Canadian Institute for Historical Microreproductions / Institut canadien de microreproductions historiques

C 1991

The copy filmed here has been reproduced thanks
to the generosity of:

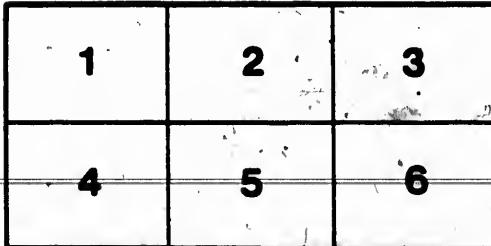

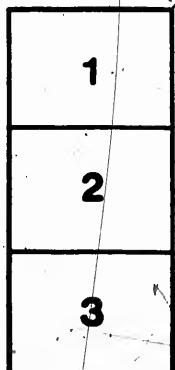

Library of the National
Archives of Canada

The images appearing here are the best quality
possible considering the condition and legibility
of the original copy and in keeping with the
filming contract specifications.

Original copies in printed paper covers are filmed
beginning with the front cover and ending on
the last page with a printed or illustrated impres-
sion, or the back cover when appropriate. All
other original copies are filmed beginning on the
first page with a printed or illustrated impres-
sion, and ending on the last page with a printed
or illustrated impression.

The last recorded frame on each microfiche
shall contain the symbol → (meaning "CON-
TINUED"), or the symbol ▽ (meaning "END"),
whichever applies.

Maps, plates, charts, etc., may be filmed at
different reduction ratios. Those too large to be
entirely included in one exposure are filmed
beginning in the upper left hand corner, left to
right and top to bottom, as many frames as
required. The following diagrams illustrate the
method:

L'exemplaire filmé fut reproduit grâce à la
générosité de:

La bibliothèque des Archives
nationales du Canada

Les images suivantes ont été reproduites avec le
plus grand soin, compte tenu de la condition et
de la netteté de l'exemplaire filmé, et en
conformité avec les conditions du contrat de
filmage.

Les exemplaires originaux dont la couverture en
papier est imprimée sont filmés en commençant
par le premier plat et en terminant soit par la
dernière page qui comporte une empreinte
d'impression ou d'illustration, soit par le second
plat, selon le cas. Tous les autres exemplaires
originaux sont filmés en commençant par la
première page qui comporte une empreinte
d'impression ou d'illustration et en terminant par
la dernière page qui comporte une telle
empreinte.

Un des symboles suivants apparaîtra sur la
dernière image de chaque microfiche, selon le
cas: le symbole → signifie "A SUIVRE", le
symbole ▽ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être
filmés à des taux de réduction différents.
Lorsque le document est trop grand pour être
reproduit en un seul cliché, il est filmé à partir
de l'angle supérieur gauche, de gauche à droite,
et de haut en bas, en prenant le nombre
d'images nécessaire. Les diagrammes suivants
illustrent la méthode.

The "Boss" Shingle Machine.

Patented May 24th, 1884, and
December 16th, 1886.

WEIGHT, 1850 POUNDS.

Champion Drag Saw Machine.

Best Machine for the Purpose Made in Canada.

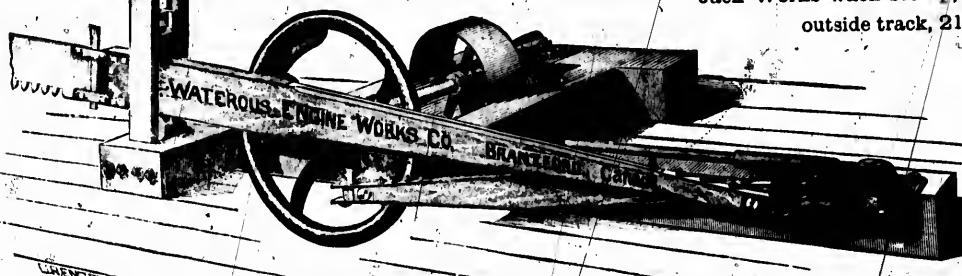

Left Hand
Machine.

SIZE.
14ft. by 5ft.
without
the
Saw.

The frame is made of heavy timbers, well framed and bolted together.

Shear, Pitman and Standards are of ash; Bearings or boxes of Brass, and are fastened by straps and keys as shown in cut. Saw is made to feed regularly and smoothly by the action of the double wrist pin. Crank weighs about 350 pounds, has 40 inch stroke. Pulley 24x8; speed 175 revolutions; 2½ inch shaft. Pillow Blocks, 18 inches long by 8 inches wide, bolted down with 4 bolts and adjusted with keys. Weight, 1,250 lbs. Extreme width of Drag Saw and

Jack Works when set up, to
outside track, 21ft.

Jack Works for Champion Drag Saw.

For hauling logs into mill and moving them
the length of shingle blocks to drag saw.

Using a 1½ inch cable chain or a 6 inch link chain,
same weight, with a grab hook to fasten in end of log.

Ewart's Giant Chain, No. 600 with jaw
special as desired, makes the best arrangement. Logs
are simply rolled into a trough, and first special cutting
log takes it along without further attention. Does not
twist or slip, and runs on sprocket wheels.

Pulley, 20in.x8in. Speed, 250 revolutions per minute.

Weight, 1,050 exclusive of chain. Size 5ft.x5ft.

Shingle Manufacturers Save your Timber.

Sapping with an axe wastes from 25 to 30 per cent.

Split Bolts require several cuts to be made before
a perfect shingle is cut. Nothing wasted and a perfect
shingle first cut, where Knee Bolter is used.

Saw, 50 inches; pulley, 16x10 inch face; speed 800.
Steel arbor, solid yoked boxes. Guard easily removed
to sharpen or remove saw. Weight, 1,100 lbs.

Carriage covered with sheet iron. Runs on wheels,
and is gibbed down to keep it on the track. Has pivot
on centre which raises bolt to adjust it. Is light and
strong.

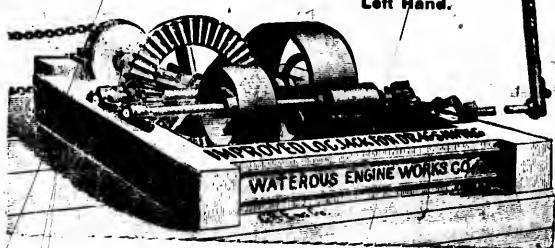

Advantages

Both hands are at liberty to manage blocks.
Feed controlled by motion of sawyer's body.
Will bolt & sap from 3 to 6,000 blocks per day.

THE WATEROUS ENGINE WORKS CO., LTD.

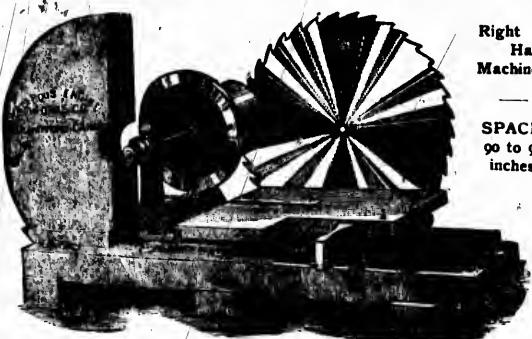

BRANTFORD, CANADA, AND ST. PAUL, MINNESOTA, U. S. A.

Left Hand.

CHAMPION KNEE BOLTER & SAPPER

Right
Hand
Machine.

SPACE:
90 to 92
inches.

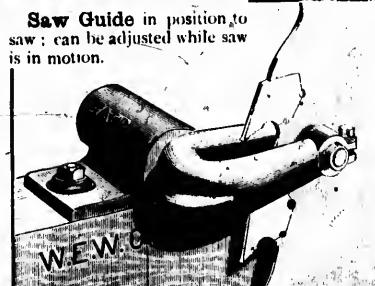

The Farmers and Threshers Saw Mill

KEEP YOUR ENGINE AT WORK.

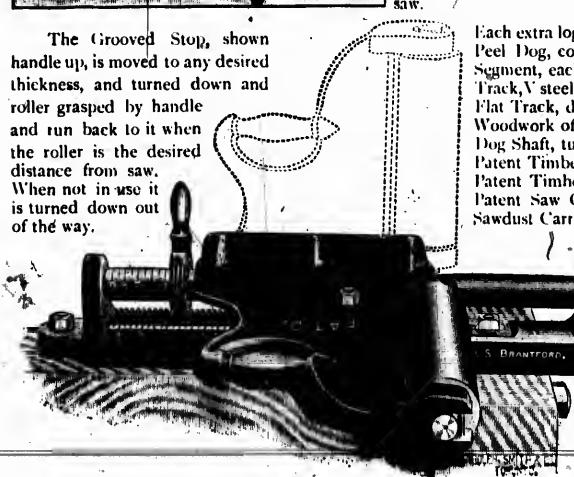

INCREASE YOUR EARNINGS

BY ROLLING

A Saw Mill, Shingle Mill or Grain Chopper

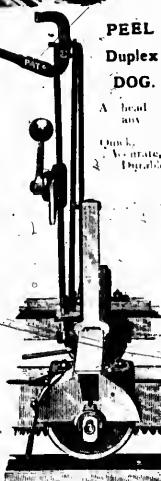

The Grooved Stop, shown handle up, is moved to any desired thickness, and turned down and roller grasped by handle and run back to it when the roller is the desired distance from saw. When not in use it is turned down out of the way.

NO. O SAW IRONS.

A Strictly First Class Mill in every Particular.

THIS new frame and carriage was brought out last year to meet a long felt want of a cheap but a thoroughly good saw mill attachment for farm and threshing engines, which would come within the reach of farmers and threshers, and at the same time, be capable of manufacturing lumber equal in quality to any circular machinery built.

IT IS NOT A CHEAP MILL in the popular sense of the word, that is, badly built of poor materials, but a first-class mill with special points and improvements, but a low price.

The mill can be furnished complete as shown in cut, with track ribbon and sills built in sections so as to be easily moved and set up again. Or it can be complete to the track iron only. When desired the mandrel can be lengthened to suit any special position, or to enable two engines to be attached to the one saw. The carriage can be made any desired length and in section, to be attached and used when wanted.

PRICE LIST.

No. O Saw Iron, complete as shown in cut (to timbers track iron is laid up flat not including timber and sills) with wooden frame, Patent Saw Guide, Patent Timber Gauge, 2 Peels, feed belt, pulley 24x10in. face with lighter frame and pulley, splitter and blower roller connected. Carriage with two log seats 10 feet apart, with V and flat wheels running in reservoir dust proof brass boxes, solid knees, 2 Peel Duplex Dogs, that grab a round log top, and a square log top and bottom, patent fiction set works, setting over the log, working carriage either way; extra pinion on dog shaft to enable one log seat to be moved up nearer to cut shorter than 10 feet; woodwork of carriage, 26 feet of rack stick, 35 feet of back track and of V steel front track planed true, and screws for same, all set up complete, knocked down and delivered f. o. b. cars, without saw, no main belt and no frame work under track.

\$ 400

Track, Ribbon and Sills, as shown in cut, framed in 12ft. sections with splicing plates arranged so it can be readily taken up and reset. 75c. per foot, or

27

Extra Mandrel per foot, to enable a second engine to be attached, \$1.50 or say 5ft. and sill box hatched.

12

Extra Pulley, 24x10in. face bored and key seated..

9

Dotted line shows Gauge in position to Cost to Increase the Length of Carriage can be Estimated from the following:

Each extra log seat, knee piece and slide, wheels, boxes and pinion	\$ 35 00
Peel Dog, complete, each one (smallest size)	15 00
Segment, each 3 feet long by 1/4 wide round tooth, and bolts	2 75
Track, V steel track planed true in 10ft lengths, per foot and screws	75
Flat Track, drilled and counter sunk with screws, per foot	10
Woodwork of carriage for each extra foot in length	1 00
Dog Shaft, turned, includes couplings, per foot	75
Patent Timber Gauge, small size same as used on No. O Irons	25 00
Patent Timber Gauge, same style, large size	35 00
Patent Saw Guide, adjustable	8 00
Sawdust Carrier, 20 feet centres using No. 35 chain	25 00

SELF-ACTING SHINGLE MACHINES

NO RACK OR GEAR FEED, BUT PATENT

Lever Feed Slow Feed to Saw,
Quick Return.

Guts Shingles,

Box Stuff or Heading
IN SHINGLES,

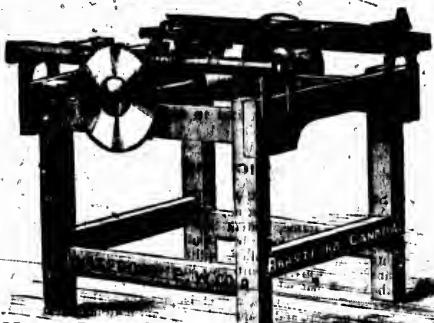

20 Tooth Pinion cuts for Canadian Market, scant $\frac{3}{8}$ butts, or white
15 gauge saws, 3 shingles cut at $\frac{1}{4}$ thick.

18 Tooth Pinion cuts for American Market, plump $\frac{3}{8}$ butts,

TO CHANGE FOR

Heading or Parallel Stuff.

With Improved Feed Works is more Simple than Before.

Knot Saw Jointer,
should run 2,500 r.p.m.

Shingle Packer,
Makes Square Bunches

Improvements in the Smallwood

Shingle Machine.

We have lately changed entirely the feed works of our Smallwood Shingle Mill, and added patented improvements by which the operator can now, by a simple device, make the machine cut all tips and all points at either end of block continuously. By this arrangement knots or other imperfections can be put into the points of shingles, keeping them No. 1; and when this is worked out, the feed is reversed and points made at the other end till block is evened up, and then machine can be made to work butts and tips alternately as before.

As this adds considerably to the cost of making the machine and very much to its value, we have been forced to advance the price as above.

16 do Double Tooth Pinion cut $\frac{1}{8}$ inch thick.....	NEADING
22 do do do $\frac{1}{4}$ do	BOXBOARD and PICTURE BACK STUFF.
12 Shingle do do $\frac{1}{2}$ do	
14 do do do $\frac{3}{8}$ do	
15 do do do $\frac{1}{8}$ do	

No. 1 Machine uses 36 and 38 inch saws. Cuts 14 to 18 inches long by 14 wide, weight, including Jointer, as shown in cut 2,200 lbs...
Pulley, 12x8 $\frac{1}{2}$; should run 1,400 to 1,600 revolutions per minute.

No. 2 Machine uses 40 and 42 inch saws; cuts 14 to 20 inches long with 40 inch saw, and 14 to 22 inches with 42 inch saw, by 24 inches wide. Weight, including Jointer, as shown in cut 2,800 lbs...
Pulley, 12x8 $\frac{1}{2}$, should run 1,400 to 1,700 revolutions per minute.

Smallwood's No. 1 (small size) Patent Self-Acting Lever Feed Shingle Mill.—With improved feed works, all iron with the exception of three braces; including all late improvements, (menth net below); making the machine heavier and more durable as illustrated. We generally use American shingle saws of the best make—has 16 inch saw

taper ground to 14 or 15 gauge at rim, with 100 teeth. Capacity 10,000 to 20,000 per day. Cost of Machine complete, with Jointer and Belt to Jointer as shown in cut \$250.00

260.00

No. 1 Machine with 38 inch saw, including jointer and Jointer Belt.....

\$250.00

Smallwood's No. 2 (large size) Patent Self-Acting Lever Feed Shingle Mill.—With improved feed works same as No. 1, but much larger, heavier, and with larger blocks of much greater capacity—15,000 to 30,000 per day; made for extra large and wide blocks, with table to set block on while being dogged. Uses 40 inch saw, taper ground to 14, 15 or 16 gauge at rim, 100 teeth. Includes Belt to Jointer and Jointer Belt.....

300.00

No. 2 Machine with 42 inch saw, including Jointer and Jointer Belt.....

320.00

Smallwood's No. 2 Machine, without Jointer; weight, 1,800.....

220.00

Smallwood's No. 2 Machine, without Jointer; weight, 2,400.....

270.00

If Improved set works are not wanted in above machine deduct \$20.
