MAIL CONTRACT.

TENDERS, addressed to the Postmaster General, will be received at Ottawa until noon on FRIDAY, 11th August, for the conveyance of mail...

JOHN McILLAN, P. O. Inspector.

Agriculture.

The Remedy for Weeds.

It costs the farmer as much care and trouble to subdue the "crop which never fails," the weeds, as to raise the crops which sometimes fail in spite of all his labors.

The Canada thistle, so called, but which seems to be identical with the ordinary farm thistle of England, is the greatest plague of all, for its seeds of propagation are blown over a district of country, and the idle, selfish or ignorant farmer, who allows this weed to grow unchecked in his fields, is the means of doing great damage to his industrious, thrifty neighbors.

There should be a man who thus wrongs his neighbors. In Ontario, the "Canada Thistle Act" gives ample powers to municipalities, against offending thistle growers.

The Act provides that every occupant of land must cut down thistles as often as necessary to prevent their going to seed, under penalty of a fine of from \$2 to \$10; and the overseers of highways are charged, under penalty of the provisions of the Act, to carry out this duty.

They must notify, not later than 24th June, any occupier on whose lands thistles are growing and in danger of going to seed, to cut them down within five days from service of notice; and if the occupier does not attend, and another person enters on his land, provided it is not sown with grain, and cut down the thistles, the cost being chargeable to the occupier and recoverable from him in the same manner as taxes.

But it is one thing to get an Act passed, and another to carry it out. In this respect, we hear that it is a dead letter and never taken notice of. In these districts, it may be safely concluded, there must be a great deal of careless farming.

In Ontario, the dealing with thistles is acknowledged to be a matter of difficulty. Within the last few years they have been increasing rapidly in many of the older sections of the Province, until, it is said, that more than one-half of the soil in too many fields are occupied by weeds; of course the food which never fails to grow on the soil is so much nutriment taken away from the cultivated crops.

Prof. Buckland, in his evidence before the Ontario Agricultural Commission, alluding to the thistle, said: "I have seen in England permanent pastures completely overgrown with it, and the only way to cut it out is by burning it, which is a very expensive and laborious process."

It is not possible to make hay without sunshine. Everybody knows the time-honored saying, "Make hay while the sun shines." But the sun is not always to be trusted to shine just when he is wanted during the season, and the crop is not seldom ruined or damaged by want of sunshine and excessive rains.

Generally, the hay-making season, which commences here about the middle of July, is marked by a series of showers, which, when they severally try the patience of the farmer. In England the vicissitudes of sunshine and rain are more serious to the hay crop than in this Province.

"Rings" and "Corners."

The National Farmer, published in Washington, opens out against the mercenary schemers of the "ring" in Chicago, who are now playing into each others' hands, to rob the farmer and mule the public.

There is a rumor of one ring in Chicago, which, controlling a million acres of land almost worthless under present conditions, has agents at every point west of the Mississippi, who are endeavoring to send reports of crops that have never been planted, let alone brought to unexampled fullness by this cold season.

It is a fraud of the first water, perpetrated first with the intent to sell unavailable land to fenced settlers; and used in the second place, by the exchange thieves to rob the farmers of Illinois, Indiana, and Iowa, by inducing them to throw their some what plentiful grain harvest on the market at a low figure, that the thieves may gobble it up and rob producer and consumer.

The method employed by Mr. Neilson consists in utilizing the heat which is generated in damp storage bins, and carried to a point some little distance away. The outlet here is closed by means of a revolving fan. A series of stacks may be made to communicate with the same air passages, and the fan may be worked by horse or steam power according to the amount of mechanical energy required.

The spontaneous heat of the stack is tested by means of a thermometer inserted in a tube which penetrates a considerable distance into the stack, and when the combustion point is approached the fan is set to work. The air and steam collected in the interior cavity beneath the stack, and carried to a point some little distance away. The outlet here is closed by means of a revolving fan.

Words can scarce describe the sad feelings that took possession of all classes of people in the city and when the

Narrowing details of the tragedy became fully known, there were the most genuine expressions of horror at the fatal termination of two happy and vigorous lives, and the warmest demonstrations of sympathy for the bereaved husband, father and friends.

On the streets no other topic was discussed, and the minutest information was sought from those who had visited Berry Hill, all the city churches on Sunday touching references were made to the violent death that carried sorrow and woe into happy families and struck down the hopes of relatives and friends.

In all these expressions the MARTINEZ FAMILY joins, and with a fervent hope that the affliction may be soportive of the true trouble by consolations more potent than that of God.

Mrs. Babbitt was the youngest daughter of the late Wm. Turnbull, of Bear River, Digby Co., N. S., and would have been thirty-eight years old next September. She was married to Mr. Babbitt, jeweller, eight years ago and leaves two children, Isabel, seven years of age, and Hazel, five years of age.

She was a sister of W. W. Turnbull, O. G. Turnbull, Mrs. C. E. Barnham and Mrs. F. A. Johnson, and of Mrs. E. F. Randolph, Mrs. Judge Stoddard and Mrs. Henry Chestnut of this city. This has been the first death in the Turnbull family since her father's, thirty-seven years ago, when Mrs. Babbitt was an infant.

Mrs. Chestnut, as we have stated, was the only daughter of Henry Chestnut, a well known and successful business man, and a favorite with her schoolmates and friends.

She was exceedingly large for one of her age, almost grown to womanhood, and was especially favored by her friends.

The remains of Miss Chestnut were interred from Berry Hill in the new Methodist cemetery, at 9 A. M. on Monday, and a large number of people attended the service, which was conducted at the house and at the grave by Rev. Mr. Waldman. Mrs. Babbitt's funeral took place on Monday at 3 o'clock. There were a large concourse of people present and strong manifestations of sorrow. The service was continued till dark but without success and he is still at large having escaped into the country, it is believed after hiding all night in Matt's barn.

After the arrests on Monday, the gun from which the charge was fired at Vandine was found in the cellar. It was a .38 Smith & Wesson, and was in the hands of the police.

At seven o'clock the Lees were brought before the Police Magistrate, and the warrant for George Lee and Thomas Virtue was issued on Friday for the arrest of Newton Lee, George Lee and Thomas Virtue.

They were taken to the County Jail, and their preliminary examination will be held on Friday morning at 10 o'clock.

It is a sad condition to permit it. His gaiting some, but is yet in a precarious condition.

Of the two men captured Newton Lee is by far the most desperate in appearance, although the other wears a dogged and brutish look.

Newton is a large and well developed man, about thirty years of age, and has the reputation of being most daring, shrewd and cool-headed rascal.

He is a native of the county, but lacks the appearance of his companion. He is believed to be only the tool of the other, but when pinned, would, no doubt, defend himself with the desperation of a desperado.

Virtue, familiarly known as "Scab," for whose apprehension the Mayor offers \$200 reward, is a large, dark, and forbidding looking man, and bears the reputation of being a worthless character. He is the same party who has been in a row at the St. Mary's school, and was arrested on Friday.

He is a native of the county, but lacks the appearance of his companion. He is believed to be only the tool of the other, but when pinned, would, no doubt, defend himself with the desperation of a desperado.

Virtue, familiarly known as "Scab," for whose apprehension the Mayor offers \$200 reward, is a large, dark, and forbidding looking man, and bears the reputation of being a worthless character. He is the same party who has been in a row at the St. Mary's school, and was arrested on Friday.

It is a sad condition to permit it. His gaiting some, but is yet in a precarious condition.

Of the two men captured Newton Lee is by far the most desperate in appearance, although the other wears a dogged and brutish look.

Newton is a large and well developed man, about thirty years of age, and has the reputation of being most daring, shrewd and cool-headed rascal.

It is simply a matter of fact, that the "Black Snake" Scythes are the best of every scythe.

F. H. ENNIS, Secretary of Public Works, OTTAWA, 24th July, 1882.

Recalling Old Times. It is a noticeable fact that of the corps ordered to the seat of war, the 7th and 42nd Regiments, did not see any action in the expedition to that country in 1881. The 50th and the 7th formed part of Lord Carnarvon's brigade, and the 42nd was attached to the reserves commanded by Major Moore. The 42nd particularly distinguished itself in the action fought near Aboukir on the 21st of March, 1881, when they rendered important assistance to the 28th Regiment when nearly overpowered by the French cavalry. It was on this day that the 42nd who bayoneted the French officer who had inflicted the wound on Sir Ralph Abercromby, which he died of a few days later. The 42nd also claim the honor of having captured the French standard on that day. The 42nd were also with the British at the battle of Aboukir, and subsequently engaged in the affair at Bahariya on May 9, and the first of these regiments did not see any action in the expedition to that country in 1881.

Terminated on September 2 by the surrender of that city and the capitulation of General Moore.

Marriages. In this city, on the 26th ult., by the Rev. A. J. Milnes, C. G. G. to Miss Kiln road, Winters.
