 mile wide, and navigable.

Saint Clair, ARTHUR, an American soldier, born at Thurso, States, having been founded by the Spaniards about 1565. A few specimens of Spanish architecture remain, including the city gate, the fort of San Marco, Quebec, 1759; settled in Pennsylvania, (new Fort Marlon), and a Huguenot joined the revolutionary army and house, the eldest building in the United States. There are a number of large and handsome hotels and several fine was made a major-general in 1777, was churches. Seemanent pop. 5494. This OWE 7 0 ers hol

command in the army in consequence, and died near Greensburg, Pa., Aug. 31, 1818. Saint Cloud (sant kioud), a city of Minnesota, capital of Minnesota, bank of the Mississippi river, 75 miles N. W. of St. Paul. It is the seat of a State normal school and a State reformatory institution. Water-power is here abundant and there are railroad shops and manufactures of flour, lumber, wagons, sleds, etc. The chief industry is the working of granite. Pop. 10,600.

Saint Cloud (san kloo), a town of France, on the Seine, in the western outskirts of Paris. Here was formerly the fine château of St. Cloud, beionging to the Duke of Orieans and a favorite residence of royaity. It was burned during the slege of Parls in 1870. The extensive park in which it stood is a The extensive park in which it stood is a spiendid example of the work of Le Nôtre. Pop. 7316.

Saint Croix (sant crol), a river of Wisconsin, rises near the W. end of Lake Superior, flows s. W. and then s., becoming the boundary line between Minnesota and Wisconsin, and fails into the Mississippi 20 miles s. E. of St. Paui. Its whole length is 200 miles; an expansion of it near Stillwater, Wis., forming St. Croix Lake, 26 miles long and orming St. Croix Lake, 20 miles long and 2 miles wide. There are several falls in its course, and St. Croix Falls, 55 miles from the Mississippi, interrupts navigation.—A river of the same name, 75 miles long, rises in Grand Lake, on the border between Maine and New Brunswick, and after a very winding tourse fails into Passamaquoddy Bay. It is navigable as far as Caiais.

See Sainte Croix. Saint Croix.

Sainte-Beuve (sant-beuv), CHARLES AUGUSTIN, a French writer, and one of the greatest of modern critics, born at Boulogne, Dec. 23, 1804; died at Paris October 1906. died at Paris, October, 1869. He studied medicine at Paris, but abandoned that science in favor of literature, his first work of importance being on the French literature of the sixteenth century. His contributions to the Revue des Deus Mondes on French authors and literature formed for a considerable period the chief attraction of that periodicai. In 1837

year, and was in Washington's army at the delivered some lectures in the School the siege and surrender of Yorktown. He of Port Royai at Lausanne, and these was elected to Congress in 1785, was iald the foundation of his eiaborate work, president of Congress in 1787, and was Histoire du Port Royai (1840-60). In expedition against the Maxarin Library, and in 1845 addied with heavy loss. He resigned his defeated with heavy loss. He resigned his After 1848 he contributed a number of command in the army is consequence, and critiques to the Monday numbers of the critiques to the Monday numbers of the Constitutionnel and then of the Moniteur (Causeries du Lundi, 15 vois.; Nouvesus Lundis, 13 vols.). In 1852 he was appointed professor of Latin poetry in the Collège de France, but his views in favor of Napoleon III and imperialism rendered him unaccentable to a large second rendered him unacceptable to a large sec-tion of the students, and he resigned; he tion of the students, and he resigned; he also lectured for some years on French iterature at the Ecoie Normaie Suptrieure. The cross of the Legion of Honor was bestowed on him in 1859, and the senatorship in 1865. Most of his critical writings have been republished in various editions. He also wrote three volumes of poetry (1829-37), under the nom de plume Joseph Deiorme; but these do not rank high, aithough his ideal these do not rank high, aithough his ideal of poetry was of the very highe

Sainte-Claire-Deville, HENRI, chemist, born in Saint Thomas, West Indies, in 1818. He studied in France; became professor of chemistry in the normal school, and won distinction by the invention of a method for producing the metal aluminum in considerable quantities, and for his demonstration of the dissociation of chemical compounds at high temperatures. He died in 1881. II.s brother Charles (1814-1876) was a geologist and published a Geological Voyage to the Antilles and the Island of Teneriffe, and other works.

Sainte Croix (sant krwt), one of the Virgin Islands, bought from Denmark by the United States in 1917. It is the largest of the Virgin group, 84 square nilles. The western portion is hilly, but the soli almost the properties. tirroughout the island is productive. It was discovered by Columbus in 1493. Pop. 16,000. Capital, Christiansted. Also called SANTA CRUZ.

Saint Elias (-e-il'as), Mount, a mountain situated on the boundary between British North America and Aiaska, about 25 miles from the Pacific Ocean. It rises 19,500 feet above the ocean, and being completely isolated serves as a very important landmark. It was first ascended in 1897, by the Duke of the Abruzzi. Sainte Marie. See Nossi-Ibrahim.

Saintes (sant), a town in W. France, department Charente - Inférieure, on the Charente. It has an oid cathedrai and interesting Roman remains. The manufactures are bombasine, earthenware, etc., and the trade is in brandy, wool and corn. Pop. 13,774.

Saint-Étienne. 5-men). See Markirch.

See Eustatius. Saint Eustatius.

Saint-Evremond (sant-avr-mon). GUETEL DE SAINT-DENIS, SEIGNEUR DE, a French writer, born in 1613; died in 1703. At sixteen he entered the army, took part in many of the campaigns of the period, and rose to the rank of field-marshai, but gained his chief iaurels in the saion of Ninon de l'Enclos as a brilliant conversationalist and a graceful wit. He was a staunch rovelist ful wit. He was a staunch royalist, but, compromised by the disgrace of Fouquet, and afraid of Mazarin, he fled to Engiand in 1061, and was welcomed and pensioned by Charles II. He was buried at Westminster Abbey. His satisfical writings and his letters are of most interest. One of the former is his La Comédie des Académistes.

Saint Francis (sant fran'sis), a the boundary between Arkansas and Missouri, and entering the Mississippi about 9 miles above Helena. At high-water it is navigable for about 150 miles; total

iength 450 miles. Saint Gall, See Gall (St.).

Saint Gaudens, Augustus, scuip-tor, born at Dubiin, Ireiand, in 1848; was brought in infancy to New York, studied art there and at Paris and Rome, opened a studio in New York in 1872, and produced Hiawatha, The Puritan, statues of Farragut and Lincoln, and other works. He designed the medai of award of the Columbian Exposition and other medals. He died August 3, 1907. See Germain (St.). Saint Germain.

See Helena (St.). Saint Helena.

Saint Helens (hel'enz), a mnnicipal and parliamentary borough in England, in Lancashire, 10 miles E. N. E. of Liverpooi. Until a comparatively recent period an unimportant village, it is now a prosperons town. It ewes its rise to the extensive coai-beds About 1834 he settled down to his favorin the vicinity, and the introduction of ite pursuits in the north of Scotland, and

At Sault Ste. Marie, or St. Mary's Falls, there is a fall of 18 feet, and to enable vessels to avoid this a canal was constructed on the Michigan side in 1855, 1800 yards long and 12 feet deep, with two locks. The present Michigan canal is 2330 yards long and 108 feet wide, with a huge lock 800 feet long and 100 wide, canable of accommodating years of 21 capable of accommodating vessels of 21 feet draught. A parallel canal on the Canadian side has a lock 900 feet long. St. Mihiel (san-mê-yel') a tewn of France on the right bank of the Meuse and the Canal de l'Est, 23 miles southeast of Verdun, in the department of Meuse. Its name comes from the Benedictine Abbey of St. Michael founded here in 709. During the European war (q. v.) which began in 1914 the German troops forced the French back from the frontier, creating a wide salient south of Verdun, with the apex at St. Mihiel. The plan was to make a simultaneous thrust north of Verdun and bring the two armies together, thus enveloping the citadel This plan failed, the northern army being unable to bend back the French line. The southern salient stretching out to St. Mihiel remained unaltered from its establishment in September, 1914, to September. lishment in September, 1914, to September, 1918, in which latter year the American First Army, under General Pershing (q. v.), captured the town and forced the

enemy out of the salient.

Marshal Joffre, commanding the French armies, tried to pinch out the salient in February, 1915, and again in the summer February, 1915, and again in the summer of the same year; but his efforts came to nothing. With St. Mihiel and the heights of the Meuse in the hands of the Germans, General Falkenhayn essayed a Verdun offensive in February, 1916. The ambitious drive was continued for several months, but the ground temporarily gained by the Germans had to be given up. The St. Mihiel salient, however, remained intact, and for a long time ever, remained intact, and for a long time

575,238; in 1910, 687,029, it being the fourth city in population in the Union.

St. Lucia. See Lucia (St.).

Saint Mary's River, the channel connecting Lake Superior with Lake Huron, having more the character of a lake than a river. At Sault Ste. Marie, or St. Mary's Falls, there is a fall of 18 feet, and to enable later the attacking waves met at the village. later the attacking waves met at the vil-lage of Vigneulles, thousands of prisoners unable to retreat quickly enough from the pocket were captured, and the famous salient was obliterated.

Seven German and Austrian divisions were engaged, and it was reckoned that the total enemy loss exceeded 40,000 men. In the battle of St. Mihiel more Americans fought side by side than in any previous battle in American history; more men were engaged on both sides than in any battle in which an American army under an American general had ever fought. It was the greatest uninterrupted advance made in one day on the western front since the war began. More prisoners were taken than in any 24 hours of the war on this front; and a larger area of French territory was liberated than in any equal period since the lines stabilized in 1914. The population of St. Mihiel in 1914 was 9660.

Saint Paul (sant-pal'), a city of Minnesota, capital of the State and of Ramsey county, is situated on the Mississippi River, just below Minneapolis, the suburbs of the two cities being contiguous. It lies 350 miles N. W. of Chicago. It is at the head of navigation in the Mississippi, the Falls of St. Anthony being 9 miles above. It is built on both sides of the river, the two parts being connected by five handsome and substantial highway bridges. Owing to its favorable position it has grown in about 40 years from an insignificant depot into a fine city, and a great commercial and manufacturing center. It is surrounded by a complete network of railroads, and its situation on the Mississippi offers water communication of exceptional value. Manufactures include architectural iron, hoisting machinery, fur goods, railroad rolling-stock, flour, leather, boots and preserved provisions. There are also large railroad ever, remained intact, and for a long time it was one of the quietest sectors on the long whole western front. It was here that several American divisions, which had arrived from overseas in 1917, were trained.

Following the great retreat of the Germans from their advanced positions in the spring and summer of 1918, Marshal Foch, in supreme command of the Allied arrives, determined to make the attempt agricultural department of the State uni-

Saint-Pierre (san - pi - ar), JACQUES HENRI BERNARDIN DE, a French author, born in 1737; died in 1814. He iearned engineering, and in the capacity of englneer worked in Maita, Russia, Germany, and for about three years for the French government in Mauritius. Having returned to France he betook himself to literature. His Etudes de 'n Nature, published in 1783, first secured him a literary position. Then followed his chief works: Paul et Visciia (1787) and Chamière Indianae. Virginie (1787) and Chaumière Indicane music; Hubert (1790), both of them (especially the shoemakers, etc. former) highly popular. He was married twice when weil advanced in years, Saintsbury each time to a young girl. In 1795 he was admitted to the Institute.

Saint-Quentin (san-kan-tan).

(sāntz), a word used in the New Testament as a generai Saints term to designate ali believers in the gospei of Jesus Christ. In a specific sense it signifies persons whose lives have been deemed so eminently pious that the Greek and Roman Catholic churches have authorized practices of commemoration and invocation in regard to them. The points involved in the Roman Catholic doctrine are the intercession of the saints and the utility of invoking them. According to the Council of Trent 'the saints reigning with Christ offer their prayers for men to God'; and it teaches chat 'it is good and useful to call upon them with supplication, and in order to obtain benefits from God through Jesus Christ, who aime is our Redeemer and Saviour, to have recourse to works include nearly every form of comtheir prayers, heip and aid.' This help and aid is not expected to be given directly, but only through the favor the saints have with God, and through their also many of his symphonies, suites, consistences in the saints have with God, and through their also many of his symphonies, suites, consistences in the saints have with God, and through their also many of his symphonies, suites, consistences in the saints have with God, and through their continuous co intercession. As to how the saints are certos, etc.

enabled to hear prayers addressed to them, there is no definite teaching. is chiefly holy men who have died since the time of Christ that are spoken of as saints. The doctrine of saints, and the ideas and usages which grew out of them, form one of the main points of difference between the Protestants and the adherents of the above-mentioned churches. The Roman Catholics regard their beilefs on the subject of saints as supported by different parts of the Bible and the writings of many of the early fathers. Protestants generally object to the whole doctrine, alleging that not only is the idea of saints as intercessors no-where contained in the Bibie, but that it originated centuries after the establishment of Christianity; and that it is against the chief doctrine of Christianity, which deciares ali men to be sinners, and to be saved only by Christ. Countries, cities, arts, trades, orders, things, etc., have their patron saints, or saints who are supposed to be specially interested on their behalf; but the church, it seems, determines nothing in relation to them. St. Denis is the patron of France; St. George of England and Russla. St. St. George of England and Russla; St. Andrew of Scotland; St. Patrick of Ireland; Oiaff of Norway; Canute of Denmark; Nepomuk of Bohemia; Cecilia of music; Hubert of hunting; Crispin of shoemakers, etc. See Beatification, Canadistical Police onization, Relics.

(santz'ber -i ), George Edward Bateman, an English critic and historian, born in Southampton, Oct. 23, 1845; matriculated at Merton College, Oxford University, in 1867. He published A Short History of French Literature (1882); Essays on French Novelists (1891); A Short History of English Literature (1898); A History of Criticism and Literary Taste in Europe (1900-04), etc. After galning a high reputation as a critical writer he became professor of English literature at Edinburgh in 1895. Saints' Days are days set apart by Saints' Days, are days set apart by traditional usage or authority of the church for anniversary celebrations in honor of particular saints.

Saint-Simon (san-se-mon), CLAUDE HENRI, COMTE DE, founder of a philosophico-religious sect of socialists, was born at Paris in 1760. At the age of eighteen he entered the at the age of eighteen he entered the army, served in the closing campaign of the American war. He went to Holland in 1785, and to Spain in 1787 in connection with canal projects. He took no active part in the revolution which, indeed, caused him the ioss of his own property; hut he speculated in the national domains created by the the national domains created by the confiscation of the landed property of the nohility and clergy, and thus hy 1797 had realized a considerable fortune. He had by this time, it is said, conceived the idea of regenerating humanity, and in order to qualify himself for this great task he engaged in extensive studies, and traveled in England and Germany. He married in 1801, and in the course of a year ran through his fortune. After this he parted from his wife, and henceforth he lived in aimost constant penury. forth he lived in aimost constant penury. During the ten years 1803-13 he wrote a number of works on scientific and political subjects, such as L'Industrie on Discussions Politiques, Morales et Philosophiques (1817-18), and Parabole (1819). Augustin Thierry, Saint Auhin, and Auguste Comte, who had become his disciples, collaborated in these later volumes. Finding the difficulty of procuring the means of subsistence and of puhilshing his works increasing, he atpuhiishing his works increasing, he attempted suicide hy shooting (1823), hut recovered with a mutilated visage and the ioss of an eye. He lived for about two years after this, dying in 1825. Previously Comte had separated himself from St.-Simon on account of the theoiogical element which the latter grafted upon his socialistic doctrines, a change which ied to the production of the Catéchisme Industriel (1824), and Le Nouveau Christianisme (1825). Christianity he now averred to be a progressive system, and taking its fundamental principle of love he held the church to be a complete organization of society for ministening to the wants of the whole ministering to the wants of the whole, and especially of the more numerous and poorer classes. A social hierarchy hased ou capacities and services, with author-ity to divide heritages, distribute sala-

Saint-Servan (san-ser-van), a seaport town of North-western France, department of Iile-et-Vilaine, at the mouth of the Rance, near St. Maio. It is well huilt, has a good harbor and docks, and is a favorite seaside resort. It carries on steam-sawing, shiphuilding and rope-making. Pop. (1906) 9765.

Saint-Simon, Louis DE Rouvroy, Writer, born in 1675; died in 1755. He was brought up on terms of intimate friendship with the Duke of Orieans, and when the latter became regent he was appointed a member of the regency council. From 1692-1702 St. Simon served in the army. He possessed the esteem and to some extent the confidence of Louis XIV, and of the Duke of Oresteem and to some extent the confidence of Louis XIV, and of the Duke of Orleans, but his spirit of independence, severe moraity and peculiar views about the mission of aristocracy, made him unpopular at the court. Nevertheless he succeeded in getting himself weil informed about all the court cabals, and the doings and sayings of almost every notable personage of the France of the period. This information he deposited in his Mémoires, puhilished posthumously, and which have made him famous. The and which have made him famous. The first complete edition appeared in Paris in 1829-31.

Saint-Simonians. See Saint-Simon.

St. Thomas (sant-tom'as), or S. Thomés, a West African isiand, in the Gulf of Guinea, belonging to Portugai. Area, 355 sq. miles; pop. 37,776; capital same name on the N.E. coast. There is a lofty mountain in its center, culminating in St. Thomas' Peak, over 6000 feet high. Coffee plantations have taken the place of the former sugar plantations; and cocos. vanilla and plantations; and cocoa, vanilla and cinchona are raised in increasing quantities. The ciimate is unhealthy for Europeans.

St. Thomas, a West Indian island, one of the Virgin group, belonging to the United States, 36 miles E. of Porto Rico. It possesses a fine climate, due to the trade winds. Area, 33 square miles. In Chariotte Amalie (q. v.) it possesses one of the finest ports in the West Indies. St. Thomas was colonized by the Danes in 1672. The English were in possession 1801-02, and 1807-15, the island again reverting to Denmark until 1917, when it was bought, together

with St. John and Ste. Croix (see Virgin Islands) by the United States. Pop. 10,000. St. Thomas, a city and railway center of Ontario, Canada, capital of Elgin Co.; served by six railroads. It has large manufactures including car and car-wheels, wooden ware, shoes. farm implements, etc. Pop. shoes. 15,000.

St. Vincent (vin'sent), a British West Indian island, in the center of the Windward group. Area, 132 sq. miles; pop. about 44,500; capital, Kingston, on a bay of the same name near the s.w. extremity of the island, with a pop. of 4547. The center is mountainous (highest peak about 4000 feet), the soil in the valleys very fertile, and especially adapted for sugar cuitiva-tion. The climate is humid, yet healthy, and considered one of the finest in the West Indian islands. In the N. w. is an West Indian islands. In the N. w. is an active volcano, called the Souffrière, about 3000 feet high, with an immense crater; an eruption in 1872 caused great damage in the island. Chief exports, sugar and arrowroot. St. Vincent was discovered by Columbus in 1498, and first became a British colony in 1763; between 1779 and 1783 it was held by the French.

St. Vincent, CAPE, a promontory forming the s.w. extremity of Portugal. It is celebrated in naval history for the great victory gained here in 1797 by the British admiral Sir John Jervis over a Spanish fleet pearly thice the strength of his fleet nearly twice the strength of his own. Sir John was raised to the peerage under the title Earl of St. Vincent. See Vitus (St.). St. Vitus' Dance.

Sais (sa'is), a ruined city of Egypt, near the right bank of the Rosetta branch of the Nile, 67 miles northwest of Cairo, formerly a piace of great im-

for its ancient monuments, pyramids, etc. (sā'ki), the common name of several species of monkeys inhabiting South America, closely ailied to the sapa- News contain many productions from the pen. Sal (sal), one of the most valuable timber trees of India, Shorea robusta, nat. order Dipteracem, growing to the height of 100 feet. Extensive forests of it exist in northern India, where it is French beans, etc., with sait, vinegar, oil, sauces and spices. A great number of salads may be made by suitable combination of the materials mentioned, and still further variety is obtained by the admixture of different kinds of shredded meat, fish, eggs, sausage, lobster, crabs,

meat, fish, eggs, sausage, lobster, crabs, prawns, shrimps, sardines, etc.

Saladin (sai'a-din), or properly sultan of Egypt and Syria, born 1137; dled 1193. His father, a native of Kurdistan, was governor of Tekrit (on the Tigris). He early distinguished himself as a soldier, became vizier to the last of the Fatimite caliphs in succession to his uncle Shirkuh, and on the caliph's death uncle Shirkuh, and on the caliph's death in Egypt (1171) Saladin usurped his wealth and authority, with the approval of Nureddin, the sultan of Damascus. After the latter's death (1173), Saladin proceeded also in passessing bigged. succeeded also in possessing himself of Damascus and southern Syria. He rapidly extended his conquests over Syria and the neighboring countries, and thus came in contact with the Crusaders during the Crusader deserved d the Third Crusade. The disastrous defeat he suffered from the Crusaders in 1177 compelled him to return to Egypt, but in 1182 he resumed his career of conquest. In 1187 he gained the famous victory of Tiherias, and Jerusalem surrendered to him after a gallant resistance. But the fall of Acre in 1191 after a two years' siege, and the defeats at the hand of Richard I, compelled Saladin to conclude a truce (1192), which was followed by the middle of Richard Saladin to Conclude a truce (1192), which was followed by the middle of Richard Saladin Saladi lowed by the withdrawal of Richard.
About a year after this event Saladin
died at Damascus. He was a skilful, brave and magnanimous general; and an astute, beneficent and merciful ruler. Saladin was the founder of the dynasty of the Ayoubites. See Crusades.

Salado (sa-la'thō), a river of the Argentine Republic, which rises on the eastern slopes of the Cordilleras, and falls into the Parana after a course of 750 miles.

Sal Aëratus, Salera'tus (sal-a-ra'for a baking-powder, prepared from car-bonate (or hicarhonate) of soda and sait. Salamanca (sal-a-man'ka), a city in Spain, capital of a province of the same name, 120 miles northwest of Madrid, on and between three bills, and on the river Tormes, here spanned by a fine bridge of twenty-six arches, the greater part of which is

(sixteenth century), a spiendid example of florid Gothic; the old cathedrai, erected 1102, in Romanesque style; the university, the Coilege of the Jesuits, King's College and churches. The university is one of the oidest and most celebrated in one of the oldest and most celebrated in Europe, and when at its zenith in the sixteenth century attracted some 15,000 students from all parts of Europe. Besides a number of interesting monastic huildings, there are also some large and elegant palaces and private mansions. The Plaza Mayor is a magnificent square. Salmantica, the ancient Salamanca, was taken by Hannibal in 222 B.C., and under the Romans it became a military stader the Romans it became a military station. It has been the theater of many interesting historic events, including the victory gained in its vicinity in 1812, by the Duke of Wellington, over the French under Marshal Marmont. Pop. 25,690.— The province of SALAMANCA, chiefly formed by the Douro basin, has an area of 4829 sq. miles, and a population of 320,765. It is rich in oak and chestnut forests and cereals, and produces wine, oil and hemp.

Salamanca, a village in Cattaraugus Co., New York, on the Alleghany River, 34 miles E. of Jamestown. It has extensive lumber and manufacturing interests. Pop. 5792.

Salamander (sai-a-man'dêr), the name given to various animals included in the class Amphibla a village in Cattaraugus

(frogs, toads, newts, etc.), and in the order Urodela ('tailed') of that class. The salamanders may be divided into the land salamanders (genus Salamanders) and the water salamanders, efts or newts. The land salamanders have an

the common salamander of Europe. It is 6 to 8 inches long, is found in moist places under stones or the roots of trees, near the borders of springs, in deep woods, etc., and passes its iffe in concealment except at night or during rain. It is dealy age, and his brilliant military career aupplies some stirring pages in the history of the British Indian Empire of the first half of this century. In India, Burmah, Afghanistan, wherever he was employed, except at night or during rain. It is distinguished himself, especially in Affrom the hright values atrines on its sides.

Salem (sā'iem), a city of Columbiana Co., Ohio, 20 miles s. s. w. of Youngstown. It is in a coal-mining and

Salem, a city and seaport of Essex county, Massachusetts, about 17 miles N. N. E. of Boston, on the main line of the Boston and Maine railcoad; in the famous North Shore district of Massachusetts, a summer resort region. Salem formerly had a considerable foreign trade, especially with the East Indies and China, and has still a large coasting trade, while its manufacturing industries are in a flourishing condition, including contract and leather goods beet including cotton and leather goods, boots and shoes, boats, toys, steam, gas and water specialties, machinery, carriages, medicine, etc. Salem has many interesting huildings, including the East India Marine Museum, the Peabody Academy of Sciences, the Athenseum and the Escar Institute. It played a prominent part sex Institute. It played a promineut part in the earliest history of the States, being founded in 1628. Among its interesting remains is the house where Roger Wilhirds' nests.' See Birds' remains is the house where Roger Williams dwelt, and First Church, the oldest off the western extremity was the birthplace of Nathaniel Hawthorite as belonging; area miles. Pop. 3000.

Salem, a city, county seat of Salem city, county seat of Salem area miles. Pop. 3000.

River, 37 miles s. s. w. of Camden, is the business contan and shipping point of a fertile farming district; has manufactories, including Heinz' catsup, brass and iron works, glass, tinware, oil-cloth, etc. Pop. 6614. business center and shipping point of a

Salem, a town of Forsyth Co., North Carolina, since 1913, part of Winston-Salem on a branch of the Yad-Salem, kin River, 109 miles w. N. w. of Raleigh. It has iron works, cotton mills and wood-working plants. Pop. 5533. Salem, the capital of Oregon and

Salem, the capital of Marion county, Oregon, is situated on the navigable Willamette River and the Southern Pacific R. R., 53 miles s. by w. of Portland. It has various State institutions, and manufactures of flonr, iumber, woolens, foundry products, doors and aash, etc., also fruit packing industries. Pop. 20,000.

Salem, a district and town of Hindran dust au, Madras Presidency. Area of district, 7653 square miles; pop. 2,204,974. Population of the town of Salaver See Saleyer. Salayer.

Salep (sal'ep), obtained from the tucies of orchis, especiaily O. mascala, and the fluest is obtained from Asia Minor. It occurs in commerce in small ovai bails of a whitish-yellow coior, of a horny aspect, hard, with a faint pecuiiar suell, and a somewhat insipid taste. It is much valued in the East for its supposed general stimulant and nutritious properties. For use it is ground into a fine powder, and mixed with boiling water, sugar and milk being added according to taste. It is to some extent used in Europe as a food for weakly persous.

Salera'tus.

(så-ier'no; anciently Saler-Salerno (num), a town and seaport of Italy, capital of the province of the same name, on the Guif of Salerno, 30 miles southeast of Naples, finely situated on the side and at the foot of a hill, crowned by the remains of an ancient Norman citedei. It has an availant marine prometer. the side and at the foot of a hill, crowned by the remains of an ancient Norman citadei. It has an exceilent marine promenade, and a cathedrai dating from the eieventh century. Its university (established 1150, abolished 1817) was famous in the middle ages, especially in medicine. Its well-sheltered port has recently been much improved. It was a place of great importance under the Romans, Goths, Lombards and Normans. Silk and cotton are manufactured. Pop. (1911) 231,380. See Manchester. Salians Franks, is the name given to that section of the Franks who from the third to the middle of the fourth century were settled on the left bank of the Lower Rhine. Their origin is nucertain, but we know that the earliest Franksh but we know that the earliest Franksh lings were Salian Franks.

Salicaceae (sail, saiz), Saint Frankois prudènce at Padua. Early in life he showed a decided predilection for the cierical life, and, against his father's desire, took orders in 1593. Geneva became the scene of his ecclesiastical work, and here, as dean, coadjutor bishop (1598), and bishop (1603), he spent the best part of his life. His eloquant, yet simple and persuasive sermons, and his exemplary life, exercised a powerful influence for the benefit of his church. His fluence for the benefit of his church. His evening were much valued, and some of the laws in this code excluded women from inheriting certain lands, writings were much valued, and some of women from inheriting certain lands,

them have been translated into all the leading languages of Europe. The best known is his Introduction to a Religious Life. In 1065 he was canonized by Pope Alexander VII.

Salesian Nuns (sal-es'i-au), the other of the Visitation of the Virgin Mary, founded by François de Sales (see above), and his frieud Madame de Chantal and the disciples in 1410 tai, one of his disciples, iu 1610, at Annecy, in Savoy, as a refuge for widows and sick females. In the eighteenth century there were 160 convents and 6600 nuns of this order. There are still Saiesian nuns in the principal cities of Italy, devoting themselves to the healing of the sick and the education of young girls.

Saleyer Islands (sa-li'er), a group of islands in the

Indiau Oceau, south of Ceiebes, from which Great Saieyer is separated by the Saieyer Strait. They are about thirty in number; have a pop. of about 80,000 Mohammedan Maiays governed by native rajahs uuder a Netheriands agent. Ebouy, teak, iudigo, coffee, earth-fruits

and cotton, are among the products.

and unty, acific l. It nanuprobably because certain military duties were connected with the holding of those lands. In the fourteenth century females were excluded from the throne of France by the application of this law to the succession to the crown, and it is in this sense that the term salio law is commonly

Salicylic Acid (sal-i-sii'ik), an orsweetish-sour taste, without smeil, possessing great antiseptic and anti-putre-factive properties. It occurs in nature in the flowers of the mendow-sweet, and in the whortle-berry; but that preferred by the medical profession is procured from the oil of the winter-green (Gaul-theria procumbens). There are now several processes for manufacturing salicylle acid on a large scale, and it forms an important article of commerce. It is largely employed in medicine, having properties similar to those of quinine, and is given in acute and chronic rheumatism, used as a jotion in Irritation of the skin, etc. A sait prepared from lt, salicylate

of sodium, is often preferred.

Salina (så-li'na), a city, seat of Salina (så-li'na), a city, seat of Union Pacific Railroad, 18 miles E. of Monterey. There are salt springs and gypsum quarries in the vicinity, and it is the commercial center of a farming and stock-raising region. It has grain ele-vators and various manufactures. Here is the Kansas Wesleyan University and other educational institutions. Pop.

Salina Cruz, a town of the State of Oaxaca, Mexico, near Tehauntepec, of which it is the port. It ls the Pacific terminus of the Tehauntepec Rallway. Its open roadstead has been made into a safe harbor by two great converging jettles. The railroad service is giving it a rapid growth.

Salina Formation, the name given the United States to a subdivision of the Silurian system in geology. It appears to correspond with the lower portion of the Ludiow rocks of the British series.

Salins (så-lan; ancient, Saling), a town of France, department of the Jura. It owes its name to saline springs which were worked by the Romans, and still form the chief wealth

uiarly iaid out, is chiefly interesting for uiarly laid out, is chiefly interesting for its historic associations and antiquities, and for its magnificent cathedrai, built between 1220 and 1258, entirely in the early English style, and on a nniform and weil-arranged plan. The spire (404 feet) was added between 1335 and 1375, and is the highest in England. Salisbury was at one time celebrated for its woolen manufactures and fine cutlery, but these industries are now all but extinct. Pop. (1911) 21,217.

Salisbury, a city, county seat of Rowan county, North Carollna; in the heart of a rich farming country, the Pledmont Section. It has large railroad shops, granite works, cotton mills, lumber plants, mattress plant, flour mills from and metal works. flour mills, Iron and metai works, oil mills, etc. Pop., including suburbs, 20,000.

Salisbury, EARL OF. See Cecil. Salisbury, a town, seat of Wicomico Co., Maryland, on the Wicomico River, 32 miles E. N. E. of Crisfield. It has a railroad repair shop and canning and other factories. Pop. 6690.

Salisbury, ROBERT ARTHUR TALBOT GASCOYNE CECIL, THIRD MARQUIS OF, English statesman, was born at Hatfield (county of Herts) In 1830, and educated at Eton and Oxford. As Lord Robert Cecii he entered Parliament as member for Stamford in 1853, and gradually made his way till in 1866, on the formation of Lord Derby's third

Marquis of Salisbury.

mans, and still form the chief wealth of the town. Pop. 4358.

Salisbury (salz'be-ri), or New Satary of State for India. In 1865 he became Lord Cranborne and heir to the England, capital of the county of Wilts, was appointed secretary of State for India. In 1865 he became Lord Cranborne and heir to the marquisate, on the death of his elder 80 miles southwest by west of London, at the junction of the Upper Avon with the united streams of the Wiliey, Nadder and the Bourn. Willow. Sallow-thorn (Hippophas), a genue of plants of the nat. Hippophae rhamorder Eiseagnacese. noides, an European species, is a spiny shrub with dioclous leaves and small orange-colored berries, growing on cliffs near the sea.

Sallust (sai'ust), CAIUS SALLUSTIUS CRISPUS, a Roman historian, born B.C. 86, at Amiternum; died at Rome B.C. 34. He became tribune in B.C. 52, and in the civil war sided with Cæsar. In B.C. 47 he was prætor elect, and in the following rear accompanied Capar to the following year accompanied Casar to the African war, where he was left as gov-ernor of Numidia. He returned with imernor of Numidia. He returned with immense wealth, was accused of maladministration and oppression, and after Cæsar's death lived in luxurious retirement. Sallust wrote several historical works in a clear and concise style. His Bellum Catilinarium is a history of the Catiline conspiracy. The Jugurtha, or Bellum Jugurthinum, is a history of the war against Jugurtha, king of Namidia. war against Jugurtha, king of Numidia, from B.C. 111 to B.C. 106.

Sally-port, in fortification, a postern, or a passage underground from the inner to the outer works, to

similar structure, and with separate defense of Charles I (Defensio Regia products, which are scattered thickly beneath the mucous membrane of the lips, cheeks, soft paiate and root of the tongue. Salivary glands are absent in some mammals and reptiles, and in most fishes.

Salivation (sal-l-va'zhnn), a superabundant secretion of salivaty of the superabundant secretion of salivation.

Salmon (sam'un; Balmo seler), a weli-known fish, forming the type of the family Saimonide (which see). The salmon inhabits both salt and fresh waters, and ranks prominent among the food-fishes of the United States and other countries. It generally attains a length of from 3 to 4 feet, and an average weight of from 12 to 30 lbs., but these limits of size and weight are frequently exceeded. The typical color of the adult fish is a steel-blue on the back and head, becoming lighter on the sides and beily. Teeth are present in the upper and lower jaws, palate, and vomer or roof of the mouth; the edges of the tongue are also toothed or notched. The food consists of animal matter, and The food consists of animal matter, and of depositing eggs. After spawning in must vary with the changes of habitat the fresh water the grilse again seeks from sait to fresh water, and vice verse. the sea in the autumn, and when its secIn the autumn the saimon quits the sea ond stay in the ocean is over it returns and ascends the rivers for the purpose after a few months' absence as the of spawning, often having to surmount aduit saimon, weighing from 8 to 10 ibs.

period it attains a length of 8 inches. When the season of its migration arrives, generally between March and June, the fins have become darker and the fish has assumed a silvery hue. It is now known as a smolt or selmon fry. The smolts now congregate into shoals and proceed leisurely seaward. On reaching the estuary they remain in its hrackish water for a short time and then make for the open sea. Leaving its native river as a fish, weighing frequently not more than 2 ozs., the smolt, after three months' absence, may return to fresh water as a grilse, weighing 4 or 5 ibs. In the grilse stage or selmon peel, as it is sometimes called, the fish is capable of depositing eggs. After spawning in

Red Salmon.

the definite or parr stage of its existence, times, but also as to the forms and disbeginning to be marked by transverse positions of the machines for the capbars of dark color. It usually continues ture of the fishes. In Europe the fish in the shallows of its native stream for is found between the latitudes of 45° and two years after hatching, and during this 75°, in North America in corresponding

considerable obstacles such as fails of some height, in its progress. In many streams they are now assisted in this by artificial structures known as 'salmon-ladders,' or the like. The eggs are deposited in a shallow trough or groove excavated in the gravelly bed of the river. After spawning, the salmon, both male and female, return to the sea under the name of spent-fish, foul-fish, or kelts, the females being further distinguished as ahedders or baggits. In from 70 to 150 days the young fish emerges from the egg, and in its embryo state it is not unlike a tadpole, being on the average about one and a quarter inches in length. About 50 days later it assumes the appearance of a fish and now approaches the definite or parr stage of its existence, the salmon returns as a ruie to the river in which it passed its earlier existence. The fertility of the fish is enormous; it has been calculated that over 150,000,000 of salmon ova are annually deposited in the Scotch river Tay alone, and of these only about a third come of these parrs only 20,000,000 become smolts; and in time only 100,000 remain as perfect salmon, of which 70,000 are caught and 30,000 left for breeding purposes. Salmon are caught by the rod, and by means of nets. For purposes of commercial supply they are taken in nets of special construction and of various forms, the fishing being regulated by iaw not only as to their seasons and the definite or parr stage of its existence, the first passed its earlier existence. The construction are calculated that over 150,000,000 of salmon ova are annually deposited in the Scotch river Tay alone. The fertility of the fish is enormous; it has been calculated that over 150,000,000 of salmon ova are annually deposited in the Scotch river Tay alone. latitudes. The flesh of the salmon when fresh is of a bright orange coior, and is ach are generally numerous and rarely of highest flavor when taken from the absent. The air-bladder is large and seen-feeding fish. Of the same genus as the common salmon is the salmontrout, the common river-trout, Lochleven trout, etc. What is known as the Salmon-trout, or Sea-rhour (Salmon-trout, etc. What is known as the trout, etc. What is known as the 'Iand-locked' salmon, which is found in Norway, Sweden, Maine and New Brunswick, and is so cailed because it remains Norway, Sweden, Maine and New Brunswick, and is so cailed because it remains in inland waters and does not descend to the sea, is by some regarded as a distinct species from the common salmon, hy others not. In the waters of Northwestern America are several salmon belonging to a distinct genus, Oncorhynchus, inciuding the quinnat or kingsalmon, blue-back salmon or red-fish, sliver salmon, dog salmon and humphack salmon. The quinnat (O. tchaucytcha) has an average weight of 22 ibs., but sometimes reaches 100 lbs. Both it and the hiue-back salmon (O. nerks) are caught in immense numbers in the Columbia, Sacramento, Frazer, Yukon and other rivers, and are preserved by canning. The fiesh of these salmon is indistinguishable from that of the common form. The salmon is one of the fishes that are important objects of pisciculture (which see), and various species of the family have been introduced into waters not previously inhabited by them. Since 1880 over-fishing in American waters has rendered the salmon industry much less profitable, and efforts American waters has rendered the salmon industry much less profitable, and efforts are being made by the Fish Commission to replant the rivers with the young. The waters of Alaska teem with salmon and during recent years have yieided largely, their annual product being valued at over \$10,000,000. In the Columbia, which was once full of salmon, the most wasteful methods of fishing have been employed, with the result of enormously reducing the supply. An attempt mousiy reducing the suppiy. An attempt is being made to restore it by planting the stream with saimon fry. The product of these streams is canned and widely distributed throughout the world.

Salmonidæ (sal-mon'i-dē), a famliy of teleostean fishes, beionging to the subdivision Malacopterl of that order. To this family belong the various species of salmon (see Salmon), the trouts, the char, the graying, the smeit, the vendace, white-fish of America, etc. The Salmonide are abdominal etc. The Salmonide are abdominal species.

ach are generally numerous and rareis absent. The air-bladder is large and simple. The ova fall into the cavity of the abdomen.

Salmon-trout, or Sea-mour (Selmo trutte or S. erice), a species of salmon which grows to a length of S feet, and is numerous in some of the British rivers. It resembles the salmon in form and color, and is, like it, assembles assembles rivers to deposit its migratory, ascending rivers to deposit its spawn. It is plentiful, though smaller in size, in the waters of North America and is alied to the weak-fish.

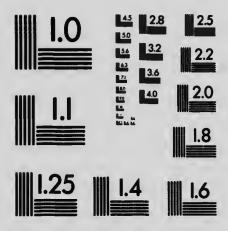

Salonica (sil-lo-ne'ka; ancient, Thes-salonica; Turkish, Scientk), a large seaport in the Baikans, formerly in the Turkish empire but incorporated in the Heilenic kingdom under the Treaty of Bucharest in 1913. It is situated on a gulf of the Aegean Sea, 140 miles s. of Sofia, 315 miles w. s. w. of Constanti-nonic and viscs from the sea in the form nopie, and rises from the sea in the form of an amphitheater. Its harbor is excelient and its roadstead well sheltered. Principal exports: cotton, corn, leather, siik, carpets, hricks and soap. There are many splendid mosques in the city, some of them dating from the fourth century. St. Paui preached the Gospel here, and addressed two of his episties to the Christian converts of the place, then called Thessalonica. Great Britain and France occupied Saloniea in 1915 during the European war, while Greece was neutral. Later events, which culminated in the abdication of King Constantine and the rise to power of Venizelos, the former premier and an avowed republican, brought Greece into the war. Population 160,000. COUNTY OF. See Shropshire.

Salop, Salpa (sal'pa), a genus of ascidian or tunicate mollusca forming the representative example of the family Salpidæ. These animals are found floating in the Medlterranean and the warmer parts of the ocean, and are protected by a transparent gelatinous coat, perforated for the passage of water at both extremities. They are frequently phosphorescent, and are met with in two conditions known as single and chain salpa. Each salpa is of oval or quadrate form, and the organs of the body occupy a comparatively small space within the hody-cavity. Salpa maxima is the most famillar

order Composits, and is allied to the endive and dandelion. It is cultivated for the use of its long, white, fleshy roots, which are cooked and served in various ways. It is also known, from lts peculiar flavor, as the eyster plant. The leaves are narrow and long; the flowers are solitary and terminal, with Violet purpie corollas. See Goat's Beard.

Salse (sals), an eruption of het acidu-lated mud from a small orifice, generally in volcanic regions, and frequently accompanied by steam and gases at a high temperature, which act power-fully on the surrounding solid matters, disintegrating and decomposing them, and forming new compounds. In some dis-

tricts the gases are inflammable, and flames issue from the orifices.

Salsette (sal-set'), a large island to the north of Bombay, and runs along the center of the island from north to south, while the lowlands are much intersected by tidal creeks. There are no large fresh-water streams; but which exhibit such reac the supply of water from wells is of most familiar conditions. fair quality, and pretty constant. \* The staple crop is rice, and most of the up-lands are reserved for grass for the Bombay market. The coast abounds in cocoanut groves, and the palmyra palm grows plentifully over most of the Island. The island is remarkable for its great rock-cut caves, with colossal statues of Buddha.

See Salsafy. Sal'sify.

(sal-sil'a), a name of several Salsilla amaryllidaceous plants producing edible tubers, and belonging to the genus Bomerea, or to the closely-allled genus Alstrameris. One species (B. or A. edalis) is cultivated in the West A. edulis) is cultivated in the Indles. Its roots being eaten like the potato; it is diaphoretic and diuretic. Other species, such as B. Salsilla, are natives of the Peruvian Andes, and are

tion of such undesirable elements. It is nat. order Chenopodiaces, and comeight States. Like vasctomy (q. v.), it is a distinct advantage to the person operated upon, as well as to the community.

Sal Prunella (sal-prü-nel'a), niter which has been fused and cast into cakes or balls, and used for chemical purposes. See Niter.

Salsafy (sal'sa-fi; Tragopogon porrisorder Cemposits, and is allied to the usually obtained from the action of an acid upon a base. It is impossible to state in very precise terms what is the idea attached to the word salt, as at present used in chemical science. It may perhaps he most correctly defined by saying that it implies the capability of readily undergoing double decomposition. In its most restricted signification the word salt suggests a substance which, if soluble in water, can produce rapid double decompositions with other soluble substances, or if insoluble, can be produced as a precipitate, as the result of a rapid double decomposition taking place hetween soluble substances. This is certainly the idea suggested by the application of the word salt to nitrate of potassium, chloride of sodium, etc. The term salt is also sometimes applied to substances which, like chloride of ethyl, give rise to slow processes of double deconnected with Bombay island by bridge composition with aqueous solutions of the and causeway; area, 241 square miles. salts specially so-called. The name is, (See Bombay.) A broad range of hills however, most commonly and most appropriately applied to those bodies of which reaction by double decomposition is the most characteristic property, and which exhibit such reactions under the

Salt (salt), COMMON (chloride of sodium, NaCl), a substance in common use as a seasoner and preserver of food from the earliest ages. It exists in Immense quantities dissolved in seawater, and also in the waters of salt springs, and in solid deposits, sometimes on the surface, sometimes at greater or less depths, in almost every geological series. Rock-salt, that is salt in the crystalline or solid form, is found in abundance in nearly every region of the earth. The basin of the indus and other parts of India possess extensive salt plains. In China deep salt-wells abound. The Sahara and Central and Southern Afrlca afford inexhaustible supplies. South America, Europe, the West Indies, and the potato; it is disphoretic and diuretic. United States also have large natural Other species, such as B. Salsilla, are supplies. Salt manufactured from seanatives of the Peruvian Andes, and are water is produced extensively along the pretty twining plants with showy flowers. Mediterranean and Atlantic seaboards. ment of same name, 550 miles E. S. E. of Moscow, at the confluence of the Samara with the Volga. It has manufactures of leather and soap, and is now one of the most important commercial centers on the Volga, carrying on a large trade in corn, meal, salt, llnen, wool, fish, and caviare. Three markets are held annually. Pop. about 150,000.—The government lles on the left bank of the Volga, and has an area of 58,302 square miles. A great part is flat and fertile, but is at present little cultivated. There is little wood. Wheat and other kinds of grain are the chief products. There are a considerable number of Swiss and German colonists here, also Nogal Tartars, Bashkirs, and Kirghis. Pop. 2,763,478.

Samarang (sä-ma-rling'), a town of Java, on the north coast of the island, near the mouth of the Samarang river. Next to Batavia and Surabaya it ranks as the most important commercial port of Java. Its har-bor is not good, and large ships have

Samaria (sa-mā'ri-a), or SEBASTE (modern Sebustieh), an an-SEBASTE cient town of Palestine, formerly the capital of the Kingdom of Israel, finely situated on a hill surrounded by higher situated on a hill surrounded by higher hills, 36 miles N. N. W. of Jerusalem. Samaria was built by Omri, king of Israel, about B.C. 925, and was the metropolis of the ten tribes till they were carried away into captivity about B.C. 720. After its destruction by John Hyrcanus it was rebuilt, and given by Augustus to Herod, who gave it the name of Sebaste. There is now an insignificant village here and some striking ruins.

when extensive irrigation works have been constructed, and the Transcaspian Railway now extends to the city. It is still a center for the caravan trade and has important native industries, compriscing gold and silver ware, leather goods, tanneries, dyeing, harness, cottons and silk, wine and pottery. Pop. 89,693. See Bokhara.

Sambas (säm-bäs'), a town of Western Borneo, on the river Sambas, not far above its mouth, seat of a

Samaritan Pentateuch, an ansion of the five books of Moses, which has been preserved by the Samaritans as Pop. 17,039. the canonical Scriptures have by the Samhre Jews.

and who formed a sect among the Jews. Sambucus (sam-bū'kus), a genus et They consisted partly of the tribes of trees. See Elder.

Samara (sam'a-ra), a name given in Ephraim and Manasseh left in Samaria indehiscent by the King of Assyria when he had carried their brethren away captive, and partly of Assyrian colonists. On the return of the Jews from captivity they declined to mix with the Samaritans, though united with them in religion. The latter attempted to prevent the Jews from building the temple at Jerusalem, and, failing in this, they built a temple on Mount Gerizim exclusively for their own worship. A few of the race still exist scattered in Egypt, at Damascus, and at Gaza. They adhere strictly to the Mosaic law, but are regarded by the Jews as heretics, as they accept only the Pentateuch, of which they have a special version of their own. They believe in the existence of angels, in a resurrection and future retributiou, and expect the coming of a Messiah, in whom they look only for a prophet. In the synagogue the Aramaic Samaritan dialect is used, but they generally speak Arabic. They avoid any connections with other sects, and marry only among their own nation. (sam-ar-kant'), a city Samarkand bamarkand of Asiatic Russia, on the Zerafshan river, 130 miles E. of Bokhara, situated in a fertile plain, capital of a territory of the same name. It is surrounded by a double wall, and contains numerous gardens. The tomb of Tamerlane is an octagonal building paved with white marble. The mosque of Shah to anchor at some distance from the Zirdeh, outside the city walls, is one of shore. Pop. 96,660. It is the capital of the finest in Central Asia. Caravanaresidency of the same name. buildings. It was once the capital of a powerful Asiaric kingdom, and subsequently of Tamerlane's empire. Samarkand was ceded to Russia in 1868, since when extensive irrigation works have been constructed, and the Transcaspian Railway now extends to the city. It is

> bas, not far above its mouth, seat of a Dutch resident. Pop. 10,000.

> Sambor (sam'bor), a town of Austria, in Galicia, on the Dniester.

Sambre (sän-br), a river of N. E. France and Belgium, a trib. Samaritans (sa-mar'i-tanz), a mixed utary of the Meuse, which it enters at people, who inhabited Namur; length 110 miles, great part of the region between Judæa and Galilee, which is useful for navigation.

Samian Ware (sā'mi-an), a name given to an ancient kind of Greek pottery made of Samian earth, or to a variety of Roman pottery made in imitation of this. The vases are of a bright red or biack color, covered with a justrous siliceous glaze, with separately-moded ornaments attached to them. Samnites (sam'nitz), an ancient peo-pie of Lower Italy, who were of Sabine stock, and consisted of several tribes. They were a brave, frugal, and religious people. Their first war with the Romans resulted in favor of the during the Latin war (340-338 B.C.). The second Samnite war (326-304 B.C.) was a fierce contest, in which the Romans were shamefully defeated at the Caudine Forks, but were finally successful. The third Samnite war (298-290 B.C.) saw the overthrow of the Samnites and Gauis at Sentinum. When the Italian ailies of Rome revolted against her in 90 B.O. the Samnites once again rose against their oppressors but were completely subdued and almost extirpated by Sulia. The Samnites appear to have been a rude pastoral people. Their form

of government was democratic. Samoa (si-mo'a), or Navigator Isles, a group of voicanic islands in the South Pacific, N.E. of the Fiji group, made up of three iarge islands, Upola, Savaii, and Tutuila; and a number of smailer ones; total area about 1700 sq. miles, with a population of nearly 39,000. The most important island of the group is Upola, with an area of 340 sq. miles, diversified by mountains and fertile plains; pop. about 17,000. Apia, the seat of government, is a town of 1500 inhabitants situated on a bay on the N. W. side of Upola. Savaii, the largest of the group, has an area of 659 sq. miles, and is extremely mountainous (greatest height 5350 feet), the interior being hardly known. Tutuila has an area of 54 sq. miles. The Samoans are of the Polynesian race, and vary in color from a dark brown to a light copper, occasionally to a shade of olive. They are of fine physique and of a gentle dispersion. Samoa (sii-mô'a), or Navigator Isles, occasionally to a shade of olive. They are of fine physique and of a gentle disposition, and are now all Christians. Their language contains thirteen letters, and is soft and liquid. The leading industries are fishing, collecting copra, the mitigation of fruit enters and tare and cuitivation of fruit, cotton, and taro, and the manufacture of taps, a native cloth. The cocoanut, breadfruit tree, taro, and banana form the staple food of the peo-ple. The former government consisted

Sambur Deer (sam'bur; or Samboo). of a king and vice-king, and a parliament of chiefs called the malo. Disturbances Samian Ware (sa'mi-an), a name broke out in the island in the late nineteenth century through the jealousy of foreign settlers and the intrigues of the Germans among the native leaders, but in 1889 an agreement was made between Germany, Great Britain, and the United States guaranteeing the neutrality of the islands, and placing each power on an equal footing as regards trade, etc. In January, 1899, further trouble arose. In November, 1899, an agreement for the partition of Samoa between the United States and Germany was made between the three powers, the claim of Great Britain being given up for concessions Britain being given up for concessions eisewhere. The United States obtained Tutuila, and some smailer islands, with the fine harbor of Pago Pago.

Samos (sā'mos), now Samo, an island in the Grecian Archipelago near

the coast of Asia Minor, 45 miles south-west of Smyrna, forming a principality tributary to Turkey; area, 180 square miles. It has a mountainous surface, partiy covered with pine forests; several fertile and well-watered valleys; produces fertile and well-watered valleys; produces corn, fruit, and excellent wine; and has several valuable minerals, including argentiferous lead, iron, and marble. The principal town is Vathe, with a good harbor on the northeast side of the island. The principal exports are valuins, skins, wine, and oil; imports, grain, coionlai produce, and woven fabrics. Samos was inhabited in antiquity by Ionian Greeks, and had an important position among the Greek communities as early as the seventh century a.d. In the early as the seventh century B.O. In the iatter haif of the sixth century it was in a specially flourishing condition under Polycrates, and subsequently was under the domination of Athens. Pop. 49,733, mostly Greeks.

Samothrace (sam'ō-thras), or Sam-other m. of the Ægean Sea, belonging to Turkey, about 14 miles iong by 8 miles broad. It has a very mountainous surface, one of its summits exceeding 5000 face, one of its summits exceeding 5000 feet. Its chief products are corn and oil. The island is of interest as being in antiquity the chief seat of the worship of the Cabiri (see Cabiri), and celebrated for its religious mysteries. It is interesting also as being visited by St. Paul in the course of his second missionary journey (Acts xvi, 11). Recent archæological researches have produced valuable results. vaiuable results.

Samovar (sam'u-var), a Russian tea apparatus, the water in which is boiled by means of hot coals

contained in an iron tube, and then poured over the tea.

Samoyedes (sam'o-yēdz), or Samo-IEDES, a people of Ural-Aitaic stock, inhabiting the shores of the Arctic Ocean, both in Europe and Asia, from the Yenisei to the White Sea. They consist of two main groups, a southern resembling the Tartars, and a northern and more degraded group. They are nomadic, and live chiefly by fishing, hunting and keeping reindeer. They are of small stature, have a flat, round, and broad face, thick lips, wide nose, little beard, black hair, in small quantity. Their religion is fetlshism, though they have an idea of a great divinity; they are have an idea of a great divinity; they are extremely superstitious, and generally peaceable. The reindeer supplies them with food, ciothing, tents, utensils, etc. They number about 25,000.

Sampan (sam'pan), a boat of various build used on the Chinese rivers, at Singapore, and eisewhere, for the conveyance of merchandise, and also

Sampan, Canton River.

frequently for habitation. They are swift saliers both with oar and sail. Samphire (sam'fir; Crithmum mari-timum), an umbelliferous plant, very succulent, pale green, with bi-triternate leaves and lanceolate fleshy leaflets. It grows wild along the sea-coast of Europe, and where it abounds it is used by the lnhabitants as a pickle, as an ingredlent ln salads, or as a potherb.

Sampson (samp'sun), WILLIAM THOMAS, naval officer, was born at Palmyra, New York, Feb. 9, 1840, and was graduated from West Polnt in 1857. He served in the Civil He did not live to see the contest bewar, and gradually rose in rank, being promoted from captain to commodor, and gradually rose in rank, being promoted from captain to commodor, and rear-admiral during the Spanish war of 1898. He commanded the fleet blockading Santlago, Cuba, during this war, In Hebrew MSS. the work is one, the

but was absent on the flagship New York during the fight with and destruction of the Spanish fleet, in its attempt to escape from Santiago harbor. This circumstance led to a controversy between him and Commodore Schley that excited much attention. He died May 6, 1902.

Samsö (sam'ses), a smail island belonging to Denmark, situated in the Kattegat, between Seeland and Jutland. Pop. 6939.

Samson (sam'sun; Hebrew, Shimshon, of uncertain import), an Israelite of the tribe of Dan, the son of Manoah, a popular hero, and an enemy of the Philistines. He is classed among the judges of Israel and the date of his career is estimated at 1116-1096 B.C. He was celebrated for his enormous strength and the story of his exploits and dramatic death are of much interest.

Samsoon (sam-sön'), or Samsum', a seaport of Asiatic Turkey, in the pashalle of Sivas, on a bay of the same name in the Black Sea, 166 miles w. N. w. of Trebizond. It is a steamship station, and carries on a large trade in copper, timber, tobacco, and agricultural produce. Pop. about 13,000.

Samuel (sam'n-el; Hebrew, Shemuel, asked from, or heard of God'), the first of the order of prophets and the last of the judges of Israel. He was the son of Elkanah of Ramathaim zophim, belonging to the tribe of Levi, and was consecrated by Hannah, his mother, to the service of Jehovah. He was educated in the house of the chief priest Ell at Shiloh, and had the dis-asters revealed to him that should befall the house of Eli. He assumed the judgeship of Israel about twenty years after the death of Eli, and headed a successful the death of Eli, and headed a successful expedition against the Philistines. He mentions his own name in the list of warlike chiefs by whom the Lord sent deliverance to his people, and it is recorded that he judged Israel as civil ruler all his life, going a yearly circuit from Ramah, where was his home, to Bethel, Gilgal, and Mizpeh. His administration was distinguished by the restoration of the neglected worship of Jehovah. tion of the neglected worship of Jehovah. Testaber in text. e, the

division into two books being first introduced by Bomberg, in 1518, at Venice. The contents of the books present us with a more or iess consecutive narrative of events relating to the Israelites, from the priesthood of Eii to the death of David. The principal periods embraced in the record are:—the restoration of the theocracy under Samuei (book i, chap. i.-xii. B.C. 1171-1095); the history of Saui's reign, ending with his death (book i, chaps. xiii.-xxxi, B.C. 1095-55); and the history of David's reign (book ii, B.C. 1055-15). As regards the authorship of these books it is evident they could not have been written division into two books being first introevident they could not have been written by Samuel, since his death is recorded in book i, chap. xxv.

Sana (sā-nā'), a town in Southwest-ern Arabia, capitai of Yemen, 170 miles N. N. E. of Mocha, situated in a vailey 4000 feet above the sea. The streets are wide, and the town is encircied hy a wail about 5 miles in circuit. There are many handsome houses, numerous fountains, two large palaces, many mosques, some of them with tail minarets, baths, caravansaries, and an aqueduct. The chief manufactures are duct. The chief manufactures are articles in gold and silver, and the principal commerce is in coffee and in its husk. Pop. about 50,000.

San Antonio (san an-tō'ni-ō), country seat of Bexar Co., Texas, the largest city in the State. It contains a government building, a fine court-house, cost about \$1,000,000, a cathedrai, and especiaily the Alamo, part of the buildings of an old Franciscan cathedrai, and especially the Alamo, part of the huildings of an oid Franciscan mission, the defense of which and the massacre of its surviving defenders, in 1836, is a notable event in the history of the State. It is a busy manufacturing city and an entrepôt for the shipping of live-stock, cotton, wool, grain and hides. It is one of the leading live-stock markets of the country and has large flour mills, breweries and iron works. markets of the country and has large flour mills, breweries and iron works. It has an excellent water supply, possesses a very salubrious climate, with a remarkably even dry temperature, which has made it a winter health resort. There are a number of historic landmarks, the city being founded in 1718. Pop. 125,000.

Sanatorium (san-a-tō'ri-um; a mod-ern Latinism formed from senare, to cure), a piace to which people resort for the sake of their health, the term being applied to military or civil stations on the mountains or table-lands of tropical countries, with climates suited to the health of Americans or Europeans, and to heaith resorts in many parts of

the United States.

San-benito (san-be-në'tō), a kind of loose upper garment painted with flames, figures of devils, the person's own portrait, etc., and worn by persons condemned to death hy the Inquisition when going to the stake on the occasion of an auto de fe.

San Bernardino (ber-nar-de'no), a city and the county seat of San Bernardino Co., California, in a fertile vailey, to miles E. of Los Angcies. Fruit and aifaifa are grown in the vicinity and there are various kinds of mineral and thermai waters. There are railroad shops in the town, and a shipping trade in honey and fruits. Pop. 12,779.

San Cataldo (ka-tāi'dō), a town of Sicily, prov. Caitanissetta, with rich suiphur mines in vicinity. Pop. 17,941.

Sanchuniathon (san-kü'ni-a-thon), THON, a Phænician historian and philosopher, who is supposed to have lived about 1250 B.C. Only fragments of his works remain, quoted hy Eusehius from a translation into Greek by Philo of Byhios. Some modern critics have said that the fragments were forgeries, and it is now doubted hy many whether he ever legisted. existed.

San Cristobal (krēs-tō'val), a town of Mexico, capital of the state of Chiapas, 450 miles E. S. E. of the city of Mexico. Manufactures earth-enware and coarse textiles, but the chief occupation is cattle rasing. Pop. about 20,000.

Sancroft (sang'kroft), WILLIAM, an English prelate, born in 1616. He was educated at the University of Cambridge, and obtained a feliowship in 1642, but was rejected because he refused to sign the 'engagement' to support the Covenant and the Presbyterian party. After the Restoration he became successively dean of York and St. Paui's, in 1668 archdeacon, and in 1678 archhishop of Canterhury. He was committed to the Tower in 1687 with six other hishops for refusing to read the Declaration of Induigence, hut they were all acquitted. On the Revolution settleall acquitted. On the Revolution settlement he became a non-juror, and thereby forfeited his archhishopric. He was succeeded by Tiilotson, and iived secluded till his death in 1693. Sancroft published some sermons, Modern Politics, and one or two other works of little and one or two other works of little permanent value.

Sanctification (sangk-ti-fi-kā'shun), the term applied in Scripture, as well as in theology, to denote the process by which the effaced im-

age of God in man is restored, and the great deserts of the world. Valuable sinner becomes a saint. It is based upon metallic ores, as those of gold, platinum, the holiness of God, who communicates tin, copper, iron, titanium, often occur his purity to his people by means of in the form of sand or mixed with that siner becomes a saint. It is based upon the holiness of God, who communicates his purity to his people by means of the Holy Spirit. Eanctification is distinguished from justification in this, that while justification changes the state of the sinner in law before God as a judge, sanctification changes the heart before him as a father. Justification precedes sanctification; the one removing the guit, the other the power of sin. The former is an act done at once, the latter is a graduai process.

Sancti Spiritus (sangk'të spë'retös), a city of
Santa Clara province, Cuba, about 50
miles s. E. of Santa Clara, on the Yayabo
River. The city has an asylum for glris,
hospitals, a college, etc. Pop. 17,440.

Sanctuary (sangk'tū-a-ri), RIGHT
OF, is the privilege attaching to certain places in virtue of which

ing to certain places in virtue of which criminals taking refuge in them are pro-tected from the ordinary operation of the law. By the Levitical law there were six cities of refuge in Palestine for the involuntary manslayer, and a somewhat similar provision is traceable among heathen nations. From the time of Constantine downwards certain churches were set apart in many countries to be an asylum for fugitives from the hands of justice. During the middle ages the custom of sanctuary was much abused, the privilege being often extended to wilful malefactors. In England, partic-ularly down to the time of the Reformatlon, any person who had taken refuge in a sanctuary was secured from punish-ment—except when charged with trea-son or sacrilege—if within the space of forty days he gave signs of repentance, and subjected himself to banishment. and subjected nimself to banishment. Sanctuaries were finally abblished in 1697. In Scotland the Abbey and Paiace of Holyrood, with their precincts, including Arthur Seat and the Queen's Park, have the privilege of giving sanctuary to civil debtors, but since the abolition of imprisonment for debt the limitation of this protection has cased. portance of this protection has ceased.

Sand, fine particles of stone, particularly of siliceous stone in a loose state, but not reduced to powder or dust; a collection of siliceous granules not coherent when wet. Most of the sands which we observe are the ruins of disintegrated rocks, and differ in color sandal-wood Island, or Jeen-disintegrated rocks from which they were derived. Sands occur very abundantly, not only on the sea bottoms, but in many inland locations, formerly seathers, and were derived. Sands occur very abundantly, not only on the sea bottoms, but in many inland locations, formerly seathers, and differ in color sandal-wood Island, or Jeen-distance, and disland, or Jeen-distance, and differ in color sandal-wood Island,

substance. Pure siliceous sands are very valuable for the manufacture of glass, for making mortar, filters, ameliorating dense clay soils, for making moids in founding, and many other purposes.

Sand, George. See Dudevant.

Sandal (san'dal), a kind of shoe or covering for the feet used among the ancient Jews, Greeks, and Romans. It consisted of a sole fastened

Sandal-wood (Santalum album).

fibers, or leather, they afterwards became articles of great luxury, being made of gold, silver, and other precious materials, and beautifully ornamented. Certain religious orders of the present day wear sandais.

Sandal-wood (genus Santālum, nat. order Santaiacem), a tree belonging to the East Indies and the Maiayan and Polynesian islands, remarkable for its fragrance. Its wood is used as a perfume, and is manufactured into giove-boxes and other light articles. It is largely used as incense in the worship of Brahmans and Buddhists. There are several species which furnish sandai-wood eral species which furnish sandai-wood, the common being S. album. Some trees or other genera are called faise sandaiwood. See also Adenanthera.

EEN-8 peiago cy of E.; opulabold, and terminates at the southern ex-tremity in a lofty and inaccessible pen-insula. The interior is mountainous. Edibie birds'-nests, bees'-wax, and sandai-wood are obtained here. The natives are described as treacherous and ferocious.

Sandarach (san'da-rak), a resin which exudes from the

bark of the sandarach-tree (which see). It is used as incense, and for making a paie varnish. It is also used as pouncepowder for strewing over paper erasures.

Cailed also Juniper-resin.

Sandarach-tree (Callitris quadri-valvis), a large coniferous tree with straggling hranches, yielding the resin described in preceding article. It is a native of Morocco, Algeria, and Northern Africa generally. The timber is fragrant, hard, and durable, and is largely used in the construction of mosques and other buildings, as well as for cahinet work.

Sanday (san'dā), on of the Orkneys, an island of vary irregular.

Sanday an island of very irregular shape, generally with a very literature and a light sandy soil; greatest length fully 13 miles. There are a number of small lakes. Pop. 2082.—There is another small island of same name in the linear Habrides, connected with Connect Inner Hebrides, connected with Canna at iow water, 4 miles northwest of Rum. Pop. 62.

Sandbach (sand'hach), a market-town of Cheshire, Eng-land, 4½ miles northeast of Crewe. It

which ilve in holes in the sand along

tion of about 1,000,000. The coast is sect founded by John Glass, a Scotch-bold, and terminates at the southern ex-man, about 1728. He was originally a man, about 1728. He was originally a Presbyterian minister, but was suspended for hoiding heretical opinions. Among other views, he held that the Church and State should be in no way connected, and that there should be no established church. These doctrines were much developed by his son-in-iaw, Robert Sandeman (born at Perth, 1723; died in America, 1771), who established the sect in London and America. He maintained that justification hy faith meant nothing more than a simple assent to the divine mission of Christ. The Sandemanians still exist as a very small body, manians stili exist as a very small body, and have revived several customs of the primitive church, such as the kiss of charity, the use of the lot, and the weekiy iove-feasts.

Sander (san'der; Lucioperca sandra), a species of fishes belonging to the perch family, and found in fresh-water rivers and streams in Germany and the east of Europe generally. It attains an average length of from 3 to 4 feet, and is esteemed as an article of food. It is known under the name of pike-perch.

Sanderling (san'der-ing; Colidria grenaria), a wading bird averaging from 6 to 8 inches in length, which breeds in the Arctic regions, and in winter migrates southward. It feeds on smail marine animais, and chiefly inhahits the sandy tracts of the sea-beach

land, 4½ miles northeast of Orembas a handsome church, a spacious grammar school, and in the marketplace are two antique obelisks. In the neighborhood are saltworks. Pop. 5723.

Sand-flea. Same as Sand-hopper.

'daddy long legs,' or crane-flies.

Sand-grouse (Pterocles), a genus of rasorial or scratching hirds, belonging to the family Pteroclide, Sea, and Indian Ocean, and is remarkable for the rapidity of its motions.

Sand-eel, a genus of teleostean fishes belonging to the suhorder and Africa, and are most shundard in the body is slender of the family Ptercellide, and differing in several respects from the common grouse (which see), belonging to the family Tetraonide. They are natives chiefly of the warm parts of Asia Anacanthini. The body is slender of the suhorder and Africa, and are most shundard in the body is slender of the suhorder and Africa, and are most shundard in the body is slender of the suhorder and Africa, and are most shundard in the suhorder and Africa, and are most shundard in the suhorder and Africa, and are most shundard in the suhorder and Africa, and are most shundard in the suhorder and Africa, and are most shundard in the suhorder and africa, and are most shundard in the suhorder and africa, and are most shundard in the suhorder and africa, and are most shundard in the suhorder and africa, and are most shundard in the suhorder and africa, and are most shundard in the suhorder and africa, and are most shundard in the suhorder and africa, and are most shundard in the suhorder and africa, and are most shundard in the suhorder and africa and af Anacanthini. The body is stender and arid sandy plans. The legs are longer cylindrical, somewhat resembling that of than in other grouse, and the tail and an eel, and varying from 4 inches to wings are pointed. Palias's sand-grouse about 1 foot in length, of a beautiful differs from these in having feathered slivery luster, destitute of ventral fins, and united toes. It has been made and the scales hardly perceptihie.

Sandemanians (san-de-mā'ni-anz), a native of the sandy plans of Central or Glassites, a Asia, where it occurs in vast numbers. than in other grouse, and the tall and wings are pointed. Palias's sand-grouse differs from these in having feathered tarsi and united toes. It has been made Much interest was excited in 1868, and again in 1888, by vast flocks of these birds invading Europe. They crossed the North Sea, and were found in considerable numbers throughout Britain and the Unroe Isles.

Sand-hopper (Telitrus locuste), a species of small insectlike crustaceans of the order Amphipoda, common along most see shores, where they may be met leaping about the sands in great quantities after the receding

Sandhurst (sand'hurst), a village in England, Berkshire, pleasantly situated on the Blackwater, and famous for its royal military college, originally founded at Great Mariow in 1802, but removed to Sandhurst in 1812. It is now used for giving one year's special training in the theoretical part of cial training in the theoretical part of the science of war to those cadets who have passed by competition for the army. Sandhurst (formerly Bendigo), a flourishing city of Victoria, Australia, about 100 miles N. N. W. of Meibonrne, with which it has railway communication. The town contains a handsome pile of public huildings. It has a town-hail, hospital, benevolent asylum, mechanics' institute (with a library of 13,500 voinmes), a theater, and numerous places of worship. Sandhurst is well lighted and supplied with water. It is the center of a rich auriferous conntry. Besides gold-mining, in which between 4000 and 5000 miners are employed, the most important industries are iron-founding, coach-hullding, tanning, and in addition farming and vine-growing. Pop. 43,112.

popular resort for i.valids, its climate summer plumage differing from the win-being perhaps the mildest and most ter dress. The voice is shrill and un-foreign commerce, with several ocean and they are able both to run steamship lines, and is the first port of eral European species and various spe-call from Panama. Fruits, fertilizers, cies exist in the United States, wintering etc., are among the articles of export. Sand-screw (Sulcator areaeries), a

Sandstones, consist usually of grains of quarts aggregated into a compact rock, which may also contain particles of felspar, minute scales of mica, and an admixture of clay, indicating in many places their immediate derivation from the debris of granitic rocks. Sandstones are in most cases chiefly composed of particles of quarts, united by a cement. The cement is in variable quantity, and may be calcareous or marly, argillaceous or argillo-ferruginous, or even siliceous. The grains of quarts are sometimes scarcely distinguishable by the naked eye, and sometimes are equal in size to a nnt or an egg, as in those sandstones called conglomerates, or sometimes pudding-stone or breccia. The texture of some sandstones is very close, while in others it is very loose and porous. Some sandstones have a fissile structure, and have been called sandstone slate. In color sandstone varies from gray to reddishbrown, in some cases uniform, in others variegated. In addition to quartz some sandstones contain grains of felspar, filnt and siliceons slate, or plates of mice. Some sandstones are ferruginous, contained and siliceons are ferruginous, of a slice of meat, fish, fowl, or other Some sandstones are ferruginous, containing an oxide or the carbonate of lron. Sandstones have been formed at different periods and under different circumstances, and are hence associated with different rocks or formations. They are in general distinctly stratified, and the beds horizontally arranged, but sometimes they are much inclined or even vertical. Sandstone in some of its varieties is very useful in the arts, and when it has no tendency to split is known by the name of freestone. When sufficiently the light is applicable as a building store solld it is employed as a building stone. Some varieties are used as millstones for grinding meal, or for wearing down other materials preparatory to a polish, and some are used for whetstones. For the New Red Sandstone, and the Old

Red Sandstone, see Geology.
Sandusky (san-dus'ki), a city of Ohlo, capital of Erie Co., on a sandstone ridge on the southern side of Sandusky Bay, Lake Erie, about 61 miles w. of Cleveland. Among the principal buildings are a conrt-house, Federal building, Soldiers' Home and Stat? fish-hatchery. It has a good harbor, and an extensive trade is done in fish lumbar limestone manufactured in fish, lumber, limestone, manufactured subsequently vice-chancellor of the uni-

Sand-wasp, a name of hymenopterous insects of the genus Ammophila, belonging to a group which, from their peculiar babits, are termed Fossores or diggers. The sand-wasp inhabits sunny banks in sandy situations, running among grass, etc., with great activity, and continually vibrating its antenne and wings. The female is

sandwich (sandwich), a municipal borough and one of the Clique Ports of England, in the county

Sandwich, the name given to an article of food consisting of a slice of meat, fish, fowl, or other savory food placed between two slices of bread, which may be plain or buttered. The term is said to have arisen from the control of an earl of this name having been in the babit of providing himself with one in bis pocket to avoid dining in town.

Sandwich Islands. See Hawaii. Sandwich Islands.

Sand-worm, of the numerous worms a general name for any fisherman's lobworm is one of the most important of these. Hidden under stones or burrowing degry in the sand are numerous species of errant Chestopeds, while the tubes of Terebella condrilega, mostly composed of fragments of shall living in the sand of the sea-shore. The mostly composed of fragments of shell, are familiar objects in the sands.

Sandy Hook, a low sandy peninsula at the entrance of New York barbor. On the N. point are a fixed light 90 feet high and a government proving ground. See New York.

Sandys (san'dis or sandz), EDWIN, Archbishop of York, was born in Lancashire, England, in 1519, and educated at Cambridge University, where he became master of Catherine Hall and subsequently vice-chancellor of the uni-

On the accession of Elizabeth he returned to Engiand, and was made bishop of Worcester in 1559. In 1570 he was made bishop of London, and archbishop of York in 1577. He died in 1588.—His son, SIR EDWIN SANDYS (born 1561; died 1629), was employed by James I on several missions, received the honor of knighthood, was connected with the Second Virginia Company and otherwise with the American colonies, and published Europæ Speculum, a Survey of the State of Religion in the Western Parts of the World.—Another son, George Sandys (born 1577; died 1644), published a Relation of Travels in the East a portion translation of in the East, a metrical translation of Ovid's Metamorphoses, metrical para-phrases of the Psaims, Job, Ecclesiastes, Song of Solomon, etc. His poetry is praised by Dryden and Pope.

San Fernando (san fer-nan'do), or Isla de Leon, a strongly fortified town of Andaiusia, Spain, 7 miles southeast of Cadiz, sit-uated on a flat in the Isla de Leon. The lown is of modern construction, and has two hospitais, severai convents, a marine schooi, an observatory, and an extensive arsenai. Sait, the staple trade of the town, is made in the sclings and marshes between San Fernando and Cadiz. Pop. 29,802.

Sanford (san'ferd), a city, county seat of Seminole Co., Fiorida, at the head of navigation on the St. Johns River. It is an important railway center and is in the largest vegetableproducing section in the State-what is

Sanford, a village in Sanford town-ship (town), York county, Maine, about 35 miles w. s. w. of Port-land. It has good water power and produces, dress goods, carriage robes, yarnshoes, etc. Pop. of town 10,000.

San Francisco (san fran-sis'kō), the chief city and seaport of California and of the Pacific coast of America, is situated on a peninsula or tongue of land between the Pacific Ocean and the Bay of San Francisco, the entrance to the latter being foundry and machine shop products, through the Golden Gate, a waterway slaughtering and packing, and fruit canabout 5 miles long and 1 mile wide. Asia and the Pacific islands.

The site of San Francisco was first occupied by white settlers in 1776, an Indian mission being founded by Spaniards. Sixty years later the ittle village of Yerba Buena sprang up, the name of San Francisco being adopted in 1847. The conquest of California from Mexico and the discovery of gold in 1848 ied to a rapid influx of inhabitants, there being 20,000 by the end of 1849. The city has since then grown with great rapidity, though it has been visited by configurations and carthonology of derapidity, though it has been visited by conflagrations and earthquakes of destructive character. In 1900 the population was 342,782. Six years later, in prii, 1906, there came a frightfully destructive earthquake, followed by a terrible conflagration, which threatened to reluce the whole city to ruins. Yet the effects of this disaster have largely disappeared the husings activity of the disappeared, the business activity of the city has been fully resumed, and in 1910 its population had grown to 416,912. Among these is included the largest Chinese settlement in America.

Sangallo (sang-gal'ō), Antonio, an Italian architect, born in the environs of Florence in 1485. He succeeded his master Bramante as architect of the church of St. Peter's in Rome, and was much employed under the popes Leo X, Clement VII and Paul III, both in fortifying places and in the construc-tion of public buildings, the grandeur and solidity of which have been much admired. He died in 1546. His two uncles, Antonio and Giuliano Sangallo, were

also distinguished architects.

Sangerhausen (záng'ér-hou-zn), a town of Prussian Saxony, 33 miles w. N. w. of Merseburg, on the Gonna. The town has two castles, and manufactures of iron-ware, machinery, etc. Pop. (1905) 12,439.

San Gimignano (san ji-min-ya'no), province, Italy, six miles s. w. of Siena. it is notable for the mediæval aspect of its old walls, its many towers, and Gothic edifices, and is rich in splendid works of art, among them beautiful frescoes and paintings of past centuries. Pop. 9848.

The islands are all mountainous and partly volcanic. In an eruption of Aboe, a voicano on Great Sangir, in June, 1892, the greater part of the island was devastated, and nearly 10,000 inhabitants perished. Pop. about 50,000.

Sangster (sangs'ter), Charles, a Canadian poet, born at Kingston, Ontario, in 1822; died in 1893. Kingston, Ontario, in 1822; died in 1893. He was for 15 years an editor, and for 18 years a post-office official at Ottawa. He wrote The St. Lawrence and Saguenay and Hesperus and other Poems.

Sangster, MARGARET ELIZABETH MUNSON, American author, born ir New Rochelle, N. Y., in 1838; died in 1912. She was educated in Vienna and New York City and in 1858 married George Sangster. She became a married George Sangster. She became a favorite contributor to 'home' magazines,

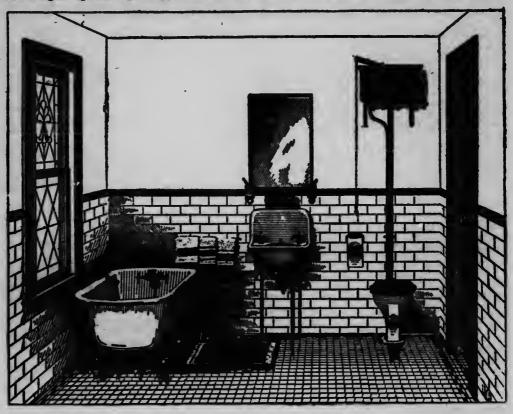

and was the author of a number of books

and poems. See Blood-root. Sanguinaria.

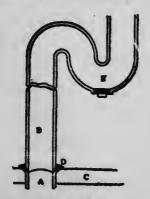

Sanhedrim (san'he-drim), or San-Hedrin (corrupted from the Greek sunedrion, a council), the supreme judicial tribunal of the Jews, existing in the time of the Maccabees and in New Testament times. Accord-ing to the Talmud it was founded by Moses when he elected seventy elders to assist him in judging the children of Israel in the wilderness, but this view is now generally rejected. The sanhedrim consisted of seventy members besides the president, who was usually the high-priest. They were chosen from among the priests, elders, heads of families and scribes or doctors of law and ilies, and scribes or doctors of law, and had power to deal with both secular and spiritual matters. The council became extinct in 425.

Sanitation (san-i-ta'shun), the methods employed to maintain heaith and ward off disease. The science of sanitation treats more especially of what is required of each individual in his duty to his neighbor, so that by using such means as may ensure his own health he may in a negative way preserve that of his neighbor also. The subject natupaintings of past centuries. Pop. 9848. sions:—1. That relating to our dwell-san Giovanni (jo-van'ne), a town ings; 2. Food; 3. Clothing; 4. Cleanlings of Naples, a suburb of the city of dwellings should be situated so as to ensure a free circulation of circula rally divides itself into four main divi-Sangir Islands (san'ger), a group and a thorough system of drainage. The of small islands in rooms should be large, airy, and well the Indian Archipelago, inhabited by the ventilated. A most pernicious source of Malay race (Christians), and beionging impurity is sewer-gas, which can only to the Netherlands. Most of them are enter houses where waste and soil-pipes inhabited and are covered with cocoa-are in direct communication with the palms. Rice, pisang, and sago are culti-main system of sewers. The decomposi-

tion of fecal and other matters in drains tions in drains and pipes, and also produces both ammoniacal and other suithrough the water-traps of closets, sinks, phurous gases. These gases, owing to etc., into our houses, and become a most their light specific gravity, rise to the potent atmospheric impurity. They are

San Martin (sán már-tēn'), Jose DE, ilberator of Chile, was born at Zopeyer, Argentina, in 1778. He joined the Spanish army and fought in the campaigns against France from 1793 till 1811, becoming lieutenant-colonel. Resigning in 1812, he sailed for Buenos Ayres, and joined the patriot army. Here he formed and drilled an army. Here he formed and drilled an army of invasion and in 1817 led a body of 4000 men in a famous march across the Andes, traversing a pass 12,800 feet high. Reaching Chiie, he gained a victory at Chacabuco on Feb. 12, following on the 15th with the capture and occupation of Santiago. He was defeated on March 19, 1818, but on April 5 galned a spiendid victory at the Malipo, which drove the Spanlards from Chile. He was offered the supreme dictatorship, but declined it, and bean preparations for the invasion of Peru. On July 19, 1821, he took Lima from the Spaniards, and carried Callao after a hard fight. On August 3 he was proclaimed supreme protector of Peru. At the same time Bolivar was marching south to Peru, and to prevent rival claims San Martin resigned his office, leaving Bolivar to complete his work. Withdrawing from South American affairs, he went to France and lived there in reduced circumstances until his death, August 17, 1856.

San Miguel, a town of Saivador, on a river of the same name, and capital of department of San Miguei. Its trade is largely in indlgo. Pop. 24,768.

San Miguel Allende (mi-gei' al-yen'dā), a town of Mexico, state of Guanajuato, on the Rlo de ia Lara, with manufactures of woolens, saddles, weapons, etc. Pop. 10,-000.

Barbara. It is near the Pacific and has Sannazaro (sån-åd-zå'rō), Jacofo, some manufactures. Pop. 5157.

San Luis Potosi (pō-tō-sē'), a city both in Latin and Italian, born at Naples of Mexico, capitai in 1458; died in 1533. He was patronof the state of same name, 198 miles N. w. ized by King Ferdinand of Naples and of Mexico, t350 feet above sea-level; his sons Aiphonso and Frederick, and

the latter gave him the delightful villa of Mergeilina, with a pension of 600 ducats. Sannasaro wrote sonnets and canzon and an idyi (Arosdia) in Italian, canzoni and an idyi (Aroadia) in Italian, the wars between the two countries. In Latin eiegles, eclogues, epigrams, and a 1813, when held by the French, it was ionger poem, De Parts Virginis, in three stormed by the British and iargely debooks.

Sanskrit Language and Lit-

erature (san'skrit). Sanskrit is the name given to the learned and ciassical language of the Hindus, the language in which most of their vast ilterature is written, but which has not been a llving and spoken language since about the second century before Christ. It is one of the Aryan or Indo-European family of tongues, and may be described as a sister of the Persian, Greek, and Latin, Teutonic, Slavonic, and Celtic tongues. It stands in the same relation to the modern ture. The town was completely destroyed by earthquake on April 16, 1854, and has suffered severely since. It was founded originally in 1528. Pop. 60,000.

Aryan languages of India as Latin stands to the Romance languages. It is a highly inflected language, having in this originally in 1528. Pop. 60,000. respect many resemblances to Greek. To philologists it has proved perhaps the most valuable of tongues, and it was only after it became known to Europeans that philology began to assume the character of a science. Its supreme value is due to the transparency of its structure, and its freedom from the corrupting and disguising effect of phonetic change, and from obliteration of the original mean-ing of its vocables. The name Sanskrit means carefully constructed or symmetrically formed, and was given to distinguish it from the vernacular dialects, which were called *Prākrit*, that is, common or natural. It is probable that Sanskrit, in its more highly electrony, was never spoken by a great body of the people. The all at is usually known as the Nāgarī o. Devanāgarī, and in its earliest form dates back several centuries before Christ. It consists of fourteen vowels and diphthones. consists of fourteen vowels and diphthongs. and thirty-three consonants, besides one or two other characters. Among the phonetic peculiarltles of Sanskrit may be consist chiefly of cordage, sail-cloth, mentioned the absence of f and the exist-leather, candles, and soap. The harbor ence of consonants such as kh, gh, th, dh, is small, exposed, and difficult of access, in which the h is distinctly heard after and the trade has greatly decayed; but the other sound. When several consother piace is much frequented for seanants come together they are fused into bathing. San Sebastian is of considera-

original components are often hard to distinguish. In Sanskrit roots play a most important part, the processes of decien-sion and conjugation being looked upon as consisting in the appending of certain ter-minations to root-forms, or roots modified in certain ways to form inflective bases. The system of case-terminations is similar to those in Latin and Greek, but in declensional forms Sanskrit is richer than either of those languages. There are eight cases—nominative, accusative, instrumental, dative, ablative, genitive, locative, and vocative. There are three numbers—singular, dual, and plural—and three genders. The verb in Sanskrit exhibits many striking analogies to the verb in Greek, but it is not so rich in forms. Prepositions are scarcely used in Sanskrit to govern nouns, as in other The system of case-terminations is similar Sanskrit to govern nouns, as in other Aryan ianguages, but as prefixes to verbe they are of constant occurrence. Syntax holds but an unimportant place in Sanskrit grammar. The excessive use of cumbrous compounds - some of them of extraordinary length and complexity—is a very general feature in Sanskrit, appearing in all styles of composition, but especially in the more artificial.

Sanskrit literature covers a period extending from at least 1500 mm.

tending from at least 1500 B.C. to the present time. The great mass of the literature is in meter, even works on science and iaw having a poetical form. upon as the source of ail the shastras or sacred writings of the Hindus, which, however, include works upon ethics, science, and philosophy as well as reiigious works. (See Veda.) The Puranas form another important department of the religions literature, but are very much later than the Vedas. There are eighteen of them altogether, forming a vast body of literature of varied contents, the subjects treated comprising mythology, legendary, history, cosmogony, with many digressions of a philosophical and didactic nature, though some of them also contain descriptions of places, and pretend to teach medicine, grammar, etc.

India is likewise iarge. Grammar seems to have had a special fascination for the Hindus. The oldest extant grammar is that of Pānini, which belongs to the second or third century before Christ. In mathematics and astronomy the selves, as also in medicine and philosophy. Sanskrit literature was first introduced to the Western world by Sir William Jones in the end of last century.

Sans-souci (siin-sö-sē; French, without care'), a paltern that of Pānini, which belongs to the second or third century before Christ. In mathematics and astronomy the selves, as also in medicine and philosophy. Sanskrit literature was first introduced to the Western world by Sir William Jones in the end of last century.

Sans-souci (siin-sö-sē; French, without care'), a paltern that of Pānini, which belongs to the second or third century before Christ. Sanskrit literature was first introduced to the western world by Sir William Jones in the end of last century. digressions of a philosophical and didactic nature, though some of them also contain descriptions of places, and pretend to teach medicine, grammar, etc. The oidest iaw-book is the Dharma-stra, ascribed to the mythical personage Manu. In the department of epic poetry the chief productions are epica cal'd the Rāmāyana and the Mahābhārata. The Rāmāyana is becommercial center of a rich agricultural district, watered by including the straightful of the two and to and horticultural district, watered by including the straightful of the two and to and horticultural district, watered by including the straightful of the two and to and horticultural district, watered by including the straightful of the two and to and horticultural district, watered by including the straightful of the straigh lieved to be the older of the two, and to and horticultural district, watered by inhave been current in India as early as rigation. Pop. 12,000. the fifth century B.C. The Makabharata Santa Anna (san'ta a'na), Antonio is a huge epic of about 220,000 lines, forming rather a cyclopædia of Hindu wythology, legendary history, and philoso-expelled the Spaniards from Mexico, and

phy than a peem with a single subject. It is the production of various periods and various authors. (See Ramayana, Makabharata.) In the province of tyric poetry we meet with poems of the greatest elegance, tender sentiment, and beautiful descriptions of nature. We must mention in particular the Meghadāta ('Clond Messenger') of Kālidāsa; the Ritusanhāra ('Circle of the Seasons') of the same poet; and the Gitagovinda of Jayadeva, describing the adventures of Krishna. Though the Hiudus can boast of some excellent specimens of dramatic poetry, yet, on the whole, their dramas and various authors. (See Ramayans, poetry, yet, on the whole, their dramas are much inferior to those of the Greeks or of modern Europe. The plays are written in mixed prose and verse, and the lower characters and all females are made to speak not in Sanskrit but in Prākrit, only the higher male characters using the former. The Hindu poetic tales and fables have exercised a most important influence on the whole literature of the East, and even on that of ture of the East, and even on that of our own middle ages. Among the collec-tions of this class are the Panchatantra ('Five Books'), from which Europe derived the fabies of Bidpai (or Pilpay) and the Hitopadesha ('Salntary Instruction'), a somewhat later collection of the same materiais; also the twenty-five Tales of the Demon, seventy Tales of the Parrot (which gave rise to the well-known stories of the The oldest literary monuments are the Seven Wise Masters), etc. The Katha-Vedas—the Rig, the Yajur, the Sama, sarit-sagara ('Ocean of Streams of Nar-and the Atharva Veda. They are looked ration') compiled in the eleventh century, is an extensive collection of the best Indian tales. The scientific literature of India is likewise large. Grammar seems to have had a special fascination for the

Santa Maria di Capua-Vetere,

a town of South Italy, in the province of Caserta, 3 miles southeast of Capua. It is built on the site of ancient Capua, of which there are many remarkable ruins, including remains of a Roman amphitheater. Pop. 21,825.

See Leucadia. Santa Maura.

Santa Monica, a city in Los An-15 miles w. of Los Angeles. It is a senside resort and a shipping point. Pop.

Santander (sän-tan-där'), a city and seaport of N. Spain, capital of the province of same name, on the Bay of Biscay, with a good and secure harbor. In the more ancient quarter the streets are narrow and straight, while in the modern the streets are spacious, and the houses of good architecture. There is a town-house, small cathedrai, theater, two public markets, promenades, etc. It has a large cigar manufactory, foundry, brewery, cooperages, fish-curing establishments, tanneries; besides manufactories of refined sugar, candles, vermicelli, hats, etc. It is also a resort for sea-bathing. Pop. 65,046.—The province is bounded by Biscay, Burgos, Palencia, and Oviedo, and has an area of 2111 square miles. The soil is fertile, and produces large quantities of maize, hemp, flax, oranges, lemons, figs, etc. There are also lead, coal, and iron mines, quarries of ilmestone and marble. The rearing of cattle is common, and the fisheries along the coast are well developed. Pop. 276,003.

Santarem (san'ta-ron), a city of Portugal, heautifully situated in the province of Estremadura, on

the right bank of the Tagus, 46 miles northeast of Lisbon. It has an important Jesuit seminary. Pop. 8628.

Santa Rosa (rō'za), a city, capital of Sonoma county, Caifornia, 57 mlles N. by w. of San Francisco. It has various mills and factories, and an extensive trade, in a wine-growing

In 1809. As a wealthy brewer he was notable during the French revolution for his influence over the Parisian moh in the attacks on the Bastlle and the Tuileries. He rose to be commander of the National Guard and a field-marshai. Santiago (săn-tē-ă'gō), the capital of the Republic of Chile and of the province of the same name, is beau-

tifuily situated at the foot of the Andes, 112 miles by rail E. of Valparaiso. It is intersected by the Mapocho, a rapid stream issuing from the Andes, has water channels in many of the streets, is lighted by electricity, and furnished with tram-ways. Owing to the prevalence of earth-quakes the houses are mostly of one story, and generally occupy a large space of ground, having gardens and patios or courts in the interior. The Plaza or Great Square is a large open area adorned with a fine fountain; around it are the municipal buildings and criminal courts the postoffice the identical forms. courts, the post-office, the oid paiace, for-merly the residence of the presidents, now used as harracks, the cathedrai, etc. There are also a mint, a well-appointed university with about 1000 students, high-class secondary schools, school of art, military school, normal schools, theater, museum, etc. The city was founded in 1541. The most memorable event in its history was the burning of a church, in which about 2000 persons parished in 1863. Page 378 103 perlshed, in 1863. Pop. 378,103.

Santiago-de-Compostella (komtā'ia), a city of Spain in Gailcia, in the province and 32 miles south of Coruña. It is picturesquely situated, and weil bullt; streets for the most part broad and paved. The chlef edifice is the cathedrai, a Romanesque building founded in 1078, having in one of the chapels the image of St. James (Santiago) of Compostella (more correctly Compostela), which has long attracted numer-ous pilgrims. Other buildings are the archiepiscopal palace, the eccieslastical seminary, the town-house, the convent of St. Martin, and the university. The town has manufactures of leather, linen, etc. Pop. 24,120.

Santiago-de-Cuba (ku'ba), a seathe southeast coast of the Island of Cuba. It is the oldest town of the island (having been founded in 1514); has a fine cathedral, severai other churches, and a harhor, which, though and an extensive trade, in a wine-growing and agricultural region. The climate is in industry. Pop. 7817.

Santerre (san-tar), Antoine Joseph, born in Paris in 1752; dled invested and taken by the Americans in the war of 1898. Pop. (1914) 61,513.

Santiago del Estero (as-ta'rō), a town of the Argentine Republic, in the province of same name, in a fertile district on the Rio Duice. Pop. 12,000.— The province has an area of 31,500 sq. mlles, and is well suited for cattie-rearing and agriculture. Pop. 186.205.

Santipur (sän'të-për), a town in Nadiya district, Bengal, on the river Hooghly. It is well-known for its cloth manufactures, has an annual fair which lasts for three days, and a considerable local trade. Pop. 29,687.

Santley (sant'li), Charles, a public singer, was born at Liverpooi in 1824; acquired a knowledge of his art

in 1834; acquired a knowledge of his art in Italy under Gaetano Nava, and in London under Garcia; appeared for the first time in 1857, and achieved his first great success at the Handel Festival in the Crystal Paiace in 1862.

Santo Domingo. See Sun Dominican See San Domingo

Santonin (san'tu-nin), Santonine principie, possessing acid properties, obtained from the seed of southernwood (Artemisia santonica). It is colorless, crystallizabie, and soluble in alcohol.

Santorin (san-to-rên'), Thera, or Calliste, the iargest of a small group of Islands in the Grecian Archipelago, 60 miles north of Crete. It is somewhat crescent-shaped, and has a Republic.

is somewhat crescent-shaped, and has a circuit of about 30 miles, though its breadth nowhere exceeds 3 miles. The shores of the inner curve are precipitous, but they slope gradually down to those of the outer curve, which are covered with vlneyards. Wine is the staple of the island. The island is of volcanic origin, several small and adjoining it are islands thrown up by eruptions in historic times, the last having taken place in 1866. Pop. about 15,000.

Santos (săn'tush), a city and seaport of Brazil, in the province and 50 miles s. s. e. of São-Paulo, on a bay of the South Atiantic. The harbor is the

tobacco, hides, etc. Pop. about 90,000.
Santos-Dumont, Alberto, aeronaut, born at São Paulo, Brazil, in 1873, son of a wealthy coffee is coal, of which planter. He began experiments in aerostation at Paris in 1898, constructed a succession of air-ships, and in 1901 won the Deutsch prize of 100,000 francs by agricultural protection which he sailed round the Eiffel (1906) 613,377. Tower. On the invention of the aeroplane he was one of the first to experiment with it, and in 1906 won a prize of \$10,000 by making a flight of one kilometer.

town in forms the boundary between the latter Bengal, on province and Pernambuco, and fails into known for the Atlantic 50 miles N. N. B. of the town an annual of Sergipe-dei-Rey; length, 1600 miles, with numerous rapids and cataracts, which make its continuous navigation impossible.

Saone (son; anc. Arer), a river of E. France, rises in the Vosges, enters the department of Haute-Saone, then flows through the department of Côted'Or, continues southwest and receives the Doubs as tributary, reaches Châlon, where it flows due south until it joins the Rhone at Lyons; length, 280 miles, of which 190 are navigable. It is connected by capals with the Phina Loise and by canals with the Rhine, Loire and Seine.

Saone, HAUTE (ot son; 'Upper saone'), a department in the east of France; area, 2028 square miles. It is drained by the Saone, the Ognon, etc., and there are many small lakes. A part of the department belongs to the Vosges Mountains. This, which comprises about a fourth of the whoie, is rugged and the soil arid, but the low-lying basin is well watered and productive. In addition to cereals flax and hemp are extensively cultivated: the ordihemp are extensively cultivated; the ordinary fruits generally thrive well, and some districts are almost covered with cherry plantations. Iron is extensively worked, but the main occupation is agriculture. Vesoul is the capital. Pop. 265,179.

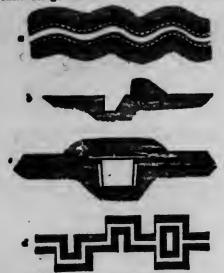

Saone-et-Loire (son-e-iwar), a de-France; area, 8270 square miles. It is divided by a mountain range, which belongs to the Cevennes, and it takes its 50 miles s. s. E. of São-Paulo, on a bay of the South Atiantic. The harbor is the best in the province, and the chief outiet for its products, which are course, sugar, tobacco, hides, etc. Pop. about 90,000.

The soil on the whole is not of remarkable fertility, the finest total course of the department being the valley of the Saone. The vine la course of the soil on the whole is not of remarkable fertility, the finest total course of the department being the valley of the Saone. The vine la course of the soil on the whole is not of remarkable fertility, the finest course of the department being the valley of the Covenius. of the Saone. The vine is extensively cultivated. The most important mineral is coal, of which there is an extensive field; iron is also worked. There are manufactures of leather, glass, linen and active goods; and the trade is chiefly in cotton goods; and the trade is chiefly in agricuitural produce, coai, iron, wine, and leather. Macon is the capital. Pop.

São-Paulo (soun pou iu), a maritime state of Brazil, between Minas-Geraes and Parana; area, 112,312 square miles. The coast-line is bold and rocky; behind are mountain chains which divide the province into two basins. That on the east side sends its waters directly to the Atlantic; while São-Francisco (soun-fran-sēsh'ku), chains which divide the province into two chains in the southwest of the province its waters directly to the Atlantic; while of Minas-Geraes, flows N. N. E. through the far larger interior basin drains into that province and the province of Bahia, the Parana, which bounds the province on the west. The mountains are generally covered with forests, while on the lower slopes the crops grown are sugarcane, coffee, cotton, malse, mandloc, to-bacco, etc. The province has several harbors on the coast, particularly that of Santos. Pop. 2,282,210, including 500,000 Italian colonists and 20,000 Germans.—Slo-Paulo, the capital, is the center of the provincial railways, 36 miles from its seaport, Santos, and 143 miles from Rio-de-Jauelro. The principal edifices are the cathedral, several monasteries and convents, the governor's and asteries and convents, the governor's and the bishop's palace, the town-house, etc. It is one of the oldest cities of Brazil, having been built in 1554, and is the industrial center of the state. Pop. estimated at 450,000.

Saouari (så-y-ä'rē). See Souari.

Sap, in military affairs, a narrow ditch or trench by which approach is made to a fortress or besieged place when within range of fire. It runs in a zig-

Sap, as variously constructed.

zag, serpentine, or similar direction, so as not to be enfiladed by the fire of the for-tress. The trench is formed by trained tress. The trench is formed by trained men (sappers), who place gabions as a cover, filled with the earth taken from the trench along the intended line of parapet; the earth excavated, after the ga-bions have been filled, being thrown up to form a parapet capable of resisting artillery. The single sap has only a single parapet: the double has one on each side. Sometimes the sap is entirely covered in. The digging of a sap is generally a dangerous operation. In the activities and insects.

Capucin Sapajou (Cobus capucinus).

Capucin Sapajou (Cobus capucinus).

companying figure s is a double sap on the serpentine plan; b, section of single sap, showing portion of gabiens; c, sec-tion of covered sap; d, sap on rectangujar plan.

Sap, the juice or fluid which circulates in all plants, being as indispensa-ble to vegetable life as the blood to animal life. It is the first product of the digestion of plant food, and contains the elements of vegetable growth in a dissolved condition. The absorption of nutriment from the soil is effected by the nutriment from the soil is effected by the minute root-hairs and papilise, the absorbed nutriment being mainly composed of carbonic acid and nitrogenous compounds dissolved in water. This ascending, or as it is termed crude sep, is apparently transmitted through the long cells in the vascular tissue of the stem and branches to the leaves, passing from cell to cell by the process known as and changing in character endosmose, and changing in character under the influence of sunlight acting upon it through the leaf tissue. It then descends as elaborated plant food.

Sapajou (sap'a-jö), the name gen-erally given to a group of South American prehensile-tailed mon-keys, including fifteen or sixteen species, whose characteristics it is exceedingly difficult properly to define. Among the species may be named the Cebus fatuellus, or horned sapajou (also called horned capucin); the C. monachus and C. capucinus, often called the capucin. One of the most common species is the

Capucin Sapajou (Cebus capucinus).

Sapan-Wood, Sappan-wood (sap'- Africa, and America. Some produce eatCasalpinia Sapan, a middle-sized leguminous tree, indigenous to Siam, Burmah, India, etc., and used as a dy-wood.
The dye it yields is of a red color, but rather inferior.

Sap-oreas.

Sap-green, a pigment prepared by evaporating the juice of the Rhamnus catharticus, or buckthorn, to dryness, mixed with a little alum. It is soluble in water; acids redden it, but the alkalies and alkaline

redden it, but the aikailes and alkailne earths restore the green color. It is used by water-color painters as a green pigment. Called also bladder-green, being kept in bladders to dry and harden.

Saphir (sa'fer), Mortz, a German humorist, born at Pesth. of Jewish parentage, in 1795; died in 1858. At an early age he went to Berlin, and successively edited the Berliner Schnellpost, Der Deutsche Horisont, Der Korsar, and Der Humorist.

Sapindaceæ (sap-in-da'se-2), a mat. order of polypetalous dicotyledons. It consists of trees or shrubs with erect or climbing stems, inhabitants of most parts of the tropics, more especially of South America and India. The leaves are usually alternate, simple or compound, and the flowers often irregular. The fruit of the Sapindus suponaria is used for washing linen.

Saponaria is used for washing linen.

Sapodilla (sap-u-dl'a), a tree of the genus Achras, the A. Sapots, nat. order Sapotaceæ, and found in the West Indies. The fruit resembles a bergamot pear in shape and size. It is often called naseberry, and is much prized as an article of diet. The bark of the sapodilla is used in medicine as an astringent, and the seeds as a duretic.

Saponine (sap'n-nin; CaHaO15), a non-nitrogenous vegetable principle found in the root of Sanonaria.

principle found in the root of Saponaria officinglis and many other plants. It is soluble in water, and its solution, even when much diluted, froths on being agi-

saponite (sap'u-nit), a hydrous silicate of magnesia aud alumina. It occurs in soft, soapy, amorphous masses, filling veins in serpentine and cavities in trap-rock.

Sapotaceæ (sa-po-th'se-ē), a nat. or-der of plants belonging to the polycarpons group of monopetalous exogens. It consists of trees and shrubs which frequently abound in a milky jnice, which may be used for alimentary purposes. They have alternate undivided leaves, small solitary or clustered axiliary flowers, and a baccate or drupaceons fruit. They are chiefly natives of India.

Sapper (sap'er), a soldier whose du-ties consist in constructing saps or other field-works, etc. Formerly the non-commissioned officers and privates of the Royal Engineers received the general appellation of the Sappers and Miners.

(saf'Ir), a precious stone, Sapphire next in hardness and value to the diamond. belonging to the corundum ciass. Supplies are found in various piaces, as Burmah, India, and Ceyion, in Asia; and Bohemia and Sliesia, in Europe. The sapplire proper is a beautiful transparent stone of various shades of blue color. See Corundum.

Sappho (suf'o), a distinguished Greek poetess, born at Mityiene, on the Island of Lessos and flourished about 600 B.C. Little is known regarding her life, though she is made the subject of various legends. ( ese may be menese may be mentioned the commen Phaou, which, bein unrequited, caused her to leap down from the Leucadian Rock. At Mitylene Sappho appears to have been the center of a female coterie, most of the members of which were her pupils in poetry, fashion, and gailantry. lier odes, elegies, epigrams, of which only fragments have come down to us, display deep feeling and imagination. Her reputation among the ancients almost borders on extravagance.

(sap-ro-leg'ni-a) Saprolegnia genus of fungi which grow on dead and ilving animals and plants in water, and form the characteristic feature of the salmon disease.

Sap-roller, a large gablon filled with another gablon of less diameter as well as with fascines. It is used by sappers, who roll it before them in digging a sap to protect them from the fire of the enemy. Sca Sap, Gabion. Saprophytes (sap'ro-fits), plants that feed on decaying organic matter. The Fungi are examples, some of them living on dead organisms, some on living ones. The former live on the bark of trees, and the leaf soil of forests and meadows (these incinde the mushrooms); the latter (as the moids and yearts) on the juice of fruits and sugary solutions. Examples of saprophytes are also found in the Phaneregams and the Bacteria.

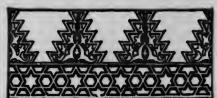

mali ding r OB Sap-sucker, the popular name of several small woodpeckers.

Sapulpa, a city in Creek county, Oklahoma City. It has glass factories, machine shops, brick plants, etc.; electric power plant, and natural gas. Pop. 10,000, Saraband (sar'a-band), a dance used in Spain, or the music adapted to the dance. This is grave and expressive in character, written in 2

of the style are the dome, the minaret, and the pointed arch. The Saracenic domes rise from a square base, are graceful in form, sometimes in groups of three or more, and frequently enriched externally with colored tiles or other decorations. The minarets are slender towers of considerable height, rising in stages or stories, each with a balcony, and are most frequently octagonal, sometimes cylindrical, rising, however, from a square hase. The arch is of the pointed variety, this form of arch having seen used by the Arabs in Egypt before the rise of the Gothic in Europe. It is sometimes of the horse-ahoe form. (See Arch.) The use of clustered pendentives (koneycomb work) to form a transition from the quadrangular area under a dome to the arch of the dome itself is very peculiar and common. Externally the tops of walls are often finished off with an upright cresting, which may be regarded as an ornament taking the place of a cornice.

Flat surfaces are freely ornamented with a profusion of acroil-work and conven-tional foliage, often in intricate and beautiful designs. Stucco is much used in ornamentation. The mosque ei-Aksah at Jerusalem, reconstructed by Abd el Maiek in A.D. 691, shows evidence of the Christian art of the time in its basilica of seven aisies. In Egypt the Saracenic art began with the mosque which Amru erected at Old Cairo in the 21st year of the Heitra (Ap. 642). Subsequently adapted to the dance. This is grave and expressive in character, written in a consists of two parts. Handel and other masters frequently repaired and aitered, it may now be considered and other masters frequently repaired and aitered, it may now be considered as a good specimen of Mosiem architectural art when freed from Christian influence. But the perfected Saracenic ard dates from the building of a mosque at Cairo by Ibn Tooloon in 876 A.D. This hullding is nearly square (380 ft. by 455) with a central court, around which on three sides are two ranges of medians of Syria and Palestine, or the Arab Serber races of Northern Africa. At a later time it was also applied to any infidel nation against which crusades were preached, such as the Turks.

Saracenic Architecture (sarassen'ik), the style adopted by the followers of Mohammed in building the from the side Cairo, is one of the most graceful in 1453 they appropriated the Christian Churches of the clty, the most Important of which was St. Sophla. Such was possessed no distinctive architectural style, and the style suchief presented in Egypt, Persia, Spain, Turkey, and India, but the Saracenic architecture tural style with modifications in all the mosques of Moorish. (See Moorish Architecture). The most prombent features of the style are the dome, the minaret, and the pointed arch. The Saracenic domes rise

Wall-creating, Mosque of El-Azhar, Cairo.

supposed to be a development of the old Bahylonlan or Assyrian. The rulned mosque of Tabreez, one of the finest of its kind, belongs to the Mogui dynasty, and was begun hy Ghazan Khan in 1294 A.D. In form it resembles a Byzantine church, but it is chiefly remarkable for the decorative results obtained by mosaic of glazed bricks and tiles in brilliant colors. The most splendld of Saracenic buildings in Persia was built during the dynasty of the Sufis built during the dynasty of the Sufis hy Shah Abbas (1585–1629) in his capi-tal of Ispahan. or bazaar, a large rectangular area inclosed by an arcade two stories in height, and to which was attached the great mosque of Mesjid Shah and other buildings. The latter building is 223 ft. by 180, the center compartment being surmounted by a double dome, whose external height is 165 feet. Taken in the mass the Maidan Shah, with its gates and mosques, superbly decorated, is one of the most effective specimens of Saracenic architecture. See also Indian Architecture. Architecture.

Saragossa (sara-gos'a), or Zara-gos, capitsi of the province of the same name, 200 miles N.E. of Madrid in a fertile plain irrigated by the Ebro. The houses are huilt in solid masonry, and in a highly ornamental style. The principal editices are the two cathedrals, La Seo and El Pilar. The former is the metropolitan archiepiscopal church, and is mainly Gothic in style dating from the tweifth century; the sis a huge unattractive huilding begin 1677. Other hulldings are the vast archiepiscopal palace, the Torre Nueva, an octengular clock-tower for the city, which copal palace, the Torre Nueva, an octal-gular ciock-tower for the city, which leans about 9 feet ont of the perpen-dicular; the oid Irregular citadel cailed the Aljaferia, hulit by the Moors, town-nouse, hospitals, exchange, musenm, etc. There is a university of three faculties and about 800 students. The chief man-pfortures are allk, wooden cioth, leather nfactures are slik, woolen cioth, leather, soaps, hats, etc. It is famous for the heroic resistance which its citizens made to the French in 1808-09. Pop. 111,704. BATTLE or, the name of Saratoga, two battles of the Ameriican Revolution fought at Schuylerville (Earatoga), New York, September 19 and October 7, 1777, between the British under Burgoyne and the Americans under Gates, who had succeeded Gen. Schuyler (q. v.). The first was indecisive; the second a great victory for the Americans, resulting in the surrender of Bnrgoyne with his whole force of nearly 6000 men. The victory, which was mainly due to the leader-thin of Benedict Aynold second for the ship of Benedict Arnold, secured for the Americans the alliance of France and led to the acknowledgment of the United States by foreign powers. Also called the battle of Bemis Heights, the battle of Stillwater and the battle of Freeman's Farm. See Burgoung.

States. The springs are characterised by their saline and chalybeate ingredients combined with carbonic acid gas. It has numerous large and handsome hotels, several churches, etc., and during the season has an influx of about 35,000 visitors. Pop. 12,093.

Saratov (sa-ra'tof), a city of Rusment of same name, is built on broken and undulating ground on the right bank

ment or same name, is built on broken and undulating ground on the right bank of the Volga, 450 miles southeast of Moscow, and surrounded by gardens. Its streets are wide, regular, and well paved, and it has a number of fine huidings, including new cathedrai, public offices, theater, railway-station, etc. It has manufactures of cordage, nottery. offices, theater, railway-station, etc. It has manufactures of cordage, pottery, tobacco, woolen cioth, cotton and silk stuffs, etc. I'op. 217,500.—The government has an area of \$2,614 square miles. The eastern boundary is formed by the Voiga, hut the greater part of the government is drained chiefly hy affluents of the Don. The surface is generally diversified hy numerous hills and valleys, where a mild climate and good soil combine in raising heavy crops. The principal exports are ccrn, hemp, flax, tobacco, hops, and madder. Pop. 2,419,884.

Sarawak (sa-ri'wak), a rajahship in the island of Borneo, under British protection. It is situated on the west and northwest side of the island, and has a coast-line of about 300 miles, and an undefined semicircular sweep in-

and an undefined semicircular sweep inand an underned semicircular sweep in iand, area about 40,000 square mlies. The soli, consisting generally of black vegetahie moid, is peculiarly adapted to the sugar-cane, which grows readily even without cuitivation; but the more important vegetahie productions are cocoants with the same statement of the superscripts. portant vegetance productions are cocoannts, rice, and sago. The minerais include gold, antimony, and quicksilver, and dlamonds are also found. The original inhabitants are Dyaks, but are now very much intermixed with Malays and Chinese. The rajahship was conferred upon Sir James Brooke by the Sultan of Romeo in 1841 in return for distinin the surrender of Bnrgoyne with his whole force of nearly 6000 men. The victory, which was mainly due to the leadership of Benedict Arnold, secured for the Americans the alliance of France and led to the acknowledgment of the United States by foreign powers. Also called the battle of Bemis Heights, the battle of Bemis Heights, the battle of Stillwater and the battle of Fresman's Parm. See Burgoyne.

Saratoga Springs (sar-a-to'ga), a City of New York, about 38 miles north of Aibany, and 180 mlies north of New York city hy rail. It owes its prosperity to its mineral springs, which have made it one of the United the surrender of mineral springs, which have made it one of the surrender of surrender, and when he died in guished services in queiling disturbances and restoring order, and when he died in 1868 he was succeeded hy his nephew (see Sir James Brooke by the Sultan of Borneo in 1841 in return for distinguished services in queiling disturbances and restoring order, and when he died in 1868 he was succeeded hy his nephew (see Sir James Brooke by the Sultan of Borneo in 1841 in return for distinguished services in queiling disturbances and restoring order, and when he died in 1868 he was succeeded hy his nephew (see Sir James Brooke). The military forc some 250 men—is under English con troi. Pop. estimated from 300,000.—Sarawak (formerly Kuohing). Sarcina (sur-se'na), a genus of minutes capital, has a pop. of about 30,000.

are

some important indentations, such as the Gulf of Ashara in the northwest, the Bay of Oristano in the west, and Bay of Oristano in the west, and the Guif of Cagliari in the southeast, on which Cagilari, the capital of the island, is situated. The interlor is generally mountainous; the chain which traverses Sardinla sends out branches east and west, and culminates in Brunca, 6291 feet, and Gennargentu, 6132 feet. Between the mountain ridges are extensive piains or valleys. The streams are numerous, but unnavigable, the largest being the Tirso, which pours its waters into the Guif of Oristano on the west coast. In the vicinity of the coast are a series of iagoons. As regards the geo-logical structure of the island crystalline rocks occupy a considerable area, in which granite, overlaid by gnelss and mica-schist, predominates, but sedimentary rocks are also well represented, as also voicanic formations, a number of ancient craters being traceable. The mineral riches of the island consist chiefly of lead, zinc, copper, qulcksliver, antlmony, and iron of excellent quality. Igleslas, near the west coast, is the center of the mining district. The other minerals are porphyry, alabaster, marble, lignite, etc. The climate is similar to that which obtains generally over the Mediterranean region. The range of the thermometer is between 34° and 90°, and the mean annual temperature 61° 7′. During the hot season an unhealthy malaria infects the low-lying tracts. The winter months are rainy, and the pleasantest season is in the autumn. Much of the land is of remarkable fertility. The principal crop is wheat; barley, maize, beans, etc., are extensively grown; the vine is well adapted both to climate and the soil; and olive-grounds are met with in various quarters. The rearing of live stock forms an important industry. Game of all kinds is very abundant. Wild boars, stags, deer, and mufflons frequent the climate is similar to that which obtains ail kinds is very abundant. Wild boars, stags, deer, and muffions frequent the woods and forests. The most valuable fishery is that of the tunny. Mannfactures are chiefly confined to a few coarse tiesues. tissues woven by the women at their homes for private use. The trade consists of the exports of corn, wine, brandy, inhabitants are of Italian race, with a listy.

mixture of Spanish, and are characterized by a chivalric sense of honor and hospitality, but the family feud or vendette still exists. Education is in a very Tmolus. Under the Persians It was a

backward state, and aitogether civilization is rather primitive. The early history of the island is involved in much obscurity. It passed from Carthage to Rome in 238 B.C., and latterly came successively into the hands of the Vandals, the Goths, the Longobards, and Saracens. In 1297 Boniface VIII invested the kings of Aragon with Sardinia vested the kings of Aragon with Sardinia, and it continued in the possession of Spain till 1708, when it was taken possession of by the British. By the Peace of Utrecht it fell to Austria, and in 1720 to the House of Savoy, being from that time onward part of the kingdom of Sardinia. Capital, Cagliari. See next article. Pop. 791,754.

Sardinia, kingdom of the south of . Europe, composed of the Island of Sardlnia, the Duchy of Savoy, the Principality of Piedmont, the County of Nice, the Duchy of Genoa, and parts of the Duchies of Montferrat and Milan; 28,229 square miles; pop. (1258), 5,194,807. In 1720 Victor Amadeus II, duke of Savoy, on receiving the island of Sardinia in exchange for Sicily, took the title of King of Sardinia. He was succeeded by Charles Emmanuei III, Victor Amadeus III, and Charles Emmanuei IV, who in 1802 abdicated in favor of his brother Victor Emmanuel I, the royal family the state of the family having by this time, during the domination of Napoleon, taken refuge on the island of Sardinia. In 1814 the king returned to Turin, where the seat of government was established. An insurrection occasioned his abdication in 1821 in favor of Charles Felix, who, after Charles Albert. In 1848 he beaded the league which endeavored to drive the Austrians from Italy. The defeat of the Sardinian forces at Novara (1849) by Radetsky, however, caused him to abdicate in favor of his son Victor Emmanuei II. The position of Sardinia was strengthened by the part which it piayed (1854) in the Crimean war, while in 1859 the cooperation of France was secured in a war against Austria. The brief campaign which followed ended in the defeat of the Austrians at Magenta and Soiferino, and led to Sardinia retimber, fish, cattle, iead ore, calamine, and Soiferine, and led to Sardinla resalt, etc.; the imports include cotton, ceiving a large increase of territory, colonial produce, hosiery, hardware and metals, coai, etc. For administrative to France. Soon after this the Sardinlan purposes Sardinia is divided into the two kingdom was merged in a united Icalian provinces of Cagilari and Sassari. The kingdom under Victor Emmanuel. See

seat of one of the seven churches of the Apocalypse. A small village with some ruins stands at present on its site. Sardonyx (sår-don'iks), a precious stone, a beautiful and rare variety of onyx, consisting of alternate layers of sard and white chalcedony. The name has sometimes been applied to a reddish-yellow or nearly orange variety of chalcedonic quartz resembling car-nelian, and also to carnelians whose

Sardou (sar-do), VICTORIEN, a French dramatist, born at Paris in 1831. The son of a professor, he at first studied medicine, but abandoned this in favor of literature. His earliest venture was the comedy of La Taverne des Etudiants, which proved a failure at the Odeon. He was successful, however, with two plays which he wrote for Déjazet cailed M. Garat (1860) and Les Prés-Saint-Gervais (1862). His better-known works, many of which have been produced or the English stage, are Les Pattes de Mouche, Nos Intimes, La Patrie, Daniel Rochat, and Dora. His later successes were associated with Madame Bernhardt, for whom he wrote Fédora, Théodora, and La Tosca. He died November 8, 1908.

(sa'rē), a cotton fabric worn by Saree Indian women to wrap round the person; also, an embroidered long scarf of gauze or siik.

Sargasso Sea, the name given to several immense areas of floating vegetation found in midocean in different parts of the earth, and formed by a sea-weed named Sargassum bacciferum, and known popularly as gulf-weed, sea-entils, sea-grasses, and sargasso. The most celebrated of these occupies a great section of the Atlantic between Africa and the West Indies, from 20° to about 65° w. ion., and 20° to 45° N. lat. It was first traversed by the ships of Columbus. This vast meadow of floating sea-weed is also remarkable for the great variety of animal life inhabiting it, all these animals (crustacea, annelids, molluscs, polyzoa, fishes, etc.), being of the same general tint as the weed, so that they are often difficult to dis-cover at first sight. The weeds are sup-posed to be carried to this position by ocean currents, and continue to grow here, though they do not produce roots or fruit. See Gulf Weed.

Sargent, CHARLES SPRAGUE, botan-ist, born at Boston, Massa-

magnificent city on the commercial route chusetts, in 1841. He served as a vol-from Asia to Europe. Sardis was the unteer staff-officer in the Civil war and afterwards was made director of the botanic garden and then of the arboretum of Harvard University, and professor of horticulture. He also edited Forest and Stream (1887-97), and was made a member of the National Academy of Sciences in 1895. He is the author of numerous works on the forests of North America and on other botanical subjects.

of chalcedonic quartz resembling carnelian, and also to carnelians whose colors are in alternate bands of red and white.

Sardon (sar-dö), Victorien, a French Sardon (sar-dö), a and the cross of the Legion of Honor the same year. His La Carmencita was bought by the French government in 1892. He was noted especially as a portrait painter.

(sar'jint), EPES, poet and dramatist, was born at Glou-Sargent cester, Massachusetts, in 1812. He was educated in the latter city and at Harvard University; became associated with the Boston Advertiser and the Atlas; removed to New York, where he was assistant on the Mirror; and subsequently returned to Boston to become editor of the Evening Transcript. He afterwards devoted himself entirely to literature, and produced, among other plays, The Bride of Genoa, a poetlcal drama; Velaeco, a tragedy; various novels and books of adventure; a Life of Henry Clay (1852); and two volumes of poetry. He was the author of that well-known iyric, A Life on the Ocean Wave. He died December 30, 1880.

Sargon (sär'gon), an Assyrian king.

(sä-rē'), a town of Persia, capital of the province of Mazanderan, 22 miles east of Balfrush, and 15 miles from the sbore of the Caspian. A considerable trade is carried on with the interior of Persia and the Russian government of Astrakhan. Pop. estimated from 8000 to 20,000.

Sark (särk), or SERCO, one of the Channel Islands, situated about 8 miles from Guernsey. It is divided into Great Sark and Little Sark, the connectlon between these bing a narrow neck of land cailed the Coupée; length about 5, and breadth about 3 miles. The island is surrounded by aimost inaccessible rocks, and the carriage-ways are steep. Fishing is the chief employment though some degree of agriculture is carried on. Pop. 506.

Sartain (sar'tān), John, engraver,
was born in London, Engthology, a son of Zeus and land, Oct. 24, 1808; came to the United

to introduce mezzotint engraving. He settled in Philadelphia, held various offices in the Artists' Fund Society, the School of Design for Women and the Pennsylvania Academy; was elected a member of the Society Artis et Amicities in Amsterdam, Holland, in 1802, and in 1878 had charge of the art department at the Philadelphia Centenniai Exposition. He was the anthor of a large number of engravings for book liiustration, and engraved many historical paintings; designed the monument to Washington and Lafayette in Monument Cemetery, Philadeiphia. He founded Sartain's Magazine and published interesting personal reminiscences. He died October 25, 1897. Sarthe (sart), a department of North-west France: area, 2410 sq. miles. It has a diversified surface, pre-senting fertile plains, vineyards, and ex-tensive forests. Wheat, oats, hariey, beet-root, and hemp are grown, while cider and wine are largely produced. The only mineral of any consequence is iron, but there are excellent sandstone, ilmestone, milistone, siate, and markie quarries. The capital is Le Mans. Pop. 421,470. Sarti (sar'te), GIUSEPPE, an Italian composer, born in 1729; died in At the age of twenty-two his first opera, Pompeo in Armenia, was put upon the stage at Faenza, his native place. Other operas soon followed, and he became successively court chapel-master at Copenhagen; director of the Couservatory deil' Ospedaietto at Venice, and chapelmaster of the Milan cathedrai. In 1784 he was invited by the Empress Catherine to St. Petershurg, where he founded a musical conservatory. He wrote, in ali,

States in 1830, and was one of the first

about thirty operas, and was for some time teacher to Cheruhini.

Sarto (sar'tō), Andrea del, a painter of the Florentine school, one of of the Florentine school, one of the most distinguished painters of the sixteenth century, born at Florence in 1480; died of the piague in 1531. His proper name was Andrea d'Agnolo, the name dei Sarto (of the Tailor) being applied to him from the occupation of his father. He painted many frescoes in his native city, and Francis I induced him to go to France in 1518. He soon returned to Italy, and having appropriated returned to Italy, and having appropriated large sums which had been given him by his royal patron to purchase the pic-tures of great masters in Italy, he could not go back to France. Among his most important easei-pictures are the Sacrifics of Abraham and the Marriage of St. Catherine, in the gailery of Dresden; the Madonna di San Francesco, an Annunciation, and an Assumption of the Virtue of Which are not far apart.

gin, at Florence; Virgin and Child with St. Joseph, at Madrid. He is best known in gaileries by his Holy Families. He was highly distinguished for his excellence in fresco, and it was in this form of art that his naturalness of design, fineness of color, and careful execution became most apparent.

Sartorius Muscle (sar-to'ri-us), or tailor's muscle, in anatomy, a muscie of the thigh, so called from the fact that hy its contraction the iegs are crossed in sitting in the manner in which tailors usually do.

Sarts, the name giver the settled in-habitants of Turkestan, Af-ghanistan, Persia, and adjacent regions of Asia, as distinguished from the nomad desert dweilers. The word is often used to designate the Aryan aborigines of those regions, who properly are called Tajiks.

Sarzana (sär-dzii'nà), a town of N.
Itajy, province of Genoa, 8
miles east of Spezia, near the Magra. It has a cathedral in the Italian Gothic style (1355-1470). Pop. (commune) 11,850.

Sarzeau (sar-zō), a sea-bathing town of France, department of Morbihan, on the south side of the Bay of Morbihan, 14 miles from Vannes.

Sasin (sas'in), the common Indian anteiope (Antilope cervicapra), remarkable for its swiftness and beauty. It is ahundant in the open dry piains of India, in flocks of from ten to sixty females to a single male. It is grayish-

applied to fibrous gypsum or sulphate of

nesses. In a narrower sense it is a poem, elected to share the government with Jaof which ridicule and censure are the
object and chief characteristic. This species of poetry had its origin with the
Romans, but satires may also take the
forms of epistles, taies, dialogues, dramas
(as with Aristophanes), songs, epics,
fables, etc. The didactic satire originated
with Lucilius (148-103 B.C.), and Horace, Juvenal, and Persius developed it.
Saturn, one of the planets of the
Satirists are common in all modern littude then Juviter, and more remote from erature.

Satlej. See Sutlej.

inces which were called satrapies. The power of the satrap, so long as he retained the favor of his sovereign, was absolute; he levied taxes at his pleasure master unchecked.

Satsuma Ware, the most famous variety of Japanese pottery, so called from being introduced

quires, after being passed over heated other birds are introduced, and figures of cylinders, that luster which distinguishes warriors and women are effectively employed.

purple plumage of the male. It is one of if, when the temperature is slightly lowered, condensation takes place. The de-Satinet (sat-i-net'), a twilled cloth gree of saturaton at any place is called made of woolen weft and cot- the hygrometric state. (See Hygrometon warp pressed and dressed to produce ter.) The term is applied in chemistry a glossy surface in imitation of satin.

Satin-spar, a variety of calc-spar or tion of one body with another in such tinguished by a silky luster and fibrous ize each other, or till the receiving body structure. The name is also sometimes can contain no more.

(sat'ur-dā; A. Sax. Sæter-Saturday Saturday (saturda; A. Sax. Sæterdæg, Sæterndæg, — Sæter, Sæterndæg, — Sæter, Sæterndæg, a day—lon, the C. swietenia, nat. order Cedreurn), the seventh or last day of the laceæ. It is a native of the mountain-ous parts of the Circars in the East Saturday (saturday).

ous parts of the Circars in the East Indies. The wood is of a deep yellow color, close-grained, heavy and durable and has a silky luster.

Satire (sat'ir), in the widest sense of the word, pungent ridicule or ing them from barbarism to social order cutting censure of faults, vices, or weak- and civilization. He was consequently nesses. nesses. In a narrower sense it is a poem, elected to share the government with Ja-

tude than Jupiter, and more remote from the sun. Its mean diameter is about 70,000 miles, its mean distance from the Satrap (sat'rap, sa'trap), in the ansun somewhat more than 872,000,000 cient Persian Empire, the miles, and its year or periodical revoluname given the governors of the provious round the sun nearly twenty-nine tion round the sun nearly twenty-nine years and a half. Its mass is about 90 times that of the earth. Saturn is attended by ten satellites, two of them of recent discovery and very smail size, and is and aped the capricious tyranny of his surrounded by a system of flat rings, which are now supposed to be an immense multitude of meteoric masses, mixed probably with vaporous matter. See Planet.

Saturnalia (sat-ur-nā'li-a), a fes-tival held by the Romans by the formerly powerful princes of Satsuma. It is of a pale yellow color, with minute crackles in the glaze, very richly painted and lavishly gilt. Modern Satsuma is of deeper yellow tinge than the genuine old ware. The Japanese also then three; afterwards five; and finally, excel in making egg-shell porcelain, so called from its extreme thinpeas. The During its continuance no public business could be transacted, the law courts on Lynn Harbor, and has manufactures were closed, the schools kept holiday, and of flannel, rock-drills, leather, etc. Pop. slaves were freed from restraint. Masters and slaves even changed places, so that while the servants sat at table, they were waited on by their masters.

Chinney Court is chusetts, 10 miles n. m. of Boston. It is nessed to be schools with the servant states. Sault Sainte Marie (sö-sant-ma'-ri), a city of were waited on by their masters. were waited on by their masters.

Satyrs (sat'erz), in Greek mythology, a class of woodland divinities, in later times, inseparably connected with the worship of Dionysus (Bacchus). Mary's River). The city has large waThe satyrs appear in works of art as ter-power and manufactures lumber, half-man and half-goat, having horns on paper, flour, wooien goods, carbides, the head, and a hairy body with the feet dredges, etc., and has a fish-packing inand tail of a goat. They are described dustry. Pop. 14,500. as being fond of wine and of every kind

(sou'er-krout), a favor-ite German dish, con-Sauerkraut sisting of cabbage cut fine, pressed into a cask, with alternate layers of salt, and suffered to ferment till it becomes sour. Saugor, or SAGAR (sä'gur), a district of the Jabalpur division, Central Provinces, India; area, 4005 sq. miles. In some parts the soil is good, and wheat is grown in large quantities. The district is administered by a deputy commissioner.—The principal town has the same name, and is situated near a fine lake surrounded by hills, about 180 miles north of Nagpur. The town is well built, and has a considerable trade and a military cantonment. Pop. 42,330. SAUGOR is also the name of an island of Bengal, in the Ganges delta, E. of the mouth of the Hughl. It is visited an-

sonal courage and military capacity, several successes over the Philstens, Edomltes, Moabltes and Ammonites, by means of which he consolidated the tribes and Saumur (so-mür), a town of Northpriests of Nob and various similar excesses. Meanwhile the prophet Samuel, and other schools, etc. Sparkling white estranged by the king's misdeeds, had anointed David as his successor. Saul, with three of his sons, was killed in a battle with the Phillstines.

Saugus (sa'gus), a village of Saugus township, Essex Co., Massa-

Michlgan, capital of Chippewa Co., other St. Mary's River, at its effux from Lake Superior. Here are great ship canals, passing the river rapids (see St. Mary's River). The city has large water-power and manufactures lumber, paper flour workers goods carbides.

Sault Sainte Marie, a town of Canof sensual gratification. One of the most famous specimens of Greek art is the Satyr of Praxiteles.

Satur Sainte Marie, Ontario, Candamous specimens of Greek art is the connected with it by a bridge. It has connected with it by a bridge. It has shipping, mining, steel and manufacturing interests. Pop. (1913) 12,506.

Saumarez, or Sausmarez (soma-ra), James, Baron de, an English admiral, born in St. Peter Port, Guernsey, in 1757; died in 1836. He entered the navy at the age of thirteen; accompanied Sir Peter Parker in the attack on Charleston, and served in America four years; was raised to the rank of commander for his conduct in rank of commander for his conduct in the engagement against the Dutch off the Dogger Bank (1781); contributed to Rodney's victory over De Grasse; in 1793 was knighted for the capture of, a French frigate; in 1795, in command of the Orion, seventy-four, opened the battle of L'Orient, where the French fleet was de-feated; shared in the victory of Cape of Bengal, in the Ganges delta, E. of the feated; shared in the victory off Cape mouth of the Hugll. It is visited annually by multitudes of pilgrims and is command to Lord Nelson in the victory the seat of a great annual fair. It was of the Nile (1798). On his return to devastated by a tidal wave in 1864, when most of the inhabitants perished.

Saul (sal), king of Israel from about 1095 B.C., -1056 B.C., and the son of four frigates, his own squadron consisting of Kish, a Benjamita. Selected for this office by Samuel, he obtained, by his personal courses and military consists says the same of perliament and a particular says of perliament and says of perliament and says of perliament and says of perliament says of perliament and says of perliament and says of perliament says of perliament and says of perliament says o of only half that number. For this action he received the thanks of both houses of parliament, and a pension of £1200 per annum. In 1831 he was raised to the peerage.

confirmed his authority. After a iong relgn the wild nature of the king at length showed itself in a kind of religious s. s. e. of Angers. It is irregularly built, frenzy. This frenzy, which is briefly de-scribed in the Bible as an 'evll spirit now an arsenal and gunpowder factory, of God,' led him to the massacre of the priests of Nob and various similar excesses. Meanwhile the prophet Samuel, and other schools, etc. Sparkling white retranged by the bine's middeds hed wines are extensively grown in the paich.

Sausage (sas'ij), an article of food, evolutionary views, also of spiritualistic consisting of chopped or doctrines. He wrote many works of evominced meat, as pork, beef, or veal, sealutionary theology and in support of the soned with sage, pepper, salt, etc., and theory of Spiritualism, including Lif? stuffed into properly cleaned entrails of Beyond Death, etc. Sausage (sas'ij), an article of feed, the ox, sheep, or pig, tied at short in-tervals with a string. When sausages are made on an extensive scale the meat is minced and stuffed into the intestines

by machinery.

Saussure (55-sür), Horace Benedict nexed by Britain in 1888.

Saussure DE, a Swiss savant, born Savanna, Savannah extensive op near Geneva, in 1740; died in 1799. At the age of twenty-two he was appointed professor of philosophy in the University pasturage in the wet season, and offen of Geneva, and continued to discharge the duties of this office for twenty-five years. A favorite object of his investi-

gations was the structure and height of mountains; and he rendered valuable services to physics, geology, etc. Among his writings are Essais sur l'Hygrométrie and Voyages dans les Alpes.

combine in their structure certain characters of reptiles. The existing sauroid fishes consist of several species, the best known being the bony pikes and sturgeons.

Sauropsida (sar-op'si-da), Professor Huxley's name for the his three primary sections of been made famous by Dr. Johnson in his Lines of the Poets. Born at London in Sauterne (so-tern), a white Bordeanz wine of high repute, pro-Lives of the Poets. Born at London in 1698, he claimed to be the illegitimate son of Richard Savage, Earl Rivers, by the Countess of Macclesfield. The mysterious story of his birth and the protracted persecution to which he claimed to have been subjected by his mother, although believed by Dr. Johnson, have not been above suspicion. What is certain is that he was apprenticed to a shoemaker, and displayed his interary capacities in the two seconds. ties in the two comedies of Woman's a Riddle and Love in a Veil. These efforts precured him favorable notice, and he afterwards produced his tragedy of Sir Thomas Overbury, and the poems, the Bastard and the Wanderer. In 1727 he was condemned to death for killing a Mr. Sinclair in a tavern brawl, but his par-don was procured. Thereafter he lived npon the bonnty of his friends and a pension from government of £50; but his dissipation and extravagance eventually brought him, at the instance of his credstrong, to Newgate, where he died in 1743.

Savage (sav'lj), Minor Judson, a clergyman, born at Norridgewock, Maine, in 1841; died in 1918. He began as a Congregationalist preacher, but joined the Unitarians, and was minister of the Church of the Unitarians.

> Savage Island, a small coral island, in the Pacific Ocean, iat. 19° s., lon. 170° w. It is about 30 miles in circuit, and has a population of 5000 nominal Christians. It was an

> pasturage in the wet season, and often having a growth of undershrubs. The word is chiefly used in the Southern United States.

Savan'nah, a river which forms the through Croatia, and after a course of about 540 miles joins the Danube at Corgia, and separates it from South Belgrade. It is in great part navigable. Chaina. It is formed by the junction of the Tugaico and Keowee, 100 miles by the course of the river above Augusta, and is navigable for vessels drawing over a structed in an angle formed and is navigable for vessels drawing over 18 feet to the city of Savannah, 18 miles from the sea.

Savannah, a city, the seat of Chat-ham county, Georgia, on the south bank of Savannah River, 18 miles from the sea. It is huit on a flat sandy bluff 40 feet high, and is beautifuily laid out with wide streets and many squares, most of which are adorned hy magnoidas, live-oaks, and other stately trees. It has the beautiful Forsyth Park, with its varied and attractive woodland, with its varied and attractive woodland, and nearly 30 umbrageous squares within its iimits. These, with its shady streets, have given it the name of the 'Forest City.' Among its works of sculptural art are monuments to Puiaski, Sergeant Jasper (both of whom feil here in battie), and General Greene; also a Confederate war monument. Its public bull-lings embrace the city-hali, federal building, custom-house, Telfair Acadamy of Arts and Sciences, Hodgson building, custom-house, Teifair Acad-Ats and Sciences, Hodgson amy of Arts and Sciences, Hodgson Hall, and various others. This city is the leading cotton port on the South Atlantic coast and the first navai-stores port in the world. It has also very heavy ship-ments of lumber, rice and phosphates. The manufactures include locomotives, cars, fertilizers, flour, cotton-seed oil, etc. Savannah was founded on the settlement of Georgia in 1733. It was taken by

the British in 1778 and by General Sherman in 1864. Pop. 65,004.

Savary (så-vå-rë), ANNE-JEAN-MARIE-RENÉ, Duke of Rovigo, MARIE-RENÉ, Duke of Rovigo, a French genera', born in 1774; died in 1833. In 1789 he entered an infantry regiment, and being appointed adjutant to Bonaparte after the battie of Marengo, he rose high in his confidence, and was entrusted with the execution of the Duke d'Enghien, finaily being rewarded with the title of Duke of Rovigo. He was sent to Spain to arrange for Joseph Bonaparte being made king, and in 1810 succeeded Fouché as minister of police. When the emperor returned from Elba he was joined by Savary, who, after the was joined by Savary, who, after the defeat at Waterioo, desired to share his imprisonment in St. Helena. He was afterwards employed by the government of Lonis Philippe as commander-in-chief

separates Carniola from Styria, flows

of Cuneo, situated ir. an angie formed by the confluence of the Maira, and Grana, 31 miles south of Turin. It is weil built, and has ancient wails and towers. Pop. 9895.

Savigny (savin-yē), FRIEDRICH KARL von, a German jurist, born at Frankfort-on-the-Main in 1779; died in 1861. Sent to the University of

died in 1861. Sent to the University of died in 1861. Sent to the University of Marburg, he devoted himself to the study of jurisprudence, took his degree, and delivered lectures on his special branch of study. In 1803 he published Das Recht des Besitzes, which was translated into English hy Sir Erskine Perry, under the title of Savigny's Treatise on Possession. In 1808 he became professor of law in the Uriversity of Landshut, Bavaria, and two years later filled the chair of inrisprudence in the University of of jurisprudence in the University of Berlin, where he continued for thirty-two years. His principal works are: Geschichte des Römischen Rechts im Mittelalter (six vois. Heidelberg, 1826-31); System des heutigen Römischen Rechts (eight vois. Berlin, 1840-48), to which Das Obligationsrecht (two vois. Berlin, 1851-53) forms an appendix: Vermischte 1851-53) forms an appendix; Vermischte Schriften (five vois. Berlin, 1850). Savile. or Saville, George. See Hab-Savile, ifaw.

Savile (sav'ii), SIR HENRY, an Engirh schoiar, born in Yorkshire
in 1549; died in 1622. After being graduated from Brasenose Coilege, Oxford,
he removed on a fellowship to Merton
Coilege, in the same university. Having
made a tour on the Continent for this purpose of perfecting himself in litera-ture, he was on his return appointed tutor in Greek and mathematics to Queen Eiizabeth. Subsequently he was appointed warden of his college and provost of Eton. He founded two professorships in geometry and astronomy at Oxford, and published Commentaries on Roman Warfare; Rerum Anglicarum post Bedam Scriptores; Prælectiones in Elements Euclidis; and the writings of St. Chrysostom.

(sav'in), SAV'INE, a tree or shruh of the genus Juniperus, Savin of Lonis Philippe as commander-in-chief in Algeria. (See Juniper.) The savin of Europe resembles the red cedar Save (sä'vė), incorrectly SAU, a river (J. virginiana) of America, and the lat of Austria, rises in the Julian ter is therefore sometimes called savin.

Alps, flows southeast through Carniola, Savings-banks. See Bank. Savoff', MICHAEL, commander-in-chief of the Bulgarian army, born in 1857, of a native Bulgarian family. As a teacher of military science Savoff is rated by the experts of Europe as the most successful soldier living, and the war in the Balkans has won him renown as a strategist. He had worked out a plan of operation long before the crisis, and he showed the value of his plan at the decisive battle of Kirk-killeseh.

Savona (sa-vō'na), a seaport of Northern Italy, province of Genoa, on the west side of the Gulf of Genoa. It is charmingly situated amid lemon and orange gardens, and has a lemon and orange gardens, and has a small but secure harbor defended by a fort. The industries include pottery, silk, wool, glass, paper, etc. Pop. 50,051.

Savonarola (så-vo-nå-ro'là), GiboLAMO, an Italian ecclesiastical reformer, born at Ferrara in 1452.

Educated for the medical profession, he secretly entered the order of Dominicans at Bologna in 147. In 1482 he was sent to St. Mark's convent at Florence; and began to preach there, but with little success. He retired into Lombardy, and there his increasing fame as a preacher and theologian induced Lorenzo de' Medici to invite him (1490) to return to Florence. Now his discourses attracted such crowds that the church could not contain them, the great theme of his eloquence being the corruptions in Church and State, and the general iniquity of the times. In 1491 he was elected prior of St. Mark's. He claimed to be a special messenger from God, to be the recipient of divine revelations, to see visions, and to have the gift of prophecy. He foretoid the death of the pope, the and theologian induced Lorenzo de' Me-He foretoid the death of the pope, the king of Naples, and his patron Lorenzo. When the latter was on his death-bed (1492) Savonarola refused to grant him absolution unless under conditions which the prince refused. After the death of Lorenzo and the expulsion of his son Piero, Savonaroia put himseif at the head of those who demanded a more democratical form of government; and such was now his commanding influence in Florence that he organized the distracted clty into a form of republic, with two councils and a governing signory. But in his zeal, not content with revolution-izing Florence, he meditated the reform of the Roman court and of the irregu-larities of the clergy. To this end he wrote to the Christian princes, declaring

cathedral at Florence. But besides the apal and political influences which were now arrayed against Savonarola, his in-novations in St. Mark's and other mon-asteries had excited the enmity of the monks, especially the Franciscans. In these circumstances Francesco di Puglia, a Franciscan friar, challenged Savonaroia to test the truth of his divine pre-tensions by passing with him through the ordeal of fire. This Savonarola de-clined; scenes of tumuit and riot arose; St. Mark's was stormed by an infuriated mob and Savonarola cast into prison. As the result of the mock trial with torture which followed in 1498, Savonarola, with two of his companions, was strangled and then burned. His writings consist of some theological works, a treatise on the Government of Florence, and numerous sermons.

(sa'voi), one of the cultivated forms of the cabbage (Brassics Savoy oleraces) which has a firm head and crinkled leaves. It is good for winter use, and is best after a slight frost.

Savoy, Duchy of (Italian, Savoja; French, Savoja), formerly a division of the Sardinian Klingdom, now forming two of the departments of France; bounded on the north and northeast by Switzerland, on the east and southeast by Pledmont, and on the south and west by the French departments of Isère and Ain. Savoy belongs entirely to the basin of the Rhone, and is separated from Switzerland by the Lake of Geneva. The climate is in general cold, the winters are long and severe, and the summers frequently follow without an intermediate apring. The vine is cultivated with success, but the chief riches of the country are in its cattle and dairy produce. By treaty (1860) Savoy was ceded by Sardinia to France (see Sardinia, Kingdom of), of which it now forms two departments, Savole, area 2388 sq. m., pop. 254,781, and Haute Savole, area 1667 square miles, pop. 259,595. The capital of the former is Chambéry, of the latter Annecy.

Savoy, House of, one of the oldest royal houses of Europe, now represented by the King of Italy. Humbert White Hand (Umberto Blancamano), the reputed descendant of Wittekind, the last of the Old Saxon kings, was the first of the family who took a prominent place among the princes of Northern Italy. The family dominions continued to Increase, and under Amadeus II (1103-49) were raised to a county of east by Switzerland, on the east and southeast by Pledmont, and on the south

that the church was corrupt, and that continued to increase, and under Amadeus it was their duty to convoke a general II (1103-49) were raised to a county of council. Alarmed at this, Alexander VI, the empire (1111), and now received the who was then pope, excommunicated him name of Savoy. Count Thomas I (1188-in 1497, and the bull was read in the 1233) obtained important accessions of

oldest Hum-Blanca-Wit-kings, o took ices of ainions nadeus nty of red the ons of territory in Chambéry, Turin, Vaud, etc. Amadeus IV (1233-53) obtained the submission of the city of Turin to his rule. Amadeus VI lent his aid to the Greek emperor, John Palæologus, against the Turks and the Ruisesping and united the Turks and the Buigarians, and united the iordships of Cherasco, Coni, Gex, and Vairomey to his possessions. His son, Amadeus VII (1383-91), forced the Count of Provence to cede to him Nice and Vintimigiia. Amadeus VIII. grandson of the preceding (1391-1451), received the ducai title from the Emperor Sigismund in 1410, and acquired the county of Geneva, together with Bugey and Verceiii. The eider maie line became extinct in 1490, and the crown devolved on the nearest coliateral heirs, the Turks and the Buigarians, and united volved on the nearest collateral heirs, Philipert II (1497-1504) and his brother Charles III (1504-53). The latter aided the Emperor Charles V against Francis I of France and was finally densited of I of France, and was finally deprived of all his territories by the French king. But his territories by the French king.
But his son Philibert Emmanuel, surnamed the Iron Head (1553-80), succeeded in gaining back the greater part of the paternal domains. Charies Emmanuel I (1580-1630) was prompted to reconquer the marquisate of Saiuzzo, but Henry IV of France invaded Savoy and Piedmont, and conneited the duke to give Piedmont, and compelled the duke to give Pledmont, and competed the duke to give up Bugey, Vairomey, and Gex. His son, Victor Amadeus I, regained these pos-sessions, and added to them Montferrat, Aiba, and some other places. Victor Amadeus II (1675-1730), grandson of the first of that name, at the beginning of the war of the Spanish Succession sided with France, but afterwards trans-ferred his services to Austria. By the ferred his services to Austria. By the Treaty of Utrecht (1713) he received a part of the Duchy of Milan, along with the island of Sicily, which conferred upon him the title of king; but in 1720 he was compelled to give up Sicily to Austria in exchange for Sardinia, which, along with Savoy, Piedmont, and his other dominions, became he Kingdom of Sardinia. See Sardinia, Kingdom of.

Savoy, tween the Strand and the Thames Embankment, site of the Savoy uncle of Eleanor, queen of Henry III, in 1245. It was burned by Wat Tyler in 1381, but restored as the Hospital of St. John by Henry VII in 1505. The hospital was dissolved in 1702, and the buildings removed in 1817-19. The Chapel of the Savoy, which at one time enjoyed the privilege of sanctuary, was greatly injured by fire in 1864, and was restored at the expense of Queen Victoria. It is one of the aspels-royal (being connected with the duchy of Lancaster), sales in the sales in the sales of lancaster and structive to shoais of small fishes, and structive to shoais of small fishes, and structive to shoais of small fishes, and inflet severe and inflet sever morati injuries on the deges, armed with which, is said to at ferred his services to Austria. By the Treaty of Utrecht (1713) he received a

but at the present time is used as a district church.

Savoy Conference, an ecclesiasence heid in 1061 at the Savoy Palace (see above) between Episcopalian and Presbyterian divines. The proposal made by the Presbyterians was, that the conference should adopt Bishop Ussher's scheme of presbyteries, synods and assemblies as the basis of negotiations, but to this it was replied that the commission was not empowered to deal with church government. The two parties finally separated at the end of four months without coming to a single resolution. The government passed in the following year the famous act of uniformity, the stringent ciauses of which drove about 2000 cier-

gymen from the Anglican Church.

Savu (sii-vö'), Savou, or Savoe, an island of the Maiay Archipelago southwest of Timor; area, 237 square miles. It yields mlilet, maize, sugar-cane, cotton, tobacco, etc., and its Maiayan inhalitants are subject to the Dutch gov-

habitants are subject to the Dutch government of Timor. Pop. about 16,000.

Sawantwari (så-want-wå'rē), a native state in the Bombay Presidency, situated about 200 miles south of Bombay bounded north and week south of Bombay, bounded north and west by the British district of Ratnagiri, and on the south by the Portuguese territory of Goa; area, 900 square miles. Pop. (mostly Hindu), 217,732.

Saw-fish, a fish (Pristis antiquorum) nearly related on the one hand to the sharks, and on the other to

hand to the sharks, and on the other to the rays. It attains a length of from 12 to 18 feet, has a long beak or snout, with spines projecting like teeth on both edges, armed with which it is very destructive to shoais of small fishes, and is said to attack and inflict severe and even mortal injuries on the large cata-

versely, is a large straight saw wrought by two persons, one at each end. The ripping-eaw, half-ripper, hand-saw, and panel-saw are saws for the use of one person, the hlades tapering in length from the handle. Tenon-saws, sash-saws, dove-tail saws, etc., are saws made of very thin blades of steel stiffened with stout pleces of brass, iron, or steel fixed on their back edges. They are used for forming the shoulders of tenons, dovetail joints, etc., and for many other purposes for which a neat clean cut is required. Compass and key-hole saws are iong narrow saws, tapering from about 1 inch to 1/2 inch in width, and used for making curved cuts. Machine saws are comprehended under three different classes making curved cuts. Alternative different classes comprehended under three different classes. The circular, reciprocating, and band-saws. Rhymes (1875). He used to revolve with great rapidity and force, while the log is pushed forward against thy means of a traveling platform, the reciprocating saw works like a two-handied hand-saw, being driven upwards handled hand-saw, being driven upwards and downwards and the wood carried and downwards and the wood carried the s.w. by the Grand-duchy of Saxe-Meinstein the German Empire, is divided into two nearly causi portions hy a part of Reuss, and is bounded on the s.w. by the Grand-duchy of Saxe-Meinstein the Grand-duchy of Saxe-Meinst handied hand-saw, being driven upwards and downwards and the wood carried forward against its teeth. The bandsaw or ribbon-saw consists of a thin endless saw placed like a belt over two wheels, and strained on them. The ribbon-saw down through a data sawingbon passes down through a flat sawingtable, upon which the material to be cut is lald. Saws for cutting stone are without teeth. The sawing of timber is an important industry in some countries, especially the United States and Canada, where immense quantities of lumber are produced. Water-power is often empioyed to drive the machinery of the saw-mills, but steam is equally common.

Cove (såks), HERMANN MAURICE, Saxe (saks), HERMANN MAURICE, COMTE DE, Marshal of France, natural son of Augustus II, king of Poland, by Aurora, countess of Könlgsmark, born at Dresden in 1696; died ln 1750. At the age of twelve he joined the allied army under the Duke of Marlborough and the Prince Eugene, and was present at the sieges of Lille and Tournay. After the Treaties of Utrecht and Passarowltz he withdrew to France, and at Parls made himself intimately acquainted with professional tactles. On the death of his father he declined the command of the Saxon army, offered him factures of linen, leather, metal-wares, by his brother Augustus III, and joined

Saws, are instruments with a dentated the French, with whom he distinguished wood, stone, ivory, or other solid substance, and are either straight or circular. In form and size they vary from the minute surgical or dental tool to the large instrument used in saw-mills. The cross-cut saw, for cutting logs transported to the famous battle of Fontency. In 1747 he was victorious at Laufeidt, versely, is a large straight saw wrought the following year took Maesby two persons, one at each end. The tripping-saw, half-ripper, hand-saw, and Aix-la-Chapelle was concluded. He gamel-saw are saws for the use of one wrote a treatise entitled Mes Réveries. Aix-la-Chapelle was concluded. He wrote a treatise entitled Mes Réveries, on the art of war.

Saxe, John Godfrey, orist, was born in Frankiln ..., Vermont, June 2, 1816. He studled law, but ulti-mately took to journalism and litersture. mately took to journalism and literature. His poems, many of which are of a humorous character, have been very popular in America. They include Progress, a Satirical Poems (1840); Humorous and Satirical Poems (1850); Money King (1859); Flying Dutchman (1862); Clever Stories of Many Nations (1865); The Masquerade (1806); Fables and Legends (1872); and Leisure Day Rhymes (1875). He died March 31, 1887.

Weimar-Elsenach, on the N. by Prussia, and on the E. by Saxony; area, 511 square miles. The eastern or Altenburg division is very fertile, while the western or Saal-Elsenburg portion is hilly and wooded. The duchy is represented by one vote in the Bundesynth and one vote one vote in the Bundesrath and one vote in the Reichstag of the German Empire. The capital is Altenburg. Pop. 206 508. Saxe-Coburg-Gotha (saks-ko'-burg-go'ta;

German, Sachsen-Koburg-Gotha), a duchy of Central Germany, one of the states of the German Empire, comprising the province of Gotha, lying between Prussla, Schwarzburg, Meiningen, and Welmar; and the province of Coburg, iying between Meiningen and Bavaria; Coburg 218 square miles, and Gotha 542 square miles. The south of Gotha and north of Cohurg are both mountainous. Both divisions are fertile; the bills are covered with wood, and in Gotha coni and other minerals are found. The chief isbed burg stall 623 death 1745 enoy.

to the Reichstag of the German Empire. For affairs common to both divisions the assemblies meet conjointly at Coburg and at Gotha alternately, the two chief towns of the duchy. The ducal house and the greater part of the population profess the Lutheran faith. Pop. 242,532.

Saxe-Meiningen (saks-ml'ning-en; German, Sachsen-Meiningen), a duchy of Central Germany, and one of the States of the German Empire, consisting of a main body, and several minor isolated portions. Area, 955 square miles. The greater part of the surface is hiliy, and the principal crops are oats, buckwheat, potatoes, turnips, hemp; and the pastures rear considerable numbers of cattle, sheep, and horses. The minerais include iron and conner, worked to a small extent and the copper, worked to a small extent, and the manufactures are chiefly ironware, por-celain, glass, etc. The government is a hereditary and constitutional monarchy, and the great majority of the inhabitants are Lutherans. The duchy sends one member to the Bundesrath and two to the Reichstag of the German Empire. The capital is Meiningen. Pop. 268,916, Saxe-Weimar, or Saxe-Weimar-Eisenach (saks-wi'mar; German, Sachsen-Weimar-Eisenach).

wi'mar; German, Sachsen-Weimar-Eizenach; zak'sen-vi-mar-i'zu-ah), a grandduchy of Central Germany, one of the
States of the German Empire, and consisting of three larger portions, Weimar,
Neustr'dt, and Eisenach, and twelve
smaller parcels. Area of the whole, 1421
square miles. The forests are very extensive, and form the principal weaith
of the grand-duchy. The minerais are
unimportant. In Eisenach woolen, cotton, and linen tissues, ribbons, carreets,
tian, or the Learned), the most celebrated
of the old Danish historians, who flourshed in the twelfth century. He is supposed to have been a native of Denmark,
of which kingdom and its dependencies
tory down to 1186. Saxo was a priest
in the cathedral of Roeskilde, and died
about 1208.

Saxon Architecture, the earliest
type English architecture its regist being etc., are made. mar, and there is a university of considerable repute at Jena. The government is constitutional, the

legislative power heing vested in a honse of parliament, consisting of one chamber of thirtyone members. Saxe-Weimar sends one member to the Bnn-desrath and three one to the Reichstag of the German Empire. Pop. 888,095.

Sax-horn (after M. Sax, of Paris, the in-

monarchy, and each province has its own ventor), a name of several brass wind-elective assembly, while the duchy sends instruments with a wide mouthpiece and one member to the Bundesrath and two three, four, or five pistons, much emthree, four, or five pistons, much em-ployed in military bands. These horns comprise the piccolo cornet or high small sax-horn, the soprano, the alto, the tenor, baritone, bass, and double-bass.

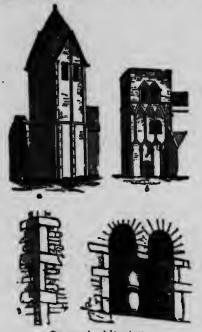

Saxicava (sak-si-kā-va), a genus of marine jameijihranchiate

moliuses, remarkable for excavating hurrows in rock to serve as their habitations. Saxifrage (sak'si-frāj), a popular name of various plants, the saxifrages proper belonging to the genus Sasifrāga, of the nat. order Saxifragacem. The species are mostly inhabitants of aipine and subalpine regions of the colder and temperate parts of the northern zone. Most of them are true northern zone. Most of them are true rock plants, with tufted foliage and panicles of white, yellow, or red flowers; and many are well known as ornamental plants in our gardens, as 8. umbross. London pride or none-so-pretty; 8. gran-London pride or none-so-pretty; S. gran-wlata, white or granulated meadow saxi-frage: S. hypnoides, mossy saxifrage or ladies' cushion; S. crassifolia, or thick-leaved saxifrage; S. sarmentosa, or Chinese saxifrage. The genus is a large one, containing upwards of 150 species. of which at least fifty are natives of North America North America.

Saxo Grammaticus (that ls, Saxo the Grammarian, or the Learned), the most celebrated of the old Danish historians, who flour-ished in the twelfth century. He is sup-

ton, and linen tissues, ribbons, carpets, tive English architecture, its period being etc., are made. The chief town is Wei-from the conversion of England to Christlanity till the Conquest or near it, when Norman architecture began to prevail (seventh to eleventh century). The few relics left us of this style exhibit its general characteristics as having been rude solidity and strength. The walls are of rough masonry, very thick, without buttresses, and sometimes of herringbone work; the towers and proportion to height, the former being sometimes not more than these diameters. sometimes not more than the diameters high; the quoins or angle masonry are of hewn stones set alternately on end and horizontally; the arches of doorways and windows are rounded, or sometimes these openings have triangular heads, their jambs of long and short work car-rying either rudely carved imposts or

and when two or more arches are conjoined in an arcade these are on heavy low shafts formed like balusters. Win-

dow openings in the walls splay from both the interior and the exterior, the position of the windows being in the middle of the thickness of the wall.

by Ptolemy, who speaks of them as in-babiting a district bounded by the Eider, the Eibe, and the Trave. In the third century of the Christian era they were a numerous, warlike, and piratical people. In the fifth century considerable hordes of them crossed from the Continent and laid the foundations of the Saxon kingin Britain - Essex or East Saxons, Sussex or South Saxons, etc. (See England and Anglo-Saxons.) Those who remained in Germany (Old Saxons) occupied a great extent of *Productions*, *Industries*.—The most country, of vague and varying limits, important crops are rye, oats, barley, which bore the general name of Saxony. wheat, potatoes; and orchard-fruits, par-Charlemagne waged a thirty years' war ticularly apples, pears, and plums, are

capitais with square abaci. Sometimes against the Saxons; and Wittikind, their heavy moidings run round the arches, national hero, with many of his countrymen, submitted to his arms, and embraced Christianity. See Saxony, Kingdom of.

Saxon Switzerland, a name which has been given to part of the Kingdom of Saxony, on the Elbe, southeast of Dresden and bor-dering on Bohemia. It consists of a group of mountains of sandstone, with valleys and streams of the most picturesque character, in which isolated masses of sandstone, large and small, occur in very fantastic shapes. It is about 24

miles long, and equally wide.

Saxony (saks'un-i), KINGDOM OV (German, Sachsen), a kingdom of Central Germany; bounded on the northwest, north, and east by Prus. sia, southeast and south by Bohemia, southwest by Bavaria, and west by Reuss, Saxe-Weimar, and Saxe-Altenburg; greatest length, 135 miles; greatest breadth, 75 miles; area, 5786 square miles; pop. 4,797,700. For administrative purposes it is divided into the four districts of Dresden, Leipzig, Zwickau, and Bautzen or Budissin.

General Features .- With the exception of a very small portion of the east, which sends its waters to the Baltic, Saxony belongs to the basin of the Elbe, which traverses it in a northwesteriy direction for about 70 miles, the most important of its tributaries being the Mulde and the Elster. The surface, though very much broken, may be regarded as an inclined plane, which commences in the south, in the Erzgebirge chain, and slopes towards the north. In the more elevated districts the scenery is wild, while on either side of the Elbe, from the Bohemian frontier to Pirna, is a remarkable tract, covered with fantastic sandstone for-Saxons (saks'uns; German, Sachsen; tract, covered with fantastic sandstone for-Latin, Saxones), a Teutonic mations, which has received the name of race whose name is generally derived from the Saxon Switzerland. On the Prussian race whose name is generally derived as the or frontiers, where the district subsides the Oid German word sahs (a knife or frontiers, where the district subsides the Oid German word sahs (a knife or frontiers, where the district subsides the Short sword). They are first mentioned its lowest point, the beight above the short sword). They are first mentioned its lowest point, the beight above the short sword sahs of them as in-sea is only 250 feet. The ioftiest summits and are generally composed of granite and gneiss, and are rich in mineral products. The Erzgebirge is continued by the Riesengebirge, a branch of which, under the name of the Lausitzer-gebirge, or Mountains of Lusatia, covers a considerable portion of the east of Saxony. The climate in the iofter mountain districts is very coid, but with this exception it is milder than that of most countries of Europe under the search latitude.

Several mineral springs of repu- and the electorate transferred to Maurice, stone. Several mineral springs of repu-tation exist. Saxony is an important who represented the Albertine line which manufacturing country. The principal manufactures are cotton and woolen goods, linen, lace, rihhons, and straw-plaiting. Other industries are earthen-ware, Dresden ware, leather, chemicals, otherwise. His son, Christian I, died in etc., and the printing establishments of Leinzig are well known. The religious Christian II. Christian II. Christian II. Christian II. etc., and the printing establishments of Leipzig are well known. The railroads of Saxony are connected with the great successor, John George I (1611-56), trunk lines which traverse Central Europe.

Administration, etc.—The government is a constitutional monarchy (forming part of the German Empire), in which the executive power is lodged solely in the crown, and the legislative power jointly in the crown and two chambers.

The members of both houses are paid for their services of the control of the crown and two chambers.

The members of both houses are paid with France and the son, Christian I, died in 1691, ieaving his crown to his son. Christian II. Christlan's brother and successor, John George I (1611-56), joined Gustavus Adolphus in the Thirty Years' war, and the Saxon forces took Frederick Augustus I (1694-1733) emphraced the Catholic religion (1697) to obtain the crown of Poland. Frederick Augustus II also obtained the Polish crown (as Augustus III) after a war with France and the son, Christian II, died in 1691, ieaving his crown to his son. Christian II. Christlan's brother and successor, John George I (1611-56), joined Gustavus Adolphus in the Thirty Years' war, and the Saxon forces took and the Catholic religion (1697) to obtain the crown of Poland. Frederick Augustus II also obtained the Polish crown (as Augustus III) after a war the crown, and the legislative power Augustus II also obtained the Polish jointly in the crown and two chambers. crown (as Augustus III) after a war The members of both houses are paid with France and joined with Austria in for their services; the amount (\$3 per the Seven Years' war. Frederick Augusday during the session) helng the same tus III (1763-1827) rejuctantly took for the members of each house. Justice part against France when war was desis administered by three classes of courts, clared by the imperial diet in 1793, but namely, courts of primary, secondary, after the battle of Jena the elector and bits army fought side by tide with the namely, courts of primary, secondary, and tertiary resort or instance. In religion universal toleration is guaranteed; hut the religious hody recognized by the state is the Lutherans. At the head of the educational establishments of the kingdom is the University of Leipzig, and there are gymnasia in the principal towns. The army is raised chiefly hy conscription—all male citizens being hound to serve for three years in the active service, four years in the reserve, and five in the Landwehr. As a memher of the German Empire Saxony has four votes in the Federal Council, and terrupted somewhat at the revolutionary period of 1848-49. In the Austro-Prussian war of 1866 Saxony took part with Austria, and was occupied by the Prussian troops. Prussia desired to incorporate the kingdom, but Austria, supported by France, opposed this arrangement, and Saxony was admitted into the North German Confederation in-stead. In the Franco-German war Sax-ony united with the rest of Germany

almost in the center of Germany, to the of an expedition to the Rocky Mountains north of the Kingdom of Saxony; area, in 1819-1820. He is supposed to have 9729 square miles. Originally a part of discovered more new species of insects Saxony, it was given to Prussia by the Congress of Vienna (1814). The northern and larger portion belongs to the North German plain; the southern and south western is elevated or hilly, partly belonging to the Harz Mountain system. The capital of the province is Magdeburg; other towns are Halle (with a university), Erfurt, Halberstadt. Pop. 2,979,221.

Saxonhone. a brass wind instrument, of comparative philology under Max

Saxophone, a brass wind instrument, so named from Adolph Sax. It consists of a conical brass tube curved forward and upward, containing about twenty lateral holes covered by keys. It is played by a mouthpiece and reed as is the clarinet. The tone is rich

and mellow.

(să), JEAN BAPTISTE, a political economist, born at Lyons, France, in 1767; dled in 1832. He was destined hy his father for a commercial career, and passed a part of his youth in England. On his return to France he was for some time secretary to Clavière, the minister of finance, and from 1794 to 1800 conducted a journal called the Décade. In 1799 he was a member of the trihunate, hut being removed by Napoleon devoted himself to industrial pursuits. In 1819 he was appointed professor of industrial economy at the Conservatoire des Arts et Métlers, and in 1831 was nominated to the chair of political was nominated to the chair of political economy at the College de France. His chief works are his Traité d'Économie politique, and his Cours complet d'Économie politique pratique. Son JEAN BAPTISTE LÉON, a French

son of the above, was horn at Paris, in 1826. He was returned to the National Assembly in 1871, and in the following year became finance minister in the government of M. Theirs. He occupied this position in successive ministries; was appointed ambassador to London in 1880, and soon afterwards was

Scafell (skä'fel), or Scaw Fell, a mountain of England, in the south of the county of Cumberland, near the borders of Westmoreland, consists of two principal summits, separated from each other by a deep chasm. Of the two peaks the higher is 3229 feet, the other 3092 feet in height.

Scagliola (skal-yi-ō'la), a composi-tion, imitative of marble, used for enriching columns and internal walis of buildings. It is composed of gypsum, or sulphate of lime, calclned and reduced to a fine powder, with the addition of water, by which a fine paste is made. While soft it is bestudded with splinters of spar, marhle, granite, bits of concrete, colored gypsum, or veins of clay, in a semifluid state. It is sucothed with fine iron tools when soft, and when it becomes hard receives a high polish like marbie.

(skä'la-nō'va; Turkish, Kushadassi), a seaport Scala-Nova the neighborhood. Pop. about 7000.
Scalaria (ska-lar'i-a), a genus of ma-

rine, turreted, gasteropodous mollusca, with raised ribs or ridges on their shells. They are found in sandy mud, at depths varying from 7 to 13 Scalaria fathoms, and are commonly called wentle-

a marine flat-fish, Rhom-Scald-fish, a marine nat-nsn, know-bus Arnoglossus, allied to the turbot, sole, and flounder. It is not uncommon on the British coasts.

Scald-head, a fungous parasitic dis- similar places, and are so-called from the ease of the scalp. See smail scale-like leaves.

. Farus. See Burns and Scalds. Scalds.

Scalds, or Skalps, were the poets and historians of the Scandinavian race. They sang the praises of the gods, and celebrated the exploits of the national heroes. A list of 230 of the most distinguished is still preserved in the Icelandle records.

Scale (skal), a mathematical instru-ment consisting of a sllp of wood, ivory, or metal, with one or more sets of spaces graduated and numbered on its surface for measuring or laying off distances, etc.

although coarse, is esteemed and eaten given key. In its simplest form the scale consists of seven steps or degrees counted upward in a regular order from a root or prime (the tonic or key-note), to which series the eighth is added to form the octave. It has been the practice among musicians to consider the scale having C for its key-note as the natural, model, or normal scale. The diatonic scale ascends by five steps (tones, and two half-steps (semltones), taking for the names of the notes the syllables do. re, mi, fa, sol, la, si, do; the two semitones occur hetween E and F (mi and fa) and B and C (si and do). When the scale is graduated all the way by a series of twelve half-steps or semitones it is called the chromatic scale. A scale is said to be major when the interval between the key-note and the third above it, as from C to E, consists of two tones; it is called minor when the interval between the key-note and its third, as from A to C, consists of a tone and a half. See Music.

a popular name for a Scale-fern, fern of the Ceterach (C. officinarum), so-named from town in Asiatic Turkey, at the head of the imbricated tawny scales at the back the gulf of same name, 40 miles south of Smyrna. The ruins of Ephesus are in merly attributed a morvelous influence over the liver and spless. It is a British species, and is said he used as a bait for fish on the coast of Wales.

Scale-insect, a name given to va-coccus family injurious to plants. See Coccus.

Scale-moss, a opular name given to the Jungermannlas, plants resembling moss, and belonging to the order Hepaticæ. They grow on the trunks of trees, in damp earth, and in

Scalene (ska-iēn'), in mathematics, a term applied to a triangle of which the three sides are unequal. A cone or cylinder is also sald to be scalene when Its axis is inclined to its hase, but in this case the term oblique is more frequently used.

the imbricated plates on the Scales, exterior of certain animals, as the pangolins or scaly ant-eaters, serpents and other reptiles, and especially fishes. The scales of the latter are developed beneath the true epiderm, and consist of alternate layers of membrane. of horny matter, and occasionally of phosphate of lime. Fishes were classed Scale, in music, a succession of notes by Agassiz, in accordance with the arranged in the order of pitch, structure of their scales, into Ctenoid, and comprising those sounds which may Ganoid, Cycloid, and Piacoid, the genocur in a piece of music written in a erai appearance and character of which are indicated in the accompanying figures. (See also the separate terms.) The term scale is applied also in botany to a small rudimentary or metamorphosed leaf, scalelike in form and often in arrangement,

Scaliger (skal'i-jer), Joseph Justus, born at Agen in France, in 1540; died in 1609. His training as a scholar was largely due to his father, after whose death he we, at the age of nineteen, to Paris, where he studled Greek, Hehrew, Syriac, Perslan, and most of the modern European languages. For some time he led an unsettled life, visitlag Italy and England in his search for lag Italy and England in his search for manuscripts. Having become a Protestant, he retired from France after the massacre of St. Bartholomew, and was Simois in the story made professor in the Academy at of the Trojan war. Geneva, but returned to France in 1574. Scamillus (skannd lived there for the conditions of the story of and lived there for the succeeding twenty years. In 1593 he was appointed to the chalr of polite literature in the University of Leyden, and remained there until his death. Of his numerous works, the treatise De Emendatione Temporum, is one of the most important. In this work he gave the first complete and scientific like a pedestal, orchronological system. His annotations namented with any to Theocritus, Nonnus, Catulius, Tibui- kind of moiding. lus, Propertius, Seneca (tragedies), Varro, Ausonius, Festus, are characterized by an excessive subtlety and overfree treatment of the text.—SCALIGER, dantiy in Syria and Asia Minor. It refree treatment of the above, was born in 1484, and resided in Venice or Padua till his forty-second year, occupied with study and the practice of medicine. His writings gave him a high of the root of a blackish gray color a cine. His writings gave him a high rank among the scholars of his age, although the boldness of some of his works rendered his faith suspected. He died in 1558. Both father and son gave rise to much ridicule on account of their vanity and irritability. The work of reither is commenced with his fame. neither is commensurate with his fame. See Peoten,

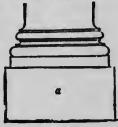

the outer covering of Scalp, composed of skin an expanded tendon of the occlpito-frontal muscle, and of intermediate cellular tissue and biood-vessels. Hence the tissue and blood-vessels. Hence the skin of the head or a part of it, with the hair helonging to it, torn or cut off by the American Indians as a mark of victory over an enemy.

the act, peculiar to North Scalping, American Indian warfare, of partly cutting, partly tearing off a piece of the skin of the head, with the hair attached; whether the victim was alive or dead at the time does not affect the operation. The Indians, with whom scaips were the trophles of victory, always left a long lock or tuft on the scalp as a challenge. The whites at times encouraged the practice by offer-lng hounties for scalps, especially dur-ing the French and Indian war. In 1755 Massachusetts offered £40 for every scalp of a male Indian over 12 years of age, and £20 for scalps of women and children. The French offered bounties for British scalps, and in the Revolution the British in the West for American scalps.

Scaly Ant-Fater. See Pangolin. Scaly Ant-Eater.

Scamander (ska-man'der), a small stream in the Troad, in the northwest of Asia Minor, associated

with the little river in ancient us), architecture, a sort of second plinth or block under a col-umn, statue. etc., to raise it, but not,

different resins and other purgative sub-

or Aibania, whose proper name was George Castriota, son of John, prince of that country, was born about the year 1404; died in 1407. As a boy he was sent as a hostage and educated at the Turkish court At the age of aighten Turkish court. At the age of eighteen he was placed at the head of a body of ne was placed at the head of a body of troops, but hearing of the death of his father, Scanderbeg renounced Mohammedanism and raised the standard of insurrection in Alhania. He repeatedly defeated the Ottoman forces, and Mohammed II found it necessary (1461) to accept terms of peace. After his death Albania again feil under Turkish dominion.

Scandinavia (skan-di-nā'vi-a), the ancient name of the region now comprehending the three northern kingdoms, Denmark, Sweden and Norway, also Sweden and Norway alone, and still not uncommonly used. These countries were inhabited in the earliest times by people of the Teutonic stock, and B.C. 100 the natives of Jutland and Schlaswig became formidable to the Schleswig became formidable to the Romans under the name of Cimbri. But it was chiefly in the ninth century that they made their power felt in the western and southern parts of Europe, where hordes of Northmen or Vikings, as they were often called, made repeated raids the cuckoos (Cuculldæ), the woodin their galleys on the coasts of Euglaud, peckers and wry-necks (Picidæ), the Scotland, Ireland, Holland, Germany, parrots (Psittacidæ), the toucans (Ram-France, Spain, and Itaiy, where they plundered, destroyed, and sometimes founded new kingdoms. (See Northmen.)

The Old Norse or Scandinavian literature so far as extent is of considerable ture, so far as extant, is of considerable value, having preserved to us not only the oid versification peculiar to all nations of Teutonic origin, but also the mythology, history, and laws of the pagan period of these northern countries. Among the most valuable remains are the Edda and the Sagas (which see). For the ancient mythology see Northern Mythology.

Scandix (skan'diks), a smail genus of plants, nat. order Umbel-liferæ. It is composed of annual herbs with striated stems, hipinnate leaves, the leaflets divided into linear lobes, and small umbels of white flowers which eaters are succeeded by slender long-beaked order fruits. A common species is S. Pecten-climbir Veneris (needle chervil, shepherd's needle order. Scan

with four toes, of which two are turned backwards and two forwards. Of the Scanderbeg (skan'der-beg; that is, two toes which are directed hackwards Alexander Bey), prince one is the haliux or proper hind-toe, the other is the outermost of the normal three anterior toes. This conformation of the foot enables the scansores to

Scansores. s, Head and foot of Cuckoo. b, Do. of Green Woodpecker. c, Do. of Great Jacamar.

climb with unusual facility. Their food consists of insects and fruit; their nests are usually made in the hollows of old trees. The most important families are

Scansores.

phastidæ), the trogons (Trogonidæ), the barbets (Bucconidæ), and the plantaln-eaters (Musophagidæ). Not ail of this order are actually climbers, and there are climbing hirds which do not belong to this

or Venus's comb).

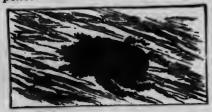

Scansores (skan-so'rez), an order of birds, popularly known as duncle, rising from the foot and bearing climbing birds, having the feet provided the fructification without leaves, as In the narcissus and hyacinth.- In architecture, the spring of a column; the part where a column springs from its base, usually molded into a concave sweep or cavetto.

Scape-goat, in the Jewisb rltual, a goat which was brought to the doc: of the tabernacle, where the high-priest laid his hands upon hlm, confessing the sins of the people, and putting them on the head of the goat, after which the goat was sent into the wilderness, bearing the inliquities of the people. Lev. xvi.

Scapula (skap'ū-la), or Shoulder-BLADE, the bone which in most mammalla forms the chlef bone of the shoulder girdle, and which chiefly supports the upper imb on the trunk or axial skeleton. In man the scapula exlists as a flattened bone of triangular shape, which lies on each side of the body, on the back, and towards the upper and outer border of the chest or thorax. The internal surface of the scapula is conceve, and is applied against the ribs. The outer or dorsal surface is divided into two portions by a strong ridge which runs obliquely across the bone.

(skap'ū-la-ri), a kind of garment or portlon of Scapulary dress, consisting of two bands of woolen stuff - one going down the breast and the other on the back, over the shoulders—worn by a religieux. 'The original scapulary was first introduced by St. Benedict, in lieu of a beavy cowl for the shoulders, designed to carry loads.

Scarabæus (skar-a-bē'us), an extensive genus of coleopterous insects placed by Linnæus at the head of the insect tribes, and answering to ln pellets of dung, which are placed in

Scarabæus sacer, or Sacred Beetle.

holes excavated for their reception. The S. sacer, or sacred beetle of the Egyptians, was regarded with great veneration; and figures of it, plain or inscribed with characters, were habitually worn by the ancient Egyptians as an amulet. Large numbers of carved scarabæi or scarabs, to fit into the other, making the part made of hard stone or gems, are still where the junction takes place of the

found in Egypt, often inscribed with bleroglyphics. Some of the carved scarabs are three or four feet long. The

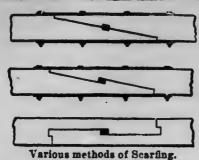

beetie itself was also embaimed.

Scaramouch (skar'a-mouch), a personage in Italian comedy, imported originally from Spain, whose character was compounded of traits of vaunting and poitroonery. His costume was black from top to toe, he wore a black toque (kind of square-topped cap), a black mantle, and had on his face a mask with openings. In France the scaramouch was used for a greater variety of parts.

Scarborough (skii'brō, or skiir's bur-ō), a borough and seaport of England, county of York (North Riding), is beautifully situated on two open sandy bays separated by a bold promontory of rock 300 feet high, on the North Sca, 39 miles northeast of York. The main part of the town is south of this promontory and a deep valley divides it, and is bridged over from St. Nicholas Cliff to the South Cliff. Scarborough has a town-hall, market-ball, custom-house, assembly-rooms, public rooms, a theater, some large hotels, several hospitals, a fine aquarium, a nuseum, spa saloon, etc. It is much frequented for cea-bathing and for its mineral waters, which contain carbonate and sulphate of lime, magnesia, and oxide of Iron. There is a fine sea-wall, forming an agreeable promenade, also a promenade pler on the north side of the town. Scarborough harbor is much used by the fishing-fleets, and though confined at the entrance is easy of access, and safe and commodious. The castle, which stands on the dividing promontory, was erected about 1136, and Is a of the insect tribes, and answering to which stands of the dividing probable the section Lamellicornes of Latreille. tory, was erected about 1136, and is a the section Lamellicornes called dung-beetles, conspicuous object to the seaward. The from their habit of inclosing their eggs cliff on which it stands is exposed to a from their habit of inclosing their eggs cliff on which it stands is exposed to a steady and rapid deuudation by the sea. Scarborough carries on a limited foreign trade, principally with France, Holland, and the Baltic. Shipbuilding, rope and sall-clotb making, the manufacture of jet ornaments, and the fisheries give employment to many of the inhabitants. Pop. (1911) 37,204.

Scarbroite (skär'bru-It), a mineral of a pure white color, void of luster, and composed of alumina, silica, ferric oxlde, and water, occurring as velns in the beds of sandstone covering the cai-careous rock near Scarborough (whence the name).

Scarfing (skarfing), a particular method of uniting two pieces

same thickness as the rest of the pieces

of timher. Scarification (skar-i-fi-kā'shun), the operation of making several incisions in the skin with a lancet or scarificator for the purpose of taking away hiood, letting out fluids, etc.; or the removal of flesh about a tooth in order to get at it the hetter with an in-

strument.

Scarificator, an instrument used in scarification or cupping. It consists of ten or tweive lancets in a sort of box or case, which are discharged and mines of i.on, and has several harthrough apertures in its plane surface bors. Pop. about 8000.

hy pulling a kind of trigger, so that in passing they make a number of incisions in the part to which the instrument is in 1610; died in 1660. His father was applied.

Scepticism (skep'ti-sizm; Greek, Schadow (sha'do), Johann Gott-skepsis, reflection doubt), in the wide sense, that condition of mental conflict in the search for truth which involves suspension of judgment before opposing testimony. Specifically, however, it has been applied to the doctrines of the Greek philosophers called Pyrrbonists, whose scheme of philosophy denied in the model of the Capital Capit of the Greek philosophers called Pyrrbonists, whose scheme of philosophy denied the possibility of knowlng anything with certainty. Pyrrho of Eils (360-270 Berlin, to the memory of the Count of Berlin, although he himself left no writings, was the founder of this school. Chief among bis immediate disciples was Timon of Philos, who taught that appearances are neither faise nor true, that logical reasoning has no adequate sanction, and that imperturbability is the only possible attitude hefore the facts selves to art. The eidest, Rudolf, born as a political reposition was maintained in 1785, gained some reputation as a only possible attitude hefore the facts seives to art. The eidest, RUDOLF, born of life. This position was maintained hy the founders of the Middle Academy, and died at Rome in 1822; the Arcesiiaus and Carneades, who employed this philosophy of doubt against the dogmatism of the Stoics. Arcesiiaus, who iived ahout 315-241 B.C., heid that the report of our senses is untrustworthy. Carneades (213-129 B.C.) deciared absolute knowledge to be impossible, and was the author of the doctrine of probability.

1. 1819. He studied at Tübingen. iute knowiedge to be impossible, and was the author of the doctrine of probability.

1, 1819. He studied at Tübingen, To the later skeptical school of the first Halle, and Berlin; lectured in the latter century B.C. helongs Ænesidemus of university in 1842-44, and then went to Cnossus, who expressed his doctrine of America, where he was professor in the negation in ten tropes. These were reduced to five by Agrippa, the first of formed Church at Mercershurg (Pa.) which is connected with the irreconcilation 1844 to 1863. In 1864-69 he was hility of human testimony; the second is lecturer in several theological institutions, based on the principle that every proof and after 1870 was professor of sacred requires to be Itself proved; the third literature in Union Theological Seminary, that knowledge varies according to the New York. He was a prolific writer, that knowledge varies according to the conditions under which it is acquired; his works including History of the Aposthe fourth forbids the assumption of tolic Church; History of the Christian unproved opinion; and the fifth seeks to Church; Creeds of Christendom; Rediscredit the reciprocal method of proof ligious Encyclopedia (as editor), etc. in which one thing is proved hy another and then the second adduced to prove the first. In later times Al-Ghazzali (1069-1111) taught at Bagdad a philosophic skenticism to enforce the truth of his on the right bank of the Rhine, 24 miles skepticism to enforce the truth of his Mohammedan doctrine. In this method he was followed hy Pascal (1623-1662), who sought to establish the necessity of Christian faith hy a skeptical exposure of the failacy of human reason. Among modern skeptics may be mentioned Montaigne, Bayie, D'Alembert, and Hume. Cathedral, built in 1052-1101, in the Rotaigne, Bayie, D'Alembert, and Hume. Cathedral, built in 1052-1101, in the Rotaigne to human experience, and affirmed that any knowledge concerning the town, the parish of St. John's Church; the minster of cathedral built in 1052-1101, in the Rotain manesque style, with its ancient beil, made famous by Schilier and Longfeilow; the Imthurneum, exested by Herr Imthur,

constants during the winter months. It feeds God or a future state transcends the on small fish, molluses, and hence its scope of our faculties. See Agnostics. Schabzieger (shap'tse-ger), a kind Schabzieger (shap'tse-ger), a kind Schabzieger of green cheese made in Switzerland, to which a special flavor is ruler, as a symbol of office or authority; communicated by the plant Melilotus corrules (hiue melilot). tween Hanover, Hesse-Cassei, and Rhen ish Prussia, and a southern, between Lippe and Hanover; area, 131 square miles; pop. 43,132. It is drained by a number of small streams, tributaries of the Weser. The soli is fertile, corn is grown for export, and cattle are numerous. Schaumburg-Lippe is a hereditary principality, with a constitution granted in 1868. The diet consists of fifteen members, representing six different estates or orders. Schaumburg-Lippe sends one member to the Bundesrath of the German Empire. The capital is Bückeburg. Scheele (shēl; Swed. pron. shā'lė), KARL WILHELM, Swed is h chemist, born in 1742; died in 1786. He discovered tartaric acid, chlorine, baryta, oxygen shortly after Priestley, glycerine, and arsenate of copper, cailed Scheele's green.

was early impressed with the Romantic movement. His first picture was exhibited in 1812, and was followed by many genre and historic pictures. Subsequently to about 1827 he turned to the works of Goethe, Byron, Schiller, Dante, etc., and to the Scriptures for the subjects he depicted. He painted a series of pictures from Faust, two Mignons, a Francesca da Rimini, and a Beatrice. Among religious subjects may be mentioned Christus Consolator, Christus Remunerator, Christ Bearing His tus Remunerator, Christ Bearing His Cross, Christ in the Garden of Olives, Christ Interred, etc. His coloring is de-fective, though his drawing is correct and his taste refined.

Scheldt (skelt; Dutch, Schelde—es-kö), one of the most important rivers of Belgium and the Netherlands, rises in the French department of the Aisne; flows circultously through Belglum; reaches Ghent, where it receives the Lys; at Antwerp attains a breadth of about 1600 feet, and forms a capscious and secure harbor. About 15 mlies below Antwerp, shortly after reaching the Dutch frontier, it divides into the East and the West Scheidt, thus forming a double estuary. The whole course is 211

Schelling (shel'ing), FRIEDRICH WILHELM JOSEPH VON, a German philosopher, born at Leonberg, Würtemberg, in 1775; dled in 1854. He studied at Tübingen, for a short time also at Leipzlg, and from thence proceeded to Jena. His philosophical studies were mainly suided by Eighte of when he were mainly guided by Fichte, of whom he was first a colleague, and afterwards successor. In 1803 he was appointed professor of philosophy at Würzburg, and in 1806 member of the Academy of Sciences at Munich, of which he subsequently became secretary. He lectured at Erlangen from 1820-26, and in 1827 became a professor at Munich, whence he was called to Berlin in 1841, and iectured for several years in the university of that city on the philosophy of mythology and revelation. Subsequently he ceased teaching, and lived sometimes at Berlin, remetimes at Munich or alsowhere for several years in the university of that city on the philosophy of mythology and revelation. Subsequently he ceased teaching, and lived sometimes at Berlin, sometimes at Munich, or elsewhere. Schelling's system of philosophy, both in its earlier and later developments, was essentially pantheistic, but its later developments are marked by a strong eelectic tendency, which indicate the dissatisfaction of the speculator with his own results. The principle of identity—

1690. It was made a city in 1799. It is growing very rapidly, having advanced in population from 31,682 in 1900 to 72,
Scherer (shā-rer), Edmond Henry Adolphe, a French critic, born in Paris in 1815; died in 1889. He studied theology and in 1843 became professor of exegesis at Geneva, a post which he resigned in 1850, and thenceforward was a leading spirit in the liberal movement in Protestant theology.

Scheffer (shef'er), ARY, a French or of one absolute and infinite underlying both nature and spirit, real and ideal, believed in Paris under Guérin, and tained throughout, formed a link of connection between the most various systems, tained throughout, formed a link of con-nection between the most various systems, and afforded the utmost facilities for an eclectic development. He cailed his later speculation, based on mythology and rev-elation, positive philosophy, in contradis-tinction to his speculation on identity tinction to his speculation on identity, which he called negative philosophy. The object of positive philosophy he defined as being not to prove the existence of God from the idea of God, but from the facts of existence to prove the divinity of the existent. The principal writings of Schelling are: Ideas for a Philosophy of Nature (1797); The Soul of the World (1798); First Sketch of a System of the Philosophy of Nature (1790); System of Transcendental Idealism (1800); Esposition of My System of Philosophy, published in the Journal of Speculative Physics, edited by him (1801-08); Bruno, or the Divine and Natural Principle of Things (1802); Critical Journal of Philosophy (in conjunction with Hegel), 1802-03; Esposition of the True Relation of the Philosophy of Nature to the Amended Theory of Fichte (1806).

Schemnitz (shem'nits), a mining town of Hungary, 65 miles N. w. of Budapest. The mines of Schemnltz were long regarded as among facts of existence to prove the divinity of Schemnitz were long regarded as among the most important in Europe, including gold, silver, lead, copper, iron, arsenic, and sulphur, but the produce has in recent times greatly fallen off. Pop. 16,370.

Schenectady (ske-nek'ta-di), a city of New York, seat of the county of the same name, on the Mohawk River, about 17 miles from Albany. It is the seat of Union College, incorporated in 1794. The Eric Canal and the Deiaware and Hudson and New York Central raiiroads pass through the It has extensive electrical manucity. facturing industries, and locomotive, boiler, and engine works, with various other industries. Schenectady was settled in 1662, attacked and burned by French and Indians from Canada in 1690. It was made a city in 1799. It

but it is as a critic of the interactive of the eighteenth and nineteenth centuries that he excelled. He contributed largely to the Temps, the London Daily News, lands, connected with which there are etc., and his collected studies have given about 200 distilleries. Pop. 32,039. etc., and his collected studies have given about 200 distilleries. Pop. 32,039. Schiller (Shi.'ler), Johann Friedmann neets, was born and the collection of literary successor to Schiller (Christoph von, one of Corman neets, was born

in Lower Austria; died at Berlin in 1886. He studied at Vienna and Berlin, became professor of the German ianguage and ilterature at Vienna, and then at Strasburg, and in 1877 went to Berlin as professor of modern German itterature. erature. His most important work was his History of German Literature ('Geschichte der deutschen Litteratur'), which has been published in English.

(1788). Visiting Weimar in 1787 he received a friendly welcome from Wieland, Herder, and Goethe, the latter assisting to procure him (1789) a professorship of philosophy at Jena. Here is he lectured on history, and began to publish Historical Memoirs from the Twelfth Century to the Most Recent Times (1790); and his History of the Thirty Yesrs' Wer appeared in 1790-93. His frat periodical, Thalia, begun in 1784 at Mannheim, having cessed in 1793, he formed the plan of publishing a new periodical, Die Horen ('The Hours'). It was now also that he returned with renewed ardor to poetry, and produced, particularly after 1795, his finest lyrical poems and ballads. From 1799 he lived in intimate acquaintance with Goethe at Weimar, and published in succession his dramas Wallenstein, Maria Stuart, the Maid of Orleans, the Bride of Messina, and William Tell. He also adapted Shakespeare's Maobeth, Racine's Phædra, etc., for the stage, with which his dramatic works close. In 1802 he was raised to the rank of noblity. He had long been in weak health, and being attacked by fever he died May 9, 1805. His correspondence with Goethe. William von Humboldt, and C. G. Körner has been published, his life has been written by Carlyle, and there are several English translations of his works.

been published, his life has been written by Carlyle, and there are several English translations of his works.

Schilling (shil'ing), Johann, a Gerweida, Saxony, in 1828; studied art at Berlin and Dresden. In 1868 he became professor at the Dresden Royal Academy. His chief works include the Four Seasons at Dresden, Schiller's statue at Vienna, Maximilian's statue at Trieste, War Memorial at Hamburg, and the German National Monument on the Niederwald, opposite Bingen on the Rhine, with a colossal figure of Germania.

Schinkel (shin'kel), KARL FRIEDBICH, German architect,
born at Neu Ruppin, Brandenburg, in
1781; died in 1841. He was educated
at Berlin; entered into practice as architect; went to Italy to enlarge his knowledge; and on his return, finding no field
for his art, he turned to landscape-painting. In no long time, however, he again
devoted himself to architecture, and later
became chief director of the public huildings in Berlin. He was architect of the
Berlin museum, the Berlin theater, and
other prominent buildings, mostly in the
Greek style. A collection of his architectural designs was published in twentysix parts, Berlin, 1820-37; and his

Here he lectured on history, and began to publish Historical Memoirs from the Twelfth metamorphic or crystalline rocks consisting to the Most Recent Times (1790); and his History of the Thirty

Very West appeared in 1790-93. His chiorite-schist, etc.

Schizomycetes (skiz-o-mi-se'tes), a botanical term for Bacteria. It refers to their commonest mode of reproduction, by transverse division. The term Schizophyte is also synonymous with Bacteria.

Schizopoda (skiz-op'o-da), a tribe of long-tailed decaped

Schizopoda of long-tailed decaped crustaceans. They are all of small size and marine. The Mysis, or opossumshrimp (which see), furnishes an example of these creatures.

Schlangenbad (shlang'en-bat), a Schlangenbad (watering-place of Prussia, in Hesse-Nassan, 6 miles w. N. w. of Wlesbaden, among wooded hilis. It consists chiefly of lodging-houses, and two large bathing establishments. The water has a temperature of from 80° to 88°, and is beneficial in hysteria, neural-gia, rhenmatlsm, gout, paralysis, etc.

gia, rhenmatism, gout, paralysis, etc.

Schlegel (shiā'gēl), August WilHelm von, a distinguished

German scholar, born at Hanover in

1707; died at Bonn in 1845. At an
early age he showed an aptitude for languages and poetry; studied t:eology and
philology at Göttingen; became a tutot
in Amsterdam; contributed to Schiller's
periodicals; was appointed professor first
at Jena and then in Berlin; engaged in
a bitter controversy with Kotzebue; traveled through France, Germany, and Ital;
with Madame de Staël; and in 1813
acted as secretary to the Crown-prince
of Sweden. Five years later he was
made a professor in the University of
Bonn. He wrote various poems and bailads, delivered lectures on literature and
art, published a tragedy called Jon, translated the most of Shakespeare's and Calderon's plays into German, and devoted
the latter part of his life to Oriental
studies and the translation of various
works from Sanskrit.

Schlegel, Von, a brother of the foregoing, born in 1772; died in 1829. He
studied philoiogy at Göttingen and Leipzig, and became an accomplished scholar.
He early contributed to various periodicals; published Greeks and Romans, and
in 1798 wrote Lucinat, an unfinished
romance, and Alarcos, a tragedy; and
lectured as a privat-decent in the Uni-

versity of Jena. In 1803 he joined the Roman Catholic Church; was appointed an imperial secretary at Vienna in 1808; and was councilor of legation for Austria in the i ankfort diet. Besides the lectures which he published his chief works are: History of the Old and New Literature (1815); Philosophy of Life (1828); Philosophy of History (1829); and the Philosophy of Language (1830). His wife, a daughter of Moses Mendelssohn, was the author of some works sohn, was the author of some works published under Schlegel's name.

Schleicher (shli'her), August, a German philologist, born in 1821; died in 1868. He was educated at the Gymnasium of Cohurg, at Leipzig, Tübingen, and Bonn. In 1850 he was appointed professor of comparative philology at Prague, and in 1857 became honorary professor of the science of language and Old German philology in the University of Jena. His published works embrace a number of linguistic productions, including the welllinguistic productions, including the well-known Compendium der vergleichenden Grammatik der indo-germanischen Sprachen ('Comparative Grammar of the Indo-European Tongues'; 1862).

Schleiermacher FRIEDRICH ERNST FRIEDRICH ERNST Protestent theologian

and Unia fortune commenced a series of archæological investigations in the East. In 1869 he published at Paris his lithaque, Le Piloponnese, Troie: Recherches Archæologiques, an account of his travels in these regions, and this was followed in 1874 hy his Trojanische Alterthümer, giving the results of his researches and excavations on the piateau of Hissarilk, the alleged site of ancient Troy. In 1875 he commenced excavations at Athens and Mycenæ, and in 1877 discovered the five royal tombs which local tradition in the time of Pausanias asserted to be those of Agamemnon and his companions. Many treasures of gold and silver were hrought to light. His Mycenæ, a narrative of researches and discoveries of Mycenæ and Tiryns, was published in 1877, with a preface by Gladstone. He received valuable assistance in his investigations from his wife, a native of Greece and an accomplished scholar. His Troja (1883) and his Tiryns (1886) are in a measure supplementary to his carlier works on Troy and Mycenæ. He died December 29, 1890.

Schlosser (shlos'er), FRIEDRICH CHRISTOPH, a German historian, born in 1775. He was educated at Göttingen, in 1812 was appointed professor in the newly-founded Lyceum of Frankfort, and when it ceased to exist in 1814 he became city librarian. In 1817 he was called as professor of history to Heidelberg. His first great historical work, the History of the World in a connected narrative (1817-24), was followed in 1823 by his History of the Eighteenth Contury, which in its subsequently enlarged form won him yet wider fame. His other works include a View of the History of the Old World and its Civilization (1824-34), and a History of the World for the German People (1844-53). Along with Bercht he edited the collection of Archives for History and Literature (1830-35). He died at Heidelberg in 1861.

Schlözer (schleu'tser), August Lud-

Schlözer (schlew'tser), August Lubwig von, a German historian, born in 1737. After studying at Wittenberg and Göttlingen he went as tutor to Sweden, and lived at Stockholm and at Upsala. In 1759 he returned to Göttlingen r id commenced the study of medicing. In 1761 he proceeded to St. Petersburg as tutor to the Russian historian Müller, and engaged diligently in the study of the Russian language and history. In 1765 he was appointed a propointed to the chair of political science at Göttingen, a post held by him till his sagainst the emperor, forcing him to science were essentially the same as those of the Confession of Augshurg. The league was subsequently crippled by mutual jealousy and the conflict of interests, and its early successes in the so-called Schmalkaldic war were ultimately more than outwelghed by the complete rout at Mühlberg and the capture of John Frederick. The ends of the league, however, were ultimately gained through the instrumentality of Duke Maurice, who had been made eiector of Saxony, and in 1552 declared war against the emperor, forcing him to

death in 1809. The fruit of his residence and studies in Sweden and Russia was his Allgemeine Nordische Geschichte (1772) and a translation and exposition of Nestor's Russian Annals (1802). At a later period appeared his Weltgeschichte, or History of the World (1792-1801).

Schmalkalden (shmål'kåi-dèn), a town of Prussla, province of Hesse-Nassau, on the Schmalkalde, 30 miles s. of Eisenach. It is an antique and picturesque town with double wall and ditch, narrow streets, two castles, and a handsome Gothic church (fifteenth century). The staple manufactures are iron and steel wares, and there are extensive mines and salt-works in the vicinity. Pop. 9529.

Schmalkalden, LEAGUE of, the league formed at the close of 1530 by the Protestant princes of Germany, assembled at Schmalkalden, to resist the aggressive measures contemplated by the Emperor Charles V. It ultimately included seven princes, two counts, and twenty-four cities, representing the whole of Northern Germany, Saxony, Würtemherg, and Denmark, with portions of Bavaria and Switzerland. The object of the league was the common defense of the political and religious free-dom of the Protestants, and the confed-eracy was first intended to continue only for six years, but subsequent events induced them in 1535 to renew it for another period of ten years, and to raise a permanent army to carry out the objects of the league. About this time it was joined, among others, by the king of France, Francis I, though only from political motives, and Henry VIII of England declared himself its protector. The confederacy received a fuller con-solidation by a new Protestant confesslon, drawn up at the instance of John Frederick of Saxony by Luther and other divines, and known as the Articles of Schmalkalden, from the circumstance of their having heen signed (1537), like the league itself, at the town of Schmalkalden. These articles were assertially kalden. These articles were essentially the same as those of the Confession of Augshurg. The league was subsequently crippled by mutual jealousy and the conflict of interests, and its early successes in the so-called Schmalkaldic war were ultimately more than outwelghed by the complete rout at Mühlberg and the capture of John Frederick. The ends of the league, however, were ultimately gained through the instrumentality of Duke Maurice, who had been made electer of Savory and in 1550 declared n

Scholasticism (sko-las'ti-sizm), the system of philosophy taught hy the phiiosophers of the middle ages, who were called scholastics or schoolmen from the circumstance that their philosophy originated in the schools instituted by and after Charlemagne for the education of the ciergy. The philosophy here taught consisted in a collection of logical rules

the exact period of its origin. Those who regard particularly its theological character make Augustine its founder; others consider it as having commenced in the Monophysite disputes of the fifth and sixth centuries. The great aim of the schoolmen was to reduce the doctrines of the church to a scientific system. They started with the assumption that the creed of the church was absorbed. tem. They started with the assumption that the creed of the church was absolitely true. The criterion of truth and falsehood in matters common to philosophy and theology was not sought in observation and in thought itself, but in the dogmas of the church. The first period of the schoolmen may be considered as extending from the ninth to the thirteenth century, and is characterized by the accommodation of the Aristoteian losic and of No Plates, while the control of the control of the Aristoteian losic and of No Plates. logic, and of Neo-Platonic philosophemes to the doctrines of the church. The period begins with John Scotus Erigena, and numbers, among other names, those of Berengarius of Tours and his opponent Lanfranc, Anselm, archbishop of Canterbury, Rosceilinus, Abeiard, Peter Lombardus and John of Saiishury. The period is marked by the controversies that raged between the Nominalists and the Realists, and which terminated at length in the triumph of the latter. The second period of scholasticism, extending from the thirteenth to the fifteenth century from Alexander of Hales to the ciose of the middle ages, when classical studies were revived and the sciences of nature and human nature began once more to be studied — presents us with the com-plete development of scholasticism, and also with its dissolution. During this period the Aristotelle philosophy exer-cised a more marked influence; Realism was also triumphant, untii, towards the end of the period, William of Occam rose up as the champion of Nominalism, and in distinguishing thought from being, and the theoretical from the practical, gave to philosophy a wider range and a freer spirit. The zenith of scholasticism is constituted by Thomas Aquinas, a Dominican (died 1274), and Duns Scotus, a Franciscan (died 1308), who were the founders of the two schools into which the entire movement was thence-forward divided. With the separation of forward divided. With the separation of theory and practice, and still more with the separation in Nominalism of thought and thing, philosophy was disjoined from theology, and reason from faith. The result of this was that religious minds turned away from a theology which had become a mere formal logical system to take refuge in mystic experiences of the result of the Royal Geographical Society of London. It was in the course of these explorations that he discovered (1837) the result of this was that religious minds turning to England in 1839, he received the gold medal of the Royal Geographical Society for a work entitled Travels and Society for a work entitled Travels and Researches During the Years 1835-39 in the Colony of British Guiana, etc. In 1840 he was sent to make a survey of

their mental energies in the study of nature and mind. The former of these tendencies culminated in the Reformation, and the latter in modern philosophy. Scholia (skö'il-a), explanations annexed to Greek or Latin authors by the Greek and Latin grammathors by the Greek and Latin grammarians (scholiasts). There are many scholia to Greek authors extant, fewer to Latin. The names of the scholiasts are mostly unknown. Those, however, of Didymus, John Tzetzes, and Eustathius, the famous scholiast of Homer, have been preserved. The two last belong to the tweifth century.

Schomberg Hermann, Duke of, a distinguished soldier, a native of Germany, born about 1619, the son of Count Schomberg by the daughter of Lord

many, born about 1619, the son of Count Schomberg by the daughter of Lord Dudiey. He began his military career under Frederick, prince of Orange, and afterwards went to France. He was then employed in Portugai, and was successfui in establishing the independence of that kingdom. He commanded the French army in Cataionia in 1672, and was afterwards employed in the Netheriands, where he obliged the Prince of Orange to raise the siege of Maestricht. For these services he was created a mar-For these services he was created a marshal of France in 1675; but on the revocation of the Edict of Nantes Marshai Schomberg, who was a Protestant, quitted the French service, and took service under the Elector of Brandenburg. He went to Engiand In 1688 with William III, and after the Revolution was created a duke. He was sent to Ireland in the following year to oppose the partisans of James II, and took Carrickfergus, but was killed at the battle of the Boyne in 1690.

Schomburgk (shom'burk), Sir Robeler, son of a German Protestant ciergyman, was born in 1804. He engaged in commercial pursuits, went to North America, then to the West Indies (1830), and gained the patronage of the Royal Geographical Society of London by a re-port on the island of Anegada in the West Indies. From 1835 to 1839 he was engaged in the exploration of Guiana, a commission undertaken at the instance of

British Gniana for the government, and in 1844 received the honor of knighthood for his services. From 1848 to 1853 he acted as British representative to the Republic of Santo Domingo, and in 1857 was appointed to a similar post at Bang-kok, in Siam. He died at Beriin in Feb-ruary, 1865. In addition to the works works.

Schönbrunn (shewn'brun), a royai of Vienna. See Vienna.

Schönebeck (shew'nè-bek), a town in the government of Magdeburg, Prussia, on the left bank of the Eibe, 9 miles s. s. E. of Magdeburg. It is a very ancient place; and an important sait-mining center. Pop. 17,786. Schöningen (shew'ning-en), a town of Germany, in Brunswick, 20 miles s. E. of Brunswick, with a salt-works, chemical works, etc. Pop.

Schoolcraft, HENRY Rowe, ethnologist and geologist, born at Watervliet (now Guilderland), in Aibany county, New York, in 1793. He was educated at Union and Middlehury colleges, and in 1816 commenced an unfinished serial work on glass-making, entitled Vitreology. In 1817-18 he made a journey to the west, with the object of extending his knowledge of geology and mineralings, and on his return published mineraiogy, and on his return published A View of the Lead Mines of Missouri, etc. In 1820 he was appointed geologist to the expedition despatched by the government to explore the sources of the Mississippi, and in 1821 was appointed secretary to an Indian conference at secretary to an Indian conference at Chicago. In 1822 he was appointed agent for Indian affairs in the northwestern provinces, and having married carrying a square top-sail and top-gallant a woman of Indian descent, devoted himself to the investigation of the languages, fore-mast, and the latter having foreethnology, and antiquities of the Indians. From 1828 to 1832 he was a member of the territorial legislature of Michigan. In 1832 he conducted a government expedition to the Upper Mississippi, in the conrse of which he explored the sources of that river. In 1836 he negotiated the purchase for the government of 16,000,000 acres in this region, and after this he was appointed acting superintendent of Indian affairs for the northern department. In 1847 he was appointed by the government to prepare an extensive work on the Indians, which appeared under the Johanna Schopenhauer, attained considtitie of Historical and Statistical Information Respecting the History, Condition, as a writer of books of travel and novels, and Prospects of the Indian Tribes of the In his youth he traveled in France and

Schopenhauer is, therefore, that of a philosophic pessimism, having as its ideal the negation of the will to live.

Schopenhauer is, therefore, that of a philosophic pessimism, having as its ideal that the negation of the will be planted by the negation of the entitled Ueber die vierfache Wurzel des Satzes vom sureichenden Grunde ('Fourfold Root of the Principle of Sufficient Reason'), in which he lays down the basis of his future system. From 1814 to 1818 he lived at Dresden, and occupied himself principally with the preparation of his most important west. cupied nimself principally with the preparation of his most important work—
Die Welt ale Wille and Vorstellung
('The World as Will and Idea'), 1819.
Previous to this he had published a work
on optics (Ueber das Schen und die Farben, 1816). In 1818 he visited Rome
and Naples, and from 1822 to 1825 was
again Italy returning in the letter again in Italy, returning in the latter year to Berlin. Here as a private lecturer he met with little success, and on the outbreak of cholera in 1831 he left the capital and spent the remainder of his life in private at Frankfort-on-the-Main, devoting himself to the elaboration of his system. He died in 1860. His later works are Die beiden Grundprobleme der Ethik ('The Two Fundamental Problems of Ethics'; Frankfort, 1841) and Parerga and Para-lipomena (Berlin, 1851). The philo-sophical system of Schopenhauer has for its fundamental doctrine the proposition that the only essential reality in the universe is will, in which he includes not only conscious desire, but also unconscious instinct, and the forces which manifest themselves in inorganic nature. What are called appearances exist only in our subjective representations, and are merely forms under which one universal will manifests itself. Between this nniwill manifests itself. Between this nin-versal will and the individuals in which it appears there are a number of ideas, which are stages in the objectivication of the will. Throughout nature, from the lower animals downwards, the will works unconsciously, and it only attains consciousness in the higher stages of being, as man. All intelligence serves originally the will to live. In genius it is emancipated from this servile position, and gains the preponderance. Upon this foundation Schopenhauer rears his esthetical and ethical structures; the former of which derives much from the Distance system, while the latter resem-Platonic system, while the latter resembles in maintaining the necessity of endirely subduing the sensuous nature in without determining positively the limitations of the old strophic method. The final teaching about four hundred other compositions,

received his name from Schoorl, a village near Alkmaar, where he was born in 1495. He studied nnder William Cor-nelis, Jakob Cornelis, and Mabuse, came under the influence of Dürer at Norem-bers, and afterwards visited Venice, Levus law and Phodes and recided says Jerusalem, and Rhodes, and resided several years in Rome, returning in 1525. He died at Utrecht in 1562. Italian influence is specially discernible in his works.

See Tourmaline. Schorl.

Schottische (shot-tësh'; a French form of the German word for Scottish), a fanciful name given to a slow modern dance in 3 time, somewhat resembling a polka.

Schreiner (shri'ner), OLIVE, novelist, was born at Capetown, South Africa, about 1860, daughter of a Lutheran clergyman. Her Life on an African Farm (1883), won her a wide reputation by its graphic picture of Beer farm life and exposition of soul problems. Another notable story was Trooper Peter Halket of Mashonoland, and several later works have appeared. Her brother, W. P. Shreiner, became premier of Cape Colony in 1898.

(shö'bert), FRANZ, one of the greatest composers of Schubert modern times, born at Vienna Jan. 31, 1797, the son of a teacher. He commenced his musical education in his seventh year, and in 1808 was admitted among the choristers of the court chapel. the soon acquired particular efficiency on the pinno and the different stringed instruments, so that in a short time he was able to take the part of first violin in the orchestra. After he left the court chapel he supported himself by teaching made develope himself in chaputing himself in chaputing and music, devoting himself in obscurity and neglect to original composition. He achieved success in almost all kinds of music, but his genius was specially note-worthy for its opulence in melody and lyric power. His songs and ballads, as exemplified in his three principal collections, the Winterreise (1826-27), the Müllerlieder (1828), and the Schwanengesang (1828), may be said to have revolutionized the Lied in making the accompaniment not less interpretative of the emotions of the poem than the vocal part, and in breaking through the limitations of the old strophic method. music, but his genius was specially notethey are considered inferior to his unproduced Fierabras. His symphonies take a higher rank, the Seventh (in C major) being ranked by Mendelssohn and Schumann with Beethoven's. His entire work

the Abegg variations, the Papillons, the Carnival, and two sonatas in F sharp minor and G minor. In the year following his marriage he published nearly one hundred and fifty songs, many upon Heine's words, and all marking an advance upon previous composers in the fidelity and subtlety with which they reproduced the most delicate shades of meaning in the poems selected for musical treatment. He then commenced his great series of orchestral works, his symphony series of orchestral works, his symphony in B flat being first performed at the close of 1841. It was followed by his Overture Scherzo and Finale, his D minor symphony, three quartets, the piano quintet and quartet, the cantata Paradise and the Peri, the C major symphony (1846), Genevieve (1847), Manfred (1848), the Faust music (1850), the E flat symphony (1851), and many other works. Under stress of work, however, his reason failed him and after an attention. his reason failed him, and after an at-tempt to drown himself in 1854 he was confined in a lunatic asylum, where he died July 29, 1856. In the line of musical descent Schumann stands between Schuyler, Philip, soldier and sension descent Schumann stands between Schuyler, ator. was born at Albany. Beethoven and Wagner.

including fifteen operas, six masses, and at Freetown, Prince Edward's Island, in several symphonies. Two only of the 1854. He became professor of philosophy operas, Rosamond and the Enchanted in Acadia College, 1880-82; in Dalhousie Harp, were performed during his life, and College, Halifax, 1882-86; subsequently at Freetown, Prince Edward's Island, in 1854. He became professor of philosophy in Acadia College, 1880-82; in Dalhousie College, Halifax, 1882-86; subsequently at Cornell College, of which he has been made president since 1892. In 1890 he was made president of the first Philippine Commission. He wrote a number of works on evolutionary and philosophical works on evolutionary and philosophical

Vienna November 19, 1828.

Schumann (shö'mån), Robert, musical composer and critic, born at Zwickau in the Kingdom of Saxony June 8, 1810. He studied law at Leipzig, but in 1830 finally devoted himself to music under the tuition of Friedrich Wieck and Heinrich Dorn. The daughter of the former, the celebrated pianiste Clara Wieck (born 1819), became his wife in 1840. In 1834 he commenced his New Zeitschrift für Musik, a journal which was to herald an ideal music, and which, for the ten years of his more intimate connection with it, exercised an important influence upon the development of the art, not incomparable with that of Lessing's Post in 1866. Two years later he Hamburg Dramaturgy in drama. Prior to 1840 his principal works were the Hamburg Dramaturgy in drama. Prior to 1840 his principal works were the Litudes Symphoniques, the Kreisleriana, the Abegg variations, the Papillons, the 1881. He was editor of the New York and two sonatas in F sharp with its marriage he publish. terior under President Hayes, and in 1881-84 was editor of the New York Evening Post. He was an able orator and writer, publishing a finely written Life of Henry Clay in 1887 and a Life of Lincoln in 1892. He died May 14, 1906.

Schuvler (ski'ler), EUGENE, historian and traveler, was born at Ithac. New York, in 1840; was graduated from Yale and at the law school of Columbia College; in 1867 was made United States Consul at Moscow and in 1860 at Royal and scenarious of the American and second and the American and traveler, was born at Ithac. United States Consul at Moscow and in 1869 at Reval, and secretary of the American legation in Russia. He traveled in Turkestan in 1873, was consul-general at Constantinople 1876-78 (when he traveled in Bulgaria and made an important report on the Turkish atrocities in that country). He held other consulships, and was made II. S. minister at ships, and was made U.S. minister at Athens and representative for Roumania and Servia. His works include Turkestan, The Cossaoks, Life of Peter the Great, etc. He died at Cairo July 18,

New York, in 1733; died in 1804. He served in the French and Indian war in 1756, was made major-general of the Gould, educator, born was about to lead an army to Canada

when he was taken sick and was re-placed by General Montgomery. He com-manded the army operating against Bnrgoyne in 1777, but was removed by Congress and succeeded by General Gates, who won the honor which justiy belonged to Schwier. A court of inbeionged to Schuyier. A court of inquiry vindicated him of the charges against him. He declined again to take command of an army, though he rendered important military services. He was a member of Congress 1778-81, was in 1789 elected to the first United States Senate, and was again elected in place of Aaron Burr in 1797. One of his danghters was the wife of Alexander Hamilton.

Schuylkill (sköi'kii), a river of Pennsylvania, which rises in the north side of the Blue Mountains, a river of

in the north side of the Blue Mountains, runs southeast, passes through the confines of Philadelphia, and unites with the Delaware near the southern extremity of that city. It is 120 miles long, and navigable within the city limits.

Schwab (shwab), Charles M. (1862-), American steel merchant, born at Williamsburg, Pa., educated at St. Francis' College. He was superintendent of the Homestead Steel Works, 1887-89; president of the United States Steel Corporation 1901-03, and later became chairman of the board of Bethlehem Steel Corporation. In April, 1918, he was appointed director general of shipbuilding under the U. S. Shipping Board, and was largely responsible for Board, and was largely responsible for the speeding up of work at the Hog Island (q. v.) yards.

Schwabach, Articles of, a confession of faith drawn up by Luther for the princes and cities as-sembled in 1529 at Schwabach.

Schwäbisch-hall (shvå' blsh - hål), or HALL, a town of Würtemburg, in the circle of Jaxt, beantlfully situated in the deep valley of the Kocher, 35 miles northeast of Stnttgart. It is a picturesque old town, and has extensive salt-works and salt-baths. From the thirteenth century till 1802 Haii was a free imperial city. Pop.

Schwanthaler (shván'tä-lér), LUD-man scuiptor, born at Munich in 1802, where his father, the court sculptor, died in 1821. On the death of his father he succeeded him, and executed various commissions for King Maximilian, and a great number for his successor, King Ludwig. After a short residence in Rome in 1826 he returned to Munich and in 1826 he returned to Munich and ex- of Tanjore for the died in 1798.

Giyptothek, a statue of Shakespeare for the theater royal, etc. In 1832 he again the theater royal, etc. In 1052 re again visited Rome, remaining there two years. In 1835 he was made professor in the Academy of Arts in Munich. Among his more important works may be specified fifteen colonsal statues for the principal pediment of the Waihaila, on the Dannbe, near Ratisbon; the fifteen figures of the Ratile of Arminius, for the northnbe, near Ratisbon; the fifteen figures of the Battle of Arminius, for the northern pedlment of the Waihaiia; the great bas-reilef frleze, more than 250 feet long, in the Barbarossa Haii of the royai paiace, Munich; the pedlment group for the Art Exhibition bulidings, Munich; the colossal bronze statue of Bavaria, 70 feet high, in front of the Ruhmeshalle (Haii of Fame), Munich; a marble statue of the Emperor Rudolf for the cathedrai in Spires; a statue of Mozart for Salzburg; a marble group of Ceres and Proserpine for Beriin; and numerous designs for sculptors and numerous designs for sculptors and painters. He died in 1848. Schwanthaler was the chief representative of the romantic school in scuipture, and his works are often deficient in truth to nature and reality.

nature and reality.

Schwarz (shvarts), Berthold, born in the first half of the fourteenth century, a Franciscan frlar of Germany, formerly regarded as the inventor of gunpowder and firearms. The invention of gunpowder, however, is probably at least as oid as the time of Roger Bacon (d. 1202), but Schwarz may perhaps be credited with the invention of field artiliery. In 1380 he was commissioned by the Venetian government to cast some cannons. The price agreed upon not being forthcoming he became importunate, and was thrown into prison, where it is believed he died in 1384.

Schwarz Christian Friedrich.

Schwarz, Christian Friedrich, Protestant missionary, born in 1726 at Sonnenburg, In Brandenburg, educated in his native town and at Küstrin till 1747, when he proceeded to the University of Haile. In 1750 he sailed from London for Tranquebar, the seat of a Danish mission, where he iabored till 1766, when his services were accepted by the Society for Promoting Christian Knowiedge. He then removed to Trichinopoly, and afterwards to Tanjore. His influence in India was shown jore. His influence in India was shown by the fact that Hyder Ali admitted hlm as an ambassador for the negotiation of peace after refusing all other envoys, and that his personal guarantee of payment was sufficient to procure the relief of Tanjore from imminent famine. He Schwarzburg - Rudolstadt

(shvarts burk-rö-doi-stat), a German principality, consisting of several isolated portions, situated between Prussian Saxony, the Saxon duchies, and the principality of Recat. It lies on the northern side of the Thuringian Forest, and has an area of 362 square miles. The surface is rugged, and the soil by no means fertile. The most important crop is flax, the cuiture of which is aimost universal. A great part of the land is devoted to pasture, and great numbers of cattle are reared. The minerals inciude brown coal, iron, slate, and salt. The principal manufactures are giass and porcelain. The inhabitants are almost all Lutherans. The capital is Rudolstadt. Pop. (1905) 96,835.

Schwarzburg - Sondershausen,

a Germau principality on the uorthern side of the Thuringian Forest, between the territories of Prussian Saxony and the Saxon duchies, and consisting of several distinct portions; area, 332 sq. miles. It is more fertile than Schwarzburg-Rudolstadt, producing corn for export. One of the principal sources of revenue is derived from the forests, which furnish only manufacture of any important procedure. The inhabitants are aimost ail Lutherans. The capital is Sondershausen. Pop. (1905) 85,152.

Schwarzenberg (shvårts'en-berk), ADAM, COUNT OF,

born in 1587. He was prime-minister to the Elector of Brandenburg, and alipowerful during the Thirty Years' war, causing great calamities to the electorate of Brandenburg hy promoting an alliance with Austria against the Swedish Protestant League. When the 'great elector' assumed the reins of government he imprisoned Schwarzenberg in the fortress of Spandau, where he died of apopiexy in 1641.

FELIX LUDWIG Schwarzenberg, JOHANN FRIED-RICH, PRINCE OF, an Austrian statesman, born in 1800, entered in 1818, as cadet, a regiment of hussars, and advanced to be captain; in 1824 went to St. Petersburg as an attaché to the embassy, and was subsequently employed in connection with the embassies at London, Brazil, Paris, Beriin, Turin, Parma, and Napies. literature and antiquities, and latterly of Returning to Vienna from Naples in ancient history. He died in 1857. His 1848 he reëntered the army, but soon deschichte der Philosophie ('History after, on the suppression of the popular of Philosophy') is widely known outrising in Vienna, he was called to be aide Germany through the translations of

the head of the new government. His great object was to govern Austria as a single cate in a military and absolute manner—still not without some inclination to internal reforms; and to establish the prepouderance of the Austrian power in Germany and Central Europe; and this, after the suppression of the Hungarian revolt, he largely succeeded in doing. He died in 1852.

Schwarzenberg, KABL PHILIPP, PRINCE OF, an Austrian field-marshal, born at Vienna in Austrian field-marshal, born at Vienna in 1771, served in the early wars of the French revolution, taking part in the battles of Würzhurg, Ulm, Austeritz, and Wagram. He uegotiated the marriage between Napoleou and Maria Louisa. In the campaign of 1812 he commanded the Austrian auxiliary corps in Galicia, and at the close of the year received the staff of field-marshal-general. After Napoleou's return from Elba he commanded the ailied forces ou the Upper Rhine, and though the contest was decided at Waterloo without his participation, he took part in the subsequent movement upon Paris. He died in 1820.

Schwarzwald. See Black Forest.

Schwatka (swatka), FREDERICK, explorer, was born at Galena, exceilent timber. Flax also is extensively cultivated, and great numbers of cattle, sheep, and swine are reared. The only manufacture of any importance is graduated from West Point in 1871, and served as a cavalry lieutenant ou the frontier till 1877, meanwhile studying law and medicine, and being admitted to the Nebraska bar. After exploring the course of the Yukon, he resigned in 1884. In 1878-80 he commanded the Frankliu search expedition to the Amtic search and search expedition to the Arctic seas, and discovered and buried the skeletons of many of Franklin's lost party. He made later explorations in Alaska, and pubiished works describing his journeys.

Schwedt (shvet), a town in Prussia, on the left bank of the Oder, 24 miles southwest of Stettin. The principal edifice is the oid castie, in which a branch of the margrayes of Brandenburg socied in margrayers. Brandenburg resided. Its manufactures are chiefly tobacco and cigars. Pop. (1905) 9530.

Schwegler (shväg'ler), ALBERT, a philosophical writer and theologian, born in 1819. He was educated at Tübingen (1836-40), where he became a privat-docent, and subsequently extra-professor of Roman

Professor Seelye, of Amherst, and Dr. Hutcheson Stirling. His other chief works were Das Nachapostolische Zeitalter ('The Post-Apostolic Age,' 1846), Geschichte der Griechischen Philosophie ('History of Greek Philosophy,' 1859), and editions of the Clementine Homilies, Anistalla's Mattanhalia.

Aristotle's Metaphysics, etc.

Schweidnitz (shvit'nits), a town of Prussia, in Silesia, on a height above the Welstrits, 20 miles southwest of Breslau. Its manufactures include machinery, woolens, linens, furniture, earthenware, carriages, gloves, beer, and spirits. It was made a regular fortress by Frederick the Great, and figured much during his wars. During its last slege, in 1807, it was taken in thirty-six days by the French, and its outworks were disposabled. Its and its outworks were dismantled. Its fortifications were removed in 1864. Pop. (1905) 30,540.

Schweinfurt (shvin'furt), a town of Bavarla, on the Main, which is spanned by two bridges, 24 miles

N. N. E. of Würzhurg. It is partiy surrounded by old walls, and was long stree Imperial city. It has a handsome town-house of 1570, and a symnaslum founded by Gustavus Adolphus. The manufactures include Schweinfurt green, white-lead, and other colors. Pop. 18. white-lead, and other colors. Pop. 18,-

See Emerald Schweinfurt Green. Green.

Schwerin (shvā-rēn'), the capitai of Mecklenburg-Schwerin, on the western shore of the lake of same name and other smaller lakes, 60 miles name and other smaller lakes, 60 mlles east of Hamburg. It is pleasantly situated, has a fine old Gothic cathedrai (thirteenth to fifteenth centuries), a grand-ducal palace on an island, grand-ducal museum and picture-gallery, and an arsenal. The manufactures consist of machinery, carriages, woolen and linen cloth, lacquer and earthenware, etc. Pop. (1910) 42,578.

Schwyz (shvēts), a central canton of Switzerland, bounded on the north by the Lake of Zürich and canton St. Gall, west by Zug and Luzern, south by Lake Luzern, and east hy Glarus; area, 353 square miles. It belongs to the so-called mountain cantons, being traversed in all directions by lofty hills, including the Mythen, the Rigl, the Rossberg, the Drusberg, etc. The whole canton belongs to the basin of the Rhine, more than two-thirds of the surface being more than two-thirds of the surface being drained by the Sihl and the Lake of Zürich; a third, hy the Lake of Luzern, chiefly by means of the Muotta; and the remainder, forming only an unimportant portion, by the Lake of Zug. The chief

industry is the rearing of cattle, sheep and swine. The canton is very poor in minerals. Manufactures are almost confined to some cotton and sijk spinning and weaving. Schwys being the most important of the cantons which first threw off the yoke of Austria, gave the name to the whole confederation. Its present government is an extreme democracy, the whole power, legislative and racy, the whole power, legislative and executive, being lodged in the male population of legal age, who hold a general assembly every two years. The great body of the inhalitants are Roman Catholics. body of the inhalitants are Roman Catholles. Pop. 55,385.—Schwyz, the capital, is a straggling and picturesque town at the foot of the Mythen, about 1680 feet above the sea, with a handsome parish church and an interesting townhall. Pop. 7398.

Sciacca (shäk'kå), a seaport of Sicily, on the side of a hill rising from the shore, 30 miles w. N. W. of Gir-

from the shore, 30 miles w. N. w. of Girgertl. It is surrounded by old fortifications, has an old cathedral, and interesting medieval building; but the trade is smail. Pop. (1906) 24,645.

Sciena (si-è'na), a genus of telesting medieval building; but the trade is smail. Pop. (1906) 24,645.

Sciena (si-è'na), a genus of telestina ostean fishes, belonging to the Acanthopterl, and forming the type of a family—the Scienolds, allied to the perches. The most important of the genus is the S. aquila, the maigre of the French, whose chief habitat is the Mediterranean. See Maigre.

terranean. See Maigre.
(sI-at'i-ka), a term used in medicine to denote a rheumedicine to denote matic affection, in which the pain stretches along the course of the great sciatic nerve, that is, from the hip along the back part of the thigh towards the ham of the leg. There is stiffness and pain, increased by any change of temperature and molsture; there is generally swelling of the limb at the commencement of the disease, but after repeated attacks the ilmh seems to shrink, owing to the wasting of the muscles. In some cases the articulation of the hlp seems affected, and permanent immobility of the ilmh

Scicli (shek'le), a town of Sicily, prov-ince of Syracuse. Pop. (com-mune) 16,277.

Science (sl'ens), a term applied to the generalized and systematized divisions of knowledge. Science and philosophy resemble each other in so far as they both have to do with knowledge; but while the latter deals with the whole sum of knowledge, the former takes up special branches of it, and it does not necessarily go back to first principles like philosophy. Given a sufficient number of inter-related facts, they may be so

up not like nber gineering, and practical mechanics; surgery, materia medica, etc.

Scientific Management, the name a system of industrial efficiency worked out by Harrington, Emerson and others. In April, 1881, the island out by Harrington of efficiency is the needless elimination of all needless wastes, in material, in labor and equipment, so as to reduce costs, increase wastes, in material, in increase about 1900 or Kastro, the chief town of the profits and raise wages. Efficiency as a science came into avistence about 1900 middle of the east coast, carries a considered much from repeated shocks of earthquake. The island belonged to Turkey and the coast coast, carries a considered much from repeated shocks of earthquake. The island belonged to Turkey and the coast coast, carries a considered much from repeated shocks of earthquake. The island belonged to Turkey and the coast coast, carries a considered much from repeated shocks of earthquake. The island belonged to Turkey and the coast coast, carries a considered much from repeated shocks of earthquake. The island belonged to Turkey and the coast coast, carries a considered much from repeated shocks of earthquake. The island belonged to Turkey and the coast ment, so as to reduce costs, increase profits and raise wages. Efficiency as a science came into existence about 1900. It was first called production engineering; several years later Emerson christened it efficiency; and still later Frederick W. Taylor named it scientific management. There are four factors that the efficiency engineer must take into account—men, machinery, methods and materials. He tries to introduce personality into the whole task of production and to choose the right man for the work as well as the right tool and right ma-terial. Mental and temperamental as well as physical differences are taken into account. Professor Hugo Münsterberg, of Harvard, has made important discoveries in the psychological principles underlying efficiency.

Scilly Islands (sil'i), a group of granitic islands belonging to England, forming part of the county of Cornwall, at the entrance to the English Channel, about 30 miles west by south of Land's End. The islands have an area of 4000 acres, mainly devoted to flora culture. Pop. 2002.

Scimitar (sim'i-tar), a kind of sword in use among eastern nations. The blade is nearly semicircular.

arranged and classified, by referring them to the general truths and principles on which they are founded, as to constitute a well-certified and more or less complete Minor by a channel not more than 7 branch of knowledge, that is, a science. The sciences are broadly divided into pure 53 miles west of Smyrna. It is of a or theoretic sciences and applied or practical sciences, the interest being definable as long from north to south, with a mean that knowledge of facts avents or place. tical sciences, the jatter being definable as the knowledge of facts, events, or phenomena as explained, accounted for, or produced by means of powers, causes, or laws; the former as the knowledge of from each other by verdant and fertile these powers, causes, or laws, considered apart or as pure from ail applications. To the ciass of pure or fundamental sciences belong mathematics, physics, chemistry, psychology, and sociology; to the applied or concrete belong geology, mineralogy, botany, zoology, meteorology, geography, ethics, politics, iaw, jurisprudence, logic, grammar, rhetoric, philology, and political economy; navigation, engineering, and practical mechanics; surgery, materia medica, etc.

Scientific Management, the name

> middle of the east coast, carries a considerable trade. Pop. 14,500.

> Scioppius (stse-op' pi-us), properly KASPAR SCHOPPE, a German theological controversialist, born in 1576. He renounced Protestantism about 1599, and the whole of his subsequent career was marked by venomous attacks on his former co-religionists. The Jesuits likewise came in for a share of his hate. His rancorous life terminated in 1649. His works include De Arte Critice, Elementa Philosophiæ, Stoicæ Moralis, Paradoza Literaria, and Rudimenta Gramma-tice Philosophice.

> Scioto (si-5'tō), a river of Ohio, with a general southerly course, its length about 225 miles, and flowing into the Ohio River at Portsmouth by a mouth 150 yards wide. It is navigable for boats about 130 miles. Its valley is one of the richest and best cultivated portions of the state.

Scipio Africanus (sip'i-ō) T H E LIUS CORNELIUS SCIPIO AFRICANUS MA-JOR, one of the most illustrious Scimitar in use among eastern na-Roman warriors, was born about 235 tions. The blade is nearly semicircular B.C. At the battle of the Ticinus against in form, with the edge upon the convex the Carthaginians in 218 B.C. he is said side. This form, while ill adapted for to have saved the life of his father. Two thrusting, is well adapted for striking. escaped from the fatal battle of Canna, when he succeeded in gathering together the remains of the defeated army and saving Rome. In 212 a.c. he was unanimously elected adile, and a few years after was appointed proconsul in Spain. His first successful enterprise of importance was the conquest of New Carthage, the stronghold of the Carthaginians in Spain. The next year (209 B.c.) Scipio totally defeated Hasdrubal, Hannibal's brother, and subsequently a fresh army, led by Mago and Hasdrubal the son of Gisco. The result was to drive the Carthaginians wholly from Spain, and Scipio was empowered to lead an army against Carthage herself. The Carthaginians recalled Hannibal from Italy to Africa, where the great hattle of Zama, fought October 19, 202 B.C., resulted in the total defeat of the Carthaginians, who, on the advice of Hannibal, sought for peace. On his return to Rome Scipio was honored with a triumph, and received the surpame of Africana. escaped from the fatal battle of Canna, was honored with a triumph, and received the surname of Africanus. After ceived the surname of Africanus. After this he discharged, in a praiseworthy manner, the office of censor; but lost the favor alike of the old Roman party and the new. After the successful close of the war with Antiochus, king of Syrla, in B.C. 189, Sciplo retired into private life. He was not long permitted to rest, however, without experiencing the analysis. life. He was not long permitted to rest, however, without experiencing the enmity of a party in the state who were hostile to him. First his brother Lucius was imprisoned and his property confiscated, on an alleged charge of misconduct in his dealings with Antiochus. This was followed up by charges brought against Sciplo himself. When his trial came on he made no reply to these charges, but he made no reply to these charges, but merely narrated all that he had done for the republic, and reminding them that this was the anniversary of the battle of Zama, called upon the people to follow hlm to the Capitol, there to return thanks nim to the Capitol, there to return thanks to the immortal gods, and pray that they would grant the Roman state other citizens like himself. The people immediately followed him, leaving the accusers alone in the forum. Scipio immediately quitted Rome, and retired to his villa at Liternum, where he died, it is believed, in B.C. 183, the same year as his great opponent Hannihal.

Scip'io Africa'nus, The Younger, Publius Cornelius Scipio ÆMILIANUS AFRICANUS MINOR, son of L. Æmillus Paullus, the conqueror of Macedoula, and adopted son of P. Cornelius Scipio, the son of Scipio Africanus Major, was born about 187 B.C. In a.c. 152 he accompanied the consul Luclus Licinius Lucullus to Spain as military tribune, and in B.C. 149, on the

outbreak of the third Punic war, commanded in Africa under the consul M. Manllus Nepos. His services were so important that in B.C. 147, contrary to the usual custom, not being of the legal age, he was unanimously chosen consul and leader of the forces against the Carthaglnians. In B.C. 146 he took, and by command of the senate burned Carthage, for which he was honored with a triumph at Rome and with the surname of Africanus. In B.C. 142 he was elected censor, and in B.C. 134 entered on his second consulship, in order to put an end to the war with Numantia in Spain. For his conquest of this powerful city a triumph was decreed to Scipio, and he received the surname of Numantians. In the last years of his life he made himself many enemies among the people by opposing the measures of the popular party, and especially the agrarian law of Tiberlus Gracchus, of which Papirius Carbo, and Calus Gracchus, the tribunes of the people, were the great supporters. He was found dead in his bed in B.C. 129, Carbo being suspected of having murdered him. He was a friend of Polybius, the historian, and a patron of Terence.

Scire facias (si're fa'si-as; Lat. cause him to know'), a judicial writ to enforce the execution of judgments, etc., directed against a person who is called upon to show cause why something should not be done on behalf of the party in whose interest the writ is issued. The writ is now of little practical importance.

Scirpus. See Bulruch.

Scirrhus (skir'us), or HARD CANCER, is the most frequent variety of cancer. It has its seat sometimes in the stomach, rectum, and elsewhere; hut hy far most frequently it attacks the female breast. If detected in time it can be removed from the hreast with every prospect of success.

Scissor-bill (Rhynchops nigra), a get us of Laridæ or gulls, so named from the possession of an elongated beak of compressed form, the lower mandible exceeding the upper one in length, and shutting into the latter somewhat after the fashion that the hlade of a knife does into its handle. This curious beak is of an orange color at its base, and black at its tip. The bird, which inhabits the coasts of America and Africa, is a dark hrown on the upper aspect of the head and body; the under surface white, and a hand of white across the wings. The average length of the scissor-hill is about 12 foot.

the two great varieties of coral-Coral, the two great varieties of coral-ium, or coral substance (see Corsi) secreted by the Actinosoa, or highest group of contenterate organisms. Sclerotic Coat. See Byc.

Scolecida (sko-ie'si-da), Huxiey's name for a provisional class of annuioids, comprising the Platyelmia, or flat-worms; Nematelmia, or round-worms; and Rotifera, or wheel-animaicules. The Piatyelmia include the orders Taniada (tape-worms), Trematoda, or flukes, and Turbellaria (non-parasitic forms such as Pianaria and Nemertidans); the Nemateimia are represented by the orders Acanthocophals (thorn-headed worms), Gordiaces, or hair-worms, and Nematods, or round-worms. The Rotifera are non-parasitic, free organisms, which differ in many respects from the rest of the Scolecida. The Scolecida are characterized by the possession of a water-vascular system, consisting of a re-markable set of vessels which communi-cate with the exterior by one or more apertures situated upon the surface of the body, and branch out, more or less extensively, into its substance. The nervous system (when present) consists of one or two closely approximated ganglia. Scolopacidæ (sko-io-pas'i-dē), the family of birds to which the snipe and woodcock beiong.

Scone (skon), New, a village of Scot-iand, 2 miles N.E. of Perth, on the Tay. The village of New Scone conthe Tay. The village of New Scone contains 1585 inhabitants. Of Old Scone the principal remains are a market-cross. Its ancient abbey, in which the kings of Scotiand were wont to be crowned on the stone of destiny, now in Westminster Abbey, is only represented by inconsiderable ruins.

Scopas (sko'pas), an eminent sculptor and architect of ancient Greece, belonging to the Island of Paros, flour-ished about 890-350 B.C., a contemporary of Praxitales. He was really a cosmopolitan artist in the Grecian States.

Score (skör), in music, the original draught, or its transcript, of a musical composition, with the parts for all the different voices or instruments arranged and placed in juxtaposition:

called from the practice of drawing the bar through all the parts.

Scoresby (skors'bi), William, an Arctic navigator, born at Cropton, Yorkshire, in 1789. He made his first voyages with his father, a daring and successful commander in connection with the northern whale-fishery. During the winter months when the vessel was in port, he attended clames in Edinburgh. port, he attended classes in Edinburgh University. On the resignation of his father in 1811 he was appointed to succeed bim as captain of the Resolution. Through information communicated by him to Sir Joseph Banks, the government was induced in 1817 to fit out an expediwas induced in 1817 to fit out an expedition under Sir John Ross to discover the northwest passage. In 1820 Captain Scoresby published a work entitled An Account of the Arctic Regions, with a History and Description of the Northern Whale-fishery, which established his reputation as one of the most original observers and scientific navigators of the day. It was followed in 1823 by a Journal of a Voyage to the Northern Whale-fishery, including Researches and Discoveries on the Eastern Coast of West Greenland. About the same time he quitted the whale-fishing. In 1824 be was elected a fellow of the Royal Society. He afterwards entered the ministry, and He afterwards entered the ministry, and filled several pastorates, dying March 21, 1857. Throughout his life he had a keen interest in scientific investigation, especially in that of magnetism and its relation to navigation. Various treatises were published by him, afterwards coliected under the title of Magnetical Investigations. He also published The Franklin Expedition, and other works.

Scorpion (skor'pi-un), the name of animals of the class Arachamida (which is included also the suiders) nida (which includes also the spiders)—order Arthrogastra or Pedipaipi, the iargest of their class. Scorplons have an elongated body, suddenly terminated by a

Scorpions. 1, Buthus socitanus. 2, Scorpio Casar. iong siender tail formed of six joints, the iast of which terminates in an arcuated and very acute sting, which effuses a venomous liquid. This sting gives rise to extruciating pain, but is usually unattended either with redness or sweiling, except in the giands of the arm-pit or groin. It is very seidom, if ever, fatai to man. The animai has four pairs of limbs borne by the thorax or chest-segments, and the maxiliary paipi (organs of touch belonging to the maxiliae or lesser jaws) are largely developed, and constitute a formidable pair of nipping claws. With these claws they seize their insect prey, which is afterwards killed by the sting. The eyes, which are of the simple kind, number six, eight, or twelve. The female scorpions are said to exhibit great care for their young, and carry them on their hacks for several days after being hatched, while they tend them carefully for about a month, when they are able to shift for themselves. Scorpions generally live in dark places, and rearrilly for about a month, when they are able to shift for themselves. Scorpions generally live in dark places, and under stones. They are found in the south of Europe, in Africa, in the East Indies, and in South America, several genera (Androctonus, etc.) being comprised within the order. The Buthus afer, or rock scorpion (which see) of Africa, is one of the most familiar species. The scorpions are first represented in a fossil state in the carboniferous period. The book scorpions (Cheliferids), of which a common species is the Chelifer Wideri, are so-named from their presenting a close resemblance in outward form to the true scorpions. The book scorpions are, however, much smaller, and are included in another group (Trachesica) of the class Arachnida, while they want the jointed tall of the true scorpions. They are generally found living among old books, and feed on the minute insects which also inhabit such situations.

Scorpion-fsh, Or SEA-SCORPION Scorpion-fish, or SEA-SCORPION or teleostean (acanthopterous) fishes, belonging to the Triglides or gurnard family. The first dorsal fin possesses eleven spines, the second dorsal possesser eleven spines, the second dorsal possessing one spiny ray and nine or ten soft rays. The anal fin is short, and has three spines and five soft rays. The red scorpion-fish (Scorpana scrofa) is a familiar form. The spotted scorpion-fish (S. porcus), a second species, occurs in the Mediterranean, the Atlantic, and the tropical second ical seas.

Scorpion-fly (Panorpa), a genus of insects belonging to the flies. The name scorpion-fly is derived the payment of parish assessment according to a hilly. In certain English borabdomen of some species. The male in the common species, for example, has the sixth and seventh joints of the abdomen attenuated, and capable of extensive motion; while the last joint forms a pair ducks. The most familiar species is the order Neuroptera, or that of the dragon-

of forceps resembling those of the ear-wigs. When at rest this tail is curied over the back, but when irritated the forceps are used as weapons of offense or defense.

Scorpion-shell, the name given to the shells of certain gasteropodous moituses, belonging to the family Stromhldæ, from the projecting spines with which the shells are provided. These shells are also known by the name of 'spider-shells' for the same reason. They are chiefly found in the Indian and Chinese seas.

Scorzonera (skor-sō-ne'ra), a genus of plants of the nat. order Composite, suborder Chicoracee, with yellow and occasionally rose-colored flowers. The species, which are numerous, are chiefly indigenous to Southern Enrope and the East. The common scorzonera (S. Hispanica), a native of Spain and the south of Europe, has long been and the south of Europe, has long been and the south of Europe, has long been cultivated in English kitchen-gardens for its edible roots, which are carrot-shaped, but small and dark-colored, though pure white within. They possess cooling and antifebrile properties, and are said to be often highly beneficial in cases of indigestion or hillousness. The name viper's grass is sometimes given to this plant, either from the shape of the root. either from the shape of the root, or from its supposed properties of curing make-bites. B. deliciosa is a species much cultivated as an esculent at

Palermo.

Scot (skot), REGINALD or REYNOLD,
one of the first and boldest
writers against the belief in witchcraft, alchemy, astrology, and other prevalent superstitions of his time, a younger son of Sir John Scot of Scotshall, in Kent; born in the early part of the sixteenth century. He studied at Oxford, and spent his life in the study of old and obscure mystical authors, and the pleasures of gardening, until his death in 1599. The work on which his reputation is founded is entitled The Discoverie of Witchcraft, and was published in 1584. By order of James I the first edition of the book was hurned by the common hangman, and the king replied to it in his Demonology. Refutations were also published by Meric Casaubon, Joseph Gianvil, and others.

Scot and Lot, an old legal phrase applied originally to

eathe which shows a deep black piumage in the maie, the bill and legs being of the same color. The upper mandible is marked on its dorsai surface by a line of orange color. This bird averages the common duck in size; and the females are colored of a dark-brown hue. It occurs in the Arctic regions in summer. An American species of coot is known as surf-duck.

See Duns, John, and Schol-Scotists. asticism.

Scotland (skot'iand), the northern division of the Island of Great Britain, between iat. 54° 38' and 58° 40' 30" N.; and ion. 1° 40' and 6° 8' 30" W. It is separated from England substantially by the Solway, the Cheviot hills, and the Tweed, the border isthmus being about 00 miles across; though the irregular boundary line measures fully 100 miles. On all other sides it is bounded by the sea. The greatest length, from N. N. E. to S. S. W., between Dunnet Head and the Mull of Galloway, is 287 miles. The breadth varies from 140 miles to less than 30 the letter in the porth to less than 80, the latter in the north, between Dornoch Firth and Loch Broom. Few points in the mainland are more than 40 miles from the sea, the country being so much penetrated by inlets. The country was formerly divided into a number of districts, many of the names of which are still familiar, such as Lothlan, Tweeddale, Galloway, Breadaibane, etc., but for political nurnoses it is now but for political purposes it is now divided into thirty-three shires or counties, the total population in 1911 being 4,750,445.

Four towns, Edinburgh (the capital), Glasgow, Dundee, and Aberdeen, each contain upwards of 100,000 inhabitants. Among the more important of the other towns are Greenock, Palsley, Perth, Inverness, Stirling, Kilmarnock, and St.

Andrews. Islands and Coasts. - The Islands of Scotland are said to number altogether nearly 800. On the northeast are the two large groups of the Orkneys and Shetlands, and on the west coast the islands are large and numerous, including the Hebrides, which extend for 200 miles from north to south. The west coast of the mainiand is generally a wild, deeplyindented mountain-wall, presenting a series of inlets or sea lochs, while towards the middle the coast is cleft by two great the middle the coast is ciert by two great injets with openings to the southwest, the Firth of Lorn and its continuation Loch Linnhe, and the Firth of Clyde and its ramifications running far inland. The east coast is sometimes low and sardy, but is often formed of steep rocky cliffs schists, guelss, and quartzites; the Com-

of considerable elevation, the chief inlets

being the Firths of Forth and Tay, and the Moray Firth Cromarty Firth, etc.

Surface.—Be the configuration of the surface e geological structure the country civides into three divisions, the Highlands, Central Lowisnds, and Southern Uplands. The Highland division is remarkable for the number and division is remarkable for the number and elevation of its mountain-masses, many of the summits being over 4000 feet high. The mountains best known by name are the Grampians, which form a system or series of masses covering a large area, and culminating on the west coast in Ben Nevis, 4406 feet high. The Grampians and their connections are separated from the mountains farther to the north by Glenmore or the Great Glen of Scotland, a remarkable depression stretching quite across the country from sea to sea, and forming, by the series of lakes occupying it and the Caledonian Canal connecting them, a waterway from the west coast to the east. The Southern Uplands are also essentially a mountainous region, summits of over 2000 feet being frequent, though none exceed 3000 feet above the ses. The central region, though much less elevated than the other two divisions, has none of the monotony usual in first has none of the monotony usual in flat countries. Though occupying not more than a sixth of the whole surface, the fertility of the soil and its minerai treasures make this part by far the wealthiest and most populous.

and most populous.

Rivers and Lakes.— The chief rivers flow (roughly speaking) to the east, and enter the German Ocean, the largest being the Tweed, Forth, Tay, South Esk, North Esk, Dee, Don, Deveron, Spey, Findhorn, etc.; those entering the sea on the west are the Clyde, Ayr, Doon, Dee, Nith, Annan, and Esk. The Tay carries to the sea a larger quantity of water than any river in Britain, but neither it nor most of the others, except when they form estuaries, are of much use for navigation. The Clyde, however, in its iower course carries a vast traffic. In its lower course carries a vast traffic, this being rendered possible chiefly by dredging. Many of the rivers are valuable from the numbers of salmon they produce. A striking feature of the country is the great multitude of lakes, varying in size from Loch Lomond (28 square miles) to the pool-like mountain tarns. In the Northern Highlands almost every glet, as its lake and every mountain hollow is filled by a stream or spring.

Geology.— As regards geology the older cr palæozoic rocks predominate almost everywhere in Scotland. The Highlands are composed almost entirely of crystalline applications and quantities the Com-

lands the summer is not so warm as that of England, hut the winter, on the whole, is milder and the climate is salubrious. But agriculture does not fionrish in Scotland generally, on account of the rugged character of its surface, only about one-fourth of it being nnder cultivation. The principal cereals are oats and bariey, little wheat being grown. Potatoes, turnips and beans are largely cultivated, and sheep-raising is a leading feature of rural industry. The leading minerals are coal, iron, and oil-shales, coal being much the largest in yield. The fisheries are a great source of wealth to the Scottish people, the surrounding seas teeming with herring, haddock, cod and other fish, while salmon frequent the rivers. Manufacturing industries have greatly developed within recent times, Scotland having become one of the important manufacturing countries of Encyperature manufacturing countries of Encyperature are great iron-works in Glasgow and steel products. The Clyde leads in the shiphuilding industry of the world, there are great iron-works in Glasgow and some other cities, while cotton is largely manufactured in Glasgow, linen and jute in Dundee, and cotton-thread in Paisley.

Other large industries are distilleries, hreweries, and chemicals. Edinburgh, manufactured in Glasgow, linen and jute in Dundee, and cotton-thread in Paisley. Other large industries are distilleries, breweries, and chemicals. Edinburgh, the capital, is one of the leading publishing centers of the world. The principal seaports are Glasgow (the second city in size in the British empire), Dundee, Aberdeen and Greenock.

Civil History.—The country now called Scotland first became known during the Roman occupation of Britain.

ONINE TO PART OF PART OF THE STATE OF THE ST

tral Lowiands of oid red sandstone, carboniferous and Permian strata; the Southern Uplands mostly of rocks of Silurian age. In certain iocalities remains of secondary formations are represented over small spaces, while volcanic rocks cover considerable areas. Granite exists in great masses in many localities, and in some parts is extensively quarried. The most valuable mineral region is the Central Lowiands, where coal and iron exist in such quantity as to make this one of the most important mineral fields of Great Britain.

For Agriculture, Manufactures, Trade, etc., see Britain. of Great Britain.

For Agriculture, Manufactures, Trade, etc., see Britain.

Agriculture and Manufactures.—The climate in the w. and s. is mild hut humid; in the central elevated regions, chilly and humid; in the eastern plains and Lowlands, more genial. In the Lowlands the summer is not so warm as that of England, hut the winter, on the whole, is milder and the climate is salubrious. But agriculture does not fionr-

Other large industries are distilleries, breweries, and chemicals. Edinburgh, the capital, is one of the leading publishing centers of the world. The principal seaports are Glasgow (the second city in size in the British empire), Dundee, Aberdeen and Greenock.

\*\*Clivil History.\*\*—The country now called Scotland first became known during the Roman occupation of Britain, though for many centuries little is known of its history. It is supposed that the earliest inhabitants of the country were a many of the English nohies, sought an arace resembling the Iberians, and typified in Scotland. Malcolm many continuous properties of the country were a found refuge in Scotland. (1058) to the throne after the death of

ried Margaret, the sister of the fugitive prince, who is said to have introduced into her court a degree of refinement remarkable for that time. The Scotch remarkable for that time. The Scotten king twice invaded England with success, but William, having coilected a large army, in his thrn advanced into Scotland, and compelled Malcolm to do homage for those lands which he held within what was accounted the English territory. Malcolm Canmore and his eldest son were

slain in attempting to take Alnwick Castle in 1093, and Margaret survived only a few days.

On the death of Malcoim the Celtic tribes placed his brother Donald Bane on the throne, but he was driven from the throne, but he was driven from it before he had reigned a year by Duncan, a natural son of the late king, who now seized the scepter. In 1098, however, Edgar Atheling obtained a force from the English king, and succeeded in gaining the kingdom for Edgar, the lawful son of Malcoim. Edgar was succeeded gaining the kingdom for Edgar, the lawful son of Malcoim. Edgar was succeeded by his brother Aiexander I, a prince whose reign is chiefly signalized by his severe administr ion of justice. He assisted Henry of England, who had married his sister, in a war with the Welsh, and died in 1124, leaving the tbrone to his younger brother David. On the accession of the usurper Stephen to the English throne in 1135, to the prejudice of Maud or Matiida, wife of the Emperor Henry V, only child of Henry I and niece of David, the latter made several expeditions into England in support of his niece's claim to the throne, during which he suffered an indecisive defeat near Northalierton (Battle of the Standard, 1137). He acquired a great Standard, 1137). He acquired a great reputation for sanctity, having founded several new abbeys, including those of Holyrood and Meirose, and reorganized most of the Scotch bishoprics. His services to the church procured him canonication but his and average as the church procured the card the zatlon, but his endowments so taxed the royal resources that be was bitterly characterized by James VI as a 'sair sanct for the crown.' His death in 1153 was preceded by that of his only son, so he was succeeded by his grandson, Malcoim the Maiden, whose reign of twelve years is only remarkable for his giving np Northumberland and Cumberland to the Engthumberland and Cumberland to the English king.

land, and declaring Scotland a fief and himself a vassal of the English crown. This treaty remained in force till 1189, when Richard I restored Scottish inde-pendence for the sum of 10,000 marks in order to equip a force to join the third crusade. The rest of William's reign was devoted to the consolidation of his kingdom in the north and west. The Scotch alliance with France, and many of the Scottish burgh charters, date from this reign.

His son and successor, Aiexander II (1214-49), a youth in his seventeenth year, took the side of the English barons in their struggle with King John, in the hope of recovering the Northumbrian and Anglo Cumbrian and Anglo-Cumbrian provinces. After much blood had been shed, and the border lands repeatedly devastated, Henry III agreed in 1237 to give the King of Scots certain manors in Cumberland and Northumberiand, not in sovereignty, but in feudal property. This was accepted, and a border line was laid down which has never since been altered to any con-

siderable extent.

Alexander III (1249-1286) succeeded in the eighth year of his age. One of the chief events of his relgn was the war that broke out with Hace of Norway for the possession of the Western Islands, which ended in the victory of the Scots at Largs (1263), and the consequent cession of the Isles to Scotland (1263). In 1284 the king was left childless, and a meeting of the Estates at Scone settled the crown on his granddaughter Margaret, who succeeded on his death in 1286. She was then only three years old, and a regency was established consisting of four barons and two bishops. Edward I, desirous of joining the two countries in one kingdom, proposed that a marriage should take place between the young queen and his son (afterwards Edward II). This was agreed to by a treaty signed at Brigham near Roxburgh, which made strict provision for the independence of Scotland. The scheme, however, was frustrated by the death of Margaret in one of the Orkneys when on her way to Scotland (Sept. 1290). Now a host of rival clalmants for the throne propagated of whom nitimately care appeared, all of whom nitimately rave way to three descendants of David, earl On the death of Malcolm IV in 1165 of Huntingdon, brother of William the the crown fell to his younger brother William, who is known by the title of William the Lion. During an expedition into England for the purpose of David's eidest daughter, Robert Bruce as son of David's second daughter, and David de Hastings as grandson of the regaining Northumberland he was taken third daughter. Edward I being asked prisoner (1175), and sent to Faiaise in to settle the dispute decided in favor ot Normandy, where a treaty was concluded Baiiol, who was crowned at Scone (1292), acknowledging the apprensive of Eng-

On the outbreak of war between England Scotland. Graudally Bruce On the outbreak of war between England and France the weak monarch was compelled by his nobies to enter into an offensive and defensive alliance with France, and formaily to renounce his alliegiance to Edward (1296). Edward immediately invaded Scotland, stormed and took Berwick, and reduced the fortresses of Dunbar, Roxhurgh, Edinburgh, and Stirling. Balioi surrendered in the neighborhood of Brechin, and Edward after marching north, probahiy as far after marching north, probably as far as Eigin, returned to Berwick to receive the homage of the Scotch hishops, barons, and knights. Baliol himself was committed to the Tower of London. Scotland was now occupied by English garden and a local and a Facility officials. risons and piaced under English officials; and Edward seemed to have entirely accomplished his cherished purpose, when a rebeilion against his usurpation broke out.

Wiliam Wallace, younger son of Sir Maicoim Wallace of Eiderslie, first came forward in a private quarrei with Haseiforward in a private quarrei with Haseirig, an English governor of Lanark, which developed into a successful rebeilion in the southwest and center of Scotland. Assisted by some of the barons and a considerable body of men, he defeated the English governor, the Earl of Surrey, at Stiring Bridge (September 11, 1297), drove Edward's garrisons out of the country, and made a raid into England. He assumed the title of Guardian of Scotland in the name of Bailoi, and directed his energies to rectify the abuses and dishis energies to rectify the abuses and disorders of the country, and to revive the trade with the free towns of the Continent. Edward, who was in Fianders, hastened home, and marching at the head of a large army, defeated Wallace at Faikirk (July 22, 1298), and before 1303 had repossessed himself of the whole country. In 1306 Wallace was betrayed 1303 had repossessed nimself of the whole country. In 1305 Wallace was betrayed into the hands of the English near Glasgow hy Sir John Menteith; was carried to London, and after a mock trial was condemned as a rebel and traitor to Edward and executed (August 23, 1305).

recovered the whole country, till in 1313 the only English garrison left was Stirling Castle, which was closely besieged by the Scotch. To relieve it Edward II ied into Scotland a great army, which was totally defeated by Bruce in the decisive battle of Republic Management (Turn 24, 1214) Bannockburn (June 24, 1814). After this victory Bruce reigned with almost

this victory Bruce reigned with almost uninterrupted success, and died in 1329.

On the death of Robert Bruce his som, David II, a boy six years oid, was proclaimed king, and acknowledged by the great part of the nation. Edward Bailol, however, the son of John Ballol (who died 1314) formed a party for the purpose of supporting his pretensions to the crown; he was backed hy Edward III of England. At first Bailol was successfui; and on September 24, 1332, he was crowned king at Scone, but eventually David succeeded in driving him from the crowned king at Scone, but eventually David succeeded in driving him from the kingdom. Stili, however, the war was carried on with England with increased rancor till at length David was made prisoner at the battle of Neville's Cross, near Durham (October 7, 1346). After being detained in captivity for eleven years he was ransomed for 100,000 merks, an old Scottish coin worth about 27 cents. 27 cents.

At his death in 1370, childless, the suc-At his death in 1870, childless, the succession feli to Robert, son of Waiter, the high steward, and of Marjory Bruce, daughter of Robert I (Bruce), Robert II being thus the first of the Steward, or, as it came to be written, Stewart or Stuart, dynasty. He concluded a treaty with France, in which the nations mutually stipulated to assist and defend each other. His raise was on the whole name other. His reign was on the whoie place-ful, though the usual border raids between Scotiand and England continued; the chief ending in the ceiebrated fight of Otterbourne or Chevy Chase. Robert II died in 1390, and was succeeded by his son, John, who upon his accession took the name of Robert III. Scotland ward and executed (August 23, 1305).

Wallace soon had a more fortunate successor in Robert de Bruce, eari of Carrick, grandson of that Bruce, iord of Annandale, who had been Balioi's rival in the dispute concerning the Scottish crown. He had long been an unwilling and restless retainer of Edward, but finally determined to push his claims in Scotiand, and was crowned as king of the country at Scone in 1306. At first his career was not successful, but the death of Edward I at Burgh-on-Sands, on his way to Scotland, and the inactivity of his son Edward II, were turning points in the recovery of the independence of the safety of his second son, James, at this time was rent by the dissensions

James I being then only eleven years of age, and a captive, the regency devoived on the Duke of Albany. The kingdom was torn with internal strife. Several of the more powerful nohles were conciliated hy grants of land; but Donald, lord of the Isles, the most powerful Highland chief, marched into Aberdeenshire with a great host, and threatened to overrun lowland Scotland. He was totally defeated at Harlaw hy a much inferior force (July 24, 1411), and the course force (July 24, 1411), and the country was saved from this danger. The excellent education bestowed on James force (July 24, 1411), and the country was saved from this danger. The excellent education bestowed on James cases, James V, had not yet reached the for the injustice of his capture and detention. In England also he obtained a wife, namely Joanna Beaufort, daughter wife, namely Joanna Beaufort, daughter of the Earl of Somerset and niece of Earl of Angus, who had married the King Henry V. Their marriage facilitated the negotiations for his release, and control of affairs till 1528, when James, after nineteen years of captivity he and then in his seventeenth year, managed to wife, namely Joanna Beaufort, daughter of the Earl of Somerset and niece of King Henry V. Their marriage facilitated the negotiations for his release, and after nineteen years of captivity he and his hride were crowned at Scone (1423). On his return the regent Murdoch of Albany was out to death, reforms in the constitute of parliament and in the statute-law efficient, lawlessness put down, and the connection between Scotland and France streng lened. James's efforts to diminish the power of the great nobies provoked a conspiracy against him, and he was murdered in the Blackfriars' Monastery at Perth (Fehruary 20, 1437). In this reign the University of St. Andrews 1985 (1441) drews was founded (1411).

His son and successor, James II, being His son and successor, James II, being only seven years of age, the country was subjected to the miseries of a long and feehle regency. One of the chief events of his reign was the rebellion and temporary overthrow of the powerful house of Douglas. James was accidentally killed by the burzing of a cannon at the siege of Roxburgh Castle (August 3, 1460). James III was not quite eight years of age when he succeeded to the kingdom, which was again subject to ali the trenbles of a minority. In 1467 the young king married Margaret, daughter years of age when he succeeded to the kingdom, which was again subject to all the tronbies of a minority. In 1467 the tronbies of a minority. In 1467 the ting possession of the queen, and renewing young king married hiargaret, daughter the old league with France. The consection of the Norse king Christian, and in the guence was war with England, when the whole of a pledge of payment of her dowry was devastated, and the Scotlish army given up to Scotland, of which they defeated at Pinkie (1547). In the following ever since formed a part. James lowing year Mary was sent to France, seems to have been a man of culture, but her mother filling the regency. In 1588 was married to the dauphin, who confederation against him was formed by succeeded to the throne the following a number of his nobies in 1488; the year, but died in 1560. Mary then reforces met at Sauchieburn, near Stirling, the time to Edward, son of Henry VIII, was defeated by a party of the nobies getting possession of the queen, and renewing was defeated by a party of the nobies getting possession of the queen, and renewing was defeated by a party of the nobies getting possession of the queen, and renewing was defeated by a party of the nobies getting possession of the queen, and renewing was defeated by a party of the nobies getting possession of the queen, and renewing was defeated by a party of the nobies getting possession of the queen, and renewing was defeated by a party of the nobies getting possession of the queen, and renewing was defeated by a party of the nobies getting possession of the queen, and renewing was defeated by a party of the nobies getting possession of the queen, and renewing was defeated by a party of the nobies getting possession of the queen, and renewing was defeated by a party of the nobies getting possession of the queen, and renewing was defeated by a party of the nobies getting possession of the queen and renewing was defeated by a party of the nobies getting possession of the queen to get in getting possession of the que

Robert designed to send him to France; where the royal army was defeated, and but the ship in which he was being conveyed was captured by the English, a misfortune which is thought to have had a great effect in hastening the king's death (1406).

James I being then only eleven years old when he ascended the throne. In 1503 he married Margaret, daughter of Henry VII of England, and thus nevel the way for the future union. thus pavel the way for the future union of the two kingdoms. During the early part of the reign of Henry VIII James was induced to espouse the French cause and to invade England. This disastrous campaign ended in the total destruction of his splendid arms his own death and of his splendid army, his own death and that of most of the nobles who accompanied him, at Fiodden Field (September

9, 1513).

The king's death plunged the nation then in his seventeenth year, managed to

escape to Stirling, take the government into his own hands, and drive Angus into England. His alliance was sought hy England, France, and Spain, and in 1537 James married Madeleine, daughter of Francis I. The young queen died a few weeks after her arrival in Scotland, and in the following year James married mary of Lorraine, daughter of the Duke of Guing. His refusal to throw off his allegiance to Rome at the request of Henry VIII of England led to a declaration of war on the part of the latter and the defeat of the Scote at Salvare and the defeat of the Scots at Solway Moss, in 1542. A few days afterwards James died, having just received tidings of the birth of his daughter, the future

Mary Queen of Scots. The eventful period which followed the accession of Mary was dominated by the Reformation movement, and the questions affecting the Union of Scotland and England. A scheme to affiance the young queen to Edward, son of Henry VIII,

The result was a series of disturbances between the opposing parties, but Mary's reign was popular up till her unfortunate marriage with Darniey in 1565. Moray, who opposed the marriage, had to fly, and was henceforward her enemy. The marriage was unhappy. Darnley was murcared by the Earl of Bothwell and his servants, but whether Mary was accessory to the murder is yet a matter of controversy. Yet she married Bothwell within three months, and allenated the greater number of her subjects. A confederacy was formed against her, and after a vain show formed against her, and after a vain show of resistance at Carberry Hill she surrendered, and was imprisoned in Lochleven Castle, where she was forced to abdicate in favor of her infant son, and commit the regency to Moray (1567). In May next year she escaped, and raised an army, which was met by Moray and the Protestant nobles at Langslde, near Glasgow, and was defeated. Flying to England Mary put herself under the protection of Elizabeth. Here she drops from Scottish history, but her after-life till her execution in 1587 was a continual series of plots to regain her iost throne.

James VI, the son of Mary, being a mere child, Moray held the regency of the kingdom, conducting lts affairs with a wise and firm hand, till February 26, 1570, when he was shot in the streets of Linlithgow by Hamilton of Bothwellhaugh. His death was followed by a succession of regents—Lennox, Mar, and Morton—hy great disorders in

James VI, the son of Mary, being a mere child, Moray held the regency of the kingdom, conducting its affairs with a wise and firm hand, till February 26, 1570, when he was shot in the streets of Linithgow by Hamilton of Bothwellhaugh. His death was followed by a succession of regents—Lennox, Mar, and Morton—by great disorders in the kingdom, and a war between the parties of the king and queen. On the death of Elizabeth, in 1603, James succeeded as the nearest heir to the English throne through his descent from Margaret, daughter of Henry VII and wife of James IV. He was crowned at Westminster, and assumed the tile of King of Great Britain, France, and Ireland.

There were seven Scottish Parliaments

There were seven Scottish Parliaments cailed by James after his accession, wherein he was represented by a commissioner sitting as president. His chief energies were directed to an attempt to draw England and Scotiand into a closer union by means of harmonising the laws of the two countries, and by establishing episcopacy in Scotland. In furtherance of the latter object he visited Scotiand in 1617 for the only time after the union of the crowns. There were many acts passed for promoting trade and commerce, and the nation about this time

Dundee, and St. Andrews to Falkland Palace. This royal progress alarmed the republican council of state at Whitehall, and a force under Cromweil was despatched to stop it. General David Leslie marched to meet Cromweil, but was defeated at Dunbar (September 3, 1650). Notwithstanding this defeat, into England. Cromweil followed, and a force under Cromweil was defeated at Dunbar (September 3, 1651), and immediately marched into England. Cromweil followed, and a force under Cromweil was defeated at Dunbar (September 3, 1650). Notwithstanding this defeat, into England. Cromweil was defeated at Dunbar (September 3, 1650). seems to have been which with a mania for colonization, as many thousands of the inhabitants left their native land for the Irish province of Ulster, or the more distant shores of Nova Scotia. James VI died in 1625, and was succeeded by his son, Charles I, then in the twenty-fifth year of his age.

Foreign wars and domestic troubies prevented Charles from visiting Scotland till 1633, when he was crowned at Edinburgh. The church was now entirely governed by the blshops, and civil affairs managed by the privy-council. At the outbreak of the civil war in England, Scotland took the part of the parliament against the king, the Solemn League and Covenant being entered into between the Scottish Presbyterians and the English parliament (1643). A Scottish army entered England under Alexander Leslie, earl of Leven, and was of considerable assistance to the parliamentary forces at Marston Moor and elsewhere. Meanwhile Montrose overran the country with his wild Highland and Irish army, till his career was cut short by General David Leslie at Philiphaugh in 1645. The affairs of the king becoming hopeless in England, Charies gave himself up to the Scottish army posted before Newark May 5, 1646, and was surrendered to the English parliament January 30, 1647, on payment of the arrears of pay of the Scottlsh troops.

After the execution of Charles (Jan. 30, 1649) the Scots proclaimed his son king, under the title of Charles II. The young king was then in Holland, and certain commissioners were sent over from Scotland to inform him that the governing body were willing to espouse his cause if he should take the Covenant with its companion testimonies, and engage to do his utmost to enforce the whole Covenanting system over England and Ireland. This Charles agreed to do, and he was invited over to his northern kingdom. He arrived in Scotland, landing at the mouth of the Spey, July 3, 1650, and marched southwards by Aberdeen, Dundee, and St. Andrews to Falkiand Palace. This royal progress alarmed the republican council of state at Whitehall, and a force under Cromweil was despatched to stop it. General David Leslie marched to meet Cromweil, but was defeated at Dunbar (September 3, 1650). Notwithstanding this defeat, Charles was crowned at Scone (January 1, 1651), and immediately marched into England. Cromweil followed, and at Worcester utterly scattered the royalist force, and compelled Charles to become a fugitive (September 3, 1651).

nania

ds of d for more lames by his r-fifth Cromwell returned to Scotland and in in Scotland, a fact much to the satisfac-part reduced it, leaving Monk to complete the work. This was brought about by the sack of Dundee in 1653 and other severe measures. Cromwell's death was to Queen Anne, sister of Mary. In 1703 soon followed by the fall of his son, the parliament of Scotland issued a dec-monk's march to London at the head of iaration which intimated a purpose, in

the army, and the restoration of Charies II (1660).

The Scottish pariiament assembled under the Earl of Middleton, the king's commissioner, January 1, 1661, and it soon became apparent that Charles was determined to carry out the favorite determined to carry out the favorite scheme of his father and grandfather, of establishing Episcopacy in Scotiand. This endeavor to establish Episcopacy was violently opposed, and led to a cruel persecution, which lasted with more or less severity during the whole of the reign of Charles. Hundreds were executed on the residuent warm fixed. terian ministers returned to their charges; and the continued persecution of the strict Covenanters, one of whose ministers, Renwick, the last of the Covenanting martyrs, was executed at Edinhurgh in 1688.

At the Revolution a convention of the Estates at Edinburgh proclaimed William, prince of Orange, James's son-in-law and nephew, and his wife Mary, James' daughter, king and queen of Scotiand. Ciaverhouse, now Viscount of Dundee, raised an army of Jacohites, but his death of Killiamentia (1689), page 1889. at Killiecrankie (1689) pnt an end to the rising. Religious freedom was again restored, and in 1690 a General Assembly of the Preshyterian church again met. The reign of William III was marked by two events which rendered him generally unpopular in Scotland and transfered the cause of the Inschizer. strengthened the cause of the Jacobites, as the party which still adhered to James

case of the demise of the crown, to appoint a different sovereign from the English king, and the iii-feeling between the two countries grew so strong that English statesmen became convinced that English statesmen became convinced that an incorporating nnion was essential for the peace of the two countries. A joint-commission was appointed to draw up articles of nnion in 1706. The Scottish parliament met to consider the articles, which encountered a strong opposition, headed by the Duke of Hamilton, and strongly backed up by the bnik of the people. A majority of the parliament, however, carried the measure (January 16, 1707); it received the royal assent (March 4); and the Union took effect (May 1). The chief provisions of the Act of Union were: (1) That the two kingdoms should be united under the reign of Charies. Hundreds were executed on the scaffold, others were fined, imprisoned, and tortured; and whole tracts of the country were placed under a military despotism of the worst description. (See Covenanters.) In 1679 a body of royal troops under Graham of Claverhouse was defeated by a force of Covenanters at Drumclog. Six weeks later the Covenanters were defeated with terrihie slaughter at Bothwell Bridge. Charles died in 1685, and was sneceeded by his hrother, James VII of Scotland and II of England. The chief events of his reign, so far as Scotland was concerned, were the rising, defeat, and execution of Argyle; the declarations of indulgence by which many of the Presbyterian ministers returned to their own laws and constoms relating to propown laws and customs relating to propown laws and enstoms relating to property and private rights, and also the Court of Session and other Scotch courts; (6) that ail the rights of trade, free intercourse, and citizenship should be the same for Scotch and English subjects. Thenceforth the general history of Scotland may be said to be entirely identified with that of England. See

Language and Literature.— Down to the fifteenth century the term Scottish language meant the Gaeiic or Ceitic tongue; the language of Lowiand Scotland being iooked upon as English, which indeed it was and is—Northern English, with certain peculiarities of its own. The term Scottish came to be applied to it as possessing these peculiarities, and as having a somewhat distinctive literary use. This language has been divided into three periods. During the carly paried extending to near Il was called. These were the massacre of Giencoe (see Glencoe, Massacre the end of the fifteenth century, there was
of) and the nufortunate Darien expedition (see Darien Scheme), but the Scotland and that of England north of
reign closed without any serious rising the Humber. In the middle period, which

according to locality.

The Sir Tristrem, a metrical romance, doubtfully attributed to Thomas the Rhymer, is by some regarded as the earliest piece of Scottish literature, and is generally accounted the earliest specimen of romance poetry in Britain (end of the thirteenth century). But the first undoubted specimen of Scottish literature is The Bruce of Barbour (about 1375; see Barbour). Between 1420 and 1424 was written Wyntoun's Oryginale Cronykil of Scotland, and about 1460 Henry the Minstrel, commonly cailed Blind Harry, did for Wallace what Barbour had done for Bruce. Another of the poets of this early period is no less a personage than James I (1394-1437), author of the King's Quhair. Christis Kirk of the Grene and Peblis to the Play, long believed to have been productions of is generally accounted the earliest specilong believed to have been productions of James, have to be attributed to some other early poet. Down to the middle other early poet. Down to the middle of the sixteenth century four names stand out prominently, viz., Henryson, Dunbar, Gavin Douglas, and Sir Davld Lyndsay (which see). Minor poets of this period were Walter Kennedy, Sir John Rowli, Quintan Shaw, and Patrick Johnstone. In 1536 John Bellenden, archdeacon of Moray, published the History and Croniklis of Scotland, a translation of Boece's Historia gentis Scotorum, which was also versified by William Stewart, a descendant of the first earl of Buchan. The anonymous Complaynt of Scotland The anonymous Complaynt of Scotland (1548) is of value as preserving the titles of several popular pleces of contemporary ilterature now lost, and as a piece of early prose. A century and a half now elapse without any eminent Scottish poet, the names that appear being of minor note. David's, St. Asaph, Bangor, Salisbury, In the third period of the language, when it had become a provincial patols, the first notable name is that of Ailan Ramsay tion of our Ancient Churches (1850); (1686-1758), author of The Gentle Shepherd, and of numerous shorter pleces and songs. To this same age believes and songs. To this same age believes also nearly the whole of that remarkable body of song known as the Jacoblte minstreisy. The Scottish ballads, ever since the publication of Percu's of the thirteenth century, of whose hiswithout any eminent Scottish poet, the lads, ever since the publication of Percy's of the thirteenth century, of whose his-Reliques, have engaged much attention, tory nothing is certainly known, except and have been carefully collected and that after his return from the Conti-

extended to the Union, it was influenced illustrated by Sir Walter Scott and other in a slight degree by the Gaelic, and editors. The list of the more prominent in a more pronounced manner by French successors of Ramsay is closed by the and Latin, consequent on the French alliance and the revival of learning. For the Scotchmen who have won an honorable place in England, section Literature.

Literature.

Scott, DAVID, historical painter, born at Edinburgh in 1806; died in 1849. His father was a landscape engraver. In 1828 he exhibited his first picture, The Hopes of Early Genius Dispelled by Death. He subsequently studied abroad, and while at Rome painted one of his best works, The Household Gods Destroyed. Having returned to Edinburgh he continued the practice of his art, and became a regular contributor to the exhibitions of the Scottish Academy, producing Vasco de Game Encountering the Spirit of the Storm at the Cape; Queen Elizabeth at the Globe Theater; Puraceleus Lecturing to His Students on the Elizir of Life; Duke of Gloucester Carried to Prison (Scott's finest work); and many others.

Scott, grandson of Thomas Scott, the biblical commentator, was born at Gawcott, near Ruckingham in 1811. biblical commentator, was born at Gawcott, near Buckingham, in 1811; died in 1878. His tastes drew him died in 1878. His tastes drew him mainly to the study of Gothic architecture, and to him is due in a great measure its revival in Great Britain. He was very largely employed in the erection of new churches, colleges, and secular public buildings, prominent among them being the church of St. Nicholas at Hamburg, the first important specimen of the Gothic revival erected in Germany, and the spire of which is 478 feet high. Sir Gilbert was specially identified with the process termed restoration, which he applied to many important minsters and churches, such as the cathedrais of Ely, Lichfield, Hereford, Ripon, Gloucester, Chester, St. David's, St. Asaph, Bangor, Sallsbury, and St. Albans. In this connection he wrote a Plea for the Faithful Restorather

nent he received the honor of knighthood from Alexander III, by whom he was confidentially employed, and that he died at an advanced age in 1291. He must have been a man of considerable learning for his time, and being addicted to the study of the occult sciences passed among his contemporaries for a magician, and as such is mentioned by Boccaccio and Dante. He is generally identified with a Sir Michael Scott, or Scot, of Balweary, in Flifeshire, but this is at least open to doubt.

MICHAEL, author of Tom Crin-Scott, Midge, was born at Glasgow In 1789, and was educated at the high school and uni-

was educated at the high school and university of his native city; resided in Jamaica, engaged in commerce and agriculture, 1806-22; and finally settled in Scotland. He died in 1835.

Scott, ROBERT FALCON, polar explorer, born at Outlands, Devonport, England, in 1868; entered the navy in 1882. Made commander in 1901, he commanded the National Antarctic Expeciation of 1901-04; was promoted cantage. dition of 1901-04; was promoted captain, and in 1910 commanded the British Antarctic Expedition, sent with the hope of completing the work of Captain Shackleton. He reached the pole on January 18, 1912, only to find that Amundsen had preseded him. He and the four of his men ceded him. He and the forr of his men who accompanied him to the pole perished

who accompanied nim to the pole perished on the return trip.

Scott, THOMAS, an English bihitical commentator, was born in 1747. He was ordained in 1773; in 1781 he became curate of Olney; in 1785 he obtained the chaplainship of the Lock Chapel, near Hydepark Corner, London; and in 1801 he was appointed rector of Aston Sanford, in Buckinghamshire, where he died in 1821. He imblbed Calvinistic views, in the defense of which. where he dred in 1821. He imbled Cal-vinistic views, in the defense of which, both from the puiplt and the press, he greatly distinguished himself; hut he is now remembered chiefly by his Com-mentary, or Family Bible with Notes, which has had a very large sale both in

which has had a very large sale both in England and America.

Scott, Thomas Alexander, railroad manager, was born at Loudon, Pennsylvania, in 1834, and became connected with the Pennsylvania Railroad in 1850. He was made superintendent in 1858, vice-president in 1859, and in 1861 was put in charge of forwarding volunteers to the seat of war. He wild commissioned colonel of volunteers in May, 1861, and put in command of all government railroads and telegraphs, and in August was appointed assistant secretary of war. He resigned this post in June, 1862, but entered the government

service again in September, 1863, giving excellent service in the forwarding of troops. He was president of the Pennsylvania Railroad, 1876-80 and died May 21, 1881.

Scott, Sir Walter, Bart., poet and novelist, was born in Edinburgh, August 15, 1771. He was a younger son of Walter Scott, writer to the signet, hy Anne, daughter of Dr. John Rutherford, professor of medicine the University of Edinburgh, both in the University of Edinburgh, both connected with old Border families. Before he was two years old his right leg was attacked with weakness, which left him lame for life, and generally as a boy his health was not robust. He appeared the high robust of Edinburgh in entered the high school of Edinhurgh in 1779, and in October, 1783, he was matriculated at the University of Edin-burgh, where he studied Latin under Professor Hill, Greek under Professor

Sir Walter Scott.

Dalzell, and logic under Professor Bruce; hut neither at school nor at college did he manifest any special hrilliance. He was not idle, however, being a voracious reader from his earliest years, especially in the fields of ballad literature, romance, and history, and he acquired a fair acquaintance with modern languages, French, Italian, and Spanish, and even with German, a knowledge which was in that day not common. At the age of sixteen he commenced in his father's office an apprenticeship to legal business, and in 1792 he was admitted a member of the Scottish bar (the Faculty of Advocates). In 1797 he married a Miss Charpentier, the daughter of a French refugee; in 1799 he was appointed sheriff of Selkirkshire, a situation te which an income of £300 was attached;

popular. In 1808 he published Marmion, another poetic romance which greatly increased his reputation; and in 1810 the Lady of the Lake, in which his poetical genlus seems to have reached the acme of its powers. His subsequent poetical productions—The Vision of Don Roderick (1811), Rokeby (1812), The Bridal of Triermein (1813), The Lord of the Isles (1815), Harold the Dauntless (1817), Halidon Hill (1822), The Auchindrane Tragedy (1830), and The Doom of Devoryoil (1830)—did not attain the same success. On the decline of his popularity as a poet he turned of his popularity as a poet he turned his attention to the prose romance, for which the greater part of his early life had been a conscious or unconscious preparation. The appearance of Waverley, in 1814, forms an epoch in modern literature as well as in the life of Scott. This romance or novel was rapidly fol-This romance or novel was rapidly followed by numerous others, forming, from the name of the first, the series known as the Waveriey Novels. The earlier of these were Gay Mannering (1815), The Antiquary, The Black Dwarf, Old Mortality (1816), Rob Roy (1817), The Heart of Midlothian (1818), The Bride of Lammermoor, A Legend of Montrose, and Ivanhoe (1819). These splendid works of fiction, which surprised and enchanted the world, it is held by most, mark the high tide of his genius, those which foliow being piaced on

and in 1806 he became a principal cierk of the Court of Session, although by arrangement with his predecessor he did not receive the full emoluments of his the Canongate, The Fair Maid of office, about £1200, till the death of the Canongate, The Fair Maid of office, about £1200, till the death of the Canongate, The Fair Maid of office, about £1200, till the death of the Perth (1829), Anne of Geierstein latter in 1812. His first ventures in literature were a translation of Bürger's Castle Dangeroue (1831). The Wav-Lenore, and Der wilde Jäger ('The Wild Huntsman'), which he published in a small quarto volume in 1796; then followed the bailads of Glenfinlas, The Eve of St. John, and the Gray Brother; a secret to many. Meanwhile he performed an amount of misceilaneous literary work which would have been also for the last Minstrelsy of the Ecotish Border in 1802-03 (3 vois.); most more than enough for any other man and edition of the oid metrical romance of Six Tristrem in 1804. In 1805 he became prominent as an original poet with the Lay of the Last Minstrel, an extended specimen of the bailad style, which fell upon the public as something entirely new, and at once became widely popular. In 1808 he published Marmion, another poetic romance which greatly increased his reputation; and in 1810 the Lady of the Lake, in which his poetical genlus seems to have reached the acme of about 100 acres, lying on the south of the Dwerk. His subsequent poetical bank of the Tweed, 3 miles above Meiof about 100 acres, iying on the south bank of the Tweed, 3 miles above Meirose, upon which was a small and inconvenient farm-house. Such was the nucleus of the mansion and estate of Abbotsford. By degrees, as his resources increased, he added farm after farm to his domain, and reared his chateau turret after turret, till he had completed what a French tourist not unaptly terms 'a romance in stone and lime'; clothing meanwhile the hills behind, and embowwoods of his own pianting. It was here that he dispensed for a few years a spiendid hospitality to the numerous visitors whom his fame drew from every part of the civilized world. In 1820, when he was made a baronet by George IV who was a great admirer of his IV, who was a great admirer of his genius, he reached the senith of his fame genius, he reached the zenith of his faint and outward prosperity. But this prosperity was founded on no solid basis, and the crash came in 1826, when Constable & Co., the Edinburgh publishers, were obliged to suspend payment, hopelessly involving Ballantyne & Co., with whom it then appeared Scott have splendid works of fiction, which surprised and enchanted the world, it is held by most, mark the high tide of his genius, those which follow being piaced on a somewhat lower level, although there are several, especially in the second period, up to 1825, in which no failing-liberal offers of assistance were made to off is perceptible. His are several, especially in the second the trial with strength and dignity. Liberal offers of assistance were made to £130,000. His are several provided to £130,000. Within a few years he was able to pay his creditors £40,000, and to put things in such shape that soon after his death the whole debt was liquidated. Symptoms of gradual paralysis, a disease hereditary in his family, began to be manifested, and in the autumn of 1881 his physicians recommended a residence. his physicians recommended a residence in Italy as a means of delaying the approaches of his illness. To this scheme he feit the strongest repugnance, as he feared he should die on a foreign soil; but by the intervention of friends he was prevalled upon to comply. He sailed in a government vessei from Portsmouth, landed at Napies, and afterwards proceeded to Rome, Tivoli, Aibani, and Frascati. Feeling, however, that his strength was rapidly decaying, his devire to return to his native land became irrepressible, and he hurried became irrepressible, and he hurried home with a rapidity which in his state of heaith was highly injurious. He reached Abbotsford in July, 1832, and died there September 21, 1832. He was interred in his family buriai aisle amid the ruins of Dryburgh Abbey. His life was written by his son-in-law, John Gibson Lockhart, a work which has taken the position of a a work which has taken the position of a classic.

practiced. Entering the army, he served with distinction in the war of 1812-14, Canada, and in the batties of Chippewa and Lundy's Lane. For his eminent services he was made major-general and received thanks and a gold medal from Congress. He afterwards visited Europe, and studied military science at Paris. In 1832 and the following years General

Scott was employed in operations against the Indian tribes, and in 1841 he was appointed commander-in-chief. His fame rests upon his brilliant conduct of the rests upon his brilliant conduct of the Mexican war of 1846-47, in which he invaded Mexico, capturing Vera Crus, winning a series of victories during his march inland, and finally capturing the Mexican capital and concluding an advantageous peace. He was nominated for the Presidency by the Whig party in 1852, but was defeated by the Democratic candidate. In 1855 the honorary mark of itenternant-general was conferred rank of ileutenant-general was conferred upon him, with the provision that the title should cease at his death. At the outbreak of the Civil war he remained at the head of the army, but age and infirmities prevented his taking any actual command, and he retired in November, 1861, under fuil pay. He published his autobiography in 1864, and died at West Point, May 29, 1866.

classic.

Scott, William Bell, brother of David Scott, the painter, and himself a painter, etcher, engraver, archeologist, and poet, was born at Edinburgh in 1811. He received his art training in Edinburgh and removed to London in 1836. In 1844, at the request of the Board of Trade, he established a school of art at Newcastle-on-Tyne, and was until 1885 art examiner under the Education Board. His published poems include: Hades (1838), The Year of the World (1846), Poems by a Painter (1854), Balluda, etc. (1875), and Harvest Home (1882). Other works are: Antiquarian Gleanings; Loctures on Art; Albert Dürer, His Life and Works; The Little Mastery; Life and Works; The Little Mastery; Life and Works; The Little Mastery; Life and Works; The Scott; etc. He died in 1890.

stone, wood, or metal to separate dif-ferent parts of the building, as the nave or an aisle from the choir, or a private chapel from the transept. The term is chapel from the transept. The term is applied to a partition extending across the lower end of a medieval hall, forming a lobby within the main entrance doors, and having often a gallery above; also to a decorated wall inclosing a courtyard in front of a building. The word has also a general use as a promoter of privacy, aside from its architectural one.

Screw (akrō), a wooden or metal cylinder having a spiral ridge (the thread) winding round it in a uniform manner, so that the successive turns are all exactly the same distance from each other, and a corresponding from each other, and a corresponding spiral groove is produced. The screw forms one of the six

Hunter's Screw-press.

mechanical pow-ers, and is simply a modification of the inclined plane. The energy is transmitted by means of a hollow cylinder (the female screw) equal diameter with the solld one (the male screw), having a spiral channel cut on its lnner surface so as to correspond

one will work within the other, and by turning the convex cylinder, while the other remains fixed, the former will pass through the latter, and will advance every revolution through a space equal to the distance between two contiguous turns of the thread. As the screw is a modification of the inclined plane it is not difficult to estimate the machanical and the continued of the inclined plane. difficult to estimate the mechanical advantage obtained by it. If we suppose the power to be applied to the circumference of the screw, and to act in a direction at right angles to the radius of the cylinder, and parallel to the base of the inclined plane by which the screw is supposed to be formed, then the nower will be to the realistance as the power will be to the resistance as the distance between two contiguous threads to the circumference of the cylinder. But as in practice the screw is combined with the lever, and the power applied to

its head is furnished with a dependent the extremity of the lever, the law becreet of feathers.

Screen (akren), in ecclesiastical aras the distance between two contiguous chitecture, a partition of threads to the circumference described by threads to the circumference described by the power. Hence the mechanical effect of the screw is increased by lessening the distance between the threads or making them finer, or by lengthening the lever to which the power is applied. The law, however, is greatly modified by the friction, which is very great. The uses of the screw are various. It is an invaluable contrivance for fine adjustments such as are required in fine telescopes, microscopes, microscopes, ct. It is used for the application of great pressure, as in the screw-jack and screw-press; as a borer, in the gimlet; and in pressure, as in the screw-jack and screw-press; as a borer, in the gimlet; and in the ordinary screw-nall we have it em-ployed for fastening separate pieces of material together. The differential screw, or Hunter's screw, is formed of two screws, a larger and a smaller, the for-mer being screwed internally to allow the latter to screw into it; the pitch of the two screws differs slightly, and for each turn of the chief or larger screw the progress of the point of the compound screw is the difference of pitch. Great power is in this way attained without the weakness due to a screw with fine threeds. See also forces are with fine threads. See also Screw-pro-peller, Archimedean Screw, Endiese peller, Berew.

See Mesquite. Screw-bean.

Screw-pine (Pandanus), the type of an order of trees or bushes known as the Pandanaces or as to correspond Screw-pine order. They are natives of exactly to the spiral ridge raised situations, such as the Eastern Archiupon the solid cylpelago. They branch in a dichotomous
inder. Hence the or forked manner, and are remarkable for

olutions per minute. Either two or three barges and towing purposes. The usual position for the screw-propeller is immediately before the stern-post, as shown civil and coolesiastical scribes. The former mer were employed about any kind of keel into the engine-room, where it is set civil writings or records. The latter in rapid motion by the steam-engines. Studied, transcribed, and explained the This rotary motion in the surrounding Holy Scriptures. blades of this shape answer well for barges and towing purposes. The usual

finid, which may be considered to be in a partially inert condition, produces, accord-ing to the weil-known principle of the screw, an onward motion of the vessel screw, an onward motion of the vessel more or less rapid, according to the velocity of the shaft, the obliquity of the blades, and the weight of the vessel. In 1827 Mr. Wilson, of Dunbar, produced a screw-propelier which proved satisfactory, but the successful introduction of the screw-propelier is due to Mr. F. P. Smith and to Ericsson, who both independently and about the same time (1838) secured patents. Numerous modifications of the screw-propelier have been proposed and adopted since it was first introduced, and it has now practically superseded the paddie-wheel for sea-going vessels, and has come very generally into use for river paddie-wheel for sea-going vessels, and has come very generally into use for river traffic. Twin-screws have recently come into favor for use on the Atlantic liners; and even triple screws in some instances. For warships the screw-propeller is indispensable, as a protection to the motive power of the vessel.

Scribe (skreb), Augustin Eughne, at Paris in 1791; died in 1861. His father was a silk merchant, and bequeathed to his son a considerable fortune. Young Scribe was originally intended for

Young Scribe was originally intended for the legal profession, but at the age of the legal profession, but at the age of twenty he abandoned it for the more congenial occupation of a writer for the stage. His first distinct success was achieved in 1816 with Une Nuit de Gerde Nationale, and thenceforward his pen was never idle. His dramatic pieces comprise all the departments of the lighter kindof drama, and from their gayety and interest of piot, as well as the felicitous manner in which modern French life is depicted in them, have acquired a universal popularity over the European continent, and have also been introduced on the English and American stare in the form of translations or adaptation. Two of the best known among them, after the first successful one, are Le Verre d'Ess ('Glass of Water') and Adrienne Leconvreur. As an opera librettist Scribe is also deservedly famons, having supplied several composers, especially Anber and Meyerbeer, with the text of the most celebrated of their works. His works, frequently collaboration frequently collaborations, number several hundreds. In 1838 he was admitted a member of the French Academy.

Scrip (skrip; abbreviation of subscription), a certificate of loans or consumption. Scrotula is also called shares in a joint-stock company, forming a temporary acknowledgment of the holder's interest, and indicating the amount and date of each installment of the total subscribed or to be subscribed by him, the scrip being finally exchanged for a definite share certificate or bond.

tubercle in the glandular and bony tissues, and in reality a form of tuberculosis or consumption. It generally shows itself by hard tumors of the glands in vious parts of the body, but particularly in the neck, behind the ears, and under the chin, which, after a time, suppurate, and degenerate into ulcers, from which, instead of pus, a white curdled matter is discharged. The first appearance of the disease is most usually between the third and seventh year of the patient's age; but it may arise at any period between this and the age of puberty, after which it seldom makes its first attack. It is by no means a contagious disease, but is of a hereditary nature, and is often entailed by parents upon their children. It may, however, remain dormant through life, tubercle in the glandular and bony tissues. however, remain dormant through life, and not show itself till the next generation. The disease generally goes on for some years; and appearing at last to have exhausted itself, all the ulcers heal up, without being succeeded by any fresh swellings, but leaving behind them an agly puckering of the skin, and a scar of considerable extent. This is the most mild form under which scrofula appears. In more virulent cases the eyes and eyelids are inflamed, the joints become eral books about them. Died in 1911.

affected, and caries of the bones supervenes. Hectic fever at last arises, under
which the patient sinks; or the disease writer of romances, born at Havre in

d'Arrondissement Scrutin

(skrú-tan då-rön-dës-män), in France, the system of voting whereby each arron-dissement or district of a department re-turns its own member for parliament, each voter of the arrondissement having only one vote. Scrutin de Liste, on the other hand, is the system of voting whereby all the candidates for a department are put upon the same list and returned at the same election.

Scudder (skud'er), HORACE ELISHA, author, was born at Boston, Massachusetts, in 1838. He was graduated from Williams College in 1858, engaged in literary pursuits, and was editor of the Atlantic Monthly, 1890-98. He wrote a series of stories for children, Nosh Webster, Boston Toson, History of the United States, etc. He died January 11, 1902. Scudder, SAMUEL HUBBARD, natural-Scudder, ist, brother of the preceding, was born at Boston in 1837, and was graduated from Williams College in 1857. He wrote a work on Butterflies and many scientific papers and in 1883 became editor of Science. He gave special attention to fossil insects and wrote several books about them. Died in 1011

ted 02. alnav 57. nd beial evfigures in the literary circle of the Hotel Rambouillet at Paris, and acquired gradfame by her romances, Artandme on the Grand Cyrus, Ibrahim on l'Illustre Basse, Cidite, Almahide, and others of aimost interminable length, aimost entirely forgotten now, even by name. The secret of their great popularity at that time consists in this, that they were fairly representative of her age, being, in fact, the reflection of the society in which she moved. Her nominal heroes and heroines were classical or oriental personages, but the names of her characters were, in fact, only a transparent mask behind which her read as saw and read themselves. The interminable conversations and meaningles, a distanties which make her works dull it present were precisely what gave the minterest when all her characters and respected by those she portraved, by the evident they were flattered by het potraits. After the reunions at the hotel Rambouiliet had been broken up by the Rambouiliet had been broken up by the troubles of the Fronde, Midlle, de Scudérl opened her own house to a select society of similar tastes. She died in 1701.—Her brother, Geonges de Scudéri, was a writer of tragedles, etc., and an enemy of Corneilie. He was born in 1601; died in 1667.

Scudo (skö'dō; It. scudo, L. scutum, a shieid), an ancient Italian coin, the equivalent of a crown. It was named from its bearing the impress of the heraldic shieid of the sovereign by whom it was issued. The scudo was of different value in different states and at different times. The name is sometimes given to the piece of five iire or francs, nearly equivalent to the American dollar. Scull. See Rowing.

Sculpin (skui'pin; Cottus octodecimspinosus), a small seafish found on the Atlantic seaboard and
on the Pacific coast of America. The
gemmeous dragonet (Callionymus lyra)
is so-called by the Cornish fishermen.

Sculpture (skulp'tūr), the art of imsoild snbstances. The word means strictiy, a cutting or carving in some hard
material, as stone, marble, ivory, or
wood; but it is aiso used to express the
molding of soft substances, as clay or
wax, and the casting of metals or plaster.
The imitation of living form is alike the
essence of sculpture and of painting, and
both these arts are primarily for the use
and purposes of architecture. Sculpture
is distinguished from architecture by its
imitation of living form, and is separable

from painting by the mode of its expression. Scuipture may possess the rided element of color; but while its appeal to the sense its appeal to the sense its appeal to the sense its likely through color, sculpture concerns itself wholly with pure form, whether of the or composition.

of line or composition. Processes .- In producing a work of sculpture two processes are invoived, 'modeling' and 'casting,' the former aione being truly the work of the artist. For ornament and figure the same method is employed. In the former a ground of comployed. In the former a ground of the prepared, and upon it the lines of the owngment are lightly sketched, mally with tool. These are then ciothed upon ratly with important masser, then the connecting lines, and, lastly, the minor letail, the whole being afforwards model to the forms desired. Your a lead of that a flat board, set on a high strong will a piece of wood standling, it is angles to it, is used. Leadphing is sometimes further employed to make the height of this piece of wood, and around this structure the clay is roughly bar't up, a cylindrical mass for the neck, and an egg-shaped form for the bard. Upon this latter the position of leatures is marked, and the work carried on by reference to the living model. For a full-length figure an 'armature' is prepared, consisting of an iron passing through the center and attached to which are other irons in the case of statues, or of lead piping for statuettes. These are bent to the required positions, the whole when complete representing in line the pose and character of the intended figure. Upon and around this framework the figure is first roughly bulit up with ciay, care being taken to add just as much as is requisite, and to follow the general form and direction of the muscles. The essential difference between modeling and carving is that in the former the artist works from within outwards by the addition of mat viai, while in the iatter from without it ards by the taking away of materiai. Seculptor's work proper generally ends y ith the completion of the cler model. The rest process is ally cast in halves, and a similar treatment is adopted in the case of complete figures. This is termed 'piec: moiding.' represent human or natural beauty, but Parts which project very much are removed and cast separately, being afterwards attached by means of plaster of Paris. The reproduction of this plaster of Paris. The reproduction of this plaster of gradual and steady development. The cast in marble or stone is a mechanical operation, usually intrusted to a skilled often exquisite imitation of inanimals. operation, usually intrusted to a skilled workman. To aid him he employs a pointing machine, by which he first finds out the distance of any point on the cast from an imaginary vertical plane placed in front, and into the block of marble drills a hole whose depth from the same plane equals this distance. Innumerable holes are thus drilled, and the solid marble cut away until the bottoms of all the holes are reached. This gives the form roughly, and the carver proceeds to copy from the plaster cast, carrying on the work under the supervision of the sculptor, who rarely carves the rying on the work under the supervision of the sculptor, who rarely carves the work himself except in finishing touches. For casting in metal a plaster mold is first made as already described. Within this is fixed a rudely-formed, solid, but removable mass called a 'core,' the space between it and the surface of the mold being fixed with the molten metal. Another method for smaller work is called 'cire perdue.' In this the mold is lined with wax and the core inserted close up to the wax lining. The wax is then melted out and the molten metal poured into the mold to take its place, the core into the mold to take its place, the core being afterwards removed.

scuipture as a style, is inferior to that the temple of Egina, executed about 475 of Egypt. Its characteristics are an intense and vigorous spirit of representation without the least reference to ideal beauty of any kind. As compared with Egyptian work it is more realistic but less true. It is nowacful and approach. less true. It is powerful and energetic, but lacks grandeur; overladen with detail and ornamentation it does not attain to the sublime in its repose, nor to beauty In its repose, ner to beauty long and attentively. In its movement. Persian scuipture (560-331 B.C.) differs but little from fied without distorting human attributes, Assyrian, and is usually included with it. Roughly hewn and badly modeled, the force of the animal forms yet givet it a sense of the gigantic, analogous to that question of Greek art became only a a sense of the gigantic, analogous to that question of time. It came to perfection of Hercules, but withal possessing no the Parthenon at Athens (B.C. 438), and sense of ideal beauty. In the British

B.C., and now preserved at Munich, the B.C., and now preserved at hunch, the figures of the warrlors (see the casts in the British Museum) are no ionger of stiff conventional type, with attitudes correct but lifeless; there is energy and movement in their action, and a living truth of gesture only to be gained by artists who had studied the human form long and attentively. Upheld on the one hand by a noble mythology, that magnified without distorting human attributes, and supported on the other by an increas-

the period of the highest style of Greek art. The special character of the art that flourished at Athens nnder the rule of Pericles (fourth century B.C.), and by the all-potent hand of Phidias, consists in a perfect balance and combination of elements sublime and human. Sculpture had reached that point when a faultless imitation of nature was within its reach, but it had not yet shandaned its smirling. but it had not yet abandoned its spiritual connection with a spiendid mythology. We have therefore, in the sculpture of this period, the highest type of human beauty joined to a god-like calm and reticence of emotion. Examples of the grand style of this epoch are the sculptures of the Parthenon; the colossal bronze head of Artemis in the British Museum; the

misia over the remains of her husband Mausolos, prince of Caria, B.C. 352. These sculptured decorations, now in the These sculptured decorations, now in the British Museum, present in the designs for the frieze, depicting a battle between Greeks and Amasons, an invention of graceful and energetle movement, and a record of rapid and violent gesture such as clearly distinguish the work from that which it succeeded. The works of Praxiteles are especially valuable as expressing a tenderness of feeling which this new and closer sympathy with human emotions had developed. He is known to us chiefly through copies of his works, or of the works of his school, the most celebrated of which are preserved in the Vatican; but the sweetness and delicate

in Greece. It was Greek art produced by Greek workmen that adorned the pai-aces of the emperors; and the Roman sculptors, in so far as they had any inde-

pende, it existence, can only claim to have impoverished the ideal they received from Greece. Many of the best-known statues in existence were produced in the Greece. Roman period; as the Borgheas Gladiator in the Louvre, the Venus de Medici at Florence, and the Farnese Heroules at Naples. From the time of Hadrian (A.D. 138) art rapidly declined, and this debased Roman was the only style employed in Italy until the revival in the twelfth century. This revival of sculpture began with Nicola Pisano, who was born at Pisa about A.D. 1206, and whose work is preserved in the pulpits which he carved at Pisa and Siena. He was followed by his son Glovanni Pisano (2nd 1320), whose great work is the allegories. The carry of the classical revival which spread to the classical revival which spr

Flazman.

Jacopo dena Quercia classic lines. (1874-1438), whose beautiful reliefs adorning the façade of the Church of San Petronia at Bologna show a feeling for grace not before expressed, was the founder of the modern school. Lorenzo Ghiberti (1881-1455) developed a more plctorial style with extraordinary success; but sculpture awalted the advent of Donatello (1386-1468) in order to find its true direction and to reach its full triumph. His marble statue of St. George, in the church at Or San Michele in Florence, is one of the very finest works of renalssance sculpture. Luca works of renaissance sculpture. Luca della Robbia (1400-81), and Andrea Verrocchio (1432-88), the master of Leonardo da Vinci, may also be named. The special tendencies of Italian sculpture may be said to have reached their full expression in the work of Michael Angelo (1475-1564). Here we see all previous efforts to interpret passion and feeling summed up and concluded. His figures are charged with all the possibilities of human experience and amount of the passion human experience and emotion. It was towards this complete understanding of the resources of physical expression that all Italian art had been tending, and it

ls only more fully exhibited in Michael Angelo because he was the greatest master that Italy produced. works are the statues in the chapel of the Medici at Florence, the Cap-tives in the Louvre, the colossal David at Flor-ence, the Moses

thence throughout Europe. The leading spirit in this movement was Cauova (1757-1822), who, although he failed to restore to his art its earlier masculine strength, at least sought in the study of the antique for greater simplicity and elegance in representation. Canova's most finished productions are notable for an affectionate tenderness of sentiment rather than imagination, and his figures are never formed after the highest ideal. But within the narrower limits of his style he produced much that is graceful, and he combined in a manner peculiar to himself a reminiscence of antique grace, with a feeling entirely modern and almost domestic in its tenderness. His most characteristic works are the Graces, the Hebe, and the Cupid and Psyche (ali well known), but his finest work is the colossal Hebe, and the Cupid and Psyche (all well known), but his finest work is the colossal group of Theseus Slaying a Centaur at Vienna. Canova formed Thorvaldsen, Drake (1802-65), Bandel (1800-76), and Vienna Canova formed Thorvaldsen, Drake (1805-82). Schlilling is the most the great Danish sculptor, and his name and influence dominated the art of scuipture throughout Europe for many years.

His pupils were Tenerani and Glacomettl, and among later sculptors occur the England.—Of examples of sculpture executed before the eighteenth century ture throughout Europe for many years. His pupils were Tenerani and Glacomettl, and among later sculptors occur the names of Bartollni and Dupré. Italian sculpture of to-day has a strong bias towards realism, the chief exponents being Monteverde and Gallori, Magni and Barzaghi, though Consani, Albani, and Fedi form exceptions.

England.—Of examples of sculpture executed before the eighteenth century England possesses very few. Several notably Wells, Exeter, and Lincoln, possesse figures executed presumably by Englishmen at an earlier date. It is not, however, until the reign of Charles I that rames of artists appear notably among sculpture of to-day has a strong bias towards realism, the chief exponents being Monteverde and Gallori, Magni and Barzaghi, though Consani, Aibani, and Fedi form exceptions.

consors of the renaissance Bouteillier and Colombe (1431-1514), and in the sixteenth century Jean Goujon (1530-72), whose best work is the Fountain of the land shows all the faults and beauties of the style. Cousin (1501-89), Pilon (1515-89), P among living artists are St. Marceaux, Frémiet (animai), Falguière, Mercié, Gibson (1791-1866), a pupil of Cantola, Daiou, Rodin, and Duhols (monument more properly beiongs to the Italian than of General Lamoricière), who form a the English school, his whole artistic life school which is the foremost and most works are Psyche Borne by Zephyra, the

Germany.— There was no early school of German apart from the general Gothle style of all northern European countries, but with the renaissance of the fifteenth century arose Adam Krafft (1480-1507) and Peter Vischer, two contemporary sculptors of Nuremberg, and Albert Dürer (1471-1528), painter and sculptor. Then came a hreak until the rise of the modern school, which owes its existence to the influence of Thorvaldsen. The chief names are Dannecker (1758-1841), with his Ariadne and Schadow with Girl Tying Her Sandal (1764-1850). Ranch (1777-1857) was the real founder of the modern school. His monument to Fred-German school. His monument to Frederick the Great at Beriin, with its many accessory figures, is his finest work, and

Fedi form exceptions.

France.—The early art of France was infinenced by the then prevailing styles. Thus the aculptures of her cathedrals show Byzantine, Romanesque, and Gothic Infinences, the finest examples in this iast being at Amiens. Awakening in the school which produced Banks and Flax-fifteenth century it produced as precursors of the renaissance Bouteillier and in the six-appear, notably among them being Nicholas Stone (1586-1647), who definiting Gibbons (1648-1721), who was the first real artist of the English school. Cibber may be mentioned, but Joseph Wilton was the forerunner of the school which produced Banks and Flax-fifteenth century it produced as precursors of the renaissance Bouteillier and of ideal English sculpture, but died uncomposed (1431-1514), and in the six-appear. most famous pupil was Baily (1788-1867), whose Eve at the Fountain is much admired. Sir Francis Chantry (1788-1841) worked chiefly on portrait figures and busts, and Sir Richard Westmacott (1799-1856) on monuments. John Gibson (1791-1866), a pupil of Canova,

tendency of sculpture in England at the present day is towards a more original and naturalistic treatment. Alfred Stevens (died 1875) is the author of the finest decorative work in England, the monument of the Duke of Wellington in St. Paui's, London; and among the more distinguished of iiving men are Woolner, Roehm, Thornwordft, Gilbert, Brock and Boehm, Thornycroft, Gilbert, Brock and Leighton, whose works, with those of some younger men, go far to give English scuipture a high place.

United States.—Among earlier sculp-

tors Powers and Crawford hold commanding positions. Powers' Greek Slave represents a high type of beauty. Among his more important works are Il Penseroso, Proserpine and the Fisher Boy. Crawford's equestrian statue of Washington, his Beethoven and the Peri at the Gate of Paradise have attracted much attention; the American Revolution as illustrated on the bronze door of the Capitol at Washington and the Statue of Liberty on the dome of the Capitol are also important. The Indian Chief and Orpheus and Cerberus have won admiration.
Horatio Greenough's Chanting Cherubs,
the Bunker Hill Monument and the
statue of Washington at the Nationai
Capitoi are noble works of art. Clevenger (1812-1843) and Henry K. Brown
(1814-1886), were artists of merit.
Akers (1825-1861) in his Pearl Diver exhibited his thorough knowledge of the principles of art and a strong imaginative faculty. Barthoiomew (1822-1858) pro-duced several classic and scriptural subjects in which he showed a rare natural talent. Story (h. 1819) hoids a conspicversatile, with a delicate and noble sentiment, his work is not strictly original, but is marked by careful finish. Jerusalem Lementing, Cleopatra, The Sibyl, and

Narciseus, Hylas Surprised, and a large relievo of Christ Blessing Children. The Hylas is now in the National Gallery. His introduction of color in statuary and statues of Napoleon and General raised much discussion. Foley (1818-Sedgwick. Rogers' 'groups' appeal to 75), whose chief work is the equestrian statue of General Outram, now at Caiseutta, and Patrick Macdowall (1799-tutta, and patrick Macd Warner are younger artists whose works reflect credit on American sculpture. Barnard's admirable symbolical groups for the Pennsylvania capitoi, at Harrisburg, rank among the ablest achievements of modern sculpture. Of women sculptures are the more tone in America can be more toned in Americans. tors in America can be mentioned Harriet Hosmer, whose Sleeping Faun and Zenobig bear marks of strong individuality. Emma Stebhins, Anne Whitney, Vinnie Ream Hoxle and Edmonia Lewis deserve permanent record.

Scuppers (skup'erz), channels cut through the sides of a ship at the edges of the deck to carry water

off the deck into the sea.

Scurvy (skur'vi), a disease of a putrid nature prevaient in coid and damp climates, and which chiefly affects sailors, and such as are deprived of fresh provisions and a due quantity of vegetable food. It seems to depend more on a defect of nourlshment than on a vitlated state; and not to be of a contagious nature. It comes on gradually, with heaviness, weariness and unwillingness to move about, together with dejection of applying considerable icon tion of spirits, considerable ioss of strength, and debility. As it advances in its progress the countenance becomes sallow and bloated; respiration is hurried on the least motion; the teeth become ioose; the gums are spongy; the breath is very offensive; livid spots appear on different parts of the body; oid wounds, which have iong been healed up, break out afresh; severe wandering pains are felt, particularly by night; the skin is dry; the urine small in quantity; and the pulse is small, frequent, and towards the last intermitting; but the intellect, for the most part, clear and distinct. By an aggravation of the symptoms the sufferer in its last stage exhibits a most wretched appearance. Scury as usually met with on shore is unattended by any symptoms other than slight hiotches, with Medes exhibit his almost perfect work. scaly eruptions on different parts of the Rinehart (1825-1874) is a truiy ideal-body, and a sponginess of the gums. In istle scuiptor. Rogers, Mead, Palmer the cure, as well as the prevention of are favorahiy known. J. Q. A. Ward (b. 1830) has done work most thoroughly then hy medicines, obviating as far as national and entirely original. His possible the several remote causes of the statue of Washington is a nohle contribution. The Indian Hunter is a remarkable example of American art. Launt a large proportion of fresh vesetables. able example of American art. Launt a large proportion of fresh vegetables.

on the seashore and high up on the mountains. It has long been esteemed for its antiscorbutic property, and hence its name. The leaves are slightly pungeral and are sometimes used as a salad. Scutage (skû'tij), or Escuage (L. L. scutagium, from L. scutum, a shield), in feudal law, the service by which a vaccious hours to follow his which a vassai was bound to follow his subsequently commuted for a pecuniary satisfaction and became a parliamentary assessment, the custom of commuting service having become general and the rate of commutation variable.

Scutari (skö'ti-rē), a town of Asiatic Turkey, on the Bosphorus, opposite Constantinopie, of which it is a subnrb. It is built on an amplitheater of hills, and contains numerous mosques, fine bassars and baths, barracks, and a seraglio of the tan. Behind the town is an immense tains granarie is a fruit market. The manufactures are saddlery, slik, musiin and suffs. Pop. 105,500.

Scutari, a of European Turbania, at the south end of the lake of same name. It has manufactures of arms and cotton stnffs, and being situated on the Bojana, by such the lake (18 miles long by 6 wide, discharges its waters into the Adrilatic, is favorably situated for commerce. Pop. about 32,000.

Scutching Machine (skuch'ing), a machine for rough-dressing fiber, as flax, cotton, or

Scutcheon.

See Esoutcheon,

Scylla (sil'la), a rock in the Strait of Messina, on the Italian side nearly opposite the whirlpooi of Charyb-dis. Various legends were associated with Scylla and Charybdis, which were esteemed highly dangerous to navigators. See Charybdia.

Scyllidæ (sil'li-dē), the dog-fishes, a family of small-sized but very abundant sharks. They are caught in great numbers for the sake of their oll. See Dog-fish.

Scymnidæ (sim'ni-dē), a family of sharks, distinguished by the absence of an anai fin, and by dorsais the absence of an anai fin, and by dorsais a very handsome and elegantly colored unfurnished with spines. The lobes of bird inhabiting part of Australia and the caudal fin or tall are nearly equal, some of the Eastern Islands, about the and the head is furnished with a pair of size of the common crow. It has a large

Both as a preventive and as a curative small spiracles. The Greenland shark agent lime or iemon juice is of the first is the best-known species.

Scurvy-grass (Cochlesria officins-lis), a cruciferous plant, growing in Britain and elsewhere of the seaschers and high up and the seaschers and high up and the seaschers.

Scythe (alth), an instrument used in mowing or reaping, consisting of a long curving blade with a sharp edge, made fast at a proper angle to the lower end of a more or less upright handle, which is bent into a convenient form for swinging the blade to advantage. Most scythes have two ahort projecting handles fixed to the principal handle, by which they are held. The real line of the handle is that which passes through both the hands, and ends at the head of the blade. This way he a straight line or a creaked This may be a straight line or a crooked one, generally the latter, and by moving the short handles up or down the main handle, each mower can place them so as best suits the natural size and position of his body. For laying cut corn evenly, a *oradie*, as it is called, may be used. The cradle is a contrivance somewhat resembling a rake, with three or four long teeth so fixed to the scythe as to stretch the cut grain properly at each sweep of the scythe. A species of scythe which has been called the cradle-scythe is regularly used with the cradic for reaping in some localities. One form of scythe has a short branching handle somewhat in the shape of the letter Y, having two smail handles fixed at the extremities of smail handles fixed at the extremities of the two branches at right angles to the plane in which they iie. The Hainauit scythe is a scythe used with only one hand, and is employed when the corn is much laid and entangled. The person has a hook in one hand with which he collects a small bundle of the straggling corn, and with the scythe in the other hand cuts it. The scythe has largely gone out of use since the advent of the mowing machine. machine.

(sith'i-an), a name very vagnely used by ancient Scythian writers. It was sometimes applied to ail the nomadic tribes which wandered over the regions to the north of the Biack and the Caspian Seas, and to the east of the latter. In the time of the Roman Empire the name Scythla extended over Asia from the Volga to the frontiers of India. The people of this region, being little known, were the subject of numerous fables.

Scythrops (sith rops), the channel-bill, a genus of birds be-ionging to the cuckoo family. Only one species is known, the S. Nova Hollandia,

See Balanus. Sea-acorn.

(sē-a-nem'ō-nē), the Sea-anemone a number of animals of the subkingdom Cœlenterata and ciass Actinozoa, inciuding the genus Actinia and other genera. They are among the most interesting organisms met with on the sea-beach, and in aquaria form a great attraction. All sea-anemones, however varied in coi-oration or form, present the essential structure and appearance of a fleshy cylinder, attached by its base to a rock or stone, and presenting at its free extremity the mouth, surrounded by a circiet of arms or tentacies. With these tentacies, which may be very numerous,

Sea-anemones. a. Heliactie bellie. b, Cylista viduata.

in some cases exceeding 200 in number, they seize and secure their food - small crustacea, molluscs, such as whelks, etc.—which they paralyze by means of the thread-cells common to them with air Cœlenterata. The mouth leads into a stomach-sac, which, however, is imperfective specialized. fectiy specialized, and is such that a generalized idea of the structure of a seaanemone may be gained by supposing that the animal in transverse section repre-sents a double tube, the outer tube corre-sponding to the body-walk, and the inner tube to the stomach-sac. When fully sponding to the body-walls, and the inner tube to the stomach-sac. When fully expanded the appearance of the ammenes in all their varieties of color is exceedingly beautiful. But upon the slightest lit is sometimes planted to form hedges touch the tentacies can be quickly retracted within the mouth-aperture, the fluids of the body are expelled by the mouth, and the animal, from presenting the appearance of a fully expanded.

Sea-cat, a native of Europe, a native of England also throughout a great part of Textury. It is sometimes planted to form hedges orange colored and are greatfully acid.

Sea-cat, a native of England also throughout a great part of Textury. It is sometimes planted to form hedges orange colored and are greatfully acid.

and curiously formed beak, which gives flower, becomes a conical mass of jellyit so singular an aspect that on a hasty like matter. Although these forms are giance it might almost be taken for a attached to rocks and fixed objects, they toucan or hornbill.

Sea. See Ocean.

They are, most of them, directous, that attached to rocks and fixed objects, they appear able to detach themselves at will. They are, most of them, diecious, that is, having the sexes situated in different individuals. The young are developed within the parent body, and appear in their embryo state as free swimming ciliated bodies of an ovai shape. The sea-anemones resemble the Hydra in their marvelous powers of resisting injuries and mutilation. Thus if a seaanemone be divided longitudinally a new animal will in due time be formed out of each haif. They appear singularly insusceptible also to the action of hot or cold water, and seem to be wonderfuily iong-iived. A weii-known instance of iongevity on the part of the sea-anemone is that afforded by one named 'Granny,' which was taken by Sir John Dalyeli in 1828, and lived till 1887. They are eaten as food in Italy, Greece, Provence, and on various other coasts.

Sea-ape, a name sometimes given to the fox-shark or thresher. See Thresher.

Sea-bathing, produces the stimulat-nary coid bath with the additional stim-ulus due to the salt, so that it acts as an invigorating tonic. Persons who are anæmic—that is, of deficient quality of blood—and those suffering from any internai complaint ought to refrain from sea-bathing. It has, however, been found very saiutary in several complaints, as diseases of the glands of all kinds, and of the skin in scrofula and a scrofulous of the skin in scroula and a scroulous predisposition, exhausting sweats, and tendency to catarrhs, chronic nervous diseases, particularly hysteric attacks, epilepsy, St. Vitus's dance; also sometimes in chronic rheumatism. Many physicians advise sea-bathing for their patients.

Sea-bear, a name semetimes given to the polar bear (see Bear); also to a kind of seal. See Bear.

Sea Buckthorn, or Sallow

Thorn, large shruhs or trees with gray silky foliage and entire leaves. There is but one known species, sometimes called the sea buckthorn, a large thorny shrub or low tree, a native e

Sea-cow. See Manates.

Sea-cucumber. See Holothuria.

Sea-dace. See Base.

Sea-devil. See Angler.

Sea-dragon. (Pegdaus draco), a teleostean fish included
among the Lophobranchii (which see).
The breast is very wide, and the large
size of the pectorai fins, which form winglike structures, together with its general
appearance, have procured for this fish
its popular name. P. natans, an ailied
species, has amailier pectoral fins and a
larger body. The sea-dragon occurs in
Javanese waters. The dragonets (Callionymus), fishes of the gohy family
(Gobiida), are also known as sea-dragons.
Sea-eagle, a name applied to one or
two members of the eagle
family; but probably with most distinctive value to the cinereous or whitetailed eagle or erne (Haliaëtus albicilla),
found in all parts of Europe. It is generally found inhabiting the sea-coasts,
and although living mainly upon fish, yet
makes inland journeys in search of food,
and seizes lambs, hares, and other animais. The head is covered with long
drooping feathers of ashy brown color,
while the body is of a dark-brown hue,
straked in some places with lighter tints,
and having the primary feathers of the
wing mostly hlack. The tail is rounded,
and is of white color in the aduit, hut
brown in the young hird. The hird
hreeds in Shetland and in the Hehrides.
Its average size appears to be about 3
feet in length, and from 6 to 7 feet in
expanse of wings. The American haidheaded eagle (Haliaëtus leucocephalus)
from its frequenting the sea-coasts is also
named the sea-eagle. See Eagle.
Sea-ear.

Sea-egg, the sea-urchin. See Echinus.

Sea-elephant. See Elephant-seal.

Seaford (sefurd), a small town of England, in the county of Sussex, 8 miles S. E. of Newhaven, now a popular seaside resort. Pop. 4787.

Sea-fox. See Threeher.

Sea-grape, a genus of plants, Ephodra, nat. order Gnetaces, closely ailied to the conifers. The species consist of shrubs with jointed stems, whence they are also called Joint-fire.

Sea-grass.

Seaham Harbor (et'am), a seaport of England, county of Durham, 6 miles s. of Sunderland, has an excellent harbor for the shipping of coal. Pop. 15,759.

Sea-hare (Aplysia), the name of a genus of gasteropodous moilusca. These animals are slug-like in appearance, and derive their popular name from the prominent character of the front pair of tentacies, which remewhat resemble the ears of a hare. The shell is either absent or is of very rudimentary character, and is concealed by the mantie. Four tentacles exist, and the eyes are situated at the base of the

Depilatory Sea-hare (Apiyeia depllane).

hinder tentacies. The sea-hares are widely distributed throughout most seas, and generally inhabit muddy or sandy tracts. They emit a fluid of a rich purple hue, which, like the link of the cuttle-fishes, has the property of diffusing itself quickly throughout the surrounding water. They are also known to discharge an acrid fluid of milky appearance, which has an irritant effect on the human skin, and in the case of A. depilans was thought to have the property of removing hair.

Sea-hedgehog. See Echinus.

Sea-hog. See Porpoise.

Sea-horse. See Hippocampus and Lophobranchii.

Sea-kale (Crambe maritime), a perennial cruciferous herb, a species of colewort, called also sea-cabbage. It is a native of the sea-coasts of Europe, and is much cultivated in gardens as a table vegetable, the bianched young shoots and leaf-stalks being the parts eaten.

Sea-king. See Viking.

Seal (sei), an engraved stamp bearing a device or inscription pertaining to the owner; also, the impression of such a stamp on a plastic substance as wax. A seal upon a document was originally a substitute for a signature; a seal upon a place of deposit answered the purpose of security in a different manner from a lock. The use of seals is of the highest

antiquity, and one of the earliest and on each foot, and the middle digits of commonest forms is the signet-ring. the hinder feet are much shorter than In Egypt impressions of seals were made the outer ones. The toes, which are proint in the ciay, and attached to documents by slips of papyri. The Romans used by a web of akin, and so form effective clay, bees'-wax, and in the time of the swimming paddics. The fore limbs are empire lead for taking impressions. In the time of Constantine flat metal seals that of carnivora generally. The fur called bulks were used. The metals generally consists of a dense thick underused were gold, sliver, and lead, and the fur and of an outer coat of longer and builts were attached to documents by coarser hairs. The bones are of light slik or woolen bands. The leaden seal spongy texture, and beneath the skin was adopted by the popes. (See Bull.)

Attitudes of the Fur Seal in the Water. Breathing. Sleeping.

Scratching.

The western monarchs generally used the eyes are large and intelligent, and bulls up to the sixteenth century. The the sense of smell is also well developed. use of bees'-wax was introduced by the The sense of touch appears to reside Normans; sealing-wax was invented in the seventeenth century (See Sealing-The brain is of large size in proportion was.) Documents in England are still to the body, and when domesticated seals sealed in compliance with legal formality, but the true youcher to which since any but the true voucher to which alone any real importance attaches is the signature. There are three seals officially used in England—the great and privy seals, and the signet. The United States government and the several States have seals, and the several States each with a distinctive device or legend. The attestation of deeds and other docu-

The attestation of deeds and other documents by a notary's seal stamped upon the paper is customary.

Seal, the name applied collectively to certain genera of mammals, order Carnivora, section Pinnipedia or Pinnigrada, in which the feet exist in the form of swimming-paddles. Two distinct groups of seals are defined by zoologists, the Phocidæ, or common or true seals, and the Otaridæ, or eared seals.

The Phocide, the true or hair seals, have a body of fish-like contour. They have no external ear, and the hind limbs ar: permanently stretched out behind the body and parallel with the tail, a conformation obviously inappropriate and unsulted for supporting the body for locomotion on land, but admirably adapted for swimming. Five toes exist

Old Male Fur-Seal.

exhibit a very high degree of intelligence. They are polygamous, and seldom produce more than two young at birth, one being the common number. They occur almost in all seas except those of tropical regions. In the northern regions they are more especially plentiful. They are largely hunted for their skins, which are converted into leather, and for their blubber, from which a valuable oil is obtained. The common seal (Phoce vitalins) is found widely throughout the northern seas. Its average length is from 3 to 5 feet, and the fur is a gray-lsh-brown, mottled with black. It is very destructive to most of the food fishes. destructive to most of the food fishes. It is much attached to its young, and is strongly attracted by musical sounds. It is never met with in large numbers,

churus gruphus or griseus), attains a length of from 8 to 9 feet, and is found on the Seandinavian and Icelandic ceasts. The P. cuspics, found in the Caspian Sea, and also in the Siberian lakes Arai and Balkal, attains a length of about 5 feet. The genus Bienorhyachus is represented by several species of the Southern Seas, and he the month of the seasons. by several species of the Southern Seas, and by the monk seal (S. monichus) of the Mediterranean, which attains a length of from 10 to 12 feet, and seems to have been the seal best known to the ancients. The genus Cystophörs includes the large bladder-nose, hooded or crested seal (C. cristats) of the Greenland seas, in which the nose of the males has a curious distensible sec. and which attains an average of the season tensible sac, and which attains an average length of from 10 to 12 feet. It also includes the large sea-elephant, ele-

Common Seal (Adult and Young) (Phoca vitulina) 3

or far away from the land. Closely ailed to the common seal is the marbled seal (P. discolor), met with on some of the European coasts. The harp seal, Greenland seal, saddleback, or atak (Phoes greenlandics), inhabits almost all parts of the Arctic Ocean. The males average 5 feet in length, are colored of a tawny gray, and on the back there is a dark mark resembling a harp or saddle

phant-seal, or bottle-nosed seal (C. or

pnant-seal, or bottle-nosed seal (U. or Morunga proboscides) of the Anarctic Seas, which attains a length of from 20 to 30 feet. See Elephant-scal.

The Otaridæ or 'eared' seals are distinguished by the possession of a small outer ear, which is absent in the Phocidæ, by a longer neck, better developed limbs, and a structural relationship which presents a much pearer affinin shape. In the spring, at breeding ity to that of the bears. Of these the season, these seals resort in immense herds to the floes of the Arctic Ocean, stelleri), so-called from the mane of around Jan Mayen Island, where great stiff crisp hairs on its neck and shoulders, numbers of them are killed annually by crews of the sealing vessels. The great other parts of Alaska. The sea-bear seal (Phocs barbāta), which measures or fur seal extends south of the equator 8 or 10 feet in length, occurs in Southfrom near the tropics to the Antarctic ern Greenland. s, ır ic ralkiand Islands early in the nineteenth century, but has almost been exterminated there. It is now sought for chiefly at St. Paul's and St. George's Islands, of the Pribyioff group, off the coast of Alaska, and at the Commander Islands in the Behring Sea. The species found here is the northern fur seal (Callorkiaus ureinus or Oteria ureinus). It visits those islands, making its appearance from the southward late in the spring, chiefly for reproductive purposes, leaving again about the end of October or beginning of November. Each old maie mates with ten or fifteeen or more females, whom he guards jeaionsly, and in whose behalf he fights furionsly. The female gives hirth to one pup. The male attains maturity about the eighth year, when its length is from 7 to 8 feet, and its weight from 500 to 700 lbs. The outer and longer hairs of its fur are of a graylsh-brown color, the thicker underfur being darker or reddish haven. Falkland Islands early in the nineteenth and longer hairs of its fur are of a graylsh-brown color, the thicker underfur being darker or reddish-brown; and it is this fine under-fur which, when stripped of the coarse outer hairs and dressed by the furrier, affords one of the most beautiful and valued of the 'sealskins' of commerce.

The seal fisheries are divided into heir

The seal fisheries are divided into hair-seal fisheries and fur-seal fisheries. The principal seats of the hair-seal fishery are Newfoundland, Jan Mayen and the Caspian Sea. Nearly half the total number of seals obtained is taken on the Newfoundland coast. The Jan Mayen fishery is carried on by the British, Norweglans, Swedes, Danes and Germans, the number of seals taken hy the British vessels being about equal to that taken by all the others together. The only British ports now engaged in the industry are Dundee and Peterhead. Steamers are employed, and the vessels make the ice about the middle of March, and prosecute the seal fishing till about the middle of May, when they proceed to the whale fishing. The seals are taken either by clubbing them or shooting them when congregated on the The seal fisherles are divided into hairor shooting them when congregated on the lce. The species taken are the same as those on the Newfoundland coast, the harp or saddle-back and the hood or hladder-nose. The skins are salted, and the fat is stowed into tanks, and manufactured into oll when the vessels reach home in the autumn. The blubber of about 100 seals yields a tun of oil. Owing to the reckless way in which the february has been applied to the reckless way in which the fishery has been conducted seals have greatly diminished in numbers of late 'sea-lemon' per escellence, is about 8 years in localities where they were formerly pientiful; but a 'close season' having the mantle warty, has now been established both in the Newfoundland fishery and the Jan Mayen

fishery. The fur-seal fishery is carried on chiefly at St. Paul's and St. George's Islands, Pribyloff Islands, Alaska, and Commander Islands, Behring Sea, all which were leased in 1870 by the Alaska Commercial Company of San Francisco, and in 1800 by the North American Fur-Sealing Company. It is also carried on at the Straits of Juan de Fuca, at the Lobos Islands, mouth of Rio de la Plata, at the South Shetland Islands and Straits of Magellan, and at the Cape of Good Hope. The indiscriminate killing of fur seals in the open seas by vessels chiefly from Canada, led to a controversy between the United States and the British governments, the practice of ocean fishing becoming so destructive that there was serious danger of annihilation of the seals. Fortunately the difficulty has been adjusted, Canada and Japan receiving part of the profits of the fisheries for their abstention from this destructive process. The sealing company is not allowed to take more than this destructive process. The scaling company is not allowed to take more than 100,000 skins annually, and this from young males, the old males and the females being preserved for breeding purposes.

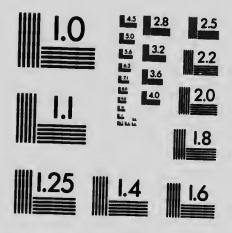

GREAT, a seal used for the United Seal, Kingdom in sealing the writs to summon parliament, treatles with foreign States, and other papers of high moment.
The lord-chancellor is keeper of the great seal. The United States has a great seal of similar character in charge of the Secretary of State. Its device is an American eagle, with the shield on its breast, in its right talon an olive breast, in its right talon an olive breast, in in its right talon an olive branch, in its left a bundle of 13 arrows, and in its beak a scroll with the inscription E Pluribus Unum. On the reverse is an unfinished pyramid and above it an eye, a Latin inscription snrrounding.

Sea-lemon (Doris), a genus of gasteropodous molinsca, section Nndibranchiata ('naked-gilled'), family Dorids. It is destitute of a shell, and moves by means of a broad ventral foot. The gills exist in the form of a circle of plumes in the middle of the hack, at the posterior extremity of the body, and can be retracted at will within the body. The name sea-lemon has been the body. The name sea-lemon has been applied to these molluscs from their usnally yellow color and somewhat lemonlike shape. They may be found at lowwater mark under stones and in similar

Sealkote, or SIALKOT, a town of In-dla in the Punjab, 72 miles northeast of Lahore, is the scene of a famous annuai falr, and a local trade The mancenter of rising importance. ufactures are paper and cloth. Pop. (in cluding military cantonment), 57,956. Pop. (in-

Seal-leather, a leather manufactured from sealskins. It is light, strong and tongh, and is finished either in a large coarse grain for boot-makers, or as an enameled or japanned

Sea-mat, or Hornwrack (Flustre), a genus of Molinscolda, class Polyzoa (which see). The seamat, which presents the appearance of a plece of pale brown sea-weed, is a compound organism, produced by a process of continuous germation or budding from a single primitive polypide, which latter was in turn developed from a true age. Each little polypide or solid true egg. Each little polypide or zoöld of the sea-mat possesses a month sur-rounded by a crown or circle of retractile, ciliated tentacles, a stomach, and intes-tine. Flustra foliacea, or the broad hornwrack, is a familiar species, as also are F. truncata, F. denticulata, etc. Seamen, the American merchant

service shipping articles are agreements in writing or print between the master and seamen or mariners on board of his vessel (except such as shall be apprenticed or servant to himself or owners), declaring the voyage or voyages, and the term of time for which such seamen or mariners shall be shipped. It is also required that at the foot of every such contract there shall be a memorandum, in writing, of the day and the horr on which each seaman or mariner, who shall so ship and subscribe, shall render him-self on board to begin the voyage agreed npon. In default of shipping articles the seaman is entitled to the highest wages which have been given at the Search-light, an electric arc-light of port or place where such seaman or mariner shall have been shipped for a ranged with a parabolic reflector so

similar voyage, within three months next before the time of such shipping, on his performing the service, or during the time he shall continue to do duty on board such vessel without being bound by the regulations, or subject to the penalties or forfeltures contained in act of Congress; and the master is further liable to a penalty. Shipping articles onght not to contain any clause which decreates from the general rights which derogates from the general rights. and privileges of seamen; and if they do the clause will be declared vold. A seaman who signs shipping articles is bound to perform the voyage, and he has no right to elect to pay damages for non-performance of the contract. In the British service laws closely similar to these are in use.

(Aphrodité), a genns of dorsibranchiate Annelids Sea-mouse or marine worms. The most notable feature in connection with the seamouse consists in the beantiful iridescent hues exhibited by the hairs or bristles which fringe the sides of the body. The sea-mouse inhabits deep water, and may be obtained by dredging, although it is frequently cast np on shores after storms. Seance (sa-ans), in spiritualism, a sitting with the view of obtaining 'manifestations,' or holding intercourse with the alleged spirits of the departed.

See Otter. Sea-otter.

Sea-pass, a passport carried by neu-trai vessels in time of war to prove their nationality, and so seenre them from molestation.

See Pennatula. Sea-pen.

Sea-perch, a fish, Labras lupus. See Bass. See Gar-fish. Sea-pike.

Sea-pink (Armeria maritima), a small plant, the type of the genns Armeria, nat. order Pinmbagina-cese, found on European coasts. The thrift (Armeria vulgaris) is found in the sea-waters of the Middle and Southern States, near the coast.

Search, RIGHT OF, in maritime law, the right claimed by a nation at war to anthorize the commanders of their lawfully commissioned cruisers to enter private merchant vessels of other nations met with on the high seas, to examine their papers and cargo, and to search for enemy's property, articles contraband of war, etc.

Search-light, an electric arc-light of great candle-power, ar-

that the rays are sent almost wholly the body. Probably all three views conin one direct line, forming a path of tain a certain amount of truth. The light which may be projected for miles. A chief purpose is for use on war vessels, enabling the officers to detect the seas, enabling the officers to detect the revenue of the the revenue approach of an enemy in the dark and to guard against torpedo boats. They are also used for eignaiing, and on land for exhibition and advertising purposes. They have been made powerful enough for the light to be seen nearly 100 miles away.

Search-warrant, in law, a written authority granted by a magistrate to a legal officer to search a house or other place for property ai-leged to have been stoien and suspected to be secreted in the place specified in the warrant. Similar warrants are granted to search for property or articles in respect of which other offenses are committed, such as base coin, coiners' toois, explosives, liquors, etc., kept contrary to

See Scorpion-fish. Sea-scorpion.

Sea-serpent, a marine serpentine form of large size, or sea-monster of doubtful character, frequently alleged to have been seen. From marine serpentine the numerous substantiated accounts of animais of one kind or another, but differing from all described and known forms, having been seen, often close at hand, by the crews and passengers of ships, and by respectable observers on iand, we are restricted to the choice either of believing that in every case the senses of the observers must have been mistaken, or that some iiving form must have been seen in the majority of cases. Careful research, and the weighing of the evidence presented in the accounts of 'sea-serpent' phenomena, show that the subject demands, at least, investiga-tion, though very little credit is placed in the existence of any such animal. See Kraken, Sec-snake.

in iaw, signifies the strip Sea-shore, surrounding a coast be-

tween high and low water mark. Sea-sickness, the name given to the nausea and other disagreeable sensations produced on those agreeable sensations produced life by the unaccustomed to a sea-faring life by the unaccustomed to a sea-faring life by the rolling motion of a vessel at sea. The exact causes and etlology of this complaint are as yet imperfectly understood. Some observers have referred the malady to causes entirely dependent upon the altered or affected functions of the nervous centers; others to the regurgitation of bile into the stomach; and others, again, to the irritation of the liver consequent on the unusual movements of section Nudibranchiata.

Sea-snake, a name common to a family of snakes, Hydride, of several genera, as Hydrus, Pelamis, Cherydrus, etc. These animais frequent the seas of warm latitudes. They are found off the coast of Africa, and are found off the irritation of the liver ingly venomous. They delight in calms, consequent on the unusual movements of an are found of eddies and tide-ways,

sea-sickness are preventive or curative. Preventive measures, so far as the construction of the vessels themselves are struction of the vessels themselves are concerned, have not proved of much practical utility. Preventive measures, regarded from the patient's point of view, are practically limited to the regulation of the diet, which for some days previously to undertaking the voyage should be pientifui, but of light and nutritious character. The bowels should not be constipated above all things; and food should not be taken for at least five food should not be taken for at least five or six hours before going on board. A cup of strong coffee, swailowed just before embarking, proves beneficial to some as a nerve stimulant; while others derive benefit from a nerve sedative, such as bromide of potasslum, chloral, or opium; but these, especially the two last, should never be used save under strict medical direction. Nitrite of amyland cocaine have also been used. Once on board the ship, a position as near the center of the vessel as practicable is to be preferred, and the posture in lying should be that on the back, with the head and shoulders very slightly elevated. With reference to curative measures, during the attack of nausea and vomiting, some derive benefit from a bandage applied moderately tight across the pit of the stomach; some from small doses of brandy and ice; some from saline effervescing drinks; and some from frequent draughts of lukewarm or even cold water.

Seaside Grape, a small tree of the genus Coccolobes (C. wvifers), nat. order Polygonaces, which grows on the sea-coasts of Fiorida and the West Indies. It has clusters of edible fruit somewhat resembling the current in appearance, and a beautiful hard wood which produces a red dye, and yields the extract known as Jamaica kino.

Sea-slug, a name applied generally to Sea-lemons (which see) and other gasteropodous molluscs destitute of shells, and belonging to the section Nudibranchiata.

where the ripple coilects numerous fish and meduse, on which they feed. The Hy. w. Stokesii inhahits the Australian seas, and is as thick as a man's thigh.

Sea-snipe.

See Bellows-fish. The name to the Dunlin (which to)

given to the Dunlin (which see). Seasons (sez'nz), the four grand divisions of the year—spring, summer, antumn, winter. These have distinctive characters, best seen in the temperate zones. Within the tropics they are not so much marked hy differences of temperatures as by wetness and dryness, and are usually distinguished as the wet and dry seasons. Astronomically speaking, spring is from the vernal equinox, when the sun enters Aries, to the summer solstice; summer is from the summer solstice to the autumnai equinox; autumn is from the autumnal equinox to the winter soistice; winter is from the winter soistice to the vernal equinox. In common acceptation winter consists in the three months beginning with December, spring in those beginning with March, summer with June, and autumn with September; but the tendency now is to repiace this with the astronomical reckoning. The characters of the seasons are reversed to inhab-

deep water, and is seldom seen on the shore.

Sea-squirts, a name sometimes applied collectively to all the Tunicata, or more especially to the genus Ascidia (see Ascidia). The name 'sea-squirts' has been applied from their habits of continuous transfer of the continuous transfer of

side and near the extremity of the tail. (1908).

bearing a resemblance to a surgeon's lancet. It occurs on the Atlantic coasts of South America and Africa, and in the Caribbean seas. Its average length is from 12 to 19 inches.

Sea-swallow, a name given to the common tern and also to the stormy petrel.

Sea-toad, a name given to the great spider-crab (Mais or Hyss araness), found on British coasts at low-water mark.

Seattle (sē-at'l), a city and seaport, capital of King county, Washcapital of King county, wasnington. It is situated on the east side of Puget Sound, 23 miles N.N.E. of Tacoma, and is the largest city in the State and seat of the State university. The city is beautifully iocated, its heights affording a magnificent view of Mount Rainier and the Olympic and Cascade mountains. The harbor affords safe anchorage for the largest vessels. It has direct ilnes of steamships to the It has direct ilnes of steamships to the ports of China and Japan and is the outfitting point for the gold-fields of the north. It is a rapidly growing place, with numerous industrial establishments. snch as shipyards, foundries, machineshops, saw-mills, breweries, meat-packing, fish-canning, etc., and has also smelting and refining works. The exports are coal, iumber, meat, fruits, wheat how at and an active trade in wheat, hops, etc., and an active trade in coai and iumber. Pop. in 1880, 3533; in 1900, 80,671; in 1910, 237,194.

Sea-unicorn, a popular name given to the narwhal (which

Sea-urchin. See Echinus.

or the seasons are reversed to inhabitants of the southern hemisphere. See Spring, Summer, Autumn, Winter; also Climate, Earth, Equinox, etc.

Sea-spider, or Spider-Orab, a marine (chioride of sodium=common sait), crab of the genns Mais (M. squinado). Its body is somewhat triangular in shape, and its legs are slender and generally long. It lives in slender and generally long. It lives in slender and generally long. It lives in Sea-weed, any plant growing in the legs water and is selden seen on the

Sea-weed, any piant growing in the usually confined to members of the nat. order Algæ (which see).

Seawell, Molly Elliot, author, was born in Gioucester Co., Virginia, in 1860; died Nov. 15, 1916. She began a literary career in 1886, and in 'sea-squirts' has been applied from their hablt of emitting jets of water from the orifices of the body when touched or irritated in any way.

Sea-surgeon, or Surgeon-Fish (Acantharus ohirur-nus), a fish belonging to the teleostean cier (1908). Among her novels are The section of Acanthopteri, so named from Victory (1906), The Secret of Belgrads side and near the extremity of the tail. (1908).

(Anarrhichas lupus), a a conside genus of teleostean fishes, romances. (Anarrhichas Sea-wolf section Acanthopteri, family Bienniidæ or hlennies (aiso known by the names 'sea-cat' and 'swine-fish'). The mouth is armed with sharp, strong teeth of large size, and when captured it is and under Diocletian was captain of the said to bite the nets and even attack the fishermen. It is the invest of the largest of the l

(se-bā'shus), Sebaceous Glands small structures of glandular nature and sacculated form which exist in the substance of the corium, or deeper layer of the dermis or true skin, and secrete a fatty matter. They are very generally distributed over the entire skin surface, but are most numerous in the face and scaip. Those of the nose are of large size, but the largest in the body are those of the eyelids — the so-called Meibomian glands. They appear to be absent from the skin of the release of the hands and soles of of the palms of the hands and soles of the feet. Each sebaceous gland consists essentially of a lohulated or sac-like structure, with cells which secrete the sebaceous or glutinous humor, and with a single efferent duct; and these ducts open into the hair-follicles, or sac-like involutions of the skin which surround and inclose the roots of hairs, or simply on the external surface of the skin. The functions of the sehaceous secretion are chiefly those of keeping the skin moist.

Sebastes (se-bas'tez), a genus of acanthopterygious fishes, containing the bergylt or Norway haddock. See Bergylt.

Sebastian (sa-bast'yan), Dom, King of Portugal, posthumous son of the Infant John and of Joanna, daughter of Charles V, was born in 1554, and ascended the throne in 1557, at the death of his grandfather. John at the death of his grandfather, John III. In 1578 he led the flower of his nohiiity into Africa on a wiid expedition against the Moors, and perished in tion against the Moors, and perished in battie with nearly all his followers. He had no immediate heir, and Portugai was soon annexed hy Philip II of Spain, but the masses of the people refused to believe in his death, and several pretenders to his name and claims received a measure of popular support. The belief in the future return of Dom Sebastian amounted to 43,000, it became the population against which the operations of the allies the form of a myth, and giving rise to

a a considerable literature of poems and Sebastian, San. See San Sebastian.

the fishermen. It is the jargest of the biennies, growing to a jength of over 6 feet. The flesh is palatable, and is was tied to a tree and pierced with largely eaten in Iceland, while the skin is durable, and is manufactured into a kind of chagreen, used for making pouches and like articles. See also him home, and nursed him till he recovered. He then presented himself before Diocietian, and remenstrated with fore Diocietian, and remenstrated with him on his cruelty; whereupon the em-peror ordered him to he beaten to death with rods (January 20, 288), and his body to be thrown involved a rejuct. protection was invoked against pesti-lence, and his martyrdom has been a favorite subject with painters.

del Piombo. Sebastiano

See Piombo. Sebastopol (se-bas'tō-pōl), a Russian town and naval station on the Black Sea, in the southwest of the Crimea. The town lies chiefly on the south side of a large and deep inlet of the Black Sea running east for a distance of nearly 4 miles, with an average width of 34 mile narrowing to 930 yards between the promontories at its mouth,

one of the most remarkable episodes in modern history. (See Orimosa war.) The town, then utterly destroyed, has been reconstructed, and though the treaty of Paris stipuiated that no arsenal should exist on the Black Sea, and that the town should not again be fortified, these colligations have been repudiated by Russia, and it blds fair to exceed its former importance. Railway communication with Moscow has greatly improved the trade. There are many new important public buildings and the menu-

provid the trade. There are many new important public buildings, and the monuments and relics of the siege are interesting. Pop. 77,000, largely military.

Sebenico (sā-bā'nā-kō), a town in Austria, Dalmatia, on a creek of the Adriatic, near the mouth of the Kerka, between Zara and Spalato. It is the seat of a bishop, and its Italian Gothic cathedral, of the fifteenth and sixteenth centuries, is considered the finest church in Dalmatia. It has an excellent harbor, and is the entrepôt of a considerable trade. Pop. 24,751.

considerable trade. Pop. 24,751.

Sebesten (se-bes'ten), the Cordia myss and latifolis, Aslatic trees of the borage order. The frult is edible, and was formerly employed in European medicine, hut now only by the practitioners of the East. It is mucilaginous and somewhat astringent.

(se-kā'le), the genus which contains rye. Secale

(se-ka-mo'ne), a genus of Secamone plants, nat. order Asciepiadacese, found in the warm parts of India, Africa, and Australia. The species form erect or climbing smooth shrubs, and some of them secrete an acrid principle which makes them useful in medicine. The roots of S. emetics are employed as a substitute for ipecacuanha.

Secant (sekant), in trigonometry, a straight line drawn from the center of a circle, which, cutting the circumference, proceeds till it meets with a tangent to the same circle; as the line A B C in the figure, which is a se-cant to the arc C D. In the higher geometry it signlfies the straight line which cuts a curve in two

or more points.

Secchi (sek'kë), Anglo, an Italian astronomer, was born at Reggio in Lombardy, June 29, 1818; entered the order of Jesuits in 1833, and in 1849 was appointed director of the observatory of the Collegio Romano at Rome, a post which he held till his death, Fehruary 26, 1878. Father Secchi gained a great reputation by his astro-

nomical researches, especially by his meteorological observations and spectroscopic analyses both of stars and of the sun.

analyses both of stars and of the sun. His three most popular works are l'Unité des Forces Physiques (1869), Le Soleil (1870), and Le Stelle (1879).

Secession (se-sch'un), the right of a State included under the Constitution of the United States to withdraw from the Union and set up an independent government. This has been attempted twice in American history, once in 1832, when a convention in South Carolina voted in favor of seceding from the Union if the tariff was enforced within the State; and again in 1860-61 when eleven of the Southern States sought to hreak away from the Union. The result of the Civil war was so decisive that secession is war was so decisive that secession is hardly likely to be again attempted. See Sze-chuen. Sechuen.

Seckendorf (sek'en-dorf), FRIEDRICH HEINRICH, COUNT VON. imperial field-marshal, born in 1673 at Königsberg, in Franconia; died in 1763. After studying law at Jena, Leipzig, and Leyden, he adopted the military profession, and served against the Turks under Prince Eugene, and in the war of the Spanish Succession. On the death of Prince Eugene, 1736, he became commander-in-chief of the Austrian army against the Turks, but being unsuccessful, was recalled, tried by court-martial. ful, was recalled, tried by court-martial, and imprisoned in the fortress of Gratz, from which he was liberated in 1740. He then took service with the elector of Bavaria, who had just been elected as Charles VII, emperor of Germany, and as commander of the Bavarian forces relieved Munich and drove back the Austrians into Bohemia. On the emperor's death in 1745 he himself set negotiations on foot for establishing a

negotiations on foot for establishing a peace; whereupon he was reëstablished by the new emperor Francis I, husband of Maria Theresa, in all the honors he had at an earlier period obtained.

Second (sek'und), in the measurement of time and of angles, the 60th part of a minute; that is, the second division next to the hour or degree. In old treatises seconds were distinguished as minutes seconds, from minutes arings, minutes. minutæ primæ, minutes.

Second Adventists, a general name given to several slightly different Protestant sects, all of which believe in the visible reappearance of Christ at some time in the future. They include the Evangelical Adventists, the Advent Christians, the Seventh Day Adventists, and others, pic

Secondary Formations, in go, the Mesonoic strata, midway, in ascending order, between the Primary or Palæosoic below and the Tertiary or Kaino-soic above. They range from the top of the Permian Formation to the base of the Eocene, and include, therefore, the Trias, Lias, Oölitic, and Cretaceous Formations.

Second Sight (in Gaeic, teisch), a Highland superstition, formerly very common, which supposed certain persons endowed with the power of seeing future or distant events as if actually present. These visions were believed to be not as a rule voluntary, but were said to be rather dreaded than present. These visions were otherwise by those who were subject to them; yet it was also believed that those who possessed this gift might sometimes induce visions by the performance of certain awful rites. The subject is treated at length in Martin's Description of the Western Islands of Scotland (1703); Macieod of Hamir's Treatise on the Second Sight (1762); and is disthe Second Sight (1763); and is discussed also in Dr. Johnson's Journey to the Hebrides (1775).

(sekret), in the Roman Catholic Church, the prayer of the mass which follows immediately after the oblation of the hread and wine, and which is recited by the priest in so low a voice as not to be heard by the people.

Secret Service, United States, a bureau connected with the Treasury De-

partment, designed originally to guard against the counterfeiting of money. Its scope has been considerably widened and it has come to be an important agent of government in the detection of plots of alien governments in the United States. The arrest of numerous German spies in this country during the European war was effected by the Secret Service. Other nations have similar organizations.

Secretary (sek're-ta-ri), the name given to the heads of departments, or members of the President's cabinet, in the United States government, with the exception of the Attorney-General and Postmaster-General. It is also applied to various members of the British cahinet, as Secretary of State for the Home Department, Secretary for Foreign Affairs, etc.

the total membership in the United Gypogeranus serpentarius), order Accip-States being less than 100,000, the itres or birds of prey. It derives its Seventh Day Adventists numbering about popular name from the peculiar piumes of feathers which project from the back and sides of its head, and give it the appearance of having bundles of pens stuck behind each ear. It has very long legs, and stands nearly 4 feet in height. The wings are elongated, and carry a hiunt spur on the shoulder, the third, fourth, and fifth quills being the iongest. The tail is also very iong, and wedge-shaped, the two middle feathers projecting beyond the others. The tibiss are feathered all the way down. The

Secretary-bird (Serpentarius secretarius).

skin around the eyes is destitute of feathers. The general color is a slaty gray, the pen-like feathers of the head helng black, as also are the feathers of the tlbise and the primaries of the wings. The secretary-hird can fly with ease when once it takes wing, but it seems to pre-fer the ground. It is found over the greater part of Africa, especially in the south. It derives its generic name from its habits of destroying serpents, striking them with its knobbed wings and kicking forward at them with its feet until they are stunned, and then swailowing them. As a foe to venomous snakes it is encouraged and protected in South Africa, where it is frequently brought up tame.

Secretion (se-krē'shun), in animai physiology, is the separation of castain elements of the blood, and tion of certain elements of the blood, and their elaboration to form special fluids: differing from the blood ltself or from any of its constituents, as bile, sailva, mucus, urine, etc. Secretion is performed by organs of various form and structure, but the most general are those called glands. Of these glands the essentially active parts are the cells, which each orate from the blood a peculiar fluid, in each instance predictormined by the the Home Department, Secretary for in each instance predetermined by the Foreign Affairs, etc.

Secretary-bird, the soie representative of the genus The chief general conditions which variSerpentarius (S. secretarius, also called ously affect secretion are the quantity and quality of the blood traversing the gland and the influence of the nervous system. Mental conditions aione, without material stimui, wiii excite or sup-press secretion; hut this is a hranch of the subject which is yet ili-understood. Animal secretions have been arranged into—(1) Eshalations, which are either external, as those from the skin and mucous membrane, or internal, as those from the surfaces of the closed cavities mucous membrane, or internal, as those from the surfaces of the closed cavities of the body and from the lungs; (2) Follicular secretions, which are divided into mucous and cutaneous; and (3) Glandular secretions, such as milk, bile,

urine, saiiva, tears, etc.

Secretion, in vegetable physiciogy, is
the separation of certain elements from
the sap, and their elaboration by particular organs. These secretions are exceedingly numerous, and constitute the great bulk of the solid parts of plants. They have been divided into (1) General or nutritious secretions, the component parts of which are gum, sugar, starch, lignin, alhumen and gluten; and (2) Special or non-assimilable secretions, which may be arranged under the heads of acids, aikaiies, neutral principles, resinous principles, coloring matters, miks, oils, atc.

oils, etc. See Cryptog. Secret Writing.

making diagrams, laying down pians, etc.
The sector is founded on the fourth proposition of the sixth book of Euclid, where it is proved that equiangular triangles have their homologous sides proportional portional.

(sek'ū-lar), in the Roman Catholic Secular Clergy Church, clergy of all ranks and orders not bound hy monastic vows. Those who live according to any rule or order are known as the regular clergy. See

Secular Games, a great festival, probably of Etruscan origin, anciently celebrated at Rome

can origin, anciently celebrated at Rome to mark the commencement of a new secular or generation. In 249 m.c. it was decreed that the secular games should be celebrated every hundredth year after that date; but this decree was frequently disregarded, and they were celebrated at very irregular intervais.

Secularism, gist of which consists in the advocacy of free thought and the assertion of some coroliaries derived from this leading tenet. Secularists are convinced that the best means of arriving at the truth is to place perfect confidence in the operations of human reason. They do not hold human reason to be infailible, but they maintain that it is in the interest of truth that reason should be corrected only hy reason, and that no restraint whatever, penai, moral, that no restraint whatever, pensi, moral, or social, should be placed upon holding, expressing, or acting up to any opinion intelligently formed and sincerely held, however contrary that opinion may be to those generally current. Skepticism or the questioning of traditional beliefs they regard as a moral duty, yet their upped cannot be called a skeptical one. creed cannot be called a skeptical one, for they do not rest satisfied with doubting, but when they find that certainty, that is, irresistible conviction, is unattainable on any subject, they consider that they should confess their ignorates Section (sek'shun), a representation of a huisding or other object as it would appear if cut through hy an intersecting plane, showing the internal with regard to it, and pass on to one with regard to it, an arc of a circle; as c D B of every man of enlightened conscient in the accompanying figure. The term denotes lision with any religion. It is not at also a methematical inistic, inasmuch as it is no tenet of the accompanying figure. The term denotes lision with any religion. It is not at also a methematical inistic, inasmuch as it is no tenet of the accompanying figarc. strument so marked with system either to affirm or deny the existence of sines, tangents, ence of God; nor does it deny the tribusecants, chords, etc., as of Christianity, for that is none of the secants, chords, etc., as of Christianity, for that is none of the secants, chords, etc., as of Christianity, for that is none of the secants, chords, etc., as of Christianity, for that is none of the secants, chords, etc., as of Christianity, for that is none of the secants, chords, etc., as of Christianity, for that is no tenet of the secants. radii and business any more than theory. Secular useful in deny some scientific theory. Secular useful in deny some scientific theory. Secular useful in England is an offshoot of the social plans, etc. in England is an offshoot of the social open, but its immediately the secular to the social open. of Robert Owen, but its immediant founder is George Jacob Hoiyoake (q. v.), who began to promulgate his views about 1846. It is to him that British legislation is, chiefly indebted for the Evidence Amendment Act, which legalized affirmations in lieu of oaths. Mr. Charles Bradlaugh, Mr. Holyoake's successor in the leadership of the English secularists, carleadership of the English secularists, carried this question a step further by his refusal to take the parliamentary oath and by his Oaths Bill of 1888.
