OF

DEBATES

HOUSE OF COMMONS

FOURTH SESSION—FOURTEENTH PARLIAMENT

15-16 GEORGE V, 1925

VOLUME IV, 1925

COMPRISING THE PERIOD FROM THE TWELFTH DAY OF MAY TO THE TENTH DAY OF JUNE, 1925, INCLUSIVE

BEING

VOLUME CLXVIII FOR THE PERIOD 1875-1925

INDEX ISSUED IN A SEPARATE VOLUME

OTTAWA
F. A. ACLAND
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1925

CANADA

House of Commons Debates

OFFICIAL REPORT

Tuesday, May 12, 1925

The House met at three o'clock.

PRINTING OF PARLIAMENT

Hon. CHARLES MARCIL (Bonaventure) moved that the second report of the Joint Committee on the Printing of Parliament be concurred in.

Motion agreed to.

CANADA-FINLAND TREATY OF COMMERCE

Hon. J. A. ROBB (Acting Minister of Finance) moved that the House go into committee to consider the following proposed resolution:

Resolved, that it is expedient to introduce a measure to provide that goods produced or manufactured in Finland shall receive treatment as favourable as that accorded to goods produced or manufactured in any foreign country so long as goods produced or manufactured in Canada enjoy in Finland the same treatment as is enjoyed by similar goods produced or manufactured in the United Kingdom, as set out in Article 23 of the Treaty of Commerce and Navigation between the United Kingdom of Great Britain and Ireland and Finland, made at Helsingfors the 14th day of December, 1923.

Mr. MEIGHEN: Mr. Speaker, is this not a notice of motion to go into committee to-morrow?

Mr. ROBB: To-morrow, if my right hon. friend insists, but I thought we might make some progress by taking it up to-day.

Mr. MEIGHEN: Oh, it cannot be anything else.

Mr. ROBB: I move that we go into committee to-morrow on this resolution.

Motion as amended agreed to.

CANADA-NETHERLANDS CONVENTION OF COMMERCE

Hon. J. A. ROBB (Acting Minister of Finance) moved that the House go into committee to-morrow on the following proposed resolution:

Resolved, that it is expedient to bring in a measure to provide that a certain convention of commerce dated the eleventh day of July, 1924, entered into at Ottawa by the plenipotentiaries appointed by His Majesty and by Her Majesty the Queen of the Netherlands be approved, and to give effect to the provisions of the said convention.

Mr. MEIGHEN: Both these resolutions were on the order paper yesterday, and I think the day before. This notice could have been given then, and we could then have gone into committee to-day.

Mr. ROBB: The day before, I was not here.

Mr. MEIGHEN: Somebody else could have done it.

Motion agreed to.

DEATH OF MR. A. B. HUNT, M.P.

On the Orders of the Day:

Mr. SPEAKER: I have the honour to inform the House that I have received the following letter:

Bury, Quebec, May 11, 1925.

The Honourable RODOLPHE LEMIEUX, K.C., M.P.,
Speaker of the House of Commons,
Ottawa.

Dear Sir,—Please convey to the House of Commons on behalf of my mother and the other members of our family our deep appreciation and gratitude for the great tributes paid to my father's memory and for the sympathy so kindly extended to us in our great and sudden bereavement.

Respectfully,
WALTER G. HUNT.

BRITISH PREFERENCE ON SUGAR

On the Orders of the Day:

Mr. NEIL McTAGGART (Maple Creek): I desire to rise to what I presume would be a question of privilege. I desire to challenge the correctness of an answer given by the hon. Minister of Marine and Fisheries (Mr. Cardin) to a question appearing in my name on the order paper a few days ago. The question concerned the tariff on sugar, and especially the British preference, and was based on information which came into my possession that the British preference on sugar had been withdrawn.

Mr. SPEAKER: I would remind the hon. gentleman that a question of privilege can only be raised if the matter at issue affects the honour of a member of the House. A

question such as the one raised by the hon. gentleman is a matter for debate on some other occasion, but not before the Orders of the Day as a question of privilege. I do not see where the privilege is in that question. We should therefore proceed with the Orders of the Day.

Mr. McTAGGART: I defer to your ruling Mr. Speaker, and I will follow it up by a question to the government as to whether or not the British preference on sugar has been withdrawn?

Mr. ROBB: I think my hon. friend had better put his question on the order paper; it will be considered in the regular way.

WAYS AND MEANS

CUSTOMS TARIFF, 1907, AMENDMENT

The House in committee of Ways and Means, Mr. Gordon in the chair.

1. Resolved, that the first paragraph of subsection one of section six of the Customs Tariff, 1907, and subsection seven of said section six be repealed and the following substituted therefor:

In the case of articles exported to Canada of a class or kind made or produced in Canada, if the export or actual selling price to an importer in Canada is less than the value thereof for customs entry, there shall, in addition to the duties otherwise established, be levied, collected and paid on such article, on its importation in Canada, a special duty (or dumping duty) equal to the difference between the said selling price of the articles for export and the said value thereof for customs entry; and such special duty (or dumping duty) shall be levied, collected and paid on such article, although it is not otherwise dutiable.

(7) Such regulations may also provide for the exemption from special duty of any article when the difference between the value for customs entry and the selling price thereof to the importer as aforesaid amounts only to a small percentage of its value for customs entry.

2. Resolved, that schedule A to the Customs Tariff, 1907, as amended by chapter forty-seven of the Statutes of 1919, chapter twenty-seven of the Statutes of 1921 and chapter thirty-eight of the Statutes of 1924, and by Order in Council, be further amended by striking thereout tariff items 101a, 587, 588, 591 and 591a, the several enumerations of goods respectively, and the several rates of duties of Customs, if any, set opposite each of said items and to repeal paragraph (a) of regulation 1 of Order in Council, P.C. 1344, dated 5th day of August, 1924, designated as item 774 of the Customs Tariff, and to provide that the following items, enumerations and rates of duty be inserted in said schedule A:—

Tariff Items	—	British Preferential Tariff	Intermediate Tariff	General Tariff
101a	Shaddocks or grape fruit, n.o.p., per one hundred pounds	50 cts.	$1.00	$1.00
101aa	Shaddocks or grape fruit, when imported from the place of growth, by ship, direct to a Canadian port, per one hundred pounds	Free	50 cts.	$1.00
453e	Engines to be used exclusively in the propulsion of boats bona fide owned by individual fishermen for their own use in the fisheries, under regulations prescribed by the Minister of Customs and Excise	10 p.c.	12½ p.c.	15 p.c.
469a	Well-drilling machinery and apparatus and parts thereof, and rope twenty-one hundred feet and over in length, capable of drilling wells of two thousand feet and over in depth, of four inches and over in diameter, and of raising and lowering casing over four inches in diameter for such wells, for drilling for water, natural gas and oil, and for prospecting for minerals, not to include motive power	5 p.c.	5 p.c.	5 p.c.
553a	Braided candle-wick with or without wire centre or braided taper-wick with or without wire centre when imported by manufacturers of wax candles or wax tapers for use only in their own factories in the manufacture of wax candles or wax tapers	Free	Free	Free
588	Coal, bituminous and coal, n.o.p., per ton	35 cts.	45 cts.	50 cts.
588a	Gas for heating, cooking or illuminating per one thousand cubic feet	6 cts.	6 cts.	6 cts.
591	Farm wagons, farm sleds, logging wagons, logging sleds, and complete parts thereof	5 p.c.	10 p.c.	10 p.c.
591a	Freight wagons, drays, sleighs, n.o.p., and complete parts thereof	17½ p.c.	25 p.c.	25 p.c.

Hon. J. A. ROBB (Acting Minister of Finance): I move that resolution No. 1 with respect to the amendment of subsection 1 of section 6 of the Customs Tariff, 1907, be struck out.

[Mr. Speaker.]

Mr. GOOD: I am entirely in favour of having the resolution struck out, but I was going to ask the Acting Minister of Finance whether or not there would be any opportunity afforded of discussing the administra-

tion of the dumping regulation; if not, whether the present opportunity could be taken advantage of in spite of the fact that the proposed dumping resolution is to be struck out?

Mr. ROBB: The question is now before the House.

Mr. CALDWELL: I think that if the clause proposed to be struck out were read to the committee it would avoid some doubt or confusion in the minds of hon. members as to what we are striking out.

Mr. ROBB: If hon. members refer to the Votes and Proceedings of March 24, they will see that I am proposing to strike out the resolution to amend the dumping clause.

Mr. GOOD: I understand that the Acting Minister of Finance claimed, when he announced the withdrawal of this resolution some time ago, that the present regulations were adequate. Am I to understand that the present regulations give the same adequacy as the proposed amendment was supposed to provide? Because, it seems to me that the resolution which it is now proposed to strike out gives to the customs officials a tremendous power, a power which they ought not to have under any circumstances. I should therefore like to know whether or not the same power of arbitrary valuation rests with the officials at the present time.

Mr. ROBB: We are proposing to strike out the resolution giving the officials the very power to which he objects. The act will therefore remain as it is now, and it will be applied to imports of dutiable goods when they are valued at less than the fair market value in the country of origin—that provision has been in our statutes for many years and it will continue. I do not think I have anything to add to that statement.

Mr. GOOD: My reason for putting the question is that there have been a good many complaints as to the determination of "fair market value" in valuing goods for customs purposes. The minister might give some assurance to the House, if he can, that there are no abuses existing at the present time in connection with this particular matter.

Mr. ROBB: Does my hon. friend claim that the valuation has been too high, or too low?

Mr. GOOD: I have no personal knowledge of such valuations, but we have heard hon. members mention them. I have heard frequent charges that the valuation which has been placed upon articles for this particular purpose has been much higher than the market value in the country of origin. I should like to know, therefore, for my own information, how the officials determine the fair market value of these goods in the country of origin?

Mr. ROBB: As my hon. friend knows, they have methods of gaining that information. According to my observation most of the complaints that have come to the department are that the valuation has been too low.

Mr. FORKE: It depends upon which quarter it comes from.

Mr. ROBB: It is administered by regulations in the Customs and Excise Department. There is a Customs Board dealing with the regulations to which the importers may appeal. Generally I think it has been fairly administered. It has been in operation since 1906.

Mr. CALDWELL: I presume the complaint that the valuation has been too low comes from the Manufacturers' Association.

Mr. ROBB: No, not necessarily; not always.

Mr. CALDWELL: I think it would be doubtful if the minister would claim that it would come from the consumers.

Mr. HOEY: The minister says it applies to dutiable goods. Does it not apply to free goods as well, such as binder twine?

Mr. ROBB: Oh, yes.

Mr. CHURCH: The formal resolution with regard to the dumping clause was announced in the budget speech, but later the Acting Minister of Finance (Mr. Robb) gave notice that he would withdraw it. When he first announced the withdrawal of the dumping clause it met with applause from my hon. friends to my left; no doubt it was a surrender of the government to the free trade policy of those hon. members.

In the large cities of Canada there is a protest from every business man about the way in which German and American goods are being dumped into this country. If you walk into any of the departmental stores in the city from which I come you will find that German goods of many kinds are being sold over the counter, and it is impossible for the small retailer or the large or small manufacturer to compete under existing conditions. An almost unanimous wish has been expressed that the government should provide a drastic dumping regulation, to take care of our

native products and industries. The large and small manufacturers of the country have to contend with many economic conditions which are almost intolerable on account of the competition of the German manufacturer, where they have cheaper labour, longer hours of work and depreciated currency. In that country they are not paying the heavy taxes which the manufacturer has to pay in this country. These impositions have become a nuisance and a burden on trade and commerce in Canada, and I do not know how long the present condition is going to continue. A letter was read in the House the other day in regard to this matter, telling us how factories were being closed and how the people were out of work in this country, while Germany was in a prosperous condition—many people in Canada in the breadline or having a hard struggle to keep home and family together. The other night in the House I exhibited some of these German articles which were sent here from Toronto, showing how impossible it was, owing to the present condition of the dumping clause, to compete with the foreign goods from Germany and the United States.

What does the government propose to do about it? A large number of men are going to the States. Many industries are closed and others are suffering from the lack of some provision which would protect them. I do plead with the minister, notwithstanding what he has said here to-day and what he stated the other day, to do something for the small manufacturers and the larger manufacturers in order to give them some safeguard, which they have not to-day as a result of the condition of the dumping clause at the present time. The dumping clause was a good Liberal doctrine a few years ago when the Minister of Finance (Mr. Fielding) was actively in charge. He saw the condition many years ago and recognized the necessity of providing relief for the Canadian artisan and mechanic, and he did something for them. But to-day the flood-gates are open, and European goods of all kinds are being sent into Canada and I do not know where it is going to end. Take the shoe industry which has been so much referred to both in this House and outside. We have suffered very much on account of present conditions. Owing to mass production in European countries, shoes have been sold in Canada for a dollar and a half, when these same shoes could not be produced by Canadian workmen for less than two, three or four dollars. England is coming forward with a dumping clause. It may be an indirect way of doing it by the Safeguarding of Industries Act, but they have to make some provision to safeguard the industries of England. The United States is doing the same thing. I appeal to the minister, because he is more in touch with the trade and commerce of the country than anybody else, to look into conditions and have some regard for the unanimous protests from the city from which I come and from all over Canada, and to take some practical action to prevent the dumping of European goods into Canada in such a wholesale manner which has the effect of closing up many industries in Canada,—causing unemployment and driving our citizens to join the exodus.

Mr. EVANS: I was wondering if the hon. member for Brant (Mr. Good) had received a proper answer to his question yet. I have reason to believe that the dumping clause should not be applied according to the original meaning of that act. I take it the dumping clause is not applied until goods are sold at five per cent less for export than they are sold in the country of origin.

Mr. ROBB: That is right.

Mr. EVANS: I have reason to believe the Dumping Act is applied according to the price which is fixed at the instigation of the Canadian manufacturers, instead of being governed by the price in the country of origin, and moreover goods which are on the free list also come under the Dumping Act, and dumping duty has been charged on goods which have been imported into this country when sold at the regular price in Great Britain. I should like to have some information regarding that. The question is whether, with the customs authorities already using the power that this provision sought to give them, it would still be used if we passed this paragraph.

Mr. KENNEDY (Glengarry): Would the minister give a statement in a general way as to what he considers the purpose of the dumping clause?

Mr. ROBB: My hon. friend from Saskatoon (Mr. Evans) appears to have a fair knowledge of the position. It applies when the goods are sold at less than five per cent of the fair value in the country of origin. The five per cent however does not apply to free goods. That is the general purpose.

Mr. HOEY: It does not apply to natural products.

Mr. ROBB: If they are produced in Canada it applies.

Mr. KENNEDY (Glengarry): Would the minister state whether or not in his opinion the act should be applied where there is no serious cutting of prices as between the country of origin and the price in Canada?

Mr. ROBB: Five per cent is the regulation.

Mr. KENNEDY (Glengarry): It only applies to dutiable goods.

Mr. ROBB: I will give my hon. friend an instance. The hon. member for North Toronto (Mr. Church) a few moments ago made a representation regarding undervaluation. We have had a lot of representations placed before us with regard to the importation of manufactured goods. But I recall an instance just about a year ago when there was complaint from the dairymen of this country who claimed large consignments of butter were shipped in from New York at a price far below the market value. What happened was this. There was a surplus of butter on a certain day in New York and the price went down. They shipped thirty or forty cars into Canada and the price in New York went up immediately. Our dairymen represented to us that the "fair market value" should not be the price on a day when there was a large surplus but the price the day before the goods were shipped, or the day after. Thus hon. members will see that the dumping clause applied to other than manufactured goods.

Mr. KENNEDY (Glengarry): That was not my question. What the minister states is true in the case of articles where there is a serious fluctuation in the price either in Canada or in the country of origin. If the firm importing into Canada are not seriously cutting their prices in order to interfere with Canadian manufacturers, should the dumping clause be applied?

Mr. ROBB: The regulation, as I pointed out to my hon. friend a moment ago, allows five per cent.

Mr. KENNEDY (Glengarry): Only in respect to dutiable goods.

Mr. ROBB: Yes.

Mr. KENNEDY (Glengarry): In respect to goods that come in free, there is no five per cent differential. May I repeat the question again? In respect of free goods where there is no serious fluctuation in price, and where there is no intention to cut the price under that of Canadian manufacturers, should the dumping clause be applied?

Mr. ROBB: That is all a matter of opinion. I imagine the dairymen of this country, had butter been on the free list, might have raised exactly the same complaint as they would if butter was paying a duty.

Mr. KENNEDY (Glengarry): That may be very true, but may I repeat my question? —because the minister has not yet answered it. What I would like to know is the policy of his department. In certain cases or in any case where there is a cutting of prices to undersell the Canadian producer of natural or manufactured products, the department applies the dumping clause. I ask him: In cases where there is no serious fluctuation in price and where there is no attempt to undersell the Canadian manufacturer, should the dumping clause be applied?

Mr. ROBB: I will ask my hon. friend if he knows that it has been applied under such conditions?

Mr. KENNEDY (Glengarry): I would like to have a statement of policy of the department.

Mr. EVANS: Some years ago I had reason to believe that agricultural implements bought in the United States in the regular way at the price at which they were sold to the trade there, came under the dumping clause here.

Mr. ROBB: This government has largely removed the complaint of my hon. friend regarding agricultural implements.

Mr. BRETHEN: Is it not a fact that today American automobiles are priced, not at the American valuation, but at a supposed Canadian valuation?

Mr. ROBB: I will read the law as it is. I am not administering the law:

> In the case of articles exported to Canada of a class or kind made or produced in Canada, if the export or actual selling price to an importer in Canada is less than the fair market value of the same article when sold for home consumption in the usual and ordinary course in the country whence exported to Canada at the time of its exportation to Canada, there shall, in addition to the duties otherwise established, be levied, collected and paid on such article, on its importation into Canada, a special duty (or dumping duty) equal to the difference between the said selling price of the article for export and the said fair market value thereof for home consumption.

Mr. BRETHEN: Some time ago I made an examination and went to the trouble to interview some dealers in this city who are selling automobiles. There was a standard price for American machines as advertised in all the American papers. There was no fluctuation in the price. I was informed that that price was not accepted under the customs tariff, but that an arbitrary Canadian price

was set on those machines for the purpose of duty. With this increased valuation for duty and with the sales tax, the practical result is that the selling price of those cars in Canada is about 48 per cent over the American price.

Mr. ROBB: That has not been directed to my attention.

Mr. LEWIS: The minister, in reading the regulation, did not say anything about the limitation. He did not speak about the five per cent differential.

Mr. ROBB: Fifteen per cent.

Mr. ANDERSON: In view of the fact that large quantities of German goods are coming into Canada at possibly about fifty per cent of the cost of production in Canada, has the minister taken into consideration inserting a clause in the act giving the minister authority to make special provision for special cases, so that he can act in the interim of parliament?

Mr. ROBB: My hon. friend knows Germany is now on a gold basis, and since Germany has got on the gold basis, the experience is that importations of goods from Germany are not increasing. The importations remain practically stationary.

Mr. STIRLING: Under what regulations or clauses was the dumping of fruit in 1924 taken care of?

Mr. ROBB: I think that was an amendment to the Customs Act in 1923.

Mr. STIRLING: Does the minister mean section 47(A) of the Customs Act?

Mr. ROBB: Yes.

Mr. STIRLING: Were orders in council issued to cover that?

Mr. ROBB: I think the minister took responsibility under section 47(A) of administering that.

Mr. STIRLING: Would the minister explain why rebates were apparently granted in such a wholesale manner as described in Commissioner Duncan's report?

Mr. ROBB: I could not tell my hon. friend that because I was not aware that rebates had been granted.

Mr. MacLAREN: Does the change affect the importation of fresh fish from the United States coast? I understand that occasionally there is an unusually large catch of fresh fish in the United States and that it is sent into Canada at such low prices that Canadian fish fails to be sold at a fair price. Does the amendment now proposed by the minister affect the matter of dumping as regards fresh fish?

Mr. ROBB: There will be no change in the law. The law will remain exactly as it has been heretofore. If the fishermen have any complaint as to the price, they should lodge their complaint with the Minister of Customs.

Mr. CLARK: What is the difference in effect between the old clause and the proposed clause?

Mr. ROBB: The clause as introduced, regarding which the complaint has been made by some hon. gentlemen opposite, gave to the officials of the department certain powers to determine the value for duty purposes. The law, as it will remain, determines within what limits those values may be fixed.

Mr. CLARK: Who defines now the value for customs entry?

Mr. ROBB: It is defined under the Customs Act. I have just read that.

Mr. CLARK: That was the old section.

Mr. ROBB: We are coming back to the old section.

Mr. MEIGHEN: Except as modified by section 47(A).

Mr. ROBB: Yes.

Mr. MEIGHEN: The minister, in answer to the hon. member for Yale (Mr. Stirling), said that the Minister of Customs had taken it upon himself to act.

Mr. ROBB: That is my recollection of the matter.

Mr. MEIGHEN: If the minister will read section 47(A)—I do not have it before me, but I have a pretty distinct recollection of it—he will find that the Minister of Customs has no authority to act and value any goods unless he is first authorized by an order in council.

Mr. ROBB: There may be an order in council.

Mr. MEIGHEN: That is to say, there must first be an order in council authorizing him. It is vicious legislation; it could scarcely be more so, as I clearly emphasized in the House at the time. It was designed to put the minister virtually in control of the boundary to do what he liked. But the minister could not act except on the authority of an order in council. If the Acting Minister of Finance (Mr. Robb) will read the act he will

find that I am right. Now, is it a fact that the Minister of Customs and Excise (Mr. Bureau) went in there and acted without an order in council at all?

Mr. ROBB: It is possible he had the order in council.

Mr. MEIGHEN: No, he had not.

Mr. ROBB: My right hon. friend knows that the Minister of Customs and Excise is a good lawyer and he would not exceed the limitations of the act in the administration of it.

Mr. MEIGHEN: He is a good lawyer but—

Mr. ROBB: This question however is not now before the House—

Mr. MEIGHEN: Yes it is.

Mr. ROBB: —except by way of review.

Mr. MEIGHEN: He (Mr. Bureau) is a good lawyer but he is a lot more daring politician. The fact is that he had no order in council, for I wrote to the privy council to find out and received the reply that he had none at all. So that if what the Acting Minister of Finance tells us to-day is correct, the Minister of Customs and Excise, without the authority provided by parliament, went to the boundary and did what he pleased, instructing his officials to value as he liked. Are we to assume that this was the case? I can read the minister the letter which says that no order in council whatever was passed under the authority of section 47(A).

Mr. ROBB: I will take your word for it.

Mr. MEIGHEN: The minister will admit that the Minister of Customs had no authority to act at all except on the basis of an order in council to be passed after section 47 (A) had been adopted. He has section 47(A) there and can read it and tell the House whether or not the Minister of Customs had any authority to act without the order in council.

Mr. ROBB: I will accept my right hon. friend's word for it if he has been in communication on the subject.

Mr. MEIGHEN: That is one thing; but the minister has the law, and reading that law I want him to admit, or to deny, that the Minister of Customs had any authority to act unless the order in council gave him that authority.

Mr. HOEY: Was he obliged to have an order in council in each case?

Mr. MEIGHEN: No, a general order, I think.

Mr. GARLAND (Bow River): Does the leader of the opposition mean that all collections made subsequently would be illegal?

Mr. MEIGHEN: The valuations made by the minister without the authority of the order in council were illegal.

Mr. GOOD: And when did that occur?

Mr. MEIGHEN: I do not know; I did not know it had occurred myself, but the Acting Minister of Finance says that the Minister of Customs acted as he did.

Mr. GARLAND (Bow River): But if the valuations were illegal, then at least some portion of the collections must have been illegal.

Mr. MEIGHEN: Perhaps so.

Mr. ROBB: My right hon. friend will observe that section 46 of the act gives the minister some latitude.

Mr. MEIGHEN: But not the latitude he gets under section 47(A). Now the fact is —and I do not think any hon. members will be surprised, for it is in accordance with history—that the candidate representing the government in the election in the county of Yale circulated literature and asserted to the electors of that riding that this government, under the authority of this act, had given the farmers there higher protection in fruit than they had ever got under the Conservative regime. This was the appeal on which hon. gentlemen went before the electors in that constituency.

Mr. ROBB: My right hon. friend possibly denied that statement.

Mr. MEIGHEN: I knew that they could do it under the law, and I assumed that doing it, they did it legally. But now we are informed that it was done illegally. The fact is, as I say, that the Liberal candidate in Yale county, representing a government that claims to be determined to get reciprocity back again, with free fruit, circularized the whole riding proclaiming that this government had given higher protection on fruit to the farmers out there than they had ever enjoyed before. And I have his circular with me.

Mr. ROBB: Did you believe it?

Mr. MEIGHEN: The assumption usually is that such assertions are false. But it is bad enough to do that in violation of all professions made in this House and in the country,

and still worse to do it illegally; it is still worse to do it against a law which in itself is too sweeping and empowers the governor in council far beyond the limit to which it should be empowered. But we are now informed that the minister took the law into his own hands, ignored the provisions of the statute, and went to the boundary and told his officials to value as they liked, for this man one rate and for that man another. And the Liberal candidate in the riding to which I have referred made the statement that in that way the government gave higher protection than had existed before.

Mr. BANCROFT: All hon. members in this corner will be glad to learn that the good people of Yale, in electing the present member (Mr. Stirling), were voting for a low tariff.

Mr. MEIGHEN: They were voting for protection on fruit, announced by a man who was in favour of it and whose party openly advocated it. They were voting frankly for something that they understood; they were not voting for something under disguise, only to be fooled.

Mr. EVANS: I can give the right hon. gentleman some light on this. It is quite true that apples were being bought in the United States at that time at 65 cents a box and the regular duty brought them up to 95 cents. The British Columbia apple grower maintained that a box of apples should not be sold at first hand under $1.10. Two cars of apples at that time were assessed in Winnipeg, and as a matter of fact a dumping duty of 16 cents a box had to be paid, bringing the total up to $1.11. This was the power given the minister, who could place what price he liked on any fruit or other natural product imported. And that power was enacted in this House on June 22, 1922.

Mr. COOTE: I want to throw some more light on the question if possible. I was in British Columbia last year when the campaign was in progress in Yale and I cut out of a newspaper I bought on the train the following in reference to a meeting which was being held in the constituency:

> D. W. Sutherland, Liberal candidate, defended the record of the Liberals in the matter of the duty on fruit. He asserted that during the past two years, under the anti-dumping legislation in its present form, reductions in fruit importations as compared with the last two years the Meighen anti-dumping clause was in force, had amounted to 239 per cent. The electors of Yale, he said, must decide whether or not they are desirous of having that form of taxation discontinued.

It seems to me that there should be some amendment to the Dumping Act. I think the minister is well advised to withdraw this amendment, but the government should bring forward some other amendment by means of which it will be possible for the importer of fruit to know in advance whether or not he is likely to be subject to the dumping duty. Under present conditions I do not think the importer knows. I had a letter from a western fruit jobber in which he said:

> I would like to emphazise the fact that we never know how much the dumping duty is until after we have possession of the goods, and sometimes we have the apples sold, when two or three weeks afterwards an account is received for the dumping duty, which was not included in the selling cost. We tried to get an established price for apples coming into this market, but our answer was that there might be collusion between shipper and jobber and false invoices made out; so you can see we are sometimes in the dark as far as the dumping duty goes.

And he gives specific instances of the unfair levying of the dumping duty. As I said before, I think there should be some amendment made to the dumping clause, but the amendment proposed was not a proper one, and I am glad it is being withdrawn. Under the present dumping law, will the minister inform us if the officers of the Department of Customs are given the power to set an arbitrary value upon motor cars which are brought into this country? Such cars are sometimes accompanied by a sworn affidavit as to the price paid, and yet the customs officers will arbitrarily set a value on the car for duty purposes which is sometimes nearly twice the sworn invoice value.

Mr. ROBB: My understanding is that the officers of the department must assess the value as provided for by the Customs Act.

Mr. COOTE: Just what does the Customs Act provide in that case? Does it give them that power, or should they take the exporter's invoice of the price paid for the car as the value for duty?

Mr. ROBB: I do not know that I can give my hon. friend any further information. I believe that all hon. gentlemen who desire to look after our legitimate trade will agree with me that the customs board must have some latitude. I may take my hon. friends and the public into my confidence to this extent. We have had complaints that goods were being smuggled into this country. Not long ago our secret service men raided the offices of an importer, and discovered that he had blank invoices, properly endorsed by the exporting firm, and sworn to. He took these blank invoices, filled them in, and went to the customs and tried to pass his entries on them. It is manifest that we must have

some power to catch those chaps. I think my hon. friend will admit that.

Mr. COOTE: I was just trying to find out, Mr. Chairman, what power the minister or his officers had to place an arbitrary value on imported motor cars. I must say I have not yet found out.

Mr. CAMPBELL: Mr. Chairman, the minister's explanation in this regard is not very satisfactory. Surely the officers of the department have some means of arriving at the prices of imported goods without resorting to arbitrary action. Surely the price lists of motor cars, for instance, are available to them. Reverting to the point raised by the hon. member for East Peterborough (Mr. Brethen), is it not a fact that even where the valuation of an imported automobile is agreed on, where in fact there is no dispute as to price, five per cent is added to that price before the automobile is assessed for duty? That is, all invoice prices are increased to the extent of five per cent. Is that not so?

4 p.m.

Mr. ROBB: It may be.

Mr. CAMPBELL: But is it not an arbitrary ruling of the department? I am not quite clear what the minister says as to this.

Mr. ANDERSON: Is not the sales tax in the country of origin added to the import price for customs purposes?

Mr. ROBB: Yes, that establishes the fair market value of the article in the country of origin.

Mr. LADNER: I understood the minister to say that the law as it stood requires the valuation to be based upon the fair market value of the imported article in the country of origin. My understanding was that valuations are based on the home consumption.

Mr. ROBB: Yes, the home consumption value in the usual and ordinary course. That, I should think, means the fair market value.

Mr. CLARK: Mr. Chairman—

Mr. ROBB: If hon. gentlemen desire me to take up their time and read the Customs Act I shall be very glad to do so, but I would suggest that they get the act and read it for themselves. I would refer them particularly to sections 41, 42, 46 and part of 47, which prescribe the powers of the minister and officers of the department.

Mr. FORKE: Mr. Chairman, there seems to be a good deal of confusion in respect to this matter and it has not yet been cleared up. In fact, no one yet knows exactly how these duties are assessed upon articles that are imported. For instance, take a motor car advertised in the Saturday Evening Post at $1,800. It should not be a difficult matter to add the luxury tax and specify the rate of duty that applies. Is that done?—that is the point. Or does the officer simply make an arbitrary valuation and assess the duty? There is no use denying the fact, Mr. Chairman, that there is a suspicion in the public mind that the customs officers are charging more than the import duty—if 35 per cent is not enough, put on 50 per cent. Of course, I am not advocating any such rate of duty. But let us know exactly where we stand. That is the way we look at it.

Mr. CAMPBELL: Mr. Chairman, the minister has admitted that five per cent is added to the price. I should like to know on what authority this is done. If I import an automobile valued at $2,000, I find it is assessable for duty at $2,100. Where does the minister get authority to add $100 to the price of that car for the purpose of assessing the import duty?

Mr. ROBB: I understand the five per cent is added for the home consumption price. Answering my hon. friend from Brandon (Mr. Forke), I do not know anything about advertisements in the Saturday Evening Post or any other paper, but the prices there advertised need not mean the fair market values or the prices for home consumption. My hon. friend has had too long experience to believe that. For instance, departmental stores advertise goods at certain prices, but it is well known that this is simply a drawing card to attract customers, and does not always mean that those are the fair market or home consumption prices. It is the duty of the customs officers, representing the people of Canada, to investigate whenever they are in doubt concerning the actual selling price in the country of origin of the article imported.

Mr. LEWIS: It was stated a few minutes ago that one hundred per cent is added in arriving at the import value; and yet the minister said only a short time ago that in applying the dumping duty his department was limited to a range of fifteen per cent. Is that ever exceeded?

Mr. ROBB: I am telling my hon. friend what the law provides. If any hon. gentleman has a case to submit where officers of the department have exceeded that range, I shall be glad to have it investigated.

Mr. CAMPBELL: Where does the minister get authority for adding 5 per cent to the import price of an automobile? If I go to the United States to-day and buy a car for $2,000, the regular selling price, I find I am assessed for duty purposes on a valuation of $2,100. I am anxious to find out where the minister gets authority to do that. Twenty-one hundred dollars is not the price for home consumption.

Mr. ROBB: I am told by my officers that this is done under section 41, which establishes the fair market value:

> Such market value shall be the fair market value of such goods in the usual and ordinary commercial acceptation of the term and as sold in the ordinary course of trade, provided that a discount for cash for duty purposes shall not exceed 2½ per cent, and shall not be allowed unless it has been actually allowed and deducted by the exporter on the invoice to the importer.

Mr. CAMPBELL: Mr. Chairman, that gives the minister no such authority. Two thousand dollars is the price at which that car can be purchased at any place in the United States; there is no question about that. Yet I find $100 is added to that price.

Mr. KELLNER: According to the report of the commission which investigated the alleged fruit combine last year, those prices are not arrived at at all by means of the act, but by regulations passed by the department. I have before me a long list of these regulations which the department has passed. The fair market price would be arrived at by what is presumed to be the selling price in the United States, regardless of whether the goods were bought for cash or credit. No matter whether it is fruit or manufactured articles you are importing, the importer in Canada should be assessed on the wholesale price of the article, and if he is paying cash for it, it should be on the cash price. But according to these regulations he would be assessed on the credit selling price. I do not think there is any question but that if the department is allowed to make regulations fixing these prices, the act does not amount to anything, for the regulations are the governing factor, and not the act at all.

Mr. GOOD: I think the minister ought to give us some satisfaction in regard to this question. Let me put a case to him. Supposing I go to the United States and buy a second-hand car for $100, and present a sworn certificate to the customs officials that that is all I paid for it. Would the officials have the right to say to me, "No, we cannot accept that price; we must charge you duty on a valuation of $200"? Would that be possible under the regulations?

[Mr. Robb.]

Mr. ROBB: That is an imaginary case my hon. friend is bringing up—

Some hon. MEMBERS: No, no.

Mr. ROBB:—although it is in common practice to a considerable extent. We know there is a vast organization that steals automobiles, and brings them into Canada and offers them at a low price. These fellows are crooks to start with, and anything is a price to them. I would ask my hon. friend, are the customs officials not justified in watching that sort of commerce?

Mr. CAMPBELL: Is a man assumed to be a thief if he brings in a cheap motor car?

Mr. ROBB: Certainly not, but there are men in prison to-day who have been convicted of stealing automobiles and bringing them in here and selling them at a low price.

Mr. GOOD: The minister is evading the question. I say that if a man bought an automobile in good faith for $100, and certified to the department that that is what he paid for it, would the officials have the power to charge him duty on a valuation of say $200?

Mr. ROBB: I understand the procedure is this: They take the list price of the automobile and allow so much for depreciation each year—they know the year the car was made—and in that way they arrive at the value.

Mr. GOOD: An arbitrary valuation.

Mr. LEWIS: In that case the fifteen per cent maximum does not apply at all.

Mr. EVANS: In the case cited by the hon. member for Brant (Mr. Good), is not the trade discount taken into account according to the status of the importer? If the importer is a dealer, the whole amount of the trade discount is allowed, and duty is not charged on it, but if under the Canadian rules of the distributing combine, which is recognized in the Tariff Act of Canada, the importer happens to be a consumer, no trade discount is allowed. That trade discount sometimes amounts to fifty or sixty per cent. I think that would perhaps answer the question of the hon. member for Brant.

Mr. CAMPBELL: I am not at all satisfied as to this 35 per cent, and I think the minister ought to give us some better explanation, particularly with reference to automobiles. It simply means the importer has no protection at all. The consumer is paying 35 per cent duty, and if the minister thinks 35 per cent is not sufficient, let him increase the duty and make it 37 or 37½ per

cent, or whatever is necessary. Let us know what it means. When I buy a car anywhere in the United States for $2,000, and I find I have to pay on a valuation of $2,100, I maintain the department is getting money out of me by subterfuge. It is a dishonest practice, something that would not be tolerated in connection with any other business in the country. Surely the department can be open and above-board and put on sufficient duty if they think 35 per cent is not enough. Let us know precisely just what we are obliged to do.

Mr. LADNER: Under the original proposal, which properly and frankly placed in the hands of the minister power to fix a value so as to protect a similar article in Canada, the importer knew exactly where he was at. Under the old practice the value of the article, let us say a second-hand motor car, was supposed to be the home consumption value, but when you buy that car on the market in Los Angeles for $400 or $500 and bring it up to Canada, by some method or another the customs officials arrive at the value of that car by estimating depreciation over a series of years. That depreciation is calculated arbitrarily so as to make the value for duty purposes in Canada such as to give protection to similar articles produced in this country. I am in favour of protecting the articles produced in this country, but what I am putting to the minister is this: Under what authority or by what provision of the law have the officials of the department the right to fix a depreciating value instead of taking the actual home consumption value?

Mr. ROBB: They are working under sections 41 and 42, which authorize them to determine the fair market value.

Mr. LADNER: I am pointing out to the minister, and I do not think he will deny, that the officials do not fix a fair market value. The fair market value is a question of fact to be determined from the evidence on the spot where the markets are. In this case it would be the price of cars in California. What they do is to put an arbitrary value on the car, and I believe they do it without authority. I am asking the minister if they have authority, and whether it would not be better—I think it would be much more honest to the people of this country—to maintain the provision he is now proposing to repeal, and give power to the minister to put a value on the imported goods. I would like my question answered—whether the act gives authority to anyone to make an arbitrary discount each year for depreciation, instead of taking the home consumption value.

Mr. ROBB: I have only to answer my hon. friend again that the officials are operating under the clause which empowers them to determine the fair market value. There is also a provision in the Customs Act—I have not the clause before me at the moment—for an appeal to a board of arbitration.

Mr. CLARK: I am not clear as to the meaning of the words "the value thereof for customs entry." I understand the article would be valued at the home consumption value now. Under the proposed section will the article be valued according to the home consumption value, or according to the value in the market where purchased, or will it be valued arbitrarily by the opinion of the customs officials? It must be one of the three.

Mr. ROBB: It is arrived at under the terms of the Customs Act.

Mr. CLARK: What are the terms of the Customs Act as to "the value thereof for customs entry"? What do these words mean? I am putting three propositions to the minister, and it must be one of the three, I should think.

Mr. ROBB: My hon. friend misunderstands me, that is the clause I am striking out.

Mr. GOULD: I should like to ask the minister what law he would invoke if, as a result of wheat in the United States being ten cents per bushel lower than Canadian on the average, as it was this year, if the millers of Canada could take advantage of that lower price to import American wheat and use it in their mills?

Mr. ROBB: My hon. friend, who is a grain man and I believe knows as much about the grain trade as anybody, in Canada, must be aware that under the act, as it now is and has been for many years past, the millers of Canada can import wheat from the United States just the same as American millers can import Canadian wheat and mill it in bond for export.

Mr. GOULD: One of the reasons why it would not have been economical to do that in the past is that this is the first year that Canadian wheat has been quoted at a higher price than American wheat. This new condition has obtained since the harvesting of the crop of 1924-25 for the first time in our history. I am not asking that the dumping law should be enforced, and therefore am

showing generosity from an agricultural point of view; but some consideration should be given to the other questions which have been raised by other hon. gentlemen. If the condition referred to is going to continue, will there be any medium by which there might be a levelling up, in the case of Canadian millers importing American wheat and grinding it in this way?

Mr. ROBB: Everybody knows that in the markets of the world wheat as a commodity is on a parity with gold.

Mr. GOULD: True enough, but in all past years American wheat has been on the average ten cents a bushel higher than Canadian wheat.

Mr. ROBB: I will not admit that there is that difference in the quality of the wheat.

Mr. GOULD: We know the lower quality of the American wheat, yet in the past it has been quoted at from ten to twenty cents a bushel higher than our good Canadian wheat. Now the price of American wheat has in every year up to 1924-25 been on the average ten cents a bushel higher, which made a disparity of twenty or thirty cents as compared with Canadian wheat. This creates a condition which may result in Canadian millers importing American wheat and grinding it in this country.

Mr. ROBB: If the Canadian miller imported American wheat and it came under the dumping clause he would have to pay the penalty.

Mr. GOULD: Have the dumping duties ever been applied to wheat coming in under these circumstances?

Mr. ROBB: Not to my knowledge. I should like to advise hon. gentlemen that when they have complaints, as some of them seem to have, as to the determination of the valuation, the Customs Act already provides for those complaints being brought to a proper tribunal. If the importer is dissatisfied with the appraisement the act provides that he may appeal. I will read the section in question so that it may appear on Hansard:

> Except as in this act otherwise provided, if the importer, owner, consignee or agent, having complied with the requirements of this act, is dissatisfied with the appraisement of any such goods made by the appraiser hereinbefore mentioned he may, within three days, give notice in writing to the collector of such dissatisfaction, on the receipt of which notice the collector shall at once notify such importer, owner, consignee or agent to select one disinterested and experienced person familiar with the character and value of the goods in question, and the collector shall select a second person with similar knowledge and notify such person, importer, owner, consignee or agent of such appointment.

And then they proceed to deal with the case.

Mr. MEIGHEN: The minister knows that clause would never apply to section 47(A). That clause could never apply except that the principle of valuation were declared by statute. But under section 47(A) all principle of valuation is swept away, and the minister is put in power—clear, despotic power—over everything. All he need do is to express his will on any principle at all. Consequently the appeal could not apply because the appellant would have nothing to go on. This government has swept away the protection of parliament and assumes the whole authority itself, all in the name of "responsible government".

Mr. WOODSWORTH: May I call attention to a case which, perhaps, illustrates one difficulty in determining what the fair market value of an article is. The matter itself is very small. There were some books advertised by the Haldeman-Junius Company, Girard, Kansas, a series of books ordinarily sold at ten cents but reduced for a certain fixed period to five cents per copy. A Canadian wrote away for a number of these books and found that he was charged a heavy duty. He wrote about the matter and received this explanation:

> It would appear that these books are paper bound and are therefore subject to duty at the rate of 25 per cent ad valorem under tariff item 169. The books were invoiced to the purchaser in Canada at six cents each, and the collector raised the value to ten cents per book, in view of the enclosed advertisement from the Toronto Mail and Empire.

It would seem a rather arbitrary and far-fetched interpretation to raise the value of these books from six to ten cents simply because they were being sold at a bargain for a limited period. I should like to ask whether this is a correct interpretation of the act according to the minister?

Mr. ROBB: My hon. friend had better make application to the customs people about that.

Mr. WOODSWORTH: I have read from the interpretation of the customs officials. This case would seem to me to illustrate the point at issue, that there is an absolutely arbitrary power given into the hands of the officials of the department when the price of books invoiced at six cents each can be arbitrarily raised to ten cents simply because it is claimed they are offered at a bargain.

Mr. RYCKMAN: I am unwilling that the hon. member for Mackenzie (Mr. Campbell) should worry about that $100 on his $2,000 car if I can relieve his doubts. I think that $100 just represents the five per cent sales tax imposed by this government. The United States government is very careful to impose the sales tax in considering the value for entry into that country, and I think it is quite proper that this country should also do so. With regard to the $100 second-hand car there is a market in second-hand cars, a very substantial one, in this Dominion, and if a member of parliament can go over to the United States and buy a hundred-dollar car—I do not know really what it would be like, I would imagine it had been stolen—and then come back and tell his friends what a great bargain he had got, I do not see why, considering the regulations in force in this country and the home market there is in second-hand cars, he should not be willing to pay the duty which Canada imposes on the right value of that car. I should like to say a word to the minister in commendation of this dumping legislation, and I wish that it could be made more effective. There is a very recent case where an order to the value of about $30,000 was wanted in Canada. The United States manufacturers were altogether unwilling to break their price lists in the United States or to quote a lower price than they were asking in their home market. But being very anxious to avail themselves of a chance to make a deal of this kind they quoted the Ontario buyer a very much lower figure. The matter was taken up with the Customs department. It only required a little investigation—and I wish to compliment the minister upon the working of the department in this case at least—to disclose the facts of the case. It was very soon ascertained that all these people wanted to do was to get rid of their surplus; that while they were unwilling to break their prices in the United States they were eager to make quotations upon and offer the same goods for sale in Canada. Between $5,000 and $6,000 would have had to be paid in additional duty if the goods were imported into Canada. When that fact was discovered the goods were not imported. The result is that workmen in Canada are engaged at this very minute in manufacturing the articles which the United States manufacturer tried to sell by quoting in Canada a price he would not quote in the United States.

Mr. CAMPBELL: I do not think the hon. member intended to mislead the House, but he has a wrong impression entirely of the case I quoted. With regard to the automobiles, the five per cent is not the sales tax. There is a five per cent arbitrary assessment over and above the value of the car. Take the case of the car valued at $2,000. The department adds $100, which is five per cent, and makes the price $2,100. Thirty-five per cent duty is assessed on that, which makes $735, bringing the price to $2,835. The sales tax is assessed on $2,835.

Mr. ROBB: Perhaps my hon. friend is not aware that there is an excise luxury tax in the United States, and that accounts for the $100.

Mr. CAMPBELL: That is the difference in the value of the car. The person buying the car does not have to pay that. There is an export tax which is not paid by the purchaser of the car at all.

Mr. ROBB: That establishes the home consumption price when he adds the $100 excess tax.

Mr. CAMPBELL: That is the purchase price; the department here adds $100 or five per cent.

Mr. ROBB: But if he were a United States citizen he would have to pay the $100 excise tax and that establishes the fair market value for home consumption in the United States.

Mr. HOEY: The luxury tax applies only to cars in the United States selling over $1,200—

Mr. ROBB: He (Mr. Campbell) is quoting a $2,000 car.

Mr. HOEY: —and our duty is imposed on the price of it, plus the luxury tax which the purchaser in the United States has to pay.

Mr. CAMPBELL: I am not satisfied with the minister's explanation. The $2,000 in this case includes all the cost in the United States, but there is an export tax in the United States which I understand the individual importer buying the car does not have to pay. The department takes hold of that and raises it a little above the thirty-seven per cent.

Mr. COOTE: I think the way the duty is collected on automobiles at the present time is wrong. It may be in accordance with the letter of the law, but it is hard to believe that such is the case. Take the case of a car costing $1,000 in the United States. The purchaser of that car in the United States would have to pay the five per cent tax that would make the price $1,050; and that is the value taken by the department here when a car is imported; so that an individual purchasing a car in the United States and bringing it in-

to Canada pays a duty of $367.50, whereas the dealer in Canada, when he purchases several cars in one shipment, is not required to pay duty upon that five per cent. If he imports a car sold retail for $1,000 in the United States, he will bring that car into this country at a discount of probably twenty-five per cent. That is, those cars would be valued at $750, and he is not charged any extra five per cent, so that he pays $262.50 customs duty as compared with the $367.50 paid by the individual, I do not think that is right. The same thing I am told applies to the sales tax and to our excise tax. The individual would pay in sales tax and excise tax a total of $141.75, while the dealer would pay on the same car $101.25. I think the law as administered is working out very unfairly and I do not think this practice is in accordance with the act.

Mr. ROBB: I imagine my hon. friend has given a correct view of the trade conditions, but I imagine also that the price which the Canadian dealers pay is the same price as the United States dealer would pay, and the price charged a Canadian for one car is the price paid in the United States by the man who buys one car.

Mr. COOTE: It may be what he is paying for it, but is that the fair price for home consumption?

Mr. ROBB: Anybody buying a like quantity in that country would be entitled to the same rate.

Mr. COOTE: With regard to the power of the department, I understood the minister to say that there was a section in the act which allowed for an appeal in case a man thought he had been overcharged in connection with an automobile or anything else. I understand it is the practice of the department to issue an appraiser's bulletin, showing the value of all makes of cars, and showing the valuation which would be placed on second-hand cars and cars which had been used. Surely that is an arbitrary power, and that is done under a bulletin issued by the department. It would not be any use to make an appeal if a man thought he was overcharged when they charged him according to the value fixed in a bulletin issued by the department.

Amendment agreed to.

On resolution 2:

The CHAIRMAN: Does the committee wish me to read all these items?

Some hon. MEMBERS: No.

Mr. STEVENS: If the minister would take those items in the schedule one by one that would be sufficient. I do not ask that the minister read all the items now.

Mr. ROBB: My hon. friend can take up any one of them he wishes.

Mr. STEVENS: Would the minister give to us the existing rate of duty in each case as we come to it. I wish to discuss one or two of them.

Mr. ROBB: What items does my hon. friend wish to discuss?

Mr. STEVENS: Would the hon. gentleman give me the existing duty in items 101a and 101aa.

Customs tariff—101a. Shaddocks or grape fruits, n.o.p., per hundred pounds: British preferential tariff, 50 cents; intermediate tariff, $1.00; general tariff, $1.00.

Item agreed to.

Customs tariff—101aa. Shaddocks or grape fruit, when imported from the place of growth, by ship, direct to a Canadian port, per one hundred pounds: British preferential tariff, free; intermediate tariff, 50 cents; general tariff, $1.00.

Mr. ROBB: There is a change in the second, putting it on the free list if it comes into a Canadian port, but there is no change in the other.

Item agreed to.

Customs tariff—453e. Engines to be used exclusively in the propulsion of boats bona fide owned by individual fishermen for their own use in the fisheries, under regulations prescribed by the Minister of Customs and Excise: British preferential tariff, 10 per cent; intermediate tariff, 12½ per cent; general tariff, 15 per cent.

Mr. STEVENS: This is a very substantial reduction, I understand.

Mr. ROBB: The present rates run along in order. They are: British preference, 15 per cent; intermediate, 25 per cent; and general, 27½ per cent. We propose to reduce them to 10 per cent, 12½ per cent and 15 per cent respectively. The estimated reduction will be about $15,000. There was imported for consumption, of engines, internal and combustion, during the fiscal year ending 31st March, 1924, $225,521. It was estimated that not more than one-half of these imports would be entitled to entry under this item.

Mr. STEVENS: I have seen some correspondence in regard to this matter. There are, I think, three different concerns in Vancouver—and I know this affects others in Victoria, New Westminster and eastern Canada, but I am speaking more particularly of the Pacific coast—that have been manufacturing these engines for some time. I have in mind two concerns that have been established for some twenty-five years,

gradually building up their business. They have succeeded in establishing themselves well and they have been building an engine that has been giving excellent satisfaction. So far as I am aware, there has been no demand for a reduction in the tariff and no complaint regarding the price of these goods. I am quite aware that, perhaps, individuals, in view of this reduction, might say to the minister that it is a good thing from their standpoint as purchasers. But I want to point out to the committee what invariably follows in a case like this. When these three or four concerns at the coast, for instance, manufacturing these articles, are put out of business, as they will likely be as a result of this, and cease to manufacture, the firm in the United States or elsewhere, marketing their goods on a market that will be free from the competition of the home manufacturer, will raise the price and there will be no advantage to the consumer at all. Had there been some abuse of the tariff, had these local concerns been extracting some exorbitant price or not been giving satisfaction, or had there been some general complaint or suffering, there might have been an excuse. But in the twenty-five years or more that I have been acquainted with these manufacturers and with the business, I do not know of any form of complaint warranting a reduction. This is going to have a very serious effect upon these industries. The result will be throwing an additional number of men out of work and on the labour market. On the Pacific coast more than in eastern Canada we have been striving to build up and establish industries that are either directly or indirectly based upon our natural resources, and it must be clear to any fair-minded person that it takes a considerable period of time, especially where you have a sparse population, to develop such an industry. It is also clear from experience that if such an industry is stifled in its infancy or when it is comparatively small, that market receives no advantage since the importer or manufacturer in another country has the local competitor eliminated. Personally, I am exceedingly sorry that the minister has included this in his deductions. I wish the minister would state the grounds upon which this step was taken, if he can do so.

Mr. ROBB: My hon. friend will recollect that last year we made some concessions to the producer on the land, lumber mills, mines, and it was represented to us that we were going to put a number of industries out of business. That, however, has not been the result. Some of these industries are in just as good shape as they were before. This year it was represented to us that we should do something for the fisherman, the man who goes out and risks his life, making his living by fishing. It is not any more the desire of the government than the desire of my hon. friend to put any industry out of business, and we have taken care of that. If my hon. friend will turn to item 1048, he will note that we are giving a rebate of 50 per cent of the duty on the raw material going into the manufacture of these engines, so that we believe the industry will be in a pretty good position even with the change.

Mr. COOTE: What is the rate of duty on small engines used on the farm?

Mr. KYTE: I am very sorry that the hon. member for Vancouver Centre (Mr. Stevens) takes the view he does with regard to the effort that the present government has made to relieve to some extent the burden which the fishermen of eastern Canada are carrying in connection with their business of fishing. When the very substantial reductions were made on mining machinery and other implements of production a year ago, it was felt that the government should have gone a little further and given the large and important element of our population who are engaged in fishing some slight advantage in the same direction. I am glad to know that the representations which were made by representatives of the Maritime provinces, and also by representatives of fishing constituencies on the Pacific coast to the Acting Minister of Finance (Mr. Robb) have borne fruit and that this substantial reduction has been made in the duty on gasoline engines. At the present time no fisherman can hope to carry on successfully the business in which he is engaged unless his boat is equipped with a gasoline engine. The time was when fishing boats were propelled by sails or oars, but that time has passed away. Boats are more expensive now than they were thirty or forty years ago. It costs more to build a boat in which a gasoline engine is installed than it did to build the boat that was propelled by sails. These considerations should have weight with the Acting Minister of Finance and they have had weight. There is no feature of the budget and no reduction in the duties bearing upon implements of production included in the budget proposals as brought down by the Acting Minister of Finance that will be more appreciated by the people of the Maritime provinces than the item under discussion at this moment. I should have been glad if the minister could have removed the duty entirely from gasoline engines. Not having been able to do that, he has taken

a step in the right direction, and his action in this regard will be highly appreciated amongst all fishing communities in the Dominion of Canada.

Mr. STEVENS: I now have some of the correspondence to which I referred and I would like to read it. This is a telegram from the Vivian Gas Engine Works, addressed to myself under date of March 25, immediately following the introduction of the resolution by the minister:

> We regard announced reduction duty fishermen's gas engines from twenty-seven and half to fifteen per cent as extremely serious in effect it will have on our business. Since commencing operations in 1909 and through financial assistance accorded us provincial Department Industries we have built up industry to-day employing average twenty-three skilled mechanics with payroll averaging seven hundred dollars per week. We are dependent for seventy-five per cent our business on orders from individual fishermen and while reduction in duty represents very little saving to those buyers in purchasing American engines reduction in prices which will be forced make to retain business simply means difference between profit and loss to us. We hope you will make strong protest and endeavour induce government refrain from proposed action in view its inevitable effect in curtailing our operations.
>
> Vivian Gas Engine Works.

I have also a telegram from Easthope Brothers, Limited. This concern has been built up in the most commendable manner from a small shop operated, I think, by a family of two or three brothers and the father, established many years ago, until it has acquired now a considerable standing and reputation. The business experienced for a number of years all the vicissitudes of a growing industry; the type of engines produced has changed in the last twenty years from two cycle to four cycle, and so on, and there have been many other modifications and inevitable alterations. They have kept pace with all these changes and have turned out an excellent engine. They say:

> Reduction in duty on American engines from 27½ to 15 per cent announced in budget literally means wiping out our industry as we are dependent for 90 per cent our business on sales individual fishermen. As you know we started business here in small way in 1890 and have gradually built our business up till to-day we are employing twenty-five highly skilled mechanics with average annual pay roll of not less than $50,000. We cannot possibly reduce our price to compete with figure at which American engines can be sold here under new tariff and only result will be that our employees with their dependents will be obliged go American side where engines which will be sold in this market in future are made. This is life and death proposition with us and we ask you protest in strongest possible terms on our behalf against announced reduction.

I have other representations as well. I appreciate what my hon. friend (Mr. Kyte) said a moment ago; there is perhaps some temporary advantage to be gained by a few individual fishermen. But I know that so far as the Pacific coast is concerned, where there are a great many fishermen who use this class of engine, we shall find that once the Canadian manufacturer is put out of business, as he will be as a result of this, any advantage that may accrue to the purchasers of these engines will disappear. And I doubt very much whether my hon. friend's constituents on the east will derive any advantage from this reduction. It may be that in eastern Canada some of the plants having a wider market may be able to meet the American price by some means or other, although I am not sufficiently qualified to speak in that regard. I will venture to say however that in many cases in the east there will be put out of business plants which have gradually developed in the manufacture of these engines; and once they are driven to the wall the fishermen will get no benefit from this alleged favour.

Last year when the question of a reduction in logging machinery was under consideration I predicted certain results; and in remarks I made early this session I pointed out that certain businesses in Vancouver had been seriously affected. The Minister of Public Works (Mr. King, Kootenay) in his speech declared that I had stated what was untrue, and he made a very strong attack on me on that account. I was unable to reply to him at the time. He read into Hansard a letter from a certain individual whom he described as a leading machinery manufacturer. I think my hon. friend (Mr. Tolmie) corrected him in this regard. I take this occasion to refer to the matter for the reason that unless I do correct the Minister of Public Works someone will probably say that the same argument applies to what I am advancing on behalf of Easthope Brothers and the Vivian Gas Engine Company and others. I want the minister and the government to take these representations seriously; it is the duty of the government to consider the welfare of all those who may be affected. If we could give concessions to certain groups, whether fishermen, loggers, or agriculturists, without injuring anyone else and without losing some decided advantage to the country in the way of industry, it would be a simple matter. But if in granting something which is alleged to be an advantage we at the same time put industries out of business and throw bona fide industrial workers on the street, we are doing an injury not only to these individuals but to the whole community, inasmuch as the effect will gradually work round to the very

class, such as fishermen, whom these reductions are supposed to benefit. I have here a copy of a letter which has already been placed on Hansard. I shall not read it at length but I wish to refer to it. It deals for instance with the effect of the tariff reductions on local manufacturers. In the case of the Britannia Wire Rope Company, it is shown that the amendments of last year have resulted in a serious curtailment of business, throwing a number of workmen out of employment. Let me cite an instance.

In the early part of 1924 the Canadian Sumner Iron Works and one other Canadian company were bidding on the entire list of equipment for one of the largest mills in the province, namely, that of the Victoria Lumber & Manufacturing Company of Chemainus. Before the bids were closed the tariff reductions of April 11, 1924, came into effect and the entire order, which would have represented business retained in Canadian plants of approximately $200,000 if placed with the local plant, was placed with the Diamond Iron Works of Minneapolis. That is an illustration of the effect of reducing the tariff. Here was an order of $200,000 lost to a Canadian firm; and there was no particular demand for the reduction in question. The same thing applies exactly to the item now before us dealing with gas engines. I am sure that the result will be a loss of business to Canadian firms and consequent unemployment; and further than that it will involve a loss of capital invested in these businesses. I will ask the minister to follow the good example which he himself set in dropping the dumping clause and leave this clause out of the list. If he does so he will win a good deal of gratitude from a very deserving people. It may be too late to make this appeal but I submit it to the minister anyway.

Mr. ROBB: I am afraid it is.

Mr. STEVENS: I am exceedingly sorry that the minister should take that stand.

Mr. EVANS: I am glad that the government has decided to take the duty off engines for fishermen, for if there is a class of men in primary production who need encouragement it is the fishermen, particularly those who are in business in a small way. There is no duty on raw fish. It is when this commodity gets into the manufacturer's hands for curing that the duty is put on. And there I find fault with the government to-day; they favour organized industry as against those who are engaged in primary production such as farmers and fishermen. Organized industry is protected all the way through, but nothing is done to make the cost of living come down. Regarding the contention of the member for Vancouver Centre (Mr. Stevens) that some of these concerns will be put out of business, I do not see why they should be. I do not see the use of trying to bolster up such an industry, because by their plea for tariff protection they admit that the finished article they produce is worth less than the raw material and the labour they put into it. There are plenty of vocations for Canadians to engage in, and if it is more profitable for our people to fish than to make gasoline engines, they will adjust themselves accordingly. I think the hon. member's contention is based on what over and over again has been proved to be a fallacy of the very first rank.

Mr. McISAAC: Mr. Chairman, why should the fishermen of the Maritime provinces be compelled to pay a higher price for an inferior article? Every fisherman will tell you that an American engine will last at least twice as long as an engine made in this country, because the former is built to better withstand the action of salt water. It is therefore the fault of such concerns as the hon. member for Vancouver Centre (Mr. Stevens) refers to that our fishermen will not buy their output. Then why should all the fishermen of Canada be penalized? If our manufacturers had the enterprise to turn out the right quality engine, they would find our fishermen would buy them in preference to the engine built by their American competitors.

Mr. STEVENS: May I correct my hon. friend in one regard? He says that the American engine will last twice as long as the engine built in Canada. That is not the case with respect to the engine turned out by the concern to which I have referred. Their engine has been demonstrated to be in every way satisfactory. The trouble is our manufacturers with a comparatively small market have to compete with the massed production south of the line. The same applies to the arguments advanced by my hon. friend from Saskatoon, which I will deal with in a moment or two.

Mr. McISAAC: I do not know about British Columbia engines, but I do know that what I have said applies to engines purchased in the Maritime provinces.

Mr. SNOWBALL: I desire to commend the Acting Minister of Finance (Mr. Robb) for the reduction he has made in the duty on gasoline engines for use by our fishermen. This will be a boon to the fishermen in the Maritime provinces. I am not conversant with gasoline engines manufactured on the

Pacific coast, but I do know that the engines manufactured in the Maritime provinces are not equal to the engines that can be procured by our fishermen across the line. If our manufacturers wish to secure and retain business in the Maritime provinces, they must pay more attention to turning out an engine that is adapted for use in salt water—that is, for the work our fishermen are engaged in.

Mr. LADNER: Will the hon. gentleman tell us in a practical way to what extent a fisherman in the Maritime provinces would benefit in dollars and cents by buying an American engine, and how long that engine will last for his work?

Mr. SNOWBALL: I am not a fisherman and therefore cannot give a practical answer to my hon. friend's question. Members interested from the Maritime provinces may be able to deal with the matter more specifically. I may say, however, that fishermen have told me that the engines they buy in the Maritime provinces have lasted only four or five years, whereas similar engines purchased across the line have been giving satisfactory service for fifteen or sixteen years and are still going strong.

5 p.m.

Mr. ROSS (Kingston): What engines of Canadian make have failed?

Mr. SNOWBALL: The ones I refer to are manufactured in the Maritime provinces, at New Glasgow, Charlottetown and, I think, Yarmouth.

Mr. MARTELL: May I call the hon. member's attention to the fact that in certain parts of Nova Scotia the fishermen imported engines from Ontario, made by a certain firm called Adams at Penetanguishene, but they did not last two years in salt water.

Mr. ROSS (Kingston): What was the name of the engine imported from Ontario?

Mr. MARTELL: It was manufactured by a company, formerly known as the Adams Company, at a place called Penetanguishene, or some such name, in Ontario.

Mr. SNOWBALL: I wish I were an expert, Mr. Chairman, so that I might satisfy my hon. friend. I am voicing the sentiments of the fishermen in my constituency, who tell me that they should have had this reduction granted to them last year when the duties on agricultural implements and machinery used in lumbering were reduced. However, I am glad that this boon has been granted to them at last. Every year it is becoming more important that our fishermen should get further out from shore in following their business, and it is necessary that they should have their boats equipped with reliable gasoline engines so that when a storm comes up they may get back to shelter as quickly as possible; in fact their lives may depend on the efficiency of their engines. These men have told me that they should be able to buy the American engine, and they have asked for this reduction time and again; indeed, they would like to see the whole duty removed. I cannot see why any of our manufacturers who have been producing a satisfactory type of engine cannot continue to prosper under the small reduction of duty now proposed. We heard a great deal during the past year of the disaster that would befall the manufacturers of farming implements as a result of the reduction of duty on their output, but I do not think any hon. gentleman can name a single one that has gone out of business since that reduction went into effect. And I shall be very much surprised if, when we return to this House next session, the hon. member for Vancouver Centre will be able to tell us that owing to this reduction in duty the manufacturing concerns that he has referred to have been driven out of business. If they are manufacturing as good a type of engine as their American competitors, I am sure they will be in business for many years to come. Certainly I hope they will not go out of business, simply to demonstrate the fact that they are not able to manufacture a real highclass engine and hold their own with the engine turned out by their competitors in the United States.

Mr. SUTHERLAND: Mr. Chairman, the debate on this resolution so far indicates that the old subject of protection versus free trade is going to be discussed all over again. My hon. friend who has just taken his seat (Mr. Snowball) says he cannot understand why the Canadian manufacturer cannot carry on under a low tariff or no tariff. I think the Acting Minister of Finance (Mr. Robb) gave a good illustration why in connection with the dumping clause of the Customs Act, dealt with a few minutes ago when he pointed out that on a certain date last year about a million pounds of butter, or forty carloads, had been imported from the United States at a time when the market there was glutted, and butter prices went down, but they went up there as soon as the surplus was dumped on our market. That very thing is happening all over this country, and is, I believe, responsible for the demoralized condition of trade which we find throughout the Dominion to-day.

The question of the quality of some article which is manufactured in Canada arises, and we often hear it said, "Oh it is not of any use; it is not as good as it should be. If we could get something from some other country it would be very much better." We have heard that complaint time and again during the present session and in previous sessions. I do not like to hear that said of things which are grown or manufactured in Canada. I know that we are under a handicap in this country living alongside a very great and powerful neighbour which has seen fit to establish a very high customs tariff. When they have a surplus of anything in that country, rather than have their market break, or fluctuate they get rid of that surplus somewhere else, and that is the very thing that is happening in this country at the present time. The minister in connection with the dumping clause touched the crux of the whole situation. When forty carloads of butter are dumped into this Dominion, which should be able to produce enough butter to supply the small population we have, you can see here the very thing the people of this country are up against, and that is the very thing the manufacturer of these engines will be up against if you lower the tariff to the degree proposed under this resolution. I think it is a most dangerous course to pursue, but it is evident the government are determined to proceed step by step until they gradually reach their objective. We heard minister after minister last session get up in the House and express the hope that the step then taken indicated the ringing of the death knell of protection. To-day we have had the chief whip of the government party get up in this House and say he would gladly have welcomed the abolition of the whole tariff in connection with the articles coming in under this item, namely gasoline engines, but that it was at all events another step in the right direction, and consequently it was welcomed. Now if the government believes this is a good thing for the fishermen and others why not go the length and abolish the whole tariff? Rather than proceed step by step, why not go the whole way at once? Is it another case of the Indian who was going to cut the tail off his dog, and decided to do so by cutting off an inch at a time so that it would not hurt so much? Is the government attempting to strangle industry in this country by degrees, and then come back here later on and say: Some of these industries have survived, so it cannot be as disastrous a step as the members of the opposition were predicting. Why not come out in the open and indicate what you intend to do? Do not be everlastingly harping upon this "step in the right direction". If you believe it is a good thing, have the courage of your convictions, and introduce a measure which means what you intend to do, rather than adopt this slow process of strangulation.

I regret to hear so much about the inability of Canadians to manufacture goods that are the equal of those manufactured in the United States or elsewhere. So far as gasoline engines are concerned, I want to say that the manufacturers in this Dominion are competent to manufacture, and do manufacture gasoline engines, equal to anything that has been manufactured in any other country. We demonstrated during the war in the way of manufacturing munitions what we were capable of doing, something that the people did not believe it was possible for us to do. Rather than discourage our people, I think this is the time when it is necessary to come out and encourage them to carry on and to put forth their maximum effort. Surely that is better than trying to frighten them and make them believe that even worse things are coming, and that if they have any capital they had better keep it out of business which ought to be employing people in this country. It is just another example of what has been going on for the last year or two, resulting in our workmen having to cross the line to find employment, and manufacturing over there the things that are required in this country, and many of these things manufactured by our own people in a foreign country come into competition with the goods produced in this country, under great difficulties which are continually increasing as a result of legislation similar to this resolution.

Mr. ROBICHAUD: My hon. friend from South Oxford (Mr. Sutherland) has made a brave attempt to compare the dairy industry in this country to the marine motor industry. While I do not profess to be an expert in marine motor engines, yet I was very much interested in the questions asked by some of the hon. members opposite of my hon. friend from Northumberland county (Mr. Snowball). It has been demonstrated that the life of the American-made motor is of longer duration than the Canadian made motor, and I believe that is true. I have often asked myself the question why our Canadian manufacturers cannot manufacture as good an engine in Canada as they make in the United States, and in my humble opinion it is on account of our protective tariff. I truly believe that if the field were wide open, if our American competitors were allowed to sell their engines in

Canada in open competition with the Canadian made article, our Canadian manufacturers would manufacture a better engine.

It has been asked where those engines of little duration were manufactured, whether in Ontario or Nova Scotia. I believe the Ontario engine is by far the poorest machine made in Canada, and that the engine manufactured in Nova Scotia is by far the best. The life of an engine, of course, depends entirely on the treatment it receives at the hands of its owner. One might be made to last for ten or fifteen years at the very most, but the average life of the Canadian made engine, is I believe ten years, whereas that of the American made engine would be not less than fifteen years.

Our fishermen have come to a point where they must equip their fishing boats with gas engines. In my constituency we have a very extensive fleet, known as the Caraquet fishing fleet, and the time has now come when these fishermen must equip their schooners with gas engines. The question has often been put by these fishermen: How long will these engines last? And when they were told they would last only eight or ten years at the most, they thought it was a poor business proposition. Then the question of buying American made engines was put up to them, and another objection was made by our fishermen, that the American made engine was by far too expensive because it was struck by a 35 per cent duty. Now with this reduction in the tariff I believe our fishermen will be in a position to buy the American made engines to equip their schooners, so that they can cope with the American fishermen.

It has been stated that our fishermen should not be a preferred class. Why not, when they are suffering more than any other class in this country on account of the high tariff of the United States? Then again it might be stated that a high tariff is a good thing to protect the fishermen. I say not. In 1922, in the month of September, I think, I reached the New York market with four carloads of fresh fish. I had shipped them with a view to dodging the Fordney tariff. Unfortunately the fish were shipped in bond, and when they arrived in New York I was called upon to pay a tariff of 2 cents a pound. I went down on the fish pier to see if these fish could not be sold, and while I had to pay a duty of 2 cents a pound, the American fishermen were dumping the same class of fish on the same pier in the same fish market, for 1½ cents a pound. That clearly demonstrates that protection after all does not protect the producer, but is simply a tax on the consumer.

[Mr. Robichaud.]

Mr. LADNER: I wanted to ask the minister, or perhaps the hon. member for Cape Breton South and Richmond (Mr. Kyte), if he could give me information in the first place as to what the duty on engines is today?

Mr. ROBB: I gave that information to the committee earlier in the afternoon, but perhaps my hon. friend was not here then. The hon. member means the engines that are now under consideration?

Mr. LADNER: Yes.

Mr. ROBB: Prior to the date of the presentation of the budget the rates were: 15 per cent, 25 per cent and 27½ per cent. The new rates are: 10 per cent, 12½ per cent and 15 per cent, and as a concession to the manufacturers we are giving them a rebate of 50 per cent on certain raw materials that enter into the manufacture of these engines.

Mr. LADNER: Now could the minister, or the hon. member (Mr. Kyte), tell us how much an engine costs?

Mr. KYTE: It depends entirely upon the horse-power.

Mr. LADNER: Well, one with the customary horse-power?

Mr. KYTE: From $200 to $400.

Mr. LADNER: And the hon. member for Northumberland (Mr. Snowball) informs us that a good engine will last sixteen years. Now that engine may be bought in Canada or in the United States, and there is compensation in either event. If bought in Canada the engine will have been manufactured here. If bought in the United States we shall have the revenue from the duty and we need the revenue. I think the Acting Minister of Finance will agree with me in that.

Mr. ROBB: Yes, I will agree with the hon. member in that.

Mr. LADNER: Now 25 per cent of $300 —taking the central figure of the three which the hon. member gave—would be $75. It is proposed to reduce that by $37.50. Hence the reduction that will be given to the fishermen if you distribute the $37.50 over a period of ten years will be $3.75 per year. That will be the amount which the fishermen will contribute to the tariff revenue of this country. On the other hand there is the desirability of retaining in the country all the industries to which the hon. member for Vancouver Centre (Mr. Stevens) referred. Now, to what extent—taking the complete operations of the fishermen for a period of ten years—

taking his capital investment, what he earns and what he spends—is $3.75 going to affect him? He will never notice it.

Mr. ROBB: Now will my hon. friend just follow out his argument and calculate the extent to which the 50 per cent reduction on raw material which we give is going to affect the manufacturer of engines.

Mr. LADNER: It gives a certain advantage to the manufacturer, but we have here under their own signatures the statements of responsible firms in Vancouver, who presumably know their business, and they say "If you make these reductions, and make further reductions, you are going to put us out of business."

An hon. MEMBER: Do they not all say that?

Mr. LADNER: Yes, they all say it and the industries of the country are being put out of business. Everybody knows it, and the government will know it too when the general elections come.

Now, Mr. Chairman, the hon. member for Saskatoon (Mr. Evans) gave us the benefit of some theories on free trade. The trouble is there is too much theory talk. We have here an actual condition. The duties on engines, which affect the fisherman only to the extent of $3.75 a year, are being reduced and in doing that the government will not only put out of business these two, three or more industries in the city of Vancouver, as well as others elsewhere in Canada, but they will cause people with capital to invest to ask themselves whether it is desirable to invest in Canadian industries in view of the uncertainty of the policy which the government follows—taking two steps forward one year in a downward direction and another step in another direction; then next year it may be half a step, or two steps, again in the direction of lowering the tariff. Looking at this matter from the point of view in which a business man would look at it, is it in the interests of this country to save the fisherman $3.75 on his capital investment in the fishing enterprise and put out of business the manufacturers of these engines? Is it wise to force these people who have put their capital into the business to lose it; and worse still, is it wise to create such fear in the hearts of people desirous of investing capital in industries in other parts of Canada that they will refrain from taking that step?

Mr. MARTELL: Is it not a fact that the things which are used by fishermen generally, even the luxuries, pay the highest pro rata duties into the treasury, at any rate duties much higher than the average manufacturer pays?

Mr. LADNER: I do not think that is correct at all.

Mr. MARTELL: I think it is.

Mr. KYTE: The comparison the hon. gentleman has addressed to the House in regard to the saving to a fisherman by a reduction of the duty has reference to only the boat that has been built and the engine purchased. My hon. friend has left out of account the number of boats that will require to be built from year to year upon which there will be a saving of $37.50 in the case of each engine costing $300. Now, in the Maritime provinces we are endeavouring to develop our fisheries. Unfortunately during the last ten years a great many of our fishermen gave up fishing and went away to the United States. Now we are trying to get them back, and there is a very considerable return movement on the part of those expatriated fishermen from the Maritime provinces. These people will require boats to carry on their vocation.

Mr. LADNER: Does the hon. member seriously, as a responsible individual, suggest that the prospect of saving $3.75 a year on a gasoline engine will bring the fisherman back?

Mr. KYTE: No, but the prospect of returning to Canada and living under a Liberal government is bringing them back. They are going to engage in their former occupation, and they will require fishing boats, they will need to purchase engines, and each one of these men will save $37.50 upon every engine that he buys. My hon. friend with the true instinct of the Conservative is not thinking of progress, of advancement. He is thinking only of the conditions to-day; he is not thinking of the men who are looking to the future and who wish to contribute towards the development of our industries.

Mr. LADNER: Hon. gentlemen opposite are thinking of votes.

Mr. KYTE: Let me emphasize the point that it is upon the new boats that the saving will be made. A large number of engines for these boats will be purchased in the Maritime provinces in the present and succeeding years.

Now, my hon. friend refers to the reduction of duty as being somewhat in the nature of an economic triumph. Does he not know that when his own leader entered parliament, or in the second session following that entry, he

moved to reduce the duty on agricultural implements very considerably? I presume my hon. friend will not think that his leader was wrong in taking that action? Furthermore, the late government, representing the party which my hon. friend supports made a reduction in the duty on agricultural implements a few years ago. Had my hon. friend been in the House at that time he would have supported that policy. Now if it was a good thing to make reductions from time to time in the duties upon the implements that are used in the agricultural industry—

Mr. LADNER: I doubt whether it was.

Mr. KYTE: —surely it cannot be a bad thing to reduce the duty upon the implements used in the development of our fishing industry?

Mr. NEILL: Perhaps, it is right that I, as representing some of the fishermen on the Pacific coast, should speak on this question. I may say that the hon. member for Skeena (Mr. Stork) is at present engaged in the Ocean Freight Rates committee, otherwise I am sure he would be here to lend his views in support of the fishermen whom he represents in common with myself. When speaking in the budget debate I dwelt on this matter, and indicated the advantage that would result to the fishermen not only from the remission of this particular tax, and some remissions made on the twine used in connection with their nets, but also from the reduction in the sales tax. I do not think there is any very great danger to be apprehended of these manufacturing industries in Vancouver going out of business immediately. It is a curious fact that they are always going out of business when reductions in the duties are suggested. Nevertheless they are still here, and they pop up year after year, and session after session, with the same old wail that they are going out of business unless something is done. However, we find them still here, and still complaining that they are losing money.

Mr. LADNER: Since a reduction of duties has proved so beneficial in the opinion of my hon. friend, would he advocate the total elimination of duties in the case of all manufacturing industries?

Mr. NEILL: When I was speaking on the budget I said the hon. members of this House had spent something like sixty per cent of their time debating the everlasting question of tariff protection versus free trade, and I did not propose to be drawn into a discussion of that abstract question. I can only deal with situations as they arise. I am now dealing with the proposed partial remission of tax on engines used in the fishing industry on the Pacific coast. The duty has not been taken off altogether. The manufacturers still have a duty, and it is such a duty that it will give them a living chance. The hon. member for Vancouver South (Mr. Ladner) endeavours to minimize the benefit to the fishermen, and figures out by some abstract method of reasoning that the fisherman only benefits to the extent of $3.75 a year. On the Pacific ocean—I do not know anything about the doings on the Atlantic ocean—when we buy engines we pay for them, and do not spread the payments over ten or sixteen years, and if the hon. member for Northumberland (Mr. Snowball) was correctly represented by the hon. member for Vancouver South, when he is supposed to have stated that the average life of a gasoline engine on one of these boats is sixteen years, I beg to differ with him. That is a mistake to my mind. They have not been in general use for sixteen years to begin with, and I know of cases where six years would be more likely to be the average life than sixteen. But that is certainly an exaggerated statement of the life of such an engine. Not only the engine itself but the parts that go with it have to be renewed from time to time.

We hear about encouraging basic industries. In the estimates of the Minister of Marine and Fisheries (Mr. Cardin) we saw quite a large item running into hundreds of thousands of dollars for the encouragement of deep-sea fishing. I think some of it used to be spent for paying part of the freight on fish, in order to enable them to ship it to the centre of the continent; but here is a readier and cheaper way of encouraging deep-sea fishing on the coast, by enabling them to get tools at something nearer a reasonable price, in order to prosecute their industries. The market of the fishermen is a good deal like the wheat market of my hon. friends to my left. The product has to be sold, not perhaps in the world market, but in the market of the United States. That market governs the price at which the great bulk of the commodity has to be sold. The amount of halibut consumed in Canada is negligible compared with the amount consumed in the United States. That is where the market lies, and when the American fishermen and the Canadian fishermen go out side by side, the banks being in neutral waters, they have to compete. The American has his boat, equipment and all the material necessary without paying any duty at all. The Canadian has to pay a heavy duty and

is handicapped at the start. When they come into port with their fish, the American fish go through Canada in bond to the eastern states market, free of duty, and the Canadian has to pay a duty of two cents on his fish going into the United States. He is handicapped in that way also. What is the result? Canadians go over to the other side, and they have been going over in hundreds and thousands during the last fifteen years. A large number of Canadian fishermen can now be found operating in Seattle, on account of the economic conditions to which I have referred, both as regards the tax on fish and the other conditions. We hear about Canadians going over to the States and we are urged to find means to stop them and to encourage them to come back. The way to encourage them to come back is to make conditions by which they can compete with Americans in the common market of both of them, which is the United States.

Another feature I should like to mention is that this reduction is one which will tend to reduce the cost of living. One of the greatest things statesmen strive for is to reduce the high cost of living. If you reduce the cost of production in a basic industry—and fishing is one of the basic industries—you will cheapen the price to the consumer, and that is what the people of Canada want. They want a cheaper cost of living. When my hon. friend from Vancouver South asked a question, he expected a negative answer, but I will give him a different answer. He asked, is it in the interests of Canada to do this? I say yes, it is in the interests of Canada to cheapen the cost of production and keep Canadian citizens in Canada.

Mr. BLACK (Yukon): Does this include steam engines and oil burning engines, as well as gasoline engines, when used for the purposes set out in the schedule?

Mr. ROBB: Yes, it reads:

"Engines to be used exclusively in the propulsion of boats bona fide owned by individual fishermen for their own use in the fisheries, under regulations prescribed by the Minister of Customs and Excise".

Mr. BLACK (Yukon): Is not the class of engine known as the Diesel, which is an oil burning engine, free now when used for marine purposes, and if that is so, will not this provision place a duty on it?

Mr. ROBB: No.

Mr. BLACK (Yukon): How can you escape it?

Mr. ROBB: It comes in under another item, 470.

Mr. ROBICHAUD: The item reads:

Engines to be used exclusively in the propulsion of boats bona fide owned by individual fishermen for their own use in the fisheries, under regulations prescribed by the Minister of Customs and Excise.

In some cases you have to draw a line between a vessel owned by a private individual and one owned by a trader or a man engaged in the fishing industry. Some are owned by fishermen and others owned jointly by fishermen and by dealers. In Nova Scotia the large bankers are owned jointly by fishermen and traders. I should like to know whether this provision would be the cause of any misunderstanding.

Mr. ROBB: No, I would not think so. We consulted the Department of Customs; this paragraph was so framed for administrative purposes, so that the man who had a large yacht would not get the advantage of it.

Mr. STEVENS: A very important point has been raised by my hon. friend. If Diesel engines were, as my hon. friend from the Yukon point out, put on the free list for fishing purposes last year there would be a very great danger of them being taxed under this item. What is the item under discussion?

Mr. ROBB: Diesel engines are under item 470.

Mr. STEVENS: I would like to check that up. It is a rather important matter. Item 470 in the tariff I think reads "Iron or steel masts."

Mr. ROBB: It says:

And iron or steel manufactures which at the time of their importation are of a class or kind not manufactured in Canada when imported for use in the construction or equipment of ships or vessels.

I can assure my hon. friend it is amply covered.

Item agreed to.

Customs tariff—469a. Well-drilling machinery and apparatus and parts thereof, and rope twenty-one hundred feet and over in length, capable of drilling wells of two thousand feet, and over in depth, of four inches and over in diameter, and of raising and lowering casing over four inches in diameter for such wells, for drilling for water, natural gas and oil, and for prospecting for minerals, not to include motive power: British preferential tariff, 5 per cent; intermediate, 5 per cent; general, 5 per cent.

Mr. GARDINER: What is the previous tariff on this item?

Mr. ROBB: Well there are some clauses involved in it. The proposed rates are five

per cent, five per cent and five per cent. The previous rates were:

	British Preferential Tariff	Intermediate Tariff	General Tariff
	Per cent	Per cent	Per cent
453..	15	26	27½
408..	17½	22½	25
454..	20	27½	30
548..	20	22½	25

And the sales tax will also be taken off.

Mr. FANSHER: Why is there a limit put on well drilling machinery capable of drilling wells over 2,000 feet in depth?

Mr. ROBB: That was after conversation with people who were interested in the development of the deep wells, and they are satisfied this will give them the relief they desire.

Mr. FANSHER: I notice in the previous item the minister has given a reduction in the materials that enter into the production of those items. He will remember that last year there was a reduction of one-half of the bounty that was given to assist the oil producer, and on the last of June of this year the other half goes off. Most of the oil is produced from shallow wells, and the machinery that is used is not machinery such as is used to drill a well to a depth of 2,000 feet. Most of the oil produced in Canada at the present time is from wells between four and five hundred feet in depth. Last year the assistance in the shape of a bounty was reduced. Why not reduce the duty on the implements that enter into the production of crude oil?

Mr. ROBB: There has been no such request. As a matter of fact our information is that the same people who have the wells largely manufacture the machinery. My hon. friend will observe also that in this item we are providing for a rebate of 99 per cent on the materials entering into the manufacture of this machinery.

Mr. GARDINER: Has the minister taken into consideration the advisability of reducing the tariff on engines used for the purpose of running this well drilling machinery?

Mr. ROBB: I have not taken that into consideration.

Mr. GARDINER: Such reduction would be appreciated by people who have to buy this class of machinery. The cost of the power is a great deal more than the cost of the well drilling machinery. If we are to develop our oil industry in Alberta, I would suggest that the minister consider the advisability of reducing the tariff on engines required to operate these drills.

Mr. JELLIFF: I would like to impress upon the minister the idea expressed by the hon. member for Medicine Hat (Mr. Gardiner). These oil drilling outfits might properly be termed units. The different parts are built to work together in harmony; they are harmonized as to power, weight and stength. This is a good deal like letting in free or under a low tariff a clock or a watch with the mainspring left out. The reduction might well be made on the motive machinery as well as on other parts of the well drilling outfit.

Mr. COOTE: Might I emphasize that point as well, for the particular reason that in the state of Montana, just across the line, quite a number of professional well drillers, who own their outfits and who, I think, would in many cases like to come across to Alberta to drill wells for those who have leases in that district, under the present arrangement will be allowed to bring in their drill, but they must pay a duty of possibly 25 or 27½ per cent on the power attached that naturally belongs to that outfit? Although I would like to commend the minister for reducing this tariff to 5 per cent, he has fallen a little short in his duty in this regard.

Mr. ROBB: We do that frequently.

Mr. COOTE: I would like to see him include the motive power with these drills. The motive power that is put out with the drill when it is made is of the right size and capacity to run that drill. Sometimes, it is a little difficult for a driller in Canada to get the Canadian power that entirely suits his drill. I should like to impress that upon the minister, and I hope he will yet see his way to include the power with these well drilling outfits.

Mr. WARD: When the minister is considering the engine, I would like to suggest that he should change his regulation to include small drills for drilling wells for water. I cannot see why he should allow a drill drilling a four-inch hole to come in free and not a drill drilling a two-inch hole. There are many wells in western Canada that do not require to be drilled to a depth of two thousand feet. They go down three or four hundred feet drilling wells for water for farming, and such drills are entitled to just as much consideration as the oil drills.

Mr. FANSHER: While I appreciate very much the intention of hon. members from Alberta in trying to get a reduction in duty

on the whole outfit, I still claim that most of the oil produced within the Dominion of Canada is produced from shallow wells, and that the machinery required to drill such wells is not the machinery that would be required to drill a well two thousand feet deep. Therefore, it would not come under this item. We well remember the reduction in the assistance in the shape of a bounty to the oil industry. The principle was established in the budget of last year that where a reduction was made in the protective tariff, a like reduction was made on the materials entering into the production of those goods. I think, in this instance, a reduction should have been made on the goods entering into the production of crude oil. That branch of the industry is left now without any assistance. While the refining branch is given assistance. We have no reduction in duty on the tools which are required to drill these wells, neither have we any reduction in the duty on the goods that are required to maintain these wells. There is a large quantity of casings, tubing, rods, brass cups, couplings and the like upon which there is a heavy duty, and carrying out the same principle that was carried out last year, a reduction should be made in the duty on these items.

Mr. LEADER: I should like to back up what some hon. members have said about well drilling machinery used in drilling for water. I know something about that as I have had to go down two hundred feet for water for the animals on my farm. Last year when casings over four inches were exempted from the sales tax, I did not say anything, although I felt the government should have gone further and given the same exemption on casings used in wells for water. The present is not too late to amend that. Many farmers in western Canada especially have to drill to find water for their animals. This entails a great deal of expense. Many times they drill for three or four hundred feet, striking stone, and they must take their machinery out and drill somewhere else. Sometimes they drill for days or weeks without accomplishing their purpose and their expense is all for nothing. It is only fair to the farmers of western Canada, and, indeed, of all Canada, who are similarily situated in that regard, if the government would include well drilling machinery for drilling wells of any depth, for water, as well as oil.

Mr. FANSHER: In view of the fact that the minister made an investigation of the oil industry, has he considered the idea of reducing the duty on the goods that enter into the production of crude oil?

Mr. ROBB: I had officials of the department go through the oil wells in western Canada and the demand was more for a bounty than for any change in the duty. I have listened to the observations of hon. gentlemen this afternoon and I shall refer all this to the tariff inquiry board to go carefully into it. I am not prepared to make any further concessions this session.

Mr. BLACK (Yukon): On what principle does the minister admit free the Diesel engine for marine purposes and tractors when used for farming purposes, and charge a duty on both when used for mining? Is it not just as necessary, if the tariff is changed for the purpose of helping industry, that the change should apply to mining as well as to other industries?

Mr. ROBB: My hon. friend will observe that it referred to a class or a kind not made in Canada. My recollection is that when we made the change in regard to mining duties last year my hon. friend was not very enthusiastic over it.

Mr. BLACK (Yukon) The minister is entirely mistaken; I made no remarks on the matter one way or the other. I had correspondence with him in which I asked a question and the reply was merely that my suggestion was noted. I certainly think that where gasoline tractors are admitted free for farming purposes they should be admitted free, on the same principle, for mining purposes. Farms were carried on successfully many years before they used tractors, but in some of the remote parts of the country much difficulty would be experienced in mining if they had not the gasoline tractor for freighting and hauling ore. And the industries in those sections are much more in need of encouragement than is the ordinary farmer to-day. These engines are used for power purposes in these localities where there is no fuel supply and they cannot obtain hydro power. I submit that if the government is going to reduce the tariff on principle to help industries it should make reductions in this case. Of course, if the object is merely to get votes in various localities it is a different thing. Certainly, if the government is really anxious to help industries, the mining industry can be helped in this way.

Item agreed to.

Customs tariff—553a. Braided candle-wick with or without wire centre or braided taper-wick with or without wire centre when imported by manufacturers of wax candles or wax tapers for use only in their own factories in the manufacture of wax candles or wax tapers: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Mr. STEVENS: What was the duty on this before?

Mr. ROBB: This is a reclassification; it came under 25 per cent.

Item agreed to.

Customs tariff—588. Coal, bituminous and coal, n.o.p., per ton: British preferential tariff, 35 cents; intermediate tariff, 45 cents; general tariff, 50 cents.

Mr. STEVENS: Would this change bring slack coal up to the level of ordinary run of mine?

Mr. ROBB: This reduces the ordinary run of mine coal 3 cents per ton, making it 50 cents, and it brings the slack coal up to that. It wipes out the slack coal item altogether.

Mr. STEVENS: Which previously was free?

Mr. ROBB: No, 14 cents.

Mr. WOODSWORTH: I should like again to call attention to the fact that at this very time we have a good deal of trouble in the coal mining area of Nova Scotia, and it has been said by the government that there is some difficulty in their taking action. I cannot myself see the grounds of that difficulty, but it has been stated that the government is more or less precluded from action because of the decision of the Privy Council with regard to the Industrial Disputes Investigation Act. Be that as it may, the fact is that there is a serious difficulty there and this government cannot avoid all responsibility in the matter. There is clearly one course that could be taken to force an investigation. Statements have been made by the miners with regard to the situation while other statements have been made by the operators. There is no evidence whatever before the public that if further protection is granted the operators it will be any help to the miners themselves. Further than that, there is no guarantee whatever that protection to the miners will mean any help at all to the consumers of coal. Under these circumstances it would seem absolutely essential, before the government or parliament can act intelligently, that there should be a fact-finding commission. It seems to me that this is due the public at large, and it is also due parliament before we are asked to vote on the matter. I should like to urge that it is the responsibility of the government to bring before us absolutely reliable statistics as to the cost of mining coal and as to the whole of the financial arrangements connected with the British Empire Steel Corporation before the public is asked to give further assistance in this matter.

[Mr. George Black.]

Mr. EVANS: I cannot help thinking that this duty on coal is very ill-advised. The government would have done much better to have accepted reciprocity in the matter of coal with the United States, who offer free trade in this commodity to all who will reciprocate. I cannot help thinking that coal, all the way across Canada, will be dearer for the householder than it has ever been. The natural market for coal for eastern Canada is in the Maritime provinces as well as in the New England states, and the natural market for Alberta coal is to the south and in the three prairie provinces. I think it is futile to spread Canadian coal over the whole of the Dominion either by means of a duty or by a railway subsidy. I think it is well established that even with this duty matters will not mend very much in Nova Scotia. There seems to exist there a situation which it will take more than 50 cents of a duty per ton on coal to overcome. There we see day after day an outrage committed against men, women and children which is besmirching the fair name of the British Empire. No British fair play is shown to the operatives in that area, and I think that their very nakedness and the suffering of these people are simply used as a lever to extort a high duty on coal for the benefit of the mine owner. The whole thing is wrong. Along with my hon. friend (Mr. Woodsworth) I want to see some interference on the part of the government in behalf of these operatives. It is time we took the matter in hand, and if the pride of Nova Scotia will suffer in consequence then I think the people there will have to pocket their pride for the time being. Certainly a duty rests on the government to interfere and put an end to the awful conditions now prevailing in Glace Bay.

Item agreed to.

Customs tariff—588a. Gas for heating, cooking or illuminating, per one thousand cubic feet: British preferential tariff, 6 cents; intermediate tariff, 6 cents; general tariff, 6 cents.

Mr. ROBB: I move that the item be amended by adding after the word "illuminating" the words "by pipe line."

Mr. STEVENS: What is the reason for this change, and what is the present duty?

Mr. ROBB: For many years there has been a duty of 17½ per cent, but it has never been imposed by any government. Recently we had a request from a municipality to reduce the duty as they wanted to import this gas. Therefore we are reducing the duty to a point where it can be properly administered—six cents instead of 17½ per cent.

Mr. STEVENS: What is the difference?

Mr. ROBB: It was 17½ per cent on the value; now it is six cents per 1,000 cubic feet.

Mr. STEVENS: What is the approximate value?

Mr. ROBB: Sixty cents at Niagara, two dollars at Calais, Maine.

Mr. STEVENS: This would be 10 per cent at Niagara.

Mr. ROBB: About that.

Mr. STEVENS: Is very much imported?

Mr. ROBB: Only at St. Stephen from Calais, Maine. Now there is a request to import it from a point near Niagara.

Mr. STEVENS: In the past the duty has been a dead letter, and this is virtually a new duty?

Mr. ROBB: Yes. We are changing it so it may be properly administered.

Mr. WHITE: Will this cover natural gas as well as artificial?

Mr. ROBB: Yes.

Amendment agreed to.

Item as amended agreed to.

Customs tariff—591. Farm wagons, farm sleds, logging wagons, logging sleds, and complete parts thereof: British preferential tariff, 5 per cent; intermediate tariff, 10 per cent; general tariff, 10 per cent.

Mr. CALDWELL: What was the former duty on this item?

Mr. ROBB: We are adding the words "logging sleds". The duty before was 25 per cent.

Mr. WHITE: What is the difference between farm sleds in this item and sleighs contained in the next item?

Mr. ROBB: It is the expression used by the customs for administrative purposes.

Mr. STEVENS: Just for the sake of harmony—

An hon. MEMBER: Hear, hear.

Mr. STEVENS: I mean harmony in language. I do not care much about the harmony of the House, in fact I think a little bit of spice once in a while is a very good thing. Will the minister look at the two items: logging wagons, 5, 10 and 10 per cent, and then below sleighs—which I presume will be logging sleighs—17½, 25 and 25 per cent? Why should there be a duty on the wagon of 10 per cent, and on the sleigh of 25 per cent. It sounds to me a little unreasonable and—well, scarcely sound common sense. Why not make them all 25 per cent?

Mr. ROBB: I have discussed this with the customs, and they claim that they can administer it and understand it better this way.

Mr. STEVENS: I admit that the customs officer's administrative mind is so trained to draw fine distinctions that he might understand it, but I defy any person of ordinary intelligence like myself to do so.

At six o'clock the Speaker resumed the chair and the House took recess.

After Recess

The House resumed at eight o'clock.

PRIVATE BILLS

SECOND READINGS

Bill No. 78, for the relief of Vera Thelma Gooderham.—Mr. MacLaren.

Bill No. 99, for the relief of William John Fuller.—Mr. Duff.

Bill No. 100, for the relief of Alfred Augustus Jacques.—Mr. Duff.

Bill No. 101, for the relief of Paul Zizis.—Mr. Hocken.

Bill No. 102, for the relief of Annie May Blunt.—Mr. Hocken.

Bill No. 103, for the relief of Grace Harrington Bloom.—Mr. Hocken.

Bill No. 104, for the relief of Ian Somerled Macdonald.—Mr. Garland (Carleton).

Bill No. 105, for the relief of Arthur Beldon Morrison.—Mr. Church.

Bill No. 106, for the relief of George Edward Sharp.—Mr. Arthurs.

Bill No. 107, for the relief of Marjorie Morton.—Mr. Arthurs.

Bill No. 108, for the relief of William Ernest Hampson.—Mr. Arthurs.

CONSIDERED IN COMMITTEE—THIRD READINGS

Bill No. 26, respecting a patent of Walter W. Williams.—Mr. McMaster.

Bill No. 48, for the relief of George Thomas Grigor.—Mr. Martell.

Bill No. 49, for the relief of Ethel May Sheriff.—Mr. Church.

Bill No. 50, for the relief of Max Arno Frind.—Mr. Hocken.

Bill No. 51, for the relief of Elizabeth Burns.—Mr. Garland (Carleton).

Bill No. 52, for the relief of Fred Herdman Ogden.—Mr. Church.

Bill No. 53, for the relief of Marion Gooderham Smith.—Mr. Hocken.

Bill No. 54, for the relief of Edith Mary Wiles.—Mr. Garland (Carleton).

Bill No. 55, for the relief of Annie Kate Winch.—Mr. Hanson.

Bill No. 56, for the relief of Florence Kate Coutts.—Mr. Ryckman.

Bill No. 57, for the relief of George Kerr Jess.—Mr. Hanson.

Bill No. 58, for the relief of Thomas Almer Shields.—Mr. Euler.

Bill No. 59, for the relief of Roderick James Ellis.—Mr. Boys.

Bill No. 60, for the relief of Florence Mann. —Mr. Sheard.

Bill No. 61, for the relief of Samuel John Pegg, junior.—Mr. Preston.

Bill No. 63, for the relief of Izzie Klinmentz (otherwise known as Izzie Climans).—Mr. Jacobs.

Bill No. 64, for the relief of John Hutchinson Durnan.—Mr. Sheard.

Bill No. 65, for the relief of Richard James Wright.—Mr. Garland (Carleton).

Bill No. 66, for the relief of Mary Ellen Ayre.—Mr. Boys.

Bill No. 67, for the relief of Helen Marie Pritchard.—Mr. Garland (Carleton).

Mr. SPEAKER: I might, perhaps, ask the House if I could not embody the motions for the third reading of these bills in one resolution in order to save time?

Some hon. MEMBERS: Carried.

Mr. SPEAKER: By leave of the House. It is moved by Mr. McGiverin seconded by Mr. Mackinnon that the bills be read a third time. Is it the pleasure of the House to adopt the motion?

Mr. LAPOINTE: On division.

Mr. SPEAKER: Carried on division.

BRITISH CONSOLIDATED INSURANCE CORPORATION

Mr. WILLIAM IRVINE (East Calgary) moved the second reading of and concurrence in amendments made by the Senate to Bill No. 34, to incorporate the British Consolidated Insurance Corporation.

Mr. LAPOINTE: Will the hon. gentleman tell us what the amendments are?

Mr. SPEAKER: I see by the amended bill that the only change is in the phraseology. The word "insurance" is replaced by the word "assurance" in two places.

Mr. IRVINE: That is the only change.

Mr. SPEAKER: With this assurance is it the pleasure of the House to adopt the motion?

Motion agreed to.

[Mr. Stevens.]

WAYS AND MEANS
CUSTOMS TARIFF, 1907, AMENDMENT

The House in committee of Ways and Means, Mr. Gordon in the chair.

Customs tariff—591. Farm wagons, farm sleds, logging wagons, logging sleds, and complete parts thereof British preferential tariff 5 per cent; intermediate tariff, 10 per cent; general tariff, 10 per cent.

Mr. HOEY: Is there any change in the farm wagon item?

Mr. ROBB: No, the only change is to insert the words "farm sleds."

Item agreed to.

Customs tariff—591a. Freight wagons, drays, sleighs, n.o.p., and complete parts thereof; British preferential tariff 17½ per cent; intermediate tariff, 25 per cent; general tariff, 25 per cent.

Mr. ROBB: The only change is to add the words "n.o.p."

Item agreed to.

Resolution agreed to.

DRAWBACKS

3. Resolved, that schedule B to The Customs Tariff, 1907, be amended by providing that the following items, enumerations, and rates of drawback of customs duties be inserted in said schedule B:—

Customs tariff—1045. Materials when used in the manufacture of tubes enumerated in tariff item 397,—payable as drawback, 99 per cent.

Item agreed to.

Customs tariff—1046. Materials when used in the manufacture of articles entitled to entry under tariff item 663b, when such articles are sold to manufacturers to be used as specified in said item,—payable as drawback, 99 per cent.

Mr. LUCAS: What are the conditions which a manufacturer has to comply with in order to receive this drawback?

Mr. ROBB: The general regulations apply to drawbacks and they are given on goods imported within three years. The item is to provide for a drawback on materials used in the manufacture of machinery and other articles entitled to free entry under tariff 663.

Mr. LUCAS: Does that apply to material imported to be manufactured into goods which are for export?

Mr. ROBB: No this item is to apply particularly to the machinery for manufacturing fertilizers. The machinery is now free and it is to give them a rebate on the material going into the machinery, to put the Canadian in as good a position as the foreign dealer.

Mr. SPENCER: Is that drawback given on machinery manufactured and sold in Canada as well as on what is exported?

Mr. ROBB: Yes.

Item agreed to.

Customs tariff—1047. Materials when used in the manufacture of articles enumerated in tariff item 469a—payable as drawback 99 per cent.

Item agreed to.

Customs tariff—1048. Materials, including all parts, when used in the manufacture of goods enumerated in tariff item 453e—payable as drawback 50 per cent.

Mr. WHITE: Before six o'clock, when the items covering engines, well drilling machinery and farm sleds were under consideration, the minister stated that, on account of the reduction of duties, the manufacturers of these articles were allowed certain drawbacks on materials as covered by the next page. What consideration is being given to the makers of these materials?

Mr. ROBB: I think we made some concessions last year covering that. I will get the information for my hon. friend.

Mr. WHITE: And withdrawn this year?

Mr. ROBB: No, excepting in the alloy rolls.

Mr. LEWIS: Why is it that when a manufacturer manufactures a commodity that is on the free list, he is given the privilege of a drawback of 99 per cent of the tariff on all the raw material that goes into it, while on the other hand the farmers who are manufacturing as primary producers all the time and whose goods are all on the free list, do not get a drawback of 99 per cent on the things which they require in order to produce their goods?

Mr. ROBB: My hon. friend seems to forget that we made a good many reductions last year on implements, particularly for farms, and that we are adding to the list this year.

Item agreed to.

Customs tariff—1049. Bituminous coal when imported after the 24th day of March, 1925, by proprietors of by-product recovery coke ovens and converted into coke at their by-product recovery coke ovens. Provided that no drawback shall be paid under this item during any calendar month when the average ratio during that period is less than 1,300 pounds of coke from 2,000 pounds of coal, also provided that drawback payable under this item is in lieu of drawback payble under any other item—payable as drawback 99 per cent.

Mr. ROBB: I beg to move that the following be substituted for item 1049:

1049. Bituminous coal when imported after the 24th day of March, 1925, by proprietors of by-product recovery ovens and converted into coke at their by-product recovery coke ovens. Provided that no drawback shall be paid under this item—

This is new:

—on coal converted into coke at a gas retort plant or at a plant using any other process than the by-product recovery coke oven process.

Mr. KENNEDY (Edmonton): What is the reason for that change and what general effect will it have?

Mr. ROBB: The reason is to give this advantage only to plants that are making exclusively coke as a by-product.

Mr. GARDINER: Producing coke for fuel?

Mr. ROBB: Yes.

Mr. CHURCH: What is exactly the policy of the government? This afternoon we passed a resolution in reference to bituminous coal and coal n.o.p., British preferential tariff, 35 cents per ton; intermediate tariff, 45 cents per ton, and general tariff, 50 cents per ton. In my opinion that resolution passed this afternoon and this item in connection with the drawback on bituminous coal are not fair and equitable for the whole of Canada. It may be that the minister may be trying to give some stimulus to the coal industry in Nova Scotia, but there has been a great deal of discussion in parliament in regard to a national policy on this coal question and equality of treatment for both Alberta and Maritime coal. I was much surprised this afternoon, in view of that resolution and the drawback item of 99 per cent, that my friends the Progressives from Alberta did not ask for the same treatment which the Maritime provinces are getting. The resolution passed this afternoon and this item in regard to the drawback of 99 per cent have to be read together, and I claim that they constitute a clear discrimination against Ontario. This duty is going to cost the people of Ontario, it is estimated, between $1,500,000 and $2,000,000. The people of Ontario would gladly use Nova Scotia coal, as was pointed out in the debate on the coal question, but they cannot use it on account of the transportation question at the present time and many other questions connected with it. This is clear discrimination in favour of Nova Scotia at the expense of Ontario and Alberta as well. I do not understand this silence on the part of my hon. friends to my left who are much interested in this coal problem, in both the duty and the drawback and in getting Alberta coal to central Canada.

I fail to see that there is equality of treatment. It is class discrimination of the worst kind at Ontario's expense. The government should bring down a national policy giving

equitable treatment to all parts of Canada, instead of levying an imposition of $2,000,000 a year on the people of Ontario for the benefit of the people of Nova Scotia. This is not a solution of the coal question. It is the mere absence of a proper policy. It is not carrying out the resolution adopted unanimously by this House at two sessions of this parliament for a national policy on coal for Canada. It is simply benefiting one section of the country at the expense of another. As regards these coke ovens, although this may not be in the minister's department—it may be in that of the Minister of the Interior—the minister ought to tell the committee the names of the coking plants benefited by this drawback proposition and where they are. They may be only in certain parts of Canada. I am very much disappointed at the silence of the Progressive members from Alberta, the so-called Ginger group in this House and the way they follow the government. It does not seem as if they had very much ginger or progress in their make-up. This afternoon they said not a word as to the adoption of this discriminatory policy on the tariff. If there is to be any tariff or drawback at all on coal, it should be equitable not only for Nova Scotia, but for Ontario and Alberta as well. Ontario is also penalized on well drilling machinery. Last year a resolution was passed providing for $200,000 bonus for the benefit of the coal industry, and not a cent went to Alberta. Nevertheless, hon. gentlemen from that province sit here and say nothing. I do not see why the government could not bring down a fair and equitable national policy on coal and a policy of protection for the whole country. I am surprised that the Conservatives and Progressives of Ontario, especially those coming from the cities and towns, should allow a resolution of this kind to go through without protest, when this means that $2,000,000 will be taken out of the pockets of the hard-working people of Ontario.

Mr. LEWIS: I am glad for once that protectionist Toronto knows what it feels like to be taxed for the benefit of some other class of people. If there was ever any insincerity in protection, we have heard it to-night. The people who believe in protection and who are willing to tax the whole of Canada for the sake of the few, when the thing is turned around upon themselves, are the first to howl.

Amendment agreed to.

Item as amended agreed to.

Resolution agreed to.

Resolution 4 agreed to.

[Mr. Church.]

THE SPECIAL WAR REVENUE ACT 1915, AMENDMENT

Mr. ROBB moved:

1. That "cheque" shall be further defined to include any document or writing, not drawn upon or addressed to a bank, in exchange for which a bank makes payment of a sum of money, except a coupon and a document used solely for the purpose of settling or clearing any account between banks, and that such a cheque shall be liable to the stamp tax imposed on cheques by the said act.

2. That a bill of exchange transferred or delivered to a bank drawn upon a person outside of Canada shall, for the purpose of the value of the stamp to be affixed thereto, be deemed to be drawn for an amount not exceeding twenty-five hundred dollars.

3. That no person selling foreign exchange shall for the purpose issue a bill of exchange drawn upon a person outside of Canada unless there is affixed thereto a stamp of the value of two cents for every fifty dollars up to twenty-five hundred dollars.

4. That the stamp tax imposed by the said act on money orders or traveller's cheques shall be similarly imposed on money orders or traveller's cheques issued by a bank or other person.

5. That any bill of exchange or promissory note held by a bank as collateral security for an advance or other indebtedness and in respect of which advance or other indebtedness stamps of the requisite value under this section are affixed to the relevant bill, note or other proper document, shall not be subject to the provisions of this section. If such collateral is paid by a person liable thereon stamps of the requisite value according to subsection 3 (a) of this section shall before surrender thereof be affixed thereto and cancelled by the bank.

6. That a request in writing by a customer of a bank asking the bank to transfer from the account of the customer to another bank a sum certain for deposit only to the credit of the customer in such other bank, and an advice in writing by a bank to its customer that a sum certain is placed to the credit of the customer for transfer and deposit only to the customer's credit in another bank, shall not be subject to the stamp tax prescribed by section twelve of the said act.

7. That in the case of the first complaint to the minister or any officer of Customs and Excise against a person for failure to properly stamp a receipt given by such person the minister may permit the person to affix the stamp in the manner prescribed in section fourteen of the said act within one month of the date of the permit on payment of a penalty of ten dollars.

8. That subsection four of section nineteen BBB of the said act as amended by section three of chapter sixty-eight of the statutes of 1924, being the list of excepted articles not liable to the consumption or sales tax, be amended by striking out of said section three of chapter sixty-eight the words "gasoline engines to be used in boats bona fide used by individual fishermen for their own personal use in the fisheries" where they occur in lines twenty, twenty-one and twenty-two, thirty-eight, thirty-nine and forty, and fifty-eight, fifty-nine and sixty of said section three; and that the said subsection four of section nineteen BBB be further amended by adding thereto the following:

"Vegetable plants; lasts for boots and shoes including rubber footwear and patterns for boots and shoes including rubber footwear; goods enumerated in customs tariff items 453e, 469a; articles and materials to be used exclusively in the manufacture of goods enumerated in customs tariff items 453e,

469a; materials, not to include plant equipment, consumed in process of manufacture or production which enter directly into the cost of goods enumerated in customs tariff items 453e, 469a."

9. That the bond required under the provisions of subsection seven of section nineteen BBB of the said act to be given by a licensed wholesaler or jobber shall be for an amount not more than fifteen thousand dollars and not less than two thousand dollars.

10. That any enactment founded on paragraph eight of this resolution shall be deemed to have come into force on the twenty-fifth day of March, 1925, and to have applied to all goods imported or taken out of warehouse for consumption on and after that day and to have applied to goods previously imported for which no entry for consumption was made before that day.

11. That any enactment founded on this resolution, excepting paragraph eight thereof, shall come into force on the first day of July, 1925.

On resolution 1:

Mr. STEVENS: What is the effect of resolution number one?

Mr. ROBB: These resolutions are based on the act introduced in 1915, The Special War Revenue Act. It has been brought to the attention of the department that there has been an evasion of the intent of the act and the amendment is to define more clearly what a cheque is so that there shall be equity all along the line. After we have got through with this I shall move an amendment to provide that the stamp tax imposed by The Special War Revenue Act of 1915 on any cheque receipt for money paid by a bank, money order, traveller's cheque, post office money order and postal note, shall not be payable in respect of any of the said instruments if it is for an amount not exceeding $5. That I think will be some concession to all classes throughout the country.

Mr. CAMPBELL: Could the minister not raise that to $10? We have a great many protests from dairymen and produce dealers in the west, and personally I have so many resolutions here that it would be impossible to read them all to the House. They come from various representative bodies, such as boards of trade, dairymen's associations, creamery companies, wheat pool organizations, grain growers' associations, farmers' unions and agricultural societies, and it is pointed out that the cheques or bills for produce such as eggs, cream and various other commodities, are for very small amounts, very often for $2 and $3. When we remember that the stamp of 2 cents for every $50 applies only to cheques up to $2,500, it will be seen that this provision is a direct bonus to those who are handling large amounts. This is a particular hardship on the dairymen and the various produce dealers of the west, because naturally it all comes out of the producer in the end. I think the minister might raise this amount to $10.

Mr. ROBB: If my hon. friends were responsible for raising the revenue to meet the fixed charges of the country and our interest on the immense national debt we incurred during the war, as well as to take care of pensions to the soldiers and the widows and children of soldiers, besides carrying on the general affairs of the country and providing for the development of our transportation system, building branch line railways and all that sort of thing; and if, in addition to that, they were attacked by the same people in the country, the delegations that come to interview the government, some wanting public works and others seeking to evade taxation —if hon. gentlemen were faced with such a problem as this they would see how difficult it is to carry on our national business. If we fix a limit of $10 it will simply mean that the revenue of the country will be seriously eaten into. This I think is a very fair concession. My hon. friend a moment ago referred to the dairy business. I want to say frankly that the government never contemplated that or any other business in particular in framing this legislation.

Mr. MEIGHEN: Could not the hon. member escape the tax by issuing two cheques?

Mr. CAMPBELL: That occurred to my mind, but I prefer to do it in the proper way.

Mr. ROBB: When Sir Thomas White brought in the legislation originally it was thought that it would cover all forms of payments in the way of cheques; but there are men in business who sit up at night trying to devise ways and means of evading taxation, and it has been found in practice that there is considerable business in the country that has escaped. The farmer who sells his grain is not the man who pays the tax on the $2,500; it is the man who purchases that pays it.

Mr. CAMPBELL: When the farmer ships a car of grain he finds a deduction on his bill for the exact amount of the stamps used on the cheque.

Mr. ROBB: He will not find that in the case of regular grain companies.

Some hon. MEMBERS: Yes.

Mr. ROBB: Then he has recourse under the law, because the law says that the man who issues the cheque must put the stamp on.

Mr. CAMPBELL: And so he does; the man who issues the cheque puts the stamp on and deducts it from the bill.

Mr. ROBB: He has no right to do so.

Mr. BROWN: The minister will remember that two years ago the Minister of Finance (Mr. Fielding) made the statement that the government did not care who paid the tax so long as it was paid.

Mr. ROBB: But I am pointing out the law as it is. My hon. friend introduced the question of the dairy industry in relation to milk cheques. I am told that in western Canada there is a system of doing business whereby they are paid daily as the produce is sent in. I have been listening to and reading the debates that have taken place and I notice that some hon. gentlemen have particularly emphasized the fact that a direct tax is the proper sort of tax to be imposed. Now, this is a direct tax. They emphasize this also, which is the fact, that any tax should be equitable. Let us take that part of the dairying industry which sends its product to the dairy factories. In the three western provinces the business last year was about twelve million dollars; in eastern Canada it was eighty-two million dollars. Now, the people who were doing the eighty-two million dollars' worth of business paid the tax on the cheques they sent to their patrons; the other people did not pay it. I ask hon. gentlemen, is that an equitable tax all over Canada? All we are trying to do is to make this tax not merely applicable to the dairy business but to every business—in a word, to make it equitable all over the Dominion. We have discovered that not only in the dairy and grain business, but also in the lumber business and the machinery business methods have been devised of evading the tax, so we are tightening it up now in order that everyone liable will have to pay. As my hon. friend said a moment ago, most of this business is for amounts under five dollars, and the amendment which I propose will release cheques up to that amount; but we want to make it equitable, therefore we are releasing payment of stamps on these small cheques to everyone throughout Canada.

Mr. CAMPBELL: I have a good deal of sympathy with the minister, and agree with the most of what he has said. Undoubtedly we must have revenue. But I do not agree with him when he describes this as equitable. The inequity is the very thing we are protesting against; we say that it is not equitable. Let me take a concrete case. A cheque for $20,000 would bear a fifty-cent stamp, but ten cheques of five dollars each would bear a tax of twenty cents. It is the very inequity of this that we are protesting against. I think the minister could straighten it out a little better if he would raise the $2,500 minimum to $25,000, or something like that, and then I think there would be little complaint from the men who pay on the small cheques.

Mr. LEWIS: Mr. Chairman, I am pleased that the Acting Minister of Finance has acquiesced in the judgment expressed by the western members to even the extent of five dollars in the interests of the primary producers. This tax would have been a serious matter to many of our farmers in the west who to a large extent depend for their living on dairy products, and I am sure they will be glad that the extra burden has been so justly removed. But I also agree with my colleague from Mackenzie (Mr. Campbell) that the minister should go a step further and raise the minimum to $10, which I am sure would earn him the gratitude of the western producers.

Mr. ROBB: But we would lose a lot of revenue, and this we cannot afford to lose, for we have to provide for interest on the national debt, for pensions, and for carrying on the affairs of the country. If I open the door and raise the minimum to $10 for the dairy men, I have to open it for all others. I submit that the country cannot afford to lose the revenue.

Mr. CAMPBELL: Leave the minimum just as it is at $5, but raise the maximum to $25,000, then you will get some revenue.

Mr. GARLAND (Bow River): Get some revenue from the larger cheques; don't lose them.

Mr. ROBB: That change was made not with the view of relieving anybody, but to secure additional revenue. We found that a lot of business along the international boundary line which should have been done through Canadian banks was, on account of this higher tax, going to the United States banks across the border. It was to bring that business back that we made the maximum $2,500.

Mr. BOYS: The minister says that raising the minimum to $10 would involve a very considerable loss of revenue. Unless he can show us that such a loss would ensue, I would be inclined to support the suggestion to increase the minimum to $10, for it is most annoying to have to put a two-cent stamp on small receipts and cheques. Personally I do not think there would be any serious loss. To-day these small amounts are very often paid in cash; I think it is desirable to encourage people to pay by cheque, and so avoid the

many disputes that arise where receipts are not given on cash payments. I think in the interest of people doing business in a small way the minimum should be increased from $5 to $10 unless the minister can show the House that the loss in consequence would be very substantial.

Mr. ROBB: I regret I have not the exact figures before me, but it is estimated in the department that the change would involve a very considerable loss of revenue. I agree with my hon. friends opposite that these stamp taxes are a nuisance, and it would be much better if we could meet the views of hon gentlemen and raise the limit to $10. But I would suggest that we try this minimum of $5, and if next year we find we can increase it to $10, $15 or $25, we will be glad to consider it.

Mr. BOYS: Is any effort made to ascertain the amount paid, for instance, on cheques of $5 and under, on cheques from $5 to $10, and on cheques from $10 to $15, or is it merely the total which is derived from the tax?

Mr. ROBB: It is the total. I did ask some of the banks to try and get me an estimate along that line, but the time was too short for them to give me any.

Mr. MEIGHEN: What is the total income from the tax stamps on cheques and receipts?

Mr. ROBB: About ten million dollars from all stamps.

Mr. MEIGHEN: Ten million dollars on all stamps! Does that include cheques, receipts, overdrafts, bills of exchange, notes, and all those things?

Mr. ROBB: Yes, about ten million dollars.

Mr. MEIGHEN: I am astonished if it is that much.

Mr. ROBB: I am speaking in round figures. I will try to get the exact figures.

Mr. MEIGHEN: I take it that all of them are objectionable, as every tax is.

Mr. ROBB: I agree.

Mr. MEIGHEN: Cheque and receipt stamps are by no means as objectionable as the overdraft and note taxes. Those are taxes that affect me most.

Mr. ROBB: And me too.

Mr. MEIGHEN: And I feel most keenly about them. I have never under any government been able to understand why a man ought to pay a tax because he owes a debt —the more he owes and the harder up he is, the more he is taxed. That is the actual law. I am not objecting to the cheque tax and the receipt tax, these are in

9 p.m.

a different category, but the overdraft tax and the tax on a note that a man cannot pay really strike me as the most inequitable, unjust and iniquitous. Of all taxes in the world I think those are the hardest to defend. Surely there can be something devised a little more sensible than those. It is really an attempt to tax poverty.

Mr. ROBB: I agree with very much that my right hon. friend has said, but I would remind him that this tax was introduced originally in 1915.

Mr. MEIGHEN: I know that.

Mr. ROBB: By a former colleague of my right hon. friend. It is based on the English act. Under that act I am told that the tax on an overdraft in the United Kingdom is slightly higher than it is in Canada.

Mr. MEIGHEN: This government increased it.

Mr. ROBB: Yes, we did. The British act has been in force since 1845. In 1894 it was contended that coupons should also be taxed, and the British government amended their act to make it clear it was not intended to tax coupons, and coupons are not taxable in Canada. Now why is that? Coupon bonds are not issued by a business concern. No business concern can tell what they are going to be able to pay in five, ten, fifteen or twenty years; they do not finance that way. Coupon bonds are generally issued by governments, dominion, provincial and municipal.

Mr. MEIGHEN: The minister is wrong.

Mr. ROBB: Not to any great extent. Now if we imposed a tax on coupon bonds, and a tax had to be put on every coupon, that tax would have to be put on at the time the document was issued. It might be payable fifty years from now; it might be a fifty-year bond, and before the fifty years had expired the country might have repealed that act. That is one reason. The other is that it would be an additional cost on the municipality or corporation issuing the bond. They would have to put the tax on at once, and therefore, very wisely I think, coupons have been exempt from taxation.

Mr. MEIGHEN: It may be wise to exempt coupons, but I do not think the minister's reasons are conclusive. In the first place, although it does not seem to be relevant, coupon bonds are issued by corporations in many cases.

Mr. ROBB: I have never seen them.

Mr. MEIGHEN: I have; but the minister's objection would not apply, because there should be no difficulty in the execution of a law which provided, not that the coupons should be stamped, for that would be impossible without providing for their stamping on issue, but which provided that before being cashed the stamp tax should be put on the coupon. I cannot see any objection to that. If the law was repealed afterwards, there would be no stamp tax to put on the coupon.

Why also would it not be much more sensible to tax deposit money than to tax over-drafts?

Mr. ROBB: That view has been represented to us.

Mr. MEIGHEN: Deposit money is not in circulation, it is not helping the country, it is simply held there without doing very much for the public at all, and also they represent at least a certain amount of money, and the larger they are the more they should be taxed. But to tax the fellow because he cannot pay a debt, and to penalize him every three months, simply means that when you get a man down you are going to push him further down—down, down he goes, with the government's heel on his neck all the time. For the life of me I cannot see any common sense in that overdraft tax at all.

Mr. BROWN: I would like to endorse what the leader of the opposition has said with regard to this overdraft tax. I have had some little experience with that in trying to finance for a small country elevator, and we felt it to be a heavy burden to have to pay an overdraft tax at very short intervals.

In regard to the stamp taxes, the hon. member for North Waterloo (Mr. Euler) spoke of these as nuisance taxes some time ago. I do not altogether agree with him. I do not think this stamp tax should be any particular nuisance to the man in business, for he is prepared to stamp all the documents that come before him, but this particular tax will be a nuisance to a large class of people who are not in the way of doing business. These creamery tickets, as we call them, are given to large numbers of people who have no banking account, who never see a cheque, who never have had anything to do with issuing cheques or stamped documents in any form, and this tax will become decidedly a nuisance tax to them. I can imagine the consternation it will create in the minds of a great many people who are shipping an odd can of cream to the creamery and getting back what we call cream tickets for four, five, or it may be six or seven dollars in some cases. It will put a very heavy burden on them which I think they might very well be relieved of, and it will most certainly become a distinct nuisance tax to this class of people who have had nothing to do up to the present with the stamping of any document.

Mr. EULER: I would like to say that I have a good deal of sympathy with the views expressed on the other side of the House with regard to the stamp taxes. I would support anything that will tend to minimize the effect of these nuisance taxes. I do not know to just what extent the remedy the minister suggests, or the further one suggested by my hon. friends opposite, will tend to relieve the situation, but I would urge upon the minister to do everything he possibly can to relieve the public of these nuisance taxes. I do not altogether agree with the hon. gentleman who has just spoken (Mr. Brown). It may be true that this will be a nuisance tax more particularly to the people of whom he speaks, but I believe they are nuisance taxes to everybody.

The hon. leader of the opposition has referred to the tax on overdrafts, and the illogical nature of that tax. I think his remarks apply just as well to the tax on cheques, because the tax is taken from the man who pays. It ought to be taken from the man who receives, if it were possible to do so. I think it is just as illogical in the one case as in the other.

So far as the receipt tax is concerned, the law is more honoured in the breach than in the observance. I do not believe out of ten receipts upon which the tax should legally be paid, it is paid on one. Most people evade it. Generally the man who receives the receipt will make no objection if the stamp is not on the receipt. As a matter of fact, I think it is an encouragement to the breaking of the law in that respect.

Mr. HOEY: The receipt is of no value unless it is stamped.

Mr. EULER: It certainly is evidence to show the money has been paid, and I venture to say and I think I know whereof I speak, that in the majority of cases where the receipt is for more than ten dollars the stamp is not affixed at all.

I was rather surprised at the amount given by the minister of $10,000,000 as being the amount of revenue collected under these taxes. I was just wondering whether it would be possible absolutely to segregate these taxes and ascertain just what the revenue is from that source. Ten million dollars seems very high indeed.

I would like to urge again that the government, if it is at all possible, get rid as soon as possible of this form of taxation, which is about as annoying as anything that could be devised.

Mr. CHAPLIN: I would like to inquire from the minister if it is the intention to do anything in respect to the receipt tax. My reason for asking this is that I believe there is a studied endeavour on the part of people to avoid paying this tax. I would call the minister's attention to one case that came to my notice. I received what I call a receipt after sending a cheque, and on the receipt was written, "Your cheque received. No receipt is necessary." It was signed, and there was no stamp affixed. I would like to ask the minister if that is a legal document, and whether something cannot be done to avoid that sort of thing being done?

Mr. ROBB: My hon. friend who is a business man, and a good business man, knows that if he issues a cheque payable to order, and the payee endorses the cheque, he can have no better receipt than that. That covers it, as I am sure my hon. friend will admit.

Regarding the observations of my hon. friend from Lincoln (Mr. Chaplin) and the hon. member for North Waterloo (Mr. Euler) that the receipt tax is being evaded, I venture to say that to-morrow the officers may look into conditions in the constituencies represented by these hon. gentlemen, because I have in mind that within the last three months a Roman Catholic priest wrote to me and wanted me to see my colleague the Minister of Customs, who is a member of his own church and his own race, because he had taken action against him for not having put stamps on the receipts for pew rent. I say this in all justice to my colleague (Mr. Bureau) who is absent that wherever it is brought to his attention that people are evading the tax he does his best to have it collected. That is what the tax is imposed for. That tax has been in force in Great Britain for many years. The receipt tax is a good tax, and we get a lot of revenue from it, for instance in hotels from tourists and transients who are passing through the country.

Now with regard to the tax on the $10,000,000 officers have gone after it and I think we will get that collected. I recall since the debate started having a conversation with a representative of the Bankers' Association, and he gave me the assurance that the most of this overdraft tax, that is the one I am talking about now, is paid by big business—stock brokers who deposit securities in the bank and get an overdraft covering them. From that source there is about $8,000,000 of revenue derived. If hon. gentlemen wish to lose $8,000,000 for the sake of a few of us—and I am in the same class as my hon. friend—

Mr. MEIGHEN: Eight millions?

Mr. ROBB: Yes, that is the amount of revenue derived from "big business".

Mr. CHAPLIN: The minister, it seems to me, has missed the point I was trying to get at. I never questioned the value of the receipt that was on the back of my cheque; but when a man sends me a receipt for it I expect it to be stamped. I may say to the minister that he does not need to come to my constituency; there is a case in point that I can produce to him very close to his own constituency.

Mr. ROBB: All right, let me have the facts and we will get after them.

Mr. GOULD: I wish to add my little word of protest to the protest of other hon. gentlemen who have expressed themselves concerning the $10 cheque. I think I am in receipt of possibly, one hundred letters and telegrams from the western country protesting against this proposed tax. I believe that if the minister would make a recommendation that $10 should be the minimum he would not necessarily lose any revenue. I am aware that in the past in the case of grain cheques this tax has been evaded in many instances. I could cite instances where one would sell his grain upon the street, receive his ticket from the weighmaster, and then go to the bank and cash it without any question being asked—he got the full amount written upon the ticket. In other places when he presented his ticket at the bank they would insist upon the stamp being placed upon it. I think if such a regulation were enforced the minister would secure as much revenue as he would by requiring the payment of a tax upon a cheque for $5 or for something over that amount.

I also know that what the hon. member for North Waterloo (Mr. Euler) has said in regard to receipts is true; but of course in that case there is no method whereby the stamp could be cancelled, and therefore the question of legality would not necessarily arise. If the receipt were questioned there would be no difficulty in the individual putting a revenue stamp on the receipt and thereby, possibly, rendering it legal. In the case of bank cheques however it is a different matter; there is no opportunity to avoid the

liability as there is in the case of receipts. The minister said that in reading over a number of the budget speeches he noticed that arguments were made for direct taxation. I am one of those guilty individuals; I have always advocated the principle of direct taxation.

Mr. ROBB: For the other fellow.

Mr. GOULD: The minister has only told one half of the story. We have been advocating the principle of direct taxation for many years, but we do not want that supplemented by indirect taxation. The minister has brought down a budget which adopts the principle of indirect taxation, and now he wants to apply the principle of direct taxation too. That is what we are objecting to. We are prepared to pay in our equity on the principle of direct taxation, provided it supplants indirect taxation. That is the important point with those who are in favour of the principle of direct taxation.

Mr. SPENCER: Why was it found necessary to substitute excise stamps for postage stamps when putting stamps on cheques? There were many postmasters in the rural districts who got a small commission on the postage stamps they sold, and they regard it as a hardship to substitute excise stamps for postage stamps.

Mr. ROBB: I know that it occasions considerable inconvenience and some heart burning perhaps, but hon. gentlemen must understand that if we are to determine what revenue we are receiving from the Post Office Department the business must be segregated. That was the object in view in making the change.

Mr. EULER: Are the stamps now used on commercial paper, cheques, and so forth used only for that purpose, and was the change made in order to tell exactly what the revenue was?

Mr. ROBB: Yes.

Mr. KELLNER: How would the minister prevent a debtor who owed $25, using five consecutive cheques in paying his creditor, and evading the law in that way?

Mr. ROBB: Do not ask me to tell people how to evade the tax. They know pretty well already.

Mr. KELLNER: I was assuming that people knew how and asking the minister how he would overcome the evasion of the law if that practice was resorted to.

Mr. CAMPBELL: The minister mentioned a reason for exempting cheques above $2,500

that I think is very well ill-founded. I can hardly conceive of a business man, or a business corporation, carrying money across the line, depositing it in an American bank, and then issuing a cheque on it to some part of Canada in order to evade the tax. That is something I can hardly conceive of; in fact we have heard so much about the weakness of American banks that I cannot imagine any of our larger corporations using those banks at all. I do not think there is very much force in that argument. But let us take the case of the man who writes cheques for $5 and a little over, amounting in all to $50, he has to pay a tax of twenty cents.

Mr. ROBB: Wait a moment. Does my hon. friend say he has to pay twenty cents?

Mr. CAMPBELL: Yes, twenty cents.

Mr. ROBB: On a cheque for $5.

Mr. CAMPBELL: We will say there are ten cheques and in each case it amounts to a few cents over the $5. He is penalized to the extent of 18 cents.

Mr. ROBB: He pays two cents on $50.

Mr. CAMPBELL: He pays two cents on one cheque of $50 but if he issues ten cheques for $5, or five cheques for five dollars and one cent he pays twenty cents. So that he is penalized to that extent on a total amount of $50. On the other hand a man issuing a $20,000 cheque pays 50 cents. That is, he pays $2.70 less than he would pay if the tax were equitably assessed. Now that is my complaint. I can hardly conceive a man issuing a $20,000 cheque and then walking, perhaps a considerable distance to the American side of the line depositing his money there, and issuing a cheque against it just to save $2.70. In my opinion that is a very weak argument. I may say personally, and I think it would apply to most hon. gentlemen in this section of the House, that we are quite satisfied with the amendment the minister brings in providing he will raise this amount to, we will say, $20,000. This will make a considerable increase in his revenue. We certainly do object to the present lack of equity in the assessing of this tax.

Mr. McQUARRIE: With reference to the tax on receipts, I understand the minister has received representations in reference to putting stamps on monthly statements. I believe that early in the session a ruling was given that monthly statements that showed credits of more than $10 would not require to have stamps on them, but very recently

a contrary ruling has been given, and now further representations are being made to the minister in connection therewith. It would seem that the requirement of stamps on monthly statements is rather stretching this stamp policy. I was wondering whether the government had determined what the department would do in that connection.

Mr. ROBB: The stamp on monthly statements was only brought to my attention when I returned to Ottawa on Monday of this week. I never heard of it before and I cannot understand that it is general, because I know two businesses, not large businesses but businesses of some size, in connection with which statements were sent out each month. I never heard of the stamp being required, and I think I would have heard if the department had insisted upon it. If the department has made such an order, I agree with my hon. friend, and I do not think the act ever intended that. However, if the monthly statement is receipted, or a payment is acknowledged in the statement, and it is sent back, this stamp tax would be imposed, but I cannot believe that it would be imposed simply on the statement being sent out.

Mr. McQUARRIE: I got a communication from the Credit Men's Association in Vancouver, in which they said they had only recently been notified by the Vancouver branch of the department that a stamp would have to be put on a monthly statement, but I accept the minister's explanation.

Mr. ROBB: I will direct the attention of the Acting Minister of Customs and Excise to this matter. I was a bit surprised to hear of that tax.

Mr. LEADER: In common with hon. members, I agree that paying taxes is rather a nuisance, and I agree with the minister that so long as we spend the money we must pay the bill. I understood the minister to say that grain dealers would put the stamp on the cheques they issued to the farmers and bear the expense themselves. Is that the minister's information?

Mr. ROBB: That the dealer pays it?

Mr. LEADER: Yes.

Mr. ROBB: Yes, the person who issues the cheque must put the stamp on it. That is the law.

Mr. LEADER: I am very glad to hear the minister's declaration.

Mr. ROBB: Before my hon. friend proceeds, let me tell him that a cheque is no good and will not be accepted by the bank unless the stamp is on it.

Mr. LEADER: I could relate a little experience which would go to show that the farmer is charged with the amount of the stamp tax.

Mr. ROBB: Well, that is wrong.

Mr. LEADER: When the act came into force, in settlement for my wheat they sent the cheques to me by mail, deducting the amount of the stamp tax which I think was about forty cents per car. I had to pay that money. I immediately wrote to the grain dealer and told him I felt like bringing an action. He is a very good friend of mine and he wrote back that notwithstanding my threat—although he did not use that word—he felt they were entitled by law to charge the stamp tax to farmers. I wrote to the Finance Minister, at that time Mr. Fielding, and he wrote back that he had referred the matter to the Department of Trade and Commerce.

Mr. ROBB: No, it would be the Department of Customs and Excise.

Mr. LEADER: Perhaps it was. In due course I received a letter from the Department of Customs and Excise saying they had referred the matter to the law officers of the crown. After some little time I received a letter from the law officers of the crown saying that in their opinion the man issuing the cheque should pay the stamp tax but added that in my case it was a matter between me and the grain dealers to settle. I took it to a lawyer in Portage la Prairie and asked him what he thought about it. I showed him all the letters and he said, "I believe we can beat them if you have money enough, but I would advise you to drop it, because you would be the loser if you did win." And I dropped it. The law officers of the crown declared that in their opinion there was nothing I could do, and to-night the Acting Minister of Finance (Mr. Robb) says that certainly the grain dealer should pay the stamp tax. I should like to see the law enforced immediately and made retroactive.

Mr. BROWN: The question has arisen, as my hon. friend from Portage la Prairie will admit, on account of the way in which grain is sold in the west, namely through a commission house. There can be no question that the man who issues a cheque for grain or anything else must stamp it. He is the actual purchaser of the grain, but the difficulty with the farmers in the west has arisen from the fact that the grain is handled through the commission men; the commission men have re-

fused to pay the tax, and have charged it back to the farmers, because they claim, whether rightly or wrongly, that they are not the actual purchasers of the grain. It is that situation which has led to all the difficulty.

Mr. GOULD: I am sure it is not the intention of the minister to enact legislation through which a coach and four can be driven.

Mr. ROBB: Not if I can help it.

Mr. GOULD: I am sure he realizes that, with the exemption of the five-dollar cheque, ten dollars can be paid with two cheques. I would ask that an exemption be made of cream tickets, and I will give the reason. In our western country in the summer time feed is much cheaper, and cream is also cheaper, and usually in the case of a five-gallon can less than five dollars will pay for the cream; but in the winter time, when people are trying to bring in a little revenue, often it costs as much as ten dollars to produce a can of cream; therefore it is a complete loss of the tax on anything less than ten dollars. I think the minister can secure a revenue by a strict enforcement of the tax on the wheat ticket or the grain ticket. I would like to ask what penalty is provided in case the individual issuing a wheat or grain ticket refuses to comply with the law.

Mr. ROBB: I have not the act before me, but I am told there is a penalty and the officer tells me he thinks it is $100. I hope hon. gentlemen will not press for the ten-dollar provision; let us try the five-dollar proposition and find out for ourselves how much revenue we can afford to lose next year. I think that is a fair concession.

Mr. CAMPBELL: I am pleading with the minister to raise the revenue of the country and will he not consent to raise the minimum from $2,500 to $5,000 or $10,000?

Mr. ROBB: There was no limit on it at one time, but experience proved we were losing money and we dropped it in order to get more revenue.

Mr. CAMPBELL: Is the minister in a position to prove that they lost revenue? I can quite conceive of big companies going to the minister and telling him about the treasury losing money; but I cannot conceive of these same companies going across the line to deposit their money. I think if the minister wants the money there is an opportunity there to get it.

Mr. RYCKMAN: In reference to this question of going across the line to deposit money, that is not necessary at all. Banking by mail was the usual practice of large houses. There was not a large concern within my knowledge that did not have a bank account in the city of New York. If you are making two dollars on every five thousand in an account, it will pay you abundantly to keep your accounts in the United States. There is no use arguing the question; every business man knows there was money lost to the country by the imposition of this tax on large amounts. It would seem to me that anyone who is able to buy five gallons of cream—and that is what a can contains—would be able to pay this tax.

Mr. CAMPBELL: If a cheque is issued on a Canadian bank and if that is sent by mail to be deposited in a bank in New York, do they not charge a little heavier exchange than the regular exchange and that will eat up any saving effected in issuing a cheque on a New York bank?

Mr. RYCKMAN: It paid to keep a banking account in the city of New York, and my hon. friend must know that once you have the money in New York, you pay nothing for chequing it out. You can cheque it out in any amount. At one time—and I am glad to say that that time is past—New York funds were at a premium. Consequently, if you gave a New York cheque you were at a great advantage and you did not have this tax to pay. The people of Canada in hordes were running away from banking in our sound, home banking institutions. Another factor in the matter was this. We in Canada had millions on deposit in the United States and we were without the benefit of that money in Canada. The whole thing was so absurd, such a disadvantage to the country, that it was soon cured even by this government.

With respect to the desperate fight that my hon. friends to my left are putting up to escape a two cent tax on five gallons of cream, it would seem to me that the man or the dealer who was able to buy this cream could quite well afford to put the stamp upon these cream tickets, as my hon. friends call them. The tax does not come out of the farmers.

Some hon. MEMBERS: It does.

Mr. RYCKMAN: No. The man who buys the cream is the one who, under the law, is required to put the stamp on.

Mr. STEWART (Humboldt): But the cream is handled co-operatively.

Mr. RYCKMAN: Of course, if you allow yourselves, as the hon. member for Portage la

Prairie (Mr. Leader) permitted himself to be mulcted out of forty-two cents in his case, to be mulcted out of two cents on every five gallon can of cream that you sell, that is your own fault. It is rather interesting to me to know what taxes our friends to the left would willingly pay. I object as they do and as strongly as they do to these nuisance taxes. I cannot imagine anything that is a greater deterrent to business that interferes with the ordinary, smooth running of business, that indirectly is the cause of more heavy losses than these nuisance taxes. The sooner this country can get rid of them, the better it will be for the business of Canada. But so long as we have taxes to pay and debt to meet, I do not know where we are going to reach my hon. friends to my left unless we get at them through the milk tickets or in some other way. I will tell the hon. member for Mackenzie (Mr. Campbell) that I believe the stenographer who takes his letters in the morning pays more in taxes to this Dominion than nine-tenths of the people of his constituency. The people of the cities are taxed. They are not willingly taxed, but they pay. They pay grumblingly, but not with too much grumbling. I should like to know where it is in taxation that our friends to the left come forward and settle with their country. It is not in income tax.

Some hon. MEMBERS: Why?

Mr. RYCKMAN: It is only a very little in sales tax. Some hon. members ask "why" in regard to the income tax. The smallest fraction, under one per cent of the income tax of this country, I understand, is paid by the farmers.

Some hon. MEMBERS: Why?

Mr. RYCKMAN: How are they going to be reached? "Why", they say. Because there is a special income tax regulation covering them.

Some hon. MEMBERS: No.

Mr. RYCKMAN: There is. The ordinary clerk in a manufacturing establishment anywhere throughout Ontario has to pay upon everything that he buys. It is well known that the clerk in the office of the manufacturing establishment or in the shop pays more in taxes than the ordinary farmer does. I am not pleased by any means at the opportunity of getting even, because we can never do that; but one hon. member to-night inveighed against the city from which I come because it was found that some taxation was oppressive. I might tell him that 23 per cent of all the taxes that are paid in this Dominion are paid in and through the city of Toronto. I think the situation of the farmer is not as bad as it might be. It is better and getting better and, therefore, we might expect that on a matter of five gallons of cream they might be willing to pay or to have the dealer who buys from them pay the two cent tax.

Mr. GARLAND (Bow River): Did the hon. gentleman state that 23 per cent of the taxes of the Dominion were paid by the city of Toronto or the residents of that city?

Mr. RYCKMAN: About 23 per cent of the revenue collected by this Dominion is paid in and through the city of Toronto.

Mr. GARLAND (Bow River): That is different.

Mr. McBRIDE: The hon. member for East Toronto (Mr. Ryckman) has referred to the people in this section of the House as paying no taxes. He seems to think that the Progressives do not pay any taxes, and he refers to the people of Toronto as the ones who pay the taxes. I am a farmer, and I might say that I paid last year over $12,000 in taxes.

Mr. WARNER: I did not intend to speak for very long, but things are in such a shape that I shall have to take longer than I expected to do. It is late and I do not want to detain the committee longer than is necessary, but I should like the committee to understand the situation before it takes action in regard to this matter. I have a certain amount of pity for my hon. friend to my right (Mr. Ryckman), who has been pointing out how the farmer is escaping taxation. I intend to show, before I finish my remarks, that the farmer is not escaping taxation by any means and that he is paying under this arrangement more than his share. I believe also he does in a good many other ways. I will, however, pardon the hon. gentleman on account of ignorance on his part.

Mr. RYCKMAN: Tell us how you pay.

Mr. WARNER: I have not time to quibble over these matters. I want to show the unfairness of my hon. friend's statements. Several hon. members have discussed the exemptions already made. I should like to say something about that, but I do not feel like spending any time on it, because everyone knows that every fifty dollars that is issued in a cheque ought to pay its own share, whether it does or not. That is, every fifty dollar cheque should have a two cent stamp, and if the cheque is for a greater amount than fifty

dollars, a two cent stamp should be put on it for every fifty dollars or fraction thereof over and above the first fifty dollars in order to have a fair taxation. That is not being done, but I will not discuss that particular phase of the question. I desire to discuss particularly the creamery phase of this matter. I am a director in one company that pays most of its accounts in small bills, and this concern is doing more than any other in the country, taking into account the amount of capital involved, towards helping to make Canada prosperous.

Mr. ANDERSON: Is it a farming institution?

Mr. WARNER: It is connected with agriculture. Last year we had a turnover of over $3,500,000 and most of it comprised small accounts. We do not make many cheques of $50, and the few we handle of this denomination are used in connection with supplies. But in buying cream we do not make one of $50. I have here two different statements to which I shall refer. The other night I made a statement regarding this matter in the course of which I submitted several quotations, and to-night I want to put on Hansard the views of two different creamery managers one of whom is the secretary of the Dairymen's Association in Alberta with regard to the payment of this tax. We must remember that this is part of overhead; you cannot get away from that and you need not think it possible. The producer will pay it in the end simply because the world's market fixes the price obtained for the butter that is made in these creameries. The creameries cannot decide that the price shall be a little more and in that way make the consumer pay his share of the tax; it will come back finally to the man who is producing. In this connection I would point out that we have instituted the system now practised as a means of securing a better quality of butter and thereby giving a better return to the producer. That is what it was done for; it was not done in contravention of the law. I read to the House and put on Hansard the other day a statement from the secretary of the National Dairy Council pointing out that the dairy cheque had been interpreted by the Department of Customs and Excise as a receipt. It is not a cheque, and in following this interpretation they are acting on the advice of the department. They issue these receipts for milk and cream, and they are not doing it to get away from the law in any sense. I do not want to labour this matter, but I do want to impress on the committee the fact that the system which is now in operation, and which is the result of careful study over a number of years, is designed to produce the highest quality of butter from our cream. The cream has to be delivered in small lots and it requires almost daily deliveries to get it in such condition as would turn out the sort of butter that the markets of the world demand and which brings the highest price.

As to passing on this tax, I do not think that it will be doubted for a moment that it forms part of the overhead. On this point let me read what one creamery man says in Saskatchewan. Mr. J. A. Calder, president of the Saskatchewan creamery, writes to the editor of the Western Producer as follows:

Editor, The Western Producer:

Dear Sir,—I noticed a reference in your last issue to the new ruling proposed in the budget speech whereby grain tickets will in the future be subject to the revenue stamp tax. This is not so serious a matter, however, as the fact that it is proposed that cream tickets and produce tickets shall also be taxable. Tickets issued for grain are usually large tickets and it only means two cents on each $50.—

There are hardly any grain tickets for less than $50 and none for amounts less than $10. These therefore are out of the question altogether. Next come the creamery and produce tickets. I do not know how much produce would be handled by this method but the dairy cream receipts are the documents particularly referred to in this connection. He goes on to say:

—but last year our company alone bought 200,000 cans of cream with an average value of slightly under $5 per can—

Mr. ROBB: They are being relieved right now in that respect; they are no worse off than they were last year.

Mr. WARNER: I note that, and I thank the minister for what he has done. But I want to point out where he might do a little better.

—and if each one of these cream tickets had to bear two cent revenue stamps it would have meant $4,000 on last year's business—

Mr. ROBB: But they will not have to bear the tax under the proposed arrangement.

Mr. WARNER: I will give my view of the matter later on, if you please. I understand quite well that the amount now fixed is $5. This writer continues:

—and on a basis of the 1925 production it will cost the dairy farmers of the four western provinces at least $100,000, and this figure will possibly double every three years.

As you know the system in use in this country is to pay for each can of cream individually by a separate remittance. We must pay three cents postage on the letter and we must pay the bank five cents for cashing the ticket and then there is the stationery used, so that it now costs us ten cents to remit for

every can of cream, and the new proposal would mean twelve cents. This is a matter which very seriously affects the producers of cream in western Canada because we think it is a generally accepted theory that the producer or the consumer must absorb all such extra expenses.

That is what this manager says; he declares that they cannot absorb the expense, I hope the committee will pardon me if I read what another manager, also the secretary of the Alberta Dairymen's Association, says. In reply to a letter I wrote him he writes:

Replying to your letter of the 6th instant. the manufacturers certainly cannot stand the expense of the stamp on the coupons and, therefore, if the government does not rescind this tax on coupons less than $10, the cost will have to be passed on the producer and consumer and in this case no doubt the producer will have to bear the lion's share of the cost.

As for a substitute system—there is no system quite so good as the coupon. However, if the government does not rescind this tax, we will probably call the coupon a cheque and place deposits in the banks at which the coupons are issued. In this way, we will only be out the expense of a 2c stamp. However, there are all the banks outside of the points where coupons are issued, and it is a big job to arrange to keep cash in all of these banks.

As regards payment twice a month—I believe over 75 per cent of the farmers of this country would raise a howl that we would all hear about, if we were to go on a twice a month payment system. As you know, the farmers are hard-up and require cream money to pay current expenses.

And I know for a fact that they are.

Mr. ANDERSON: Who are the shareholders of that company?

Mr. WARNER: They are men who were not afraid to risk their money in a business that would make the country prosperous.

Mr. ANDERSON: What business are they engaged in?

Mr. WARNER: They are mostly farmers. This concern was started to create a market for our milk and cream, manufacturing it into butter—just what the hon. gentleman and all others want done in this country: they are turning out the finished article instead of letting our raw material go out of the farmers' hands at a sacrifice. They had to have their own creamery there in order to produce the finished article.

Passing this tax on to the farmer may seem a small matter to some hon. gentlemen. True, it does not amount to much on one five-gallon can of cream, but when the whole business of the dairy is run on five-gallon cans and five-dollar payments, it will be readily seen that the farmers would be paying more than their fair share of this taxation. I do not think any other business can be instanced that makes so many small payments. Some of the creameries are big affairs, handling the produce from thousands of farmers, and all of these farmers are doing business in a small way. But it must be borne in mind that these farmers are needed to make this country prosperous, and without a doubt such an unfair burden of taxation would be too much of a handicap on the business. Even if the minimum is raised to ten dollars, they would still be paying more than their share of stamp taxes, because only 25 per cent of their payments would be over ten dollars. In no other business are three-quarters of the payments under ten dollars. So you can see that this would be going after the small dairy man too hard altogether. For instance, ten small payments aggregating fifty dollars would involve five times the stamp duty which would be payable on a single cheque for the amount.

The minister has stated that we Progressives are in favour of direct taxation. We are; I told him so the other night. I believe the Progressives stand for direct taxation every time, but they want that taxation to be fair, and I point out to this House that this stamp tax on small tickets is very unfair for the simple reason that so many of the creamery accounts are paid by small tickets. A little under 50 per cent of these accounts will run over five dollars.

Mr. ROBB: My hon. friend a moment ago read a letter from the secretary of the Dairymen's Association stating that seventy-five per cent of the payments were under five dollars.

Mr. WARNER: The percentage would vary in the different creameries. At best it is only a guess.

Mr. ROBB: But the quotation my hon. friend gave a moment ago stated that seventy-five per cent of the payments were under five dollars.

Mr. WARNER: That might apply to that particular creamery. I am not quite sure what that letter did say, but from the various statements I have received covering a number of creameries I find that twenty-five per cent of their cheques are over ten dollars, and seventy-five per cent less than ten dollars. If I said five dollars I meant ten dollars. I think that is the way the statement ran, but I cannot delay the House to verify it now. I will give the minister the letter if he wants it but am sure his idea of the statement in Mr. Love's letter is wrong. On these percentages it is obvious that the dairy business is paying a heavier stamp tax than any other business.

Mr. ANDERSON: How often are the payments made?

Mr. WARNER: Daily as the cream is delivered. The average payments, as near as we can get at them, run a little less than fifty per cent under five dollars. Straight taxation is all right, provided it is fair, but I take it that the figures I have given are proof enough that it is grossly unfair not to raise the minimum to ten dollars. However, I am glad the minister is willing to put the minimum even at five dollars, and I only hope that he will go further and meet our views. I am talking of the creamery business from personal knowledge, and I know that we as members of parliament cannot afford to put any extra burden on a business that is carried on in this way, that is, it issues more cheques for amounts up to ten dollars than any other business of which I have knowledge. We want to encourage rather than discourage the creamery business, and I believe every creamery man is willing to carry on his business in a fair way and to stamp everything over ten dollars. Anyone acquainted with the dairy business would have no trouble in understanding the unfairness of not raising the minimum to ten dollars.

Now I want to refer to a matter brought up by my friend from Mackenzie (Mr. Campbell). I believe that our people in the country would not dodge the tax if every fifty dollars had to bear its share of stamp taxation. This would permit the minister to raise the minimum to ten dollars. I had intended to move an amendment to increase the minimum to ten dollars, but the minister having committed himself to the principle of exempting small cheques to the amount of five dollars, I rather hesitate to push my amendment. I sympathize with him in trying to get all the revenue he can for the country, but I do not believe he would lose much by acceding to our request. I believe yet that these creamery men will have to change their system of business. I think this is too heavy a tax, and that they cannot stand it. They will probably have to change their system to paying once a month or every two weeks. That would be a backward step, both depriving the farmer of the money for his daily expenses, and perhaps setting back the quality of butter a good deal. The farmers would not blame the creamery men, because the creamery men could not avoid it; they would blame the government. I do not think the government is going to get the revenue out of this tax they expect, because the creamery men will have to change their system, and that will mean less revenue for the government, and also discredit as well. I would ask the minister therefore to seriously consider whether he cannot raise the exemption to ten dollars rather than five.

10 p.m.

Mr. FORKE: I only want to say a few words in connection with this matter. Who pays the taxes?

Some hon. MEMBERS: What about the stamp tax?

Mr. FORKE: I listened with a good deal of attention to the remarks made by one of the members from Toronto. I think these gentlemen want to be fair. I really think that in making attacks on members in this part of the House and suggesting that the farmers are evading their taxes they do not mean to be unfair, but I want to call the attention of the House to the situation as we find it to-day. I can only speak for the western provinces; I do not know much about Ontario and Quebec. I have been a farmer all my life nearly, and have been used to handling small amounts of money. I do not know what it is to handle thousands and thousands of dollars, although I have handled some money in my time. At the same time I have paid some income tax. I do not like to speak in this personal way, Mr. Chairman, but one seems to be more easily understood when speaking from one's own experience. I want to tell hon. gentlemen in this House that I will be happy any year to pay income tax, and I would ask hon. gentlemen to my right, how can the farmers pay income tax if they do not make an income large enough to be liable to taxation? I see statements in the newspapers and have heard it stated at public meetings that the farmers are not paying their share of the taxes, and I have no doubt the men who make these statements think they are speaking correctly, but as a matter of fact the farmers for a great many years have not been in a position to pay income tax, but have been rapidly going in the hole. Those are the circumstances in which we find ourselves.

I know conditions in the western provinces; I know the conditions of the western farmer, and when I think of those homes and of the women milking cows and striving and struggling just to get the bare means of subsistence, and then when I come into the cities and see cars worth three and four and five thousand dollars and the evidences of wealth everywhere, it makes me indignant to hear hon. gentlemen get up and attack the farmer for not paying his share of the taxes. I am not playing politics; I have no intention of

doing so. I simply want to see justice done. The farmers are just as honest, just as upright, just as straight as any other class of the community, and they will pay their share of the taxes when they are able to do so.

Mr. ROBB: I fear the debate has drifted away from the item under consideration. I am glad that my hon. friend from Strathcona (Mr. Warner) is not going to press his amendment for the ten dollar exemption. If it was only a question of the creameries and milk factories, it would be an easy matter to settle, but it has a very much wider bearing than that. The proposed amendment which I shall move after these resolutions are passed will take in all items up to the five dollar limit.

I want to emphasize again that in bringing in this tax the government had not in mind the dairy industry particularly, because if there is one agricultural industry more than another that any government should encourage in Canada it is the dairy industry. It is slavish work. I agree with my hon. friend from Brandon. I know something about it myself, for I have milked nineteen cows before breakfast. But dairying enriches the land. The dairy farm is always a better farm than the grain growing farm, and the government are interested in encouraging the dairy industry throughout this country. All we desire is to make this tax equitable all over Canada.

I am glad my hon. friend is not going to press his amendment. If he did press it, he would be jeopardizing for a business of $12,000,000 the revenue of the government from a business of $82,000,000, for that is the proportion as between the value of the dairy industry in the three provinces in the west and all the other provinces east.

I have the honour to represent in parliament just as good a dairy county as there is in all Canada. I will give my hon. friend a list of the larger dairy counties in eastern Canada, and there is not a county in western Canada that has quite as many cows. In all these years the dairy industry of eastern Canada, ever since the act has been in force has been contributing to the revenues of the country through the men who purchased their products. The dairy farmer is running no risk in western Canada. As a matter of fact, the capitalization of the dairy factories in the west is higher than in eastern Canada. There were in 1924 sixty-six dairy factories in Saskatchewan, and ninety-one in Alberta. Of these, twenty-six are operated by the Saskatchewan Co-operative Creameries, eleven by the Moose Jaw Company, and thirty-eight by the Pat Burns Company. Now nobody will say that the Pat Burns Company is not a solvent concern. I think they can be trusted. People ship them their calf skins; I do not know whether they use that system in connection with calf skins or not.

The average investment in the dairy factories in Canada in 1923 was as follows—I will give only the round figures:

Saskatchewan	$42,000
Manitoba	41,000
Alberta	33,000
Nova Scotia	23,000
British Columbia	18,000
New Brunswick	16,000
Ontario	14,000
Prince Edward Island	5,000
Quebec	4,000

The value of the milk and cream handled in factories in some provinces in 1923 was, in round figures:

	Value Milk	Value Cream
Quebec	$14,790,000	$10,974,000
Ontario	22,000,000	16,000,000
Alberta	864,000	4,700,000

Now I will give figures as to the number of cows in the dairy business:

Province	No. of Cows
Ontario	957,491
Quebec	769,097
Nova Scotia	114,373
New Brunswick	105,054
Alberta	208,997

You will notice that Alberta has 208,997 dairy cows as against Ontario's 957,491; so that the business is very much larger in eastern Canada, and the dairymen in eastern Canada have been contributing during all these years to the revenues by paying this tax.

Now I will give the number of milk cows in a few counties in eastern Canada:

County	No. Milk Cows
Bruce	25,498
Carleton	30,251
Grey	32,642
Hastings	35,567
Oxford	52,560
Simcoe	30,427
Beauce	26,068
Lac St. Jean	25,072
Nicolet	24,395
Shefford	25,521
Chateauguay-Huntingdon	28,407

I am told that Alberta has only one district with anything like an equal number of milk cows. The dairymen of eastern Canada are not protesting against this tax. They have never protested. We might now go on with the resolutions, and I promise to move to adopt the limit of $5. I will try that out for this year and see how we get along.

Mr. LEWIS: I wish to make a reference to the statement that the farmers do not pay income tax. I have here a statement from one of the live stock departments, I am not

going to mention the name of the party concerned, and when the facts are disclosed there will be no need to wonder why we are not able to pay income taxes. In this case twenty-three cattle were sold and they weighed on the average a thousand pounds each. The total received for the twenty-three head was $474, but the following items must be deducted from that amount:

Freight charges	$42 35
Yardage	8 05
Fire insurance	15
Feed	7 80
Brand inspection	2 30
Health certificate	2 00
War tax	16
Selling commission	17 00
	$79 81

That is to say the net total received for the twenty-three head of cattle was $394, or an average of $17 per head. That statement shows why, in some cases, it is not possible to pay income tax.

Mr. ROBB: Before we proceed further I should like to put on Hansard the proposed sections of the act with respect to the stamp tax. First section:

No person shall issue a cheque payable at or by a bank or drawn upon or addressed to a bank and requiring or directing payment of a sum of money, unless there is affixed thereto an adhesive stamp or unless there is impressed thereon by means of a die a stamp of the value of, if the amount of money for which the cheque is issued, drawn or made

(I) does not exceed $50, two cents;

(II) exceeds $50, but does not exceed $2,500, for every $50 or fraction thereof, two cents;

(III) exceeds $2,500, one dollar;

and every adhesive stamp affixed to such cheque shall be cancelled by the bank at which the cheque is payable at or before the time of payment.

That is the law as to issuing a cheque. Now if a man fails to do that he comes under section 7:

Every person who issues a cheque payable at or by a bank to which there is not affixed an adhesive stamp or on which there is not impressed by means of a die a stamp of the requisite value according to the requirements of this section shall be liable to a penalty not exceeding fifty dollars.

Mr. COOTE: May I ask the minister a question right there? If the man who issues the cheque places a two cent stamp thereon has he not complied with the law, and would he be liable to any fine so long as he had put a two cent stamp regardless of the amount of the cheque?

Mr. ROBB: He must put on the stamps which the law calls for.

Mr. COOTE: I was told by a banker that there had been a judicial decision to that effect. This was two years ago but the law may have been changed.

[Mr. Lewis.]

Mr. ROBB: The law was changed.

Mr. COOTE: I want to ask the minister if he could not change the law so that the bank would have to affix the stamps before the cheque was cashed, and to allow a man to issue the cheque without the stamp? I think one reason why this stamp tax has been referred to by so many people as a "nuisance" tax is that very often they do not have the stamps with them when they wish to issue a cheque; very often we are put to considerable inconvenience to get stamps. There are many small communities through the country where there are no banks and no excise stamps offered for sale. A person is liable to a fine if he issues a cheque without a stamp, and yet there are no stamps available. I think there would be far less objection to this tax if the government could introduce some new regulation under which the cheque might be issued without a stamp, leaving the bank to affix the stamp before charging the cheque to the man's account.

Before I sit down I should like to refer to the question which was dealt with so ably by the right hon. leader of the opposition, that is the stamp tax which is now charged on notes. I do not think this could properly be referred to as a "nuisance" tax. We must find some stronger term to use, and the mildest term I can think of that would be applicable at all is an "iniquitous" tax. The idea that a man should be taxed because he is in debt is to me iniquitous, and even that is too mild a term to use. I want to bring to the attention of the minister once more the figures that were given to me by a banker in my own province showing what it cost some of the farmers to pay the stamp tax on notes which had been renewed for some years and which they have not been able to pay. I have here a case where over a period of four years one man had paid $42.89 in stamp taxes on his note, and he had not been able to reduce the note by one cent in that time.

Mr. ROBB: On renewals?

Mr. COOTE: Yes, on renewals. I have another case where the tax over this period of over four years on the renewal of this one note amounted to $101.38. I was assured by this banker and by other bankers as well, that they could give me a list running into hundreds of cases where there had been a tax on notes that the men were not able to reduce at all running in some cases from $10 up to $100. Now, I want to suggest to the minister—and I want to try and impress the fact upon him—that if he could not take this tax off notes that in all fairness he should

reduce it to the same amount as the tax on cheques and provide a maximum amount of $1, the same as cheques. At the present time there is no maximum. The money which he would lose by taking the tax off these notes he could easily raise by putting a tax on coupons when they are cashed at the bank. If cream cheques must bear a stamp when they are presented to a bank for payment I do not see why coupons should not also bear that tax. The minister might also consider the question of taking the tax off renewals although I may admit there might be some difficulty in administering that. I want to impress upon the minister that this tax is working a very great hardship. Not only farmers but retail merchants are complaining about this tax, and I think complaining with a great deal of justification.

Just a word before I sit down in reference to the statement made by one of the hon. members for Toronto in regard to farmers not paying income tax. The situation is simply this: If the farmers owe income tax and are not paying it the fault is with the Income Tax department. They should collect it. That is what they are here for. So far as I am concerned I would be glad to see every man who is liable for income tax compelled to pay it.

Mr. WARNER: Before we get too far away from the point under discussion I want to add a few words to what the minister has said. I want to point out to him that eastern Canada is an older settled country and it does not need these daily small payments so badly as the people do in the west. I want to point out to him that the people who are running the new system get a better quality of butter by accommodating the farmers with daily payments, and that it would be a backward step to revert to the system of payment every two weeks or every month. They really and sincerely feel that it would be a backward step. They went ahead with this system and they put their butter on the world's market independent of other Canadian butter, and they brought the price and the prominence of the western butter to the attention of the consumers in the world's market in a way which had never been done until they worked out this system. They feel they have a good system and do not want to change it, and that is why I am presenting their case to the minister. Why make them change this system and go back to a system they have already discarded, when the government will not be able to get the revenue out of it, simply because they cannot afford to pay and will have to change their system, rather than accept the five dollars instead of the ten dollars.

Mr. ROBB: I want to repeat again that the government wish to encourage the dairy industry. I did not make this change without some consideration, or without having received some representations. Two gentlemen called at my office. I thought they represented the men who were complaining about this. I would not like to give their names. I thought they knew what they were talking about. They pleaded for ten dollars, but I said no, we could not lose that much money. They said finally before leaving, "Can you not make it five dollars?" As a concession to them, I am making it five dollars, but I am making it a little wider and I think the House should let it pass.

Mr. WARNER: I want the minister to understand that I am not refusing the five dollars, but I desired to point out to him the way the creamery men felt on account of the fact that they would have to change their system. Although the minister does make it five dollars instead of ten, they feel it is a backward step. I am willing to accept it and under the circumstances I have already done so, but not without feeling that it should be ten dollars instead of five.

Mr. SPENCE: The minister has been good enough to explain the law in regard to putting stamps on cheques and the penalties. Will he be good enough to explain the law in regard to putting stamps on receipts. That is something nobody seems to understand. I am in a business where we have to issue two or three hundred receipts a week. Nobody seems to know whether we should put the stamps on monthly or weekly accounts if not paid in full.

Mr. ROBB: Receipts up to ten dollars are exempt.

Mr. SPENCE: I understand that. But suppose you send out an account for fifty dollars and the man is only able to pay ten, do you require to put a stamp on that?

Mr. ROBB: I should think so, but I will look into it.

Mr. WOODSWORTH: May I call the attention of the minister to a departmental ruling of the Customs department, file LB-1841, under which a merchant sending out a statement must put a stamp on it. It is complained of by a number of merchants in my own constituency because it involves in reality a duplication of taxes. I should like

to know if this could not in some way be altered.

Mr. ROBB: My hon. friend was not in the House at the time, but this matter has been brought up already, and if he looks at Hansard to-morrow he will see my reference to it. It is quite new to me. It is a new ruling is it not?

Mr. WOODSWORTH: Yes.

Mr. ANDERSON: I should like to call the attention of the minister to one phase of this matter which has not been discussed. In connection with certain retail stores they have a system of keeping their accounts with a machine, and slips or statements are put in that machine and each statement contains or has on it an account up to that date. At the end of the month when the purchaser settles the account he receives the bills or slips that are in the machine. They are handed out to him and he pays his money, but pays no tax at all. There is no stamp put on the little slips or bills or invoices. In this way they avoid payment of the tax.

Mr. ROBB: Are they marked paid?

Mr. ANDERSON: No, just taken out of the machine and handed to him. There is nothing in the machine to show the customer owes anything. Consequently they do not have to receipt a bill.

Mr. ROBB: It is not really a receipt?

Mr. ANDERSON: No, but by this method they are evading payment of the receipt tax.

Mr. ROBB: I quite believe my hon. friend's statement, and I know there are many ways of evading the tax.

Mr. LADNER: I do not know whether this matter comes really under this resolution but many of us have received insistent and persistent requests to press the minister to the point of retreat on the question of the lien against real property for income tax.

Mr. ROBB: That matter is not under the resolution but I am going to provide for it and will bring it up later.

The CHAIRMAN: This is in reference to the stamp tax.

Mr. CAMPBELL: I should like to make a reference or two to the remarks made by one of the members for Toronto. He said that the stenographer who wrote my letters paid more taxes than nine-tenths of my constituents. The statement is so far-fetched, so extreme and so devoid of all reason and truth that I almost hesitate to dignify it by making any reference to it at all. But when my hon. friend states that Toronto pays about 23 per cent of the total taxes of the Dominion, I wish to point out to him that those taxes in the last analysis are passed over to the rest of us who really pay them. We buy tens of millions of dollars worth of goods manufactured in Toronto, rubber belts, boots and shoes, hardware, clothing, machinery of all kinds and so on. The hon. gentleman is a business man and I presume operates his business on a cost plus basis, and every dollar of his expenses is passed back to the people who buy the goods. Toronto does not pay the tax. The taxes the farmer pays are not always visible, because after he pays the price of these goods he has not enough left to pay income tax. But he is paying a tax on every single article he buys, and if you take the four classes of primary producers, the farmers, the miners, fishermen and the lumbermen, they pay all the taxes.

Mr. LADNER: Is not everybody else paying the taxes likewise, excepting a little more so?

Mr. CAMPBELL: The point I was trying to make is that if the average man in the city who is not a primary producer, raises his standard of living, that extra cost is automatically passed on to his business. If my hon. friend from Vancouver, who is a lawyer, finds he needs a two or three thousand dollar motor car that he had not used before, his standard of living is increased to that extent and he charges his clients a little more for his services on that account. The business men who use his services pay this extra amount. The men who buy the goods from these business men pay for that car, and in that way the price of the car is passed back to these people, the primary producers, who eventually pay. That is an economic law. One of the problems the primary producers have to face is that the people in the cities have raised their standard of living during late years beyond the standard of living of a few years ago, which means that the distribution of goods costs a great deal more than it did in the older days. If my hon. friend will just take the price of wheat at a given point in the prairie provinces, and take the direct freight to the city of Ottawa, and the fair cost of the milling, or the amount allowed the millers—

The CHAIRMAN: I think the hon. gentleman is getting away from the resolution which is the stamp tax on cheques.

Mr. CAMPBELL: I would respectfully point out that this issue of taxation is involved.

The CHAIRMAN: Under this item we are not discussing the general theory of taxation. It has reference to one specific form of taxation. I just want to interrupt the hon. member in order to draw his attention to the limitation of the debate.

Mr. CAMPBELL: I will come down to the specific point. There is one thing against which I wish to protest. Before I left the West I was shown a note, not a very large note, on which were $8 worth of stamps. That note ran along for a long period. It was renewed every sixty days and on every renewal a new set of stamps had to be attached to it. That is a very great injustice. Surely the original amount ought to be sufficient, but every time that note is renewed, the whole tax is duplicated until you find in the end a tax of five, six, eight or ten times the original amount of stamps levied from the man who was unable to pay at the time his note fell due.

Mr. TOLMIE: I am sorry that I have not been able to hear the whole of the debate, but I wish to endorse what has been said by some hon. members to the left with regard to the value of the daily payment for cream. There is, perhaps, no single industry in the whole of Canada that will do more good to the country, that will do more towards setting agriculture on a good, sound basis than the development of the dairy industry. In the western sections of Canada, out on the plains of Alberta, Saskatchewan and Manitoba, where these people live under conditions that are quite different from those of the eastern farmer, where they are scattered over wide areas, where they are not closely situated together, they live under a good many disadvantages at the present time, and it requires something to induce them to go into the dairy business. There has been this attraction, particularly in those years when crops have been short and when the people have not been very well off, that for every shipment of cream they have received the cash immediately. In conversation with men interested in the dairy business to a large extent in that country, it has been clearly proven to me that these regular, daily cash payments for cream have been a very strong factor in the development of the dairy industry in that part of Canada. I am very glad that the minister has listened to the dairymen to a certain extent inasmuch as he has extended to them an exemption up to $5. I would rather have seen this extended to $10, but half a loaf is better than none.

Mr. COOTE: Would it be quite legal for a man who issues a cheque and who has not a stamp in his possession, to write on the cheque after the amount, the words "and stamp tax?" That is about the only way in which a man living in a locality where tax stamps are not sold, can, it seems to me, remain within the law if he must issue a cheque?

Mr. ROBB: I cannot give my hon. friend a ruling on that now as the act is not administered by my department, but I will direct his observations, as I intend directing especially the observations of all hon. members who have spoken to-night, to those who administer the act. I think their idea is to make it as light as possible. Later on, my hon. friend will observe that I am making some changes to avoid the severe penalties there have been in the past.

Resolution agreed to.

Resolutions 2, 3 and 4 agreed to.

On resolution 5:

Mr. ROBB: I beg to move that the resolution to amend the Special War Revenue Act, 1915, be amended by striking out the words "bill of exchange or" in the first line of clause 5. The clause as amended will read:

5. That any promissory note held by a bank as collateral security for an advance or other indebtedness and in respect of which advance or other indebtedness stamps of the requisite value under this section are affixed to the relevant bill, note or other proper document, shall not be subject to the provisions of this section. If such collateral is paid by a person liable thereon stamps of the requisite value according to subsection 3 (a) of this section shall before surrender thereof be affixed thereto and cancelled by the bank.

Mr. GARLAND (Bow River): What is the reason for the change?

Mr. ROBB: So that when the notes are deposited as collateral, stamps will be affixed only when notes are paid.

Mr. GARLAND (Bow River): Why remove bills of exchange from being subject to this tax?

Mr. ROBB: To make it uniform and to bring about simplicity in the administration of the act.

Amendment agreed to.

Resolution as amended agreed to.

Resolution 6 agreed to.

On resolution 7:

Sir HENRY DRAYTON: What is the revenue from receipts? Last year we had a

number of instances where people were evading the law by not giving receipts, by sending in bills stating that if a stub was torn off and sent back, that was sufficient, and no receipt was necessary.

Mr. ROBB: I will give my hon. friend the exact figures to-morrow. I do not have them to-night. I do not think there is any separation as between receipts and cheques. I think just the general revenue is given.

Resolution agreed to.

On resolution 8:

Mr. ROBB: I beg to move that the resolution to amend the Special War Revenue Act, 1915, be amended by inserting after the word "patterns" in the second line of the second paragraph of clause 8 the words "and dies". The clause as amended will read:

8. That subsection four of section nineteen BBB of the said act as amended by section three of chapter sixty-eight of the statutes of 1924, being the list of excepted articles not liable to the consumption or sales tax, be amended by striking out of said section three of chapter sixty-eight the words "gasoline engines to be used in boats bona fide used by individual fishermen for their own personal use in the fisheries" where they occur in lines twenty, twenty-one and twenty-two, thirty-eight, thirty-nine and forty, and fifty-eight, fifty-nine and sixty of said section three; and that the said subsection four of section nineteen BBB be further amended by adding thereto the following:

"Vegetable plants; lasts for boots and shoes including rubber footwear and patterns and dies for boots and shoes including rubber footwear; goods enumerated in customs tariff items 453e, 469a; articles and materials to be used exclusively in the manufacture of goods enumerated in customs tariff items 453e, 469a; materials, not to include plant equipment, consumed in process of manufacture or production which enter directly into the cost of goods enumerated in customs tariff items 453e, 469a."

Sir HENRY DRAYTON: What is the estimated amount of the reduction?

Mr. ROBB: In connection with the sales tax it is estimated that it will be $2,500, but since then we have added dies.

Sir HENRY DRAYTON: How much more will that represent—another $500.

Mr. ROBB: Suppose we put it at $1,000.

Sir HENRY DRAYTON: Does the minister think that $1,000 will take care of the reduction?

Mr. ROBB: I hope so.

Mr. SPENCER: What is the customs tariff now on small farm engines of from one to five horse-power?

Mr. ROBB: If it is a traction engine it is free.

[Sir Henry Drayton.]

Mr. SPENCER: No, but small stationary engines.

Mr. ROBB: Speaking from memory I think it is 27½ per cent.

Resolution agreed to.

On resolution 9:

Mr. STEVENS: I want to ask a question under this item regarding the lien under the sales tax—I am not talking about the lien under the income tax. Has the minister some amendment with regard to the lien under the terms of the sales tax?

Mr. ROBB: If the hon. gentleman will allow this resolution to carry I shall move as resolution 9(a) the following:

Resolved, that it is expedient to bring in a measure to provide that an advance made by any person on the security of bonds, debentures, stocks or other securities, shall be taxable quarterly at the rate of 2 cents for every $50 or fraction thereof.

Sir HENRY DRAYTON: What is the present bond?

Mr. ROBB: It is quite considerable. I might read the provision in that regard:

The bond or security to be given by licensed wholesalers or jobbers, as provided for under subsection 7, section 10BBB of The Special War Revenue Act, shall be for double the amount of the consumption or sales tax payable on the maximum amount of taxable sales made during any period of three months of the present calendar year.

Sir HENRY DRAYTON: This may make it worse.

Mr. ROBB: No, I do not think so.

Sir HENRY DRAYTON: It depends on the turnover; in the case of a small merchant this is an added burden. In the case of the large merchant it is a relief, but it is the opposite with the small man whose turnover is limited.

Mr. ROBB: This was intended to get after houses that were not reliable.

Sir HENRY DRAYTON: It seems to be a stiffening up in one instance. Is it necessary?

Mr. ROBB: Yes.

Resolution 9(A) agreed to.

Mr. ROBB: I move as a new resolution, 9(B) the following:

Resolved, that it is expedient to repeal section 17 of chapter 47 of the statutes of 1922, which makes the liability to the crown for payment of excise taxes specified in the Special War Revenue Act, 1915 a first charge on the assets of the debtor.

Sir HENRY DRAYTON: What is the effect of the amendment?

Mr. ROBB: We are merely repealing that lien.

Mr. CLARK: Does this deal with the sales tax or the income tax?

Mr. ROBB: It relates to excise taxes. I have a note from the Department of Justice forwarding a memorandum which outlines the objections to the legislation now on the statute books and the difficulties arising in the administration of it. The opinion is expressed in the memorandum that in view of these difficulties the legislation should be repealed.

Mr. LADNER: Is the minister bringing in a similar resolution in regard to the income tax as a lien against property?

Mr. ROBB: We shall come to that later.

Resolution 9(B) agreed to.

Resolution 9 agreed to.

Mr. ROBB: I move as a new resolution, 10(A), the following:

Resolved, that it is expedient to provide that the stamp tax imposed by The Special War Revenue Act, 1915 on a cheque, receipt for money paid by a bank, money order, traveller's cheque, post office money order and postal note, shall not be payable in respect of any of the said instruments which is for an amount not exceeding $5.

Mr. LADNER: I understood that the minister was going to draw to the attention of the department the question of statements in regard to monthly balances owing. This question was raised by the Credit Men's Association?

Mr. ROBB: Yes.

Mr. LADNER: Is the minister recommending the elimination of that?

Mr. ROBB: No. I shall direct it to the attention of the officers of the department, and see if they can give me any good reason for introducing it. It was only brought to my attention yesterday.

Mr. LADNER: It was imposed once, then it was cancelled for some weeks, and a few days ago it was re-imposed.

Mr. ROBB: The complaint must come from some men who are dodging taxes.

Mr. LADNER: It is from the Credit Men's Association of Canada.

Resolution 10 (a) agreed to.

Resolution 10 agreed to.

Resolution 11 agreed to.

CUSTOMS TARIFF 1907 AMENDMENT

Resolutions reported, read the second time and concurred in. Mr. Robb thereupon moved for leave to introduce Bill No. 118, to amend the Customs Tariff, 1907.

Motion agreed to and bill read the first time.

SPECIAL WAR REVENUE ACT

Resolutions reported, read the second time and concurred in. Mr. Robb thereupon moved for leave to introduce Bill No. 119, to amend the Special War Revenue Act.

Motion agreed to and bill read the first time.

SUPPLY

SOLDIERS' CIVIL RE-ESTABLISHMENT

The House in committee of Supply, Mr. Gordon in the chair.

Soldiers Civil Re-establishment—salaries, $21,500.

Hon. H. S. BELAND (Minister of Soldiers' Civil Re-establishment): Mr. Chairman, there is not much change in this vote. There were eight employees last year, there are six this year, the supervisor of expenditures and the head clerk having been dispensed with, which accounts for the reduction in the vote. The reason that the civil government vote has always been presented in this way is, I think, that originally it was intended to mention only the permanent staff, and it does not in any degree reflect the number of employees of the department.

11 p.m.

Mr. CLARK: How many employees are covered by the item?

Mr. BELAND: Page 102 gives the details: One deputy minister; one assistant deputy minister; one assistant secretary and chief clerk; one principal clerk; one storekeeper; one departmental librarian. In addition there is an allowance of $600 for a private secretary.

Mr. STEVENS: I do not want to be charged with reflecting on any of these civil servants, but would the minister tell me how many deputy ministers are in his two departments, Soldiers' Civil Re-establishment and Health?

Mr. BELAND: There is a deputy minister in each department.

Mr. STEVENS: Again I do not want to be charged with any reflection on these gentlemen, but we have before us a vote for $6,000 for a deputy minister of this department and another vote of $5,000 for an assistant deputy minister. No doubt they are competent and

capable officials, but they preside over a staff of only four. Does it not look to be just a trifle top-heavy, $11,000 for two first class, highly trained, competent men to preside over so small a staff? Frankly, I think the time has arrived when we must look that fact in the face.

Mr. BELAND: I am very glad, Mr. Chairman, that my hon. friend has asked the question. The number of employees in the department is not 6; it is 2,422.

Mr. STEVENS: That is very nice. That is the number in this particular branch?

Mr. BELAND: Yes. I have endeavoured to explain that originally, under the former administration, only six or perhaps a few more, perhaps ten or twelve in all, were mentioned in the civil government estimates, the reason being that the large majority, practically the totality of the members of the department, some 8,000, were only temporary employees. They have been reduced in number very considerably year after year. During the former administration the number of employees was reduced in some years by over 1,000, perhaps 1,500; three years ago the number was reduced by 1,000, and two years ago by some 700 or 800. Last year again, the number was reduced by 600, or thereabouts. The number of employees still drawing salary in the department is 2,422.

Mr. STEVENS: What does that include?

Mr. BELAND: It includes all the employees in the administrative work, all the employees in the Vet Craft shops, all the employees in the limb factory, all the employees and doctors in the hospitals of the department, all the physicians who are employed full-time outside of the hospitals for pension examination, and so forth. In a word, it includes all the employees of the department. The number of these employees on the 1st January, 1924, speaking from memory, was 2,922. On the 1st of April last, the number was 2,422, so that during thirteen months, continuing the reduction process which had been started, the number of employees had been reduced by 500.

Perhaps this would be a proper occasion to set right some opinion which has been expressed as regards the cost of administration of the Department of Soldiers' Civil Reestablishment. Speaking personally, I have not the remotest desire to be in charge of the department one day longer than I am desired, but I must say that the work which is new being discharged in Canada in connection with this department will be maintained for a large number of years to come, and the number of employees engaged in the work of the department will be reduced by a smaller margin as the years go by. The time will come, I should say within five or six or perhaps ten years, when you will not be able for a long number of years thereafter to reduce the number any further. And why? Because the department has the whole administration of pensions, which involves the paying out in one year of $34,000,000. It would be a simple matter to pay $34,000,000 to one man, but it is an altogether different thing when you have to pay pensions to 64,000 different people every month, and when a large number of those pensioners are not permanent in their disability, thousands of them in the course of one year being either reduced, cancelled or increased, thousands of new pensions being awarded during one year, and hundreds, if not thousands, of children being born to pensioners and who have also to be taken into account. That is one feature of the work.

But there is another feature, and that is the paying of pensions to Imperials in Canada. The amount that is being paid on account of the Imperial government to Imperial pensioners in Canada is around $10,000,000. The department is acting in Canada for the Imperial government in regard to these pensioners.

Mr. ROSS (Kingston): Is not that a large increase? Last year it was only $7,000,000.

Mr. BELAND: Yes, there is a large increase.

Mr. ROSS (Kingston): To what is the increase due?

Mr. BELAND: That includes also the pay and allowances which are paid to Imperial pensioners who are under treatment in Canada.

Mr. CALDWELL: Is this $10,000,000 of Imperial pensions included in the $34,000,000?

Mr. BELAND: No, it is in addition to that.

Mr. HOEY: Do the Imperial authorities pay the cost of administering those pensions.

Mr. BELAND: They do. We are reimbursed, but we have to provide the money in the first place. We have a section in the department which is called the Imperial section, there being 105 employees in that section alone.

Mr. ROSS (Kingston): The increase in Imperial pensions seems enormous. Are there more Imperial pensioners coming out?

Mr. BELAND: Perhaps there are. I can give later on when we consider the item for pensions the exact number of Imperial pensioners in Canada last year and this year. Now I am just making a general statement.

Mr. CALDWELL: Is the Dominion government reimbursed by the Imperial for both the Imperial pensions and the cost of administering those pensions?

Mr. BELAND: Yes. I want only to set at rest the minds of my hon. friends on the other side; for instance, the hon. member for York-Sunbury (Mr. Hanson) and the hon. member for Yale (Mr. Stirling), whose presentation I very much admired the other day. I did not care to interrupt the hon. gentleman, but he went so far as to say, unintentionally and unwittingly, I am quite sure, that 71 per cent of the amount of money which is voted for this department goes into administration expenses. If it were true, if half of this were true, if only one-quarter of it were true, I would be the first man to be scandalized. As my hon. friend from York-Sunbury has said himself, it would indeed be scandalous. But what is the situation in this connection? I appeal to my hon. friend from Yale not to stake his reputation on the statement he made in this connection, because it is absolutely inaccurate. What is the total amount involved in this department in one year? It is $51,000,000, and every cent of it is administered by the Department of Soldiers' Civil Re-establishment. Now how did my hon. friend contrive to arrive at the figure that 71 per cent of $51,000,000, or whatever it is, has been expended in administration? My hon. friend said that only a small share of that money goes direct to the men; the balance of it is expended for salaries and administration. Now what are the facts? I ask the question without any idea of creating the impression that my hon. friend has been misleading the House. I do not think it was his intention; nor do I think it was the intention of any newspaper man who publishes such broad and unwarranted statements; but it is time—it may be late in the day; perhaps it should have been done long ago—that this matter should be explained fully to hon. members. Let us take the amount which goes directly to the men in cash. In the first place the sum of $33,048,000 is paid in pensions. This is money that goes to the men or to their dependents without the omission of one cent. The balance left from that $51,000,000 would be about $18,000,000. How is that made up? In round figures the sum of $4,463,000 is paid to the Imperials either in pension or in pay and allowances. Is there anything else being paid to the men in cash? Surely. What else? Pay and allowances to the men who are being treated in hospitals. The men who are admitted into hospital for treatment receive not only shelter, clothing, food, and medical care but they receive also pay and allowances. But the amount paid to the men under treatment varies according to whether the man is single or whether he has a wife or a wife and children. The amount of pay and allowances is $2,314,044.59. This money is paid in cash to the men or their dependents. There are also pay and allowances made under a certain order in council and the total of the two classes of payment is $2,816,000.

Sir HENRY DRAYTON: That figure does not agree with the vote.

Mr. BELAND: My hon. friend does not take into consideration other allowances, smaller in character, which help to make up the total. The hon. gentleman may accept my word that the pay and allowances amount to $2,816,000. Add the $33,000,000 odd for pensions to Canadians, or to the dependents of those men, and the $4,463,000 paid to the Imperial pensioners in pensions and pay and allowances. There are still other sums that go to the men in cash. We must consider the salaries that are paid to the men in the craft shops under the jurisdiction of the department; they must be paid because they are suffering from disabilities that do not permit them to seek employment elsewhere. We have three or four hundred of these men employed by the department in shops and these men draw their salaries in cash. Now let us take insurance. The department administers a soldier's insurance which is not a very considerable branch.

Mr. CLARK: Before the minister passes to the subject of insurance, can he tell us what the administration expenses are for the payment of all the pensions?

Mr. BELAND: Yes, I am coming to that; I will be pleased to give my hon. friend those figures.

Sir HENRY DRAYTON: The minister did not state how much is paid for salaries in the craft shops?

Mr. BELAND: In wages to operators $95,822. Now let us take vocational loans, that is to say the loans made to the men who have completed a course of vocational training under the department and who secure a loan from us in cash for the purchase of

equipment. The money thus paid to them in cash for the year 1923-24 was $37,893. The war service gratuity is also money paid to the men in cash. Now we come to the returned soldier's insurance—

Mr. POWER: Will the minister be kind enough to tell us how much was paid in war gratuity last year? It would not amount to much.

Mr. BELAND: It is a small amount, $30,769.

Mr. POWER: The amount should be diminishing every year.

Mr. BELAND: It is, yes. Now on account of the deaths of soldiers who carried insurance with the department we paid out during the same year $241,887 in death benefits; $203,704 in annuities; and $917 in disability benefits. Then there must be considered cash surrender values, return of premiums, and so on, making a total paid in cash to the men in connection with returned soldiers' insurance of $483,000. Surely not a single one of the amounts I have mentioned can be claimed as money spent for administration. Out of the total of $41,000,000 odd that I have mentioned there is not a single cent which is not paid directly to the men.

Mr. GARLAND (Bow River): Would the minister be good enough to give us the figures for the amounts paid to disabled men who are in the employ of the department, in their own shops? He has overlooked that figure.

Mr. BELAND: Ninety-five thousand dollars odd.

Mr. ANDERSON: Do they correspond with the figures for 1923-24.

Mr. BELAND: Yes, they correspond closely with the figures for that year.

Mr. ANDERSON: I think there is a difference.

Mr. BELAND: We had a supplementary estimate that year which probably accounts for the difference. The hon. member is referring to the main estimates.

Sir HENRY DRAYTON: The estimates of last year are before us.

Mr. BELAND: I refer to the year 1923-24. That is the statement I have. But they coincide pretty well from year to year. Now let us consider another point. In addition to this amount which is paid in cash to the men or their dependents a large amount of money is paid for services rendered to the men. For example: We have the item of medical attendance upon soldiers who require an operation, or who require any medical treatment. I ask any hon. member in this House, in all sincerity, is that money which is being expended for attendance on a soldier in a hospital not equivalent to money which is paid to him direct? It is for a service which is of benefit to the men; and if you handed the money to the man himself he would employ it for that very service. Are the services of nurses attending our soldiers not to be considered as equivalent to a direct payment, inasmuch as if we handed the money to the men they would pay for the services of the nurses? I will go one step further. Is not the money which is being spent and paid to experts, skilled workmen, to make limbs for the thousand amputation cases which we have in Canada equivalent to the money paid to the men themselves? If we supplied the money to the amputation cases what would they do with it but provide artificial limbs? I quote these as examples. We have a large number of medical men in Canada employed in this department. I have the figure here and I will give it later. These men are not employed for administration purposes, except in very few instances, but they are employed for the purpose of rendering certain services to the men, which is equivalent to paying the money to the men themselves. What is the amount of money which is being used for those services? It is $5,648,118.

Sir HENRY DRAYTON: Which item of the estimates is that under?

Mr. BELAND: Care of patients, for instance, employer's liability compensation, vocational training, transportation of blinded soldiers, sheltered employment and so on. Now what is the amount that is to be used for administration purposes? I desire to make a general statement of the cost of administration. First, we have general administration salaries, $1,806,358. I grant you that is a large amount, but not at all disproportionate to the administration that is required for it.

Now under the heading "General" we have:

Telephones, telegrams and postage	$51,689
Transportation and travelling of staff	53,760
Stationery, printing and office supplies	66,164
Rent, taxes, insurance and bonding	8,333
Light, heat, power and water rates	11,364
Maintenance and repairs	4,000
Automobile supplies and expense	15,454
Freight and express	6,577
Advertising and publicity	1,918
Miscellaneous supplies and expense	31,381

Making a total of $250,491. Then we have:

Medical administration—	
Salaries—	
Medical services	$337,976
Dental services	10,971
Provisional bonus	21,653

Making a total of $368,201.

Then we have under the heading of "General" in connection with medical administration the following items:

Telephones, telegrams and postage	$10,440
Transportation and travelling of staff	28,042
Stationery, printing and office supplies	15,828
Automobile expense	3,492
Miscellaneous supplies and expense	2,137

Making a total of $59,941, or a grand total of $2,485,645, which is equivalent to a little below five per cent of the amount that is being administered by this department.

Sir HENRY DRAYTON: Look at vote 284, and you will see that under the heading of salaries you have administration, insurance and training, hospitals and clinics, making altogether an amount of $3,100,000. Last year it was considerably greater. They are all put down as salaries here.

Mr. BELAND: I agree with my hon. friend, but I have attempted to point out that under the item of salaries is included the salaries of all these parties I have referred to, all the physicians in the hospitals, all the physicians outside the hospitals engaged in the examination of pensioners all over Canada, probably 30,000 disabled pensioners, who are examined under the instructions of the board every six months. Then we have the nurses, the staffs in the hospitals, orderlies and so on. The item for salaries covers them all. So that I say, Mr. Chairman, it was an unhappy reference by, I think, my hon. friend from Yale (Mr. Stirling) the other day. I do not think the hon. member has given this matter the proper attention and perhaps he was led into making the statement because he had read something in the newspapers about it. But those are the conditions. That the staff should have been reduced every year as the years went by was conceded by everybody, and the staff was reduced year by year to a large extent. Since I have been in the department I have no doubt we have reduced the number of employees by over 3,000. We have reduced the number in the course of the last year, plus one month, by 500, and I pray hon. members to note that a large proportion of these employees are returned men themselves and in many cases disabled soldiers. It is always a difficult task for any minister to retire an employee in a department such as this. It is perhaps an easy task for my hon. colleagues to retire officials, but it is painful to be obliged to retire men who have seen service and suffered disability, who have wives and families, and who are receiving a salary of $1,200, $1,500 or $1,800. It is not agreeable. It would not be agreeable to any man. We take all necessary precautions in these reductions of staffs. We notify the man beforehand; we give him two or three months' notice, and we provide for the payment of two months' salary after retirement. If a man, who has been a faithful servant, but who is surplus, finds that after two months he is unable to secure employment, and if he claims that he should have one more month in order to attempt to secure a job somewhere else, we allow it. But administer it in any way you like, it is a painful and difficult task, and I do not think you could decrease the number by more than fifty a month at the best. That is what we have been doing. I have given this explanation because it was due to hon. members. I am quite certain that in many minds the idea prevails that at least fifty per cent of the money voted in the House of Commons for the soldiers was money that went for administration expenses. That is absolutely beside the mark. The department does not claim perfection. The department has been administered by men of ability, regardless of who was the head under the previous administration or under this administration, by men who have seen service overseas, everyone of whom, with barely one or two exceptions, has seen honourable service in France. It is only due to them that we should tell the House that they are working every minute of their time, and to my personal knowledge, after hours fifteen days in a month. The situation cannot be otherwise because, when you retire in one week ten or twelve people, they were doing something. While perhaps they were not doing a day's work, you have to load other employees with the work, and they have to go back to their office after five, or six or seven o'clock in the evening in order to acquaint themselves with the new work that has been placed in their care.

The idea has prevailed that the medical staff is too large. I have myself many times felt that, perhaps, we should be able to reduce the number of physicians whom we employ in our hospitals. I look at Christie street in Toronto where there is a large hospital with five or six hundred patients, patients who come in and patients who go out, some who remain for two, three or four years and some who remain for one month or two or three months. We have a large staff of medical men there. But that is not all. Not only are the medical

men working in the hospitals, but they are administering what we call clinical treatments to hundreds at Christie street hospital. I have seen that myself. I wanted to satisfy myself that such was the condition. Last year we administered more than 160,000 different clinical treatments. When a soldier comes into a hospital or the unit—it is the same place now in Toronto because we have contracted the service and everything is now under one roof—seeking treatment, it is impossible to say to that man: You are looking for treatment; you cannot have it; you have to go out; you will not be attended to. That man must be admitted and you must have a physician examine him. His case may require services of a specialist or, perhaps, two or three specialists. This is now about seven years after the war. A disability that has been recurrent after two, three, four, five or six years may be very much complicated, and it may require an X-ray man to take radiographs of this man's body. It may require a surgeon to ascertain that an operation is not needed. Heaven knows that we make mistakes, especially in the medical profession. It is too well known that in many cases the diagnosis is not made as it might be; but, as the hon. member for Kingston (Mr. Ross) knows that is the weak side of our profession, and unhappily amongst our medical men there are some who make mistakes like the rest of us. You have to examine this man; you have to decide whether he requires treatment or not, and you have to admit him to hospital or to refuse him. All that requires services, and nobody will give you those services for nothing, especially if it is the government that requires the services. It is my expectation that the number of employees will be further reduced in the course of the present year by a few hundred and probably next year also, although the number of patients is about the same as it was twelve months ago. When we are on this item "care of patients", I might explain that last year we had in our hospitals, I think 3,730 patients, and the last figure I have of patients under treatment is 3,704, or only a few less than last year. It is sometimes claimed that the department is too severe, that our medical men are refusing treatment to people who are entitled to treatment. I do not know whether this accusation is well founded or not, but at all events I have never heard that the medical men in the employ of the department have allowed into the hospitals patients who should not be allowed. I do not know of any man who is being treated to-day who does not deserve treatment. It may be that some may claim that a few soldiers are not being treated who are entitled to treatment. In the last instance we have to abide by medical opinion, because this is largely a matter of medical appreciation. I am sorry that I have detained the committee so long, but I thought it was only fair that I should give hon. members this explanation.

Mr. CLARK: I asked the minister during his remarks to state the cost of the administration of pensions. He said that he would give me the figures, but he has not done so. I would like to draw the attention of the committee to one point in connection with a statement made by the hon. member for Yale (Mr. Stirling), who does not happen to be in his seat at the moment. That hon. member did not refer to the amount that is being expended for pensions nor to the cost of administration for pensions. My impression has always been that the cost of administration for pensions is comparatively small. The hon. member for Yale was referring to an entirely different matter. He was distinguishing between the cost of administering pensions exclusively, and the other branch of soldiers' civil re-establishment, and if any statement has been made which is not correct the hon. member for Yale will be only too glad to see it corrected. I invite the minister now to give a concise statement of the cost of administering pensions as distinguished from soldiers' civil re-establishment.

Mr. BELAND: There is no information available on the question. There is no proper administration of the pensions except that which is being carried out by the department; there is no administration of pensions outside the department.

Mr. CLARK: Is there no information available to enable the minister in the future to tell us how much it costs to administer pensions to the extent of $34,000,000 annually?

Mr. BELAND: It would be very involved accounting work, although it might be done. The hon. member will bear in mind that the employees who administer the allowances to the men in hospitals also administer pensions. We have only one department under one roof in Ottawa; all these employees are at their desks and do whatever work of administration is required of them. At one time pensions were administered by a pension board entirely outside of the department; that was previous to 1921. It was my immediate predecessor who combined both the administration of pensions and that of the re-establishment department proper. At the time that was done about 800 employees were

transferred from the Board of Pension Commissioners to the Department of Soldiers' Civil Re-establishment and the amount of money paid for the administration of the pensions by these 800 employees was some $880,000. That is the only information available. It may be that after many years of practice and training on the part of the employees the amount would be much smaller if the administration of the pensions were entirely in the hands of a separate board; but at the time of the merging of the two branches there were transferred to the department proper, as I have said, some 800 employees.

Sir HENRY DRAYTON: The way the estimates are prepared invites the kind of comparison which the minister complains of.

Mr. BELAND: I grant you that.

Sir HENRY DRAYTON: There is nothing whatever in the vote for the soldiers' civil re-establishment, on its face, to show that there is anything in it having regard to pensions, while on the other hand item 94 provides for salaries and contingent expenses of the Board of Pension Commissioners for Canada. Under the heading of pensions we are paying $109,380 in salaries. It is obvious therefore that anyone taking up the government's figures must work out the same result and come to the same kind of mistake, if it is a mistake, as did the hon. member for Yale.

Mr. BELAND: Item 94 has no reference at all to administration; the amount of $89,000 asked for covers the salaries of the immediate personal staff and ten medical advisers. I grant you that, placed as these figures are in the estimates, my hon. friend from Yale might have been misled; but he should not have been misled to the extent of saying that 71 per cent was going into administration. That was absolutely beyond the mark. But if the item for pensions were placed with the estimates of the Department of Soldiers' Civil Re-establishment, it would be seen immediately that the amount paid out in administration in this department can compare favourably with the cost of any other department in the government or of any business corporation in Canada. At any rate, not being a business man myself, that is the information I have received from an accountant of experience whom I asked to give me the real situation.

Sir HENRY DRAYTON: Now, the minister graciously told us that he did not want to hold the committee. It is now ten minutes to twelve; can he not let us go? I make this suggestion with certain feelings of commiseration for the minister; I dislike to see all the government's pre-election statements going by the board one after another. I dislike to see the promise in regard to eleven o'clock adjournments being broken.

Mr. CAHILL: That is not a pre-election statement.

Sir HENRY DRAYTON: If we are unable to rely on the pre-election statements of the government, at least we might be pardoned for assuming that we have some right to rely on their statements made since we have been in this House. I suggest that we might pass this item and adjourn.

Mr. BELAND: Surely, after all my exertion in giving the long explanation I did to the committee, an explanation rendered unavoidable by reason of the statements made by the member behind my hon. friend, he will reward me by allowing a larger item to pass. I was expecting that the whole estimates of the department would be adopted to-night; I have given a long explanation and supplied a good deal of information.

Sir HENRY DRAYTON: I made a very fair proposition to my hon. friend. We will let the item go through and adjourn.

Mr. ROSS (Kingston): On this item, we have been so far discussing matters relating to something else. While I have little to say about this particular vote I shall have a good deal to say on some other items. There are certain items on pages 22 and 23, and on page 56 again we have votes for soldiers' civil re-establishment. Some of these subjects I should like to deal with.

Mr. BELAND: Let us adopt a few items to show that we want to make some progress.

Mr. CLARK: I think the minister has had enough experience of members on this side of the House to know that we wish to do everything to facilitate these matters, but it is most unreasonable for him to expect us at this late hour to go into these items in an intelligent manner, and in fact it is unfair to the soldiers to attempt it.

The CHAIRMAN: Shall item 36 carry?

Sir HENRY DRAYTON: We want to see on what understanding it is carried. If we adjourn afterwards it will be all right. I thought I made a very fair offer ten minutes ago.

Item agreed to.

Progress reported.

On motion of Mr. Mackenzie King the House adjourned at 11.55 p.m.

Wednesday, May 13, 1925

The House met at three o'clock.

BANKING AND COMMERCE COMMITTEE

Mr. VIEN presented the third report of the select standing committee on Banking and Commerce.

AGRICULTURAL CREDITS

Hon. J. A. ROBB (Acting Minister of Finance) moved:

That sessional paper No. 152, supplementary report on agricultural credits by H. M. Tory, and laid on the table on March 31 last, be referred to the select standing committee on Banking and Commerce.

Motion agreed to.

CROWSNEST PASS AGREEMENT RATES

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals): I lay on the table a return in reference to the Crowsnest pass agreement rates.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

OLD POST OFFICE SITE—VANCOUVER

Mr. BLACK (Yukon):

1. Having reference to the old post office site, corner Pender and Granville streets, Vancouver, British Columbia: (a) has the government advertised this property for sale; (b) when were bids due; (c) how many offers were received and from whom; (d) what was the highest tender, if any?

2. Before advertising the said property, did the government secure estimate of value by individual appraisal; if so, by whom was the property valued and what was the amount of the said appraisal?

3. Has the government secured information of the value of property similarly located which has been sold?

4. Is the government aware that there has been considerable movement of property in Vancouver in this neighbourhood, with the prospect of steadily increasing values in the near future?

Hon. Mr. KING (Kootenay): I would ask that this question be allowed to stand for the present. The government have advertised the property referred to, and tenders have been received which are now under consideration.

Question stands.

ACCUMULATIONS OF WHEAT FROM SAMPLES

Mr. COOTE:

1. What amount of wheat was accumulated from samples at the grain inspection offices at Vancouver, Calgary, Moose Jaw, Saskatoon, Winnipeg, and Fort William, in each of the years 1923, 1923 and 1924?

2. How was this wheat disposed of?

3. What was the revenue received for same, at each of the above points during these years.

4. What disposition was made of the revenue from sale of this wheat in each case?

Hon. Mr. LOW:

1.

	Vancouver	Calgary	Moose Jaw	Saskatoon	Winnipeg	Fort William
	bus.	bus.	bus.	bus.	bus.	bus.
1922	Nil	535	32	Nil	8,464	3,289
1923	260	1,045	Nil	Nil	10,370	3,871
1924	685	977	24	210	8,288	3,700

2. The accumulated samples at Vancouver were sold to the Vancouver Milling Company; at Calgary to the Robin Hood Mills principally; at Moose Jaw to the Robin Hood Mills; at Saskatoon to Jas. Richardson and Sons; at Winnipeg to the Ogilvie Flour Mills Company; at Fort William to the Bole Grain Company with the exception of a few loads sold to the James Davidson Feed Mill and some sacks to a few individuals.

3.—

	Vancouver	Calgary	Moose Jaw	Saskatoon	Winnipeg	Fort William
1922.. ..	Nil	$ 460 17	$26 28	Nil	$ 7,317 30	$2,630
1923.. ..	$326 59	806 58	Nil	Nil	8,000 05	3,096
1924.. ..	842 78	1,227 84	18 38	249 37	10,563 71	3,700

4. All revenue received from the sale of this wheat was deposited to the order of the Receiver-General by bank drafts through the Department of Trade and Commerce.

DEPARTMENT OF AGRICULTURE—EMPLOYEES AND SALARIES

Mr. SUTHERLAND:

1. What was the total number of employees permanent and temporary of the federal government at Ottawa and elsewhere, connected with the Department of Agriculture, in the month of January, 1925?

2. What was the total amount of salaries and bonus paid or due to the said employees for the month of January, 1925?

Hon. Mr. MOTHERWELL:

1. Total number of employees January 1925, 1,569.

2. Total amount of salary and bonus, January 1925, $228,506.13.

This does not include ordinary day labour, which is constantly changing.

WEMBLEY EXHIBITION—PROFICIENCY IN FRENCH OF CANADIAN OFFICIALS

Mr. DECHENE:

1. How many Canadians, able to speak the French language fluently, are in the employ of the government at Wembley exhibition, England?

2. What are their names, positions and respective salaries?

1. Eleven.

2. Name—Position—Salary.

A. W. Tolmie, Canadian Government Exhibition Commissioner, $4,320; J. O. Turcotte, Chief of Decorating Division, Exhibition branch, $3,240; J. Sylvain, Labourer, Exhibition branch, Sixty cents per hour; W. Bayard, Foreman painter, Exhibition branch, Ninety cents per hour; Wm. Tomney, General utility man, Exhibition branch, Sixty-five cents per hour; E. C. Leveille, Constable, R.C.M.P., $120 per month; J. G. Pelletier, Constable, R.C.M.P., $2 per day; J. P. A. Savoie, Constable, R.C.M.P., $2 per day; Eric Brown, Director, National Art Gallery, $4,500; H. S. Spence, Engineer, Mines branch, grade (4) Department of Mines, $3,720; Yvet Lamontagne, Assistant Trade Commissioner, Department Trade and Commerce, $1,920.

IMPORTATION OF POTATOES FROM UNITED STATES

Mr. DOUCET:

1. What was the total importation of potatoes from the United States of America into Canada, during the respective months of January, February, March and April, 1925?

2. What was the rate of customs tariff applied to such importation?

Hon. Mr. CARDIN:

1.

Month	Pounds	Value
January	2,086,665	$ 25,372
February	3,126,789	32,890
March	3,076,892	33,496
April	2,797,096	35,885

2. 35 cents per 100 pounds.

POSTMASTER, ALDOUANE, N.B.

Mr. DOUCET:

1. Has the Post Office department received correspondence asking for the dismissal of the postmaster, at Aldouane, Kent county, New Brunswick?

2. If so, what is the nature of the complaint?

3. Who laid the information?

4. If for political partisanship, will an investigation be held?

5. Who is the official investigator named by the government?

Hon. Mr. LAPOINTE (for the Postmaster General):

No complaint has been received at the department.

UNOPPOSED MOTION FOR PAPERS

QUEBEC RIOTS—COLONEL MACHIN'S REPORT

Mr. DOUCET:

For a copy of the report of Colonel Machin to the Governor in Council respecting the Quebec riots of 1917.

DOMINION NOTE ISSUES—REDISCOUNTING

Mr. W. C. GOOD (Brant) moved:

For a return showing: 1. The amount of Dominion notes advanced under the War Finance Act of 1914 (with amendments), and outstanding at the end of March, June, September and December of each year from 1914 until the present year.

2. The amounts of securities accepted as a basis for the foregoing issues of Dominion notes, given for the same periods.

3. The different classes of securities and the various amounts of each accepted for rediscounting, for the same periods.

4. The different institutions (banks) which took advantage of the rediscounting privileges, and to what extent, for the above mentioned periods.

Hon. Mr. ROBB: On Monday, in the absence of the mover, I asked that this resolution should stand as I wanted to direct his attention primarily to the expense involved in preparing this return. I am not sure what good service may be served by compiling the information asked for. My hon. friend, who is chief whip of the party that stands for economy, will observe that the preparation of this return will not promote that purpose. That is one objection. Another possible objection is that we should be giving out separate information to competing banks. I would ask my hon. friend if he would not like the question to further stand in order that we may talk the matter over together and see if we could not agree as to what might be done to meet his wishes.

Mr. GOOD: I may say that before placing the request on the order paper I corresponded with the Deputy Minister of Finance, and was assured by him that the information was readily available. Therefore I do not think this motion will involve any expense whatever. He suggested, however, that there might be a question of propriety involved in question No. 4, as to whether or not it would be wise to publish the extent to which each of the banks use the War Finance Act. In view of his intimation that the information was all available, I think there is no ground whatever for the objection now raised by the Acting Minister of Finance.

Mr. ROBB: After the explanation my hon. friend has vouchsafed, in view also of his statement that he has already discussed the matter with the Deputy Minister of Finance, and finally having in mind the fact that he is seeking this information for the students of a university outside of Canada, it seems to me the hon. gentleman might very well at least drop question No. 4.

Mr. GOOD: If the minister will take upon himself to answer all the questions but No. 4, I shall have to be content with that amendment.

Motion as amended agreed to.

CONSTRUCTION OF CHUTES IN NORTHERN ALBERTA

On the Orders of the Day:

Mr. D. M. KENNEDY (West Edmonton): I desire to call the attention of the government to a press despatch which says that an appropriation of $50,000 will be made this spring by the Dominion government for the opening of Vermilion chutes in northern Alberta. Will the Prime Minister tell me if this is correct?

Right Hon. W. L. MACKENZIE KING (Prime Minister): Any appropriations to be made will appear in the estimates. I did not hear the last words of my hon. friend. Does this refer to the Department of National Defence, or to what department?

Mr. KENNEDY: I suppose it would be the Department of Public Works, or it might be the Department of National Defence.

RURAL MAIL SERVICE

On the Orders of the Day:

Mr. G. E. BRETHEN (East Peterborough): I notice in the Citizen of this morning an article headed:

Salary revision in postal service to be discussed.

Is it the intention of the government in the forthcoming revision of salaries to consider the advisability of doing away with the contract system in the rural service, and to place the whole service on a uniform basis?

Right Hon. W. L. MACKENZIE KING (Prime Minister): What does the hon. gentleman mean by contract system?

Mr. BRETHEN: The rural mail carrier system.

Mr. MACKENZIE KING: I will have to refer the question to the Postmaster General (Mr. Murphy). He will give my hon. friend an answer at a later stage of the session.

BANKRUPTCY ACT AMENDMENT

On the Orders of the Day:

Mr. H. E. SPENCER (Battle River): Does the government intend to bring down legislation this session with regard to a change in the Bankruptcy Act?

Hon. ERNEST LAPOINTE: Yes, the government proposes to bring down legislation in that regard. The measure will be introduced in the Senate, I think to-day or to-morrow, in order to expedite business.

CANADA GRAIN ACT AMENDMENT

Hon. T. A. LOW (Minister of Trade and Commerce) moved the second reading of Bill No. 113, respecting Grain.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): I do not rise to speak on the motion at the present time, but to suggest to the minister that, outside of the members of the government, there is not one hon. member of this House who can possibly have read the provisions of this bill. It has been printed only this morning and hon. members received copies about noon to-day. The bill is almost half an inch thick. It is really a travesty on the House of Commons to suggest that the important stage of the second reading of this bill be taken this afternoon. What the government should have done was to introduce the bill and have it placed on the order paper before or during the debate on the budget. We would then have known something about it. I know it is similar to the old act. I have hastened through a few pages of it, and I read pretty fast; but to ask anybody to give a vote on the second reading to-day is really monstrous.

Mr. LOW: Does the hon. gentleman know that it is the intention of the government to refer it to the committee on Agriculture?

Mr. MEIGHEN: I know that.

Mr. LOW: And that an opportunity will be given to the House to discuss the measure when it comes back from that committee?

Mr. MEIGHEN: But surely the second reading is not a mere formality; the second reading is the important stage of the bill and the details come afterwards. Does the minister think it is right to ask members of this House to discuss a measure that not one single member can by any physical possibility have read?

Mr. MACKENZIE KING: Last night I announced that the Grain Act would be brought on to-day.

Mr. MEIGHEN: But it was not printed.

Mr. MACKENZIE KING: The sole motive of the government is to get the bill before the committee on Agriculture and Colonization at as early a date as possible, but if my right hon. friend or any hon. members feel that they would like a longer time to talk it over, we will not proceed with it to-day.

Mr. MEIGHEN: I would suggest—and I am not insisting on this—that the minister might make his statement in explanation of the bill and the various amendments—

Mr. LOW: I made a statement the other day.

Mr. MEIGHEN: But not a complete statement. There is the bill and it is voluminous.

Mr. LOW: It boils down to very few changes. There are not very many.

Mr. MEIGHEN: I do not think the minister explained it thoroughly. If he explained the purport of the measure, then it is not much of a measure to emanate from such an expensive commission. I would be prepared to go on with the discussion, but I object to having a decision on the second reading to-day, so far as my objection may be of any avail. I have no objection to the discussion, and I will take part in such a discussion myself.

Mr. LOW: We will let it go over if the hon. member desires.

Mr. MEIGHEN: I have only expressed my views.

Motion withdrawn.

INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, AMENDMENT

Hon. JAMES MURDOCK (Minister of Labour) moved the second reading of Bill No. 25, to amend the Industrial Disputes Investigation Act, 1907.

Motion agreed to, bill read the second time and the House went into committee thereon, Mr. Gordon in the chair.

On section 1—Disputes to which act shall apply.

Mr. MURDOCK: If hon. gentlemen will turn to the printed bill which is on their files they will find the explanatory notes opposite the proposed amendments. These proposed amendments are matters that will of course be considered by the legal gentlemen in the House, the purpose of the measure being to endeavour to continue the Industrial Disputes Investigation Act, and make that act applicable at least to such industries and conditions of controversy in any industry that the federal government would have authority to deal with. These proposed amendments are the result of the decision of the Privy Council on January 20, last which appeared to make inoperative the Industrial Disputes Investigation Act as it had been heretofore handled. I think the explanatory note will give hon. gentlemen a full outline of the intent and purpose of the proposed amendment.

Mr. MEIGHEN: I may be dull, but I cannot understand the second sentence of the explanatory note. The explanatory note reads:

> The purpose of this amendment is to limit the application of the act in terms to matters not within the legislative jurisdiction of any province.

That is quite clear. But the next sentence reads:

> It is recognized, of course, that the enumerative provisions of the amendment are not technically necessary for this purpose.

What is meant by the "enumerative provisions"? Does that mean all the provisions?

Mr. LAPOINTE: It means that paragraph (i) of section 2A might have ended after the words "parliament of Canada":

> Any dispute in relation to employment upon or in connection with any work, undertaking or business which is within the legislative authority of the parliament of Canada.

The explanatory note means that the clause might have ended there, but that it has been thought advisable to insert in an enumerative manner the various subject paragraphs in order to make it clearer to those who are interested in the investigation and settlement of industrial disputes.

Mr. BAXTER: While I do not object to some of the enumerations, I think it would be much better if the paragraph had ended just where the minister indicates. To some of the enumerative paragraphs no possible exception can be taken, because the first four of them, at all events, are simply a repetition of the British North America Act, putting certain operations under the control of the federal parliament. Therefore, when you say that the Industrial Disputes Investigation Act shall apply to things that are under federal control, you have already said what is placed in paragraphs (a), (b), (c) and (d). But

when we go a little further and read some of the other paragraphs, I fear, while I do not intend in any way to oppose this legislation, that we are simply opening up new avenues of possible litigation without obtaining any corresponding beneficial results. I agree with the remarks of the draughtsman in editing this bill that it is, perhaps, advisable to put, in a succinct form before the people who will possibly have resort to its provisions, an enumeration of the particular matters to which the bill will relate. But when we find that paragraph (e) includes:

> Works, undertakings or business belonging to, carried on or operated by aliens, including foreign corporations immigrating into Canada to carry on business.

I very much doubt whether we can resort to the provisions of the British North America Act which puts "naturalization and aliens" under our jurisdiction, in order to provide that whenever a dispute occurs in an industry carried on by an alien, we shall have legislative power. I doubt if we can confer it upon ourselves. I know the Privy Council has, in many instances, reprobated attempts which have been made to legislate, under the name of the criminal law, with regard to things that are not at all criminal, and in every instance the Privy Council has defeated such attempts. No one knows what the highest court of last resort will ever do, but the Privy Council will show no more favour to an attempt to legislate on a different subject under the title of aliens than it does under the title of the criminal law. While a business is being carried on in any province by aliens, they take their status practically by permission of the federal government. They are accorded by the comity of nations, an opportunity to carry on business within our territory, but it has been held and it has been acted upon in many provinces, in fact, I think, in all provinces, that on the other hand the right to acquire land can be conferred only by the legislature of the particular province in which the land is situated. In other words, it is beyond the power of this parliament to confer upon an alien the right to hold land in any particular province. It can confer upon him the right to be a British subject; it can make a British subject of him for Canadian purposes, and the moment he has the status of a British subject, his right to hold land is indisputable. But while he remains an alien, he must resort to the particular province to get his rights.

I am not going to pursue the discussion into any other region than that of pure law; but let us take, for instance, the business which is carried on in the Nova Scotia coal mines, and I do not intend to refer to the particular dispute that exists there at the present time. Supposing an alien owned a mine. That alien could not get title to the mine unless the law of the particular province permitted him to do so. But when he has that mine, as I understand the judgment of the Privy Council, his relations with his employees must be determined simply by the law of that province. I think I am correct in that position. At all events, while I am not in a position to say that I am absolutely correct, no hon. gentleman whose mind is inclined to the opposite view is in a position to say that he is indisputably correct. I must grant the same liberty of thought to others that I ask for myself. But the moment you have two divergent views, which probably will be expressed in this House, you throw the whole thing into the melting pot of litigation once more. Instead of, by this enumeration, giving security to the man who reads the act that whatever falls within those phrases is within our legislative power, you only invite him to rely upon those phrases and send him eventually to the Privy Council to find out whether we have power to do what we are proposing to do to-day or not. While I do not oppose the legislation—and this is not in any sense a party matter—I think it is my duty to point out the danger which may result from legislation of this character. If it were within the competence of this parliament to restore what is popularly known as the Lemieux Act in full force, I would be entirely in accord with the government and the Minister of Labour in trying to do that. But we cannot do it, and the fact that we cannot do it is surely a strong argument against an attempt to lead people to believe that we are doing something well which yet may be quite outside of our competence.

One other paragraph to which I should like to call attention is paragraph (iii):

> Any dispute which the Governor in Council may by reason of any real or apprehended national emergency declare to be subject to the provisions of this act.

Now, the war brought about a new interpretation of our constitution and it was held that the war emergency evoked certain powers which were slumbering in the constitution or perhaps almost lay outside of it, and to which we had not given attention before. A great many things were done because of the existence of a state of war which undoubtedly could not have been done by this parliament or by the executive of the nation under peace conditions. But I desire to point out that the same declaration by the government, that

there is an apprehended national emergency, may fall far short of constituting the conditions under which alone this portion of the state can interfere. Once again I say I am not opposing these provisions, but I desire respectfully to point out that there is danger that in trying to remove the cause of uncertainty we are only by this enumeration adding to the possible causes of it with regard to this very difficult question.

Mr. CHURCH: This bill should be referred to a select committee of the House, who in my opinion could give better consideration than could this House to the important legislation involved. The minister has published in blue book form, extending over some 300 pages, the judicial proceedings affecting the constitutional validity of the Industrial Disputes Investigation Act of 1907 and amendments of 1910, 1918 and 1920. The subject matter of these proceedings was taken all the way from the courts below to the Privy Council and a very sound decision was rendered by the Privy Council. The minister's department had taken up the case of the employees of the Hydro Electric Commission, who had been given several raises in salary in a few years, and who were getting high rates of pay.

This bill now before the chair in my opinion has not been as carefully drafted as it might have been, and the litigation that has taken place recently has cleared the air and disclosed the proper relationship between capital and labour in these matters in Canada; and what this parliament should do is to stay in its own field of activity under section 91 and not go beyond that. Under that section a large number of classes of subjects are assigned by the act to the Parliament of Canada, all of a general nature. But not satisfied with this ample scope within the limits of the pond, this parliament through the Labour Department, in the original Industrial Disputes Investigation Act of 1907, undertook to widen the boundaries of its authority and to venture forth upon the lake and the ocean and to bring within its jurisdiction local matters not properly within its competence to decide upon. Parliament has encroached upon the provincial field and interfered in matters defined under section 92 which relate to the provinces and the municipalities, including the control of such local departments, as street, fire and police departments and public utilities. If the employees in any of these local works are not satisfied with the wages paid them the minister can grant them a board; and not content with that the government has actually granted a board in the case of a purely private dispute between the Hydro Electric Commission and their employees notwithstanding the fact that the commission are known to pay good wages.

There is no reason why parliament should not act within its own sphere as prescribed by the act; it can deal with Dominion employees, and dear knows there is great occasion for proper action in this direction. It seems to me that the act might very well apply for example, to the post office and customs house staffs and the whole Civil Service, and it might be invoked in connection with the grievances that exist in the Maritime provinces in the coal industry, it should also extend to the Customs department and to the work carried on by the Civil Service Commission. This parliament therefore has enough to do looking after its own end of the act without worrying about the provinces and the municipalities with their public utilities.

Section 2 of the act lays down the jurisdiction within which the Dominion may act under the British North America Act; and this comprises disputes relating to employment on works within the authority of this parliament; works, undertakings or business operated or carried on for or in connection with navigation and shipping, whether inland or maritime; railways ferries between provinces or between any province and any British or foreign country and various other undertakings of a similar nature. So far so good. And the explanatory note on the page of the bill opposite to this outline of subjects declares that the purpose of the amendment now proposed is to limit the application of the act to all matters not within the legislative jurisdiction of any province. That is all very well so far as it goes. But on page 2 of the bill all this is nullified by paragraph (f) which declares that certain works, although wholly within the province, may be declared by the Parliament of Canada to be for the general advantage of Canada. I contend that if this provision passes it will enable the Dominion to encroach upon the provincial field and that would be ultra vires of this parliament.

I think there should be a distinct line drawn between one field of activity and another as between the Dominion and the provinces and municipalities. Indeed, confederation would not have been possible had it not been for the fact that home rule was granted the provinces and the municipalities under section 92 of the British North America Act. I do not blame the minister personally for what he has done; at the start he did his best to bring

the parties together in the unfortunate dispute we have had. It was not the first time the question had been raised, the minister, I do think, might have refrained from granting the board in connection with this particular utility. It had been the practice for some time in cases of these disputes for a board not to be granted, unless with the consent of the municipality and the public utility concerned. In this particular dispute the board was granted and the minister declared that it was a matter of policy; the board was allowed against the protest of the public utility commission.

I have already suggested the reference of this bill to a special committee. Last session this very question was taken up by a special committee which considered industrial relations and very good work was done. The committee met only four or five times but the minister was present with officials from his department and the Justice department. And with reference to the act of 1907 the hon. member for Cape Breton South and Richmond (Mr. Carroll), I think, referred to the fact that several opinions had been given by the Department of Justice on the act some one way and others of a different character, with regard to the division of activities between the three legislative bodies in Canada. The committee last year went into this matter thoroughly, exploring not only the Dominion field but as well the entire scope of the provinces and the municipalities; and the evidence given by some of the Minister of Justice's own officials to that committee went to show that such legislation as is now proposed in paragraph (f) on page 2 of the present bill must create trouble. It was lucky there was a privy council to say just where the line should be drawn. In my opinion, if the Privy Council ever performed a good day's work for the people of any overseas dominion it did so for the people of Canada when it gave its decision with reference to this particular act, because the decision went a great deal further than the act and laid down the scope of legislative usefulness not only of this parliament but of all the legislatures and municipalities of Canada. This decision is a very good one and has carefully mapped out the three spheres of activity. Paragraph (f), as I have said, provides that provincial works wholly within the province may be declared to be for the general advantage of Canada, and this was done recently in the case of the lake of the Woods matter. It cannot be defended and it would be unfortunate for this parliament to go beyond its own proper limits and to interfere with the public utilities of the provinces and municipalities. Why, if this provision were enacted parliament might, although it seems extravagant, even declare some candy store on Sparks street to be for the general advantage of Canada, or it might do the same in regard to Ford's factory in Windsor, on the ground that it had some connection with the automobile industry of the Dominion and touched the question of transportation. I should like to see this question settled for all time. Agriculture is a matter of concurrent jurisdiction for the Dominion and the provinces, but if this bill becomes law we cannot say how far it may affect that industry and provincial jurisdiction, and even the agricultural industry might be declared to be an undertaking for the general advantage of Canada.

I think the minister would be doing a good day's work for capital and labour if he would consent to the appointment of a small committee to study this bill so that we may have a better understanding of what its enactment will entail. For instance, it contains a definition of what is a national emergency. Well, if there was ever an opportunity for the Labour department to do something under the Industrial Disputes Investigation Act it is presented to them now in the labour troubles in the coal district of Nova Scotia; there surely is a national emergency requiring the immediate and direct attention of the minister and his department. But in view of the declaration by Lord Haldane of what constitutes a national emergency, we would be treading on pretty dangerous ground if we passed this sub-clause 3 of subsection 1 of section 2 (a) as it is. A dispute between private individuals or between a public utility corporation and its employees is not a national emergency, and yet by this legislation the Dominion parliament seeks to take control of all the works and on the plea that a labour dispute constitutes a national emergency undertakings of the provinces and municipalities. When the act was passed in 1907 there were no public utilities in the sense that we have them to-day; for instance, the province of Ontario has made a total investment of $241,000,000 in its hydro electric undertaking. Had not the decision of the Privy Council been what it is, the legislatures of the provinces would have been reduced to the status of county councils. I should like to see the bill referred to a committee and so amended that it will be placed beyond doubt that this parliament has no control over any provincial or municipal undertaking.

Mr. MACLEAN (York): Mr. Chairman, I do not agree with what has been said by the

hon. gentleman who has just taken his seat (Mr. Church). I am a one hundred per cent Canadian, I have said so before in this House, and to-day I am surprised at the absence of courage on the part of the government, and especially on the part of the Minister of Justice (Mr. Lapointe), in not coming to this House and saying: The way to cure all these inconsistencies that have been found in our constitution is to have Canada become what everybody says she is, a sister dominion, the equal of the Mother Country and of the other member parts of the British commonwealth. We have the right, or we ought to have, to make our constitution, and to have it interpreted by our own courts, not by the Judicial Committee of the Privy Council, no matter how eminent its members may be. To-day by reason of this discussion we are admitting inferiority of position. We are not enjoying complete self-government now, we never have been, but we ought to be. This question will be in the courts again. Only the other day I read a discussion that has been proceeding in England in regard to what is to be the status of the colonies or the dominions. It is evident that Mr. Amery, who is the head of the Colonial Office, has made some progress, but to my mind his progress is retrograde, it is in the direction of bringing this Dominion more under the direction of the Secretary of State for the Colonies. I am afraid that as a result, instead of widening our powers and securing complete autonomy, they will be narrowed and we will find ourselves continued in our old colonial status. I challenge the Minister of Justice to say what the decision of the government is to-day in regard to this constitutional crisis. It should not be our attitude, as my hon. friend from North Toronto says, to rejoice and thank God that there is an arrangement under which disputes which we as Canadians should settle here shall be settled in the Motherland. I spoke on this question at the opening of the session and a large volume of correspondence afterwards came to me unsolicited, from young Canadians all over this country strongly supporting the view that I took in regard to the matter. They think we ought to have what our neighbors to the south achieved a hundred and fifty years ago, namely, the right to make their own constitution; and when they got that right they made their country a great country. If we have the courage to go ahead we shall be in the eye of the world perhaps as much as the Americans are; and I do not suggest by that that in any way we should break with the Mother Country. What I do say is that we should rid ourselves of this incubus—because that is what it is—of the settlement of our disputes and the determining of these questions in the Old Land. I know pretty well what the view of this House is; I have talked a good deal to hon. members with regard to it. I have been ridiculed and criticized for the views I hold, but I am willing to stand for that. The Minister of Justice in this measure is merely sidestepping the issue. The real issue to-day is whether we are to make and interpret our own constitution or whether it shall be done for us; whether or not we shall remain in the position of an inferior, a junior—an infant in the eye of the law. And we can get this right if we ask for it. Will the Minister of Justice say we would be denied the right of jurisdiction if we applied for it?

Mr. LAPOINTE: I agree with my hon. friend.

Mr. MACLEAN (York): Then why does he not have the courage to state it as representing the party dominating this House to-day? That is where I want to see some courage. He says he agrees with me; why does he not live up to the agreement?

Mr. LAPOINTE: That is another question.

Mr. MACLEAN (York): Yes, but it must be answered, and I am asking for an answer to-day. I have the courage to say what my view is and I know there are many in the House who agree with me. There are a great many in the minister's own province—eminent lawyers—who hold the same view. I hope he will not send this bill to a committee; I would like to see the discussion turn upon the broad constitutional issue, especially in view of the fact that the Parliament of Great Britain is ready any day to give us the power to deal with out own constitution and to make our own division of powers as between the federal and provincial authorities. When that is done we will make some headway.

Mr. MARTELL: If the British parliament did give us that right, could this parliament arrogate to itself certain powers without the consent of the provinces?

Mr. MACLEAN (York): No, quite the contrary. There will be a constitutional conference to settle the question. There have been a great many struggles for constitutional rights in the past; I am reading about them every day. And there is a deplorable condition in Europe to-day because of the absence of constitutional government there. Answering the

4 p.m.

hon. member (Mr. Martell), I know we cannot settle the question in this parliament; but the onus is on the government to call a conference of representatives of the Dominion and the provinces for that purpose. The Minister of Justice says he is going to bring the question up in connection with another matter affecting the Senate. Now is the time to settle these questions, and the government must have the courage to take the leadership or give way to others who will take it.

Mr. MARTELL: Who in Canada to-day is in favour of this change in our constitution?

Mr. MACLEAN (York): I am, for one.

Mr. MARTELL: I am glad to know it.

Mr. MACLEAN (York): I regret that my hon. friend has not that courage, although the people of his own province are waiting on the government to-day, almost in forma pauperis, asking to be helped out of their troubles.

Mr. LOGAN: Order.

Mr. MACLEAN (York): Well, a freind of my hon. friend's went up to Toronto the other day and told a very doleful story of the condition of affairs in this country. The hon. member for Cumberland has been away to the West Indies to tell the troubles of this country there and how he seeks to get relief from them.

Mr. MARTELL: Will my hon. friend—

Mr. MACLEAN (York): Oh, sit down a moment, please.

Mr. MARTELL: We want the truth.

Mr. MACLEAN (York): Go where the truth is. Now, I apologize for taking up so much time—

An hon. MEMBER: Hear, hear.

Mr. MACLEAN (York): The hon. member for West Toronto (Mr. Hocken) does not agree with me?

Mr. HOCKEN: I did not say a word.

Mr. MACLEAN (York): My hon. friend does agree with me very often. I read his paper carefully and I see that he is progressive in his views in the way of constitutional reform. But the responsibility of dealing with this matter is on the government; they cannot sidestep it by a measure like this. Constitutional government must be progressive in its character, its scope widens with the years; and we ought to see to it that we have the right to deal with these matters ourselves in our own way.

[Mr. W. F. Maclean.]

Mr. MARTELL: My hon. friend says the people of Nova Scotia came here in forma pauperis. That is a vastly different question from the one he is dealing with now and from the point he is advocating. Nova Scotia never willingly went into the confederation. We were sold into the confederation, as our people commonly say, for the price of a sheepskin. We were a prosperous people up to that time. I am not objecting to the constitution to-day as it affects the various provinces, but if we come here advocating what we believe to be our rights, we are asking only for what is justly ours, because we never had an opportunity at the polls to pronounce whether or not we were in favour of confederation. When confederation was brought about and the first appeal was made to the people of Nova Scotia, only one confederate was returned.

Mr. MACLEAN (York): I sympathize very much with my hon. friend, and if he has any move to make in this particular I will join him.

Mr. MARTELL: I am a constitutionalist and believe that our remedy lies in trade treaties and railway considerations.

Mr. MACLEAN (York): Well, I am sorry for that sort of constitutionalist.

Mr. LOGAN: The hon. member has been talking about half an hour; may I ask if he is for or against this bill?

Mr. MACLEAN (York): I am against the bill unless the government take the leadership in the direction of a real cure for the situation.

Mr. LOGAN: Even if the government takes such leadership, the change could not be brought about in less than two or three years, and in the meantime what harm will it do to pass this bill? We have to have some machinery for dealing with industrial disputes. I have listened to the utterances of my hon. friend from South York (Mr. Maclean) for a quarter of a century or more, and I am charmed to find that after all those years he still retains that buoyant expectancy, that everlasting optimism, under the influence of which difficulties, in his mind, seem to fade away. I only wish all of us had that happy disposition; and that we may all be as youthful in spirit as my hon. friend when we reach his age. But my hon. friend, in speaking upon these matters dismisses, with a wave of the hand, some rather serious difficulties. He is even a little inconsistent sometimes. For instance, at one moment he states that the

Right Hon. Mr. Amery is trying at the present time to encroach upon the freedom of this country with respect to imperial matters; and the next moment he says that all we have to do is to go to England and the Imperial parliament will give us the power—I suppose immediately, and without any consideration at all—to amend our constitution and do it in accordance with the views entertained in this House, notwithstanding the fact that, after all, the British North America Act is a pact between the federal authorities and the provinces and that we could not amend the constitution of this Dominion along the lines he suggests unless we secured the consent, I will undertake to say, of every province in Canada. I doubt very much if we went to the Imperial parliament and asked for legislation giving Canada the right to amend its constitution the Imperial parliament would consider it for one moment if even the little province of Prince Edward Island raised an objection to the proposal. Because, as I have already said, confederation was the result of a pact between the federal authorities and the local legislatures and that pact could not be disturbed without the consent of all the interested parties. But my hon. friend goes further. With one stroke of the pen, or with a mere wave of the hand, he is going to abolish the right of appeal to the Privy Council.

Mr. MACLEAN (York): Oh no.

Mr. LOGAN: These are matters, I think, that ought to occupy our most serious consideration.

Mr. MACLEAN (York): And now is the time.

Mr. LOGAN: I submit it is not the proper time, when we are engaged in the consideration of a bill introduced to meet a difficulty which has been brought upon us by a judicial decision. Now, the facts are these: Under that decision the Industrial Disputes Act, otherwise known as the Lemieux Act has been found to be ultra vires of this parliament. At any moment there is a possibility that labour troubles may arise in this country and we have not the power, we are absolutely impotent, unless we pass this legislation, to deal with them. For instance down in Cape Breton a great labour struggle is taking place, twelve or fourteen thousand men are out of employment, women and children are suffering, and this parliament is impotent to help them or to bring about any meeting between the company and the miners in order to effect a settlement of the trouble.

Mr. BAXTER: Will this bill give that power?

Mr. LOGAN: Yes, I think that power is conferred under paragraph (f) of section 1, although I admit a question of law might be raised as to whether the intention is correctly expressed.

Mr. BAXTER: If the bill really gave such power I would be enthusiastic in its support, but what I fear is that no such power is conferred; the situation would be local and not national.

Mr. LOGAN: The paragraph in question reads:

> Such works as, although wholly situate within the province, have been or may be declared by the parliament of Canada to be for the general advantage of Canada, or for the advantage of two or more of the provinces.

If we had such a law on the statute books to-day we could put through parliament a short act declaring the works of the British Empire Steel Corporation to be works for the general advantage of Canada. When that act had been passed we would then be able to appoint a conciliation board, for instance, to deal with the unfortunate situation which exists in Cape Breton. I submit to my hon. friend from York (Mr. Maclean)—and we all recognize his enthusiasm in the cause of readjusting our constitutional difficulties, and his Canadianism; he is almost one hundred per cent plus Canadian—that we are confronted now with a condition of impotency.

Mr. MACLEAN (York): Very well, let us remove the impotency.

Mr. LOGAN: If we can meet the situation by passing the present bill let us do so. Let us endeavour to do something to meet the situation which we find ourselves in at the present time.

Mr. HANSON: Just before the hon. member takes his seat I should like to ask him this question: Is it not perfectly open to the legislature of the province of Nova Scotia to pass appropriate legislation to meet the conditions such as he has described?

Mr. BAXTER: They have done so have they not? Have they not introduced the principle of compulsory arbitration down there?

Mr. HANSON: I am not sure; I am asking for information.

Mr. LOGAN: I fear the province has made a mistake in undertaking to force compulsory arbitration. You cannot in this age force men to do anything; you can conciliate them, you can talk and reason with them. Yes, legisla-

tion has been passed in the province of Nova Scotia, but strictly speaking it will not meet a situation such as exists here which has become, in a sense, national in its character. This parliament could deal with such a situation in a broader and bigger way than the legislature of the province can in which the disturbance is occurring.

Mr. HANSON: I am inclined to agree with the last remark made by the hon. gentleman, but I would like to ask the minister a question with regard to sub-clause 3 of section 2 (a) of this bill. Just what disputes does the department contemplate should be covered by a power of that character? The language is very wide, and very comprehensive, and it seems to me that the power conferred there might be used in an improper way. I should therefore like to hear the Prime Minister or the minister—and the question is not put from any controversial motive, but with a desire to know what the minister or the government has in mind—state a case in which such power might be used with propriety by the government.

Mr. MURDOCK: I could possibly give my hon. friend a fair idea as to a possible case if we go back a couple of years. In 1923 all hon. gentlemen will recall that a serious dispute originated in the steel industry in Cape Breton, an industry over which the department had never contended the Industrial Disputes Investigation Act had any jurisdiction. However the dispute developed to the extent that it involved the miners over whom it had been generally held some controlling authority could be exercised through the Industrial Disputes Investigation Act. There is a concrete case. Of course I could not speak, even as Minister of Labour, as to what kind of dispute the Governor in Council might determine to be a national emergency such as would justify the application of the provisions of the act. But I think my hon. friend will get at least the point as to what might have been reasonably considered a national emergency. In that case, as we know, under the Militia Act as then in effect, a justice of the peace called for the despatch of troops, and we know that practically all the permanent troops in Canada were taken into Cape Breton. And this in respect to a dispute in connection with industry over which there was no control under the Industrial Disputes Investigation Act. It so happened that just at the same time another dispute arose in Toronto, and one development after another occurred until the department thought it really essential and necessary that a board should be established for fear of possible developments, for fear the dispute might reach the serious proportions that were reached in a similar dispute some years before in the city of Toronto when the entire transportation facilities in that city were stopped during the Canadian National exhibition. That dispute of some years previous did not last long, fortunately, but it reached serious proportions although originating in the same way and with the same employers as the dispute which caused the appeal to the Privy Council, with the result that the entire act was declared ultra vires of the Dominion. From my remarks I think my hon. friends will get an idea as to what might, under certain conditions, be regarded as a national emergency, and personally I should expect that the Governor in Council would not be too ready or too anxious to bring under the act, through that clause, any and every dispute that might occur at any point in the country.

Mr. MEIGHEN: We have not heard yet from the Minister of Justice (Mr. Lapointe), and we expected to hear from him.

Mr. LAPOINTE: I was about to rise three of four times but did not get the opportunity. I received a sort of challenge from my hon. friend from South York (Mr. Maclean). It is hard for me to be attacked by an old friend of mine, especially when he seems to have a doubt in regard to my national sentiments. My hon. friend is absolutely wrong, because this is not a question as between Canada and the Mother Country; in any respect whatever. There is no battle of any kind between ourselves and the Imperial parliament. The question, Mr. Chairman, is: What is the jurisdiction of the Dominion parliament and the jurisdiction of the various provinces? And if the decision which has been given in that case of Snider versus the Toronto Electric Commissioners, instead of being delieverd by the Privy Council, had been delivered by the Supreme Court of Canada we would have been placed in exactly the same situation. I do not think it is opportune, advisable or necessary to discuss the question of the propriety of having Canadian legislation submitted to the Privy Council in connection with a matter purely and simply of defining what are the powers of the provincial legislature and the powers of the federal parliament with regard to this legislation. I agree with my hon. friend—I have said it and I repeat it—that if we were asking the right to amend our constitution it would not be denied, but it is a question for ourselves to decide, not only in this parliament

but in Canada; it is a question of asking for the revision of the pact which has been entered into by the several provinces of the Dominion. If my hon. friend wants to amend the constitution so as to have at all times the power to change or alter our own charter, I repeat what I said some time ago, that that charter is just as much the charter of the province as it is our charter, and before it is altered the provinces have a right to be consulted and to give their own opinions about it.

Mr. MACLEAN (York): Why not consult them?

Mr. LAPOINTE: We are going to consult them. It has been announced that a conference would be held between the provinces and the Dominion for the purpose of considering the steps which it might be advisable to take to amend the constitution in some matters. My hon. friend agrees with that, but he says, "Wait, do not do anything for the purpose of re-enacting the Industrial Disputes Investigation Act before you hold your conference". My hon. friend is wrong about that, as my hon friend from Cumberland (Mr. Logan) told him. Even if there is nothing coming from such a conference; or even if there is an amendment to the constitution of Canada, which might take some time to make, it is necessary—at least it is opportune and it is wise—to have on the statute books of Canada an act for the investigation and possible settlement of industrial disputes. Since that decision of the Privy Council the government has been petitioned from various quarters to do something in regard to this matter, to enact legislation to revive that old act. This request comes not only from the various labour organizations; but also from the employers. This act is recognized to-day as being a fine and fair way of trying to get at the settlement of our labour difficulties. Part of the decision of the Privy Council was to the effect that this parliament had no right to enact legislation for the investigation and settlement of the dispute between an employer carrying on his undertaking under the laws of the province, and within the limits of that province, and the employees. If the Toronto electric commissioners are an association under the laws of Ontario, operating in the province of Ontario under a sort of municipal organization, there is no doubt that they are and were a merely provincial body. The Privy Council has decided that, and we have no power to interfere in the labour difficulties between the employers and the employees under such circumstances. The purpose of this act is to have legislation for the investigation and settlement of disputes which are under the jurisdiction of the parliament of Canada. My hon. friend from North Toronto (Mr. Church) said that the Privy Council had done a good day's work in giving that judgment. I do not want to give expression to my own views in regard to that, but one thing is certain, that this judgment has at least the advantage of defining to a large extent the respective jurisdictions of the Dominion and the provinces. The bill now before us is based on the decision of the Privy Council, not only on the expression of views of the Privy Council but also on the expression of views of the counsel engaged in that argument, and on previous decisions of that body on constitutional matters arising between the Dominion and the provinces. As to all the matters that are included or enumerated in section 91 of the British North America Act, there cannot be much difficulty. My hon. friend from St. John and Albert (Mr. Baxter) said that it would be better to confine ourselves to the first words of paragraph 1 of section 2A, ending with the words "parliament of Canada". This act is to define the relation between employers and employees and is like the bill of rights of the organization in Canada.

It is in the hands of the labour men throughout the country, and it has been pointed out to us by those who represent labour that in their interest it is necessary that an enumeration of at least the main subjects to which the act will apply should be given. That is the only reason for the enumeration. The hon. member for St. John and Albert expresses a doubt as to our right to enact paragraph (e) of section 2A. My hon. friend is a leading member of the Canadian bar and his views deserve more than ordinary consideration. But he has expressed a doubt and, as he said himself, he admits that the other side might be debated. This paragraph has been considered to be within our jurisdiction because of those words in section 91 of the British North America Act "naturalization and aliens," which are placed under the jurisdiction of the Dominion parliament, and those further words: "regulation of trade and commerce." It is contended that the power to make laws for the regulation of trade and commerce and for naturalization and aliens gives the right to regulate the conditions under which aliens may carry on trade in this country. That is the view of the officers of the Department of Justice.

This bill has been more than carefully studied and considered before being drafted and it has been submitted to strong authorities on this matter.

Mr. MACLEAN (York): Outside of Canada?

Mr. LAPOINTE: No. As regards the other objection, or possible objection, of my hon. friend in reference to paragraph (iii) of section 2A which reads:

Any dispute which the Governor in Council may by reason of any real or apprehended national emergency declare to be subject to the provisions of this act.

This is absolutely in accord with the views as expressed by the Privy Council and especially in the argument by counsel representing the appellants in that case. It is also in conformity with the views of the Privy Council in the Fort Frances pulp case. The hon. member for North Toronto (Mr. Church) says that this should apply only to war. Of course the emergency must be a very serious one. The subject of famine and pestilence, for instance, has been mentioned—serious emergencies, emergencies in which provincial matters must be dominated by the national interest of the whole country. I might call to the attention of the committee the remarks which were made in that case during the argument, and I am not sure that it is not referred to in the judgment concerning the case of Russell and the Attorney General of Canada, when the Canada Temperance Act was declared valid and intra vires by the Privy Council. According to the Privy Council of that day, the only justification for the Canada Temperance Act being considered intra vires was that there was an emergency at the time; that the use of liquor was so widespread in Canada as to justify the government in considering the matter as an emergency. The other day I saw that one eminent judge in this country, I think it was the Chief Justice, referred to those remarks, saying that they certainly were mistaken in the Old Country when they thought that we ever had such an emergency in Canada in regard to the liquor question. This shows, though, that when an emergency arises, there is no doubt as to the power of this parliament to enact legislation with regard to a matter which might be connected with it. The hon. member for North Toronto objects to paragraph (f):

Such works as, although wholly situate within the province, have been or may be declared by the parliament of Canada to be for the general advantage of Canada, or for the advantage of two or more of the provinces.

[Mr. Lapointe.]

This is almost word for word the language of paragraph (c) of subsection 10 of section 92 of the British North America Act which excepts from provincial jurisdiction—

Such works as, although wholly situate within the province, are before or after their execution declared by the parliament of Canada to be for the general advantage of Canada or for the advantage of two or more of the provinces.

I repeat that this bill has been very carefully considered, and in the opinion of the Department of Justice, we are not encroaching upon the jurisdiction of either the provinces or municipalities in any of the sections proposed. And it is necessary that we should have such legislation on the statute books.

Mr. MACLEAN (York): Is it liable to be declared ultra vires?

Mr. LAPOINTE: I hope not.

Mr. MACLEAN (York): It is subject to that.

Mr. LAPOINTE: Every piece of legislation passed by this House that was afterwards declared ultra vires, was thought at the time it was passed to be valid. No legislation has been more carefully considered and drafted than this one, and when we are challenged, we are prepared to meet the foe.

Mr. MEIGHEN: I do not make any suggestion that the legislation is not wise, that is, that it is not a necessary step to introduce declaratory legislation of this kind in view of the decision. But I am strongly of opinion that the proceedings which resulted in the decision were unnecessary and ill-advised. The Lemieux Act, so-called, passed in 1907, remained in operation through some seventeen years. Throughout the whole period of the life of that act I do not think there was a single month when the validity of its provisions was not at least in doubt on the part of the Justice department, and certainly on the part of eminent lawyers in this country. The question whether it was within the power of parliament to legislate as to the settlement of disputes in all the fields provided for therein, certainly as provided for in section 2 of the original act, was really never seriously supported by the law officers of the crown. I well recall on more than one occasion when we in our time encountered difficulties and sought the advice of the Justice department, we were cautioned to let well enough alone, to keep away from the courts, and to take such a course as would enable the law to operate where it was not challenged or where, if challenged, there was no doubt as to jurisdiction, as for example in relation to our rail-

ways. But, we were told, do not get into the courts on any doubtful question under this act; if you do you are very liable to come to disaster. We therefore avoided these questions.

Now the case that came up was this: the act was sought to be put into force with respect to a wage dispute in connection with the Toronto Electric Commission. One would have thought that if there was any single case where the application of the act was on a very, very weak legal footing it would be there; and the wise course for the government to have taken, the course which I understand was suggested by the law officers of the crown, was to have said to the Toronto Electric Commission, "Very well, if you don't want us to assist, take care of the matter yourselves; we will step aside. We are here to be of service if possible, but we are not going to fight any protracted lawsuit and chase you to the Privy Council to try to establish a jurisdiction over such a body." This would have been the sensible course; this course the government did not take. The government plunged into litigation with the result that the very foundations of the act have come out shattered and its usefulness for all time is impaired.

The Justice department has undertaken to state as clearly as may be the outside limits where we may exercise jurisdiction in the future. I should have thought that as a mere matter of drafting, having read section 2 of the old statute and 2(a) of this statute, it would be wise to have words in 2(a) making it plain that 2(a) dominated over the old section. The definition of "employer" in the former section is so wide as to be in conflict with the provisions of 2(a). It is very probable that 2(a) is the dominating section anyway, but in my opinion it would have made matters clear to have indicated that fact beyond any question.

Mr. LAPOINTE: Has the hon. gentleman read section 2 of the present bill? It refers to that.

Mr. MEIGHEN: Yes, I have read section 2 and I shall make a few comments on that. If such words as—

Notwithstanding any of the provisions of the preceding section.

—were inserted at the beginning of 2(a) it would establish beyond all question the dominating character of that new section. I am not going to put my opinion against the opinion of the minister's officers, but I am surprised that it should be the opinion of the officers of the department that this country, in view of the decisions that have been rendered, would have jurisdiction in respect of disputes arising where the party to the dispute, as employer, is an individual alien or an alien corporation. The argument of the hon. member (Mr. Baxter) appeals to me very strongly. It is true that under the British North America Act we have jurisdiction in respect of aliens and naturalization. But surely it is plain, or so it seems to me, that that jurisdiction is as respects the person of the alien and not the alien's property. We have jurisdiction as respects the alien in persona, and the very fact that the word "alien" is followed by the word "naturalization" seems to me to make it clear that our jurisdiction as to the alien is of the nature of our jurisdiction as to naturalization; and to assume that we can go in and act with respect to the alien's property and the alien's civil relations with his employer any differently from the way in which we can act towards a citizen of Canada and his employer is very perilous indeed. I feel so confident of this that I will venture to suggest that if a dispute arises where the employer is an alien corporation the government would be well advised to withdraw from the action early and not come to the calamitous end they have come to in relation to the last litigation. However, if the Department of Justice has given its opinion I cannot criticize the minister for accepting it.

Now I want to say a word as to section 2:

The provisions of this act shall be construed as relating only to the application of the Industrial Disputes Investigation Act, 1907, and not so to extend the meaning of the word "employer" as defined by section 2, paragraph (c), of the said act.

"The provisions of the act," the first five words, very plainly refer to the present act, the amending act; and how they could ever be construed otherwise than as relating only to the application of the Industrial Disputes Investigation Act passes my comprehension. I do not know what could have been in the mind of the draftsman in putting in this clause—I am arguing only as to the first sentence of the clause. It could not possibly apply otherwise than is stated. I have tried to stretch my fancy to imagine what the draftsman could have had in mind, but I cannot. The second part also seems unnecessary, though not so plainly unnecessary. How in the world could it extend the meaning of the word employer by subsection (c) of the old statute? On the contrary, the purpose of this act is to limit the application and therefore limit the meaning of the word employer. There may have been a purpose, but I do

not see what the draftsman intended. The act seems generally to have been prepared by a draftsman, but I cannot imagine what purpose section 2 has. Therefore, so far as the provisions of the statute are concerned, irrespective of the unfortunate proceedings which led up to its now being introduced, I would say that the government would be well advised to leave out the clause which assumes to give us jurisdiction with respect to aliens, and to consider whether there is any real purpose, and not possibly just a cause of litigation, in section 2.

Mr. MURDOCK: My right hon. friend discusses the legal phases of the question and of course I would not assume to deal with those matters. But he commenced his statement by referring to the causes which led up to the situation in which we find ourselves at the present time. Possibly he proved the truth of the old adage that hindsight is a great deal better than foresight; but he did not exactly state the facts in regard to the manner in which this dispute happened to go to the extent that it did. He did not tell the House that on one or two previous occasions there had been a board appointed in a dispute exactly similar to that of the Toronto Electric Commission; and I think the records will show that on one occasion at least such a board was strongly contended for by the distinguished gentleman from North Toronto (Mr. Church), who has taken such exception to the proceedings with regard to this board. It is true that the Labour department could in 1923 have evaded its responsibility and sought, as had been done admittedly in numerous similar cases for years, to sidestep, dodge and keep out of trouble. That could have been done; but I am quite sure that my right hon. friend (Mr. Meighen) and other gentlemen associated with him on that side, would have been the loudest in their clamour to show that the department was shirking its responsibility and not functioning as by law intended.

Having regard to the circumstances that confronted us in the summer of 1923, with a dispute in effect in Nova Scotia, starting in an industry over which the act had no jurisdiction, and had never so contended, this dispute spreading to the extent that all the permanent troops of Canada were brought into play, and the further fact that another dispute having arisen in Toronto in connection with the operation of the Toronto Electric Commission's works in which dispute there was also some question as to the federal Labour department's authority, the department decided that the proper course to take was to insist on the formation of a board even although our authority so to do might by some be questioned. But I would correct my right hon. friend by saying that I do not recall that the Justice department told us not to do this, that or the other thing, I do not recall that their opinion was even asked; it was a question of the Department of Labour, under the apparent intention of the act, determining whether, in the face of the refusal of the employer, the Toronto Electric Commission, to appoint a representative on the board, the minister should assume and accept the authority to proceed to make the appointment. That was done. The results since that time speak for themselves. When the board was taken to court by an injunction the department undertook to find out what authority we had, and while I think both sides of the House regret the final outcome, surely it was better for us to ascertain what authority we had, and I do not think it will answer any good purpose now to say that we should not have done this, that or the other thing in 1923 in connection with this dispute. I stand before this House and frankly say that if I had to do it over again I would do exactly the same, as Minister of Labour, to find out just what authority we have, because I believe that employers and employees and the country are entitled to know exactly their legal position under this or any other similar regulation.

As to the legal matters that are before us in this bill, I do not presume to deal with them except from a layman's standpoint, although I am assured by eminent legal gentlemen not only in the Justice department but elsewhere that the federal government has the authority which these amendments propose to give it to carry on under the act in the case of certain disputes that may arise in the future.

Mr. MEIGHEN: The minister has kept within bounds, rather unusual for him so far, and I will endeavour to make what I said clearer because he misapprehended me. I did not criticize the department for appointing a board. I said the department was quite justified in offering its services, but in ground where the title was in doubt the department was not wise to have gone to litigation and imperilled those features of the act which had been in operation for years, and which probably, but for the precipitate action taken, would have been in operation for years to come. When the government's—

Mr. MURDOCK: Would you indicate where you think we should have started to back up?

Mr. MEIGHEN: I am just doing that. When the government's title was challenged, surely it was the duty of his department to have taken the advice of the Justice officials and ascertain whether they would be safe in traversing the ground of litigation and thereby imperilling a very important section of the statute. The minister says it was not a case for the Justice department. If ever there was a case that was it. If the Labour department did not take such advice—I can hardly understand why they did not; I fancy they must have asked it. If they did they would have been advised that the government's position at least was doubtful. The part of wisdom then would have been to continue to operate the act within those limits which had not been challenged, and not take a case like that of the Toronto Electric Commission, which was the most dangerous of all, and go right to the Privy Council with it and thereby wreck the statute. That is all the contention which I made, and it seems to me it is a very moderately stated one. The minister says: Well, if we had not appointed a board we would have been charged with evasion. I do not complain of the appointment. Perhaps he means he would have been charged with evasion if he failed to proceed in the courts when challenged by the Toronto Electric Commission. Well, I would be very sorry if the attacks, whatever they have been on this side of the House, against the minister's department have been such as to drive him into a blunder in this case. I hope that he will not be guided in the future by any fear of this kind, and I assure him that if the criticism that has come to him in other cases, and to the government in general, of evasion, has been the cause of driving him into precipitate error, why, it would be for us to assume the ways of sunshine and gentleness after this in an effort to try and save the country.

Mr. WOODSWORTH: Mr. Chairman, I think it should be noted that labour is by no means unanimous in its attitude towards the Industrial Disputes Investigation Act. While in theory this legislation may appear admirable, in practice it has very frequently been found to work out to the detriment of labour. The difficulty apparently has been to get a board that is at all disinterested. Labour may nominate one man, but the third man selected has very frequently been found not only to be out of sympathy with labour, but not even open-minded with regard to the viewpoint of labour. The opposition or the indifference of labour in this regard was well illustrated a few months ago in the Nova Scotia situation, where the government was left to appoint a labour representative on the board. It is quite manifest that when such a situation arises the board cannot hope to accomplish very much by its labours. I would suggest that in future, if this act is to be of any value at all, greater care must be taken to see that the board is not loaded, as it were, on the side of the employer, that is, holds essentially the viewpoint of the employer.

I should like to call attention to two particular clauses to which reference has already been made, as it seems to me it is very essential that at this time we should know what their effect will be. In subsection (f) we read:

> Such works as, although wholly situate within the province, have been or may be declared by the parliament of Canada to be for the general advantage of Canada, or for the advantage of two or more of the provinces.

Now, I take it that if this bill is passed it would be quite possible in any particular case, such for example as that in Nova Scotia, to declare that the mines in Cape Breton were for the general advantage of Canada. If parliament so declared, it would seem to me this government would have the right to take action under this provision. I think it could be held that the mining industry of Nova Scotia is not merely of local importance but that if parliament is called upon to give protection to that industry it might very well be declared to be a work for the general advantage of Canada. If I am right in that, and this bill passes as it stands, surely it will be possible to take action in such a case. The member for Cumberland, I think, took that ground when he stated that in an emergency there would be no doubt as to the power of parliament. Perhaps he was referring especially to subsection (iii), which says:

> Any dispute which the Governor in Council may by reason of any real or apprehended national emergency declare to be subject to the provisions of this act.

In this case it would not be necessary for parliament to declare that the mining industry of Nova Scotia was a work for the general advantage of Canada. Should an industrial dispute in any way become acute and it be considered that a national emergency was involved, that in itself would be sufficient ground for the government to take action. If the member for Cumberland is right and the bill passes in its present form, it would be quite possible for the government to take action in such a situation as now exists in Cape Breton. The Minister of Justice has just told us that this bill has been carefully drawn and that it does not go outside the bounds of the British North America Act; that it merely restates

the provisions of that act. If that is the case, why has the government not now the power to act in the case of Nova Scotia? The minister says that paragraph (f) is almost word for word in the terms of the British North America Act, and I think we all recognize in it the wording of the act. It would seem, therefore, if this act is of any value at all, that the government already has the power to act, and that the only thing necessary to enable federal action in the Nova Scotia situation would be a declaration on the part of this parliament that the mines of Nova Scotia are for the general advantage of Canada. Even that is not necessary: the emergency clause may be invoked. When there is danger of riot; when we are told it is only a matter of time until the militia will have to be called out; when the newspapers say we are only waiting until something breaks, until something serious happens—surely we are faced with what would be an emergency under the terms of this act. Since we are told that this measure goes no further than the British North America Act, it seems to me there is no reason why the government cannot act in the present emergency.

Mr. MEIGHEN: With regard to the construction of the bill, would not subsection 2 of the new section 2A be far better a separate section of the bill?

Mr. LOGAN: Make it "2B."

Mr. MEIGHEN: Yes, that would be much better drafting.

The CHAIRMAN (Mr. Marcil, Bonaventure): Is it the pleasure of the committee that this change be made?

Mr. LAPOINTE: Yes, I think so.

Mr. MURDOCK: During the last two sessions of parliament this House passed, with little discussion, an amendment to three sections of The Industrial Disputes Investigation Act, and I would like to move an amendment which will rewrite subparagraph (b) of paragraph 2 of section 15 of the act, except that it is provided that if employees have taken all possible steps to secure a conference but have been unable to enter into negotiations, the conditions necessary to the granting of a board would be considered as complied with. Under the section as it is now there must be a conference between the parties, which it is sometimes impossible to secure. The amendment which I would move is as follows:

5 p.m.

That subparagraph (b) of paragraph two of section fifteen of The Industrial Disputes Investigation Act, 1907, as enacted by section two of chapter twenty-nine of the statutes of 1910, is repealed, and the following is substituted therefor:—

(b) A statutory declaration setting forth that, failing an adjustment of the dispute or a reference thereof by the minister to a board, to the best of the knowledge and belief of the declarant a lockout or strike will be declared, and (except where the application is made by an employer in consequence of an intended change in wages or hours proposed by the said employer) that the necessary authority to declare such lockout or strike has been obtained; or, where a dispute directly affects employees in more than one province and such employees are members of a trade union having a general committee authorized to carry on negotiations in disputes between employers and employees and so recognized by the employer, a statutory declaration by the chairman or president and by the secretary of such committee setting forth that, failing an adjustment of the dispute or a reference thereof by the minister to a board, to the best of the knowledge and belief of the declarants a strike will be declared, that the dispute has been the subject of negotiations between the committee of the employees and the employer, or that it has been impossible to secure conference or to enter into negotiations, that all efforts to obtain a satisfactory settlement have failed, and that there is no reasonable hope of securing a settlement by further effort or negotiations.

[Mr. Woodsworth.]

The CHAIRMAN (Mr. Marcil, Bonaventure): Before that amendment is proceeded with, the hon. member for North Toronto presents an amendment to section 1. Mr. Church moves:

That the following words be added to clause (f) on page 2:—

Provided that no provincial or municipal public utility work or undertaking wholly situate within the province may be declared to be a work for the general advantage of Canada without the consent and sanction of such provincial or municipal authority.

Mr. CHURCH: I think this amendment will provide for any emergency that may arise in the future in connection with industrial disputes affecting any of these three fields of activity, Dominion, provincial and municipal. If you read over the book setting forth the proceedings of this case from the courts below to the Privy Council you will see that an amendment like this is necessary to clause (f) of the bill. The provinces and municipalities have millions of dollars invested in various public utilities, and for this parliament arbitrarily to declare them to be works for the general advantage of Canada would be a hardship and also it never was within the intent of the British North America Act or the decisions of the Privy Council based thereon. If the bill is passed as drafted it will lead the government into all kinds of trouble. It will practically reduce the legislatures of the province to county councils and seriously interfere with the sovereign power they enjoy under section 92 of the British North America Act.

Mr. LAPOINTE: I am sorry I cannot agree with my hon. friend, and my advice to my colleague the Minister of Labour is not to accept the amendment he proposes. I think it is safer, more reasonable and more legal to confine ourselves to the wording of the British North America Act and not to add the reservation which my hon. friend proposes.

Amendment (Mr. Church) negatived.

Mr. MURDOCK: The amendment I have moved simply contemplates that an application from a committee representing employees can be accepted if the committee say that all possible efforts have been made to enter into negotiation and that it has been impossible to do that or even to secure a conference. The department has found itself at times unable to accept an application because the employees could not declare in their application that they had been in conference, their representations had been ignored. This simply proposes to give reasonable latitude with appropriate powers. It is exactly what was passed as an amendment to this same section last year and the previous year.

Mr. LADNER: Is there any provision for the submission of evidence to show that negotiations have been attempted? We have not the amendment before us and it is therefore very difficult to ascertain exactly what is contemplated.

Mr. MURDOCK: The Chairman read the section a moment ago. It requires that there should be a statutory declaration setting forth that, failing an adjustment of the dispute or reference thereof by the minister to a board. to the best of the knowledge and belief of the declarant a lockout or strike will be declared: that the dispute has been the subject of negotiation between a committee of the employees and the employer, or that it has been impossible to secure conference or to enter into negotiation; that all efforts to obtain a satisfactory settlement have failed; and so on.

Amendment agreed to.

Section as amended agreed to.

Mr. LAPOINTE moved:

That section 57 of the said act, as amended by section five of chapter 29 of the statutes of 1910, and as further amended by section 5 of chapter 29 of the statutes of 1920, is repealed, and the following is substituted therefor:—

57. Employers and employees shall give at least thirty days' notice of an intended or desired change affecting conditions of employment with respect to wages or hours; and in the event of such intended or desired change resulting in a dispute, it shall be unlawful for the employer to make effective a proposed change in wages or hours or for the employees to go on strike, until the dispute has been finally dealt with by a board, and a copy of its report has been delivered through the registrar to both the parties affected; the application for the appointment of a board shall be made by the employers or employees proposing the change in wages or in hours; neither of those parties shall alter the conditions of employment with respect to wages or hours, or on account of the dispute do or be concerned in doing directly or indirectly, anything in the nature of a lockout or strike, or a suspension or discontinuance of employment or work, but the relationship of employer and employee shall continue uninterrupted by the dispute, or anything arising out of the dispute; but if, in the opinion of the board, either party uses this or any other provision of this act for the purpose of unjustly maintaining a given condition of affairs through delay, and the board so reports to the minister, such party shall be guilty of an offence, and liable to the same penalties as are imposed for a violation of the next preceding section.

Mr. CHURCH: May I ask the minister if it is fair to submit amendments of this character without having them printed? I am very doubtful, in view of the decision of the judicial committee of the Privy Council as rendered by Lord Haldane, whether the powers conferred by the amendments are within the competence of this parliament. It is hardly fair in the case of such an important statute as the Industrial Disputes Act, which has been so prolific of litigation, that amendments should be handed in without being printed or without any hon. member on this side of the House having a chance to see them. It is proposed to amend section 57 of the act which was amended in 1910, and further amended in 1920. The amendments proposed and also section (f) are of an important character and what will be their effect? They will only get you where you were before. The changes contemplated will have the effect of enabling the federal authority to invade the sphere of provincial activities, and will only result in the government getting into trouble again. What reason is there for rushing this legislation through the House? It is proposed, under this legislation, to grant powers as to which even the officers of the Department of Justice themselves are in doubt. It is not fair to put through amendments in such a manner, nor is it fair to do so without consulting the attorneys-general of the respective provinces. Certainly in the case of the province of Ontario there should be such a consultation. The Attorney General of that province was a party to this litigation and no doubt is desirous that the provincial legislature should act in unison with this parliament to define the sphere of activity in which for example, a public utility like the Hydro-Electric or

other utility may engage. The Minister of Labour in proposing amendments such as these is entering upon a very large sphere, and, I am afraid, will again be found to be exceeding his powers. Where there is an emergency which is within the four corners of the words used by Lord Haldane in that particular case, such as pestilence, famine or plague, parliament would have power in regard to these works in Canada to afford a remedy. If we adopt this particular amendment and the other amendment which I suggested, which I think is a fair one, I believe it would be a great benefit. But the minister will not accept it. I hope that he will consult the Attorney General of the department of the province which is the authority in the province.

I do not doubt that the Minister of Justice and the Minister of Labour are anxious to keep within their own fields of activity. I think a lot of good will come out of this discussion, both as regard the Dominion field and the municipal field. I do not see the object of rushing this measure through to-day. The amendment might be printed and the matter considered another day.

Mr. MURDOCK: I do not think my hon. friend realizes that this amendment is exactly similar to the amendment passed last year and the year before, and of course is only intended to apply to public works or undertakings as set out in Bill No. 25, which is before the House now.

Mr. BAXTER: That is all that can apply.

Mr. MURDOCK: Yes.

Mr. BAXTER: It cannot touch the municipalities at all.

Mr. MURDOCK: No, of course not. I hope my hon. friend from North Toronto (Mr. Church) will agree with me in this. It seemed inadvisable to propose this amendment, which has been I think generally if not unanimously concurred in by the House of Commons on two previous sessions, until we found out what the House was going to determine in regard to section 2A which we have dealt with. As we have dealt with section 2A, I hope the hon. member for North Toronto will permit us to pass the three additional amendments which were adopted by the House during the last two sessions of parliament.

Amendment agreed to.

Section as amended agreed to.

Mr. MURDOCK: I move that section 58 of the said act be repealed and the following substituted therefor:

[Mr. Church.]

58. Any employer declaring or causing a lockout or making effective a change in wages or hours contrary to the provisions of this act shall be liable to a fine of not less than one hundred dollars, nor more than one thousand dollars for each day or part of a day that such lockout or change exists.

Mr. BAXTER: I should like to ask the minister how the employer can make effectual the change in the hours if the employees do not accept the change.

Mr. MURDOCK: It seems to me that is the trouble. A number of disputes occurred in the past because employers, possibly with notice to the employees, have made effective as of a given date a changed rate of wages and certain changes in the hours of work. The employees have protested and said, "We do not want it, we will not accept it. We do not think you should do that." This amendment contemplates that an arbitrary, hurried change of that kind could not be made, if it resulted in a dispute, until the dispute had been inquired into.

Mr. BAXTER: I am not quite clear about it. My right hon. leader (Mr. Meighen) handed me a copy of the amendment. The amendment to section 57 provides at the end:

If either party uses this or any other provision of this act for the purpose of unjustly maintaining a given condition of affairs through delay, and the board so reports to the minister, such party shall be guilty of an offence, and liable to the same penalties as are imposed for a violation of the next preceding section.

That is, if the party uses it for the purpose of delay. There seems to be no penalty for the violation of section 57, except what is contained in sections 58 and 59, one relating to the employer and the other to the employee.

Mr. MURDOCK: That is correct.

Mr. BAXTER: I see the reason for it.

Amendment agreed to.

Section as amended agreed to.

Bill reported, read the third time and passed.

SUPPLY

SECRETARY OF STATE

The House in committee of Supply, Mr. Marcil (Bonaventure) in the chair.

Civil government—Secretary of State; salaries, $121,640; contingencies, $21,500.

Hon. A. B. COPP (Secretary of State): I am glad to be able to report that we have a reduction both in the salaries and the number of employees in the department. The number of employees has been reduced

from eighty-six to eighty, a reduction of six, and there has been a reduction in the administration cost of over $9,000.

Mr. MEIGHEN: I suppose the six died. What happened to them?

Mr. COPP: One, I think, died; two were superannuated; two resigned and one was transferred to the Post Office Department.

Mr. MEIGHEN: There may be a saving on the one who died, but that would be the only saving. The two who were superannuated would still be on the paylist, and the two who resigned would, I suppose, continue to receive pay under the Calder Act. The one who has gone to the other department will be paid there. Where is the list showing the additions to those drawing pay under the Calder Act in the Secretary of State's department?

Mr. COPP: Mr. Pelletier, Assistant Under-Secretary of State, has retired on a pension, being paid an allowance of $2,963 per annum.

Mr. MEIGHEN: Is that under the new act?

Mr. COPP: Yes.

Mr. MEIGHEN: What is his age?

Mr. COPP: Seventy-six years. Mr. Learoyd, Assistant Deputy Registrar General, retired on the 1st April, 1925, at the age of seventy-one years, after serving for fifty-one years and six months. His retiring allowance is $2,324.

Mr. MEIGHEN: Was he in good health?

Mr. COPP: No. Mr. P. T. Kirwan, retired on October 1, 1918, being superannuated after thirty-nine years' service on an allowance of $1,470 per annum.

Mr. MEIGHEN: At what age?

Mr. COPP: Sixty-eight.

Mr. MEIGHEN: Why was he retired?

Mr. COPP: That was in 1918 before I took office. I understand he was retired at his own request.

Mr. MEIGHEN: I am referring to retirements in the last year.

Mr. COPP: Mr. A. E. Lewis retired under the Calder Act owing to ill-health on the 22nd September, 1923. He was only twenty-nine years of age. He received a gratuity of $649.98. Mr. A. Drouin, at the age of seventy-two years after thirty-eight years' service, was retired on the 1st October, 1923, with a retiring allowance of $1,596. Mr. H. E. Larkin, after four years in the service, was retired with a gratuity of $300 on the 1st June, 1924.

Mr. MEIGHEN: Has the position of Assistant Under Secretary of State been filled?

Mr. COPP: It is not the intention to fill it.

Mr. MEIGHEN: Or the position of Assistant Deputy Registrar General?

Mr. COPP: No.

Mr. MEIGHEN: As regards the work, or whatever other sufficiently dignified term might be given to what was lately carried on by the late Hon. William Pugsley, what has become of that enterprise since his death?

Mr. COPP: That is not in this vote. Another vote will be provided for that. That is under the war claims.

Mr. MEIGHEN: Would the minister prefer not to have more than one discussion on that subject?

Mr. COPP: I have no objection, but it will only take up more time.

Mr. ROSS (Kingston): Have any changes been made in regard to the naturalization of ex-Canadian citizens? Supposing a man leaves Canada, goes to the United States, takes out citizenship papers there and then later returns to Canada. What qualifications must he possess after his return before he receives naturalization?

Mr. COPP: After he returns he must reside for five years in a British Dominion and then make application in the regular way under the Naturalization Act.

Mr. ROSS (Kingston): Is there any reason for that law that he must reside here for a period of five years in the case of a man who has already been a Canadian citizen?

Mr. COPP: There is an arrangement entered into with the Imperial government after three different Imperial conferences that all the naturalization acts of the various dominions should be in agreement. That has been carried out.

Mr. BEAUBIEN: Has the minister any intention of bringing in any amendments to the Naturalization Act? The reason why I ask that question is this. A number of people have been put to a great deal of inconvenience in appearing before a county court judge. I know of certain cases where the reports of the mounted police as to character and everything else that go to make a good citizen were very favourable to the men who made application, but where the applicants were re-

fused by the judge without any just ground. This is a hardship on these people. I am inclined to believe that the act should be amended so as to provide an appeal to either the minister or someone else. I have nothing against a county court judge, but supposing he is partial in some way or feels that he does not want to issue naturalization papers to a man, there is no redress, no other place where the man can go. This entails expense and inconvenience. It would be better if we would accept such men into our citizenship and let them take their part in the affairs of our country. If we did that, they would be better citizens than they are to-day.

Mr. COPP: The question of naturalization and the machinery and administration of the act are rather complicated. An applicant has to reside in the Dominion for five years. He has to make application to the clerk of the court. Notice of application has to be posted in his office for three months. Then the judge must hear the man's application. He is entitled to appear in person and be heard, and he can bring any persons there in regard to his qualifications, reputation and character, in order to prove to the judge his worthiness and proper qualifications. I quite understand that the reports that are received from different judges throughout Canada are not all uniform. Some will take exceptions different from those taken by others. That is the law, and unless there is some amendment providing for appeal to some other body or official I do not know that anything can very well be done. I shall be glad to consider any suggestions that may be made.

Mr. BEAUBIEN: I think that there should be some appeal from the decision of the judge. I know that in many cases men are refused naturalization papers on the strength of nothing more than a rumour that they intend to use it as a means of getting to the United States, and in such cases there should be some recourse.

Mr. CAMPBELL: Is the judge's decision the last word, or has not the department some power to issue certificates irrespective of what the judge may decide? I know of a great many cases of injustice in my own constituency. I do not suggest that naturalization should be made cheap and open to everyone indiscriminately, but there are cases of hardship where men who have been in the country ten and fifteen years, and even as long as thirty years are refused naturalization without good reason. I know of one case in particular of a man who has been in this country thirty years; he has raised a thoroughly respectable family and in all that time there has been nothing against the character of either himself or his family. But the old man himself is not able to read and write the English language although he speaks English as correctly as may be expected of one who cannot write it. There is absolutely nothing against him. And yet he has been definitely refused a certificate of naturalization. Naturally he feels that he has no share in the institutions of the country and he feels that his children are dubbed foreigners in the district, although they are all able to read and write and are in every way good citizens. I heartily endorse a good deal of what my hon. friend (Mr. Beaubien) has said; I think there should be some provision for an appeal from the judge's decision. At any rate, I think the minister ought to have the right to grant the certificate irrespective of the judge's decision, where he deems it wise to do so.

Mr. COPP: The act does not say anything about being able to read or write; it provides for an adequate knowledge of either English or French. As to just what "adequate" means, that is left to the judge to decide. It is not right to assume that the Secretary of State has any right to override the judge's decision. When the application comes in the department may make a further investigation if this is considered necessary; and whether or not the judge approves of the application the department can refuse the certificate. This matter was before parliament two years ago, when it was suggested that the application should be made direct to the department or to some official in Ottawa in order to avoid delay, and that if the department were satisfied that the applicant was qualified the certificate could be issued forthwith. In the present administration of the act there is of course more or less delay; the applicant has to go to the court, a notice must be posted up, the application must be heard by the judge, and the clerk must send in the report; and if the clerk is not active in forwarding the report then the matter is held up. In some cases we have actually written to the court to find out the cause of the delay. This delay should not be considered so serious a matter in view of the importance of the applicant's naturalization, but there is a strong demand, particularly from the west, that something be done to get rid of this delay. Unless the act is amended materially I do not see what can be done.

Mr. BEAUBIEN: Has the minister the power under the act to-day to grant the certificate where the judge has not approved of the application?

Mr. COPP: The department has come to the conclusion that if the judge disapproves of the application his decision should not be overridden.

Mr. MEIGHEN: I cannot lose this opportunity of congratulating the minister on having revised his opinion on that question. He was wrong for many years—

Mr. COPP: Not many.

Mr. MEIGHEN: —and I struggled hard enough to enlighten him, not, I rejoice to find, without ultimate success.

Mr. COPP: Thanks.

Mr. ROSS (Kingston): As regards the naturalization of a Canadian citizen who returns to this country after having been naturalized in some other country, I can quite understand the minister's view, that there should be uniformity. But does he not think that five years is too long a period for a Canadian citizen, returning under these circumstances, to remain in this country before securing naturalization here and being restored to Canadian citizenship?

Mr. COPP: I might personally be of the same view as my hon. friend, but this question was carefully discussed at different imperial conferences and decided upon.

Mr. ROSS (Kingston): How long ago was the decision arrived at?

Mr. COPP: The matter was under consideration from 1899 to 1914. The United States has the same provision; if one of their citizens becomes naturalized here and returns he must remain in the United States five years before he can regain his American citizenship. The same is true throughout the empire.

Mr. ROSS (Kingston): When will there be another opportunity to discuss this question imperially? The decision, according to the minister, was come to about eleven years ago.

Mr. COPP: I presume at the next imperial conference, whenever that may be.

Mr. EULER: Under our present law a British woman marrying a foreigner becomes a foreigner. I understand that some time ago the British government had under consideration a change in that respect to provide that any British woman marrying a foreigner may elect whether she desires to become a citizen of the country of which her husband is a subject or whether she desires to remain a British subject. Is there any intention on the part of the government to make a change in the law in that regard? To-day, if a Canadian girl, for example, marries an American citizen she loses her Canadian nationality and she does not gain the nationality of her husband; in a word, she is not a citizen of any country. That should not be, and it seems to me it ought to be possible in such a case for the woman to retain her nationality if she so desires.

Mr. COPP: I am informed that a resolution was passed, but no action was taken in regard to it, and we have not been consulted. Unless some further action is taken by the imperial authorities we would not be justified in proceeding with the matter here.

Mr. EULER: I was under the impression that the British authorities had communicated with the dominions.

Mr. COPP: Not on that point.

Mr. EULER: I do not like to be positive about it, but my recollection is very strong that the British government communicated with the governments of the dominions.

Mr. BAXTER: Can the minister inform me if there is any case now of a Canadian who discarded his British nationality, became a United States citizen, and subsequently desired to resume his British status, being held up by the department, or by the county court judge or whoever deals with these matters?

Mr. COPP: I do not remember any such cases.

Mr. BAXTER: Are there any in Nova Scotia? If the minister cannot answer me, I will obtain in the course of a few minutes the name of a man who, I am informed, is in the position I have indicated. There is another matter I want to advert to. A few years ago we had a discussion about delays in connection with naturalization. I do not wonder at the complaints which some hon. members then made. To-day we have been given instances of erroneous rulings made by certain county court judges. But I want to put in a plea that the country should, to some extent, bear with the necessary delays, and even the mistakes—if there are mistakes—of officials who are entrusted with this very important work. I think we ought to proceed on the assumption that the privilege of British nationality is not, per se, the right of any applicant, but is a distinct privilege granted on certain conditions. We ought to be absolutely satisfied as to the fitness of the applicant before we grant him the privilege, and personally I have not much sympathy with the

view which is occasionally put forward that it is a great hardship for a man to have to travel twenty or thirty miles to appear before some naturalization tribunal. For the consideration of members I would point out that it is far better to have a judicial tribunal passing upon a man's qualifications to become a citizen of this country than to have a political tribunal, even this parliament, passing upon those qualifications. Also, that the man who complains of having to travel a score of miles or to spend a few days to obtain a privilege so important as this, would have to travel just as many miles and spend just as much time to get before the same tribunal if he were involved in litigation with some of his neighbours. Why should we take away from a man all the obstacles which intervene between him and his accomplishment of British nationality, and yet leave him to travel perhaps a long distance and spend a good deal of his time in order to defend his civil rights? It is suggested that county court judges sometimes make mistakes. I presume they are still human, and will continue to be to the end of the chapter, and therefore they will continue to make mistakes. But those mistakes may just as well occur in private litigation, and a man may be deprived of a great many other things that are valuable to him because of the mistakes of some officials. Therefore I do not see why we should put what, after all, ought to be the highest thing in the land, a man's participation in British nationality, upon a lower plane than an ordinary lawsuit, and ask to have all formalities disregarded and make naturalization a mere perfunctory ceremony. I repeat, it is far better, even with some hindrances, to have the determination of nationality a matter for a judicial tribunal, even though it may err, than to have it in the hands of any political tribunal whatsoever.

Mr. BROWN: Mr. Chairman, I wish to refer to the point raised by the hon. member for North Waterloo (Mr. Euler). Perhaps he will recall that on two occasions I put a question to the Prime Minister in regard to this matter and with reference to the discussion that took place in the Imperial house. It appears that the press reports of that discussion were not strictly accurate. The matter was introduced into the Imperial house by Major Harvey, by way of resolution to the effect that British women should retain their nationality on marriage to foreigners unless they definitely requested otherwise. An amendment was introduced to this resolution, that they should lose their nationality unless they made a definite request otherwise. Mr. Locker-Lampson promised that if the amendment was adopted he would take the matter up with the dominion governments, but when Lady Astor questioned him as to whether he would do so in case the original resolution was carried he did not make any reply. If I remember rightly, the amendment was withdrawn, and the original resolution carried. But evidently Mr. Locker-Lampson did not assume any responsibility for communicating with the dominion governments. I have had the matter urged upon me by some of our women's organizations, and when I stated to them the situation as I find it to be now, they further urged that the Canadian parliament should not wait until the Imperial parliament acted, but that we should give to our Canadian women who might marry foreigners the right to retain their nationality unless they themselves definitely decided otherwise. For my part I should like to support that position.

Mr. POWER: Mr. Chairman, within the past few months two or three cases similar to those given have come to my personal knowledge. I may be mistaken in this, but I understand that this is a consequence of the United States quota law, the effect of which is that alien women marrying American citizens do not become citizens of the United States unless they comply with certain requirements in respect to residence. I do not know whether it is three years or five.

Mr. EULER: One year only, I believe.

Mr. POWER: Perhaps so, but there are certain residential qualifications. The hardship which results is that this class of women lose their nationality. They are no longer Canadian citizens under our law because they become citizens of the country of their husband, and they do not acquire any new nationality. It seems only fair, in view of these facts, that some such legislation as has been proposed in the British House of Commons should be introduced here. I commend to the Secretary of State the remarks made by the member for North Waterloo (Mr. Euler) and the member for Lisgar (Mr. Brown) in this regard.

Mr. COPP: I assure my hon. friends that if the legislation that is proposed in the Imperial parliament in regard to this question is placed on the statute book, we will do the same thing here. We shall be very glad to communicate with them and see if we cannot impress upon them the necessity of having this uniform legislation passed. Until that is done, under our agreement with the

Imperial parliament we are not in a position to pass this legislation.

Mr. EULER: Do I understand that the minister proposes to initiate the action himself?

Mr. COPP: We can only do it by communicating with them.

Mr. EULER: And the minister will communicate?

Mr. COPP: Yes, we would be glad to do that.

Mr. LADNER: I wish to draw the attention of the Secretary of State to two very important points in connection with the Naturalization Act as affecting particularly British Columbia, and I would hope that he will bring down some amendments to the act in that connection. I wrote to the minister on the 24th of June, 1924, regarding this matter, and he has received other communications from people in the west who are highly competent to form opinions on the subject. Under the first section of the present Naturalization Act it will be seen that any person born within His Majesty's dominions and any person born on a British ship, whether in foreign waters or not, is by the accident of birth a natural-born British subject, regardless of colour, race, assimilibility or otherwise, or whether the citizens of this country like it or not. This is a highly unsatisfactory state of the law, because there may be many reasons why such persons, through conditions of physical health, mental defectiveness or otherwise, might not make desirable citizens of Canada; or they might be persons who could not be accepted in this country. In many cases they become a public charge and remain so all their lives. Another point is the question of dual nationality. A number of nations have provided in their law that when their citizens come to a country such as Canada and acquire naturalization or citizenship they also retain for all the purposes of their country of origin the obligations and rights of citizens of that country. But some nations, Japan and others, have passed a law by which a citizen of dual nationality cannot obtain citizenship in their country, and the matter is becoming one of considerable interest and concern to the people of British Columbia. I think the time has arrived when the minister could properly amend the law so as to make it conform with that of almost all other nations. There are several other matters of lesser importance to which I could draw the attention of the minister, but at this late hour I will not do so; they have already been placed before his department. They are of considerable importance to the west and they have been the subject of resolutions of public bodies and of discussion in the press, and I am sure that amendments could be introduced dealing with these points with resulting benefit to the country as a whole. I repeat that we should do away with dual nationality and with the possibility of people born on a British boat automatically obtaining citizenship in this country. Is it the intention of the minister at this session to deal with these by amendment to the Naturalization Act?

6 p.m.

Mr. COPP: My hon. friend has mentioned only a few of the many difficulties that we encounter in the administration of the naturalization law.

Mr. LADNER: It is not a question of administration; it is the law itself.

Mr. COPP: Well, the suggested amendments. Amendments have been suggested from different quarters in regard to our naturalization as well as our other laws, and the officials are giving them consideration. As I have already told my hon. friend, we appreciate the difficulties that have arisen; we realize the importance of the suggestions made, but we have an arrangement with the Imperial authorities whereby our naturalization law shall be kept uniform with theirs.

Mr. LADNER: The minister is not suggesting that these matters would in any way interfere with that?

Mr. COPP: We are discussing all these matters. It is not the intention of the department to bring down any amendments to the Naturalization Act this year, but we hope as the result of conference to be able to meet the many difficulties that we experience in the administration of the law and to make some changes. In reply to the hon. member for St. John and Albert—

Mr. BAXTER: I may say to the minister that I have since obtained some information, and the matter will be taken up privately with him.

Mr. LADNER: I wanted to ask the minister whether the conference to which he refers is to be a conference of dominions, or provinces, or nations, or what?

Mr. COPP: The Imperial conference. We hope to discuss the matter with representatives of the Imperial government.

Mr. LADNER: Is that conference to take place this summer?

Mr. COPP: We do not know, but we hope we may have one.

Mr. WOODSWORTH: Representations have been made to me that it has been made very difficult in many cases for foreigners to become naturalized. There are a large number of workers in nearly all our northern camps and throughout the prairie provinces who were born outside of Canada; in many industries they form as high as fifty or sixty per cent of the workers.

Mr. COPP: If my hon. friend will permit me, there is a special vote under which matters affecting naturalization can appropriately be discussed, and perhaps he would be willing to leave this matter over until that item comes up.

Sir HENRY DRAYTON: A good deal of the expense in this department has been in connection with the settlement of claims against Germany, and the idea was that there would be a considerable contraction in expense as this adjustment proceeded. There is some contraction, but it is not very considerable. I should have thought that the adjustment of these claims would be now pretty well advanced and that considerable retrenchment would be made. Another reason why we had to have a large number of employees was because of the issuing of passports, and I understood that that also was in the way of being cut down.

Mr. COPP: Passports are not under my department.

Sir HENRY DRAYTON: How does the matter of the adjustment of enemy claims stand at the present?

Mr. COPP: There is a considerable saving under this head—a reduction from $85,000 to $35,000. There is another vote, however, under which this can be discussed.

Item agreed to.

Progress reported.

LAKE OF THE WOODS AND RAINY LAKE LEVELS

Mr. SPEAKER: I have the honour to inform the House that a message has been received from the Senate informing this House that the Senate doth unite with the House of Commons in the approval of the convention and protocol between His Majesty, in respect to the Dominion of Canada, and the United States of America, for regulating the level of the Lake of the Woods, and of identical letters of reference submitting to the International Joint Commission certain questions as to the regulation of the levels of Rainy lake and other upper waters, laid upon the table of the House on Thursday, the 26th of February, 1925, which were signed at Washington on the 24th day of February, one thousand nine hundred and twenty-five, and which were signed on behalf of His Majesty in respect of Canada by the plenipotentiary therein named, by filling in the blank space therein with the words "Senate and".

[Mr. Ladner.]

At six o'clock the House adjourned, without question being put, pursuant to rule.

Thursday, May 14, 1925

The House met at three o'clock.

REPORTS OF COMMITTEES

Third report of the committee of both Houses on the Printing of Parliament.—(Mr. Marcil, Bonaventure.)

Fourth report of the select standing committee on Railways, Canals and Telegraph Lines.—(Mr. Cahill.)

PRIVATE BILLS

FIRST READINGS

Bill No. 120, from the Senate, respecting The Essex Terminal Railway Company.—Mr. Healy.

Bill No. 121, from the Senate, for the relief of Dorothy Strathy.—Mr. Preston.

Bill No. 122, from the Senate, for the relief of Minnie Williams Goldberg.—Mr. Jacobs.

Bill No. 123, from the Senate, for the relief of Ruth Dorothy Rutenberg.—Mr. Baxter.

Bill No. 124, from the Senate, for the relief of Charles Arthur Sara.—Mr. Duff.

Bill No. 125, from the Senate, for the relief of Frederick George Randall Lacey.—Mr. Ryckman.

Bill No. 126, from the Senate, for the relief of Mollie Weiner.—Mr. Jacobs.

Bill No. 127, from the Senate, for the relief of Norma Evelyn Stevens Hammond.—Mr. Church.

QUESTIONS

(Questions answered orally are indicated by an asterisk).

CIVIL SERVICE—SALARY REVISION

Hon. Mr. STEVENS:

1. Has the government received a full report on the salary revision of the Civil Service?

2. If so, is it the intention of the government to bring the same into operation this year?

3. Is it the intention of the government to introduce any legislation providing fixed labour laws for members of the Civil Service at 44 hours per week?

4. What action has been taken in connection with the request of the Amalgamated Civil Servants, having reference to, (a) resintatement of eastern postal employees who were dismissed; (b) the right of government employees to petition; (c) dismissal of O. Power, Vancouver, British Columbia?

Hon. Mr. COPP:

1. Yes.

2. Yes. The necessary orders in council authorizing salary revision have been passed and action is now proceeding to apply the revision this year.

3. No.

4. (a) The Civil Service Act passed in May, 1918, does not make provision for the reinstatement of dismissed employees.

(b) Employees have never been refused the right to petition, and in fact, are regularly doing so.

(c) Representations from the Amalgamated Civil Servants were received and, after the consideration, the reasons for Mr. Power's dismissal were given, which apparently satisfied the Amalgamated Civil Servants, as nothing further has been heard from them in regard to this matter.

MR. ALEXANDER McLEAN, VANCOUVER

Hon. Mr. STEVENS:

1. Did the Board of Pension Commissioners prefer a charge of perjury against a veteran of the Great War, named Alexander McLean of Vancouver?

2. Was the said charge tried before Mr. Justice Macdonald, a justice of the Supreme Court, and jury at Vancouver?

3. Was the Minister of Soldiers' Civil Re-establishment advised of the intention to prosecute said Alexander McLean?

4. At whose request, or upon whose report was the said charge preferred?

5. Before authorizing prosecution of a veteran of the Great War upon so serious a charge as perjury, did the government, or the Board of Pension Commissioners, exhaust every possible source of information as to the truthfulness of the statements of the said war veteran?

6. What was the finding of the jury, and what was the nature of the charge of the said Justice W. A. Macdonald to the said jury?

7. Has the government been advised that, as a result of the said trial, Alexander McLean has been honourably acquitted and his name cleared?

8. Before preferring a criminal charge against the said Alexander McLean, did the officials having the matter in hand, secure from the said Alexander McLean the material evidence in his possession which was later produced at the said trial? If so, why was the said charge laid? If not, why was not every effort made to secure the evidence in fairness to the said Alexander McLean?

9. In view of the result of the said trial, has the government instituted enquiry to ascertain definitely who, among the officers acting on behalf of the Board of Pension Commissioners and the government, were responsible for the unwarranted blunder, and humiliation and embarrassment of said Alexander McLean? And will the government take necessary steps to punish and discipline all officials shown to be responsible?

Hon. Mr. BELAND:

1. A charge of perjury was laid against an ex-soldier known as Alexander Archibald McLean, of Vancouver.

2. It is understood that it was so tried but the department is not yet in receipt of any report upon it from the Attorney General of British Columbia or his agents, in whose hands lay the conduct of the trial.

3. No.

4. The official file of documents in the case was submitted by the Board of Pension Commissioners to the Department of Justice with a view to prosecution and proceedings were instituted accordingly.

5. Yes.

6, 7. 8 and 9. Information is not available pending receipt of report referred to in 2.

DISTRIBUTION OF CENSUS

Mr. BROWN:

When will the full report of the census of 1921 be available for distribution?

Hon. Mr. LOW: Three additional volumes during the present year; the remaining two volumes in 1926. Most of the data which will appear in these volumes have already been issued in bulletin form.

STAMP TAX COLLECTIONS

Sir HENRY DRAYTON:

1. What amount was collected in the fiscal year last closed under the tax requring stamps to be affixed to cheques, receipts, etc?

2. Do the returns made enable the government to give the amount collected for stamps required for receipts?

3. If not, what is the amount estimated to have been received for stamps on receipts?

Hon. Mr. CARDIN:

1. $9,321,890.82.

2. No.

3. No information available upon which to base an estimate.

REBATE OF DUTY ON CHEESE

Mr. STEWART (Leeds):

1. What is the aggregate amount of drawback or rebate of duty allowed and paid to importers of cheese used in the manufacture of kraft or loaf cheese exported during the fiscal year 1924-25?

2. To whom were such rebates paid and what amount was paid to each party receiving such rebate?

Hon. Mr. CARDIN:

1. Nil.

2. Answered by No. 1.

BUSINESS OF THE HOUSE

ASCENSION DAY ADJOURNMENT

Right Hon. W. L. MACKENZIE KING (Prime Minister): I move, in accordance with the notice given:

That when this House adjourns on Wednesday, the 20th of May, instant, it stand adjourned until Friday, the 22nd instant.

Mr. BAXTER: What is the intention of the right hon. the Prime Minister with regard to sitting on Monday, May 25? I should like to know if the House will sit on Victoria day, or whether we will have a holiday in honour of the good Queen Victoria. Hon. members will probably want to make arrangements of one kind or another.

Mr. MACKENZIE KING: The government thought it would be meeting the wishes of the House generally if we sat on the 25th May in order to get through the business as soon as possible.

Motion agreed to.

HYDRO-ELECTRIC POWER EXPORT TAX

On the Orders of the Day:

Sir HENRY DRAYTON (West York): Has any action been taken in connection with the appeal by the municipalities of Ontario in regard to the export tax under firm contracts?

Hon. J. A. ROBB (Acting Minister of Finance): My recollection is that there has been no appeal from the government of Ontario. We have had representations made to us on behalf of the Hydro-Electric Commission.

Sir HENRY DRAYTON: My hon. friend did not get my question. It was on behalf of the municipalities of Ontario that are interested in hydro-development, in connection with firm contracts by which they are bound. I think my hon. friend recollects the deputation. What, if any, action has been taken?

Hon. T. A. LOW (Minister of Trade and Commerce): Representations have been made, and the whole matter is under consideration.

BUSINESS OF THE HOUSE—FURTHER LEGISLATION

RAILWAY FREIGHT RATES

On the Orders of the Day:

Hon. H. H. STEVENS (Vancouver Centre): I notice that the Premier of British Columbia has been here for a couple of weeks, I presume in connection with the freight rates question. Is the government ready with its legislation in regard to the freight rates question, and if so, does it include something to provide for the claims which British Columbia has been advancing for so many years so ineffectually?

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals): I think that to answer fully my hon. friend's question would be to say that the government is not ready with its legislation.

HOME BANK

Mr. H. C. HOCKEN (West Toronto): When may we expect the Home Bank bill?

Hon. J. A. ROBB (Acting Minister of Finance): We would like to make some progress in getting the budget resolutions off the slate before we bring up any other legislation.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): What harm would it do to let parliament know what legislation is going to be brought down?

Mr. ROBB: We will let my right hon. friend know in good time.

Mr. MEIGHEN: It is now three and a half months since parliament opened and none of the important legislation is down yet. We have no idea what it is going to be.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I take exception to my right hon. friend's statement that none of the important legislation is down yet. I think a great deal of it is down. There is other important legislation to be brought down and I hope it will be brought down very shortly. Answering the hon. member for West Toronto, I think probably within another fortnight we shall be able to bring in the bill to which he has just referred.

Hon. H. H. STEVENS (Vancouver Centre): What did the Acting Minister of Finance mean when he said that he would like to make some progress in getting the budget resolutions off the slate? What delay has been occasioned in the last two or three days?

Mr. ROBB: I am not referring to the last few days. I am referring to the period that has elapsed since the introduction of the budget.

Mr. MEIGHEN: How would that impede the bringing down of any other legislation? It would not impede it in the slightest degree. That is no excuse.

SOLDIER SETTLEMENT LANDS

Mr. E. J. GARLAND (Bow River): Is the government prepared to bring in any legislation respecting the revaluation of soldier settlers' land, live stock and equipment?

Hon. J. A. ROBB (Minister of Immigration and Colonization): Yes.

DOMINION ELECTIONS ACT AMENDMENTS

Mr. WILLIAM IRVINE (East Calgary): The Solicitor General (Mr. McMurray) promised the House that there would be some legislation in connection with the Dominion Elections Act. Is it still the intention of the Government to bring it down?

Right Hon. W. L. MACKENZIE KING (Prime Minister): Yes, it will be brought down very soon.

CANADA—FINLAND TREATY OF COMMERCE

Hon. J. A. ROBB (Acting Minister of Finance) moved that the House go into committee to consider the following proposed resolution:

That it is expedient to introduce a measure to provide that goods produced or manufactured in Finland shall receive treatment as favourable as that accorded to goods produced or manufactured in any foreign country so long as goods produced or manufactured in Canada enjoy in Finland the same treatment as is enjoyed by similar goods produced or manufactured in the United Kingdom, as set out in Article 23 of the Treaty of Commerce and Navigation between the United Kingdom of Great Britain and Ireland and Finland, made at Helsingfors the 14th day of December, 1923.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

Mr. MEIGHEN: The House will readily see the great difference between this resolution as a matter of both form and substance and the resolution which we were asked to pass as the antecedent to the Grain Act. This resolution at least sets out what nature of legislation the government intends. Would the minister be good enough to give us a review of the history of the enactment?—that is to say: what has led up to this; what has been our trade relations with England; how has it come about that we have entered into this arrangement; and specifically what is Canada to get in return for the concessions made.

Mr. ROBB: This will involve practically the same legislation as we had last year in a bill that was passed through this House without very much objection if any, but that was defeated in the Upper Chamber. As my right hon. friend knows, the population of Finland is about 3,335,000. The trade of Canada with Finland has been considerable and it is a favourable trade for Canada. For instance, for the ten months ended January, 1925, the total importations from Finland amounted to $13,581 and the total exportations to Finland of goods produced in Canada amounted to $908,777. The imports from Finland include the following:

Cream separators	$2,187
Wrapping paper, kraft	2,777
Tissue paper	3,842
Other paper and manufactures of	628

Mr. MEIGHEN: The total of that would be only a few thousand.

Mr. ROBB: Yes, just a few thousand on kraft paper. When this goes through they will come under the French treaty which is 20¼ per cent on this particular article, and the present tariff being 25 per cent they will then have an advantage of 4¾ per cent. The total imports into Finland of kraft paper amounted to $2,777. Our exports to Finland are largely of farm products. The list is as follows:

Flour	$787,995
Oatmeal and rolled oats	50,751
Clover seed	2,880
Lard	4,984
Felt	6,060
Pipe and tubing	11,695
Adding and calculating machines	18,000
Woodworking machinery	4,095
Automobiles	17,058
All other items	5,259
Total	$908,777

Mr. HOEY: What is the duty on flour entering Finland?

Mr. ROBB: Finland has two tariffs, a general and a conventional. I have no record of the duty on flour, but the duty on passenger automobiles under the general tariff is 20 per cent.

Mr. FORKE: Is there any duty on flour into Finland? I should not think so.

Mr. ROBB: There is a duty on flour and I will tell my hon. friend why I think so. The matter was brought to my attention last year by one who I think is the largest miller in Canada. He was complaining that this trade agreement had been killed in the Senate and those to whom he made the complaint retorted that this had been done by his own friends, the kraft people; for it so happened that he was also president of a kraft mill. He was disturbed because it meant a loss of trade in some way to him. The duty on passenger automobiles is 20 per cent under the general tariff and 8¾ per cent under the conventional tariff, and that I

think is a fair indication of the general trend of the duties. Under article 5 of the treaty we shall be entitled to whatever favoured nation concessions Finland gives. There is no preference in regard to flour but there is a duty of about 2 cents per kilogram.

Mr. MacLAREN: Are the imports from Finland limited to those coming direct through Canadian ports, as is the case in other treaties?

Mr. ROBB: Yes; the imports under all favoured nation concessions come through Canadian ports.

Mr. MEIGHEN: I do not think the minister fancies that he has given us even a fraction of the information we ought to have before coming to a conclusion.

Mr. ROBB: If my right hon. friend desires more I shall be glad to give it.

Mr. MEIGHEN: Here we are proposing to give concessions to Finland in respect of a very important article of Canadian produce, an article in respect of which Finland is in the world to-day a very keen competitor. It may be wise to give these concessions if we get sufficient to return, but I fancy that no hon. member has yet received from the minister information in regard to one single thing we get in return. He says that we shall get the conventional tariff subject to certain conditions. That compels us to look at our exports and see whether these concessions are any good to us. Our principal export to Finland is flour; I gather from the minister's figures that it is more than all the rest together, four times over. And the minister tells us that he does not know whether or not there is a duty on this commodity into Finland.

Mr. ROBB: I said there was a duty but no preference.

Mr. MEIGHEN: But we need to know not only that there is a duty but what it is, whether or not it is to be changed by the treaty, and if so to what extent. That is the principal single item of our exports to that country, over-shadowing all the others, and we ought to know something about it.

Mr. ROBB: I have told the committee already that there is a small duty on flour but no preference. But I submit that there is a considerable advantage to Canada in having this treaty go through. I know where the opposition to this treaty comes from; It was the subject of a boast in the upper house last year. It was then stated that the opposition came from the kraft people. But surely Canada need not be afraid of this treaty so far as our kraft imports are concerned, the total from Finland being, as I have said, some $2,777. We are getting concessions on automobiles and other products and with these, in a market of 3,500,000 people, we shall be able to develop some business. What is the situation in regard to the kraft mills of Canada? The production in Canada was $4,000,000 and there was imported $5,464,000 of wrapping. The production of manilla paper was $4,464,198 and all other wrapping paper $3,201,976, or a total production of $7,666,174. There was imported into Canada from all countries during the fiscal year ending March 31, 1924, $564,890, making a total for production and imports of $8,231,064. That was the production and importations.

Mr. MEIGHEN: Production of what?

Mr. ROBB: Of kraft and wrapping papers in Canada. What were the exports? Let us keep in mind that the total quantity that came in from Finland was $2,770, but during that period Canada exported $3,153,515. And they are afraid of an importation of less than $3,000!

Mr. STEVENS: What is the duty on kraft?

Mr. ROBB: I gave that a few moments ago—25 per cent. Under this agreement Finland will get a duty of 20¼ per cent; she will have a preference of 4¾ per cent. My hon. friend referred to the question of flour. We have representations made to us on behalf of the Canadian Millers' Association, and I quote a letter addressed to the Minister of Trade and Commerce, (Mr. Low) on March 7, 1924:

> I understand negotiations are pending with regard to a commercial treaty between the United States and Finland.

The United States are our competitors in exporting flour.

> I believe that a commercial treaty now exists between Great Britain and Finland and I believe Canadian goods would come within this treaty.
>
> As the Finnish trade in flour is still in the hands of United States mills to a large extent, we would like to suggest that some action be taken through your department to protect the interests of Canadian flour shippers in the event of this treaty between the United States and Finland working to our detriment.
>
> This is a valuable market and one we would like to maintain.

For the moment I had quite forgotten that the United States were negotiating for a special treaty with Finland.

Mr. MEIGHEN: Who signs that letter?

Mr. ROBB: F. C. Cornell, who at that time was secretary of the Canadian Millers' Association.

Mr. MEIGHEN: I do not think we have much light yet. We are clear on one thing only—at least I am; we are conceding to Finland a reduction of duty on kraft paper from 25 to 20¼ per cent. The minister starts out by saying that he knows where the opposition is coming from. I have not seen any yet. I am endeavouring to get some light. If the minister wants to throw an aspersion on any member of this House,—

Mr. ROBB: No.

Mr. MEIGHEN: —that he has been influenced by any kraft paper man or anybody else not to do what is in the public interest, I hurl it back. I tell him first, that neither last session nor this did any kraft paper man speak to me directly, indirectly or in any other way with respect to the Finnish treaty of last session or this, nor did I know until now that this was a re-introduction of the Finnish treaty in another form. I assume the makers of kraft paper would be opposed to any tariff concessions. That is not something to introduce into the debate as a sort of sinister feature likely to colour the actions of hon. members. I set out to find what we are giving and what we are getting. We have learned a lot of what we are giving—4¾ per cent on kraft paper. I am not yet informed what we are giving in respect of other papers, or if we are giving anything.

Mr. ROBB: We are giving them our intermediate column on all business.

Mr. MEIGHEN: It is considerable, but just what it means one does not know. One has to analyse the business to ascertain whether it is important or not. When we come to the other side we have very little, so far as specific application is concerned, to enlighten us on what we are giving, except as to kraft paper. We do not know what its application is specifically. Going the other way, we find our exports of flour are $500,000.

Mr. ROBB: They are $700,000.

Mr. MEIGHEN: That is still more. The next highest is $50,000, and the rest is very, very small, $6,000. So flour overshadows all other exports many, many times over.

Mr. ROBB: It does.

Mr. MEIGHEN: The minister tells us immediately afterwards what we get. There is a duty on flour into Finland, there is no preference to anybody. So we are not getting anything on flour, and what the letter of Mr. Cornell had to do with flour I do not know. Naturally he was anxious that, if necessary, steps should be taken to prevent the United States getting anything better than we are getting.

Mr. ROBB: That is it.

Mr. MEIGHEN: But, first of all, we do not know if the United States has got anything, and, in the second place, according to this resolution we would not be protecting ourselves at all. This resolution merely says that Finland shall give in respect of our goods as low a tariff as she gives the United Kingdom —not as low as she gives the United States.

Mr. ROBB: She gives the United Kingdom the most favoured nation treatment, and if she gives the United States anything lower than is now contained in the arrangement with the United Kingdom, automatically the United Kingdom will receive the same treatment.

Mr. MEIGHEN: She does not give the most favoured nation treatment to anybody on flour. Of course, in the future she might. That letter was written a year ago last March, and the United States cannot possibly have any preference on flour, because the minister has already said there is no preference to any nation on flour.

Mr. ROBB: Not yet.

Mr. MEIGHEN: And I would not presume that the negotiations are continuing. As a matter of fact the United States do not make treaties with any other nation giving a preference in their markets. I think the minister will have to admit that the United States make their tariff as they think best suits themselves, and they give no preferential treatment to any country except to Cuba, which is part of themselves. So there is not any bugaboo to be afraid of there. In respect of flour, then, we get absolutely nothing. The minister suggested that we get something on automobiles—he did not tell us what it was. I should like to know what it is. But I do not want any hon. members to be under the delusion that we are getting something in respect of our great flour export business to Finland, for we are getting nothing at all.

Mr. ROBB: We are getting a concession on automobile wheels. The duty is 20 per cent under the general tariff, and we will get 8¾ per cent.

Mr. MEIGHEN: Do we sell them any automobile wheels?

Mr. ROBB: We have a pile of correspondence from the manufacturers of automobiles and agricultural implements urging us to get this concession put through.

Mr. MEIGHEN: I think it would be not at all unlikely that we would be selling them automobile wheels, but I should like to know for sure.

Mr. GOOD: Mr. Chairman, I wonder if it does not strike hon. members as rather curious, or at all events as rather signficant, that this and all similar questions are usually discussed wholly from the standpoint of our interests as producers. I hear constantly about "giving" and "getting." Now, I submitted to the House the other day, that public policy, particularly in such matters, ought to be based on the interests of the citizens as consumers rather than as producers. And yet day after day, week after week, year after year, public policy is debated here and elsewhere wholly, or almost wholly, from the standpoint of our interests as producers. My right hon. friend (Mr. Meighen) talks about our "giving" concessions to Finnish producers: they are "getting" something if we "give" them a market; we are "getting" something if they "give" us a market. If we give to Finnish producers a market here, are we not entitled to consider what we are getting as buyers? I submit that we are looking at these questions in a topsy-turvy way. I am astonished, disturbed and discouraged at the persistent upside down attitude of the people toward these matters. There is sound ground for the view that public policy ought to be based on our interests as consumers rather than on our interests as producers. I submitted argument in that connection the other night when speaking on the budget. But apparently nobody ever dreams in these discussions of considering the interests of Canadian citizens as consumers. Personally I am in favour of freer trade relations with any country and I think this measure is perfectly in order whether we are getting or giving, because if we can break down these trade barriers producers and consumers are both bound to benefit. I rose only to call the attention of the committee to the very curious situation that faces us.

Mr. ROBB: Replying to my right hon. friend (Mr. Meighen), the general tariff on passenger motor cars is 20 per cent. We will get the conventional tariff, 8¾ per cent.

Mr. MEIGHEN: Have we sent them any?

Mr. ROBB: Yes, in the fiscal year ending in 1924 we sent them $13,523 worth.

[Mr. Meighen.]

Mr. MEIGHEN: About six cars.

Mr. ROBB: I quoted the tariff a moment ago, but I might mention that there is a duty per kilo on passenger motor cars not weighing more than 900 kilogrammes. The general tariff is 3.50 markkas, the conventional tariff is 1.81 markkas. For those over 900 kilogrammes the general tariff is 5 markkas and the conventional tariff 2.18 markkas.

Mr. MEIGHEN: If we are selling even six cars to Finland it is something, but it is rather picayune as yet, I am afraid. I am always grateful to be set right and be put back on my feet instead of my head by the hon. member for Brant. I entirely agree that we are all consumers in this world, and in Canada we are not only consumers, but under the present policy we are being consumed. I think I got the right application of the hon. member's theory; that the lower our duties are the better for us, because it will be easier to live. On the same principle the higher Finland has hers the better for us, because if we cannot sell them our wheat it will make wheat cheaper here. No doubt the hon. member is very anxious, therefore, to get wheat down so that people can live more cheaply in Canada. People always talk on these points until they get responsibility, then they begin to think more seriously. In this case it is just a matter of whether or not a trade arrangement adds to the productive industry of this country more than it detracts. That is what we have to weigh. Will the minister tell us what other imports from Finland are affected here, before we go into the exports, besides the kraft paper? There must be something else; I cannot help thinking that if there has been any serious objection from the kraft paper people it must be because the whole information is not given us. Surely in the face of $2,000 of imports as against $3,000,000 of exports there would not be much occasion for worrying about a 4¼ per cent reduction. There must be more significance to it than appears on the surface.

Mr. ROBB: I will give the imports again, for the ten months ended January, 1925. The first item is cream separators, $2,187. My right hon. friend can figure out for himself what advantage that is going to be to Finland. Cream separators are on our free list. Then there is wrapping paper, kraft, $2,777. On goods from Finland there will be a reduction of 4¾ per cent.

Mr. CRERAR: A little less than $100 altogether.

Mr. ROBB: On tissue paper, same reduction, the value of the import was $3,842; other paper and manufactures, $628.

Mr. MEIGHEN: What about newsprint?

Mr. ROBB: Newsprint is not mentioned. They do not ship any to Canada.

Mr. MEIGHEN: But they may.

Mr. ROBB: They may, and it will not hurt anybody if they do. Flagstone, granite, if manufactured, $1,487. The general rate is 35 per cent and the intermediate 32½. We give them a reduction of 2½ per cent. All the other articles total $2,660. My right hon. friend can figure out how much Finland is going to get out of this deal.

Mr. CRERAR: What is the total volume of our imports from Finland annually and our exports to Finland?

Mr. ROBB: The total value of the imports for the ten months ended January, 1925, was $13,581, while the total exports to Finland were $908,777. The following were the items of our export to Finland for the fiscal year ended March 31, 1924:

Rye	$ 173,600
Oatmeal and rolled oats	66,690
Flour of wheat	1,322,501
Lard	67,425
Tires	7,219
Pipe and tubing	37,341
Mowing machines	28,283
Cultivators	1,510
Other agricultural tools and implements	699
Ploughs	2,526
Adding machines	19,125
Other machinery	7,820
Automobiles	13,523
Other vehicles	3,200
Other articles	5,817
Total	$1,754,279

Our total imports during the same period amounted to $6,090.

Mr. MANION: Is it not possible that we are importing quantities of Finnish goods through some other country—England, for example? The figures are so vastly different that one would almost think that was being done.

Mr. ROBB: I have no record of that. That would be another question.

Mr. EVANS: Under this resolution we are asked to consider what practically amounts to a treaty of reciprocity with Finland. I am at a loss to know why the government goes all round the world seeking to make trade treaties with all these small countries, while they pass by the one country with whom it is natural we should trade, the United States.

[Mr. Crerar.]

Mr. ROBB: What evidence has my hon. friend that the government have not made an attempt to get a treaty with the United States?

Mr. EVANS: When Mr. Fielding brought down the first and second budgets of this parliament, he emphasized the point that we should push for reciprocity with the United States. Since then no member of the cabinet has made any report at all concerning what they have done to bring this about. The United States in many articles are offering us reciprocity. They place on the free list many articles that we produce in Canada, including agricultural implements and boots and shoes. This year, instead of seeking reciprocity with that great country, which is our natural market for many of our products, we have given the United States a slap in the face by increasing the duty on coal.

In answer to the right hon. leader of the opposition, we can classify the consumers of this country, and there is a class of consumers who really have to pay all the unfair charges which unfair tariff measures place against us. For instance, most of these unfair charges are passed on until they come down to the agriculturist, and the market of the agriculturist has been closed in, and no treaty has been made with the United States, which I believe could have been done had we been so minded. There is a country that calls for our store cattle from western Canada. We can raise all the store cattle we like in western Canada on the roughage which is consequent in a grain growing area. In the United States they have the feed and the corn to finish and fatten those beeves, and with the climate as it is, that can be done much more profitably in the United States than with us; but, instead of seeking reciprocity with that great country, which is the natural one for us to trade with, we go all round the world seeking trade treaties with other countries which do not amount to anything; and in all these treaties one thing is noticeable, that organized industry in this country is favoured every time as against the consumer. That class of our population seems to have the ear of the government at all times. To bring the cost of living down does not seem to be the aim of our legislators yet, and until that is done I think any trade treaty is useless while the cost of production and the cost of living in this country remain so high. I think it is a

desirable thing that we should trade with Finland. I am in favour of it, but I think every effort should be bent towards seeking a reciprocal trade arrangement with the country to the south of us.

Mr. McQUARRIE: The minister has referred to the comparatively small total of our imports of kraft paper from Finland. I presume the matter which is troubling the kraft paper manufacturers is that under the proposed reduced tariff the imports will be greatly increased. I think the minister must be aware that the paper mills which produce kraft paper in this country have been having a very hard time. I am informed that one mill in Ontario has closed down altogether because it cannot get a market for its kraft paper.

Mr. ROBB: It so happens that the president, I think, or at all events a director of the kraft mill at Dryden, is one of the men who is urgent that we get this treaty through so that he will he taken care of there in regard to flour.

Mr. MEIGHEN: He is in the flour business too. But the minister says this does not affect flour.

Mr. ROBB: It will, if the United States gets in.

Mr. MEIGHEN: If!

Mr. McQUARRIE: I have received communications from British Columbia concerns, which I forwarded to the minister some time ago. One is from the Westminster Paper Mills. This is a new industry which we expected to be quite an asset to the community as it would employ quite a number of men. I have received a letter from that concern which reads in part as follows:

> Understanding that the proposed preferential treaty with Finland, which at the last session was thrown out by the Senate, and under which the duty on kraft wrapping paper imported from Finland into Canada would be reduced from 25 per cent to 20½ per cent, we desire to vigorously protest against any reduction in the rate of duty on importations of wrapping paper into Canada, from Finland or elsewhere.
>
> Burdened with high labour costs and heavy taxes, and harassed by competition from European paper mills, who have the advantage of depreciated exchange, and low labour costs, it is with difficulty that the Canadian wrapping paper mills hold their heads above water, and in confirmation of representations made to the Minister of Customs some time ago asking for an increase in the rate of duty to 35 per cent, any change in the rate of duty on importations of kraft paper into Canada, instead of being downwards, should be upwards.

[Mr. Evans.]

Then I have another letter from the Pacific Mills, Limited, Vancouver. They have mills at Ocean Falls, B.C. All these paper concerns, as I have said, have been having a hard time.

Mr. ROBB: Do the Pacific Mills also make newsprint?

Mr. McQUARRIE: I think they do. As the minister knows, the paper mills have been having a hard time, and if Canada is going to be the great country we want it to be, surely we must do something to encourage industries to locate and stay in this country. We in British Columbia are very much interested in this industry, particularly because these mills are manufacturing the natural resources of our country. Now how are you going to do that if you allow importations unfairly to come into this country and put our mills out of business? I think it is a very great mistake to reduce the duty on kraft paper; I agree with the paper concerns that this duty, instead of being reduced, should be increased. We must give our industries a chance to live; otherwise we are going backwards instead of going ahead.

4 p.m.

Mr. GOULD: It seems to me rather lamentable that an hon. member should rise in his place and protest on behalf of the paper industry in this Canada of ours, which is filled with the natural resources from which paper is made, and show his fear because there is an import of kraft paper from Finland to the amount of $2,770, which is the figure the minister has given. It seems to me belittling on the part of the hon. member and more belittling on the part of those engaged in the industries who would ask him or any other man to stand up in the House of Commons and plead for them, and even go so far as to protest that the possibility was that they might be put out of business. Who are the manufacturers that they fear the granting of such privileges as these? And what privileges are they asking the people of Canada to stand for that they will take up such a picayune thing and make a protest on the floor of the House? It should be to the shame of the institution that they stoop to such a thing as to profess fear of competition from a country with few natural resources such as Finland has to provide for the production of kraft paper, as against the great natural resources of Canada. I anticipate that the minister has a great hope that our exports to Finland will increase. On the other hand, we

have reason to believe that the statesmen of Finland are confident that their exports to Canada will increase. That is the purpose. But apparently the policy adopted in order to develop our industries is to erect a barrier of taxation and then to spend the money collected by taxation in going round the world trying to get favoured nations treatment, trying by some means to overcome the conditions we ourselves have created. I am prepared to believe that all the difference it will make in our tariff between Finland and Canada will be eaten up by the cost of the few words of discussion which have taken place in the House. We have erected a barrier, and now we try to crawl out and evade the barrier we have created. I endorse the sentiment expressed by the hon. member for Brant (Mr. Good) that we are approaching these subjects from a wrong point of view. The loud protest comes from some institutions which are producing their manufactures from our natural resources, of which we have plenty, but now by the admissions they make and the privileges they ask they confess their inability to compete with other countries. I do not think any government of this country should listen to them but rather should read them a lesson—tell them that an all-wise Providence gave them these natural resources, and if they are industrious and capable they can stand upon their own feet and not create an extra burden upon the country.

Mr. CHAPLIN: How many other countries manufacturing kraft paper will have advantage of this treaty under the present favoured nations clauses of the treaty?

Mr. ROBB: No other countries manufacturing kraft paper will automatically come in. Of course there may be some countries which have the preference now, but no other countries will be added. Sweden had the privilege, and Sweden shipped in $48,776 worth, and the United Kingdom has the preference and they have something even better, they have the full British preference; and they shipped in last year $44,430 worth.

Mr. CHAPLIN: While we are on the subject I would like to inquire what the importations of paper have been from Japan and from Norway, because both those countries are manufacturers of kraft paper; they will come under this treaty and will have the benefits of it.

Mr. ROBB: Japan will not be any better off or any worse off than to-day. Whatever preference Japan has now will not be affected in any regard by this treaty.

Mr. FORKE: Would the minister repeat again, what amount of flour was exported from Canada to Finland?

Mr. ROBB: For the ten months ending January, 1925, the exports of flour were $787,995. For the previous year ending 31st March, 1924, the exports of flour were $1,322,501. That was for twelve months and the other period was for ten months. There is a letter in the file which may interest my hon. friends opposite, from the Goldie Milling Company, urging us to make this arrangement, as they feared the United States millers might possibly come in.

Mr. FORKE: Has the minister an idea by what method Finland pays for that flour?

Mr. ROBB: We have no complaint from the millers that they have not been paid. It was the millers who urged us particularly to see that they were protected against the possible discrimination against them by the United States millers.

Mr. CHAPLIN: Will the minister explain how it comes that Japan will not have any advantage from that treaty, or will not be put in a better position than at present?

Mr. ROBB: Because Japan now has all that we propose to give Finland.

Mr. MEIGHEN: Under what?

Mr. ROBB: Under the French treaty. They are a favoured nation.

Mr. McQUARRIE: I must take exception to the remarks of the hon. member for Assiniboia (Mr. Gould). It seems to me that they were entirely uncalled for. I am very much surprised that a man of his supposed intelligence should rise in this House and make a speech such as he has just favoured the committee with. I think it is without doubt the most narrow-minded speech I have ever listened to in this House, and we have had some of them from his quarter before. Besides being unfair to me, inasmuch as he possibly insinuated that I had some interest in some of these paper concerns, which is entirely untrue and unfounded, he displayed his ignorance of the few remarks which I made. He entirely failed to grasp the significance of the argument I advanced. The point I tried to make was this—and if I had some way of injecting it into his brain cells, I would do so—that it was not at all a matter of the amount of imports of kraft paper we are receiving from Finland at the present time, but what we might be expected to receive if the duty were decreased from 25 to 20½ per cent. I also tried to point out that paper con-

cerns in this country were and have been for some time in a rather bad way. I also endeavoured to point out that in our province, British Columbia, we are interested, not financially and personally, but generally speaking as citizens of this country, in the industries of the country which are manufacturing our natural resources. Now, if we are going to put those concerns out of business by reducing our tariff that would be an injury to Canada as a whole. I happen to represent, in addition to the people who are engaged in industries, about 20,000 farmers. The farmers of British Columbia are also looking for protection. They are complaining now in regard to various of the tariff items. The farmers in British Columbia are certainly in a somewhat different position from the farmers of the prairies. If we are going to have a great country here, if Canada is going to amount to anything, it seems to me that besides protecting the farmer we should also protect the people who are engaged in industry. Those who are engaged in the industries of the country provide to a large extent the market for the farmers, if not on the prairies, at least in British Columbia.

Mr. BAXTER: It may be that I am overlooking something, but there is one point in the treaty that is not clear to me. Article 5 which, I take it, is the central provision of the treaty, reads:

Articles, the produce or manufacture of the territories of one of the contracting parties, imported into the territories of the other, from whatever place arriving, shall not be subjected to other or higher duties or charges than those paid on the like articles, the produce or manufacture of any other foreign country.

I tried to go through this treaty, though hurriedly—this is the first I have seen of it. If there is nothing more than that, it seems to be simply a statement that Finland will not charge more on articles from Great Britain than is charged on similar articles from any other foreign country.

Mr. ROBB: —enjoying that trade concession.

Mr. BAXTER: But what is there to enjoy? Where does the minister get this difference as regards automobiles involving a change from one tariff classification to another? I may have overlooked it in the treaty, but I certainly have not yet been able to find it. I presume that this document dated the 14th December, 1923, the Treaty of Commerce and Navigation between the United Kingdom of Great Britain and Ireland and Finland, that has been passed around, contains everything, and that it is simply under the 23rd article that we are taking action. Article 23 reads:

The stipulations of the present treaty shall not be applicable to India or to any of His Britannic Majesty's self-governing dominions, colonies, possessions or protectorates, unless notice is given by His Britannic Majesty's representative at Helsingfors of the desire of His Britannic Majesty that the said stipulations shall apply to any such territory.

Mr. ROBB: We are now giving the notice.

Mr. BAXTER: Yes. If that notice is not given, apparently Finland can impose against us any rate of duty that she sees fit. If the notice is given, we come in on the same footing as Great Britain. We do not, apparently, come in on a preferential footing, but we get simply the benefit of an agreement that our goods will not be charged more than goods which come from any other foreign country. In other words, we are not getting a preference into Finland, but we are simply receiving an undertaking that we shall not be put on a more unfavourable basis than any other foreign country.

Mr. ROBB: My hon. friend probably was not in when I stated the advantages that we had on some articles and I will not detain the committee by repeating them. I will give my hon. friend an item which I am sure will interest him. He will perceive the advantage that we receive in giving this notice in order to come under the most favoured nation tariff, and I challenge him to vote against this: "Preserved anchovies, sardines and other fish per kilogram"; general tariff 20 markkas; we are getting a tariff of 11 markkas, or about one-half the duty.

Mr. BAXTER: That is not what troubles me. I am not bothering about the fish; it is the net I am looking at just now. I may be at fault in taking up the time of the committee, I may have overlooked something; I am asking the minister to be good enough to point out to me anything in the treaty, a copy of which has been handed to me, which provides for what we call a preference as against the conventional tariff. I do not see anything in it except that we are on the same footing as any other foreign country. I do not want the details, I want just the principle.

Mr. ROBB: We are to enjoy the favoured nation treatment.

Mr. BAXTER: There is something wrong somewhere. In article 5 I can find no reference to any conventional or other form of tariff. This must be the original draft of a treaty that has been revised.

Mr. ROBB: The treaty between France and Finland of the 13th July, 1921 is the basis that Great Britain and Ireland come in on. We propose to come in and receive the same advantages.

Mr. BAXTER: I understand it now after it has been explained, but there is certainly nothing in the documents before the House to give me the slightest intimation of that. I have not, I trust, uttered a word of criticism of this treaty. I have sought only to obtain information. I should like to know from the minister why, what I might call a comparatively minor trade arrangement is brought before the House at this time, and why, what I would characterize as a major trade arrangement with another British dominion, the Commonwealth of Australia, is not yet in any form before the House.

Mr. ROBB: The Australian treaty has nothing to do with this, and if my hon. friend refers to the records, he will find that the Prime Minister explained the matter a few days ago. In that connection, I might say that to-morrow morning when the paper men of Canada read the remarks of some hon. gentlemen opposite they will say: Heaven save us from our friends, because we find these gentlemen object to an agreement whereby a very little paper comes into Canada and we are getting an advantage for other manufacturing industries and agricultural products. How are we going to expect these gentlemen to support them when we come in with an Australian agreement?

Mr. BAXTER: Nothing in my request for information has been in the slightest degree either dictated or suggested by any pulp or paper interest or the interest of any other industry.

Mr. ROBB: It is the gentlemen sitting behind and around my hon. friend.

Mr. BAXTER: Then I will ask the minister to be merciful enough, when he makes a remark of this kind, to make it in juxtaposition of some member he wishes to punish and not apparently to cast the bolt at me. I do not see why we cannot ask for information without having the suggestion thrown out that members of this party are acting on behalf of certain interests in the Dominion. I will go a step further. While I have absolutely no thought of the particular interest to which he has referred, yet I cannot see why any aspersion should be cast upon a member of this party who, thinking that injury is threatened to an industry should rise to defend that industry and ask that it have a proper chance for its life. I am not in that position. But I can understand how a member of parliament may honestly and honourably, and in support of the interests of the country, take such a position as that. I will go a little further, I want to point out to the minister that outside of some minute discussion of automobiles and of a reference to the paper industry, I am not in a position, although perhaps some other hon. members may be, to go back to my constituents and explain the benefits of this treaty. I am not able to point to a single thing to be gained by it.

Mr. ROBB: My hon. friend was not in the House; if he reads Hansard to-morrow he will get the information.

Mr. BAXTER: I have been in the House ever since the discussion commenced.

Mr. ROBB: You have not been following it.

Mr. BAXTER: I have been following it but I have not heard everything that has been said. That has not been the fault of the minister, except perhaps that his voice is not very strong. But I have not yet learned the advantages that are expected to flow from the treaty. It may be that I shall find them stated in Hansard, but I do not think I have missed very much this afternoon.

Mr. LADNER: The remarks of the Acting Minister of Finance (Mr. Robb) bring me to my feet. I have received representations from the Pacific Mills, Limited, and other concerns to place before the House the effect of this legislation so far as their business is concerned.

Mr. ROBB: I do not doubt that.

Mr. LADNER: And I have not heard before that any industry affected by legislation in this country is necessarily subject to some suspicion or condemnation because it has asked the representatives of the people in parliament to place the situation before the body of members who are to legislate on the matter.

Mr. GOULD: Does the hon. member think that when the total import of a particular line into this country amounts to $2,777 it should occasion any question in the minds of large business concerns here?

Mr. LADNER: Apparently the hon. member does not distinguish between the actual situation here and the principle that is involved. The principle is one of protecting industries that are indigenous to the country, and this legislation is contrary to that prin-

ciple. Whenever an hon. member in this part of the House rises to discuss the tariff from the protective point of view there is a regular outburst of objections from hon. gentlemen to my left simply because they favour the opposite. So far as placing the representations of different interests before the House is concerned, I do not know of any members who are more disposed to take advantage of every opportunity than many hon. gentlemen to my left. When it comes to holding the big stick over the government to force them into the pursuit of wrong, reckless and foolish policies, such as restoring the Crowsnest pass rates, they are all for it; there is no principle involved there but they know they will get a cheaper rate. But when we in British Columbia, seeking to develop our natural resources, raise our standard consistent with our policy of protecting all industries, no matter how big or how small, then that issue is something to be condemned, we are to be told that it is foolish, and that we should not engage in any such discussion. Now, surely there ought to be a bit of tolerance and mutual consideration of one another's interests without anyone becoming over-critical. The fact is that most hon. members in this House live in glass houses so far as some phases of their political and economic interests are concerned.

Mr. HOEY: I have the Finland tariff schedules before me and it will be a source of comfort to my friends to the right to realize that there is a heavy export imposed by Finland on all paper leaving that country.

Mr. SUTHERLAND: I notice among the articles of our exports to Finland that there is an item of some $67,000 in lard.

Mr. ROBB: I did not give any such figure; our exports of lard for ten months amounted to $4,984, and it was about double the imports of kraft paper.

Mr. MEIGHEN: What is the duty on lard into Finland?

Mr. ROBB: The duty is .60 markkas per kilo.

Mr. MEIGHEN: There is no difference?

Mr. ROBB: No.

Mr. SUTHERLAND: I asked the question because we import about ten million pounds of lard annually from the United States.

Mr. MEIGHEN: The minister said it was only finished imports that count. Apparently, so far as our exports go, we are not affected at all except as to automobiles.

Mr. ROBB: I did not say that.

[Mr. Ladner.]

Mr. MEIGHEN: Well, that is the summation of it.

Mr. ROBB: I gave the hon. gentleman (Mr. Baxter) evidence to show that there had been a gain in fish; the duty is reduced from 20 markkas to 11 markkas.

Mr. MEIGHEN: What fish do we sell to Finland?

Mr. ROBB: It can be sold if we get the preference.

Mr. MEIGHEN: I suppose we could sell Nova Scotia coal to Newcastle as far as that is concerned, if anyone would buy it.

Mr. ROBB: I have no record with regard to our sales of fish.

Mr. MEIGHEN: No, nor do I think there would be any record of fish sold to Finland. Similarly, we are not likely to sell cotton to Florida. The fact is that the only real benefit we get is on six automibiles we sold last year.

Mr. ROBB: I would not allow my right hon. friend to say that.

Mr. MEIGHEN: We are not getting anything out of the treaty that I can see, nor do I know that we are giving anything serious. It would not seem so on the surface. But is the minister certain that there are not favoured nations coming in under the treaty besides Finland? If he looks at the French treaty he will find that item 197, paper n.o.p., comes under schedule (e), which schedule is the list of those goods that get 10 per cent of the duty off the intermediate tariff. What is our intermediate tariff on paper?

Mr. ROBB: It is 22½ per cent. Take 10 per cent off that and you will get the proper figure.

Mr. MEIGHEN: Yes. That means that France already got the benefit under the French treaty, under which the favoured nations also came in. And this only serves to emphasize what we gave under that French treaty and the fact that we got nothing in return. After the French treaty I am always critical of treaties made by this government. If ever there was a gold brick put over in this country it was that French treaty.

Mr. JACOBS: We got cheaper champagne.

Mr. MEIGHEN: I do not know if it is better or cheaper; maybe the member for Halifax knows.

Mr. FINN: No; when I take anything it isn't that brand.

Mr. MEIGHEN: Will the minister explain why this treaty comes in its present form? Why is it not introduced in the same way as the treaty of last session?

Mr. ROBB: It is practically the same. We had an agreement.

Mr. MEIGHEN: Yes, but there is no agreement referred to here. The minister is adopting a different plan; if there was an agreement last session there is none here.

Mr. ROBB: This is exactly the same as the one last year, with the difference that last year there were certain figures submitted, which the hon. member (Mr. Baxter) quoted a moment ago. A copy of the British treaty was distributed for the information of members. My right hon. friend I think has it now.

Mr. MEIGHEN: This year there is no agreement at all?

Mr. ROBB: It is exactly the same arrangement as was put through last year.

Mr. MEIGHEN: Is there any written agreement now between us and Finland?

Mr. ROBB: No.

Mr. MEIGHEN: There was not last year?

Mr. ROBB: No.

Resolution reported, read the second time and concurred in. Mr. Robb thereupon moved for leave to introduce Bill No. 128 respecting trade between Canada and Finland.

Mr. MEIGHEN: At this point, Mr. Speaker, may I ask the minister if he has received special written representations against this trade arrangement; and, if so, from whom?

Mr. ROBB: Speaking only from memory, I have received representations verbally and, I imagine, some by letter from the manufacturers of kraft paper. I do not recall any other objections.

Motion agreed to and bill read the first time.

Mr. MEIGHEN: At this stage may I ask that the minister lay on the table of the House or send us copies—the former would be better for all members—any representations he has received of the character I have just inquired about? I think there must be something more than what he has mentioned.

Mr. ROBB: Any letters we have I will produce.

CANADA-NETHERLANDS CONVENTION OF COMMERCE

Hon. J. A. ROBB (Acting Minister of Finance) moved that the House go into committee to consider the following proposed resolution:

That, it is expedient to bring in a measure to provide that a certain convention of commerce dated the eleventh day of July, 1924, entered into at Ottawa by the plenipotentiaries appointed by His Majesty and by Her Majesty the Queen of the Netherlands be approved, and to give effect to the provisions of the said convention.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

Mr. MEIGHEN: I suppose the minister has arranged to get low duties on our butter going into the Netherlands? What is really effected by this treaty?

Mr. ROBB: Mr. Chairman, we get the favoured nation treatment in their market. A convention of commerce between Canada and the Netherlands was signed in Ottawa on July 11, 1924. This convention includes the Netherlands, the Netherlands Indies, Surinam and Curaçao. The population of the Netherlands and their possessions is 51,780,000.

Mr. MEIGHEN: What!

Mr. ROBB: That includes their colonial possessions. The population of the Netherlands proper is 6,977,230.

Mr. MEIGHEN: Where are the rest?

Mr. ROBB: Java and Madura, 35,017,200; the island of Celebes, 1,200,000; Sumatra, 5,858,800; Borneo, 2,000,000; Molucca Islands, 560,000; Dutch West Indies, 53,700; Dutch Guiana, 113,181. The customs tariff is very low, there being no treaty or convention rates lower than the general tariff, but according to Dutch parliamentary papers it is considered desirable to introduce a system whereby it will be possible to discriminate in certain cases. In a word, measures of tariff retaliation are being studied, and the matter will eventually be dealt with in a bill which they are now considering. My right hon. friend knows that throughout the world to-day there is a tendency to put up tariffs, indeed he advocates it for Canada. At any rate, that is the spirit throughout the world, and we are making this convention now so we will have the most favoured nation treatment in our commercial relations with that large population.

Our principal imports from the Netherlands are cocoa butter, gin, plants, bulbs, shrubs, nursery stock, tobacco, starch, pickled herrings, artificial silk, binder twine, railway bars, electric lamps, diamonds (unset), aniline dyes,

litharge, zinc white, glycerine for explosives, toys. On most of these items there is practically no difference between our general tariff rates and the convention rates. Our principal exports to the Netherlands are wheat, wheat flour, oats, rye oil cake, condensed milk, lard, electric vacuum cleaners, automobiles, nickel and asbestos. The value of our imports for the year ending March 31, 1924, was $5,359,980, and for the eleven months ending February 1925, $4,630,010. Hon. gentlemen will observe that there is very little variation in our imports, there having been practically no increase as between those two periods. Turning to exports, we exported to the Netherlands for the year ending March 31, 1924, goods to the value of $9,480,881.

Mr. BROWN: Does that mean to the colonies as well?

Mr. ROBB: No, only to the Netherlands proper. During the same period our imports were just a little over five million dollars. For the eleven months ending February 1925, our exports increased to the value of $11,880,-135. Hon. gentlemen will observe that while our imports have varied very little, our exports have increased considerably during the past year. It is just possible that a part of that increase might be accounted for by the increased value of the goods we sold.

There is considerable trade between Canada and the Dutch possessions, especially with the Dutch East Indies. Our imports from their possessions were valued at $2,941,189.

Mr. MEIGHEN: Those are not included in the former figures?

Mr. ROBB: No. These imports were practically all sugar, coffee and tea. The treaty rates are the same as the general rates. During that same period our principal exports to the Dutch possessions were rubber tires, canned salmon and automobiles, the total value of which was $1,350,067. It will be seen that we bought from the Dutch possessions more than we sold to them, but to the Netherlands proper we sold double the value of our purchases from them. It is also provided under this arrangement that goods from this country destined to Europe and passing through ports in the Netherlands en route will be exempted from any duty which might otherwise be charged.

Mr. HOEY: What are the chief exports from Canada to the Netherlands?

[Mr. Robb.]

Mr. ROBB: I will give some of the items, in round figures, for the ten months period ending January, 1925:

Apples, green or ripe and dried	$ 60,000
Barley	195,000
Buckwheat	373,000
Oats	1,371,000
Rye	1,008,000
Wheat	5,095,000
Oatmeal and rolled oats	33,000
Flour of wheat	1,168,000
Vegetable food products, not otherwise provided	144,000
Pneumatic tire casings	84,000
Inner tubes for tires of vehicles	15,000
Fodders, not otherwise provided	12,000
Lobsters and canned salmon	100,000
Hides and skins	22,000
Butter	4,000
Cheese	23,000
Milk, condensed, canned or preserved, not otherwise provided	477,000
Lard	278,000
Honey	26,000
Machinery, electrical vacuum cleaners and parts thereof	55,000
Automobiles, value $500 to $1,000	57,000
Automobiles, value over $1,000	22,000
Aluminum	33,000
Lead	34,000
Nickel, fine, in ore	268,000
Asbestos	95,000
Soap	16,000

A total export of $11,426,000 in that period.

Mr. HOEY: A great many of these things enter the Netherlands free. I cannot see any duty on butter.

Mr. ROBB: It is a low tariff country. I may say that while the export of butter during the period referred to was not very considerable—about $3,000—there were no imports of butter from that country. Moreover, we will have the advantage of our trade going to other countries in Europe through the ports of the Netherlands without duty or other restrictions. The United States have a favoured nation arrangement with the Netherlands and we want to get the same advantage in that respect. Another reason why we have been urged to negotiate this treaty is put forward by the manufacturers of Canada who use rubber. There is a possibility of the Dutch possessions placing an embargo on the export of rubber and we hope it will not be placed as against countries that come under this favoured nation arrangement.

Mr. CHAPLIN: Does the minister suggest that goods shipped to continental Europe through Holland, say to Switzerland, would be subject to a duty?

Mr. ROBB: They have the right to impose a duty on goods in transit.

Mr. CHAPLIN: The minister must know that so far as Germany is concerned they do not have to tranship goods. They have their own ports.

Mr. ROBB: The agreement provides for that.

Mr. CHAPLIN: It does not cut any figure.

Mr. MacLAREN: Is the provision in this treaty similar to that of the Finland treaty, that goods affected by it are required to come into Canada through Canadian ports?

Mr. ROBB: That is the law under the favoured nation provision; they must come in through Canadian ports.

Mr. JACOBS: What is the value of the tobacco imported from the Dutch possessions?

Mr. ROBB: For the ten months ended January, 1925, tobacco unmanufactured, 10,627 pounds, at a value of $27,335. I imagine my hon. friend would have to pay more than that for it if he were buying it in cigars.

Mr. MEIGHEN: As in the case of the Finnish matter the minister is asked whether it is provided that under this arrangement goods must be shipped direct through our ports. The minister answers that that is the law under our favoured nation arrangement. I cannot see how that affects the matter at all.

Mr. ROBB: All we are giving them is the benefit of the favoured nation provisions.

Mr. MEIGHEN: Yes, but we cannot impose any restriction unless it is in our contract with them. If it is in our contract with Japan or some other favoured nation, that cannot affect the Netherlands or Finland. The minister's answer so far is wrong. There may be some provision under which these goods must come in through our ports, but those with whom we are now negotiating are not affected by a treaty we have with someone else.

Mr. ROBB: The officer advises me it is exactly the same as in the case of our treaties with Belgium and Italy. They get no privileges under those treaties unless the goods come in through Canadian ports.

Mr. MEIGHEN: Yes, but we have treaties with Belgium and Italy which provide that the goods must come in through our ports; then they get the benefit of certain rates. But here we are making a treaty, we will say, with the Netherlands. We say to them: You do so and so, and we will give you the rates—we do not say we will impose all the conditions but we will give you the rates—we give to France by our treaty. Now we cannot afterwards impose restrictions on the plea that we imposed those restrictions on France. That is not in the bond.

Mr. ROBB: I have the assurance both of the officer by my side and of the customs officials after consultation with them, that the Netherlands will not be entitled to these concessions unless the goods come in through Canadian ports. I think my hon. friend must take the word of the officers administering the act.

Mr. MEIGHEN: I would rather take the word of the law itself. I want the authority. There is nothing here to show it.

Mr. ROBB: That is provided in our favoured nation treaty.

Mr. MEIGHEN: That is probably what the officers rely on, but what is provided there does not affect the Netherlands at all. The Netherlands are bound by their arrangement with us, that is all they are bound by; and according to this resolution we agree to give them certain duties as low as we give any foreign country, our favoured nation duties. Now we have to do that if it is in the bond; we cannot impose any restriction afterwards even though the restriction applies to other favoured nations, because we did not stipulate to impose it. In the face of that reasoning, I certainly would like something better than the mere say-so of anybody.

Mr. ROBB: My hon. friend will surely be guided by the experience of those who have been administering the treaties that have been in force now for a few years, and I am informed that that is the way it is applied.

Mr. MEIGHEN: Those are treaties; this is not a treaty at all.

Mr. ROBB: We are dealing with a country that has as great a population as Canada, good customers; why should my hon. friend not make to them the concession that they give to us? They have certain restrictions in their tariff, but they do not dot every "i" and cross every "t" in the agreement.

Mr. MacLAREN: It is specifically mentioned in the treaty with France.

Mr. ROBB: That is all these people are getting.

Mr. MacLAREN: Why was it specifically mentioned in the French treaty?

Mr. ROBB: The French treaty was the basis we started on. All these others come in on that basis.

Mr. MEIGHEN: They do not, I do not care what anybody says, unless he can show me the bond. We make a French treaty and we say to France: You give us certain rates, and we will give you certain rates, and your goods must come in through our ports. That is the treaty with France. But here we are passing legislation in favour of certain duties with respect to the Netherlands on condition that she passes some in favour of us, and it does not matter a whit what is in the French treaty unless we stipulate that the Netherlands can only get in here at the French rate of duty and subject to the French restrictions. But we have not done it.

Mr. GRAHAM: Would this have any bearing on it?—the French treaty is made the basis; this treaty gives the favoured nation treatment, and that covers the treatment that France gets.

Mr. MEIGHEN: It is a rough-and-ready method of reasoning.

Mr. GRAHAM: It is really the way the act is administered, I understand.

Mr. MEIGHEN: You cannot impose a restriction in the treaty that is not there. We stipulated with France that the goods shall come in through our ports, and it will not do for us to say casually and calmly to the Netherlands: That is the basis. The Netherlands are not interested in that fact. They say: Here is what you have agreed to legislate:

That it is expedient to bring in a measure to provide that a certain convention of commerce dated the eleventh day of July, 1924, entered into at Ottawa by the plenipotentiaries appointed by His Majesty and by Her Majesty the Queen of the Netherlands, be approved.

Now if we approve that, we are bound by every term of it, and we cannot import any other restriction on the mere plea that it is in the French treaty. This is a convention; it differs from the Finnish agreement in that way. It may be that the minister has a clause in the actual convention, although it is not embodied in this resolution, which imports the restrictions of the French treaty into this convention, but if he has not, he is down and out; he has to give to the Netherlands free admission through any port of any country.

Mr. MacLAREN: Is it stated so in the act?

[Mr. MacLaren.]

Mr. ROBB: I would direct my hon. friend's attention to the treaty of 1913 with Japan. There was no reference there to coming in through Canadian ports, but those goods from Japan must come through Canadian ports to get the advantage of the treaty. My hon. friend would not blame this government or the friends of this government for putting through the treaty of 1913 with Japan.

Mr. MEIGHEN: If it is not in the treaty with Japan, certainly Japan could, if it would be any convenience to her, enter her goods through any other ports.

Mr. ROBB: The customs people would not recognize that, and they will not in this case.

Mr. MEIGHEN: You would find out if Japan raised the point.

Mr. MacLAREN: I think we should have this point elucidated a little more, because it is very important.

Mr. ROBB: If it is going to clear things up, and hon. gentlemen insist upon it, we will refer it to the Justice department; and, if after looking into it they are not satisfied that it is absolutely clear that the advantages will be given only to goods coming through Canadian ports, we will make it clear in the bill.

Mr. MacLAREN: I must confess I have very serious doubts as it stands that that condition is imposed. It may be rather late to refer to the agreement with Finland, but I put the same question to the minister when that treaty was before the committee, and, if it is possible, I hope the minister will give us a similar undertaking in regard to the treaty with Finland.

Mr. ROBB: In the case of Finland it will not be necessary, because we are taking as a basis the treaty that was arranged by the United Kingdom, and the basis of that is the French treaty, and under the French treaty that condition is imposed.

Mr. MacLAREN: It would certainly be a very easy matter to insert the condition. It would make the point abundantly clear and beyond discussion.

Mr. ROBB: Finland might not accept that as a proper basis.

Mr. MacLAREN: I understand that that condition applies, so what harm would there be in inserting it?

Mr. ROBB: It is not in the Japanese treaty at all, but apparently it is in the regulations issued by the Customs department under date of May 1, 1913; and my right hon. friend the

leader of the opposition, if he was not then a member of the government, was certainly a very ardent, and the strongest and best supporter they had at that time.

Mr. MEIGHEN: I thank my hon. friend for the compliment, for that really is a compliment more than most members of this House realize. But at present we are discussing this treaty.

Mr. JACOBS: A compliment in what respect?

Mr. MEIGHEN: To have been the best supporter of the last government is a title to immortality.

Mr. GRAHAM: Faithful to the last!

Mr. MEIGHEN: The regulation of the Customs department is a good regulation; there is no doubt about that, but we cannot by regulation modify the terms of an express agreement. That is the point I am trying to raise. I am ready to accept the minister's undertaking so far as I am concerned—and, I think, for my friends behind me—that he will refer this Netherlands agreement to the Justice department, and unless the Justice department is satisfied that without any question the condition applies that the goods must come through our ports to get the benefit of the treaty, the minister undertakes to insert a clause in the treaty. I think that is satisfactory. But as respects the Finland treaty we will have to hold the government responsible in the face of very, very serious warning that no regulation, no clause of the French treaty or any other treaty will enable the minister to impose this restriction on Finland if we legislate merely in the terms of this resolution in return for their similarly legislating. Warning is given. There are several other features I wish to discuss, in relation to the treaty, but I do not wish to pass from that point.

5 p.m.

Mr. ROBB: This government will not be assuming any greater responsibility than the government my right hon. friend supported assumed in 1913, when they made the Japanese treaty.

Mr. MacLAREN: That is not a very practical argument—whether this government or the late government have failed or otherwise. My point is in the interests of the country, not what the past government has done or what the present government seems to be seeking credit for—

Mr. ROBB: Give us credit for what we have done already with regard to Canadian ports.

Mr. MacLAREN: My remarks apply to the conditions in these treaties. I would ask that the minister make it quite clear that it does apply in the case of Finland. We have already had the satisfactory assurance with reference to the Netherlands, but I asked the question in the last hour with regard to Finland and I received the reply that that would be in force. Now apparently there is considerable doubt thrown on that.

Mr. ROBB: I do not think there is much doubt about Finland.

Mr. MacLAREN: I submit the including of one phrase that it should apply directly to Canadian ports would remove all doubt. Can the minister give us any assurance on this point?

Mr. ROBB: I will give the assurance that I will have the Justice department look very carefully into it, and I will be glad to discuss it with my hon. friend if he drops into my office.

Mr. MacLAREN: I would rather discuss it in the House.

Mr. ROBB: Well, I will not press it now.

Mr. EVANS: I would ask the minister if the memorandum, appendix No. 17, page 169 of the Customs Tariff, does not apply to that? It is dated March 17, 1924.

Mr. ROBB: Would the hon. member read it?

Mr. EVANS: It reads:

By order in council dated 12th March, 1924 (P.C. No. 409), printed herewith, published in the Canada Gazette of that date, the benefit of the intermediate tariff is extended to products originating in and coming from the territory of the Netherlands, Netherlands East Indies, Netherlands Guiana and Netherlands West Indies, when imported and conveyed without transhipment from a port to the Netherlands, Netherlands East Indies, Netherlands Guiana and Netherlands West Indies, or from a port of a country enjoying the benefit of the preferential or intermediate tariff into a sea or river port of Canada.

Mr. SUTHERLAND: I notice that our exports to the Netherlands are less than one-half of what they were in 1921. In 1921 they were over $20,000,000, and now they are less than $9,500,000. Can the minister explain the falling off of the exports?

Mr. ROBB: I think that would be quite clear to any person after a moment's thought. From 1914 to 1918, and pretty well up to 1919, all that country was made bare of products by the war, and the friendly countries

closer to the war were almost as bare as the countries actually in the war, and I suppose the additional supplies were to fill up the trade and the shortage during that period.

Mr. SUTHERLAND: During that year there was an export of nearly half a million tons of condensed milk to that country. Is that trade increasing? Or how has it progressed?

Mr. ROBB: The exports to the Netherlands were as follows:

1922	$ 50,000
1923	426,000
1924	602,000

Mr. JACOBS: In reference to the importation of diamonds and other precious gems, in what way will the duties be affected?

Mr. ROBB: Uncut diamonds are free.

Mr. MEIGHEN: Much to the disgust of the minister.

Mr. ROBB: Oh, no.

Mr. MEIGHEN: I remember when we had to take terrible abuse from his friends because diamonds were free.

Mr. FORKE: I was going to ask for an explanation why that was so.

Mr. ROBB: There is a very simple explanation. There was a time when the country had a duty on diamonds, but it was found impossible to collect the duty. One reason was that it was very easy to smuggle diamonds. It was felt by the government at the time that it would be better business for Canada to admit uncut diamonds free, and build up a business, giving employment to citizens and manufacturers of Canada, because the duty we could collect on them would not be very much, on account of the ease with which they are smuggled.

Mr. FORKE: Smuggling would be a factor.

Mr. ROBB: I recall that in a recent by-election I did criticize the candidate of my right hon. friend because he was attacking this government for having made reductions in the duty on agricultural implements. I remember giving an interview and saying that I did not quite understand why that gentleman found any fault with the reduction of the duty on agricultural implements, when he himself was enjoying the privilege of importing uncut diamonds without paying duty.

Mr. MEIGHEN: I must congratulate the government on the ready acquiescence with which my hon. friends to my left accept the explanation.

[Mr. Robb.]

Mr. FORKE: It may be our simplicity.

Mr. MEIGHEN: Their simplicity varies very greatly according to the colour of the government in power.

Mr. FORKE: That is not fair.

Mr. MEIGHEN: The explanation the minister gave was given last parliament and every parliament and every budget. But notwithstanding, the hon. member for Marquette (Mr. Crerar) rose in his wrath and denounced this business of letting diamonds in free and imposing a duty on foodstuffs.

Mr. GRAHAM: That was not when he was in the government.

Mr. MEIGHEN: No, that was after he got out. But hon. gentlemen thought that was a good demagogic appeal to the people, and they sputtered it up and down the side lines. I do not want to refer to individuals, but certainly those who were in the House at the time representing the Progressive party—

Mr. FORKE: I did not.

Mr. MEIGHEN: I know that, and I am not sure if my hon. friend would have even if he had been here. I think he is a little more honest than that.

Mr. FORKE: Thanks.

Mr. MEIGHEN: But I do remember, notwithstanding the explanation given over and over again, just as sound and irrefutable as anything ever was, there was contained in party literature which I had to meet myself right out on the western plains, this same humbug that we should have a duty on diamonds in order to catch the rich. It was simply all a part of the whole villainous campaign in which hon. gentlemen to my left joined with the present Acting Minister of Finance and others who now calmly and in very dignified tones give the same explanation which they ridiculed just a few years ago. Certainly we cannot have a duty on diamonds. Such a thing is absurd; it has proved absurd in practice, and if and when, as is most certain, a change of government takes place, I know there will be some hon. gentlemen of that party to my left who will return to the old war cry and paint us the allies of the rich and powerful and the enemies of the masses and the poor because we have not a duty on diamonds. Enough, however, as to that.

I should like really to know what we are going to get out of this treaty. Nobody knows it. We have been told how many

people there are in the Netherlands and how many blacks there are in Borneo, Sumatra, Java and so forth. We have also been given a list of our imports from those countries. To the extent that we give a reduction on these actual imports, of course we give a concession to those countries. The minister has read us a list of exports, but he has not told us that on a single export we get a different treatment from what we got before. The hon. member for Springfield (Mr. Hoey) informed the minister that the large items go into the Netherlands free now. We cannot get anything on that. What do we get anything on? The minister says: Well, if we do not have this treaty, the Netherlands would have power to impose duties on our goods destined for a foreign country but calling at a Netherlands port. What nation in its senses would ever do that? We could do it in Canada. I suppose, if we chose to be so foolish, we could could collect our duties upon imports from Germany, intended for the United States, but in vessels calling at Halifax to discharge other goods for Canada and then going on. We could collect the duties if we were mad enough to do so and thereby destroy our own ports. That seems to be a purely fanciful consideration. The Netherlands are not going to do it, and I never heard of a country doing it. That is the only suggestion we get. Will the minister tell us one single article we export, on which we get a reduced duty into the Netherlands, the amount of the export, and how much the reduction is?

Mr. ROBB: I never said to my right hon. friend that we were getting any concessions in duties. I said very frankly that there was a low duty and there was no preference. There is, as I have already pointed out, a sentiment there that they should amend their tariff, and we want to get in on the favoured nation treatment so that we shall be clear. There is also, I repeat again, a possibility that they have now under consideration imposing a duty on Canadian goods in transit through their ports to other countries. There is, as is represented to us by manufacturers of crude rubber, a possibility of their imposing an embargo or export duty on rubber and we wish to evade that.

Mr. MEIGHEN: This treaty will never stop that.

Mr. ROBB: As to the concessions that we are getting from the Netherlands on the goods that we export to that country, if they are not giving us much, they are not receiving much from us on the basis of existing business.

Mr. MEIGHEN: The minister admits that we are not getting any reductions in duty at all. That is a rather interesting piece of information. But, he says, if we put this through, the Netherlands cannot impose their duties on our goods in vessels going to their ports but destined elsewhere. I cannot imagine how a country would do that. If a country were to legislate that its ports should be closed up and worthless, that would be just the same thing. Why in the world would a country legislate to say to other countries: Do not ship through our ports, do not use our territory? Surely no country in the world, even in this age, is as mad as that. So we are getting nothing there. The minister says: But the Netherlands are talking about raising their tariff; that spirit is abroad in the world, and in order that we may not suffer any more than another country would suffer, we are ready to give them concessions on our tariff already low. That is exactly what the minister is doing this for. There is the whole thing in a nutshell. What is this reduced to? Here we sit with a low tariff, a tariff that this party opposite and the party to my left declared they were going to slash down, down, down, year after year. They have been afraid to do so, but they have made certain instalments along that line. We are compelled with that low tariff to give concessions to-day, to-morrow, the next day, to South America, Europe, France, Italy, Japan and all the rest here, there and everywhere.

Mr. ROBB: My right hon. friend gave the concession to Japan.

Mr. MEIGHEN: No. Japan got the concession before. We renewed it to Japan, but we renewed it under world conditions very different from those of to-day, when the tariffs of the world were about one-half and many of them one-quarter or one-tenth what they are now. Here we are with an already low tariff spreading concessions throughout the world in order to protect ourselves against being further penalized at the hands of other countries. That is the condition we are in and are suffering from now, and it is all the consequence of the policy of hon. gentlemen opposite. Why should we have to be giving concessions? I would have a tariff we could give some concessions from without suffering. I would be in the same position as they are. Other countries are virtually getting something for nothing from us and this country is getting nothing for something. We have to give something for nothing to the Netherlands just because of the policy of this government. Why is it that we are not in their position?

Mr. ROBB: With a lower tariff.

Mr. MEIGHEN: No. They have a government in office that sees the state of the world and is prepared to adjust its position accordingly. It is going to raise its tariff. That government knows well that we have a government committed to my hon. friends to my left to lower the tariff, who can dictate to it what it is going to do and it does it.

Mr. SUTHERLAND: What proportion of the imports from the Netherlands during the past year came in free of duty?

Mr. ROBB: I do not have that. I can get it for my hon. friend.

Mr. MEIGHEN: We have not yet any list of reductions on articles coming in. We have the admission that there is no reduction on anything we sell. Just let us know how much we are giving as an insurance fund against the adoption of a protective policy by the Netherlands. This is simply a contribution to the Netherlands by way of insurance that we shall not be any worse off than we are now. We are only paying them so much and we want to know what it is, to be sure that we shall not be any worse off than some other countries. What are the imports from the Netherlands upon which we are reducing the duty, all for nothing?

Mr. ROBB: I can get that information only on the basis of the previous year's business.

Mr. MEIGHEN: That is good enough.

Mr. ROBB: I will have it looked up and I shall be glad to give it to my hon. friend when we are in committee on the bill.

Mr. MEIGHEN: But surely this is the place to get that information.

Mr. ROBB: I have not got it now.

Mr. MEIGHEN: How do I know whether or not it is expedient to adopt this measure? It would be far more expedient to get the government out that got us into this position. I might move a resolution to that effect.

Mr. GRAHAM: That would be pleasing but not expedient.

Mr. MEIGHEN: It would not be expedient for the Minister of Railways (Mr. Graham), but I am thinking of the country at present. Surely the minister does not ask us to pass a resolution that it is expedient to reduce the duties on a whole line of articles without even telling us what the reductions will be.

[Mr. Meighen.]

Mr. ROBB: I have quoted two or three times over a list of the large importations coming from these countries. My right hon. friend has been in parliament as long as I have; we came here on the same day. He has before him the customs tariff and he must know what the intermediate rate is.

Mr. MEIGHEN: But I have not got it.

Mr. ROBB: Neither have I.

Mr. MEIGHEN: I have not the list of the articles the minister read. Can the minister not take them one by one, giving us the larger items, so that we may see what the reductions are going to be? Are we making any reduction in gin, for example? Are we making gin cheaper for the masses of our people? Are we making any reduction in tobacco or in butter? Surely this is the place to be informed of all these things?

Mr. ROBB: There are no imports of butter; we export that article.

Mr. MEIGHEN: But still we might be making a reduction on it.

Mr. ROBB: That would not hurt the men in the cities.

Mr. MEIGHEN: No, but I fancy you would hear a howl even from some hon. gentlemen to my left, at least from the wiser of them. Why does not the minister let us know what reductions we are making? We cannot be asked to pass a resolution that it is expedient to do something and wait to be told afterwards what we are doing.

Mr. ROBB: If my right hon. friend desires to prolong the discussion I am ready to read the whole tariff. I would just as soon pass my time reading the tariff as anything else.

Mr. MEIGHEN: I want the tariff as it affects this treaty.

Mr. ROBB: I will give the importations for the ten months ending January 31, 1925, together with the rates. The first item is "fruits in air-tight cans," on which the rate is 2½ cents per pound. There is a reduction of half a cent.

Mr. MEIGHEN: Quite a concession.

Mr. ROBB: That would be some advantage to my right hon. friend, who possibly buys fruit in air-tight cans occasionally.

Mr. MEIGHEN: I would rather see the country grow, and eat our own fruit.

Mr. CHAPLIN: I would sooner eat fruit from the Niagara district.

Mr. GRAHAM: You do not get them canned there.

Mr. CHAPLIN: Yes, there are seventeen canning factories in my own county.

Mr. ROBB: Of vegetables, peas and so on, the importations amounted to $12,000. The proposed rate is one cent per pound as against one and a half.

Mr. MEIGHEN: What other articles are there?

Mr. ROBB: There was an importation of rice amounting to $44,000 and the rates are 65 cents per 100 pounds as against 75 cents

Mr. MEIGHEN: Is rice dutiable?

Mr. ROBB: This is cleaned rice. Of cocoa butter, a large item, the total was $391,000. The rates are 2 cents and 2 cents.

Mr. MEIGHEN: No reduction.

Mr. ROBB: No. Aromatic and caraway seeds amounted to $12,000 and they are free in both lists. The same tariff rate as before will apply to ground spices, which is a small item. My right hon. friend asked me a moment ago about gin. That is a large item amounting to $563,000 and the rate is $10 per gallon. There is no concession on that. Of shrubs, trees, plants, vines and rose bushes the total is $21,000 and there is a reduction from 20 per cent to 15 per cent. Azaleas and seed stock which is a large item, amounts to $404,000 and is free in both cases. Is there any other item my hon. friend would like to know about?

Mr. MEIGHEN: The larger ones.

Mr. ROBB: I see an item of flax, hemp, jute, jute cloth and canvas taken from the mill, not coloured, amounting to $12,000. It is free in both cases. On silk and its products the rate is 32½ per cent less 10 off.

Mr. CHAPLIN: What is the importation?

Mr. ROBB: Twenty-nine thousand dollars; hon. gentlemen will understand that I am leaving out the hundreds. On velvets the rate is the same. On fibres, artificial silk yarns, and so on, amounting to $120,000, the regular duty is 20 per cent and this is reduced to 17½ per cent.

Mr. MEIGHEN: What about glass?

Mr. ROBB: Glass comes largely from Belgium; I do not know that there is any quantity of it coming under this arrangement. There is no difference however in the duties. Has my hon. friend any other item in mind?

Mr. MEIGHEN: If the minister says that these are all the important items the information is worth while.

Mr. ROBB: I do not say that; there is a long list.

Mr. MEIGHEN: This simply means that we are making reductions without obtaining any concessions; it is more hacking at the tariff.

Mr. ROBB: If my hon. friend will mention any item I will quote it.

Mr. SUTHERLAND: How is the trade in condensed milk affected? There has been a large increase in this in the last few years.

Mr. ROBB: Condensed milk goes there, it is not coming here. My right hon. friend is asking for the duties on goods coming into Canada.

Mr. MEIGHEN: Will the minister prepare and lay on the table before we come to the second reading, a list of the actual importations affected, that is to say, those in regard to which there will be a reduction in the duty? He can prepare the information on the basis of the last year ending March 31.

Mr. ROBB: My right hon. friend means on the second reading of the bill, I suppose?

Mr. MEIGHEN: Yes.

Mr. ROBB: I will have that prepared.

Resolution reported, read the second time and concurred in. Mr. Robb thereupon moved for leave to introduce Bill No. 129, respecting a certain trade convention between His Majesty and the Queen of the Netherlands.

Motion agreed to and bill read the first time.

CUSTOMS TARIFF 1907 AMENDMENT

Hon. J. A. ROBB (Acting Minister of Finance) moved that Bill No. 118 to amend the Customs Tariff 1907, be read the second time.

Mr. JOHN EVANS (Saskatoon): Mr. Speaker, I desire to move the following amendment:

That all the words after the word "that" be struck out and the following be substituted therefor:—

The House regrets that the budget presented by the Acting Minister of Finance contains evidence of the

application of unsound principles of public finance, affords no relief from the excessive burdens of indirect taxation and constitutes a failure to carry into effect substantial economies in public expenditure and the fiscal policy of the Liberal party as from time to time enunciated;

And that the policy of protection maintained in the present budget has greatly increased the cost of living and production has failed to provide adequate revenues or to prevent serious depression in trade and industry;

And be it further resolved that a revision of the tariff schedules, based on the needs for revenue instead of on the principle of protection is long overdue and should be immediately undertaken in order to bring down the costs of living and to place our industries on a permanently sound basis.

Mr. SPEAKER: The question is on the amendment. Is it the pleasure of the House—

Mr. A. J. LEWIS (Swift Current): Mr. Speaker, I can hardly let this matter come to a vote without stating my position. I understood it had been decided that the amendment should not be moved officially by this group. However, it is now before the House, and some of us in this quarter are placed in a rather awkward position. When the budget was first brought down it was agreed among ourselves that we should move the subamendment, which was in identically the same words as the amendment now before us. The Speaker disallowed the subamendment. His ruling was appealed and I voted against the ruling and in favour of allowing the subamendment. There were then two things before us—the budget and the Conservative amendment. At the time I asked the government some questions respecting certain legislation which I considered was, for this session, just as important to the western people as tariff reductions. Those questions were answered largely in the affirmative, and as a result, not because I agreed altogether with the government policy on the tariff question, but in order to give them an opportunity to bring down legislation of the character I have referred to, I supported them with my vote. Now once again I am called upon—

Mr. MEIGHEN: Will the hon. member permit a question? Has he any objection to giving the House what it was he asked from the government and what concessions he received?

Mr. LEWIS: It was not a matter of concessions at all. I simply said that if the government would outline their policy in regard to the Grain Act and other things, I was not here with the intention of voting in any particular way in order to get votes; but that I believed the interests of Canada were far greater than any question of whether or not people voted for me. For that reason I supported the budget proposals. At present I am called upon to make a choice between two things, with respect to both of which I have voted affirmatively; and that, of course, makes it very difficult. I might say that the budget passed the House and when it was discussed seriatim a few days ago no one raised any objection to it; that is, there was no vote against it. I cannot vote against the principles expressed in the amendment, and I am not going to swallow myself with respect to the budget. Accordingly, when the vote is taken on this amendment I intend to leave the House and let the responsibility remain as between myself and my people.

Mr. SPEAKER: As the hon. member who has just been speaking (Mr. Lewis) referred to the present amendment having been already before the House as a second amendment to the budget, I wish to state that it was not put by the Chair. It is quite true that I ruled at that time that that amendment could not be moved, because on the motion that the Speaker leave the chair for the House to go into committee of Ways and Means on the budget only one amendment can be moved. I allow it now because it is presented on the second reading of the bill bearing on the whole question of supply and ways and means. All authorities agree that on the second reading of such a bill any amendment can be moved which is relevant to the issue. On this point I quote May, twelfth edition, page 357, as follows with regard to the moving of amendments on the second reading of a bill:

It is also competent to a member who desires to place on record any special reasons for not agreeing to the second reading of a bill, to move, as an amendment to the question, a resolution declaratory of some principle adverse to, or differing from, the principles, policy, or provisions of the bill; or expressing opinions as to any circumstances connected with its introduction or prosecution.

But of course it must always be relevant, as it is in the present case. My statement is warranted, because I might be accused of taking one view on one occasion and a different view on another when practically the same question was involved. But on the second reading of a bill like the present one it is proper to seek a remedy for those who have a grievance, on the old principle of the right to air grievances before supply is granted.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, just before the House rose at recess the hon. member for Saskatoon (Mr. Evans), having reference to the motion that Bill No. 118 be read a second time moved in amendment:

That all the words after the word "that" be struck out and the following be substituted therefor:—

The House regrets that the budget presented by the Acting Minister of Finance countains evidence of the application of unsound principles of public finance, affords no relief from the excessive burdens of indirect taxation and constitutes a failure to carry into effect substantial economies in public expenditure and the fiscal policy of the Liberal party as from time to time enunciated;

And that the policy of protection maintained in the present budget has greatly increased the cost of living and production has failed to provide adequate revenues or to prevent serious depression in trade and industry;

And be it further resolved that a revision of the tariff schedules, based on the needs for revenue instead of on the principle of protection is long overdue and should be immediately undertaken in order to bring down the costs of living and to place our industries on a permanently sound basis.

As far as I am able to recall, and I think I recall the circumstances correctly, this is the same amendment which the hon. leader of the Progressive party (Mr. Forke) moved at the time the budget resolutions were introduced, and which under the rules of the House it was not permissible to proceed with at that time. Now the hon. member for Saskatoon brings this forward as an amendment to the motion to proceed with the second reading of the bill which is based upon the resolutions that have already passed this House. If any useful purpose could be served in debating a resolution of the kind at this stage, I could understand the motive which has prompted my hon. friend in bringing in the amendment. While it is perfectly true that the amendment when presented by the leader of the Progressive party at the time the budget was introduced could not then be discussed, there is no single affirmation or sentence of the amendment which has not been fully discussed in the course of the long debate which took place on the budget, the longest debate, I think I am correct in saying, which has ever taken place in this parliament, certainly the longest which has ever taken place on the introduction of the budget. Were we to debate the amendment of the hon. member it would only mean spending a lot of time in reiterating arguments and statements which have been discussed at great length for over a period of a month, and which certainly will not gain any emphasis by being repeated at this time.

I can only say that, under the circumstances, the motion as presented by my hon. friend cannot be construed as other than a motion of want of confidence in the administration. If the amendment were to carry it would mean that the government would not be able to proceed with the business of the country for the reason that it would be deprived of obtaining the revenues essential to the carrying on of the work of public administration. That is the only effect the carrying of this amendment could have.

What is extraordinarily singular is that the bill which the Acting Minister of Finance (Mr. Robb) is asking the House to permit to have its second reading is in identical terms with the resolutions which were introduced on which it is based, and which passed through the committee stage without a division. That is the feature I would like hon. members of the House to appreciate. The House has already without a single division approved everything of which the government at the present time is asking the House to approve in the bill for which we are now asking a second reading. I am inclined to feel that if my hon. friend the member for Saskatoon had appreciated that such was the significance of his motion, he would possibly—

Mr. STEVENS: Might I interrupt my right hon. friend? He states that there was no division of the House on the resolutions on which this bill is based. I would remind the right hon. gentleman that the House was divided on the principle of the resolutions when we divided on the budget; so it can hardly be claimed there was no division.

Mr. MACKENZIE KING: I have not questioned that. I have said that we have been discussing for a month and a half the principle of the resolutions, and after having discussed for a month and a half the principle of the budget I cannot see that any useful purpose would be served in reopening the debate on that score. Not serving the purpose of discussion of any matter of principle, the amendment reduces itself to a motion to prevent the government from proceeding with the bill which is before the House at the present time. Now the bill which is before the House at the present time is as I have said to all intents and purposes, a reproduction of the resolutions which were introduced by the Acting Minister of Finance at the conclusion of the budget debate, which resolutions have already passed this House, and have received at least

the silent support and approval of every hon. member of the House. Under the circumstances the amendment introduced at this stage, in this way, can only be in the nature of a motion of want of confidence in the government. It may not have been so intended, but I would appeal to you, Mr. Speaker, as to whether that would not be the effect, if it were passed. Believing that to be its effect and significance I can only say the sooner we find out whether or not the government has the confidence of the House the better.

Sir HENRY DRAYTON (West York): Mr. Speaker, I would be very much obliged if my right hon. friend would let me see a copy of the amendment. I feel in somewhat of a difficulty, Mr. Speaker, in dealing with this question at the present minute as this is the first time I have had the opportunity of seeing the notice of motion. The usual practice of sending copies in advance has not been followed in this case.

My right hon. friend says that this resolution can have no useful effect. He points out that it cannot have any useful effect because the only thing it could do, if carried, would be to establish a want of confidence in the government. I cannot imagine anything more useful for this Dominion at the present time. If there is any one thing that the people of this country want to-day it is a chance to pronounce upon public questions.

Some hon. MEMBERS: Bring it on.

Sir HENRY DRAYTON: It is something which would give them an opportunity of saying whether or not the present policy of drift and indecision is to continue.

Some hon. MEMBERS: Go to it!

Sir HENRY DRAYTON: Hon. gentlemen are exceedingly brave. They have it in their own hands. What is all this bravery about in saying "Go to it"? Who starts it? Who can start the election except the government, unless by some happy chance—

An hon. MEMBER: "Chance" is right.

Sir HENRY DRAYTON:—unless a vote can be passed in this House which will precipitate an election. So that I do not agree at all with my hon. friend in saying that this is an idle resolution having regard for the point from which he attacks it, because, having regard to the point from which he attacks it, it is most useful. The thing that is wrong with this resolution is simply that gentlemen who voted for the budget and voted down another amendment dealing with pressing questions at the present time, namely questions of taxation and economy, are now in a position to know that with absolute safety they may vote to turn this government out. That is the weak part, Mr. Speaker, of the situation. There is no question at all as to the facts. Hon. members have framed a resolution in such terms that it puts in somewhat of a quandary any man who has any regard for financial institutions and for the proper progress of the country. Anyone who has a regard for Canada at the present time ought to be trying to get his government out of power, and that same man ought to have and generally does have some regard for the form of the motion submitted to the House. So the situation is perfectly plain. I only speak for myself, but I have to choose between two direct duties, one the maintenance of what I believe to be sound, proper, sane financial proposals, and the other the duty which is an imperative duty that I feel, that I ought to do everything that I can to ensure to the people of Canada the opportunity to register their opinion on the first possible occasion as against this government.

An hon. MEMBER: That's that.

Sir HENRY DRAYTON: An hon. gentleman across the floor had something to say. I did not catch it. What was it? Very good, he had nothing to say. Now on the other hand, Mr. Speaker, this motion can serve a purpose that I do not think is at all commendable. It can serve the purpose of giving my hon. friends to my left the opportunity of voting safely against the government.

Mr. FORKE: My hon. friend can prevent that.

Sir HENRY DRAYTON: The hon. leader of the Progressive party says we can prevent that. I speak again for myself, and I say I am not in the habit of swallowing my principles for the purpose of making a switch on a vote. I think it is perfectly clear that this resolution has been so drawn as to make it a safety-first resolution, so that some gentlemen will be able to say, "We are opposing the government; we still believe in freer trade. We are against this government; there is our vote," while at the same time feeling assured that that vote is absolutely safe, that nothing is imperilled, and that the vote of want of confidence which ought to be passed by this House is impossible.

I agree with what my hon. friend said that this situation ought not to be made use of for the purpose of entering into another debate. We have already talked a very long time, but I really think my hon. friend went entirely out of his way when he talked about

the length of time this House occupied in connection with the budget. The government had it in its hands always to bring the debate to a close, as they brought it to a close when they made up their minds. Further than that, through the whips, my right hon. friend made it known a week before the conclusion, that it was time to bring it to an end. Yet notwitstanding that he went out of his way to castigate the opposition for obstruction.

Some hon. MEMBERS: Order, order.

Sir HENRY DRAYTON: How am I out of order?

Mr. CANNON: In referring to a former debate. It is an elementary rule that that cannot be done, and I want a decision on my point of order. We are not going to discuss the budget again.

Sir HENRY DRAYTON: The hon. gentleman may not know, but I understand this is a continuation of the debate upon that question, and I do not think there is any doubt about it. I await your ruling, Mr. Speaker.

Mr. SPEAKER: The first motion was for the Speaker to leave the chair for the House to resolve itself into committee of Ways and Means. The resolution went to committee, and was adopted and reported by the committee; two bills were introduced based on the resolution, notably the one we are discussing now. The first reading of the bill was passed, and we are now on the motion for the second reading of the bill. My ruling is that it is the same debate, though at a different stage, and the hon. gentleman is therefore in order.

Sir HENRY DRAYTON: I felt pretty sure of my ground on the point of order that was raised. Under these circumstances it ill befits my hon. friend to charge the opposition with obstruction. Hansard itself is the best answer to that allegation. We all know that in parliament when we have not time for preparation, and particularly at the end of a long debate, things are said for which we are sorry afterwards. I admit that at once, but I submit that if there is one person in this world that ought to be careful it is the First Minister of the Crown. and he certainly ought not to make charges of that kind which the records show to be incorrect. So far we have had nothing from my right hon. friend acknowledging his error or pointing out that of all the long speeches delivered on the budget his was the longest. Yet he makes the charge of obstruction. I am not going to give my right hon. friend any opportunity of saying that I am delaying this debate. I simply rose for the purpose of making these few remarks to join with my right hon. friend, not in connection with the major part of his observations, not in connection with that anticipated swan song of his as to what would happen if he could no longer function, but simply as to his one statement that we have had a long debate, a debate which the government could and ought to have stopped long before they did, but did not see their way to do so, and to suggest to hon. members that we ought not to go into another stage of a long debate and that the vote should be taken this evening.

The House divided on the amendment (Mr. Evans) which was negatived on the following division:

PAIRS

(The list of pairs is furnished by the chief whips.)

Messrs:

Morin,	Beaubien,
Dechene.	Sales.

Mr. BEAUBIEN: I was paired with the hon. member for St. Hyacinthe-Rouville (Mr. Morin). Had I voted I would have voted for the amendment.

Main motion agreed to, bill read the second time, and the House went into committee thereon, Mr. Gordon in the chair.

On section 1—Schedule (a) amended.

Mr. STEVENS: Section 1 deals with the schedules in connection with the amendments to the tariff. These schedules I presume are the same as those in the resolution.

Mr. ROBB: Yes.

Bill reported, read the third time and passed.

THE SPECIAL WAR REVENUE ACT, 1915, AMENDMENT

Hon. J. A. ROBB (Acting Minister of Finance) moved the second reading of Bill No 119, to amend The Special War Revenue Act, 1915.

Mr. STEVENS: This bill has not been distributed.

Mr. ROBB: It is precisely the same as the resolution we put through the other day and on which the House was fairly unanimous.

[Sir Henry Drayton.]

Mr. STEVENS: I am the last to suggest delaying the business of the House, but to ask us to proceed without even a shred of paper relating to this bill before us is going too far. I would take this opportunity of saying to the minister that he made this afternoon a statement which I tried then to correct in the very brief time at my disposal, and which I think was exceedingly unfair. A day or two ago he moved the resolutions into committee and we expedited them; the whole schedule passed through the House in one sitting. It may have been two sittings that we had on them, but I think it was one, and this was almost unprecedented in the consideration of the budget. Notwithstanding this my hon. friend to-day declared that he had been delayed. I thought this statement most unfair and unkind, and certainly was not in keeping with the minister's usual courtesy and fairness. We always seek to give fair treatment to him and to other ministers who extend to the House the usual courtesies of parliament, and his reference to delay hurt us very much indeed. Now, he surely is not going to impose upon us consideration of a bill that we have not seen?

Mr. ROBB: No, Mr. Speaker. I am very glad my hon. friend made that qualification, that he did not think I wished to hurt him when I made reference this afternoon to the delay that had occurred. I was not referring to the proceedings in the committee but to the lengthy debate on the budget. I am sorry if I have injured my hon. friend's feelings, for he is the last man in the world whom I would wish to hurt.

Mr. STEVENS: We will forgive the minister.

Mr. ROBB: I regret that the bill has not been distributed. I would suggest that we adjourn this debate and in the meantime have the bill distributed, so that later in the evening we can resume consideration of it.

Mr. SPEAKER: I do not want to disturb this love feast. It will be remembered that the night before last we sat very late, and if the bill has not been distributed no fault is to be imputed to the officers of the House. Later on in the evening, as suggested, we might proceed with the consideration of the bill.

Mr. MACKENZIE KING: Mr. Speaker, I move the adjournment of the debate.

Motion agreed to and debate adjourned.

DEPARTMENT OF IMMIGRATION AND COLONIZATION ACT AMENDMENT

Hon. J. A. ROBB (Minister of Immigration and Colonization) moved the second reading of Bill No. 112 to amend the Department of Immigration and Colonization Act.

Motion agreed to, bill read the second time and the House went into committee thereon, Mr. Gordon in the chair.

On section 1—Duties and powers of minister.

Mr. STEVENS: Mr. Chairman, I do not want the minister to think that because we did not oppose the second reading no explanation of this bill is due the committee. We would like to know just exactly what is the purpose of the amendments.

Mr. ROBB: Mr. Chairman, if hon. gentlemen will refer to the explanatory notes opposite each section, the amendments will be quite clear to them. The courts of British Columbia gave a decision that section 4 of the Immigration and Colonization Act had the effect of transferring to the Minister of Immigration and Colonization
9 p.m. the power conferred on the Minister of Justice by section 43 of the Immigration Act. The purpose of the amendments is to correct this situation for the future, and to legalize all such orders issued in the past, other than those which have been passed upon by the courts. That is, it is the intention that the Minister of Justice shall deal with all these cases.

Mr. STEVENS: Do I understand this has reference to deportation of persons convicted of some criminal offence?

Mr. LAPOINTE: Yes, and who have served their term.

Mr. STEVENS: Will the Minister of Justice kindly explain what is intended?

Mr. LAPOINTE: Apparently, when the Immigration Act was amended, through some mistake the duty of signing the order for deportation, which had always been done by the Minister of Justice, was unwittingly transferred to the Minister of Immigration. This bill is merely for the purpose of restoring this duty to the Minister of Justice.

Mr. STEVENS: I am speaking without preparation, I admit, but I recall some years ago the question of deportation was under discussion, and if my memory does not serve me false, at the time I urged that the Minister of Immigration should deal with the deportation of persons convicted of felony. Now I am again speaking wholly from memory, but I have in mind we were dealing particularly with offenders under the Narcotic Drugs Act, in which we were very deeply interested on the coast, because at that particular time both there and in Montreal orientals were known to be trafficking in narcotic drugs contrary to the law. The traffic became so notorious that the public of British Columbia was thoroughly aroused, and in order to contribute to the suppression of that illicit traffic it was thought desirable that these traffickers, when convicted, should be deported with very little ceremony; that is, that there should not be too much red tape in the deportation procedure. Having that in view, power was given to the Minister of Immigration to sign the deportation orders. Personally I should like to be very sure that that intention is still to be carried out, and that we are not by this legislation introducing some circuitous procedure. I am not reflecting on the Minister of Justice.

Mr. ROBB: Nor on the Minister of Immigration?

Mr. STEVENS: The Minister of Immigration can look after himself in regard to these offenders. The Justice department is supposed to be conducted on a plane somewhat above that of the other departments, and the result is that the Minister of Justice sometimes delays unduly in his consideration of these deportation cases. On the contrary, the Minister of Immigration, acting on the reports of his officers, dealt with them in a more or less summary fashion. I should like to be assured that no greater leniency is to be extended to this class of offenders. This country should desire to get rid of such offenders as quickly as possible. We do not want to throw our courts open to unlimited appeals from aliens who have been convicted of a felony. Every conviction of an alien should justify our deporting the offender with very little ceremony.

Mr. LAPOINTE: My hon. friend may be assured that his remarks will be noted. There is no intention to deal with these men any more leniently. It is simply a question of its being more practical to have this done by the Department of Justice, because the persons to be deported are in the custody of officers of that department.

Mr. STEVENS: Will the minister describe the process? What has to be done? Who makes the appeal for the deportation?

Mr. JACOBS: As I understand it the only object of this act is to give the power to the Minister of Immigration and Colonization, instead of the Minister of Justice, to deport these people.

Mr. STEVENS: No, it is just the reverse.

Mr. JACOBS: Is it thought that the Minister of Immigration and Colonization is so soft hearted that he cannot do the work, and he wants the Minister of Justice to do it?

Mr. STEVENS: That is what I am trying to find out.

Mr. JACOBS: I think the Minister of Immigration and Colonization has been doing this work vigorously and with despatch during the last few years. He knows how it has to be done.

Mr. LAPOINTE: It has always been done by the Minister of Justice, under section 43 of the Immigration Act. It is the Department of Immigration and Colonization that asks for the amendment so that what has always been the practice shall prevail.

Mr. MANION: I would like to have a thorough explanation of this bill. The little conversation that has been going on between the Minister of Justice and the hon. member for Vancouver Centre, with a few words thrown in by the Minister of Immigration, has not made it clear, I am sure, to a good many of us. Will the minister explain it from start to finish?

Mr. ROBB: It is largely to avoid red tape. The person who is to be deported is already under the charge of the Minister of Justice and we think it is a slowing down of the process that the necessary documents should first have to go to the Minister of Immigration and Colonization.

Mr. MANION: Does this deal only with immigrants coming in, or with persons generally?

Mr. ROBB: With any person who has to be deported.

Mr. MANION: How many years has a person to be in this country before he is immune from deportation?

Mr. ROBB: Five years, I think.

Mr. STEVENS: I am a little uneasy about this legislation, because I recall very well the serious condition which prompted the original legislation. I do not know what influence is demanding this change.

[Mr. Stevens.]

Mr. LAPOINTE: It is not a change; it has always been done in this way. A mere reading of section 43, which is set out in the explanatory notes of the bill, will explain that. The warden of the penitentiary is an officer of the Department of Justice and should receive his orders from the minister of that department.

Mr. EULER: Is the order for deportation to be issued only at the expiration of the term of the man who is serving the sentence?

Mr. LAPOINTE: Yes.

Mr. EULER: Would it not be better to remove him at once if you are going to get rid of him anyway?

Mr. LAPOINTE: I do not think so. If a man commits a murder in this country and is sentenced to twenty-five years' imprisonment, he would be very much pleased if we would send him back to Europe instead of detaining him.

Mr. STEVENS: The minister's observations make me even more suspicious of this legislation. The minister argues this: "I am the minister in charge of penitentiaries. Here is a statute which authorizes the Minister of Immigration and Colonization to issue an order in respect to a prisoner in one of these institutions. I do not think that is right; the order should be issued by myself." But here is the weakness of the minister's position: In all sections of the country it is the official of the Immigration department who knows of the case, who is in touch with it, who is watching it. I believe the duty rests upon the clerk of the municipality or the clerk of the court in the municipality or district in which the offence was committed, and where the person to be deported is incarcerated, to notify the Immigration department. The immigration officer gets word of this and it is his business to see to the deportation; in all other forms of deportation these duties are always carried out by an immigration officer. For instance, if an immigration officer finds a person in the country contrary to the immigration law, he has him apprehended, detained, and deported on the next boat.

Mr. LAPOINTE: Who will give the order to the warden of the penitentiary to deliver that man to the officer?

Mr. STEVENS: The Minister of Immigration advises the warden—

Mr. LAPOINTE: There is no connection between the Minister of Immigration and the warden.

Mr. STEVENS: We will suppose there is a man in Vancouver whose day of release is to come to-morrow. The immigration official gets word that to-morrow a certain notorious criminal is to be released. He cannot wire his minister and get an order immediately; it has to go through all the red tape at Ottawa before getting through the Immigration department and the Justice department. If this bill passes I venture to say that hundreds will be released without being detained at all.

Mr. ROBB: That is the difficulty we are experiencing now: it comes to the Minister of Immigration and the Minister of Immigration sends it to the Justice department; then it goes on to the warden. We propose to shorten the procedure so that it will go direct to the Minister of Justice.

Mr. STEVENS: No. The way it is now—

Mr. ROBB: I have been doing it for the last three months.

Mr. STEVENS: Certainly. The minister signs the order, and it is immediately communicated to the warden of the penitentiary.

Mr. STEWART (Argenteuil): You are wrong there.

Mr. STEVENS: I am not wrong. That is the law.

Mr. BAXTER: The section says so.

Mr. STEVENS: That is the law; I do not care what circuitous route is followed here. I am objecting for this reason. We had all manner of difficulty in the years preceding 1918 in apprehending particularly violators of the Narcotic Drug Act. It became a veritable scandal on the Pacific coast. Public meetings were held in various cities out there, and in some of the cities eastward, protesting against the laxity of the regulations, the formality involved, and the difficulty of apprehending these people and getting them out of the country. This legislation before us in my estimation will make it more difficult than ever to secure the deportation of these individuals who are in the penitentiaries or jails committed for a felony.

Mr. STEWART (Argenteuil): Having the Minister of Immigration issue an order to his officer to take charge of the prisoner at the moment he is released did not short cut the thing, and this is not lengthening the process any because in all cases the Minister of Justice had to give the order. To all intents and purposes the prisoner is in charge of the Minister of Justice from the moment of his conviction until his sentence is served, and the moment the prisoner steps out, instead of the Immigration department executing the deportation, it would be executed by the officer of the Minister of Justice.

Mr. STEVENS: Let me ask a question. At the present time if the Minister of Immigration advises the warden of the penitentiary that such and such a criminal is about to be released and is to be held for deportation, that warden has to hold him.

Mr. STEWART (Argenteuil): Certainly.

Mr. STEVENS: Certainly, but when you pass this law and the Minister of Immigration or any accredited officer so advises the warden, the warden says: "No, I take no instructions except from the Minister of Justice," and if it happens that there is a loss of connection between the Immigration department and the Justice department your criminal must be released, and nothing can hold him there. There is no doubt about that. You are simply adding another step to the procedure; that is all.

Mr. LAPOINTE: Will not my hon. friend admit that, after all, it is merely a question of procedure? There is no principle involved; it is merely a question of procedure. Now who knows which is the best procedure? Is it not the officers of the departments concerned who have been dealing with this matter for four years, and who have asked that there shall be no change in the procedure which has been followed all this time? Will not my hon. friend admit that after all the officers of the Immigration department as well as the officers of my department should be the best judges of what is the best procedure to follow?

Mr. STEVENS: That is a very nice way to put it, but I want to point out to the minister that we have a right to our opinion, and I will say something further to him. I want to tell him it was the failure of both the Justice department and of the Immigration department, not of this government but of past governments, to have a due appreciation of the situation that brought about this legislation in 1918. It was public opinion that forced that legislation on the statute book.

Mr. LAPOINTE: Oh no, it was—

Mr. STEVENS: It certainly was. I had a good deal to do with it, and this is refreshing my memory. It was the indignation of the public on the Pacific coast that brought about that legislation, and now we are going back to the sleepy methods that were followed in previous days.

Section agreed to.

On section 2—Orders of Minister of Justice to be valid.

Mr. EVANS: Unless I misunderstand this bill, I think a word here is necessary on behalf of the stranger within our gates. I do not understand the member for Vancouver Centre as wishing for more stringent legislation in this regard. If I understand the bill aright, we may detain the immigrant who has committed an offence and keep him in jail or in the penitentiary or reformatory for many years, and then deport him without any further ado. After many years he has lost all connection with the land of his birth, he has lost his standing in this country as well, and we turn him adrift, perhaps penniless. In the name of humanity I think we are dealing too summarily altogether with those who are seeking new homes in our country.

Mr. LAPOINTE: Of course, my hon. friend has read the section of the statute? It applies only to men who are not Canadian citizens or who have not acquired Canadian domicile.

Mr. EVANS: Is it not a fact that those to whom this act would apply mostly require five years' residence in this country before they can obtain citizenship anyway? We may detain that man ten or fifteen years in prison in this country, at the end of which time he has lost all connection with the land of his birth, and then we summarily deport him without trial. It does not seem like British justice.

Mr. STEWART (Argenteuil): They have not lost citizenship. If a Canadian were to commit a like offence in another country and serve a like sentence, he would come back to Canada as a Canadian citizen. So it works both ways.

Mr. McQUARRIE: Has the minister considered the point raised by the hon. member for North Waterloo (Mr. Euler) as to whether the act could be so amended as to provide for the deportation of these convicts immediately after their conviction instead of keeping them here in the gaol or penitentiaries? It seems to me there might be something in that. I have considered the point previously. As a matter of fact, it has been put up to me by some of the authorities, more particularly in regard to the less serious offences which have resulted in gaol sentences. In the case of a sentence to gaol, what happens? It means that the municipality in which the offence is committed has to maintain the man while he is in gaol awaiting deportation. It is very doubtful indeed whether the confinement in gaol is going to do any of these people any good.

The CHAIRMAN: I would draw the hon. member's attention to the fact that section 1 is passed. It is section 2 we are dealing with now, providing that the orders of the Minister of Justice shall be valid.

Mr. McQUARRIE: Section 2 deals distinctly with section 43 of the Immigration Act, which is the one I am discussing.

The CHAIRMAN: I do not see the relevancy at the present time.

Mr. McQUARRIE: Section 2 distinctly refers to section 43 of the Immigration Act, and it is that section of the act I am discussing.

The CHAIRMAN: Is it the hon. member's intention to suggest an amendment to section 43 of the act, as coming within section 2 of this bill? This deals purely with the power of the minister to make an order.

Mr. McQUARRIE: I say that this section is before the committee, and I am discussing with the minister whether it would not be advisable to further consider the suggestion which was made by the hon. member for North Waterloo. If I may proceed, Mr. Chairman—I shall not be long—when a man is sent to the gaol, the municipality has to pay for his keep until he has served his sentence, and then he is deported. Why not deport him immediately after conviction? I do not see why that could not be done.

Mr. LAPOINTE: Because he has committed a crime. He has been convicted of a crime and has to serve a sentence. I am sure my hon. friend would be very popular with these people if, under such circumstances, he would allow them all to go scot-free.

Mr. JACOBS: Suppose two men, one a Canadian and one an American citizen, commit a crime. The Canadian would be sentenced to two years in the penitentiary for his offence, while the American would be sent to New York, both having committed the same offence. The thing is absurd on the face of it. The man should be punished, and in addition to that he should be sent out of the country. But to sentence a man to repatriation for an offence would make the Minister of Justice most popular with alien criminals. Suppose a man wants to go back to London and has not the means; he says to himself, "I will commit an offence, incur

imprisonment for two years, and be sent back to my country, without any cost to myself." Such a procedure would be placing a premium on crime.

Mr. McQUARRIE: In the meantime, if you do not do that, you are simply providing him with board and lodging, because a man who is so unprincipled as to endeavour to do what has been suggested by the hon. member for George Etienne Cartier (Mr. Jacobs) would not care very much whether he was kept in gaol or not. This provision for the deportation of a foreigner who has committed an offence in this country is comparatively recent. When you send a man to the penitentiary what happens? The government has to keep him there and educate him.

Mr. JACOBS: Where would New Westminster be if you did not have a penitentiary.

Mr. McQUARRIE: I guess it would be in the same place as it is now. The government has to keep and educate this man and all that kind of thing, and the difference to my mind is this, that we owe a duty to Canadian citizens and British subjects, but we do not owe any duty to foreigners. When we deport them we are inflicting upon them possibly the greatest penalty that we can impose

Mr. GARLAND (Bow River): My hon. friend suggests that we owe a duty to British subjects coming here on our solicitation, but that we do not owe any duty to foreigners Does he really mean that, or is that just a joke? I really do not think the hon. member can be serious in that.

Mr. McQUARRIE: We apparently do not owe any duty to the people who are not Canadian subjects when we throw them out of the country. When we deport them we are through with them and they cannot come back to Canada.

Mr. LAPOINTE: But we are not paying them a compliment either by keeping them in gaol.

Mr. McQUARRIE: But we are going to a lot of expense in keeping them in gaol, and the question is whether we should do that or not. I am simply suggesting this to the minister as something that might be considered. I do not say that I am absolutely in favour of it. I can quite see that lawyers might cast it aside as being ridiculous, but at the same time the more I think of it the more I am convinced that this matter should receive some consideration.

Mr. HOEY: Will the minister tell us if all such prisoners after release are deported, or are exceptions made in certain cases?

Mr. LAPOINTE: It is optional.

Mr. HOEY: Optional with the prisoner?

Mr. LAPOINTE: It is in the discretion of the department.

Mr. HOEY: Optional with the department, but not optional with the prisoner.

Mr. LAPOINTE: No.

Section agreed to.

Section 3 agreed to.

Bill reported.

SPECIAL WAR REVENUE ACT AMENDMENT

Right Hon. W. L. MACKENZIE KING (Prime Minister): Bill No. 119, to amend the Special Act, 1915, has now been distributed. If hon. gentlemen have no objection, the government would like to proceed with it this evening. Copies are on the table.

Mr. GARLAND (Bow River): We have not copies.

Mr. MEIGHEN: I do not desire to waive the rule in this case. I do not think there is any need of proceeding with it. Other items were mentioned in last night's statement by the minister. I have not had time to read this bill.

Mr. MACKENZIE KING: If my right hon. friend objects of course we will not proceed. We have already been over it in committee, and my hon. friend is familiar with it all.

Mr. MEIGHEN: I do not care to proceed with it.

Mr. MACKENZIE KING: Then the second reading will have to stand.

Bill stands.

DOMINION LANDS ACT AMENDMENT

The House resumed from May 11, consideration in committee of Bill No. 75, to amend the Dominion Lands Act.—Hon. Mr. Stewart (Argenteuil)—Mr. Gordon in the chair.

On section 1—Conditions of entry for lands in Saskatchewan and Alberta south of south boundary of township 16.

Mr. STEWART (Argenteuil): There is just the one clause in this bill dealing with the sale of school lands, and it was not finished when we were in committee the other day.

The hon. member for East York (Mr. Harris) moved an amendment, and I asked time to consider it. I have now drafted a proviso that will cover the objection taken by the hon. member. This proviso reads:

> And provided that no action shall be taken save and in respect of a holder who has been actually farming such lands in a proper and husband-like manner.

That is in order to take in only the men who are actually farming these lands, not the speculator who is using these lands for speculative purposes. This provision has been copied from the form of mortgage describing cultivated land. I have adopted the same clause and embodied it in this section. It amply covers the objection raised by hon. gentlemen opposite.

Mr. MEIGHEN: What is meant by "such lands"? Does that mean lands that are surrendered or lands or quarter sections that are to be retained or the whole of the land bought?

Mr. STEWART (Argenteuil): It means that the lands in question, whatever lands they are, both those that are surrendered and those to be retained, are being farmed. The idea is not to allow the speculator to come in who is not farming the lands, who is holding them for speculative purposes. Frankly, I do not think there are any left, but I tried to meet the objection so that this will be confined to men who are actually carrying on farming operations on those lands.

Mr. MEIGHEN: A man might have bought at a school land sale a section of land and he might be farming only a quarter of it. He desires to retain that quarter and to abandon the other three quarters. He could not do that under this amendment. He would have to be actually farming the whole section. My point is this, that under the amendment as worded, I fear the minister virtually negatives the whole clause. What I mean is this: No man who is farming land which he has bought at a single sale, will be anxious to give up that part of the land which he has under cultivation.

Mr. STEWART (Argenteuil): If my right hon. friend is speaking of farming, say 160 acres, no one farms the whole 160 acres. He farms portions of that. What I am trying to avoid is to say that, without his having performed any duties upon the land, he would be entitled to give it up.

Mr. MEIGHEN: What the minister means is this, that if a man is farming a portion of the actual land bought, that should be sufficient. The way in which the minister has this worded, the man would have to be farming in a good and husbandlike manner, perhaps not every acre, but every portion. I presume the minister means—and if he does, he is right—that even a man who is living in a town, provided that he is farming the land by means of a tenant or an employee, is entitled to the relief just the same as anybody else.

Mr. STEWART (Argenteuil): Yes, if he is spending money on the property.

Mr. MEIGHEN: I think that is quite proper, but I fear the minister's wording will have to be extended; otherwise, it will mean that the man has to be farming every portion of the land even though he is not ploughing every portion of it. Any man who is doing that is not going to give up the rest and have all his payments centre on the one quarter.

Mr. STEWART (Argenteuil): All I am seeking to avoid is that the speculator should come in and take advantage of this provision We want simply to deal with men who can prove to the satisfaction of the department that they are in a position where they cannot continue; that they are liable to sustain serious loss, and that they have been putting forth their best endeavours to farm the land. They are the people whose investment we are trying to save. If a man is in no danger of losing his investment, he has no cause for complaint and he cannot ask to be taken under the protection of this legislation. Cases, however, constantly come to our notice of the kind I have described. There is a case on the Blackfoot reserve of a couple who have spent $30,000 in trying to develop a farm. The husband died a year ago. The widow is left in possession of the property and she is unable to carry it on. There is no section in the Indian Act that gives me authority to deal with that case, but it is identical with cases that arise. The land which this couple have been farming comprises a considerable acreage. I have forgotten the quantity. So far as I am able to ascertain, they have been farming it in a good, husbandlike manner, but the widow has got into a position where it is impossible for her to carry on. If she could surrender part of the land and apply the payments on the balance, that would get her out of a very difficult situation. That is exactly how I mean to apply this provision. I have gone carefully into this question, and I think the clause is drafted so as to give us authority to deal with these cases where they arise.

Mr. MEIGHEN: Supposing a man buys a section and sells half of it, and the purchaser who buys on an agreement of sale, cultivates a portion of that. The man is not farming any of it at all, but he has some of it under cultivation through his purchaser. He applies to have the moneys he has paid all devoted to the redemption of the half section that he has sold. Will the minister feel that he is empowered under this amendment to yield to the importunities of that man?

Mr. STEWART (Argenteuil): Do I understand my right hon. friend to suggest that the other half the man is holding himself would not be cultivated?

Mr. MEIGHEN: Yes. He bought it all as one piece.

Mr. STEWART (Argenteuil): He could scarcely claim to apply the payments on the half that was uncultivated to the half that was cultivated. That is one of the very serious difficulties with which we have to contend. The method of disposing of these lands by agreements of sale creates endless difficulties in making adjustment. There are so many parties interested in the matter that it almost puts an adjustment beyond the bounds of possibility.

Mr. GARLAND (Bow River): Supposing one of these parcels of land to which the right hon. gentleman has called the minister's attention were used simply as grazing land for grazing purposes, and the other portion is the portion of which the minister has spoken, that is cultivated. The man is in difficulties. What is there in this legislation to prevent that man from having the payments on both quarters apply on the cultivated one and so get out from under his liability on the uncultivated land?

Mr. STEWART (Argenteuil): One can hardly conceive of the various angles that will arise in connection with dealing with a question of this kind; but the legislation is devised, so far as we can devise it, for the purpose of meeting cases of real distress. I am not tying them down to just how much cultivation there shall be or whether it shall be fifty, sixty or seventy-five acres. If a man had a half section that he wished to retain without any cultivation on it, I would hesitate to some extent. If it were a quarter section, that would be a different matter, and I think I could agree to that, provided that he had a half section well cultivated and was having difficulty in meeting his payments.

Mr. BANCROFT: What would happen in a case where a whole section, say of school land, purchased by a settler residing near there, was grazing land, was purchased for that purpose and he got into difficulties in just the same way as a man who bought land for farming and was unable to carry it on? Would the same treatment apply to him? Could he surrender three-quarters and keep one?

Mr. STEWART (Argenteuil): I am sorry, but we do not cover that case. The moment you do that, you immediately cover the case of land with a two-strand wire fence around it, leased by a speculator for somebody to graze his stock upon. That is, perhaps, a real difficulty and it may be somewhat of a hardship. But if you carry it to that extent, the other purchaser comes in with whom we do not wish to deal.

Mr. BANCROFT: I am sure the minister will agree with me that there are some cases where this land is not leased, but purchased solely for that purpose, because pasture is scarce in some of those sections in the west. It might in a few cases work a hardship on such a man.

Mr. STEWART (Argenteuil): I had a fairly wide experience in this matter before coming here. We encountered all sorts of difficulties and I made some trips to Ottawa with regard to the leasing of school lands held by speculators or by people who hoped for an increase in value by leasing the land for a time. The real reason these people leased the land in our province was to get out of the wild land tax; and they avoided this by putting stock on the land. We were forced to meet this attempt to avoid taxation by enacting a clause providing that the stock must be the bona fide property of the owner of the land. If we undertook to assist cases of the kind suggested we might step into difficulties of all sorts. It was to meet the objection raised in the committee on the previous occasion that I drew up the clause I am now suggesting.

Mr. MEIGHEN: The minister is going to be in a position under this amendment to do pretty much as he likes.

Mr. STEWART (Argenteuil): That is true.

Mr. MEIGHEN: And I do not know how the amendment could be framed to avoid putting him in that position. I want to put myself on record to this effect: This legisla-

tion will result in bringing back into the title of the government a very large proportion of the outstanding school land sales. The title will revert to the department and not only will the progress which has been made in school land sales for many years be arrested, but retrogression to a great extent will ensue. I ask the minister to note what I am saying now; he will find that this will be the result.

Mr. STEWART (Argenteuil): I cannot share the fear expressed by my right hon. friend. We know pretty well now the number of rescissions that will take place. We have had a great deal of correspondence and the matter was discussed fully with the provincial governments before this step was taken. It will be applied only in cases where there is real distress. It is true, as my right hon. friend says, that considerable power is placed in the hands of the minister, and this is necessary if the act is to be practicable.

Mr. GARLAND (Bow River): Approximately, what is the amount of the arrears on school lands?

Mr. STEWART (Argenteuil): I could not give that information now; I will submit it when the estimates are under consideration.

Mr. MEIGHEN: This will be an expedient to relieve the large purchaser to a very great extent; he is the beneficiary of this legislation. But the small purchaser cannot possibly be relieved at all. The fellow who bought a quarter section in the boom times at a high figure must make his payment or lose his money; but the man that bought a section or two, if he is farming part of it, can come to the foot of the throne and make out a case for a lease. The poor chap with a quarter section must stay with his bargain.

Mr. STEWART (Argenteuil): Very few fail on the quarter section. I do not think, speaking from memory, that I have one application from an individual who has purchased a quarter section.

Mr. MEIGHEN: What could the poor fellow apply for? There is no smaller unit; he has to stick, that is all.

Mr. SPENCER: Does the department allow the purchaser of school land to re-sell the land to a second party? If so, does the department hold the original purchaser good for the full payment in case the second purchaser does not come through?

Mr. STEWART (Argenteuil): I do not quite follow the question.

[Mr. Meighen.]

Mr. SPENCER: I want to know whether purchasers of school lands are allowed to re-sell, and, in that case, whether the department holds the original purchaser good for the amount.

Mr. STEWART (Argenteuil): In most cases the sales are made by agreement, and the great difficulty in the department is that frequently it is not notified. But if they are prepared to pay out the amount against the land then the first purchaser is released, but not until the amount is paid.

Mr. MEIGHEN: The minister I think has missed the point. What the hon. member wants to know is whether the department can hold responsible the person who purchases from the government's vendee. He cannot be held responsible, nor can the government hold their own purchaser responsible, inasmuch as the government's purchaser does not enter into any agreement at all; he gets a receipt for the money he pays. It amounts to this, that the purchaser from the government really takes an option, but he is not bound personally; there is nothing by which he can be made to pay a cent. All he suffers is the loss of the first payment in case he does not come through.

Mr. CAMPBELL: On the other hand, by that policy the government it seems is in a favoured position to cancel the land not held by legal restriction.

Mr. MEIGHEN: That is right.

Mr. CAMPBELL: In the past I think the department has erred on the side of leniency. A great deal of this land passes into the hands of speculators and is turned over by them to bona fide farmers at a large price. The speculator's object is to secure all the equity he can from the farmer. The farmer in many cases has broken up the land, he has put his buildings on it, having done all the work of development, and now he finds that the payments have not been kept up to the department; in fact, in some cases that I know of nothing further than the original payment was made. The farmer on the land wants possession of it and cannot secure it. I think the policy of the government should be to eliminate the speculator and eliminate him immediately; but in a great many cases they are not doing so. It is in cases where the land was purchased by wealthy men that the government is extending the most protection to the speculator. I know of instances in which land was bought at from six to eight dollars per acre originally and was turned over to the farmers at as high as

eighteen dollars. A farmer has worked on it for years, having spent a lot of money, and now he finds he has no opportunity of securing it. The speculator never paid any taxes and the farmer has let his own taxes run on, because he did not know whether he would acquire the land or not. The municipalities were not able to collect the taxes for the reason that there was no title to the land and they did not want to seize from the farmer; they knew he had his share of the crop to deliver to the original purchaser and they feared to put him out of business. The result is that the taxes have run up in arrears to an enormous extent; in one case I know of there is nearly $1,000 against one particular quarter section. A municipal officer told me some time ago that in view of the trouble they have experienced they would prefer to lose the taxes if they can eliminate the first party. It seems to me that if the department would wipe out the speculator and get the bona fide farmer on the land the municipalities could secure their taxes and be in better shape than they are to-day, because they would be doing business direct with the farmers. The only thing for the minister to do is, as I say, to eliminate the speculator, who has been a curse to western Canada. With regard to the question raised by the leader of the official opposition (Mr. Meighen), that a man might be living in a town and yet be farming his land by proxy, there are a great many cases of that kind and these men might be entitled to consideration. In many cases it has happened that some man has gone on the land and worked on it a very short time and then moved in town to engage in some other business, and necessarily he had to rent the land or get someone else to work it. In that case I would say that the man would be entitled to consideration, but I think the minister should not be bound by any very definite legal restriction and that he is perfectly right in leaving the matter to his own judgment. Indeed, I do not think it can be handled any other way. But I should like to point out that in the case of a speculator, who never intended to farm the land, but just used it to farm the farmer, merely trying to get all the money he could out of it without doing any work, and in a good many cases where he did not sell it had some broken up to comply with the provisions of the Wild Lands Act. I think the minister should take drastic action and eliminate that speculator. I want to point out another feature, that in re-selling the land the man residing on it should have the first opportunity to purchase. There are some cases of very great hardship, and in the cases I have referred to I may say that the department has been very fair and always willing to give the man on the land the first opportunity to purchase. I think that should be borne in mind, that somebody else might step in and put up a little more cash or pay a few dollars more and the man on the land would be losing his equity and forced out on the road.

Mr. MEIGHEN: How does the minister feel about that speculative argument?

Mr. STEWART (Argenteuil): The speculator is very hard to eliminate. When you attempt to do so you wipe out the purchaser too. You cannot do anything in that case. If he has made a sale of the property, and the property is cultivated, we cannot be responsible for the collection of the taxes. Where you find a speculator in possession of land to-day, he is paying the interest, although he may not be paying any of the principal. When he gets in arrears with his interest payments we take action; not so when the man in arrears is the actual farmer. But if that speculator has some other man on the land working it, then you are going to put the latter out of business as well as the speculator the moment you take action on the contract. My hon. friend may say: Well, is there not some process by which you can protect the man on the land? There is not, because under the act we must sell the land by auction.

Mr. CAMPBELL: I think the minister has missed the point of my argument. We will say a speculator bought land at ten dollars an acre, and resold it at fifteen dollars an acre to a farmer. His object is not to pay the original amount to the department at all, but as quickly as possible to secure his equity, and then assign what equity he may have to the farmer on the land. If the minister cares to look up the figures in his department he will find that in a great many cases the interest payments are not being kept up. I understand the minister has nothing to do with payment of the taxes, but I think the department is under a moral obligation to the municipalities to at least be reasonable in the matter. The point is this, the speculator should be eliminated and the land, or a reasonable amount of it, resold to the man on it. In most cases this man might be ahead by this proceeding, because he probably bought that land at a time when the value of it was inflated above what it is worth to-day. In a good many cases the speculator

never secured his full equity because the value of the land has dropped to such an extent that it is probably not more than equal to the amount of the original purchase price and any accrued interest there may be. In that case it would be perfectly fair to sell the land to the farmer. You would not be putting him out of business as the minister suggested; you would be putting him in business, because he would prefer to deal with the department rather than with the speculator. He would at least know where he stood, and in a great many cases he would be getting the land a little cheaper than the amount that is against it to-day.

Mr. STEWART (Argenteuil): I am sorry, but it cannot be done.

Mr. COOTE: Is not every quarter section a separate sale? And in case a man bought ten quarter sections at one of these school sales, and is now farming three or four of these quarter sections, would he be able to turn them back under this suggested amendment?

Mr. STEWART (Argenteuil): No, he would not, I can assure you.

Mr. SPENCER: If he could not turn back those extra quarter sections, where would you put the limit?

Mr. STEWART (Argenteuil): If he is only farming one or two quarter sections, and is doing nothing with the balance but grazing them, he would not be entitled to consideration. Right off the bat I would say so.

Mr. MEIGHEN: If the member for Macleod (Mr. Coote) is right—and I fancy he is, from recollection—that each unit is a quarter section, what is the effect of the minister's amendment? The land referred to in the minister's amendment cannot be any of the land except the land in the one sale.

Mr. STEWART (Argenteuil): If he is farming the land in a good and husbandlike manner—

Mr. MEIGHEN: What land?

Mr. STEWART (Argenteuil): The land he purchased; and he has purchased twenty, ten or two sections—

Mr. MEIGHEN: Quarter sections.

Mr. STEWART (Argenteuil): Yes. But he is the owner of ten or fifteen quarter sections, and the mere fact that because the sale was made for one quarter section does not limit the action provided for by the amendment.

Mr. MEIGHEN: Suppose a man has bought ten quarter sections, does the minister mean he might actually be farming in a good and husbandlike manner the whole ten quarter sections?

Mr. STEWART (Argenteuil): No.

Mr. MEIGHEN: What does he mean? That is what he said before.

Mr. STEWART (Argenteuil): True; but surely my right hon. friend would not expect that the act would so provide? We would much rather have not touched it if that were the case and left it absolutely to the jurisdiction of the minister; but we are trying to throw some protection around the minister as to how he shall deal with these sales.

Mr. MEIGHEN: What is the meaning?

Mr. STEWART (Argenteuil): The meaning is that farming operations shall have been carried on in a good and husbandlike manner.

Mr. MEIGHEN: On how much land?

Mr. STEWART (Argenteuil): I did not put in the acreage, because if I did so it would probably nullify the effect of the whole thing. You have to leave that to the discretion of the minister. But when you ask me if I am going to cancel eight or ten quarter sections of uncultivated land for one individual, I answer, certainly not.

Mr. MEIGHEN: The minister cannot get through the maze so easily. Here he has an amendment which says that he cannot apply this relief clause unless the purchaser of, say ten quarter sections, is farming that land in a good and husbandlike manner. When I asked him what that "land" meant, he said the land bought. I do not see how it could mean anything e'se. That is, he must be farming the ten quarter sections in a good and husbandlike manner, he must be farming each of them; there is no other way to farm them; he cannot farm every acre of each of them. Under the law he will have to be farming each of these ten quarter sections.

10 p.m.

Mr. STEWART (Argenteuil): No, no; my right hon. friend has missed that.

Mr. MEIGHEN: I have not missed it. The minister told me that.

Mr. STEWART (Argenteuil): No.

Mr. MEIGHEN: The minister's answer was quite right; I have just read the amendment through. Under the amendment as he has it he would be powerless to apply the relief

unless the applicant was farming each of the quarter sections in a good and husband-like manner. Any man who is actually farming the land is not going to ask that the contract be cancelled.

Mr. STEWART (Argenteuil): My right hon. friend is wrong there. I know of at least a dozen half sections, in respect of which applications are now in the office, where 75 per cent of the lands are being farmed.

Mr. MEIGHEN: Oh, yes.

Mr. STEWART (Argenteuil): And the request comes to have the purchase price applied on the one quarter.

Mr. MEIGHEN: That is, one quarter of the half?

Mr. STEWART (Argenteuil): No, 75 per cent of the whole is being farmed, and they want to give up one quarter and apply the payments on the other. Many men who are farming on half sections owe more than the original purchase price, to say nothing of what they have paid in, and these are the real cases of hardship. It will help them out very materially if we apply the payments on the one quarter section and release them in respect to the remainder. There are not many men with eight or ten quarter sections in these days; those are mostly all cancelled.

Mr. McTAGGART: The minister is perfectly correct in his summing up of the case. I know of a man who bought a half section of school land around 1917 or 1918 and has since been farming practically the whole of it, with the exception of a little pasture. He put up substantial buildings on one quarter—house, barn, stables, granaries—and had a well dug and fencing built. At the time he bought the land there was great inflation of land values and possibly he paid too high a price; and he has been unable to keep up with the payments on the half section. So that to-day he is in the position of having made very substantial payments on the half section but of being unable to make good on the whole of his land. This legislation will enable him to release one quarter back to the department and have a chance to make good on the other quarter. This is not the only case of the kind. These men unwisely bought at an inflated value more land than they could handle, and they now find that after two or three years labour they are faced with the loss of everything because they cannot make good their payments.

Mr. CAMPBELL: The minister stated that the suggestions I made to him could not be carried out. I am quite aware that they could not be carried out in connection with school lands, but I was speaking in a general way of all government land. As a matter of fact I had particular reference to Indian land, of which the department can make direct sales after the original purchase has been cancelled. That is really what I had in mind, and perhaps I should have explained that to the minister. There is an enormous amount of land under the control of the Indian department which was sold to speculators, the payments having been in arrears, in some cases only the original payments having been made.

Amendment agreed to.

Section as amended agreed to.

Bill reported, read the third time and passed.

SUPPLY

TRADE AND COMMERCE

The House in committee of Supply, Mr. Gordon in the chair.

Trade and Commerce—Dominion Bureau of Statistics (including western census), $125,000.

Mr. MANION: I notice that there is a decrease of $75,000. It is so rare a thing I would like to have an explanation.

Hon. T. A. LOW (Minister of Trade and Commerce): It is because a large number of census clerks employed in connection with the 1921 census are no longer required.

Mr. MEIGHEN: They have not been kept on until now, have they?

Mr. LOW: Yes, it takes time to complete the work.

Mr. HANSON: When will the remaining volumes of the census report be available?

Mr. LOW: Three more volumes will be available this year. The remainder will be published next year.

Mr. GARLAND (Bow River): Does the minister say that the work of compiling the census statistics is about completed?

Mr. LOW: The work of concluding the compilation is going on.

Mr. CASGRAIN: Will the reports be published in French at the same time as in English?

Mr. LOW: Yes.

Mr. MANION: How many employees are there in the Bureau of Statistics?

Mr. LOW: They come under the civil government estimate, not under this one.

Mr. HANSON: What particular items does this deal with?

Mr. LOW: This is for the outside staff. It is to provide for salaries of temporary employees, printing and stationery, criminal and vital statistics, travelling expenses of the Dominion statistician and his staff, freight and express, telephones and telegrams, newspapers and periodicals, machine rentals and repairs, and contingencies.

Mr. HANSON: What permanent staff has the Bureau of Statistics outside of Ottawa? I thought they were all localized here.

Mr. LOW: There is no permanent staff outside of Ottawa. We have to have a considerable outside staff, of course, for the decennial census.

Mr. HANSON: Those are just enumerators. I understood the minister to say that this did not cover the salaries of the staff here in Ottawa. They would come under civil government. What salaries, if any, are paid out of this vote outside of Ottawa?

Mr. LOW: This includes the salaries of the temporary clerks employed in connection with the census, but these clerks are all gone now.

Mr. HANSON: If they are all out, why vote this? What makes up the $125,000? Does it include anything for salaries for staff, and if so, where is the staff located?

Mr. LOW: As I said before this vote is to provide for the salaries for temporary employees, printing and stationery, criminal and vital statistics, travelling expenses of the Dominion statistician and his staff, freight and express, telephones and telegrams, newspapers and periodicals, machine rentals and repairs, and contingencies. It covers the salaries of temporary employees.

Mr. MANION: What salaries are paid in addition to this for the permanent employees?

Mr. LOW: If my hon. friend will turn to page 103 of the Estimates, he will find the items scattered over the whole page. They are so placed in accordance with the Auditor General's requirements.

Mr. MANION: Yes, I saw that. I did not wish to take up the minister's time, but I was curious to know how much in addition to this $125,000 there was paid. Page 103 takes in the whole department, and it does not give the Statistics branch separately. I am not in any way critical of the Statistics branch; I am one of the boosters for it, I always like to say a good word for it, because you can always get reliable information on very short order there. At the same time, I would like to know what salaries in addition to this $125,000 are paid in that branch.

[Mr. Manion.]

Mr. LOW: I am sorry my deputy has not the figures with him.

Mr. HANSON: Has the minister had any criticism lately with respect to the multiplicity of returns that merchants, manufacturers and others are required to make to the Statistics branch? I have had a good many complaints from business men of the large number and great variety of returns that are required of them from time to time by this department, so much so that many of them have complained of it as a perfect nuisance. I quite appreciate that the Statistics branch is an important one; it is important that we should have statistics, but when it is carried to such an extent as has been complained of to me, then I think there is such a thing as overdoing it. I spoke about this last year, and I should like to know how the matter stands.

Mr. LOW: I quite agree that there is sometimes ground for complaint, but it is only occasionally that those who are called upon to make returns object. As a matter of fact, before I was in the House I remember objecting myself. I used to think it was a waste of time supplying all the details that were requested. However, they serve a useful and valuable purpose, and I do not think there are many industries which would care to have any of this work dropped.

Mr. ANDERSON: What is included in this vote for the western census?

Mr. LOW: The census of population and agriculture in the provinces of Manitoba, Saskatchewan and Alberta will be taken by the bureau in the month of June, 1926, on a date fixed by the Governor in Council, and every tenth year thereafter. That is the clause in the act governing the taking of the western census.

Mr. HANSON: Then why vote the money this year?

Mr. LOW: We have to start it this fall.

Mr. ANDERSON: Are they going to take the census next year in the western provinces?

Mr. LOW: Yes.

Mr. HANSON: What is the idea?

Mr. LOW: That is in accordance with the act, from which I have just quoted.

Mr. HANSON: When was the law passed?

Mr. CRERAR: Years ago.

Mr. GARLAND (Bow River): With what success has the merging of the different statistical branches into a central bureau been effected?

Mr. LOW: We are gradually working towards centralization.

Mr. GARLAND (Bow River): It is not yet completed?

Mr. LOW: No.

Mr. ANDERSON: What amount of this vote goes towards paying for the western census that is to be taken?

Mr. LOW: It is impossible to say definitely, but it will come out of this vote.

Mr. HANSON: Do I understand that for the purposes of the subsidies to the three prairie provinces, the western census is taken every five years? Is this part of the agreement under which they became provinces? Is that the act the minister has in mind?

Mr. LOW: The census for the whole Dominion is taken every ten years, but a census of population and agriculture, only, in the three western provinces is taken every five years.

Mr. HANSON: It has nothing to do with the subsidies?

Mr. LOW: Nothing whatever.

Mr. ANDERSON: When was the last census taken? It was in 1921, was it not?

Mr. LOW: The 1921 census was a census of the whole Dominion, and included everything.

Mr. BROWN: It takes the two to fulfil the whole purpose. We have a quinquennial census in the west. The Dominion census covers one period, and the census of population and agriculture covers the other, so we have a quinquennial census for the three western provinces.

Mr. HANSON: Has it any relation to the subsidies paid to the three western provinces by the Dominion?

Mr. LOW: None whatever.

Mr. BROWN: Oh yes.

Mr. HANSON: The minister says no.

Mr. LOW: My deputy informs me that the subsidy is based on the population in those provinces.

Mr. HANSON: Then the subsidy to the three western provinces is changed every five years, instead of every ten. Why is the distinction made between the three western provinces and the other provinces? I am asking just for information.

Mr. GRAHAM: Would the reason be that the west is a new country, rapidly growing in population and it would be unfair possibly to those three provinces to keep them down to a decennial census? Would we profit any in the older provinces by having the census taken oftener?

Mr. HANSON: Personally, I would like to see a census taken of the old provinces. We would know how many people we have lost since the government came into power.

Mr. GRAHAM: You would not be afraid of that.

Mr. GARLAND (Bow River): I can readily understand some of the objections taken by hon. members to my right to sending in the returns required by the bureau. I will not readily forget an objection of my own in the early days before I learned the value of statistics. I happened to be one of the unfortunate crop reporters, and when during my early days in western Canada I received the forms to fill in, I took care to fill them in with a booster's mind. Everything looked glowing and extremely good, and so no return I made could have reflected accurately the general conditions of that country. Later on I began to realize that we possibly had some enemies—well perhaps not exactly enemies, but people who liked to make a living off what we raised—and the thought began to grow in my mind, if I give them this information it will simply enable them to steal a little more from us; so that I began to change absolutely the nature of the report I was making, until it was the very opposite of optimistic. However, I am glad to say that today I am beginning to realize the immense value of statistics, and therefore I notice with considerable regret the serious cut in the estimates. I do not think we have a more important department than the Bureau of Statistics. I do not think there is one single department of the government to which the government as a whole always look for guidance in its progress forward or for indication of what retrograde steps may have been taken.

An hon. MEMBER: Hear, hear.

Mr. GARLAND (Bow River): I am glad I have one supporter when I make that statement. It is very seldom I take exception

to a reduction in the estimates. It is therefore with a full realization of the responsibility in this case that I do take serious objection to this reduction, especially as it is an enormous one. It is the largest single reduction in the Department of Trade and Commerce, a reduction of $75,000. The reduction amounts to almost half of the amount voted last year, but the minister states that the compilation of the census figures is practically complete. May I suggest that the department has a great and steadily growing work to perform? Every country in the world recognizes that feature. My hon. friends to my right have tried to impress upon the government that in the United States tremendous strides for economy are being attempted, and that in their general budget they have reduced their estimates by about a billion dollars. May I point out however that they have increased their vote for this work? In Japan and also in Germany, this work is expanding. Germany has realized, as no other country has, the importance of the statistical barometer that can be developed by the proper use of statistics to indicate just how trade should expand or be contracted as the case may be. I think too many hon. members seem to regard this matter as a sort of joke, but after all the joke will be turned round the other way. One gentleman said that the joke has been on those who believe in statistics, statistics, and lies; but in a little while the joke will be on those who do not use the statistics. I think if this government realizes its responsibility in this matter it will not cut this vote. Although the work of the census may be practically completed, there is an enormous amount of work yet to be done. I should like to point out to the minister that in the last report made by the Dominion Statistician, he pointed this out. For example, in connection with the statistics of Immigration we have no information whatever in this country. We do not know how many people we are losing. We have to guess at it or rely on the figures given by the United States. There is no accurate taking of a return of the emigration from this country and the figures that we get in the returns from other countries are challenged by this government or by the department; but they have no evidence to produce to set off against these returns except the fact that perhaps some Canadians are coming back. Those coming in here are counted, but the emigration figures are very incomplete.

Certain improvements were recommended in compiling navigation statistics but I doubt if they have become effective. Some improvements were recommended in the reports which were furnished respecting trade, but I would especially call the attention of the minister to the Income Tax branch and urge that the data which is brought together there should be correlated with that of the bureau. I do not think any more important work than that can be undertaken. When we try to find the actual income of farmers, we cannot do it, but we can find in the Year Book the net return of the manufacturers. We cannot get comparative figures with regard to agriculture. It is my belief that the agricultural feature of the bureau has been seriously neglected. I do not think that we have enough expert help in that division. We may have a sufficient clerical staff, but I think we should have one or two young men who, anxious to go forward in this work, will be ready to step into the places of the older ones when the time comes. Of the older ones the best is I think Mr. Godfrey who will have to retire, on account of his age, within a period of two or three years. I would strongly recommend the minister to take this matter into consideration, and I would be willing to support a vote in the supplementary estimates, if the minister thinks, after consideration of the matter, that this vote should be implemented.

We have no satisfactory statistics of civil justice, or very few. They are quite incomplete.

In conclusion, I do not think there is a more valuable book on which we can base accurate estimates as to the condition of the country, the trade and the future than the Canada Year Book. I think it is a splendid piece of work, well done. There are those in this House who say statistics are a joke. They have spoken to me in that way and have stated that statistics are the toys of faddists propagated by those who wish to send their theories broadcast on every occasion. I should like to call their attention to the words of men like Lord Reading and Lord Milner. In the official report on the government of South Africa, Lord Milner said:

> No one can have followed the account of the functions of government without feeling how complicated and scientific its business is, even in a new country—

Such as Canada is.

> —with a small population. Great issues hang upon the judgment of those who guide its policy just as the safety of a ship depends upon the navigating officer. The captain does not guide his ship by guess work or intuition.
>
> The navigation of a ship is a good example of scientific administration. A bank, a railway, an army, a mining group, must each be equipped with an intelligence department whose duty it is to collect and

tabulate facts and figures (which are merely the most concentrated expression of facts) and to deduce correct conclusions from them. Much of the information upon which governments act should be prepared for them in the same way by their statistical offices. As in the navigation of a ship nothing should be left to guesswork that can be discovered by accurate observation and the comparison of measured results, so it shou'd be in matters of state. The policy of government ought to be based so far as is possible on information collected and prepared on the most scientific lines.

I could go on quoting many others, like Emile Levasseur, an eminent French economist, S.N.D. North, De Bray and many other eminent men, whose judgment certainly ought to be regarded with some confidence by those who sit in this House. I would conclude by asking the minister, in view of the fact that we hope to have a constantly growing and expanding country with an ever increasing population and various social and economic problems, to take into consideration again the possibility of increasing this vote.

Mr. SPENCER: Is this cut taken entirely from the amount that was used for the census, or will it reduce the staff of the bureau at all?

Mr. LOW: It is confined entirely to the census.

Mr. MEIGHEN: How many clerks are being taken off the census?

Mr. LOW: They have all gone but nine.

Mr. MEIGHEN: When did they go?

Mr. LOW: They have been dropped each year.

Mr. MEIGHEN: How does the minister explain a reduction of $75,000 by dropping those nine? They must have been pretty well paid clerks.

Mr. LOW: I said that there were only nine left. There are a number of other items.

Mr. MEIGHEN: How many were left a year ago?

Mr. LOW: There were 188 at the end of the fiscal year, 1923-24.

Mr. MEIGHEN: Were those dropped at that time?

Mr. LOW: No. They were employed originally for three years under the act. They were let out from month to month as they were not required. There are only nine left at the present time.

Mr. HANSON: Are these employees absorbed into other departments, or do they leave the public service? If any are drafted into other departments, how many?

Mr. LOW: Some of the temporaries may receive employment in other departments. They are not debarred from applying to other departments for employment.

Mr. ANDERSON: I think in Ontario the provincial government takes a census every year with regard to agriculture and some of the other provinces do the same. Do the governments of the prairie provinces not issue their own statistics with regard to agriculture?

Mr. LOW: The governments of the western provinces do much the same as the governments of the older provinces. This department works as much as possible with the different provincial governments in the collection of these statistics in order to avoid duplication.

Mr. ANDERSON: Do I understand the minister to say this is a duplication of the work, or is the Dominion government working in harmony with and getting their statistics from the provincial governments?

Mr. LOW: We try to work in harmony as far as possible with the governments.

Mr. ANDERSON: Can the minister say how much of this vote is for the Dominion part of the census in Saskatchewan, for instance?

Mr. LOW: It is impossible just at this moment to say how much.

Mr. CAMPBELL: I notice in the Auditor General's report for 1923-24, total expenditure in the Bureau of Statistics was $257,000, and the total amount for the sixth census was $159,000. That would leave approximately a net amount of $100,000 chargeable to the Bureau of Statistics. In that case this would not mean any reduction in the service. Can the minister state if that is so?

Mr. LOW: I do not follow my hon. friend. There is no reduction at all in the permanent service. The reduction is due entirely to the census, as I said before.

Mr. MEIGHEN: I do not presume anybody is getting the idea that the minister is really cutting down the staff of his department.

Mr. LOW: We cut it down last year.

Mr. MEIGHEN: Very little. I notice that the minister still has, as appears on page 104 of the estimates, 294 clerks. He had 296 last year. Therefore, even if he loses on the statistical end of his work, he is making it up very readily on the rest of it. He is keeping up the show anyway. He has made

up his mind that if there is to be any contraction, it is going to be in the enumeration expenses. There will be nothing unnecessary spent in order to let the public know the facts. He has more statistical clerks than he ever had. He has 56 now where he had 55 last year and he has 41 junior statistical clerks where he had 38 last year. I really do not think he has made much of a reduction. I am inclined to suspect he is cutting out some of the services in the statistical branch, some of the other work of the department. I do not know what it can be. He seems to be getting rid of the money as before, but saving it in the statistics. Just what service he is cutting out, it would be interesting to discover.

Mr. LOW: In 1921-22 there were 405 employees engaged in the work of the census; in 1922-23, 577, and in 1923-24, 364. As I said before, the number of employees has been worked down to nine at the present time. On the work of the census there was spent the following amounts:

1921-22..	$1,664,088
1922-23..	259,148
1923-24..	158,015
For the ten months ended January 31, 1925..	40,304

Mr. STEVENS: How much in the last fiscal year?

Mr. LOW: We have not the figures for the fiscal year.

Mr. MEIGHEN: Surely my hon. friend has the figures for the fiscal year. That is published.

Mr. LOW: They have not been brought up to the end of March yet.

Mr. MEIGHEN: If the minister looks at the ten-day statements issued by the Department of Finance, he will find the figures for the fiscal year issued at least three weeks ago.

Mr. LOW: The figures I have were prepared in accordance with the usual custom, and the whole estimates would have to be re-prepared. We always bring down the figures showing the ten months. If my right hon. friend has the information, he might give it.

Mr. MEIGHEN: I have it upstairs, but I thought the minister would have it here as we are discussing his estimates.

Mr. LOW: My right hon. friend always wants something that we do not have.

[Mr. Meighen.]

Mr. MEIGHEN: The minister apparently is just through with the 1921 census now. He was not in the House when in 1921 his party insisted upon the completion of the census that year and roundly abused us because we suggested it might run into 1922. He is now proclaiming that he is closing it up in 1925, about in time to start the semi-decennial census of 1926, which must take place in western Canada. It is quite right that the census clerks should be taken off; they should have been off last year or the year before. But my worry is this: I am anxious that the general service of the statistical branch itself be not curtailed, that is in any serious respect. I should like to know in what respect there is any curtailment in the census branch. To what extent does the minister intend making reductions, if any?

Mr. LOW: I have no further reductions in mind at the moment.

Mr. GARLAND (Bow River): The minister said a moment ago in answer to a question of mine that the co-ordination of the various departments for statistical purposes was not completed. What is lacking? What departments are not yet completely under the bureau?

Mr. LOW: Some of the other departments have statistical branches and it is hoped through time that all these will be centralized within the Department of Trade and Commerce.

Mr. GARLAND (Bow River): Which of them are not now under the control of that department?

Mr. LOW: The Departments of Labour, Customs and the Interior.

Mr. MEIGHEN: I am mystified by the whole proceedings. If the minister will look at page 103 he will find all the clerks of his department. He says now that he is cutting off $75,000 because of a reduction in the number of clerks owing to the closing up of the census statistics of 1921. I fail to see where he is cutting off any statistical clerks.

Mr. LOW: Those are all under civil government.

Mr. MEIGHEN: I know.

Mr. LOW: They are not under discussion at the moment.

Mr. MEIGHEN: Are not the statistical clerks under civil government?

Mr. LOW: The temporary census clerks whom we are letting out are not included in the civil government vote.

Mr. GARLAND (Bow River): If the minister, in answer to the objections that are raised to the reduction in the vote, is stating that it is because of a reduction in the number of servants employed, how can he ask us to withhold examination until some other occasion and pass this vote in the meantime?

Mr. LOW: I have endeavoured to clear up the situation. I have been asked how the reduction is made up and I have told the committee that the reduction in the temporary census clerks accounts for it.

Mr. MEIGHEN: What is included in the item of $125,000 that is not included in the civil government?

Mr. LOW: I have stated two or three times what that $125,000 is supposed to cover, but I shall read it again for the benefit of my right hon. friend. It is to provide for salaries of temporary employees, criminal and vital statistics, travelling expenses of the Dominion statistician and his staff, freight and express, telephones and telegrams, newspapers and periodicals, rental of machines and repairs, and contingencies.

Mr. STEVENS: Does this vote of $125,000 represent all the costs of the Bureau of Statistics?

Mr. LOW: The civil government vote is not included in this at all.

Mr. STEVENS: The minister last year said that in ten months he had spent $40,000. Is that right?

Mr. LOW: Yes, on the census.

Mr. STEVENS: How much was spent of the $200,000?

Mr. LOW: Last year? Does my hon. friend mean in the whole bureau?

Mr. STEVENS: I mean out of the $200,000 voted for 1924-25.

Mr. LOW: For the ten months ending January 31, 1925 the following sums were spent:

Salaries	$15,181 42
Printing and stationery	26,992 92
Criminal and vital statistics	13,960 32
Travelling	626 74
Freight and express	214 77
Telephones and telegrams	935 20
Machine rentals and repairs	4,374 50
Sundries	1,826 05
Total	$64,111 92
Salaries for the sixth census	$36,131 17
Sundries	3,924 92

This makes a grand total of $104,168.01 for the ten months. And in the previous fiscal year ending March 31, 1924, under the same headings, the total was $257,096.74.

Mr. HANSON: What is the total cost to the country per annum of the Bureau of Statistics including the salaries under civil government?

Mr. LOW: About $375,000.

Mr. STEVENS: As a matter of fact, last year out of the $200,000 voted the minister would spend about $125,000. He says he spent $104,000 for ten months; for twelve months it would be about $125,000.

Mr. LOW: Yes, without civil government.

Mr. STEVENS: Out of this vote of $200,000. So that the vote of $125,000 this year represents approximately the same amount as he actually expended in the previous year. Am I right in that?

Mr. LOW: Yes; but we have to prepare for the 1926 census.

Mr. STEVENS: What we are trying to get at is how many individuals are included in the salary expenditure last year of $125,000.

Mr. LOW: I suppose my hon. friend as a former minister of the department knows that in this vote only temporaries are included. In the early part of the year we had quite a number, but the staff has been very much reduced on account of the completion of the work in connection with the last census.

Mr. STEVENS: Why cannot the minister tell us what that reduction is?

Mr. LOW: At the end of 1924 we had 188 persons engaged on the census; now there are only 9. My hon. friend was not in his seat when I made that statement earlier in the evening.

Mr. CAMPBELL: I find it very difficult to understand the figures quoted by the minister. The Auditor General's report shows the total expenditure on the Bureau of Statistics as $259,000, from which has to be deducted $159,000 for the census, leaving approximately $100,000. This evidently does not include the item of $50,000 for salaries. How is that $175,000 made up?

Mr. LOW: The statistician informs me that the $250,000 is made up of salaries, which are included under civil government, and the $125,000 item that is now under consideration.

Mr. CAMPBELL: I think these items should be put in a way to be easily understood. Naturally one would conclude from this that $125,000 was the total cost of the bureau. I am not complaining, I think the bureau is worth every dollar it costs, perhaps even a little more, for it is one of the most valuable of our government departments; but it is impossible to understand just what the bureau does cost even after consulting both the Auditor General's report and the estimates.

Mr. STEVENS: We recognize, Mr. Chairman, that the expenditure on the census should naturally have diminished to its present point probably before this. It has been the desire of parliament for many years to bring the compilation of statistics for the Dominion to as efficient a condition as possible, and I think the House will agree with me that this very laudable object has been pretty well attained, for the bureau has been well administered and excellent progress has been made along this line. I would be the last one to urge the minister at this stage to increase his expenditure, but for the purpose of some show of economy in this particular branch, we should not wreck the work that has cost us a good deal to build up over the last ten years. With regard to the western census, it has of course to be taken into account in connection with this branch, but if the minister is actually sacrificing some of the service that has been rendered, we ought to know.

Mr. LOW: I do not know of any service that is being sacrificed.

Mr. STEVENS: None at all?

Mr. LOW: No.

Mr. STEVENS: I am very glad to hear that, because we certainly ought to maintain the efficiency of this branch. As I say, it deserves great credit for the manner in which it has its work handled. I confess still to some feeling of mystery about the nature of this expenditure. I cannot quite understand how the minister is maintaining the service and providing the additional expenditure for the western census this year. It may be covered by these figures in some way, but I cannot quite understand it. For instance, does the minister intend to increase the census staff this year?

Mr. LOW: It will be increased slightly.

Mr. STEVENS: Some of those discharged will be put back again?

Mr. LOW: Yes.

[Mr. Low.]

Mr. WOODSWORTH: Is the regular staff sufficiently large to draw out of the census figures all the material that is available?

Mr. LOW: As we are carrying on the work at the present time, I have no doubt that the staff is sufficient; but as the country develops we shall have to increase the personnel. As stated by my hon. friend from Mackenzie (Mr. Campbell), it is very important work, and when parliament feels that we are in a position to spend a little more money on it I shall be very glad to recommend such increase to the government and ask the House to vote it.

Mr. WOODSWORTH: Would it be possible by a larger regular expenditure, Mr. Chairman, to obviate to any extent the decennial expenditure on the general census? It has sometimes occurred to me that just as in the old days of the small store we had to have an annual stock-taking, when everything was turned upside down, to the inconvenience of everybody, and have now passed beyond that stage in a great many establishments because by a careful system of bookkeeping we know pretty well at any moment how the business stands, so it might be possible, with a closer co-ordination of the agencies at work on vital statistics, for example, through the various municipal officials, and possibly through a larger permanent staff, if necessary, of correspondents in different sections of the country, to collect annually a great deal of this information and have it available from year to year instead of gathering it every ten years?

Mr. LOW: I think my hon. friend will find that although the modern method of bookkeeping of which he speaks is very satisfactory for ascertaining the position of a business from month to month, yet all firms of any importance continue to take a physical inventory at the end of the year. While we may make an estimate from year to year as to population and other matters, I do not think it would be wise to dispense with the decennial census.

Mr. ANDERSON: Mr. Chairman, I am not opposing the vote, but I am trying to get a clear idea of what the semi-decennial census in the western provinces means. I can hardly see its necessity, since the provinces themselves take a census nearly every year, and their figures should be available to the federal department. How often do the western provinces take that census, and why is it necessary for the federal government to take a census in the western provinces and not in the others?

Mr. LOW: The taking of the census is required by the act that brought these provinces into existence.

Mr. ANDERSON: Is the census taken by the provinces themselves not available to the federal government?

Mr. LOW: There is no census taken by the provinces; they are only estimates.

Mr. MEIGHEN: I think both ministers have missed the real reason of the semi-decennial census in the west. The west not only gets a regular subsidy but is entitled also under the autonomy bills to a special subsidy in lieu of lands, and accepted that subsidy and yielded the lands on the terms, which amounted to contractual terms, that the census upon which the subsidy was based should be taken every five years.

Mr. LOW: That is right.

Mr. FORKE: If I remember correctly, the municipal clerks send in returns each year to the provincial authorities, and the provinces may base their estimate upon those returns. The information is not exact, but it is fairly correct.

Mr. MEIGHEN: You could not expect the Dominion government which pays a subsidy to do so on the basis of a census fixed by the provinces.

Mr. FORKE: I understand that, of course. I was simply referring to the method followed in the provinces.

Mr. GARLAND (Bow River): I notice in the only report concerning this matter that is available, dated 1922, that on page 9 reference is made to certain organizations that had not been completed. For example, with regard to "migration" it states:

> The statistics of immigration and emigration are incomplete and out of correlation with the census and vital statistics.

Then we have reference to "navigation" as also incomplete; "imports and exports," incomplete; "trading operations," incomplete; "public finance," need for further organization of statistics; "income," need for correlation with the data of the bureau; "private finance," statistics require remodelling; "civil justice," no statistics exist—and so on. The issue of a monthly review of Canadian statistics is suggested, with the idea of making a monthly barometric forecast of the current economic trend. Has any progress been made in connection with these matters of organization, and if so, will the reduction in this vote impede the development that is suggested here as desirable?

Mr. LOW: The statistician informs me that some progress is being made; that in the matter of trading operations and migration there has been considerable progress.

Mr. HANSON: I understood the minister to say there were other departments of government that compiled statistics. I think the country should have some idea of what is the total cost of collecting these statistics. I fancy it is not less than half a million dollars a year, which is quite enough for a country like Canada.

Mr. LOW: My hon. friend is in just as good a position as I am to make an estimate. All these items come up under supply to other departments and he can get them under the different headings.

Mr. HANSON: There is so much duplication, not only in the matter of statistics, but in surveying and a dozen other activities that might be mentioned, that it is really difficult to tell exactly what these services cost the country. The sooner the minister gets busy and puts all these different statistical branches under one bureau, the sooner he will get more efficient work. The cost of government is very materially increased by this duplication of services. Especially is that true in respect to the matter of surveying.

Mr. MEIGHEN: Does the minister know whether the Labour department is still fussing away with its little statistics?

Mr. LOW: I included Labour in the list I gave a moment ago; Labour, Interior, and Customs. But the statistical work is being eliminated gradually from other departments, and we hope in time, to have them all under the Department of Trade and Commerce. Whether or not my colleagues will agree with me in that time will tell.

Mr. MEIGHEN: Perhaps the Minister of Labour finds it hard to get anything to do.

Mr. LOW: Things are so peaceful.

Mr. MEIGHEN: Yes, they are very peaceful. I observe that in all parts of Canada there is considerable in the nature of death, but there is a lot in the nature of war, too. Really it is foolishness to run this statistical branch in the Labour department. The minister will remember that last year I read a letter from the head of the Labour department questioning an official as to where in the world he got his statistics, and the reply was that he got them from the statistical branch of the Dominion government. Evidently the Labour department did not know that such a branch existed.

Mr. GARLAND (Bow River): The minister answered my question of a moment ago by saying that a little progress had been made in regard to migration and trading statistics and some progress in the rest. That simply confirms my opinion that work is being neglected that might be gone on with and the reduction in this vote is hardly justified.

Item agreed to.

Electricity and gas inspection—	
Salaries of staff..	$137,055
Travelling expenses of the Director, staff at Ottawa, district inspectors, and inspectors; purchase and repairs of instruments; upkeep of equipment and contingencies..	43,340
Export of electrical power..	500
International Electro-technical Commission.	400
	$181,295

Mr. STEVENS: Would the minister tell us how much electric power was exported last year; how much of it was exported by companies under annual license and how much under long term contract; the length of the contracts under which the export is made, and what are the remaining unexpired terms? I shall be glad to get this information by provinces.

Mr. LOW: There is no information as to the quantity contracted for by each individual corporation in the United States. Sometimes the term of the contract is a long one, sometimes a short one. The list of exporting companies, with the amounts in kilowatts for which licenses were issued for 1924-25, is as follows: Hydro Electric Power Commission of Ontario, 80,000; Canadian Niagara Power Company, 45,000; Ontario and Minnesota Power Company, 3,000.

Mr. MEIGHEN: The first two are the same.

Mr. LOW: Yes, I think the Canadian Niagara Power Company was taken over by the Hydro Electric Power Company. Then, there is the International Railway Company of Niagara Falls, 200; Maine and New Brunswick Electric Power Company, 2,500; Sherbrooke Railway and Power Company, 100; Cedar Rapids Manufacturing and Power Company, 75,000; Western Power Company of Canada, 10,000; British Columbia Electric Railway 5,000; West Kootenay Power and Light Company, 1,500; Bridge River Power Company, Vancouver, 28,000.

Mr. STEVENS: Did the minister say the Bridge River Power Company?

Mr. LOW: The Bridge River Power Company applied for and received a license to export 28,000 kilowatts.

[Mr. Meighen.]

Mr. STEVENS: They have not got a plant yet.

Mr. LOW: They applied for the license and paid the fee.

Mr. STEVENS: This is rather a serious thing. I am quite certain that the Bridge River Power Company have no plant. I am certainly very derelict in my duty in attending to the development in my province if they have. Why should a company without a plant to export get a license to export 28,000 kilowatts? Does the minister give a license to a firm that has not got power to export?

Mr. LOW: My deputy informs me they complied with the law. I do not know whether the application was renewed this year, but they made application last year for a license and complied with the law.

Mr. STEVENS: I am going to ask the minister if he would be good enough to lay on the table a full copy of the correspondence and the license in regard to it.

Mr. LOW: I shall be very glad to comply with that request.

Mr. STEVENS: That brings me to this very important question, and that is the export of power. This would indicate—and I wish the Prime Minister and other ministers would take note of this; I do not say it in any critical sense at all, I am very earnest about it—this would indicate what naturally a person looking purely for monetary advantage will tend to do, that is, to secure some privilege or right, then make contracts on the other side for the sale of that power. Here is a firm, for instance, that I am certain has no plant at all. They apply for and receive a license as if they were going to export. Naturally the only assumption you can make is that they then go to the other side of the line and make contracts for the purchase of power, then come back here and say to financiers: "We have a license to export, we have contracts on the other side for the purchase of power, and now we want financing for the erection or completion of a plant." Now what does that mean? It means the gradual establishment south of the line of a vested right in the power, of a contractual character. I want to say to the government this: In my estimation, if we allow this process to go on, the result is going to be that there will be established in certain places south of the line factories, and small towns built up around those factories, with certain vested interests there dependent upon the receipt of this power, which they

will claim later on was contracted for in perfect good faith. Then it will become a question of dispute between the two governments as to whether or not that power can be cut off.

I am going to repeat what I said in the budget debate. Power ought to be looked upon as an implement, a tool, and not as a product, and I think we should serve notice to the world that we expect persons who want our power to put their factory beside the power. That is what I think we ought to do. I will admit that if you can eliminate altogether all danger of the establishment of a vested right, then perhaps when you have a surplus of power during the period of development in this country, it is not a bad thing to sell power; I am not disputing that. But let us take this Carillon development, this big concern that desires a power development contiguous to this district. What is the desire there? The desire is to establish on a hydro-electric site a big power plant, ostensibly and deliberately with the intention of exporting power from that plant. The whole undertaking has that in mind. Now if the government say to the Carillon Power Company just as they have said to the Bridge River Company: "Yes, we will give you a license to export," and then the company go on and put in what they represent as $25,000,000 or something of that kind, secure $25,000,000 or $30,000,000 of American capital and invest it in that plant; and then they commence to export. A little later on, perhaps five years from now, the people of Ontario and Quebec will say: "We want power." There comes a big demand for power, and the price of power goes up. They turn to the Carillon Power Company and say: "You are exporting all your power. Why not sell some in Canada?" "Oh," they will say, "we got this power five years ago from the Dominion government with the distinct understanding that we were going to export. It is true the license was to be renewed from year to year, but the government and the people of Canada knew this power was for export purposes." Then they will point to the vested rights south of the line that have been established because of that right to export.

I want to warn the government, and warn the country, that this whole policy that is gradually growing up and becoming established ought in my estimation to be abandoned. I think the world ought to be informed that so far as Canada is concerned, hydro-electric power is looked upon as an implement or tool for the purpose of serving the factories of Canada, and that we invite industries to come to the power; but we warn them we are not going to adopt or follow a policy of exporting power to industries in a foreign country.

Take the export of power on the Pacific coast. There are two companies, now one —the Western Canada Power and the B.C. Electric, two most estimable companies; I am not criticizing them at all. They are exporting power. Then here is the Bridge River Company coming along, desirous of promoting a plant, and within a very few years, with the expansion clearly in sight in that country, there will be a demand for all the power that can be obtained. Take Vancouver City, which is dependent on the B.C. Electric and the Western Canada Power Company at the present time. I venture to say that the expansion of the city of Vancouver continuing in the ratio of the last five years will result inside of ten years in the absorption of all the power available at the present time. Now supposing at the end of ten years, or even five years, this increase is commensurate with what I have intimated; what is going to result? The B.C. Electric and the Western Canada Power Company are bound to say: "The price must go up. We cannot supply our customers south of the line with whom we have contracts, and we cannot increase the sale here. We have a demand for all the power we can produce." Then what will be the result? The retarding of the development of industry on the Canadian side. On the other hand, if we discourage the export of this power, then there would be evidence on the part of Canadian hydro-power companies to develop industries in the neighbourhood in order to take all the power they could develop. In other words, you put pressure on the development of industry in Canada, whereas under the present policy we are virtually putting a premium on the export of power, and a retarding influence upon the development of industry in Canada.

I do not desire to delay the committee at any length because it is late, but I want to make myself abundantly clear. I consider this question of the export of power, if not the most important, one of the most important questions before parliament to-day or that has been before parliament this year or last year or for many years. I believe in its effect in the future it will be found to have far greater significance than we at the present time dream of. I saw a statement the other day which I cannot quote exactly, intimating however that we could not absorb the power that is possible of development in Canada over long periods of years.

On the other hand, I am advised by those who understand the business—and I had hoped to have here to-night definite data on this, but I have not—that in a definite period of time, some ten or fifteen years, or some twenty years, we will, in Ontario and Quebec, reach the limit of power. That is making a very broad statement and I was surprised to hear it. It is not my statement, but it was made to me by engineers who have studied the question for years,—that we are in sight, as it were, of the maximum power development. That is a very serious thing, because after all electrical power in factories is comparatively new. It is not looked upon as such an old factor as to be even yet beyond the point of almost experiment, at least not far beyond that point. So that when we hear these statements I think it behooves the government of Canada to be very, very careful. Notice should be served at once on all these companies the minister has cited that they must not consider these licenses as in any sense constituting a guarantee that they would be continued next year, or at any future time, with of course the exception of those that are under contract under some regulations of the past, and I understand there are only a very few small contracts existing.

Mr. LOW: I suppose my hon. friend knows there is no guarantee given beyond the year.

Mr. STEVENS: Yes, I know there is no positive guarantee, but I have been trying to point out to the minister—and I hope he will not think I am doing it in a critical spirit—that it is a question which has obtruded itself on parliament this session. But I come back to the Carillon case, and I tell my hon. friend now that if this government were to give to the Carillon Power Company a license to export, as he has done the Bridge River Company, on the strength of that contracts would be made south of the line, $25,000,000 of capital would be supplied, the plant would be established on that understanding, and then later on the Carillon Power Company would say to this government or its successor, "Why, we advised you at the time, you knew what we were doing and here is a vested interest." The government of the United States would probably take the same view. It would become immediately a matter between the governments, and I think we know from a study of history that the moment a thing becomes a matter between governments it is very difficult of solution or of being easily unravelled. Regarding the Carillon Power Company, I think the Dominion of Canada should hesitate—not only hesitate, but I think should refuse—to be tied in any sense by any inferential guarantee, not a definite written guarantee but an inferential guarantee, to the Carillon Power Company or any other company, and that they should do more than that, and should serve notice on the world that these annual licenses are in every sense of the term temporary licenses, and that the purpose of Canada in the future is to retain the power for the development of Canadian industry.

Mr. MACLEAN (York): I had a letter to-day from the mayor of Toronto drawing my attention to this matter. He said that he had protested to the government in regard to certain contracts that had been made in the past in connection with hydro-electric development and in which a lot of the municipalities of Ontario were interested, and that the consequence of this export duty on power going out of the country would be to put a load on the municipalities which have gone into the business and let the contracts in the past to American companies at a very low rate. They have a proposition before the government now, I understand, that they at least be relieved from the export tax by reason of these contracts made some years ago, and in regard to that I should like to know whether the government has any intention of taking into consideration the protest of Toronto and associated municipalities in this matter. I agree with what the hon. member for Vancouver Centre (Mr. Stevens) has stated, and I want to say that the Hydro-Electric has now under consideration the establishment of a large steam plant in Toronto for the generation of power to supplement the production of hydro electric power.

Mr. STEVENS: Ten million dollars.

Mr. MACLEAN (York): Yes, ten million dollars. That is going on in other directions, and there is a great famine of power in almost immediate prospect. I spoke on this question the other day, and I said, "Our greatest resource to-day is the generation of power on our great rivers north to the Hudson bay slope". They will probably jointly produce millions of horse-power. Science is going ahead so rapidly in the way of high tension wires and long distance transmission, the products of those rivers will be worth millions and millions to us, and we ought to start now and say that not one kilowatt of that power shall go out of the country if it can be kept here. It might be an immense source of revenue. If we have a transporta-

tion problem ahead of us, as apparently we have, and the cost of transportation is a most vital matter in connection with industry, we ought to keep that power for transmission purposes and not let it go out of the country. That would be the solution of this tremendous problem more than anything else. I say to my hon. friends from the west that they ought to put in a protest now if they wish to keep down transportation charges. But if we start now and make commitments in which Americans will be interested and will be able to go to their government and allege unfair treatment on the part of Canada, we will be embroiled with the American people, and the firms which make the contracts, so that I join with my hon. friend from Vancouver Centre in saying we should call a halt now and that there should be no commitment in regard to any of the privileges. I ask the Prime Minister (Mr. Mackenzie King) if he has heard of the protest made by the city of Toronto that this export tax should not apply to them in connection with the contracts made years ago with the Hydro-Electric. If we do as I have suggested we will get a new national policy in this country in connection with power. The greatest asset we have to-day is the immense power we have in our country, and if we sit quietly by, those who see the large profits in exporting it, will be laying plans to get control of it, and they will entrench themselves so that it will be very hard to dislodge them.

I again urge on the government—and I hope our friends from the west will make the same appeal to them—to call a halt in connection with the export of something which we have got which is limited in quantity, because it will pass out of our hands if we do not guard ourselves.

Mr. FORKE: Without any invitation from my hon. friend from South York (Mr. Maclean) I intend to say a few words on this matter. I listened to the hon. member for Vancouver Centre, and it seems to me the arguments he advanced are worthy of the most serious consideration on the part of the minister. I can easily see how, by our exporting power, large factories being built and villages and towns growing up around those factories in the future, this may become, as has already been said, an international question. I do not think there is much danger of the prairie provinces exporting any water-power to the United States.

Mr. MACLEAN (York): That will come in five years. There is the Nelson river.

Mr. FORKE: Yes. I believe some day we shall have on the Nelson river perhaps the greatest water-power in Canada. I have been impressed by the arguments advanced by the hon. member for Vancouver Centre, and this question should be gone into very carefully in order to ensure that no vested interests are created that will cause international trouble. There is no doubt the time is coming when Canada will use all her water-power. It seems almost foolish in a way that water running down, which is of no use at the present time, which will continue to flow for all time and which is not a thing that can be used up, should not be used by some people who can take advantage of it at the present time. Still, the argument has been advanced that if you give the power away to a foreign country, it may be difficult afterwards to restore things to their original condition. This question ought to receive the most careful attention and consideration before commitments are entered into that we may regret in the future.

Mr. McMASTER: I had not the pleasure of being in the House when this discussion began, but I should like in a very few words to take issue with what has been said by the father of the House Mr. Maclean, (York), who has not shown in this regard that broad, generous, far-sighted spirit which usually characterizes his utterances. The idea that we in Canada, with 90 per cent of our electrical power undeveloped, should not use that vast potential power by turning it into electrical energy so that it might be exported and help us to pay our debts, is, I think, perfectly preposterous nonsense. The hon. gentleman will pardon me if I have said anything unparliamentary. We have in Quebec, I am told about 14,000,000 horse-power and we have developed about 1,000,000 horse-power. The suggestion is that we should leave that 13,000,000 horse-power undeveloped because in years to come we may want it for ourselves.

Mr. STEVENS: That is not the suggestion at all.

Mr. McMASTER: That is the suggestion because, if you are going to prohibit its export and there is no market for it at home, how will it be developed? It will not be developed unless it can be used, and if it cannot be used in this country, it cannot be used unless it be exported.

Mr. STEVENS: I would like to suggest to my hon. friend that he is the one that is talking the preposterous nonsense now.

Mr. McMASTER: That is a matter of opinion. I used to think our protectionist friends were anxious to see an increase in the

exports of this country, and that the idea of imports into this country caused them alarm. Usually they were always anxious for a favourable balance of trade and they rather encouraged exports. If we can manufacture power and sell it abroad when we cannot use it at home, surely we should be allowed to do so.

Mr. FORKE: Can the hon. member see a way clear that at any time Canada, after allowing that power to be exported for a number of years can say: Now, this must stop; we need this power for ourselves? Can that be managed all right?

Mr. McMASTER: Without any doubt.

Mr. FORKE: It is all right if that can be done.

Mr. McMASTER: First of all, water-powers should never be sold. They should be leased to companies, and one of the conditions of the lease should be that the first charge upon the company, so far as their customers were concerned, would be to see that Canadian customers were supplied. If there was not enough to go around, Canadian customers must have the preference. As power would get more valuable and expensive, the market for it inside the country would develop, and there would be no question but that regulations could be made to preserve for Canadian use such portions of the power as were necessary for Canadian use. The point I want to make is this, that we have in this country vast sources of potential electrical power which, if it can be turned to account and exported, it would be wise and in the interest of the country to export.

There is another phase of the situation. How can we, with any common sense, play the dog in the manger on this continent? How can we say, with wisdom or even with safety: We have sources of power which we will not allow you, our American cousins, to use, even on terms fair to ourselves, because in the far distant future we may possibly need it ourselves. Supposing the United States followed the same policy with us, where would we be? I saw the other day that the Premier of Ontario said: If American manufacturers want to use our electrical power, let them come into Ontario and manufacture in Ontario.

Mr. MACLEAN (York): Or in Quebec.

Mr. McMASTER: In Canada, let us say. In what position would the textile manufacturers be if the United States said: If you want our cotton, come down to the United States and manufacture our cotton here. None of our cotton is going to go north of the Great Lakes.

Mr. HANSON: That is different. One is a raw material and the other is an implement.

Mr. McMASTER: Power would be manufactured in Canada and sent into the United States. Cotton would be grown in the United States and sent into Canada. As a matter of fact, the sooner we realize that we have to develop this North American continent in close co-operation and under friendly conditions with the United States, the better for us. A policy of restriction in this country is extremely unwise. I trust to hear less in this House and elsewhere of that narrow and unwise policy of closing the walls of Canada against the export of power or anything else.

Mr. JELLIFF: Can the minister give us a little more information in regard to this Bridge River Power Company? Who is the president of this company? Who is the secretary? What is the capitalization? What is the capital that has been paid in? What are the conditions under which a license has been issued? Is it an American or a Canadian concern?

Mr. LOW: I am very sorry I have not the information here to-night, but I shall be glad to give it to my hon. friend to-morrow or at any other time. I am now trying to find out by telephone just when this license was first granted to the Bridge River Power Company. If the information comes before we adjourn, I shall be glad to give it to my hon. friend.

As regards the discussion on the export of power, I quite agree with the hon. member for Vancouver Centre that it would be a splendid idea if we could force these industries to come to this country and establish here. But after all, there is another side to the question. The water is, as some hon. member has remarked, flowing away. In other words, dollars are flowing by. The question we must ask ourselves is: Are we to allow these dollars to flow away from us for the next twenty or twenty-five years until such time as the industries are ready to establish in this country? With our mineral wealth it is different; if we do not take it out of the ground to-day it will be there to-morrow. But the water that flows by to-day we shall not be able to use to-morrow, and millions of dollars in the next twenty-five years might come to the country through the export of power. Most industries in Canada require some export business; I know that the industries with which I am connected always require an export trade. We are able to sell 75

per cent of our output in this country but we want the balance in the way of export trade to keep the wheels of the factories running day and night. And power is much the same.

Mr. FORKE: No.

Mr. LOW: Power may remain idle for years unless there is some use for it at home, and if we are able to export a small quantity of it, above what is necessary for home purposes in the locality in which it is developed, it is possible to develop a valuable business in the interests of our people. This year, before a license was granted, I notified all exporting companies that before we would renew any licenses they would have to submit to the department a declaration that the power was not required at home and that there was ample power to supply all the needs in the locality in which it was developed.

So far as vested rights are concerned, I have no doubt that these corporations that enter into contracts across the border, and the companies on the other side, all look into the conditions under which the exporting concern is permitted to send out power. And when they turn up the act they will find in it a clause to the effect that the license shall be revocable on such notice to the licensee as the Governor in Council may deem reasonable in each case. I do not see therefore how anyone making a contract can labour under any misapprehension as to the length of time he will be allowed to export power, or the people on the other side purchase it from the company generating.

I am not so much impressed with the argument that vested rights may be established and that we shall not be able to get away from them when we like. I repeat however that the water is flowing under the bridge continuously and if we do not use it to-day the same water will not flow by to-morrow or the next day. If the figures given by my hon. friend (Mr. McMaster) are correct, we have 14,000,000 horse-power in the province of Quebec alone of which he says 1,000,000 horse-power is developed. So that, if that is correct, we have ample power to supply all the needs of Quebec and the Dominion of Canada for some time if it were harnessed.

Mr. STEVENS: The same argument was applied to timber not more than twenty years ago.

Mr. LOW: Yes; but it is not the export of timber that has depleted the forests. There are other causes that have made greater inroads into the forests than the export of timber.

Mr. STEVENS: But they are depleted nevertheless.

Mr. LOW: Yes, and they would have been depleted very largely in any case apart from the export of timber. A question was asked me about the Bridge River Power Company. The information I have is that this license was granted for the first time five or six years ago.

Mr. STEVENS: Before the power was located.

Mr. LOW: It has not been renewed for this year; it is under consideration.

Mr. MEIGHEN: It is not in the list of licenses returned to this House this session, about two months ago.

Mr. LOW: It has not been renewed this year.

Sir HENRY DRAYTON: Although I have not been here continuously, I want to bring a few facts to the attention of the government before any action is taken which will occasion irreparable damage, certainly to Ontario and I think to Quebec as well. We hear a good deal about a surplus of power. Well, there is a surplus of ice on the hottest day if you get to the Arctic; but there is no surplus of power where it is wanted. There is no surplus of power to-day which is convenient. I wonder what the government are thinking of when they listen to this talk about a surplus of power, when they know that Toronto has to put up $10,000,000 as a result of delays in connection with the St. Lawrence. They know that the whole of the power at Niagara Falls has been exhausted and that, after waiting for years and years to get some action in connection with the St. Lawrence, the Hydro commission, in the protection of the people of all the municipalities concerned, have been obliged in Toronto to put in a steam auxiliary at a cost of $10,000,000 to the people. And yet some people talk about a surplus of power. Where is the surplus of power in Montreal? The minister talks about fairness to the Canadian market. Does he know what the current prices are in Montreal to-day? And if he does, does he know what power is exported from that same district to the American side? Does he know for example what appears in the paper that is issued by Mr. Miles? I believe he is a good Liberal and was at one time certainly, if not now, a member of the local House. He has a chemical or a trade journal in which he is arguing in favour of Carillon power, and he is so anxious in this argument to make his case against the companies that distribute

electricity to-day that he makes what I consider the strongest and most unanswerable point that has been advanced in connection with the whole business. He points out that from the Cedar Rapids Company the American gets power at $12 per horse-power per annum while from the same company they get in Montreal a multiple of that figure. And yet this government talks about a surplus of power in Montreal. The thing is a farce, and everyone knows it. It is not what you have away off in the north or somewhere else, but what you have right here, that counts. Hon. gentlemen say that there is nothing to be uneasy about. Let me draw a picture to show what a great sum the municipalities of Ontario have to meet. At the time there were two companies, the Ontario Power Company on the Canadian side of the river and the Niagara and Lockport Company on the other side. The Niagara and Lockport Company was the distributing end of the Ontario Power Company. That company was formed in just the same way as it is proposed to form the Carillon Company, for the purpose of looking after the American market, which my hon. friend says is in the interests of the people of the district. What interest has the company in the district as soon as that installation is completed? What work is there around a power house? Why, everybody knows, who knows anything at all about it, that if there is any activity in the world where little labour is used it is in a power house. The thing runs itself practically. And if you allow the product to be exported, you are losing the only thing that is going to bring labour and help the people here. But the situation is the same. Here is the Ontario Power Company, and there is the Niagara and Lockport Company. At first they make their arrangements between themselves. Under those arrangements there is a firm contract for 60,000 horsepower. That contract has still twenty five years to run. It had also three renewal periods of twenty years each. The price paid for that power is $12.35 per horse-power year.

Mr. GRAHAM: What is that for?

Sir HENRY DRAYTON: That is for the power exported from the Ontario company's plant into the United States.

Mr. GRAHAM: That is the export price?

Sir HENRY DRAYTON: Yes. The government talks about a surplus of power. I should like the government to tell us where they can get a firm contract for power anywhere in the whole of Ontario—

[Sir Henry Drayton.]

Mr. LOW: Who has said that there is a surplus of developed power at the present time?

Sir HENRY DRAYTON: If there is not, why develop more just to send it to the States? My hon. friend answers his own argument at once.

Mr. LOW: Who is talking of selling it to the States If it is needed in this country it will be kept here.

Sir HENRY DRAYTON: My hon. friend need not worry at all, we will deal with that. I was going to say, I should like to see where to-day, Mr. Chairman, anywhere in Ontario this government could get from anybody a firm contract for power at $24 per horse-power year, let alone the rate that the American customer gets the benefit of. That power company then made a contract with the hydro-electric commission for the supply of electric power to them. That was the first source of hydro-electric energy for the Ontario hydro-electric power movement. The Hydro Electric Commission were always wanting power and could not get it, and finally they bought out the Ontario Power Company. As a result of the negotiations when they bought it out, they were able, after a great deal of difficulty to cut off the three rights of renewal, but they are bound by that fifty-year contract, absolutely bound, and there is no getting out of it so far as they are concerned.

There is only one way by which this sort of commitment could be got rid of, and that is through Dominion action. The Dominion had to consider it. We had an enormous shortage of power when the war was on, and I unfortunately among a few other things, had to take on the job of power controller. As power controller I could have disregarded those contracts altogether, just in the same way as my hon. friend in administering his department could disregard them. What I mean is, if he refused the license, there is no responsibility under the contract so far as the contractors are concerned, the whole question is in his hands, and in his alone. But he would have trouble in taking that action. It is the only excuse that he has for not doing it now, that he would have trouble in doing it. It is the only excuse he has to-day why Toronto has to spend ten million dollars—because he would have trouble in doing it. I admit he would have trouble. What was the situation? Throughout a territory of miles in extent that power was carried; municipalities were lit by it; municipal water works were operated by it; houses and factory light-

ing was supplied by it. And my hon. friend would find, if he has looked into this—and I presume he has, because I do not suppose he is entirely negligent of the interests of that district—if he has looked into it he will find he could not possibly take that power away. It cannot be done. I should like to know what my right hon. friend the Prime Minister would think about shutting off export of power which is giving water to an American municipality? He would not do it. There are certain things that simply cannot be done, and that is one of them.

Now, all we are asking to be done in this case is that we should at least take cognizance, not of a new situation but of a present situation, not of something that may happen but of something we know will happen. There it is. It is absolutely sure that if we go on with this policy we will have a repetition of the Montreal situation, with the same Canadian companies sending power miles across the border for $12 and charging a multiple of it on the Canadian side when it is needed and as it is needed, getting all the difference between the first initial rates and the other rates; we will have that situation for sure. I take this opportunity to impress upon the government as hard as I can the absolute injustice of the proposal to tax the municipalities in connection with that contract. There is a contract made under which they are losing thousands of dollars per annum—all the difference between the current export price of $12.35 per horsepower and their very much greater domestic rates. Further than that, as a result of it, and as a result of the delay in the development of the St. Lawrence power, Toronto is out of pocket ten million dollars, and on top of all that, piling, piling, piling on the load, this government now suggests that we should turn round and add a burden which, for the term of that contract, will mean another three million dollars on
12 m. those municipalities. That is just exactly what it means. A protest has been made, the matter has been discussed, everyone knows about it, but everyone is simply astounded to know that the injustice is not immediately rectified. It is one of those sort of things you can understand going on as a mistake, but to turn around and penalize municipalities that are carrying on this business, not for gain but merely in the public interest,—I say to turn around and penalize them to the extent I have indicated is simply something which passes comprehension.

Mr. MACKENZIE KING: I do not know whether my hon. friend was in his seat in the early part of this afternoon when the question was answered and the House was informed that the government is considering the very matter to which he is now referring.

Sir HENRY DRAYTON: Yes, I was in the House and asked the question, and I was immediately told that the matter was under consideration. I should like to know before it is too late what possible justification there is for such a state of things. Now that my hon. friend raises that point, I am going to raise another. If there was one thing my right hon. friend talked about in the last campaign and talked about also in this House; if there was one thing he waxed eloquent upon, it was the alleged theft from the people of the principles of parliamentary control. I forget the name he applied to it, but certainly his description left nothing to be desired from his point of view of the case.

Mr. MACDONALD (Pictou): Hear, hear.

Sir HENRY DRAYTON: The Minister of National Defence says "hear, hear"; he agrees with it. Why, my right hon. friend would wax incoherent upon that question. The whole trouble was government by order in council. I do not remember any occasion before this when a government put through a budget by order in council. Here we have the whole thing in connection with this precious export duty on electrical power put through without the assent of parliament, without parliament having a single thing to say about it.

Mr. MACKENZIE KING: Can my hon. friend tell me when the act was passed giving power to the government by order in council to do these things?

Sir HENRY DRAYTON: My right hon. friend is referring to an act which was passed by a very estimable gentleman, a very high authority, a man who will deserve and will always hold a very high place in Canadian history, Sir Wilfrid Laurier.

Mr. MACKENZIE KING: The point I wanted to bring out was that from the time of Sir Wilfrid Laurier up to the time my hon. friends opposite went out of office they never thought it advisable to change that act in any particular.

Sir HENRY DRAYTON: I wonder if we can find something that will hold water a little better than that. Will my right hon. friend suggest that Sir Wilfrid Laurier ever

thought the act would be used in this way? He certainly never used it in this way. I will admit the power is there, and it was also there in respect to every order in council that was passed by the late government—just the same; not the slightest bit of difference. The late government, that he has called despotic and all the rest of it, never attempted at any time to implement a budget by such an order in council.

Mr. MACKENZIE KING: It was too busy with other things.

Sir HENRY DRAYTON: My right hon. friend laughs; it is the only thing he can do, because he has no defence whatever. The power with respect to orders in council is not ordinarily exercised when the House is in session; there is then no excuse for action of that kind. If there had been any pressing necessity for the putting on of this tax and the House was not in session, my right hon. friend would at least have an excuse, but the House is in session, the order in council is passed, and he has no excuse. The fact of the matter is that the municipalities to-day are called upon to pay a tax which I do not believe any selfrespecting Canadian parliament would validate. It is validated by order in council, and that is the only way it could be done.

Mr. GRAHAM: I agreed with the leader of the opposition that the St. Lawrence waterway development should not be discussed without our giving him fair notice. I see that his desk-mate does not regard that arrangement; he bases a lot of his argument on a condemnation of this government for not going on with the St. Lawrence waterway development. I am going to keep my arrangement with the leader of the opposition that a discussion of this matter should have notice, although I think I could make a fairly good reply to that part of my hon. friend's remarks. Now, I want to get back to this Carillon power. The hon. member for Vancouver Centre is one of the gentlemen who gave this lease for the development of the Carillon power. There was not anything in it about export, but the law was there for export year by year if they wished to apply for a license. And they granted the lease for the development of the Carillon power a few days before the general election in December, 1921. What is asked for now is an enlargement of that power to make a greater development. But there has been a lease in force for the development of large power at the Carillon rapids—

Mr. MEIGHEN: What has that to do with the export of power?

[Sir Henry Drayton.]

Mr. GRAHAM: Now, the hon. member for Vancouver Centre spoke for fifteen minutes on the proposed development of the Carillon power.

Mr. MEIGHEN: The export; nobody is against the development.

Mr. GRAHAM: Oh, is that so?

Mr. MEIGHEN: Not that I know of.

Mr. GRAHAM: Now, I want to get this matter where it belongs, because this government has not done as much as the late government did in regard to the development of the Carillon power.

Mr. MEIGHEN: Except talk.

Mr. GRAHAM: My right hon. friend does not like this part of it. I am not saying he did wrong; I am saying it was a little shady to rush it through a few days before the election in 1921.

Mr. STEVENS: Will my hon. friend permit me? He is making rather unfair—

Mr. GRAHAM: I am telling the truth, according to the record.

Mr. STEVENS:—unfair insinuations—

Mr. GRAHAM: Not insinuations—a bald statement.

Mr. STEVENS: My hon. friend insinuates that I did something that was wrong. Will he please produce what he is referring to? He is insinuating that there was some document signed by me—

Mr. GRAHAM: No, I did not say anything of the kind.

Mr. STEVENS: Yes, he intimated that a few moments ago, and said that it was a few days before the election. I was in British Columbia a few days before the election.

Mr. GRAHAM: I said that the new power lease for development at Carillon was signed by the then Minister of Railways in a government of which my hon. friend was a member, a few days before the general election in December, 1921. My hon. friend cannot escape his share of the responsibility. I am not arguing that that was wrong, but I am pointing out to my hon. friend, when he declaims against any lease being signed for the development of the Carillon power, that his government signed it under the circumstances which I have outlined.

Mr. STEVENS: I made no such statement; I cannot let my hon. friend get away with that. I did not declaim, as he says, against the signing of a lease for the development

of the Carillon power. I spoke entirely in a non-critical spirit, and the whole purport of my discussion was the question of the export of power. I did not attack the government for anything it had done or was about to do. I simply asked the government to be very careful in this matter, pointing out that in the years gone by it had grown to such a point that parliament ought to take notice of it. My hon. friend's insinuations and innuendoes are unjustifiable and unbecoming to him.

Mr. GRAHAM: I accept the lecture, Mr. Chairman, but still I am not going to be driven away from this point.

Mr. STEVENS: My hon. friend cannot drive me into any corner either on that point.

Mr. GRAHAM: I am just stating the facts. My hon. friend can be in the corner or not.

Mr. STEVENS: They are not the facts.

Mr. GRAHAM: I will show the record whenever I am called upon. As a matter of fact a lease was signed for the development of a large amount of power at Carillon a few days before the election of 1921 by the Minister of Railways in the government of which my hon. friend was a member. That is on record.

Mr. STEVENS: That is not me.

Mr. GRAHAM: Not you personally, but as a member of the government you are jointly responsible. My hon. friend, of course, did not sign the lease for the power himself.

Mr. STEVENS: And that has nothing to do with the export of power, which is what I was discussing. My hon. friend is not going to fasten any responsibility on me on any such hypothesis as that.

Mr. GRAHAM: If I might be allowed to go on, Mr. Chairman, my hon. friend from Vancouver Centre should not get so much annoyed because I mention this fact; he has mentioned Carillon at least a dozen times.

Mr. STEVENS: Certainly.

Mr. GRAHAM: Certainly. Let us get discussing Carillon power. I have not come to the question of export yet. I was pointing out that the lease for the development of power at Carillon was signed in December, 1921, by the Minister of Railways in the government of which my hon. friend was a member. He is responsible for the signing of that lease just as much as was the Minister of Railways, although I know enough about governments to know that a man may not be always present, but he has to accept responsibility just the same.

Mr. STEVENS: No one is trying to evade it.

Mr. GRAHAM: My hon. friend said he did not know the lease was being signed, that he was in Vancouver.

Mr. STEVENS: I am not seeking to evade any responsibility. I was in Vancouver at that time; I was not in Ottawa then nor for a month before. I do not seek to escape any responsibility for any act of the previous government, but I want the minister to understand this: I discussed in good faith and in all courtesy with the minister and his colleagues the policy of the export of power as it was developing—and I used this expression—under this government and under previous governments. My hon. friend is by innuendo and insinuation seeking to fasten on me personally some responsibility in regard to the export of power by the Carillon Power Company, and I am not going to allow him to do it. I want to say further, it is not becoming to him or to his record for fairness to make an insinuation of that kind.

Mr. GRAHAM: I am bound I will not lose my temper over this, Mr. Chairman, because there is nothing to lose one's temper about. I was pointing out that the government of which my hon. friend was a member had through its Minister of Railways signed a lease with the Carillon Power Company in 1921 a few days before the election, and no member of the government can escape responsibility for the signing of that lease. If I have insulted any person, I apologize; but that is all I was saying.

Mr. STEVENS: Not at all.

Mr. GRAHAM: That is what I meant to convey, and did convey, that no minister can escape responsibility for the act of the government.

Mr. MEIGHEN: What is the matter with it?

Mr. GRAHAM: I did not say anything was the matter, but I was pointing out that when this government came into power it found that lease signed in December by the Minister of Railways of the late government a few days before the last election, and that very lease for Carillon Power remained in

force until a few months ago, the identical lease, not given by this government, but given by its predecessor.

Now the same company is asking for the powers under that lease to be enlarged. No arrangement has been made with them; no arrangement, I imagine, would be made with them unless subject to the act in force when my hon. friends were in power, and which is in force now. So that as far as this Carillon question is concerned, this development is in the same position it was in when this government came into power. I want to make that clear.

I am strongly of the opinion—if it were my personal business, I might perhaps think otherwise, being after the profits—that any government in Canada ought to go very slow in approving of the export of power in any great quantity. There is no question about that in my mind; I agree heartily. There is an argument on the other side which has been presented to us very strongly time and again by people living along certain powers, who feel they are losing day by day in seeing the power flow by their doors without development. They take the ground that development cannot take place unless outside capital is got for that development, and that would imply the export of a part of the power. That is the situation. It is not changed at the present time from what it has been for months and years.

As to the point raised by my hon. friend from West York (Sir Henry Drayton), he has made a pretty strong plea for the 60,000 horse power for the municipalities of the province of Ontario. The Hydro-Electric in itself is an entity, and is not an entity financially. Its financial standing is the financial standing of the municipalities that belong to the Hydro, and they are protesting that an old contract which they took over from the Ontario Power Company should not be subjected to this export tax. I take the view that one of the best ways to discourage the export of power is to put a good tax on it, just like you would put an export tax on any other product. But this is a question that has to be carefully considered. We have not been wasting any time in considering it. It was only last week that the people who are most vitally interested came to us in very large numbers, and they unanimously expressed the view that they were in favour of the export duty on power.

Mr. MACLEAN (York): Not the city of Toronto.

[Mr. Graham.]

Mr. GRAHAM: This deputation without one exception assured us they were in favour of the principle of a tax on the export of power.

Mr. MEIGHEN: Because they did not want it exported.

Mr. GRAHAM: But they did ask this, that the power exported under this old contract from which they could not recede should be excluded from the tax. That is a serious matter. It is under consideration, and will be given the fullest possible consideration. There is no attempt at all to shirk responsibility, and the arguments of this deputation are being carefully considered by the government at the present time.

Sir HENRY DRAYTON: My hon. friend says it is only a short time ago. I brought this matter most pointedly to the attention of the government in the early days of the budget; that is about six weeks or two months ago.

Mr. GRAHAM: What I said was that this deputation of municipalities came to us only a few days ago.

Sir HENRY DRAYTON: The matter must be an old one with the government. I brought it up six weeks ago.

Mr. GRAHAM: I was speaking of the visit of the deputation from the municipalities, which came here only last week, I think. There need not be any doubt about it; the government is going to give the matter every consideration, and being from Ontario myself and always taking a deep interest in the development of this province, the House can rest assured that at least I am not prejudiced against the province of Ontario.

Mr. STEVENS: When I rose first to discuss this matter I think the House will bear me out that I treated the government with every courtesy and consideration. I indicated to the government that I desired to discuss the matter not in a spirit of criticism at all. I pointed out that this question of the export of power had grown into a problem by the gradual development of the hydro electric power system in Canada, and that we were faced with a condition which was the product of the years. The Minister of Railways sought to divert what was I think a reasonable and a proper discussion of a very important matter, as he himself indicated in the latter part of his remarks when he expressed the view he takes of this question, but in the first part of his remarks he sought to insinuate and by a circuitous innuendo to

suggest that in some manner I and the government with which I was for a short time connected was responsible for the whole business. I think he was unfair, and in my estimation it ill became his usual courtesy and fairness. I resent it very much and I suggest that this item should stand. It is getting pretty late. We have asked the minister in charge to furnish us with certain information regarding the Bridge River Power Company. That company I know has not any works at all, but I would like to look into it, and also to see this lease that the minister refers to—in fact all the papers connected with the Carillon Power Company. I ask him in all fairness, in face of his suggestion that something has been done by myself and others that was calculated to reflect on our administration, that he should produce all the correspondence and papers, and the famous lease upon which he bases his insinuations and innuendoes; and if we have those papers before us, and if the government will give us some indication what their intention is regarding the charge on the 60,000 horse-power from the Ontario Electric, then I think we can properly and fairly consider the item. I ask that the minister consent that the item should stand.

Mr. GRAHAM: I cannot for the life of me understand how my hon. friend takes the attitude he does towards me, that I was making a personal allusion—

Mr. STEVENS: Read Hansard to-morrow and the hon. member will see.

Mr. GRAHAM: I was saying that, as far as the Carillon Power Company was concerned, he as a member of the government was responsible. We did not issue that lease. It was forced upon us. I did not say whether it was right or wrong to issue it.

Mr. MEIGHEN: The minister said that it was peculiar that it was issued just before the election.

Mr. GRAHAM: Yes, I repeat that now.

Mr. MEIGHEN: What is the government supposed to do, if it has any responsibility? I want to remind him that after his government was elected they declined to take responsibility and forced us to continue two or three weeks after election. It was our business then to carry on.

Mr. GRAHAM: I thought it was a peculiar circumstance but this government did not issue that lease.

Mr. STEVENS: What was peculiar about it? What was the insinuation?

Mr. GRAHAM: I have stated the facts.

Mr. STEVENS: The minister has stated more than the facts.

Mr. GRAHAM: No.

Mr. STEVENS: The minister has stated more than the facts.

Mr. GRAHAM: The hon. member cannot get me fussed about this matter. He has got into a temper for no reason at all. I have stated the facts as nearly as I could, and I do not want to go over them again. I made no personal reflection. Can we not criticize a previous government without it being considered a personal reflection? I did not mean anything of that kind. I want to tell my hon. friend that I respect his good will, but I will not be put in a wrong position by him or anybody else if I can help it.

Mr. STEVENS: The minister has not much regard for the feelings of other hon. members.

Mr. SPENCE: Signing a lease for the development of electrical power is entirely different from the exporting of electrical power. I think the policy proposed is a bad one for the government to entertain. It is said we are going to develop 14,000,000 horse-power in this Carillon project. I have talked with engineers who know something about it, and they say that the horse-power that can be developed there is over-estimated.

Sir EUGENE FISET: It is 14,000,000 horse-power in the whole of the province of Quebec, and not simply in the Carillon Power Company.

Mr. SPENCE: It is said you are over-estimating the amount of horse-power you can develop, and if you go into a contract and guarantee to lay down a certain horse-power our good friends to the south will see that you develop as much as you contract to develop. The first thing you know you will be developing at different points on the St. Lawrence river, and that will be a bad thing for the country. My own view is that the industries cannot remain stagnant here forever, and I think in five years we will be able to use all the horse-power we can develop.

Mr. CANNON: Does the hon. member approve of the lease passed by the former government for the Carillon development?

Mr. MEIGHEN: I never saw it.

Mr. SPENCE: Signing a lease for the development of power is different from exporting power. I am opposed to the principle of anything going out of the country. I want

to see the industries of this country developed from our own power. I come from a city where we have great electrical power development and we know something about the matter. The Hydro Electric would not have been the success it has been if it had not been for the big city of Toronto. We are bound to spend $10,000,000 in a steam plant because we cannot get the power otherwise. We can carry this development on in Toronto without sending the power to the United States. The Minister of Railways mentioned the fact that a deputation waited on him a few weeks ago, and he made a correct statement in regard to the matter. He asked if they were opposed to the principle of exporting power, and they said no, they were in sympathy with it, it was all right; they were carried away with the idea of having to pay a duty on 60,000 horsepower on a deal made in 1904. The gentlemen who answered the Minister of Railways were friends of the minister, but they were not expressing the views of the city of Toronto or the views of the Hydro Electric people. I know the gentlemen who made the statement, I know their politics, and I say they had no right to make that statement. They were in the room at the time and they had no business to make such a statement. I do not believe they expressed the views of the city of Toronto or of the people of the province who put their heart and soul into the hydro electric development of this country. I say to the minister that he was stating the absolute fact when he said that the deputation made the statement to him that they approved of the principle of exporting power, but they had no right to say that and were not expressing the views they should have expressed.

Mr. STEVENS: I have asked the minister if he will let the item stand until we have the information which he agreed some time ago to lay on the table. I say it is a reasonable request, and I again ask the minister to permit the item to stand until he brings down the information.

Mr. LOW: The information is contained, I understand, in certain papers. My hon. friend can obtain these in the regular way. As to the question of an export tax, that matter is under consideration, as has already been stated, and I see no reason why we should be asked to allow the item to stand over to-night after debating it for a couple of hours.

[Mr. Spence.]

Mr. MEIGHEN: This is an appropriate item under which this whole subject can come before parliament. The government has chosen, while parliament was sitting, to act in this matter by order in council, consequently the matter did not come up in the budget. It is now up for review by parliament, and parliament's duty is to express an opinion on a question of as far reaching consequence for Canada as anything that has come before the House for years and we should not be shut off in the discussion until we have the data before us. The information which has been asked for is certainly elementary and manifestly necessary. The data as to what has been done in British Columbia and the further data mentioned by the hon. member for Vancouver Centre (Mr. Stevens) should be furnished. The minister should not ask that this item be allowed to pass, especially in view of what has been done by order in council, until this information is furnished to the committee.

Mr. MACKENZIE: KING: If my hon. friend insists on having the item stand, all I can say is that what we desire to do is to get on with the work as rapidly as possible. If the hon. members are agreeable to proceeding with some of the other items, there is no objection to letting this stand and taking up some others.

Mr. MEIGHEN: It is now half past twelve. Certainly there has been no obstruction. We did not need to debate this at such length, except for the interposition of a reference that was unnecessary. We might have had it stand before; but we are not going to consent to go on with other items after twelve-thirty, especially as we have made good progress every day since the budget debate closed, and of course we know what caused the delay in the budget debate.

Sir HENRY DRAYTON: My right hon. friend says: We will go on with this item. Very good. This is the only item on which we can discuss the question of export of power, and I am now going to refer more particularly to the Carillon power. The first information that we ought to have is: Who are the applicants for the power? What gentlemen are behind the application? Who are the gentlemen who have been lately in the corridors of this House looking after the question of that license? What do those gentlemen want to do with it? I do not for one minute question their perfect financial solvency and strength. Where will this money be spent? To what municipalities in the

United States is the power to go? Will the company be not only a Canadian company, but an American company? If a Canadian company and as well an American company, what will be the inter-relationship of the two companies? What will the contracts be? What arrangement will be made for the contracts? What arrangement will be made, for example, to prevent a repetition of what we have in connection with Ontario power? I may be absolutely all wrong, because the only information that I have is what I have seen in the newspapers.

Mr. LOW: I am listening to my hon. friend.

Sir HENRY DRAYTON: The minister connot carry on two conversations at the same time. The minister cannot talk to the Minister of Railways and Canals and listen to me at the same time, and I am quite willing to wait until he is ready. I am absolutely in the dark and I think all hon. members are in the dark as to the exact terms of the present proposal. Perhaps the minister could tell me now how large a quantity of power has a license been asked for? What is the present application? Will the minister kindly table the application or send it across the alleyway? Of course, as the item under consideration is the only one on which we can discuss this question, the application must be in the bag there. Has the minister the application here?

Mr. LOW: Proceed. I will answer later.

Sir HENRY DRAYTON: I think we had better get along with one question at a time, because the minister will forget them.

Mr. LOW: I will make a note of them. As regards the Department of Trade and Commerce, no application has been made.

Sir HENRY DRAYTON: I observe that my hon. friend immediately takes the ever efficient coaching of the Minister of Railways and Canals (Mr. Graham), who whispers in his dulcet tones that no application has been made. Are we to understand that the whole of this Carillon power is a myth, that there is no application to the government? I do not care about the technicalities within which truth may be hid, but is there any truth that this government has been approached, yes, time and again, in connection with an export of power from Carillon? I will take my hon. friend's denial, but I will wait for it.

Mr. GRAHAM: I thought my hon. friend was addressing the other minister.

Sir HENRY DRAYTON: No, in this case the Minister of Railways and Canals was giving the cue to the Minister of Trade and Commerce.

Mr. GRAHAM: He gave it to me.

Sir HENRY DRAYTON: It was returned then. In this game of battledore and shuttlecock, we will go to the shuttlecock. Does the Minister of Trade and Commerce mean to say that the whole of this question of the export of Carillon power is a myth and that this government has not been requested, pressed, to grant it?

Mr. LOW: I say to my hon. friend without any hesitation that we have had no application for a license to export Carillon power.

Sir HENRY DRAYTON: Does my hon. friend want that to go to the country as a real answer giving the truth of the situation? Does he mean to say that we have not had deputations here, well worked-up deputations?

Mr. LOW: My hon. friend asked me a question and I have answered it.

Sir HENRY DRAYTON: I am putting another question. I am asking whether worked-up deputations did not come to press the government to give those licenses for export, and I will await an answer to that.

Mr. LOW: I know of no worked-up deputation.

Sir HENRY DRAYTON: Does he know of any spontaneous deputation? What does the minister say?

Mr. LOW: My hon. friend knows that deputations have waited upon the government. That is public property.

Sir HENRY DRAYTON: So that we have had deputations waiting upon the government pressing for licenses for the export of this power. For how much?

Mr. LOW: No quantity at all was stated by the deputation.

Sir HENRY DRAYTON: Does the government want to take that position? We have three members of it here now.

An hon. MEMBER: Four.

Sir HENRY DRAYTON: But one is asleep. I am referring only to the members of the government that are not yet asleep. I see he has wakened up. Does the government seriously want the country to understand, after what I think everybody knows has been going on not only for weeks, but for months, that it does not know how much power is

sought to be exported? What does the government say? That it does not know how much power the promoters of this new exploitation think they should have the right to export? If the government wants to say that it does not know, I shall have to take that answer, but it will surprise many people.

Mr. MACKENZIE KING: If I may speak for the government, I will say that the government does not know. There has been before the government no application that I am aware of, and the government has nothing before it to consider. The hon. member is simply wasting the time of the committee in asking these questions. Even if there had been an application, is there anything in that to which the hon. member could take exception?

Sir HENRY DRAYTON: I would want to look at it before I would know. The right hon. member forgets all his pre-election discussion—

Mr. MACKENZIE KING: What does my hon. friend want to discuss? An imaginary application?

Sir HENRY DRAYTON:—of the whole of this question as to the export of power, and I am going to tell my right hon. friend that I think I would be unkind to him to take altogether seriously the idea that nothing has been said to him about the export of this power.

Mr. MACKENZIE KING: I simply say to my hon. friend that I will not permit any insinuation of the character he is making at the present time. No application whatever, that I am aware of, has been made to the government with respect to the export of power. I am making that statement fully conscious of its significance and meaning in every particular.

Sir HENRY DRAYTON: I was not talking about that technical word "application" at the moment. I wanted to know whether the Prime Minister had not been approached in connection with this very question of the export of Carillon power.

Mr. MACKENZIE KING: My hon. friend knows that I presided at the gathering at which a deputation stressed from their point of view the advantage it would be to many municipalities to permit a certain amount of power being exported. And this is all public knowledge. Surely municipalities have a right to present their own point of view to the government. But I repeat that the government has received no application and has had nothing before it to consider. The reply given to the deputation was that the government was just as conscious as any member of this House of the importance of considering the future needs of Canada and protecting the requirements of the Dominion against any possible encroachment from any direction. The government is just as sensible and as watchful of the interests of the provinces and of all classes as any deputation that can come before it, and it has so stated. What other position does my hon. friend wish the government to take in the matter?

Sir HENRY DRAYTON: It is becoming a habit with the Prime Minister to miss the point. I never suggested that there was anything wrong about any municipality waiting on the government; they all have a perfect right to do so and to receive proper consideration.

Mr. MACKENZIE KING: Is there anything improper in any individual or group of individuals doing the same?

Sir HENRY DRAYTON: Not the slightest. I am merely asking for information. There seems to be such a fog of dense ignorance in government benches as to the whole question of Carillon power that I wonder hon. gentlemen opposite even knew the name.

Mr. MACKENZIE KING: It is my hon. friend who is making a myth and mystery of it.

Sir HENRY DRAYTON: I again ask the Prime Minister: Apart altogether from that deputation, has he not been approached with a view to securing his sympathy in connection with a license for the export of Carillon power? If he says no, then there is an end of the matter.

Mr. MACKENZIE KING: Ever since the government has been in office it has had the same sort of representations made to it as hon. gentlemen opposite had when they were in power; and I presume that for the next ten, twenty or a hundred years this will continue; some will want the right to export power while others will be of the opinion that it should be carefully safeguarded. Some think that its export should be totally prohibited, while others think that all these matters are questions of development. I do not understand what my hon. friend means when he seeks to insinuate that in some way either the government is doing what is wrong in listening to representations that are made to it, or individuals are wrong in making such representations in regard to matters that are of great public concern.

Sir HENRY DRAYTON: My hon. friend is getting away from the point; he has taken me back a hundred years.

The CHAIRMAN: I do not want to interrupt the hon. member but I do think his remarks are not quite relevant. I would draw his attention to the following from Bourinot with reference to the relevancy of arguments:

The precise relevancy of an argument is not always perceptible, but the Speaker must be satisfied that it is relevant, otherwise he reminds the member that he must speak to the question. It follows therefore that the debate must not stray from the question before the House to matters which have been decided during the current session, nor anticipate a matter already appointed for the consideration of the House.

I do not think that the hon. member has been speaking to the point before the committee, in the way I have heard him speak in a good many years; and he has repeated so many times what he has had to say that I am beginning to conclude that he is not strictly in order.

Sir HENRY DRAYTON: If I may, Mr. Chairman, I would indicate one or two reasons why I think you are wrong. In the first instance, I have asked a question, which is perfectly pertinent, with regard to the export of power. I have failed to get certain papers; they are not here. And I have failed to get any definite information at all on a matter which is of transcendent importance to the country, a matter which cannot come up again. Now, I am trying to get informattion if I can and so far I have not been able to get it.

The CHAIRMAN: Does the hon. member say that this matter cannot come up again on a motion to go into Supply on some other day.

Sir HENRY DRAYTON: It can come up on this estimate.

Mr. MEIGHEN: Does the Chairman suggest that any question connected with the export of power cannot come up under this estimate?

The CHAIRMAN: I never said any such thing.

Sir HENRY DRAYTON: The Prime Minister, as I was pointing out, took me back many years; he said that representations had always been made on the subject. I am interested in this particular question of the export of Carillon power. Has the Prime Minister been approached—I am not using the word in the slightest degree invidiously but in order to get established what we all know to be a fact—has the Prime Minister been approached, I say, in connection with this very question of the export of power, apart from that delegation?

Mr. MACKENZIE KING: I have given the answer.

Sir HENRY DRAYTON: What was it?

Mr. MACKENZIE KING: You will have to read it to-morrow.

Sir HENRY DRAYTON: I suppose I shall have to be content with that, but I do not know that everyone else will be content with it. I should like to know in connection with this lease which is being discussed whether the Dominion controls it or whether it is controlled by the two provinces of Ontario and Quebec.

Mr. GRAHAM: That is a big question.

Sir HENRY DRAYTON: Yes, but we might as well know where we stand on the question. The position has been taken by the premiers of both provinces where the power is located that this export ought not to be allowed.

Mr. GRAHAM: I think they are both against all export.

Sir HENRY DRAYTON: Yes, and they happen to represent the two provinces which are immediately concerned. Hon. Mr. Taschereau, Premier of Quebec, in a reported speech, has stated pretty fully his grounds of objection, and in connection with the question of power going to waste he has pointed out that he had then under arrangement a large development in his province and was getting industries to go in to use it. The mere fact that he has been able to do that is in itself evidence that there is not so very much in the statement that unless we allow this export the power will be wasted. Does not my right hon. friend think that the considered opinions of the two provinces primarily interested ought to be the governing factor in the matter? I submit that they ought to be. I would point out to the government that the title to the water is in the province, subject to the rights of navigation; and when we have both these owners taking the position which they do take, I really submit to the Prime Minister that he would allay a good deal of unrest that now exists if he would now say that there is going to be no export. I am afraid my right hon. friend is singularly unresponsive to-night.

Mr. MACKENZIE KING: When any application is received it will be considered in the light of all circumstances of public importance.

Sir HENRY DRAYTON: Then about this question of the tax on the municipalities. So far as I know this is the only vote on which it can be considered, and in the absence of any resolution dealing with the matter but action by order in council, I really would have thought that the right hon. Prime Minister would have wanted full and free discussion upon the question. Why should we not have it? Is there any doubt? Because if there is, this is the only chance I shall have of removing it. Is there any doubt whatever in the minds of the government as to the absolute justice of the claims of these Ontario municipalities? If there be any doubt, in all fairness to the municipalities why should it not now be raised? In other words, Mr. Chairman, unless the government now have absolutely determined to do what really I would submit is the only proper thing to do, relieve these municipalities, and are at present merely indulging in an obstinate silence, the only fair thing to do is to point out some weakness in the municipalities' case; and I do not think I am asking too much in requesting them to do so. I would ask the Minister of Railways (Mr. Graham) if he can point to any weakness whatever in the case of the Ontario municipalities? I think I have a right to an answer. It is a serious question.

Mr. GRAHAM: Does my hon. friend now think seriously, having been a member of government, that if he were in my position with the matter under consideration he would want the members of the government to be cross-questioned one at a time? The government acts as a whole.

Sir HENRY DRAYTON: I have been talking to the government as a whole, but I can get no answer from anybody. I am not asking for an immediate decision. I would like to know if there is any point of weakness in the municipalities' case that we can be informed of and discuss. As I have said, this is the last chance I have of answering any objections. Is there any argument advanced that is not sound? Is there the slightest excuse for withholding the claim of the municipalities? If there is, it should be stated now. I am not asking that the government, if there be any such thing, have not a right to consider it; but I think we have a right to know whether any such thing exists at all, unless it is thought by the government not proper for discussion. So far they have not said so.

Mr. MEIGHEN: I read a statement attributed to the Prime Minister—I am not quite certain of the occasion, but I have it upstairs; I think it was to a delegation—to the effect that in his judgment surplus power should be permitted to be exported from Canada. Was such a statement made?

Mr. MACKENZIE KING: No.

Mr. MEIGHEN: Then a lot of newspapers are travelling along a wrong track, and for the purpose of getting their way in this matter are extolling the government.

Mr. STEVENS: I should like again to appeal to the minister to let this important item stand over.

Mr. LOW: We have been debating it now for nearly three hours, and surely if we are to make any progress at all we must get some of the items passed.

Mr. STEVENS: I want to point out this to the Prime Minister as the leader of the government, without any disrespect to the Minister of Trade and Commerce, that during the discussion of the estimates of this department we have made excellent progress with very large and very important items. We come to this item to-night, and I intimated in my previous remarks that this raised perhaps the most important and significant question before parliament; I qualified it in this way, that if it was not the most important it was one of the most important questions. To my mind it is the most important. I made that statement, if the minister will recall, before the little tiff between myself and the Minister of Railways (Mr. Graham)—

Mr. GRAHAM: Let us forget it.

Mr. STEVENS:—which apparently has occasioned this impasse. I had no intention of delaying the committee or causing any unreasonable discussion, but I submit to the government and to the Prime Minister that in view of the tremendous significance and importance of the question this item should be allowed to stand. I am not asking the government to give way on anything; simply on the merits of the case I ask that this item be allowed to stand until we have had the documents and other information which we have asked for.

Mr. MACKENZIE KING: I think my hon. friend will recall that about three-quarters of an hour ago I said the government would not

hesitate for one minute to allow the item to stand, provided hon. gentlemen opposite would be prepared to allow us to pass another item or two before the committee rose.

1 a.m. I am quite prepared to repeat that proposition at this hour, but I certainly do not think the government should be called upon to meet the whims of my hon. friend in the matter of whether or not we are to make progress with the estimates. I submit that until the difference arose to which he refers, there was no thought of holding up those items, and then my hon. friend got up and stated, "I will see this item does not go through to-night."

Mr. STEVENS: I beg my right hon. friend's pardon, I did not make that statement.

Mr. MACKENZIE KING: Yes, I think my hon .friend did.

Mr. STEVENS: I want the Prime Minister to be fair. I made no such statement. I admit I resented very much what I considered an unfair insinuation, but it had nothing to do with this item or the previous discussion. I regret very much the Prime Minister taking this stand, but again I would submit to him the importance of this item is such, and the necessity for information so pressing, that it is utterly unreasonable to ask that it pass to-night.

The CHAIRMAN: Would it satisfy the committee to let the first item, salaries of staff, the second item, travelling expenses, and the fourth item, International Electrotechnical Commission, pass, and allow the third item, export of electrical power $500, to stand?

Mr. STEVENS: The point is that it is all one item.

The CHAIRMAN: If consent is given the one item can stand and the other three pass.

Mr. MEIGHEN: The Prime Minister at 12.30 agreed that this item should stand provided we would agree to take up some new items and let them go through. It was a strange suggestion to make at 12.30 after we had got through to-day two resolutions of the Minister of Finance, both very important; the second reading of the budget resolutions as a bill and the debate on an amendment; and some further bills to-night, and then made some progress on the estimates of the Minister of Trade and Commerce. That is the treatment this government has had from the opposition. They have never had anything in the nature of obstruction for an hour of the whole of this parliament. There has been ample progress made to-day, and now we are not allowed to have an item stand except conditionally—an item that involves as big a question as ever was before the people of Canada, an item on which that question can alone be appropriately discussed. Before we can get that to stand pending the bringing down of what is admitted to be important information, we must submit to conditions. That is supposed to be reasonable treatment, and this is propounded to us at one o'clock in the morning. We are not anxious to hold up the item, but we are anxious that there should be reasonable discussion in the light of reasonable information on this item. I am prepared to allow the item to pass if I get the undertaking from the minister that on the next item that comes up in his department, when he presents his estimates again, we can have the discussion finished, he having brought down the information asked for. The understanding is that we can then have a full discussion on this same subject.

Mr. MACKENZIE KING: Certainly.

Sir HENRY DRAYTON: I had an arrangement similar to this two years ago, but I was told afterwards that it was illegal. I do not desire that we should be caught that way again. The arrangement should be clearly understood so that there will be no question about the right to go on with this discussion on whatever item is now fixed.

Mr. MEIGHEN: The next item taken up, I said, and the material brought down.

Mr. MACKENZIE KING: The right hon. leader of the opposition has made a suggestion which I think will meet the situation, and I am prepared on behalf of the government to accept it in the spirit in which it is made.

The CHAIRMAN: The understanding is that on the next item introduced by the Minister of Trade and Commerce the debate will continue on the question of the export of electrical power—the same as this item that has been debated under this vote in committee; and that is accepted, I understand, by the right hon. leader of the opposition.

Item agreed to.

Progress reported.

On motion of Mr. Mackenzie King the House adjourned at 1.05 a.m. (Friday).

Friday, May 15, 1925

The House met at three o'clock.

COMMITTEE ON BANKING AND COMMERCE

Mr. VIEN presented the fourth report of the Committee on Banking and Commerce.

PRIVATE BILLS

FIRST READINGS

Bill No. 130, from the Senate, for the relief of Lillian Yaffe.—Mr. Hanson.

Bill No. 131, from the Senate, for the relief of Charles William Dickinson.—Mr. Hanson.

Bill No. 132, from the Senate, for the relief of Charles Murray Cramsie.—Mr. Baldwin.

Bill No. 133, from the Senate, for the relief of Frederick William Mallyon.—Mr. Speakman.

SPILLERS ELEVATOR

On the Orders of the Day:

Mr. GEORGE BLACK (Yukon): I desire to call to the attention of the government the fact that return No. 176 made pursuant to an order of the House for copies of certain letters, correspondence, and so on, between January 1, 1922, and February 25, 1924, is incomplete, there being nothing in the documents filed bearing a date prior to June 29, 1923. The correspondence should begin with the 1st of January, 1922, and I should like to have the rest of the return brought down if possible.

Right Hon. W. L. MACKENZIE KING (Prime Minister): What is the subject of the correspondence?

Mr. BLACK (Yukon): The order reads:

For a copy of all letters, telegrams, documents and correspondence, between January 1, 1922 and February 25, 1924, between R. H. Gale and any minister or official of the Dominion government; and, between R. H. Gale and the Vancouver Harbour Commission, and between Vancouver Harbour Commissioners and any minister or official of the Dominion government; and, between any representative of the Spillers interests and the Harbour Commissioners, and, or any minister of the Crown and official of the government, regarding the negotiations for lease or sale of certain waterfront property in the Vancouver harbour, upon which is now erected what is known as the Spillers elevator, and which property lies immediately east of the Vancouver Harbour Commissioners elevator No. 1. Also, copy of any letters, agreements, schedules of fees, assignments, transfers, and other documents appertaining thereto.

Mr. MACKENZIE KING: If the return is incomplete it must have been due to an oversight and the government will seek to have it made complete as soon as possible.

[The Chairman.]

ALLEGED FRUIT COMBINE

On the Orders of the Day:

Mr. L. J. LADNER (Vancouver South): There has appeared in the Vancouver Daily Province a headline article announcing that the government has determined to start prosecutions under the Lewis Duncan report against the alleged fruit combine. There has been no announcement in the House that I know of and I would ask the government whether there is any official authority for the statement.

Hon. ERNEST LAPOINTE (Minister of Justice): I am sorry the Minister of Labour (Mr. Murdock) is not here; he is dealing with the matter. I may inform my hon. friend however that counsel has been instructed to institute proceedings.

Mr. LADNER: Is the prosecution co-operating with the provincial governments, or is it entirely on the part of the federal authorities?

Mr. LAPOINTE: Counsel is instructed to communicate with the various attorneys general interested in the matter, but I do not know whether they will take part in the proceedings independently or not.

DIVORCE

EQUALITY OF GROUNDS FOR RELIEF AS BETWEEN THE SEXES

On the Orders of the Day:

Mr. JOS. T. SHAW (West Calgary): I beg to direct the attention of the Prime Minister to order No. 32 on to-day's order paper, for the third reading of Bill No. 4 respecting divorce. May we anticipate an early opportunity for the third reading of this bill?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I am not in a position at the present time to say what it may be possible to do with reference to this bill as well as to other orders that appear on the same page. It will depend largely on the progress we make with legislation whether or not that opportunity can be given soon or late.

Mr. SHAW: Perhaps the Prime Minister may have overlooked the assurance given in connection with this matter and for that reason I would refer him to the Hansard report which indicates the conditions upon which I consented on at least one occasion to the bill standing over.

Mr. MACKENZIE KING: Any assurance given will be carried out, but I cannot at the moment indicate when the opportunity will come.

SUPPLY

DEPARTMENT OF MINES

The House in committee of Supply, Mr. Gordon in the chair.

Mines and Geological Survey—for organization and equipment of the explosives division, under the Explosives Act, chap. 31, 4-5 George V., $10,000.

Mr. MEIGHEN: Will the minister indicate what work the division is doing now?

Hon. CHARLES STEWART (Argenteuil, Minister of Mines): They are doing the same duties they have performed since the act was instituted. These comprise the inspection of all explosives, their storage, the distances at which they are allowed to be stored from industries or dwellings, general supervision over storage, and an examination into the chemical composition of the explosives themselves that are offered for sale.

Mr. MANION: Is not this something that should be under the provincial authorities?

Mr. STEWART (Argenteuil): It comes under the federal act of 1914. If there is to be uniformity it should be under the federal government; I do not understand why it should be in the hands of the province.

Mr. MEIGHEN: It does not appear to be a distinctly Dominion responsibility; is it not provincial? I know it was started some years ago and the minister is not responsible for initiating it. But what the hon. member has in mind is that the federal government has no special jurisdiction in respect of explosives. It is really just as much a matter for the provinces as is the question of health or any other matter of a civil or private character. In these days, when we are trying to contract our responsibilities, it might be well to consider whether it should not go back to the provinces.

Mr. STEWART (Argenteuil): I do not understand it was ever taken from them.

Mr. MEIGHEN: No, they never had it.

Mr. STEWART (Argenteuil): It has been the function of the federal government. The matter never occurred to me, because the function is not carried on so extensively as during the war period, when munitions, for instance, were under supervision; but it is reduced now largely to advice being given to mining companies who are using explosives, just as chemical analysis is made of cement and so on.

Mr. MEIGHEN: The Dominion government analyses explosives.

Mr. STEWART (Argenteuil): Yes, if necessary.

Mr. MEIGHEN: And gives certifcates as to the power of the explosives.

Mr. STEWART (Argenteuil): Yes.

Mr. STEVENS: It is in the nature of research work.

Mr. STEWART (Argenteuil): No; you may be purchasing blasting powder for mining purposes, you are doubtful about the strength, and you appeal to Colonel Ogilvie who will attach a certificate. The work is of that character. Then we have the examination or inspection work for safety purposes, and as to the proper storage of dangerous explosives of this character, and taking care of them for the protection of human life.

Mr. GARLAND (Bow River): Has the minister ever taken into consideration, in view of the Geneva investigation, the necessity arising for the government to take over the operation of munitions and explosive factories in this country? Has he in mind any plan in regard to that?

Mr. STEWART (Argenteuil): No, I have not given the matter of taking over the manufacture of explosives any consideration. We content ourselves with this proposition for the moment.

Mr. GARLAND (Bow River): I might suggest that it would be well for this government, or any other subsequent government to seriously consider this aspect of the explosive and munition industry. The reason I make the suggestion is that I am convinced that sooner or later the countries that are considering the possibility of establishing permanent peace, or as near as humanly possible establishing such a condition, will have to undertake either a complete state of control of munitions, explosives and so on, or a monopoly of the manufacture of them.

Mr. MEIGHEN: How many are employed in the branch?

Mr. STEWART (Argenteuil): Ten.

Mr. MEIGHEN: This work will be costing the country about $30,000, or probably $35,000 or $40,000 a year. Is that estimate about right?

Mr. STEWART (Argenteuil): The duties of the branch are to examine plants; and in order to carry on any sort of reasonable inspection or reasonable protection, I would not think that would be too large an amount to spend.

Mr. MEIGHEN: What was in my mind was this: The branch was developed in the first place on account of the tremendous explosive shipments, and also as a safeguard to the public. When the branch was instituted we were shipping explosives in very large quantities through the country. As I recall the work of the branch, it was largely devoted to seeing to the proper storage and transmission under civil conditions of the explosives. We are now past that time entirely, and, so far as explosives are concerned, we are using them for civil purposes only, and consequently it does not seem unreasonable that the provinces should be asked to do what is undoubtedly their work, as the work is necessary.

Mr. STEWART (Argenteuil): It may be a question as to the work being done by the provinces, but I think my hon. friend will agree with me that it could be done much more efficiently from one central point. He will also agree with me that explosives at best are subject more or less to the danger of explosion, and consequent serious loss of life and property. So far as I can remember, we have not had any serious accident recently. It is true the staff was very much larger when we were passing through war days, but now that there is only a civil responsibility it has been greatly reduced.

Mr. MEIGHEN: If ever the minister's authority to place restrictions on transmission and storage of explosives for civil purposes is questioned, I would strongly advise him not to follow the obstreperous conduct of the Minister of Labour (Mr. Murdock) and carry it to the Privy Council, and then quietly and with dignity withdraw.

Mr. STEWART (Argenteuil): My hon friend will admit that explosives must be carried by the transportation companies passing through the provinces?

Mr. MEIGHEN: Yes.

Mr. STEWART (Argenteuil): And the question of jurisdiction may be seriously questioned.

Mr. MEIGHEN: I think it is cheaper in the end.

Mr. CRERAR: Is there any obligation on the part of individuals or concerns owning or controlling these explosives to have them analysed and reported upon?

Mr. STEWART (Argenteuil): I do not want to raise the question of jurisdiction; I would much rather not, but as we are operating at the moment, yes. The question of whether we have authority might be doubted, but we are doing it, and they have to comply.

Mr. CRERAR: Is any fee charged for the service rendered by the department?

Mr. STEWART (Argenteuil): No.

Mr. MEIGHEN: Should there not be a fee?

Mr. CRERAR: That is the question I was going to ask.

Mr. STEWART (Argenteuil): In case of practical inspection and inspection of magazines, yes, but not in the case of smaller inspections.

Mr. MEIGHEN: Should not the matter of certificates as to the quality and power of the explosives be covered by the owner?

Mr. STEWART (Argenteuil): That is usually covered by the factory inspection.

Mr. MEIGHEN: What is the revenue of that branch of the department?

Mr. STEWART (Argenteuil): I cannot answer the question accurately, but it is in the neighbourhood of $2,200 or $2,300.

Mr. MEIGHEN: Very little.

Mr. STEWART (Argenteuil): Very little. We are not featuring the fee part of it. There are two things to be kept in mind; the protection of the public, and the guarantee of the material in the explosive itself.

Mr. CRERAR: It seems to me that it would be quite proper and appropriate that some charge should be made for that service. I may be wrong, but there is certainly a principle involved in it.

Mr. STEWART (Argenteuil): I am not going to quarrel with my hon. friend about whether or not we should do it, but it seems to me it is rather important service. I quite see the force of his argument. If the question were raised as to jurisdiction, possibly we would find we were in the same difficulty that we experienced in other cases; but inasmuch as those explosives are being carried about the country, it seems to me we are warranted in spending a reasonable amount of money in the protection of human life alone, disregarding any question of property damage. If the expenditure does not exceed $30,000, it is not a very great sum for this purpose.

Mr. CRERAR: I do not agree there. If the expenditure were $150,000 I would judge from the minister's remarks that he might argue that a charge should be made, but because it is a small amount he says it is not of much consequence. In the inspection

and weighing of grain, for instance, the government make a charge for the service rendered. Why should not a charge be made for such services as are rendered under this act?

Mr. STEWART (Argenteuil): There is something in that argument.

Mr. MEIGHEN: There is a lot in it. It may not be so vast in consequence here, but I know I was impressed, especially toward the end of the term of office of the late government, with the fact that a very considerable revenue could be secured, and ought in principle to be secured, from many of the services rendered by the crown, in the Department of the Interior as well as in other departments such as Railways and Canals and Trade and Commerce. It is true the Grain Act is a relatively new act and there, on account of the large amount involved, the principle has been rigidly followed; in fact, some say it more than pays its own way, but it is about the only thing that does. There are some services rendered in various departments of government where if a thorough inquiry was made, if somebody was asked to give his attention to the question, he would find that the people who get the benefit would pay the money, and ought to pay it. That would very much relieve the general taxpayer, who should not be asked to assist this, that and the other man in his own calling.

Mr. CRERAR: There is a very noticable tendency in recent years to extend what are called services, ostensibly on the ground that they are for the public good when they are really for the benefit of private concerns or persons; and the principle is a dangerous one. It simply increases the burden laid on the taxpayer. I suggest that the minister consider the question seriously. Perhaps he could dig at least enough revenue out of this to meet the cost of administration.

Item agreed to.

Mines Branch—	
For investigation of mineral resources and deposits; of the mining and metallurgical industries, and of mineral technology; wages, expenses of testing and research laboratories, investigations by Dominion Fuel Board, including salaries and all other expenses..	$200,000
For publications, English and French, purchase of books, laboratory supplies, intruments, miscellaneous assistance and contingencies..	40,000
For transportation charges from outlying provinces on ore shipments which may be sent to the ore dressing plant of the mines branch at Ottawa for testing purposes, under regulations approved by the Minister of Mines..	5,000
Mines Branch—*Con.*	
To compensate J. H. Fortune for quarters, fuel, light and water supplied him as resident caretaker of the Mines Branch building, Sussex St., vacated because of the necessity of utilizing the caretaker's quarters for storage and laboratory space.. ..	400
	$245,400

Mr. SIMPSON: The minister has had under consideration the question of assistance to the development of the iron ore industry; has he arrived at any decision in that connection?

Mr. STEWART (Argenteuil): The department has had a request to join with the Ontario government in assistance to the development of the iron ore industry by way of a subsidy. We are doing a good deal of investigational work, but we did not feel the time had arrived when we could accede to that request.

Mr. FORKE: What is being done in the way of investigation of mineral resources?

Mr. STEWART (Argenteuil): For the division of mineral resources we spend $35,000; division of ore dressing and metallurgy, $60,000; fuel testing, $60,000; ceramics division, ceramics, $6,000; road material, $4,000; Dominion Fuel Board, salaries of staff, $9,000; power fuel survey, $10,000; investigation of the use of wood as an auxiliary fuel in Ontario and Quebec, $5,000; publication of reports, $5,000; special investigations to be carried out by secretary's office, $4,000; investigation of the process for converting fuels high in volatile matter into a form suitable for domestic purposes, $2,000. These are some of the main items.

Mr. FORKE: Does the government do any prospecting for minerals, on its own account?

Mr. STEWART (Argenteuil): No. We have a number of geological parties in the field, but it is for the purpose of making public the information we gather; it is not for the purpose of developing for the government.

Mr. STEVENS: Can the minister give us any information with regard to the question of establishing an ore dressing plant in British Columbia?

Mr. STEWART (Argenteuil): When I came to the department there was a vote in the estimates for the construction of a plant, but we did not go on with the construction; instead we put in a vote for a year or two for the transporting of the ores down here and their testing in the laboratory. However, there was very little advantage taken of that

provision, and I have cut the vote this year, but we are prepared to make all these tests and carry the ore down free of charge to the prospector.

Mr. STEVENS: I think perhaps the main reason why this has not been taken advantage of is that the distance is great, and the quantity that can be sent is small, and other than in some odd specific cases it would scarcely be applicable. The minister is aware of, and I know he is quite sympathetic with the immense development in mining in British Columbia; the same applies also to northern Ontario and northern Quebec, but I am speaking now of British Columbia particularly, and of the existence there of a great variety of minerals, some of which are minerals of commercial value, and others of a more complex nature. What struck me when I was over in the Old Country last autumn and saw the display of minerals in the Canadian building at Wembley—not at the government's expense, I want to make that clear—was this, and I mentioned it to some of the officials in charge. I think it would have been very desirable if we could have shown in greater exactness and more detail the availability of these minerals, the quantities, and so forth; because I discussed with some industrialists over there certain matters regarding minerals in Canada, and they seemed not to be very well informed.

An ore dressing plant such as has been suggested, if established in British Columbia to deal with some of our complex ores, might be able to find a system of handling them that would enable us to get into the world market minerals that are at present in the country, but are not being recovered at commercial values at the present time. Of course, it would be of tremendous advantage to the country at large if some of these mineral resources could be so developed. I know the difficulty about the establishment of such a plant. There is the question of locality; personally, I am not mentioning locality at all. All I want to see is an ore dresing plant situated where it can be utilized, and that is a question for the minister's officials to deal with.

In addition to that, there is the question of just how to get the plant operating so as to get the most benefit from it. This vote of $5,000 by which ores can be sent in small packages three and in some cases over four thousand miles, coming from northern British Columbia, is not, I submit, of very much value. I am not criticizing the existence of the vote, but I do not think it meets the case. I would suggest to the minister that this whole question should be taken up again, having in mind a genuine endeavour to market in a commercial way the various metals and minerals that we have in Canada. I have expressed myself imperfectly, but I think the minister will grasp what I mean. I think that the establishment of an ore dressing plant, or some other method, if there is a better one, of ascertaining the values of these ores and working out a commercial process for marketing the minerals would justify some effort and some expenditure.

Mr. HUMPHREY: I am in thorough accord with the remarks of the hon. member for Vancouver Centre (Mr. Stevens). I am quite convinced, and have been for some time, that it is necessary to have some method of treating and dressing the ores of the different provinces, and especially those found in the province of British Columbia. We have an abundance of complex ores in that province, and it is only necessary for them to be treated to a certain extent. If advantage has not been taken of the provision whereby ores can be transported free to the testing station here at Ottawa, I think it is because of the distance, and also because the results of these tests do not go far enough. I have had representations made to me that while the results obtained from the department are very good in respect to defining the content of these ores, the department might go further and furnish the values of the minerals that are to be found in these ores. The principal part of this work is really done by the prospector. He goes out into the mountains and discovers certain deposits. He sends samples to the department here to find out what they contain. When he gets the findings, he must go still further and send the result of these tests to the assayer to ascertain the values. I believe it would be of great assistance to the prospector, who is the pioneer in the mining industry, if the department would also furnish the values with the result of their tests. It has also been brought to my attention that the private institutions connected with the mining industry of British Columbia do at the present time furnish these tests. They carry on a certain amount of that work, and they also give the values in connection with their tests. But with the increased activity in mining, these private institutions will be unable to go that far on account of the many requests that are coming to them, and it has been represented to me that inquiry be made of the government as to whether the department here could not furnish the values. I am well aware that

such a privilege could be abused to some extent by large corporations, if they saw fit to take advantage of it, but I believe that the request in this matter has been asked on behalf of the pioneer prospector, and such a provision would be of great assistance to him.

Mr. MANION: The question asked by my hon. friend from West Algoma (Mr. Simpson) brought up a subject on which I wish to make a few remarks, and I think they will be as applicable here as on any other item. I refer to the iron ore bounty. My hon. friend coming from that section, like myself, is naturally interested—and so, I believe, is the whole country—in this question. While the minister said that they had not yet decided to recommend any co-operation with the provincial government, at the same time I should like to impress upon him, as the hon. member for West Algoma and others have done on previous occasions, the importance of giving very serious consideration to the question. It is not just a local question. One of the reasons why the National Railways, indeed all the railways in this country, have found it difficult to carry on has been a shortage of freight, and that is particularly due to the lack of population in that gap of more or less unsettled country between North Bay and the Manitoba boundary. We have an area there as large as the British Isles and the German Empire combined, and yet while they have one hundred and ten millions of people, or thereabouts, in those European countries we only have in this northern Ontario section about 150,000, so that this area forms an immense gap where neither passenger nor freight traffic, nor population, is as large as it should be. Therefore the whole of Canada, as well as northern Ontario, is interested in developing the iron industry which is one of the basic industries in commercial processes throughout the world. There is no country in the world that is really a great commercial country that has not its prosperous iron industry; and there is this further fact to be remembered in our case that we import from the United States something like $150,000,000 or $175,000,000 worth of iron and iron products each year. I should think that, in view of the past history of this country in helping various industries with bounties, enterprises which have been built up into very large industries, the government might well consider co-operating with the province of Ontario which has proposed to grant a bounty in unison with another bounty from the Dominion government. I think the government might very well give very serious consideration to that idea between now and the next session of parliament. I do not believe that at this late day in the session there would be any likelihood of bringing the proposition to a successful issue; but this is a question which has been a very live one, which is being agitated very strongly not only in northern Ontario, and down in the Maritime provinces, but in British Columbia as well. We have also heard of deposits being found in Manitoba; that province has ore deposits which also might be utilized in the same way. There is this fact to be remembered too: If we offered a bounty, in co-operation with the bounty proposed by the government of Ontario, and the project were not a success there would be no money spent. There is a further fact to be borne in mind. The Minister of Finance (Mr. Fielding) has pointed out on the floor of the House on different occasions—I heard him do it some years ago—the great success that was met in the case of the steel industry in Canada through the bounties that were given by the Liberal government between 1896 and 1906, or thereabouts. I believe that even my hon. friends to the left who are free traders—or a large number of them,—if they were convinced that a bounty for a time would start a basic industry such as this, would probably not feel that it was as harmful a type of protection as they consider some of the other forms are.

Mr. CRERAR: A most vicious kind.

Mr. MANION: What did my hon. friend from Marquette say?

Mr. CRERAR: I was just remarking to one of the hon. gentleman's friends over there that probably the bounty system is the most vicious kind of protection.

Mr. MANION: I do not agree with my hon. friend that there is anything vicious about protection, I do not think there is—my hon. friend and I differ as to that. But even if there were, I have read a statement on the question of protection by many of the best authorities, professors of political economy and others, to the effect that the bounty system is the least vicious—using my hon. friend's term—because it is a straightforward method, you know exactly what you give and what returns you get, and in many cases there is no possibility of building up the desired industry by any other means. However, that is by the way. I just wish to impress upon the minister once again the necessity of a serious consideration of the whole question; and I hope that between this

and next year the government may give some thought to this question—as has been given in the past by various governments—the granting of iron ore bounties on the line of the steel bounty, the lead and zinc bounty, the oil bounty, and various others. I believe it would be entirely in the interests of Canada if the government could see its way clear to co-operate with the province of Ontario in this matter.

4 p.m.

Mr. FORKE: The provinces of Ontario and British Columbia have been mentioned by the hon. member for Fort William and Rainy River (Mr. Manion), and he has also spoken of Manitoba. I thought, therefore, I would quote to the House a statement made by Professor Wallace, of the university of Manitoba, that the day would come when Manitoba would be more famous for its minerals than for its agricultural produce. So that we are not at all blind to the fact that Manitoba has a great future in store for her as far as mineral production is concerned. I shall limit myself to mentioning this statement without at all going into the question of free trade versus protection at this time.

Mr. JELLIFF: Is the department making any investigation as to our oil resources, or the utilization of the tar sand in our north-western country?

Mr. STEWART (Argenteuil): I might answer the question in the affirmative although the subject is one which comes up more appropriately under another vote.

Mr. STEVENS: Is the government considering any scheme for the development of the iron and steel industry—that is the utilization of our great deposits of iron ore—in a manner similar to that adopted by the British government under the Aids to Industry Act? Has there been any proposal for, or consideration of, a plan of that kind, in contra-distinction to the bounty system, or supplementary thereto?

Mr. STEWART (Argenteuil): May I say in reply to my hon. friend first, that I am not familiar with the details, but I believe a proposal of that kind has been discussed between members of the government and representatives from British Columbia, but I do not think any action has been taken on the matter at the moment, although a considerable amount of discussion has occurred. But, dealing with the question raised by the hon. member for Fort William and Rainy River, namely, the question of assisting in the development of the iron industry in Canada by way of a bounty, let me say that I do not go the length to which my hon. friend from Marquette (Mr. Crerar) goes in characterizing this as a most vicious kind of protection. So far as the Mines branch of the federal government is concerned at the present moment, having in mind perhaps that the most important service that could be rendered would be the evolving of a process of dealing with these low grade ores, that we are bending all our energies, working in conjunction with the American Department of Mines or any other informative source that we can find, to ascertaining whether or not a process can be developed that will make it profitable to mine and transform into pig iron the low grade iron ore that we have in Canada in large quantities. There is no question but that if that could be done we would be in a very different position in Canada from the one we now occupy; and that many of the things suggested by my hon. friend (Mr. Manion) would come about. We are very much alive to the importance of the question, and feel that perhaps we can render a great service at the moment by investigating every one of these processes that comes under our notice. At the moment we are working on an electrical process that we hope will prove a partial solution at least. I hope that before long some one will evolve a commercially feasible process. I can quite appreciate the desire of the Ontario government to lend encouragement along the same line; but we feel that for the time being we can best serve the development of this industry by what we are doing to-day.

Mr. STEVENS: Has the minister in mind the granting of any other form of assistance this session?

Mr. STEWART (Argenteuil): My hon. friend has reference to the iron industry?

Mr. STEVENS: Yes.

Mr. STEWART (Argenteuil): No.

Mr. MORRISON: Will the minister tell us what the expenditure on the coal briquetting plant has been in the past year, and what the department is doing during the coming year in connection with that plant? Are they still co-operating with the governments of Manitoba and Saskatchewan in their experiment?

Mr. STEWART (Argenteuil): We have not done anything during the past year. Speaking from memory, about a year ago we entered into an agreement with the owner of the mines, Mr. Sutherland, that the three governments would take over the plant and develop the process. My understanding through Mr.

Molloy, Commissioner of Labour and Industries for Saskatchewan, whose duty it is, I believe, to supervise to some extent this investigation, is that Mr. Sutherland is anxious to test out a process they have developed in Germany, and with that object in view has shipped over a very considerable amount of coal which is being tested by the German process in the hope that it may be superior to what our investigations have developed so far. However, we do know that we can make briquettes successfully, although perhaps the cost is a little more. I do not know whether Mr. Sutherland expects to reduce the cost or not, but he seems to be enamoured of the process developed by the Germans and wants to try it out thoroughly. He is on the spot himself watching the process, and we have a representative there also for the same purpose so that we may have full information. He wants to do that before he begins the making of briquettes at the plant now in existence.

Mr. WARNER: The minister speaks of low grade iron ore. Is it low grade in quality or just low grade in quantity? That is, is the return low grade?

Mr. STEWART (Argenteuil): It is low grade in quantity. The hon. member means low grade in metal content?

Mr. WARNER: Yes.

Mr. HUMPHREY: What is meant by low grade in quantity?

Mr. STEWART (Argenteuil): It is about 35 per cent.

Mr. WARNER: Is the development of the salt mines in Alberta carried on by the Dominion government?

Mr. STEWART (Argenteuil): No. Any drilling that is being done there is being done by the provincial government. The hon. member refers to McMurray, I presume.

Mr. STEWART (Leeds): Would the minister give a little more in detail the activities of the Fuel board during the past year whether they have abandoned all experiments with peat, and what the minister has in mind of any particular new field of investigation or development during the coming year?

Mr. STEWART (Argenteuil): While we are getting the memorandum regarding the investigational work, I might deal with the peat problem. This problem has been carried to the point where we have proved that it is a commercial possibility and that we have a process that will work successfully. Since that time both governments have agreed that the matter has now entered the field of commerce. I think we are both of the same opinion, that it can best be developed by private enterprise. That is being attempted by a company, organized, I think, in Montreal. I understand they are ready to operate now at Alfred on the bog. The machinery was turned over to them on a guarantee that they would continue to operate and produce peat.

Mr. PARENT: Lately in glancing over the report of the Department of Mines of the province of Quebec, I was reading reports concerning the titanium ore deposits in that province. It was stated in the report that there is any quantity of titanium ore in Quebec. Does the Department of Mines at Ottawa know something about this, and has it ever ventured to find out whether this ore is of value to the country?

Mr. STEWART (Argenteuil): We have a report on the ore mentioned by my hon. friend.

Mr. HUMPHREY: I am not just clear on this question of testing or treating ores. Would the minister explain the procedure in regard to testing a shipment of ore coming to headquarters at Ottawa? Have the department had any requests in regard to furnishing assays of ores that are sent in?

Mr. STEWART (Argenteuil): We are not attempting to do this work in any commercial way. I think the hon. member mentioned the fact that the prospector was not in a position to get tests made for which he would have to pay. That is just the field that we are trying to fill, to test all the discoveries of the prospector. I do not say that we are confining our efforts entirely to that, but our chief desire is to lend that aid to the individual who has spent his time and money in trying to discover mineral. After the assay is made and the various minerals that usually are found in the sample are discovered, we try to work out a process that we can give him for his information. We advise him as to what the ore contains in pounds and as to the best method of treating and handling that particular sample. It is true that we do not furnish the actual dollars-and-cents value of the product, but that can easily be ascertained when he has at his disposal those two or three very important pieces of information.

In reply to the hon. member for Vancouver Centre (Mr. Stevens), we put no restrictions on the quantity which may be sent forward for investigational work here. I do not think the government of Canada should be called upon to provide a commercial plant. We are

doing our full duty by carrying out investigational work rather than by attempting to enter the commercial field or to develop this work in a large way, employing a number of highly technical men and machinery for the purpose of testing ores in big quantities.

Mr. HUMPHREY: That was the point I was interested in. I am not concerned in any way with the commercial end of the matter; I am interested in providing some way of assisting the prospector, the one who goes out and actually finds the mineral. I can go as far as to say that I have not had any representations made to me on behalf of the commercial phase of the question. When the prospector sends his ore to the testing plant at Ottawa, at the time this test is made, it might be very easy to assist him by providing an assay giving the value in dollars and cents of the metal content. If he sends his ore to the plant here and a report as to the result of the test is furnished to him, he then has to send the result of that test to an assayer. That takes a good deal of time and money, and prospectors are not in a position to do that. The fees in connection with assaying are fairly high, and if the man is constantly engaged in prospecting, he has to have a good many assays made in a season. Therefore, when the department has the prospector's ores here, it might go as far as to give him the value of the metal content in dollars and cents and he would then have the result of his season's investigation right before him. I do not think, for a moment, anyone wishes the department to look at this matter from the commercial angle. All the big commercial institutions engaged in mining carry on extensive assaying and testing plants of their own, and it is hardly necessary for commercial institutions to call upon the department.

Mr. JELLIFF: Has any investigation ever been made as to the metals in the Rocky mountains? These mountains have been piled up there a long time, much longer than I have been alive at any rate, and it is about time we were finding out what there is in them. We are under the cloud of a great national debt which, if it is to be paid, must be paid through the development of our natural resources. I am quite in sympathy with what has been said by hon. members to my right. We have coal there in millions of tons and we have everything necessary for the reduction of ores. I think therefore that a complete investigation, even if it should cost a lot of money, should be made into these resources.

[Mr. C. A. Stewart.]

Mr. STEWART (Argenteuil): We are doing geological work in the mountains every year; whenever reports are brought to us we try to investigate the possibilities of new discoveries.

Mr. BOYS: With regard to the question of peat, I remember that a few years ago, in an effort to get rich quick, I lost in peat all the money I had. I am interested to know if any progress has been made. I recall the difficulties that we encountered, the chief of which was the drying process. Has anything been invented of late to overcome that difficulty? Another trouble was that after the fuel had been manufactured by the Dickson patent process it could not be stored except under cover; and that was a great objection. I had not followed the developments in the last five or six years but I understood the minister to say that progress had been made. I should like to know something about the cost of manufacture, what the finished product can be sold for, and whether any is now being sold commercially.

Mr. STEWART (Argenteuil): The experiments were carried out at Alfred, between here and Montreal, and we did not discover that there was any short process for drying the peat. They simply spread the mud, as I call it, on the ground and left it to be dried by the sun.

Mr. BOYS: And suppose it rained the next day?

Mr. STEWART (Argenteuil): The rain does not affect it except that it takes longer to dry.

Mr. BOYS: When it is wet it disintegrates and the whole process has to be gone over again. We found that we could never get enough dried.

Mr. STEWART (Argenteuil): So far as I could ascertain down here, and I watched it closely, the whole thing depended upon the devolpment of machinery to handle the material cheaply. I have given an opportunity to everyone who has come along with a pressure process, or with some process of sun-drying, to try it out. There is an engineer here who felt that he was discriminated against because we had not given him the necessary machinery to put his process to the test, and we decided to meet his wishes in this regard. So far no process has been discovered whereby you can separate the moisture content from the peat, the composition being about 90 per cent moisture and 10 per cent solid matter. It seems impossible to bring sufficient pressure to bear to extract all the

moisture to make it decent fuel. We had an area covered with the peat and we produced about 4,000 tons in a short time.

Mr. BOYS: Was that in the crude state? As far as I know, in Ireland they dig it with a spade eighteen inches long by four or five inches wide. Where it is dense in quality it more easily sheds the water; but in the bogs in which we are interested we could not get the quality of peat that would successfully produce fuel. I am therefore very much interested in the whole subject and I should be glad to get all the information I can in regard to it. There are bogs not very far from the town in which I live which it might be worth taking hold of if recent investigations indicate that a commercial success can be made of the production of fuel in this way. The minister mentioned 4,000 tons having been manufactured. Was that produced by pressure, or was it allowed to dry in the sun?

Mr. STEWART (Argenteuil): It was sun-dried. I had some of it sent to Ottawa and a number of people burned it. It gives a strong heat although of course it is a low grade fuel. I do not think it would be more than between fifty and sixty per cent of the value of anthracite. It can be manufactured cheaply if you do not put too many transportation charges on it; a hundred miles would be about the limit you could ship it economically. And after it has been thoroughly dried it will keep.

Mr. BOYS: Is it used for steam or for domestic purposes?

Mr. STEWART (Argenteuil): It can be used for steam but it is used chiefly for domestic purposes, for fire-places and cooking stoves.

Mr. BIRD: How much of the vote approximately is spent on the investigation of mineral resources and deposits—altogether, in actual investigation?

Mr. STEWART (Argenteuil): About $95,000.

Mr. BIRD: That is, on field work.

Mr. STEWART (Argenteuil): No, this is for investigational work in the laboratories. The field work comes under the next vote.

Mr. BIRD: I think an undue proportion of the money is spent on laboratory work. I asked the minister some time ago to give me the figures with respect to the work that was being carried on at The Pas; I thought that was the only way one could ascertain how much work the Mines department was doing in actual investigation. The minister was not able to give me an answer to that question.

Mr. STEWART (Argenteuil): It is difficult to get it down quite so fine because we might have a party operating for part of a season or we might have two or three parties carrying on work at the same time, yet part of this expenditure would be involved as well. It is very difficult to separate in that way and get it down to the amount we spend in one province. If we had a party there for the whole season we could give the expense of the party. But that is not the way it is done. We have so many departments for geological investigatory work that we try to spread it over as much territory as we can.

Mr. BIRD: There is a doubt in my mind as to whether we are spending this money effectively in developing our already known deposits. I make this statement because I took a trip in The Pas mineral belt. I could see no indications at all that this department was doing anything actively to develop that district. I will admit that two or three years ago the Topographical Surveys branch issued a very excellent map, and of course that is to some extent of great assistance to the prospector, and that is the kind of thing that should be followed up. I spent two or three days in that district, and I do not think I ever heard so many complaints in so short a time from prospectors and others interested in mining. It seems to me the whole thing has been done in a haphazard way as far as that important mineralized section is concerned.

Mr. STEWART (Argenteuil): Was that my hon. friend's first visit to a mining field?

Mr. BIRD: I will admit it was.

Mr. STEWART (Argenteuil): I thought it likely.

Mr. BIRD: I think it is very significant when hard-working men—and these prospectors are hard-working men—complain that they are being neglected.

Mr. STEWART (Argenteuil): What is the nature of the complaint?

Mr. BIRD: It would take me half an hour to go over the great variety of the complaints.

Mr. STEWART (Argenteuil): Give us one or two.

Mr. BIRD: This district in The Pas is one hundred miles from the nearest town. In coming out from there I was accompanied

by prospectors who were on their way to register their claims a hundred miles from the mining district. It seems to me that is an undue hardship imposed on men who are all the time undergoing great hardships in trying to investigate our mineral deposits. I think the real work of investigating our mineral deposits is being done by the prospectors, and I do not think much assistance is given by the department. I know that a great many of their hardships were not really due to the neglect of the department, but I say that if this department were supervising the districts where there are probably a thousand men or more on their own responsibility engaged in a work of national importance, and if the department were directing their minds towards that district in any systematic way, a lot of things such as railway facilities, for instance, and post office facilities, might be provided—

Mr. STEWART (Argenteuil): My hon. friend is not blaming the mining proposition for the lack of railways and post offices?

Mr. BIRD: These things are due to the lack of consideration by this department. It seems to me futile for the department to be spending half a million dollars every year and nothing being done on the site of the mineral deposits. I should like to ask the minister what is being done in that district. I placed a question on the order paper and the minister could not tell me.

Mr. STEWART (Argenteuil): My hon. friend asked me the cost.

Mr. BIRD: That would be the most direct way to get at the facts. If we are not spending any money there of course we are not doing anything in that district. I did ascertain that the department during the last three years has collected over $70,000 from these prospectors in registration fees. I think the minister should inform us how much the department is spending in that district. Here we have a large number of men a hundred miles away from anywhere, at great hazard, living a hard life, and yet without any direction of any kind. I can see from this that most of this money has been spent on work which has been done for people who could very well do it for themselves, namely our big mining companies. The minister has been talking about the facilities they have been offering to the prospector. Last year I brought a sample to the department. The deputy was very courteous, but I could see he was restricted in his ability to grant me a test upon this sample, and the way in which he put it was this: "How are we to know that this is a genuine sample?" I could only give him my word of honour. But if that process has to be gone through every time a prospector sends a sample down here, I cannot see of what advantage that function of the department is at all.

Mr. STEWART (Argenteuil): It is very important.

Mr. BIRD: But how can the department carry it out with any advantage to the prospector?

Mr. STEWART (Argenteuil): It is really no advantage, unless it is an authentic sample and we know it to be authentic.

Mr. BIRD: Has the department any means of telling whether the samples are genuine?

Mr. STEWART (Argenteuil): Yes, we have the affidavits, and we conclude from these affidavits that the men are honest about it.

Mr. BIRD: It seems to me that in an area such as The Pas mineral belt this government should have some official with some knowledge of the situation, helping the prospectors, and giving them advice, and trying to lessen the amount of hazard there is in their work. Some of them have been in there for five, six or ten years, and they do not seem to be any nearer to their object than they ever were. I think this is due to the lack of guidance from this government.

Mr. STEWART (Argenteuil): How would you guide a prospector?

Mr. BIRD: My hon. friend may make light of it?

Mr. STEWART (Argenteuil): No, I am not making light, or attempting to make light, of it. I think a great deal of the prospectors, and they have done a great deal for Canada; but you go beyond the point when you say anyone can guide a prospector when he is out looking for minerals.

Mr. BIRD: I was not suggesting that, but there are many ways a prospector can be helped, especially as to the quality of his find.

Mr. STEWART (Argenteuil): We are doing that. We are taking the samples from the prospector at the nearest station, paying the freight on these samples to Ottawa, and when they are examined we issue a statement with respect to them, and that statement is

accepted by all the mining people of the country and it is authentic. But we have to know with whom we are dealing, and we have to know that a sample comes from a certain location, and that is all the prospector is required to prove.

Mr. BIRD: Is the department being used to any great extent by the prospectors?

Mr. STEWART (Argenteuil): Yes, we analyse every sample sent to us.

Mr. BIRD: The department has no agent on the spot to take the samples and to see that the samples are properly taken?

Mr. STEWART (Argenteuil): No, we are operating all over Canada.

Mr. BIRD: You are confining yourself to a laboratory, and not actually investigating in the field. That is my conclusion. The department is not spending money where it ought to.

Mr. STEWART (Argenteuil): Would it satisfy my hon. friend if I said that we had fifty parties in the field?

Mr. BIRD: What kind?

Mr. STEWART (Argenteuil): Geological parties.

Mr. BIRD: That is not of any advantage to a prospector.

Mr. STEWART (Argenteuil): Oh, yes, it is of immense advantage to the prospector. Parties are up in The Pas district, and have been there for some time.

Mr. BIRD: The geological party finds the mineral field and the prospector develops it.

Mr. STEWART (Argenteuil): No, not necessarily. The prospector goes out and makes his discovery, or thinks he does—he is not in every case trained in the business—and he asks for an investigation. The request does not come from the mining companies, because they have experts of their own.

Mr. BIRD: Will the minister tell me anything that the Geological Survey can do for the prospector?

Mr. STEWART (Argenteuil): Yes, it can do a great deal for the prospector. It can tell him whether or not his find is worth anything.

Mr. BIRD: And is the department doing that?

Mr. STEWART (Argenteuil): Yes.

Mr. BIRD: How much has that been costing in The Pas mineral belt?

Mr. STEWART (Argenteuil): We are making investigations all over Canada, and a party may be in The Pas field for two weeks and then transferred to another, or it may be there the whole season. It would be difficult to give the expenditure for that particular area.

Mr. BIRD: I think that is a very reasonable question to ask. Here is a well defined mineralized area; it is not a new one, and the department should certainly know how much is being spent in administration in that area.

Mr. STEWART (Argenteuil): We have no administration charges in that area.

Mr. BIRD: I mean the amount the department is spending on the development of that mineral area. I doubt whether the department is doing very much at all in that respect; nearly all its money is being spent in the laboratory down here.

Mr. STEWART (Argenteuil): Would my hon. friend agree if I said it was more important and more in the interests of The Pas district that we should spend a good deal of money in the laboratories rather than upon actual investigation or development work?

Mr. BIRD: If the minister will show me how The Pas mineral area will be developed by work in the laboratories, I will concede it; but I do not see it myself.

Mr. STEWART (Argenteuil): A prospector must have someone to test his samples and advise him as to their value.

Mr. BIRD: It seems to me that the game of developing our mineral resources is carried on in a haphazard way. Professor Wallace, speaking not long ago, said that $4,000,000 of private money had been spent in that game in Manitoba during the last few years, the whole of it practically wasted. That could not happen if we had a Mines department that was really interested in the Manitoba resources.

Mr. STEWART (Argenteuil): Why could it not happen? It has happened in every mining country. It is happening in Ontario to-day, in Quebec, and in every province where there is development of any moment. The men who discover the minerals are the prospectors with the packs on their backs who go out and take their chances. We stand ready to advise them with regard to their samples, all that they will send to us.

Mr. BIRD: Does the minister call that investigating our natural resources—sitting

here in a laboratory and waiting until other people go out and get the material?

Mr. STEWART (Argenteuil): Does the hon. member suggest that it is the business of the government to go out and discover minerals?

Mr. BIRD: If the federal Mines department were like the provincial departments, it would do more than it is doing. That is why Manitoba mining is so far behind that of other provinces.

Mr. STEWART (Argenteuil): What department of mines is going out to discover minerals?

Mr. BIRD: The Mines departments in British Columbia and Ontario—

Mr. STEWART (Argenteuil): No, neither one.

Mr. BIRD: —but they are taking a keen interest in the development of their provincial resources. I am not blaming the minister; this is not a matter which has arisen since he took charge of the department. It is because the natural resources in our province are owned by the Dominion. There is only so much our province can do in this direction, but it has done all it could; it has helped to build a road in there. And now I want to know what the Dominion government has done to develop that country. Almost everything the Dominion government has done has been done half-heartedly. I was up the railway last fall and I was told by one of the mining companies there that they scarcely ever had a shipment of goods without some of it being stolen from the siding. Is that encouraging our mining men up in that district? Not only that, but in numerous other areas there is every sign that there is no push from Ottawa toward the development of our mining areas in northern Manitoba. It all arises from the fact that we do not own our natural resources.

Mr. STEWART (Argenteuil): My hon. friend suggests that if the provincial governments were in charge, more would be done for the mineral development of the province —and I am now eliminating the railways and the post office and the other services, because the Mines department has nothing to do with them.

Mr. BIRD: They have.

Mr. STEWART (Argenteuil): Well, it may be a question for the government generally, but I am speaking now of the Mines department only. We do practically all the geological work that is being done in British Columbia; it is part of the pact of union that that work should be carried on, particularly in view of the fact that there are known to be huge deposits of ore in that province. We have done identically the same thing in Manitoba. It is true that the Department of Mines of British Columbia are ready to make assays and so on, to a limited degree, as is being done in Ontario. But I hope my hon. friend does not think there is any way of our organizing a search for minerals. That has always been done by the prospectors, in whom he is interested, and in whom I also, am interested. The prospector is the man I want to help because he is the real pioneer in mineral development; he has to put up with all the difficulties he meets with in going into the unbroken wilds. If he thinks he has found anything we can give him expert advice on it. It is true he has to go a long distance to register his claim, but we could not establish recording offices in every centre. The Department of the Interior does establish these offices wherever the business warrants it, and there is a general endeavour to facilitate the development of the mining industry as far as possible.

Mr. BIRD: Does the minister not think his department is under greater obligation to develop the mineral districts of Manitoba than those of British Columbia?

Mr. McBRIDE: Absolutely not.

Mr. BIRD: They own their mineral resources and we do not. Surely the minister admits that.

Mr. GARLAND (Bow River): I would like the minister to get back from the rocks into the bog for a little while. When was the experimentation in the development of peat fuel started; how much has been expended to date, and what has been the total revenue from the sale of the product?

Mr. STEWART (Argenteuil): The experiments were organized in 1918, the costs being met to the extent of fifty per cent by the Dominion government and fifty per cent by the Ontario government. In 1920, 6,000 tons were manufactured; in 1921, 4,000; in 1922, 4,700. The peat was sold in approximately twenty-five cities and towns in eastern Ontario and Quebec, at a price, f.o.b. cars at Alfred, Ontario, of $5 a ton.

Mr. GARLAND (Bow River): Does the minister seriously think that it is advisable to continue experiments of this kind from the point of view of solving the fuel problem of the central provinces?

Mr. STEWART (Argenteuil): We are not doing anything with peat at the moment except endeavouring to discover whether there is any better process, because we consider that so far as the air drying process is concerned we have solved that problem. The peat bogs of Canada are not nearly so old as those of Ireland, and you cannot treat them in the same way. There is a tremendous amount of water in our peat, and we think we have solved the drying problem by the air drying process, so that peat can now be marketed within a reasonable distance of the bog itself in a commercial way, and become a reasonable adjunct to the other fuels, but we are still willing to investigate, although we are not spending any large amount of money, any process of pressure that might be discovered that would seem to shorten up the drying process.

Mr. GARLAND (Bow River): I do not wish to be regarded as in any sense desiring to restrict reasonable experiment, but frankly I think the experimentation in this case has been continued long enough and the time has come now to stop. If the government is satisfied that a process has now been discovered for marketing peat commercially, let that continue to be developed by private interests and let the government cease this experimental work. If we could turn sums of money of this kind and similar sums to the reduction of transportation costs, for example, on the movement of the real fuel of the country, which is coal, to the central areas, I think it would be much more advisable. Does the minister intend to continue asking for large votes annually for a continuation of this peat experiment?

Mr. STEWART (Argenteuil): Oh no, we are not asking for any large sum. I thought I made it clear to my hon. friend that so far as this experiment is concerned, we have concluded that it is finished; but small sums are being expended from time to time investigating pressure processes that would appear to shorten the drying process.

Mr. GARLAND (Bow River): What was the total vote last year for peat development?

Mr. STEWART (Argenteuil): There was no vote last year.

Mr. GARLAND (Bow River): What expenditure was made?

Mr. STEWART (Argenteuil): Only a very small sum. Peat is mentioned in the general list of experiments, but only because someone may come along with what might appear to be a better process for pressing out the moisture.

Mr. GARLAND (Bow River): Then actually the amount to be spent on this work annually will not be more than a few hundred dollars?

Mr. STEWART (Argenteuil): That is true.

Mr. HUMPHREY: I wish to come back to the question of mineral ores, in which there is a little more money than in peat. With reference to the remarks made by the hon. member for Nelson (Mr. Bird) I may say that so far as I am personally concerned I have lived a lifetime with the prospector and there is no one who has a greater respect or a higher regard for the prospector than I have. The prospector is not a man who will be guided when it comes to prospecting in the hills. The kind of assistance a prospector wants is a grub stake, and it is not through some organization that the prospector functions. But he does want assistance from the different governments, I quite admit that; and I am afraid that the assistance that is being given to the prospector is falling off to some extent. While no headquarters organization will ever be able to guide the prospector in any shape or form, he does need assistance in determining the content and the values of his discoveries. With regard to the remarks made by the hon. member for Nelson in reference to the work of the Mines department, I must disagree with him. From my own personal experience and the experience of others, I know that the Mines department has been doing a wonderful work in developing the mining industry in British Columbia. I cannot speak for Manitoba, but I can say that the wonderful activity in mining that is taking place in British Columbia at the present time is due to the research and scientific methods that have been discovered and approved by the Department of Mines. I would like the federal government to go further and give every possible assistance to the prospector by telling him what is in his ore and the values. That is the one point I would like to urge upon the minister.

As far as the geological work and other work that has been done by the Mines department in the past is concerned, I can only commend it. As a result of that work, mining engineers are now able to go into different localities in the several provinces without any waste of time or money and develop the mineral resources there. In that way the Mines department, while I will not say it has done everything possible, has assisted the mining industry to a very great extent, and

I only hope that they will continue to work along these lines, because the actual results that have been brought to my notice speak very highly of the work of the department. There is, however, need of a good deal of co-operation between the provincial governments. Of course, we fully understand that the mineral resources in the province of Manitoba are in a somewhat different position from those in British Columbia, because in Manitoba they are under the control of the Dominion government, whereas in British Columbia, outside of the Dominion belt, they are under the control of the province, and it is through road building and in other ways that help is given to the prospector. In the past few years I know that the number of prospectors throughout the Dominion has been falling off. I trust this is not due to lack of assistance from our federal and provincial governments.

Mr. LeSUEUR: During the sessions of 1923 and 1924 the status of the oil fields and the oil industry in Lambton and Kent counties was argued at some length in this House, and after much urging the government consented to an investigation. My information is that Dr. G. S. Hume, the geological expert, and Mr. Russell, an expert more I presume in financial matters, went up there and made an investigation at considerable length, with the assistance they could receive in that section. The situation of the oil fields and of the oil industry in those two counties, Lambton and Kent, is so serious, and was so serious, that those interested sent for the third time in the third successive session a deputation to Ottawa to take up with the government the question of continuing the assistance which has been given to them by way of bounty. To my mind it was most important that the reports of these two gentlemen should be before the House and before the government in considering the request of that deputation, and for that purpose I put a motion on the order paper asking for a copy of the instructions given to Dr. Hume and Mr. Russell in connection with their visit to the county of Lambton, and of all letters or reports written or made by them or either of them thereon, and all correspondence relating thereto. The return to that order I have here, No. 187, and it reads in part as follows:

A copy of the instructions issued to Dr. Hume covered by this order is attached hereto.

Passing on, the meat of the return is this:

No report on the Kent and Lambton counties fields was requested from Dr. Hume in the instructions issued to him, and none was made, nor will any be made by him thereunder. There is no information on file in the Department of Mines concerning instructions to, or a report by Mr. Russell.

I have brought this matter up because I thought these reports were most important in the event of either the government or this House deciding on the question of continuing the bounty in the Kent and Lambton oil fields. To the producers in those fields this is really a matter of life and death, as was explained in the arguments on this subject formerly presented in this House. My information was that Dr. Hume did make a full report to the department, and that Mr. Russell also made an exhaustive investigation and reported to the government. When I received the return saying there was no report and no report expected, I took it up with a gentleman who had been to Ottawa in three successive years with these deputations to the government, and I wish to read what he writes in reply:—

Your letter of April 25, last, advising of the result of your effort to get before the House Dr. Hume's report on the condition of our oil industry here was received in due course.

While it may be true that no report was requested from Dr. Hume when he received his instructions to visit and investigate this field it is hard to understand a government official, at the country's expense, going to the trouble of making such an investigation and not being required to report back the result of such investigation.

Very soon after his arrival here Dr. Hume saw me and explained to me the purpose of his visit. I raised the question of the effect of the removal of bounty on oil and he then told me that he was not here under any instructions from the government to secure information in connection with the bounty controversy but that the object of his visit was to secure some information for his own particular department. He then stated that he thought it quite proper and necessary to report to his department his opinion of the result of the removal of the bounty and he asked that we give him such information as we had on the bounty subject.

Every facility was given Dr. Hume to make a thorough investigation and following his investigation a meeting of our producers was held attended by Dr. Hume and at this meeting the bounty matter was fully gone into and Dr. Hume made rather copious notes as to what was said. Following this meeting of our producers Dr. Hume prepared a report for his department at Ottawa and as he was not returning to Ottawa from here it was his intention to forward this report by mail. Before posting it Dr. Hume called upon me at my office, read the report to me, made some changes suggested by me and stated that it would be forward to Dr. Camsell that day, Friday of the week. I was in Ottawa on the Monday following the Friday Dr. Hume was in my office, saw Dr. Camsell in his office on Monday morning, he admitted to me that he had just received Dr. Hume's report, that he had not had an opportunity to read and consider it but that he purposed having some copies made and would go into the matter later on. As a result of some of my efforts the Minister of Mines, Hon. Mr. Stewart had Dr. Camsell call at his, Mr. Stewart's office, with the report and I saw two typewritten copies of the report in Dr. Camsell's possession in Mr. Stewart's office.

I have gone into this matter with considerable detail because I believe that when all these particulars are brought to the government's knowledge they will realize that a blunder has been made some place when the return was brought down declaring that Dr. Hume had never made any report. I believe we are entitled to have this oil bounty matter discussed upon its merits and are entitled to have this report as well as the material and information collected by Mr. Russell submitted to the House.

Yours truly,

I. GREENIZEN.

I believe that an injustice has been done to these fields for the numerous reasons which have been thoroughly threshed out already. This investigation, in my opinion, has thoroughly corroborated every statement made in the House in regard to the situation in these two oil fields. It was therefore with the utmost surprise that I read the statement in the return that no such reports had been made. I wrote to Petrolea about the matter, and the reply is what I have read.

Mr. STEWART (Argenteuil): Dr. Hume's instructions were to visit that field on his way west and to make an investigation for the information of the deputy minister—for his information alone and for the benefit of no one else—as to the situation with respect to oil alone and not with respect to bounties. The granting of a bounty, or otherwise, is a matter of policy. Mr. Fielding, rightly or wrongly reduced the bounties and since that time a gentleman—I have forgotten his name, but he has been here on several occasions—has been in my office repeatedly. He has pointed out that the production has fallen to such a low point that ruin would absolutely ensue unless the bounties were continued. Let me say frankly that speaking personally I never concealed the belief that in the event of oil being discovered in large quantities in Canada the amount of bounty paid would ruin the country, but so long as the bounty was confined to the Ontario fields it would not be a serious matter. I take full responsibility for advising these producers that I thought the industry was surely now in the position to carry on without assistance from the federal government. I merely mention that in passing.

5 p.m.

Coming back to Dr. Hume, his report was of a confidential character; I cannot speak for Mr. Russell, I do not know why Mr. Russell was sent there, and I have no knowledge that he did make a report. If Mr. Russell was sent there officially to prepare a report, I have no complaint to make, but the point is this: Where a question of policy is concerned I do not think it is the business of a government official to pass his opinion upon it. He is an expert in his own line, but cannot be accepted as an authority on matters of policy—as to what ought to be done in the way of reducing or enlarging bounties, or otherwise.

Mr. LeSUEUR: The first point made by the minister as to the ruining of the country by leaving this bounty on in the event of a large production is easily answered by the suggestion made by the deputation that the bounty should only be applicable to the first five barrels per well, or to some limited amount per well, which would answer fully the purpose and avoid entirely the possibility that the minister mentioned. But now, the point is this: The reply given in the return says that no report on the Kent and Lambton fields was requested from Dr. Hume in the instructions issued to him, "and none was made nor will any be made by him thereunder." Now, the minister admits there was a report. Whether that report was confidential or not, it was a report; yet a return was brought down to the House which contained a statement to the contrary, and which, according to the minister's own statement is not accurate. The minister says the report was confidential. But why should a report on the oil fields be so regarded?

Mr. MEIGHEN: Hear, hear. It cannot be confidential, it is absurd.

Mr. LeSUEUR: The formation of a policy on a matter of this kind depends on the facts as they exist. Those facts were reported, and it was essential that the House should be made acquainted with them, and should know that previous statements made in this House were accurate. Then the House could adopt what policy it pleased, and continue or eliminate the bounty as it saw fit. I think the House was entitled to the facts. The investigations in question were made by the government at the country's expense, and I think we are entitled to have his report. We are entitled to know what the conditions are in those oil fields and then we can take such action as the circumstances call for. In any event it was improper to have said in an official return that there was no report because the minister has admitted that there was a report, but that it is confidential.

Mr. STEWART (Argenteuil): There comes to the department any number of reports of a confidential character that are not requested to come in that way, that are not intended for the use of parliament. There is a vast difference between these reports. We deal with so many and so varied subjects that my hon. friend may be excused for putting

this in the wrong category. We have to get confidential information, and confidential information that we get for the purpose of advising ourselves may take on a vastly different character if made public. I understand that Dr. Hume was sent there on his way westward. He did not come back to make any report on this matter, but he wrote to his deputy minister a short letter of a confidential character which now, it develops, he showed to the gentleman mentioned in the letter whose name I have forgotten. I am perfectly willing to accept the statement. If that is the case, it is absolutely news to me. Of course, the report could be no longer confidential. It was public property; he knew it, and in all probability he saw that information in my office. I do not deny that, but I have always treated that report as one for our own information in the department. In view of what my hon. friend has brought out, I am perfectly willing to lay the report on the table of the House and to treat it no longer as confidential. But I would want it understood that I am at liberty to get confidential reports in the department for my information.

Mr. MEIGHEN: The hon. member for West Lambton (Mr. LeSueur) has certainly, more by accident than anything else, exposed this afternoon what is a too-common practice on the part of this government. Whenever anything comes out of a public nature which the government would prefer not to be known, it immediately becomes in the eyes of the government confidential; only that can be published which pleases the eyes of the government. In the first place, if one has to assume that the government has a right to regard as confidential the report of an official on a public question, obtained at public expense, a question that has been debated in parliament. This return is absolutely false, and it is brought down on the minister's authority. This return says that the official made no report; that he was not asked to make a report and that he was not going to. Does the minister suggest that is the truth? It is a deception of parliament. If it had not been that an outsider saw that report, parliament would never have known differently. Certainly the department stands in a most unenviable position in relation to this matter. But this report cannot be confidential. Certainly a government has a right to confidential reports on subjects with respect to which there would be danger in divulging information, danger, for instance, in letting other countries know, communications between ministers of other countries and those of Canada. But to say that the government can call a report of one of its own officials on a public question confidential, is ridiculous. What can there be secret? What should in the public interest be secret with relation to the facts in the oil fields in the county of Lambton? The thing is absurd. This man is paid a salary by this country, and we are entitled to the full results of his work. He brings in a report. I do not know what was in it, but the presumption is very clear, namely, that it reflects on government policy. The government immediately put their stamp "confidential" on it and, not content with that, they bring a return down to the House stating that the man made no report at all, and further than that, that he is not going to make any; whereas the facts are absolutely the contrary. This is not the first time that something of this kind has occurred. Almost every return brought down by this government bears on the face of it evidence that it is only partly revealing the whole facts. This return reveals nothing. It reveals a letter written to Dr. Hume, but it shows nothing in the world in relation to the results of a trip in respect of which he was given some thousands of dollars of the money of the Canadian people.

Mr. STEWART (Argenteuil): No, no.

Mr. MEIGHEN: Yes, he was given $2,400 when he started out.

Mr. STEWART (Argenteuil): He also went to the west.

Mr. MEIGHEN: Yes, he went further than that, but the return reveals nothing in relation to the results of his work. Are the people's representatives not entitled to better information than that? I cannot see how the minister can stand in parliament and suggest that the report of an officer of the Mines department in relation to the oil fields of that territory can be regarded as confidential, even if in that report he went beyond his direct instructions—and I do not know that he did; his instructions are shown in the return. That does not matter; this is in relation to a public question and the government have no authority to stamp the word "confidential" on it as an excuse for not revealing it. But if they did mark it confidential, they should have stated in the return that the report was confidential, so that parliament might know and discuss the matter. But in order that parliament would not be aroused to that discussion, the government asserts that there is no report at all.

Mr. McTAGGART: I should like to draw the minister's attention to Saskatchewan for

just a moment. I presume he is familiar with the fact that Saskatchewan, as well as the other provinces mentioned here this afternon has important mineral deposits, and that some of those deposits are expected, when developed, to be of considerable value. It is my understanding that the Department of Mines during the last two years have carried on an investigation into the mineral resources of Saskatchewan, and in this connection I should like to ask a question: What has been the general result of the investigation into the sodium sulphate deposits in Saskatchewan? Have any important finds been made in that province?

Mr. STEWART (Argenteuil): Answering my right hon. friend (Mr. Meighen), I would not want the committee to go away with the impression that, so far as we were concerned, we were attempting to suppress anything that was of a public character. This Dr. Hume, as I remember, had certain instructions to go into that territory and make a private and confidential report verbally to us on the matter. He did not do so. If there are any returns coming down from my department that would indicate in any way that we are attempting to keep back public information, I assure the committee that such is not the intention. But to settle this matter once and for all, whatever report Dr. Hume made—and I have no recollection of it at the moment except that, perhaps, he reported in his private letter something of a confidential character dealing with the bounties—I am prepared to bring it down, place it on the table of the House and treat it as no longer confidential.

A general complaint has been registered with regard to returns. I can speak only for myself. If any hon. member is complaining of returns that are brought down that are not proper, I shall be glad to know what they are. I bring down a great many returns, and sometimes I do not have an opportunity of perusing them in order to see whether they fully answer the questions.

Mr. MEIGHEN: I only interrupt to say that the assertion made by the minister that this official was entitled to make a private report to the department is not the truth. If it had been, the position of the department would be worse than ever.

Mr. STEWART (Argenteuil): No.

Mr. MEIGHEN: Of course it would. What right has the minister or any officer of his department to instruct an officer on salary by this country to go out and investigate a question of public concern and make a private report that the public who are paying him have no right to see? He has no right to do that at all. Before the minister can be justified in asserting that any document is confidential, he must show that it would be injurious to the country to reveal it at the time. I recall that in the days of the late government, only in connection with correspondence with the United States government and the British government were we compelled to take that stand. We were roundly —and foolishly—abused. In a case of that kind I would never in the world complain. But what harm could there be in submitting the report of an officer on the condition of the oil industry in Lambton? There could not possibly be any reason to justify the suppression of it. But he was not asked to suppress it or to make a private report. The instructions are given in a letter to the following effect:

> On your way to and from the field you will spend a few days in the oil fields of southwest Ontario in Kent and Lambton counties with a view to becoming familiar with present conditions in these fields and arranging for closer co-operation with the drilling companies to obtain information regarding the well logs, etc.

He was to make an investigation there so that the department might become more familiar with the situation; and whatever report he made, whether as a letter or in any other form, is public property from the beginning. The government therefore had no right to endeavour to stamp it otherwise, and much less had they the right, having done so, to assert that there was no report at all.

Mr. McTAGGART: Will the minister reply to the question I put to him?

Mr. STEWART (Argenteuil): The hon. member's question, I take it, relates to the work in Saskatchewan. I do not know that we have any particular report on what has been done in Saskatchewan, but as most of the sodium comes from Alberta and Saskatchewan we have been investigating matters there. We are really just beginning the work. In 1924 there was sold in Canada a production of some 118 tons valued at $1,179, which was produced from the stock of 1923. The total production of 1923 was 733 tons valued at $10,189.

Mr. McTAGGART: Did the finds in Saskatchewan prove to be of value when tested? A year ago last fall, I spent several hours in the company of a party operating under the Department of Mines, and they were then investigating a deposit in my own

district. The engineer in charge told me that he thought the deposit was a very valuable one. They were sending samples to Ottawa to have them tested and I gathered from what I was told then that the investigation into the sodium sulphate deposit in Saskatchewan was about concluded. I thought therefore that the minister might have a general statement to make with regard to the deposits in the different provinces.

Mr. STEWART (Argenteuil): I see from the report of the investigation carried on by the Mines branch that there is at least a supply of 100,000,000 tons to draw upon, so that there is a considerable quantity of it, sufficient to do us for hundreds of years, I should think.

Mr. FORKE: Is it used in the making of paper?

Mr. STEWART (Argenteuil): Yes. These are the lake deposits of the prairie provinces.

Mr. FORKE: What quantity comes in from Europe? Is the supply from these deposits used in the pulp mills in Ottawa and in the east, or does it come from the other side of the Atlantic? I ask this question because a delegation waited upon me representing the desirability of increasing the duty on this material; they had difficulty in competing with shipments from Europe.

Mr. STEWART (Argenteuil): The deposits of the prairie provinces are only of recent discovery.

Mr. FORKE: They were using it as far east as Dryden.

Mr. STEWART (Argenteuil): I have not the report of the department before me.

Mr. FORKE: I cannot give any details in regard to the matter but, as I say, there was a delegation wanting the duties increased.

Mr. McQUARRIE: Has the Minister considered the advisability of assisting prospectors by way of bonus or otherwise? I understand that in some parts of the empire this is being done and is proving quite satisfactory; money is advanced to the prospectors to pay for their food and supplies to a limited extent. They must show of course that they understand something about the work and it must be evident that they are doing something to earn their bonus. Has the minister ever thought of adopting such a policy? In a country such as Canada where we have no doubt many undiscovered fields of valuable minerals in all parts of the various provinces, and in sections where the Dominion has control, if some policy of this kind were adopted it might lead to valuable results.

[Mr. McTaggart.]

Mr. STEWART (Argenteuil): We have not considered the question of grub-staking prospectors. It would be a little difficult I think inasmuch as there are all sorts of people prospecting, and sometimes the most inexperienced man stumbles on the richest find. It is true that a great many of these men who are expert in their work are grub-staked by the larger companies who control the finds, but the government has not considered entering that field.

Mr. WARNER: The minister spoke about the geological work that was being done; I do not know just what is being carried out in that direction. Is there any systematic control of the matter? Does the department take the initiative, or is an investigation made upon the report of someone that he has found something?

Mr. STEWART (Argenteuil): Where there is a reasonable prospect of discoveries parties are ordered into the locality, but usually we act on advice received from some source. It cannot be denied that the prospector is the pioneer; he is the man who makes the discovery.

Mr. CAMPBELL: What is the approximate amount of the vote charged to the operation of the Dominion Fuel Board, including the costs of the various publications by the board?

Mr. STEWART (Argenteuil): My hon. friend will find all these figures in Hansard.

Mr. CAMPBELL: I find here a rather voluminous book published by the department with reference to coke. This publication must have been expensive. I find also a report issued by the municipal council of the city of Ottawa dated February 15, 1923, which, so far as I can see, contains all the information that is in this book. This cost the city of Ottawa comparatively nothing whereas the book to which I refer cost the tax-payers a lot of money. It would not appear that the new Fuel board is doing much to justify its existence.

Item agreed to.

For publications, English and French purchase of books, laboratory supplies, intruments, miscellaneous assistance and contingencies.. .. .. $40,000

For transportation charges from outlying provinces on ore shipments which may be sent to the ore dressing plant of the Mines branch at Ottawa for testing purposes, under regulations approved by the Minister of Mines.. 5,000

Mr. MEIGHEN: What is the $40,000?

The CHAIRMAN: For publications or books, laboratory supplies, and so forth.

Mr. JELLIFF: Is this second item to pay transportation charges on samples sent in by prospectors?

Mr. STEWART (Argenteuil): Yes, chiefly from British Columbia on account of the great distance, to avoid the construction of an ore dressing plant there.

Mr. MEIGHEN: What is being done away with when we make the reduction?

Mr. STEWART (Argenteuil): We are not getting the samples. We do not require the money.

Mr. BIRD: Will this apply to prospectors in Manitoba?

Mr. STEWART (Argenteuil): All outlying provinces.

Mr. MEIGHEN: How does the minister account for fewer samples coming in?

Mr. STEWART (Argenteuil): I do not know why they have not come in larger numbers. My hon. friend will remember that we had an item in the estimates for a number of years—it was in at all events when I first came here—for the construction of an ore dressing plant in British Columbia. I think the amount was $100,000 and it was decided not to go on with the construction of that plant, but to put in an item of $10,000 for the purpose of bringing the ore eastward for examination. They send very small samples, and it does not amount to a great deal. We have not put any restriction on the amount of the samples.

Mr. JELLIFF: I do not see why people sending in sample ores for testing should not pay the transportation charges. The department pays the testing charges.

Mr. STEWART (Argenteuil): It was simply to help the prospector.

Mr. MEIGHEN: It was an endeavour also to be fair to all parts of the country. If you keep your ore dressing plant here it is a good thing for Ontario, but not very good for British Columbia.

Mr. HUMPHREY: Has the department received any notice of opposition to the construction of the ore dressing plant in British Columbia?

Mr. STEWART (Argenteuil): I believe we have a resolution somewhere.

Mr. HUMPHREY: In opposition to this plant?

Mr. STEWART (Argenteuil): Yes.

Mr. HUMPHREY: If the prospectors of British Columbia are not taking advantage of this offer it cannot be a very useful proposition. I would suggest that there be some investigation or looking into the question of why the prospectors are not taking advantage of this offer of free transportation for samples of ore. I refer to the construction of the ore dressing or ore testing plant.

Mr. STEWART (Argenteuil): They had a meeting of the Miners' Association in British Columbia, and I have a letter from W. H. Burgess dated October 30, 1923, which reads as follows:

> At a general meeting of this association no members concurred with the proposal. It was explained that this proposed plant is considered among prospectors to be for the customs purchasing of complex ores, the following communication being received and read:
> "We the British Columbia Prospectors' Association unanimously protest against any moneys being spent for the purpose of erecting a testing plant in the province of British Columbia for the present considering it is a total waste of money."

I do not agree with that, but that is the resolution.

Mr. FORKE: What sort of regulations are attached to that?

Mr. STEWART (Argenteuil): I do not think there are any.

Mr. FORKE: I thought the minister mentioned something about them.

Mr. STEWART (Argenteuil): This document goes on to speak of the present high taxation and necessity for economy. They say this plant should not be considered unless it can be shown to be a real help to the mining industry. I think there is a mistake there, because no doubt if the plant were established it would be a real help.

Mr. McQUARRIE: When was provision made for this plant?

Mr. STEWART (Argenteuil): There was $100,000 in the estimates for a couple of years.

Mr. McQUARRIE: When was that?

Mr. STEWART (Argenteuil): Four years ago it first appeared, I think.

Mr. McQUARRIE: Under the previous government?

Mr. STEWART (Argenteuil): Yes.

Mr. McQUARRIE: I remember there was a good deal of agitation about it from British Columbia at that time. I think I had something to do with it. It seemed to be a very desirable thing to have an ore testing plant

in British Columbia, instead of requiring the people to send their ore to Ottawa. The time occupied in sending the ore by freight was quite an item, and the delay was very considerable. As I remember it there was a very strong desire on the part of the people of British Columbia and those interested in mining that this plant should be erected. Now this government apparently has abandoned that.

Mr. STEWART (Argenteuil): I would not say absolutely abandoned it, but we have delayed the construction of it and substituted this provision in the meantime.

Mr. CALDWELL: What was spent under the heading of transportation last year?

Mr. STEWART (Argenteuil): Not very much.

Mr. McBRIDE: Was not that vote passed just before the last election?

Mr. STEWART (Argenteuil): I do not remember.

Mr. HUMPHREY: I did not catch the answer of the minister.

Mr. MEIGHEN: If the hon. member would bring about a by-election in British Columbia he could hurry it up, and it would appear in the estimates again.

Mr. HUMPHREY: I did not get the minister's reply to the question asked by the hon. member for New Westminster (Mr. McQuarrie) in regard to the bonus for the prospector.

Mr. STEWART (Argenteuil): I said the government had not considered the matter. Many of the richest finds have been made by men who have no knowledge, or at least very little knowledge, of prospecting. It would be a very difficult thing to select men. I do not know how you could place any restrictions on it, because there are a great many men who take all sorts of chances, who love the life and make real discoveries, and these men contribute very largely to the wealth of the country. Many of them work all their lives and discover nothing. I think my hon. friend will bear me out in that statement, but some of the best among them are selected by corporations who are interested in the mining business, and they are kept in the field for that purpose. But the government has not given any consideration to grub staking and prospecting.

Mr. HUMPHREY: I would urge on the minister something along that line. Considering that the old prospector is passing away, I think something should be done to create an interest for the prospector and making it worth his while to go out and prospect for minerals. Conditions are such to-day, on account of the increased expense, that I believe it is worthy of every consideration this government or any government can give it. Further assistance could be given to these men, either by way of bonus or some other means, to encourage the prospector—and especially the old time prospector—to go into the field. These old timers are amongst the best prospectors we have.

Mr. KNOX: Did I understand the minister to say that samples sent in for assay purposes were assayed free of charge?

Mr. STEWART (Argenteuil): Not all of them. A great many of these samples are sent in by our own men in the field, and these are the ones we feel most confident about in the matter of getting results. That is why the prospectors do not send in many samples under the provisions of this vote.

Mr. KNOX: I asked the question because a short time ago I heard a man complain that he had been charged three or four dollars for the assaying of a sample he had sent in to the department.

Mr. STEWART (Argenteuil): It did not come under the provisions of this vote.

Mr. SUTHERLAND: The provincial governments do a great deal along these lines, I understand, and samples they deal with would not reach this office at all. Ontario, for instance, has an assay office?

Mr. STEWART (Argenteuil): Yes.

Mr. McQUARRIE: What are the requirements to come under this vote?

Mr. STEWART (Argenteuil): The chemical assaying is the only one that is charged for; the milling is done free. Charges are made in all cases except where they come under this provision. When the item was first put in the estimates three years ago it was for the purpose of facilitating the sending of samples from British Columbia. We felt we could postpone for a time the construction of the plant and offer to pay transportation charges on the samples.

Mr. McQUARRIE: That will be continued?

Mr. STEWART (Argenteuil): Oh yes.

Mr. MEIGHEN: The minister says this is for the purpose mainly of assaying samples sent in by officers of the government?

Mr. STEWART (Argenteuil): No; I mentioned that our parties in the field in every province were forwarding samples for testing purposes which had been turned in to them by prospectors.

Mr. MEIGHEN: These were forwarded before there was any such provision as this, so that the extra amount here must be for privately transmitted samples. I had always understood that those were assayed free, and I was surprised at what the member for Prince Albert said.

Mr. STEWART (Argenteuil): We ask payment only for the chemical assay.

Mr. McQUARRIE: How much was spent last year under this vote?

Mr. STEWART (Argenteuil): Only about $8.

Mr. MEIGHEN: It would seem that the mining business is pretty nearly down and out if only $8 is the outlay in relation to samples for assaying from all of Canada.

Mr. STEWART (Argenteuil): I think the explanation is that the samples come largely from our own officers in the field.

Mr. MEIGHEN: It does not take very much, then, to balance up British Columbia.

Item agreed to.

Dominion of Canada Assay Office—for maintenance of assay office, Vancouver, B.C., $26,000.

Mr. MEIGHEN: How long has this office been there?

Mr. STEWART (Argenteuil): Twenty-five years. It was established at the time of the gold discovery in the Yukon and has been continued ever since.

Mr. MEIGHEN: What is the need of it?

Mr. STEWART (Argenteuil): It is really a function of the Finance department; it has no connection with the Department of Mines. I would be very glad if the Finance department would take it over.

Mr. MEIGHEN: All they do is buy gold and transmit it to Ottawa?

Mr. STEWART (Argenteuil): Yes.

Mr. MEIGHEN: They might just as well transmit it direct, without any stopping off at an assay office at Vancouver.

Mr. SPENCER: How much of this vote was spent last year?

Mr. STEWART (Argenteuil): $23,723.

Mr. MEIGHEN: How much gold was taken in at that office last year?

Mr. STEWART (Argenteuil): $2,029,236. I am told that they refine the gold there before forwarding it.

Mr. MEIGHEN: Is the gold all refined there and sent on here?

Mr. STEWART (Argenteuil): Yes.

Mr. MEIGHEN: Would it make any difference as to freight if it were sent here unrefined?

Mr. STEWART (Argenteuil): It does not come here; it is sold in Seattle. I confess I thought it all had to come here.

Mr. MEIGHEN: Who sells it?

Mr. STEWART (Argenteuil): We sell it apparently.

Mr. MEIGHEN: I suppose it helps to pay our balance of trade with the United States.

Mr. McBRIDE: This assay office is very important for Vancouver. Why should people have to go to Seattle and spend their money there when they come down with gold from the Yukon and Cariboo? This office in Vancouver not only refines gold, but if any person has any gold in the way of brooches or anything of that sort the assay office will tell them the exact value of it, and purchase it if it is for sale, they can get it refined there also for a small fee. It is one of the most important institutions we have in Vancouver from a business standpoint.

Mr. MEIGHEN: I thoroughly agree with the hon. member. I was just suggesting the office was not necessarily on the strength of the minister's statement that the gold all came down here anyway. His statement was wrong.

Mr. STEWART (Argenteuil): I was right to this extent; it came down here until eight months ago. I did not know it had been changed since. I am informed the Finance department did not require it, and therefore it is being sent to Seattle.

Mr. MEIGHEN: I presume it is all a matter of the drift of the stream of gold. It would sometimes come here and and sometimes not, but undoubtedly it is good business to refine it here and not allow them to go down to Seattle with it.

Mr. BLACK (Yukon): Is it not a fact that up until eight months ago under the War-

time Measures Act the export of gold was prohibited? That regulation being relaxed, gold now goes where the best market is.

Mr. STEWART (Argenteuil): I am told there has been no relaxation. You have to have a license to export. Of course, this is under the control of the Finance department and not under our department and I think this assay office should also be under the control of the Finance department.

Item agreed to.

Geological survey—for explorations, surveys and investigations, wages of explorers, topographers and others, $200,000.

Mr. STIRLING: Does the minister propose to spend any of this money in British Columbia?

Mr. STEWART (Argenteuil): Oh yes.

Mr. STIRLING: In what parts does the minister expect to survey?

Mr. STEWART (Argenteuil): I will give my hon. friend the lump sums for the provinces: British Columbia, $38,000; Alberta, $15,000; Saskatchewan, $7,000; Manitoba, $7,000; Ontario, $23,000; Quebec, $15,000; New Brunswick, $5,000; Nova Scotia, $6,000.

Mr. STIRLING: Does the minister know whether it is proposed to carry on geological surveys in the southern portions of British Columbia?

Mr. STEWART (Argenteuil): There are nine parties in British Columbia, and two in the Yukon. In British Columbia the parties are working at Galena Hill, Atlin, Dease lake, Hazelton, Portland canal, Eutsuk lake, Tatlayoko lake, Britannia, Slocan, Kimberley, Lardeau, Windermere.

Mr. KNOX: Could we have the location of the parties in Saskatchewan?

Mr. STEWART (Argenteuil): We have two parties in Saskatchewan under D. B. Dowling and P. S. Warren. They are both in the southern part of the province.

Mr. KNOX: Is nothing being done in the north part of the province?

Mr. STEWART (Argenteuil): No.

Mr. KNOX: The mineral area is largely in the northern part of the province, except the sodium sulphate and some coal. I have been pressing on several occasions for a party to be sent into the country around Lac La Ronge, about 150 miles north of Prince Albert. There has been a good deal of pressure brought to bear by the people of northern Saskatchewn that this should be done, and I think the minister would be well advised to consider that proposal, because that mineral area is very important indeed.

Mr. STEWART (Argenteuil): I am informed that a fairly thorough investigation of that locality has been made, and we have a report on it.

Mr. MEIGHEN: Anything in it?

Mr. STEWART (Argenteuil): I have not seen it.

Mr. KNOX: The claim was that it had not yet been surveyed. If a topographical survey party was sent in there, it could be followed by an aeroplane survey to get the location of the smaller lakes, so that the prospectors would know where they were going. It would be something to guide them in the survey of their claims.

Mr. STEWART (Argenteuil): We did hope to make an aerial survey of that territory this year. I am not just sure, but I will get the information for my hon. friend when the estimates of the Interior department are up, because the aerial service comes under that department.

Mr. McQUARRIE: Can the minister give us particulars as to how this $200,000 is divided among the different services?

Mr. STEWART (Argenteuil): I have given the lump sums to be expended in the various provinces.

Mr. McQUARRIE: The vote reads: "For explorations, surveys and investigations, wages of explorers, topographers, and others." Can the minister segregate the expenditures on these different items?

Mr. STEWART (Argenteuil): I gave the amounts for explorations before. For topographical surveys the figures are as follows: British Columbia, $12,000; Northwest Territories, $7,500; Ontario, $8,500; Quebec, $7,500; New Brunswick, $5,000; Nova Scotia, $7,500.

Mr. McQUARRIE: What would explorations consist of?

Mr. STEWART (Argenteuil): The work of the geological parties. The salaries of the parties in the field and all incidental expenses would have to be paid.

Mr. McQUARRIE: Do you send them out to a particular district? I can understand them being sent out to make a survey, but what do they do in the way of exploration?

It does not seem to be a matter of exploration at all, but a matter of surveying.

Mr. STEWART (Argenteuil): The geological party are doing exploration work for geological purposes only. Then we have the topographical surveys, making preparations for a map of the territory. All the salaries and incidental expenses of these parties in the field come out of this vote.

Mr. McQUARRIE: How much was spent last year?

Mr. STEWART (Argenteuil): For exploration, surveys, and investigations the sum of $187,486.

Mr. BIRD: How much of this vote is allocated for Manitoba?

Mr. STEWART (Argenteuil): Three parties will go into that province—to Oxford river, Fox lake, and God's lake.

Mr. MEIGHEN: Would the minister have, at eight o'clock, the report of Dr. Hume?

Mr. STEWART (Argenteuil): Yes.

At six o'clock the Speaker resumed the chair and the House took recess.

After Recess

The House resumed at eight o'clock.

PRIVATE BILLS

CONSIDERED IN COMMITTEE—THIRD READING

Bill No. 38, to incorporate the Knights of Pythias of Canada (title changed to Knights of North America).—Mr. Maybee.

SECOND READINGS

Bill No. 120, respecting The Essex Terminal Railway Company.—Mr. Healy.

Bill No. 121, for the relief of Dorothy Strathy.—Mr. Preston.

Bill No. 122, for the relief of Minnie Williams Goldberg.—Mr. Jacobs.

Bill No. 124, for the relief of Charles Arthur Sara.—Mr. Duff.

Bill No. 125, for the relief of Frederick George Randall Lacey.—Mr. Ryckman.

Bill No. 127, for the relief of Norma Evelyn Stevens Hammond.—Mr. Church.

SUPPLY

The House in committee of Supply, Mr. Gordon in the chair.

The CHAIRMAN: The item under consideration relates to explorations, surveys and investigations, wages of explorers, topographers and others, $200,000.

Mr. McQUARRIE: What work was done last year under this item or by means of the expenditure of $187,000 which the minister gave?

Mr. STEWART (Argenteuil): I have not the details; the field work would be much the same as it was this year.

Mr. McQUARRIE: That is to say, the same parties are working this year.

Mr. STEWART (Argenteuil): Yes, but not in exactly the same locality in each province. The hon. member is asking, I take it, for the details of this year's work, that is to say, the fields in which the parties are working. The expenses for exploration work last year were as follows, in round figures:

Province	Amount
British Columbia	$45,693
Alberta	9,000
Saskatchewan	2,000
Manitoba	4,000
Ontario	18,000
Quebec	10,000
New Brunswick	2,000
Nova Scotia	8,000

For topographical surveys the expenditures were:

Province	Amount
British Columbia	$14,000
Northwest Territories	4,000
Ontario	2,000
Quebec	5,000
New Brunswick	4,000
Nova Scotia	8,000

The wages of explorers and topographers amounted to $21,000.

Mr. ANDERSON: Have any surveys been made in the Mackenzie river and Peace river districts?

Mr. STEWART (Argenteuil): Not this year.

Mr. ANDERSON: Where there any last year?

Mr. STEWART (Argenteuil): We did nothing in the territories last year either. I gave the three prairie provinces in a group.

Mr. ANDERSON: There were some investigations a year or two ago in connection with certain oil finds. Has there been no report in this regard?

Mr. STEWART (Argenteuil): The last work done in the Norman field was two years ago; there was none last year and probably there will be none this year.

Mr. ANDERSON: Was there no report on the surveys made last year with regard to the oil possibilities in that district?

Mr. STEWART (Argenteuil): Yes, there are reports in existence with reference to the work done in the Norman field.

Mr. STEWART (Leeds): Is there any general plan according to which these survey parties are sent out? Are they trying to complete a general scheme or do they go where they are requested from one year to another?

Mr. STEWART (Argenteuil): There is a general plan to be followed but frequently we have to break in on the work by sending parties to make hurried investigations where necessary. We are trying however to cover the field in a continuous way in those localities in which the geological parties work.

Mr. KENNEDY (Edmonton): What is the difference between the work done by the geological and topographical surveys as indicated on page 46?

Mr. STEWART (Argenteuil): The topographical party simply makes a tour of the country for mapping purposes, and this must be done prior to the entry of the geological party. The work of the topographical survey is of great assistance to the geological branch and as a matter of fact little progress could be made until that work was done. The work is either done by the men of the geological party who precede them, or it is done by the topographical parties of the Interior department; but there is no overlapping; they know what areas they will work in before they start.

Mr. KENNEDY (Edmonton): Could not one organization do the whole thing?

Mr. STEWART (Argenteuil): No; it is different work altogether.

Mr. McQUARRIE: From whom does the request come for this work—from individuals or from the province?

Mr. STEWART (Argenteuil): Not necessarily from the province. We accept requests from individuals if there appear to be reasonable grounds for an investigation.

Mr. ANDERSON: In connection with the expenditure of $18,000 in northern Ontario, would the reports of investigations there be available?

Mr. STEWART (Argenteuil): My hon. friend asks whether reports are available with regard to northern Ontario?

Mr. ANDERSON: Yes, the reports that were filed?

[Mr. Anderson.]

Mr. STEWART (Argenteuil): Yes.

Mr. HANSON: What work has been done in the past year in New Brunswick? I remember two years ago the minister referred to it. I have not heard of any work being done.

Mr. STEWART (Argenteuil): The work there was in the Minto coal fields, and base maps for the Chipman-Minto coal basin and base maps for later coal and oil shale investigations were prepared.

Mr. HANSON: Was any work carried on in the Albert district?

Mr. STEWART (Argenteuil): No, not recently.

Mr. BLACK (Yukon): I think the minister said there would be two geological parties in the Yukon. I suppose one of them will be in continuation of the very valuable work being done in the Mayo silver fields. Will the minister state where the other party will be.

Mr. STEWART (Argenteuil): Yes there will be one in the Mayo field, and another in Atlin.

Mr. BLACK (Yukon): That is in British Columbia.

Mr. MANION: What work is being done in northern Ontario? My hon. friend from Halton (Mr. Anderson) asked a question about it. I understand there was some work done in northern Ontario with regard to the investigation of mineral deposits.

Mr. STEWART (Argenteuil): Mr. Tanton and Mr. Gill were in the Nipigon field mapping out the iron ranges. They were working together. There was the geological mapping of Bruce Mines, and Mr. Thompson was working on a complete geological survey commenced last year in latitude 47.30; that is in the Woman river area. Then Mr. Quirke was in the Parry Sound district, and Mr. Freeland was at French river. Mr. Ellsworth was also in the Parry Sound district

Mr. ANDERSON: Were there any investigations made in northern Ontario?

Mr. STEWART (Argenteuil): No, I understand the Larder lake district is being investigated by the Ontario department.

Mr. ANDERSON: Did the department of the Dominion government make any investigation?

Mr. STEWART (Argenteuil): No, we have not done anything in Larder lake.

Mr. MANION: I was wondering if the reports of Mr. Tanton and others regarding the iron formations in the northern section had been filed.

Mr. STEWART (Argenteuil): I am told the report is in print and will be available shortly.

Mr. LeSUEUR: This afternoon we had a discussion with regard to the return to an order asking for a report of Mr. G. S. Hume and Mr. Russell. The return brought down stated that no report had been requested, no report made and no report expected. I have the report in my hand now produced by the government, and I think I should read it to the House, as it is a complete justification of everything that has been argued in this House on behalf of the oil industry in Lambton and Kent counties. The report is not marked confidential. It is a typewritten document of several pages signed by Mr. George S. Hume, dated Petrolia, May 22, 1924, and reads:

Memorandum to Deputy Minister of Mines

The Oil Industry at Petrolia, Enniskillen Tp. and Oil Springs

Enclosed is a letter sent to The Right Honourable W. L. Mackenzie King by Mr. I. Greenizen, manager of Ontario Lands and Oil Co. Petrolia, and representing in this letter the interests of the oil operators in Petrolia, Enniskillen township and Oil Springs. This letter gives the reason for the establishment of the oil bounty as a substitution for the protective tariff which was removed in 1904 as well as other facts regarding the oil industry. Oil operators claim if the bounty on oil of 52½ cents per barrel is discontinued, the oil industry in Ontario will be left unprotected while other industries have been protected to a greater or less extent.

The price of oil received by operators in this area is fixed by the Imperial Oil Co. Ltd., who buy the oil for their refineries at Sarnia. The grade of the Petrolia oil is much the same as that produced in the Lima—Ohio field of United States and consequently the price paid for oil in this area is dependent on the price paid in the Lima field. Producers in this area claim that oil can be produced in the Lima field at a much smaller cost per barrel than at Petrolia and Oil Springs because,

1. The production per well in the Lima field is greater while the cost of pumping may be taken as about the same. Consequently in the Lima fields more oil is produced for the same amount of pumping expense or much less per barrel.

2. The price of equipment for oil wells at Petrolia and Oil Springs is much greater than in the Lima field because to a considerable extent American products are used in the well equipment in this area. The reasons given for the increased cost of American equipment in Canada is (a) Duty. On well casing and tubing this is 30 per cent (Subject to a part rebate when used for certain purposes). (b) Sales tax of 5 per cent which American operators don't pay. (c) Exchange of 2 to 2½ per cent. Total 37½ per cent or costing the Canadian operator 37 dollars for every $100 of equipment used. Some of the operators in this area use Canadian made tubing manufactured by Page-Hersey Co. of Welland, Ontario. This tubing is cheaper than American tubing by a few cents per foot but is most unsatisfactory in this area where sulphur waters are present. The Canadian tubing corrodes very readily and consequently has a much shorter life than American tubing. This fact I have corroborated by my visit to the oil fields and from several operators.

The result of these conditions, therefore, is that oil is produced at Petrolia and Oil Springs at a much greater cost than in the Lima field whereas the price paid for oil from each is approximately the same.

The costs of production by a number of representative companies at Petrolia and Oil Springs are as follows:

1. Ontario Lands and Oil Company Limited, Petrolia.

	1919	1920	1921	1922
Average cost per bbl. production	3.25	4.01	3.73	2.94
*Price received (without bounty)	3.13	3.88	2.83	2.51

2. Crooker—Parks Oil Company Limited, Oil Springs.

	1919	1920	1921	1922
Average cost per bbl. production	2.49	3.72	3.25	2.70
*Price received (without bounty)	3.13	3.88	2.83	2.51

3. Estate of J. H. Fairbanks, Oil Springs and Enniskillen township

	1919	1920	1921	1922
Average cost per bbl. production		2.68	2.67	2.58
*Price received (without bounty)		3.88	2.83	2.51

The costs of production on this property are less than the others at Petrolia because (1) the wells are shallower; (2) individual wells have a larger production than other properties.

*The price received and quoted here is the price given by the Imperial Oil Company Limited. This varies slightly for each company according to the test of the oil made at the receiving station. An average price is given.

4. Canada Crude Oil Producers, Limited.

	1919	1920	1921	1922	1923	1924 3 mos.
Average cost per bbl. production	2.322	3.521	2.662	2.663	2.548	3.06
Price received ..	2.81	4.09	2.736	2.541	2.50	2.66

The price given here is the price as per the attached signed statement of this company.

Conclusions.

For the year 1922 all operated at a loss exclusive of bounty. For year 1921 two operated at a loss and in the other two the profits were small.

No deductions have been made in this statement for depreciation, depletion or interest on capital investment.

5. Property of John H. Anderson, Oil Springs,
Property bought in 1916 for $15,000.
Extent of holdings 32 acres.
Number of wells, 62.

	1921	1922	1923
Profit without bounty..	704.93	1223.22	934.09

This does not include cost of personal supervision and work by Mr. Anderson and no deductions have been made for depreciation, depletion or interest on capital invested.

6. Further statement regarding,
Ontario Lands and Oil Company Limited, Petrolia.
Capitalization £127,000.
Stock held by English investors.

Number of wells, 208 of which 143 operating. A number of wells on these holdings are fully equipped and ready for operation but which do not pay at the present price of oil. These wells can be operated again when prices warrant a profit. The resident manager of this company, Mr. I. Greenizen, has been required for many years to furnish quarterly statements to the head office in London, and I have had an oppor-

tunity to personally examine these and the following results are from these reports:

Date	Loss	Profit
September, 1921..	1045.37	
December, 1921..	483.06	
March, 1922..		1158.84
June, 1922..		1690.07
September, 1922..	114 24	
December, 1922..	1418.01	
March, 1923..	791.60	
June, 1923..		1405.53
September, 1923..	340.74	
December, 1923..	314.31	
March, 1924..		573.81

These include the bounty but nothing has been deducted for depreciation nor depletion.

Effect of Decreased Production per Well on Cost per Bbl. Production

	1918	1923
Production.. .. .. .. bbl.	600,000	158,551
Average price..	$1.44	$2.53

1. The cost of production per barrel in 1923 was much higher than in previous years due to the decline in production per well even assuming the cost of pumping to be the same. That is, if a well in 1923 produces much less than in former years and the cost of operating the well is the same it is obvious the cost per barrel must be greatly increased.

2. The cost in 1923 per barrel production was increased over former years because it is much easier to operate a well with a large flow than it is to operate one with a small flow.

3. The cost in 1923 per barrel production was greatly increased over former years on account of the increased price of labour and equipment.

A sheet showing comparison of equipment costs for a number of years is attached.

The result of these three factors combined is that the cost of production per barrel under present conditions is several times greater than formerly.

Effect Anticipated by Operators by Removed of Bounty

On account of the fact that most of the producers now operate at a loss without the bounty the effect of the removal of the bounty will be a cessation of operations by the operators losing money. Even supposing only a few closed down at once the results are likely to be disastrous because,

1. A great deal of water is pumped with the oil and this water must be removed before the oil can be obtained. The closing down by a few operators will throw this burden on the remaining operators, which of course, will at once increase production costs and undoubtedly cause others to close down, even though under present conditions they may be operating at a small profit.

2. The effect of several operators closing down will be to increase the water troubles in the field and flooding will result. The effect of flooding is to permanently destroy the field so that even if the price of oil does increase at a later date operators who were forced to close down will not be able to resume operations. This, I think, is one, if not the most serious, effect on the future of this area as an oil producer.

3. The effect of decreased production in this area will be to cause the Imperial Oil Company to shut down their receiving stations, now maintained in this area, and to abandon their pipe line which carries the oil to Sarnia. The oil operators left in the field will thus be forced to transport their oil to Sarnia or some other refinery thus increasing their production costs. This, no doubt, would be most serious.

Conclusions.

[Mr. LeSueur.]

The effect of the conditions outlined above leaves little doubt that with the withdrawal of the bounty the oil fields of this area will be speedily abandoned and, I take it, this also applies to the other fields in this part of Ontario. This will have a disastrous effect, as far as I can see, on the towns in this area, who have assumed obligations for debentures of a large amount. Debentures were issued in the towns of Petrolia and Oil Springs to cover cost of installing hydro power which is almost universally used in the oil area by the operators for the production of oil and which account for by far the greater part of the power used. Also in Petrolia there are at present at least two machine shops—Mackenzie's and Bain's—each employing a number of men and these are entirely dependent on the oil industry. If a partial or complete cessation of production in this area should result from the withdrawal of the bounty, these industries would be seriously affected and the reduction in population resulting from these and the oil operations themselves would make it extremely difficult for these towns to meet their debenture obligations.

Are the Oil Fields Worth Saving?

There seems no doubt that even under satisfactory conditions to operators for production of oil in this area, the Ontario fields will show a gradual decline in future years but from operators here I have arrived at the conclusion that the decline is likely to be slow. For example Mr. Kerr, a large operator claims his property pumped as much oil in 1923 as it did in 1914 and Mr. J. P. Watt who controls 24 acres and operates 32 wells in Petrolia claims his production is larger than in 1916. There seems reason, therefore, to expect with continuous operation Oil Springs, Petrolia and Enniskillen Township areas will continue to produce much the same quantity of oil as formerly for a number of years and this conclusion is substantiated by the production in barrels shown for the last few years.

	1921	1922	1923
Petrolia and Enniskillen.. ..	68,483	64,935	64,159
Oil Springs..	40,966	43,214	39,090

Regarding the capital investment in these areas I can get no reliable information but statements are made that it runs into several millions dollars.

The oil fields of S. W. Ontario now produce considerably more than 90 per cent of the oil produced in Canada that production in 1923 being 158,551 bbls for Ontario representing $400,000. With import of nearly 31½ million dollars for Canada for oil and oil products in 1923 it would seem worth while to return our present production—

I presume that is a mistake, that what is meant is "retain" our present production.

—although my conclusions from the investigations I have been able to make, lead me to believe a withdrawal of the bounty will cause almost wholly the abandonment of the Petrolia, Enniskillen Township and Oil Springs fields.

GEO. S. HUME.

Petrolia, May 22nd, 1924.

I would like to add that this report is a complete justification for the arguments made in this House in two separate debates for the retention of the oil bounty. The disastrous effects of the withdrawal of those bounties, not only on the field, but on the surrounding towns and that section generally, have been fully pointed out, and our request for the return of this report was in order that the result of the investigations might be made known

in this House to show whether our arguments had been sound or not. This report confirms them absolutely, and I think this House and the government should take cognizance of these facts now that they are brought to their attention, and should reconsider their position on this bounty question.

Mr. STEWART (Argenteuil): We discussed the question of the return before we rose at six o'clock, and I have only this to say in reply to the hon. gentleman. All those facts were in our possession. They were urged by the delegation, by Mr. Greenizen, who presented the very same statements to the government through Mr. Fielding. While I do not know that he filed an exact duplication of that report, the representations he made concur so nearly with the statements made in the report that there is very, very, little difference.

Mr. MEIGHEN: Does the minister still persist that that is a confidential report?

Mr. STEWART (Argenteuil): Yes, I do. It is not marked confidential, but my recollection of the whole thing was that that report came in long after Mr. Greenizen had been here and made his statement.

Mr. MEIGHEN: What has that to do with the confidentiality of the report?

Mr. STEWART (Argenteuil): Not at all. That report was considered confidential at the time by the government—

Mr. MEIGHEN: Because it was against the government.

Mr. STEWART (Argenteuil): No, it was not against the government. The original report came in in writing, as I recollect it.

Mr. LeSUEUR: This is the original.

Mr. MEIGHEN: It is signed, and is typewritten.

Mr. STEWART (Argenteuil): The original report came in in writing, and it was typewritten here in the department and passed on to the deputy minister. I am not complaining of that. I simply want to make the statement complete, and to point out that that report is very, very largely, if not entirely, a duplication of the presentation made here by a group representing the oil men who came to call upon the Minister of Finance.

Mr. MEIGHEN: A confirmation.

Mr. STEWART (Argenteuil): My hon. friend can say that if he likes. I am the last man on earth to take advantage of an official or to suggest that an official has not got his information in the proper manner, but I do want to say that long before that report was prepared, representations were made to this government, to Mr. Fielding and to myself, exactly identical with the report, because the report is wholly a financial one; it is wholly a report of the companies' costs presented by the companies themselves. I want my hon. friend to bear that in mind.

Mr. MEIGHEN: What else could it be on that subject?

Mr. LeSUEUR: Might I interrupt the hon. minister? I take exception to his statement that this report is wholly financial. Here is a statement as to the effect of the water if the wells close down. That is not financial; it is geological.

Mr. STEWART (Argenteuil): Quite true, in the event of the closing down of the wells, but it does not follow that the wells were going to close down. May I ask my hon. friend if they have closed down?

Mr. LeSUEUR: I think some have.

Mr STEWART (Argenteuil): But in a general way, has there been any cessation of work in the petroleum fields?

Mr. LeSUEUR: Not in Ontario. The bounty was cut in half on the 1st of July last, and the Imperial Oil Company themselves advanced 25 cents per barrel to these producers to keep them going until they could see if this matter could be adjusted. That was a purely philanthropic proposition because of these producers being old clients who had supplied the company with oil for years. That is withdrawn today, and the rest of the bounty will come off on July 1st next unless the government reconsiders its position.

Mr. STEWART (Argenteuil): My information was that there was no cessation of the activities in the field. I was quite unaware that 25 cents per barrel was being gratuitously advanced by the Imperial Oil Company. But the point I want to make is this: Quite apart from the report, which I maintain was of a confidential character and sent to another official in the department, to be handed on to Dr. Camsell, the deputy minister, Mr. Hume was in that field less than three days. I have every admiration for Mr. Hume's ability, but he certainly could not have compiled all that information in that time, nor do I think he could have come to the conclusion that even if there had been a small cessation of activities, water would have flooded the field. I quite appreciate that if too many wells cease operating and

water enters the field, it will destroy it, and nobody knows that better than Mr. Hume; I am not taking issue on that point. But I say that with the single exception perhaps of that reference to the destruction of the field, which Mr. Greenizen perhaps did not feature, he featured every other item in that report, and said that if the bounty was cut to any appreciable extent production would have to cease, that they could not continue under those conditions; and that is exactly what is contained in that report.

Mr. LeSUEUR: The minister's position, then, is that Mr. Greenizen represented these facts more or less along the lines which I have read to-night.

Mr. STEWART (Argenteuil): Yes.

Mr. LeSUEUR: And that Mr. Hume, the geologist of the department, went up there and presents more or less the same statement, with some geological additions.

Mr. STEWART (Argenteuil): Yes.

Mr. LeSUEUR: Now might I go further and say that the government sent up Mr. James A. Russell, and I understand his report also confirms these statements.

Mr. STEWART (Argenteuil): I cannot speak as to that; I do not know anything about that.

Mr. LeSUEUR: That is also another gentleman who was sent up to investigate this field, and no report has been produced.

Mr. STEWART (Argenteuil): I cannot speak as to Mr. Russell. I can only speak as to the report of the geologist.

Mr. LeSUEUR: The point I am making is this: If the hon. minister impugns this report as not being thorough, as not being exact, as not setting forth the absolute facts, I believe he has got the facts corroborated by at least two other reliable men.

Mr. STEWART (Argenteuil): I am not impugning the honesty of purpose of anyone, much less one of the officials, because I always take it that no official has the chance to defend himself here, and I take the side of the official upon all occasions. But I do say that the facts set out there particularly the facts with respect to the financial conditions, were all in our hands. I will not say because I have no recollection of the statement being made that the fields would be destroyed if they were flooded; but the statements with reference to the injury to the business of the town, and other matters, were made here by the deputation.

[Mr. C. A. Stewart.]

Mr. MEIGHEN: The merits of the report constitute one question; the merits of the government constitute quite another. What is the history of the matter? The hon. member for West Lambton (Mr. LeSueur) moved for a return of the instructions given an official of this government in relation to the oil fields of Kent and Lambton and he asked that the return also present the report of that official. In answer to the order by parliament the government brings to this House a statement —a solemn statement on the authority of a minister of the crown—that the official who went up from his department, Dr. Hume, made no report at all—was never asked to make a report, and will not make any report. I ask this House to consider where the government stands in the face of this report read a few minutes ago by the hon. member for West Lambton? Was that a report or was it not a report? No human being would assert that it could be described otherwise than as an official report of an official of the department.

Now I come to the minister's plea. He said "That report is confidential." That is what he said this afternoon. If we are prepared to grant that what the minister says is correct the conduct of his government and himself is inexcusable even then. Were it a confidential report the statement that should properly have been made was that the report was confidential; that would have been the truth as interpreted by the government. They reported that there was no report at all; they embodied that statement in a return to parliament in answer to an order of this House. Now let us inquire what is to be thought of a government which declares a report of that character confidential? What is the minister's plea to-night in extenuation of his statement that this report is confidential? "Why, we knew those facts before; we knew what was in it."

Mr. STEWART (Argenteuil): I think my right hon. friend should be fair in this matter. The minister did not make that statement in that way.

Mr. MEIGHEN: No? What is the difference in effect?

Mr. STEWART (Argenteuil): The contents of the report and the question of disclosing it are two different things altogether.

Mr. MEIGHEN: I asked the minister why he had stated the report was confidential, what there was in it of a confidential character, and the answer I got from the minister was that he knew it before.

Mr. STEWART (Argenteuil): No, no.

Mr. MEIGHEN: If the minister has any other answer let us have it.

Mr. STEWART (Argenteuil): If I made that answer I do not want it to go on the record.

Mr. MEIGHEN: Will the minister tell us now what there was in the report that justified him in saying it was confidential?

Mr. STEWART (Argenteuil): Well, any report that we ask for of that character—

Mr. MEIGHEN: What character?

Mr. STEWART (Argenteuil): —is confidential.

Mr. HANSON: A public document?

Mr. MEIGHEN: What character?

Mr. STEWART (Argenteuil): When we wish to get confidential information from any official of the government the report would be considered as such.

Mr. MEIGHEN: Is the information confidential that was disclosed in the report?

Mr. STEWART (Argenteuil): It is not so marked.

Mr. MEIGHEN: It is not marked at all. It could not be honestly so construed. Nobody would suggest it could be so construed. What is there confidential about it? It has not any mark whatever of confidentiality, not a word. If the word was on it it would have no right to be there. The whole subject is a public subject. It is a subject affecting the public interest. It is a subject that has been debated in this House over and over again, and the reports have been made by a salaried officer of the department paid by the people of Canada. Is such a report to be concealed from a Canadian public? What harm could be done by the publicity of that report? What harm could be done to the taxpayer of Canada, the people of Canada? None could be suggested. No man however imaginative could suggest the slightest injury. Consequently, no person can be justified for a moment in suggesting that this report is confidential. It would not matter if it were marked confidential in every line—even if at the top or bottom or anywhere in it, it were marked confidential, private, personal or in any other way. It is not a letter. Even if it were a letter it would make no difference; it is a regular report in formal shape. And is this country going to understand that when anything comes to the government from an official, which is diametrically opposed in recommendation to the government's policy, though paid for by the people's taxes, the government can put it in its pocket and say "This is confidential, we will not tell parliament anything about it?" I wonder what trust parliament is going to place in the returns of this government after this? I do not think it will place very much. I do not know what there could be that we would be entitled to if this is something we are not entitled to; I could not conceive it. That is the position the government rest in and that is the position from which they cannot escape.

As to the merits of the claim for bounty, that is another issue altogether. Suffice to say that it does not argue much against a report—the fact that that report is in absolute confirmation of all that hon. members of this party argued for in two sessions in this House, of all that hon. gentlemen opposite of the government disputed two sessions in this House. The report of their own official confirms the representations made by those who asked for the renewal of this bounty and confirms to the letter all the contentions of the hon. member for West Lambton. This government is now disclosed—by its own official as by surrounding facts which support the official—as having adopted a course which, for a comparatively paltry sum, is going to result in the destruction of a very considerable industry in an important section of Ontario—is resulting in it now, inch by inch, and day by day; that is going to result in the demoralization of other industries dependent thereon, and in the probable collapse —at all events partial collapse—of otherwise flourishing towns.

9 p.m.

Item agreed to.

For publication of English and French editions of reports, maps, illustrations, et cetera, $55,000.

Mr. McQUARRIE: Will the minister give the details of this vote?

Mr. STEWART (Argenteuil): This is the usual amount that is voted from year to year for these publications. These publications of the work of the geological parties in the various fields in which they work are now in the press in English and French.

Mr. McQUARRIE: What is the cost of the French and of the English respectively?

Mr. STEWART (Argenteuil): The English publications cost $18,000, the French, $9,000, and the publication of the maps $12,000. Then there is the wages of the engravers $9,000 and cost of illustrations $7,000, making a total of $55,000.

Mr. STEVENS: I notice that there is an item for $40,000 in the Mines branch, $55,000 here for publications, and a little lower down in the same vote for "chemicals, books of reference, miscellaneous" and so forth, another $50,000?

Mr. STEWART (Argenteuil): That is the museum vote.

Mr. STEVENS: I see. But there are the other two items I mentioned of $40,000 and $55,000. I am not complaining of the nature of the work performed because I am competent to speak about it only in a very general way, and I know that some of the publications are exceedingly valuable and highly prized by those interested in geological work. But $95,000 does seem like a very large sum for publications for the Mines branch and the Geological survey. Is the result of the work of the Geological survey pretty generally appreciated and used? If it is used, there cannot be much complaint. But, on the other hand, no matter how excellent the work may be, if the knowledge is not widely disseminated, it is not performing its chief function in the expenditure of this $55,000 for publications.

Mr. STEWART (Argenteuil): All these copies of printed publications are used up annually, so that we are not printing copies of reports and having them filed away. A great deal of interest is taken in mining in Canada and many of these publications go out of the country for the information of outside investors.

Mr. STEVENS: What method of distribution is used?

Mr. STEWART (Argenteuil): We have a list. Of course we receive many requests also, and these publications as soon as they are ready are furnished to interested parties.

Mr. STEVENS: Is there any charge for them?

Mr. STEWART (Argenteuil): To people inside of Canada the publications are free, but if they go outside of the country, we make in some instances a small charge for them.

Mr. STEVENS: I do not want to be too critical, but I think, in the interest of economy, something could be done. Some of these publications are printed upon very fine paper. The illustrations are excellent and costly, and I assume, and, I think, rightly, that they are quite useless and needless, shall I say, to a large number of individuals who would apply for this literature. Many, for instance, in my province, would appreciate and use geological reports on their district to great advantage, and they would prize them very highly. But, perhaps, 60 to 75 per cent of the publications they are not interested in at all. An effort might be made to lessen the number for free distribution containing these highly expensive engravings and the costly paper upon which they are printed.

Mr. STEWART (Argenteuil): We have paid some attention both to the quality of paper going into these publications and to the distribution. They are being distributed, not to people who will be entirely uninterested, but very largely to people who are much interested in them. We might adopt a new policy altogether and send them out only to those who apply for them.

Mr. STEVENS: I think most people would be prepared to pay a small fee, for instance, twenty-five cents, fifty cents, for some of these reports. They are excellent and easily worth the money. A fee might be charged that would at least partly cover the cost. This is a fairly large sum for this free work.

Item agreed to.

For maintenance of offices and museum, instruments, chemicals, books of reference, miscellaneous assistance and contingencies, $50,000.

Mr. McQUARRIE: What are the details of this item?

Mr. STEWART (Argenteuil): The details are as follows:

Clerical assistance, wages of mechanics, labourers, etc..	$18,500
Stationery, mapping material, sundry printing..	10,000
Chemical laboratory supplies and apparatus, lumber, hardware, freight and express charges, cartages, customs, duty, etc.. ..	7,500
Photographic supplies..	3,500
Library books and subscriptions..	3,500
Instruments and repairs..	3,500
Postages and telegrams..	1,500
Advertising..	1,000
Miscellaneous..	1,000

Mr. KNOX: Is this the Victoria Museum?

Mr. STEWART (Argenteuil): Yes. The Victoria Memorial Museum.

Mr. STEVENS: Do the clerks and other employees in the civil service not come under the civil list?

Mr. STEWART (Argenteuil): Not all of them. We have not that happy condition where they are all in the civil list, although we are getting them in as fast as we can.

Mr. STEVENS: Last night we found that the Minister of Trade and Commerce (Mr.

Low) had a group of clerks under a general vote not disclosing the vote as being for salaries of clerks. We have now a very extensive civil list at the back of the estimates, showing the number and so on; but constantly we are finding in the departmental estimate large general sums covering salaries, wages and so forth of a number of employees. We should disclose all of these employees in the civil list.

Mr. STEWART (Argenteuil): I think every man who is working in the service of the government should be in the civil list and I have said so repeatedly. This, however, is mostly made up of mechanics who are working in or about the museum. There are some carpenters and labourers. That is quite all right, but there are a few clerks. I cannot give my hon. friend the details, but I agree with him that everyone on the clerical staff should be in the civil list.

Mr. STEVENS: We shall take it for granted that the minister will get them on the civil list as soon as he can.

Mr. STEWART: Just as speedily as I can.

Item agreed to.

For museum equipment, $10,000.

Mr. STEVENS: What is this for?

Mr. STEWART (Argenteuil): Nearly all the specimens at the museum are now being put under glass. Instead of buying the cases from a furniture company, we are making them on the ground with cabinet makers. We find that we can save a great deal of money by so doing and, in addition, preserve the specimens very much better than when they are open to the dust in the building. We are trying to get them under glass as speedily as possible. That is what this $10,000 is for.

Mr. WOODSWORTH: The National Gallery to a certain extent serves outside communities by pictures being sent out to them. Has the possibility ever been considered of having some sort of an arrangement of that kind with regard to the exhibits, so that exhibits along certain lines might be sent to outlying districts? It is all very well for Ottawa people to enjoy and profit by these exhibits, and for students to come here and study them. But would it not be a great advantage if, occasionally, other parts of the country benefited by these exhibits?

Mr. STEWART (Argenteuil): The Art Gallery is not under the control of the department. It is under a board.

Mr. WOODSWORTH: I quite understand that.

Mr. STEWART (Argenteuil): I shall be glad to pass on to that board the suggestion of my hon. friend.

Mr. WOODSWORTH: The minister misunderstood me. I said that in the case of the Art Gallery a certain amount of extension work was being done. It might be possible to do something of that kind in the case of the museum. Occasionally an exhibit of a certain character might be sent out to some of the western cities to stimulate interest in our Canadian national resources.

Mr. STEWART (Argenteuil): Just what has my hon. friend in mind? We have exhibits of minerals that are easily moved, but as he well knows there are in the museum many exhibits of a very fragile nature which would not stand moving about very well.

Item agreed to.

Compassionate allowance to Mrs. Anna Kohl, widow of the late Harold Kohl, a chemist in the employ of the Mines department, $3,000.

Mr. McQUARRIE: The minister might explain this.

Mr. STEWART (Argenteuil): Perhaps I had better read the memorandum I have on this vote:

The late Harold Kohl was employed as a chemist in the chemical laboratory of the fuel testing division of this department. He was a young man who rendered intelligent and conscientious service. Since his demise it appears that he continued uncomplainingly at work for months when in fairness to himself and his family he should have had sick leave; for constitutionally he seems to have been not properly fitted for the endurance of the confinement and the exposure to fumes which a chemist may in the performance of his duties have to endure. For the reason stated it seems that a compassionate allowance might justifiably be made to the widow of the late Mr. Kohl, who has besides herself four children under the age of eight years to provide for.

I thought it was a worthy case.

Item agreed to.

Grant to Imperial Institute, $12,849.

Mr. WOODSWORTH: May we have some information in regard to this vote?

Mr. STEWART (Argenteuil): This represents a considerable reduction in comparison with former votes. Formerly it was in two items; now we have it in one, and for the sake of brevity I might read a memorandum to show how this came about:

At the Imperial Economic conference 1923, a resolution was passed providing for the reorganization of the Imperial Institute and the amalgamation with it of the Imperial Mineral Resources Bureau. It was agreed also that the exhibition galleries of the Imperial In-

stitute should no longer be maintained and, in consequence, the expenses of supporting the two bodies would be greatly reduced.

The annual cost of maintaining the reorganized institute on the basis mentioned is estimated at £39,000 per annum. Of this amount £14,000 will be obtained from endowment, annuity, fees for work and rent of part of the building, leaving £25,000 to be provided annually by the governments concerned.

The conference agreed that this amount should be provided as set forth below,—each government agreeing to contribute its share annually for a period of five years:

Great Britain	£9,000
Colonies and protectorates	8,000
Canada	2,000
Australia	2,000
South Africa	1,200
New Zealand	1,200
India	1,200
Irish Free State	200
Newfoundland	200
	£25,000

This is the way in which the institute is now maintained.

Mr. JELLIFF: How are the proceedings of the institute carried on? Do they hold conventions and discuss these subjects?

Mr. STEWART (Argenteuil): Their work is purely investigatory but it is under imperial auspices. It is of very great interest to mining industries throughout the empire.

Item agreed to.

DEPARTMENT OF AGRICULTURE

Agriculture—Entomology, $20,000.

Mr. LUCAS: How does the minister explain the decrease?

Hon. W. R. MOTHERWELL (Minister of Agriculture): The vote is subdivided as follows:

Printing	$10,000
Apparatus and scientific supplies	2,000
Annual grant to Imperial Bureau of Entomology	5,000
Various minor items	3,000

Last year we put in a pretty good supply of equipment and instruments and we find now that we can reduce the vote without endangering the service. This accounts for the decrease.

Mr. HANSON: Is this for equipment?

Mr. MOTHERWELL: Two thousand dollars.

Mr. HANSON: Merely for equipment at Ottawa?

[Mr. C. A. Stewart.]

Mr. MOTHERWELL: Yes. The offices are in the Birks building on Sparks street, Ottawa.

Item agreed to.

Administration of the Destructive Insect and Pest Act and necessary buildings, $375,000.

Mr. HANSON: This is a very large item and a very large increase. What work has been carried on in the past, and what is the cause of the increase?

Mr. MOTHERWELL: The total appropriation is $375,000. The items are:

Entomological branch	$220,000
Experimental farm (Division of Botany)	155,000

Then we have a further subdivision of the vote. The two causes which led to this increase are, first, the increased activities out in the west in connection with the problem of rust, the endeavour to find a rust-proof wheat, or otherwise dealing with the rust problem in some manner that will reduce as far as possible these ravages. This has necessitated the construction of a laboratory at Winnipeg in conjunction with the college in that province. This was partly taken care of last year by a vote for that purpose, and the balance will be taken care of by this vote. The proposition is to put up a fumigating and inspection plant in the city of Montreal to inspect or fumigate certain plant products and such other commodities as require fumigating. This is the result of a new regulation that has been adopted in the United States. A law was recently put on their statutes to provide for the inspection of all plants going into the United States, and as we had a working arrangement with the United States, in order to continue our trade with that country the necessity was imposed upon us of bringing down a similar provision that all shrubs and bulbs coming into Canada would have to be inspected. At the same time this will prevent contagion and will provide the necessary supervision to continue the trade backward and forward between Canada and the United States. We have taken this initial step to provide for this inspection and fumigating plant in the city of Montreal. In addition to this, we intend to use it for fumigating embargoed cargoes that still persist in coming into the country, packed in straw. The House has heard from various members, particularly the hon. member from Vancouver Centre (Mr. Stevens), whose case I think we have been able to look after all right, because we had a fumigating plant at Vancouver sufficient to take care of the goods after they had been reduced down to about 20 per cent of what they were last January, by our pro-

hibitory law. They still come in but not in such quantities that the plant at Vancouver cannot now take care of them. We need a plant at Montreal, and we are going to combine it for these three purposes, shrubs, bulbs and other commodities, and occasionally other cargoes that come in packed in straw. The increase is due to these two causes.

Mr. FORKE: This is a very large vote, and I would not like to reduce it one dollar, if I thought the money was being spent to advantage. As the years pass and the country gets older we find the damage by pests of all kinds is increasing rapidly. Man is able to handle beasts of prey, lions, tigers and those animals that perhaps create a terror in the minds of man, but after all the real danger to humanity to-day is the insect pest. I suppose most hon. members have read about it, and have an idea what it means. If we have no system of combating the insect pest I have no hesitation in saying that in a short time man will be unable to live on this globe which we now inhabit.

It is all right enough for hon. gentlemen to laugh, but it is a very serious matter. Coming down to what we are more familiar with, farm life and growing of crops, we know that the pests are increasing. Out west, when we first began to grow wheat, we had no pests. Now I could name them by almost the dozen. One thing after another comes along, and we are trying to discover some method of combating not only the insect pest but fungi, such as rust. As I said in opening, I would not like to cut down the grant in any way provided the money be spent to the best advantage. We have this trouble with fruit, with trees and with the foliage, and all kinds of crops. This pest of rust means millions of dollars of loss to the wheat crops of Canada. I would like some information as to what is being done in regard to an investigation in the matter of rust. Is there any increase in the knowledge of how rust damages the wheat or where it comes from? I have listened to a great many addresses and talks about rust, but I have never heard anything to lead me to believe that we are on the way to some discovery which will combat this disease which threatens our agriculture.

Mr. MOTHERWELL: I am very glad to welcome my hon. friend as a doubting lieutenant in this crusade against rust, and not only against rust but against all forms of insect pest and fungi, fungus diseases, because we have come to an age when it is a fight between man and the insect pest. That will be our next great war, and we are right into it now. Let us examine for the moment the remarkable extension of the activities of the corn-borer in Essex, Kent and adjoining counties. It has increased from five hundred to a thousand per cent in its activities this last year, at a time when the people were beginning to think it was about exterminated. The old-fashioned potato bug has caused a complete embargo on our potatoes going into Great Britain. The high tariff of the United States stopped our potatoes going in there, and something else stopped them from going to Cuba, with the result that we have no country to which we can send our potatoes, and one of the causes is the potato bug. In British Columbia we have the fire blight which attacks apples and pears particularly, and in Australia they have placed an embargo against fruit of that class from Canada. I think the embargo was improperly placed, but it is there. All across the continent, from one end to the other, we have pests of this kind, so that in the last two decades there have been no less than seventy-two pieces of legislation, regulation and embargo, passed by the parliament of Canada against goods from other countries, and those countries in turn have passed legislation against imports from Canada, for similar reasons. So that hon. gentlemen will see that the very continuity of our trade depends upon keeping our products free from insect and fungus pests. This fact cannot be too strongly impressed upon the committee. The matter of bugs and bacteria has been made the occasion of a legitimate amount of jest, and we take advantage of it and regard it as a joke. To the man who has had his grain crop attacked by rust two or three years in succession, the thing is no joke. Ask the hon. member for Assiniboia (Mr. Gould) if it was a joke when the land was almost covered with grasshoppers through southern Saskatchewan and into Manitoba and Alberta. Had nature not come to the relief of the provincial government and the municipalities in the shape of a parasite these grasshoppers would not have been rounded up as quickly as they were. Last year the committee on Agriculture, after hearing Professor Gussow's very excellent address on the tremendous annual losses Canada sustains as a result of cereal diseases, including rust, recommended to the House that $50,000 be expended in the launching of a vigorous campaign against these plagues. Last year $25,000 was appropriated for this purpose, most of which was spent on equipment for the new laboratory. Last Sep-

tember Dr. Grisdale, representing the department, and Dr. Tory, representing the Research Council, invited a number of gentlemen interested in this investigatory work both in the United States and Canada to an international rust conference at Winnipeg, and there the foundation was laid of a strong campaign on the part of both countries against these diseases. Since then there have been several meetings of the sub-committee that was appointed, and Dr. Tory, Dr. Grisdale and Dr. Murray have gone down to the United States looking for the very best men who could be found to deal with the question of fungus diseases, because we have not got in Canada a sufficient number of trained experts to take care of this work. We entered into an agreement with the college authorities of Manitoba under which as their contribution to these activities there should be set apart twenty-five acres of land close to the college buildings, with provision of heat, power and light, the federal government to supply the building and equipment.

Mr. HOEY: What is the estimated cost of the building?

Mr. MOTHERWELL: About $40,000, including equipment. In January last the authorities of the Dominion, Manitoba, Alberta and Saskatchewan met to lay out this work. While we wanted to proceed in co-operation with the United States authorities, we constantly reporting to them and they to us, it was felt that we should have a specific plan for Canada and that certain matters should be delegated to the Winnipeg authorities, certain others to the laboratory authorities at Saskatoon, others to Alberta and others to the Central farm at Ottawa, so that we would have the work going along concurrently at these four points, with the central activity at Winnipeg. A good many theories have been advanced as to the cause of rust. It is known that some varieties of wheat are immune to it while others are quite susceptible. The old Scott wheat was comparatively immune, while the Clawson wheat was susceptible to it. Twelve or fifteen years ago the idea was conceived of developing a wheat plant that would be immune from rust. During the past ten years more has been learned about rust than has been learned in the preceding two hundred years, in searching about for a plant that would be immune. It has been found that there are no less than thirty-nine different species of rust, and that some varieties of wheat are immune from some of the rust species but not from others. It was thought by some that the barberry bush was the primary cause of the rust; that it acted as a host plant for the rust spore. It has since been discovered by experiment that these spores are carried in the upper currents of the atmosphere, usually from south to north, starting with the early ripening wheat in Texas and proceeding northward through Kansas, the Dakotas and Minnesota, and thence into Manitoba and Saskatchewan, and now to some extent in Alberta. On a calm day these spores, having been carried in the upper currents, are precipitated on the crop. A calm, murky day, with intermittent sunshine and rain, is what we call a bad rust day.

Mr. FORKE. I doubt it. When we have had a bad attack of rust it has usually followed extreme heat.

Mr. MOTHERWELL: If you have a period of drought lasting three or four weeks the plant is weakened, and then when there is just enough moisture to make the rust spores develop they commence to drive their activities home on the plant. If you have it bright, fair, dry and cold, the danger from rust is not so great; it is warm enough for the growth of the wheat but too cold to encourage the rapid development of the rust. For the most part it is a question of a neck-and-neck race. As a matter of fact, it has proved to be a neck-and-neck race. Had it been a little warmer, a little moister, a little calmer, the rust would have developed. That is the theory, and that is as far as we have got—as far as I have got at all events. I had the privilege of meeting some of the very best experts of the United States who had made a life study of this problem, and they are all of the one mind, that one of the most fruitful sources of contagion is through the upper currents of the atmosphere, running three and four miles high and then quietly dropping. Now how are we going to ward that off? We cannot put an umbrella over the country and ward it off. We can do something practical in eradicating the barberry bush, and there is a campaign all over the United States, in every wheat state, to eradicate the barberry bush. A regular survey is being made of the country, and everywhere the barberry bush is found they go after it. That is one thing we can control, but there is no way of controlling the winds, and the waves, if you like to put it that way. Man has no dominion over the winds, especially the upper currents. I suppose some of the flying men have found that out, although they have pretty well navigated the upper currents.

The only way to meet the difficulty is to have a rust-resisting plant developed. Any wheat that will ripen more early is more resistant to rust. Marquis wheat is more resistant. It crosses the line before the rust can get after it, and the binder is cutting. Then we have that newer wheat, Garnet, a very good wheat, which is some eight or nine days earlier. Even if it were not more resistant than Marquis, the fact that it is some eight days earlier puts it in the running.

Mr. KNOX: Does not the minister think there is a possibility of the rust starting right down at the gulf of Mexico and coming up with the wheat crop as it gradually ripens?

Mr. MOTHERWELL: I may say, Mr. Chairman, that that is along the line of the investigational work. Those are the sources of contagion known so far, and they are confirmed by the best investigators who have made a life study of this problem in the United States. At the conference at Winnipeg, these experts were very pronounced on these two sources of contagion, and were exceedingly insistent that we should pursue our campaign against the buckthorn and the barberry, because that came within our powers. Wherever you see the barberry bush adjacent to a wheat field, you will see lots of rust in the immediate vicinity. Other sources of contagion may be discovered, and experts are working on the different breeds. Kota wheat, while not as good as some of the others is resistant to some varieties of spores, but not to them all. That is the stage, roughly speaking, where the investigation is at the present time.

Mr. LEADER: We all appreciate the fact that the minister is doing what he can to fight ravages of insect pests, including rust. As one who has had practical experience of its ravages, I wish to express my appreciation of the attempt, at least, of the government to find some solution for this problem.

Now I would like to get back to the financial end. This matter was up for discussion in the committee on Agriculture, and I think the deputy minister gave us the information that the government contemplated erecting in Winnipeg, on the Agricultural College site, a laboratory building in connection with this work. I would like to ask the minister if it is the intention of the government to go on with this building, what is the probable cost, and if they have made any arrangement with the Manitoba government, and if so, whether the Manitoba government have agreed to the arrangement made.

Mr. MOTHERWELL: I think my hon. friend could not have been in when I gave that information. I gave that before, as I thought it was the first information I should give. We have an agreement, signed and delivered, whereby the Manitoba government, through the College of Agriculture, supplies the land, the heat, power and light, while this government supplies the building and equipment. About $15,000 of last year's vote was devoted to equipment. We could not build in the winter, but we could buy the equipment. About $25,000 of this increase goes to put up the laboratory, and the $15,000 of equipment is ready to move in. The other $25,000 goes to another laboratory for a similar purpose in the city of Montreal.

Mr. LEADER: I listened to the discussion, but I wanted it brought out distinctly whether or not the Manitoba government had agreed to this. The minister says they have agreed to it. I have it upon good authority that they have not agreed to the proposition, but that is by the way.

Mr. MOTHERWELL: What is my hon. friend's authority for that?

Mr. LEADER: I have it here, and I can give it to the minister.

Mr. MOTHERWELL: There was a while when the matter was referred from the president of the college and the president of the university to the government for confirmation, and the Premier of Manitoba drew attention to certain changes he desired, and these changes were covered by a communication from myself. So far as I know it is satisfactory. It is not material anyway; we are going ahead anyhow; we have an arrangement made.

Mr. LEADER: In view of the fact that we have in Manitoba a plant that cost approximately $4,000,000, not a cent of which has ever been paid—we have borrowed the money and are paying interest on it still—in view also of the fact that that plant is being utilized to only about one-half of its capacity, because although every building may be utilized for some specific purpose, they are being utilized to only one-half their capacity, I think it is a serious thing for this government or the Manitoba government to contemplate any additional expenditure for extensions to the buildings we have there now. Unless the government have made all possible investigations and have found they cannot get out

of putting up that building, I would say to them to-night in all earnestness that they should make every attempt to see if they cannot utilize some of the buildings already there for this worthy purpose. I am heartily in accord with the work that is to be done. I wish to see it go on, and I would not be niggardly in appropriating money for this work, because it is very important work, but I would hesitate spending more public money for buildings in Winnipeg when we have already $4,000,000 tied up in buildings now, not one dollar of which has been paid.

Mr. MOTHERWELL: We tried hard to get a little corner of that $4,000,000, but we could not, We went into it thoroughly with President McLean and President McKillican, of the Agricultural college. They have a very fine laboratory there, but it is practically all in use at the present time, and if we went in there as well we would be simply crowding each other, and that would not be a very good start for harmonious team play between two governments; it would be like a team of horses each crowding for the road, and my hon. friend knows they do not go very good that way. Then we tried to get an adjoining building, the mechanical building. We tried every way, and hesitated a long while because we wanted to have good equipment, but finally we were driven to the conclusion that there was only one way, and that was to put up a new building. There was no building and in such a situation as this the necessary thing is to get the land and the buildings close together. They would not let us have it under any consideration whatever, and yet it is necessary that the land should be adjacent to the building for the convenience of the work. I can assure my hon. friend that we felt and the Manitoba government felt just as strongly, the desirability of not incurring any unnecessary expense. They are quite as conscious as anybody can be that they have got all the money they want invested in buildings, and they were quite generous in their views as to the disposition of the land for this purpose, and for the provision of heat, power and light. Now an arrangement has been entered into that when we come to dissolve partnership there will be a suitable settlement arrived at.

Mr. LEADER: I understand that the arrangement has not been agreed to by the Manitoba government either, but I wish to stress this fact: Notwithstanding that we have this mammoth plant in Manitoba, and similar plants all over the Dominion, there is a desire for further building to carry on this work. I do not believe the members of the House begin to appreciate the amount of money that we have got tied up in public buildings in this country. On this subject I should like to read an extract from the Manitoba Free Press. This is from an interview given by the agricultural experts from the Old Country who toured this country last year. It is a short extract which is very appropriate to the subject and I will read it. It will go to show what they think of our elaborate plants in Canada.

Mr. MOTHERWELL: Whose opinion is my hon. friend going to quote?

Mr. LEADER: I am going to quote from an interview given by the British experts who toured Canada last year. This extract is taken from the Manitoba Free Press of September 2, 1924. This is what it says:

> All through our tour we have coveted the magnificent agricultural colleges and experimental stations of Canada. The money which has been expended on any one agricultural college in Canada is many times greater than that expended on any similar institution in the British Isles, probably more than has been spent in erecting all the similar institutions of Scotland or Ireland, and possibly of England.

Yet we find it necessary, although we have less than one-quarter the population they have, to erect additional buildings.

Mr. MOTHERWELL: If my hon. friend thinks he can find a corner in those magnificent buildings in which we can do this work the chances are yet good. We have not started to put up the building; we are just getting the plans out.

Mr. FORKE: Did you try the parliament building?

Mr. MOTHERWELL: That is reserved for another purpose. We certainly exhausted our energy in searching in every quarter we could to secure a place in which we could do good work. The fact that this is an expensive building does not necessarily imply that there will be a corresponding working space. It is a magnificent building, at least to look at, and one that you can take a pride in. At the same time there is not the room available corresponding at all to its appearance. We were not looking for grand architecture, we wanted a working laboratory, and we now have an agreement with the Manitoba government in which they have concurred. We tried to get into what they call the mechanical building, we tried to get accommodation everywhere we could, before we reached a decision. As a matter of fact we have not started to build yet

Mr. BROWN: I understand the buildings are to be suitable in every way, and that a large number of hot houses will be needed to carry on this work effectively; is that true?

Mr. MOTHERWELL: Yes, that is right.

Mr. BROWN: I do not think there is any more important work the government can undertake than this particular work. It is a kind of work, I think, that if it is to be done at all must be done properly.

Mr. MOTHERWELL: Sure.

Mr. BROWN: There is simply no use in attempting to do this work unless it is done well.

Mr. MOTHERWELL: Hear, hear.

Mr. BROWN: While none of us like to see more buildings put up than are necessary, yet I can appreciate the fact that this special work requires a particular kind of building, and a somewhat expensive kind of building too.

Mr. MOTHERWELL: Hear, hear.

Mr. BROWN: For my part while I would urge the most economical construction possible in this building, I would not like to put a stone in the way of carrying out the proposition that has been entered into for it is most important work that we are engaged in.

Mr. LEADER: May I just add a word or two. I think it is most important to carry on this work also; I do not want the committee for a moment to imagine I am opposing the work undertaken by the government. But I am protesting against any additional expenditure in public buildings, and I want the fact brought out that either this government or the Manitoba government will be held responsible by the people for this further expenditure on public buildings. If this government claims that it could not get along without this building, that there was nothing suitable already available, it will have to take the blame. And if the Manitoba government says "We cannot accommodate you in our buildings, they are for our own private use," they will have to take the blame and the responsibility for their action before the people.

Mr. MOTHERWELL: After the generous way in which the committee on Agriculture took hold of this last year, and made the recommendation that $25,000 should be devoted to the desired object, we would have been very remiss in our duty if we did not go forward with this work just as rapidly as we could. We have done so. We could not get the buildings sought, and we have entered into an agreement with the Manitoba government. That government has agreed to the arrangement. Oh yes. My hon. friend (Mr. Leader) will have to do more than shake his head. I do not know what he has got there to the contrary. I have written to the Premier of Manitoba and we have an agreement with the authorities of the university. There was a time when the Manitoba government did point to the necessity of some supplementary understanding so that in the event of our dissolving partnership there would be a friendly dissolution. I may say further that our working relations with the Manitoba government have been most friendly and cordial from the beginning, and in order to have those relations continue it was necessary to have that thorough understanding and then start out. I think we are in good shape to do good work. May I point out to my hon. friend that the very fact that we are co-operating with them is another indication that we are trying to cut out unnecessary duplication. We are working in conjunction not only with the government of Manitoba but also with the governments of Alberta and Saskatchewan. I think my hon friend is just getting the wrong steer on that question, the wrong slant on it, that is all. He has got, well a little bit of something to talk about, you know.

Mr. LEADER: I can assure the minister that I have not got—did he say?—a wrong steer. I have got the authority in my hand to establish that the Manitoba government has not yet approved of this.

Mr. MOTHERWELL: What date is that?

Mr. LEADER: It is dated March 10, 1925.

Mr. MOTHERWELL: Oh that is quite a while ago.

Mr. LEADER: It is a letter from a private individual, but I have no hesitation in letting the minister see the signature.

Mr. MOTHERWELL: Well, my goodness, governments I know are proverbially slow but nevertheless there has surely been time to adjust the matter since March 10. I will take my hon. friend's word for it that the date is March 10, but just the same I assure him that there was not a hitch or a disagreement with the Manitoba authorities. They did think however that there should be a thorough understanding in the event of a time coming when we thought it desirable to dissolve partnership on the work. However, I accept my hon. friend's statement that the date he speaks of was two months ago.

Mr. LEADER: In the committee on Agriculture the intimation was given by the Deputy Minister of Agriculture that they could not get the building owing to the attitude of the Manitoba government, that they did not think anything there suited them. Immediately after that I wrote to Winnipeg and received this letter, so the arrangement was not completed on that date, March 10.

10 p.m.

Mr. MOTHERWELL: Pardon me I do not want to be like the individual that wants the last word, but is not that two months ago? We are talking of conditions to-day. That was over two months ago.

Mr. LEADER: Yes but I understand you claim an arrangement was made before the deputy minister made his announcement in the committee which was before March 10.

Mr. MOTHERWELL: Oh well!

Mr. MILNE: As one who has been following this proposal very closely I want to say at the outset that I am very pleased indeed to see the co-operative spirit that exists between the provinces of Manitoba, Saskatchewan and Alberta, also the progress towards an international arrangement that has been made with the northern states interested in this same rust problem. I think the parties interested are greatly to be praised for bringing about this cordial spirit of co-operation in a movement to overcome the dreaded disease known as rust. In regard to the buildings at Winnipeg I understand that a committee of the university met the officers of the federal Department of Agriculture and both parties went to the agricultural college and made a thorough survey. Personally, I was firmly of opinion that space should be available at that institution to carry on this work. Not being familiar with the technical part of this work, I must confess that I have been compelled to give way to the opinions of those who have made a study and know something of it. The report of the committee was that it was impossible to get laboratory, greenhouse and field space that could be so arranged at the present time as to carry on the work efficiently. I am convinced that the parties who were looking into this matter were doing so with the intention of doing the best possible in fighting this disease. Consequently, I give way to the officials who have decided that it is impossible to get the proper space. But I feel so strongly on the question that sometimes I would almost like to ask the department, even yet, if it is not too late, to see if it is not possible to get some space there and not to spend more money than is absolutely essential. I may be wrong. But I have the feeling sometimes that some of our scientific men have a tendency towards extravagance and ask for things just a little more handy than is absolutely necessary for really efficient work. I do not want to hamper the efficiency of the staff in any way, but I should like the government to do the work as cheaply and economically as they possibly can. If the building is not under way yet, I feel so strongly on this that I would almost suggest that a new survey of available space should be made. I am not casting any reflection upon the officers or the committee that looked into this question. I believe they were sincere and anxious to bring about the best possible results and I am going to leave it at that. I am going to give way regarding this question if these scientific men are firmly convinced that it is impossible to carry on the work efficiently in the present buildings. I will not oppose the expenditure for a moment, because it is essential that something be done immediately to combat this disease.

Mr. MOTHERWELL: While we have already had three surveys made for the purpose in view that the hon. member mentions, that is to see if we could not find some of these buildings suitable for the work, one survey being made in September immediately after the international conference when I was there, the next in January and the last in April, in spite of that, I will assure my hon. friend that we shall draw the matter again to Premier Bracken's attention and send him a marked copy of Hansard showing this discussion. If any space is discovered in the meantime, it is not too late, but we must proceed as quickly as possible with the work. You have expected us to do that. Are there any other suggestions, because this is a work which people have been at for years and years, and in my estimation, we are only in the a-b-c of it. I am not beguiled by the thought that we are going to solve this problem in a year. It may take five years or it may take twenty-five years. This committee is aware of the research work that has been done during the last twenty-five years in regard to the eradication of tuberculosis. There is still something to be done that will immunize animals and mankind too from the ravages of this disease. Those who are doing this work are getting hotter, as the saying is. They are coming to know more about it. No man, however, can tell yet what may be accomplished. All we know is that there is

sufficient persistence in man to surmount this difficulty in time.

Mr. HOEY: Provided that no suitable building is discovered at the college or in the city of Winnipeg, is it the intention of the department to go ahead with the new building this season?

Mr. MOTHERWELL: Yes. The land is secured and the plans are all prepared.

Mr. KNOX: The minister asks for suggestions. I would suggest that we have a university at Saskatoon where suitable buildings might be found.

Mr. MOTHERWELL: Some of the work is being done there by Mr. Fraser, a very good man. He has associates there, and he is doing the work under the supervision of President Murray who is so intensely interested in it that he went down into the United States to help us to hunt three good men for the work.

Mr. EVANS: I appreciate the importance of carrying on this work, but at the same time I wish to add my protest to that of the hon. member for Portage la Prairie (Mr. Leader). The Dominion seems top-heavy with public buildings from one end to the other.

Mr. MOTHERWELL: What is the particular protest now?

Mr. EVANS: That we should not go on with this building on the campus of the university at Winnipeg.

Mr. MOTHERWELL: Where should we put it?

Mr. EVANS: I believe we could have found room at Saskatoon. I do not believe it is necessary that this work should be carried on at Winnipeg. We have at Saskatoon many public buildings that I do not think are overcrowded at all, and we could have found room there. The work will be temporary to a large extent, and I am inclined to think, if we are going to find a remedy at all, we shall do so very soon. We are spending rather too much money in bricks and mortar throughout the Dominion in the present financial state of this country. With all the empty buildings that there are in the cities we could have found room for this work without putting up another building costing as much as it is expected to cost.

Mr. STEVENS: We have been hearing some objections to expenditures. I want to bring something to the attention of the minister, and I hasten to do so now because I have been waiting for just fifty minutes to get a chance to ask the minister a question. While this discussion is very interesting and instructive, I think this is important. We are now discussing the administration of the Destructive Insect and Pest Act. I have here a compilation from the Auditor General's report of the amounts spent last year in travelling expenses in the Department of Agriculture. I want to give this list to the minister now and to suggest that perhaps too much money is being spent in this way which could be better spent in actual work. I am not unduly complaining, but I think sometimes if we get the magnitude of these expenditures, it will lead, perhaps, to greater economy. This is a list of the travelling expenses in the Department of Agriculture, including the item that is under discussion now, for the year ended March 31, 1924.

Mr. MOTHERWELL: For all purposes?

Mr. STEVENS: Yes. It does not include automobiles. I am making that reservation. That must be added, whatever the cost of them may be:

Officials at Ottawa..	$86,591 68
Outside service—	
Agricultural Instruction Act..	1,065 58
Dairying..	36,431 62
Destructive Insect and Pest Act..	71,300 54
Experimental farms..	39,063 14
Fruits..	55,271 37
Health of animals..	253,817 53
Livestock industry..	271,996 93
Seed, feed, and fertilizer control..	50,744 79
Total..	$866,283 18

I checked some of the details although I had not time to go into the matter very closely. But I was interested to find if possible some reason for the excessive expenditure and I discovered, for example, that at one experimental farm there were two men whose travelling expenses, although their per diem allowance was the same, differed considerably. I have not the details before me, but speaking from memory I should say that one man for a lesser number of days had double the amount of travelling expenses. I found the same sort of thing in several instances, and I think that we may fairly assume that the man with the lower expense account is a good official who is careful of the public's money. The man who has an inordinate travelling expense account, with the same per diem allowance, although he does not travel the same number of days, certainly is not so good an official, or at any rate the indication is that there is some laxity. This magnificent vote is given without any grudge to agriculture year after year because, I think, the whole country is anxious to promote the work that

is done and is ready to give it general support. But when we find an item of $866,000 in one year for travelling expenses, exclusive of the cost of a large number of automobiles and so on, then I say that there is something that evidently merits very careful consideration.

There should be a strict investigation on the part of the minister or on the part of competent officials in his department into the whole question. A first class accountant, one of his own staff, might be directed to check up this class of expenditure. I venture to say that if this were done a saving of 20 per cent could easily be effected; indeed, I should not be surprised if the department could save 30 or 40 per cent. But suppose we put it at 25 per cent; that would represent a saving of over $200,000, a considerable sum. I know that the minister is an exceedingly busy man, and all that is necessary in the circumstances is to call this abnormal expenditure to his attention to have this extravagance curtailed.

Mr. MOTHERWELL: That is a fair enough criticism. But where the work of a department like that of agriculture is largely educational and is carried on by officials who are not fixed in any particular locality, the expenditure must of necessity be largely for salaries and travelling expenses. The hon. member (Mr. Caldwell) reminds me of the question of certified potatoes. Well, there are thirty or thirty-five competent men set aside for work in this connection in the Maritime provinces, and their expenses are practically all for travelling. I presume the cost of transportation on the mileage basis would be the same there as anywhere else but the general expenses would depend on the nature of the locality they were in. I must impress upon the committee the fact that a close check is kept by means of vouchers on all these expenses. The men are not given a flat per diem allowance; it is transportation plus whatever it costs them, and that as I say would depend upon the district in which they were travelling. For instance, in some of the cities of British Columbia and the west there are some exceedingly fine hotels, and if the officials found it necessary to put up at some hotel in Calgary or Vancouver the cost would naturally be higher than it would be in some other parts of the country. I do not suppose they would take either the worst or the best hotels; they would go to middle class places. But even there there would be a vast difference and their expenses would be greater than if they were travelling in districts where the hotels are of a modest character. One man might take a long trip to Calgary or even to Victoria and necessarily his expense account would be high; it would be higher than the account of some other man travelling somewhere else. Take the health of animals branch; there are in connection with that branch 140 veterinary surgeons and the vote is nearly $2,000,000. Now, outside of something like $700,000 for indemnification in respect of animals slaughtered for tuberculosis the rest practically all goes in salaries and expenses. You cannot station a man at every point where the services of an official are required; these men must travel around. I can quite understand the feeling of my hon. friend who says that the expense is enormous. It is enormous; but I do not see how it is to be avoided. The only thing that can be done, and that is what we are doing, is to keep a close check on all expense accounts. An accountant who is familiar with accounts of this sort easily recognizes where padding takes place, and occasionally that occurs in all departments. But I do not think that our men are extravagant; I do not believe that they patronize hotels which are beyond their reach and which they would not patronize on their own account.

Mr. STEVENS: I hope the minister will accept my criticism as he did a moment ago, in good part.

Mr. MOTHERWELL: I do.

Mr. STEVENS: There are inspectors of fruit and butter and other things, and I think that an effort should be made to have each man cover two or three departments of activity. Take the inspector of butter and eggs and the inspector of fruit in grocery stores, who all come under the various federal acts. There is no reason why one inspector should not cover most of these fields. It might require a bit of co-ordination but it could be done and it would save a good deal of expense. I have met in different towns and cities groups of officers of the department who were all there at the same time. I have no doubt they are quite serious in the performance of their duties, but I do believe that much could be done to reduce this enormous sum.

The case I mentioned was not in an expensive city. I do not want to mention any names, because I have no desire to drag the officials into this House. But the case I have in mind occurred at one of the experimental farms in central Canada and it was such a glaring case that I checked up two or three similar items. I think that a perusal of the Auditor General's report by an accountant in

the department familiar with these matters might lead to a demand for an explanation in cases where there is an obvious difference; and this would have a salutary effect on some officials who are inclined to be extravagant, which perhaps is a tendency to which human nature is prone to give way.

Mr. MOTHERWELL: These remarks are quite all right, and as a matter of fact we are doing that very thing now in one or two cases which I am sorry to have to look into. With regard to assigning a multiplicity of duties to one man, this is being done in some cases. I might mention the Fruit and Vegetable Act under which we have some inspectors that are doing a dual work. In the Seed branch we have seed, feed and fertilizer. The same inspector looks after all these three products, and we have recently added to the duties the inspection of hides and hay. We have been requested for legislation in connection with commercial poison for spraying fruit and trees, and if we pass legislation with respect to that it will be added to the duties of the same class of inspectors under the Seed branch. I question whether we can do that in that department, but we can do it where conditions lend themselves to it. Take the case of the egg inspectors; we have so few of them in comparison with the extent of the country that they are on the hop, skip and jump continuously and it takes them all their time to go after old Biddy and her chicks. I do not think we can add anything to their duties. But wherever it can be done it is being done. In the Seed branch now there is such a great amount of work we wonder where they would come in on this proposition. They are working with the additional load without the additional salary. We have been asked to raise their salaries, owing to the multiplicity of their duties. However, anybody who has endeavoured to obtain reclassification from the Civil Service Commission knows that he has a job ahead of him. In the main we are working along the lines indicated. We have been told that these expenditures are too large. We have looked at them, reviewed them, and re-reviewed and got our accountants to look over them, and occasionally we find places where we can check them up. Now the hon. member for Saskatoon (Mr. Evans) has a protest. That is quite all right, coming from my hon. friend. We expect that. That is the way he is built. He protested against unnecessary expenditure in capital outlay. That point was well taken by him, but before he sat down he was quite agreeable to it if the money was spent in Saskatoon. I do not know whether he is exactly consistent in the position he takes.

Mr. EVANS: The minister is mistaken there.

Mr. MOTHERWELL: I will be glad to accept a correction.

Mr. EVANS: I said we could find room without constructing any building.

Mr. MOTHERWELL: My hon. friend did not protest against the expenditure. He thought the expenditure was all right. Is that the understanding?

Mr. EVANS: No, not for that building.

Mr. MOTHERWELL: Then the hon. gentleman does not want it at Saskatoon. Well, all right, we understand it. I am afraid my hon. friend wants to have his eye both ways, first on the treasury and then on his constituency. Well, there is no harm in that.

Mr. EVANS: Let me put the minister right. I protested against the construction of a new building, and I said I thought room could be found without constructing any building.

Mr. MOTHERWELL: Then my hon. friend did not want it at Saskatoon.

Mr. ROBINSON: Is any portion of this money to be spent in fumigating plants in the Maritime provinces?

Mr. MOTHERWELL: I believe there should be. We have one building at St. John at the present time. I did not visit it when I was there, as I passed through rapidly and had not time, but I understand it is not quite modern in its construction and has not the accommodation required. I understand from my deputy that without much expenditure the one at St. John can be fixed up, but I recognize that is not in Nova Scotia. I think my hon. friend refers to Halifax.

Mr. ROBINSON: I wanted to know about the nursery stock that comes into Nova Scotia from Upper Canada. Is that stock to be fumigated before going in there from the nursery?

Mr. MOTHERWELL: It has to be fumigated somewhere if it comes from outside Canada.

Mr. ROBINSON: It is fumigated at St. John.

Mr. GOULD: I wish to say a word on behalf of the minister and his estimates.

I recollect well that in the committee on Agriculture we listened to an able address on the question of rust by Dr. Gussow, and an animated discussion immediately followed the address. I might state that I liked that address much better than I liked the address on hog raising.

Mr. MOTHERWELL: The hon. gentleman did not think much of the address on hog raising.

Mr. GOULD: But after the animated discussion before the committee on Agriculture last year, we made a unanimous request for a grant of $50,000 for the commencement of the construction of the plant for investigational purposes in regard to rust. When we suffer $90,000,000 damage per year from the ravages of rust, surely hon. gentlemen in this chamber cannot very well criticize an expenditure of $25,000 voted last year, which was only one-half the amount asked for, and one-fourth of the amount which Dr. Gussow recommended, namely $100,000. I think we are just a little too earnest in the application of economy. In my opinion that is false economy.

Mr. MOTHERWELL: Hear, hear.

Mr. GOULD: Because it is a fact we have been losing the wealth of this country to the extent of $90,000,000 a year through the ravages of rust, and the Dominion government at last is waking up to the enormity of this thing and is working in co-operation with the United States Department of Agriculture and in co-operation with the provinces, and probably in the near future we will reach a solution. When we asked for $50,000 last year I understood it was to provide a hothouse, in which to carry on experiments with the barberry bush, which serves as a host plant for the rust germ, and in which scientists could follow the activities of the rust germ particularly through the winter season, something that up to the present time in Canada they have not been able to do. Now if it is necessary to spend money to provide these facilities, I think it is altogether wrong and false economy to suggest that the expenditure should be spread over three or four years, because if the money were spent at the present time the trouble could be overcome. It is wise to expend it in the first place, and then in the years to come we will hope to lose less than $90,000,000 a year. I rise to support the vote, I accept the word of the minister that they have done all they can, and I realize that in using Winnipeg as the location more facilities are offered for the professors at the universities to the south to come in and confer with them, whereas Saskatoon is much further away and more expense would be involved if the experimental plant were located there. I did make a recommendation to the minister in regard to this matter. Arrangements have been made with the University of Manitoba, and the preliminary work is being commenced there. The minister may be sure I will always support any reasonable expenditure for the investigation of rust and insect pests in this country.

Mr. MANION: I would be the last to protest against any expenditure on behalf of the agriculturists of this country, but one cannot help being startled at the expenditure of $866,000 in one year on travelling expenses in one department. I believe there are 420 employees, which would make an average of over $2,000 each for travelling expenses in the year.

Mr. MOTHERWELL: The 420 are the employees in Ottawa. There are about 1,600 all told.

Mr. MANION: Even at that we have about $500 each for travelling. At any rate, $866,000 is a startling figure. Perhaps I owe an apology to gentlemen I criticized for making a trip to Wembley. I remember the chief whip of the Liberal party was very severe in his criticisms of one minister who spent $10,000, or nearly that, on a trip overseas with his secretaries, but this amount of nearly a million in one department makes these other expenditures look like shadow-boxing in comparison. It seems to me the minister could in this respect save some thousands of dollars, without reduction of efficiency, to the people who are already severely burdened with taxation. I cannot help thinking that a great deal of this $866,000 was unnecessarily expended.

Mr. MOTHERWELL: Can my hon. friend point to where it could be cut down?

Mr. MANION: That is not my business; it is for the minister to do that.

Mr. MOTHERWELL: The work of this department is largely educational and must be done for the most part through travelling by members of the staff. The travelling expense is one-seventh of the whole expenditure of the department, and I am surprised it is not more. There is need, of course, for careful supervision, and I think it has got it. My hon. friend's feelings in the matter, as one who has not had any experience in administering affairs relating to agriculture, are easily understood. Anyone not knowing anything about it would think just as he does.

Mr. STIRLING: What progress has been made in the control of the codling moth? I understand that in British Columbia that control is shared between the provincial and the Dominion governments; is that the case in the other provinces?

Mr. MOTHERWELL: We have been fumigating cars, banding trees, spraying, and taking other steps to circumscribe the activities of this moth. Every country is protecting itself against the invasion of these noxious insects, therefore it behooves us to be alert in their suppression, and, if possible, their extermination. As to the sharing of the control, that depends on the province. Some provinces will take hold of it and others will not. In every province, however, steps are being taken to eradicate this pest.

Item agreed to.

Publications, $18,500.

Mr. CALDWELL: I think the department might well cut down on some of these publications. I know they send out a list so that persons interested may indicate the publications they desire, and that is a wise thing to do, but I cannot help thinking that we are spending too much money on publications that are seldom or never read.

Mr. MOTHERWELL: Formerly there was an indiscriminate distribution of this kind of literature, but that is not done now. The publications are sent out only on application.

Mr. CALDWELL: Are there no publications sent out by the Agriculture department except on request?

Mr. MOTHERWELL: None except Seasonable Hints. We have been requested to make a more general distribution of the others, but we have adhered to the policy of sending out our publications only on application. If we could get one hundred per cent value out of all our literature that would be an end highly to be desired, but by the method we have adopted, I think we are getting as near that as we can hope to attain. I know that a great deal of our educational work does not come home to the men who need it most, but that applies to all walks of life. The gospel of good farming is just the same in that respect as the gospel of salvation, which has been preached for thousands of years and yet has not reached some people.

Mr. MacLEAN (Prince): Is any information given in these publications regarding experiments with sugar beets such as have been carried on at Winnipeg by this new firm which has offered to distribute seed from Germany for the sugar beet industry? Can any of that seed be obtained?

Mr. MOTHERWELL: I remember having some correspondence with my colleague the Minister of National Defence with regard to certain clubs organized in the Maritime provinces, to whose members the Central farm distributes beet seed. The request was made that these clubs be increased in membership from a possible fifty to a possible one hundred.

Mr. MacLEAN (Prince): Would that be the same seed as is used in Germany?

Mr. MOTHERWELL: No. This is Ontario grown seed. In addition to that we analyse the beets, so as to keep them in the direction of growing the highest quality of beets.

Mr. MacLEAN (Prince): I suppose the minister is aware that this company in Winnipeg is distributing beet seed.

Mr. MOTHERWELL: That is a private company.

Mr. MacLEAN (Prince): Is it distributing a different class of seed altogether?

Mr. MOTHERWELL: We distribute Ontario grown seed, but, of course, originally most of this seed was imported. I think some of the Winnipeg seed is imported.

Mr. MacLEAN (Prince): Does the minister think the beets test out as good for sugar?

Mr. MOTHERWELL: The Ontario grown seed produces a higher testing beet than the seed we have been importing.

Mr. CALDWELL: Due to the mild criticism that I offered of this vote a few minutes ago, I do want after looking the matter over, to commend the minister for having cut this down $15,000 from last year. How much was spent under this head last year, and was the reduction due to the fact that you were not spending as much, or because you were cutting down the publications?

Mr. MOTHERWELL: This vote is for distribution, and the cost is borne by the respective branches.

Mr. CALDWELL: This does not include the printing?

Mr. MOTHERWELL: No. The reduction is due to the fact that we have no longer got the expense of distributing the Agricultural Gazette. Formerly that was not only distributed but printed out of this vote.

Mr. CALDWELL: Am I to understand that it costs $18,500 merely to distribute these pamphlets? Is that postage, or are they delivered by special messenger, or how?

Mr. MOTHERWELL: I will give my hon. friend the cost of the different items. First, there is the cost of advertising our publications. Sometimes when we have anything new to send out we put a very small ad in our farm papers, and that results in requests for the publication. Envelopes alone cost $8,000, labour $3,000, equipment and maintenance $2,000, postage, express and cartage $2,000, printing and stationary $2,500.

Mr. STEVENS: How many envelopes would there be in that $8,000? I do not want to be picayune, but $8,000 is an enormous sum for cheap manilla envelopes.

Mr. MOTHERWELL: I understand this would cover several millions of envelopes.

Mr. CALDWELL: Are envelopes used in practically every case? The Department of Labour have adopted, not an envelope, but the publication is rolled up and pasted at one end with a little strip of mucilage. That would cost I should think one-quarter of what the envelopes would cost.

Mr. MOTHERWELL: We have not used that.

Mr. STANSELL: To what extent are applications being made for these publications, in Ontario, for instance?

Mr. MOTHERWELL: I understand that in Ontario the applications will run up to about half a million. It depends upon how much we advertise. If we put a small notice in the farm press indicating a number of bulletins that are available, we generally find a run on those afterwards. We have not very much money for advertising, and when you limit the advertising, the demand is less. If we spent more in advertising, the chances are the demand would be greater; so it just depends what you are seeking. I do not think we have done much advertising of any kind lately for the simple reason that we have not the money.

Mr. STIRLING: Over and above that, is there a mailing list for all Canada to whom you send each one of these publications?

Mr. MOTHERWELL: There is no recognized mailing list except for the publication we call Seasonable Hints, but if a request comes in for the bulletins that are issued on vegetables, gardening, or anything like that, these would be sent. But there is no regular mailing list except for Seasonable Hints.

Mr. CALDWELL: There are lists of the department's publications sent out to individuals, and they are asked to mark an X opposite the publications they wish mailed to them during the year. You must have some mailing list for taking care of these requests.

Mr. MOTHERWELL: They go out in the same envelope with Seasonable Hints.

Mr. DOUCET: Do I understand that $18,500 is for the purpose of distribution only, or does it include also the cost of printing?

Mr. MOTHERWELL: Just for distribution.

Mr. DOUCET: According to the Auditor General's report for the fiscal year ending March 31, 1924, page 879, the disbursements on publications amount to $28,500. Of that amount the King's Printer, for printing, receives $17,235.97. Apparently 60 per cent of the vote went for printing. Now if the minister claims, as he does claim, that the item of $18,500 does not include printing, surely there must be an excess in expenditure in the other items as compared with the fiscal year 1923-1924.

Mr. MOTHERWELL: It is obvious we could not get those into the public accounts of a year or two ago. What other year is my hon. friend referring to? Last year? Well, the publication of the Agricultural Gazette, as intimated a moment ago, was charged to this account in addition to the distribution. Now we are not publishing it, and next year's vote will not show any item in that regard.

Mr. CALDWELL: Under what vote will the publication of the Agricultural Gazette appear this year?

Mr. MOTHERWELL: We are not publishing it.

Mr. CALDWELL: You are not publishing it?

Mr. MOTHERWELL: No it has been dropped.

Mr. DOUCET: If I understand the minister correctly he says that the elimination of the publication of the Agricultural Gazette is responsible for the reduction of this vote; but in the Auditor General's report for 1923-24 the principal items, apart from the printing of the Agricultural Gazette, are stationery,

$4,000 odd and wages and labour $4,000 odd, amounting to between eight and nine thousand dollars. The others are all insignificant items. Now this vote is double that amount, and surely it cannot be for distribution purposes only. A short time ago the minister said that certain items, I did not quite catch the amount, were to cover postage and express charges. I fail to see why the department has to pay postage on periodicals or pamphlets that are mailed out. They certainly must go through the mails free as all publication emanating from the departments do.

The CHAIRMAN (Mr. Fortier): Shall the item carry?

Mr. DOUCET: Do you not think, Mr. Chairman, I am entitled to a reply to the arguments I have advanced. There must be something else besides the cost of distribution to account for a vote of $18,500, when in the last fiscal year of which we have a record all the various items, apart from printing, only amount to something like $8,000.

Mr. MOTHERWELL: I can only go over my explanation again if that is what my hon. friend wants. Perhaps the hon. gentleman was not in when I read the itemized account.

Mr. DOUCET: I was in my seat.

Mr. MOTHERWELL: Then what my hon. friend wants now is to reconcile the difference between this and what appears to be the expenditure for another year. I do not think I am called upon to reconcile the difference. It will be accounted for next year. The activities of the year to which my hon. friend alludes were based upon another vote altogether. One large item of expenditure was the Agricultural Gazette which was a very expensive publication. It was printed on very high-class paper and, if I remember rightly, had an expensive cover. I understand from my deputy that it cost about $15,000; I do not know if that includes the cost of distribution or not. Yes, it does include the cost of distribution. So there you have $15,000. That one item alone plus the $18,000 would make $33,500. I do not know what figures my hon. friend wants to harmonize but assuming that I am correct the total of the two amounts would be $33,500.

Mr. DOUCET: I think I made it plain that in the year 1923-24 when the department was publishing or having published the Agricultural Gazette and for which an item appears in the Auditor General's report of $17,235 for the King's printer—

Mr. MOTHERWELL: For the Gazette alone?

Mr. DOUCET: For the Gazette mostly.

Mr. MOTHERWELL: It costs a little more than I said.

Mr. DOUCET: —the balance of the vote amounted to less than $10,000. Now, with lessened activities for the year 1925-26 there being a decrease in expenditure of $103,500, we are called upon to vote $10,000 more for distribution and yet the publication of the Gazette has been eliminated. If the minister wants to reconcile the figures he must show wherein it costs $10,000 more to distribute to-day the publications of his department when the Agricultural Gazette is not being circulated and the activities of the whole department are less.

Mr. MOTHERWELL: You want to know what we are doing with the $17,000 we are saving, is that it?

Mr. DOUCET: No.

Mr. MOTHERWELL: That is what I understand. We are not publishing the Gazette now. The Gazette cost $17,000 and the amount must be reduced by that sum.

Mr. DOUCET: I will try and make it plain this time.

Mr. MOTHERWELL: If my hon. friend will just sit down a moment I will explain. We are sending out additional literature to the Wembley exhibition which is going to continue for another year. Last year our vote for distribution was increased because of the extra distribution that was necessary by reason of the Wembley exhibition. This year the distribution of publications at Wembley will continue in greater degree so that there will be that much more for this particular purpose, although the publication of the Gazette has ceased. In other words the fact that there is more business accounts for it.

Mr. DOUCET: That is quite right. Had the minister given the information, when he was first asked, that more publications were being sent to the Wembley exhibition we would have understood why the vote was increased. But to my mind the amount is still too high because when the Gazette was being circulated the distribution cost less than $8,000, and to-day with no Gazette circulated the cost of the distribution of publications amounts to $18,000.

Mr. MOTHERWELL: Well it is all right now anyway.

Item agreed to.

International Institute of Agriculture, $13,500.

Mr. STEVENS: Is this vote for the International Institute at Rome

Mr. MOTHERWELL: Yes. The committee will remember that last year I promised that I would endeavour to consolidate this branch with the main department under the assistant deputy minister. That has been done and it has resulted not only in a small saving in connection with this item but also a saving under the heading of civil government. By that consolidation we have saved one salary and a little bit more, but work will be carried on just as before.

Mr. EVANS: I should like to ask if this vote represents a grant to that institution, or is it intended to cover the expenses of a delegate to Rome?

Mr. MOTHERWELL: Part of it is for the library in the west block. We have a very valuable and a very complete library there. Part is for the usual cost of administration in the way of maintenance and supplies, and the balance is for the maintenance of the offices in Rome where a permanent staff is kept towards the expense of which we
11 p.m. contribute a proportionate share in common with some thirty other countries interested in the same work. Here is how the total of $13,500 is made up: Contribution made towards the maintenance of the International Institute at Rome, $8,900; maintenance of library, binding, stationery, subscriptions, and so forth in Ottawa, $4,600. The cost of the offices at Rome, like every other institution has gone up, as the saying is, since the war, and the result is that we find this part of the expenditure continually growing. On the other hand we have effected a reduction in expenditure through the consolidation which I mentioned.

Mr. CALDWELL: What other countries contribute to the upkeep of this institution?

Mr. MOTHERWELL: Nearly every civilized country in Europe that is in the League of Nations.

Mr. CALDWELL: What do we get in return for this outlay?

Mr. MOTHERWELL: We do not get some of the things we thought we were going to get, but on the other hand we get some things more than we bargained for. For instance, we get a little more expense for maintaining the offices. But if you are going to work in conjunction with the nations of the world, whether it be in the League of Nations or in this kind of a league, some expenditure is necessary.

Mr. CALDWELL: I realize that you cannot put down in dollars and cents what you get in return; but what service do we get from this institute, and does the minister consider this is money well spent?

Mr. MOTHERWELL: In a few weeks we shall get the complete acreage of the world and statistics of the various cereals. That is compiled and centralized there and it is redistributed throughout the world. Every civilized country is in the League of Nations now and some that are not in the League of Nations are in this. David Lubin was the enthusiast that travelled all over the world with the idea in mind of organizing this institute. I had the pleasure of meeting him, and I was inspired to some extent by his vision of what could be accomplished. In the fall of the year it is worth while knowing where Canada stands in relation to other countries in the matter of cereal production. We discovered first through that source what our status was. We discovered two years ago authentically that we were the largest wheat-exporting country in the world. Statistics are sometimes not as reliable as they might be, but this is a really authentic source of statistics. I have never heard of it being disputed, and I consider for the amount of money we are spending, we get a reasonably good service. I understand that sixty-two countries participate in this activity.

Mr. STEVENS: I am going to suggest to the minister that we have been very patient and, I think, very moderate with him to-night. The hour is getting late. We sat very late last night, and I think we have sat very late every night this week except Wednesday when we did not sit at night. I would suggest that we might adjourn at this late hour.

Mr. MOTHERWELL: I feel so good natured to-night that I am ready to submit to anything that is requested.

Mr. MANION: We have submitted to a good deal.

Mr. MOTHERWELL: Let us finish this item.

Mr. CALDWELL: I have followed the work of the International Institute of Agriculture with a good deal of interest, and I am not as optimistic as to the value we are getting to-day as I was some years ago. For instance, I think the statistics we get are so

old before we get them they are not of very much benefit to the producer in Canada.

Mr. MOTHERWELL: We get them very promptly.

Mr. CALDWELL: I am quite sure of this statement, that there is a possibility that they are of more benefit to the speculator, let us say in wheat or commodities of that kind, than they are to the producer.

Mr. MOTHERWELL: It works both ways.

Mr. CALDWELL: If this information were made available to the producer so that he might know whether there was a shortage of cereals in the world supply or not, he would know better whether he should sell at the price offered or not. If some method were devised of making this more readily available to the producer or if the information were made available earlier in the season, it might be of more benefit to him. I am not, however, opposing the vote. This institute performs a useful function.

Mr. MOTHERWELL: My hon. friend has a popular misconception of the uses to which it may be put. When the statistics indicate a very large crop, that naturally has the effect of lowering the price. An abundance all over means as a rule lower prices. But when you get the other information, as we did last year, from a reliable source that the crop is quite short, this has the other effect. Up goes the price. The question is one of getting the information in a reliable fashion in this way or in an unreliable way through any other medium. This goes through the press in the regular way.

Mr. CALDWELL: I have in mind something that happened to us in the potato-growing section of New Brunswick in 1916, I think it was. It was when the Canada Food board was functioning. I will agree at once with the minister that the reliability of these statistics is all important. In that year a report was issued that there were to be 28,000,000 bushels of potatoes for export in Canada. Potatoes were selling in New Brunswick at $2 a barrel out in the field at that time which was in October. We had never exported more than 4,000,000 bushels prior to that. We were selling in the United States and Cuba, the United States market not being closed then by the Fordney duties. This had such a disturbing effect, that the wholesalers in the countries in which we were selling, believing we had such an abnormal crop for export, immediately dropped the price. They would not buy except for present requirements.

Mr. MOTHERWELL: It was not the institute that got out that report.

Mr. CALDWELL: No. The Canada Food board. I am speaking of the reliability of the statistics. Immediately after the report was issued, the price dropped to $1.50 a barrel, and within three weeks it went down to 80 cents and it continued so during the whole winter. Instead of exporting 28,000,000 bushels, we exported the usual quantity of 4,000,000 bushels, and there was a shortage in other places with the result that in April, after the New Brunswick crop was all sold, the price rose to as high as $7 a barrel because there were none to be had. That year I claim—and I have made this statement more than once in this House—that they beat the potato producers in New Brunswick out of a profitable price for their potatoes. It cost about $1.50 a barrel to grow them in New Brunswick and the price was 80 cents a barrel. If that report had not been issued, potatoes would have been selling at $2 a barrel. Our supply ran short in March and we did not have enough to supply the market during the shortage in other countries.

Mr. MOTHERWELL: Is that not an argument in favour of getting information through a really reliable source?

Mr. CALDWELL: Yes. But I think we should be absolutely sure of the reliability before the statistics are published. That report did us more damage in New Brunswick than we have recovered from since.

Mr. PRITCHARD: Has this item any connection with a vote passed this afternoon in regard to the grant to the Imperial Institute? That was in the estimates of the Minister of the Interior (Mr. Stewart).

Mr. MOTHERWELL: It has no connection. Each department runs its own show.

Mr. SPENCER: In the co-ordinating of these two departments, how many employees has the minister been able to let out?

Mr. MOTHERWELL: Three altogether, the director and two of the staff. We are retaining the librarian and three others, and the work is all under the assistant deputy minister.

Mr. SPENCER: Was the minister able by this to let out the institute commissioner?

Mr. MOTHERWELL: Yes, but that comes out of civil government. It does not show in this reduction.

Mr. SPENCER: Was he giving satisfaction, or was he let out because he was not giving satisfaction?

Mr. MOTHERWELL: I could give two or three reasons that would all be true, but the principal reason is that there was never any necessity for a branch there at all as far as I could see. As in some other cases, it was established for the purpose of giving someone a position. There was no justification for a separate branch.

Mr. CALDWELL: That is reason enough.

Mr. MOTHERWELL: I promised the committee last year that I would try to consolidate the work, and this I am endeavouring to do all along the line.

Mr. KENNEDY (Edmonton): Is not the institute largely a statistical organization?

Mr. MOTHERWELL: Yes.

Mr. KENNEDY (Edmonton): Why should it not be linked up with the Bureau of Statistics? It would seem to be a wise thing to have all the statistical branches of the government together.

Mr. MOTHERWELL: I discussed the matter with the Minister of Trade and Commerce (Mr. Low), but if I handed the work over to him it would inflate his expenses. It was discussed just before we were preparing the estimates and we decided to let it stay as it was. Of course, all information in regard to agriculture as well as other industries, so far as exports are concerned, is compiled through the Department of Trade and Commerce. That is where the director of this institute gets his information for transmission to Rome.

Mr. SPENCER: Did not the institute publish a Bulletin of Foreign Intelligence, advertising what was going on through the institute at Rome? If so, is that still being sent out?

Mr. MOTHERWELL: We ourselves do not publish any bulletin of this description; it is published at the head office at Rome and distributed throughout Canada. That is the part of the service they give in return for the money they get.

Mr. SPENCER: I was informed that formerly 13,000 copies were sent out. Has that number been reduced?

Mr. MOTHERWELL: There was a larger number previously.

[Mr. Motherwell.]

Mr. SPENCER: Is it the policy of the department to cut down this issue?

Mr. MOTHERWELL: We do not publish anything ourselves, as I say; it is the product of the office in Rome. We have not sent any representatives to the annual gathering these last two years, but when we do go there, if we think they are sending out too many copies, we can make representations to that effect. It has been considerably reduced.

Mr. SPENCER: Do I understand that the central office at Rome sends out these bulletins at the pleasure of the department and as many copies as the department wishes, and charges them to the department?

Mr. MOTHERWELL: An allocation is made to the sixty odd countries associated in proportion to the grant made, and the amount has been reduced of recent years to our requirement.

Item agreed to.

Progress reported.

EXPORT OF POWER

Right Hon. W. L. MACKENZIE KING (Prime Minister): I promised the leader of the opposition (Mr. Meighen) that I would lay on the table of the House, before adjournment to-night, the correspondence which he requested last night and of which he spoke at three o'clock this afternoon. I have here a copy of all correspondence, relating to the issue of a license to the Bridge River Power Company, Limited, for the fiscal year ending March 31, 1925. This correspondence was asked for by the hon. member for Vancouver Centre (Mr. Stevens). I came back to the House to-night ready to put on the table all the correspondence on the matter, and I have been trying to get in touch with my colleagues, the Minister of Railways (Mr. Graham) and the Minister of Trade and Commerce (Mr. Low), who have further correspondence in relation to it, but unfortunately I have not been able to get in touch with them in the last few minutes. I will undertake to see that the correspondence is tabled the first thing on Monday and that we do not go on with the discussion of this matter until there has been ample opportunity for hon. gentlemen to read it.

Mr. STEVENS: That will be satisfactory.

On motion of Mr. Mackenzie King the House adjourned at 11.20 p.m.

Monday, May 18, 1925

The House met at three o'clock.

EXPORT OF POWER

Hon. T. A. LOW (Minister of Trade and Commerce): I lay on the table of the House correspondence in connection with the application of the Bridge River Power Company, dated October 5, 1920, for the right to export power for a term of twenty-five years.

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals): As promised on Friday last, I lay on the table of the House certain documents in connection with Carillon dam, copy of lease of 1908, of lease of 1911, and of lease of December, 1921, with renewals thereof and applications for renewals.

CANADA—FINLAND TREATY OF COMMERCE

Hon. J. A. ROBB (Acting Minister of Finance): On Thursday last I promised the leader of the opposition (Mr. Meighen) to lay on the table certain correspondence regarding the trade treaty with Finland and also a statement of imports from the Netherlands to Canada. I now do so.

DEATH OF MR. T. H. THOMPSON, M.P.

Right Hon. W. L. MACKENZIE KING (Prime Minister): It is only a fortnight since mention was made in this House of the death at Ottawa of one of its hon. members from the province of Quebec. To-day it is our sad duty to record the loss of another hon. member, Mr. Thomas Henry Thompson, member for East Hastings in the province of Ontario.

Mr. Thompson's death occurred with tragic suddenness. Though not in the best of health, he was to all appearances hale and hearty when the House adjourned over the week end on Friday last. On Saturday morning, due, it is thought, to over-exertion, he suffered a heart strain from which he rallied for a brief time, but within twenty-four hours he had passed away.

Mr. Thompson was in his fifty-ninth year. He was first elected a member of parliament in 1917, at which time he was returned as the Conservative member for the constituency of East Hastings. He was re-elected in the general elections of 1921. Prior to his entry into federal politics he had taken an active part in the municipal affairs of his native township and county. He was reeve of Madoc village on more than one occasion, and for five years was member of the Hastings county council. In 1913 he was chosen warden of the county.

His business and commercial interests, especially as a manufacturer and buyer of cheese, gave Mr. Thompson a special knowledge of many branches of agriculture. For ten years he was a director of the Eastern Ontario Dairymen's Association and for three years he was president of the Madoc Agricultural Society. The knowledge thus acquired he turned to the advantage of all concerned, as occasion arose for the consideration of agricultural problems in this House. Mr. Thompson did not take much part in debate. Like the hon. member for Compton who predeceased him, he was one of those members who make their presence felt by the faithfulness of their attendance in the House but whose influence is not less great because so largely silent and unobtrusive.

Hon. members on this side will join with me in extending to my right hon. friend (Mr. Meighen) and those who sit about him, our sympathy in the loss of one who was a highly respected member of the Conservative party. May I ask, Mr. Speaker, that irrespective of party, you will convey to Mrs. Thompson and her daughters, on our behalf, expression of the sympathy felt for them in their great bereavement by all hon. members of this House.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): It was a distressing shock to myself to hear yesterday morning by telephone of the death of one of our colleagues in this group in the House, all the more so because I had personally no intimation that Mr. Thompson suffered from any disability. His closer companions amongst us were aware that for some time he had been afflicted, as was thought in a minor way, with weakness of the heart, but unaccompanied, so far as anyone knew, with any serious apprehensions as to his life. The suddenness of it all was the greater because within a few hours before, he had mingled with his fellow-members here, apparently in the best of spirits and of health.

The Prime Minister has reviewed Mr. Thompson's association with this parliament and, as well, has made mention of those things in which he had engaged prior to his entry here. Any office of civic honour that he did not fill was not within the reach of the man. He appeared to have freely gained and very long sustained the unbounded confidence of his fellow-citizens; and if a knowledge of the affairs of a constituency, an intimate acquaintance with all its activities, close, indeed familiar, information as to each and all of those whom he represented, constitute the best attributes and qualifications for a member of parliament, Mr. Thompson would in-

deed be hard to excel. There was nothing of value to the people of his riding that he did not understand as well or better than they, and he seemed to consider it his one duty here to reflect the mind of his people on all questions of public import. Nor was there anything that his industry did not apply itself to that he felt would be of value to those whom it was his privilege to serve. He enjoyed, as well, and of us still more emphatically, the affection of his fellow-members of parliament. Modest in demeanour, as modest as his career was creditable to himself, unobtrusive on the floor of the House, but ever at hand to serve, he gained the esteem of and finally became beloved by all.

It is with very, very deep feeling indeed, that I ask that we all do join in the message which you have been kindly deputed to send to his widow and daughters.

Mr. ROBERT FORKE (Brandon): Mr. Speaker, on behalf of the members who sit in this part of the House, may I add a few words to what has been said? The death of Mr. Thompson came with startling suddenness; he had done his day's work and has been called home—a striking reminder to all of us of the uncertainty of human life. As has been said, Mr. Thompson was a man who took an active interest in public life and had rendered great service to his community before he came to this House. I was not intimately acquainted with him, but judging from what I saw and what I know, I think that to know him was to love him. I am sure he was held in the highest esteem and respect by those who were intimately associated with him. Undoubtedly he was respected by all the members of this House. I hope, Sir, that you will convey to his wife and daughters our sincere sympathy in the great loss which they have sustained. May his memory be to them a comfort and a joy, that he was a good father, a good husband, and a good public servant.

Mr. DEPUTY SPEAKER: As requested, I shall immediately transmit to the bereaved widow and daughters the expressions of sympathy which have been extended to them by the hon. gentlemen who have expressed their tributes of esteem and respect for the deceased.

QUESTIONS

(Questions answered orally are indicated by an asterisk).

SOLDIER SETTLEMENT—INSURANCE

*Mr. SPENCER:

1. During the years 1922, 1923 and 1924, what did the Soldier Settlement Board pay in annual protection with regard to insurance in Alberta on (a) buildings on lands under contract to settlers; (b) on buildings situated on lands which have reverted to the board?

2. What was the percentage of repayments by settlers during the years above mentioned, where the insurance has been paid by the board?

Hon. Mr. ROBB: Mr. Speaker, I understand that the hon. gentleman has been in communication with his friends who desired this information, with a view to having the question modified. Perhaps he would be prepared to drop this question, and place a modified form of it on the order paper.

Mr. DEPUTY SPEAKER: Dropped.

SOLDIER SETTLEMENT—SADDLE LAKE

Mr. KELLNER:

1. Did the Soldier Settlement Board pay to the Department of Indian Affairs the sum of some $43,000 as an initial payment on the purchase of some 18,000 acres of land comprising a portion of the Saddle Lake reserve?

2. If so, by what authority was this done?

Hon. Mr. ROBB:

1. Yes.

2. Section 7, 10, Soldier Settlement Act, Chapter 71, 9-10 George V.

KEEFER PROPERTY, PORT ARTHUR

Mr. CARRUTHERS:

1. Was a building or buildings in Port Arthur the property of Mr. Francis H. Keefer, M.L.A., of that city, used by the government for any purpose during or after the late war?

2. If so, on what terms did the government enjoy the use of such?

3. What disbursements were made by the government in this connection, either by way of rentals, improvements, taxes, or other charges?

Hon. Mr. COPP:

1. Yes. It was used for convalescent hospital from March, 1916, until 31st May, 1920.

2. Rent free. Insurance premiums paid by the government $590.68.

3. Alteration to heating plant, electric services, plumbing, fuel, light, lumber and kitchen appliances, $1,386.72.

CIVIL SERVICE EXAMINATIONS—MONTREAL DISTRICT

Mr. MERCIER:

1. Is the government aware that the examinations of the Civil Service Commission for the Montreal district are held exclusively at McGill University, in the city of Montreal?

2. Is the government aware that the candidates who present themselves at each of the said examinations are in a proportion of eighty-five per cent French Canadians?

3. Would it not be advisable, under such circumstances, that said examination be equally held at the Montreal University, or at least alternately at McGill University and at the Montreal University?

Hon. Mr. COPP:

1. The Civil Service examinations have been held at McGill University, Montreal, for the last sixteen years, with joint presiding examiners, French and English. Arrangements have been made recently to hold examinations for French speaking candidates at the University of Montreal.

2. No specific information.

3. Answered by No. 1.

PROVINCIAL CONFERENCE—THE SENATE

Right Hon. Mr. MEIGHEN:

1. Does the government intend to recommend to the coming provincial conference to be called to consider changes in the British North America Act an amendment curtailing the powers of the Canadian Senate in the manner stated to the House of Commons by the Prime Minister on the 19th of July, 1924?

2. What other amendments, if any, does the government propose to submit to this coming conference?

Right Hon. Mr. MACKENZIE KING: Mr. Speaker, the government has not yet considered the agenda of the proposed conference with the provinces, but will do so in due course.

Mr. MEIGHEN: Will the House be given an opportunity of discussing any features of the agenda that hon. members might desire to discuss, that opportunity necessarily being based on the announcement of what the government's proposals are?

Mr. MACKENZIE KING: To be quite frank with my right hon. friend, I doubt if between now and the close of the session the government will have time to give that careful consideration which should be given to any such agenda. We have a good deal of business ahead of us, and I think we will have to wait until the session is over before we will be able to devote the necessary time to the drawing up of this agenda.

Mr. MEIGHEN: In that relation, may I suggest that it would be wise to postpone the conference? I would not think the govovernment would contemplate placing this country, as represented by the government, on record as requesting amendments to the constitution without the opportunity of previous discussion of those amendments in this House.

Mr. MACKENZIE KING: I assume, of course, that the government will not in any way commit this parliament at that conference, but will see that whatever recommendations are made by the conference will be subject to further consideration by the House.

R. H. GALE

Mr. BLACK (Yukon):

1. Did R. H. Gale of Vancouver interview the Right Honourable the Prime Minister suggesting that item for $2,000,000 for construction of a new grain elevator at Vancouver, be struck out of the proposed budget of expenditure for the Vancouver Board of Harbour Commissioners?

2. Did R. H. Gale of Vancouver interview the Minister of Public Works, Honourable Dr. King, suggesting that item for $2,000,000 for construction of a new grain elevator at Vancouver, be struck out of the proposed budget of expenditure for the Vancouver Board of Harbour Commissioners?

3. Dir R. H. Gale of Vancouver interview the Minister of Marine, Honourable P. J. Cardin, suggesting that item for $2,000,000 for construction of a new grain elevator at Vancouver be struck out of the proposed budget of expenditure for the Vancouver Board of Harbour Commissioners?

4. Did the Prime Minister, or Minister of Marine, or any other member of the government, invite the said R. H. Gale to assist in answering questions submitted in the House of Commons by Mr. Geo. Black, M.P., of the Yukon?

5. Is the government aware that sworn testimony was given in the Supreme Court in Vancouver stating that said R. H. Gale had advised the Prime Minister, Minister of Public Works and Minister of Marine to strike said $2,000,000 item from Vancouver Harbour Board estimates?

6. If said statement is not in accordance with the facts, will the government cause necessary inquiries to be made, and public retraction made if said statements are false?

7. If said statements are correct, what is the explanation of the government for accepting advice of said R. H. Gale?

8. Did the said R. H. Gale secure a very valuable foreshore lease from the Vancouver Harbour Commissioners at a very low rental, and sell the same to a grain company?

9. Is the government aware that at the said trial, it is alleged said R. H. Gale received 30 per cent of a two million dollar company for the assigning of the said lease?

10. Did the granting of the said lease to the said R. H. Gale receive the approval of the Minister of Marine, or was it approved of by order in council? If so on what date?

Hon. Mr. CARDIN:

1, 2 and 3. There is no public record of any interview but the recollection of the ministers referred to is that Mr. R. H. Gale discussed with them a proposal whereby additional elevator accommodation could be provided at the port of Vancouver by private capital, provided the Vancouver Harbour Commission would not insist on the construction and operation of all the elevator accommodation that would become necessary at that port. The government was at that time and is now of the opinion that if private capital should become available for the construction and operation of elevators, the public interest would not suffer by abstention by the Vancouver Harbour Commission from the construction of further elevator accommodation, at least until such time as it becomes evident that

necessity therefor has arisen. Negotiations carried on by Mr. R. H. Gale resulted in the construction by private capital of an elevator at Vancouver of a capacity of approximately 2,000,000 bushels and to that extent the government has been spared the necessity of providing elevator accommodation at that port out of public funds.

SASKATCHEWAN—CUSTOMS PORTS OF ENTRY

Mr. KNOX:

1. How many ports of entry are in the province of Saskatchewan?
2. Where are these ports located?
3. What was the amount of customs duty collected by each during each of the last five fiscal years?

Hon. Mr. CARDIN:

1. 32.
2 and 3.

BRITISH PREFERENCE ON SUGAR

Mr. McTAGGART:

On what date and under what authority was the British preference on sugar withdrawn?

Hon. Mr. CARDIN: British preference on sugar has not been withdrawn.

CANADIAN NATIONAL RAILWAYS—SALARIES $10,000 AND OVER

*Mr. DOUCET:

1. How many officials of the Canadian National Railways receive as remuneration $10,000 or more per year?
2. What is the total amount paid by the Canadian National Railways, in salaries or other remunerations which amounted in each case to $10,000 or more per year?

Hon. Mr. GRAHAM: Mr. Speaker, I think my hon. friend (Mr. Doucet) can hardly be serious in pressing this same question again. Already this session several questions along the same lines have been asked, and in the interests of the Canadian National Railway Board, and on their advice, I have declined to answer them.

On February 23 my hon. friend himself asked these questions:

1. How many officials of the Canadian National Railways are in receipt of a salary of $10,000 and over per annum?
2. What are their names?

I replied:

This is a question similar to others asked and which, in the interest of the Canadian National Railway Board, it would not be in the interest of the railway to make public.

I like to give all the information asked for, but this is a matter of business in which the people of Canada, through the Canadian National Railway Board, are endeavouring to carry on a commercial enterprise under great difficulties. The question refers absolutely to operation, and I think we have pretty well established the principle that matters affecting operation only should be very carefully handled when information is asked for. True, perhaps I fell from grace in this connection when the other day the hon. member for West York (Sir Henry Drayton) asked about salaries over $15,000. Now, to show the House that I had in mind on that occasion the idea of guarding against the appearance of just such a question as this, perhaps I may be permitted to read what I said. The question was:

1. How many officials or officers of the Canadian National system receive salaries or remuneration amounting to $15,000 per year or over?
2. What was the total amount paid by the Canadian National system for salaries or other remuneration amounting in each case to $15,000 per year or more in the year 1924?

This is the answer I gave:

Mr. Speaker, this is a peculiar question in that it seeks to have the Canadian National Railways give to the public information which no other railway company gives. It really is asking the railway owned by the government to do something that no other railway company in Canada is asked to do, or does, or, possibly, would do. I may say this, however. The management of the Canadian National Railways are very much averse to giving this information, for the reasons I have suggested. I have urged them to give it in this case, particularly as it relates only to the higher paid officials and does not include the employees in general. With that understanding—that it is not opening the door to a series of questions that will be handing the entire information as to salaries over to the public for use by other companies, information which if given would also give rise to endless jealousies in the staff itself—I am prepared to answer the question. The answer being confined within the limits I have stated, I do not think it will do any appreciable harm.

So I think the answer to the question asked to-day, Mr. Speaker, will have to be that the Canadian National Railway Board are fully convinced that it would be detrimental to the interests of the operation of the great national railway undertaking to give out such information as this, which, of course, would only lead to other questions of a similar character; and I agree with the management in that view.

Sir HENRY DRAYTON: Before my hon. friend finally disposes of the matter, I would ask him to be kind enough to read the evidence of Sir Henry Thornton on this point before the special committee of the House the other day. He was asked what would be the disadvantage of giving such information as this, and the gist of his reply—I am not giving the exact words, but I think my hon. friend will find that I am right in stating the gist of it—was that it would not be nice for employees to have their salaries talked about; it would not be nice to have it known that they were working so cheaply.

Mr. DEPUTY SPEAKER: I would draw the attention of the hon. member to the fact that this matter is not debatable.

Sir HENRY DRAYTON: I am not debating it. Of course I bow to your ruling at once, but I would point out that considerable latitude has been allowed to the minister in making an argument.

Mr. DEPUTY SPEAKER: No; he was giving certain reasons why the question should not be answered.

Sir HENRY DRAYTON: Usually a statement of reasons constitutes an argument; at least I should think so. Now, all I am asking is that the matter should not be finally de-

cided by the minister's answer to-day, and I am giving reasons why. However, if it is your view, Sir, that I may not do it, I will stop.

Mr. DEPUTY SPEAKER: That is my view.

Sir HENRY DRAYTON: I would simply draw attention to the fact that reasons were allowed to be given in the one case whereas in the present case we are not allowed to give them.

Mr. DEPUTY SPEAKER: The question is answered.

CANADIAN ENVOY TO THE UNITED STATES

Mr. JACOBS:

1. In what year was the office of Canadian envoy to the United States created?
2. Since the creation of such office, what sum or sums have been included in the estimates for the upkeep of the same?
3. Has the British government been consulted with regard to the creation of such office? If so, has it agreed to the same?
4. Is it the government's intention to fill the office? If so, when?
5. Is it in the interest of Canada that the office of envoy to the United States should be established?
6. If so, why has the appointment been delayed?

Right Hon. Mr. MACKENZIE KING: Had the hon. member for George Etienne Cartier (Mr. Jacobs) been in his seat, I would have asked him to bring these questions up when the estimates for the Department of External Affairs are under consideration. I think that would be a more appropriate time to deal with them.

Mr. DEPUTY SPEAKER: Stand, then?

Mr. MACKENZIE KING: No, I would like to have the question dropped, and if my hon. friend does not approve of that method he can reinsert it in the order paper at some other time.

Mr. DEPUTY SPEAKER: Dropped.

GRAIN SCREENINGS

Hon. Mr. STEVENS:

1. What was the yearly average price of screenings as quoted on the Winnipeg Grain Exchange for the grain years 1921, 1922, 1923 and 1924?
2. Has a standard been fixed by the Board of Grain Commissioners for screenings. If so what is the date of said order and title of the same?

Hon. Mr. LOW:

1.

	Per ton
Crop year 1920-21..	$3 50
Crop year 1921-22..	96
Crop year 1922-23..	3 06
Crop year 1923-24..	2 50

[Sir Henry Drayton.]

2.

Fort William, Ont.,
October 20th, 1924.
File 93:

To all Public Terminal
and Private Elevators:

Please be advised that the board has received from its inspection department, a report showing the result of the separation of samples of screenings taken from public terminal elevators during the month of September, 1924, and, on the recommendation of the Inspection department, the board has decided that, until further advised, when shut-out or other documents are surrendered for the delivery of screenings, such screenings should contain not less than 30 per cent of standard recleaned screenings and 5 per cent of mill oats.

Will you please be governed accordingly?

(Sgd.) F. J. RATHBONE, Secretary.

QUESTIONS PASSED AS ORDERS FOR RETURNS

MONUMENTS AND HISTORIC SITES

Mr. BLACK (Halifax):

1. How much federal money has been expended by the National or Quebec Battlefields Commission in monuments and historic sites in Quebec?
2. How much federal money has been expended for like purposes in the Maritime provinces?
3. What monuments have been erected in the Maritime provinces, and what was their respective costs?
4. Were the character, design and inscriptions of these monuments ever submitted to any government, historical authority, or historical society, previous to erection and, if so, did they meet their commendation?

UNDELIVERED DUTIABLE PARCELS

Mr. SPENCER:

1. During the years 1923 and 1924, what was the total number and estimated value of parcels passing between Great Britain and Canada, and subject to customs duties, that failed to reach the destination to which they were addressed?
2. What are the reasons therefor?

UNOPPOSED MOTIONS FOR PAPERS

KOOTENAY FLATS RECLAMATION

Mr. HUMPHREY:

For a copy of all letters, telegrams, memoranda, orders in council, and other documents in the possession of or under the control of the government of Canada or any department thereof, of date subsequent to May 17, 1924, relating to the proposed reclamation of the area in the province of British Columbia and the state of Idaho, known as the Kootenay Flats.

STORAGE OF ALCOHOL—REGINA

Mr. McQUARRIE:

For a copy of all correspondence, papers, telegrams and other documents passing to and from the Department of Customs and Excise, relating to the storage of alcohol in bonded warehouses at Regina since 1st January, 1923.

BUSINESS OF THE HOUSE—FURTHER LEGISLATION

RAILWAY FREIGHT RATES

On the Orders of the Day:

Hon. H. H. STEVENS (Vancouver Centre): Mr. Speaker, I would like to bring to the

attention of the Minister of Railways and Canals (Mr. Graham) the fact that the session is advancing and that although we shortly hope to hasten prorogation we have not received intimation of the nature of the legislation to be brought down regarding railway rates. This is a subject of profound importance in which large sections of the country are deeply interested. Can the minister give us any idea when the government propose to bring this legislation before the House?

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals): As my hon. friend says, this is very important legislation and requires careful consideration before it is brought down. It is not being neglected, it is being studied from every angle; and I assure my hon. friend that it will be brought down in plenty of time to have a full discussion and enable the House to prorogue not later than June 15.

AUSTRALIAN TREATY

On the Orders of the Day:

Hon. R. J. MANION (Fort William and Rainy River): In view of the remark just made by the Minister of Railways (Mr. Graham) that the House hopes to prorogue by the fifteenth of June—which I rather hope, too—may I ask the Acting Minister of Finance (Mr. Robb) whether a report published the other day to the effect that Mr. Ross, who is en route to Australia, will not arrive there until about the fifteenth of June, is correct, and if so, does the government not hope to deal with the Australian treaty before prorogation?

Hon. J. A. ROBB (Acting Minister of Finance): When a man embarks on a sea voyage he never knows when he will arrive at his destination; but Mr. Ross has left for Australia.

Mr. MEIGHEN: Has he embarked yet?

Mr. ROBB: I think so.

Mr. MANION: When, in the ordinary course of events, should he arrive in Australia?

Mr. ROBB: I have not before me the time table of the ship, but I will get the information for my hon. friend.

ST. JOHN RIVER POWER

On the Orders of the Day:

Hon. J. B. M. BAXTER (St. John City and Counties of St. John and Albert): I notice in the press that a very interesting discussion is taking place in Montreal regarding an application from the New Brunswick Hydro-Electric Commission for certain rights in connection with the St. John river as an international waterway. One feature of it struck me as very important from the point of view of the possible policy of this government. I notice that both the United States and the state of Maine are suggesting very strongly to the commission that no export tax should be imposed upon the power. I would ask the Prime Minister whether his government proposes to be heard or represented before the International Joint Commission, and what action they propose to take with regard to this demand from the United States and Maine.

Right Hon. W. L. MACKENZIE KING (Prime Minister): The government will be careful to see that there is proper representation before the commission. I have not in my mind at the moment the particular matter to which my hon. friend refers, but I can assure him that so far as the country's interest is concerned, it will be safeguarded.

Mr. MEIGHEN: Would the Prime Minister, when he has time to review what the hon. member has called attention to, tell the House to-morrow what he considers in relation to this matter the country's interest to be?

Mr. MACKENZIE KING: I have pleasure in promising my right hon. friend that we will give the matter consideration.

FLOOD IN THE YUKON

On the Orders of the Day:

Mr. GEORGE BLACK (Yukon): I should like to ask if the government have been officially advised of a very serious and disastrous flood at Dawson in the Yukon occurring within the past few days, and whether the government has received from its agent there an application for relief or other assistance, and if so, what action it is proposed to take.

Hon. CHARLES STEWART (Minister of the Interior): Yes, we are being kept fully informed of the disaster by the Commissioner. I am not sure that Mr. Lowe has not wired, but our information is coming direct from the acting commissioner. We have instructed him to take any necessary action, and as a matter of fact, he is doing so.

Mr. MEIGHEN: What action?

Mr. STEWART (Argenteuil): Any action that would protect life and property that is in danger at the moment, so far as it is humanly possible to do so. I may say that the flood is receding. We have notice

to-day that it is down four feet from yesterday.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I might add that I received a telegram from Mr. Lowe, the Speaker of the Yukon Council this morning, and I have just at this moment sent a copy of it, together with a copy of my reply, to my hon. friend. The telegram from Mr. Lowe asked that my hon. friend be favoured with a copy of his message, but I had not opportunity until this minute to send it to him.

IMMIGRATION AND COLONIZATION ACT AMENDMENT

Hon. CHARLES STEWART (Minister of the Interior) moved the third reading of Bill No. 112, to amend the Department of Immigration and Colonization Act.

Motion agreed to and bill read the third time and passed.

CANADA GRAIN ACT AMENDMENT

Hon. T. A. LOW (Minister of Trade and Commerce) moved the second reading of Bill No. 113, an act respecting Grain.

Mr. STEVENS: I am not speaking to the motion, Mr. Speaker, I simply wanted to ask the minister a question. I understand it is the intention of the minister to refer this bill to the committee on Agriculture.

Mr. LOW: Yes, that is the intention.

Mr. STEVENS: Would the minister before the House passes the second reading give to the House in outline some of the major amendments which are contained in this bill? It is an enormous bill, and I do not expect the minister to go through it exhaustively, but perhaps he would give some of the major principles that have been followed in the amendments.

Mr. LOW: I do not think I can add anything to what I have already said when the resolution was up. I outlined then the major changes in the act. The hon. member has the bill before him, and I have no doubt that he has noted the changes that are proposed. Some of the old clauses have been dropped, and some new ones have been inserted, and these new ones are all marked as new. It is my intention, after the bill receives its second reading, to move that it be referred to the committee on Agriculture.

Motion agreed to and bill read the second time and referred to the committee on Agriculture and Colonization.

[Mr. C. A. Stewart.]

SUPPLY

NATIONAL DEFENCE

The House in committee of Supply, Mr. Gordon in the chair.

National Defence—salaries, $675,798; contingencies, $50,000.

Sir HENRY DRAYTON: Would the minister kindly tell us what the expenditure was last year?

Hon. E. M. MACDONALD (Minister of National Defence): The situation in regard to the number of employees and expenditure is this: For the year 1924-25 the number of employees was 448, and the expenditure $694,555. The estimate for the present year is 432 employees, and the expenditure $675,798, being a net decrease of 16 employees and of $18,757 in expenditure. The gross decrease for the year amounts to $34,604, but from this figure the sum of $15,847 has to be deducted for statutory increases for 233 employees, leaving a net decrease of $18,757 over last year. In the outside service, which is covered by other votes, the number of employees in the department on December 31, 1923, was 67, and the expenditure amounted to $75,511. At the end of 1924, that number had been decreased to 54, and the expenditure to $59,927, or a decrease in number of 13 and in amount of $15,584. Outside of Ottawa the number of employees—this comes under other votes—at the end of December 31, 1923, was 808, and the expenditure $829,856. At the end of 1924, the number had been decreased to 778 employees, and the expenditure to $775,511, a decrease in number of 30, and in amount of $54,345. The total reduction in number during the year was 59, and in amount $88,686. The following reductions have taken place during the last four years.

	No.	Salaries
Jan. 1, 1922, Permanent employees ..	648	$ 962,472
Jan. 1, 1922, Temporary employees ..	1,750	1,645,992
Jan. 1, 1923, Permanent employees ..	595	920,196
Jan. 1, 1923, Temporary employees ..	943	907,548
Jan. 1, 1924, Permanent employees ..	558	883,248
Jan, 1, 1924, Temporary employees ..	746	694,548
Jan. 1, 1925, Permanent employees ..	599	925,392
Jan. 1, 1925, Temporary employees ..	643	555,479

There was thus a decrease of 49 permanent employees and 1,107 temporary employees. The total number was reduced from 2,398 to 1,242, a reduction of 1,156.

Sir HENRY DRAYTON: I did not ask as to the provision that was made—we can get that by looking at the figures here; what I asked for was the amount actually paid last year in the way of salaries.

Mr. MACDONALD (Pictou): The total amount paid for salaries last year was $648,773.

Mr. HANSON: The minister says there has been a total reduction in the permanent staff in four years of 49; but I do not understand that there has been any corresponding reduction in the amount of the salaries paid. Will the minister kindly inform me what the reduction, if any, has been in the total cost of the inside and outside service in the same period of time?

Mr. MACDONALD (Pictou): The amount is $37,080.

Mr. CRERAR: According to the figures given by the minister a moment ago the total number of employees on the payroll on January 1, 1924, was 558, and on January 1, 1925, 599. Will the minister explain how this happens?

Mr. MACDONALD (Pictou): The explanation is, that in accordance with the usual practice in all the departments, under the regulations of the Civil Service Commission, a number of temporary employees have been made permanent.

Mr. HANSON: Since the work of the department has been reduced to an almost negligible quantity, is it the intention of the minister to cut down the staff still further? I am informed by militia officers that the vote passed by parliament is so small—and I think the minister will agree with the statement—that very little useful work can be done among the militia units in the Dominion. If that be the case is it not possible to reduce the cost of the overhead of this department? Personally I have a good deal of sympathy with the department, and I should like to see it placed in a position to carry on its work properly; but inasmuch as parliament in its wisdom has not seen fit to grant the minister the necessary money to do that, I think the overhead should be cut down. What are the views of the minister on the subject?

Mr. MACDONALD (Pictou): It is in the interest of the country that the department should be maintained in such a position that if the necessity arose we could adequately perform our duty to the nation. With regard to the question of expenditures for these various services, the permanent force has been decreased to a certain extent in numbers, but we are preserving it in a fairly good position. As to votes for militia services outside, these have been cut down to a very great degree. However, it has been represented to me, particularly by those who are interested in the maintenance of the artillery service throughout the country, that as a result of the economies which the department has put into effect that force has become paralysed practically, owing to its inability to obtain that training with the guns which is essential to maintain it in proper order. I have received letters from a great number of members of parliament in regard to that subject, and I would be very glad to know what the sense of the House is on that question. I am sure the House will agree that it is the duty of Canada, like every other country, to maintain its military and naval establishments in such a condition that if it became necessary for the defence of our own interests those establishments could be expanded. Just now when taxation is being imposed upon the country to a greater degree than ever before in Canadian history I am one of those who think that, while we should maintain our organization, it is not proper to ask for large amounts of money from this House or to impose further burdens upon the people. At the same time I am not one of those who think that sweet peace is likely to be permanent. My visit to Europe last year and to the League of Nations impressed me most forcibly with the fact that at any time a condition may arise in Europe which will bring about another conflagration, which, while it might probably not be as great as the unfortunate war which broke out in 1914, would nevertheless involve a great many nations. For that reason I think we should maintain our organzation.

Mr. CLARK: In view of the minister's statement that there is always a possibility of further conflagrations, not only in Europe but the world over, why is proper provision not made for the units in this country to carry on at the present time? I think there are something over 250 units which receive for their annual training and administration sums not in excess of $2,000, and are required to find out of their own pockets anywhere from $6,000 to $10,000 a year to enable them to carry on.

Mr. GARDINER: I rise to a point of order. I believe we are discussing civil government estimates, and the remarks of my hon. friend would not come under the head of civil government.

The CHAIRMAN: I draw the hon. member's attention to the fact that civil government items deal with everything relating to the policy of the department. It is the one vote that is most general in its character and under that vote practically everything relating to the department or to the policy of the department may be dealt with. It is the one item that may be called really general.

Mr. CLARK: I am not discussing at this moment the general policy. I am asking the minister, in view of his own statement of the possible dangers that confront the country, why does not the country make proper provision for the training of the units which it has authorized and which are organized in the country? Why does the country ask those commanding officers to contribute their own funds? Why will members of parliament support a policy which makes it necessary for individuals to contribute out of their own pockets four times the amount this country contributes for their training?

Mr. MACDONALD (Pictou): I am well aware of the great sacrifices which are being made from year to year by the officers of the militia forces. They carry on these organizations at great expense to themselves with very great unselfishness and patriotism. That is a matter which is not fully realized throughout the country generally. Anyone who has had to do with the administration of this department, or who knows anything about dealing with these questions, knows that my hon. friend is right in his statement as to the unselfish conduct of the militia officers. As to how much they spend in comparison with the amount of this vote I am unable to say exactly; but I know they have been very generous in helping to maintain the militia. So far as the infantry is concerned, we are able to maintain that organization, and to give a number of days' training under the vote which we have in the estimates, but I confess that I think the situation with reference to the artillery service requires consideration. That service developed tremendously during the late war, and the officers connected with the service throughout the country generally are splendid men, who took a very great interest in the extremely technical work that is necessary to be mastered in order to become efficient military officers; and the representations which have been made to me with reference to the position of that force are to the effect that, in consequence of the limited amount of money that we have been able to devote to the maintenance of the artillery, there is danger that these corps in certain portions of the country will have to disband. I am considering the question of placing in the supplementary estimates an amount to deal with this matter. However, every minister who is responsible for the administration of affairs to-day experiences great difficulty when requests come in from various portions of the country with regard to what seem to be very necessary and important matters, inasmuch as we necessarily hesitate when we come to consider the fact that all this money must be obtained by taxation; for the burden of taxation upon the people of the country to-day is very great, and every proposition must be approached with a full regard for the responsibility involved in the expenditure of every dollar of public money. That is the way I feel in regard to administering this department, although I would be anxious, if it were possible, to spend further sums.

4 p.m.

[The Chairman.[

Mr. MacLAREN: I think there are many governmental departments where economies can be carried out and less expenditure made at the present time; but I make one exception, and that is the Department of National Defence. I do not think we can reduce expenditure in this department and still maintain a reasonable efficiency. On the contrary, I think that this department has reached the stage where less money is being spent upon it than is really in the public interest. The defence of the country is just as necessary, or perhaps more necessary, than any other feature of governmental work. The minister has asked for an expression of opinion regarding the training of the artillery. We are aware that men all over the country have been urging that sufficient opportunity be given for artillerymen to receive their training. It is not a training that can be acquired in a short period; it is a skilled department of the militia which requires to be kept up by regular practice and in sufficient numbers. I believe that if an adequate vote is not provided for the artillery in the end the country will suffer. So far from being an excessive expenditure, if the vote is not passed it will be a serious loss, because we will lose those men who have had training and those men who may now receive the training in the future, which will leave us in an inferior position. I believe the minister will receive generous support if he sees his way clear to increasing the allowance for the artillery. While I speak in this way in reference to artillery, I am speaking also generally. While care and economy should be practised in all departments, I do not see how we can reduce the number of men receiving annual training at the present time.

Mr. HANSON: I desire to add a word to what has been stated by the hon. member for St. John and Albert (Mr. MacLaren). In the province of New Brunswick during the last few months the artillery officers are very keen about the service and nearly every one of them was a returned war veteran; they are all desirous of seeing that branch of the service kept up to the proper level. If I

recollect aright, they passed a resolution, the effect of which was that unless there was some further appropriation for the service it would be impossible for them to carry on, and I was among those to whom this resolution was sent. I had the honour of forwarding it to the Minister of National Defence. I believe it was received sympathetically by the minister, and I hope he will be able to place something in the supplementary estimates, as he has indicated, in order to do something for the artillery. I think this branch of the service should not be lost sight of. It is just as important—perhaps more so, especially along the coast—as the infantry branch of the service, and I think that in following the course indicated by the hon. member (Mr. MacLaren) the minister will have the support of the best sentiment of the people.

Mr. CLARK: I shall say just a few words in support of what the minister has stated as to the need of the artillery. If the artillery does not get support we might as well dispense with it; and in making these remarks I want to appeal to hon. members, especially those who believe that we should be prepared at all times to defend our country and that if the time ever comes, misfortune though it might be, for us to fight again, we shall have the courage to do just as we did before. I appeal to these hon. members because the defence forces of Canada are in a pitiable condition. The minister has stated that there is need to give further support to the artillery, and I agree with him; if you do not supply the artillery with the ammunition with which to practise then it is hopeless to expect to train an efficient force in that branch. The minister also stated that there was provision for the infantry. Well, I know of my personal knowledge that there is not provision for the infantry; there is provision for the training of one hundred men in each unit in the infantry, but that is not sufficient. Such provision is just sufficient to discourage officers and non-commissioned officers who are capable of training men; it will only serve to diminish the interest they take in the defence forces, to dampen their ardour, and to make them feel like quitting.

It was the infantry I had in mind particularly when I said that the officers of the units in Canada had to go down into their own pockets, or to depend upon public support, to get the money that is necessary for their training. I have somewhere among my papers, and I shall be glad to give it to the minister, a detailed statement showing the annual expenditures, absolutely cut to the bone after various consultations, in a militia unit in the city of Vancouver. In that particular unit, the sum required annually amounts to $8,000. And they receive $2,000 from the country with which to carry on. That sort of thing is hopeless. The training of one hundred men is not sufficient. I am not personally identified with any unit in Canada, being now on the reserve; so that I have no axe to grind for any particular organization. But I know the condition that exists; I have gone into it carefully.

Let us reflect for one moment on the advantage it would be to us to have a thoroughly trained body of men if the defence forces of Canada were ever called upon again to go to war. In the Great war, while the Canadian forces were given credit for having done almost impossible things—and they did do almost impossible things—it was not until late in 1916, over two years after the outbreak of war, that the Canadians were able to put a complete corps in the field and fight as a unit from Canada. If we had not been dependent on the Mother Country and the Allies, what sort of war would Canada have fought? We should have been crushed before we started. Now, as a result of training, casualties can be avoided; on the other hand, owing to lack of proper preparation, every force that went into the field not thoroughly trained suffered casualties untold. A comparison might well be made between the Canadians, after they were able to fight as a unit, and the Americans who came into the field, much as we entered in the early stages, inexperienced and untrained. If hon. members will make the comparison between the accomplishments of the two forces under such conditions they will find that the achievements of the Canadians in the last hundred days of the war were almost as great as those of the Americans, despite the fact that the latter had, I suppose, ten times our force. And this was due to the experience which the Canadians had gained through training and discipline.

With a backbone in Canada to-day of officers and non-commissioned officers of experience, the foundation can be laid for a defence force which, with very little training, could take the field in case of emergency. But if we allow the force to go to pieces, as it is unquestionably doing to-day, then should another war occur Canada would enter it much in the same condition as she entered the last war. And, proud as we may be of the showing which this country made in that war—and undoubtedly individual battalions and individual divisions did admirably—it is

nevertheless lamentable that as a unit Canada was unable to make a showing within a period of two years. The only way therefore that Canada can prepare herself for any similar emergency is to give proper and decent support to her defence forces.

Furthermore, the cost will not be much. To-day the vote for annual training is something like $1,000,000, and if that were increased to $3,000,000 or $4,000,000 a great deal could be done towards the efficient training of the forces. It has been said that taxation is severe. I agree; and I think that we could find innumerable places where the expenditures could be cut down or perhaps done away with altogether. We are voting money for grain elevators and railways in connection with which, with careful consideration, we might save many millions. But when it comes to something for our own defence then we are apathetic, we are not very enthusiastic about our duty. The first duty of every man is to his country; and this is the opportunity to do something to show that our hearts are right.

Mr. SPENCER: Where would the hon. member suggest cutting down grain elevators?

Mr. CLARK: I have not suggested any place in particular nor have I specially looked into that matter. I am not discussing the question of any particular grain elevator, although my own city is vitally interested in grain elevators. I mentioned this as something which I should probably advocate for my own city. But I do not care whether it be grain elevators or railways or anything else; if you look over the estimates you will find from beginning to end innumerable places where you might reduce them by millions. And I say that this is one direction in which neither Canada nor any other country can afford to be niggardly. At a recent dinner a Canadian officer was deploring the very condition which I am now deprecating; he referred to "O Canada!" and he said something like this—"O Canada! We stand on guard for thee—at a lower capital cost than that of any other country in the world except Bolivia." That is the record of Canada, and it is something that is most lamentable if we are really patriotic and desire to see our young men trained so that in case of emergency they may be able to defend their country.

Mr. GOOD: Mr. Chairman, you have just stated that this is the opportunity we should take to discuss the general policy of Canada with regard to military affairs. I do not think there is any difference of opinion in this

House as to the desirability of defence, but there may be all the difference in the world in our opinion as to what is the best means of defence. I would suggest to hon. members that before we get too far into the subject we should give very serious consideration to the basic question—as to whether or not after all, we are better defended by being defenceless in the ordinary acceptation of that term. Even if we admit—which I do not—that the best method of defence is by naval or military preparations, there are all kinds of such preparations that might be considered defensive. Reading a pamphlet issued by the Navy League some little time ago I noticed a statement to this effect:

> From the point of view of Canada, we may as well put the idea of invasion out of our heads. It does not enter into the question. But the protection of trade should indeed receive most careful and studied consideration by both people and parliament.

I cite that merely to show that even this league, which stands for active defence by physical means or armaments, argues that Canada does not need to consider the danger of invasion. If that is admitted, it makes a great deal of difference in our discussion of what would be the best method of defence.

Mr. CLARK: Just what difference does it make?

Mr. GOOD: I do not know that I am called upon to answer that question, but it certainly would make a great deal of difference. For instance, if there were no danger of invasion we would not need to have, as I take it, a large army.

Mr. CLARK: Does my hon. friend suggest that we have a large army?

Mr. GOOD: I do not suggest that we have or that we ought to have. I simply rose, Mr. Chairman, to draw the attention of the House to the propriety of deciding in our own minds as to what after all is the best kind of defence. Later on in the debate I may have something to say on that question, but now I merely submit that it is a basic question, and before we make assumptions it seems to me we ought to be certain that those assumptions are at all events tenable and to some extent justifiable.

There is another subject, Mr. Chairman, which I should like to see discussed, but I am not sure whether this is the proper time to bring it to the attention of the House. I have recently received a very interesting, indeed a startling pamphlet, written by John S. Ewart, entitled "Canada and the Next War." It contains statements as to the present position of Canada and her obligations which I think are of paramount importance.

Perhaps this is the proper time to discuss it, but I will leave the subject for the moment.

Mr. CLARK: May I ask the hon. gentleman whether he agrees with the expressions of opinion in that pamphlet?

Mr. GOOD: I am not discussing the contents of the pamphlet for the moment, Mr. Chairman.

Mr. MacLAREN: Could the minister give us information as to the number of men who are to receive annual training this year; the number who were trained in 1913, the year before the war; and similar figures for an intermediate year, say, 1920?

Mr. MACDONALD (Pictou): It would be more advantageous if my hon. friend would wait till we come to the item particularly relating to the militia. My officers tell me they have not the information going back that far, but I will get it for my hon. friend.

Mr. MacLAREN: I want it merely for purposes of comparison.

Mr. MACDONALD (Pictou): Yes.

Mr. FORKE: Mr. Chairman, the military men have had their innings in discussing this question. It seems to me that perhaps the military mind does not always view it just exactly the same as the civilian mind does. Sixty thousand Canadians laid down their lives in "a war to end war." I want that phrase to sink into the minds of hon. members to my right, who have been talking about the "next war"—sixty thousand Canadians laid down their lives in a war that was to end war; now we are busily talking about how we are going to raise another big army to go to war again. Just as long as we have discussions of this kind in every country under the sun we will have war. If we spend our time on the problems of peace, spreading the gospel of peace and showing how peace can be brought about, we will accomplish a great deal more in preserving peace than we can ever expect to by talking about preparing for war. Whom are we going to go to war against I want to know? Who are our enemies? Where is the hostile force that is hovering on the borders of this Dominion ready to attack us if we have not a large army to defend ourselves?

Mr. CLARK: May I ask a question?

Mr. FORKE: A dozen, if you please.

Mr. CLARK: Did my hon. friend or any other human being in the world know whom we were going to war with in 1914?

Mr. FORKE: We had a pretty good idea. From what we read in the newspapers for years preceding 1914 we knew that military preparations were being made on a large scale, that in fact Europe was an armed camp, and that war was bound to come.

Mr. CLARK: Does my hon. friend recall the Prime Minister of Great Britain announcing in the Imperial House of Commons not more than a week before war broke out that there was no danger of war?

Mr. FORKE: Did you ever see a small boy with a toy who did not want to use it? Military men are just grown up boys, and they want to see how their "toys" will work, they want to use them. Those in control of huge armies want to try them out. Canada is the most happily situated of any country in the world to teach the uselessness of war.

Mr. CLARK: Did the British Empire want to try its army out?

Mr. FORKE: I do not wish to carry on a dialogue with my hon. friend.

Mr. CLARK: You invited me to ask a dozen questions. Having asked only three, I have another nine still coming.

Mr. FORKE: I believe it is quite right to have a skeleton army of the smallest possible size to take care of any internal disorders that may break out, and to do its share if the country is ever attacked, which I think is a very remote contingency. I believe that if we attend to our own business and keep the banner of peace unfurled there is very little danger for a long time to come of this Dominion being invaded. I have every respect for hon. members to my right who were engaged in the late war and realize the dangers resulting from national unpreparedness, I have also considerable sympathy for their trend of thought. But, Mr. Chairman, I sincerely believe that if we talk peace, prepare for peace, and look for peace, we will get peace; and I am convinced that if we talk war, prepare for war, and look for war, we will get war. I would cut this vote down to the lowest possible minimum, just continuing our present forces without enlarging them to any extent whatever. It seems to me that if we had twice as much money to spend just exactly the same arguments might be brought forward by hon. gentlemen to my right in favour of a still larger expenditure. What is "adequate protection"?—to use a phrase familiar in tariff matters. One member might answer, a force of a hundred thousand men, while another would be con-

tent with fifty thousand men, and so on. There never will be any concrete idea of what actually constitutes adequate protection in a military sense. We cannot compete with the great military nations, neither could we defend ourselves against them. Personally, I have sufficient faith in human nature to believe that if we attend to our own business and, as I said before, look for peace, we will get peace. I would not be in favour of augmenting this vote by one single dollar.

Mr. HANSON: The hon. member for Brandon has entirely misapprehended the argument advanced by members of this group. No one suggests that Canada should maintain a large standing army. Such a thought was not expressed here this afternoon or at any other time, and it is not fair to suggest that that was the argument we put forward. What we have suggested is this: Canada is spending less per capita to-day upon national defence than any other civilized country, and the minister's own remarks bear out the statement that has been made throughout the country that the vote is so small that it is not possible to maintain even the skeleton service that is required in the case of the artillery. Artillery officers who have put their hands in their pockets year after year to provide funds since this vote was reduced to such slender proportions are getting tired of this sort of thing. I wonder if the hon. member himself is satisfied that militia officers, men of high standing in his own province and in other provinces, should be obliged to contribute from their own private funds in order to ensure the existence of a skeleton force. Artillery officers in my own province tell me they are going to abandon the whole thing if they do not get enough money to enable them to train at least once in two years a sufficient force of men to keep the skeleton organization going. We have not even got that, and that is all anybody is asking for. I do not think the hon. member is doing himself justice or that the patriotic people of Manitoba will back him up if they understand exactly what the situation is and what hon. gentlemen in this corner of the House are asking for.

Mr. LADNER: Has the minister considered a proposal originating from the Air Force Club of British Columbia with regard to the establishment of a reserve air arm by way of supplementing the existing Royal Canadian Air Force? The proposal is contained in a resolution adopted by the club and forwarded by Major Bell Irving, its president, to members of the House and to the minister. The gentlemen making this suggestion are competent by experience and by training to express an opinion of value on the question, and I would be interested if the minister could tell the committee whether the proposal is considered to be a practicable one and whether it will be gone ahead with.

[Mr. Forke.]

Mr. MACDONALD (Pictou): The suggestion that came from Vancouver through Major Irving has been submitted to the officers of my department having to do with the air force. I shall be glad to bring down, when we come to the vote for air services, the memorandum which was submitted to me in that connection.

Mr. BAXTER: I do not wish to plead for any waste of money, but I want to make a suggestion to help the minister to prevent the waste of money. If you go below a certain point in the training of artillery it would be better, I think, to abandon it altogether, because what you do is nothing but a waste of time and money. As my hon. friend (Mr. Hanson) has said, artillery officers in his province have contributed pretty largely of their private means in connection with the work of the artillery unit. They do that for certain purposes in connection with training, but they cannot do it to the extent of providing shells, and an artillery unit that is trained without actual experience in firing at a target is not worth keeping up. This material must be supplied, otherwise the whole scheme is abortive. The artillery officers are saying that it would be far better to drop the whole thing than to give them so little that they cannot produce any effective results. I would like to quote from a letter I received on this subject from a very enthusiastic artillery officer who took part in the South African war and in the Great war as well. He says:

> The portion of the national defence vote allotted to the training of the entire artillery forces of Canada for 1924 was approximately $57,000, and a similar meagre expenditure is proposed for the coming year. An amount of $400,000 was voted in 1924 to cadet corps work.

I am not criticizing the vote for the cadet corps, but if we are to have any talk about militarism and the old cry of "Shall I train my boy to be a soldier," it would be far better to direct such comments to the activities of the cadet corps than to the artillery, which must be a necessary part of Canada's protective force if we are to have any force at all as a part of the force which must be called upon for immediate duty if anything happens. My friend says further:

Though the militia officers appreciate the value of such training, it does appear as a most disproportionate amount in view of that expended on artillery. The training for last season, which is proposed for the coming season, is, in the unanimous opinion of all commanding and senior officers, from the Atlantic to the Pacific, absolutely inadequate to maintain the esprit de corps and efficiency of the Canadian artillery. It is the serious belief of such officers, and the unanimous opinion of the Canadian Artillery Association that should such training not be improved upon, it would be better to cease training altogether, until such time as sufficient training grant can be obtained.

Then he points out that the Canadian Artillery Association, at its annual meeting on the 26th of February last, embodied these views in a resolution, which, I have no doubt, has been communicated to the minister. He is of the opinion that an additional sum of not less than $200,000 is required to train the batteries as they were trained in 1923. A large part of the money is not only for material but for transportation charges, and those transportation charges largely go to the Canadian National Railways. I have no doubt that the minister has had this matter brought before him repeatedly from many quarters and that the representations put forward have met with his personal sympathy. I think his real difficulty is to convince the representatives of the people that it is worth while to do something for this particular branch of the service.

I want to ask the attention of the committee to a matter very far removed from the one I have been discussing, and one which is much more pertinent to a discussion of the civil list in connection with national defence. It is a matter I have already taken up with the minister, from whom I received a careful and sympathetic hearing. I am not speaking to-day to criticize the minister, but I am going to criticize some of the men—and I do not know what particular men they are,—for whom we are voting a part of this civil list. As I have said, I believe it is worth while to keep up national defence in Canada.

I can hold that view and at the same time I can reprobate what so often occurs—that a man because he is dressed in a uniform thinks he is justified in being an absolute autocrat in his attitude toward his fellow creatures. The man in the ranks has as good a right before this parliament as the officer at his desk, and I want to call the attention of this House, because there seems no other remedy for it, to a case of flagrant and prolonged injustice which has resulted in a young man being debarred from honest employment which ought to be open to him if he is telling the truth, and if he could get justice. It will not take very long—because I have made a memorandum of the case which I have already presented to the minister—to lay the facts before the House, and in that way before the country. I can get no other remedy but that of publicity, but this young man shall at least have that. His name is John Joseph Quilty, born on the west side of the harbour of St. John, New Brunswick. He was a railway employee with the Canadian Pacific Railway. At the time of conscription he was exempted on the ground of railway service. His serial number was 678783 E.C. The certificate stated that he was exempted until he ceased to be employed as a railway clerk. Now mistakes are not uncommon in any line of business, and Quilty in that certificate should not have been called a railway clerk. He never was one; he was a railway fireman. Nothing perhaps turns on this mistake except that it shows the possibility of innocent mistake, and unfortunately other mistakes occurred with regard to Quilty which he has never been able to get rectified. I have personally seen a document issued by local tribunal No. 35 in which Mr. Quilty is described by serial 678-783 and consecutive number 528. It exempted him while in the railway employ. It is dated 21st December, 1917, and is signed by J. F. Owens and C. B. Lockhard. Both of these men and their signatures are well known to me, and there is no doubt of the genuineness of this document. Now up to that point Quilty was exempt.

Mr. Quilty tells me that a statement was posted in the Canadian Pacific railway yards Bayshore, West St. John, that these exemptions would continue, as there were limitations of time, I think, in nearly all the railway certificates which were issued. He alone of all the men received a notification that he must appear and report for service. He did so, as he says, on 7th May, 1918, but the military record shows his enlistment on 6th May, 1918. He tells me that at that time no medical sheet had been received by the depot battalion. It appears from the records, that on the 15th May, 1918, the medical sheet was produced, showing that he had been examined on 3rd October, 1917, and it also appears from the records, that he was examined by a medical board on May 6th, 1918. The earlier examination, of course, would be in connection with liability to service. His statement is that about four days after reporting he was told to sign some paper, which was probably an attestation sheet and that he was assigned to "A" Company. He claims that he was never issued any uniform and that while he occasionally reported, no

employment was given him, and one day when the men were formed up for inspection, or as he terms it "lined up for exempted men" he was told, by a Sergeant McIntyre, to "step out with the farmers." He says that his name was never called at any roll call. Later —he was unable to fix the date—he says Sergeant McIntyre told him he could stay at home until he was sent for. In connection with his exemption there is a possibility of some confusion. He had a brother Charles, who was a clerk in the employment of the same railway company. This brother was conscripted, went to the front, and made the supreme sacrifice. I am not aware that J. J. Quilty's exemption was ever cancelled, though I am not in a position to speak positively on that point. He says he never received any notice of cancellation, but simply the notice to appear and report for service. Now if his exemption never was cancelled he was under no liability to service, but that is not the most important thing in his case by any means. It is quite clear from the military records, that on 15th May, 1918, Quilty signed a recruit's declaration, as a draftee under the Military Service Act. On the same day he signed a form of will.

On the 12th of August, 1918, a court of inquiry was held at Camp Sussex, some forty-four miles from the place to which Quilty had repared for enlistment. The court found that Quilty had illegally absented himself, without leave, on 15th May, 1918, the very day that he made his declaration and signed his will. One of the witnesses says that his kit was reported deficient, as stated in the evidence of C.Q.M.S. Hardy on the 17th day of May, 1918. It seems very strange that Hardy's testimony states that any articles were missing. It is evident that Quilty's statement that he was never issued a uniform is true, as the court's finding declares there was no deficiency, —another blunder in this evidence, not serious perhaps, and I do not wonder at mistakes occurring with the tremendous rush there was at those camps, but I do not want a blunder to blast a man's life.

No steps were ever taken to apprehend Quilty or to compel him to serve. On June 7, 1920, some two years after this occurrence, the Pension department of the Canadian Pacific Railway sent to the Militia department for inspection what purported to be a discharge certificate held by Quilty No. 326278.

On 16th June of the same year the Director of Records wrote to the District Record Officer sending this discharge certificate, which he states is thought to be a forgery. He pointed out—and this is an exact quotation from the correspondence on the subject—(1) That it does not bear the headquarter's stamp; (2) That the form is obsolete; (3) That from comparison of the handwriting, it would appear that Quilty made out his own discharge; (4) That there is no record of any discharge in orders; (5) That the signature of Quilty on his regimental documents appears to be identical with his signature on the discharge certificate; and (6) that there is no record of such a number as 326278. The District Record Officer replied to the Director of Records at headquarters on 28th of June, 1920, saying that from all appearances the discharge certificate is a forgery, as there is no record of same having been issued in that district. He attached a specimen of Major H. H. Smith's signature, Major Smith being the officer by whom the certificate purported to be signed. There is a photographic copy of the discharge certificate attached to the return of the papers in this case. It is signed by Quilty, as it should be. All the filled-in part is in writing, except the case of discharge, which is typewritten and is in these words "being no longer physically fit for war service K.R. & O. 392 XVII." It is suggested, of course, that Quilty, who is a man of no great education, knew enough to turn up the King's Regulations and Orders and find this paragraph and put it in there as the proper thing—an utter absurdity to any one who knows the young man. The description of age, height, complexion, eyes and trade, with a description of identifying marks, are all typewritten. The identifying marks are entered "nil." Now nil is a word that Quilty would never think of using. I am satisfied he would not understand it and the description does not correspond with Quilty's medical sheet.

Knowing the man as I do, it is simply incredible that he can have assigned to himself a number, which by the way was neither his regimental number nor that of his Military Service Act record; that he can have filled in part of the form with a typewriter, which I know he cannot use; that he can have filled in the remainder of it in a handwriting entirely different from his own, nor that he can have signed it in another handwriting. His handwriting is of a character—I could show hon. members copies of it—it is the handwriting of a man who can write only one hand. The signature on the discharge certificate certainly clearly resembles that of Major Smith, the district officer. If it is a forgery, I would say it is a mighty good one, and it differs very materially from the portion of the certificate which is filled in in handwriting. No one would accuse the same person of having filled it in and signed it, unless that person was a very competent forger.

Now I ask you to add to these things the difficulties a man in Quilty's position would have to encounter, a man not employed in a regimental office, in the way of getting hold of the parchment form, as well as perhaps the greater difficulty of getting at the necessary records from which to fill in the material portions of the document. It is true he might have been in collusion with some man that could do these things. That is a possibility, but I do not think it is fair to assume this possibility against this man. The brass hats have done so. I want a trial by a jury of his countrymen, and not by brass hats. This certificate is dated 2nd May, 1919, nearly a year after he had enlisted. In other words he had been at camp Sussex where the decision of a court martial had rendered him liable to imprisonment and he is supposed to have forged, or obtained the forgery of, a certificate a year afterwards, as if that would do him any good. Not one of the considerations I have pointed out appears to have been present in the minds of the officers asked to report on this subject. The Adjutant General wrote to the Canadian Pacific Railway Pension department on 16th July, 1920, saying that the case had been thoroughly investigated by the District Record Officer of No. 7 district. He stated that the discharge certificate was a forgery and that—I quote his note—"the handwriting on this certificate is similar to that of the soldier, marginally noted (Quilty) who was struck off strength as a deserter at St. John on 15th May, 1918." If he means the signature it is similar, of course the man put his own signature on; he was directed to sign. If, however, he means the body of the certificate he could not have looked at the document because it is absurd to say that the handwriting on the signature, with the exception of Quilty's own signature, is similar to Quilty's handwriting. The most casual or the most careful inspection would demonstrate the difference. He was advised that the discharge certificate, being a forgery, would be retained by the directorate.

Now, the action of the department—the casual, careless action of the department—resulted in Quilty's dismissal by the Canadian Pacific on the ground of his having been illegally absent from service, and the man who before the war was working in the employ of this railway was dismissed. He was no deserter, according to his story at all events; he was no shirker. He was exempted, under the law made by this parliament, which provided that the railway services of the country should be carried on by men just such as he. He gave up his discharge certificate, or what he thought was his discharge certificate, so that it might be investigated. He has never up to this hour been able to get that document back; the department have impounded it and he cannot get it. I have seen in a return to this House a photographic copy of the certificate, but the man himself cannot get hold of it. While he has not been directly charged with forgery, it would have been far better, far fairer, and far more manly to have charged him with forgery. Then he could have got a fair trial by somebody who would not have had, at least, the prejudice of a military caste against the man. He is treated, however, as one in possession of a forged document apparently concocted for his own advantage. He is blacklisted by the railway, and has never had an opportunity to explain his conduct, his possession of the certificate, or to justify himself in any way. He has lost the advantages which, as a young man, he had in connection with an important branch of employment.

I personally brought this matter to the attention of my hon. friend the Minister of Railways (Mr. Graham) when he was Minister of Militia and Defence. He kindly instructed his department to report upon the subject, and in consequence the General Officer commanding military district No. 7 stated on 10th February, 1921, that there were a number of men by the name of McIntyre on the strength of the depot battalion, New Brunswick regiment, and that it was impossible to trace the one concerned, in order to verify Quilty's statement at so late a date. On 12th April, 1921, the Adjutant General informed me that on 15th May, 1918, Quilty had signed attestation papers, also medical sheet and form of will; also that the court of inquiry was held as aforesaid, that he had been pardoned as a deserter under the provisions of the general amnesty; and that he would be granted a discharge on misconduct, but that the discharge certificate previously mentioned would be retained and filed with his regimental documents, as no proof could be found of same having been issued by the military authorities. This man does not want a pardon; a pardon is only for a man who has been guilty of some offence. What he wants is an opportunity to vindicate his innocence.

I took the matter up again with the minister on 11th November, 1922, and on 5th April, 1923, received a letter from the minister in which he stated that he felt if the matter was fully explained to me I would appreciate that Quilty had no further cause for consideration by the department. The minister was of the opinion that it was logical to

suppose that Mr. Quilty knew he had not been properly discharged, otherwise there would be no reason for him to present a false discharge certificate. He stated that Mr. Quilty's case had been very carefully reviewed —reviewed by the military at different times— and it had been decided that he might be issued with a discharge certificate showing him as having been discharged on 15th May, 1918—the date of the court martial. A certificate dated March 15, 1923, was granted and sent me which gave the date of discharge as 15th May, 1918, and assigned as the reason for discharge, that his services were no longer required. Now, this was meant in kindness. It was the honest attempt of the minister to palliate the injury that had been done and, I presume, because he could get no further with his subordinates and cocked hats. But it was not justice to Quilty; it did not restore him to his position with the railway company; they still regard him as a deserter and a forger. This is due to the position the military officials have taken; they are unwilling to earn the money that this parliament pays them by listening to a complaint of a man who says an injustice has been done him and investigating that complaint. I presume the members of the headquarters staff would rather play golf than look into poor Quilty's case.

Now, since what I have related, the Great War Veterans' Association have asked the Director of Records as to the genuineness of this latter certificate. Remember that Quilty had no title to anything from the Great War Veterans' Association. If they thought he was a shirker, a deserter, or a forger, these men would not have lifted a finger in his behalf; but they wrote saying that this certificate had been secured in an endeavour to show the Canadian Pacific that he had been honourably discharged and should be re-instated in their employ. "However," says Mr. Machum, the Secretary-Treasurer of the St. John branch," it seems that in some way this latter certificate has not been given the necessary consideration by that company, and it is our desire to have it so considered, if it is correct, as we feel that perhaps an injustice is being done Mr. Quilty in continuing to bar him from his former employment."

Last year I laid this memorandum, practically as I have recited it to-day, before the minister. I was assured of his sympathy, and I feel that I have it. I feel that he does not want any injustice done, but apparently he has not been able, as yet, to cut the official red tape. I am going to ask this House now to express its opinion that Mr. Quilty should be given his hearing before some civil tribunal, so that if he is guilty of forgery he will stand convicted as a forger; but if he is not guilty the stain will be wiped from his character and he can re-enter the employ of the Canadian Pacific Railway Company honourably, as he claims he has a right to do.

Mr. MACDONALD (Pictou): The case to which my hon. friend has referred is typical of a great many other cases which arose in the department during the period of the war. One can well understand that during the years from 1914 to 1918, through the sudden responsibility that was thrown upon the officials of the department and the military officers of that time, a great many occurrences happened which, in the light of after events, appear to be injustices. There is not a week passes but there come to me from some part of the Dominion cases of men who claim that at various times they did not receive proper consideration from the officers having to do with them during the period in question. But the case my hon. friend has brought up is a unique one, and is out of line with the ordinary case of complaint which has been brought before me and before previous ministers. Certainly it would seem to be an anomaly that this young man should be in the position in which he is at present. I remember very well that my hon. friend called the matter to my attention some time ago, and it was rather difficult, even with the most sincere desire to meet his views, to indicate exactly what course could be taken by the department now in order to remedy the situation which arose as a result of previous actions which prevented him from being re-employed by the Canadian Pacific Railway. I say to my hon. friend that, realizing his evident sincerity in this matter, I shall be glad to take it up, and do anything in my power to relieve the situation in which Mr. Quilty is placed.

Mr. BAXTER: I suggest to the minister that he should get someone from the Department of Justice, or some competent legal man in St. John if he wishes, and give him authority under an order in council to investigate this matter. Let him see what information the department has, and let him hear the man himself. The point is that Quilty has never been before anybody yet to whom he could give an explanation of the circumstances. The district record officer from St. John would not send for Quilty, he looked over the document and gave five reasons why it was a forgery, and these reasons would not convince any man of legal

training, or any man in a jury box, that there was evidence of forgery on Quilty's part. He was condemned unheard. I know that I have the sympathy of the minister, and I know that I am offering him a practical solution of the difficulty.

Mr. HUGHES: Men who have been connected with the militia service in this country would like to see a larger expenditure of money for that service, and no doubt we must admit that they are quite sincere. But they speak of the defence of Canada. Does anybody at the present moment really believe that within the next few years—I will not mention the number of years—there is any danger of any attack upon Canada from any quarter whatever? Why, the pamphlet issued by the Navy League a short time ago stated that we might as well dismiss that idea from our minds, and that Canada was in no danger of attack; therefore whatever preparations are to be made would not be for our defence. I think the idea is—and it is not an improbable one—that a war might break out in Europe in which it would be our duty to take part. If that is the idea, we might as well state the facts. It would be a serious thing, if we are to believe what we read in regard to what is going on in the world at the present time, if any great war broke out in Europe. The last war would be a pink tea compared with the next one. Many of the brightest minds in the world at the present time are engaged in perfecting weapons of destruction of the human race. They are fabricating them in the forges of the world. Many of the brightest minds of the world are engaged at the present time in the laboratories devising poisonous gases, fumes and vapours that will be so destructive that if another war should break out cities like London, Berlin and Paris might be wiped out, or at least the greater portion of the population wiped out, in a few hours. It is said that if another war occurred, the greatest sufferers would be the non-combatants, the women, the children, the sick, the aged and the infirm, and that the destruction would be so great that we cannot realize what it would mean. If a great portion of the large cities should be wiped out by poisonous gases and fumes dropped on them from the clouds, the destruction would be so great that the living would not be able to bury or cremate the dead. It would be followed by pestilences and plagues that would probably wipe out the remaining portion of the people. Another war in Europe, if we are to believe what we read, might mean the destruction of the human race in that part of the world. Is there any effort Canada could make that could change the course of events in such a war? That point is well worthy of consideration. If there is anything Canada or the North American continent can do to preserve peace or promote peace, whether through the League of Nations, or a world court of justice, or in any way whatever, I believe every person in Canada would be glad by every means in his power to do it.

5 p.m.

Is it just possible that Europe will destroy itself? Great empires and even civilizations have passed away, leaving scarcely a trace behind, and that part of the human race in Europe can destroy itself. Are they making preparations to do so? If these preparations go on, and if such a war should break out, could Great Britain save herself by withdrawing altogether from the continent? Could that part of the Caucasian race living in North America and South America save itself by withdrawing from Europe? There is no use in playing with matters of this kind. Any preparation that we could make within our power would hardly be a drop in the bucket compared with what would be necessary in order to take any appreciable part in any great war in Europe. I had a little experience myself when I was much younger than I am now. I was in the artillery service in a rural corps, and perhaps things are better now than they were then. I know the training we got in two weeks in the artillery, and I know the training the infantry got, and so far as the rural units are concerned, I have no hesitation in saying the whole thing was a farce, and the money was wasted. I would be prepared to admit that a city unit that could train in the drill halls in the winter season and keep up their training might get an education or a training that would be of service in case of an emergency; but I repeat again that unless things have changed very much, money expended in training rural units is money wasted, and I think we would be well advised to consider very carefully before voting large sums of money for any such purpose. These are the thoughts I wish to express, because the artillerymen for some reason or other—and it is not to their discredit—are nearly always anxious to make preparation for war. They think it is important; they think it will help to maintain peace. I believe they are mistaken; I believe it is the very means of bringing on war and of exciting people to the pitch of war. All the preparations that were made in Europe previous to the last war did not prevent war, and all the prepara-

tions they are making now for the next war will not obviate that one. A different mentality must be created if war is to be avoided and if that part of the Caucasian race that inhabits Europe is to continue to exist. The next war will mean the destruction of Europe and perhaps that part of the world will be peopled by the other races. It may be in the decrees of Providence that that part of the world shall be peopled by the Mongolian race, by the Asiatics. But if the part of the Caucasian race that now lives in Europe is to survive, war must be abolished, and they must decide of themselves that there shall be no more war.

Mr. WOODSWORTH: I do not intend to discuss this or that particular item of expenditure but rather to consider the general principles underlying the policy of preparedness. I want to challenge the theory which underlies the whole of armaments, whether military, naval or air; that is, that armaments are in any sense a guarantee of safety. That is the underlying postulate of this theory. Now, some of us are interested in preserving the country but we cannot see that armaments are the means by which this can be done. As a matter of fact it would seem as if the last war had demonstrated to the whole world the futility of preparedness as a means of safety. Yet, even within this short time after the close of the last war the world seems to be threatened with a recrudescence of militarism. In the British Empire itself we find a changed policy with regard to Singapore which may bring on strained relations with the oriental nations. The minister himself has this afternoon suggested that he has information that would show that war in Europe is by no means improbable.

Mr. MACDONALD (Pictou): I did not indicate that I had information to that effect at all. What I did say was that having visited Europe last year and having had an opportunity of attending the League of Nations and judging the mentality of Europe I was not by any means satisfied that the danger of war was over but that on the contrary war might take place.

Mr. WOODSWORTH: I am glad to have the minister's statement in that regard. I think that, as undoubtedly anyone who has followed recent movements in Europe will admit, war in the near future is by no means improbable. We have Britain's own attitude towards Egypt and India, which is not at all reassuring to anyone who is outside the official circles. And we have recently had the Dawes plan adopted. I am quite well aware that it was a Labour government that suggested the carrying out of a plan along this line. Nevertheless I believe that there is very real danger that the central part of Europe will be reduced to something resembling industrial serfdom. Undoubtedly the present political developments in both France and Germany would suggest that there is anything but the prospect of peace and security in central Europe to-day. Further than that, we have the anti-Japanese propaganda which is being carried forward in the United States and is being echoed in Canada.

Now, some hon. members may ask, what have we to do with Europe or Asia? Well, I venture to point out that we had a great deal to do with Europe when the last war came on, and there is no reason why we shall not have something to do with Europe again if other troubles arise.

Mr. BROWN: The hon. member referred to Britain's attitude in Egypt and India. In order to get his point of view, he might tell us whether he would advocate the withdrawal of Great Britain from Egypt and India.

Mr. WOODSWORTH: I do not know that I am called upon to answer that question; I made a general reference to Egypt and India, and I think that anyone who has followed to any extent the British policy in India during the past few years, with some of the types of repression which we have witnessed there, and with the refusal to give any large measure of self government to India, must view the situation with anything but equanimity. And as we all know, Egypt has been a sore place for many years. We Britishers told the world that we were going there for temporary occupation, and so far we have neither withdrawn nor shown any signs that we are about to withdraw. However, I do not intend to discuss the policy of Great Britain in either Egypt or India; I merely referred to the matter in passing. It might very well however be the subject of discussion in this parliament. Indeed, I had rather hoped that after we had set up a committee on international relations, we might discuss some of these questions in this House; because if the League of Nations is to mean anything to us—and through the League of Nations we are committed to certain definite responsibilities—and if the British Empire is to mean anything to us, especially in view of the fact that we are involved in war when the empire is involved in war, then we should have a little more discussion than we have had in past years of the policies that are carried on

by the British Empire as well as by other members of the League of Nations.

There are those who are perhaps inclined to deny any of us the right to question the maintenance of armaments. For a good many years in Canada those who believe in military preparation have had their innings, and they have almost come to take it for granted that their policy is the correct policy and the one that must be maintained indefinitely in this country. In fact, during the war it became a crime for anybody to question the causes that led to hostilities; and the press and other agencies effectually silenced anyone who was opposed to that policy. It seems to me that now that we have had this Great war, which has practically led to the bankruptcy of the world; and when we are faced with the possibility of another war, which as Winston Churchill has said will be the potential destroyer of the human race, it is well that we should take time to consider the claims of the militarists before passing as a matter of form from year to year these military estimates.

Some hon. gentlemen may say that this is merely a personal matter with me. I have no hesitation in saying that I was opposed to the last war, and I hope I shall be opposed to the next one. But it is not merely a personal matter. I was elected on a platform one plank of which advocated national disarmament, and I should not be true to the people who sent me here unless I took this opportunity to advocate that policy. Some hon. gentlemen here may pooh-pooh the idea; but the fact is that a sufficient number of electors were found in the fairly respectable city of Winnipeg to endorse a policy of this kind. I have the right to stand here and voice the viewpoint of my electors. It is a viewpoint that is growing very rapidly across the country. I have in my hand a pamphlet which was issued just recently by a committee of the Protestant Ministerial Association of Montreal, in which strong ground is taken with regard to war and in which it is suggested, for example, that the Christian churches and Christian individuals ought in the presence of war to set God above Cæsar, conscience above the authority of the state. This, it seems to me, gives the state fair warning that if another war is precipitated, at least a section of the churches will refuse absolutely to participate in that war. Further than that, we have resolutions from farmers' organizations throughout the entire west protesting against the continued war expenditure.

As to the labour organizations, I think I cannot do better than read a paragraph or two from the manifesto issued about a year ago by the International Federation of Trade Unions. This organization, let me interject, is not the one affiliated with Moscow. So there is no reason for any hon. gentleman to jump up and shout, "Red Moscow!" I note that the Trades and Labour Congress of Canada has signed this manifesto through its president, Tom Moore. The manifesto states:

> We are drawing near the tenth anniversary of the day which saw the outbreak of the world war—that fatal August day which let loose Armageddon upon the world, and opened the way to a slaughter and havoc which has been unexampled in the annals of the world.
>
> For four long years the world suffered untold agonies; for four long years the peoples fought each other like wild beasts; for four long years the flower of the world's youth was sacrificed on the battlefields; for four long years civilisation was forgotten, and its most elementary lessons were thrown to the winds.
>
> During these four terrible years, thousands of young men went forth to battle in the confident hope that they were fighting to end war, and to make the world safe for democracy.
>
> They did not know that they were merely the dupes of the lies and insinuations of small groups of capitalists, who were seeking to strengthen and extend their domination of the world.
>
> Then came the sham peace that shattered the illusion of so many, and destroyed the dream that this was the war to end war.
>
> And now the countries of the world are again making ready for fresh war.
>
> Science is busy seeking new and even more terrible methods of dealing death and destruction. We all know that the next war will bring with it wholesale slaughter to a degree undreamed of before. The very air will be laden with death and will bring pestilence and destruction to countless multitudes far remote from the actual centres of war. The next war will be the final triump of barbarism; it will sweep from the face of the earth the last traces of civilisation.
>
> In the next war there will be no place for personal heroism. The days when man could show prowess on the battle-field are for ever gone by. Henceforth he will be killed by a system of mass destruction, which will work unerringly as the machinery he now uses for mass production. The sole use of the mechanical perfection to which he will have attained will be to doom millions to horrible and inevitable death.

The manifesto calls upon the trade unionists throughout the world to unite in an international anti-war day. In view of this growing sentiment, I would suggest that we might very well pause and ask ourselves whether we should longer continue this policy, or whether we should give due notice to the advocates of militarism that we propose to insure the defence of our country along other lines.

Before following that theme any further, might I call the attention of the government to several specific matters? First of all, I notice very frequently by the papers that military officers—and in this connection the name of General MacBrien occurs very often—are taking the opportunity of going about the country advocating preparedness; in other words, devoting themselves to war propaganda. I would respectfully question

the propriety of salaried officials of the people of Canada undertaking to throw themselves into the advocacy of certain political policies. We do not permit it in other departments and I cannot see why it should be permitted in the National Defence department.

Let me call attention to the fact that in the last few days we had a good deal in the newspapers about the danger of interruption of our friendly relations with the United States due to the government of that country probably finding it necessary to put an anti-rum-running fleet on the Great Lakes. The papers have definitely given publicity to the rumour that American vessels are to be armed to deal with rum-runners. All of us who know anything about the way in which rum-running has been conducted for the last few years know that Canada has been used more or less as the base for these operations. I do not know how far our government has definitely undertaken to put down this illicit traffic. But if it has tried, it has not succeeded in doing so, with the result that to-day we find a good deal of friction occuring between the two countries. Now, a great many of us have pointed rather proudly to the fact that from the days of the Rush-Bagot treaty in 1817 we have had no armed ships on the Great Lakes. Some hon. members have asked, what are we doing in the way of preparation. I would say that the surest preparation against any armed intervention by the United States is not for us also to put on armed boats, but to see that the law in this country is maintained, and that wrongs are remedied. This is the surest way, and the only way, to prevent international trouble, and I would call upon the government to take more definite action along that line. This is one of the ways by which we may prevent war.

Another matter to which I should like to call attention has also come to our notice recently through the papers. In reply to certain questions put in the British House of Commons, we were told that twenty-five members of the Canadian expeditionary force were executed during the war for military offences. No Australians were so executed. Considerable publicity has been given to the statement of Sir Arthur Currie with respect to this matter. Sir Arthur represents the view of officialism. I should like to give a statement that represents the idea of the ordinary Canadian. It is contained in an editorial in the Western Producer—and I might remind the House that the editor is Mr. Horace Turner, who served and lost a good deal during the war.

Mr. CAMPBELL: He lost his sight.

Mr. WOODSWORTH: The editorial is entitled, "Now, It can be Told":

> In reply to a question in the British house of commons the other day, the minister of war stated that during the Great War twenty-five Canadians, five New Zealanders, and no Australians had been executed for offences committed during their connection with the armies to which they were attached. The explanation for the immunity of the Australians from execution is not that they were more law-abiding than the Canadians or New Zealanders, but that the Australian command refused to permit the Imperial authorities to impose the death penalty on Australian soldiers. Sir Arthur Currie, commander of the Canadian forces during the war, has expressed his disapproval of the publication of the figures mentioned above. He believes that it would be just as well if such matters were not opened up for public discussion. He thinks no good purpose can be served by such publicity. Sir Arthur—who gathered many medals, a title, and much appreciation from his connection with the war—apparently does not think it a good idea that the public in general should actually know and realize what war is and what it means. He apparently believes that if it is possible to hold the public to the idea that war is a great and glorious occupation, in which the flaunting of banners, the playing of bands and the shouting of heroes—and not the misery and horror of death—are the main considerations, it is a good thing for the country. As a matter of fact, it is just as well that the people should know what they are talking about when they talk about war. It is well that they should know who these men are, who were shot down by their comrades in France; well to know why they were shot down; and well to know that war means death and destruction, horrible suffering and unjust oppression. Some of these men who were executed were volunteers who, because they were persuaded that their king and country needed them, or for love of adventure, joined the army. In some cases they were men who made great personal sacrifices to go to the war. In some cases they were men who had served—and served well—in the front line of the battle, but who, through the constant, gnawing horror of the business, the ever present fear of death, had lost their nerve. They ran away. They were men driven to the extremity of terror by war conditions; driven to the point where they, although they had joined the army voluntarily and with perfectly brave and loyal intentions of seeing the thing through, had become practically insane through their close contact with horror and the terrible business of war. They were, many of them, more to be admired than thousands of young men who did not join the army, but who preferred to stay at home. And yet they were shot in cold blood by men wearing uniforms the same as theirs. There is no good purpose served by gasping with amazement at the fact that these men were executed. As a matter of fact, it is probably a good thing that they were shot. It is probable that the idea spread abroad among the troops that the man who fled from his position would be killed by his own comrades, was an idea worth promulgating at all costs, for the defection of these terror-stricken men at critical moments affected not themselves alone, but the men side by side with them in the trenches. One man who faltered might have meant the death of a score of men in a trench at a desperate turn in the tide of battle. The poor devils had to be

shot in order to protect the lives of men who were, for the moment, more in control of their senses. No, Sir Arthur, the public may just as well know what happens when nations go to war. It is well for them to know that the men they send to the battle line suffer agonies of mind and body. It is well for them to know that the heroic men in the front line are reduced to the mental stature of savage beasts of prey; that they grovel and fight like madmen; that, if overcome by terror, they run away, they are shot by men of their own race and colour. It is well for the public to know that war has no relation to sanity, and that the men who put obstacles in the way of permanent peace are traitors to mankind and are beyond comparison the greatest scoundrels at large to-day.

I submit that the policy of Canada with regard to her men should be determined here and now. Are we to be less careful of the lives of our men than Australia? Are Canadians to be shot down at the hands of British officers?

I should also like to call attention for a moment to the anti-Japanese propaganda which apparently is being carried out very carefully and systematically. We are told of the oriental menace. I for one am anxious that the standards of the Canadian people should be protected, but it is quite possible to protect our standards and also to maintain control of our own immigration policies without antagonizing other nations. The trouble is that it is so easy for us to be influenced by press propaganda, and that propaganda is carried on at the present time on such a wholesale scale. Debates of the British parliament have already established that British war-time propaganda in America was a thousand-fold more virulent and widsespread than the feeble propaganda of the German imperialists. Lord Northcliffe himself admitted that England had spent $150,000,000 for propaganda purposes in the United States during the war, and he said he considered that money to be spent to better advantage than any equal amount spent during the entire conflict. There were over 4,500 British publicity agents in the United States, it was admitted in the House of Commons. The British government subsidized its own news agencies to disseminate official war propaganda. Mr. McCurdy, M.P., declared in the British House of Commons, August 5, 1918, that the government had paid Reuter's agency £126,000 for services covering a certain period of the war. We are already subsidizing Reuter's agency, and it is comparatively easy at any time to have only those particular items go through that will carry out the purposes of the particular group that happens to be in authority. Sir Gilbert Parker, who was in charge of the department for American propaganda, confessed in Harper's Magazine, March, 1918:

Among other things, we supplied three hundred and sixty newspapers in the smaller states of the United States with an English newspaper which gave a weekly review and comment on the affairs of the war. We established connection with the man in the street through cinema pictures of the army and navy, as well as through interviews, articles, pamphlets, etc., and by letters in reply to individual American critics, which were printed in the chief newspaper in the state in which they lived and were copied in newspapers of the other and neighbouring states. We advised and stimulated many people to write articles; we utilized the friendly services and assistance of confidential friends; we had reports from important Americans constantly, and established association by personal correspondence with influential and eminent people of every profession in the United States, beginning with university and college professors, and scientific men, and running through all the ranges of the population. We asked our friends and correspondents to arrange for speeches, debates and lectures by American citizens, but we did not encourage Britishers to go to America and preach the doctrine of entrance into the war. Besides an immense private correspondence with individuals, we had our documents and literature sent to great numbers of public libraries, Y.M.C.A. societies, universities, colleges, historical societies, clubs and newspapers.

After the exposé of the way in which the propaganda for the last war was carried forward, it is surely time that the common people of the country should ask themselves whether they are not in danger of being trapped a second time.

Let me pause for a few moments to visualize the international political situation which confronts us. We have a large number of independent states, and their attitude to one another is that of very keen rivalry. The final court of appeal, as it has been for a great many years, is war; hence we have on the part of all these independent nationalities, with very few exceptions indeed, the theory and practice of preparedness. This takes two forms. First of all, military preparedness; the army, navy and air forces must be kept up. It was very clearly shown before the last war that armament firms egged on one nation to certain forms of preparedness and then turned round and urged its rival to meet it along similar lines.

In addition to the military preparedness we have what I might call psychological preparedness. We maintain the attitude of boosting our own. We have our own song, "Britannia Rules the Waves", and I am not at all sure that it is much preferable to "Germany Over All." They both exhibit the same spirit, the same desire to dominate. Of course, as a Britisher I suppose naturally I like to think of the British dominating; it is hard to get out of one's own skin. But at the same time, I say both of them manifest a

spirit that will never bring us peace, but will always lead to war.

Mr. MACDONALD (Pictou): I suggest, Mr. Chairman, that the hon. gentleman is verging very nearly to a statement of disloyalty, which ought not to be permitted in this committee.

Mr. WOODSWORTH: I await the Chairman's decision on that matter. I should like to repeat my statement—and I have no hesitation in doing so: that the spirit which leads us to assert that Britannia rules the waves is precisely the same spirit which led the Germans to assert that Germany should be over all.

Mr. MACDONALD (Pictou): That is slightly different.

Some hon. MEMBERS: The same thing.

Mr. WOODSWORTH: I think it is the same thing.

The CHAIRMAN: I would suggest to the hon. member that it is a little difficult for me to see the application of his address in this debate in committee to the question of this vote that is before the Chair. I do think that he is getting somewhat away from this vote.

Mr. WOODSWORTH: Mr. Chairman, we have had definitely placed before us to-day the urgency of the situation and the need for preparedness. I submit with all respect that those of us who do not agree with that policy have a right to state our disagreement and the grounds on which it is based.

As I was saying, we have constantly the glorification of our own nation, and side by side we have the habit of decrying other nations. One of the commonest ways of doing so is to call them nicknames. We have the Hun, the Dago, the Jap, the Chink, the Turk, and so on. All these names are derogatory in character, so that there is hardly a nation to-day but that if occasion should arise, could be designated by some term of opprobrium. Thus it is easy to arouse great antagonism on the part of our people.

The fact is that even peace has been very largely an armed truce or simply a defensive alliance. Let me point out at the same time that we have recently experienced some very remarkable world developments. To-day we have an economic interdependence that has brought all the nations into close relationship the one with the other; I do not think I need to elaborate that statement. No nation to-day is self-contained. Each nation is inevitably connected with all other nations. It is absolutely impossible for us, as it were, to put a corral around our own particular piece of property and say we will have nothing to do with outsiders. The whole of modern industry, commerce and finance is international, inter-communal in character. Thus there is a growing sense of world community. We have seen this for a great many years in the scientific world. We recognize that advancement in any one nation along scientific lines means advancement in other nations. We have seen it more or less in the cultural spheres, literary, artistic and religious. We know that what happens in any one part of the world is of more or less concern to all the rest of the world. But let me point out that with this growing inter-dependence, world-wide in its character, we have group and class conflicts that are also world-wide. The financiers do not stop within the bounds of one nation, but stretch their operations over into other nations. The present highly concentrated system of finance is also international in its viewpoint, and we have also our international labour unions, our international socialist parties, just as we have our international groups of financiers and industrialists.

The trouble, Mr. Chairman, is, I submit, that there is a danger of the various groups and classes using the political machinery and national prejudices for their own ends. It is so easy for the one group that happens to be for the time being in control to use the political machinery to advance business interests, and that has been done again and again; in fact, that is more or less the settled policy of the British Empire itself. We look back at the past war for a moment, and I think no one is any longer deceived as to its causes. President Wilson said at St. Louis:

> Is there in this audience any man, or any woman, nay—is there any child, who does not know that the seeds of war are sown in hot, successful commercial and industrial rivalry?

Marshal Foch made a similar statement just after the war was over. Joseph Chamberlain years ago said:

> The Empire is commerce. . . . . It was created by commerce, it is founded on commerce, and it could not exist a day without commerce. . . . For these reasons, among others, I would never lose the hold which we now have over our great Indian dependency—by far the greatest and most valuable of all the customers we have or ever shall have in this country. For the same reasons I approve of the continued occupation of Egypt. . . . and lastly it is for the same reasons that I hold that our Navy should be strengthened, until its supremacy is so assured that we cannot be shaken in any of the possessions which we hold, or may hold hereafter.

A frank recognition that commerce is behind the whole of our military preparations to-day! A few days before the outbreak

of the Great war, Sir Edward Grey defined in the House of Commons on July 10, 1914, what had been for years the practice of the Foreign Office. He said:

> I regard it as our duty, wherever bona-fide British capital is forthcoming in any part of the world, and is applying for concessions to which there are no valid political objections, that we should give it the utmost support we can, and endeavour to convince the foreign government concerned that it is to its interest as well as our own to give the concessions for railways and so forth to British firms, who carry them out at reasonable prices and in the best possible way.

Now, Mr. Chairman, I would submit to you that this matter comes very close to us here in this House at the present time as we are considering these estimates. If we are inextricably involved with the British Empire and with the fate of the British Empire, and if it is definitely the policy of the British Empire to seek concessions in almost any part of the world, to develop certain markets in almost any part of the world, to extend its finance into almost any part of the world,—surely we are constantly in danger of being dragged into the various operations in which the British government is more or less concerned. Just before the last Great war Mr. H. N. Brailsford pictured in a very notable book, The War of Steel and Gold, the situation which existed at that time. It might have been called a prophecy of the war, because he showed how the whole stage was set for war, and that war was inevitable. I was surprised a little while ago to find the hon. member for Burrard (Mr. Clark) speaking as if there had not been preparedness on the part of England. If he will read anything of the literature which has come to us since the war he will find abundant evidence that there had been very, very definite preparations on the part of England as on the part of other nations, for the last great war. Mr. Brailsford in a recent issue of The New Leader, in commenting on British policy had this to say:

> The foreign ministers of other great powers interpreted their "duty" in the same way—

That is, as Great Britain did,

> —and felt the same touching confidence in the capitalists whose ambitions they promoted. The result was that, for a generation before the war, Constantinople, Pekin and Teheran were centres of intrigue, in which the financiers and the diplomatists of all the great powers, in the closest association, cajoled and bribed and bullied, formed their cliques, hired their partisans, scrambled for loans and concessions, competed in selling armaments and railways and in buying oil wells and mines, and carried their competition from the field of business to the world of high politics. Should the "heavy industry" of Germany or of France dig iron-ore in Morocco in order to lay it down in the form of steel rails on the road to Bagdad?—that in one concrete illustration was the question which set all Europe arming in two allied camps.
>
> Sometimes the rivalry was checked in one region by an arrangement, fatal to the liberties of its population, to divide it into spheres of influence. Tropical Africa was in the end partitioned peacefully: Persia was amicably torn in two by Russia and Great Britain. But always the rivalry broke out again, for always and in every country the pressure of business and finance was at work in the press and among politicians to prompt governments to forge more cannon, to build greater battleships, to exhaust the last reserves of man-power, in the effort to gain a preponderance of prestige and force which might be used for economic ends.

And then Mr. Brailsford goes on to meet the objection that all this is a thing of the past, and that through the League of Nations we had created an instrument which was going to put an end to this kind of capitalistic manipulation. He proceeds:

> "An old story," you may say, "an obsolete story. Capitalism has made the world safe for democracy and banished war by its League of Nations." Save by its attempts to regulate the hours of labour, the one thing which the league has not touched, or begun to touch, is this curse of economic imperialism. Under its shelter the predatory hunt for oil and coal, for raw materials to monopolise and territory to exploit, has been blessed and sanctified: it has not been stopped. We arm more heavily than before, and as before diplomacy places the services of the state at the disposal of capital invested abroad; while the British government insists that the league must not interfere between us and the population of our fields of investment in Egypt and the Soudan. Capital has acquired nationality: shares possess citizenship, and scrip can say in Palmerston's words, Civis Romanus sum. So long as private capital can call up, to guarantee its profits, the clerks of the foreign office and the admirals of the fleet, so long will it perpetuate militarism and prepare wars.

I have spoken of the situation as it affects the British Empire. Now I should like to draw attention to the advocacy of preparedness that is being carried on in Canada. I hold in my hand a pamphlet issued by the Navy League of Canada in which we have a very excellent statement as to the real reason for armaments. It is entitled "The Interdependence of Canadian Industry and Naval Defence." I notice as patrons: His Royal Highness the Prince of Wales, Their Excellencies Baron and Baroness Byng of Vimy; and the Lieutenant Governor of each province. I notice among the honourary presidents: E. W. Beatty and Sir Henry Worth Thornton. This document reminds me very strongly of another that I hold in my hand, dated August, 1912, when the same kind of propaganda was being carried forward. On this particular document Hon. D. C. Cameron, then Lietutenant Governor of Manitoba, headed the list. I also find the names of George Bury, Vice-president Canadian Pacific Railway; M. H. MacLeod, General Manager Canadian Northern Railway; Hugh Suther-

land, Executive agent Canadian Northern Railway. So that it is the same class of men who now advocate preparedness as urged it before the last war. I should like to read two or three statements from the pamphlet in question which, I think, place the issue frankly and fairly. I am not throwing any discredit whatever on gentlemen who honestly believe this is the way to save our country; I give them every credit for their convictions in this regard, but I claim they should extend the same credit to us and admit that we are honestly endeavouring to put forward a policy which we on our part believe will save our country. This pamphlet puts the case so clearly that I wish to place it before the House:

> That at the present time, and so far as can be forseen by the most idealistic statesmen responsible for the destiny of their respective countries, there is no immediate prospect of certainty that the re-actions of various national external policies will not result in a call to arms to support antagonistic national convictions.
>
> That to meet our obligations to future generations, the development of national industries must be on a basis of stability, and that stability is ephemeral under existing conditions, without the security provided by armed forces.

The question is asked on the next page:

> What is a navy for? There is a common idea that the object of a navy is to resist invasion, and if that conception were correct there would be little to say in favour of naval defence for the Dominion. But it is far from accurate, particularly as regards Canada.
>
> The primary role of the navy is the protection of lines of communication across the sea. There are many ways in which the navy has to carry out this duty, many kinds of naval activities, but whether it be the clash of great battle-fleets, the cruiser actions, the submarine and mine blockade of enemy ports, the convoy escort work, the patrols of minesweepers and light craft off our coasts, or the many other distinct operations, they are each and all phases of the main objective of keeping the sea routes open and secure from enemy action.

The pamphlet in the latter part does what some of us have tried to get the minister to do on previous occasions. and does it very frankly It discusses the question as to who our enemies are likely to be. The view put forward is that there are three conditions of emergency or war in which we may become involved: First, our position as a neutral, with a very heavy responsibility, in the event of war between the United States and some overseas power; second, ourselves at war with an overseas power; and third, war with the United States. I do not propose to discuss whether, in any one of these three eventualities preparedness would be our best means of safety; I think that could very well be left to the House. But I read again, a statement of the underlying theory:

[Mr. Woodsworth.]

> The fact is that the seeds, the root of war, lie not in armaments but in economic causes, in the re-actions of varying national policies framed by governments with a view to the industrial and commercial development of their peoples. The economic struggle goes on to-day as actively as prior to August, 1914. Nations, with their varying economic problems, their natural racial pride, their own group psychology, evolve policies which it is vain to believe will all be in harmony, and which involves an ever present risk of a clash wherein stability of industrial commitments will lie only with those in a position to maintain their sea communications.

One more brief quotation. After the pamphlet has frankly admitted that the Washington conference changed the details but not the principles of national naval defence:

> So we differ both from those who say that armaments prevent wars and those who preach that armaments are the cause of war. It is the everlasting economic war, which prevails in time of nominal peace, which has produced, and will produce, physical war.

There we have a most important statement made very fairly and very definitely by the navy league. I agree with the navy league in this regard:

> It is the everlasting economic war, which prevails in time of nominal peace, which has produced, and will produce, physical war.

So we have to conclude that the last war was not, as we were assured, the war to end war. It was, in fact, simply a skirmish. I think we have to go further than that, and say that those who promised us that this was the war to end war are not men whose judgment can safely be followed; they have proved themselves blind leaders of the blind. They have led us into the ditch. I think the least that might be expected of them is, if not to confess how seriously they were mistaken, at any rate to give opportunity for the discussion of some other and some better way.

Why should Canada not strike out along new lines? The hon. member for Southeast Grey (Miss Macphail) had on the order paper a resolution, which, I am very sorry, was not reached, suggesting a peace bureau to foster and promote international goodwill and understanding. Why not? We are spending our millions upon war preparations, why not spend at least a few thousands in trying to find if there is not some other way? We have trodden the hard paths of war; why not explore the avenues that may lead to peace? You want the thing put on a business basis? Mr. Chairman, if Canada adopted an attitude of this kind and was foremost among the nations that definitely set themselves against war and assured her citizens that they would keep out of these great struggles, it would be the biggest advertisement that Canada could ever make before the nations of the world. Your Wembley exhibition

would not not be in it with the statement that would go forth that Canada was done with war. You would have no need further to spend your millions of dollars in inducing people to come to this country, because the people would be flocking from war-torn Europe, only too glad to come to a country where there was no prospect of war.

But let me not deceive the House into thinking that I believe that merely by setting up a bureau of peace we could solve the problem. I come back again to this clear-cut statement of the Navy League of Canada. "It is the everlasting economic war which prevails in times of nominal peace which has produced and will produce physical war." And I would urge that this House should devote some attention to studying the fundamental principles of our economic and social order. I know there are those who, as soon as one suggests that we should have some fundamental changes, shout "Socialism" and try to banish the thought. I am not afraid of the word "Socialism," which comes from a perfectly good Latin word which means comradeship, which means that to-day we as individuals are no longer living isolated lives; that no nation is any longer living an isolated, individualistic life, but rather that we are living in society in a thousand and one complicated relationships and that we must adapt our political ideals and our political institutions and our political policies to meet the new situation that confronts us. I am perfectly well aware that it is comparatively useless to appeal along these lines to many members of this House, but I would like to appeal beyond the walls of this parliament, to the men who at the front learned what war really meant, because I have found after conversations with them that the majority of them actually thought that they went out to fight in order to end war, to bring in democracy, to have a changed social order, and these disillusioned men are among those who will back up any effort to put things on a new basis.

In conclusion, I would like to appeal to the men and women who have dreamed of a better future for their children and for humanity, and who are willing to take some risks to make their dreams come true. I recognize that the policy which I have advocated would involve risks, but the present policy involves not only risk, but almost certainly a failure. Why not take those risks which are incident to the development of the new means of protecting our nation?

Item stands.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

DEPARTMENT OF THE INTERIOR

Interior—salaries, $1,437,542.50; contingencies, $100,000.

Hon. CHARLES STEWART (Argenteuil, Minister of the Interior): Last year we voted for salaries, $1,501,410.25 for the permanent staff at Ottawa, whose salaries are chargeable to civil government. The amount asked for this year represents a decrease of $63,867. Statutory increases in accordance with the Civil Service Act have been provided for and these total $21,305. The reorganization of some of the branches accounts for a further increase of $1,725 while three new positions account for $6,480. The decreases are effected by the abolition of twenty-six positions amounting to $49,390, while twenty-six positions not required amount to $31,020. There are twenty-six positions abolished, twenty-six positions not required, and one position is for six months only. These are the reductions. But there are three new positions and this makes the net decrease forty-nine.

Mr. MEIGHEN: Since last year?

Mr. STEWART (Argenteuil): Yes; these are comparisons with last year's figures.

Mr. MEIGHEN: This is the first time the estimates of the Department of the Interior have come up. They should not be gone into to-night but I will not press the objection if the minister will undertake that they will be gone on with on one of the first three days of the week.

Mr. STEWART (Argenteuil): It is intended that I should stay only for a short while.

Mr. McMASTER: Not more than every fifth word is audible down here.

Mr. MEIGHEN: I would suggest to the hon. member that he come up here where he ought to be; there is plenty of room. The Department of the Interior, like every other department, should be gone into on a separate day on one of the first three days of the week; otherwise the motion to go into Supply is valueless as far as that department is concerned. However, so long as the minister undertakes that there will be a motion to go into Supply for his department on another day I shall be satisfied.

Mr. CAHILL: The right hon. gentleman will remember doing the same thing.

Mr. MEIGHEN: Yes, but he gave an undertaking.

Mr. CAHILL: Without any undertaking.

Mr. MEIGHEN: Not at all.

Mr. STEWART (Argenteuil): The objection is that we are taking up two departments on one day?

Mr. MEIGHEN: Yes.

Mr. STEWART (Argenteuil): I do not anticipate getting through to-night. However, I am willing to give that undertaking, certainly; I have no desire to deprive anyone of any opportunity to ask questions.

Mr. MEIGHEN: Has there been any merging of branches since last year? I understand that the year before the Irrigation branch was merged with the Water Powers.

Mr. STEWART (Argenteuil): No direct heads of branches have been abolished but we have reduced our Land branch considerably. We have them all in the Norlite building under Mr. Greenway. Formerly they were under separate heads.

Mr. MEIGHEN: School lands with Dominion?

Mr. STEWART (Argenteuil): All land branches are under Mr. Greenway at the present time. The same men are in charge but they are under one control.

Mr. MEIGHEN: The minister reopened some sub-offices which had been closed before. Has he closed any sub-offices?

Mr. STEWART (Argenteuil): We reorganized a number of offices but I have not the list at hand. We gave Kamloops the status of a sub-office.

Mr. MEIGHEN: Have any sub-offices been closed?

Mr. STEWART (Argenteuil): There may have been one or two. I am not sure whether Yoho is still in operation or not. These are only one man offices which are kept on a commission basis in the outskirts where homesteading is going on.

Mr. MANION: I notice at the bottom of the estimates that there is reference to a saving by superannuation of $20,500. What does that mean? I have always thought that superannuation would involve the paying of two salaries.

Mr. STEWART (Argenteuil): This is a departmental saving but the money comes out of the superannuation fund. There is a good deal of criticism with regard to the retiring of civil servants but under the Superannuation Act I do not think the government will pay very much money. True, we did under the Calder Act, which called for a direct grant in many cases; but under the Superannuation Act, with 5 per cent levied on the civil servants, I cannot believe that there will be any heavy draft on the resources of the government.

Mr. MANION: The minister will understand what I mean; it mentions a saving.

Mr. STEWART (Argenteuil): It is a departmental saving.

Mr. MANION: But their superannuation allowance goes on while other people take their places in the department.

Mr. STEWART (Argenteuil): Not in this case, which is a saving to this department although it is not a saving so far as the general total is concerned. The superannuation must be paid out of the fund.

Mr. MEIGHEN: I do not see why it appears there. I notice it is not in any of the other departments, for instance, Indian Affairs or Insurance. I do not understand how there can be a saving through superannuation. The number of employees is given; those employees are paid; how would there be a saving of their salaries through superannuation?

Mr. STEWART (Argenteuil): Apparently there were savings because certain employees were superannuated during the year. I understood the hon. member for Fort William and Rainy River (Mr. Manion) to contend that the mere superannuation of a civil servant was not a saving to the government. But it certainly is a saving to the department, providing the position is not filled.

Mr. MEIGHEN: It may be a saving to the department, but that saving will already be represented in the $1,462,000, which is paid to 768 civil servants. When you pay those employees, how can you save their salaries by superannuation? They are not superannuated, they are on the staff.

Mr. STEWART (Argenteuil): When retirements take place, for example, in the middle of the year, five or six months' salary is saved for that particular year.

Mr. MEIGHEN: For the year we are on now?

Mr. STEWART (Argenteuil): Yes. We had a saving of $20,500 last year. The estimate is $25,000 for this year.

Mr. MEIGHEN: How in the world can that be? The department estimates that 768 employees will be required this year. If that many are required, and one of them is super-

annuated in the middle of the year, there will be somebody to take his place.

Mr. STEWART (Argenteuil): No. We think that by further reorganization we can cut down our staff, but the difficulty is to know just when it is in order to make the cut. We cut it by $20,500 last year. By adopting this course, if certain positions become vacant some time during the year in a large staff like this, we estimate we can save this much money. Therefore we have cut the estimate to this extent. In other words, we have obligated ourselves to make the reductions as far as is practicable. I find in my experience that it is a pretty good thing to do this, because then the officials of the department keep within the estimate.

Mr. BOYS: Has this ever been adopted before?

Mr. STEWART (Argenteuil): No, it is only done in this one department.

Mr. BOYS: Do you provide for the salaries of a certain number of clerks for the year, and then in the early part or middle of the year, supposing one is superannuated, you save his salary for the balance of the year?

Mr. STEWART (Argenteuil): Yes.

Mr. BOYS: That would be perfectly correct if his place is not filled.

Mr. STEWART (Argenteuil): It will not be filled because we have not the salary available for the position.

Mr. BOYS: I would imagine there would be promotions, and possibly the junior position would be filled. Unless the minister can say definitely that for every superannuation there will be a reduction of one clerk, it would hardly be fair to take full credit for what would be saved by superannuation.

Mr. STEWART (Argenteuil): No.

Mr. BOYS: Then I cannot see how you can possibly take credit for the full saving by superannuation. Supposing a man is superannuated, and his position is filled by the clerk immediately under him, and this promotion continues down to the junior. If on his promotion his position is not filled, then of course you subtract the salary formerly paid to him.

Mr. STEWART (Argenteuil): We set out last year to reduce our staff, and we think we can reduce it still further by co-ordinating the work and getting the employees into buildings where we can amalgamate the staffs. That is what we are trying to do. I cannot say at the moment, nor can the officers of the department, just when that particular position will be abolished, because in effect that is what it means. That individual may go on the superannuation list, but the position itself will be abolished, and we will not require that salary for the balance of the year. This is more or less an estimate of what we will save in that way.

Mr. BOYS: Whoever prepared this estimate and reached the conclusion that there was to be a saving of $25,000, must have had his mind fixed upon certain persons receiving certain salaries being superannuated at a certain definite period. The next thing that comes to my mind is, will those positions be filled? If so, and you are filling the junior position—the minister knows what I am referring to—when there cannot be that saying. But if the minister will tell the committee that the junior position will not be filled, then I at once concede that you would save the salary of the junior officer who is promoted and whose position is not filled. I think the best way to get at the explanation would be to turn to the page and consult the notes there which indicate how it is we are going to have a saving of $25,000. We would like to know the number of the employees, the salaries they are getting, and the dates upon which they will retire. Then we can figure up the saving for ourselves.

Mr. STEWART (Argenteuil): That is just the difficulty; hence this is the method we have adpoted. We have a list of last year's positions, of which we abolished twenty-six, but I assure my hon. friend that at the time I could not have told him exactly how it would work out. If we knew that we would only vote salaries up to the time the retirements would take place. Under our programme this year we estimate that we will abolish completely several positions and make a net saving of $25,000. Therefore we have taken that sum off our estimates.

Mr. BOYS: I would not prolong the discussion for one minute, so far as I am concerned, if the minister said that this will be saved by the abolition of positions, because if they are abolished of course we do not pay the salaries.

Mr. STEWART (Argenteuil): That is the only way we can abolish them.

Mr. BOYS: Is it based upon certain definite retirements, or is it a guess?

Mr. STEWART (Argenteuil): If we can get certain amalgamations through within a reasonable time and get our staff coordinated we can put those savings into effect. At all events, we cannot spend more money than

we are asking for, so we are taking the responsibility of reducing the estimate to this extent.

Mr. BOYS: That is done sometimes?

Mr. STEWART (Argenteuil): Yes, I favour this system very much. Sometimes we may not make the reductions in the direction we expected, but we have to make them before the end of the year in order to save the money. It is imperative in this case.

Mr. MEIGHEN: If you made it $125,000 it would be better.

Mr. STEWART (Argenteuil): I think my right hon. friend will admit that forty-nine reductions constituted pretty good progress last year, and I am prepared to go on in that direction.

Mr. MEIGHEN: What mystifies me is that this government shows reductions in all details, according to the professions of its ministers, but when you add the whole thing up it is the same as the year before.

Mr. STEWART (Argenteuil): It is not in this case.

Mr. MEIGHEN: I say that in the individual cases it is less. This will all appear, though, in some other items.

Mr. McQUARRIE: Is the department endeavouring to make this reorganization, or is it being done by the Auditor General? When the new Auditor General was appointed we were told that his principal duty was to reorganize the civil service through the Audit Board. So far as we can ascertain he has not done anything in that direction of any consequence. His salary was placed at $15,000 because he was supposed to have some special qualifications for this work, but so far as I can see that phase of his duties has been entirely dropped and the departments themselves are attempting reorganization—in perhaps an inefficient way, if we consider the results that are being obtained. Will the minister explain the system that is being followed in this connection?

Mr. STEWART (Argenteuil): I can only speak for my own department. One of the difficulties I found on coming to Ottawa was the location of the staffs in different places all over the city. The Lands branch, for instance, had its staff in three different buildings; now we have them all in one building, and that makes saving possible. With respect to the Auditor General, he has not appeared in our department up to the moment, although I should be glad if he would come in, because if someone not connected with any of the staffs would go into the matter some saving could perhaps be made. We have, however, been decreasing the numbers of our staffs year by year, and I think we are not losing anything in efficiency. There is an idea prevalent that the work that has to be done by the Department of the Interior must be decreasing. That is true to a certain extent with respect to surveys, but it does not apply to leases, details of homesteading, pre-emption sales and all the other ramifications of the department's activities. In respect to these branches I cannot see that very much reduction can be accomplished, but I am putting reductions into effect wherever they can reasonably be made.

Mr. McQUARRIE: What saving has been effected in the Lands branch?

Mr. STEWART (Argenteuil): I shall be glad to deal with that when we come to the vote providing for that branch.

Mr. GARLAND (Bow River): On page 78 of the estimates of last year the total number of employees for 1924-25 is given as 816; this year the total number of employees for 1924-25 is given as 817. The total amount voted was given in 1924-25 as $1,500,737, whereas in the 1924-25 column of this year's estimates it is given as $1,501,410. Will the minister explain that?

Mr. STEWART (Argenteuil): The explanation is that a matron was appointed whose salary was voted in the supplementary estimates; also a forest assistant. But there is nothing of the kind to be voted this year.

Mr. GOOD: Has the Civil Service Commission done anything to assist in the reorganization of the department?

Mr. STEWART (Argenteuil): All the reorganization is virtually in the hands of the Civil Service Commission. There is an officer of the commission in our department continuously, and he assists and makes recommendations to the commission, particularly with regard to any additions that are requested. The Civil Service Commission are not responsible for all the work, because we make the requests for the changes that are deemed necessary, and these are investigated and reported on by the officer to whom I refer. The recommendation of the Civil Service Commission must of course go with every move that is made.

Mr. GOOD: Then I understand that in this department the services of the Civil Service Commission have been utilized to effect what reorganization has been made?

Mr. STEWART (Argenteuil): Oh, yes.

Mr. BLACK (Yukon): Is provision made in this estimate for the salary of the gentleman who was formerly Gold Commissioner of the Yukon, Mr. Mackenzie, who, according to the minister, has been brought to Ottawa to assist in framing a policy for administration in the Northwest Territories along lines which will protect the natives and conserve wild life?

Mr. STEWART (Argenteuil): No; that is in the Northwest Territories vote.

Mr. GARLAND (Bow River): After last year's criticism, has the minister been responsible for undertaking any co-ordination of the survey work of the various departments?

Mr. STEWART (Argenteuil): We will come to that under another item.

Mr. GARLAND (Bow River): I am simply asking whether any attempt has been made to co-ordinate the surveys.

Mr. STEWART (Argenteuil): Yes. I will deal with it when we come to it.

Mr. BOYS: I notice there has been a reduction in this item of $63,868, and also in the number of employees. How many reductions are due to death, how many to superannuation and how many to dismissals?

Mr. STEWART (Argenteuil): Twenty-six positions have been completely abolished, and there are twenty-six more which up to the beginning of the fiscal year we were not sure would be required in the re-organization, but which we now know are not required; so we have fifty-two positions that are completely abolished. I cannot give my hon. friend details as to whether these men died or are retired, but there are fifty-two individuals whose positions have been abolished and we have created three new positions.

Mr. BOYS: I appreciate that, because twice 26 are 52, and 49 from that leaves a difference of 3, but what I am trying to find out is this: If a position is abolished and the clerk who has been filling that position receives employment in some other department, then as far as the country is concerned there is no saving. We were given to understand that there was going to be some re-organization and economy effected as the result of the appointment of the new Auditor General and the Audit Board, and I thought perhaps there would be some in this department; may be there are; I wanted to find that out. I would like to ascertain from the minister whether, when a position is abolished in his department, the officer holding that position is dismissed or whether he gets employment in some other department. If the latter is the case, and it applies in all the departments, the country makes no saving whatever as the result of these positions being abolished.

Mr. STEWART (Argenteuil): I would have some difficulty giving my hon. friend details, but I do not think any of these 52 went to any other department. A number of them have been retired, and we are constantly having resignations. I have no knowledge that any of these went into any other department. As a matter of fact, there was some controversy amongst the Civil Service Commission as to whether an individual who resigned or was retired or stepped out of one department was eligible for appointment in another department, and I do not think that has been entirely settled yet. I can say frankly so far as this department is concerned, that when the services of an individual are not required, if there is a vacancy in some other department, he certainly ought to be given the preference.

Mr. BOYS: Certainly.

Mr. STEWART (Argenteuil): But so far as I know, not one of these 52 has gone to any other department.

Mr. BOYS: If I rightly understand, when any civil servant is dismissed, it is always as a result of an order in council.

Mr. STEWART (Argenteuil): Yes.

Mr. BOYS: Then I would think the minister would know. There would be some record kept when such a formality as an order in council is required to get rid of a civil servant, and it ought to be easy to keep track of the number who are dismissed. Can the minister tell me whether or not there have been any dismissals brought about by order in council so far as his department is concerned?

Mr. STEWART (Argenteuil): Do we dismiss any individual?

Mr. BOYS: I do not mean for misconduct, but because you wanted to abolish the office, or for any other good reason.

Mr. STEWART (Argenteuil): I have no recollection of that. Of course, every change in the department is recorded by order in council, and the majority of these cases would be retirements or superannuation. Then we have a number of young women who get married—

Mr. BOYS: I would call that a promotion.

Mr. STEWART (Argenteuil): And we have individuals who leave the service for better positions, but as regards these 52 I have no recollection of any of them having been dismissed. These are voluntary retirements or superannuations, and when they step out the positions are abolished.

Mr. BOYS: I think the minister will appreciate what is in my mind, and if it is possible to get the information necessary, I would like to get it. If we want to find out to what extent the country has benefited by what is suggested, we must of necessity know whether these abolitions or retirements or dismissals put an end entirely to the employment of the individual, or whether he got employment in some other department. As I have already said, if the employee is simply transferred to another department, the country saves nothing by that whatsoever. The minister has been very fair. He tells me he does not recollect any dismissals or transfers. That is partly satisfactory, but I would think we could get this information without any difficulty whatever, because if a civil servant is dismissed for any reason an order in council is passed and a record is kept, and we ought to be able to find out how many dismissals there are and whether the employee ceases to be an employee of the government in any department.

Mr. STEWART (Argenteuil): I can recollect only one being transferred in my department, and that was not this year; I do not recollect a single transfer this year. When the services of a man are required in some department, a transfer may be effected, but that seldom happens. I think I can assure my hon. friend that these fifty-two are all out of the service entirely now, but I will verify this for my hon. friend later, and be glad to answer his question fully.

Mr. BOYS: That is the information I want.

Mr. HANSON: When a female employee marries, does she automatically leave the service?

Mr. STEWART (Argenteuil): Yes.

Mr. BOYS: Not always.

Mr. STEWART (Argenteuil): I do not know of any in my department.

Mr. STEWART (Humboldt): I believe we had a definite illustration of the consolidation of branches in the union of the Water Powers branch and the Reclamation Service. Can the minister give us the details of just what was saved in civil government expenses by the joining of these two branches, what staff was dropped, and what new positions were created?

Mr. STEWART (Argenteuil): I can give that information when we are dealing with Reclamation and Water Powers, which is a separate service from this. I will have a note made of the question.

Mr. McQUARRIE: I understand there was a good deal of controversy last year over salaries, and that a revision of salaries was brought in this year, and that many complaints have been received in regard to that revision. Would the minister say whether that applies to his department, and if so, how are those complaints being dealt with?

Mr. STEWART (Argenteuil): This salary revision, as my hon. friend knows, has only been out about ten or twelve days. It will be surprising if there are not complaints; there usually are, but so far none have reached me from the Department of the Interior, or indeed from any other department, and of course this department is affected just the same as any other.

Mr. HANSON: Could the minister tell the committee just what an economic adviser in this department is, and what services he performs?

Mr. STEWART (Argenteuil): The gentleman who filled that position was a Mr. Patton. As my hon. friend knows when the Conservation Commission was abolished the staff came to the Department of the Interior. Mr. James White, who has since retired, came for one, and Mr. Patton came with him. The latter was classified, I understand, under that head in the Conservation Commission, and performed in the Natural Resources Intelligence branch of our department the same service the next year. Mr. Patton is now, I believe, going to enter another branch of the service, the Finance branch. He will appear next year as a transfer; it will not be a reduction of the staff.

Mr. HANSON: Not in the same capacity.

Mr. STEWART (Argenteuil): Yes, in the same capacity.

Mr. McQUARRIE: What provision is being made to hear complaints of the civil servants in regard to salary revision?

The CHAIRMAN: The question is scarcely relevant.

Mr. McQUARRIE: The minister said, Mr Chairman, he anticipated complaints. As a matter of fact I have seen by the press, particularly the western press, that civil servants

are highly indignant at the salaries that have been fixed for them, they do not think they have been fairly treated at all. I presume those civil servants are entering complaints although, perhaps, the minister has not heard of any in his own department. The question I asked, Mr. Chairman, was what provision was being made, or has been made for the purpose of hearing and determining these complaints, if any?

Mr. STEWART (Argenteuil): My hon. friend will understand the government has not the particular authority to hear complaints. The Civil Service Act makes the Civil Service Commission supreme in these matters subject to the action of parliament. The government cannot very well take action without the consent of parliament, because the Civil Service Act puts the control of the civil servants into the hands of the commission. Of course the government must take the responsibility of acquiescing in the adjustment of salaries by the commission; my hon. friend knows that the only remedy provided by the act, in case of a grievance, is a recommendation to parliament. All these difficulties are occurring in every department, and the grievances are being heard every day. Sometimes they are adjusted by the Civil Service Commission and sometimes adjustment is refused; cases of this kind are happening continually. With respect to the Post Office Department my hon. friend will remember that last year we offered to give a hearing to the executive of the employees after the adjustments were all completed; and I noticed the other day—I only got this from the press, however—that the hon. the Postmaster General (Mr. Murphy) is having a meeting with the executive to discuss what they claim is a grievance so far as they are concerned. But under the act the only remedy for the government, if they wished to overrule a finding of the Civil Service Commission, would be to make a recommendation to parliament and have parliament pass on it.

Mr. McQUARRIE: Is there going to be any special committee this year with regard to the civil service?

Mr. STEWART (Argenteuil): Well, the promise referred to was made to the executive of the employees of the Post Office Department. My hon. friend will remember that during the controversy that was one of the features of the case. We asked the executive to delay any drastic action until the adjustments were all made, and then, if they still felt they had a grievance, we would listen to the recommendations which they might make.

Mr. McQUARRIE: That would be a committee of the government?

Mr. STEWART (Argenteuil): Yes.

Mr. McQUARRIE: But there is no committee of the kind I referred to in existence at the present time?

Mr. STEWART (Argenteuil): No.

Mr. McQUARRIE: That is the question I was asking, whether it was the intention of the government to have any committee of the kind this year?

Mr. STEWART (Argenteuil): I cannot answer that question.

Mr. BLACK (Yukon): Could the minister tell us why the International Boundary Commissioner is dropped from the estimates?

Mr. STEWART (Argenteuil): As my hon. friend knows Mr. McArthur is dead, and the duties he performed have been combined with those of the Director General of Surveys who now takes charge.

Mr. BLACK (Yukon): Would the minister explain to the House what is meant by "exploratory engineer?" I see there are some twelve or fifteen different kinds of engineers mentioned in these estimates, and I should like to understand what an "exploratory engineer" is?

Mr. STEWART (Argenteuil): Since the abolition of the Conservation Commission we have had one or two engineers whose business it is to assist the municipalities in making a survey of their conditions. For example Mr. Kitto is one of the officers who perform this particular line of work. It is largely to supply them with industrial information, to give them advice if they ask it; it is only done upon request. For example this official was in Winnipeg a short time ago making a survey there for that purpose, and advising the city council on matters largely industrial. These officers came over from the Conservation Commission.

Mr. BLACK (Huron): Is that work done at the expense of the city?

Mr. STEWART (Argenteuil): No, it is done at our expense.

Mr. McQUARRIE: May I ask how the travelling expenses are dealt with? Is there a certain per diem allowance provided, or do the officers concerned put in claims for expenses at the end of their journey when they return to Ottawa? What restrictions or what supervision is there in regard to travelling expenses, to see that the amounts charged are right and proper?

Mr. STEWART (Argenteuil): With the exception of a man who is going outside of Canada when by order in council his per diem allowance is fixed, he has to render a certified account for his expenses.

Mr. McQUARRIE: Is there any limit to the expenses an official may incur? If he is travelling from here to Vancouver can he take a compartment, if he wishes, on a train, or is he limited in the matter of expenses? As I understand it in some of the provinces—I think, for example, in Alberta—they have found it advisable to put a curb on the travelling expenses of civil servants, and the employees themselves find it more satisfactory to have a per diem allowance; it costs the country less and the civil servants are better satisfied to have it that way. I think I mentioned this matter last year and the minister said he knew something about the system, that he was watching it, and that he would give it a trial, or something of that kind. I am told it worked out very satisfactorily in Alberta; and it has been suggested to me that the same system might be applied to the services of the Dominion, with a saving to the country and also, perhaps, with more satisfaction to the employees themselves. That is the point I am raising. Under the present system, as I understand it, a man goes off on a trip, comes back, puts in his bill for expenses and the bill is paid. There is practically no restriction as to what expenses he may incur as long as they are considered to be in reason. There is no attempt at economy whatever. Apparently the government is satisfied to allow things to go along in the same old way, making no effort toward economy. Could the minister tell me if this point has ever been considered by this government, and if so what conclusion has been arrived at and what were the reasons for such conclusion?

Mr. STEWART (Argenteuil): Usually most people would prefer to travel on a per diem allowance, because that per diem allowance must be sufficiently large to cover their expenses. They get an allowance sufficient to provide for reasonable accommodation, and we have a very close check upon these accounts, which are checked by our own auditors and our own accountants, in our own department, and rechecked by the auditor. As I am a member of the Treasury Board, I know pretty well that there is not very much leeway. In addition to that, these accounts must be certified. If I were to give my candid opinion I would say that we save money by asking for the return of the vouchers for the accounts and by the careful checking that goes on. I will mention one instance. We have a good many removals, running into a considerable sum of money. These come before the Treasury Board and we have any number of them on every occasion on which the Treasury Board meets. We find that by careful checking we have been able to cut the removal expenses very considerably. I am not taking any credit, but I want to point out to hon. gentlemen that these accounts are scrutinized, because there is of necessity a great deal of travelling in the service, for that reason we have a careful check on all the accounts for travelling expenses.

Mr. McQUARRIE: Does this item of $32,000 include all the travelling expenses in the department for the year?

Mr. STEWART (Argenteuil): Yes.

Mr. McQUARRIE: Then we have travelling expenses and sundries. How much is for travelling expenses and how much is for sundries?

Mr. STEWART (Argenteuil): It is estimated that a sum of $22,000 will be required to meet the expenses of officials at Ottawa, permanent or temporary, who may be travelling on government business, and an amount of $10,000 will be necessary to cover the expenses such as telegrams, postage, subscriptions to newspapers, express charges, and other items relating to the inside service of the department at Ottawa.

Mr. McQUARRIE: Then does the item above that, printing and stationery, relate to printing and stationery outside of the Printing Bureau?

Mr. STEWART (Argenteuil): The Printing Bureau charge us for that work. Nothing goes outside.

Mr. McQUARRIE: Nothing at all goes outside?

Mr. STEWART (Argenteuil): No, that is for index books for the Registration branch, land patent record books, special paper for patent printed form, purchase of typewriters and supplies and stationery required for the general use of the inside service at Ottawa.

Mr. McQUARRIE: There is no outside printing at all in this particular branch of the department?

Mr. STEWART (Argenteuil): No.

Mr. McQUARRIE: No advertising or anything of that kind?

Mr. STEWART (Argenteuil): No.

Mr. HANSON: The minister spoke of employees being transferred from the Conservation Commission to his department. Could he tell us how many of the 817 employees were transferred from the Conservation Commission, how many are left now, and how long before they will be out of the service? This service I understand has been done away with and the Conservation Commission abolished practically.

9 p.m.

Mr. STEWART (Argenteuil): No, that is not correct. Part of the service is being continued in the Natural Resources Intelligence branch of the service, but these employees were in the department when I came here. I cannot tell when they were transferred.

Mr. HANSON: How many of the 817 were from the Conservation Commission?

Mr. STEWART (Argenteuil): I cannot tell how many came over, it was before my time and we have not a record of the names. It would be very difficult for me to tell, except as to two, Mr. White and Mr. Patton. Mr. Patton is still with us and will be exchanged; Mr. White is retired. I cannot tell my hon. friend how many of that particular group are still in the service.

Mr. BAXTER: I do not wish to delay the item, but this seems a good opportunity to ask for something in which I feel a little interested and possibly the matter may be dealt with in some publication. If so I want to see it. I am not objecting to what we are spending for this astronomical research work, but I would like to know the results we are getting from it. Have any discoveries been made or any works carried out that are of practical benefit? I do not mean to criticize if they are of practical benefit, but at the same time I would like to know what the relation is between what we get and the money we spend.

Mr. STEWART (Argenteuil): I am afraid you have given me a rather difficult question to answer. As a layman I frankly confess that I have not any doubt that the service is a valuable one to the country, but as a layman I would have considerable difficulty in explaining the value to my hon. friend. We spend a good deal of money on the service and no doubt the investigations are valuable. but just to put it in a concrete way, would be very difficult. However, when the vote comes up I will get that information.

Mr. McQUARRIE: I see provision made here for four editors, grade 1, at $2,400 per annum or a total of $9,600. What are their duties?

Mr. STEWART (Argenteuil): We get out a Natural Resources Intelligence Monthly to advertise the natural resources of the country, new discoveries of mineral wealth, and so forth. Our reports must be put in the hands of someone competent to take care of them and he is called editor. I do not want to be responsible for all these titles; I am merely stating the duties they perform.

Mr. HANSON: There are also two publicity agents. What are their duties?

Mr. STEWART (Argenteuil): We have Mr. Campbell now at Wembley. The business of these men is to advertise the scenic beauties of Canada, to encourage the tourist traffic. That is all they do.

Mr. HANSON: I suppose the minister knows that the Canadian National Railways have a bureau which is doing the same thing. Do they work in co-ordination with these publicity agents of his department or do they work on their own hook?

Mr. STEWART (Argenteuil): The Canadian National and the Canadian Pacific both maintain services of this kind, and although the Canadian National Railways belong to the country, Mr. Campbell does not advertise them particularly; he is trying to induce people to come to Canada rather than to go to Europe to spend their wealth while travelling. We are bombarded by boards of trade all over the country to assist them in advertising campaigns and I think the time has nearly come in Canada, in view of the increasing importance of the tourist business here and the large amount of money it is bringing into the country, when there should be some co-ordination throughout the Dominion. For example, I think the city of Vancouver spends thousands annually in advertising. I am not complaining about that of course, but I cannot help feeling that great good would result from such co-ordination as exists in connection with fire fighting and better methods of forest conservation and preservation. Something of this kind in relation to the tourist business would help materially.

Mr. HANSON: I am inclined to agree with the minister. I realize the value of the tourist business of this country and I am not criticizing in the slightest degree the expenditure under this head. There is no doubt that tourists along the Atlantic and in the mountains leave millions of dollars here which otherwise would not come to Canada. In New Brunswick we have a provincial tourist

association and the city from which I come maintains a tourist bureau. The same is true of all the principal centres in the Maritime provinces. I think it would be an excellent idea to have some co-ordinated effort to prevent the enormous over-lapping that now exists.

Mr. LADNER: In line with the minister's remarks as to co-ordination in tourist advertising for the purpose of inducing tourists to come to Canada, the publicity bureau at Vancouver in charge of Mr. Davidson submitted such a proposal to the government. Other tourist organizations in the various cities throughout the country are also interested in this matter; and the suggestion is that the government, in formulating a policy in this direction, as well as contributing to its upkeep, should aim at an advertising campaign that would be nation-wide rather than sectional. The idea should be for example that the bureaus of Ontario while participating in a nation wide policy would also try to induce tourists in the United States adjacent to Ontario to come to that province, and similarly the people of British Columbia would endeavour to bring tourists to British Columbia. I might tell the minister that, contrary to his idea, the city of Vancouver is not working in isolation; it has established a practical policy of co-ordination, having joined with the states of Oregon and Washington, under what was known as the Pacific Northwest Tourists' Association, in an extensive advertising campaign through the medium of hotels and otherwise to induce thousands of citizens to come from California and the middle states up to Portland, Seattle, and Vancouver. British Columbia and the two American states are treated as one territory for this purpose. I think the minister might profitably inquire into the results of this practical scheme. If he does he will find that it has been eminently satisfactory and has brought into British Columbia many thousands of tourists who otherwise would never have gone there. Did the minister not receive a proposal of this kind some time ago, and in view of his remarks would he not be disposed to take the initiative in bringing together the advertising bureaus of the cities of Canada and other interested organizations to carry out such a policy as he has suggested to-night?

Mr. STEWART (Argenteuil): I have memoranda from Mr. Davidson on the subject and I had the pleasure of a visit from him last year and this year as well. We are preparing to put on what will be more or less a week of broadcasting for the purpose of getting tourists to come to Canada right across the country. Our difficulty is that we must be extremely careful about our advertising, and that is why co-ordination appeals to me. I say frankly that so far we have done very little advertising in the way of newspaper or pamphlet publicity in the United States. We have contented ourselves with sending lecturers throughout the country at important points where large gatherings could be got together. These people have lectured on the scenic beauties of Canada, not emphasizing any particular part of the country; and the intensive local work has been carried on by organizations such as that maintained at Vancouver. The results have been splendid. I am quite prepared to take the initiative in getting together all the forces to see whether we cannot co-ordinate the efforts of the railways, the municipalities and the government in a drive to secure tourists. There may not be over-lapping at the moment but there is a possibility of some duplication with all the separate units working independently.

Mr. LADNER: I have had occasion to go into this matter in detail, having been connected in a professional way with a very large organization, the Brewster Transport Company at Banff, as well as with the Terminal City Motor Company and Triangle Tours at Vancouver. I am also acquainted with the activities of other organizations. I know that those men connected with the tourist business who have made a great success advertise the tourist features in a scientific way. This method does not appear to be followed by the government agencies. Experts in the tourist business do not give lectures. They ascertain when any organization is making arrangements for a convention, they send representatives to the chairman of the committee which has to do with selecting the convention city, and these representatives are provided with a plentiful supply of maps, photographs and other information, which they lay before the chairman of the committee. In a word, they are expert salesmen of our natural beauties, and they are very successful in bringing conventions to our cities. As a result of their efforts the tourist traffic across Canada in prospect next year, from information I have gathered, which has been confirmed by our railway executives, is simply tremendous. For instance, in one day alone 2,200 people will visit Banff and Lake Louise. These tourist organizations co-operate with the railways in securing this business. My suggestion is that the publicity bureau at

Vancouver and other cities be called upon to co-operate with the railway organizations which desire to get business for their railways. I would urge upon the minister the wisdom of the government taking the initiative in this work and not continuing its policy of drifting, because the tourist traffic means millions of dollars every year to Canada and to British Columbia. No doubt the minister has the data in his files, and if he studies it he will be surprised at the amazing advantages which are derived from practically no capital investment through inducing hundreds of thousands of people to visit the Dominion every year, for they leave a large amount of money behind them and spread a knowledge of Canada throughout other lands.

Mr. ROBINSON: It seems to me that the government should adopt some general policy rather than a local one which might benefit only certain portions of the Dominion. Does the hon. gentleman suggest that the government deal with it locally?

Mr. LADNER: I was simply suggesting that the government should call together the people who understand the business of inducing tourists to visit our cities; in other words, that it should take the initiative and encourage those engaged in the business by intimating that the government will participate with them financially in working out a policy that would be of national advantage.

Mr. CASGRAIN: Is any publicity carried on for the province of Quebec, and especially for the county which I have the honour to represent in this House, a county in which is situated the great summer resort of Murray Bay? Also, is any of this publicity work carried on in both languages, and particularly in the French language?

Mr. STEWART (Argenteuil): The government advertises the whole Dominion without specifying any particular locality.

Mr. CASGRAIN: That is a mistake.

Mr. MacLAREN: Perhaps the minister would inform us if these publicity agents organize the parties of tourists which from time to time visit this country from the United Kingdom. Three large parties of teachers from the United Kingdom will visit Canada this year. Hitherto such parties always begin their tour at Quebec and proceed westward. Now, we do not wish to convey to these teachers a wrong geographical impression of this country, and it would be rather unfortunate if they imagined for one moment that the Dominion begins in the east in the city and province of Quebec. I would suggest to the minister that whether his publicity agents organize these parties or not, he should send them a true map of Canada, so that intending tourists may obtain a correct geographical idea of the Dominion, and thus begin their tour further east than Quebec before proceeding westward through that province and the other fine portions of the Dominion. I am satisfied that his publicity agents need this point drawn to their attention. I do not say that this ignoring of the Maritimes is deliberate, rather it is a habit with these people, and there are many instances of it in other departments, but I think the minister can help the situation materially by taking action along the lines I have suggested.

Mr. McQUARRIE: What system of distribution is adopted with respect to the publications which are got out by the four editors?

Mr. STEWART (Argenteuil): We have a mailing list and are glad to send the publications to anybody who applies for them. This list is steadily growing. My hon. friend will notice that many of the articles in the Natural Resources Intelligence Monthly are quoted very largely by the press throughout Canada. A notable instance is Toronto Saturday Night, which my hon. friend will agree is a very important journal.

Mr. McQUARRIE: Have you some system in making up the mailing list, or is the work done in a blind way that does not really accomplish anything?

Mr. STEWART (Argenteuil): If, for example, an individual asks for a copy of the Natural Resources Intelligence Monthly, we put him on the mailing list. We treat him in a sense as an interested party.

Mr. McQUARRIE: You do not send the publications to people who do not happen to ask for them?

Mr. STEWART (Argenteuil): We do not.

Mr. McQUARRIE: I understand that the minister does not use the newspapers or the magazines for advertising purposes; he relies on his lecturers, of whom he has two, and on these publications, which are sent out by his department to people who ask for them. Has he ever considered the question of a more extensive distribution of these publications, some of which contain very valuable material?

Mr. STEWART (Argenteuil): In former years these publications were sent out indiscriminately and many of them were seldom

if ever read. Now we send them out to those who are interested in them. The circle of distribution is constantly enlarging, and we know that those we do send out are read and appreciated.

Mr. McQUARRIE: I agree that indiscriminate distribution would not produce results, but to distribute only to those who request them is not enough. The object, I take it, is to interest people in Canada, people who perhaps are not thinking about Canada at all. You will never get them with this system, or this lack of system. Are these publications distributed outside of Canada?

Mr. STEWART (Argenteuil): Yes—to the United States, for instance, to England, to the continent.

Mr. McQUARRIE: Are they printed in both French and English?

Mr. STEWART (Argenteuil): Yes.

Mr. BOYS: How many are on the mailing list at present?

Mr. STEWART (Argenteuil): I have not that information before me but I will get it.

Mr. McQUARRIE: I notice that there are three senior photographers and three photographers. What do they do?

Mr. STEWART (Argenteuil): They do work connected with the aerial surveys, natural resources and intelligence, and the observatory.

Mr. HANSON: I notice that all these departments have a departmental solicitor, and at the same time we have an expensive Department of Justice in which there are half a dozen good lawyers. Is it really necessary for every department to have a lawyer of its own?

Mr. STEWART (Argenteuil): In our department we need a great deal of legal advice. For instance, we handle about 5,000 leases annually and it is well to have these carefully scrutinized by a lawyer to ensure that they shall be in proper form. But there is no reason why that work could not be done in the Justice department, and I am ready to transfer every one we have to that department. I agree that all the solicitors could very well be under the Department of Justice, and that is one of the things I would like to see put into effect as soon as possible.

Mr. McQUARRIE: There are three confidential messengers in this list at $1,200 each. I notice that the Finance department which might be expected to need messengers of this kind, has only one. What are the duties of a confidential messenger?

[Mr. C. A. Stewart.]

Mr. STEWART (Argenteuil): They are really not confidential messengers at all. We have reduced the number by one, and we may be able to reduce them by two more as soon as we can get our staffs so situated that we shall not be constantly carrying files from one building to another. I do not know why they are called "confidential". There is one old gentleman in my outer office who, I presume, might be called a confidential messenger; he is a very valuable old gentleman who has seen long service.

Mr. McQUARRIE: What is the difference between the three grades of messengers—confidential messengers, senior messengers and messenger clerks?

Mr. STEWART (Argenteuil): I am afraid that is a poser; I do not think I could give the distinction. I presume one of them does clerical as well as messenger work.

Mr. McQUARRIE: They would not be confidential messengers, then?

Mr. STEWART (Argenteuil): I do not think any of them come under the category of confidential. I never send any of them on confidential messages.

Mr. BOYS: Reverting to what I was discussing with the minister perhaps half an hour ago, I notice that there were five astronomers last year, and there are only four this. Has the staff of astronomers been actually reduced by one? I should think that is perhaps a service that would either hold its own or expand.

Mr. STEWART (Argenteuil): My experience with it is that it has been expanding all the time.

Mr. BOYS: Then if you had five before, and five were needed, I do not quite see how the research work of this branch can be carried on with only four, and I was wondering if the work that was done by the fifth man is being done by some other officer, or how the minister accounts for the reduction.

Mr. STEWART (Argenteuil): Mr. Young of the observatory at the coast has resigned, and we are not filling his position.

Mr. BOYS: Is he the only astronomer at the coast?

Mr. STEWART (Argenteuil): No, Mr. Plaskett is in charge at the coast.

Mr. BOYS: Has there been any increase in the staff below the astronomers? My point is this: If you required five to carry on the work before, you cannot carry it on efficiently with one less.

Mr. STEWART (Argenteuil): It may be accounted for by the fact that the work is being carried on by a junior to Mr. Young, who is not filling Mr. Young's position; that is, we have not increased his salary to that extent.

Mr. BOYS: He will not be called an astronomer?

Mr. STEWART (Argenteuil): I can only say that I am asking for reductions only to the extent that they can be made without injuring the service in any way.

Mr. BLACK (Yukon): What are the duties of the Chief of Wild Life?

Mr. STEWART (Argenteuil): My hon. friend is aware that we have a treaty with the United States for the preservation of bird life, and that it is necessary to have officials to carry out those duties. This official is in charge of that particular work, the preservation of wild life.

Mr. BLACK (Yukon): Is there a staff in connection with this work, and if so how are they provided for?

Mr. STEWART (Argenteuil): My hon. friend will have noticed that we put through an amendment the other day by which we are enlisting the services of the provincial game guardians in this work. It is simply another case of trying to co-ordinate all the work that is going on in the preservation of wild life under an official in charge here at Ottawa.

Mr. ROSS (Kingston): I see there is provision for a Director of Forestry. Is that a separate branch from the department? Is it working in connection with any other department? What is the work being done by this Director of Forestry?

Mr. STEWART (Argenteuil): We have the forests in the three prairie provinces and in the Dominion land belt in British Columbia to look after. The duties of the Forestry branch are to preserve the timber resources, and that branch is headed by the Director of Forestry. Mr. Campbell who occupied that position has retired, and Mr. Finlayson has recently been appointed to the position.

Mr. ROSS (Kingston): Will the minister be kind enough to give details of the work that is being done by that branch?

Mr. STEWART (Argenteuil): Perhaps my hon. friend would wait until we are dealing with the forestry item, because I shall undoubtedly have to give all the details again on that item.

Mr. ROSS (Kingston): When we take up that item, would the minister be good enough to have a detailed statement of what is being done by this branch, and as to whether there is a general forest conservation system throughout the country?

Mr. STEWART (Argenteuil): Yes.

Item agreed to.

Progress reported.

CANADA—FINLAND TREATY OF COMMERCE

Hon. J. A. ROBB (Acting Minister of Finance) moved the second reading of Bill No. 128, respecting trade between Canada and Finland.

Motion agreed, bill read the second time, and the House went into committee thereon, Mr. Gordon in the chair.

On section 1—short title.

Mr. BAXTER: I think the hon. minister was to give some further statistics when we went into committee, and I would suggest that that might be done now.

Mr. ROBB: Yes, Mr. Chairman. I laid on the table at three o'clock the information that was asked for. It was not statistics in connection with this bill, but in connection with another bill, but there was some correspondence which the right hon. leader of the opposition asked for, and which I laid on the table at three o'clock.

Section agreed to.

Sections 2, 3, 4 and 5 agreed to.

Bill reported.

CANADA-NETHERLANDS CONVENTION OF COMMERCE

Hon. J. A. ROBB (Acting Minister of Finance) moved the second reading of Bill No. 129, respecting a certain trade convention between His Majesty and the Queen of the Netherlands.

Motion agreed to, bill read the second time and the House went into committee thereon, Mr. Gordon in the chair.

Section 1 agreed to.

On section 2—Convention approved.

Mr. MEIGHEN: This is the treaty where we get nothing and make a few concessions for fear that we will get worse.

Section agreed to.

On section 3—Extension of advantage to the Netherlands.

Mr. MEIGHEN: What is meant by "any foreign power"? Does that include any part of the British Empire?

Mr. ROBB: No, that would not include any part of the British Empire. That would be any other country.

Mr. MEIGHEN: Well then, they can give to the other dominions and to Great Britain better terms than to us?

Mr. ROBB: No.

Some hon. MEMBERS: Carried

Mr. MEIGHEN: The hon. member for Pontiac (Mr. Cahill) wants it carried. Does he know what bill it is?

Mr. CAHILL: Better than my right hon. friend did. He has been looking round for the bill and now that he has it I doubt whether he knows yet what it is about.

Mr. MEIGHEN: I am not asking to have it carried.

Mr. BOYS: Will the hon. member for Pontiac explain the bill for us?

Section agreed to.

Sections 4 and 5 agreed to.

On the schedule.

Mr. MEIGHEN: The schedule is the important part if there is anything important in the bill. Now we come to the expression "foreign country". Article 1 reads as follows:

> Articles the produce or manufacture of Canada imported into the Netherlands and articles the produce or manufacture of the Netherlands imported into Canada shall not be subjected to other or higher duties or charges than those paid on the like articles the produce or manufacture of any other foreign country.

Now, the question I put before is pertinent. Unless that is modified in the remaining part of the article it would mean that the Netherlands could give to the other parts of the British Empire treatment better than to us. I read further:

> Nor shall any prohibition or restriction be maintained or imposed on the importation of any article the produce or manufacture of Canada into the Netherlands, or of any articles the produce or manufacture of the Netherlands into Canada which shall not equally extend to the importation of like articles being the produce or manufacture of any other foreign country. This last provision is not applicable to the sanitary and other prohibitions occasioned by the necessity of protecting the safety of persons or of cattle, or of plants useful to agriculture.

So that there is no doubt the Netherlands are left free to make their tariff better for any other dominion or for Great Britain than for us.

[Mr. Meighen.]

Mr. ROBB: I do not so understand it.

Mr. MEIGHEN: I would be sorry if, besides the member for Pontiac and myself, the minister does not understand it.

Mr. ROBB: I think my right hon. friend has interpreted the article wrongly. I think it makes it distinctly clear that we have the most favoured nation treatment.

Mr. MEIGHEN: Yes, but what about the words "foreign country?"

Mr. ROBB: If my right hon. friend will read the article again he will observe its meaning.

Mr. MEIGHEN: I know what it means; it is a matter of what the words "foreign country" mean:

> Articles the produce or manufacture of Canada imported into the Netherlands and articles the produce or manufacture of the Netherlands imported into Canada shall not be subjected to other or higher duties or charges than those paid on the like articles the produce or manufacture of any other foreign country.

Now then—

Mr. ROBB: Any British country is a foreign country to the Netherlands. My right hon. friend will agree to that.

Mr. MEIGHEN: Is the minister quite sure of that? What is meant by a "foreign country?"

Mr. ROBB: The Netherlands is a foreign country to us. Neither Great Britain nor any of the British dominions is foreign to us; we are all in the same class.

Mr. CALDWELL: I would take it that the wording would allow us to give Great Britain, or any of the British colonies a preference over the Netherlands.

Mr. MEIGHEN: I do not doubt that.

Mr. CALDWELL: But I do not take it that the article would allow the Netherlands to give Great Britain or any of the British colonies a preference over Canada, because Great Britain, or any of the British colonies, is a foreign country to the Netherlands the same as we are; while neither Great Britain nor any of the British colonies is a foreign country to us. I think the article preserves the right of Canada to give Great Britain or any of the British colonies a preference over the Netherlands; but it would preclude the Netherlands from giving either Great Britain or any of the British colonies a preference over Canada. That is my view of it, although I may be wrong.

Mr. BOYS: Does not the minister contend that "foreign country" as used in article 1 means every country other than Canada? Because this is an agreement between the Netherlands and Canada, and as the minister has said Great Britain is a foreign country to the Netherlands; and if it applies as a foreign country to the Netherlands, one of the parties to the treaty, it surely must apply as a foreign country to the other party to the treaty, unless there is a reservation.

Mr. ROBB: My right hon. friend and the chief whip of the Conservative party are good lawyers. Well, I will read it this way to see if it is not quite clear:

Articles the produce or manufacture of Canada imported into the Netherlands shall not be subjected to other or higher duties or charges than those paid on the like articles the produce or manufacture of any other foreign country.

Mr. BOYS: I quite agree with the minister there. The difficulty is, this is an agreement between two countries, and you cannot put an interpretation upon certain words in that agreement which interpretation will mean one thing when applied to one of the parties and a totally different thing when applied to another of the parties; and "foreign country" as used there it does seem to me applies to every country other than Canada in the one case and other than the Netherlands in the other. Therefore, in that sense, Great Britain would be a foreign country to Canada for the purposes of this article. If the minister reads it I think he is bound to come to that conclusion.

Mr. ROBB: Not at all.

Mr. BOYS: Let me see if I cannot make the point clear. The minister admits that Great Britain is a foreign country so far as the Netherlands is concerned. I think that is admitted, I think the minister has said that.

Mr. ROBB: Yes.

Mr. BOYS: Well then, let us again state that this is an agreement as between two parties. If this foreign country means Great Britain, so far as the Netherlands is concerned, how can it mean anything else in the same agreement between the same two parties when applied to Canada? And if the intention is that it should, there should be some reservation.

Mr. ROBB: The article appears quite clear to me. In the first place it says:

Articles the produce or manufacture of Canada imported into the Netherlands shall not be subjected to other or higher duties or charges than those paid on the like articles, the produce or manufacture of any other foreign country.

Mr. BOYS: Read it the other way.

Mr. ROBB: Reading it the other way:

Articles the produce or manufacture of the Netherlands imported into Canada shall not be subjected to other or higher duties or charges than those paid on the like articles the produce or manufacture of any other foreign country.

Mr. BOYS: Foreign country would include Great Britain.

Mr. ROBB: No.

Mr. MEIGHEN: That is the difficulty the minister is in. I think if he will look at other treaties of the same kind he will find an express reservation which apparently has been neglected here. If the words "foreign country" were used in relation to ourselves alone, the minister would be right, but he cannot say to the Netherlands, "Those words mean one thing to us, but they mean another thing to you," and without an express reservation the minister has got himself bound to either one of two things.

Mr. ROBB: No.

Mr. MEIGHEN: Either he has to give the Netherlands the same treatment as he gives Great Britain, or the Netherlands will be free to give Great Britain better treatment, the same as we are free to give Great Britain better treatment—one or the other.

Mr. ROBB: No. My recollection is that this was referred to the Justice department. and if my hon. friend has any doubt as to the definition of it, I am prepared to let the measure stand and again refer it to the Justice. department, but my own mind is quite clear.

Mr. BOYS: It is not so much a doubt as to the definition, it is as to the application. What I cannot understand is how the minister can think that when these two countries are parties to the agreement, and in the body of that agreement the words "foreign country" are used, that in the one instance "foreign country" as applied to the Netherlands would refer to Great Britain, but although used in the same agreement, applying also to Canada, with no distinction, with no reservation, he would put a totally different interpretation on the words as applying to Canada.

10 p.m.

Mr. BAXTER: The effect of the treaty is that it is understood that in all matters governing the import, export and transit of merchandise the Netherlands grants to Canada, and Canada grants to the Netherlands the treatment of the most favoured nations. What does the word "nation" mean there? It does not simplify matters and does not

solve the difficulty at all to tell us it has been before the Justice department. The department has no standing such as that of a tribunal which can deliver a judgment and force people to accept it. The Department of Justice merely expresses an opinion and it may be correct or it may be incorrect. But the opinions expressed in this House are quite on a par with those expressed by the Department of Justice.

Mr. CALDWELL: In one point of view, England is not a foreign country to Canada; but at the same time, by reason of the fact that this language is used in the one sentence without even a comma, I think it might be advisable for the minister to let it stand and consult the Justice department, in view of the discussion which has taken place to-night, and make sure of the point, because it might be a serious matter if this interpretation should be as the leader of the opposition seems to think it is. Personally, I do not agree with him but I am not a lawyer and I do not want to pass a legal opinion on it, but I think the minister might be well advised to let it stand.

Mr. MEIGHEN: The minister negotiated this treaty himself, did he not? Did he make it clear to the Dutch negotiators?

Mr. ROBB: Quite.

Mr. MEIGHEN: It is certainly doubtful enough to warrant a confirmation. I would not like to hold up the treaty, although it is not a very important one, but I would suggest that the minister confirm that interpretation by cable, and that would be far more important than the opinion of the Department of Justice or the opinion of anyone. Being a treaty between nations, it is not really a legal point. It is just a question of what a reasonable man reading it would likely take out of it. I fancy too that two out of three would say that what is a foreign country to one is a foreign country to the other in the same treaty, and the minister would be very well advised to get the interpretation he puts on it confirmed by the government of the Netherlands by cable, because it would be extremely serious if we bound ourselves, without any concession, to give to Holland and the Dutch colonies the British preference right off or any other preference we ever give Great Britain.

Mr. ROBB: I would not like to go so far to say that we are going to re-open this with the Netherlands, but on Thursday when the matter was before the House objection was taken to this bill on the ground that it did not clearly define whether or not the goods should come in through Canadian ports, and I promised then to refer it to the Justice department. I have here the report of the Justice department, and reading it over, it makes it pretty clear. The report reads:

Department of Justice,
Canada.

Ottawa, 16th May, 1925.

Re: Convention of Commerce between Canada and the Netherlands

Dear Sir:

Referring to my interview with Mr. Russell and Mr. Viets of your department, regarding the question which arose in a discussion in the House, reported at pages 3181 and 3182 of Hansard of the 14th May, 1925, I beg to advise you as follows:

By Article XIV of the Convention of Commerce between Canada and France, 1922, it is provided that:

"To enjoy the benefit of the tariff advantages provided for in the foregoing articles products originating in and coming from France, the French colonies, possessions and protectorates shall be conveyed without transhipment from a port of those territories or from a port of a country enjoying the benefit of the preferential or intermediate tariff into a sea or river port of Canada.

Reciprocally to enjoy the benefit of the tariff advantages provided for in the foregoing articles the products originating in and coming from Canada imported into France, the French colonies, possessions and protectorates shall be conveyed direct from a Canadian port without transhipment in any country that does not enjoy the said tariff advantages.

Provided, however, that nothing in this article shall exempt the product of either country from any surtaxe d'entrepot that is now or hereafter may be imposed on products imported indirectly."

In the subsequent convention made with Italy in 1923, and in the present convention with the Netherlands, no similar clause is to be found, but it is provided by Article I of both conventions as follows:

"Articles the produce of manufacture of Canada imported into the Netherlands and articles the produce of manufacture of the Netherlands imported into Canada shall not be subjected to other or higher duties or charges than those paid on the like articles the produce or manufacture of any other foreign country. Nor shall any prohibition or restriction be maintained or imposed on the importation of any article the produce or manufacture of Canada into the Netherlands, or of any articles the produce or manufacture of the Netherlands into Canada which shall not equally extend to the importation of like articles being the produce or manufacture of any other foreign country. This last provision is not applicable to the sanitary and other prohibitions occasioned by the necessity of protecting the safety of persons or of cattle, or of plants useful to agriculture."

As I interpret this provision, it clearly means on the one hand that articles the produce or manufacture of the respective countries shall not be subjected to other or higher duties or charges than those paid on the like articles the produce or manufacture of any other foreign country, and that on the other hand either country is free to impose any prohibition or restriction on the importation of such articles if such prohibition or restriction equally extends to the importation of like articles being the produce or manufacture of any other foreign country. Having in view these provisions, and the fact that both countries understand that the purpose of the convention is to extend to each other what is known as most favoured nation treatment, I see no

reason to doubt that Canada has the right to impose the same prohibitions or restrictions under the present convention as were imposed in the convention with France above referred to, and which are in fact imposed with respect to all foreign countries enjoying most favoured nation treatment. If, therefore, appropriate legislative sanction exists for the imposition of any such prohibition or restriction, I think that no difficulty with the Netherlands will arise. Inasmuch as the provisions of article I of the convention above quoted clearly indicate that the intention of the convention was to permit the imposition of prohibitions and restrictions of the kind mentioned, I think that if clause 4 of the bill approving the convention be enacted as drawn, it will constitute sufficient legislative sanction for the making by the Governor in Council of such orders and regulations as are deemed necessary to put such prohibitions or restrictions into effect. I understand that a similar clause was incorporated in the bill relating to the convention between Canada and Italy, 1923, and I would not, therefore, vary the wording of the clause if it can be avoided.

The above remarks apply as well to the convention with Finland.

Yours truly,

W. STUART EDWARDS,
D. M. J.

I think that makes it pretty clear that we are safeguarded.

Mr. MEIGHEN: I am not taking exception to the deputy minister's opinion but I want to point out to the minister that in his resolution as he introduced it there was not included a full statement of article 1 and of the reservation contained in the second sentence here:

Nor shall any prohibition or restriction be maintained or imposed on the importation of any article the produce or manufacture of Canada into the Netherlands, or of any articles the produce or manufacture of the Netherlands into Canada which shall not equally extend to the importation of like articles being the produce or manufacture of any other foreign country.

That is the restriction on which the deputy minister relies and, I fancy, relies correctly. What the minister said before was that merely because it was in the French treaty we could therefore apply it to the Netherlands. But it would not apply at all. It is in the French treaty, and the only importance it has is this, that if it were not in the French treaty we could not apply it here, notwithstanding this second sentence. But because the second sentence appears, then, it being in the French treaty, we can apply it to the Netherlands. If the minister had the second sentence in his resolution there would be no question at all in the House and he would not have had to go to the Justice department. This is a matter where Holland is bound to consider Great Britain, in relation to trade matters, a foreign country as respects Canada. If I were in a court I would rather have Holland's end of the case. In so far as Canada is concerned, in her trade matters one country is as foreign to her as another. Holland could very well say to us, "We are dealing with you alone in matters of trade, and if you are going to give a preference to one nation you must give it to us. We are not concerned with your internal relations."

Mr. BAXTER: The minister will remember that in recent years it has not been infrequent in certain quarters to emphasize the fact that Canada is a nation. I am not finding any fault with that; but having laid the fact down in such emphatic terms, when we read the word "nation" in a convention of this character it must surely have the meaning we have been attaching to it; and if Canada is a nation Australia is equally a nation. Is it really the opinion of the government that they cannot deal with Australia for instance, as a component part of the empire and yet a distinct entity within the empire, on a better footing than they can deal with the Netherlands? Or is it the deliberate intention of the government to so bind us that whatever concessions we make to Australia must automatically operate to the benefit of the Netherlands? If that is what the minister intends to do he has in my judgment succeeded in doing it by article 4 of the treaty. If that is the intention of the government and they take the responsibility of it there is nothing more to be said; they are in charge at the helm and this is the direction in which they wish to steer. But if the minister does not intend to do that I can say to him with the most positive assurance that the language employed is not effecting his purpose but a very different one. Like my right hon. leader (Mr. Meighen) I would advise him, if he does not mean to do this, to hold the matter over until he has made the thing perfectly clear in a diplomatic way; otherwise the result I have indicated must absolutely follow.

Mr. ROBB: I cannot allow my hon. friend to put into my mouth or to ascribe to the government ideas which were never entertained. My hon. friend is a good lawyer and he might plead a case well before a court of law, but I do not intend to get into any argument with legal gentlemen regarding the phraseology of this bill. I am satisfied that the bill declares exactly what was intended, that we should give the Netherlands our intermediate column of tariff, or a little better in some cases, wherever we have conceded it. But there is no intention of giving them the British preference, and I am satisfied that no court would hold that. However, if it will satisfy my right hon. friend I will undertake,

if he will allow the measure to go through now, to see in case there is any doubt that the correction is made in the upper house. For my part I believe that the bill safeguards our interests.

Mr. BOYS: Suppose a trade agreement were made between the Netherlands and Australia in which a very low tariff was given by Australia in favour of goods manufactured in the Netherlands.

Mr. ROBB: My hon. friend is wrong altogether, because Australia has not a low tariff.

Mr. BOYS: I am only stating a suppositious case; I can take Great Britain if the minister prefers. Would Canada in that case be entitled to the benefit?

Mr. ROBB: That is my understanding.

Mr. BOYS: Then, if the minister takes that view, how can that be so unless Great Britain is treated as a foreign country, which a moment ago the minister was unwilling to do?

Mr. ROBB: Great Britain and Australia are foreign countries to the Netherlands but not to Canada.

Mr. BOYS: That is the point. Let us take the case of New Zealand; if she is not regarded as a foreign country to Canada, Canada could not get the benefit of any agreement that might be made under such a treaty.

Mr. BAXTER: Article 4 says nothing about foreign countries; it says "favoured nation".

Mr. BOYS: I am coming to that feature of it. In article 4 the word nation is used. Does not that include every nation except Canada and the Netherlands? Is not Australia, is not New Zealand, is not Great Britain a distinct nation within the meaning of that article?

Mr. ROBB: If it will expedite matters and my right hon. friend desires to make the language more emphatic, I will offer no objection to correcting it in the upper house.

Mr. MEIGHEN: But the minister cannot do that.

Mr. ROBB: The upper house can.

Mr. MEIGHEN: How can the minister correct it? This is an agreement, and I do not see how he can change it unless the Petersen plan is to be followed again. And I do not think that the minister wants to get into that humiliating position too often. I think the suggestion I made is much simpler and far less objectionable. Let the minister get a cable from the Netherlands government, and then it would hardly lie in the mouth of that government afterwards to insist on a different interpretation. But for the life of me, I would not want to rely on this.

Mr. ROBB: Will my right hon. friend be satisfied if I get a message from Mr. de Meester, the representative of the Netherlands in Canada?

Mr. MEIGHEN: That would be a lot better than nothing.

Progress reported.

CANADIAN NATIONAL RAILWAYS

BILLS PROPOSED TO AUTHORIZE THE CONSTRUCTION OF BRANCH LINES

TURTLEFORD

Hon. GEORGE P. GRAHAM (Minister of Railways): Mr. Speaker, if there is no objection we might take up the Turtleford and Bengough to Willowbunch branch line bills. The resolutions were discussed thoroughly in the House, the bills were sent to the Railway committee, and the Railway committee have reported them back without amendment. I do not think there is any objection from any quarter to either of these bills.

Mr. MEIGHEN: Let us go ahead with those.

Mr. GRAHAM moved that the House go into committee on Bill No. 69 respecting the construction of a line of railway forming part of the Canadian National Railways between Turtleford and a point in township 48, range 12, west of the third meridian in the province of Saskatchewan.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

Section 1 agreed to.

On section 2—Part of cost to be provided by the Canadian Northern Railway Company, and so forth.

Mr. MEIGHEN: Has the minister reconsidered his policy of keeping out of the estimates the money to be spent on these lines?

Mr. GRAHAM: We find this is the most practical way altogether.

Mr. MEIGHEN: That means politically.

Mr. GRAHAM: No. Work is now going on on railway lines under these bills that might possibly be held up if we were waiting for the estimates.

Mr. MEIGHEN: I know, but the minister got one-sixth of his estimates through within a few days of the opening of the House. The difficulty is now we do not know from the estimates what the country is going to spend.

Section agreed to.

Sections 3 and 4 agreed to.

On section 5—Approval of parliament if authorized amount exceeded.

Mr. GRAHAM: That was put in all the bills last session.

Mr. MEIGHEN: In the Senate or in the Commons?

Mr. GRAHAM: In the Commons.

Section agreed to.

On section 6—Nature and form of securities to be approved by Governor in Council and signed by Minister of Finance.

Mr. GRAHAM: This is the regular clause, there is no change.

Mr. MEIGHEN: I do not get the significance of the last sentence. The securities referred to in the first two sentences are the securities of the company, and are to be guaranteed in a form satisfactory to the minister, and so forth. Then the section continues:

Should the Governor in Council decide that any of such securities shall be secured by mortgage or deed of trust, the form and terms of any such mortgage or deed of trust and the trustee or trustees thereof shall be such as the Governor in Council may approve or direct.

I do not get the point there. How do you secure a security? The government would not need a mortgage to secure its guarantee, because certainly the company in issuing its bonds must give a mortgage, and if the government guarantees that mortgage the clause is not necessary. I do not see why it is necessary at all. It is not for the government to decide that any security is to be secured by mortgage; it cannot help but be.

Mr. GRAHAM: I do not know the legal bearing, but this was worked out very carefully by Mr. Ruel a year ago and inserted in all the bills. Would not the construction rather be, that should the Governor in Council decide that any of such securities shall be secured by mortgage or deed of trust, then the form to be used must be that prescribed by the Governor in Council?

Mr. BOYS: I could understand that thoroughly if bonds were issued and not secured by mortgage, but, as the leader of the opposition has pointed out, they always are secured by mortgage, and then one finds it difficult to appreciate the intention of the clause, unless it means further and additional security; but if this was intended, one would think the draftsman would use the words "such further and other security as the Governor in Council may direct."

Mr. GRAHAM: It is possible that this last sentence is not necessary, but the Justice department thought it was. It is the same as in last year's bills. I imagine the only criticism that could be offered against it is that it is superfluous; but there must be some good reason why it was inserted. Mr. Ruel thought it was necessary.

Mr. BOYS: It may have been intended to cover what I mentioned.

Mr. GRAHAM: Perhaps so.

Mr. MEIGHEN: The first part of the clause is in quite familiar language; I remember it in many railway acts. But I never saw that last one, and anything superflous is dangerous in a bill of this kind. I would rather see it out myself, but I will not insist on it. Mr. Ruel may have thought it necessary, but I do not see why.

Section agreed to.

On section 7—Advances pending issue of guaranteed securities.

Mr. MEIGHEN: What is the course pursued in this respect? There is no doubt the National Railways do not issue bonds in respect of each single line; that would be very cumbersome and expensive. I presume they periodically make an issue: For instance, they made an issue of $35,000,000 not many months ago. I suppose the practice is that the government advances the money for one line or another line, and so forth, until the market is supposed to be favourable to a large issue, and then the government is recouped. In that event, are these advances to the National Railways included in the few millions which at the end of the year the Minister of Finance reports as constituting the government's advances to the railways during the year? I would expect not.

Mr. GRAHAM: I do not know just what the Finance department does. The Canadian National did make a loan of some $14,000,000 and included in that loan were certain amounts for the branch lines. These amounts were not needed at the time, but were deposited with the Finance Minister and drawn upon as required. I think the whole $14,000,000 was not

drawn upon at the end of the fiscal year; some $3,000,000 remained.

Mr. MEIGHEN: The member for West York (Sir Henry Drayton) has arrived, and I speak with some diffidence on this subject on that account. But it would seem to me very questionable practice for the National Railways to issue its bonds in advance of necessities and then for the government to finance on money of the National Railways in the meantime. It is bad enough for the National Railways to lean on us, but we do not want to lean on them. I think the right practice would be for the government to advance the money and then when an accumulation is sufficient and the market favourable, to issue bonds to recoup the government— that is to say, if bonds are to be issued at all. It would seem to me that the sooner we get to the time when we make loans to the railways direct, the better, because undoubtedly the money can be more cheaply secured in that way ,and then, the country knows exactly where we stand. This gradually moving into the guarantee atmosphere—no guarantee one year; a moderate guarantee the next year; a far bigger one the next year, and the cash advances growing in the reverse order—well, it just gets the whole country confused and gives politicians who must confuse, to avoid calamity, an excellent opportunity to do so.

Sir HENRY DRAYTON: I do not know whether it is necessary for me to explain this item; I was carrying out the implied directions of the government in looking after the business in connection with a very similar matter in another room in this building. But we have an oddity in the railway accounts this year which has puzzled a good many more than myself. It might have been shown plainly and honestly, but it was not so shown. The real truth is—and one can only get at it after investigating and going through the accounts in a way that we should not have to do—that the government borrowed money from the railways: borrowed the sum of $14,259,435.69. Besides borrowing the money from the railways to the extent of this amount, the government also agreed to pay interest at the rate of 4 per cent. On page 27 of the accounts of the Canadian National Railways the loans from the Dominion of Canada are set out, and then appears an amount under the heading "less refunded." That, of course, means less loans as previously set out, in part paid off—refunding is the discharge of obligation. There is also a credit for interest accrued during the year. The credit taken under that head is $302,597.40. Now, the whole of that is not interest on that loan, although one might well think so. We are still maintaining the distinction between moneys spent in connection with the Canadian government railways and moneys spent on the other systems, although they are now all operated under the same management. My recollection is that something over $200,000 was for interest arising out of the loan at the rate of 4 per cent under the arrangement made between the government and the railway, the balance being interest on certain expenditures which the company had become liable for in connection with the Canadian government railways. The unfortunate part of it is that we do not get the real truth. We are told that obligations have been refunded to that extent; they have not. What took place is exactly what I said. The government borrowed this money, and it paid the company to lend it to them because all the company were getting, if I remember rightly, at the time, and I again speak subject to correction, was 3 per cent. Sometimes they get 3¼ per cent; it all depends on the demand for money, and whether the banks really want it or not. If they want it badly they will sometimes pay over 3 per cent for its temporary use, but I do not think the company has been able to get from the banks more than 3¼ per cent, so it paid the company to the extent of three-quarters of one per cent to lend that money to the government. It is unfortunate in this other way. We have an addition to the funded and unfunded debt of the company during the year, as stated by the minister, of $118,000,000 odd. By treating this item as a refunding operation, although the obligations are still remaining out, no attention is paid to it. If this item of refunding had not here appeared the answer of my hon. friend would have had to be plussed by that $14,000,000. While that is quite so as a matter of bookkeeping, and the only way of keeping your books right—I want to be absolutely fair to my hon. friend and to the system—it again would not show the real position. We had three loans out of which this money comes. We had one loan of $50,000,000, another loan of $20,000,000, and another loan of $26,000,000, and the company had cash on hand out of these loans of approximately $15,000,000. I think it is quite right, when one is stating the amount of funded and unfunded debt, to take credit for the actual cash the company yet has on hand in connection with these issues.

Mr. GRAHAM: The unexpended.

Sir HENRY DRAYTON: Unexpended. So it really makes no difference so far as that particular question is concerned, but just see

where the company is putting itself. As a result of putting this misleading entry in here they have got to put up a corresponding entry against it, and for the additions to funded debt next year they have got to add $14,000,000 odd as money then raised, adding it then to the debt. So far as the cash is concerned, and so far as the interest is concerned, no one is losing any money, absolutely none at all; but it is something that takes some time to get into, it is something which misled a lot of people, it is something which on the face of it is wrong, and which, if continued too much, is going to lead to altogether too much inter-financing between government and company; but so far as any money being lost as a result of it, no money has been lost.

Schedule agreed to.

Bill reported, read the third time and passed.

BENGOUGH-WILLOWBUNCH

The House in committee on Bill No. 74, respecting the construction of a line of railway forming part of the Canadian National Railways between Bengough and a point at or near Willowbunch, in the province of Saskatchewan, Mr. Gordon in the chair.

On section 1—power to construct and complete line described in schedule.

Sir HENRY DRAYTON: I would like to get an understanding with my hon. friend as to the situation here. I am not rising to object to the building of the line to Willowbunch. I do not know whether it is really the right point or not. A great deal would depend on what is being done in the district. I have been told that the Canadian National has made an arrangement with the Canadian Pacific that the territory to the south and west will be looked after. We discussed in the House last year the question whether the line should be extended from Bengough in a westerly direction but a good deal more to the south than Willowbunch, Willowbunch being up a little to the north. Going down in that direction we run across a district where there are old, old settlers, who for years and years have had to haul their grain over distances which absolutely prevent any return. We have the Canadian Pacific line down there with quite a gap to be built, and there was a question I know as to whether the Canadian Pacific would ever build that gap. Last year one of the things we discussed was building down to the south and west for the purpose of relieving those people by an extension—I forget the meridian number at the moment, but I think it was No. 8. At any rate it would mean probably eighteen miles construction to the west of Bengough, reaching down to a country where there are any amount of people, and where they need the railway very badly. Now we are turning away from that and going up to Willowbunch, to the north and west, and I have been given to understand that the National thinks it will have discharged its duty to the people down there if it builds that way because an arrangement has been made with the Canadian Pacific to look after that other portion to the south. I really think the people of the district are entitled to have a clear statement as to that situation. Their necessities are great; the handicaps they have laboured under in the past are heavy, and this construction to Willowbunch rather looks as if for the future they had to depend on the Canadian Pacific. I hope before this conclusion has been come to that some arrangement has been made under which the Canadian Pacific will within a certain definite time make that other construction, and I would ask my hon. friend to let us know whether the Canadian Pacific is to build in that territory to the south and west, and if so, when that construction is going to be done.

Mr. GRAHAM: The original idea of the Canadian National was the line laid down in the bill now before the House. Last year a deviation was proposed, as my hon. friend says, in order to serve another part of the territory and, if I remember correctly, before the bill was through it was left quite optional as to different routes. Well, parliament has determined, and rightly so, that so far as possible there shall be little duplication.

Sir HENRY DRAYTON: We all agree on that.

Mr. GRAHAM: Consequently it has been arranged, and I think the Canadian Pacific are perfectly agreeable, that while the Canadian National builds to Willowbunch the Canadian Pacific will build from the west. I am told but I am not sure—I have the papers somewhere and I think it was discussed in committee—that the Canadian Pacific has been getting out its charter and carrying out its surveys and will begin with the construction commencing not later than 1926.

Sir HENRY DRAYTON: Well, I have no doubt the district will be very glad to get

the assurance. I think they would like to see the work started this year; they have waited a tremendous time. I think the minister is fairly right in his discussion of the situation, except that he is wrong as to Willowbunch being the original proposition. What we had originally brought down last year was the building of a line from Radville. The Radville line was a line considerably to the east of Bengough, and it ran through a very rough country where construction would be extremely heavy and where there were no settlers. It is true that when you got further south you encountered settlement; but you had to get away south before you met it and a lot of money would be lost in coming down that way. Before the Senate committee the engineers of the railway said they were always against the Radville line, they did not recommend it, and that the construction from Bengough would be more useful and more economical. Those are the only two propositions, whether the line is to go from Willowbunch or Bengough. The alternative proposition last year was to extend for a longer distance to the south for the purpose of looking after those people who have been requiring attention for so many years. The action taken last year by this House was to leave it optional—whether the company would build from Radville south, or whether they would build from Bengough.

Mr. GARLAND (Bow River): There is a question which occurred to me, not in direct connection with this bill but in connection with the construction of some branch lines: In the event of an agreement having been entered upon for the construction of a joint line, and a certain amount of money being put up by the Canadian National Railway and a certain amount on behalf of the Canadian Pacific, or some other company, who decides when the work must be gone on with? Has the government any power to compel the construction of the line?

Sir HENRY DRAYTON: That would not come up here. The only instance of an arrangement of this kind that I know of is the joint section which was to provide for the Drumheller district. That was agreed on years ago. I do not know how much of it has been constructed.

Mr. GARLAND (Bow River): None.

Sir HENRY DRAYTON: I should have thought there was some.

Mr. GARLAND (Bow River): If in order I should like to ask the minister for a moment to turn to this line—the Rosedale south easterly line. The money has been voted by this parliament, for the National's share and the Canadian Pacific has put up its portion. The officials of the latter company inform me they are ready to go on with the work, they are anxious to go on with it, but they cannot get the Canadian National to start the work. Who is to take the necessary action in a case of that kind? The people out there need the line, the people in Drumheller need transportation facilities to move their coal; if the line were built it would mean a great deal more business for them in the district, and would also help the farmers along the route.

Sir HENRY DRAYTON: I can very quickly tell what was done before in a very similar case. As a usual thing each company wants to build, but if one company wants to hold back there is no reason why the other company should not go on and build. It is not a matter of financing; it is only a matter for the Board of Railway Commissioners to take hold of. I know I have not had much hesitation about taking hold of such difficulties in the past.

Mr. GARLAND (Bow River): I sincerely hope that the minister will see that the Board of Railway Commissioners will take action in this regard. I cannot get satisfaction from anybody with respect to it.

Sir HENRY DRAYTON: Make application to the board.

Mr. GRAHAM: I will take pleasure in sending the remarks of my hon. friend to both the railway presidents to-morrow.

Mr. GARLAND (Bow River): Send it to the Board of Railway Commissioners; that would be much better.

Mr. GRAHAM: It is one of those difficult situations in regard to which I do not know where the authority lies unless it is with the Board of Railway Commissioners. I will see that the matter is brought to the attention of the company; it is the first I have heard of it. In a case of this kind we go to one company and of course they say they are ready. Then we go to the other company and they say they are ready also; it is generally the other fellow that is delaying matters. The only thing is to try and get them to come together.

Section agreed to.

On section 2—Part of cost to be provided by Canadian Northern Railway Company and balance by Canadian National Railway Company; Canadian National may issue security which may be guaranteed.

Sir HENRY DRAYTON: In connection with that I was going to ask my hon. friend how this is proposed to be taken into the company's capital? We may just as well be fair about this question, and look it straight in the face. This is our road and we are just as much liable for these bonds, endorsed as they are by the provincial treasurer, as we will be for the other bonds coming subsequently which we also have to endorse. Now what is to be done about it? Is there to be camouflage so that the obligation will not appear in the addition to the debt? Is there to be a statement made that we have not endorsed these bonds and therefore it should not come in as part of our obligations, or will the obvious, right thing be done in this one instance anyway? The people of Canada are building a railway with borrowed money. It is not enough to look after the whole of the line but we have to go out and borrow more. This loan which is a first charge upon that property is raised under the guarantee of the province. The next loan will have our guarantee on it, and surely it would be childish to pretend that that loan should, for the purpose of arriving at our own situation, be looked upon as anything other than our own obligation.

Mr. GRAHAM: Well, I have not given it any thought, but this is cash we are getting.

Sir HENRY DRAYTON: I agree.

Mr. GRAHAM: We are getting cash from the province. My own view absolutely, although on consideration I may be wrong, is that the Canadian National will be liable for the interest on the whole investment.

Sir HENRY DRAYTON: My hon. friend does not quite catch my point. We are authorizing the government to guarantee further obligations because they will have to be issued in the name of the company. The security for those obligations is the line that is to be built. That security is subject to this cash as the minister points out. The cash does not make any difference one way or the other. What does count are the bonds already issued and guaranteed by the province; and before we can look to any of our security here at all if we are still foolish enough to go on thinking this railway is not ours, if we still go on hiding our heads in the sand and not looking upon an obligation of this character as an obligation of the whole country, then we are in the position of any second mortgagee. What is the good of a second mortgagee's security unless he is in a position to look after the first mortgage? I should have thought the thing was clear.

Mr. GRAHAM: I did not expect a discussion of this kind, or I would have brushed up my memory a little. As a matter of fact, these branch lines of the Canadian Northern system are being treated I think in exactly the same way as they have been treated since the Canadian Northern was taken over by the government many years ago. The federal government I think paid the interest on these securities guaranteed by the provinces. I do not know whether the principal amounts were taken into the capital or not, but the principal amounts must be in the capital of the Canadian Northern system, because they are part of the Canadian Northern.

Sir HENRY DRAYTON: Sure.

Mr. GRAHAM: And I imagine the capital charges will all be against some integral part of the Canadian National or Canadian Northern.

Sir HENRY DRAYTON: Sure.

Mr. GRAHAM: And the amount of interest due on all securities will appear in the books of the Canadian National. I understand they are a charge against the Canadian National, just as if they were part of the original account.

Sir HENRY DRAYTON: The minister is overlooking entirely the one thing of real importance here, and that is the question as to the government's investment and the question of the government's net or gross debt. If we are going on giving guarantees just as we feel like giving them, whether there are prior securities against the system or not, whether there is a value there on which we can get a return or not, then we are only misleading ourselves and misleading the public. The hon. minister says it is exactly the same as when the company owned it. Well, it ought not to be the same. So far as the company is concerned, it is the same, but I am speaking of the larger question, as to the government's position and the security for the people's money.

Mr. GRAHAM: I will look into that further. I had not given it any thought.

Mr. McTAGGART: It occurs to me that the Canadian National Railway is under some obligation to the people in that district in regard to this line. It must be remembered that in the vicinity of the Fife lake country and west of it, as far as the sixth and seventh meridian, or still further west—

Sir HENRY DRAYTON: I put it at the eighth meridian.

Mr. McTAGGART: The eighth meridian would be right—the people have for years been looking forward to the extension of the line from Bengough. At this time it appears as though an understanding had been reached between the Canadian National and the Canadian Pacific Railways, and I should be very glad if I thought such was the case. However, I am not assured of that. I learned a few weeks ago that the Canadian Pacific Railway were proposing to introduce a bill in the upper chamber asking for authority to construct a road from south of Assiniboia and in the direction of Fife lake. I sent over to that chamber the other day for a copy of the bill, but I was informed there was no bill; so that I do not know whether the Canadian Pacific Railway is asking for that authority or not. I feel that the people in the Fife lake country and in the Wood mountain country will expect some assurance from the Canadian National that the Canadian Pacific is going to proceed with the development of our railway facilities in the south country. I want the minister to understand that I am not at all opposed to the extension of this line to Willowbunch because I am familiar with the country, and I know that in the vicinity of Willowbunch there is a splendid farming district. But I want to point out that if in the future it is necessary to extend the line from Willowbunch to the westward, then the line should not really go down into the Willowbunch valley, as I presume it is expected to do under this bill. The town of Willowbunch lies in quite a deep valley, and it would seem that if the line were built into Willowbunch it would probably remain a stub line for some time. The point I wish to make for the benefit of the minister is that there should be some assurance given to the people in that south country that railway facilities will be developed either by the Canadian National or the Canadian Pacific Railway. So far as I am concerned, I am not particular which line is built as long as the people in that country get the railway facilities. I wonder if the minister could give us some assurance in that regard.

11 p.m.

Mr. GRAHAM: I went over that ground when the hon. member was not in the chamber. I pointed out that I felt confident that the Canadian Pacific Railway proposed to have an act of parliament passed to proceed with the surveys and begin construction from Assiniboia southward, not later, I think, than the year 1926.

[Sir Henry Drayton.]

Sir HENRY DRAYTON: Assiniboia eastward.

Mr. GRAHAM: South and east, if I remember. I do not think there is any question that the Canadian Pacific intend doing that, and that arrangement having been arrived at, it would be unwise to duplicate lines. I think parliament would not agree to that, even if the roads did desire to do it, because the time has come when we must economize as much as possible and serve the people as well as we can without running into wild extravagance in the duplication of lines.

Mr. McTAGGART: In the event of the Canadian Pacific Railway proceeding with the programme which is apparently in prospect, it is not expected then to extend the line beyond Willowbunch?

Mr. GRAHAM: Not at the present time.

Section agreed to.

On section 3—Certificates of minister as to mileage.

Section agreed to.

On section 4—Mileage and costs are estimates only, and not to be exceeded by more than 15 per cent.

Sir HENRY DRAYTON: This is the standard provision.

Mr. GRAHAM: Yes, all the way through.

Section agreed to.

On section 5—Approval of parliament if authorized amount exceeded.

Section agreed to.

On section 6—Nature and form of securities to be approved by Governor in Council and signed by Minister of Finance.

Sir HENRY DRAYTON: Has the minister ever thought whether it would not be wiser to have these things as they formerly were under the usual vote? I know previously he was against it, but does he not really think, looking into it, that it is not working out very well? Formerly we knew exactly what the whole situation was. Now we got it of course in a different way. In the way in which it now comes before us we have to split the amount as between the government's returns and the company's returns. The government gives us a return as to the securities guaranteed under the vote. We have the discussion under the vote altogether, while, if you get the company's figures, you have not only the guarantees under the vote but the guarantee

under the different bills in which the right of construction is given. I suppose it would not be fair to ask the minister to say anything definite on this point, but if he wants to get simplicity in the accounts and to give the people something like a bird's-eye view of the situation, I think my suggestion is the right one. I do not ask the minister to say anything now.

Section agreed to.

Sections 7 and 8 agreed to.

Bill reported, read the third time and passed.

THE SPECIAL WAR REVENUE ACT, 1915 AMENDMENT

Hon. J. A. ROBB (Acting Minister of Finance) moved the second reading of Bill No. 119, to amend the Special War Revenue Act, 1915.

Motion agreed to, bill read the second time, and the House went into committee thereon, Mr. Gordon in the chair.

On section 1—"Cheque."

Mr. ROBB: The purpose of this section is to define more clearly what is meant by "cheque." The intent of the act has been evaded by the use of documents that do not come within the definition and the amendment seeks to meet that difficulty.

Mr. MEIGHEN: The definition of cheque includes any document or writing not drawn upon or addressed to a bank in exchange for which the bank makes payment of a sum of money. I cannot think of how any bank could make a payment of a sum of money if the document were not addressed to the bank.

Mr. ROBB: This has been done for some time.

Sir HENRY DRAYTON: Does the minister refer to the difficulty in connection with grain tickets?

Mr. ROBB: They are issuing grain and cream tickets and certain lumber tickets in such a way as to avoid the tax.

Mr. MEIGHEN: What form would they take?

Mr. ROBB: I do not know precisely in what form they are drawn but they go through the bank.

Mr. GOULD: Under the Grain Act the ticket shows the number of bushels which the farmer has hauled to the elevator, together with other details, indicating to what sum he is entitled, and he can go to the bank and get the money on that ticket. It is really a receipt although it is considered a cheque.

Mr. MEIGHEN: This is to catch the western farmer.

Sir HENRY DRAYTON: What is the estimated gain in revenue under section 1?

Mr. ROBB: I have no estimate.

Sir HENRY DRAYTON: To what extent is the act being evaded?

Mr. ROBB: To a considerable degree.

Sir HENRY DRAYTON: Can we not get closer than that? I should think it would be to a very considerable degree. This ought to add very largely to the total revenue from the stamp tax.

Mr. ROBB: We hope so.

Sir HENRY DRAYTON: I believe, from a return brought down in the House some time ago, we are now getting nine and a quarter millions, roughly speaking, from this tax. Does my hon. friend think he will get a couple more millions out of this provision?

Mr. ROBB: I cannot venture to quote figures.

Sir HENRY DRAYTON: Would a million be a safe estimate?

Mr. ROBB: I really do not know to what extent the act has been evaded, but the complaint is made that while some people are honestly observing it, others, through the use of these tickets, are avoiding the tax. The amendment seeks to put all on the same footing.

Sir HENRY DRAYTON: My hon. friend is keeping up his fences pretty well and I do not say that he should not. He is taking off the stamps on cheques under five dollars; I think he will make much more money under this clause than he is losing under the other.

Mr. ROBB: I think that is a fair guess.

Mr. DAVIES: When the farmer takes a load of grain to the elevator he receives payment in the form of a grain ticket, which is really a cheque paid by the grain firm for the wheat which is purchased. I find that when we take these grain tickets to the bank to cash them the bank immediately makes the farmer pay the stamp tax on the ticket, not as a cheque but as a receipt. Will this section do away with that?

Mr. ROBB: This amendment is to clear up the situation. It will not affect the farmer who sells the grain but the man who buys it. It has been found that some grain firms have been observing the act while others have made their payments through the grain tickets. We propose to meet that difficulty by this amendment.

Mr. GOULD: Hardly any of the grain companies who issue this paper as a receipt for the grain received, which entitles the holder to draw upon the bank, ever pay the tax themselves, and it is contended in the west that the person who issues the cheque should be responsible for the tax.

Mr. ROBB: The act provides that.

Mr. GOULD: The individual takes his ticket to the bank and in a good many instances the bank insists on the stamp being put on by the holder before the cash is handed over. Others have not insisted on this; it seems to have affected different localities or towns differently. The minister's intention evidently is to bring about uniformity in this regard, but I think he would receive revenue through a strict enforcement of this provision so far as wheat tickets are concerned without imposing the tax on cream tickets. For my part I should like to see the tax on cream tickets abolished. It does seem to me that the man who is struggling the hardest with a few cows is the one who is least able to afford this taxation. If the minister were in the western country at certain times of the year and compared the marketing of grain at the different stations with the delivery of cream in cans that are sometimes only half full he would very likely see the logic of this argument.

Mr. EVANS: I have received protests lately from certain business firms, Gordon Ironside & Fares Company, Limited, and the Hudson's Bay Company out west, who say that they have to put on stamps which duplicate the tax on the monthly statements they send out. Is it insisted upon that a stamp should be affixed to a monthly statement for $10 or over? In that case is the statement accounted as a receipt?

Mr. ROBB: The question of stamps on statements was brought up when this bill was before the House a few days ago. The Deputy Minister of Customs and Excise, who administers the act, tells me it was discovered that some firms make remittances twice a week and others three times a month, and that a statement is sent at the end of the month. Naturally such a statement is an acknowledgment of the money received, and I think the deputy minister ruled correctly that it should be subject to a receipt tax. That was one of the methods adopted to evade the tax.

The CHAIRMAN: This does not deal with receipts but with bills of exchange.

Mr. EVANS: There is another duplication of payment which will come rather hard on the farmer in some cases. The commission man places the proceeds of sale of wheat to his own account, and he has to put a stamp on the cheque when remitting to the owner. In that case the one sale has to bear a stamp twice, which does not seem to me quite fair.

Mr. DAVIES: Mr. Chairman, I should like to be quite clear regarding the stamp on grain tickets referred to a moment ago. Am I to understand that when a grain firm issues to a farmer what we call a cash grain ticket it will have to place a stamp thereon, and if the farmer takes that ticket to his bank to get it cashed, he also will have to place a receipt stamp on it, so that the ticket will bear a stamp on the front and on the back, one affixed by the grain firm and the other by the farmer?

Mr. ROBB: No, Mr. Chairman. Whoever issues the ticket for the grain, if it is recognized as a cheque, must put the stamp on. I have not the act with me at the moment, but a few days ago I read its provisions into Hansard. Penalties are provided if the issuer of the cheque does not pay the stamp tax.

Mr. STEWART (Humboldt): I do not think the minister has caught the point of the hon. member for North Battleford (Mr. Davies). On the back of the cash grain ticket there is a receipt form which, if it were a cheque, would be an endorsation, but it reads as a receipt. I think what the hon. member wants to know is this, if they continue to use that same form will it require a receipt stamp when it is a receipt for the money of the cheque on the other side, which cheque has already been stamped?

Mr. ROBB: If my hon. friend gave me a cheque for grain payable to my order, I would have to endorse it before I received the money, but I would not have to put a stamp on the back of it.

Mr. DAVIES: As the hon. member for Humboldt (Mr. Stewart) says, on the back of the grain ticket it reads "payment received," and this is signed by the farmer. At present the bank requires you to place a two-cent stamp upon that as a receipt.

Mr. MEIGHEN: The effect of this would be to change it from a receipt to a cheque.

Mr. DAVIES: That is the point.

Mr. MEIGHEN: It would necessitate stamps for both.

Mr. ROBB: No.

Mr. MEIGHEN: It just means the farmer has to pay the $2,000,000, if it amounts to that.

Mr. ROBB: I did not say it amounted to that. The man who buys the grain pays, not the farmer.

Mr. MEIGHEN: The minister need not worry, the farmer is going to pay it. I know the man who issues the cheque has to pay the stamp, but he will charge that up to the farmer every time.

Mr. ROBB: Not in eastern Canada.

Mr. MEIGHEN: He does not issue that kind of ticket here, but wherever he does the farmer will have to pay. The grain company has him just where it wants him. I do not say it is unjust, but there is no use deluding ourselves into the belief that the grain people are going to pay; it will be the farmer.

Section 1 agreed to.

On section 2—Stamp tax on bills payable on demand, etc., or drawn on person outside of Canada.

Mr. HANSON: Why should there be discrimination between foreign and domestic bills?

Mr. ROBB: It is in order to bring bills to the same basis as cheques. We discovered that within the past year or two this foreign business has drifted down to New York because of our high tax, two cents for every fifty dollars. On very large bills of exchange, running into hundreds of thousands of dollars, the exporter sent his business down to New York and evaded the tax.

Mr. HANSON: At the time the tax was introduced the minister was warned that it would have the effect of drawing deposits out of Canadian banks. It has had a very detrimental effect, especially along the border. Of course, there is good reason for this change if business is withdrawn from our banks, but it does seem to me the sooner the government reduce the tax the better it will be for business.

Section 2 agreed to.

On section 3—Stamp tax on cheque defined in subsection 1 (e).

Mr. MEIGHEN: We can hardly swallow that all at once.

The CHAIRMAN: We will take it by subsections.

On subsection 14 of section 3:

Mr. MEIGHEN: Is this a re-enactment?

Mr. ROBB: Yes, it is really.

Mr. MEIGHEN: Why is it re-enacted? What is the real change?

Mr. ROBB: In section 3 I do not think there is anything new.

Sir HENRY DRAYTON: I think, Mr. Chairman, it is because we have changed the subject matter of the section, the definition of a cheque, and we are making it clear that the law will apply to the extended meaning. I do not think there is anything more in it than that.

Mr. ROBB: I think hon. gentlemen will find on reference to the explanatory notes the only new matter is underlined.

Subsection agreed to.

On subsection 15 of section 3—Stamp tax on foreign bill.

Sir HENRY DRAYTON: I suppose, Mr. Chairman, this is really treating what we have already done with the preceding paragraph in another phase. Am I right?

Mr. ROBB: That is it exactly.

Mr. MEIGHEN: There is some change here.

Mr. ROBB: No, it is exactly the same as the others.

Mr. MEIGHEN: This appears to make subject to tax any foreign bill issued by an individual, not by a bank. But why should it be necessary to repeat all these sections? That is what seems strange to me.

Mr. ROBB: It is just to make it clear.

Subsection agreed to.

Subsection 16 of section 3 agreed to.

On subsection 17 of section 3—On bank paying cheque without stamp.

Mr. EVANS: I would draw the attention of the government to the inconvenience that sometimes arises in connection with obtaining revenue stamps. Would it not be the same thing if a postage stamp of the same value was affixed?

Mr. ROBB: It was important that we should be able to determine our revenues

from the post office and from these excise stamps respectively, and that is the reason for it. I know there was some inconvenience at first, but I think it is working very well now.

Sir HENRY DRAYTON: The whole law is one of those inconvenient, troublesome things. What the hon. member for Saskatoon says merely illustrates one of the annoyances of the act. We are the only people in the world who put up with such an act. I do not know of any other place where there is a pyramiding of taxation such as we have in Canada on cheques. The United States have no tax at all on cheques, and never have had. Great Britain first had a tax of a penny and afterwards made it two pence on all cheques, while we have all this nuisance of calculation and the like. I really think the character of the stamp is the least nuisance, because if you happen not to have a stamp you can attach a postage stamp lightly and the bank will always take it off and substitute a proper stamp for it. I admit that it is a good thing to know what we are doing; I only wish we knew better what we are doing. It would be well if we could know something with regard to the cheques of different values; if we could do that, perhaps we could tell how much we are paying on the new receipt tax.

Mr. ROBB: I have some information here I was to get for my hon. friend. This shows the total stamp taxes for 1924:

On demand and call loans	$1,114,477 04
On overdrafts	389,544 60
On cheques, promissory notes and bills of exchange	6,397,134 12
Total	$7,901,155 76

I have not the details for 1925, but the gross revenue from this source was $9,324,455.36.

Mr. SALES: Has the minister the item for promissory notes separately?

Mr. ROBB: No, not as I have it here.

Mr. GOULD: No commission is paid to persons in small towns, for instance, on the prairies, where the banks are often three or four stations apart, for the handling of these revenue stamps, and we often have to depend on the generosity of others in order to get the stamps necessary for our documents. It seems to me that if the stamps must be different for postal and excise purposes, a small commission might be paid to somebody to handle them in such places as these where banks are not available.

Mr. ROBB: I am sure my hon. friend has only to bring that matter to the attention of the Minister of Customs and Excise, who administers the act, to have it given consideration. I recall that the minister asked me for recommendations as to places where stamps could be sold in two or three small villages in the constituency I have the honour to represent where there was no bank. I think the practice is to place these stamps with reliable merchants in villages where there are no banks.

Sir HENRY DRAYTON: What about post offices?

Mr. ROBB: Sometimes post offices too, I think. I shall direct the minister's attention to it.

Mr. CAMPBELL: I discussed that matter with the Department of Customs and Excise a year ago, and the stand they took was that it was not advisable to place the stamps in post offices because of the possibility of their becoming mixed up with postage stamps. But in one instance that I took up with them, the case of a village a long way from a bank, the department arranged to place a supply of stamps with a merchant in the village, so that there has since been no cause for complaint in that district.

Mr. ROBB: I will draw their attention to that.

Mr. KENNEDY (Edmonton): I think the member for Macleod the other night asked the minister if it would be all right for those who did not have stamps on hand to add to the amount indicated on the cheque the words "and stamp tax." The minister said he would give an answer later. Has he considered the matter?

Mr. ROBB: I admit I had quite forgotten that. I will try to remember it to-morrow.

Subsection agreed to.

Subsection 18 of section 3 agreed to.

On subsection 19 (a) of section 3—Stamp tax on a statement of a maximum amount of advances.

Mr. STEVENS: That is the section, I presume, with regard to which there has been so much criticism throughout the country. Does this refer to the new regulation of putting a stamp on statements which indicate the receipt of a sum of money?

Mr. ROBB: No. A case was brought to our attention only recently of a large broker going to a trust company or life insurance company and asking them for $100,000. Had he gone to a bank he would have had to pay

the stamp tax, but because he went to a trust company or life insurance company, he did not have to do so. We are making it clear that trust companies and loan companies, and so on, are on the same basis as banks in this respect.

Mr. HANSON: Is this not a double taxation on the same transaction?

Mr. ROBB: No.

Sir HENRY DRAYTON: How would the advance be paid except by cheque?

Mr. ROBB: This is on the security he gives for it.

Sir HENRY DRAYTON: I believe that here my hon. friend is going altogether further than he thinks. I appreciate that he wants to get a stamp on every transaction.

Mr. ROBB: No, but I want everybody to be on the same basis.

Sir HENRY DRAYTON: I do not think that he wants two stamps on the same transaction, but that will be the effect the way it is worded. Take the case of anyone who is buying some stocks and is not fortunate enough to be able to pay for them all at once, and his broker is carrying them. His broker has to get money from the bank to do that, and when his broker gets money from the bank, the broker pays all these taxes, and then they are all charged up to the unfortunate fellow who is short on his stock. Now under this section as we have it here—I have just seen it, but it strikes me offhand that it means that the broker not only passes on to his customer, the stamp taxes he pays to the bank, but he has to repeat the same proposition in connection with the same transaction.

Mr. ROBB: I do not think so.

Sir HENRY DRAYTON: Will my hon. friend say now that that will be looked after by regulation to make that clear?

Mr. ROBB: Yes, I will say that. This was carefully prepared by solicitors after consultation with a man who is dealing in this business, and who represents a pretty big business, and knows pretty nearly what is going on. I think this is quite safe.

Mr. HANSON: If I buy bonds from a broker, say $20,000 of bonds on the instalment plan, the broker does not carry them himself; he hires the money from the bank, and he has to pay the bank the stamp taxes on the loan, and he charges that to me. Now under this section I will be charged the double tax. I do not think the minister ever contemplated that. I do not believe that is what he had in mind, but it will certainly bear that interpretation. What the minister is driving at is to put a tax on private loans from trust companies and banks to an individual where bonds are lodged as collateral. That is a form of financing that to-day escapes taxation. But this section would take in the case of a broker such as the hon. member for West York has instanced, and I do not think the government contemplated that.

Mr. ROBB: I give a pledge now that I will direct the officers to adjust this to see it is not double taxation.

Mr. HANSON: It must be obvious to the minister that the point is well taken.

Sir HENRY DRAYTON: I am quite content to let it go if the minister will say that a regulation will go through to see that that is not done.

Mr. ROBB: Yes I will see to that.

Subsection agreed to.

Subsection 20 of section 3 agreed to.

On subsection 21 of section 3—Bill or note as collateral security.

Mr. HANSON: I am glad to see the minister is giving some relief along this line. I have had personal experience in connection with borrowing money on the collateral of promissory notes, and I know I have had to pay double taxation. I would like to point out to the minister that under the regulations interest is charged quarterly on demand notes or advances, whereas a man can go to a bank and make arrangements for a loan for a year on a four-months' note, and he only pays taxes three times in a year, whereas on a demand note he pays taxes four times. That is an anomalous state of affairs, and perhaps it might be looked into.

Mr. ROBB: I will have that looked into.

Subsection agreed to.

Section 3 agreed to.

On section 4—stamp tax on all money orders and travellers' cheques.

Mr. ROBB: The words underlined are new and extend the tax on money orders or travellers' cheques to such documents issued by a bank or any person. Heretofore the banks were issuing these small money orders without putting a tax on them. We are here putting them on the same basis as express orders.

Section agreed to.

On section 5—stamp tax on amounts not exceeding five dollars.

Sir HENRY DRAYTON: Has my hon. friend got any return from the banks as to the amount of cheques issued under five dollars?

Mr. ROBB: I have not got that yet.

Sir HENRY DRAYTON: I understood that some time ago a circular was sent to the banks asking them to give the government particulars as to the number of cheques issued within different ranges. What information has my hon. friend got on that?

Mr. ROBB: I have not got the returns yet, and I am therefore unable to give the information to the House.

Section agreed to.

Sections 6 and 7 agreed to.

On section 8—Licenses to bona fide wholesaler or jobber.

Sir HENRY DRAYTON: What is the real change there?

Mr. ROBB: The words underlined are new. This limits it to an amount not more than $15,000 and not less than $2,000.

Sir HENRY DRAYTON: We had that up before, and there was some question as to whether we were not really increasing the bond.

Mr. ROBB: I discussed that with the commissioner, and he says no, after consultation with the Deputy Minister of Customs and Excise, that it decreases the bond.

Section agreed to.

On section 9—Priority of excise taxes repealed.

Mr. HANSON: What is meant by the repeal of section 9?

Sir HENRY DRAYTON: The lien goes.

Section agreed to.

Sections 10 and 11 agreed to.

Mr. STEVENS: I was going to ask the minister in regard to the regulations under this act, I presume, calling for a stamp to be affixed to monthly statements sent out showing a previous payment. I think all who have to do with that class of business know that it is very difficult to send out statements without showing some payment if the account is not paid in full each month or at whatever interval it is rendered, and yet under this regulation it was necessary to affix a stamp according to the amount that was paid. There was an intimation—in fact, I think once it was dropped, then it was reinstated. Can the minister state whether that is to be dropped again?

Mr. ROBB: No, it will not be dropped. My hon. friend was perhaps not in his seat when I explained a while ago that I had discussed this with the Deputy Minister of Customs and Excise who is administering the act, and he tells me that some firms were not issuing any receipt for moneys received on account during the month. The first of the month they send out a statement, and that constituted a receipt. I think my hon. friend will agree that they should pay, because it is a receipt. I will go a little further than I went a few minutes ago, and say that it is just possible that some firms doing business in an honest way may be penalized on account of the chaps who are evading the act, but I think the officers are trying to correct it as far as possible.

Mr. STEVENS: I appreciate the minister's difficulty. I am not bringing this forward to harass him in any way, or to be critical, but I have had a very large amount of correspondence from very reputable firms, as well as the Credit Mens' Association at Vancouver, and I presume other credit men's associations have also made similar representations. I appreciate it because I have had in years gone by a great deal of experience in this sort of thing. There are many concerns particularly wholesale houses, that carry accounts along year in and year out, which really are never closed. Perhaps there is a payment made on drafts, and so on, during the month, but they show at the end of the month that the business is not completed. Yet they are called upon under the new regulation to affix a stamp. Take the case that the minister mentioned. If a firm deliberately adopted the method of sending out statements yearly and not giving any receipt that would be easily distinguishable from the other class, and I submit this to the minister: It is hardly fair to penalize a score of honest, reputable firms because some one firm out of twenty, or perhaps one out of fifty, is seeking to evade the law in the way mentioned. I would rather see some regulation framed so that where it could be shown that they were evading the law they would be penalized rather than make such a sweeping general application. For all the revenue the government gets out of the receipt tax I would suggest that that tax be abandoned altogether rather than cause this irritation and confusion.

I feel myself that the case made by these very numerous reputable firms—and I have in my room scores of letters on the subject—is one which the government should very carefully consider; and I would ask the minister if it is not still possible to at least drop this rather irritating regulation.

Mr. ROBB: The Minister of Customs and Excise is looking into the question now. I think the officials are trying to arrive at some method whereby a man who is doing business in an honest way will not be penalized.

Sir HENRY DRAYTON: I wonder if my hon. friend could tell me exactly what that means? It is pretty hard to tell really what it means under this regulation. A receipt in the ordinary sense is an acquittance.

Mr. ROBB: No, it might be a receipt on account.

Sir HENRY DRAYTON: Well, it is an acquittance, it is pro tanto an acquittance. When you send a cheque in you get a receipt for your cheque; but on top of it you always have in every single course of business a monthly statement. That is the course followed by practically every wholesaler in the trade. Then, too, if there is a person that gets hit with the stamp tax it is the man that has an account with a broker. That happens all the time.

Mr. ROBB: I do not want to interrupt my hon. friend but the statement of the broker is not taxed.

Sir HENRY DRAYTON: Why is it not?

Mr. ROBB: I have received a statement every month and have not noticed any tax on it.

Sir HENRY DRAYTON: Now my hon. friend is going to try and get that tax. Whenever I get a statement I notice there is an item charged for taxes.

Mr. HANSON: Of one sort or another.

Sir HENRY DRAYTON: Of one sort or another. There is not a statement sent in but there is some charge for taxes.

Mr. ROBB: We are talking of the stamp tax now.

Sir HENRY DRAYTON: So am I talking about the stamp tax. A charge is made for the stamp tax some way or another.

Mr. MARLER: To what section is my hon. friend referring.

Sir HENRY DRAYTON: To the section that refers to the stamping system. I really submit that we have gone just about far enough in harassing the public. If we are to understand now that no one can get a statement of his account without paying a tax on that statement simply because there are some credit items in it I think the whole country ought to understand what is really being done. You cannot make a payment without paying a tax on your cheque; and for you to be told that you cannot get a statement of your account from your creditor without having to put more stamps on it, if that statement shows credit items, it does seem to be ridiculous. Yet that is what this section says.

Mr. ROBB: There is no change in the section.

Sir HENRY DRAYTON: I do not know but the change comes in in this way. We have had sensible people administering this act at some times, and we have had other people administering the act at other times who I think are very far removed from that condition. We have had rulings that these statements ought not to be taxed, and we have had rulings that they are to be taxed. My hon. friend says it is his intention that the mere statement of account that a man gets from his creditor is to be stamped because there are credit items in it.

Mr. ROBB: My hon. friend knows better than anyone in the House that the Department of Finance does not administer the act, although I am not shielding myself behind that statement at all. I have told the House frankly that I made inquiry of the deputy minister of the department administering the act and he explained to me that the reasons for the provision were that some people were evading the tax in the way mentioned. I agree with my hon. friend that if a remittance is made during the month, the person issuing the statement should not be compelled to put a stamp on his statement; but the Credit Men's Association should see to it that the merchants throughout the country, if they are members of their association, deal fairly with the department. The department must be protected in some way. Now if one person evades the law and my hon. friend does business fairly and rightly by issuing his receipts and putting a stamp tax on them, does he not think it only is fair to him that everybody should be put on the same basis?

Sir HENRY DRAYTON: I do not think the minister is putting everybody on the same basis. We have had the illustration of a broker. Take the case of stocks that are held on margin with a broker and the dividend payments that are made by a company on its stock certificates. The debtor, who is

carrying that stock, has not paid anything; he it not entitled to any receipt in one sense because he has paid no money. On the other hand the companies have paid their dividend cheques and have paid the stamp tax in every case. Does the minister really seriously say that all these little transactions should be segregated and the receipt stamp put on all of them?

Mr. ROBB: No, what I say is that it has not been brought to my attention that the brokers do put stamps on their monthly statements. It is the first I have heard of it.

Sir HENRY DRAYTON: I know one thing, and that is that when the business public really get to know how financing is going on in this country, they will transfer their transactions to the other side of the line. I wonder if the regulation is not driving business from Canada.

Mr. ROBB: In correcting evasions of the law we are bringing business back.

Sir HENRY DRAYTON: My hon. friend is not correcting it at all. If every time a statement is sent out for the payment of money it must have a stamp attached, simply because there are some credit items in that statement, it is about time we clearly understood the situation. If there is any one way of clearly showing the absurdity of the pyramiding of these little stamp taxes this certainly is the way.

Mr. MARLER: I cannot agree with my hon. friend (Sir Henry Drayton) in his attitude with regard to the stamp tax at all. The stamp tax is in essence a tax on a document evidencing a receipt of any description. If there is a receipt in the account, even should that money come from a third person, and it is credited to the person named in the account, why should the person not pay a stamp tax on that receipt, the same as on any other receipt?

Mr STEVENS: Here we have a wholesaler distributing to a number of small retailers. A retailer comes in in the middle of the month and pays $50 on his account and gets a receipt, which is stamped. At the end of the month the wholesaler sends him a statement showing goods purchased to the value of $200. He has already paid the tax on the $50 he paid on the 14th of the month, and yet he is required to pay a tax again on the whole amount of his monthly statement, including the $50. The thing is preposterous.

Mr. MARLER: That is not the same thing.

[Sir Henry Drayton.]

Mr. STEVENS: That is what I am talking about.

Mr. MARLER: That is not the point raised by the hon. member for West York.

Mr. STEVENS: He raised the same point in connection with a different class of receipt.

Mr. MARLER: No, not quite.

Mr. STEVENS: Let us stick to my point and see if we cannot win the minister to our view. I think the minister will admit, the government must admit, and every hon. member in the House must admit, that that is a gross injustice to that individual. Why persist in doing that? It is unquestionably a double tax. What will result is this: The wholesalers and others, in sending out their statements, when dealing with private families, where in many cases they carry monthly accounts right along, will cease entering upon the statements the amounts paid, otherwise the stamp will have to be affixed, and while the sum may seem small, yet the accumulation of stamp taxes will amount to a great deal. There is a stamp tax on the cheques, and a stamp tax on the receipt, and a stamp tax on this, that and the other thing. It is multiplying the stamp taxes. That I think is really unreasonable. There may be one case in fifty where the department would lose money. I doubt if the minister or the department could cite in the whole of Canada half a dozen cases. They might possibly find half a dozen or a dozen, but supposing they found a hundred, that is nothing compared with the multiplicity of honest individuals who are going to be penalized. I say to the minister therefore that it is better to lose the small amount that is alleged to have been lost than to irritate and penalize the large number of honest dealers. I go a step further still, and say that if it is found impossible to administer the stamp tax in an equitable fashion throughout the country, for the amount of revenue received it would be far better in the interests of harmony and keeping business in something like an equitable and favourable state of mind, to drop the whole thing. I do submit that that regulation should be withdrawn. I want to say to the minister, and through him to the department that administers these various taxes, that undoubtedly they have an irritating job. There is no question about it. The officials must be driven nearly to distraction, but there is always a tendency on the part of the official mind to disregard or overlook the convenience of the public, and to seek, and properly so, to exact the last dollar. That is where the minister ought to step in and judge fairly between the public and the

official honestly seeking to do his duty, it is true, but still perhaps erring a little too much in the matter of exactitude; so that I submit earnestly to the minister—and I hope he will take it up with his colleagues—that he should to-night give us an assurance that he will endeavour to have this regulation withdrawn. It is desirable, it is fair and it is equitable to withdraw it; on the other hand, to enforce it is going to do more injury to honest and reputable firms than the value of the revenue received would warrant.

Mr. ROBB: In the absence of the minister who is administering the act, I cannot agree to have it withdrawn. I will take it up with him once again and see if it cannot be arranged. I am sure the government is desirous of avoiding irritation.

Mr. MARLER: What the hon. member (Mr. Stevens) asks for can be done by regulation. He is simply desirous of avoiding paying the double tax. He does not want to attach a stamp to a monthly statement, but does not object to attaching a stamp to the ordinary receipt.

Mr. STEVENS: No.

Mr. MARLER: Where the money is paid during the currency of the account, my hon. friend would object to the provision that a stamp should be attached to the statement; but that is a matter which can be arranged by regulation.

Mr. STEVENS: That is the matter we are complaining of, and the difficulty is we cannot deal with it in the act because it is in the regulation.

Mr. BAXTER: I have just heard a part of the discussion, and I realize from the discussion that a letter I received from a friend who is doing a very large retail business in St. John is not without foundation. I presumed when I got the letter that there must be some extraordinary mistake, because what he complained of was that where a partial payment had been made, possibly by cheque—but that would not matter—he had to give a receipt duly stamped; and that if he sent out an ordinary monthly statement of account afterwards showing the credit that had been received, he must place a stamp on that. Surely that cannot be the regulation. It must be a misinterpretation of the spirit of the act.

An hon. MEMBER: That is the regulation.

Mr. BAXTER: If that is the regulation, with all respect to the gentleman who framed it, it seems to me profoundly absurd and unjust, and I trust the minister will find some way to remedy it. As far as any possible chance of evasion or fraud is concerned, I agree with hon. members who have stated that it must be almost infinitesimal. The minister himself in this very bill is opening to my mind a far greater chance of loss, because while firms such as the one I am speaking of will not resort to it, there are many individuals who will resort to the expedient of issuing a large number of cheques just under the sum of $5, in order to pay an account which amounts to much more than $5. In fact, I cannot understand opening a door such as is opened by this act, because it leaves it open to them to evade the tax, not by fraud, but by an absolute compliance with the act, which will militate against the stamp tax revenue which the government has a right to expect. I do not care whether you place the amount at $5, $10, or $25 there will always be an opportunity for evasion, so long as the sum owed is greater than the amount fixed by the act. It is a door which should not be opened. I sympathize with the people who dislike putting a stamp on a three or four dollar cheque, but surely there should be no need to trouble the House with a discussion of this matter at all. This stamp tax has been so long in force in England that it should be decided to adopt the experience of a half century at least or perhaps more. People have practised every trick of evasion, and they have met them where it was necessary to meet them. To follow them I think would be reasonable, but to try to provide for every possible case where there may be some peculiarity of the human mind looking for an evasion only results in intolerable torment and burdensomeness to people who are honestly trying to comply with the law, but do not want to be dealt with unjustly. All these matters are unfortunate. The conditions which make the stamp tax necessary are unfortunate. Surely we should be able to collect the tax with as little friction as possible, but we should not exact the taxes in such a way that people feel they are paying more than one tax for one transaction. That arouses a feeling of injustice which is not easily quelled. It causes discontent with taxation in general, and I think that our office as legislators ought to be directed to making taxation as palatable as possible and to create, if we can in the public mind the idea that the people should loyally and if possible cheerfully accept the burdens of taxation. You cannot get that feeling when a man sees that he is discriminated against with absolute, implacable injustice.

Bill reported, read the third time and passed.

On motion of Mr. Mackenzie King the House adjourned at 12.05 a.m. (Tuesday).

Tuesday, May 19, 1925

The House met at three o'clock.

REPORTS OF COMMITTEES

Second and third reports of the Committee on Agriculture and Colonization.—Mr. Kay.

Hon. CHARLES MARCIL (Bonaventure) moved that the third report of the committee of both Houses on the Printing of Parliament be concurred in.

Motion agreed to.

EXPORT OF POWER

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I beg to lay on the table copy of a letter I received from the Premier of Ontario on April 16, and of my reply thereto. The correspondence relates to the Carillon power development, and probably should have been brought down with the other papers, but I overlooked it at the time.

PRIVATE BILLS

FIRST READINGS

Bill No. 134, from the Senate, for the relief of Lillian Rebecca Mains.—Mr. Euler.

Bill No. 135, from the Senate, for the relief of Elizabeth Ruth Badgley Shaw.—Mr. Jacobs.

Bill No. 136, from the Senate, for the relief of Lilian Helena Caldwell.—Mr. Preston.

Bill No. 137, from the Senate, for the relief of Elizabeth Strachan Reid Harvey Strachan.—Mr. Garland (Carleton).

Bill No. 138, from the Senate, for the relief of Esther Charlotte Ancel.—Mr. Jacobs.

INQUIRY FOR RETURN

YUKON GOVERNMENT OFFICIALS—INCOME TAX EXEMPTION

On the Orders of the Day:

Mr. GEORGE BLACK (Yukon): Mr. Speaker, I should like to ask the government when I may expect the return to an order, passed on the 9th of March, for a copy of all correspondence concerning exemption from income tax allowed to officials of Yukon Territory. When the resolution was passed, the Prime Minister remarked that there was no objection to bringing down any of the papers called for other than such as might properly be regarded as confidential. I notice that some of the material was ready some weeks ago, and there seems to be no reason why the return should not now be made.

Hon. J. A. ROBB (Acting Minister of Finance): Mr. Speaker, I have no knowledge of the papers having been prepared. I will communicate with the department this afternoon and ascertain.

CHICAGO DRAINAGE CANAL

On the Orders of the Day:

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Mr. Speaker, I have seen a report which has given me some concern; I do not know whether it has come to the government's attention or not. It relates to the Chicago drainage canal diversion and to the interpretation given the recent judgment of the Supreme Court of the United States by the Chicago authorities and, so far as I know, by others generally. It is well known that a limitation was placed on the diversion by the Supreme Court judgment, which limitation was believed here to be a real limitation of the very serious diversion from our waters which had up to then taken place, and the still more serious diversion in immediate prospect, it being a limitation to 8,500 cubic second feet. The interpretation which I have seen as intended to be acted upon is this: that the 8,500 cubic second feet, disastrously serious in itself, is to be applied to the drainage exit alone, that is to say, it is not to include the waters diverted by the alteration of the course of the Chicago river, which course has been changed from a flow into the lake—the natural flow—to a flow at a nearer point into the Chicago canal. It also involves an exclusion of the water taken for purposes of water supply. That is to say, the interpretation is said to be 8,500 cubic second feet for drainage alone, exclusive of 1,300 cubic second feet represented by the turning of the course of the Chicago river, and 1,200 cubic second feet more taken for the purposes of water supply. This total would be 11,000 cubic second feet, or worse than we ever understood as having been the actual practice. I would like to ask the government if they have had any information to this effect, and if so, what steps the government have in mind to bring to a head, or at least to some prospect of solution, this very dreaded and calamitous state of affairs.

Right Hon. W. L. MACKENZIE KING (Prime Minister): The matter to which my right hon. friend has just referred came also to the attention of the government, and we immediately communicated with the United States government, placing before them the interpretation referred to and asking them whether that was the view they took of the decision and its effect. We also drew attention to other possible interpretations with a

view to getting from the United States authorities an exact statement of what in their opinion was the authoritative interpretation. Up to the moment we have not received any final answer, but in view of my right hon. friend's question to-day I will have a further despatch sent.

CANADA-FINLAND TREATY OF COMMERCE

Hon. J. A. ROBB (Acting Minister of Finance) moved the third reading of Bill No. 128, respecting trade between Canada and Finland.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Before this motion is adopted I would like to direct the attention of the minister who makes the motion to the correspondence—or, rather, I will make it plainer to the corresponding phraseology—of the Finnish agreement and the Finnish legislation to that of the Netherlands agreement and legislation, and therefore to the equal danger of such interpretation of this treaty as will bind Canada to extend to Finland the schedules of our preference tariff.

Mr. ROBB: Since yesterday I have had an opportunity of looking into it, and I find that these are in exactly the same terms as the treaty with Italy. It was never thought for a moment that there would be placed upon it the construction which my right hon. friend fears.

Mr. MEIGHEN: What about the French treaty?

Mr. ROBB: I do not know about the French treaty. As regards the Netherlands, the commissioner has gone to Montreal this afternoon to have a consultation with the representative of the Netherlands in this country, and I hope to be able to give my right hon. friend a reply to that to-morrow. I do not think there is any danger in connection with this legislation.

Motion agreed to and bill read the third time and passed.

SUPPLY

TRADE AND COMMERCE

The House in committee of Supply, Mr. Gordon in the chair.

Trade and Commerce—Gold and Silver Marking Act, administration of, $6,000.

Hon. T. A. LOW (Minister of Trade and Commerce): This vote is to provide for the salary and travelling and contingent expenses of Mr. W. J. Ryan of Toronto, the inspector employed by the department for the enforcement of the act. It is the same as last year.

Sir HENRY DRAYTON: I understand that under the arrangement made last week we are to discuss under this item the question of the export of power, and if I am correct in that I wish to make a few remarks in that connection. Since we last discussed this matter a return has been tabled by the government dealing with the question of the export of Carillon power. It is a long return, covering a good many years. Since the return was tabled the gentlemen of the press, in the first place, considered it, and immediately after that the hon. member for Laval-Two Mountains (Mr. Ethier) was fortunate enough to be able to get his hand upon it, and he conveyed it after that to the Minister of Trade and Commerce—

Mr. LOW: Who had it for fifteen minutes.

Sir HENRY DRAYTON:—who tells us he had it for fifteen minutes. I do not know where it was in the meantime, but I do know that the people who asked for it and wanted it were able to get it at something like twenty minutes to one.

Mr. ETHIER: I got it only last night at ten o'clock and I gave it back this morning to the Minister of Trade and Commerce.

Sir HENRY DRAYTON: I can only say that the earliest we could get it was about twenty minutes to one.

Mr. LOW: I might say to my hon. friend that before it reached my office I had a telephone call that the file was wanted for the right hon. leader of the opposition. I retained it fifteen minutes, and it was then returned to the secretary.

Sir HENRY DRAYTON: I do not know anything about the peregrinations of the file or how many people found it necessary to check it, but that is the hour it got to the office of the leader of the opposition.

Mr. FORKE: I would like to point out to the hon. gentleman that the most of us do not know what he is talking about at all.

Sir HENRY DRAYTON: We will see if we can correct what perhaps is a common condition; we will see if we can make it a little less common. I am talking, Mr. Chairman, about the question of the export of power. My hon. friend forgets there was an arrangement under which this question was to be discussed under this item, and I am pointing out right

at the commencement that I cannot give the House as well as I ought to give it, what is set forth under this file, and what the situation is, for I simply have not had the opportunity, I have not had the time to go into it.

I think we can say we are on common ground at the commencement. A lease was made—so far as I can make out in the short time I have had the chance of looking at this file—in June, 1911, which enabled, not this company but a predecessor of this company, to develop power at Carillon. There have been extensions to that lease from time to time; and it runs on until, in 1921, the lease is enlarged by a new document giving, as I gathered during the short time I have had the chance of looking at the lease, somewhat extended powers. I do not attempt to define them; the matter has run along from 1921 with extensions, so that it is still kept alive.

My right hon. friend the Prime Minister and myself talked of this a little while on the last occasion when we were discussing this matter, and when I was attempting to find out whether any request had been made for the right to export power, whether anyone had been busy about it, whether anyone had seen him or any member of the government about it. Well, we might have saved a whole lot of time, for there is a very definite proposition before the government, as shown by the draft leases which are on this file. The proposition that is made to the government under these leases is that power shall be exported in the first instance to the United States, with the right to Canadian muncipalities to get of that power up to 100,000 horse-power. The main object of the undertaking is entirely the matter of the exportation of power to the United States, as I am going to show in a few minutes. I asked on the last occasion who was looking into this, who was pressing it, who was behind it, and my right hon. friend could not tell me anything; or if he could, he would not. I am going to give him now some information. There need be very little trouble now in finding out all about this matter.

The lease which is forwarded is forwarded under cover of a letter dated October 23, 1924. Two revised drafts are sent in. I point out that the file is incomplete at that point; I have seen nothing of former drafts; there is nothing of former correspondence. Whatever the peregrinations of the file were, it is quite clear that there is nothing to show on the file itself how this situation was led up to; but on the 23rd of October, 1924, we have a letter. I read a portion of it:

[Sir Henry Drayton.]

On behalf of the Carillon Industrial Corporation, Limited, I would like to submit for the consideration of the minister and the department, two revised drafts marked "A" and "B" respectively, and would be obliged if arrangements could be made to have these drafts reviewed with a view to a final agreement between the parties as to the precise form of the leases contemplated.

Yours sincerely,

Carillon Industrial Corporation Limited.

That communication is signed by Miss Lyla Brennan, as secretary-treasurer. I cannot find in the telephone directory or anywhere else particulars as to the Carillon Industrial Corporation, Limited, but on inquiring as to Miss Brennan, I find from the directory that Miss Lyla Brennan is a stenographer in the office of McGiverin, Haydon & Ebbs, at 19 Elgin Street, Ottawa, and I might point out that this letter bears the address, 19 Elgin Street, Ottawa. So my right hon. friend has not far to go to get information as to who is behind this scheme and what is in it. All he has to do is to go to his senatorial friend, on the one hand, or to his member of the cabinet without portfolio, on the other hand, and he will have it.

Mr. MACKENZIE KING: I do not know whether I fully grasped the purport of my hon. friend's remarks. Is he referring to my statement the other evening that the government had had no application before it? I think I made it quite clear that the government had not had before it for consideration any applications for the export of power. What my hon. friend is reading now as to some communications that have come to the minister and the department, I am hearing now for the first time. I had no knowledge of it at all until my hon. friend read the letter.

Sir HENRY DRAYTON: I am very, very sorry, Mr. Chairman, that in an important matter like this my right hon. friend the Prime Minister is being kept so much in the dark and does not know anything about it.

Mr. MACKENZIE KING: I understand there are applications made departmentally running back three and four years. They have not come before the government; and I was speaking, as I said the other evening, for the government, and I made it quite plain the government had not considered any applications of the kind. I repeat that now.

Sir HENRY DRAYTON: My hon. friend is doing scant justice to himself.

Mr. MACKENZIE KING: Not at all.

Sir HENRY DRAYTON: I went further and said I was not concerned with any formal application, but that I wanted to know whether

this matter had been brought to the attention of the members of the government, and I did not confine myself to the Prime Minister, but I went down the line of the ministers who were here. There is the Minister of Railways (Mr. Graham): this is in his department, and if you could have a more formidable application for a right to export than we have here, I would like to see it.

Mr. MACKENZIE KING: My hon. friend at the time was pressing for a statement from the government as to what they purposed doing in the export of power, and he spoke particularly of Carillon. I told him then that the government had not had that matter before them for consideration, and I repeat it.

Sir HENRY DRAYTON: My hon. friend had better look at Hansard. What I was trying to find out was what was going on in connection with this matter, not what the government was going to do, but who was behind it.

Mr. ETHIER: Is that draft signed or is it blank?

Sir HENRY DRAYTON: I would like to ask the hon. gentleman, who happens to be a lawyer, whether he ever heard of a draft document signed? If they were signed, they would not be drafts; they would be executed documents. We were trying to find out whether there was any real movement on, whether the deputations were accidental deputations; and we could get no information. But we have it here. We have an application for the export of power on a grander scale than anything we have ever had; that is the plain straight fact. And we also get it from the firm of McGiverin, Haydon & Ebbs, so there ought to be no mystery about it. Surely the government can find out and give the House and the country information as to who is behind this scheme. Well, I turn to the draft contracts and there are two. I confess in commencing that I have not had sufficient time to go through these contracts for the purpose of dissecting them and seeing clearly whether they differ one from the other. However, I have gone through them sufficiently to enable me to arrive at this conclusion—that the plain intent and the plain object under both contracts is the exportation of power in large volume and in large quantities. I first deal with contract A—

Mr. GRAHAM: It is not a contract.

Sir HENRY DRAYTON: Well, draft contract A, submitted by the company to my hon. friend. The covenant reads—I skip the first part of it which is not directly material:

Doth lease—

That is, the government.

—unto and vest in the company the following rights, privileges and hydraulic powers on the terms and conditions and for the times in this indenture specified.

I may say, just at this point, Mr. Chairman, that the contract runs a long time. In the first instance, if this lease is signed, it is to run to the 1st January, 1964. There is then to be a 21-year renewal from 1st January, 1964. There is then to be another 21-year renewal from 1st January, 1985, and a 40-year renewal from 1st January, 2006.

Mr. MACKENZIE KING: Does my hon. friend think the government will entertain any such absurd request?

Sir HENRY DRAYTON: I really do not know what absurdity this government would not do if they thought it would pay them to do it. Why, this is no more absurd than what we went through the other night. This is very very little worse than the Petersen contract; it is only a difference of degree. So, Mr. Chairman, while I admit it is ridiculous, I frankly hesitate to predict bounds to the government's powers of erring and of error. So I will have to leave that particular thing to my hon. friends right there.

Mr. McISAAC: How does it compare with the contract of the Bridge River Power Company?

Sir HENRY DRAYTON: Perhaps we had better deal with one thing at a time; my hon. friend will hear all he wants to about that later on. Now let us see what rates they get.

Mr. GRAHAM: No, what rates they ask for.

Sir HENRY DRAYTON: Quite right.

Mr. MEIGHEN: We were told they did not ask for any.

Sir HENRY DRAYTON: We are always learning something. My hon. friend's sleeve is getting narrow; we are getting nearer the heart of the matter. Now the clause as to this power is clause D. They are granted all the hydraulic powers created under this contract if it went through.

Mr. CANNON: If my hon. friend wants to be fair he should deal with this as a contract which is submitted, and not as a contract which has been acted upon.

Sir HENRY DRAYTON: I have said that often, have I not? I am just talking about

what this lease would do if put into force, I am not saying it is put into force. What I am doing is explaining the nature of the obligation which we could not find anything about.

Mr. CANNON: My hon. friend's English is very poor, then.

Sir HENRY DRAYTON: Perhaps so, but it is at least truthful:

All hydraulic power created by the said navigation, works, as extended, enlarged and improved as herein provided together with the right to generate, sell, transmit, convey and deliver the electrical power available through utilizing all of the water flowing to the dam forming part of the navigation works herein provided, and not required for the operation and lighting of the said present Carillon and Grenville canals, or of any canal or canals that may be constructed in addition to or in substitution for the said present canals or any of them, subject, however, to the obligation on the part of the company in respect to export to make available from Carillon or elsewhere at the power house of the company at or near Carillon for the requirements of Canadian municipalities, cities and other consumers for use in Canada electric power of the frequency and voltage of the company's plant up to a total of 100,000 horse power which shall be available to such Canadian consumers at the same average load factor as the balance of the load on the company's plant.

I just stop to point out there that I do not know from this file the amount of power that is to be developed. Perhaps my hon. friend the minister knows what the proposition is?

Mr. GRAHAM: I would rather reply to my hon. friend when he gets through; I do not want to interrupt him.

Sir HENRY DRAYTON: But I am looking for the interruption.

Some hon. MEMBERS: Oh, oh.

Sir HENRY DRAYTON: There goes the general chorus. There goes a chorus which is a real chorus, which can always be counted on to fill in. But just look where we are.

Mr. GRAHAM: Does my hon. friend want me to answer him now?

Sir HENRY DRAYTON: I want the information because it might cut out a whole lot of what I have got to say.

Mr. GRAHAM: As a matter of fact I have never read those proposed leases, and have never considered them for a minute. I never saw them until Friday last, and I was not considering them at all. Those leases have never been brought before me and I do not know what is in them.

Sir HENRY DRAYTON: That is not the question I asked my hon. friend.

Mr. GRAHAM: What was it?

[Sir Henry Drayton.]

Sir HENRY DRAYTON: I asked my hon. friend how much power was proposed to be developed?

Mr. GRAHAM: I do not know what is in the leases.

Sir HENRY DRAYTON: This does not say.

Mr. GRAHAM: In the case of the National Hydraulic I think there was a proposed development of 400,000 horse power; but I do not know what is in those leases because I never read them.

Sir HENRY DRAYTON: If this is an extension of the former idea, under this contract the right would be given to raise the dam to a height not exceeding 133 feet, and if the old plant would produce 400,000 horse power I would assume this would produce a bit more.

Mr. GRAHAM: The National Hydraulic asked to raise the level of the water to 133 feet.

Sir HENRY DRAYTON: It is the same in this.

Mr. GRAHAM: If these leases contain the same request that horse power would apply to this request.

Sir HENRY DRAYTON: That would be the same thing. Well then, we have a proposition looking to the development of 400,000 horse power. Out of that amount 100,000 horse power would go to the Canadian user; but he is given that right in such a way that if the idea was to see that no Canadians used the power at all it is pretty well looked after, having regard to the district, having regard to the municipalities to be served, and the like, because there is a limitation as to the amount that can be held over, the clause reading:

The company shall supply such electrical energy to such Canadian consumers in blocks of not less than 10,000 horse power and at reasonable rates and on reasonable conditions such rates and conditions (other than those herein specified) in the event of disagreement between the parties to be determined by the Board of Railway Commissioners for Canada.

I point out that none of the municipalities of ordinary size is ever going to want anything like 10,000 horse power, if my hon. friend looks at the list of municipalities taking power from the Ontario Hydro-Electric, he will find very respectable sized places getting along with less than 10,000 horse power, but the limit here is 10,000 horse power. Then they have got to put in their requisition for that power within two years from the 1st day of October, 1924.

Mr. BRISTOL: By whom and how delivered?

Sir HENRY DRAYTON: That particular is not given at all. I suppose the company will have to hand it over to the municipality, but that is not covered. Then it says:

In the event of the total of such requirements being less than 100,000 horse power the company shall be obliged to furnish the remainder of such 100,000 horse power or any portion thereof on notice from the minister that the same is required by Canadian consumers.

But if they do not go into it, in the first instance, the right to give that notice is only at the expiration of the five-year period, January 1, 1931 and January 1, 1936, and so on. It is perfectly obvious that the real intent of the whole of this draft is to look after export, and that the provision that is put in as to Canadian users is just another smoke screen. Then as to their right of export this document says:

Such surplus of electrical power at the said works of the company as may from time to time during the terms and renewals contemplated by this indenture be available for disposition after the company has fulfilled its obligations in respect to Canadian supplies as hereinbefore defined may be disposed of by the company to customers in the United States or elsewhere subject to compliance with the requirements of this contract, and the company in addition to all other rights and powers granted to, conferred upon or possessed by it is hereby vested with and may exercise all the rights of the lessor to export such surplus electric power but over the transmission facilities of the company and in so doing shall be the agent of the lessor acting for the use and service of the crown.

I just point out there that if any action is ever taken on this request, there is no necessity to get any license at all. The contract is plainly drawn for the purpose of getting around the act as to the export of electricity. That act does not apply to the crown; it does apply to ordinary companies exporting. But in this case the applicant, the mysterious clients of Messrs. McGiverin, Haydon & Ebbs, with a view of getting round the point, have struck upon the novel idea of putting themselves in the position of the crown, exporting as agents of the crown and in right of the crown. A more absurd proposition I think could hardly be conceived. The only trouble is that my hon. friend did not throw it out long ago. It would be better if he had read it and thrown it out, and we would have saved some time.

Another clause is put in for the purpose of saying that as to that export business the company is to be left to themselves, because that clause is put in on behalf of the company, and provides that these people who make the contract can export and the whole export is to be left to them.

The other contract was very very largely the same. I frankly do not think there is any good in either of them, or that anything can be said in favour of either of them. They both have these long terms to run, they both have the absolute right to export; and if they did not get that, if the substitution was not enough, there is another clause put in under which, under the further assurances, the government has the power to give them all the licenses that are necessary.

There is another clause to which I wish to draw my hon. friend's serious attention. I do not know whether he will tell us frankly and fairly that this whole thing is gone, but I want to tell him. The proposition is just as he says, to develop 400,000 horse-power. From what little we have heard about it, it will not be possible to develop that horse-power there. And the company do not think they can, because they have another clause in the contract which gives them the right to supplement this power with power obtained wherever they can get it. The effect of this audacious proposition is this: Suppose there were only 200,000 horse-power at Carillon and the company could show there was a demand in the United States for the whole 400,000 horse-power, then, under this ridiculous proposition, they would have the right to go anywhere else, get that power and export it.

Now, Mr. Chairman, these are very long contracts, and it would take some time to go through them, but I do not think it should be necessary to do that. I think the House is entitled to a frank statement to-day from the government. The last time we were discussing this matter the government knew nothing about it. The last time we were dealing with the question no applications had been made.

Mr. GRAHAM: Not to the government.

Sir HENRY DRAYTON: I do not know any way in which the applications can be made except through the minister who has the matter in charge. Now sometimes subterfuge can get almost too thin.

Mr. GRAHAM: Allow me to straighten out the matter, and let the hon. member keep cool. There was no suggestion made that there had never been any application to the Department of Railways and Canals. I think the answer given by my right hon. leader (Mr. Mackenzie King) was a correct answer.

Mr. MEIGHEN: How would an application be made except to the government, through its official channel?

Mr. GRAHAM: When I get through—

Mr. MEIGHEN: Will my hon. friend not answer the question?

Mr. GRAHAM: When I get through.

Mr. MEIGHEN: But before you get through?

Mr. GRAHAM: I cannot answer until I get through. As a matter of fact, none of the applications was ever taken to the government by the Minister of Railways, and the government never considered one of them.

Sir HENRY DRAYTON: It is like the difference between Tweedle-dum and Tweedle-dee.

Mr. GRAHAM: Tweedle-dum in this case is willing to take all the responsibility for what he did not do.

Sir HENRY DRAYTON: My experience is that all applications considered by the government, treating the government collectively when sitting in council, came through the report of the minister, and I do not know how they could come to them in any other way.

Mr. GRAHAM: They never made a report.

Sir HENRY DRAYTON: I do not know how anyone could make an application except in the first instance by sending it to the department, and the application here is made to the department.

Mr. MACKENZIE KING: My hon. friend expressed it accurately that time. He said the only way a matter came to the government was on the report of the minister. Now, the government has never had it before them, because there was no report by the minister.

Sir HENRY DRAYTON: I agree with my hon. friend in that statement but my hon. friend is wrong—

Mr. MACKENZIE KING: No. Now I think it would shorten matters if I would apologize humbly to my hon. friend, I never intended to be wrong; I never intended to convey any other meaning than what I am expressing now, namely, that the government had received no report through any minister on this matter and had not considered it at all. As to what applications there may be in the departments, I cannot speak for the government. I was speaking for the government as a whole, and I think I made that point clear. There may be in different departments a thousand applications of which I have no knowledge. But I have and should have a knowledge of matters that come before the government on the report of a minister.

[Mr. Graham.]

Sir HENRY DRAYTON: We shall take it in that way; but what I was trying to find out was whether this was being pressed and who was pressing. It can be pressed only through a department. My right hon. friend (Mr. Mackenzie King) thought I was referring to the council. I was not. There is, however, an end of that. The minister may tell us whether something is going on about this, whether the thing is absolutely dead. It should never have lived at all. What is the situation?

Mr. GRAHAM: It has not been born yet.

Sir HENRY DRAYTON: We are delighted to hear that; but I should like to know whether Messrs. McGiverin, Haydon & Ebbs have any object in putting life into these dead bones or not, and who is behind the thing.

Mr. FORKE: I confess that I am considerably puzzled to get the meaning of all this sort of thing. The ex-Minister of Finance (Sir Henry Drayton) has got hold of a draft contract of some kind which the government denies knowing anything about. Am I correct?

Mr. MACKENZIE KING: Hear, hear.

Mr. GRAHAM: It has never been considered.

Mr. BOYS: The Prime Minister says, "hear, hear." The hon. member had better get a straight answer.

Mr. FORKE. The ex-Minister of Finance should tell us where he got this contract, how it came into his hands.

Sir HENRY DRAYTON: We asked that these papers, which are ordinary governmental, departmental papers, should be tabled in the usual way, just as in any other case, and they were laid on the table yesterday afternoon. They perambulated around a bit; I managed to get hold of them at twenty minutes to one, and I was apologizing for not knowing the whole details of the case. The reason for that was simply because I had not had time to study them. There is no mystery about these papers at all; the mystery is as to who is behind them, what is going to be done with them, whether a thing that ought to be thrown out at once will be thrown out.

Mr. FORKE: Apparently this application may have been sent into the government and it may never have been considered. That is as far as I can understand the matter. I do not know whether the proper thing was to

put these papers on the table unless they had had some notice or consideration by the government. Perhaps I am floundering a little, but again I confess my ignorance. I should like to get at the bottom of this matter.

Mr. GRAHAM: May I be permitted, as far as I can in my humble capacity, to throw a little light on it? In the first place, these papers were in the Department of Railways and Canals, the hon. gentleman is quite right in that. It is questionable whether papers that had never been considered were covered by the request of the leader of the opposition (Mr. Meighen) and I read his remarks carefully—but so that there could be no question as to the Department of Railways and Canals bringing down everything it could find high and low, I brought down correspondence even from Sir Robert Perks on the Georgian bay canal, because it referred to this particular stretch of water. Allow me to give a little history. My hon. friend was somewhat astray, but not materially. The first lease was given in 1908 at the Carillon dam where the canal is—and that is why the matter comes under the Department of Railways and Canals—to the late Crawford Ross to develop 250 horse-power,—just a small development is given along nearly all the canals in the system. In 1911, that lease was transferred to a company which, I think, is called the National Hydro-Electric. The lease was enlarged a little, some new clauses being put in, but I think the total development under that would be only 500 horse-power. As a matter of fact, that lease has been honoured by that company, and at Carillon at the present time and for some years there has been a development of 250 horse-power. These two leases for this small development were, I am glad to say, signed by myself as Minister of Railways and Canals. The 250 horse-power lease was operated and is still in operation. In 1913, when the late Mr. Cochrane was Minister of Railways and Canals, a new application was made to him by the same company, if I remember correctly, to allow development which would mean an increase in the height of water to 115 feet. The development under that would have been a great deal larger; I think it would have been 100,000 horse-power. The arrangement was made, but while the then Minister of Railways and Canals, the late Mr. Cochrane, had the lease prepared, it was never executed. Some time later, I think it was in October—the date is immaterial—

4 p.m.

Mr. MANION: With whom was the lease in 1913?

Mr. GRAHAM: The lease that was not executed?

Mr. MANION: Yes.

Mr. GRAHAM: I think it was the same National Hydro-Electric. I do not wish to be held too closely to the names of these companies; the name has changed several times, but to my mind it is always the same people with a new company.

In 1920, or approximately, a communication was had, I think with the Department of Railways and Canals, asking for some new construction, referring to the 1913 proposed lease. On November 25, 1921, an application was made for a lease of this power with the right to increase still further the height of water to 120 feet. This, as the engineers tell me, would enable a development of from 100,000 to 150,000 horse-power, and with certain other works the development would reach 300,000 horse-power. I may be wrong in some of the details, but this is the history of the power at Carillon. In none of these leases, so far as I have ever known, was there any export. That is quite evident because the place to get the right to export is in the Department of Trade and Commerce. I have very grave doubt if any clause put in a lease would override the statute of the Department of Trade and Commerce which provides for regulations as to the term of export. It is a mistake to say that the restricted term of one year is in the statute. The statute which has been in force for some eighteen years is quite broad. It allows the government by order in council to regulate the period for which export can be permitted. In fact it gives the Governor in Council quite broad powers, extending even beyond this one particular point. But as a matter of fact the export of power is, under these regulations, confined to the term of one year, and I am very doubtful if any contract such as my hon. friend has read would be legal; certainly no person could borrow money on it unless it were in conformity with the statute. In these negotiations time and again the Department of Railways has been approached for the issuing of a new lease, but no new lease has ever been issued. While on this file there appears a copy of an order in council made a few months ago authorizing the Minister of Railways to again renew the lease to the National Hydro-Electric Company, I may say that that power has not been exercised, and to-day there is no lease to anybody beyond that for 250 horse-power.

Sir HENRY DRAYTON: As I read it that company takes the place of the other company.

Mr. GRAHAM: Let me correct my hon. friend. This lease which we found in existence in 1921 has, I think, been renewed once. Verbal application was made for renewal for another term, and an order in council was passed giving the Minister of Railways the right to renew it. An officer of the department, without instructions, signed a renewal and sent it out; the Minister of Railways himself recalled that renewal; so to-day there is no lease in existence for this power at all outside of the 250 horse-power. My hon. friend has been led astray by the order in council authorizing the minister to grant a renewal, which authority he did not exercise.

Mr. BOYS: Is that lease renewed from year to year pursuant to the statute which the minister referred to?

Mr. GRAHAM: No, this was not for export at all. In the lease a certain time was given for the doing of certain work, and when that work was not done the time was extended once. My hon. friend has dealt with these proposed leases, submitted by the Carillon Industrial Company, but I am free to say that I have not read them myself.

Mr. MEIGHEN: Will the minister say that the fact of the application of the Carillon Power Company was not brought to his attention by his officer?

Mr. GRAHAM: The fact was brought to my attention that there was an application, but I was not considering the application at the time it was made, and it was never brought before me for action. I never read it, and never considered it, and I have heard more from my hon. friend of what is in the lease than I ever knew before. Until Friday last I had not read the letter, because while there has been a good deal of discussion with the Department of Railways and Canals for the last two or three years for the proposed new lease, it never came to the Minister of Railways for final consideration. I do not want to be misunderstood, because it is all quite plain and open. I discussed it once or twice with the solicitor and the engineer, and with Mr. Robert himself, but no action was ever taken on these suggestions, not the slightest. Now, I ask my hon. friend, if when he was Minister of Finance he had received an application from a bank to do a lot of things for that bank, and did not do them, would he be held responsible for the bank writing to him?

[Mr. Graham.]

Sir HENRY DRAYTON: My hon. friend is perfectly right. But I would be held responsible if I denied having received the letter.

Mr. GRAHAM: I never denied having received the letter, I never made any such suggestion.

Sir HENRY DRAYTON: Well, the application.

Mr. GRAHAM: I never denied receiving the application.

Mr. BRISTOL: We are discussing a very interesting subject, and I should like to know if the minister has received any opinions from the Department of Justice as to the right of the Dominion to grant a lease of power such as has been discussed, as against the rights of the provinces of Ontario and Quebec?

Mr. GRAHAM: That matter is under consideration. But my hon. friend should have had that question raised when this lease was being made in 1921 by his own friends.

Mr. BRISTOL: It has never gone through, so there is plenty of time.

Mr. GRAHAM: It is a very big question and is being considered now. This power has been under lease for a good many years. But it is a perfectly legitimate question to ask.

Mr. BRISTOL: It would be rather dangerous for the Dominion authorities, for they might have to face an action for damages if it turned out afterwards that the Privy Council declared the provinces had the sole right of granting the lease of power we are discussing.

Mr. GRAHAM: But this government has not made any lease; its predecessors did. Now, my right hon. friend (Mr. Meighen) referred to the Board of Railway Commissioners. Well, that is not new. As a matter of fact I had the honour when I was in the House before, and the Trent Valley development was being discussed —in fact it resulted in litigation between the Ontario government and the federal government—I had the honour at that time of introducing a measure giving the Board of Railway Commissioners power to settle power rates as between producer and consumer in case there was any difference of opinion. My hon. friend has not given me very much to work on. As a matter of fact, we have been discussing two documents which have been in the Department of Railways and Canals, and which have had no consideration whatever on the part of the minister. The government

cannot be held responsible as a whole for what was in my department; and I submit to the House that I am not responsible for documents in my department if I do not act on them. If I come to my colleagues in council with a recommendation to lease this power, then I would be responsible for what I was recommending; but any person in the known world may file any document he likes in the department, and I am not responsible for it unless I commit the government or the country to something which is contained in that document. I think that is fairly well cleared up, unless some hon. member wants me to discuss further these mythical propositions which have no significance whatever. As to the people behind the proposal, as a matter of fact if the Minister of Railways or the government ever proposed to act on the request contained in this proposal for a lease, they would have the right to demand and the right to tell parliament and the country who really was behind the proposal and was getting the lease; but so long as the request is not acted on, to my mind it is immaterial who is making the request.

Now, as to the export of power itself. My hon. friend has asked me a question as to what the government proposes to do. This question is one of great import. No government in this country, either federal or provincial, has ever declared itself against the export of power in practice—they have in theory, but never in practice. At the present time I am not expressing an opinion on the export of power. I want to face it squarely. It is such a big question that conceivably conditions might arise at times when the export of power would be essential. It has arisen with the Hydro-Electric of Ontario when they admit it to be highly essential to export power. I am not criticizing that action.

Sir HENRY DRAYTON: My hon. friend is not putting that quite clearly. The Hydro-Electric of Ontario do not for one minute deem it necessary to export power. Unfortunately they are in a position where they cannot help themselves, they have got to export power.

Mr. GRAHAM: Why have they got to do so?

Sir HENRY DRAYTON: They are bound by a contract which was made by the company which they took over, a contract which was validated and which has yet twenty-five years to run.

Mr. GRAHAM: Apparently my hon. friend has not studied that contract any more than he has this file. Within the last few months the Ontario Hydro-Electric has asked for the right to export 45,000 horse power per year off peak load. That is because they can make some money out of it, of course.

Sir HENRY DRAYTON: I do not think my hon. friend should say that that is the policy of the Ontario Hydro-Electric Commission. The position in Ontario is simply this. For the moment—I hope it is only very temporary—industrial Ontario is in such shape that they have now got this surplus power, and the commission are given the right to export it temporarily. And it is the same thing with the other producers.

Mr. MACKENZIE KING: Does my hon. friend think they should not have that right?

Sir HENRY DRAYTON: I will deal with that in a moment. The Canadian Niagara Company are in exactly the same position. Their Canadian consumers, owing to lack of business, cannot use to-day the 20,000 horse-power which they ordinarily use, and what has been done is this. An arrangement is made under which that 20,000 horse-power is not to be used for the purposes of new contracts, is not to be used in connection with any new industry in the United States, or any new municipality; all that can be done with it is to have it take the place of just that much coal. So that there is no string on it which would put us in the unfortunate position we have been in in connection with other contracts. The power exported is simply taking the place of coal, and that is absolutely right and proper.

Mr. GRAHAM: That is just what I was coming at. If parliament were to instruct this government to say that the export of power should not be allowed under any conditions, then the Ontario Hydro-Electric Commission could not export a kilowatt of power, no matter what the reasons were.

Mr. MACLEAN (York): If the minister will pardon me: If after careful study of the whole question it was found to be in the interests of Canada to keep the power here, then it should not be exported. That study has not yet been made, and it is the duty of the government now to make it.

Mr. GRAHAM: Mr. Chairman, I hope Hansard will remember that this is my speech. I am doing my best to struggle along with it; I will get to all these points if there are not too many interruptions.

An hon. MEMBER: They are all helping you out.

Mr. GRAHAM: They are all making it clear that it would not be businesslike to say that under no circumstances should the export of power be allowed; because if that were done the Ontario Hydro-Electric Commission would be prevented from exporting under its licenses, which give it the right to export 152,000 horse-power. Now, it does not export that amount, but it has the right to do it. I submit that the Hydro-Electric are proceeding properly when they seek to get some income from a peak load with the view of keeping rates down to those who use power here. Should we say that under no circumstances might power be exported, all the companies in Canada who export would have to increase their prices to the Canadian consumers. That is the attitude the government takes. It is the attitude that has been taken by every government of Canada during the last eighteen years. It is the attitude followed right through by the Ontario government, and it is the attitude taken by the Quebec government in allowing power under its leases to be exported.

Mr. MEIGHEN: Does the minister say the government takes the attitude that more power than is now under license for export should be licensed for the purpose of serving new industries or new municipal uses in the United States?

Mr. GRAHAM: That is just what is being done now, except the creation of new power.

Mr. MEIGHEN: I am asking, is the government in favour of that policy?

Mr. GRAHAM: I am stating the government's policy. I am pointing out that my hon. friend's supposed policy the other night is not practicable; is not followed by his own friends in any province; is not followed by any government. In the production of power business demands that under certain circumstances, such as those existing in connection with the Hydro-Electric projects, an export of power should be allowed.

Mr. MANION: Temporarily.

Mr. GRAHAM: I will come to that. I want to nail it down fast and tight that the policy of any government looking to the welfare of the Dominion of Canada and to the development of power in Canada should not be a prohibition of the export of power under all circumstances to the United States; for the result would be at one fell swoop to bring about increased rates on the part of the hydro-electric power projects in Ontario as well as on the part of other companies.

[Mr. Graham.]

Let me go a little further. My hon. friend (Mr. Manion) suggests that the export should be temporary; I am coming to that. The legislation of the parliament of Canada has been sane along these lines. The regulations adopted in 1907-08 by the Laurier administration were sane. They restricted by regulation under the statute the period of time for which licenses might be granted, limiting it at twelve months. That was wise. The hon. gentleman may say that that might permit the establishing of vested rights. What vested right could be established in twelve months? None, and none has been so established. This regulation restricting the export of power to a period of twelve months is notice to the United States users that this supply of power to them is not permanent; that it can be taken away from them at the end of any twelve-months period. It is notice to every person concerned that this is only temporary. I want to put it again, as strongly as I can, that the policy of this government in power is the policy that has been adopted in Canada and successfully followed during the last eighteen years. It is the policy that has been practised by the Hydro-Electric Commission of Ontario and by the companies, and it is a policy under which every interest is safeguarded so far as the Canadian user is concerned.

Mr. MEIGHEN: There are two or three matters under review, if we may take the speech of the Minister of Railways as a sample. The question of the export of power and the proper policy to pursue is one subject; the question of the leases to develop power and the history of those leases is another; the question of the conduct of the government in relation to this particular Carillon application is wholly another. It was the latter that the hon. member for West York brought up. As to the first, I do not propose to discuss it at any length now. Suffice it to say that if the government's policy is now matured and ready for presentation to the Canadian public on the whole subject matter of the export of power, it is strange that we have had such a long silence. It is strange that we should have such vague terms as those to which the Minister of Railways has just given expression. It is strange that he should postpone indefinitely an answer to my direct question; it is strange that when the delegation was here, the answer given, according to the Prime Minister on Thursday last, was merely that the government was as mindful of Canadian interests as any member of the House of Commons and would look after Canadian interests in the matter of power

policy. One would have thought that the government's policy would have been stated direct when this delegation was before the administration asking for a fixed-term license for the export of large quantities of power. One would have thought that the minister would have said to me Yes or No when I asked him wheather the government was prepared, or was not prepared, to grant licenses for export of power for the purposes of new industrial enterprise or new municipal uses in the United States. This and this alone is involved in the question of the export of power. No member of this House can say Yes or No, judging from the minister's speech, by way of answer to that question.

As to the history of power leases, I do not think there is anything in dispute. I do not know why it is necessary to confuse the issue with that question. Leases have been granted dating back for many years for power development in this country. The last granted in respect to this site was in 1921. So far as I have ever heard there is no criticism of the granting of the right to develop. If there was criticism, it will suffice to answer it by saying that the government renewed the lease so granted. So this may be brushed aside for the moment, and the question is, what has been the conduct of this government in relation to this Carillon power development? It is not a mere incidental or whispered subject. It is not a mere minor incident of government policy. Everybody knows it has been before the government of Canada for months in a most prominent form. It has been the subject of importunities of delegations. It has been the subject of newspaper discussion. It has been the subject of acute controversy. It has been the subject of propaganda of a most skilful and pronounced type. In this state of affairs the government was asked on Thursday last where it stood on the matter, and specifically was asked whether an application had not been made to the government for the export of a large quantity of power from a proposed Carillon development. Now it is with the answer of the government to that question that I am chiefly concerned. The answer amazed me at the moment. I could not understand the government being in the position it claimed to be in—that the delegation should come, that all the controversy over the alleged application had gone on, and in the face of all these things that there had really been no application at all. The hon. member for West York (Sir Henry Drayton) was most explicit in his questioning. I read what he said, at the bottom of page 3225 of Hansard:

Does the government seriously want the country to understand, after what I think everybody knows has been going on not only for weeks, but for months, that it does not know how much power is sought to be exported? What does the government say? That it does not know how much power the promoters of this new exploitation think they should have the right to export? If the government wants to say that it does not know, I shall have to take that answer, but it will surprise many people.

Mr. Mackenzie King: If I may speak for the government, I will say that the government does not know.

Mr. MACKENZIE KING: Hear, hear.

Mr. MEIGHEN: And he now says, "hear, hear." He continued:

There has been before the government no application that I am aware of, and the government has nothing before it to consider.

Mr. MACKENZIE KING: Hear, hear.

Mr. MEIGHEN:

The hon. member is simply wasting the time of the committee in asking these questions.

Mr. MACKENZIE KING: Hear, hear.

Mr. MEIGHEN:

Even if there had been an application, is there anything in that to which the hon. member could take exception?

Mr. MACKENZIE KING: Hear, hear.

Mr. MEIGHEN: I always wait for the "hear, hear":

Sir Henry Drayton: I would want to look at it before I would know. The right hon. member forgets all his pre-election discussion—

Mr. Mackenzie King: What does my hon. friend want to discuss? An imaginary application?

An imaginary application! I waited for the "hear, hear" in vain that time.

Some hon. MEMBERS: Hear, hear.

Mr. MEIGHEN: I can draw out any confirmation however absurd:

Mr. Mackenzie King: What does my hon. friend want to discuss? An imaginary application?

Sir Henry Drayton:—of the whole of this question as to the export of power, and I am going to tell my right hon. friend that I think I would be unkind to him to take altogether seriously the idea that nothing has been said to him about the export of this power.

Mr. Mackenzie King: I simply say to my hon. friend that I will not permit any insinuation of the character he is making at the present time. No application whatever, that I am aware of, has been made to the government with respect to the export of power.

That is the second assertion.

Sir Henry Drayton: I was not talking about that technical word "application" at the moment. I wanted to know whether the Prime Minister had not been approached in connection with this very question of the export of Carillon powers.

Mr. Mackenzie King: My hon. friend knows that I presided at the gathering at which a deputation stressed from their point of view the advantage it would be to many municipalities to permit a certain amount of power being exported. And this is all public knowledge. Surely municipalities have a right to present their own

point of view to the government. But I repeat that the government has received no application and has had nothing before it to consider.

Mr. MACKENZIE KING: Hear, hear.

Mr. MEIGHEN: It is amazing that "hear, hear" should come to this—"the government has received no application and has had nothing before it to consider." He does not even put in the proviso that is in the other two statements; he makes an absolute assertion.

Mr. MACKENZIE KING: My hon. friend will do me the justice of assuming that I was making that statement in the light of the other ones which were made before everyone present.

Mr. MEIGHEN: I am ready, so far as the Prime Minister is concerned, to insert the proviso there:

But I repeat that the government has received no application and has had nothing before it to consider—

I will consider the proviso inserted there.

The reply given to the deputation was that the government was just as conscious as any member of this House—

I think there was a slip there.

Mr. MACKENZIE KING: I think my hon. friend is right there. I think I used the expression "conscious as any member of parliament."

Mr. MEIGHEN: It does not make much difference:

The government was just as conscious as any member of this House of the importance of considering the future needs of Canada and protecting the requirements of the Dominion against any possible encroachment from any direction.

Mr. MACKENZIE KING: Hear, hear.

Mr. MEIGHEN: If that was the answer and the government knew what its policy was, it was a very, very strange and unsatisfactory answer to give the delegation. He continued:

The government is just as sensible and as watchful of the interests of the provinces and of all classes as any deputation that can come before it, and it has so stated.

This, of course, is the statement of the Prime Minister to the House, not what he said to the delegation:

What other position does my hon. friend wish the government to take in the matter?

Then the Prime Minister kept on repeatedly asserting it was all right for delegations to come, which, of course, nobody had ever disputed.

Now when these assertions were made by the Prime Minister, there were seated on the government benches the Minister of Trade and Commerce (Mr. Low), who has to do with questions of export of power, and who must give the licenses; the Minister of Railways and Canals (Mr. Graham); and several other members of the government. While the Prime Minister was repeatedly asserting that no application even had reached the government, the Minister of Railways was aware that in his department there was an application and that the fact of that application had been brought to his own personal attention. Now, have I overstated the truth?

Mr. GRAHAM: I would not think so except that the application is wrong.

Mr. MEIGHEN: I have not applied it yet, but I think every other hon. member of this House has applied it. While the Prime Minister was declaring in all these assertions that there was no application that had reached the government, that it was purely imaginary, the Minister of Railways, who knew of the application, who had personal knowledge of it, sat silent in his seat and did not correct the Prime Minister; and this whole country got the idea, and this whole country could not avoid getting the impression—and not only the impression, but it was asserted to the country positively—that this matter had not even got to the stage of an application. But for the fact that, before that vote was allowed to pass, so far as we could we insisted upon the papers being brought down departmentally, the country would not know yet there had even been an application for the export of power from Carillon falls. It comes to light through the press yesterday, and even as yet only one of us has had time to read the return, and he has only partially got through it.

Now the fact is that an application as astounding in its audacity as any ever presented has been before the government for months, lying in the government files, and lying there without repudiation, without one negative word going to those who are behind the application. Not only so, but the application comes from a firm of which a member of the government is a partner himself. I do not think that member of the government was in this House when this rather amazing interlude took place on Thursday last.

Mr. GRAHAM: I think it would be fair to say, Mr. Chairman, that the hon. gentleman if I remember the date correctly, was not a member of the government at the time the application was made.

Mr. MEIGHEN: That may be so. I think from memory the hon. member for Ottawa (Mr. McGiverin) came into the government of the day on the 5th of November last. Perhaps his activity in connection with this application accounts for his ascension in public life. At all events it was coincident therewith. But the fact is that one member of the firm which promoted the whole scheme is a member of parliament who a few days afterwards became a member of the government itself, and whose stenographer is secretary of the company which proposes these things to the people of Canada. The other member of the firm is a senator appointed by this administration and now sitting in the upper house. Now, does the government really think this is treating the people of Canada as they deserve to be treated? Does not the Minister of Railways to-day think it was his duty to have corrected the Prime Minister when those statements were made on Thursday last?

Mr. GRAHAM: My right hon. friend and the House have heard the Prime Minister's statement. I say that this government is composed of ministers in whom the Prime Minister has confidence, and they do their own jobs. When they want the advice of the government on something they take it to council; but in other affairs that are properly departmental they act on their own initiative.

Mr. MEIGHEN: Perhaps other hon. members can get the connection between the answer and the question—I cannot.

Mr. GRAHAM: I am not responsible for the question, I am only responsible for the answer.

Mr. MEIGHEN: I asked the Minister of Railways why—seeing that he was sitting in his seat when the Prime Minister was assuring the House there was no application—he did not correct the Prime Minister and assert there was an application which he had never considered.

Mr. CANNON: The Prime Minister said there was no application to the government.

Mr. MEIGHEN: Not to the government?

Mr. CANNON: Certainly not.

Mr. MEIGHEN: An application made to a minister, as a member of the government, is not made to the government?

Mr. CANNON: Certainly not.

Mr. MEIGHEN: Why, every return brought down in response to a motion for correspondence between any person and the department, or between a minister and any other party, is brought down as a return from the government.

Mr. MACKENZIE KING: My right hon. friend will probably allow me to remind him of the remark made just a moment ago by his colleague when he said that when a matter came before the government for consideration it was brought before them by a minister, and he was discussing something that was not before the government for consideration. That was the whole point I had in mind when I spoke for the government in that regard.

Mr. MEIGHEN: By that is meant the Governor in Council. But there is not a member of this House who did not understand that those men who want this right to export power had never made application for it at all—not a member of this House who did not so understand it. Now I am not going to question the veracity of ministers, inferentially or otherwise, but I do question their frankness; and I say it is a very stange inattention to duty on their part that a matter of this paramount consequence should be allowed to hang between heaven and earth for months, with a great newspaper controversy raging about it, with great public interest centred upon it, and never the applicants advised what the government's policy was, and never the public advised what the attitude of the government was toward the application. This is certainly a remarkable way for the government to attend to its work.

Mr. MACKENZIE KING: I ask my right hon. friend, does he not think the government is entitled to see how public opinion views particular questions?—that in matters of great importance of this kind it is wholly in the public interest to allow plenty of opportunity for controversy before the government makes a decision?

Mr. BOYS: "Wait and see."

Mr. MEIGHEN: The explanation of the Prime Minister is that they were treating the whole matter as a feeler, and their concern about the rights of Canada would depend upon the volume of complaint raised against the proposal. It would appear to me that the merits of the application should have been dealt with and disposed of in a day. The record should have been cleared and all concerned with such an application should have been advised right on the spot that no such thing would be considered or entertained on the part of this country or by any government of this country. Now, this is the question that is before this House. This follows upon what was disclosed here just a few

days ago in regard to a return which was manifestly, obviously, and shockingly false—although we are past that now—a return for the character of which there was no excuse in the world: I refer to the return produced by the Minister of the Interior in relation to Dr. Hume's report as to the oil question in the counties of Lambton and Kent. This government should take warning, I think, by these two incidents and see to it that the returns brought to the House and the answers given here are in full and frank accordance with the facts, and that great questions of public policy are not left to be dallied between opposing parties and the House led to believe—as to where the administration stands—led to believe by newspaper utterances and reports of many papers, that the government stands just where it now declares it does not stand. All this information as to the government's attitude was to be found in the newspapers, and I hold in my hand one newspaper in which the answer alleged to be given by the Prime Minister is reported, although the Prime Minister on Thursday last declared he did not give an answer to such an effect at all. Yet the fact that this answer had gone into circulation was an additional reason for an early statement of policy on the part of the administration. Now, on Thursday last when the report was read to the minister to the effect that in answer to the delegation he stated that he thought surplus power in Canada should be exported, his answer to that question was a direct negative. In order to show that I had ground for stating what I did I quote from L'Autorité, although I have seen the same statement in a great many other papers. The authority from which I quote has a long front page article extending over many columns, denouncing those who oppose the export of power and commending the Prime Minister's favourable attitude thereto, and his favourable attitude towards the application which was supported by the delegation in respect of which this news item appears.

Mr. MACKENZIE KING: Would my right hon. friend let me clear that matter up for him?

Mr. MEIGHEN: Perhaps I had better read this and then the Prime Minister can do so. I will have to translate it or try to do so.

An hon. MEMBER: Read it in French.

Mr. MEIGHEN: My French pronunciation is not very good. However, I will read the statement in French first and then try to translate it afterwards:

[Mr. Meighen.]

Puisse l'honorable Mackenzie King persister dans son attitude, lorsqu'il déclarait à une députation de 300 notables de la vallée de l'Outaouais que son gouvernement était favorable à l'exportation d'une partie du surplus de notre énergie électrique. A l'heure où le pays a besoin du revenu qu'il tirera de la taxe imposée sur cette exportation, où les ouvriers se plaignent du chômage, est-ce bien le temps de tarir de gaieté de cœur les sources du trésor et de priver des milliers de travailleurs du gagne-pain dans les travaux de Carillon?

Some hon. MEMBERS: Hear, hear.

Mr. MEIGHEN: That is very charitable on the part of hon. members indeed.

Some hon. MEMBERS: Go on.

Mr. MEIGHEN: This is how I translate the statement into English:

May the Hon. Mackenzie King persist in his attitude when he declared to the deputation of 300 notables of the Ottawa valley that his government was favourable to the exportation of a part of the surplus of our electric energy. At a time when the country is in need of revenue which it will draw from the tax imposed from this exportation, when the workers are complaining of unemployment—

This is important to a government supporter.

—is it indeed the time to withhold the gain to be got from our resources and to deprive millions of workers of their daily opportunity in the work of the Carillon?

This is merely by way of intimation of the source from which I, for one, received an intimation that the government gave a rather favourable reply to the delegation which waited on it, and this is only one of the newspaper reports to the same effect. Consequently I was quite justified in what I said with respect to this application. Furthermore, if a statement was made of the government's attitude towards the export of power, even in the very vague form stated by the Minister of Railways, it might at least have been conveyed in that form to the deputation.

Now I come to the question itself.

Mr. MACKENZIE KING: Perhaps my hon. friend will let me clear it up, as it would help to illustrate just how fair my right hon. friend is.

Mr. MEIGHEN: I think I have been remarkably fair in this matter.

Mr. MACKENZIE KING: My right hon. friend, in order to make his point, has been driven to discover a paper published in the French language some distance from Ottawa, and to read to us an extract therefrom. I think if my hon. friend had even desired to get the truth he would have taken a look at the Ottawa papers which are right at hand, in order to see how they reported that inter-

view at that time. If he had looked at the Ottawa Journal, which is his own organ in the city I think he would have got better information in regard to that meeting. I have in my hand the Ottawa Journal of May 5, which contains a report of the proceedings before the deputation. The report is headed:

Export by Carillon has consideration.
Premier King says proposal has wide bearing.

And this is the particular reference to my own remarks:

The Prime Minister reminded the delegation that the request they had come to make was not wholly of local or Ottawa Valley interest. It was an inter-provincial and international problem and there was keen opposition to the export of power.

There is not another word in the report which appeared in the Ottawa Journal, and the reporter of the Journal was present when that delegation made the application to the government. Then I have the report published in the Ottawa Citizen, which is headed:

Places interest of Canada first on power issue.
Premier King says this chief consideration in reaching decision on export question.
Deputation urges Carillon scheme.
Prime Minister says it is national problem. Cabinet to discuss it.

Then further on in the article I find the following:

Mr. Brown, mayor of Point Fortune, as a merchant, thought the development and export of power would help the country.

Return When Needed

The Prime Minister: "Do you think the Americans would object if we made strong reservations providing for the return of the power when Canada needs it?"
Mr. Brown did not think so. The Americans were willing to invest their money in return for the power.
The Prime Minister agreed Canada should sell anything she had a surplus of provided the future was not embarrassed thereby.

Those are my words. My hon. friend asked me a direct question, and I answered it in an honourable way. I told him I had not made a positive statement that Canada should export the surplus. I was perfectly aware of the words I had used, and if my right hon. friend had been the gentleman I always believed him to be he would have accepted my statement.

Mr. MEIGHEN: I distinctly accepted it, but gave this report as my reason for the question. This item appeared in many papers and should have been denied.

Mr. CHURCH: The industrial provinces of central Canada have long been impressed with the necessity for power conservation, but it has taken a long time for the towns and cities of the Ottawa valley and St. Lawrence river in Ontario to become convinced of the advantage of falling in line and getting behind hydro development. What the country wants is a national policy in regard to hydro power. I advocated a national policy for coal and I would also advocate a national policy for power and oil development as well.

I say that down in the municipalities in the Ottawa valley and along the shores of the Ottawa and St. Lawrence rivers, the people are largely responsible because they have not endeavoured until recently to carry out anything in the shape of a proper policy of assisting hydro progress and development.

The Ottawa valley has been practically isolated against the rest of the province in regard to hydro power. When this Carillon dam was started away back in 1911, the Hydro Electric was producing 1,000 horse power. To-day Ontario is using 700,000 horse-power, and there is an acute shortage not only in Toronto but all over the hydro systems except the Fort William development. The Ottawa district and the towns on the St. Lawrence river are suffering also from the scarcity of power, and the fact that they are undeveloped and stationary to-day is practically due to themselves and not the fault of the Hydro or provincial government of Ontario.

I may say the Hydro Electric in Ontario are very anxious to develop this Carillon power. I was on a deputation as president of the Hydro here ten years ago, with the hydro municipalities who came accompanied by Sir Adam Beck, J. W. Lyon of Guelph and others asking for the right to develop power in the Ottawa and St. Lawrence rivers. We wanted to find out what the intention of the government was with regard to development on the St. Lawrence and Ottawa rivers, but we got nowhere. Application has been made to this government for the right to develop power on these two rivers, but nothing has been done along that line. The Hydro Electric application to construct the Morrisburg dam, has been before the government, for some years now, and we have not had any reply from the government, with the result that the cities and towns on the St. Lawrence and the Ottawa are suffering from a scarcity of power.

Since this question has arisen there has been expended on power development in the other parts of the province of Ontario, $178,000,000. There has been more trouble getting something done on the Ottawa river than there has been in all the rest of the province. In the Niagara district $141,000,000 has been spent, although the water is taken from an international river. The Ottawa river runs wholly between two provinces of Canada, and no particular difficulties would arise in the development of this project. But the Hydro can

get nowhere for the people of eastern Ontario, to give them their due. The systems developed by the combination of municipalities which function through the Hydro Electric Commission of Ontario and on which $178,000,000 has been spent to develop power are as follows: Essex county, Thorold, Severn, Eugenia, Wasdells, Niagara, Muskoka, St. Lawrence, Rideau, Ottawa, central Ontario, and Trent and Nipissing. These systems of development are the ultimate financial base and foundation of this Hydro Electric Commission. In these cases the Hydro Commission has taken over the power of these systems, but the Ottawa valley has not taken over anything. The Hydro has only spent $26,000 in hydro electric development in what is listed as the Ottawa development.

The Trent system has involved an expenditure of $12,000,000. To give the midland counties relief the Seymour interests were purchased, and $870,000 has been expended on Ottawa's distribution system. The expenditure by the Hydro-Electric Commission, for the province of Ontario has amounted, all told, to $241,000,000, which includes $62,000,000 spent by municipalities on a distribution system.

A few parts of Ontario are suffering because of the failure of and mistake made by the government. One part that is suffering is the Ottawa valley; and one reason for that is that the Carillon rapids and the St. Lawrence and other powers are not developed. One mistake was also made in 1905, in not developing the water powers in New Ontario and electrifying the railways there. The great mistake of Sir James Whitney's life was when he prevented Sir Adam Beck, in 1905 after his great victory, from electrifying the Temiskaming and Northern Ontario Railway and utilizing it as a trunk power line to distribute power to the mines and for mining development in New Ontario and the Timiskaming district. It paralyzed the mining industry. Had that been done in 1905, Ontario to-day instead of having a gold production of only $40,000,000 would have a production of $350,000,000. If that policy had been carried out, instead of Ontario mines employing only 30,000 or 40,000, the number would be in the neighbourhood of 100,000. And the failure made in New Ontario in 1905 will be repeated in the Ottawa valley, unless the municipalities and the provinces get together.

I should like to see the question settled because I think it should be settled in a big way for the benefit of the people of Quebec and Ontario as well, and we should not wait until it is too late. The government of the province of Ontario has had an application in for this power for a long time, also an application for the power at Morrisburg, and they are unable to have those applications granted.

There is another province suffering for lack of power. Notwithstanding the fact that Ontario has spent $241,000,000 of money on this project and is generating now 700,000 horse-power, there is not one horse-power left to-day in Ontario. If you apply to the Hydro-Electric Commission to take care of your load and give you direct current, they will not give you a contract because there is no power left and no power available. That is shown in the last report brought down by the Minister of Mines, the annual report for 1925 of the Water Power and Reclamation service, page 23, where he shows the demands of the province of Ontario, and he goes on to refer to the utilization of well developed water power and says:

> The 3,227,414 horse-power at present installed in this country may be classified as follows:
>
> 2,411,701 horse-power in central stations for general distribution for all purposes.

This report refers to the total distribution of water-power in Canada, and there is a short paragraph dealing with the past, the future growth and the utilization of water-power in Ontario, chiefly eastern Ontario, and Quebec. It shows that the water-power development in Canada has grown from 975,000 horse-power in 1910 to 3,227,000 horse-power to-day; central station installation growing from 605,000 to 2,411,701 horse-power and pulp and paper installation from 191,000 to 498,000 horse-power. We have an answer right in the government's own report against the export of power. The Minister of Mines has had an expert hydraulic engineer report on this question and he says:

> There is every reason to believe that this rate of growth will not diminish. New uses for electric current of the greatest import in industrial processes and services are being constantly discovered. Canada's strategic advantage in the location of large reserves of water-power within transmission distance of her centres of population should attract special industries to these centres in increasing numbers. Population follows industry and at once an added market is created for power for domestic and municipal uses. All the modern tendencies in the utilization of cheap power indicate that the rate of growth of hydro-electric development in Canada will increase rather than lessen.
>
> Should the rate of installation since 1910 be maintained at its present rate there will be installed in 1925, 4,000,000 horse-power; in 1930, 5,000,000 horse-power; in 1935, 6,000,000 horse-power, and in 1940, 7,000,000 horse-power. These growth figures are considered conservative as the rate of growth since 1920 has been considerably in excess of the rate over the whole period from 1910. Available reserves are more than ample to take care of these future demands, as outlined, for a long time to come.
>
> The water-power now developed in Canada represents an investment of over $687,000,000.

The report goes on to give a table of the developed water-power in Canada, showing that Quebec has developed in turbine installation 1,116,000 horse power, and Ontario, 1,445,000 horse-power. The report proves conclusively that there will be a great demand for power in municipalities throughout Ontario, especially eastern Ontario, and Quebec during the next five, ten and fifteen years, and that it is a very foolish policy for the government to continue exporting power.

What is the history of the Niagara river power development? Water-power development started there in 1910, and at the present time the magnanimous and generous policy of export is helping to build up industrially the United States instead of Canada. The government would have us believe, when we look over the files and all the correspondence which has been tabled, that there has been no application although amongst these papers is one written lease, since expired, of power at the Carillon falls. The question of the development of power on the Ottawa river has been going on since 1905; it is nearly as old as the Georgian Bay canal topic itself. The proposed old lease grew out of a lease of this river issued to a company for the development of the Georgian Bay canal scheme and for navigation purposes. They tell us there is no application. They would have us believe that this Carillon project is like a round robin; —now nobody ever sees a round robin; they would have us believe that nobody has been approached about this particular question. This matter could be settled in a big way by each province getting a part of this power. No doubt they are good men who are making this application, and I do not blame private ownership for seeking to get these rights. But public ownership has been trying to get these rights since 1913 or 1914, and it has never been able to get anywhere on the matter. I believe in a national coal policy, a national oil policy and a national water power policy for the people of Canada. If Canada is to grow industrially, we must preserve our own water power. In the coal debate, I said that there was an insistent demand in the United States that Canada should use her own coal, wood and peat resources to provide heat for her people. The conservation commission of the United States has pointed out that in forty years that country will run out of coal. The New York Times has been calling on the government to bring Canada to book, calling her the "Lady of the Snows". They say that we have an abundance of coal and wood and peat and can take care of ourselves. Yet, we are exporting annually to the United States 158,000 horse-power, or the equivalent of 1,300,000 tons of coal, and the value of that power export in black coal is $8,000,000. This is taking place at a time when power is needed in Ontario, especially in the Ottawa valley and central Ontario, and when some of the larger municipalities are suffering from a scarcity of power. This is especially true in the district from which I come, where the government, through the Hydro-Electric Power Commission of Ontario, have been obliged to prepare plans to build a large steam reserve plant covering seven or eight acres at the foot of Yonge street Toronto, in order to take care of the power that will be required in that city during the next two years. The city of Toronto and the Hydro Commission are being forced to spend well up to $10,000,000 to provide in some small degree for some of the demands a steam reserve of 10,000 horsepower to increase our supply in that particular locality. I should like to find out something about this particular question.

The people on the St. Lawrence river and in the Ottawa valley are in the condition in which the people of the Niagara valley were ten to fifteen years ago. Prior to the installation of hydro-electric power in the Niagara district the district was stagnant and there was very little population there. The small towns had not anything like the population they have now. Port Colborne had a population of five hundred at that time, and now, fourteen years afterwards, it has a population of six or seven thousand. Similar figures in proportion might be given for St. Catharines, Welland, Thorold, Merritton and other cities and towns in the Niagara district which have been built up industrially by cheap light and power. There have, as a result of the hydro cheap power movement,—been located in that district chemical and industrial companies of all kinds and by-product industries of many kinds, running into many millions of dollars. Why have they been located there? Because of the cheap light and power which are available. Wherever cheap light and power are available on the one hand, you will soon find industries linked up. If you wish to get a bird's-eye view of this particular question in a concrete way—you should go to the Niagara district and see what it is like to-day. On the Canadian side of the river, except inland at St. Catharines, Welland, Niagara Falls, Thorold and Merritton, there are very few factories. There is a boulevard from Queenston Heights to Fort Erie and no industries located on it, while across the river on the American side from Lewiston to Buffalo are chains of factories. Why? Because of the magnanimous, generous

5 p.m.

policy of the people of this country in exporting power across the border to build up every little distance fine industries all the way from Lewiston, N.Y., to Niagara Falls, N.Y., Lockport and Buffalo. Last winter the mayor of Buffalo had the temerity to count the number of cars of coal that were being sent across the border into Canada. Sooner or later we will have to have a national policy for coal and for power, because to-day Canada is being pictured in the United States as another Lazarus—not picking up crumbs that fall from the rich man's table, but going along the American railways picking up coal. I do not advocate dumping the coal off the cars into the lake as the Americans dumped tea into Boston harbour on a certain historic occasion, but Canada wants a government that will work out a national policy for coal that will make the people of this country independent of the United States. I also advocate a national policy for oil and a national policy for water-power that will help the development of industrial Canada as well as the farming community.

For some time I have had on the order paper a series of questions dealing with the export of power, but as the government have not yet answered any of them perhaps I had better attempt to do so myself.

My first question is:

Will the government afford the House an opportunity to discuss the tax on the export of power? If so, when?

We desire to be afforded this opportunity. It came to-day. Then I ask:

Has any decision been given on the Carillon power project by the government, and has any application been received to date in this connection, and from whom?

Evidently from what we have been told to-day there is some application before the government or perhaps some "negotiations" would be the more appropriate word.

Has any protest been received from the government of Ontario protesting against the export of this power?

I can answer that with an emphatic, "Yes"; numerous protests have been made to this government by the provincial government and the Hydro Electric Commission of Ontario. The government of the province of Quebec has also objected to the export of power and is co-operating with the government of Ontario—in advocating the development of the Carillon power for Canadian industries, but so far the federal government has stood in the way. As a matter of fact the provincial governments own the surplus waters, subject to the rights of navigation, from which electric power is to be developed on the Ottawa river at Carillon, subject only to the rights of the Dominion government I say in regard to navigation. This question has not yet been decided by the Privy Council but these are some cases on it.

For instance, at Port Colborne the government of Canada takes only enough water for the canal between lake Erie and lake Ontario, leaving the balance of the waters of the Niagara river for the use of the government of the United States and the government of Ontario for power purposes. Similarly, the Ottawa river belongs to the provinces of Ontario and Quebec, subject always to the rights of navigation vested in the Dominion, and the bed of the Ottawa river and the banks and rapids belong to the provinces. My next question was:

Will the government secure the opinion of the Supreme Court of Canada as to the powers of this parliament and the government of the provinces on the whole question of the export of power, and also as to whether the export tax is ultra vires or not?

It has been held by eminent legal authorities that this export tax is ultra vires of the Dominion government, and in my speech on the budget debate on April 17th last I gave a dozen good and valid reasons why that is the case.

Now, a deputation from the hydro municipalities of Ontario protesting against the export tax was received with great courtesy by the government and they told the Minister of Railways that they did not object to the export of power if the licensee, the Americans, paid the tax. But, as the member for Parkdale (Mr. Spence) showed the other night, the hydro municipalities of Ontario and the provincial government are opposed to the export of power and the two who spoke gave only their own views and not those of the government of Ontario.

It seems to me it might be well for the government to get the opinion of the Justice department on this question. The Minister of Justice (Mr. Lapointe) is not in his seat, but I understand that his department has already expressed very grave doubts as to the jurisdiction of the federal government on the export matter and also the question of taxation and the whole constitutional question. The case should go to the Privy Council for a decision.

Will the Justice department be asked for such an opinion, or has one been given by the said department in the matter, and what is it?

As I say, I understand the Justice department has expressed very grave doubts regarding the position of the federal government in

the matter and where the jurisdiction of the province begins and ends to generate, develop and distribute power from interprovincial and international streams and the export of power and taxes based thereon.

Did the government recently promise a hydro deputation to secure such an opinion?

I am told they did.

Have any protests been received regarding the export tax? If so, from whom and on what grounds?

Yes, a deputation was here and protested against this tax and so have the government of Ontario and the Hydro Commission. Undoubtedly the export of power is an international question, for once a lease or license is granted, and power is exported under it, certain industries are developed on the strength of the continuation of that export, and various municipal activities, such as waterworks, street lighting, domestic lighting, rely on such power, and consequently it becomes impossible to discontinue its export, and if we refused to deliver any more power, at once friction would arise between this country and the United States, and we would have to resume the export of power that probably we needed ourselves. In my opinion this is a question of policy not only for the government of Canada but for the governments of the provinces as well and all should unite to work out a national policy. I am glad to see there is no politics in this question. The absence of politics in the hydro-electric movement is one reason why it has been such a big success. Both the governments of Quebec and Ontario are very strongly opposed to the export of hydro-electric power and—

Mr. ETHIER: My hon. friend states that the governments of Ontario and Quebec are opposed to the export of power. Is he not rather referring to the personal views which have been expressed by the premiers of the two provinces?

Mr. CHURCH: That may be. Of course, I do not pretend to have the same local knowledge of Quebec policy as no doubt my learned and respected friend has. I may say that I sympathize with the municipalities in his riding along both sides of the Ottawa river, because that river has been isolated from the rest of the province so far as power development goes and the development and distribution of cheap light and power is concerned, and I do not blame him for trying to get an early solution of this question. If public ownership will not do it then private ownership should have a chance under government regulation.

What about electricity for the farmers of Ontario? It was always intended that cheap light and power should be available not only to the artisan and the mechanic in the cities and towns, but to the farmers as well. I do not see many Progressives from Ontario in the House to-day, but this matter of cheap light and power is one of the most important questions before the agricultural industry of Ontario and Canada. The Ontario Commission have been repeatedly asked by the farming community for assistance in this respect and to supply the farms with power and where is the power to come from if not from the St. Lawrence and Ottawa rivers? When the Hydro-Electric movement was started the Ontario Power Commission entered into a contract with the Ontario Power Company for 60,000 horse-power. The Ontario Power Company on the Canadian side were the generating and developing company and the Niagara and Lockport Company were the distributing company for export purposes on the American side, for the benefit of American municipalities. The present contract for 60,000 horse-power at $12.35 has twenty-four and a half years to run with two twenty-year renewals since cancelled. That power can be very readily utilized in Ontario. It is now worth $24 to $28 per horse-power and is exported at a loss of $12.35 per horse-power. Now, the government asked the Hydro-Electric Commission for certain information when they made application in respect to the Ottawa and St. Lawrence power rights, and the same should be done in this case. Some of the questions to which I think the committee should have an answer are the following: Who are conducting these negotiations on both sides? Who are the applicants? What is to be done with the developed power? How is it to be distributed—how much for Canada, how much for Ontario and for Quebec? How much will be exported, under what terms, and to whom? How is the project to be financed? Where will the money be spent? What municipalities on both sides of the river will benefit by it? Will the company be a Canadian or an American company? Will there be an interlocking directorate? What will the contracts be? What will be the nature of the licenses? Will the leases be restricted or unrestricted? What public control will there be over these companies? Will there be control over rates as well? Are these leases being sought through an agent company for a gigantic American power trust or for an American super power scheme?

The magnificent success of the Hydro-Electric system under government ownership is

shown by the fact that every dollar of the $160,000,000 invested by the Hydro which now serves four-fifths of the province is earning interest and sinking fund. Hydro investment saved 2,200,000 shareholders over $75,000,000 in reduced coal, light and power bills. Hydro investment saved Ontario over $100,000,000 on coal prices, which would have gone to $30 a ton in war time but for the Hydro investment. These are some of the reasons why the Ottawa valley and the towns along the St. Lawrence should see that they get into this big movement. It is a protectionist movement, because it supplies the protectionist principle of public ownership. If any gentleman doubts that public ownership is a protectionist principle I reply, as I did last year, that public ownership is protectionist in the true sense of utilizing the public resources of the country for the benefit of the people of the country. Protection as applied by the Hydro Conservatives of Ontario has fought the battle of the masses as against the classes, of the people against their oppressors; I mean what the Hydro Conservatives have done for the sections of Ontario that get their power from public ownership. The Ontario government would have done the same thing had they been given a chance in respect to towns in the Ottawa valley and on the St. Lawrence.

Reference has been made to the demand in Ontario for this power. The Hydro-Electric Commission of Ontario started in 1910 with only 1,000 horse-power; to-day they are using 700,000 horse-power and are still asking for more. Since the inauguration of the Hydro there have been purchased on behalf of the co-operating municipalities no less than 22 water-powers, 30 hydraulic generating plants and over 60 electrical distribution systems. At the present time, the commission operates electrical power undertakings which, when fully developed, will have an aggregate capacity of 1,000,000 horse-power. Notwithstanding these provisions, the hydro-electric systems administered by the commission, including the Niagara system, are practically all face to face with an oncoming power shortage. It is true that this is not the case, as yet, with the Nipigon development at the head of the Great Lakes, but even here it will not be long before the available power will be requisitioned. It should be appreciated that this phenomenal growth in demand for electrical energy for power and light has continued even during a period when industry has not been expanding as it was prior to the Great war. The demand for hydro-electric energy, in the Niagara district especially, has been increasing at an extraordinary rate.

[Mr. Church.]

This has been brought about chiefly by increased demands for general domestic and commercial purposes. In the last two or three years a new impetus was given to the building trades, entailing a substantial addition to the lighting load, both for premises and street purposes. The domestic consumer has been discovering that electrical appliances, such as electric stoves, washing-machines, irons and other devices, can be operated at relatively low cost, thereby greatly reducing the burden of general housekeeping. Such appliances are being widely adopted. In the city of London, for example, eleven years ago the average monthly consumption of electricity per household was less than 20 kilowatt-hours; to-day it is 89 kilowatt-hours, thus showing an increase in individual consumption of nearly 350 per cent. The point of saturation has not yet been reached. There are thousands of homes planning to instal additional domestic electric appliances which will greatly increase the total demand for electrical energy. In a word, if, during the period when general industrial activity has scarcely reached normal, there has been such a demand for electrical energy for general purposes as to absorb the available supply, where is the electrical energy to come from that will be needed to meet the large demands of industry in the period of expansion which so many far-sighted citizens, both in the Dominion of Canada and the United States, believe must come in the very near future in order to supply the world demand for manufactured commodities?

The export tax on electric power is a direct tax on Ontario's great municipal ownership enterprise. The Provincial Hydro Commission is bound by long term contracts which it did not execute, but which were obligations assumed when the private corporations generating electric power were taken over by the Ontario commission. These contracts with American consumers cannot easily be cancelled. If the export duty could be passed on to the consumer all would be well. But it is impossible to cancel these contracts. That electric power should not be exported is justifiable but the action of the Dominion government is not designed to preserve power for Canadian factories, its purpose is to augment the federal revenue. The net effect of the export duty is to impose directly an unwarranted burden on local consumers in Canada. Instead of equalizing the cost of power by taxing the American exporter who is now getting power generated in Ontario away below less than cost, it increases the difference between the price paid by the Toronto manufacturer and his factory

competitor in New York state, who is now getting power generated in Ontario away below less than cost. It increases the difference between the price paid by the Toronto manufacturer and his factory competitor in New York state. Two hundred thousand dollars of the four hundred thousand dollars which the government will net from this tax will be collected, not from the foreign consumer but from the municipalities in central and western Ontario. I contend that the tax is unjust, inequitable and illegal, for reasons which have been given in the Hansard debates. Some of these reasons are as follows:

(1) The export tax on power based on an order in Council and on R.S.C., 16 Edward VII c. 16, which seeks to give power to impose export duty not to exceed 10 cents per annum per horse-power on power exported, is intra vires of the Parliament of Canada or not, inasmuch as the power taxed is generated from works or undertakings which are wholly within the province, and have not as yet been declared to be works or undertakings for the general advantage of Canada;

(2) That the said tax is retroactive and taxes contracts made which are wholly within the province, and that the said tax is indirect and an infringement of property and civil rights in the province and is outside the scope of subjects by section 91 of the British North America Act exclusively assigned to a federal authority;

(3) And that the international waters used to generate the direct current exported is from the surplus waters after the rights of navigation under federal control have been satisfied, and is of the surplus waters from the bed of the river, and the banks and rapids of the Niagara river wholly belonging to the province;

(4) And that such a tax could only be imposed by the province under section 92; and further that such a tax is to be levied on the export licensee who is wholly within the province, and whose long term contracts cannot be made the subject of retroactive federal taxation on many grounds;

(5) And that the said tax is ultra vires on the aforesaid and other grounds, and on the ground that the indirect method of assuring the said tax from the municipalities is an invasion of provincial and municipal rights under section 92 and is not specific against the exporter who uses and gets the benefit of the exported direct current;

(6) What machinery is, or has been, provided to collect said tax and from whom will it be collected and when, and how will, in default in payment, a collection be made and by whom?

(7) Will the minister consult with the Justice department as to whether such an indirect tax is legal, and if it can be collected from the municipalities using hydro power on a long term contract to which they have no privity, and for which they receive no consideration?

(8) Can said tax be collected without the express consent of the parliament of Canada as is proposed here based only on R.S.C. 16 Edward VII c. 16 above, and without further legislation enactment?

I contend that the people of the province of Ontario, through the Hydro Electric, should be given the right to develop power at the Morrisburg dam. Their application has been in for some time, the leases have been granted by the province, and the reply now from the Dominion is that the application cannot be granted, the reason being given that they have to wait until the St. Lawrence waterway question is settled between the two countries. This is no valid reason for delay.

They have also had for years an application in for power development on the Ottawa river, and it is the fault of the municipalities that that has not been granted. The farmers of Ontario are entitled to get electric power on their farms along the lines on which the late Sir James Whitney, the dead dean of the Hydro, undertook to give it to them, and it is due to the inactivity of the Progressive group in this House and the Progressives in Ontario and the anti-Hydro Drury government, that the farmers of Ontario have not power to-day from the Morrisburg plant and from the Ottawa river, and a supply for the farms of the province. Cheap light and power should be given to the farmers, just the same as to the city man. It is true that the major proportion of the cost of the Hydro for capital and maintenance was financed by Toronto, Galt, Kitchener, Guelph and other towns; 60 per cent of the original Hydro in Ontario and Chippewa was paid for by the city of Toronto, and also the fixed charges and maintenance charges on the various Hydro by-laws in the same proportion. The original pioneer Hydro municipalities bore the heat of the day and made Hydro power possible and the Conservative party deserve the credit.

There is no greater authority on the conservation of power and on electrical energy than the late President Roosevelt, and I should like to quote from an address he made in the city of New York a few years ago, because he outlines there a policy that any Progressive government, whether Dominion or provincial, in this country, should undertake. In view of the wastage of our resources in timber and oil and coal and water-power in this country, President Roosevelt's words seem at present prophetic. He says:

The people of our country are threatened by a monopoly more powerful than has been ever seen, as it affects very closely their domestic and industrial life. Our next generation will witness a shortage of those natural resources, petroleum and gas. The price of coal will be such that hydraulic power turned into electrical energy will, owing to its cost, become the prevailing factor for transport, for manufacturers, for lighting and heating our towns. Our hydraulic power alone, entirely and judiciously employed, would be adequate for the present needs of transport, industries, municipalities and private individuals. The major portion of these powers is not developed and remains the national property. It would be madness to part, without conditions, with one of our greatest resources. If we become guilty of this crime, our children will be bound to pay an annual royalty on

a capitalization fixed at the highest price that the trade will stand for. They will see themselves struggling with powerful sweaters entrenched behind the doctrine of discharged rights strengthened by all means of protection that money can buy and the cunning of corporations defended by legal men. These ogres of finance will have succeeded long before then to monopolize those resources so as to me able to dictate to the people the management of their affairs and their way of existence. Public opinion will be their least worry.

I say these words of President Roosevelt's seem prophetic to-day when we consider the waste that is taking place in our resources of coal and oil and water-power in Canada.

The government say that there is no written application, although leases may have been prepared. It is a well known fact in Wall street to-day, in fact all the large banks in New York and Canada know that Canada has become the happy hunting ground, and has been for many years past, for American millionaires, who are trying to seize and control our forest wealth, our timber wealth, our resources in water, water-powers, and the products of the sea, the soil, the forest and the mine in this country. A great super-power scheme is before the American people to-day, all of which is set out in the report of the American Deep Waterways Commission, and which starts from the 49th parallel, near Washington, D.C., running up to the New England seaboard, up to the state of Maine, and then on to Quebec and Ontario. Now it is hoped to get another super-power scheme known as the Mellon Harriman-Dupont scheme. The Americans hope to get from the various governments, provincial and Dominion, in this country a million or two of the horse-power which this country has or will develop. I would like to ask, is this application also linked up with any American enterprise like that or not? Here are a few details of it as rumored:

(1) Rearrangement of capital and securities of the electric power companies whose names follow, comprises the first leg of a super-power merger that will extend from Niagara Falls, perhaps to San Francisco, and its component heads will endeavour to bleed Canada of several million horse-power of electric energy to feed the leviathan:

Niagara Falls, N.Y., Power Company.

Canadian Niagara Power Company, Niagara Falls, Ontario.

Niagara, Lockport & Ontario Power Company.

Buffalo General Electric Company.

To make this giant caterpillar function properly, it is required that some 4,000,000 h.p. of Canadian origin be tapped, not only because that much added energy from the Ottawa and St. Lawrence sources is needed, but also if the Mellon-Harriman-Dupont interests who are planting the chain of fortresses now can get a foothold on the Ottawa, and are able to export power to United States, the Ontario Hydro Electric Power Commission will be blanketed and confined to the area in which it now gives service. The Northern Ontario pulp and mining areas will be isolated from the commission.

The companies named are preparing for the merger which, when consummated, will form the first unit of the super-power merger. Buffalo General Electric Company, which serves light and power to Buffalo area at double Hydro rates, is getting ready to expand its capital to give one new share for each five now held by shareholders.

These are, it is said, some of the interests behind the Carillon project. Further:

(2) The Harriman interests will be standing ready to finance the development of that generation of power estimated at 400,000 h.p. If the Carillon lease is given out, and if satisfactory terms of power export with the Dominion government can be stabilized, then the Mellon-Harriman-Dupont group can look forward to tapping Canada to this extent:

400,000 h.p. from Carillon rapid to be exported to United States to feed the super merger.

1,000,000 h.p. from the international area of upper St. Lawrence, to be also exported.

2,000,000 h.p. in Quebec powers to be picked up and harnessed for export to the United States.

If the Canadian end of the coup goes through, and the Americans become entrenched on the Ottawa, they will turn a valve that will throw millions of h.p. of Canadian energy across the line, following our pulp wood, nickel, copper and other raw materials. Of the income from power sales, 7 per cent is derived from the power sale, and 93 per cent is contained in the value of what the power produces. So in all export of power, Canada gets 7 and the other fellow gets 93.

The super-power merger indicated does not immediately and directly threaten the Ontario Hydro Electric Power Commission. But, if United States interests dig themselves in on the Otatwa river banks, they will block the route of Hydro from extension into the northern Ontario mining, pulp and settlement areas.

Is this what is to happen?

Mr. ETHIER: I did not intend to take part in this debate, but being a representative of the Ottawa valley district, which is especially interested in this matter, and in view of the importance of this question of the export of electric power to the United States, I think it is my duty to express my views on this question and to bring before the House some of the representations which have already been made in regard to this matter.

Two hours of this debate this afternoon have been taken up by the ex-Minister of Finance (Sir Henry Drayton) and the right hon. the ex-Prime Minister (Mr. Meighen) in finding fault with the government by insinuation and innuendo because the firm of McGiverin, Haydon and Ebbs had transmitted for their clients the Carillon Industrial Corporation, Limited, the draft of a lease in regard to this matter. That is the only objection which has been made in the two hours of discussion that has taken place this afternoon. We know now after listening to hon. gentlemen opposite and to the government

that the Carillon Power Company is in the same position it was in in 1911 according to the lease, and in the same position they were put in by the late government on the 1st of December, 1921, when on the eve of the election a lease was granted to the same company by the Minister of Railways of that day, Mr. Stewart. That is all we know now.

I do not think any valid reasons have been given by hon. gentlemen opposite against the export of power at Carillon. The question before the House is this: Shall the government permit the export of our electric power to the United States, and shall licenses of long term be issued under special circumstances for that purpose? That is the question before the House. It is not a question of whether there was a draft in the Department of Railways and Canals asking for such and such a thing. It is not a question of whether there is or is not a draft contract before the Department of Railways and Canals asking for certain concessions. It is a question of whether the government intends to grant a license to the National Hydro Electric Company of Carillon permitting them to export power.

Before considering the matter in some detail I should like to refer to the deputation that waited on the government and to which allusion was made this afternoon. The deputation consisted of delegates from the Ottawa valley, and I had the honour of presenting them to the government. They urged the administration to grant permission to export power from the proposed development at Carillon. A long discussion took place, and the answer given was as stated last week by the Prime Minister and repeated by him to-day. The Prime Minister has correctly repeated the answer which he gave and his statement is absolutely correct. The right hon. gentleman informed the deputation that the future of Canada would be the first consideration in connection with the question of permitting the exportation of electric energy to the United States. That is the answer we received from the Prime Minister as representing the government. The reports given of the Prime Minister's statement as given in the Ottawa Citizen and Journal were also correct.

Now, let us come to a consideration of the Carillon power question. Yesterday a voluminous report was tabled by the Minister of Railways. I had occasion to examine it very briefly although my hon. friend the ex-Minister of Finance (Sir Henry Drayton) may think I retained it too long. I only got it at ten o'clock last night and it was given back to the Minister of Trade and Commerce (Mr. Low) this morning. It is not a very important matter however, but I deemed it necessary to make this explanation. In 1908 a lease of the Carillon power was granted to Mr. Crawford Ross of Ottawa covering certain lands and the surplus of water of the Ottawa river not required for navigation, the object being to develop electric power for lighting and industrial purposes under conditions that have been explained this afternoon. The lease was for a term of twenty-one years, renewable at the expiration of that term for a further period of twenty-one years. Mr. Ross was required to develop 250 horse-power and in the case of the first term was to pay $100 a year on the lands and $2 per horse-power a year for the power. For some reason unknown to us Mr. Ross transferred his rights and privileges to the National Hydro Electric Company incorporated in 1910. The ex-Minister of Finance has asked who is behind this company. I may say to him it is not the firm of McGiverin and Haydon.

Sir HENRY DRAYTON: Is my hon. friend really serious in his statement. Then who is behind the Carillon project?

Mr. ETHIER: The company behind the Carillon scheme is the National Hydro Electric Company, with a capital of $52,000,000 subscribed for the purpose of developing 400,000 horse-power of electric energy.

Mr. MEIGHEN: Who are the leading men in the company?

Mr. ETHIER: The president is Mr. Robert of Montreal and Hon. Mr. Miles Legislative Councillor of Quebec, is one of the directors. Canadians and Americans are furnishing the capital.

Mr. MEIGHEN: My hon. friend has missed my point. The Carillon Power Company, the applicants, are a corporation and therefore must have directors. I am asking who the directors are of the Carillon Power Company?

Mr. ETHIER: I saw in the papers on the file that an application was sent in to the department by the firm of McGiverin and Haydon, as representing the Carillon Industrial Company. I was surprised to see that because it is the National Hydro Electric Company to whom the lease was transferred by Mr. Ross. The same lease was renewed by the late government on the recommendation of Hon. Mr. Stewart. former Minister of Railways and Canals, in December 1921.

Mr. MACLEAN (York): I know my hon. friend is not to blame but why should the word "national" be used for a power development of this kind when it is not a national development? The National railway is a public proposition, and is very properly so called; but more and more the word "national" is being applied to private corporations engaged in developments of this kind. I notice another thing. In the Wall Street Journal, and other sections of the press, private corporations of this nature are called "public utilities". To merit such a term an enterprise ought to partake of the character of the National railway or the Hydro Electric in Ontario.

Mr. ETHIER: I cannot give my hon. friend any reason for the adoption of this name. All I know is that the lease in question was granted to the National Hydro-Electric Company and that is the name of the organization identified with this enterprise.

Sir HENRY DRAYTON: Can my hon. friend give me the the names of the directors of the Carillon Power Company?

Mr. ETHIER: No. I have not got that information. To resume with the history of the National Hydro-Electric Company. This lease was renewed in December, 1921, by the late government. It was renewable to January 1, 1942, and then a further renewal to December 31, 2005. These renewals were made in the ordinary way by the then Minister of Railways in the previous government.

Sir HENRY DRAYTON: Will my hon. friend be kind enough to produce that lease if it is on the file?

Mr. ETHIER: It is the second lease on the file. I found it when I went over the file last night.

Mr. GRAHAM: The lease of 1921 is on the file.

Sir HENRY DRAYTON: I cannot speak definitely as to that.

Mr. ETHIER: According to the endorsement on the lease it was renewed in December 1921 until 1942, and there was a further renewal until December, 2005. That lease is on the file. I saw it last night.

Mr. GRAHAM: I have been accused of not airing this matter and henceforward I propose to put everybody right.

Sir HENRY DRAYTON: You will never do it unless you make a new start.

[Mr. Ethier.]

Mr. GRAHAM: Under certain conditions the lease was renewable. When the conditions are not performed a renewal can be refused. At the present time the Department of Railways has not given the lease renewal although the minister has power by order in council to grant such renewal.

Mr. ETHIER: The question of the export which is the real issue, and which has been a subject of controversy in the press of Canada, has been strongly to the fore during the last few weeks. Since the question of Carillon power has been brought before the House all kinds of statements have been made with reference to this matter. Those who have made some of these statements are actuated by an honest desire to state the truth, but the majority are actuated by a desire to befog the issue and to prevent the financing of a possible competitor, namely the National Hydro-Electric Company. Evidently the purpose of the opposition is to defeat the efforts of what promises to be a serious competitor, whose introduction into the field would prevent a monopoly such as we now have in Ontario and Quebec. We have the Hydro-Electric in Ontario, the Montreal Light, Heat and Power Company in Quebec and the companies allied with those two concerns.

Sir HENRY DRAYTON: Does the hon. member seriously say there is a monopoly in Ontario?

Mr. ETHIER: Yes, absolutely. It has been exposed to-day. It is obvious to hon. members that this is not a sound proposition in regard to the export of power. The question of the export of power should be considered on its merits, and preference should not be given to water-power developments which it would be impossible to develop without the help of power contracts from the United States. Reasoning along these lines it seems that the Quebec government, when it granted a sixty-year lease to the Canada Paper Company on the 30th April, 1924, for a 5,000 horse-power development, was not justified in writing into this contract a clause which practically authorized the company to export power upon the payment of an additional royalty of 50 cents per horse-power. In the same way the federal regulations under which nine Canadian power companies are at present authorized to export, under one-year licenses, about 1,400,000,000 kilowatts of electricity per year to the United States are not in the best interests of the country, If we follow on the lines of that proposal, then we must blame the policy of

the government for all that has been going on for the past eighteen years.

Let us examine the case of the National Hydro-Electric Company, which proposes to develop 400,000 horse-power at the Carillon dam, on the Ottawa river. My hon. friend the ex-Prime Minister (Mr. Meighen) and the hon. member for North Toronto (Mr. Church) express doubt about 400,000 horse-power being developed at Carillon. They went so far as to say that no such amount could be developed there. I have here in my hand the report of the engineers' conference held at London in July, 1924, and I refer to the statement of a gentleman who is well known in all these matters, Mr. J. B. Challies, now of the Shawinigan Water and Power Company, who was then a director of the Dominion Water Powers branch. He presented a paper entitled "Water power from Canada" from which it is possible to derive a good deal of information concerning the future power requirements of Canada. The total amount of power development in Canada is given as 3,227,414 horse-power and the total possible commercial installation as 42,000,000 horse-power. That is not doubted.

I have here a summary of the present installation of power development in each province. These figures are quite interesting, because the information which is given in this debate will be very important for the country. The figures are as follows:

Province	Possible installation in horse-power	Present installation in horse-power	Per-centage developed
British Columbia..	6,680,000	355,517	5.32
Alberta..	1,490,000	33,067	2.22
Saskatchewan..	1,425,000	.....	....
Manitoba..	7,560,000	162,025	21.45
Ontario..	8,910,000	1,445,480	12.85
Quebec..	15,240,000	1,116,398	7.33
New Brunswick...	160,000	44,539	27.85
Nova Scotia...	168,000	54,950	32.70
Prince Edward Island...	7,000	2,239	32.00
Yukon and Northwest..	360,000	13,199	3.67
Total for Canada.. ..	42,000,000	3,227,414	7.68

Sir HENRY DRAYTON: What is the date of those figures?

Mr. ETHIER:: They were given by Mr. Challies at the conference in July, 1924. It was estimated in 1924 that the total development in Canada at the beginning of 1926 would be about 4,000,000 horse-power. The average growth from 1910 to 1926 is shown as having been at the rate of 101,000 horse-power per year, and that from 1920 to 1925 at the rate of 303,000 horse-power per year. On the basis of these increases Mr. Challies estimates that by the end of 1940 our developments should be between 7,000,000 horse-power and 8,500,000 horse-power. Applying the same rates of growth during the next ten years, it would give us about 11,000,000 horse-power in 1950 or about 26 per cent out of a possible total of about 42,000,000 horse power.

Sir HENRY DRAYTON: Will you give us the report of the engineer showing the 400,000 horse-power? You were going to let us have it, but you did not do so.

Mr. ETHIER: I have also another report made by Messrs. J. A. Jamieson and G. R. Heckle, engineers of Montreal, and some of these quotations are taken from the St. Lawrence waterways report and some from the Electrical World of June 12, 1924. That is the suggestion that has been made to the government in connection with the requirements of that part of the country. Since that time new developments have come up, and I wish now to prove to the committee that there is a power monopoly behind the opposition to the National Hydro-Electric Company Recent developments have conclusively proven the fact that what is known as the "power monopoly", who apparently are sitting on the hydro-electric throne, are leaving no stone unturned that will take away from them one atom of the grip they now appear to have on the power situation in Quebec. Not content to develop certain power rights which they control, they are using every possible influence to frustrate any opposition, no matter how slight, that might prevent them from completing their policy of absolute control of the electric situation. What have we read lately in the Financial Review of Montreal? Immediately after the first delegation came to Ottawa in order to obtain a licence for twenty-five years, I read this.

At six o'clock the Speaker resumed the chair and the House took recess.

After Recess

The House resumed at eight o'clock.

PRIVATE BILLS

CONSIDERED IN COMMITTEE—THIRD READINGS

Bill No. 62 for the relief of Harry Hambleton.—Mr. Sheard.

Bill No. 76 for the relief of Laura Grace Davis.—Mr. Jacobs.

Bill No. 77 for the relief of Alice Brouse.—Mr. Duff.

Bill No. 79 for the relief of Robert Lawrence Anderson.—Mr. Duff.

Bill No. 80 for the relief of Pearl Hibbard.—Mr. Stewart (Leeds).

Bill No. 81 for the relief of William John Taylor.—Mr. Hanna.

Bill No. 82 for the relief of Albert Edward Cottrell.—Sir Henry Drayton.

Bill No. 83 for the relief of Florence May Mott.—Mr. Clifford.

Bill No. 84 for the relief of Ellen Mary Harvey.—Mr. Hanna.

Bill No. 85 for the relief of Stella Florence Brickenden.—Mr. Euler.

Bill No. 86 for the relief of Frank Alexander Michel (otherwise known as Frank Alexander Mitchell).—Mr. Euler.

Bill No. 87 for the relief of Thelma Adeline Rose Hands.—Mr. Jacobs.

Bill No. 88 for the relief of Jean Veronica Margaret Wright.—Mr. Garland (Carleton).

Bill No. 89 for the relief of Ruth Darcy Blinn McCrimmon.—Mr. Shaw.

Bill No. 90 for the relief of Thomas George McElligott.—M. Hocken.

Bill No. 91 for the relief of Alvin Wesley Richards.—Mr. Stewart (Leeds).

Bill No. 92 for the relief of Cecil Tanner.—Mr. Rankin.

Bill No. 93 for the relief of Ruth Ellen McGowan.—Mr. Shaw.

Bill No. 94 for the relief of Edith Kearsley Smith.—Mr. Boys.

Bill No. 95 for the relief or James Raymond Armstrong.—Mr. Garland (Carleton).

Bill No. 96 for the relief of Josephine Royant.—Mr. Sheard.

Bill No. 97 for the relief of Gertrude Margaret Burkart.—Mr. Ryckman.

Bill No. 78, for the relief of Vera Thelma Gooderham.—Mr. MacLaren.

Bill No. 99, for the relief of William John Fuller.—Mr. Duff.

Bill No. 100, for the relief of Alfred Augustus Jacques.—Mr. Duff.

Bill No. 101, for the relief of Paul Zizis.—Mr. Hocken.

Bill No. 102, for the relief of Annie May Blunt.—Mr. Hocken.

Bill No. 103, for the relief of Grace Harrington Bloom.—Mr. Hocken.

Bill No. 104, for the relief of Ian Somerled Macdonald.—Mr. Garland (Carleton).

Bill No. 105, for the relief of Arthur Beldon Morrison.—Mr. Church.

Bill No. 106, for the relief of George Edward Sharp.—Mr. Arthurs.

Bill No. 107, for the relief of Marjorie Morton.—Mr. Arthurs.

Bill No. 108, for the relief of William Ernest Hampson.—Mr. Arthurs.

[Mr. Ethier.]

SECOND READINGS

Bill No. 123, for the relief of Ruth Dorothy Rutenberg.—Mr. Baxter.

Bill No. 126, for the relief of Mollie Weiner.—Mr. Jacobs.

Bill No. 130, for the relief of Lillian Yaffe.—Mr. Hanson.

Bill No. 131, for the relief of Charles William Dickinson.—Mr. Hanson.

Bill No. 132, for the relief of Charles Murray Cramsie.—Mr. Baldwin.

Bill No. 133, for the relief of Frederick William Mallyon.—Mr. Speakman.

SUPPLY

The House in committee of Supply, Mr. Gordon in the chair.

Mr. ETHIER: I was going to bring proof after the recess of the allegations I made that behind the opposition to the proposed Carillon power development there was a "power monopoly." In this connection I would like to refer to an article published under a New York date in the Financial Review of Montreal, in which it is plainly pointed out that Mr. A. Robert, of Montreal, who is the president of the National Hydro Electric Company has been ousted as president of the Montreal Tramways Company and as president of the Quebec-New England Hydro Electric Corporation and is a big factor in the Quebec power industry because he insisted upon going ahead with his plans to develop water-power on the Ottawa river, and give to the people cheap and abundant electricity. The article reads as follows:

The report that Sir Herbert Holt has bought control of the Duke-Price Power Company has attracted some attention in local financial houses interested in the larger aspects of the international power situation. If this is the case, the change thus indicated in the alignment of the financial powers behind the big power development companies in the province of Quebec, indicates victory for the Canadian interests in the big battle now under way for control of the water-powers of the province. According to local informants the first victory in the battle was won when Mr. Robert was ousted as a big factor in the Quebec power industry, and the second was the success of the big power companies in getting back of them the governments of the two provinces in their fight against the exportation of power to the United States. The third was the refusal within the past two weeks of a syndicate, headed by one of the best known bond underwriting houses in the United States and Canada, to take a $10,000,000 issue to finance the Carillon development. The fourth is apparently this move on the part of the big Montreal power interests to gain control of the $50,000,000 power development on the Saguenay.

Mr. Chairman, I would call special attention to this paragraph:

"The success of the big power companies in getting back of them the governments of the two provinces

in their fight against the exportation of power to the United States."

That statement is certainly startling.

Mr. PARENT: Does the hon. member assume that the article in question represents the truth, and does he take responsibility for it?

Mr. ETHIER: I know the standing of the Financial Review in Montreal. It is a reliable and very important business paper, and I presume that its information is accurate.

Mr. PARENT: That is only supposition.

Mr. MEIGHEN: Is the hon. member right, that it is the Financial Review, and not the Financial Times?

Mr. ETHIER: The Financial Review.

Mr. MEIGHEN: I know of the Financial Post and the Financial Times, but I did not know of the Financial Review.

Mr. ETHIER: It is from the Financial Review, and I am sure its report is accurate that Sir Herbert Holt has bought control of the Duke-Price Power Company, which is erecting plants on the Saguenay river.

Mr. PARENT: That is another assumption which is entirely against the facts.

Mr. ETHIER: I take it to be the truth, more especially when I read in the annual report of the Financial Times that Sir Herbert Holt, if not president, is a director of every power company in the province of Quebec, the Montreal Light, Heat and Power Company, the Quebec Power Company, the Southern Power Company, the Shawinigan Power Company and all the allied power companies in the province of Quebec. That is the monopoly, the merger, the trust—which is fighting against the Carillon power development plan; it is this monopoly which is behind the organized opposition to that development. This same publication called the attention of the interested parties in the Ottawa valley district to the matter, and a big meeting was called in the town of Lachute, in the county of Argenteuil, where a resolution was passed protesting against the opposition, and endeavouring to show the government the benefit it would be not only to that particular district, but to the province and the Dominion as a whole, if the Carillon power development was approved. The question was viewed not only from the point of view of their own interest, but from the national point of view. The resolution read as follows:

Resolved that after consideration of the proposed hydro-electric development at Carillon, on the Ottawa river, the council and citizens of the town of Lachute express their approval of the project and request that the federal and provincial governments do give their immediate endorsement to the work so that the work of construction may proceed without delay.

In endorsing the project, this meeting wishes to point out that the construction of this large hydro-electric plant would ensure an abundant supply of electrical energy, now so urgently needed throughout the Ottawa valley; that it would mean the expenditure of many millions of new capital in this province; that it would give employment to thousands of workmen, thus relieving the serious situation now facing civic and other authorities; and that it would create activity in many industries manufacturing materials needed for such an undertaking.

A further consideration which this meeting considers is highly important to Lachute is that the development at Carillon would be accompanied by the construction of a 14-foot canal from St. Anne's to Ottawa, thus creating a new navigable waterway which would assist in industrial development, without the cost of a single dollar to the public.

Resolved further that as it is reported that this huge power development is not financially possible unless there is an immediate market for the surplus power, this meeting can see no reason why the export of power should not be permitted so long as the home demands are amply met—a provision which can be fully provided for by the federal government.

That resolution, Mr. Chairman, covers all the points in favour of the granting of the electric water-power plant at Carillon. First of all, it would mean the expenditure of many millions. The plant, as shown by the engineer's estimate, would cost about $52,000,000, with a capacity of 400,000 horse-power. The erection of that plant would mean employment for over 2,000 people during three years, and the employment of that number of people for that length of time would certainly bring relief to the general labour situation in Canada.

Not only do the municipal councils in the districts north and south of the Ottawa river support the proposition, but the Trades and Labour Council of the city of Montreal adopted a resolution in its favour similar to the one passed at Lachute. It is therefore apparent that labour men to the number of 100,000 are behind the people of the Ottawa valley in the support of the enterprise. The Trades and Labour Council of Montreal, adopted also a resolution approving the project.

In addition to the great good to labour that will result from the carrying out of the enterprise, there is the further fact that navigation will be facilitated by the raising of the level of the Ottawa river. From the engineering reports that are available it is evident that the carrying out of the project would give a fourteen foot waterway in the Ottawa river, thus placing the city of Ottawa, on a footing

of equality in the matter of navigation with various cities on the St. Lawrence. As a further evidence of the popularity of this project in the particular district affected, may I state that, at the time the delegation met the government, Alderman Low stated that the Ottawa city council had adopted a resolution in favour of the power development scheme, similar in form to the Lachute resolution. Surely the support of such large bodies of public opinion indicates the necessity and urgency of this work.

It was stated this afternoon that the National Hydro-Electric Company had only developed 250 horse-power but let me point out that the company has already spent $500,000 on engineering work. I must not forget to mention that in addition to satisfying Canadian demands before exporting power to the United States there is a clause in both leases which declares that the plans for the construction of works must fulfil all the requirements of the Georgian Bay project. In the leases all possible contingencies are provided for, even to the extent of protecting the requirements of the Georgian Bay canal and Canadian demands for power.

Mr. MANION: Will the hon. gentleman state how much power has been developed by the expenditure of the $500,000 to which he referred?

Mr. ETHIER: Only 250 horse-power has been developed.

Sir HENRY DRAYTON: That is under the old lease?

Mr. ETHIER: Yes, but I think a greater volume of power is now developed or will be shortly. In this connection let me quote from a statement by the president of the company, Mr. Miles:

> As one matter that was accomplished, I might mention that for a distance of some fifteen miles the village of Point Fortune westward, and for a width of from half a mile to a mile and a half the whole district was bored, not only the river bed, but the surrounding banks and valleys, this to assure the knowledge as to holding back the immense reserve of water as to the safety itself of the project. In my case, my company has done everything to satisfy the financiers in both the United States and Canada as to the soundness of the basis of the investment, proposed to them. Our titles and rights, the entire legal position, everything in fact, was made perfectly clear and satisfactory to the men who have now undertaken the furnishing of all the capital required. It stands ready for our use, for our company's use immediately, and our plan in December last was to begin preliminary operations at Point Fortune and Carillon about the first week in March. We have been delayed through certain circumstances but my hope is to-day that we will reach a successful issue with the negotiations now progressing towards a finality.

[Mr. Ethier.]

This is the explanation given by the president of the company, Mr. Miles, whose statement cannot be successfully contradicted.

Sir HENRY DRAYTON: The hon. gentleman was going to give us a provision from the lease as to the sale of power in Canada.

Mr. ETHIER: The provision in that respect is the same as the one in the lease of 1908, subsequently renewed in 1913 and 1921. The project in its original form did not contemplate the exportation of power. That is a new idea which is involved in the present plans of the National Hydro Electric Company. Under the old lease it was only proposed to issue a license for one year. Where will you find capital willing to invest such an enormous sum as $52,000,000 with a prospect of having the lease terminated at the expiration of one year? For the past eighteen years the license has only been good for one year. True it has been renewed from time to time, but it is a very uncertain basis upon which to found an expenditure of $52,000,000. No capitalist will invest money in an enterprise unless there is a guarantee of at least twenty-five years' tenure, and that is what the National Hydro Electric is asking for. Then too, unless a market is found for the surplus power outside of Canada the process of developing electric energy will be slow and tedious, and Canada itself will lose money which would otherwise come to it as a result of the development and sale of power.

As regards the development of our power resources, not only in this province, but throughout Canada, I maintain that without finding a market for our surplus power outside the Dominion our development of electrical energy will be slow and tedious and we will still go on losing millions of dollars a year which would come to Canada as a result of the sale of power. I am convinced that the opposition which is apparently emanating from interested sources, if allowed to succeed, will mean the absolute killing of the Carillon power development which is so vital to the people of the Ottawa valley, and unless those opposing the export can give us more concrete arguments that the sale of electrical energy should not be permitted, I am certain that the federal authorities will understand the workings of the "power ring," which is slowly but surely getting a strangle hold on the power situation throughout our province.

What is the objection which is urged to this project? It is that "we may need in the future the surplus power proposed to be exported." Surely this is not a reason for deferring action in connection with this very important matter.

Then as to the licenses granted, I refer to the returns made under the Electricity and Fluid Exportation Act. Central stations exported 1,344,199,267 kilowatt hours during 1923, which was 16.6 per cent of the total output of all stations. Three stations on the Niagara river exported 878,335,200 kilowatt hours, or 65 per cent of the total quantity exported, and one station on the St. Lawrence exported 30 per cent of the total. A complete list of all companies exporting electric energy to the United States is shown below. Practically the only electricity imported is at Sarnia, Ontario, where the St. Clair Tunnel Company imports some for operation of their locomotives and shops and a small quantity for sale. And they exported 40 per cent. The following memorandum shows the kilowatt hours exported to the United States in the calendar year 1923:

	Kilowatt hours
Maine and New Brunswick Electric Power Company	10,209,784
Sherbrooke Railway and Power Company.	42,495
Cedar Rapids Manufacturing and Power Company	405,524,000
Ontario Power Company	332,866,100
Toronto Power Company	193,009,750
Canadian Niagara Power Company	352,459,350
Ontario and Minnesota Power Company	10,365,200
Western Canada Power Company	38,450,560
West Kootenay Power and Light Company	554,900
British Columbia Electric Railway Company	717,128
Total	1,344,199,267

Hon. gentlemen will observe that of the 1,344,199,267 kilowatt hours exported in 1923, 405,524,000 kilowatt hours were exported by the Cedar Rapids plant of the Montreal Power Company and 878,335,100 kilowatt hours from the Ontario plants of the Hydro Commission. Practically 95 per cent of the present export is done by the private power monopoly in Quebec and the Hydro in Ontario. Those are the people who are endeavouring to prevent private enterprise requesting the government to give them a license to export electrical energy from the Carillon Power Company. It would be interesting, Mr. Chairman, to show to the House how these people have discarded their proposed plan and changed their minds when they see it is not in their own interests. It is quite surprising to observe the attitude of the Montreal Gazette, the official paper of the opposition in this House, who are now every day fighting in decided opposition to the Carillon works dam. What has happened in the last two years? Who is behind the Gazette? I put the same question as the ex-Minister of Finance put, who is behind the Gazette? I will show the House the attitude of that paper and I quote the following from the Montreal Gazette:

When in 1923 a suggestion was made in parliament that a restriction should be threatened on the export of power as a means of obtaining an undertaking from the United States that American coal exports would not be restricted, the following is the editorial published by the Montreal Gazette on February 28, 1923:

This was not at a time when the National Hydro Electric Company were asking for the powers they are now seeking. The article continues:

At the suggestion of Hon. Mr. Robb, Minister of Trade and Commerce, Dr. Deslauriers in the House of Commons, withdrew a resolution favouring the restriction of the export of electric power from Canada unless the United States undertook that the export of coal to Canada should not be interfered with. The subject of control over exported electric power has been up in parliament before on several occasions. The only result was an act passed some dozen years ago requiring that producers desirous of exporting current to the United States which is the only country concerned, should take out a license before making any delivery. If occasion arose it is presumed the refusal of a license would be followed by a stoppage of the export. That, however, is not within probability. The situation is simple. It is as legitimate—

I wish my hon. friends opposing the plan would meditate on this sentence:

It is as legitimate for a Canadian producer of electric current to supply a demand from the United States as it is for the producer of wheat or lumber or asbestos, or anything else, to sell his goods in the same market.

That was the Gazette's opinion at that time.

To act on any other theory and put restrictions in the way would be to interfere with a proper development of commerce and restrict business without justification. There are sections of Canada wherein the local demand for electric power exceeds the capacity of the development plants, as there are sections where, unless an export demand existed, the plants could not be operated at their capacity and their water-power would be running to waste.

This is the case at Carillon.

The lack in one case is not the result of the export of power in the other, but is usually attributable to the geographical situation. To stop the export at Niagara or Fort Frances would not help those in central Ontario who would use more if they had it. If it were advisable to interfere by law with such a situation, no general prohibition would be advisable. Each region would have to be dealt with according to its peculiar circumstances. Embargoes as restrictions on freedom of commerce are almost essentially mischievous. The war time produced many of these. They were generally submitted to as having some good object in view, though evil in themselves and the product of greater evil conditions. No wise merchant or manufacturer would desire their establishment. Merchants and producers generally know that the wider the markets they have for their goods the better for them; and embargoes restrict markets. The general argument must be against them. The special argument advanced by Dr. Deslauriers was not sufficient. The United States had been suffering during

the war from a restricted coal supply. The government at Washington—

Listen to this—

The government at Washington knew what the facts were and took measures to distribute available fuel, so as to reduce the general inconvenience and prevent one section from suffering while another had abundance or more. Canadian dealers were treated by the Washington authorities on the same footing as those of the United States. There was a continuous movement over the border of anthracite, and the people of this province did not suffer more than those of northern New York. Such a national neighbour is not one to threaten. There may rise occasion for government interference with the distribution of electric power generated in Canada. It will be in the nature of an emergency, however, and should cease with the emergency. Though the House of Commons did not divide on the issue raised by the resolution, the effect of what was said was to put the idea into the background, where it should stay.

Who is behind the Gazette now? The Gazette inspired by people behind it publish articles every day similar to the one I have read. I do not say that they are inspired by Sir Herbert Holt, but it is strange altogether.

This question is of such importance that I thought proper to place the case as it really is before the committee. If a lease is granted to a private company which is ready to carry on the work, Canada as a whole will benefit. This will be a great advantage also to the labouring people and to the municipalities on the two borders of Ontario and Quebec from Ste. Anne to Ottawa. It will bring to Canada a capital of over $52,000,000, without costing a cent to the national treasury or to any municipality. On the contrary, according to the proposed lease, in 1928 the company will have to pay $50,000 as rental, in 1930, $75,000, in 1931, $100,000 and up to 1964. After the renewal of the lease twenty-one years by twenty-one years, the rent will be $175,000. That is a clear revenue to the country. Moreover, with the export tax on hydraulic power according to the new budget of this year, which budget I approve entirely, the company will pay $1.96 per horse-power for export and we shall pay $175,000 for rent to the government making a total revenue of nearly $800,000 per year. We keep 100,000 horse-power to serve Canadian needs. We ask permission to sell or export 300,000 horse-power to the United States, without infringing on the power required for Canadian industry.

Mr. MACLEAN (York): For what period?

Mr. ETHIER: The company is asking for a period of twenty-five years up to 1950, as I stated this afternoon. There will be only 11,000,000 horse-power utilized in the whole of Canada. If we export 300,000 horse-power, that will give a revenue of $600,000. That, with $175,000 for the lease, makes nearly $800,000 revenue going into the treasury of this country every year. This will help the labouring people and the farmers along the borders of the two provinces and there will be all the benefits accruing from the general utilities growing up from such a development in this country.

I leave the House with these considerations, renewing publicly the application which has been made by the delegation to the government. That this matter will be considered from a national point of view, I have no doubt; but I hope the opposition which has been brought against it will be severely inquired into and, if inquiry is made, it will be found that behind the opposition to the proposed plan of the National Hydro Electric Company, there is a merger, a trust, a monopoly in Quebec as well as in Ontario, and that this company will be in a position to sell electricity more cheaply than it is now being sold in Montreal or anywhere else.

Mr. MACLEAN (York): I have been very much interested by the speech of the hon. member (Mr. Ethier), but he does not quite prove his case. He rather proves the argument that I am going to make in favour of delay in this matter. My suggestion in a word is this, and I have written it down rather carefully. The thing for the government and parliament to do in regard to the export of power is to delay further action until federal investigation is made, first, as to our possible water-power development, and second, as to its further conservation by the use of long-distance transmission by high tension current, as scientists now promise us. Such an investigation might result in a national policy of keeping this power as a national asset which, in time, would take care of our public debt and our national budget for many, many years. Such a policy would have to be strengthened by a programme of sustained rainfall, by forest preservation, and permits to export power should be, not for long periods, but for short periods with frequent renewals. What the power people are trying to get—and I direct the attention of the Acting Minister of Finance (Mr. Robb) to this—is to sew up the country in long terms for the export of power. Even with the frequent renewals as I propose, the result may be that this, which I consider is the greatest asset that Canada has to-day, namely, the possibility of the development of our water-power, will pass from the people into the hands of entrenched monopoly. Therefore,

there is every reason why we should conserve this power. We should see whether it is not possible, as scientists say, to transport it for long distances by high tension currents. Besides that, they say now that electrical energy can be transmitted by a beam. Just what a beam is I will not undertake to say at the moment, but they have that in their mind. They say something else about water-power. A water-power is the most marvellous thing in the world. Neither a gold deposit nor a silver deposit is to be compared with it, nor even are the great wheat fields. This hydro-electric power, once you generate it, has this peculiar characteristic. Once you store the water and put in your generator, you get the power and what does the power do? It delivers itself a hundred miles, and I hope, in a little time, a thousand miles away through a wire; it requires no upkeep and it becomes more and more valuable. The scientists are promising a still further development and that is this. All hon. members know what these little storage batteries are. They see them in the hardware stores. The scientists promise even to store water-power in the same way and they say that it can be kept for years; that it can be transported and then released at any distance away where it can be distributed by other wires. Parliament, therefore, ought to take care of this asset. It should not part with it; especially it should not part with it under long-term leases, but it should keep it as the greatest asset the country has.

9 p.m.

To prove that it is the biggest asset the country has, one needs only to listen to the testimony that my hon. friend has just given to the committee about the efforts of capitalists in this country and throughout the whole of the United States to get this great source of electrical power sewed up to their companies, because if they get that, they have an almost unlimited field of profitable distribution of it. Canada has this wonderful store. Notwithstanding the statement that has been made, I contend that we ought not to lease any of this power for export until we know whether there will be enough of it for ourselves; and, above all, we ought to keep the development in our hands until there has been a thorough investigation as to its amount.

Mr. HUGHES: Is there any danger of a monopoly at home?

Mr. MACLEAN (York): There might be. I am not in favour of a monopoly at home, and whatever it is, I do not want to see it grow. That is the object of this movement. I do not want to assist a monopoly now, I want to prevent other monopolists from getting control of this power. That, Mr. Chairman, is my whole object, and as the Prime Minister (Mr. Mackenzie King) is not here, I would impress upon the Acting Minister of Finance (Mr. Robb) and the Minister of Trade and Commerce (Mr. Low) the importance of taking up this question with their fellow members of the cabinet and urging that there be a thorough investigation as to the amount of power available and as to what the prospects are in connection with its development, and until that investigation is completed they should emphasize the desirability of not granting any lease for power export.

Mr. FORTIER (Translation): Mr. Chairman, I share entirely the views expressed a few moments ago, by the hon. member for Laval-Two Mountains (Mr. Ethier) in favour of the development of the Carillon water-power scheme. It seems to me that the proposal which is made to the government is of great importance to that district and to the country as a whole. I fail to understand why one should really oppose the development of this water-power. The only people who, in my opinion, might object to such a scheme would be those who fear to see the beauty of our landscape spoiled. Some years ago, I heard it said by litterateurs that we should not allow industries to monopolize part of the waterpowers of the magnificent Niagara falls or the majestic St. Lawrence river. "It is depriving—it was said—beautiful nature of its poetry." Perhaps, a future generation will reproach us of having disfigured Long Sault by establishing industries. "A dam now exists on the spot where Dollard des Ormeaux immortalized himself, at the foot of these rapids" will posterity exclaim!

It has been stated, with truth, that the water powers developed along the St. Maurice river had largely contributed in making that region one of the most beautiful of the province of Quebec, and that we should follow such an example, so as to develop and utilize all the water powers of this country. I think, Sir, that there existed special reasons which favoured the development of the water-powers of the St. Maurice region, however, these reasons do not exist when it is a question of the Carillon water-powers, on the Ottawa river. The province of Quebec possesses, in the St. Maurice district, unequalled forest reserves. It has wonderfully developed these water powers. Moreover, this forest reserve, scientifically exploited will be a perpetual

source of wealth to the province. It is necessary to preserve for that part of the province of Quebec, the water-powers which have built up the industrial towns of Shawinigan, Grand Mere, and so forth, and which contribute to the expansion of Three Rivers; but such is not the case in regard to the Carillon water-power. We cannot, in fact, contend that a forest reserve necessitates the development of the Carillon water-power to establish pulp mills, as they exist on the St. Maurice.

Mr. Chairman, I agree entirely with the views expressed by the Gazette of Montreal, in 1923, in connection with a discussion which took place in the House of Commons at that time. This newspaper which, to-day, so strongly opposes the scheme of the promoters of the Carillon water-power development, at the time expressed the views which are at present shared by the majority of the citizens of this country.

The following is an extract from the editorial which the Gazette published on February 28, 1923, commenting on the debate brought on in the House by the resolution of the hon. member for St. Mary's (Mr. Deslauriers) in connection with the export of electric power:

> There are sections of Canada wherein the local demand for electric power exceeds the capacity of the development plants, as there are sections where, unless an export demand existed, the plants could not be operated at their capacity and their water-power would be running to waste. The lack in one case is not the result of the export of power in the other, but usually a geographical situation. If it were advisable to interfere by law with such a situation, no general prohibition would be advisable. Each region would have to be dealt with according to its peculiar circumstances.

To-day, when the people of the Ottawa valley request the government to allow the export of electric power from Carillon, can the government be told: "Do not allow it, as we might later need these water-powers!" Proof has been given to this committee by the hon. member for Laval and Two Mountains, that the fact of exporting 300,000 horse-power of the 400,000 which would be generated by the Carillon water-power, would in no way jeopardize the reserve of electric power we possess in the province of Quebec. It has been clearly shown by experts that Canada has at its disposal 42,000,000 horse-power and that there are, at present, but 3,500,000 horse-power developed. Canada would have to be inhabited by a population of 70,000,000 people so as to develop and utilize all its water-powers. It is estimated that in 25 years Canada will have 13,000,000 of a population and that 8,000,000 horse-power will be all it will require. It is, therefore, only 22 per cent of what we have at our disposal.

[Mr. Fortier.]

Engineers have stated that, in the province of Quebec, there exists 15,000,000 horse-power and that we but utilize, at present, about 1,000,000 horse-power. It is estimated that the yearly increase of electric power is 60,000 horse-power, and taking these figures as a basis for our calculations, the province of Quebec will utilize in 1950 about 3,000,000 horse-power supplying about 3,500,000 of a population, and that will only amount to 20 per cent of the province's water-powers.

Mr. PARENT (Translation): Would the hon. member tell us where are located these 20 per cent? Is it in Labrador or in the vicinity of Montreal or Quebec?

Mr. FORTIER (Translation): Within a radius of 200 to 250 miles from the Carillon water-power. That is according to the report of a most competent engineer, a statement which up to now has not been gainsaid.

I think, Sir, that the Carillon water-power development scheme is one of the best of its kind. It will draw to this country considerable capital; it will establish mills the building of which will amount to millions of dollars and it will give the labouring class remunerative work for many years to come. Finally, it will be a source of revenue to the government, for the leasing of these water-powers, according to the figures themselves which are mentioned in the contract of said scheme, will add to the public treasury many millions of dollars. Moreover, thanks to the government's policy of levying a tax on the exportation of electric power, we are assured that, for a period of 25 years, this export alone of these 300,000 horse-power will add to the country a revenue of many million dollars.

Neither should we lose sight of the fact that, as a result of these improvements, a navigable channel having a depth of 14 feet will unite Montreal to the capital of Canada. It would be practically the first link in the scheme cherished not only by the Ottawa valley people, but by all Canadians—the first link, I might say, in that great waterway, the Georgian Bay canal.

For these reasons which are of an economic order and bear on the future prosperity of the country, I am strongly in favour of allowing, on reasonable and equitable conditions, this company or any other sound company which may so desire, to undertake the scheme of developing the Carillon water-power.

Sir HENRY DRAYTON: I want to thank the hon. member who has just taken his seat for the manner in which he has dealt with this subject and for his kindness in speaking as deliberately and clearly as he did. I wish I

could answer him in his own language. But with regard to his argument as to the development on the St. Maurice river, at Shawinigan and at Three Rivers, he gets all these things by a policy completely different from that which he is now endeavouring to support. The hon. member for Laval-Two Mountains talked about employment. He wants to give employment to our people by shipping out of the country the chief thing through which employment can be brought to Canada—that natural, rich and permanent gift of nature, to use the words of the hon. member who has just spoken, and in whose language I should like to be able to express it with equal felicity. But there is no beehive of industry about a power plant. It is the loneliest place in the world. Nature does the work, and one or two men can look after an enormous plant. There is no pay-roll worth talking about in a plant of that kind; the pay-roll is where the electricity is used commercially.

Mr. ETHIER: What does by hon. friend think of the resolution of the Trades and Labour Council of Montreal approving the scheme?

Sir HENRY DRAYTON: Perhaps my hon. friend was there and talked about the great amount of labour there would be. But there is very little labour about a power plant; the pay-rolls are where the power is being used.

Mr. ETHIER: How about the construction of the plant?

Sir HENRY DRAYTON: Now, let us see how far my hon. friend is pushed in his argument. Just for the sake of the temporary labour in the construction of the plant he would remove from this country an enormous pay-roll for a long period of years. Talk about selling one's birthright for a mess of pottage; my hon. friend would not even get the pottage out of it. The hon. member is pushed for an argument and he makes an attack on existing power activities in this country. He calls them monopolies, and the like. Well, let us say for the moment that they are monopolies; why should they object to a proposal which would remove from the country that which can be made the basis in the future of an attack upon their local strength? What the hon. member really says is that these co-called monopolies are objecting to something which, if it goes through along the lines of the drafts available, will for all time—and I say it advisedly—remove any chance of opposition to those monopolies in Canada.

Mr. ETHIER: The proposal is only for a license for twenty-five years, up to 1950 and no further; and it is understood that there must be a clause in the license to provide that if the needs of Canada call for over 100,000 horse-power the lease shall be null and void. The hon. member knows enough about law to appreciate the fact that any such provision in the lease will have to be respected by both parties.

Sir HENRY DRAYTON: Perhaps my hon. friend will produce the lease he is speaking of; I have not seen it. The document I have seen does not provide what the hon. member says. It provides for a lease which shall run until January 1, 1964. It then provides for a twenty-one year renewal from that date, that is, to January 1, 1985; then it provides for another renewal of twenty-one years and at the expiration of that second renewal it provides for a fourteen-year renewal from January 1, 2006. I see nothing in it which says that the Canadian product shall be looked after.

Mr. ROBB: What document is my hon. friend quoting from?

Sir HENRY DRAYTON: I said I was referring to the draft lease. It is the only thing we have been able to get. If we can get anything a little more up to date, a little more definite out of this mystic matter that we are trying to get to the bottom of, we shall be delighted to have it; but this is all I have been able to get.

Mr. ROBB: Does my hon. friend contend that a lease has been granted for this power? If so, I want to say that there has been no lease granted.

Sir HENRY DRAYTON: My hon. friend I am afraid was not here this afternoon when this matter was gone into. The only paper I have been able to find dealing with this question of export on the whole of this long file—I admit I have not had time to go through it—are two draft leases, which evidently are the outcome of long negotiation.

Mr. ROBB: That is accompanying an application, but there is no lease.

Sir HENRY DRAYTON: I am not saying there is. I am speaking of this draft lease. If there is anything that would show us what is behind the smoke screen, anything that will make the matter clearer, let us have it.

Mr. ROBB: So long as my hon. friend admits that there is no lease, I have nothing to say.

Mr. ETHIER: With the permission of my hon. friend may I repeat what I said this afternoon, that the delegation which came

here asked for the issuing of a license for a term of twenty-five years, up to 1950. That was the sense of the deputation that came here, representing the National Hydro Electric Company. I do not know anything about the Carillon Industrial Company. I understood that the question over this draft lease which was put in the record without the cognizance of the Minister of Railways, and which was discussed this afternoon for two hours, was settled, and that argument on that would not begin again. There is no question about the proposed draft. The only question is, shall the license be renewed for a long term of years? The question is, will the government take the responsibility of adopting the policy of issuing in special circumstances a license for a long term, fifty years, if you like? But in this specific case we are asking for a license from to-day up to 1950, for a twenty-five year period; that is all.

Sir HENRY DRAYTON: Perhaps my hon. friend would tell me whether that application was in writing and whom it came from?

Mr. ETHIER: No.

Sir HENRY DRAYTON: I want my hon. friend to be fair. I have not brought up again the question of this document. It was my hon. friend the Acting Minister of Finance, who was not here this afternoon, who asked the question. Of course, if I can get anything definite I shall be only too glad to get it. My hon. friend has not yet told us who the directors of this Carillon Industrial Corporation are. I shall be delighted to get that information.

Mr. ETHIER: I gave you the names.

Sir HENRY DRAYTON: No.

Mr. ROBB: My only reason for intervening in the argument of my hon. friend was that I understood, and I believe every member of the House understood, him to be arguing from the point of view that the lease had been granted and I say on behalf of the government that no lease has been granted. The government is not responsible for people who come here from day to day and make applications. My hon. friend has been a member of a government and knows that every day of the week applications come before the government of one sort and another, but that does not mean they are granted.

Sir HENRY DRAYTON: No, it does not mean that at all, but I am quite confident that this carefully prepared document has meant a great deal of negotiation. But be that as it may, my hon. friend from Laval-Two Mountains (Mr. Ethier) is wrong when he says he has given me the names of the directors of the Carillon Development Corporation. If he has those names, I would like to get them. No, they were not given.

My hon. friend wants to know who is behind the Gazette. I tell him frankly I do not know. He may as well ask who is behind the Globe. He will find the Globe is taking precisely the same attitude as the Gazette. He will find that some people look upon this question as a large national question entirely removed from any matter of party politics, but as a matter that is really vital to Canada. My hon. friend talks about monopolies, and says this project is only fought by monopolies. I wonder if my hon. friend is really serious in saying that? I do not think he can be. I do not think he can be serious in saying there is a power monopoly in Ontario. The people are not being bled in Ontario for power; they are just paying what it costs and nothing else, and if my hon. friend objects to a monopoly, as he calls it, which is run for the benefit of the public, without cost to the country except the actual cost of the service—well, my hon. friend may call it a monopoly, but he will not have many supporters. I wonder if my hon. friend really thinks his case is so weak that he has got to come down to the point of charging those who are against him with being monopolists? It seems to me that he does.

I would again point out that if anything is to be done with what I hope will never be heard of again—and I did not have this before me at the time I pointed it out previously—do not let us have the delusion that anything is being done for Canadian municipalities. If anything is being done, it is along the lines proposed. There is no municipality that I know of in that neighbourhood that is as big as Brockville, for example. No municipality can get into this until they ask for at least 10,000 horse-power. Brockville takes only a comparatively small amount; I will give the figure later, I cannot find it at the moment, but it is only a small amount.

Mr. hon. friend the Minister of Railways (Mr. Graham) made an argument which is entirely to the point, that is, if his argument is correct. He points out that the policy of the government is consistent, that no harm can be done by issuing merely a yearly license. Of course, he sees at once that if you get away from a yearly license and you invite a large investment on the other side of the line, it is going to be very hard to take away the power and scrap that investment.

He realizes that, and so he says that the yearly license has done no harm. But I just want to point out to the House that even under those circumstances we are no longer in control of our power, to the extent that we have let it go.

Mr. LOW: Did my hon. friend realize that in 1912-13 when his government granted a license to the Cedar Rapids Power Company to export 100,000 horse-power?

Sir HENRY DRAYTON: What I was going to point out to my hon. friend is this: The first time I had anything to do with this matter was in the year 1917 and, as a matter of fact, my hon. friend knows it.

Mr. LOW: Very well, but my hon. friend was a member of the government when the license was granted to the Bridge River Power Company.

Sir HENRY DRAYTON: My hon. friend has been looking into this question, and must know about the situation as set out in the report.

Mr. FORKE: There was the largest export of any year in 1917.

Sir HENRY DRAYTON: Yes, it was a large export.

Mr. PARENT: On a one-year license.

Sir HENRY DRAYTON: I am not denying that for one minute. I do not know what is wrong with the Minister of Trade and Commerce.

Mr. LOW: Nothing at all.

Sir HENRY DRAYTON: Then perhaps we can get on. I am not saying that to-day the licenses are for a longer or shorter period than at any other time; I am simply saying that even under a yearly license, the granting of which the Minister of Railways referred to as the government's invariable practice and a sound practice, we lose control of our power.

Mr. LOW: Did my hon. friend hold the same opinion in 1921 when he granted a license to the Bridge River Power Company?

Sir HENRY DRAYTON: Perhaps my hon. friend will let me get on. I do not know whether anything turns on the point of granting a year's license; if my hon. friend wants to interrupt he can, I do not mind it. If the minister thinks there is any difference in the practice now I wish he would point it out so that I would know. If he wishes to say that in 1921 we gave licenses for more than a year let him say it. But if he does not wish to make a statement of that kind his interruption is not germane to the argument.

Mr. LOW: My hon. friend is charging the government with issuing a license for a longer period than one year, and at the present time we have not issued one.

Sir HENRY DRAYTON: I know there is a movement on foot looking towards that end, and I know we have not had very much luck in getting information as to that movement, or as to what the government would do. All the government need say, in order to clear matters up, is what its policy is going to be in connection with this export. If the government will say now: We have no idea of enlarging the term, we will do nothing to tie up the country, the license will be a yearly one as in the past, all this discussion will stop. But we have at least got the right to insist upon learning, so that the country will know, what the government's policy is on a most important question. My hon. friend can do me a great kindness and save me the necessity of talking at greater length if he will answer the question.

Mr. LOW: My hon. friend is simply building up a straw man for the purpose of knocking him down.

Sir HENRY DRAYTON: Will my hon. friend say that this application is a "man of straw?"

An hon. MEMBER: Absolutely.

Sir HENRY DRAYTON: Did anyone say "absolutely?" Does any member of the government say "it is a man of straw"? If not, the Minister of Trade and Commerce is not getting very far with his interruption. Now I will go back to where I was when I was interrupted. The act regulating the export of electricity came into effect in 1907. I was just going to take one contract, in connection with which we have had a lot of unfortunate trouble, and that is the contract with the Ontario Power Company. In the year 1908, and the amount was even less the year before, the Ontario Power Company generated for export 4,610 horse-power under merely the yearly license. Now take the situation in 1917, and it shows what happens when there are large distribution plants on the other side of the line. I read from the report of the Power Controller, published in 1919:

> Between August, 1904, and April, 1917, it acquired a private right of way leading from Niagara river to the city of Syracuse, with lateral lines to the city of Lackawanna, adjacent to Buffalo, and to the city of Auburn, and constructed upon these rights of way, in the main, two high tension steel tower transmission lines, with carrying capacity for the distri-

bution of the 60,000 horse-power it had purchased rom the Ontario Power Company; and secured customers whose aggregate firm demands were as stated on the schedule of contracts between the Niagara, Lockport and Ontario Power Company and its customers, hereto annexed. Furthermore, in this period of time it had constructed large and extensive sub-stations and switching stations at Lockport, at Gardenville (near Buffalo), at Mortimer (south of Rochester), and at Solvay, adjacent to the westerly corporation limits of the city of Syracuse. For the creation of this property during the period of time mentioned, there was expended approximately $10,000,-000. Aside from this, customers secured by the company had been busy during the same period purchasing and installing equipment for taking the power purchased from the Niagara, Lockport and Ontario Power Company, in connection with which millions more had been expended.

I am quite sure if the Minister of Railways were here he would see the fallacy of the position. You cannot utilize this electricity without these tremendous investments being made. And there are some things that do not turn upon the form of a contract, particularly when you get down to a question which assumes on international complexion over night. How idle it is for any of us here to say that simply because the power goes out on the strength of a year's license this government would feel itself justified in cancelling that license and saying that to-morrow morning American municipalities shall go without water and without light. And yet that is what the government has been doing. There are certain things you cannot do, and a cancellation of that character cannot very well be made.

Now the hon. member for Laval-Two Mountains (Mr. Ethier) spoke about monopolies and about the prices here. In reply to a question he gave me one bit of information, and that was that Hon. Mr. Miles was connected with this movement. Well, I might perhaps have known that after reading the article which appeared in that gentleman's journal.

But he is the same gentleman who, in his attack on the Cedar Rapids—and he can be just as successful in that as he likes—pointed out to us that power was exported to the United States for only $12 per horse-power per year. Why, there is a pulp mill just across the river which is churning up Canadian pulp into paper because it can do that with exported Canadian power at $12 a horse-power and if that plant were in Montreal it would cost them a great deal more. The argument presented by my hon. friend from Laval-Two Mountains is no argument at all. He states that the local purchaser is going to be looked after if this goes through. Is it not absurd to think that anyone would seriously argue that the more electricity you sell out of the country to the United States the cheaper will be the cost of electricity in Canada? But that is

[Sir Henry Drayton.]

where this ridiculous argument goes. We are not the only people who have found out exactly what happens when you sell electricity. I am going to read, Mr. Chairman, from an article written by Paul Lewinson in the International Relations Section. It is produced in The Nation of Wednesday, June 25, 1924, at pages 746 and 747, and this has to do with the International Relations Section, and there is some realization of what the sale of electricity internationally might produce in international relations. I am not going to read it all, but simply a small portion of it. He says:

> Approximately one-sixth of the total power produced per annum, then, goes into the export trade; in amount of power available for export at any given moment, however, the proportion is much greater—about one-half. The difference is due to the fact that the production of electric power goes on much more continuously for domestic than for foreign consumption.
>
> Again, on the surface—

And this is the argument we get:

> —This would seem to be wholly advantageous to Switzerland. Switzerland has water-power to spare; France, Italy and Germany need it and are willing to pay for it. Why not sell it, like Swiss cheese, Swiss watches, or Swiss milk chocolate?

The hon. member for Brome (Mr. McMaster) had a similar argument the other day, but he did not take cheese as an illustration. I forget what he took, but his argument was the same. This article continues:

> Unfortunately a little consideration must make it obvious that electricity as a commodity for export is not in a class with cheese and chocolate. Electric power is primarily a service. Ordinary goods can be stored against a shortage. Electricity can not. Ordinary goods can be bought in the open market when the usual source of supply is cut off. Electricity, supplied over expensive and fixed transmission lines, can not. Ordinary goods have common substitutes quickly available. But it would take from eighteen months to two years to build sufficient steam generating plants in the French provinces on the Swiss border to cover the withdrawal of electric power supply on the part of Switzerland.
>
> The city of Milan already depends on Swiss electricity for a large measure of its street lighting and tramway service.

Just as in the case of American municipalities.

> So do many towns in northern France. In Italy and France and Germany as well great industrial undertakings depend on the uninterrupted transmission of power from the great Brusic, Waggital and Olten-Gosgen plants. Were the export of power suddenly to cease, whole provinces in these countries would be plunged into darkness, their transit facilities cut off, their chief industries ruined.

If we go into this export business on fixed terms and go into it any more extensively than we have got into it now—and I think it is a pity we have gone as far as we have—we are going to make a mistake that we will

only regret once, and that once will be all the time we realize it. The minister presented a further argument this afternoon based upon his statement that the Hydro was in favour of export. Of course in some circumstances, under existing conditions it is perfectly right, to the extent that we have gone into it now. What I mean is this: If we have, as unfortunately we now have, a shrivelling population and decreasing activities, and the power we produce now is more than sufficient, and if we have somebody going ahead and wanting power, and can arrange with them so that they will take it, and not make any new commitments, not go into any new contracts, but simply utilize that power instead of using a steam plant, temporarily we are doing no harm. But apart from that, the Hydro certainly does not want any electrical institution that is not run in the interests of the public. Just think of the suggestion which is made. To-day they are exporting power at the rate of $12.35, when they are charging their own municipalities $24, and they have to do it.

Mr. CAHILL: Is it my hon. friend's opinion that power would be cheaper in Canada to-day, say in Toronto, if that power were not exported?

Sir HENRY DRAYTON: Yes.

Mr. CAHILL: What makes the hon. gentleman think so?

Sir HENRY DRAYTON: We are getting, Mr. Chairman, $12.35 per horse-power. It is to some extent below cost. It is certainly below the market value, and to the extent that that is below the market value, everybody else has to pay just that much more; and that is just what they are doing.

Mr. CAHILL: What is the basis of market value?

Sir HENRY DRAYTON: That is a difficult thing to get at. Suppose we go back to the basis of production cost of labour; the basis of production cost is interest charges in the first place, and when you get by your interest charges, the next question of cost you have is the cost of supplies and labour which you know have gone up very much. I admit very frankly that the percentage of the increase of labour is very small in one of these plants, and further that the interest cost of the first installation cannot go up. It is still there. The bonds are still there; but where the interest cost does come in is that in the operation of a lot of these plants —and I happened to be in charge at the time as controller during the war period— there is any amount of damage done by running the plants under stress, getting the very last kilowatt hour, running them over the mark without any let-up at all. My hon. friend knows about the fatigue that sets in and about the danger you have from overcharge, surcharge or a back charge. We had a lot of this, and it entailed great expense and much work after the war putting the plants really in proper shape. A lot of reconstruction had to be done, with the result that the Hydro had to advance the price in Toronto from $17 to $24, if my memory is correct. I think they charged $17 to the municipalities and the charge is now $24. But in connection with the export they cannot do that. They are still held down to the $12.35. If this government to-morrow were to say, "We will have no more export," and took the chances of doing what I do not think they could do—

Mr. CAHILL: I wish to ask for information if my hon. friend does not mind giving it to me—

Sir HENRY DRAYTON: Not at all.

Mr. CAHILL: Is the contract that the Hydro have for $12.35 a term contract?

Sir HENRY DRAYTON: Yes.

Mr. CAHILL: It is for a period of years?

Sir HENRY DRAYTON: Yes.

Mr. CAHILL: If that were made to a Canadian firm, would it not hold just as good?

Sir HENRY DRAYTON: Yes, but I cannot understand any power company making a power contract to a customer under an arrangement like that. They certainly could not do it under the Hydro-Electric regulations.

Mr. CAHILL: How was this made?

Sir HENRY DRAYTON: In this way. In the first instance the Ontario Power plant was an American company entirely. That was the producing end of it on the Canadian side. On the other side there was the distributing end. The two companies made the deal between themselves. There was friction between the Hydro and the Ontario Power, and finally the Hydro bought the latter out. The original contract had a right for three renewals, and in the deal the Hydro got the three renewals taken off. They could not get away from the first contract which has yet twenty-five years to run.

Mr. CAHILL: What difference would there have been had that power been contracted to

a Canadian firm? In what way would the question of export be affected if, before the Hydro originated in Ontario at all, the power had been contracted to a private company, say to the city of Ottawa? Would the contract not hold just as good as to export?

Sir HENRY DRAYTON: The only thing is that it would never be done.

Mr. CAHILL: It would have been done if there had not been the Hydro.

Sir HENRY DRAYTON: It unfortunately has been done here. Just on the general issue, I want to make another suggestion to my hon. friend. With the increased cost of coal, these water powers are becoming of great value. If we had all our water powers run by municipalities, or if the prices for electrical energy were all controlled by a proper board which would see that they were not excessive, the government rent would not make much difference. The people would get the whole benefit of it. But just as soon as you export the power, the people derive no benefit from it at all, except from whatever charge is being made. If the government are going to take any action with this thing—and of course I can only go on in the dark because they will not tell us what they are going to do—they should leave the present lease in the position in which it is left by the Minister of Railways and Canals (Mr. Graham) to-day. He has authority to renew it, but he will not renew it. No construction has gone on and he has not renewed it. Instead of its being renewed, what ought to be done is this, and I think it is done in the province of Quebec. My hon. friend (Mr. Cahill) will know this much better than I do. I think they advertise all these powers for sale before they are leased. If this power is to go out of the country, if every plea we make is of no avail, at least let us get for it something worth while. The power can be developed to sell at a profit on a 10 per cent basis unless conditions have changed very much. I admit conditions have changed and I may be a little out one way or the other. I am not, however, very far off, and I think I am conservative in saying that the power can be sold at a profit at from $12 to $15 a year per horse-power. My hon. friend shakes his head. There is to be a head there of 133 feet.

10 p.m.

Mr. CAHILL: How much would that be per horse-power installed?

Sir HENRY DRAYTON: $120 installed

Mr. CAHILL: My hon. friend, of course, knows it could not be developed for that.

[Mr. Cahill.]

Sir HENRY DRAYTON: I know of powers that have been put in cheaper than that. I have had to do with them. I admit that was some time ago, but I do not think I am very much out to-day when I say that I think they can be put in for $120 to $150 per horse-power installation. A multiplication has been going on in the cost of steam electricity, which our friends to the south have to rely on, as a result of the increase in the price of coal. I certainly think we ought to see that the country gets what should be coming to it out of the export of our power, if export there must be. I really think the government should give us their policy now.

Mr. BALDWIN: After at least ten or twelve years of observation and experience in connection with hydro-electric power, weighing all the pros and cons and viewing the question from every angle with an open mind, as a Canadian citizen I can say unqualifiedly that I am against the export of electrical power which is our greatest asset. From any standpoint Canada has everything to lose and nothing to gain in permitting the export of this, her richest asset. Electrical development is still in its infancy, as is acknowledged by all scientific people. A multitude of uses are making their appearances from year to year, and not one electrical plant has yet been developed practically all the power of which was not sold before the plant was ready to deliver the energy. For example, in the Eastern Townships in which I live, a district of 6,000 square miles including the cities and towns of Drummondville, Granby and other towns, Sherbrooke, St. John, St. Hyacinthe, $25,000,000,000 have been laid out in plants to say nothing of the houses and other adjuncts that run with the property. We are paying out in that district over $5,000,000 annually for labour. That district has made such a distinctive showing that it is known as the New England of Canada. Just last year we developed a $3,000,000 plant. We had no idea of increasing the plant right away, but in a very short time we contracted for a million dollar addition. If we had made a larger plant in the first place, instead of waiting as we expect to wait until 1928, we would have been a year or two ahead. When we think of exporting power to a foreign country to build up towns and cities there, where labour will receive wages, dividends will be paid and communities will be built up, while we in Canada have a lone generating plant covering the needs of a dozen or so individuals and making us no better off for the development of that energy, it seems that every Canadian

who understands this matter would say: No, we shall not develop power here to send over to a foreign country to build up that country at the cost of Canada. Take, for instance, the cost of coal and oil during the last few years. We look with pride on our white coal. Someone said this afternoon that the coal supply of the United States will be exhausted in less than forty years. The power generated by our great hydro-electric stations grinds our pulpwood, turns the great paper-making machines, and hoists and crushes the ores of our mines. But at the present time there is not enough energy in Ontaro and Quebec to look after the mining prospects in the Rouyn district. This power runs our electric railways, lights our streets and homes and operates innumerable domestic appliances.

There can be no question about the mistake of allowing this power to be exported, for vested rights are created and to discontinue the export would inevitably lead to international complications. It is a well known fact that the demand for electric power doubles every six years, some say every seven years, but whichever figure is correct there can be no doubt that all our available water-powers will be needed within the next twenty-five or thirty years. There may be great potential hydro electric power in the Hudson bay region, the Mackenzie district and the Yukon, but it would require railway facilities to develop these powers, and therefore they need not be considered in discussing this subject.

Mr. MEIGHEN: What was the period?

Mr. BALDWIN: All our available water-powers will be needed within Canada in the next twenty-five or thirty years.

Mr. MEIGHEN: I think the hon. gentlemen is a little long in that.

Mr. BALDWIN: Well, I am very generous. I said the power demand at this stage doubled every six years.

Mr. MEIGHEN: On that estimation which I do not counter at all, how much would be within the available transmission range area in Canada?

Mr. BALDWIN: A very much higher estimate was given here to-day by, I think the member for South York (Mr. Maclean); he said 40,000,000 horse power.

Mr. MEIGHEN: That is where the hon. member was led astray. The 40,000,000 is the estimate for the whole Dominion in all its reaches.

Mr. BALDWIN: Inaccessible—

Mr. MEIGHEN: Inaccessible and accessible. That would include the water powers of Labrador, which it would be quite impossible to reach.

Mr. CAHILL: When will we get Labrador?

Mr. MEIGHEN: We never will unless this government moves faster.

Mr. BALDWIN: Twenty-five or thirty years is quite a space in the life time of an individual, but not of a nation. Something has been said to-night about a monopoly. I have a list of companies that certainly are not joined with any monopoly. They are: Chicoutimi Pulp Company, Price Brothers Company, Duke-Price Company, Southern Canada Power Company, Ottawa Hull Power Company, Montreal Ottawa Power Company, Laurentian Power Company, Ottawa Electric Company, and the Canadian International Paper Company. The Southern Canada Power Company I know perfectly well is owned by the people it serves, but the member for Laval-Two Mountains (Mr. Ethier) stated that this was in the merger. No outsiders have any control over that company. I am free to say that these nine companies are not comprised in any merger, nor are they controlled by any of the great power interests that have been mentioned to-night.

New demands are always arising for electric power and, as I have said, not one big power plant has yet been completed before its entire output was sold. This afternoon some conflicting arguments were put forward in regard to that, some members contending that there was a surplus while others were just as emphatic in asserting that there was a shortage of horse-power in Ontario. I do know that boards of trade and other institutions that have any interest in public affairs in 1920, 1921 and 1922 sent resolution after resolution to all the hydro-electric power companies of Ontario asking for the withdrawal of the export of power from the Niagara district to Buffalo, Tonawanda and other places across the line, but this was found to be impossible. I do not think that we could attempt any such withdrawal of export without international trouble arising immediately, and this would be unthinkable, for it would destroy international good will. If we are to guard against such a contingency in the future, we must look after our business now and not commit ourselves to any further contracts for the export of power to our American neighbours. That seems to me quite reasonable.

I have taken pains to secure the best authority on the subject in this country. I was in favour at first of an export tax on power and I asked the member for Vancouver Centre

(Mr. Stevens) if there was anything to prevent our imposing an export tax of $20 per horse-power in case any contract was not being lived up to by the United States. He answered no. That seemed to me to be as good as an embargo. But how could we collect such a tax if under a contract with the United States they took umbrage and said "We will not pay it"? As I have said, to at once cut off their supply of power would bring about a state of war. Now, if for no other reason, I object to the exportation of power to the United States because I do not believe that once vested rights are created we could for a moment entertain the idea of cutting off the supply. For instance, when the city of Chicago, through their drainage canal, commenced to divert water from the Great Lakes they asked for about 4,000 cubic feet per second. It went on and on until they had diverted over 10,000 cubic feet per second; and we have had all the cities in the United States that border on the Great Lakes working to assist us in preventing that diversion, because it operated to the detriment of those cities as well as to the detriment of Canada. But the whole combination of interested people are unable to stop this diversion. Recently the Supreme Court of the United States handed down a decision that the city of Chicago has no legal right to divert this amount of water. The court ordered the city to stop using this amount of water within sixty days and to cut the quantity down to less than half of that amount. All parties who are against this diversion which is seriously affecting navigation by lowering the level of the Great Lakes, hail the decision of the United States Supreme Court as a victory, but does anyone think the city of Chicago will forthwith stop this illegal use of the waters which Canada owns? Experts, lawyers and engineers who know the situation, think that perhaps some time within twenty years they may stop using the waters, but not within sixty days. If they ignore a contract as between two individuals or corporations; if they ignore an international contract in that way, who can have confidence in their adherence to this decision? We know that our water-powers are a great asset to our country, as we have tried to illustrate in a few ways down in the Eastern Townships. We know that all over this country, particularly in the Ottawa valley, industry is languishing. In view of the fact that these international agreements have been ignored, that an illegal diversion has taken place and that there is no willingness to allow even one horse-power to revert back to Canada, I am emphatically against the export of power to the United States unless it be under contract limited to a period of twelve months.

Mr. MEIGHEN: The very large file which was brought down and for which this debate was postponed is not really yet known to or read by the members of the committee. I have not had an opportunity to read it; indeed, I could not do so without absenting myself from here. I am sure nobody else has; consequently I think the minister would be well advised not to delay further with this estimate, or, if he does, to permit the discussion to be resumed when there has been some reasonable opportunity, copies of the file being circulated, for hon. members who are most interested to read it. But if the minister will give a definite statement of policy now, to which the committee undoubtedly is entitled, this may be avoided, and I for one will not insist on any further delay for the purpose of reviewing this file. I will put what I conceive to be the pivotal questions to determine what the policy of the government is. First, is this government prepared to undertake to the House that there will not be issued by this government licenses covering a longer period than a year? Can I get an answer in the affimative to that? I do not see many signs of one, nor have I seen any signs of one in any of the speeches of the members of this government.

Mr. JACOBS: Is it not a case of silence giving consent?

Mr. MEIGHEN: Giving consent to what? To the export?

Mr. JACOBS: For twelve months.

Mr. MEIGHEN: Silence gives consent for twelve months?

Mr. JACOBS: No, to the issuing of no licenses for a longer period than twelve months. Of course I am not talking for the government.

Mr. MEIGHEN: Will the Minister of Trade and Commerce permit that answer to stand for the government?

Mr. PARENT: He has no application before him. He cannot answer.

Mr. MEIGHEN: I am applying now, though I do not know what satisfaction it will be to the House to know after it is done. I am without an answer. This is the second question: Is this government prepared to undertake that yearly licenses hereafter shall not be issued for new industrial purposes in the United States, or new municipal uses?

Now both these questions are clear as day to every member of the government and this House. I will sit down and give the Minister of Trade and Commerce or the Acting Minister of Finance every opportunity to answer, and if I receive an affirmative answer in both cases, personally I shall be content.

Mr. FORKE: Would the right hon. gentleman state that second question again?

Mr. MEIGHEN: The second question is this: Will the government undertake that yearly licenses in addition to those already issued will not be issued for power to be used for new industrial purposes in the United States, or for new municipal uses; that is to say, for purposes that will entail the investment of large capital over there which would be seriously impaired if the license was ever withdrawn?

Mr. ROBB: My right hon. friend who asks this question was himself a member of the government that in 1912 or 1913 gave a license to the Cedar Rapids Company for export.

Mr. MEIGHEN: I admit that, and I am going to say what I think ought to be done. Will the minister answer yes or no to these questions?

Mr. LOW: Is the right hon. gentleman through with his speech?

Mr. MEIGHEN: I am through with the questions, yes.

Mr. LOW: The Prime Minister this afternoon, and also the Minister of Railways and Canals, endeavoured to make the position of the government as clear as possible. I do not think either myself or the Acting Minister of Finance could add anything to what the Prime Minister has already stated.

Mr. CRERAR: Through an inadvertence on my part I was unaware that this discussion was to come up to-day. I was not in the House this afternoon, and I should be glad if the Minister of Trade and Commerce could give me in a word what the position of the government is in the matter.

Mr. MEIGHEN: I was in, and I do not know.

Mr. LOW: If my hon. friend will read Hansard to-morrow he will find that out.

Mr. ROBB: The hon. member for Marquette may be surprised to know that we have a letter from the Minister of Public Works for Manitoba, Mr. Clubb, protesting against the recent tax on the export of power because, he said, it would prevent the Water Power Commission of Manitoba from exporting power to Minnesota and Dakota.

Mr. CRERAR: I am not surprised at all, because I was aware through the public prints that the Minister of Public Works for Manitoba had made representations to the government here of that character. But that does not solve the question. I want to say in all seriousness, speaking purely from the angle of my responsibility as a member of parliament, that the government of Canada—or the people of Canada, if you like, who can only speak through their government in the matter—should have a definite policy on this question of export of power. I think the time has come for that question to be considered and a conclusion reached upon it, and I should like, if I may, very briefly to give my reasons. In respect to this Carillon development, I know very little of it; in fact, I must plead guilty to knowing almost nothing about it outside of what I have learned in the discussion this evening. I was not particularly impressed by the argument advanced by the hon. member for Laval-Two Mountains (Mr. Ethier). The argument in favour of this development that it will bring in some forty or fifty million dollars worth of capital for investment in Canada does not, I am bound to say, appeal very strongly to me. I may hold rather peculiar views upon this question, Mr. Chairman, but one of the things that gives me some concern in my waking moments is that this Dominion of Canada of ours is being rapidly mortgaged to our great neighbour to the south, and I have never overlooked the fact that the person who holds the mortgage ultimately calls the tune. That is the first objection.

The second argument advanced by my hon. friend from Laval-Two Mountains was that this development was necessary to combat a monopoly in Canada. Now where is the monopoly in Canada, and how are you going to combat a monopoly in Canada by exporting power from Canada to the United States? I cannot for the life of me see the force of that argument. There may be a monopoly in Canada—I am not saying there is not—in the region that would be served by this power, but if there is, how on earth can you advance the argument that you are going to break that monopoly by exporting the power to the United States?

Mr. JACOBS: Have we not enough for ourselves and for export too?

Mr. CRERAR: I am going to deal with that in a moment. I am happy to anticipate

what is in the mind of my hon. friend. I say that it is essential that the government should have a policy in the matter. The use and value of electrical energy in satisfying human needs, and in turning the wheels of industry, is only commencing to be recognized. Thirty years ago it was practically unknown. All this vast development has taken place in that short period of time. Not only that, but as the hon. member for South York (Mr. Maclean) has suggested, improvements are constantly being made in engineering science and in the transmission of electrical energy, so that we may reasonably expect within a comparatively few years at any rate, that electrical power will be distributed over far greater distances than are possible at the present time, and with much less loss.

I hold to this policy, and I dare say it is one that may not find support in some quarters of the House. I hold that the great water-powers of Canada are among the most valuable resources that this country retains. Now from the very nature of it, electrical energy on the rivers of Canada can only be developed by a large investment of capital, and I hold absolutely to this principle, that that development should be under public aegis, and should not be done by private capital. I do so for this reason: I recall, if I may give an experience of which I have knowledge, that in the province of Manitoba we had a private power development, the first that was undertaken and carried through in that province. In 1906 the citizens of the city of Winnipeg were paying 16 cents per kilowatt hour for power to light their homes, and were paying about the same rate for power to drive their machinery. The city of Winnipeg thought that rate was too high and it approached the private power company with a view to securing an arrangement for a lower rate. It was unable to make an arrangement with the power company, although it offered them a very advantageous bargain. I think as a matter of fact the power company held out for some ten or twelve cents per kilowatt hour, while the city wanted to negotiate on a basis of eight or nine cents. Failing to reach an agreement, the city of Winnipeg at that time undertook its own power development on the Winnipeg river, and brought that power into the city over a distance of eighty miles, and the day the transformer started to work the rate was three and one-third cents per kilowatt hour, with a ten per cent discount for cash, and it has remained at that point ever since. Not only have the citizens of Winnipeg had in consequence the great advantage of cheaper light and power, but the city by careful management has built up very handsome reserves, and within the last year the revenue from the power made a contribution of $100,000 towards relieving the city taxation. That is an outstanding example, but one that can be duplicated anywhere in this country, and I say that this vast resource, the value of which is only beginning to be realized, should not be turned into private hands for private exploitation. I would have the water-powers in the valley of the St. Lawrence from the headwaters of the Great Lakes to the Atlantic ocean developed by public money. I would not have them distributed and sold by public money, but I would have them made available to every manufacturer and to every city in Canada that wanted to use that power, and I would give it to those manufacturers and to those cities at cost. In that way you would place our manufacturers and our artisans in a much more favourable position to compete with the whole world.

There is one other aspect of this question of the export of power that should receive the most serious consideration of the government. I agree altogether with the argument of my hon. friend from Stanstead (Mr. Baldwin), who stated that within a comparatively few years—I think he put it at some twenty-five or thirty years, and that is a comparatively short period in the history of a country—all this power would be required in Canada. I agree with him. I look forward to the time when this country will have not the eight or nine or ten millions that it has now, but fifty or sixty or seventy-five or even one hundred millions of people, and that will come within the present century, or almost so, I believe. When that time comes, shall we not require all this power, and more, in Canada? And what position are these central provinces of Ontario and Quebec in with respect to the development of power? What other agency is there for the development of power in these provinces outside of the water in your lakes and streams? You can bring in coal from a foreign country, it is true, but you may have that shut off some day, and while you have coal down in the extreme east of Canada the cost of bringing that coal to develop electrical energy, for instance, in the heart of Ontario is very considerable, and I have never had any very great hope that the needs of Ontario and Quebec in the matter of fuel, and particularly Ontario, can be met by the coal mines of Alberta or the mines at Sydney, for the distance is too great. And looking to the future, not to-morrow or the day after to-morrow,

but twenty-five or fifty years from now, that question should give all forward looking Canadians food for thought. Twenty-five or fifty years from now you may be absolutely dependent upon the power generated from your lakes and streams to turn the wheels of industry in this province, which will then have five or six and perhaps ten times the population it has to-day.

Now what do you propose to do under the Carillon project? You propose to give a license to this company to export at least three-quarters of the power that is developed to the United States.

Mr. LOW: Who proposes to do that?

Mr. CRERAR: The promoters of the scheme. I will hasten to set the mind of the Minister of Trade and Commerce at rest at once. I am not suggesting for one moment that the government have fallen before the tempter in this matter—not for a second do I suggest that. I hope they will not. But it is estimated, I understand that 400,000 horse-power will be developed under this project, and that 100,000 of that horse-power will be retained for Canadian manufacturers and Canadian users under certain conditions. The inference is that the balance of 300,000 horse-power will be exported to the United States. That will mean of course the building up of industries in the United States, and if I were a good protectionist in fiscal policy, which I must confess I am not, I think I would be utterly opposed to the export of power to the United States that will permit, for instance, the development of industries that will compete with industries in Canada. I can understand my hon. friends to the right. I have given up almost hope entirely that they will ever see the light in fiscal matters; but I did have some hope with respect to members of the government, and I trust they will give that aspect very serious consideration when they come to consider this application for the export of this power to the United States if it is ever presented to them.

But there is one other point: If you export power to the United States under a contract, or under the proposals that are connected with this Carillon development, will it not be extremely difficult in twenty-five years, or thirty years, or forty years fron now, when the franchise expires, to refuse permission to export the power to the United States? You have not only created, unless you are careful, unless the greatest care is taken in the terms under which these export contracts are made, conditions with respect to the people to whom the power is sold but going even further—and I will refer to that in a moment—this country will find itself in the position, twenty-five or thirty or forty years from now, where it may be very difficult to refuse to allow the exportation of that power to the United States. What then should be the policy of the government in the matter?

Mr. LOW: Will my hon. friend let me ask him a question?

Mr. CRERAR: Surely.

Mr. LOW: Did my hon. friend ever see a copy of the license granting the right to export power? It contains a clause that sets forth very clearly that the license is only for one year, and that the licensees must not enter into any contract which they will be unable to carry out if this contract is not renewed.

Mr. MEIGHEN: Will the minister say he will always use that form?

Mr. LOW: That is the form we are using to-day.

Mr. MEIGHEN: Will the minister say he will always use it?

Mr. JACOBS: Does my right hon. friend expect the minister to be there always?

Mr. MEIGHEN: He is not earning a much longer time to-night.

Mr. CRERAR: That gives a certain protection I am quite free to admit. But this development is in its infancy in Canada. I venture to predict that within the next fifteen or twenty years there will be opportunities presented for the development of all the water-power that may be running loose in Ontario and Quebec for export to the United States, and that is why it is necessary to settle on some definite policy. If power is exported to the United States in large volume I venture to offer this suggestion to the government: That they should make it clear, as a government, not only to the purchasers of that power in the United States in the person of private parties, but to the government of the United States, that this country reserves the right to withdraw that power when it sees fit to do so. Then you put the question beyond the possibility of any international complications later on. You must bear this in mind—that the United States is a country of 110,000,000 people alongside of us; it has over ten, yes almost twelve times the population we have got. American capital comes in here; it develops this power; it takes it across, and very often takes it across for use in industries allied to the capital that is

invested here; and that continues for twenty-five, thirty or forty years. Thus you may have something in the nature of a vested interest grow up that would be very difficult to break; and I would like to see, for the benefit of those who may be guiding the destinies of Canada twenty, thirty or forty years from now, after we are all gone, something on record with the government of the United States putting that aspect of the question beyond any manner of doubt whatever when the time comes that Canada requires the power for her people.

Mr. LOW: What stronger notice can be given than the words embodied in the act itself? The license is only for one year.

Mr. CRERAR: That is true, but I believe that in the case of this project the minister hesitates to give that assurance. However, aside from that I offer my suggestion to the government, in all good faith, and not in any captious way because it does seem to me the matter is one of the very greatest importance that could probably be considered in this House.

I do not know that I have any further remarks to make on the question we are discussing. What I have said is fragmentary because it has been said almost wholly on the spur of the moment. I do not wish to place myself on record as being opposed to the export of power but I do wish to emphasize this point: It should be made clear beyond any question of doubt, to the people who are buying the power and I think it should be made a matter of record with the government at Washington, that this country reserves the right to withdraw this power whenever the government of the day in the future thinks it is necessary for the Canadian people.

Mr. ROBB: I do not think there is any difference of opinion on that point.

Mr. MEIGHEN: I am afraid the hon. member for Marquette (Mr. Crerar) was scarcely careful enough in the last sentence. That is why his statement was seized on by the Acting Minister of Finance to say there was no difference of opinion. I have no doubt at all that in anything the government purpose doing there will be some clause about the power to withdraw, but I know this, that if they do what is only too plainly in their minds the withdrawal will never be within the practical power of this country; and I am very suspicious from the conduct of ministers to-night that they do contemplate a further exportation of power from the Carillon falls, and exportation under circumstances that they cannot possibly ever recall. Hon. members of this House could not but have witnessed the hesitating, vacillating way in which ministers arose and refused one after the other—four of them altogether—the House any assurance at all that meant anything on this important matter. The questions I put and put repeatedly are plain and clear and only two. I asked the government if they will assure the House that they will not grant the export of further power from Canada other than on a yearly license. I cannot get an affirmative answer. Second, I asked them if they will agree that even on a yearly license they will not grant licenses for further export of power to be used for new industrial or municipal purposes over there.

Mr. ROBB: And I directed the attention of the House and the country to the fact that the gentleman who asked that question was himself a member of a government that gave the right to export power.

Mr. MEIGHEN: I know I was, but is that an answer? Could a minister possibly evade the question in any more suspicious form? Certainly I know the government of which I was a member—the government before that again, and this government—have granted up to now yearly licenses for the export of power. I am not prepared to say that the granting of these licenses has not run to too large a total—I am not prepared at all to say that—but I realize that in 1925 we know a great deal more about the use of power and the rate of expansion than we knew in 1921, than we knew even in 1922 and 1923 when this government acted. But I am not speaking in any spirit of criticism of the past either as to this government or any government. We have to learn as years advance, but I do want an assurance as to the future that this government does not purpose to issue licenses other than by the yearly permit. In the past none has been issued other than by the yearly permit and we want an assurance that they will not change that. What is the inference the House must draw? Is this House going to infer from the conduct of the ministers that they take the attitude that they have not considered this matter?

Mr. ROBB: My right hon. friend will agree with me in this that under the act as it is now we have only the right to export for one year. If we decide to export for any further period, which is not contemplated at the moment—that has been made clear two or three times—we must come to parliament for that purpose.

Mr. MEIGHEN: No, the very contrary has been made clear, and the very contrary

is the fact. The act does not prohibit the government from doing it. It is the regulations, which they can change at any time, which prohibit them. That was made clear by the Minister of Railways. He may be wrong, but I think he is right. He said as far as this statute was concerned, which was passed years and years ago, this government could grant a license for a longer period than a year, but that under the regulations pursuant to the statute, they could not. I am putting it to the minister that that was his statement. The regulations are made by order in council and can be changed at any time. Now, if I have misstated the remark of the Minister of Railways, he will correct me. I hope the Acting Minister of Finance accepts the rebuke implied by the minister's silence.

Mr. JACOBS: I do not think that is quite right. The minister has just taken his seat.

Mr. MEIGHEN: I explained it as soon as he sat down.

Mr. JACOBS: No.

Mr. MEIGHEN: I will do it again. Would he assure the committee—

Mr. PARENT: It is a case where silence gives the answer.

Mr. MEIGHEN: My hon. friend knows it is right.

Mr. PARENT: Yes.

Mr. MEIGHEN: What I have stated is correct.

Mr. PARENT: Yes.

Mr. MEIGHEN: He stated that the statute gives the government power to export, and does not limit the government to the yearly licenses plan, but that the regulations made thereunder do limit the government, in that respect. This I apprehend is the law and I am confirmed in this by the member for Quebec.

Mr. PARENT: Not Quebec.

Mr. MEIGHEN: I mean the member who has just spoken. I have no doubt the minister states the law correctly. The regulations are made by order in council, and this government can change those regulations at any moment, and unless parliament has an assurance that the government does not purpose doing so, and purposes abiding by the regulations that now exist, then the whole matter is just in the hands of the government and all our debate is wasted. Are we not entitled to an assurance? The minister cannot escape responsibility for giving an assurance by the assertion he has just made that they have to come to parliament, because they do not. Now in the failure even to get the assurance that they will abide by the yearly license system, and the failure still further to get the assurance that they will not issue licenses for export of power to be used for new purposes, industrial or municipal, the whole question is before parliament, and I propose to address myself to the discussion. The only policy the government appear to have is to get away with whatever they can, so long as the outcry in the country is not too loud, and, I shall start the outcry to-night and state where I stand. I do not believe that anything but the yearly license system should be followed by any government and consequently I think the time has come when we should cease to increase the export of power for any new purpose of any kind. I hope the government will follow the example I have given and make a clear, definite commitment on this point. I hope the debate will not end until they do. The hon. member for Marquette (Mr. Crerar) has advanced three reasons for his opinion. I do not think his last sentence expressed his real opinion. It was not in accord with his own opinion, and the same with regard to the remarks of my hon. friend from Stanstead (Mr. Baldwin). I will give my reasons for the assertion. First of all, I shall speak in criticism of the course we have pursued. I do not think under the circumstances any government, however wise and gifted with foresight, would have done otherwise. We now license the export of some 290,000 horse-power, but as respects quite a share of that no vested rights have grown up and no difficulty presents itself in reducing the total. For example, as respects the Bridge River Power Company of British Columbia, the cancellation of that license could not be followed, so far as I am aware, by the slightest objection on the part of any industry, and some of the other licenses are not being lived up to.

Mr. ROBB: What year was that license issued?

Mr. MEIGHEN: The Bridge River license was given in 1921 and renewed since that time. If it was not given then, it was given too long ago. The purpose of the interruption is hard to find.

Mr. JACOBS: Was it under the present administration or under the administration of my right hon. friend?

Mr. MEIGHEN: Under both. If it was not under both it is too long ago. The only license given under our administration ex-

pired on the 31st March, 1922. So I say again I do not see what the purpose of the interruption was. It takes an awful small shadow for members of the government to get behind. So that I say we have reached a stage where, although licenses have been outstanding and may be to-day, totalling about that sum, the total of our export responsibilities can be reduced and I do not make complaint of any administration, either the Laurier administration or any other, for inaugurating the policy and pursuing it up to this time.

Mr. LOW: When the government of which my right hon. friend was a member granted a license to the Cedar Rapids Power Company in 1915 for 100,000 horse-power—

Mr. MEIGHEN: It was in 1912, I was told.

Mr. LOW: It was increased in 1915. When his government issued the license for 100,000 horse-power was my hon. friend aware of the length of the contract that the Canadian company had made with the American company? I am told there is a 99-year contract in existence. Was the government of my right hon. friend aware of that at the time?

Mr. MEIGHEN: I do not know whether there was such a contract or not. I do not know anything about the issue of the license, and I do not think I was a member of the government which issued it, but I would like to know where that comes in. If I were making an attack upon any administration for the issue of licenses, the matter might be in point, but really I do not think it would be in point. All the government is responsible for is what it did, and if the Cedar Rapids Company made a contract for a period, extending beyond the period the government took responsibility for, that responsibility is theirs.

Now perhaps we can get to the point. Recent years have been illuminating as respects the value of power; still more illuminating as respects the multiplication of its uses. The asset that Canada has in its water-power could not be appreciated by any man however gifted, even four years ago, to say nothing of sixteen or twenty years ago, as it can be appreciated to-day. The hon. member for Stanstead stated that the experience of those years has shown that the use of power doubles every six years. I had thought the figure was seven, but at all events it is in the neighbourhood of seven. Now in Canada there is no 40,000,000 horse-power that can be taken into account as available for use in this Dominion. I suppose in one sense there are

millions of acres of land available in Canada, if we count what is in Melville island. That is in the Arctic circle, and much of the water-power is of a character comparable with that, that is when the figure 40,000,000 horse-power is used. The best authority on that subject in this Dominion, he who has far the most to do with it, has, in a paper which he has written, estimated that the available horse-power in Canada is not 40,000,000 but 18,000,000, that is what is within transmission range of our population, and that as respects Ontario and Quebec the available water-power within transmission range is only 12,000,000 horse-power. This power that we are speaking of, referring to Carillon, is, of course, for use in Ontario and Quebec, that is for Canadian use. To-day there is developed in Ontario and Quebec something like 2,500,000 horse-power. I ask the hon. members now to consider how long it will be, with a doubling every six years, before the whole available power of Ontario and Quebec is absorbed in this country. If we take the whole Dominion, the whole 18,000,000 horse-power available with 3,500,000 horse-power developed now, and if we take the rate of increase of the last four years and come to the conclusion that the hon. member for Stanstead (Mr. Baldwin) comes to or even to the conclusion that it is doubled every seven or eight years, we find the whole horse-power of this country absorbed within a space of twenty to twenty-five years. Does anybody imagine that any American concern is going to invest in the United States the capital required for the installation of industries to use that horse-power if it knows that horse-power is going to be withdrawn as it is required for use in Canada and all withdrawn within twenty-five years? There is not an American capitalist outside of bedlam who would consider that for a moment. There may be American capitalists who will sign agreements that the power is withdrawable; but if they do, they know it is withdrawable on paper, but that never in actual fact can it be withdrawn. If the government sign any contract or pursue a policy which encourages the utilization of this power within the United States, they do so knowing that we shall require the power year by year and need to extract or withdraw it year by year from them,—the whole of it within a quarter of a century, and, as regards the Carillon power, the whole of it within fifteen or even twelve years. They know they will not be able to do so, no matter what may be the letter of the contract they enter into. Does the minister dispute my argu-

ment? Though so far as any writing or law goes, we can withdraw the whole 250,000 horsepower that is going over there now, does he think we could do it practically if we set to work?

Mr. LOW: No, because some of these contracts that have been entered into are for ninety-nine years.

Mr. MEIGHEN: Does he think we could as regards those that have no ninety-nine or nine or two year terms?

Mr. LOW: So far as the government are concerned, they can do so at the renewal of the leases.

Mr. MEIGHEN: The minister knows as well as he is sitting in his seat that he could not withdraw a bit of the power. Let him test it out by way of example and see where he is going to land. We have some experience in this matter. We remember the days towards the end of the war, the corner we were in then and the pressure upon us. We were face to face with facts. Anyone who was through that experience knows where he is going to land when he attempts to withdraw power on the basis of which industries have developed and get their life.

Mr. CAHILL: What are the facts that the leader of the opposition is speaking about?

Mr. MEIGHEN: They have been related by the hon. member for West York (Sir Henry Drayton). We were face to face with the fact that we could not withdraw power when industries in Ontario and Quebec were starving for power.

Mr. CAHILL: Because a contract had been signed.

Mr. MEIGHEN: No, because there were yearly licenses issued. The government had made no contract. The government was perfectly free to withdraw the license.

Mr. LOW: Why did my right hon. friend continue to issue licenses if that was the case? In 1921, he issued one to the Bridge River Power Company.

Mr. MEIGHEN: We were past that time. The minister says that we should not have issued licenses in 1921. Perhaps we should not. Certainly if we knew then what we know now, we would not have. As a matter of fact, this talk of the power of 1921 is all moonshine for it does not exist to-day or the license can be withdrawn on the merest notice, because the power itself has never been developed. All this talk about 1921 is all nonsense. It is only an attempt to draw a herring over the trail. The question is: What should be the policy of Canada as to the future? That, however, is the only question on which we can get no word from the government. Every dollar that goes into a power development, of course, is spent in Canada, no matter whether it is borrowed from another country or not. But for every dollar that is spent in a power development, six dollars in any case and usually more are spent in the building of industries that are to use that power. While 13 per cent goes in capital investment for the power development, 86 odd per cent goes in capital investment for the industrial structures that use the power. As regards employees, after the plants are down, it takes just 2.2 per

11 p.m. cent to run the power plant and 97.8 per cent to run the plant that is built on the power. Does the minister think he is standing true to Canada if he fails to assure the committee that we are not going now to launch further into a policy, enter a new course altogether that we did not even pursue in years gone by, a course which will have the effect of draining the very life blood of this country? With the export of power this country has tried, a further export in the light of the facts to-day is simply to mortgage our future and to commit a crime against ourselves and posterity. Will the government answer to-night that they do not purpose to depart from the form that has been used even in years when we did not know what we know to-day as respects the value of this asset? Will they give us that assurance? Will they give us as well the assurance that they are not going to export power under conditions which will result in the building of new industries over there or the utilization for new municipal purposes over there of the power that they license? If they do not, certainly there should be some definite expression of opinion on the part of parliament as to the course the government pursues.

Mr. CAHILL: When did the right hon. gentleman become a convert to the new policy which he proposes to-night, that no power should be exported?

Mr. MEIGHEN: Conversion with honest-minded people is a matter of growth. Suffice it to say that I am there, and I hope the hon. member for Pontiac gets there very soon.

Mr. CAHILL: That is about the answer I expected. But my right hon. friend is trying to badger the government into an immediate answer. He says: Why not give us an answer now?

Mr. MEIGHEN: I stated my position.

Mr. CAHILL: My right hon. friend gave us an answer offhand. Did he consult with his colleagues about this answer?

Mr. MEIGHEN: Not at all.

Mr. CAHILL: They have all independent action?

Mr. MEIGHEN: I think they are just as independent as my hon. friends opposite.

Mr. CAHILL: My right hon. friend would like to leave the impression that he is trying to speak for the whole Conservative party.

Mr. MEIGHEN: He can take that assurance.

Mr. CAHILL: He wants the government also to give him an answer and he is badgering them to do so to-night. Have they not got the same right to consider this as my hon. friend and allow it to develop in their minds?

Mr. MEIGHEN: I would be sorry to arrest any development in their minds.

Mr. CAHILL: My hon. friend is jumping at the conclusion that the government of Canada has the right to do everything in regard to this power. The water-powers of Canada are vested largely in the provincial governments.

Mr. MEIGHEN: If so, the government should have no difficulty in answering the questions.

Mr. CAHILL: My hon. friend jumps at conclusions—something which it is not good even for governments to do. He did so in 1915 or 1916, when he gave this lease for 100,000 horse-power, and he did it on several other occasions when he rushed this country into various commitments.

Mr. MEIGHEN: I did not give the lease.

Mr. CAHILL: My right hon. friend takes the ground that this matter is for parliament to decide, and he thinks we should give a decision to-night regardless of provincial rights. But that is no reason why the government should pay any attention to him whatever; indeed I think they will be displaying good judgment in ignoring his demand.

Mr. MEIGHEN: How will the provincial governments be affected by an affirmative answer by the government to both questions?

Mr. CAHILL: Are not the water-powers of the country largely vested in the provinces? If the provinces want to export hydro-electric power, is my right hon. friend ready to say that this parliament should interfere and prohibit such export? Of course, he might do that.

Mr. MEIGHEN: The question does not arise, because the provinces have spoken and say they do not want the power exported.

Mr. CAHILL: They are willing to export it.

Mr. MEIGHEN: They do not want this export.

Mr. CAHILL: My hon. friend said they had a request from the province asking to export power.

Mr. MEIGHEN: No, protesting against the export tax.

Mr. CAHILL: Is Ontario protesting against it?

Mr. MEIGHEN: Certainly.

Mr. CAHILL: On what grounds, that it is provincial property?

Mr. MEIGHEN: Not at all.

Mr. CAHILL It is on that ground that they question the right of the Dominion government to interfere. I am not saying that my right hon. friend's argument, so far as the future use of power in Canada is concerned, is not right. It is just possible that we should not allow the export of power. But I am saying he is making the wildest kind of guess in asserting that all the power of the Ottawa river and its tributaries will be developed in the next ten or twelve years, because to-day power can be had right here at less than $20 per horse-power.

Mr. MEIGHEN: I did not say that.

Mr. CAHILL: He said within ten or twelve years.

Mr. MEIGHEN: I said within transmission line area inside fifteen years.

Mr. CAHILL: Let us make it fifteen years.

Mr. MEIGHEN: That is right.

Mr. CAHILL: I will allow him to change his mind. There is lots of power to be developed along the Ottawa river within a distance of a hundred miles both ways from Ottawa. My right hon. friend thinks this is all going to be used within a few years. But to-day power is offered for less than $20 per horse-power right here in Ottawa, and he can come to my constituency and get it at $12 per horse-power.

Mr. JACOBS: Not political power I hope.

Mr. CAHILL: That is the great trouble with the Carillon development; it is political in his mind.

Mr. MEIGHEN: My hon. friend from George Etienne Cartier (Mr. Jacobs) refers to the Carillon power.

Mr. CAHILL: The province of Quebec maintains that they have the right to levy an export charge on power generated in their province, so they can control the situation without my right hon. friend's worrying about it. But he seems to have run into a mare's nest. He has found something, or imagines he has.

Mr. MEIGHEN: I think so.

Mr. CAHILL: And his friends in Montreal, who have practically complete control of all the other power that is now developed, are very much opposed to anything which might lead to opposition. My hon. friends from Marquette (Mr. Crerar) and from West York (Sir Henry Drayton) made much of the impossibility of correcting the present price by exporting power. It would be possible by having a clause inserted in the agreement that this 100,000 horse-power will have to be sold in Canada at a reasonable price. Would it not be more to the benefit of the surrounding country to have that power sold at a reasonable price than to have those now in control of the water-power of Quebec charge practically what they like in order to exclude competition?

Mr. CRERAR: Mr. Chairman, I would say to my hon. friend that if this power is to be developed and used in Canada, his argument applies. But the argument of my hon. friend from Laval-Two Mountains (Mr. Ethier) to-night was the very reverse; it was all in favour of exporting this power, and he suggested that only 100,000 horse-power would be retained in Canada. That is the argument I was dealing with.

Mr. CAHILL: It might regulate competition to a large extent if the surplus power not required now were exported. But my right hon. friend also seemed to make a point of the fact that this is a yearly lease. Now, I cannot see why a yearly lease would be as good as a ten, twenty or thirty year lease. It is taken for granted naturally that if the lease is from year to year it is practically a perpetual lease, and it is so regarded apparently by the people who are using it. That applies in my own province to timber limits, where a yearly lease is regarded as a perpetual lease. On the other hand, a lease for twenty, thirty or forty years would be terminable and the people themselves would have a chance to make other arrangements. I think a terminable lease for a period of years would be much safer than a yearly lease, because at the end of the term you would expect to get the power back.

The other night my hon. friend from West York (Sir Henry Drayton) made much of the steam plant in Toronto. He will find that there is a steam plant right here in Ottawa, and there is a surplus of power being developed and used here at the present time That steam plant is operated to take care of the peak load, which can be done much cheaper than by increasing the capacity of the hydro-electric plant. So a steam plant is not so harmful as my hon. friend tries to make it out to be. If the overhead is less than that for the development of the peak load by other means, why steam power is used, and those cities in the United States which are taking our power would probably find themselves in a few years in a position where they could use steam power in lieu of the power taken under these contracts. But, as I say, I am not favouring export nor am I opposing it; I have an open mind; but I did wonder how the leader of the opposition came to this conclusion that made him so insistent on a yes or no answer to-night, an immediate answer on what he himself says is an "all-important question." Unless they do that he is going to start something. And he did, and he finished it.

Mr. MEIGHEN: Will the member give us an estimate of how long it will be before he can come to a conclusion?

Mr. CAHILL: I have already concluded.

Mr. STEVENS: Mr. Chairman, I brought this question to the attention of the minister last Friday. Unfortunately I was out of the House to-day attending the aimless Ocean Rates committee and therefore have missed most of the discussion. But since last Friday I have carefully looked up the act under which the government is authorized to export this power, and also the regulations. I want to present to the government a viewpoint prompted by the remarks of the hon. member for Pontiac (Mr. Cahill). The legislation which empowers the government to act in regard to the export of power was passed in 1907. I think every hon. member will admit that the development of electrical energy in 1907 and

its general commercial use was in such a condition of partial experiment—I was going to say, infancy—that it is not a safe guide for our actions to-day. In other words, the problem of to-day is the outgrowth of a number of years; it is one of those things that develops gradually, perhaps unnoticed, until we get to a point where there is some sudden and large development in view, and then we come to a realization of the direction in which we are heading. That condition is before us now. Here is a huge proposition facing Canada—I am going to refer to it in a little more detail in a moment—and Canada, not only the government, is now determining what its course and its policy will be in a few years. I therefore suggest to the government that this whole busines with respect to further licenses for the export of power should be held in abeyance until the act under which we are at present working can be carefully surveyed and studied by parliament. I do not think it can be done this year, but the government should make a survey of the matter during the recess and next session we might revamp the whole act and bring it up to date. Let me review the act very briefly. It is very brief and general in its terms. It is 6 and 7 Edward VII, chapter 16, assented to on April 27, 1907. It has some very simple provisions. First, no person shall export power without a license. No person shall construct a power line for export without a license. The Governor in Council—this is an important provision—may grant licenses upon such conditions as he thinks fit, and such licenses shall be revocable upon such notice as the Governor in Council may deem reasonable. In other words, the whole thing is placed in the hands of the government and the Governor in Council. Then it provides that such licenses may be limited as to quantity; it does not say "shall" be limited. The government is empowered to-day under this act to grant a 120 year lease—issue a 120 year license—or a 99 year, or a 40 or a 20 year license. I cite 120 for a certain reason which probably is better understood by the government than by most members. Then, the Governor in Council may make regulations not inconsistent with the act, and so on. Now, there are certain regulations that are also not up to date; they were adopted the same year that the act was passed, as the date upon those I have in my hand indicates. I want to refer briefly to the regulations. One clause refers to the quantity proposed to be exported; it must be shown in the license. There is another clause, an important one, which provides that the license shall be revocable at the will of the Governor in Council if the licensee refuses or neglects to comply with any of the conditions from time to time imposed by the Governor in Council. At once you see that the revocability, to use the term of the license, depends on whether or not the licensee violates the conditions that are imposed upon him. In other words, if he observes the conditions his license is not a revocable license, so far as that particular provision is concerned. Then it says that if the electrical energy, gas or fluid is required for the use of Canadian producers in Canada, any such license shall be revocable upon such notice to the licensee by the Governor in Council as the Governor in Council deems reasonable in such cases. What does that mean? If there seems to be a need of power in Canada, then it is the wish or the will or the whim of the Governor in Council which must determine whether or not the license shall be cancelled. Under this regulation the matter is entirely in the hands of the government.

Mr. GRAHAM: Of course governments have to carry on between sessions of parliament, and there is no other power to cancel but the Governor in Council. It is possible that action could not await the meeting of parliament.

Mr. STEVENS: Quite true. I am not saying this is wholly wrong; I am simply pointing out the facts. Both the regulations and the act are of a character that require careful revision. The other clause I desire to refer to is this:

> Where a supply of electrical energy is provided in any part of Canada by the contractor for export and home consumption, then the price charged to any person or company in Canada by the contractor shall not exceed the price at which the electrical energy is sold by the contractor for export in like quantities under similar circumstances.

Now, I understand a contract was entered into by one of the power companies many years ago under which power is being exported to the United States at $12 per horsepower—I am subject to correction, but I think I am stating it correctly—whereas the same company is selling power in Canada at double or treble that amount. They could not sell in Canada at the figure to-day; it is an old contract. The Governor in Council is empowered to say to that company: You must sell your power in Canada at the same rate as you do for export. The government will not suggest for a minute that they could or would make any such suggestion to the Hydro—for I think it is a subsidiary of the Hydro which is affected in the case to which I refer. That clause in the regulations, there-

fore is of no value where the contract price is below what is a reasonable figure for the sale of the power.

Mr. GRAHAM: There is a distinction to be made between companies who entered into contracts before this law was passed and those who did so subsequently. The former were not supposed to presume that such a law would be passed, although of course theoretically they are subject to it if the government wished to make it applicable to them. But is it reasonable to suppose that any company that entered into a contract after the law was passed in 1907 would know that they would be subject to the terms of that statute at any time that the Governor in Council thought it necessary to enforce the regulation providing for a limit of one year.

Mr. STEVENS: That is quite true. I am mentioning this not by way of complaint or criticism of the government, but rather to lay before the committee the difficulties which undoubtedly have developed and to offer a warning against a continuance or increase of those difficulties. I want to say a very few words in regard to the present situation. I admit frankly that necessarily my information is not very definite, but I think it comes from a sufficiently high source to justify my offering it to the committee. There is in existence to-day, I am told, a very large and powerful syndicate of American and Canadian capitalists who are desirous of developing a considerable amount of electrical energy and a large number of hydro-electric powers in eastern Canada for the purpose of supplying power to the United States and eastern Canada. The idea is to develop it on lines that will ensure to certain sections of the United States an ample supply of power. Involved in this is the American interest in the international waterway so I am told. Now then we ought to be very careful how we proceed. I am also informed that the first unit they desire to develop is the Carillon power; that is to be the first in a number of units of power development. They are asking —this is in their programme, so my information goes—for 400,000 horse-power from the Carillon development, whereas it is well known, so I am also informed by competent engineers, that the maximum to be developed from the Carillon power will be 200,000 horse-power. If that is the case, they are seeking to tie the country to an export of 400,000 horse-power, the balance of which will have to come out of some other power plant in some other section. This, I believe, is fairly near to the mark. If it is near to the mark, then I say it behooves the government of Canada to pause before they become a party to it. The issuing of a permit or the entering into of an agreement which will obligate this country to the export of power for any given period of years to my mind is a very, very serious menace to the industrial future of this country, a most serious menace, and I really do not believe that the government or parliament or the people of Canada appreciate how serious it is. I do not think we can understand it until we have given it a great deal more study than we have at the present time. It is beginning to filter into our minds through the reports that are made by engineers. I admit that many of these reports are conflicting, but some of them are alarming, and some of them are exceeding significant in the evidence and the data they produce. Therefore I again put it to the government that I think it would be a fair statement for them to make to parliament that nothing will be done for one year, or until parliament meets again, until the whole question of power development and power exportation can be fully studied and the legislation which is now on the statute books be revised and brought up to a point where it will properly and adequately safeguard Canada's interests. I do ask the government to-night to stay its hand in regard to any agreement, and in regard to the issuing of any license or the entering into of any understanding with any company that will commit this country to participation in this great scheme which I have not the slightest doubt from the information I have is already well under way and in a stage of fairly advanced development.

Mr. MACKENZIE KING: I may say the government have already taken that position.

Mr. STEVENS: I am very glad to hear the Prime Minister say that. Do I understand that the government's position is that they will do nothing for a period of one year until parliament has had an opportunity of studying this problem, which I think is the proper course to pursue?

Mr. MACKENZIE KING: The government has stayed its hand for many months in this matter, and it does not intend to proceed with any haste whatever.

Mr. STEVENS: I want to say to the Prime Minister—and I am not captious at all, I welcome his observation—but I would welcome much more the assurance that nothing will be done along the line I have indicated, that is in committing this country to anything more than the bare annual license.

I add to that, Mr. Chairman, and I put this to the Prime Minister, it is what I stated the other evening, and what I have already repeated to-night, that within the period of the last twenty-five years, and the last twenty years in particular, there has grown up a condition which was not foreseen when this act was passed in 1907, under which the government permits licenses to be issued for the export of power. Therefore I say to the Prime Minister further than what I have already stated, I believe the time has come, and we are warned by present events, when we should refrain from issuing even any further licenses for export, and in saying that I am not condemning the government for the licenses that have been issued or criticizing the government of Sir Wilfrid Laurier or the Conservative government that followed in any sense; I am not criticizing any government, but I say that conditions are such that we are warranted as a parliament, and the government is the executive of parliament, in staying our hand absolutely from issuing any further export licenses.

Mr. MACKENZIE KING: I might say that since the government has been in office, at no time has a license been issued beyond a period of one year. That is the policy upon which the goverment has been proceeding, and that is the policy upon which it intends to proceed.

Item agreed to.

Mr. STEVENS: I would respectfully suggest that this has been a very full day both here, where we have been discussing a very important question, and in the Ocean Rates committee, where we had two sittings, and I think we could very well now rise and report progress.

Mr. MACKENZIE KING: I had an understanding with the right hon. leader of the opposition (Mr. Meighen) that he would allow us to call an item in the estimates of my hon. friend the Acting Minister of Finance.

Mr. STEVENS: Whatever understanding there was will certainly be carried out.

Finance—salaries, $341,840; contingencies, $40,000; Inspector General of Banks, salaries and contingencies, $50,000.

Mr. ROBB: There is a reduction of thirty-six employees, and a reduction in amount of $27,500.

Mr. STEVENS: I might say to the minister that we desire to discuss the Auditor General.

[Mr. Stevens.]

Mr. ROBB: I will allow that later, if we can pass this item.

Item agreed to.

Progress reported.

On motion of Mr. Mackenzie King the House adjourned at 11.30 p.m.

Wednesday, May 20, 1925

The House met at three o'clock.

AGRICULTURE AND COLONIZATION COMMITTEE

Mr. W. F. KAY (Missisquoi) presented the fourth report of the select standing committee on Agriculture and Colonization, and moved concurrence in the report.

Sir HENRY DRAYTON: Will the hon. gentleman explain?

Mr. KAY: It is a recommendation that the committee be given leave to sit while the House is in session, and that the minutes of evidence may be printed if considered advisable.

Motion agreed to.

PRIVATE BILLS
FIRST READINGS

Bill No. 139, from the Senate, for the relief of Birdie Cohen Gould.—Mr. McMaster.

Bill No. 140, from the Senate, for the relief of Walter Roderick Wilson Robinson.—Mr. Elliott (Dundas).

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

PETERSEN CONTRACT—MR. LAFLEUR

Mr. DOUCET:

1. When did Mr. Lafleur first commence work on the Petersen contract?
2. When did his work cease?
3. When was Mr. Symington first retained in the place of Mr. Lafleur?
4. Why was Mr. Lafleur displaced by Mr. Symington?
5. What is Mr. Symington's per diem allowance when the committee is in session?
6. Is he allowed a per diem allowance when the committee is not in session?
7. If so, what is that allowance?
8. Is Mr. Symington still a partner of A. B. Hudson, Esq., K.C., M.P.?

Hon. Mr. LOW:

1. December 3, 1924.
2. December 11, 1924.
3. Was retained 3rd March, 1925, but not in place of Mr. Lafleur.
4. He was not displaced.

5, 6 and 7. $200 per diem for time engaged in inquiry.

8. Yes, but Mr. Symington before accepting this employment explained that he would have to get leave of absence from his firm, as they could not share in any fee from the Dominion government, and Mr. Hudson has no part or share in any fee to be paid to Mr. Symington by the Dominion government.

NETLEY CUT

Mr. BANCROFT:

1. When was the canal, known as Netley cut, constructed between the Red river and Netley lake?
2. For what purpose was it constructed?
3. What amount of money has been spent, to date, in an attempt to close up Netley cut?
4. What is the estimated cost of completing the work of closing up this canal?

Hon. Mr. KING (Kootenay):

1. October, 1913.

2. To permit of Netley lake being entered by small boats and flat-bottomed scows. The petitioners represented that there is considerable cordwood and hay on the shores of and adjacent to Netley lake, that settlers and others interested experienced difficulty in having taken out.

3. $5,599.53.

4. $3,500.

PUBLIC DEBT

Mr. TOBIN:

1. What was the net debt of Canada for the financial year ending March 31, 1920?
2. What was the increase or decrease of the debt during that year?
3. What was the net debt of Canada for the financial year ending March 31, 1921?
4. What was the increase or decrease of the debt during that year?
5. What was the net debt of Canada for the financial year ending March 31, 1922?
6. What was the increase or decrease of the debt during that year?
7. What was the net debt of Canada for the financial year ending March 31, 1923?
8. What was the increase or decrease of the debt during that year?
9. What was the net debt of Canada for the financial year ending March 31, 1924?
10. What was the increase or decrease of the debt during that year?
11. What was the net debt of Canada for the financial year ending March 31, 1925?
12. What was the increase or decrease of the debt for that year?

Hon. Mr. ROBB:

1. $2,248,868,623.79.
2. $674,337,591.35 increase.
3. $2,340,878,983.69.
4. $92,010,359.90 increase.
5. $2,422,135,801.73.
6. $81,256,818.04 increase.
7. $2,453,776,868.74.
8. $31,641,067.01 increase.
9. $2,417,783,274.88.
10. $35,993,593.86 decrease.
11. (Est.) $2,419,843,206.88.
12. (Est.) $2,059,000 increase.

NOMINATED PASSAGE SCHEME

Mr. CAMPBELL:

1. How many agricultural workers have been brought to Canada under the nominated passage plan from its inception to the present time?
2. What was the total cost to Canada of passage money for these immigrants?
3. How much of this is still outstanding?
4. How many juvenile immigrants have been brought to Canada during 1923, 1924 and up to date in 1925?
5. What was the total cost to Canada?

Hon. Mr. ROBB:

1. Number brought forward under nominated passage scheme to February 28th, 1925, 2,961.

2. Department's share of loans made and repayable, $118,707.35.

3. $92,626.75.

4. To February 28, 1925, 4,768.

5. $120,432.65.

ANTELOPE PARK

Mr. McTAGGART:

With reference to what is known as Antelope Park, situated in the vicinity of the town of Maple Creek, Saskatchewan:

1. How many acres of land are included in this park?
2. What is the location of the lands comprised in this park?
3. Under what department are they administered?
4. To whom are they leased and for what purpose?
5. What period does the existing lease cover?
6. Is the department contemplating issuing a lease for this park covering a period of twenty-one years?

Hon. Mr. STEWART (Argenteuil):

1. Seventeen sections, or approximately 10,880 acres.

2. The north half of section 31, township 9, range 25; sections 6, 7 and 18, township 10, range 25; the north halves of sections 33, 34, 35 and 36, township 9, range 26; and sections 1, 2, 3, 4, 9, 10, 11, 12, 13, 14, 15 and east half of section 16, township 10, range 26, all west of the third meridian.

3. Department of the Interior.

4. Not held under lease.

5. Answered by No. 4.

6. The department has under consideration an application for the use of this land for community grazing. No term of years has been decided on in this connection.

QUESTION PASSED AS ORDER FOR RETURN

PERMANENT FORCE—PAY AND ALLOWANCE

Mr. BLACK (Yukon):

1. During the year 1924, prior to August 1st, what rate per day was paid to the following officers, non-commissioned officers and men of the permanent force of Canada, namely, general of various ranks, colonel, lieutenant-colonel, major, captain, lieutenant, second lieutenant, regimental sergeant-major, company sergeant-major, sergeant, corporal and private?

2. What was the value in money of any per diem allowance paid or furnished each of said ranks in addition to pay during said period?

3. What rate of pay and rate of allowance has been paid each of said ranks since August 1, 1924?

BANKING AND COMMERCE COMMITTEE

On the Orders of the Day:

Hon. H. H. STEVENS (Vancouver Centre): I notice that the committee on Banking and Commerce has not, through its chairman, presented a report to-day. I would like to inquire if there is any particular reason for it. And is it not a rule of the House that when the chairman of a committee is directed to present the committee's report to the House, that report shall be presented without delay? The committee sat a week ago last Tuesday but no report was presented; there was some slight clerical error which had to be corrected. So there was an excuse yesterday, it being alleged that the report was not quite right. To-day, however, I see no excuse, and I submit that the report should be presented promptly, in accordance with the instructions of the committee.

Hon. J. A. ROBB (Acting Minister of Finance): I fancy my hon. friend is right with regard to the rule. The chairman of the Banking and Commerce committee (Mr. Vien) is not in his seat. I shall direct his attention to my hon. friend's inquiry.

Mr. STEVENS: I submit, with all due deference, that the chairman could very easily deputize another member of the committee to present the report in his absence. The hon. gentleman is not in his seat, but I am anxious that the report shall be presented to the House. It contains a very important resolution on rural credits calling for action this session, which requires, Mr. Speaker, some attention on the part of the House.

Mr. SPEAKER: Two reports of that committee have to my knowledge been laid on the table. Does my hon. friend refer to the session as a whole—that the reports of the committee have not been tabled?

[Mr. C. A. Stewart.]

Mr. STEVENS: No, Mr. Speaker; I refer to a special instruction given yesterday to the chairman.

Mr. SPEAKER: I am informed that the report will be laid on the table to-day.

INQUIRIES FOR RETURNS

CUSTOMS OUTPORT AT DRUMHELLER

On the Orders of the Day:

Mr. E. J. GARLAND (Bow River): I wish to direct the attention of the Acting Minister of Customs and Excise to the fact that on April 27, a motion for the production of papers respecting the establishment of a customs outport at the town of Drumheller, Alberta, was passed by this House. I would ask him if he is prepared to lay these papers on the table, and if not, will he inquire as to the reason for the delay?

Hon. P. J. A. CARDIN (Acting Minister of Customs and Excise): The order to which the hon. gentleman refers was passed within the last few days, if I remember correctly. At all events, I shall be pleased to make inquiry and see that the report is brought down as soon as possible.

Mr. GARLAND (Bow River): The order was passed over three weeks ago—on the 27th of April.

Mr. CARDIN: I will see that it is brought down without delay.

YUKON GOVERNMENT OFFICIALS—INCOME TAX EXEMPTION

Hon. J. A. ROBB (Acting Minister of Finance): Yesterday on the orders of the day the hon. member for Yukon (Mr. Black) submitted a question to the government with regard to reports on the income tax as affecting the Yukon. The secretary of the department has communicated with Mr. Breadner, who expects to have the return ready early next week, if not sooner. It may be ready to-morrow.

PRIVILEGE—MR. WOODSWORTH

NEWSPAPER EDITORIAL ON MINISTERIAL STATEMENTS

On the Orders of the Day:

Mr. J. S. WOODSWORTH (Centre Winnipeg): I notice in the Ottawa Journal of this morning an editorial under the caption "The Word of a Minister," which questions the veracity of ministers of the crown with regard to certain statements made on the floor of this House. It seems to me that this is a matter which affects not only

the ministers themselves but throws discredit on the House, and that it ought not to be passed without challenge.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I have not seen the editorial to which my hon. friend has made reference. I agree with him that any comment of the character he has mentioned is not fitting, but I think that he, along with the rest of us, will have to make some allowance for articles that appear in the Journal.

Mr. WOODSWORTH: I think perhaps I might be permitted to read the editorial. It is not a long one, and as I say, it reflects, I believe, upon the honour of this House.

Mr. SPEAKER: The hon. gentleman has stated his point, and the right hon. leader of the House, who is responsible to a certain degree for the honour of the House, has declared that he has not read the article, so if the hon. gentleman will give him time to read the article, perhaps then the questions might come up.

Mr. WOODSWORTH: May I not have the opportunity of reading the article, which, as I say, seems to reflect upon the honour of this House?

Some hon. MEMBERS: No.

Mr. SPEAKER: If it affects the honour of members of this House, certainly it is a question of privilege, but as the article has not been read by the right hon. leader of the House, and as the hon. member concluded his remarks by simply asking the right hon. leader of the House, to make a statement on the subject, I think he should give him an opportunity to at least read the editorial. I do not know the contents of the article, but if it is a question affecting the honour of the House, the hon. gentleman will have to read it first:

Mr. WOODSWORTH: The article reads as follows:

In the House of Commons, on Friday, May 15, Sir Henry Drayton put this question to the Minister of Trade and Commerce:

"Does the Minister of Trade and Commerce mean to say that the whole question of the export of Carillon power is a myth and that this government has not been requested to grant it?"

Mr. Low replied:

"I say to my honorable friend without any hesitation that we have had no application for a license to export Carillon power."

Sir Henry Drayton retorted that he couldn't take seriously the idea that nothing had been said to the government about the export of power. Mr. King, the Prime Minister, then said:

"No application whatever that I am aware of has been made to the government with respect to the export of power. I am making that statement fully conscious of its significance and meaning in every particular."

That was on Friday, May 15. Yet on Monday, May 18, the government, in compliance with an order of the House, tables a return including a tentative contract with the "Carillon Industrial Corporation of Ottawa," expressly dealing with the export of power from the proposed Carillon Falls dam. Under this contract, yet unsigned, the development company is given the right to export all power developed over 100,000 horsepower.

What is the country to make of such a thing? Here you have the Prime Minister and one of his ministers solemnly assuring the House that a certain thing, of which they were both bound to have knowledge, had not taken place; only to have the assurance followed by official documents which prove that they misled the House. What possible confidence can parliament or the country have in the ministry in the face of such an occurrence?

Nor is this the first offence of its kind. Only last week Mr. Lesueur asked the Minister of the Interior, Mr. Stewart, whether a report had not been made by an official of his department upon the oil fields of Sarnia. Mr. Stewart replied that the official in question had made no report upon the Sarnia oil fields, nor had he been asked to make one. That seemed conclusive enough; but, to the astonishment of the House, Mr. Lesueur arose, produced the report—a very lengthy one—and read it to the House.

Such things should not take place in parliament. Exaggerated statements, misleading statements, are deplorable enough when voiced by perspiring orators on the hustings, but it is a far more serious matter when ministers use parliament for seemingly deliberate misrepresentation. The anarchist could wish for nothing more likely to sap public confidence in parliamentary institutions.

Mr. MACKENZIE KING: That article seems to me comparatively mild compared to some that I have read in the Journal.

Hon. CHARLES STEWART (Minister of the Interior): I would just like to interject that the article is misleading, and so far as I am concerned it is untrue. Mr. LeSueur never read the report in question. The report was handed to Mr. LeSueur by myself. He read a letter from a gentleman in which he said that he knew a report of this character was in the department.

While I am on my feet, I would just like again to state although I made a full explanation when the matter was under discussion, that the report so far as I was concerned was considered a private report. The return that was brought down, which I must confess I did not examine, did make the statement that no report was in existence. All I wish to state is that while the incident is regrettable, and no one regrets it more than I do, I was in no way guilty of misleading the House. That was not the intention at all in any particular.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): I think the minister has gone rather beyond the rule. I do not want

to imitate his example, but I must crave the privilege of saying that the report was read —of course, after production, upon demand— by the hon. member for West Lambton (Mr. LeSueur).

Mr. STEWART (Argenteuil): That is not what the paper says.

Mr. MEIGHEN: The newspaper report did not say how he got it; it said he read it, and it was not a letter. That is what I want mainly to say. It was a distinct report in the form of a memorandum, and no letter at all.

Mr. STEWART (Argenteuil): If my hon. friend will permit me, the hon. member for West Lambton did not read the report until it was brought down by me.

Mr. MEIGHEN: I know that. The article does not say he did.

Mr. STEWART (Argenteuil): It does say so.

Mr. MACKENZIE KING: Did my right hon. friend write the article?

Mr. MEIGHEN: Yes, I read it.

Mr. MACKENZIE KING: I said, did he write it?

Mr. MEIGHEN: Oh, write it? Had I written it, as respects at least the Interior department matter I would have made it stronger.

Mr. SPEAKER: I may remind the House that there is nothing before the Chair. I do not consider there is a question of privilege arising out of that editorial. If the hon. gentleman (Mr. Woodsworth) maintains his view that there is a question of privilege, I can only say that in my judgment it is simply a matter of appreciation of statements made in the House.

REPORT OF BANKING AND COMMERCE COMMITTEE

On the Orders of the Day:

Mr. THOMAS VIEN (Lotbiniere): I understand that a question was put before I came into the House in respect of the report of the Banking and Commerce committee that was to be presented to-day when the order for reports from standing committees was called. This report was handed to me only late, after lunch, by the clerk of the committee, and I have been unable to check the translation yet. But the report will be presented at the next sitting.

[Mr. Meighen.]

CORRECTION—Mr. ETHIER

On the Orders of the Day:

Mr. J. A. C. ETHIER (Laval-Two Mountains): I wish to make a correction in Hansard of yesterday. During my remarks in the Carillon debate I stated, in error, that an article I quoted was from the Financial Review of Montreal; I should have said that it was from the Financial Post of Toronto, as my right hon. friend the leader of the opposition (Mr. Meighen) suggested at the time.

Mr. MEIGHEN: I thought the hon. member was wrong, and I tried to set him right.

SUPPLY

IMMIGRATION AND COLONIZATION

The House in committee of Supply, Mr. Gordon in the chair.

Immigration and Colonization—salaries, $250,770; contingencies, $50,000.

Hon. J. A. ROBB (Minister of Immigration and Colonization): I understand there are a number of hon. gentlemen opposite, and on this side also, who desire to leave early. I want to say to them that we should propose only to put through one item—civil government. There is an increase of eight clerkships for 1925-26 over the number provided for 1924-25. This is due to the reorganization which has been effected by the Civil Service Commission in some of the branches of the department, but especially in the records division. This particular division has been carrying on for a number of years with an ever increasing amount of correspondence to be filed and registered. A large portion of the staff has been composed of temporary clerks only, although a good many of these positions have been considered by the department for a long time as being of a permanent nature. The Civil Service Commission were asked to re-organize this division on a permanent basis, which they did, in order to promote the efficiency so much desired by the department. While there is an increase of eight in the permanent positions, the whole staff of permanent and temporary clerkships combined in the department at Ottawa has been decreased by six, and the amount required to cover the combined salaries has also been decreased by $15,405 as compared with the sum provided for the fiscal year 1924-25.

Mr. MEIGHEN: The increase in the superannuation vote—I do not know what title it comes under but I call it the Calder Act moneys—would make this year's estimate very considerably in excess of last year, would it not?

Mr. ROBB: While I would not like to say that, I imagine that generally speaking my right hon. friend is correct—that a great number of the employees in the service have taken advantage of the Calder Act, more particularly during the last—

Mr. MEIGHEN: Year.

Mr. ROBB: —period when they knew the Calder Act was going to expire.

Mr. MEIGHEN: Those retired by the government under the Calder Act, would, in a staff of about seventy-eight, certainly involve an annual payment of anywhere from $6,000 to $10,000, would they not?

Mr. ROBB: I have not the figures here. I do recall that the Treasury board incurred the displeasure of a good many civil servants by not allowing some people to take advantage of the Calder Act because it was thought they did not come within the age limit.

Mr. MANION: I notice at the foot of the page giving the details of civil government for this department—and I have observed it in the case of the votes for other departments—the statement:

Less saving estimated to be effected through superannuation and re-organization.

While there is a direct saving, I imagine, for the department, the allowance of the man who is superannuated is still a liability, but it is paid out of another fund—out of consolidated revenue, I suppose, or some other fund. Is that correct?

Mr. ROBB: It is paid out of another fund.

Mr. MANION: It is not paid by the department, but comes from another fund? So that, in connection with the point made by my right hon. leader, although some men have been superannuated they still get a superannuation allowance or salary. Consequently in reality there is no saving at all to the government or to the people as a whole? In fact there is an increase very often, and there is in most cases. Take, for example, the case of a man who is in charge, we will say of a branch at a salary of $4,000 a year. He takes his superannuation under the Calder Act. We will say he is getting $3,000—I am not quoting exact figures, but that will do as an illustration. Somebody else is appointed to take his position who perhaps, will get $4,000 or very nearly that amount; perhaps he will not get the full amount, he starts at a lower salary, say $3,500 or $3,000. But the two amounts together—the superannuation salary and the salary of the new man—would increase the expenditure of the government. Is not that true?

Mr. ROBB: Well. I will go this far with my hon. friend and say that the Calder Act, in my judgment, has not tended towards economy in the public service.

Mr. MANION: All right. Then, I want to ask, why put at the bottom of the details of civil government—perhaps it is unintentional but it is certainly misleading—such a statement when there is no saving at all? The same thing is done in the case of other departments and it may have been the practice in the past. I do not know anything about that; but it does not seem to me to be a reasonable thing to put such a statement at the bottom of the estimates when in reality, or in all probability, there has been an increase in the expenditure, and not any saving at all.

Mr. ROBB: We are dealing now with the Department of Immigration and Colonization, and each minister explains the transactions of his department when his estimates come before the committee. It is correct that we have effected an economy in the service, but I admit again that in my judgment the Calder Act has not tended towards economy in the public service. Many people have taken advantage of the Calder Act that I believe were quite able to carry on for a while longer. But the Calder Act was there, although it is not our child, and I suppose it was only human for people to take advantage of it.

Mr. GARLAND (Bow River): May I ask the minister if he will tell the committee just what he means by "an estimated saving of $8,000?" Who estimated it and on what basis?

Mr. ROBB: Well, it is an estimate by the accountant. I direct the attention of the committee to the fact—and I think every hon. gentleman will acknowledge it, particularly ex-ministers who have had to do with the preparing of the estimates and administering public affairs—that under our system when we are compelled to provide for the payment of employees during the year, with the possibility that some of them may drop out, and taking this into consideration as well as the changes that occur, often-times the estimate is more than is really required during the year. But we must make provision for eventualities; otherwise we could not make the necessary payments. For example, take the estimates of 1923-24. The amount voted was $274,845, but the actual amount expended was $233,013.47. The following year, 1924-25, the

amount voted to provide for the salaries as laid down by the regulations—and we must follow them—was $251,235, but the amount actually expended was $221,465.91 or about $30,000 less.

Mr. MEIGHEN: As a matter of fact the scheme the government has adopted this year of putting so much saving at the end of the details of civil government for each of the departments is so much eye-wash; the minister knows it right well. Every year since Canada has been a country there would be a certain amount saved from the estimates of any department for salaries by deaths, by resignations, by the operation of the Superannuation Act when we had it, and so on. But we always had to put the full—

Mr. ROBB: But my right hon. friend has just said that the Superannuation Act does not result in a saving.

Mr. MEIGHEN: No, I did not say that at all; that is what the minister said. The minister said the Calder Act had not resulted in a saving, and I will come to that in a minute. There has always been an amount that would necessarily be saved in the estimate of any department, but we had to put in the amount of each salary in order that the salary might be paid if necessary.

Mr. ROBB: That is right.

Mr. MEIGHEN: Now, in order to make the estimate appear less the government has adopted an ingenious device by reducing at the beginning by a certain aggregate which they know will be saved—which always has been saved in every year in the past, indeed it may be a great deal more—making the total estimates that much less, and making it appear like a saving, whereas it is not a particle more saving than has always been the case. It is only a device to improve appearances, something at which this government has managed to develop a wonderful expertness. It is eye-wash and nothing else.

Mr. JACOBS: My right hon. friend will admit it is ingenious.

Mr. MEIGHEN: I will admit they are ingenious in misleading the public. If that is a credit, I am ready to give them credit for it, with a full heart.

Mr. JACOBS: That is, they are ingenious.

Mr. MEIGHEN: Yes. The minister knows the number of retirements under the Calder Act, and knows that if he takes what is to be paid these men this year the substantial cost to the country is more than last year. He cannot help it. On his estimates he cannot help but admit that it is considerably more. And this in the face of the reduced immigration of last year—he only received 111,000, against 148,000 the year before, and as against 148,000 of the last year of office of the late government. But what I want to commiserate with the minister on is the condition of imprisonment he suffers because of the Calder Act. "There is the act," he says, "it is not our child; we are the unfortunate heirs, and because of that act larger expense is heaped upon the government." I would like to give the minister credit, and consequently I will say that he does not believe that at all. He does not need to retire one man under the Calder Act unless he wants to—not one man. He can ignore that act—throw it in the waste paper basket. If the Calder Act is an expense to this country it is the fault of the government. They have not the courage to stand up and say no to civil servants who want to retire.

Mr. ROBB: But we have said no.

Mr. MEIGHEN: He has sometimes said no; but as a matter of expense to the country, it is an admission on the part of the minister of the crown—

Mr. VIEN: They did more than say no. They repealed the act and it is out of existence.

Mr. MEIGHEN: No, the act repealed itself. It was only in existence for a certain period.

Mr. VIEN: It was not extended.

Mr. MEIGHEN: But in the period when it lived, it lived because of the act of this government; they themselves extended it.

Mr. VIEN: They said more than no.

Mr. MEIGHEN: They did not extend it last year, but they extended it the year before, and if they retired anybody that added expense to the country by the retirement, the fault is their own, for no man's application can go through unless it receives the imprimatur of the government by order in council. So what is the use of the minister saying, "The fact that we are under more expense is due to the Calder Act"? He knows it is due to himself, if such is the fact at all, because he is the Chairman of the Treasury Board. I want the minister to give us the actual retirements in the year 1924-25 under the Calder Act in the Department of Immigration.

Mr. ROBB: I have here a summary of retirements under the Public Service Retirement Act. They are not all under the Calder Act, as hon. gentlemen know. Some of these are not under the Calder Act, and some were superannuated under the regular act. The total number is thirty-nine. I think I checked them over a moment ago, and I desire to direct the attention of my right hon. friend to the ages of some of these people. The ages are as follows: 74, 67, 65, 68, 65, 71, 65, 67, 81, 83, 68, 66, 67, 63, 67. I would not admit a man should retire at the last-named age unless his usefulness is gone.

Mr. MEIGHEN: Why did the minister consent to allowing him to go?

Mr. ROBB: Here are some of the reasons: Lack of employment, ill-health, advanced age, failing health, abolition of position. In the last case the man was eighty.

Mr. MEIGHEN: If it was for lack of employment the man was let out, I hope the minister did not put another one in.

Mr. ROBB: No.

Mr. MEIGHEN: In that case there would not be an increase but a decrease.

Mr. ROBB: This is the general service.

Mr. MEIGHEN: In the case where the vacancy was not filled because of lack of employment there would be a decrease?

Mr. ROBB: Yes.

Mr. MEIGHEN: If the government let out any of these employees on account of failing health and old age, when they should not have been let out, that is the fault of the government. Does the minister think he was quite fair to the House in complaining of an act that is entirely under his control and an act which his own government renewed?

Mr. STEWART (Argenteuil): I do not rise to say anything about the Calder Act; it is out of existence now. But I think the provision of the Superannuation Act will now pretty nearly take care of the cost of superannuation—the contributions of the civil servants to that superannuation will take care of it. It is true a very large number of people who are advanced in age took advantage of the Calder Act and asked for retirement before the expiring of the act. That was bound to happen. But, if my right hon. friend will examine the records, he will find that many of these cases were examined by a doctor suggested by the Treasury Board, and were certified to be ill or physically incapacitated to carry on the work. What I object to is the exception taken by my hon. friend to the reduction. When the estimates have been before the House this year no one has criticized the expenditures more vigorously than my hon. friend sitting opposite, and he has asked repeatedly for the expenditures of previous years; and then if the estimate appears to be larger than the actual expenditure the criticism offered was that we were asking for more than we expended. In order to meet that, to show clearly what the estimated expenditure in my department would be, this system was adopted this year at my request, and I want to take responsibility for it. I asked them to do it in my department. Why should we ask for more money than we know we are going to expend? Why, and inflate the estimates? If there is anything misleading about it, the misleading part of it has been done in years gone by. It was in order to reduce the expenditure—my hon. friend is quite correct—and still have sufficient funds to carry on in the department. That is the reason it appears this year. It was discussed when the estimates of the Department of the Interior were up, and I again reiterate the statement made upon that occasion.

Mr. MEIGHEN: The minister has successfully turned the subject to the phase in respect of which the government is the least guilty. That I admit.

Mr. STEWART (Argenteuil): My hon. friend will admit there is nothing wrong about it.

Mr. MEIGHEN: I did not say it was wrong, but by comparison with other years it was misleading. That is all.

Mr. STEWART (Argenteuil): I take exception to that. A clear explanation was made.

Mr. MEIGHEN: I know.

Mr. STEWART (Argenteuil): And I do not propose in the future to allow statements of that kind to go unchallenged. It is not misleading. The explanation given the other night was identical with the explanation given to-day.

Mr. MEIGHEN: I did not say it was not.

Mr. STEWART (Argenteuil): But the right hon. member claims it was misleading. I cannot understand how it would be.

Mr. MEIGHEN: By comparison with other years. You can see very plainly it may be

just as good a system, but when we take the estimates of this year and look at the total, and say that the government proposes to spend this year so much less than last year, it is not true. It merely means that you have adopted a different system, not that there is to be less expenditure. Thus, in the comparison, it is misleading to the public. I do not say that if we had started this system from the very beginning that it would not be just as good, but as to this $8,000,000 taken off here, and the $25,000,000 taken off another place, that $8,000,000 and $25,000,000 would have been off last year or the year before, or the year before that, if this system had been adopted, for the reason that always less is expended than the amount estimated for salaries and retirements and the like. There always will be. All that is done is to lump this estimate together, and so make it appear that the government are economizing. That is all that I pointed out and that is absolutely true. The minister says that when they asked for more than they spent last year, they were severely criticized. If they were, from the mere fact that the amount asked for was more than was spent the previous year, that is an unjust criticism. I never heard it, and the minister certainly never heard me make that criticism. I have been in departments long enough to know that you have to estimate for more than you expect to spend. You cannot estimate for the exact amount. It might be that there is criticism because the margin is too large. The minister has to allow a certain margin even in estimates of salaries.

Mr. GARLAND (Bow River): I am a little puzzled to see just where the saving comes in. The amount voted last year was $251,235 and the amount expended, $221,465. The item this year is $258,770. There is an increase in the total estimate and an increase in the number of employees from 168 to 176. It then becomes possible, under the new system that is inaugurated, to make an estimate of the amount—$8,000—that will not be required for this year. This is entered underneath the $258,770 and deducted from it, showing $250,770. But if we deduct the amount unexpended last year from the total amount voted last year, we find there is an actual increase in this item.

Mr. ROBB: My hon. friend is possibly quite right, but when we come down next year with the amount actually spent, we may have spent less. This is an estimate of what we expect to spend.

[Mr. Meighen.]

Mr. GARLAND (Bow River): The minister hopes to spend less?

Mr. ROBB: We refer our record of last year to my hon. friend to show our method of conducting the department.

Mr. GARLAND (Bow River): I know that, but I also know that a goodly number of old staunch Liberals have been put in the service, such as our friend Mr. McColl, who was taken out of the Immigration department and put into the Vancouver Harbour Commission. I do not see for the life of me how the Minister of Immigration can claim very much saving over the whole service when all that is done is to take one piece of dead timber from his department and put it somewhere else for a time.

Mr. BOYS: When was this new system first adopted? Glancing at the estimates of last year, I find that it was adopted last year. Glancing at the estimates of the year before, I see no similar item to the one under discussion which reads:

Less saving estimated to be effected through superannuation and reorganization.

There are similar items in last year's estimates in different departments, but I can find nothing for the year before that.

Mr. ROBB: I cannot answer my hon. friend's question. I am speaking only of the estimates that I have before me. I do not recall last year's estimates.

Mr. BOYS: There is not the slightest doubt there are such items in last year's estimates. Glancing at the estimates for the year before, I do not find any such items, but I will not say that there are not any. I notice, going through the estimates of this year, not only have we the one in question, but we have in the Department of Mines an item of $8,750, in the Post Office Department, one item of $35,000 and in the Customs department an item of $11,425 and in the Interior department an item of $25,000. That, as the minister has said, was under discussion the other night. There is another item in the Post Office Department of $250,000. The items that I have been able to pick out in a few minutes total $338,175, a pretty big item. I do not know, when it is called an estimate and when, as it says, it is a sum of money that is to be deducted because of some superannuation or reorganization, that the minister would have a right to take credit for any such deduction at all. If it is known that there are going to be superannuations, that certain clerks will not be needed, the

salaries of those clerks should not be provided for in the estimates. If, on the other hand, it is not known and it is proper to provide for the salaries of those clerks, it is surely not proper to provide for a deduction in case they are not needed, and the minister should not take credit for that deduction. The biggest item is in the Post Office Department where in one item the estimates are reduced by $250,000 by that method. This seems to be something quite new, new last year at all events. The committee should have some explanation why this change has taken place in the method of arriving at the total amount required for carrying on the business of the country.

Mr. ROBB: I recall now that when the estimates came over from the accountant, I sent for the officials and after we had gone carefully through these estimates, this amount of $8,000 was deducted. I blue-pencilled some of the items that are in there. I take the responsibility for making that deduction of $8,000 at that time. We knew we would not require that amount of money.

Mr. BOYS: If it was known that the clerks who would receive that sum of money would not be in the service, the item appearing in the estimates providing for them in the first instance should not be there at all. I cannot see how the minister can come to parliament and ask for a certain sum of money, $8,000, which, let us assume, is for four or five clerks, and at the same time ask the House not to provide that money because it is not going to be needed.

Mr. ROBB: May I again direct the attention of my hon. friend to this? This came along to me a couple of months after we had checked through the account. We knew then that the amount would not be required, and instead of asking as we intended originally to ask for $258,770, I cut $8,000 off and we are asking only for $250,770.

Mr. BOYS: Am I to understand that if the minister had known as much when the list of clerks was first made up as he knew at the time he refers to, he would not have asked for the money required for some of these clerks? Is that a correct statement?

Mr. ROBB: I think that is fair.

Mr. BOYS: I do not really know if this is the proper place for me to put this question, but the minister, as Acting Minister of Finance, can probably answer it. Would the same reason apply to the very large item of a quarter of a million of dollars in connection with the Post Office? I suppose that must be on the same basis.

Mr. ROBB: I cannot answer that.

Mr. MANION: I noticed just while the hon. member was speaking, an item in the Interior department of $25,000 and an item of $8,750 in the Department of Mines, worded in practically the same way.

Mr. ROBB: The Minister of the Interior has just made an explanation regarding that.

Mr. MANION: I understand that, but the Minister of Immigration says that he did not realize that until a couple of months afterwards. It was a sort of mistake that was made.

Mr. ROBB: No. These estimates come to the Treasury board. The Treasury board spent about two months going through the estimates, chopping them down here and there, and I am bound to admit frankly that we ran up against some of the officials in the departments. The result of the two months' work of the board, who sometimes burned the midnight oil, has been these reductions which we are now effecting in the estimates.

Mr. BOYS: Were the estimates printed at that time?

Mr. ROBB: The proofs were.

Mr. BOYS: I can quite understand that; but one would have thought that when the board was going through the list if they found that this and that clerk would not be needed, instead of showing this reduction at the end they would simply have struck their pen through the names of these officials and eliminated them from the total.

Mr. ROBB: In the administration of the department, with the Civil Service Commission controlling the classifications, the government is powerless to do that. Some of these clerks are carried for one, two or three months. But the deputies have instructions to get the force down as rapidly as possible without affecting the efficiency of the departments. It is because of the classifications adopted by the commission that we are compelled to come before parliament; and the leader of the opposition (Mr. Meighen) has admitted that we must ask for more than we really intend to spend.

Mr. GOOD: I would ask the minister to give us an assurance that if this item is passed to-day it will not debar members who have had to leave from discussing the general immigration policy of the government.

Mr. ROBB: That is conceded at once. If we put this item through I have no objection —I speak only for myself of course and not for the Chairman—to the fullest criticism of the department.

The CHAIRMAN: I understand the minister to say that if this vote is carried the general policy of the department may be debated on another item?

Mr. ROBB: Yes.

Mr. JACOBS: On another day?

Mr. ROBB: Yes.

Mr. BOYS: I think that the explanation the minister has given could have been given with equal force in 1924 and in 1923; but the method now followed was not adopted then.

Mr. ROBB: "Every day in every way," you know, "we are getting better and better."

Mr. BOYS: I do not think so. If the minister says that the same method was followed at that time, and if he says so positively, I shall take his word for it. I have not had the time to make any close comparison but I think the minister will fail to find in the estimates of 1924, an item such as this. I have looked through many of the estimates of that year and I do not find one item similar to the present one. I do find items in 1925, and it does appear to me from a hurried glance through the figures here at my desk that the change became effective in connection with the estimates for 1925, but was not in force in 1924.

4 p.m.

Mr. MACKENZIE KING: I have not the estimates before me and I am not sure that I have in mind the particular item to which my hon. friend is referring, I thought however that he was discussing a practice. I know that in going over the estimates it was a surprise to all of us to find that it was necessary to ask for more money than would actually be required, but this was due to an arrangement with the Civil Service Commission whereby no man can be put into a different class unless the full amount is voted for that class in advance of the time at which he becomes entitled to enter it. Assume that an official will be made a first-class clerk on January 1: we shall have to appropriate the amount that is required for that clerk just as though he were going in at the beginning of the new fiscal year, although we may not use the whole appropriation. The clerk cannot be promoted to the higher class unless parliament has given the full appropriation in the first instance. The result therefore is that the estimates really call for more in the way of an assumed expenditure than will be actually required as promotions are made.

[Mr. Good.]

Mr. BOYS: I quite agree with the Prime Minister; but I should like to point out that there is nothing new in that. If you take the estimates of 1921, 1922, 1923 and 1924, you will find appropriations that are not required in full. But you will not find in those estimates the method which we see now put into effect. I do not know whether the Prime Minister heard the list I read before, and which I do not suggest is complete, but I would draw his attention to one large item which I think is worthy of our consideration —the item we are discussing just now is only $8,000, it is true; but it is the change of method that I am dealing with, and I want to find out when that change took place. At page 64 of the estimates the Prime Minister will see an item of $250,000 for the Post Office Department and another item for the same department, at page 95, of $35,000, making a total of $285,000 treated in this particular way. So far as I know, the method now adopted in relation to these items was not pursued prior to the estimates of 1925, and I presume that there was a time when the government must have considered the advisability of adopting this new system. What I want to find out is when and why that change was thought necessary. The Prime Minister has given me a partial explanation, but my answer to him is that this explanation would have been just as effective in 1924 or 1923 as it is this year. I do not regard it as adequate.

Mr. MACKENZIE KING: If the Postmaster General (Mr. Murphy) were here, he could fully explain the point raised by my hon. friend. I understand that the classification of the clerks was completed in the Post Office and Customs departments before it was completed in the other departments, and I recall in a general way that in the consideration of the estimates the Postmaster General explained that, in virtue of that classification, he had to put in a certain lump sum to meet the situation as clerks filled new positions for which they had been classified. In the case of the other departments the work of re-classification is still going on and extra provision is being made to meet the changes that may arise in consequence.

Mr. BOYS: Can anyone say for certain that this method of book-keeping is one that should be relied upon? Let me read the item that appears on page 64:

Less—estimated decrease on account of reductions which will result from changes in staff personnel throughout the year, $250,000.

Now this is only a suggestion at most; it may or may not be carried out. Yet, so far as the estimates now presented are concerned, there is an affirmed deduction of that sum of money from the total which is asked. The total asked is $15,708,584.40, and from that is deducted this estimated or problematical item of $250,000, so that the amount finally asked is $15,458,584.40. I repeat—and I will not say it again—that this might have been done just as well in 1924 or in 1923 as now. I do not say that there is anything improper about it; it may be all right. I want however to ascertain why the government has resorted to this change; when the question was discussed; and when it was determined to put the new method into practice.

Mr. MACKENZIE KING: I do not think there has been any desire to make a change in any essential. What has happened this year that did not take place in previous years is that we have abandoned the bonus. We did ask the Civil Service Commission to arrange for a re-classification of all clerks in the service and we are now voting estimates which will apply to the clerks as re-classified. That never took place in previous years, when under the old classification we voted a bonus to supplement the salaries. This year the salaries under the re-classification will have to be met out of the estimates as we are now voting them. That I think is the explanation.

Mr. BOYS: I understand the Prime Minister to say, then, that this applies only to this year, for the reason he has stated.

Mr. MACKENZIE KING: Yes, I think so.

Mr. BOYS: It did not apply last year?

Mr. MACKENZIE KING: No.

Mr. BOYS: Well, I can show the Prime Minister items in the estimates of last year similar to these.

Mr. MACKENZIE KING: I am speaking now in regard to a very wide range of classifications. Every year some classifications are made, clerks being promoted from one grade to another, and there must necessarily be provision of a certain amount to meet the adjustments. This year the whole service is being re-classified having regard to something that was not considered previously, namely, getting rid of the bonus and making it a permanent classification. A number of the subdivisions are being cut out and the service is being reduced to three main classes or grades, and a number of changes will have to be made under that re-classification. For that reason I think a larger margin in the main has to be provided in this year's estimates.

Mr. BOYS: I can quite appreciate that that extensive reclassification may have the effect of increasing an item of this kind. But items of this kind do not appear in the estimates of previous years. I would like to find out when it was decided to make this change, because there certainly is a change; and I would like to know also why it was made.

Mr. MANION: Is the minister prepared to give us a statement of the general conditions as to immigration—how many immigrants we received, what classes they comprised, where they went, and so on?

Mr. ROBB: This is the civil government estimate. We shall not proceed any further to-day, because many hon. gentlemen on both sides wish to leave. I shall be prepared to go into that matter fully when we come to the other estimates.

Mr. ARTHURS: I may not be here when the other items come up, and I am here to-day. Some time ago I had occasion to make certain remarks with regard to immigration and emigration, and the figures I gave were called in question. I hold in my hand to-day—it is unfortunate I did not have it then—a report of the Commissioner General of Immigration for the United States, issued by the United States Department of Labor, and the figures given are most startling; they go very much further than those given either by myself or by other hon. members on this side. The report indicates the large number who are leaving Canada for the United States and the very small number who are returning. It gives comparisons for a number of years back, indicating the states the men go to and the states from which they come; so that I presume there can be no question as to the accuracy of the figures. I would like to confirm the figures I placed on Hansard, given under the authority at that time of Mr. MacNeil of the Great War Veterans' Association. We all know Mr. MacNeil to be modest on every occasion, but on this occasion he was more than modest; the figures he gave as to those returning to Canada were very much greater than those shown by the American statistics. I do not intend to labour the argument, but I want to give a few of these

figures. The total number admitted to the United States from Canada from 1899 to 1910 inclusive was 179,226. The figures for the different years are as follows:

1899	1,322
1900	396
1901	540
1902	636
1903	1,058
1904	2,837
1905	2,168
1906	5,063
1907	19,918
1908	38,510
1909	51,941
1910	56,555
1911	56,830
1912	55,990
1913	73,802
1914	86,139
1915	82,215
1916	101,551
1917	105,399

In 1915, 1916 and 1917 a great many of our population went over to the United States for a different reason. We were at war; the United States were not.

Mr. ROBB: Yes, and during that same period a great many Canadians came back to Canada for another reason.

Mr. ARTHURS: I will give the number of Canadians returning, if the minister cares to have them. It will be noted that when the Americans went into the war there was an immediate drop. I gave the figure for 1917 as 105,399. The figure for 1918, when the Americans entered the war, dropped to 32,-452. In 1919 it was 57,782 and in 1920, 90,-025, a total for the ten years of 742,189. Now, I will proceed with the last four years:

1921	72,317
1922	46,810
1923	117,011
1924	200,690

The total for the last four years is 436,-828. Now, we will turn to the other side of it: "Emigrant aliens departed from the United States, 1908 to 1924, by countries." We will take the figures for the period from 1908 to 1920, "British North America:"

1908	2,629
1909	30,478
1910	34,194
1911	49,373
1912	33,506
1913	46,981
1914	31,818
1915	23,225
1916	15,712
1917	18,994
1918	27,170

These figures bear out to a greater or less extent the remark by the Acting Minister of Finance, because the numbers did increase very slightly during 1918, but immediately afterwards they dropped again.

1919	10,726
1920	7,668

A total for the period from 1908 to 1920, thirteen years, of 265,173. Now, we will take the following years—and this is the most important part of it, because it is in this respect that the figures I gave the other day are questioned. I quote:

1921	5,456

A decided drop.

1922	4,480
1923	2,775
1924	2,601

Or a total for the four years of 15,312, contrasted with emigration to the United States to the extent of 436,000.

Mr. GARLAND (Bow River): In those figures is any estimate made of what is known as bootleg immigration?

Mr. ARTHURS: I am not in the bootlegging business so I am not an authority on that point.

Mr. GARLAND (Bow River): I have no doubt the hon. gentleman has heard that the immigration authorities in the United States claim that you should multiply the official figures by four, to get any real appreciation of the actual movement.

Mr. ARTHURS: I am simply giving to the Minister of Labour (Mr. Murdock) whom I now see in his seat, the official figures given by the United States Department of Labor, issued last year by the Commissioner General of Immigration. I now hold that report, which is the official record of the United States, in my hand, and the figures I have given are open to any member of the House.

Mr. MURDOCK: Has the hon. member got the figures in that book of the number of Canadians who returned within six months and secured their $8 head tax?

Mr. ARTHURS: I have here the number of immigrants who returned, and who are classified as non-immigrants. They amounted in one year, the greatest year, to 25,000. Any member of the House can get this book in the library and he will find that the American authorities classify those non-immigrants, as they call them, by themselves, that is those who go in there, deposit $8, and secure the deposit back when they return to Canada. These non-immigrants are people, for instance, who simply go there for the purpose of visiting someone.

Mr. MURDOCK: I beg my hon. friend's pardon. I have just sent out for a file over the signature of the officials of the United States Department of Labor, which I think my hon. friend will not dispute, indicating—

Mr. ARTHURS: Does my hon. friend dispute this record, which is the official record of the Department of Labor in the United States?

Mr. MURDOCK: I say that that record does not show the number of Canadians who went to the United States and within six months came back and got their $8 head tax refunded.

Mr. ARTHURS: It does show that 25,000 returned in the greatest year, and if the minister will give me a little time I will get those figures.

Mr. MURDOCK: My hon. friend, I am quite sure, thinks that what he states is correct, but as a matter of fact he is mistaken. I have the correspondence from the United States Labor department to prove it to my hon. friend, if proof he needs. The figures were placed on Hansard on 14th April last, showing that over 43,000 Canadians had returned from the United States in 1923 and 1924 and had received a refund of the head tax they had paid.

Mr. ARTHURS: In how many years?

Mr. MURDOCK: In each of those two years. If there is any doubt, I have the official communications over the signatures of officers of the United States Labor department. I have here also a report on the number of Canadians returning from the United States after an absence of six months or longer, during the twelve months ending March 31, 1925.

Mr. CLARK: Before the minister goes further: does he suggest that they all received the head tax back?

Mr. MURDOCK: If my hon. friend would only possess his soul in patience, he would not have to ask unnecessary questions.

Mr. CLARK: You said before that they had.

Mr. MURDOCK: Those I have just referred to did not receive a refund of the head tax.

Mr. CLARK: You said a few minutes ago that they did.

Mr. MURDOCK: I said no such thing. Here is a statement of the number of Canadians who went to the United States and returned within six months, each of whom received a refund of the $8 head tax:

During	1923	1924
January	2,839	3,614
February	2,927	2,839
March	3,473	5,503
April	3,749	5,813
May	4,418	5,888
June	4,384	5,030
July	3,397	3,803
August	3,376	3,272
September	2,626	2,218
October	3,150	1,610
November	3,843	1,693
December	5,250	2,033
Total	43,432	43,316

Now, here is the manner in which I got those figures. On February 9, the date on which the leader of the opposition (Mr. Meighen) was indicating to the House how terrible was the number of Canadians who were going to the United States and remaining there, I wired to the Secretary of Labor at Washington—

Mr. CLARK: Does the minister not think it is terrible?

Mr. MURDOCK: It is not as bad, under all the circumstances, as it might be. It is altogether a surprise to me that more Canadians are not fooled by the paeans of distress that are constantly emanating from the other side of the House. On February 9th, I sent the following wire:

J. J. DAVIS,
Secretary of Labor,
Washington, D.C.

Can you kindly send me statement showing for each month last two years the number of refunds of head tax payments made to returning Canadians? Also please send me result by months past two years of emigration to United States from Canada, Mexico and Newfoundland.

In reply I received a letter under date of February 13, 1925, as follows:

I have the honour to acknowledge receipt of your telegram of February 10, 1925, requesting that a statement be sent you showing the number of refunds of head tax payments made to returning Canadians each month during the past two years and the number of aliens who have come to the United States from Canada, Mexico and Newfoundland within the same period.

I am pleased to enclose statement showing the number of immigrant aliens admitted to the United States from Canada, Newfoundland, and Mexico, during the two years ended Decembr 31, 1924, by months, and will forward the other information requested immediately upon receipt of same from our various border districts.

I am,
Sincerely yours,
ROBE CARL WHITE,
Second Assistant Secretary.

Accompanying that letter was a statement which in its totals has been placed on Hansard on numerous occasions. Then later I received another official communication under date of March 7, 1925, from the Department of Labor, Washington, office of the Assistant Secretary, as follows:

I have the honour to refer to your telegram of February 10, 1925, and to my letter of February 13th, in which I enclosed a statement showing the number of immigrant aliens admitted to the United States from Canada, Newfoundland and Mexico, by months, during the two years ending December 31, 1924.

I now take pleasure in enclosing a statement showing the number of head tax refunds at Canadian borderland ports during the last two calendar years, by months.

I am,

Sincerely yours,

ROBE CARL WHITE,
Second Assistant Secretary.

Accompanying that letter were the figures which I gave to the House a moment ago.

Mr. ARTHURS: Does the hon. gentleman dispute the figures which I quoted from the official report of the Department of Labor, Washington?

Mr. MURDOCK: Not one whit.

Mr. ARTHURS: Has the hon. gentleman made himself familiar with the figures in this book?

Mr. MURDOCK: Exactly, and I quoted from them rather voluminously in the statement I made to the House.

Mr. CLARK: Does the Minister say—

Mr. MURDOCK: My hon. friend asked a question; please let me answer it. He will not find anywhere in that record a statement showing the head tax refunds that I asked for.

Mr. ARTHURS: He will find something else.

Mr. MURDOCK: My hon. friend is right. You will find there figures compiled by the department indicating the returning Canadians who came back after six months. But of the returned Canadians who came back within six months, and got their head tax refunded you will find no record.

Mr. ARTHURS: Yes we will. The minister has not read the whole report. I gave several sets of figures, all of which were most illuminating, I think, to members of this House, and I am going to give another set now. We have here the returns, under the same authority and in the same book, of the net increase and decrease in the number of Canadians who have gone to the United States during the last two years. This report gives not only those who went over for permanent residence, but also those who are required to get permission to receive back the head tax they have paid—that is those who went as visitors or non-permanent residents to the United States. Now, I can give my hon. friend those figures; they also are more or less illuminating. For the year 1923, the immigrants admitted were 117,011. The non-immigrants—those who went into the United States openly and above board and had to pay their head tax, I presume—numbered 9,731, total 126,742. Now the number of departed emigrant aliens, that is men leaving the United States permanently, was 2,775, vastly different figures from those quoted by the minister.

Mr. MURDOCK: For what period?

Mr. ARTHURS: For the year 1923. The number of non-emigrant aliens who returned to Canada in the same year was 21,447. This is how the minister got his figures bolstered up. These were non-residents that returned. These two items make a total of 24,222, or a net increase to the population of the United States from Canada of 102,520 for the year 1923. We will take the year 1924. Those admitted openly as emigrants from Canada numbered 200,690. The non-immigrants who entered the United States numbered 8,598, a total of 209,288. Now we will take the other side again. The number of emigrant aliens that entered Canada from the United States in 1924, was 2,601, and the number of returned Canadians, that is non-emigrants, was 25,493. If you add these two figures together my figures and those of the minister are not very far apart. But the result differs very greatly because the Americans show an entirely different set of figures, the net result being that 28,094 left the United States altogether in 1924. In other words there was an absolute net increase of the population of the United States from Canada during the fiscal year 1924, of 181,194. These are the figures of the Department of Labor which the minister himself does not question and which any member of the House can obtain at any time.

Mr. MURDOCK: I will hand this file over to my hon. friend, and perhaps he will draw my attention to where this is wrong.

Mr. MANION: After listening to the Minister of Labour arguing about the number of Canadians coming back to Canada from the United States it seems to me there are two chief reasons why that number would naturally be increased this year as compared with last year. In the first place there are more Canadians over there, there is a marked in-

crease in the number of Canadians in the population of the United States, and naturally there would be a large increase in the number coming back. Then, I think, another important reason why they have been coming back is they have heard in the adjoining republic that in the very near future we are going to have an election in this country, and they want the opportunity to vote against this government that drove them to the United States. I think these may be the reasons for the return of Canadians from the United States.

Mr. ROBB: Then you are glad they are coming back?

Mr. MANION: I am glad they are coming back because I am sure any of those who were driven over to the United States by lack of work due to the inefficiency and the unstable tariff policy of this government would naturally vote for us.

I wish to submit another reason as against the reasons assigned by the Minister of Labour for people going from this country to the United States. The reason people go there is because they cannot get work and wages in Canada. It does not matter anything about the paeans of pessimism that my hon. friend talks about. Nobody will leave Canada because somebody happens to be pessimistic, and I do not know how anybody could be optimistic under the present conditions. But even if we were pessimistic, a man who has occupation in this country, who has got work and wages, is not going to leave a job here to go to the country to the south.

Mr. MURDOCK: Will my hon. friend accept the list if I will get it for him? There are simply hundreds that are in that class.

Mr. MANION: Hundreds of those to whom my hon. friend points as coming back after a visit to the United States?

Mr. MURDOCK: No, no, but hundreds who had jobs here and who desired to look for something else in the United States. There are a good many hundreds of them; I can give two or three right out of my own department.

Mr. MANION: Two or three men?

Mr. MURDOCK: Yes, and I can give him a list of hundreds of others if he wants it.

Mr. MANION: According to the ratio mentioned by the minister the number would not exceed 1,000 but there were 200,690 that went over last year.

Mr. MURDOCK: I do not know them all.

Mr. MANION: The minister does not know them all; there would be many more go if he did.

Mr. GARLAND (Bow River): Is it not possible that the men who left the minister's department did so to accept better positions in the United States?

Mr. MANION: Very probably. However, I was going on to say what the reason was for these people leaving Canada. There is no question about it to anybody who gives the matter any thought that a large proportion of the people who are leaving this country are doing so because they cannot get work and wages. It is not because they hold jobs or because they want a lower cost of living; it is because they want to be able to earn a living and they have not been able to do that in this country. And the reason they have not been able to do so, I repeat—even at the risk of arousing hon. members to my left as well as some hon. gentlemen opposite —is because of the unstable tariff policy of this government which is reducing the opportunities for employment in Canada and driving people who want a living over to the United States.

Mr. ROBB: There is not much chance of my hon. friend dragging me into a tariff debate this afternoon. We have had forty days of that already, and the people of Canada, as represented in this parliament, have already pronounced upon that issue.

Mr. MANION: They will pronounce at the next election.

Mr. ROBB: I do not wish to break faith with hon. gentlemen opposite in saying that it is not the intention to have a prolonged debate this afternoon, and as soon as the vote for civil government is through we will go on with the estimates of another department. I want to keep my promise that we would give an opportunity later on to hon. members who are absent to discuss the whole immigration policy of Canada. I only rose to make this admission: Living as we do alongside the United States there has been a flow of population between the two countries for many years, and there always will be; it cannot be stopped. I venture to say that there are but few families in all Canada—I am talking now of the native born—that are not represented in the United States in some way by family connections. That has been going on for years, and the representatives of many of these families do not know each other because they

are of the second and third generation. There are times when there is a movement towards the United States; there are other periods when there is a movement towards Canada, when United States citizens come into this country and become good Canadian citizens. Indeed there are some in that category who at present have seats in this chamber. Now it has been said that, "there are lies, damned lies, and statistics." I want to submit to my hon. friend who has quoted United States records—in good faith, I believe—something that would warrant him in the belief that we must go carefully in accepting these statements.

Mr. ARTHURS: Will my hon. friend allow me?

Mr. ROBB: When I get through my hon. friend will have the floor. According to United States records of the Immigration department for the years 1910 to 1920, we find that 742,000 Canadians left Canada to go to the United States as immigrants, but according to the United States census taken in 1920 there were 78,000 fewer Canadians in the country than there were in the previous census of 1910.

Mr. SPENCE: Were they naturalized?

Mr. ROBB: No, these are the records that were taken of the Canadian-born. When they took the census they would ask a man where he was born. Now I will admit that there was a considerable number of Canadians going to the United States two or three years ago. There was a boom on there, and they were paying carpenters from $12 to $20 a day, and bricklayers, plasterers and masons were getting high wages. Do hon. gentlemen think that a man would go to work on the farm at $2 or $3 a day when he could get $15 or $20 a day as a carpenter in the United States? Now the conditions have changed very much recently. We have here the latest statement of the United States bureau issued on 6th May, which shows that the number of immigrants admitted into the United States for the month of March last, giving Canada or Newfoundland as their permanent residence, was 4,408, as compared with 13,474, in the same month a year ago.

Mr. ARTHURS: Are these figures correct?

Mr. ROBB: They come to us from the United States bureau, they are just as correct as the figures quoted by my hon. friend from Parry Sound. This is a falling off of two-thirds. According to the figures of the United States bureau of the emigration from Canada and Newfoundland from July, 1924, to March, 1925, the number was 82,515, as compared with 146,780 in the same period a year ago. So that, admitting all hon. gentlemen say about conditions a few years ago, they are improving according to the records of the United States government.

Mr. ARTHURS: The whole thing seems to hinge on the question of authority, and I want to point out to this House and to the Minister of Labour, that the figures which I quoted, which I hold in my hand, from the American Department of Labor, are signed by this very same gentleman to whom the minister sent his telegram asking for the information, I refer to Mr. Davis, the head of the Labor department of the United States. The figures I gave and the report are the official figures given by Mr. Davis; the return my hon. friend has is not signed by anybody.

Mr. MURDOCK: I beg pardon.

Mr. ARTHURS: There is a covering letter which may or may not be right, signed by the second assistant secretary, but not by Mr. Davis at all. It may be all right.

Mr. ROBB: That is hair-splitting.

Mr. ARTHURS: It may be all right.

Mr. MURDOCK: I have not a word to say to that kind of argument.

Mr. ARTHURS: What possible answer can there be to the fact that the figures I have given are issued by the same authority to whom he appeals? There can be no question at all about that.

Mr. MANION: I wish to answer one argument advanced by the Acting Minister of Finance. I think he is really quoting a statement made by the Prime Minister in regard to these figures of the emigration to the United States. He gave the figures as 742,000 going into the United States. The emigration figures show 742,189 immigrant aliens admitted to the United States from Canada during the ten fiscal years ending June 30, 1920, and yet at the end of the ten years my hon. friend makes the statement—and I think a correct statement according to the figures he has—that there are fewer Canadians in the United States according to their figures than at the beginning of the period.

Mr. ROBB: Yes.

Mr. MANION: The Prime Minister made the same statement in the debate on the Address, because this same question was up for discussion then, and at that time I made it my business to write to the Department of

Labor at Washington and I quoted the Prime Minister. I wanted to get the explanation because it seemed to me an extraordinary statement and this is the explanation in brief from the Department of Labor. They point out these figures are correct as to the number of emigrants going from Canada to the United States, but all those who went from Canada to the United States were marked as Canadians going to the United States; but many of them were British-born, and many of them were Canadians of French extraction, and when they were taking their census the latter may have been entered as French. He does not specify that, but I am adding it because I take it that is what may have happened in regard to Canadians of French extraction. So that an Englishman who had been living ten years in Canada, and then went to the United States, was entered as a Canadian going to the United States in the emigration papers, but was entered as an Eng'ishman in their census statistics, because he was English born. I would venture to say, although I do not know exactly—that a Canadian of French extraction would probably say he was French, quite off the bat. They would take it that he was French.

Mr. ROBB: The French Canadian is a Canadian, and I recall the day—perhaps my hon. friend recalls it also—that the only people who were referred to in this country as Canadians were the French Canadians.

Mr. MANION: My hon. friend need not emphasize that point with me because I married one of them. I admit the French Canadians are the original Canadians so far as that goes. Nobody has any finer words to say about them than I have.

Mr. GRAHAM: You have to.

Mr. MANION: Perhaps there is something in that—to keep peace in the family. But at any rate I put in the part about the French Canadian because I thought possibly that might happen. But in the case of the man who was Scotch, English, Irish or any other nationality, who came to this country and lived a few years, became a naturalized Canadian, and went over to the States and lived there, the immigration officers would mark him down as a Canadian, whether he was Scotch or Irish or whatever he was. He may have been living many years in Canada. But by the census officers he would be asked his place of birth and would give it. That explains the difference in census and immigration figures. The 742,000 people who went to the United States were largely people who were not born in Canada. Possibly 200,000 would be born in Canada and 500,000 would be born elsewhere, and they would give their place of birth, not as Canada, but as Scotland, or whatever country they were born in. That is why the census figures do not agree with the immigration figures.

Mr. ARTHURS: I may say in the returns I was quoting from there is a column giving the country of origin of all immigrants to the United States, and in that column in one particular year which I am carrying in mind now there were given 33,000 French Canadians, 28,000 Irish and the others gave the country of their origin, and they carry out the statistics in that way.

Mr. BALDWIN: Quite recently I was interested in sending a man whose home was in Texas to Los Angeles twice, and he made his return last Monday to this city. The picture he drew of what he saw there was very interesting. Thousands of people are loafing and cannot get work. In fact, he said, he never saw as many out of employment. He said if people in Canada only knew the beautiful country they have here compared with what they find when they go elsewhere, they would be content and not leave. He said, "I never saw such a crowd of people, of loafers trying to find something to do, and who were trying very hard to get back into Canada". Two or three weeks ago I was told by a man that there were forty-seven vacant farms in the township in which I lived, and he wrote letters to me and told of people who sold out their farms and went to California, and were now wanting aid to come back. He spoke of many people who were whining and shedding tears because they wanted to get back to their own country. They had wasted their money they took with them from Canada.

Is it any wonder that spineless, frightened people have left this country? American born good-for-nothings in time work their way back into the United States, and they are now over there being kept on charity by wealthy people who made their money by getting high prices during the war out of those countries which were engaged in that terrible struggle. There are tens of thousands of people who will not work, who have gone there. The rich people say: Have you any poor? if you have, let us know where they are and we will feed them. That country has grown rich, and it is doling out to the shiftless. The Union government,

during its regime, brought down a policy to tempt people out of this country. Time after time they said that it was not the worst thing to be in a country where there was a small population. They would rather have a few people who were thrifty. The guilty people on this question are sitting on the opposite side of the House. I say again, it is not the worst thing to be in a country where we are not keeping a lot of people on charity. We have a fine, vigorous class of people in Canada. The hon. member for Marquette (Mr. Crerar) last night said that before this century closed, Canada would have a population of 100,000,000. It is cheap talk and all tommyrot about people leaving Canada, and it is wasting the time of this parliament to talk about it.

Mr. WOODSWORTH: Is there no possibility of consolidation of the immigration activities of this government and those of the Canadian National? In response to a question which I asked, the following figures were given me. The cost of maintaining the Colonization department of the Canadian National Railways in Europe during the years 1923 and 1924 respectively was: For 1923, $28,397; for 1924, $178,329. I would call attention to the fact that when we are discussing salaries under this department, we are discussing only a part of the salaries connected with the immigration activities of this country. With regard to the Canadian National, we are not given information as to the size of the salaries; the management does not consider it to be in the public interest that this information should be given to the people. We are not given information as to the expenses connected therewith, but undoubtedly there is a very considerable duplication and unnecessary expenditure. I have had sent me by an Old Country correspondent examples of advertising which is being carried on by the Canadian National Railways side by side with advertising that is being carried on by this department. It may be all very well, perhaps, for the minister to take the ground that the Canadian National is conducting its own affairs in its own way, but it as well as the department is subject more or less to this government, and the country is footing the bill. We ought therefore, to see to it that there should not be duplication and waste.

A good deal has been said recently about what is alleged to be the campaign that is being carried on in the Old Country with regard to immigration to Canada. This is stated to be insidious in character. There are some who claim to trace its source to Moscow or some other district which is supposed to be under the ban. I read an article only a few days ago in which the immigration question was being discussed. This was in one of the leading Old Country labour papers, the Glasgow Forward. I found that the article was basing its statements very largely on Hansard reports of discussions that had taken place in this House. It is quite true that some of the members in this quarter were quoted, but I noticed that members of the Conservative party and members of the Liberal party were also quoted as to conditions in Canada. Among other things attention was called to the situation in Cape Breton. I mention this just to suggest that with the quick communication which now existed in this country and around the world, it is absolutely impossible for us in Canada to try to fool the people either in England or in Europe as to conditions which prevail here.

Mr. MACDONALD (Pictou): Anyone who has visited England or Europe knows that conditions there are ten times worse than they are in Canada.

Mr. WOODSWORTH: I recognize there are very bad conditions in both England and Europe, but I would reaffirm my statement that it is absolutely absurd for us to think we can fool the people there as to what conditions really are in Canada.

Mr. MACDONALD (Pictou): Conditions here are a great deal better than anywhere on that side of the world.

Mr. WOODSWORTH: In reference to the particular article to which I called attention, the writer of the article who had been resident for five years in Canada, urged his fellow countrymen to remain in England rather than to risk themselves over in Canada under conditions that prevailed here. From year to year in this House a good deal has been said with regard to misleading statements which have gone out from our immigration department. I very frankly concede that much of the trouble lies in the fact that Old Country people are not able to appraise properly statements that are made in our literature. Conditions are so different that they do not always interpret the statements correctly. Yet, I would note that we are putting forth efforts very frequently which can hardly be justified. One of our Winnipeg papers recently called attention to the extent to which Scandinavian papers were being used to stimulate immigration from Sweden and Norway. The following literature was quoted:

Department of Immigration and Colonization
Accounts Branch.

Ottawa, Ont., December 4, 1924.

Sir,—I beg to enclose herewith cheque No. 12731 in your favour for $320 in payment of your account against this department for 4,000 copies of Norrona, account November 15, 1924.

Your obedient servant,

A. R. MORISSET.
Accountant.

It would seem, from the information contained in this article, that as regards this Swedish paper published in Winnipeg with offices on Logan avenue and another Scandinavian paper, the circulation of neither paper exceeds very much 5,000 copies per issue. The government takes 4,000 copies per issue. These are distributed in the Old Country, and people, by means of quite highly coloured descriptions, are induced to come to this country. I have in my hand a communication from one of these Scandinavian people who has been here for a number of years and who protests against these statements on the ground that they were deceiving his countrymen in the Old Land. I would call the attention of the department to this situation and urge that it is more than useless to base a general policy on the circulation of literature which, although the statements in themselves may not be false, gives more or less of a misleading impression as to the actual situation in Canada.

Further, let me ask, is it true that the Canadian government has guaranteed employment to immigrants sent here under the Empire Settlement Act? That has been declared in the British House of Commons by the Home Secretary, the Right Hon. Mr. Amery. I do not know how far that is a correct interpretation of the empire settlement scheme, but I have in my hand the draft agreement one clause of which states that the Dominion government undertakes to make adequate arrangements for the reception and absorption of immigrants on arrival. I find that some of our people in Canada, who cannot find any employment, consider it rather a strange thing that our Dominion government refuses to assume any responsibility for securing work for our own citizens when, as the British Home Secretary is reported to have said in the House of Commons, the Canadian government guarantees employment to anyone who will come to Canada. I think we should have it clearly put before us by the minister just what is the understanding, and whether or not this is correct.

Mr. MACDONALD (Pictou): Will the hon. member read exactly what the British Home Secretary says?

Mr. WOODSWORTH: I have not looked up the original documents; I have taken this statement from a clipping which I saw in a reputable journal which summarizes the statement that was made in the British House.

Mr. MACDONALD (Pictou): My hon. friend should not come and make the statement that this government guarantees work to everyone that comes to the country, and this on the strength of an alleged declaration in the British House of Commons, without producing the precise words.

Mr. WOODSWORTH: I might have consulted the British Hansard but I took this from a newspaper report.

Mr. GARLAND (Bow River): If the Minister of National Defence (Mr. Macdonald, Pictou) will read an official letter of the Canadian Chamber of Commerce in London he will find exactly that statement reproduced in print under the authority of the Department of Commerce in England.

Mr. MACDONALD (Pictou): I am referring to a statement alleged to have been made by the Right Hon. Mr. Amery.

Mr. WOODSWORTH: I took the clipping from a reputable journal which summarizes what was said in the British parliament. The statement was made that the Canadian government had guaranteed employment to immigrants sent here under the Empire Settlement Act.

Mr. MACDONALD (Pictou): That is not what the hon. member said; he said that employment was guaranteed to everyone that came here from the other side.

Mr. WOODSWORTH: I shall have to leave the decision of that point to Hansard; I was reading from the slip I held in my hand. Now, I want to know whether this statement is correct or not. Is this the understanding that exists between the Canadian and the British governments? If it is incorrect I want the minister (Mr. Robb) to say so. I am not criticizing anything that the British Home Secretary may have said, for he is not here to answer; I am discussing an agreement and I am asking whether or not such an understanding as is suggested by the alleged statement of the Home Secretary does exist between the Canadian government and the British government. The statement that appears in the draft agreement with the Canadian government with re-

5 p.m.

gard to nominated passages for agricultural workers reads:

(d) Make adequate arrangement for the reception and absorption of migrants on arrival.

Whether that can be interpreted as meaning that the Dominion government will take care of these people and provide employment for them, as apparently according to my information the British Home Secretary believes, is the matter I have in mind and on which I should like a statement from the minister.

I do not wish to enter into any detail regarding the whole question of immigration, but I suggest that at least on the part of a considerable number of people in the Old Country there is coming to be a fuller understanding of some of the social and economic conditions that prevail in Canada. Let me take this opportunity of calling attention to the fact that naturalization certificates amount to very little; under the present act they may be revoked on the authority of one individual. I do not believe that such a condition should prevail. I know that among some of my non-English-speaking constituents, aliens who come to this country, it is keenly felt that if they are once naturalized in Canada they should enjoy the protection which such naturalization ought inevitably to involve. Further than that, there are great difficulties in many sections of the country placed in the way of immigrants who wish to become naturalized. When an immigrant applies for naturalization a mounted policeman is sent to interview him to find out all about his connections and to report concerning him. Inquiries are made as to whether he belongs to a particular trade union or not, and I am informed that very frequently applications have been turned down because the man asserted that he belonged to a particular organization. Is this a fact or not? I have been told it again and again as I have visited different labour camps across the country. I venture to say that immigrants to this country who are in constant communication with their friends in the Old Country are telling them about these things, and it is no great mystery that there is a good deal of reluctance on the part of many people in Europe to come to Canada. I would remind the House that although this present parliament has been functioning now for four years we still have on the statute books an amendment to the Immigration Act placed there in 1919, which has been modified only in part and which has the effect of depriving certain classes of immigrants into Canada of the right to trial by jury. That affects Englishmen and Scotchmen as well as aliens,

[Mr. Woodsworth.]

and I know that this matter is very frequently discussed among different groups of labour people who have come to this country, and it is reported throughout the labour papers in the Old Country. The various organizations in England and Scotland, I need hardly remind hon. gentlemen exercise quite a wide influence. In these there has been a good deal of discussion with regard to the backward social legislation which we have in Canada. Englishmen who have been assured of the right to belong to a union and who in the Old Country have been accustomed to the idea of certain social insurance find it very difficult to reconcile themselves to the prospect of coming to a country where such provisions are yet to be enacted.

It is all very well from our standpoint to say to the immigrant, come and help us carry our load. But it is another thing from the standpoint of the man coming here to help carry that load. Some of us who have tried to catch horses at large know that if we carry the halter too prominently displayed the horse does not always come to our hand. And we have been declaring throughout the country that we wish immigration to Canada very largely to help pay our national debt. I am not at all sure that this is the best kind of immigration literature to send abroad.

Mr. COOTE: That would not be misleading.

Mr. WOODSWORTH: No, I do not know that it would be misleading.

Mr. ROBB: Will the hon. gentleman quote from any such literature.

Mr. WOODSWORTH: Such literature is being sent over.

Mr. ROBB: No.

Mr. WOODSWORTH: It is being sent over there in every bound copy of Hansard that leaves the country. It is being sent over by the president of the Canadian Pacific—

Mr. ROBB: The government is not responsible for the utterances of my hon. friend.

Mr. WOODSWORTH: No, but the government is responsible for the conditions that exist, and we in this House are in duty bound to try to remedy those conditions. Instead of continuing to spend, as we have done for many decades, large sums to induce people to come to this country, I suggest that we spend a quarter of the amount in changing the conditions that prevail so as to make life more attractive to the people out on the plains and to the people who come to our cities, particularly to our industrial centres. If we

did that I have not the slightest doubt that we would have more applicants for admission to this country than we could readily take care of.

Mr. CLARK: A great many Canadians who have become naturalized in the United States are desirous of returning to this country. Many have returned and are discouraged to find that they are unable to regain their status as British subjects until they have resided in Canada five years. This matter was brought up this year in the budget debate by the hon. member for London (Mr. White), and again, I think, by the hon. member for Kingston (Mr. Ross) on the estimates of the Secretary of State. I personally took it up with the Minister of Immigration and the Secretary of State in the fall of 1923, and later with the Prime Minister, and all agreed that the situation should be dealt with. But it was pointed out to me in 1923 that the naturalization acts of all the dominions and the Mother Country had been made uniform in 1914 and that no amendments could be made by this parliament until the matter had been taken up at an Imperial conference. We have had two or three Imperial conferences since then, but I do not suppose the matter has ever been dealt with. On September 10, 1924 I wrote a letter to the Prime Minister with reference to the difficulty of repatriating Canadians. I have had no reply other than an acknowledgment by his secretary, written when the Prime Minister was in the west last fall. My letter was as follows:

> With further reference to my letter of the 30th July and to your reply, I note from a newspaper communication that South Africa has recently passed an amendment to its Naturalization Act, the effect of which is to give the status of British citizenship to Germans who have resided there for a period of six months, should they so elect. If this British dominion has power to make such a drastic amendment to its Naturalization Act, surely the Dominion of Canada has power to amend its act so as to repatriate Canadians within a reasonable period, who have lost the status of British citizenship by becoming naturalized American citizens.
>
> May I once more urge upon you and your government the importance of giving this matter your early consideration so that an amendment along the lines previously suggested may be considered at the next session of parliament.

I realize that this matter concerns the Department of the Secretary of State, but it is of vital importance to our immigration policy that those Canadians who have lost their Canadian status, their British citizenship, by becoming naturalized United States citizens, should be given every opportunity to regain their Canadian status on their return to Canada with the intention of once more becoming permanent residents of this country.

Mr. SUTHERLAND: Every encouragement should be held out to former Canadians to come back to Canada and resume their citizenship here. I have in mind two instances of Canadians who went to the United States a number of years ago, became naturalized, did very well there, but came back to this country and married Canadian women, and they have to remain here five years before they can secure Canadian citizenship. But that is not the worst feature of it; the women they married become American citizens, although they have lived here all their lives. That is a great injustice.

Mr. POWER: If the hon. member will pardon me, these women do not become American citizens; they become citizens of no country at all, which is very unfortunate. That matter was brought up last week.

Mr. SUTHERLAND: That is perhaps even worse. Anyway, it is a rank injustice that people who have lived in Canada all their lives should lose their nationality on that account. This is a matter that demands the attention of parliament and that calls for speedy redress. I notice that a measure of this kind was introduced into the Imperial parliament during its session this year and that that grievance has been removed so far as they are concerned.

Mr. COPP: I quite appreciate the difficulty, if you may call it such, which has been referred to by the hon. member for Burrard (Mr. Clark) and the hon. member for South Oxford (Mr. Sutherland). But we have to go back a little to get a proper view of the situation. From 1902 up to 1914 the question of the adoption of a uniform naturalization law was the subject of discussion between representatives of this government and of the Imperial government, and in 1914 that uniformity was brought about. It was thoroughly understood that Canada or any other part of the empire could adopt its own naturalization law, but if a similar law was not enacted by the Imperial government those who should become naturalized under the special Canadian law would be British subjects only while they remained in Canada. No one disputes the right of this parliament to amend our naturalization law to provide that Canadians who return to this country may secure all the rights of citizenship without remaining in the country five years, but under such naturalization they would be British subjects only while in Canada. There is much to be said for the suggestion made by the hon. member for Burrard—and he has made it to me privately as

well as in the House. I have had requests from many other people throughout Canada along the same line. Just here I may say that the hon. member for South Oxford is in error, I think, in stating that a bill with regard to this matter has been presented to the Imperial parliament. As I understand it, it was presented in the form of a resolution which has not yet been accepted by the Imperial parliament. I would point out also that when our Canadians left this country and went to the United States they remained there for five years before becoming naturalized, and after giving due consideration to the matter they foreswore their allegiance to this country. We are very glad to hold out the hand of welcome to our friends who have left this country and desire to return, and personally I should be glad indeed if we could shorten the time of their residence here which is a qualification for reassuming their British citizenship, if that could be done without interference with the general naturalization act. I do not see how it can be done, but if such an arrangement can be made, and the Imperial parliament will agree to shorten the time of residence in Canada for Canadians who have gone to the United States and then returned, we shall be very glad to pass an act accordingly, but it must first be agreed to by the Imperial parliament before these returning ex-Canadians can become British subjects throughout the empire. Otherwise, they would only become British subjects in Canada. That is the stumbling block, and I do not think it would be wise to have the two qualifications. However, the matter will be given consideration, and if it is possible to shorten the time and have an act passed by the Imperial government, we shall be very glad to amend our act accordingly.

Mr. CLARK: Has the minister seen the act passed by South Africa?

Mr. COPP: It has not been brought to my attention.

Mr. CLARK: I am informed that an amendment to their Naturalization Act was passed by that dominion under which the status of British citizenship was granted to people who had resided there for a period of six months.

Mr. COPP: When was that amendment passed?

Mr. CLARK: The only information I have I noticed in a newspaper despatch about the 1st of September last year, and I wrote the Prime Minister then drawing his attention to that fact, and suggesting that if another dominion could do it, Canada might do it. I can quite see it may be desirable, I think it is desirable, to have uniformity in all the British dominions and the Mother Country as far as British citizenship is concerned, but I say this is a very vital matter to Canada, and if it takes over two years to communicate with the other dominions and the Mother Country over a small point like this, I would suggest that as a temporary expedient this country might well pass an amendment to its Naturalization Act repatriating those Canadians who return and give them British citizenship in a lesser period than five years. Then afterwards, if it requires three or four or five years to get into communication with the other dominions and the Mother Country over this matter, our act can again be amended to bring about uniformity. I am quite sure, however, that if this matter were taken up with the other dominions and the Mother Country, and if Canada requested that Canadians who have lost their citizenship by reason of being naturalized in the United States, who have returned to us and who desire to live in this country permanently, should be allowed to regain their status, they would readily agree because Canada after all is the only one of the dominions vitally affected. We are the only country, except the Mother Country, that is losing citizens to the United States and we are in a different position from the Mother Country in that the Mother Country has a policy of emigration, whereas we have a policy, or should have, of immigration. We are looking for immigrants; they are not. I think we would have no difficulty whatever in securing the co-operation of the other dominions and the Mother Country, and I for the life of me cannot see any reason why this matter has not been taken up by the government if it thinks it is desirable that these people should be encouraged to return and again take up British citizenship; I cannot for the life of me see why it has taken two and a half years to get into communication with the other dominions and the Mother Country.

Mr. COOTE: I would like to take this opportunity of expressing my disapproval of the attitude of the government during the past year particularly in the matter of unemployment relief. I think it is time that this House made some definite pronouncement on the policy of the government in that connection. I think myself it is very unfair for the Dominion government to carry on an immigration propaganda and bring many immigrants into this country, and then when the

unemployed immigrants become a charge on the municipality say to the cities where these unemployed are: We have no responsibility in this matter; you must take care of your own unemployed.

I would like to quote, with approval, for the benefit of the committee a short editorial from the Calgary Herald, as follows:

> The Dominion government has disclaimed any responsibility for the care of unemployed in the cities.
>
> Calgary does not ask the Dominion authorities to assist in the care of bona fide citizens of ten months' residence. Calgary is satisfied to accept these as a charge upon the city.
>
> But how about immigrants brought to Canada by the Dominion government, ostensibly to work on farms, who have recently come to Calgary and are now destitute? There is no justice in the Dominion government's claim that it has no responsibility in these cases.
>
> And how about immigrants who are allowed to enter Canada after faulty medical examination, who, almost as soon as they arrive here, have to be sent to hospital? Calgary at present has instances of this sort, men suffering with tuberculosis, being cared for at the expense of Calgary.
>
> If proper medical examination of these people had been made at the port of entry their condition would have been revealed. The Dominion government has an undeniable responsibility in these instances.
>
> There are destitute families in Calgary and there are patients in Keith sanitarium that should clearly be cared for by Ottawa, but when Mayor Webster brings the facts of these cases to the attention of Mr. Murdock, the minister to whom appeal should be made, he coldly ignores them and refuses to make any move.
>
> Mr. Murdock is as unfeeling as he is unfair in this attitude. These people are brought to Canada by the government and then left to starve or to die; the government does not care, it will take no step to save them.
>
> This is not a fanciful picture. It is the sad truth, a truth that can be abundantly proved by the records of the city relief department, of Sunshine, and other agencies of relief.

I know of a case, Mr. Chairman, which occurred in a rural municipality in the province of Alberta.

Mr. POWER: Does the hon. member seriously contend that the federal government should pay unemployment doles or in any way look after the unemployed who have only been here a matter of five or six months, and seek to make this country a kind of workhouse for the scum of Europe?

Mr. COOTE: No one who has followed my remarks when immigration has been discussed could accuse me of wanting to do that.

Mr. MEIGHEN: It could not be so bad if it was a workhouse, could it?

Mr. COOTE: In answer to the hon. member for Quebec South (Mr. Power), if there are people who have been in this country only a few months and who find themselves out of employment, if it can be clearly established that they have come here because of the propaganda sent out by the Immigration department, I say that this government has a distinct responsibility in aiding the municipalities who have to take care of these people. I do not think that can be disputed. If it can, I would ask the minister, when I sit down, to give reasons why they should not assist in that respect.

I want to bring to the attention of the committee a case that occurred in a rural municipality in the province of Alberta of a family brought out to this country by the Immigration department authorities and settled on a vacant farm, and who later came to the authorities of the rural municipality and asked for relief.

Mr. ROBB: What is the name?

Mr. COOTE: I will not give the name.

Mr. ROBB: If my hon. friend gives the name, he knows I have the answer. I gave it to him before, I think.

Mr. COOTE: No, the minister never gave it to me before, but I can assure him I do not think there can be any doubt of the bona fides in this case.

Mr. MACDONALD (Pictou): Then why do you not give the name?

Mr. COOTE: I have very good reasons for not giving the name. But this is only one case, Mr. Chairman. There are many of them in Canada, not so many in the rural parts as there are in the cities. This particular family had been in receipt of the dole in the Old Country. These people acquire the habit of living on doles, and when work is not very convenient or the wages not entirely satisfactory to them they feel they should receive doles. I want to try and impress upon the committee that we should be very careful in inducing people to come from England where they are getting used to the dole system.

Mr. ROBB: Right here I want to say that instructions have been given that any officer who sends to this country a perpetual dole taker is subject to immediate dismissal. Now will my hon. friend give me details as to this case so that I can have the matter dealt with?

Mr. COOTE: I will endeavour to get the information for the minister as to when the people came; personally I do not know. This information came through the secretary of a municipality. I know he is a reputable man and that is why I made the statement here.

But the point I want to impress upon the committee is that a great many people in the Old Country are now in receipt of doles, and if they come to this country and the work which they desire to accept is not to be had they are very likely to adopt the attitude that the government should give them doles. I do not think we can afford to pay out doles in this country. I dislike doles but, of course, as I said in answer to the hon. member from Quebec, if the government insists on bringing people to this country by means of propaganda which it puts out I think it is more responsible for looking after these people than the municipality in which they happen to locate. That is the point I want to impress upon the minister; and I would ask the government if it will not give this committee an assurance—

Mr. ROBB: The answer is that it is not done.

Mr. COOTE: What is not done? Does the minister mean to say they are not bringing people to Canada?

Mr. ROBB: We are not bringing dole takers to Canada.

Mr. COOTE: Whether they are dole takers or not, if they come here and inside of three months find themselves in a city with no employment and the city has to feed them, is the government going to say to that city, as it has done in the past, "The matter is no concern of ours, you must feed those people yourselves"? Though the government has itself created such a situation by bringing the people here that has been its attitude in the past. Is it going to continue taking the same attitude?

Mr. ROBB: Does my hon. friend want an answer now? At present we are considering the vote for civil government, but I may as well answer his question now by saying that the policy of the government was very clearly outlined during the present session. We do not propose in this country, we do not think it is necessary, to pay unemployment doles. As to the argument advanced by my hon. friend I do not believe for a moment, that the people he represents in parliament would support the policy that Canada should undertake an unemployment dole system. I do not think the people of Canada are prepared to adopt such a policy as that.

Mr. COOTE: I hope the minister does not think I am advocating any such policy.

[Mr. Coote.]

Mr. ROBB: It is pretty close to that policy.

Mr. MACDONALD (Pictou): What else would it be if you are going to pay money to such people when they are not working?

Mr. COOTE: I will repeat, for the benefit of the minister, a sentence from the editorial already quoted:

> How about immigrants brought to Canada by the Dominion government, ostensibly to work on farms, who have come recently to Canada and who are now destitute? There is no justice in the Dominion government's claim that it has no responsibility in these cases.

That is the point I was trying to get the minister to answer. The government thinks it has no responsibility. Does the government think all the responsibility should be placed upon the municipality where these people are? Does the minister deny that various cities and municipalities in Canada have to pay out a great many thousand dollars for relief? I was told when I came through Winnipeg on my way to Ottawa that the city was feeding 2,000 families at that time. What I say is that it is unfair for the government to bring in these people and not to assume some share in the responsibility for taking care of them in the winter time. I think myself the government should stop a lot of this immigration propaganda and then we would not have these unemployed people on our hands. But if they are going to persist in such an immigration policy I should think they ought to share with the municipalities the burden of this relief. I should like to get an assurance of that kind from the government if we are going to maintain the same kind of immigration propaganda.

Mr. MURDOCK: May I ask my hon. friend the date of the editorial in the Calgary Herald?

Mr. COOTE: It was published some time during the past winter.

Mr. MURDOCK: About what time?

Mr. COOTE: I would think somewhere about the month of December.

Mr. MURDOCK: Did my hon. friend note a news item in the Calgary Herald of April 3 last in which, under large headlines it is stated:

> Refusing to accept jobs, two hundred men ordered out of labour bureau.
>
> Majority of them alleged to be persistent idlers, and when Superintendent Carnill fails to persuade even one to take farm work, he closes door on them. Civic authorities checking up situation and police are making an investigation. Farm hands may have to be imported.

And then in the same article the acting mayor is alleged to have said:

These men have been hanging around the city the best part of the winter "and it will be necessary for the civic authorities to take some action to see that they either go to work or move on. You can say that we are going to take some action to get these loafers out of the city but we haven't definitely decided what that will be."

I do not argue that that is all correct. What I state is that this news item indicates what the Calgary Herald believed to be the situation in that city.

Mr. SUTHERLAND: The situation is a very peculiar one. We are spending money lavishly in order to bring people to Canada to fill up the vacant places throughout the country, and at the same time there is a dispute between hon. gentlemen on both sides as to the number of people that are leaving the Dominion every year. There is one point as to which everyone is agreed, and that is that the country itself is all right. Nature has made very generous provision for the people who inhabit Canada; I doubt if there is a similar area in the world which holds greater possibilities than this Dominion does. That being the case would it not be well to take the trouble to find out what drawback we are suffering from, because there certainly must be something seriously the matter when the condition which has been alluded to exists. I listened to arguments pro and con between the Minister of Labour and the hon. member (Mr. Arthurs) with regard to the number of Canadians who have gone to the United States and the number who are returning. In this connection may I quote from a despatch in the Montreal Gazette of April 20, last under a Toronto date line:

Immigrant smuggling rings, with agencies in Toronto, Montreal, Hamilton and other large Canadian cities, will be broken up this season when they commence to unload contraband cargoes of humanity at the Niagara frontier, say United States government officials who are mustering their forces in Buffalo to stop the traffic.

Shirley D. Smith, for more than a score of years chief of the United States immigration authorities for the Niagara district, asserts his force of 150 experienced officers, all heavily armed, have been ordered to wipe out the business. Aiding the immigration officials will be the United States coastguard forces. Four 75-foot cruisers will be added to the equipment for work among the Niagara smuggling areas.

The smugglers' rates for bringing aliens into the United States from Canada average $75 for each. In some cases immigrants contract to pay smugglers as high as $500.

I should like the Minister of Labour to notice the statements contained in the foregoing despatch.

Mr. MURDOCK: Surely the article has no reference to Canadian citizens. It is not necessary for them to be smuggled across the line.

Mr. SUTHERLAND: Sometimes it is.

Mr. MEIGHEN: Some of the best of our immigrants.

Mr. SUTHERLAND: This article continues:

Aliens whom smugglers' agents "sign up" in Toronto are sent to rendezvous at the border. Under cover of darkness they are brought across the river or lake and dumped on American shores. Speedy power boats, rowboats and fishermen's craft are used by the bands of smugglers to transport cargoes of humanity.

Divers other methods of transporting immigrants are resorted to by the smugglers, who in years past have had things much to their favor because of the great shortage of United States officers to keep watch on American shores.

This year a force of special immigration patrolmen, armed with heavy pistols and sawed-off shotguns, will maintain day and night vigilance on the waterfront. Mr. Smith revealed that the added force, which went on duty two months ago, is large, but he refused to state the number of men. It is believed at least 50 men make up the special force.

Now surely my hon. friend, in face of this, will not argue that conditions in the United States are so bad as he would have this House believe and that people are coming back to this country in great numbers. We can recall that during the election campaign in the United States last fall the argument put up by the Republican party was that by reason of the tariff which they had established in that country it was necessary for them to adopt the quota law to keep people out of the country, on account of the high wages and abundance of work there for the unemployed of other countries; and on the contrary their opponents adopted the very opposite policy, the very policy we have in effect in this country at this time, which is responsible more than anything else for the conditions which prevail here. What is the use of voting money to increase the civil service and in many instances spending millions of dollars on an idle service? Here we are asked to vote a quarter of a million dollars under the head of civil government. For the outside service there is included in the estimates the sum of $750,000, making a total of a million dollars for officials in connection with our immigration service in this country. That is not all. We do not know how much money we are spending in that direction. I have here the report of the Canadian National Railways for the past year and it seems that they are even going to outdistance the government in this direction. I find the item here:

Industrial and immigration bureau, $770,454.

We have not any information as to what these people are doing. We must not ask for information but we have a right to know what this government is doing in regard to this matter. We are increasing the estimates in many instances, in this particular item there is no increase this year, but that does not tell the whole story. If you turn to page 21 of the Estimates, you will find that under the head of Immigration and Colonization the great bulk of the money which is to be voted is not for immigration purposes. I find an item of $250,000 for the British Empire exhibition. Last year the item was $450,000.

Mr. ROBB: My hon. friend will find on page 21 that there is a decrease of $708,000 in the estimates.

Mr. SUTHERLAND: But there is no decrease in the civil service. The amount under immigration for the outside service is exactly where it was, $750,000, and the amount for the inside service $250,000. That makes a total of a million dollars, but there is considerable reduction in other lines, where expenditure might tend to promote immigration to the country. If the policy of the government is carried out to its logical conclusion, it would put the whole population of the country under the control of the government and the civil service. You are eliminating competition among the people who are outside the service. You are fixing rates of labour and fixing salaries, and increasing the staff far beyond the requirements of the country in many directions.

I was not here the other night, but I observe that in the Department of Agriculture tremendous increases have been made. Hundreds of thousands of dollars are going out and no attempt to practise economy. If the government have any policy with regard to immigration, I think the people of the country ought to know it. If we cannot keep the people who are coming to this country, we ought to see that some remedy is provided, and that the conditions which prevent them remaining here are abolished. We know full well that we have lost hundreds of thousands of our people, native-born Canadians who have crossed the line and are residents of the United States. You may say that numbers of them are coming back. Well that is bound to be the case. We have much cheaper land in this country, and with the increase in the price of farm products which has taken place throughout the world recently, there is a natural tendency to look to the land for some return, which people are not able to obtain in the city. I think we have altogether too much nursing legislation. I do not believe that the government should look after every person who is out of employment in this country.

Mr. GARLAND (Bow River): How about the industries that are being nursed all the time at the expense of the people?

Mr. SUTHERLAND: We have some sickly looking industries.

Mr. GARLAND (Bow River): As a result of the nursing.

Mr. SUTHERLAND: No, not at all, as a result of the medicine that they have to take since the government my hon. friend supports took office.

Mr. GARLAND: (Bow River): What is the medicine?

Mr. SUTHERLAND: The medicine which is administered by the government which is supported by the hon. member for Bow River.

Mr. GARLAND (Bow River): I wish there was more of that medicine administered, then they might get well.

Mr. SUTHERLAND: There is no excuse and there is absolutely no justification for voting a quarter of a million dollars for the inside service and $750,000 for the outside service, in view of the results which are being attained under this heading of Immigration and Colonization.

Mr. McBRIDE: I was going to add a word to what the hon. Minister of Labour said in connection with unemployment. I have in my hand a clipping from a paper which says:

> Fourteen hundred men wanted to do harvest work on the prairies.
>
> Wages from four to five dollars a day.
>
> Still remain 150 men walking the streets of Winnipeg unemployed.

Does that look as if these people want to work? There is always a certain class of people who will not work, no matter what the conditions are. I am rather surprised this afternoon to hear some of my friends to my right speak on this question. One class of them says that the immigration is all going to the United States. The hon. member for Burrard (Mr. Clark) wants the government to put in force legislation to enable these people to come back. I think if the people are coming back to take up citizenship in Canada again to the extent that the hon. member for Burrard suggests, it speaks volumes for this government.

Mr. COOTE: I would like an opportunity of saying a word in reply to the Minister of Labour. There is a big difference between the month of December or January and the month of April. In April there is a good deal of work to do on the farm, but in the month of December and the month of January there are people who cannot get work particularly people who have just been brought into Canada by the government, who are not used to conditions in this country, not used to farm work and who find it more difficult to obtain employment. I have another editorial from the Calgary Herald, published in the month of January, from which I will quote one paragraph, as follows:

> The Dominion government's absolute refusal to have anything to do with unemployment relief is inexcusably harsh. Many of those requiring assistance can reasonably be described as wards of the Dominion government. They are newcomers recently brought to the country by the Ottawa authorities, men who have run upon hard times either through sickness or lack of work. The Ottawa government can not disclaim all responsibility towards these cases and it is amazing to find that the Minister of Labour, Mr. Murdock—who of all the cabinet ministers ought to have sympathy for workmen in the direst distress—is the chief advocate of resistance to the plea for Dominion help.
>
> The Mayor's appeal to Hon. Mr. Murdock has failed. The Trades and Labour Council might with propriety now add their appeal to the Minister of Labour in the effort to lessen the privation of the workless in the city.

I would point out that this editorial says as well:

> The provincial government is keeping the promise it made at the unemployment conference at Ottawa, which was to contribute 25 per cent of the labour cost of relief works carried on by municipalities. It is making additional grants to the Salvation Army and to the Board of Public Welfare here.

All that I am asking the government to do is this. If they are going to persist in their immigration efforts, they should agree to share with the municipalities the cost of looking after the hardships which necessarily accrue amongst newcomers during the winter months.

Mr. POWER: If the federal government should be obliged to look after the newcomers, why should we not look after our own citizens who have been good and honest citizens and are in distress? To carry the argument to its logical conclusion, why should we not establish the dole system? That is what my hon. friend has been driving at all afternoon.

Mr. COOTE: The hon. member has asked me quite a lengthy question.

Mr. POWER: It is a syllogism.

Mr. COOTE: The newcomers amongst the immigrants are here as a direct result of the action of this government.

Mr. POWER: Did this government ever advertise that they wanted dole-takers or paupers in this country? They said they wanted people who were willing to work. The hon. member has had it shown pretty conclusively by the Minister of Labour (Mr. Murdock) and the hon. member for Cariboo (Mr. McBride) that these men are unemployed because they will not work. We are not responsible for the loafers.

Mr. COOTE: The article quoted by the hon. member for Cariboo was, I think, dated in the month of September, and the article quoted by the Minister of Labour was dated in the month of April. Those conditions are not at all applicable in the months of December, January and February. My attitude to immigration is this, that the government should not spend one dollar in propaganda to bring immigrants into this country. I am told the United States, which has received more immigration than any other country in the world that I know of, has never spent one dollar on immigration propaganda. She has spent money on immigration to protect her from undesirables. In every province in Canada you will find a considerable number of undesirable immigrants. I think it might safely be said that some of them are not fit to work. As the Calgary Herald says, there are in the Keith sanitarium men suffering from tuberculosis who were immigrants and who had not been very long in Canada. Our immigration policy has fallen short in this regard. We have devoted our major efforts to propaganda to get immigrants here. We have devoted very little money or effort to examining the immigrants carefully. Possibly we have done more in that respect in the last few years. I believe this government are deserving of a certain amount of credit for having immigrants examined more carefully than has been done in former years. But if we do not spend any money on propaganda tending to induce immigrants to come to this country, we shall get the kind of immigrants who will make good. I would not attempt to keep out any man of the right nationality who is willing to come here of his own accord and who is willing to work.

Mr. POWER: Is it not mostly the men of the nationality the hon. member mentions who are here and who are always looking for doles, who, in his own words, are accustomed to doles in the Old Country?

Mr. COOTE: I have not mentioned the nationality.

Mr. POWER: I know what the hon. member means by the "right nationality."

Mr. COOTE: Possibly the hon. member does and possibly he does not. It is a mistake and a waste of money to assist immigrants. You get the wrong class when you do so. It is a wrong policy to pay passages to get people to this country. I hope my hon. friend will agree with that.

Mr. POWER: Absolutely.

Mr. COOTE: If he wants to know the nationalities that I do not like being brought here, let him read almost any number of the Canada Gazette and see the names of those who have been naturalized in the past month.

Mr. POWER: The kind my hon. friend wants do not happen to need naturalization.

Mr. COOTE: Yes, many of them would have to be naturalized. I think a majority of the immigrants we have in our western country had to be naturalized. I do not wish to dwell too much on the fact of a man's nationality. It is true there are certain nationalities that are not very desirable in this country. My hon. friends from British Columbia will agree with that. Let us quit spending money in advertising for immigrants. but let us all get together in trying to make conditions fit for our own people whom the hon. member for Quebec South (Mr. Power) mentions. Then we shall have immigrants knocking at the door trying to get in, the same as they do in the United States.

Mr. GRAHAM: We have spent half a day on this one item. I am afraid my prognostications about June 15 will have to be moved on about three months. Could we not allow this item of civil government to go through? This whole question can be discussed on different items of the department when its estimates are brought up again. We have gone over every phase of immigration. While we do not want to stop discussion, these estimates with items purely applicable to the immigration question will be up on another occasion. Can we not make some little progress? We close at six o'clock on Wednesdays. We might let one item through and take up the immigration question some other day.

Mr. GARLAND (Bow River): With respect to inspection of immigrants, I notice in the civil government estimates we have provision made for one supervisor and one assistant supervisor of juvenile immigration. Are there any others not mentioned in this department?

Mr. ROBB: There are others.

[Mr. Power.]

Mr. GARLAND (Bow River): How many are there and where are they located?

Mr. ROBB: There are six inspectors of British immigrant children. They are all in Ottawa but they travel. I will get any other information my hon. friend desires if he will put his question now so that it will appear in Hansard.

Mr. GARLAND (Bow River): What I want to know is this: How many supervisors or inspectors of juvenile immigrants does this government support? Where are they located, what areas do they cover, what duties do they perform, and how frequently do they inspect the homes of immigrant children?

Mr. ROBB: I will get that.

Mr. SUTHERLAND: The request of the Minister of Railways (Mr. Graham) with regard to this item would under ordinary circumstances be a reasonable one; were it any other item I do not think there would be a disposition to discuss it at length. But, seeing that the Canadian National Railway board is apparently taking over the work; also that more than double the amount was spent in 1924 that was spent in 1923; and that we do not know how much has been spent in the past year or how much they propose to spend in the coming year, I think the matter is one that should be carefully considered. If they are to do the work formerly carried on by the department, what is the necessity for this $250,000 under the head of civil government? If it is the policy of the government to transfer the service there should be some reduction in this item. I do not think there is justification for maintaining such an enormous staff in connection with this work.

Mr. ROBB: The staff is not greater but, indeed, less than it was some years ago. I shall be glad to discuss this feature of the situation when we are on the outside vote. The Department of Immigration has nothing to do with the Canadian National Railways, who, I fancy, have land to sell through the Canadian Northern, and are looking after their business just as the Canadian Pacific is doing. The Canadian Pacific Railway has done a good deal of pioneering in this direction; we must not forget that. It has a much larger organization than the Canadian National Railways, and the department must play fair as between the Canadian Pacific and the Canadian National. I am not now entering on any defence of the Canadian National; the minister can do that. But this depart-

ment is not working particularly for the Canadian National Railways; we must show no discrimination as between the railways that bring people to the country.

Mr. MEIGHEN: The moment seems opportune to put in a remark as to the duplication that exists in the immigration service. It is entirely true, as the minister says, that the Canadian Pacific Railway has done a lot in the way of propaganda. That is all right; and the Canadian Pacific did it mainly when it had a lot of lands to sell, and for the purpose of settling people on those lands. But is it not surely the height of folly for us to have in this country two—yes, three—immigration services covering large sections of the globe at a tremendous expense? This is the worst possible form of duplication. The Canadian Northern, I know, has some lands to sell; but it sold more lands when its colonization service was run at a cost of $100,000 than it is selling to-day at a cost of $750,000. It built a great colonization service, competing with the services of the Dominion and the Canadian Pacific. Now, this Dominion cannot stand any competition of that sort. Here we have a three-headed monster piling taxes on our backs. I do not know why the Canadian Northern ever launched out into such extensive propaganda; and certainly some steps should have been taken before it was too late either to have the Dominion government withdraw from the field in favour of the Canadian Northern, or to have the Canadian Northern maintain the service it was carrying on without seeking to expand it to the inordinate proportions it has now reached.

Mr. ROBB: I agree with what my hon. friend has said, but he will be glad to know that the department has been co-operating with the representatives of the railways in an endeavour to reduce the overlapping.

Mr. MEIGHEN: It should never have been allowed to take place.

At six o'clock the House adjourned, without question being put, pursuant to rule.

Friday, May 22, 1925

The House met at three o'clock.

BANKING AND COMMERCE COMMITTEE

AGRICULTURAL CREDITS

Mr. THOMAS VIEN (Lotbiniere) presented the fifth report of the select standing committee on Banking and Commerce, as follows:

Whereas the subject of rural credit was referred to this committee for further consideration; and

Whereas the Banking and Commerce committee of the year 1924 in its investigation into questions of credit reported that it found a lack of credit facilities for farmers at rates, and upon terms, suited to agriculture and upon conditions such as obtain in competing countries; and

Whereas it is essential to deal with the serious condition of agriculture consequent thereon:

Therefore be it resolved, that the attention of the government be called again to this important matter, with the urgent request that legislation be brought down at this session for the establishment of an adequate rural credit system.

RESIGNATION OF THE SOLICITOR GENERAL

On the Orders of the Day:

Right Hon. W. L. MACKENZIE KING (Prime Minister): It is my duty to inform the House of the resignation from the ministry of the Solicitor General (Mr. McMurray). The following communications will give to the House the reasons which have caused the Solicitor General to tender his resignation and His Excellency to accept it:

Office of the Solicitor General of Canada
Ottawa, May 20th, 1925.

Dear Premier King:

Matters of a professional and private nature induce me, after careful consideration, to tender you my resignation from your government.

In asking you to accept my resignation permit me to express my thanks for being honored with the appointment of Solicitor General and a seat at your Council Board; also accept my deep appreciation for many personal acts of courtesy and kindness.

I avail myself of the opportunity to express my deep regret in disassociating myself from your self and colleagues with whom I had such cordial relationship.

May I urge for reasons above recited that I be relieved from my duties as a member of the government and as Solicitor General at as early a date as possible.

Sincerely yours,

E. J. McMURRAY.

My reply was as follows:

Prime Minister's Office
Canada
Ottawa, May 21, 1925.

My dear McMURRAY:

It is with sincere regret that I have received your letter of yesterday stating that, owing to matters of a professional and private nature, you wish to be relieved from your duties as a member of the government and as Solicitor General at as early a date as possible.

Your letter confirms the representations you have already made to me in conversation. Were it not that the reasons which impel you to desire to be relieved of your present public responsibilities are of the character to which you refer, and that we have already talked the matter over very fully, I should be most unwilling to have you sever your connection with the government. I realize, however, from what you have said to me, how considerable in many ways are the sacrifices, both professional and personal you have made in placing your time and abilities so exclusively at the service of the public. In the circumstances I have felt I had no

alternative but to meet your wishes, and have accordingly tendered your resignation to His Excellency.

I have read your letter to the other members of the government and they desire to join with me in expressing our united regret at your withdrawal from the ministry. May I be permitted to add my own very grateful appreciation of your loyal and helpful co-operation in the work of the administration ever since you became a member of it, and of the enjoyment of the closer personal relations which this association has afforded.

Yours very sincerely,

W. L. MACKENZIE KING.

Hon. E. J. McMURRAY, M.P.,
House of Commons.

MARINE INSURANCE RATES

On the Orders of the Day:

Mr. MURRAY MacLAREN (St. John City and Counties of St. John and Albert): Might I ask the Prime Minister if the government have received a report from the Imperial Shipping committee dealing with marine insurance as affecting Canada, and if so, will he state to the House in a general way the terms of that report.

Right Hon. W. L. MACKENZIE KING (Prime Minister): A report has been received dealing with the subject to which my hon. friend has referred. I shall look over it and unless there is some special reason for regarding it as confidential at this stage I will lay it on the table of the House at the next sitting.

ALLEGED AGREEMENT BETWEEN GOVERNMENT AND THE BREWERS

On the Orders of the Day:

Mr. R. J. WOODS (Dufferin): I would like to draw the attention of the government to a paragraph in the Toronto Globe of yesterday in which the president of the London Methodist conference is reported to have spoken as follows:

> Then, while our minds are upon the topic, we read in the press that brewers owe the federal government thousands of dollars, and as an explanation of this we read further that the government and the brewers have a gentlemen's agreement, which reads more like a rogues' agreement, whereby for money to be paid by the brewers to the federal government the latter will make certain concessions in filing the clearance papers of liquor presumably for export.

I should like to ask the government if that report is correct.

Mr. MACKENZIE KING: Perhaps the gentleman who has made the reference to a so-called "gentleman's agreement" would indicate to my hon. friend the source of his information, and supply him with a copy of the agreement. The government will then be prepared to answer my hon. friend's question.

[Mr. Mackenzie King.]

WEDNESDAY EVENING SITTINGS

On the Orders of the Day:

Mr. R. A. HOEY (Springfield): I should like to ask the Prime Minister if the government has seriously considered the advisability of making provision for Wednesday evening sittings, in view of the legislation that is yet to be brought down?

Mr. MACKENZIE KING: It is not the intention of the government to have the House sit on Wednesday of next week, but on subsequent Wednesdays we will ask the House to meet in the evening.

TIBURCE MALLET

Mr. DOUCET (Translation): Mr. Speaker, on March 16, last, the House ordered a Return showing all correspondence exchanged between the Department of Marine and Fisheries and others, regarding services rendered in saving lives, by one Tiburce Mallet, of Ste. Marie, Shippigan Island, New Brunswick. I would like to ask the hon. Minister of Marine and Fisheries when this correspondence will be brought down.

Mr. CARDIN (Translation): Mr. Speaker, I can assure the hon. member that this correspondence will be brought down without delay.

SUPPLY

PUBLIC WORKS

The House in committee of Supply, Mr. Gordon in the chair.

Public Works—chargeable to income—harbours and rivers—Ontario, $1,215,875.

The CHAIRMAN: Is it the pleasure of the committee to take up the appropriations in this vote item by item?

Mr. MEIGHEN: Item by item.

Beaumaris—repairs to wharf, $1,000.

Hon. J. H. KING (Minister of Public Works): I think if hon. members will glance over the list of items that go to make up the total of this vote, they will see that these items are largely for repairs and replacements or improvements. There is an increase this year in the vote over last year. That is largely made up of three or four items, namely, the harbour of Goderich where there is an increase of something like $80,000 over last year; the harbour of Oshawa, where there is a new work that was approved of by parliament in a vote last year; and the work at Port Maitland. Port Maitland was formerly under the control of the Department of Railways and Canals, but it has been transferred to the Public Works department. The work

being done there is necessary to maintain the harbour. Finally there is Port Stanley; there is also an increase under this head, but the work to be done there is essential.

Mr. MEIGHEN: What are all these for? Are they new votes, or are they simply the ordinary "pork-barrel" votes?

Mr. KING (Kootenay): I made the statement just a moment ago that I thought members in glancing down the list would find the items to be largely for improvements of harbours, or replacements and repairs. As we go on, that statement will be found to be correct. The first item is a small amount of $1,000 for repairs to a structure on lake Muskoka, which is used largely during the tourist season. The larger ships using the wharf are those owned by the Muskoka Lake Navigation and Hotel Company, the Archer Lines Lake Service Company and the Muskoka Lake Navigation Company. These boats not only serve the local people but provide connection with the National and Canadian Pacific Railways.

Item agreed to.

Blind River—dredging, $47,000.

Mr. GARLAND (Bow River): There is an increase here of $25,000.

Mr. KING (Kootenay): This amount is required to complete a contract for dredging entered into in 1924-25. The contract which was awarded to Messrs. A. B. McLean and Sons, is for the dredging of a channel 9,260 feet in length, and 150 feet wide, to a depth of 16 feet. The contract was made late in the fall, and we are asking this year for a vote of $47,000, of which $22,000 is a revote. The amount is required to complete the contract.

Mr. GARLAND (Bow River): Could the minister tell us when the work was first commenced on this river, and what the total expenditure has been up to date?

Mr. KING (Kootenay): Yes. There has been construction work done there amounting to $48,855.86, repair work amounting to $4,843.41, and dredging amounting to $60,019.91.

Mr. GARLAND (Bow River): Sixty thousand dollars

Mr. KING (Kootenay): Yes, for dredging.

Mr. CRERAR: Where is Blind River

Mr. KING (Kootenay): In East Algoma.

Mr. LEWIS: I notice that the item says there is a revote of $22,000.

Mr. KING (Kootenay): Yes.

Mr. LEWIS: The only amount down for Blind River is "wharf reconstruction, $10,000."

Mr. KING (Kootenay): There was a supplementary vote last year of $25,000.

Mr. CRERAR: Could the minister give the committee some information as to what is sought to be achieved by this expenditure?

Mr. KING (Kootenay): Blind River is principally a lumbering town; large lumbering operations are carred on there. Its population is about 1,500, and its shipments by water consist of 20,000,000 feet board measure of pine lumber per annum, and the import of about 600 tons of general merchandise. Shipments were treble this quantity, and this factor of the waterborne commerce of the place will undoubtedly revive. About 200 tons of fish are landed at the government wharf and shipped to eastern points by the Canadian Pacific Railway.

Mr. BOYS: What causes such a large expenditure for dredging there? I would have thought there was deep water at Blind River, and a pretty good harbour.

Mr. KING (Kootenay): The engineer's report says:

> Its object is to provide a safe channel for boats leaving the wharves of McFadden Limited, with cargoes of lumber, with a depth of 16 feet below mean low water or elevation 580 feet above the sea level, which is the standard improvement plane used on other dredging improvements in this district. The foreshore is comparatively shallow owing to the existence of a large deposit of sand known as the Blind River bank, which stretches easterly from the mouth of the Mississauga river to a point near Algoma mills a distance of about 10 miles and extends into the lake for an average distance of about 2 miles. The greater portion of it is from 12 to 15 feet deep, and its outer margin slopes quickly to deep water. The channel opposite Blind River through this bank is about 7,000 feet long by 150 feet wide.

That is a channel we are making through the bank.

Mr. BOYS: How has the channel been protected there?

Mr. KING (Kootenay): No protection has been provided.

Mr. BOYS: Is it not the experience that the channel fills in every year?

Mr. KING (Kootenay): Not every year.

Mr. BOYS: What depth of water is there six hundred feet out?

Mr. KING (Kootenay): You go out seven thousand feet to the banks, and then you get deep water.

Mr. BOYS: Is it seven thousand feet from the mouth of the lake before you get into deep water?

Mr. KING (Kootenay): No. These banks form out in the lake, as explained in the statement I have just read.

Mr. BOYS: A "bank" means something out of the water. Is this out of the water? Is it sand that drifts out of the river and is deposited? Surely you do not have to go through seven thousand feet in a channel, a hundred and fifty feet wide.

Mr. KING (Kootenay): Banks are forming in lakes and rivers, and in the course of time they come to the surface. It is not an unusual thing in these harbours that a drift from the river or lake forms this deposit. I am informed the bank is about thirteen feet below the surface and the depth is supposed to go to sixteen feet—

Mr. BOYS: At the shallowest point you have thirteen feet?

Mr. KING (Kootenay): Yes.

Mr. BOYS: Is there anything on file to show whether or not the engineer considered piers were necessary for protection from the drifting of sand?

Mr. KING (Kootenay): No, the engineers have not reported on that. The last dredging was done in 1913 and the channel has been maintained more or less since. It is probably considered cheaper to dredge under those conditions.

Mr. SIMPSON: Is this work considered necessary on account of the lowering of the water rather than on account of the drifting of the sand?

Mr. KING (Kootenay): Yes, that is the fact.

Mr. MEIGHEN: How is it there is a re-christening of the vote? It appeared first in 1922, in the first estimate the government brought down in that year, and it was called "wharf reconstruction." In the estimates of 1923, for the year 1924, it retained that name. The wharf was still being reconstructed. At the time of the 1925 estimates the wharf was not reconstructed and $10,000 more was put in to do the work; but in the supplementary estimates $13,000 more was added to get that wharf reconstructed. Then in 1926 the minister has taken it into his family under a new title, has christened it "dredging" and has raised the vote this year to $47,000. What is the reason? Was it feared by the government that if they put in a dredging vote in the first place, other members would want dredging in their constituencies also, and the government wanted to keep the estimates all looking like repairs and reconstruction?

Mr. KING (Kootenay): My hon. friend knows that is not right.

Mr. MEIGHEN: He does not know it yet.

Mr. KING (Kootenay): The item must show specifically what the work is for. It is for reconstruction of the wharf, and that work continued during 1923 and 1924. If the item were for dredging the Auditor General would not for a moment consider it as reconstruction or wharf construction. They are two distinct votes.

Mr. MEIGHEN: Why is it that this was called "wharf reconstruction" last year, as appears on page 39 of the Estimates of 1924, an amount of $21,000? In 1923 the same item was voted for wharf reconstruction. This year, as I say, $47,000 is voted for dredging which, it is stated, corresponds with the amount voted last year for the same work.

Mr. KING (Kootenay): That was dredging.

Mr. MEIGHEN: No, it is dredging this year.

Mr. KING (Kootenay): And dredging last year.

Mr. MEIGHEN: Then it should have been called dredging.

Mr. KING (Kootenay): I thought it was. I am surprised at that.

Mr. MEIGHEN: Look at page 40 of the Estimates of last year. It still had the old name, "Wharf reconstruction," and what was wharf reconstruction last year is not a new work, but it is called "dredging" this year. When did the transition take place, and why was it not put under the proper heading at that time?

Mr. KING (Kootenay): I am surprised that it is so. I have not the estimates of last year before me, but it should have been "dredging," that was the intention.

Mr. MEIGHEN: I will send a copy of last year's Estimates across to my hon. friend. This was wharf construction last year the same as the year before.

Mr. LEWIS: In the supplementary estimates you will find for Blind River the item,

Dredging $25,000; so that it must have been changed when it came in the supplementaries.

Mr. MEIGHEN: In the supplementaries last year the vote was $25,000, and then we voted last year Reconstruction, $10,000; so that we had a total vote of $35,000 last year.

Mr. KING (Kootenay): I think that explains the situation. The vote in the supplementaries is for dredging that is being continued this year.

Mr. MEIGHEN: How much has been spent on the wharf?

Mr. KING (Kootenay): Construction expenses, $48,000; repairs, $4,000, and dredging, some $60,000, making a total of about $113,000.

Mr. GARLAND (Bow River): In what year was the work started and what was the nature of the work in the first year?

Mr. KING (Kootenay): This goes back many years. I have a description of a warehouse built in 1905, and in 1908, due to heavy traffic resulting in an increased number of activities, an extension was made to the warehouse. I imagine the record goes back further than that. I have not the record here; it would be in the department.

Mr. GARLAND (Bow River): When was it found necessary to commence dredging?

Mr. KING (Kootenay): The last dredging prior to this was done in 1913. I imagine there has been dredging there from time to time for many years.

Mr. GARLAND (Bow River): Surely the engineers could give the minister some idea just how permanent an undertaking this dredging is to be, and whether it will be necessary to dredge every year?

Mr. KING (Kootenay): The last dredging was done in 1913. We now find it necessary to remove certain debris. That is not a bad record for a harbour on the lakes.

Mr. GARLAND (Bow River): How much was voted in 1913 for dredging?

Mr. KING (Kootenay): There was an authorization by order in council of a contract to a company to remove 57,197 cubic yards in 1912 and 17,480 cubic yards in 1913.

Mr. CRERAR: What company?

Mr. KING (Kootenay): The C. S. Boone Dredging and Construction Company, of Toronto.

Mr. GARLAND (Bow River): What was the cost?

Mr. KING (Kootenay): I have not the cost here.

Mr. GARLAND (Bow River): It is rather difficult to come to any conclusion as the minister's information is rather vague. Although he claims that no dredging was necessary from 1913 until last year, $25,000 was voted last year for dredging, and the minister this year asks for a vote of $47,000 additional for dredging. The dredging business seems to be looking up. How long are we going to have to continue this expenditure?

Mr. KING (Kootenay): My hon. friend is not quite right. Last year $25,000 was voted. The estimates were late in being passed and a contract was not entered into until late in the fall. Of the amount voted last year $3,000 has been expended. This year we are asking for $47,000, of which $22,000 is a revote, money unexpended last year.

Mr. GARLAND (Bow River): Even at that, how long are we going to have to vote $50,000—for $3,000 last year and $47,000 this year make $50,000. Is this to be a permanent annual vote, or shall we have to have another election before we have another vote?

Mr. KING (Kootenay): It is hoped this amount will clean up the contract. It is not an annual affair.

Mr. GARDINER: Is the dredging to be done by contract or by the departmental engineers?

Mr. KING (Kootenay): By contract.

Mr. GARDINER: What is the name of the contractor, and the total amount?

Mr. CARRUTHERS: The vote should have been asked several years ago for the dredging of this channel. Lumber boats have been coming out of there for the last four years drawing only about eleven or twelve feet of water when they should be loaded to sixteen feet. This has increased the cost of carriage very much. I can warn the government and the House that, owing to the rapid lowering of lake levels, dredging on the Great Lakes within a very few years is going to be something enormous. This is only a sample of what you are going to get. The lake at that point is some three and a half to four feet lower than it was five or six years ago. In order to make a fund for expenditures of this nature, I would be in favour of going back to the old system of charges: canal tolls, harbour dues and dock dues. I do

not see why the steamboat men have any right to use the lakes as they are doing now any more than the railway companies would expect the government to build a railway and then allow them to run their trains over it. As regards this port, if you are going to carry on the trade of this country, you will have to do some of this dredging. The old warehouse on the dock was blown down some five or six months ago, and the next item is to cover reconstruction of that warehouse.

Mr. KING (Kootenay): The contract was entered into, October 9, 1924, with A. B. McLean and Sons, Sault Ste. Marie. There were two tenders, the lowest being that of Messrs. McLean at 48 cents per cubic yard, place measurement. The other tender was 75 cents.

Mr. GARDINER: How does the price accepted compare with work done by the department?

Mr. KING (Kootenay): The cost of work varies in different localities on account of the material, but usually departmental work is on a par with that done by a contractor. We do not figure on a profit or interest or depreciation of plant as the contractor must do.

Mr. GARDINER: Was it not possible to use the departmental dredge in this case?

Mr. KING (Kootenay): No. We have not the plant available for it.

Mr. LEWIS: Does the government receive any fees for all these numerous works involving an expenditure of millions of dollars? It is unfortunate that any government ever started such a system. The people who use these rivers and have the advantages of the wharves and warehouses, are just as much under obligation to pay for them as the farmers in the west are under obligation to build elevators. Moreover, this House demands that there shall be sufficient traffic before branch lines are built. I would be in favour of abolishing these votes altogether. The present system takes up a great deal of the time of this House; it involves the government in millions of expenditure; and nobody gets anything.

Mr. KING (Kootenay): No changes have been made in government policy in connection with the water channels. In the matter of warehousing and wharf privileges, at the larger centres fees are charged but in the smaller localities it would not pay to keep a wharfinger to collect fees, so the people use the wharves there free.

[Mr. Carruthers.]

Mr. GOULD: I take it that the minister has a complete statement from the engineer as to the amount of money that will be required to complete the dredging in this harbour.

Mr. KING (Kootenay): It is proposed to remove 90,000 cubic yards of fine drift sand at an estimated cost of $43,200, and there will be an allowance for inspection and contingencies.

Mr. GOULD: What will be the depth of the dredging?

Mr. KING (Kootenay): Sixteen feet.

Mr. CARROLL: I have no personal interest in this vote, nor have I any personal knowledge regarding the conditions. I want to point out however that a great deal of the emigration from this country to-day is due to the fact that the people in the small localities have not the requirements they should have, especially on the lakes and rivers and on our coasts. The fact is that they are not receiving justice in the matter of public works. We talk about emigration from Canada, and we are spending millions of dollars to bring people into the country. Well, I can take hon. gentlemen down to the Maritime provinces and show them there a state of affairs that would sufficiently answer the remarks that have been made about all these votes being cut out. On the shores of the Atlantic and of the gulf of St. Lawrence there are deso'ate villages, from which have emigrated people whose fathers, grandfathers and great-grandfathers had lived there since this country was first opened up. They have gone away simply because this and previous governments have not done them justice; they have not been able to secure the improvements which they badly needed. There is one place in particular where two years ago, because this government and past governments as well would not do something in the way of protecting the boats of the fishermen, twenty-five families found it necessary to clear out. These people all left in the fall of 1923, removing to Gloucester in order to make a living. And there are various other places in the Maritime provinces where the same thing has taken place. We are spending millions of dollars on our great ocean terminals, and rightly so; no one will criticize expenditures of that nature. And we are also faced with a deficit of some $50,000,000 or so in connection with our railways. It is clear therefore that we are not stinting on any of these expenditures. This deficit is due in part to

the low grain rates which we give in the west, while the people of the east are also demanding lower freight rates for their lumber. Now, this is all very well; but why should we not extend some consideration to the small hamlet as well? I do not care how small a village may be, the people who have been born and brought up there are better qualified and in every way better adapted to make a living there than anybody we could bring from Europe or elsewhere. And these people have their rights. I should like to see not only the public works of the country but the postal service as well extend in every way possible the facilities for making life a little more comfortable in the rural communities, especially on our harbours, rivers, lakes and sea coasts.

Mr. MEIGHEN: I would receive with very much sympathy the remarks of the hon. member (Mr. Carroll), but the question here is not as to any hamlet in Nova Scotia or anywhere else, or any small settlement at all. When one makes improvements on the Atlantic coast the thing is done, and no draining of water will render the work futile. But according to the hon. member (Mr. Carruthers), who represents the riding in question, this is only the initiation of a tremendously vast expenditure at this and other points, due to a lowering of the lakes. If he is right, then I would presume that we might as well entitle this, "A vote to provide water facilities for the city of Chicago"; that is about what it is. Really, the thing is becoming appalling. I listened with amazement to the words of the hon. member, and I do not know that he has exaggerated the situation at all; it seems to me, in view of late events, that the path that confronts us is pretty nearly untraversable. We might as well therefore sit around a table and see whether we intend to start or not. If we have to continue lowering our canals, improving our docks, and dredging our rivers and lakes even, year after year, at an expenditure of untold millions, the show-down might as well come first as last. I was going to ask, before the hon. member rose, how these people got along before we started an expenditure which has now reached $113,000 and which, with this money now voted, will be $160,000 odd. Of course, the water now is lower than it has ever been. This water which is going to furnish power for the people to the south of us comes out of lakes that are the common property of both the United States and Canada, lakes from which neither has the right to divert any water at all. Has the government really considered the wisdom of calling a halt to all this type of expenditure in order that there might be an object lesson to the world at large as to just what this country is suffering?

Mr. POWER: Is this Satan rebuking sin?

Mr. CARRUTHERS: We might as well tie up the whole trade of the country.

Mr. MEIGHEN: Well, we are tying it up fast as it is, when we start on an expenditure such as is foreshadowed, not only on this particular item but over the whole area. As to "Satan rebuking sin," I do not know what the pertinence of the interruption is. The hon. member is usually very pertinent.

Mr. POWER: I do not mean to imply that the hon. gentleman has any relation to Satan, but I would say that when in power he did not stop to reflect on what this country was coming to; he did not stop to go into all these expenditures; he did not insist that we should have the greatest possible economy in public works of this kind. I do not know why he should rebuke this government when it is only carrying on the works he carried on himself.

Mr. MEIGHEN: The hon. member woke up a little late; he missed entirely what I was saying. However, I do not intend to rebuke either Satan or sin when I extend a generous forgiveness. What I was talking about was the wisdom of bringing to a head the controversy over the Chicago canal, because this matter has a distinct relation to it. The question is, how long are we going to proceed along the path we are trying to travel now? I have no doubt that what the hon. member suggests is right; this $160,000 is a mere bagatelle, only a small instalment. But what is the expenditure going to be on the St. Lawrence, at the Sault and at many other points in Canada, when we are asked to repeat in multiplied form what we are doing now?

Mr. CARRUTHERS: I would refer the leader of the opposition (Mr. Meighen) to the dock built in our town during his administration at a cost of between $50,000 and $60,000, and which was needed. It was finished some six years ago. The contract called for cement eighteen inches below the water line before any construction took place on the timbers, and at the present time the timbers below that expensive structure are exposed about a foot and a half. This means that within a very few years that expensive

dock will crumble; the timbers will rot and the whole thing will be an entire loss.

Mr. MANION: I am sure we all sympathize with the feelings of my hon. friend (Mr. Carroll) for his people in Nova Scotia, just as we all sympathize with the people on the Great Lakes who require expenditures to give them proper navigation facilities. I have been thinking very seriously that it is the duty of the government—and I am not specially criticizing this government, because, as was remarked by the member for Quebec South (Mr. Power), all past governments have expended money on public works—it is the duty of this government, or of the government that succeeds it, to cut out many millions of dollars that are now being expended on various kinds of public works. It may be retorted that a good deal of money has been spent at the head of the lakes, and I admit it.

Mr. KING (Kootenay): And more will be required.

Mr. MANION: Yes; but it was spent there of course for the benefit of the country generally. It would be a very good object lesson to our people in the practice of economy if every possible curtailment of expenditure could be effected, even at the risk to a certain extent of injuring some of our public works already constructed. To-day Canada is suffering from a very heavy burden of taxation, and I believe we need a striking object lesson not only in regard to economy in Dominion expenditure but economy in provincial and municipal expenditure. Out through the western country in many cities, including my own, there has been a determined attempt not to incur further expenditure on public works of any kind for some years to come. As a consequence, in my city the tax rate has been cut down by several mills. I believe the tax rate of the country generally could also be cut down substantially if we made up our minds absolutely to refrain from embarking on new public works that are not absolutely needed, and I would include my own city in this respect, because while there is room for a larger development of the harbours at the head of the lakes, and in the years to come this development will have to be undertaken, yet for the present I believe that enough work has been done there for the public services to be carried on very satisfactorily for a considerable time. I believe the general rule laid down by the previous government has been lived up to by this government in dealing with requests for new post office buildings, and I think this rule should be applied to all classes of public works except such as are absolutely necessary. With regard to new post office buildings, I have had requests for a couple in my riding, but I pointed out that post offices were not being built in other sections of the country, and as a result I got very little complaint from my constituents, although of course they repeated their requests. I sympathize with this government as I did with its predecessors, who took the attitude that unnecessary expenditure of that kind should not be undertaken. I think it will be well worth while for the minister and the government to very seriously consider this proposition in the interest of the country generally. I am not offering my proposal for drastic economy in any spirit of criticism of the government, because I admit it is trying to live up to the rule laid down by the preceding administration, but our taxation has become so heavy and conditions generally are so depressed throughout the country that I believe it is the duty of every member to impress on the government the urgent necessity of drastic economy in public expenditures wherever this is possible without affecting service to the public.

Mr. KING (Kootenay): Mr. Chairman, I think it is only fair to the department and to the government to call to the attention of the House and of the country the fact that since taking office we have refrained from starting any new public works. It is true we found certain expenditures were contracted for by the late government, and it was neither wise nor possible for us to cancel those contracts. Generally speaking, this department has simply been trying to hold together our public works, keeping them in repair. This is borne out when I advise the House in 1913-14 the late government appropriated $48,819,000 for public works; in 1914-15, the first year of the war, $47,154,000; in 1915-16, the second year of the war, $34,599,000; in 1916-17, the third year of the war, $30,828,000; and in 1917-18, the last year of the war, $20,914,000; in 1920-21, their last year of office, $22,680,000; and in 1921-22 their estimate was $20,609,000. The first year we came into office we appropriated for public works $16,784,000; and last year, 1923-24, $20,067,000, of which we expended $16,591,000. I think it may be fairly claimed that my hon. friend's argument has been fully met. It has been the policy of the department to curtail expenditures wherever possible. In studying the figures I have given it should be kept in mind that the value of

4 p.m.

the dollar in recent years is very much less than it was in 1914, and probably for the $16,000,000 we expended last year an equivalent amount of work could have been done for less than $12,000,000 in 1913, the cost of material and of wages having increased very largely since the war.

In regard to expenditure on public buildings, I do not take the gloomy view which to-day is so customary among hon. members opposite. I do not believe that Canada should board up her windows and cease expending money in the public interest. Considering the cry we hear from my hon. friends on the other side that the government should undertake relief works for the unemployed, I am not sure that it would not be a wise policy for us to expend some public money through the proper channels that would probably to some extent relieve unemployment. At any rate, that I believe is the course we should adopt rather than spend money on doles, as has been suggested.

Mr. CARROLL: Has the government erected any new public buildings since they took office?

Mr. KING (Kootenay): Yes, a few have been built and others are under construction.

Mr. GARLAND (Bow River): Did the minister say he thought it good policy to keep on spending money on public works in order to help unemployment?

Mr. KING (Kootenay): No.

Mr. GARLAND (Bow River): One would infer that from his remarks.

Mr. KING (Kootenay): No. I said if, as some members have been suggesting, the government should spend public moneys to relieve unemployment, this would be the way—in constructing useful public works.

Mr. MANION: Mr. Chairman, I was very careful to point out to the Minister that I was not specially criticizing the government, but apparently he reached the conclusion that I was doing so. I assure him I was not. I usually make it very clear when I am, but on this occasion I was not. I was condemning past governments as well as the present government, and I would condemn future governments if they took the same course. While I admit there has been some cutting down in expenditures of this kind, the cutting down, to my mind at least, has not been to the extent that there should be. I know the pressure the minister is under; I doubt whether any minister of the government is under such great political and sectional pressure to get work done as the Minister of Public Works. I know that very well because my own section has pressed very heavily at times, and sometimes has got what it has pressed for. But I say that as a general principle, in view of the heavy burden of taxation, we should carry out, so far as we can in this country, the same policy in regard to these public works as we have had in the last few years with regard to post offices.

With regard to boarding up the windows of Canada, there is a great tendency on the part of hon. gentlemen opposite, if any of us even suggest the conditions that exist, to retort that we are proposing to board up the windows of Canada. I do not take a back seat to the minister in my optimism regarding the ultimate destiny of this country, but I do in regard to the ultimate destiny of this country if this government goes on handling public affairs very much longer.

Mr. MOTHERWELL: Better get used to it.

Mr. MANION: I do not think I will have to be used to my hon. friend very much longer. In regard to Canada's future, I am as optimistic as any man in this House, but I think it is a strange kind of optimism that refuses to look in the face the conditions which are before every member of this House and everybody in this country, and I would advise the minister to go out into the highways and byways, as some of us not in the ministry have more time to do than he has, and ask the businessmen and the workmen how conditions are; and then if he can come back here and be as optimistic as he and some of his friends pretend they are, I shall be very much surprised.

Mr. MALCOLM: It is quite true, as the hon. member for East Algoma says, that the lake levels are down practically three and a half feet from the high point of eight years ago, but the assumption that the lowering of lake levels is entirely due to the diversion of water at Chicago is an incorrect assumption. The right hon. leader of the opposition makes a plea that we should call a halt, put the cards on the table and find out if this is going to go on. The fact is, and I want the House to realize this, that we have had almost as low water in the Great Lakes before, and the engineers on both sides of the line do not attribute over nine or ten inches of the lowering of the level of the Great Lakes to the Chicago diversion. The fact remains, however, that dredging that was sufficient two years ago is not sufficient to-day because there has been a lowering, and

hon. members from the west must realize that if rates on grain from that very important district represented by my hon. friend from Fort William and Rainy River (Mr. Manion) are to be satisfactory, we have to give one hundred per cent carriage to the vessels, which we have not got to-day. All the heavy carriers of grain went through the Soo locks last year loaded to only eighty per cent capacity. The lightship at Sarnia was moved a half mile further out last year, and still boats with a draught of twenty feet bumped at that. The minister is faced with a problem. A great many of my friends from the west wish to see their grain carried on the Great Lakes, as far as possible, but that can never be done if the channel does not permit of one hundred per cent capacity carriage.

Mr. hon. friend from Fort William and Rainy River, in making allowances for the government, suggested that pressure was always heavy on the Minister of Public Works. As the representative of a riding with a continuous coast line and a lot of small harbours, where rail communication is not a factor, where the harbour is the only way out for the fisherman and the farmer, I want to say to this House that I know many members on this side have gone to the minister and asked him not to spend all the money that was recommended by the engineering staff. I think members of this House have assisted the Minister of Public Works in his desire not to have too great an expenditure this year. I know it was my pleasure to draw a pencil through two or three recommendations myself, and I think that condition is more general than hon. members from the west realize.

Public works in the Dominion of Canada, on the waterways are a good deal more important than some of us realize. First, there is the movement of our tonnage of grain eastward. Second, there is the moving of coal and general merchandise to the head of the lakes. If you remove, as one of my hon. friends has suggested, this water competition, I do not know what railway rates we are going to have, because water competition has governed railway rates to a very great extent.

There is another respect in which the Great Lakes are important, and it is one which I think should not be lost sight of. Our tourist trade in the central part of this country, as has been pointed out by my hon. friend from Muskoka (Mr. Hammell) on different occasions, is becoming a very important trade, and it might be interesting to some of my friends to know that at one small point in my riding where we had to spend only eight hundred or a thousand dollars last year on dredging, there are families who have come to occupy 500 cottages. A summer population of 3,000 has sprung up in this district on lake Huron, and a very considerable amount of American money is left at this point. One of the greatest assets we have to offset the money that Canadians spend in the United States is the asset we have in our Great Lakes and in our summer places, where some of that money is got back; and if the actual cash returns could be compiled from these small expenditures—which would be very difficult—I think my hon. friends would not have very much criticism to make of these expenditures.

Mr. LEWIS: It may be true as stated by the hon. member (Mr. Malcolm) that certain members on the other side of the House have been to the minister and have drawn a pencil through certain items of proposed expenditure, but the fact remains that if you compare the main vote this year with the main vote last year you will find there has been an increase of a hundred per cent. The supplementaries for this year are not yet down and, therefore, we do not know what the final result will be. How much greater it would have been if some hon. gentlemen opposite had not drawn a pencil through a few of the items, it is very difficult to know.

My hon. friend (Mr. Carroll) said that he could take me to hundreds of little villages that have been depleted as the result of the government not making proper provision to look after these people. All I wish to say in reply is that year by year we are asked to spend millions of dollars in Canada to look after certain interests of these people, and if there are hundreds of settlements still going out of business, what would be the total debt of this dominion if we looked after them all! Our debt in that case would be impossible to compute. If there are settlements in Canada that are depleted to-day as the result of this government not giving them proper facilities, I can show you, on the other hand, in western Canada certain districts that have been depleted as the result of this government spoon-feeding industries for the last fifty years, and if that kind of thing is to continue we will have settlements of this kind all over Canada. I believe the time must come when industries and people requiring the dredging of these streams and the building of wharves must learn to pay their own way, stand on their own feet. That is the only way, so far as I can see, in which we are ever going to get back to a sound business basis in Canada and make this country prosperous.

Mr. MALCOLM: Does the hon. member advocate putting the railways on a cost basis in carrying traffic?

Mr. LEWIS: My hon. friend said a moment ago—

Mr. MALCOLM: It cannot be done.

Mr. LEWIS: —that these little wharves or the facilities he was speaking about had a direct reference to the transportation of grain by the Great Lakes. I cannot see for one moment that any one of the works mentioned here has any influence on the carriage of that grain or the freight rates. In a particular case here and there it may have special reference to the freight rate across the lakes; but the great majority of them have no reference whatever to that kind of service. As far as the railways are concerned I think it has been shown conclusively by our western representatives, and also by the counsel that argued the case, that the carriage of grain is a paying proposition; and the very fact that this year the deficit on the Canadian National Railways, as stated in this House, was due to the fact that the crop was not as large bears out the contention.

Item agreed to.

Blind River—to replace warehouse, $2,100.

Mr. CRERAR: What is the purpose of this warehouse?

Mr. CARRUTHERS: Blind River is on the steamboat course between Owen Sound and the Soo; it is a regular shipping place. The warehouse there was blown down and this vote is to replace the structure which is intended to protect the goods that are shipped in there until the merchants can take them away.

Mr. CRERAR: I understand, then, that the government maintains this warehouse for the convenience of the people who are shipping goods?

Mr. KING (Kootenay): That is right.

Mr. CRERAR: Is any charge made for its use?

Mr. KING (Kootenay): Not at this point, I think. The work is of a public character, and it is necessary to keep the wharf structure in proper shape in order to handle the traffic. That traffic consists of about 600 tons of general merchandise and 200 tons of fish. Before the war there was a much larger traffic at that point. As I said earlier in the discussion, at the larger points where considerable tonnage is being handled, the wharves are administered by the Department of Marine and tolls are charged for their use. At this small, outlying place it would not pay to appoint a wharfinger to collect tolls; there would not be enough revenue collected to pay his salary.

Mr. CRERAR: But wharves and warehouses are two different things. Why cannot the people who ship the goods provide the warehouse?

Mr. KING (Kootenay): They might, but it has not been done.

Mr. GARLAND (Bow River): What has been the total amount of money spent on warehouse construction at Blind River? The minister, I think, has already informed the House that this will be the third warehouse to be constructed by the government—at least the third; there may have been others that I do not know of.

Mr. KING (Kootenay): I stated before that the original warehouse was built in 1905, and its dimensions were 40 by 70 feet. In 1908, due to heavy traffic originating from lumbering activities, it became necessary to make an addition of 70 feet, so that the dimensions of the building are now 40 by 140 feet. We are making good damage done by a storm some months ago that blew down a portion of the warehouse.

Mr. GARLAND (Bow River): I take it then the minister is not in a position to give the total cost of warehouse construction at Blind River?

Mr. KING (Kootenay): I have not the expenditure itemized or separated. I gave the total cost of construction at Blind River and the repairs made at this point from time to time. I have not the total cost of the warehouse itself, but the total cost for the construction of wharf and warehouse was $48,855.86.

Mr. GARLAND (Bow River): I just wanted the cost of the construction of the warehouse.

Mr. KING (Kootenay): I have not got that separated from the other I am sorry to say.

Mr. GARLAND (Bow River): Well, really I think the minister might provide the committee with information of this kind.

Mr. KING (Kootenay): There is no objection to that but it would expand our notes tremendously if we had to have on hand details of expenditure from the beginning. I have given the total for repairs, $4,843.41

These warehouses are not unduly expensive. Taking the estimate I have for this new structure of $2,100 I would imagine that the total expenditure for the years 1905 and 1908 would be in the vicinity of $1,200—probably not more than that when you compare present costs with what they were then.

Mr. CRERAR: I do not at all like the practice that appears to have developed in the case of this warehouse, and I dare say there are others that are in the same position. I do not see why the taxpayers of Canada should be called upon to provide the money to build a warehouse at Blind River, or at any other point, that is solely for the benefit of private business interests in the locality. I know the customary thing is for wholesale houses, or shipping and business concerns, to provide their own warehouses, and I should like to have an expression of opinion from the minister as to the soundness of the policy involved.

Mr. KING (Kootenay): For the information of my hon. friend, and to corroborate what I said a few moments ago, may I state that at these smaller points it would cost more to collect the tolls than you would get in the way of revenue. Take the case of Amherstburg. In 1922 we collected only $2.25 and in 1923 but $7.50.

Mr. CRERAR: Was that from a wharf or a warehouse?

Mr. KING (Kootenay): From warehouse and wharf.

Mr. CRERAR: I am not talking about wharves.

Mr. KING (Kootenay): The practice is not a new one; it has been observed, I think, since confederation.

Mr. CRERAR: There were a good many practices which developed after confederation in the matter of public expenditures that we would do well to reconsider to-day. Up until the war the revenues of Canada were pretty buoyant, and the voting of a few million dollars more or less annually by the House was not of very much consequence. I submit, however, that the situation is wholly different to-day. It is not too much to say that this country to-day is groaning under a burden of taxation and it behooves every member of this House to endeavour to curtail public expenditures in every way possible. I submit again that the policy of taking money out of the pockets of the taxpayers of Canada to build warehouses for the benefit of private business interests is an unsound policy.

If we do it in this case why not provide such a facility at every other point where it is desired? I submit that if the government does the dredging, or provides a wharf or docks, at Blind River, the people who benefit from that work ought surely to build the warehouse.

Mr. CARROLL: Would my hon. friend suggest that the stations along lines of railway should be built by the people in the immediate locality? The principle is the same as in this case.

Mr. CRERAR: No.

Mr. CARROLL: It is the very same.

Some hon. MEMBERS: No.

Mr. CARROLL: I understand from the hon. member who represents the county that a line of boats runs from this point to the Soo and to other places, and the goods carried on these vessels consigned to so many different parties, are placed in this warehouse. My hon. friends cite the case of Vancouver where elevators for grain are being built to-day by the public funds of the country. That is all right. The same thing exactly applies to a warehouse on a wharf and a station on a railway.

Mr. CRERAR: My hon. friend is wholly wrong, and I will prove it to him in a moment. When a line of railway is built the transportation companies erect their warehouses and collect freight for the goods they hand'e; they use the warehouse and the other facilities in handling the goods.

Mr. CARROLL: What about the elevators?

Mr. CRERAR: I will come to that in a moment. If my hon. friend carried out his analogy in regard to the case we are considering he would see that the steamship companies that get the benefit of the warehouses and dredging should build the warehouses for the convenience of the people.

Mr. HAMMELL: Who would give the steamship companies the authority to build a warehouse on public property? I have in mind many cases in my own constituency where there is such a shelter as I presume this will be, where a small waiting room is built for the convenience of the public in stormy weather, and at the other end of the wharf a warehouse is built to store the perishable goods. How would my hon. friend provide for private companies in a village or town erecting a warehouse on top of a publicly owned dock?

Mr. CRERAR: I do not know whether the government owns the property where the wharf is built.

Mr. HAMMELL: They own it.

Mr. CRERAR: Then there would be no difficulty in the Department of Public Works making the arrangement with the steamship companies to build the facilities.

Mr. HAMMELL: It is not for the steamships primarily that these facilities are provided; it is for the people of the locality.

Mr. CRERAR: Then I will put it the other way: why then should not the government build all the station houses on a railroad?

Mr. CARROLL: So they do, on government railways.

Mr. CRERAR: Of course they do on the government railways. The analogy cannot apply at all. I submit in all good faith that the principle is not a sound one, and if it can be invoked at Blind River or any other river or harbour in the manner provided here, the same thing can be made to apply all over the country.

Mr. CARRUTHERS: It has, from time immemorial.

Mr. CRERAR: Does the hon. gentleman say that all the warehouse facilities on docks are all provided by the government?

Mr. CARRUTHERS: Yes, they put warehouses upon them.

Mr. CRERAR: Are any charges made in the warehouse?

Mr. KING (Kootenay): I explained that in the larger places there are charges, but the reports show that in Blind River there are 600 tons of incoming freight going over the dock. What would be a fair charge for storage? About ten cents a ton. You would collect about $60 a year. Who would collect it? If they have to collect that money for the government are they going to ask a percentage for the collection? To pay in wages would cost more than you would receive.

Mr. HOEY: The government would not need to collect if they did not put up storage facilities.

Mr. KING (Kootenay): I do not quite agree with that statement. Here the government expend $40,000 or $50,000 for the public convenience in order that the business of the country may go on. If it was necessary to build harbour works or a pier or a wharf for the use of the public, then surely some form of shelter should be provided for storage and waiting-room purposes.

Mr. CRERAR: If this warehouse is not provided by the government and the government strike out the vote what will happen? The people who are benefiting from the service—I take it probably the boat transportation companies—will make arrangements with the government for the building of the warehouse.

Mr. KING (Kootenay): Such an arrangement is impossible.

Mr. CRERAR: I do not know. The hon. member for Cape Breton South and Richmond (Mr. Carroll) cited the case of the elevators erected by the government at Vancouver.

Mr. CARROLL: And the stations on the Canadian National Railways.

Mr. CRERAR: Those stations are simply a part of the service given by the government, from which it gets revenues.

Mr. CARROLL: It does not get revenues.

Mr. CRERAR: Does it not collect revenues in freight and passenger charges?

Mr. CARROLL: But not for the building.

The CHAIRMAN: Order, order. I wish there would not be so many interruptions.

Mr. CARROLL: It is all part of the same service.

Mr. CRERAR: So is this.

Mr. CARROLL: No, because they get no revenue from the stations.

The CHAIRMAN: I wish hon. members would not make so many comments but would wait till the member addressing the Chair is through.

Mr. CRERAR: I want to put the hon. member for Cape Breton South and Richmond right, because he wants to be right, and it is very rarely that he is wrong. A definite charge is made on the grain passing through the elevator for the service rendered. I submit that is a wholly sound principle to apply in governmental policy. But I do not think it is a sound principle to expend public money in Vancouver, or Blind River, or anywhere else, merely to benefit a few people who live in that locality. That is all I am saying. In the case of the expenditure in relation to the public elevators, every bushel of wheat that goes through these government elevators pays a tax or a charge to the government for the service rendered, which is absolutely sound

also, and if my hon. friend from Cape Breton South and Richmond will look up the records, I think he will find that the revenue received by the Department of Trade and Commerce from the grain passing through elevators owned by the government, for the inspection and weighing service rendered in connection with the handling of the grain, exceeds by several hundred thousands of dollars a year the moneys expended by the government to give the service.

Mr. CARROLL: No.

Mr. CRERAR: If my hon. friend will look up the records he will find that that is correct.

Mr. CARROLL: No.

Mr. GARLAND (Bow River): Will the minister tell me if this sum of $2,100 will absolutely complete the construction of the warehouse

Mr. KING (Kootenay): Yes, that is the intention.

Mr. GARLAND (Bow River): Is it to be constructed under contract or in what way?

Mr. KING (Kootenay): It will probably be done by day labour. It is a small work; it will be supervised by competent foremen.

Item agreed to.

Burlington Channel—reconstruction of south pier, $40,000.

Mr. MANION: What is that vote for?

Mr. KING (Kootenay): This is to complete the reconstruction of the south pier at the entrance of Burlington channel, into the harbour at Hamilton. The work is an important one. It is in a state of decay. I had an opportunity of seeing it myself last year, and the reconstruction is essential in order to maintain a channel into that harbour.

Mr. HOEY: How much was spent on that last year—the total vote?

Mr. GARLAND (Bow River): When was the work of reconstruction of the south pier commenced; what is the total already expended on the reconstruction; and how much more money will be expended before the work is completed?

Mr. KING (Kootenay): Last year $45,526 was expended. The expenditure on channel piers at that point prior to confederation amounted to $432,648.40.

Mr. GARLAND (Bow River): The minister misunderstands me. I asked him for the total amount expended for reconstruction of the south pier.

[Mr. Crerar.]

Mr. KING (Kootenay): In 1920-21, there was a reconstruction of 200 lineal feet at a cost of $31,417. In 1923-24, there was a reconstruction of 489 lineal feet at a cost of $44,920. The contract for 1924-25 was $45,908.

Mr. GARLAND (Bow River): In addition to that we have the vote of this year, $40,000. This will make a total about $160,000. How much more will be expended to complete the reconstruction?

Mr. KING (Kootenay): This will complete the reconstruction of the south pier.

Mr. GARLAND (Bow River): No further votes?

Mr. KING (Kootenay): That is the intention.

Mr. GARLAND (Bow River): Has any work been undertaken on the north pier?

Mr. KING (Kootenay): In 1924-25, $13,373.14 was expended. There is nothing this year for the north pier.

Mr. GARLAND (Bow River): It will come as a great relief to the taxpayers of this country to know this work is to be completed this year for $40,000 additional. This seems pretty expensive, but I have no doubt the work can be justified.

Item agreed to.

Byng Inlet—dredging, $38,000.

Mr. KING (Kootenay): Of this amount, $30,000 is a revote. The money is required to complete the contract with W. L. Forrest of Goderich, to provide a clear channel for six and one-half miles from Georgian bay to Byng Inlet coal dock for steamboat navigation of 10,000 tons burden to a clear depth of twenty-one feet and a width of 150 feet. The amount of the contract is $46,341; inspection and contingencies, $1,659.

Mr. SIMPSON: What quantity of coal goes in there every year?

Mr. KING (Kootenay): In 1918, the quantity was 509,172 tons; in 1923, 277,515 tons.

Mr. SIMPSON: Does the Canadian Pacific get coal through there?

Mr. KING (Kootenay): Yes.

Mr. GARDINER: Is there much saving on the coal coming in through this particular channel, and if so, what will be the saving?

Mr. KING (Kootenay): There is the saving that water haulage will give over rail transportation. I have not the information, but there will be a considerable saving.

Mr. MALCOLM: Coal at Byng Inlet costs about 75 cents from lake Erie; it varies, sometimes it is 50 or 60 cents. By rail it would be about $2.75.

Mr. LEWIS: The name Byng Inlet does not appear in the general estimates of last year. Was a supplementary estimate brought in?

Mr. KING (Kootenay): Yes.

Mr. GARLAND (Bow River): Will this complete the work?

Mr. KING (Kootenay): We are taking care of the more urgent portions of the work. There will be more work at that point.

Mr. GARLAND (Bow River): Has the minister any estimate of the total amount required?

Mr. KING (Kootenay): No. There will not be anything more required there immediately, but from time to time there will be additional work. This will take care of the present work.

Item agreed to.

Chatham—repairs to revetment wall, $5,850.

Mr. KING (Kootenay): This is repair work.

Item agreed to.

Cobourg—reconstruction of harbour works, $12,000.

Mr. GARLAND (Bow River): What is the total amount that has been expended on this work; in what year was it commenced; and how much money will be expended before it is completed?

Mr. KING (Kootenay): Cobourg is an important point. The expenditures prior to March 31, 1925 are as follows:

Prior to confederation..	$ 62,010 70
1874 to 1900..	192,892 57
Repairs since 1900..	126,469 18
Dredging since 1900..	168,984 31
Construction since 1900..	308,091 76

Mr. GARDINER: Was the total vote of $70,000 last year spent?

Mr. KING (Kootenay): No; $54,587 was expended.

Mr. GARLAND (Bow River): The minister has not told us how long this work is expected to continue, and what will be the total expenditure.

Mr. KING (Kootenay): This contract will be completed by the present vote. Further work will come up for consideration from time to time as required.

Mr. GARLAND (Bow River): I frankly admit my lack of information regarding this place and I am going to try to get some information from the minister. What does "reconstruction of harbour works" mean? Are these going to be completed at any date?

Mr. KING (Kootenay): This is a long work extending out from the lake shore. One might undertake all the work at one time and complete it, but it has been found possible, in fact economical, to undertake certain sections and get them into repair. We have been doing that largely through the lake country. Where old works are in decay, we have been renewing them with permanent structures, taking section after section from year to year, and the work is being properly done. I think the plan that is followed is a safe one. I have here a diagram of the work; if the hon. member wishes, I will send it to him.

Mr. GARLAND (Bow River): I think the minister indicated that there were additional pieces constructed. Is that correct?

Mr. KING (Kootenay): There has been reconstruction, but there have been no additions.

Mr. GARLAND (Bow River): It is called "reconstruction" in the vote, but I think the minister indicated that it was by way of adding a piece.

Mr. KING (Kootenay): No, certainly not; the hon. member will see it in the middle of the diagram, marked in red.

Mr. GARLAND (Bow River): Why has it been necessary to reconstruct that piece?

Mr. KING (Kootenay): Because it is in decay.

Mr. GARLAND (Bow River): What sort of pier is it—wood, stone or concrete?

Mr. KING (Kootenay): It is a wood structure filled with stone ballast. The work we are doing there now will make it more or less permanent.

Item agreed to.

Cumberland—wharf reconstruction, $10,500.

Mr. KING (Kootenay): Cumberland is in the county of Russell. This is a bit of reconstruction we are doing on the water line.

Mr. MANION: New work?

Mr. KING (Kootenay): No, reconstruction.

Item agreed to.

Goderich—harbour repairs and improvements, $150,000.

Mr. BOYS: Why is it that such expensive improvements are being made here while nothing is being done in other lake ports of equal or greater importance? I am not suggesting that the money is not needed or that it is being improperly expended; but it is strange, at least so far as my knowledge goes, that some lake ports of greater importance, and which have been longer in need of improvements, are unable to get any money, or get very little, while an abundance seems to flow into others. The hon. member (Mr. Malcolm) pointed out a short time ago the care with which he scrutinized certain estimates, striking his pen through them. I thought it rather strange. Glancing back over a few years, I find how seldom he struck his pen through expenditures at Kincardine. For instance, in 1923 the expenditure there was $24,000; in 1924, $22,000 and in 1925, $20,000, while for 1926 it is $25,000. In fact, ever since my hon. friend has been a member Kincardine has been well looked after. No doubt it deserved it all, but it is surprising that he should point out how careful he has been to strike out estimates needed elsewhere, which he thought should not be voted, while in his own riding he takes all he can get. Now, I know that Goderich is an important harbour, and the expenditures there are probably more important than those at Kincardine. But this is a large sum of money, and bearing in mind certain things that have occurred to me, and to which I may refer later, I think the committee is entitled to a fairly extensive explanation as to what it is intended to do here.

Mr. KING (Kootenay): The expenditures under this vote will be made up as follows:

This amount of $150,000 is required to continue the development of Goderich harbour commenced in 1922-23. The work proposed for 1925-26 is as follows:

(1) General repairs to existing piers..	$ 11,500
(2) Reconstruction in reinforced concrete of additional 600 feet of river breakwater..	30,000
(3) Three new mooring cribs across west end of inner harbour..	33,500
(4) Towards dredging inner harbour and entrance channel to 23 feet (estimated to cost $155,304)..	75,000
Total amount required for 1925-26.. ..	$150,900

The improvements that are to be made will be taken advantage of by the farmers in that section as well as by others. This is not a new work, having been in existence for many years; we are merely keeping it in shape. It would not be the part of wisdom to let it deteriorate, for the harbour is important not only to the local people but to the grain trade as well. A considerable activity is taking place there.

Mr. BOYS: Is there any record of the number of vessels entering and departing from the harbour, and the tonnage?

Mr. KING (Kootenay): In 1922 there were fifteen steamers with a wheat capacity of 2,520,000 bushels; in 1924 there were twenty-four steamers with a wheat capacity of 3,683,000 bushels. While we were able in late December and early January of last winter to lighter some of the winter storge cargoes, and then place them in every available safe location in the harbour, we have been confronted with a much more difficult condition this fall, in that domestic millers and exporters are not able to move forward sufficient grain to permit these storage boats to be lightered to a draft which will enable all of them to be stored within the harbour proper. It is therefore compulsory that several of them be moored, under full load and at draft of nineteen feet or over, out between the piers. This is a prohibitive area under the mooring rules of the American Bureau of Shipping, representing the hull and cargo underwriters, as there are no approved mooring facilities and the hazard through inevitable surging and resultant damage therefrom is very great. This vote will give improved facilities and allow a larger number of steamers to enter at that point. The work will be of distinct advantage to the shippers of grain.

Mr. BOYS: The minister has given a certain number of ships carrying grain. Are we to understand that there were none others?

Mr. KING (Kootenay): There are others, but the steamers are very largely those that handle grain of all kinds. For the year 1920 the following cargoes were handled:

	Bushels
Wheat..	6,518,078
Oats..	2,932,693
Barley..	761,318
Flax..	422,937
Corn..	112,475

Mr. BOYS: What is the policy of the department regarding harbour improvements? Is the money spent with a view to improving the most important harbours?

Mr. KING (Kootenay): Yes.

Mr. BOYS: I suppose that consideration is given to any immediate demand for repairs; but am I right in assuming that the main consideration is the spending of it where there will be the most traffic, from the standpoint of transportation and commercial interests?

Mr. KING (Kootenay): These are not new expenditures; they are practically for reconstruction and for the general maintenance and improvement of harbour work. This vote is important not only to Goderich but to the Dominion at large. There is no doubt that the policy that guides the department in these estimates is the improvement of the harbours; and this is one of the important harbours.

Mr. BOYS: To what extent is this improvement and to what extent is it reconstruction? The minister evidently thinks that I am suggesting that Goderich is not important and is not entitled to the expenditure. I want to put him right on that. Having said that, I should be glad to get any information the minister can give on the question I have just asked.

Mr. KING (Kootenay): The hon. member will find that I have already given the details.

Mr. HOEY: Does the government derive any revenue from this harbour in the way of fees?

Mr. KING (Kootenay): We managed to collect $35 in 1922 and 1923. The tonnage going through is practically all grain and it passes through the elevator, which I think is privately owned. There may be a railway elevator as well.

Mr. BOYS: We find various places in Ontario referred to in this general item, and there is also in item 155 provision for dredging in Ontario and Quebec to the extent of $562,500. Will any of the money to be spent under item 155 be spent also in any of the work set out in item 149?

Mr. KING (Kootenay): No.

Mr. BOYS: All absolutely separate?

Mr. KELLNER: Will grain going through Goderich be handled at this harbour?

Mr. KING (Kootenay): Yes the harbour is absolutely essential to the handling of grain.

Mr. WARD: What is the total cost of the harbour to date?

Mr. KING (Huron): Mr. Chairman, I happen to know about the cost of the elevator works in the town of Goderich. Last year a private enterprise expended $455,000 on them. I want to tell my western friends that Goderich harbour is just as essential to them as it is to us, and that last year, as the minister stated, we unloaded 23,000,000 bushels of grain there. That grain supplied the farmers of western and southwestern Ontario, and practically all of it came from the west. So that Goderich is not a local it is a national undertaking, and we would not like to see anything interfere with the proper development of the harbour. The reason for this large vote is that the wooden breakwater between the Maitland river and the harbour being in a very decayed condition, it is necessary to rebuild it in concrete, and unless this work is done immediately it will take fifty dollars to do what one dollar will effect now. So I repeat to hon. members that the farmers of western and southwestern Ontario are altogether dependent on this harbour for their feed grain; and I would also inform them that both the Canadian National Railway and the Canadian Pacific Railway have lines connecting the harbour with the rest of Ontario.

Mr. WARD: Mr. Chairman, I hasten to assure the hon. member for North Huron (Mr. King) that I for one was not objecting to this item. I have visited Goderich and I appreciate very much its being a strategical point on lake Huron. However, I think we are entitled to information in respect to these matters.

An hon. MEMBER: Carried.

Mr. GARLAND (Bow River): May I inform my hon. friend through you, Mr. Chairman, that he is not going to help the minister with these estimates with its everlasting reiteration of "carried" while a member is on his feet asking questions? I would suggest that the minister would make better progress if his friend kept silent.

Mr. CARROLL: To whom is the hon. gentleman referring?

Mr. GARLAND (Bow River): To the hon. member who is calling "carried". Is it the hon. member for Cape Breton South and Richmond?

Mr. CARROLL: No, Mr. Chairman.

Mr. GARLAND (Bow River): I did not think it was.

Mr. CARROLL: That is the reason for my asking to whom the hon. gentleman is referring. I would suggest, Mr. Chairman, if he has anything to say of an hon. member on this side he should name him.

Mr. GARLAND (Bow River): I will name him, Mr. Chairman. The hon. member for Sherbrooke (Mr. McCrea) has been shouting "carried" for about five minutes.

Some hon. MEMBERS: Oh, oh.

Mr. GARLAND (Bow River): I think it is the member for Sherbrooke. However, Mr.

Chairman, the information which I think one member asked on this item was, what was the total cost to date, and the estimated total cost before completion.

Mr. KING (Kootenay): The total cost to March 31, 1924, was $2,162,326. The estimated cost of our scheme of reconstruction is $576,872.

Item agreed to.

Harbours and rivers generally—repairs and improvements, $50,000.

Mr. GARLAND (Bow River): What does this refer to, Mr. Chairman?

Mr. KING (Kootenay): This money is required for general repairs to harbours and rivers within the province of Ontario which are under the control of the department, and is to meet unforeseen conditions that may arise during the year. Last year of the amount appropriated we expended $24,459.99. The amount varies from year to year.

5 p.m.

Mr. BOYS: Can any of those repairs be designated?

Mr. KING (Kootenay): Yes. Barrie, repairs to pile work, $500; Big Bay Point, removal of old crib and repairs to approach, $500, and so on. I suppose there are twenty items for the coming year.

Mr. BOYS: Do any of those exceed $1,000?

Mr. KING (Kootenay): The largest would be $1,000.

Item agreed to.

Honey Harbour—dredging, $15,800.

Mr. GARLAND (Bow River): What was the total cost last year?

Mr. KING (Kootenay): This is to complete the contract for $23,612. There was only some $3,000 expended last year.

Mr. GARLAND (Bow River): Where is this place?

Mr. HAMMELL: In Muskoka.

Mr. GARLAND (Bow River): Has there been much money spent on this prior to this date?

Mr. KING (Kootenay): This is the first expenditure on dredging at that point.

Mr. GARLAND (Bow River): Was nothing voted last year?

Mr. KING (Kootenay): Yes, $22,000.

Mr. GARLAND (Bow River): Will this complete the dredging necessary?

[Mr. E. J. Garland.]

Mr. KING (Kootenay): It will complete the present contract.

Mr. GARLAND (Bow River): I do not mean that, but will it be necessary to continue dredging work up there?

Mr. KING (Kootenay): This will complete the present section of the channel, but the channel is rather extensive and from time to time there will be points where further work will have to be done. It is estimated that the whole scheme of improvement will amount to $88,000.

Mr. GARLAND (Bow River): Why is the work necessary? Is it a pleasure resort?

Mr. HAMMELL: This is only another instance where the lowering of the levels of lake Huron has made work of this kind necessary. Honey Harbour is a village on the shores of Georgian bay, with a summer population of approximately 2,200 people. There are six or seven fairly large hotels there, and the present harbour is served by the Georgian Bay Tourist Company and the Honey Harbour Navigation Company. The former operates the steamer, City of Midland, carrying 500 passengers. This steamer travels from Midland up the coast of Georgian bay, following what is known as the inside channel. Until recently, the City of Midland and the City of Dover could go up the inside channel without any obstruction, but the constant lowering of the level of lake Huron has made this dredging necessary, because it is not safe for the boats to go up that inside channel now. These people have no railway line whatever, and are absolutely dependent on the steamer service.

Mr. LEADER: What is the nature of the traffic these boats carry?

Mr. HAMMELL: They are catering to the tourist traffic, which is very considerable.

Mr. LEADER: What is the population of this village in winter?

Mr. HAMMELL: The population in winter is seventy-five families.

Mr. KELLNER: I would judge this is purely a summer resort, from what the hon. member for Muskoka says.

Mr. HAMMELL: I have just stated that there were seventy-five families engaged in agriculture living along the shores of the Georgian bay near this point and who are served by no other line of transportation; they have no railway, and not even a good road.

Mr. KELLNER: I was about to remark that in my opinion this is largely for the pur-

pose of catering to the summer tourists who visit that section of the country. I do not think it is the policy of this government to provide facilities for that purpose in other sections of the country.

Mr. HAMMELL: The other sections of the country benefit largely from this tourist traffic, probably just as much as this particular section.

Mr. KELLNER: I was discussing the policy of the government as I see it. I always thought they considered it their duty to aid navigation for the advancement of trade, but I do not think there is a section of the country where they spend money to aid navigation purely for summer tourist trade or for pleasure purposes. I have a very distinct remembrance of the government refusing me a similar application for a small amount of work in my constituency, so I am sure that if they do that work they must play favorites, because there are some sections of the country that do not get it.

Mr. HAMMEL: While the summer traffic is very considerable, there are seventy-five families who have been located there for a great many years. The lowering of the level of the lake has made it necessary to deepen the channel for these boats which have been running there for years and years.

Mr. MANION: I would suggest that if my hon. friend (Mr. Kellner) would follow the example of my hon. friend (Mr .Hammell), he might get what he wants.

Mr. HAMMELL: I would suggest he might follow the example of my hon. friend from Fort William and Rainy River.

Mr. GRAHAM: The honours are even.

Mr. MANION: I did not change after I was elected.

Mr. KELLNER: I would be entirely ruined if I followed all these examples. Could the minister give the committee the volume of traffic at that point, other than tourist traffic, of which the hon. member for Muskoka says there is considerable.

Mr. KING (Kootenay): This is in the Muskoka district where there is a large and very important tourist traffic. Both the Canadian National and the Canadian Pacific lines of railway serve the district, and the traffic derived from the tourists is of great importance to the Canadian National.

The steamer service through the district is primarily in daylight, due to the difficulties of navigating the island channels, but every Friday night throughout the tourist season two steamers run from Midland, and one steamer from Port McNichol to Honey Harbour. The round trip from Midland to Parry Sound is 114 miles approximately, and the largest steamer, City of Midland, makes the round trip daily throughout the tourist season, connecting with the Canadian National Railways' special tourist trains at Midland. This steamer cannot spare the time for calling at the various private wharves, and even though this could be done, very few of the channels are navigable for other than small craft.

The Canadian National Railways supplies fast tourist trains from Toronto to Midland, daily, including week-end pullman service. Beginning the season 1924, the City of Dover will make regular trips from Port McNichol to Honey Harbour, connecting with Canadian Pacific Railway tourist trains daily.

The present steamboat service is supplied by the Georgian Bay Tourist Company, Limited, and the Honey Harbour Navigation Company. The former company operates the steamer "Midland City" which has accommodation for 500 passengers, and is equipped with staterooms and dining room for fifty people. The latter company operates the City of Dover, which accommodates 400 passengers. In addition to the above, there are the freight and passenger boats, Tenno, Waterbus, Imperial and two more now under construction at the Midland Boat Works. These steamers all transfer passengers and freight to and from the settlers' and tourists' homes. The general service would be much improved if these smaller boats could operate from a public headquarters.

I have not the figures as to the number of tourists.

Mr. KELLNER: I think the minister has got away from the question I asked him. I asked him the number of tons of freight passing through that harbour.

Mr. KING (Kootenay): This work is being done, not in the harbour, but in the channel through which these boats ply back and forth.

Mr. BOYS: I do not suppose it is any part of my duty to be unduly anxious to assist in the passing of the estimates for my Liberal friend from East Simcoe (Mr. Chew), but being more or less familiar with this particular part of the county, it may be in order for me to say a word or two. It is not in the riding I represent but is within about forty miles of the town in which I live, and knowing the

district exceedingly well I do not hesitate to say that it is an important summer resort—I think that is the main business without any doubt—and is becoming very popular as the years go by. If the port were not kept open the boats would, perhaps, be put out of business, a very considerable investment of capital in cottages and hotels would be rendered more or less useless, and the people would have to look elsewhere for their summer outing. Those people come from many parts of Ontario; they are chiefly people from Toronto and from points to the south. They go there in numbers and a considerable investment of capital has been made. These boat routes have now been established, and I do not quite see how you can possibly let a port like that be left without consideration. Dredging is without doubt necessary owing to the lowering of the lake. The amount involved here is not overly large, and for that reason and because of the importance of the place I would not hesitate to support the item.

Mr. KELLNER: I suppose it is the policy of the government to give aid to such places as these that are concerned almost wholly with the summer tourist trade? They are willing to declare that it is their policy to assist enterprises of this kind.

Mr. KING (Kootenay) My hon. friend should not be mistaken. This is an important part of Canada. It draws a great many thousand people to this country, and it is necessary to facilitate navigation in that section in order that these people may come and go, as well as to provide the local residents with the opportunity to live. Such being the case the government has no hesitation in recommending this expenditure to parliament.

Item agreed to.

Jeanette's Creek—wharf repairs, $1,000.

Mr. GARLAND (Bow River): How much of last year's vote was spent?

Mr. KING (Kootenay): The sum of $1,000 was expended last year, and we are voting another thousand this year.

Mr. HOEY: Where is Jeanette's Creek?

Mr. KING (Kootenay): It is in the county of Kent. This is to renew ninety lineal feet of sheet piling at an estimated cost of $1,000. The engineer reports these repairs are necessary to maintain the existing structure.

Item agreed to.

[Mr. Boys.]

Kincardine—repairs to piers, $25,000.

Mr. GARLAND (Bow River): I should like an explanation of this vote. I noticed that last year and the year before quite a sum of money was spent on this work.

Mr. KING (Kootenay): This amount of $25,000 is required for the following purposes: First, to provide for balance owing William Hunter in connection with his contract for the reconstruction of the west, south and east revetment walls for a length of 660 feet—$2,000; second, to continue the reconstruction in concrete of the revetment wall and wharfage in the inner harbour, commenced in 1922-23. In 1922-23-24 a distance of 376 lineal feet was reconstructed under contract with Messrs. Keys Bros. In 1924-25 a further section of 660 lineal feet was rebuilt under contract with William Hunter of Kincardine. The final section of the inner harbour, 400 lineal feet, is estimated to cost $10,800. In the third place it is proposed to continue the reconstruction in concrete of the super-structure of the south pier for a distance of 200 lineal feet. The first section was completed in 1923 under contract with Messrs. Keys Bros. The estimated cost is $13,000. Finally, there will be general repairs in timber to the north pier, at a cost of $1,200, making a total of $27,000.

Mr. BOYS: Will the minister inform the committee as to the number of vessels that entered Kincardine harbour last year?

Mr. KING (Kootenay): The number was not as great as we had hoped; our dredging was delayed too late for the vessels that had intended going in. I think the following shipments were made into the port of the season of 1922, 300 cords of slabs at $10 a cord; 10,000 posts at 22 cents; 125,000 feet of lumber at $30 per thousand. Then the Valley Camp Coal Company, it is anticipated, will bring in annually about 30,000 tons of coal. They did not bring in the amount of coal they expected last year owing to the lateness of the dredging.

Mr. BOYS: The minister has not answered my question; perhaps he has not the figures. I wanted to find out the number of vessels that entered the port of Kincardine.

Mr. KING (Kootenay): I do not happen to have that information.

Mr. BOYS: That is a fairly important factor, I should think, in connection with the maintenance of these ports. I should imagine it would be one of the first things we would want to know.

Mr. MALCOLM: The harbour work at the port of Kincardine was all timber construction, and nothing had been expended on it for a great many years. During the period of the war the policy adopted by the late government, and I think it was a very wise one, was not to spend money on those harbours where there was no particular traffic. The purchase and reconstruction by the Valley Camp Coal Company of the Kincardine Salt Works has been an important factor in connection with the development of the port. The company has spent over $200,000, I think actually $250,000 of its own money on this plant, and to-day is operating one of the finest salt industries in Canada. The company also proposes to handle coal by vessel into Kincardine and by the National railway out. That will justify the reconstruction of the south portion of the harbour where the coal is landed. It was my recommendation that there should not be an excessive amount of money spent on any one piece of work at a time, but that the cribwork should be restored gradually where the repairs were the worst needed. The vote this year is to complete repairs on the south side of the harbour where the coal is being landed. With respect to the hon. member's question as to the number of vessels entering Kincardine last year, there were only some vessels carrying lumber, cordwood, and posts that entered; but we expect there will in future be a large amount of coal carried. In fact there would have been several cargoes of coal last year but the dredging was delayed to such an extent that when the Glenelg came in with her last cargo the weather was so stormy that she experienced a good deal of difficulty at the mouth of the harbour. The total tonnage in Kincardine will be largely coal tonnage, and the traffic, I think, will amply justify the expenditure.

Miss MACPHAIL: When the contemplated work is completed will it be possible for the fishermen of Kincardine to use the port?

Mr. MALCOLM: Yes.

Mr. BOYS: My hon. friend the member for North Bruce pointed out a short time ago the cost of the transportation of coal by water as contrasted with that of carriage by rail, and I think the difference was some $2 per ton. But with facilities for loading and unloading it will not cost nearly as much to place the coal at its point of destination when handled by railway as it will when handled by boat and without such facilities. As a rule these boats are very small, and cannot carry large cargoes. Furthermore they do not have the necessary unloading facilities, and I think it is admitted by everybody that in such cases it costs more to handle coal on such boats.

Mr. MALCOLM: The Valley Camp boats will have the necessary facilities for unloading coal. The company is constructing, at considerable expense, an underground carrier to load and take coal from the boats to the cars.

Mr. KELLNER: When was this work first undertaken?

Mr. KING (Kootenay): In pre-confederation times. From confederation down to 1912 there had been expended $236,000 odd. Since 1912 the amount expended was $142,000; repairs to works since 1912 $43,000, dredging $45,000.

Mr. KELLNER: What would it cost to finish this work?

Mr. KING (Kootenay): I think I gave the total as $27,000.

Mr. GARLAND (Bow River): Does the minister seriously contend that the vote of $27,000 will complete the works to be put in at that place?

Mr. KING (Kootenay): The work we have now in hand will cost $27,000 to complete. Of course the work in any one of these harbours is never completed, and something will always require to be done. The matter can only be dealt with as it comes up.

Mr. KELLNER: The minister stated that he was just renewing certain sections of it. If that is the case, then the estimates should include all the sections that are not completed by the present time.

Mr. KING (Kootenay): I read the four items to the House a few minutes ago.

Mr. LEADER: The minister speaks of coal being imported. Where is the coal purchased?

Mr. KING (Kootenay): American coal.

Mr. MALCOLM: Referring to another matter; salt is a free commodity and eighty per cent of the cost of manufacturing the salt is the cost of the fuel used to evaporate the brine. Unless these salt mills get their fuel at the very lowest cost they cannot continue to operate without a very high protective tariff, the mills at points like Sarnia and Goderich and Kincardine are manufacturing salt from brine by evapora-

tion, and it would mean a complete cessation from operations in a plant where the owners have invested a quarter of a million of capital if coal were not brought by water to Kincardine.

Mr. LEADER: Is it the fact that American coal can be imported and laid down there at a less cost than our Canadian coal?

Mr. MALCOLM: West Virginia slack coal can be delivered by water at a cost of $4.96 per ton.

Mr. BOYS: It might be appropriate to ask the minister whether or not any portion of the general item of $562,500, which is for dredging Ontario and Quebec, is assigned to the harbour of Collingwood.

Mr. KING (Kootenay): I will come to that a little later.

Mr. BOYS: Could the minister not tell me if any portion of that item is assigned to Collingwood?

Mr. KING (Kootenay): I am not able offhand at the present time to say.

Mr. BOYS: Very insistent demands have been made of the minister on behalf of Collingwood, which is a town quite close to my own and in my county, although not a part of my riding. The reason I asked some questions regarding Goderich and Kincardine was not to criticize what was being proposed for these ports. Hon. members talk of eighteen and twenty-two vessels calling at Goderich and one or two calling at Kincardine in a year; let me say that in 1923 229 vessels called at Collingwood, and the port handled 2,498,000 bushels of grain. Its elevator perhaps is not as big as it should be, and I hope the day is not far distant when the Canadian National Railways will realize that fact and increase the capacity of the elevator. It has a capacity of 160,000 bushels. There is a good harbour there now, but it requires improvement. The people of that locality have been clamouring for a little more money. It was pointed out that the $231,800 had been spent at the port of Goderich in the last four years. It is a port of some importance, and I am saying nothing against it, but it cannot be mentioned in the same breath with Collingwood. Not only is Collingwood an important lake port, but it has been a very important point for years where both passenger and freight boats have been calling, and doing an immense business. They have the finest shipbuilding plant in the whole of Canada. Breakwater improvements were commenced there under the government of Sir Robert Borden, and one-third of a much needed eastern breakwater was constructed. I am glad to say the present government constructed the second third of that breakwater in 1922; but that work has been standing ever since, although the port has been clamouring for a share of the money that has been lavishly devoted elsewhere. The port is not local in its character in any sense whatever, and we know that passengers from all parts of Ontario and the United States pass through there in connection with the boats which sail further up the lakes, and I think the government should spend some of the money of the country to help build up that port. They require this money for deepening the channel, but do not get their fair share for some reason. I think perhaps something might be done for Collingwood in connection with the general item to which I have referred. I can only express the hope that something will be done. The three important things they are asking for are the completion of the breakwater now two-thirds finished, the removal of certain obstacles in the inside of the harbour which have been brought to the minister's attention—

Mr. MACLEAN (York): At page 41 of the Estimates there is an item.

Mr. BOYS: That is statutory and refers to the dry dock, not for dredging and harbour improvements at all. The third improvement they are asking for is a turning basin, so that large vessels may use this harbour, as they cannot do at present. I understand the largest vessel sailing on the lakes is the Grant Morden, 604 feet long, and that vessel cannot enter the harbour. As the minister has not definitely stated that nothing is to be devoted to Collingwood out of this general item, No. 155, of the estimates and as that has still to come up, perhaps I need not say much more at the present time, except to add that in investigating the expenditure of money at Belle River the other day, one realizes what an absolutely unjustifiable waste of public funds it is to spend money on a sand bar such as you have at that place, and to leave a national port like Collingwood without the needed improvements.

Mr. KYTE: The Belle River expenditure is now under consideration and investigation before the Public Accounts committee. I submit this is not the proper time to discuss it.

Mr. BOYS: My hon. friend is in error. I am not discussing as to whether it is advisable to spend more money at Belle River. I am happy to be able to say that I do not see any item in the estimates in regard to Belle River, and I trust the minister has come to the conclusion that what he has spent at that place is wasted and has made up his mind not to spend any more.

Mr. KYTE: Order. The question whether the money spent at Belle River has been wasted is under investigation by the Public Accounts committee, and when the report of that committee is before parliament it will be time enough to criticize it.

Mr. BOYS: I can understand my hon. friend's anxiety in trying to avoid a discussion of the expenditure at Belle River, because if there is anything that should be criticized it is that outrageous squandering of public money, where a harbour can never be established. I am not seeking to discuss Belle River at any length, but I am absolutely in order, when discussing these estimates, to refer to such items as that and to say that it would be much better for the people of this country if the money was spent on a harbour like Collingwood rather than at a place like Belle River. I may have more to say regarding Belle River when we come to the general item to which I have referred. Possibly when we come to this item, we may, although I hope we shall not, find something more for Belle River. In view of that and the minister's failure to tell me whether or not any portion of the general item is to be devoted to Collingwood, I will not continue my remarks now except to ask him again in all sincerity to take into his sympathetic and active consideration the claim of the town of Collingwood for further needed harbour improvements. Every dollar that is spent there will do good, not only to Collingwood, but to the people of the whole of Canada. The grain that is brought in there by the boats is taken from there to Montreal. I am told the haul from there is exactly the same as it is from Midland. There is a certain amount of congestion at Midland, and it is just as well to use the line of railway from Collingwood through Allandale to Toronto. It would be a good thing for the Canadian National, if they would increase their facilities there, and, in consequence, a good thing for the people of Canada.

Mr. KING (Kootenay): My hon. friend has hardly been fair in the matter. We have been conversant with the needs and requirements of Collingwood. Last year we voted some $20,000 for breakwater construction and $30,000 for dredging at that point. Because I have not my notes dealing with the general dredging vote and do not care to make a statement without being sure of my notes, we are led to believe that Collingwood is being neglected. It is not being neglected. We have carried on that programme that we have been advised is the proper one at Collingwood and we are prepared to carry it on. When that vote comes up, I shall be glad to give my hon. friend the information.

Mr. BOYS: My hon. friend states correctly that there were the two items totalling $50,000. What in the world is that from 1921 to the present time for a harbour of the importance of Collingwood? I have just dealt with Goderich. I am not finding fault with that. I am going to assume that the money is properly spent. But where can there be justification for spending $231,800 at Goderich and $91,000 in four years at Kincardine, one place serving one vessel a year and the other serving eighteen in one year and twenty-two another, whereas at Collingwood you have over 200 vessels entering Collingwood each year and in addition have the shipbuilding plant there. You also have a prosperous town of 7,500 established and known throughout Canada for half a century as a lake port of consequence. One has only to stop and reflect in order to realize that this is not fair and that Collingwood is being neglected, or if Collingwood is not being neglected, the other two ports are getting much more than they should having regard to their relative importance.

Item agreed to.

Kingston, Royal Military College—wharf repairs and protection work, $1,800.

Mr. KING (Kootenay): This item is to repair the face of the pier back of the main boat house, to replace some of the flooring over the wharf in front of the gymnasium, and to build 150 lineal feet of concrete retaining wall, opposite the entrance to the Royal Military College.

Miss MACPHAIL: What does the Royal Military College need a wharf for?

Mr. KING (Kootenay): For the use of the cadets for school purposes we keep this pier and dock in repair.

Miss MACPHAIL: In 1923-24, we spent $1,300; in 1924-25, $900, and this year the government are asking for $1,800. Have the votes of the last two years been spent?

Mr. KING (Kootenay): This is to renew the old revetment wall and the floor of the wharf near the gymnasium. The work is being done in sections.

Miss MACPHAIL: Is it customary for schools to have wharves for the pleasure of students who go to those schools?

Mr. KING (Kootenay): This is a Dominion government school, the Royal Military College, a school of some importance to the people of Canada. It is being maintained by the Dominion government. It is the only military school that is maintained. This is merely taking care of our own property.

Miss MACPHAIL: Are any peace schools maintained by the Dominion government, or do they teach just one line of national policy?

Item agreed to.

Leamington—breakwater, $10,000.

Mr. KING (Kootenay): This is required for the construction of a rubble mound breakwater for harbour protection purposes. The harbour of Leamington is of some importance. The traffic between Pelee island and Leamington is quite extensive, being largely the movement of agricultural produce. There is also a considerable amount of shipping in and out of the lakes, the lake steamers stopping at Leamington.

Mr. GARLAND (Bow River): The work this year is for a breakwater. Last year the work was for repairs to pier. It is the same work?

Mr. KING (Kootenay): No.

Mr. GARLAND (Bow River): How long will the work have to go on? What will it cost? Will this complete the total work required for the breakwater?

Mr. KING (Kootenay): It will not complete it. This is the commencement of work of construction to protect the harbour. We have a vote of $10,000. This vote has been in the estimates in previous years, and it was passed by parliament I think, in the years 1914-15, 1915-16 and 1916-17. The work when finally completed for the protection of the harbour, the breakwater, will cost about $138,000.

Mr. GRAHAM: This happens to be in my constituency. According to the census the population of Leamington is approximately 3,000. The municipality claims that it is over 4,000. Perhaps, without boasting, I may say that it is in the heart of one of the most productive agricultural sections in the Dominion of Canada. It is devoted among other products to tobacco raising which gives a greater return per acre than any other form of agriculture. It is also devoted to the raising of vegetables, small fruits, market gardening, with small farms almost entirely. Tobacco raising is just beginning in Canada. All along lake Erie the quality of tobacco produced is equal to that of the Virginia leaf. This harbour could be utilised for shipping out agricultural products to great advantage if the harbour were such that boats of any magnitude could enter it. Lake Erie is a shallow lake and it does not take much wind to make it almost impossible to land at some of these docks. I think the depth of water in that harbour is only about from ten to eleven feet. The revenue derived from tobacco already produced in that vicinity, including Pelee island, will pay for all these works many times over. But the significance of endeavcuring at the present time to get better shipping facilities in that vicinity, at both Leamington and Kingsville, lies in this, At the Economic conference some two years ago in London the ministry of the day had it in their programme to give a material preference to Canadian tobacco, among other things. That preference, when the succeeding government came in, was not conceded, but it is in the new programme of the Baldwin administration. If that section of the country is ever to take advantage of the preference to be given to Canadian tobacco it ought to have all the facilities possible with which to court that trade. There are of course the other farm products to be considered, for this vicinity is very productive. One boat now runs between Pelee island, Leamington, Kingsville and Sandusky, Ohio. The tobacco production of Pelee island itself would pay a large part of the amount that will be spent on Leamington harbour, but it is for a wider object than that, I think that the money will be expended; the harbour improvements that are to be carried out at Leamington will make for the general development of that portion of Ontario. The expenditure of $134,000 eventually is on a larger scale than would satisfy the present needs. Leamington has very many facilities for large passenger and for excursion traffic, and people have been coming regularly from the lake ports and from Detroit. Under present conditions however they have ceased to go there and it is necessary that something should be done to improve conditions in the port. This necessity has been evidenced by parliament during three successive sessions. An amount was first voted some years ago to begin the work, and if parliament approves this item, as I hope it will, this will be the

fourth time it has done so. The advantages that will accrue to this section of the country through improved shipping facilities by water will well repay a reasonable expenditure. Imagine towns surrounded by a country which is a veritable garden, and situated on lake Erie, not being able to ship their goods by boat owing to a lack of proper facilities. Yet that is the situation.

Item agreed to.

Midland—wharf, $15,000.

Mr. GARLAND (Bow River): Is this a revote?

Mr. KING (Kootenay): This revote of $15,000 is required towards the construction of a wharf 250 feet long by 65 feet wide, having an approach 117 feet long and 500 lineal feet of railway extending from the outer end of the wharf to the limit of the Public Works department's property. The wharf will consist of a pile work substructure and reinforced concrete superstructure around the outsides, with earth filling in the centre, which will be obtained by dredging adjacent to the wharf to accommodate boats of 24-foot draft, and there will be a concrete or asphalt surface over the whole. This is a new structure, and it is endorsed by the district engineer as being essential to the business interests of the locality. The town is primarily a marine centre and the following is a list of its industries, which make it necessary to have further construction at that point:

1. Grain elevators—five houses in operation having a total capacity of 8,500,000 bushels and a sixth house under construction, 1,500,000 bushels capacity.
2. Saw mills—two saw mills, average joint annual cut 60,000,000 feet board measure.
3. Flour mill—capacity, 1,200 barrels per day and in addition various other products.
4. Coal docks—two.
5. The Midland Shipbuilding Company, largest ship constructed to date 560 feet long, the Glenifer.
6. The Georgian Bay Shipbuilding and Wrecking Company. The company operate a marine railway capable of taking the bow or stern of a canal sized freighter and a floating dry dock, capacity 500 gross tons, approximately.
7. The International Fibre Board Company, Limited.
8. The Midland Wood Products Company.
9. The Midland Boat Works.
10. Machine and foundry shops—three.
11. Midland Steam Laundry.
12. Midland Whitewear Factory.
13. O'Hara Woollen Mill Company.
14. Cabinet works—two.
15. Dairies—three.
16. Creamery—one.
17. Terminal Shops Canadian National Railways.

Mr. MEIGHEN: Will any of the money which is being voted in connection with all of these items under the heading of Ontario be spent on the Belle River enterprise?

Mr. KING (Kootenay): I have nothing in the estimates for Belle River.

Mr. MEIGHEN: I know it is not under that name, but is the minister ceasing operations there?

Mr. KING (Kootenay): We are completing the dredging operations.

Mr. MEIGHEN: How will that work be done?

Mr. KING (Kootenay): Out of the dredging vote.

Mr. MEIGHEN: That is more skilful than putting it under the proper head. How much of the general vote is to be spent there?

Mr. KING (Kootenay): It will be discussed under the general vote when it comes up.

Mr. MEIGHEN: The minister has not anything in mind at the present time?

Mr. KING (Kootenay): I have no notes regarding it.

Mr. MEIGHEN: If there was anything, I would think the minister would never forget it. I want to say a few words as to the general character of this vote. It is very difficult for the individual member to know anything about the merits of a particular case; that responsibility is on the minister. Where particular votes have been under review they have not been seen to have very much merit so far. But with a lowering lake level, due probably in a major degree to the Chicago drainage canal, and perhaps due to some extent to the decimation of our forests, but, however caused, very considerable and very serious, is it not time the government rose to something like an appreciation of our present position, and ceased launching upon the responsibilities of opening new harbours and thus multiplying those for which we are already responsible—reopening those that have for years ceased to be harbours, and that the minister knows have ceased to be harbours?

Mr. KING (Kootenay): No.

Mr. MEIGHEN: Yes. What about Kincardine? Has the minister ever seen that?

Mr. KING (Kootenay): Yes.

Mr. MEIGHEN: Does he pretend that that is a harbour in use to-day, or that it has been in use for years? Why, it is only a joke to speak of it as having been in use for the past three years.

Mr. KING (Kootenay): Certainly it has been in use. It was allowed to get into disrepair by my right hon. friend's government.

Mr. MEIGHEN: I saw it last summer. I was told that for a long number of years not a boat had come in there. Yet we are pitching in $50,000 to repair that "harbour." Of course, with sufficient expenditure the place can no doubt be made fit for boats to call, but I do not know that they would do so even after the money is expended. I am not directing anything against Kincardine in particular, I am calling attention to the general policy of the government. With the increased cost piling up upon us because of the lowering lake level, is it sanity for us to be sinking thousands of dollars here and thousands of dollars there, starting upon responsibilities that we will be compelled to continue all over the country?—I mean this inland country that is affected by the lowering lake level. This lowering lake level is a very important consideration which does not seem to have dawned on the government. Another consideration is our general financial condition. With $52,000,000 odd shown by the very last returns of this government of lost revenue—lost because business in Canada is not very good—the government is down with an appropriation considerably larger and of a character which of all appropriations could easiest be done without. This very substantial increase is all of course to be secured by borrowed money. At many of these points it means entering upon a struggle, that is, in so far as it is a commercial object at all—I think the object is mainly political—it is entering upon a struggle to follow the course of nature downwards and keep on digging while the water sinks, involving increased responsibility every year, more harbours always to be dredged one year after the other. Would it not be wiser to select only those harbours that were absolutely essential to the general business of the country, keeping them in shape for that purpose? Is that what the government is doing?

Mr. KING (Kootenay): Yes.

Mr. MEIGHEN: The minister knows it is not. Why, he is increasing them right along—for political purposes and nothing else at all.

Mr. KING (Kootenay): My right hon. friend stated a moment ago that we are increasing our expenditure this year. That is not true.

Mr. MEIGHEN: Look at the vote.

[Mr. Meighen.]

Mr. KING (Kootenay): There is a reduction of nearly $200,000 on public works. Last year we voted $18,789,000; this year we will vote $17,157,000.

Mr. GARLAND (Bow River): Including supplementaries?

Mr. KING (Kootenay): No, that is the main vote.

Mr. MEIGHEN: I know. We are at the Ontario vote, and that is the province from where I get my support, so I do not think I am actuated by any animosity towards it. The vote this year is $1,215,875, against $1,008,450 last year, and of course there will be the supplementaries.

Mr. KING (Kootenay): I explained that in my opening remarks—proper explanation too.

Mr. MEIGHEN: I heard it, but I did not have the same opinion of the explanation as the minister has. Then note what has been going on. For instance, $40,000 was voted last year and only $10,000 spent. What was the idea of putting $40,000 in the estimates? At another place there was a vote of $30,000 with only $15,000 spent, and at still another place a vote of $50,000 with only $16,000 spent.

Item agreed to.

At six o'clock the Speaker resumed the chair and the House took recess.

After Recess

The House resumed at eight o'clock.

PRIVATE BILLS

SECOND READINGS

Bill No. 134, for the relief of Lillian Rebecca Mains.—Mr. Euler.

Bill No. 135, for the relief of Elizabeth Ruth Badgley Shaw.—Mr. Jacobs.

Bill No. 136, for the relief of Lilian Helena Caldwell.—Mr. Preston.

Bill No. 137, for the relief of Elizabeth Strachan Reid Harvey Strachan.—Mr. Garland (Carleton).

Bill No. 138, for the relief of Esther Charlotte Ancel.—Mr. Jacobs.

Bill No. 139, for the relief of Birdie Cohen Gould.—Mr. McMaster.

Bill No. 140, for the relief of Walter Roderick Wilson Robinson.—Mr. Elliott (Dundas).

SUPPLY

The House in committee of Supply, Mr. Gordon in the chair.

Oshawa—harbour improvements, $100,000.

Mr. MANION: Would the minister explain this item, which is rather a large one?

Mr. KING (Kootenay): This amount is required to carry on construction of new work that was before parliament last year. It is proposed to construct a breakwater and to have a harbour at Oshawa.

Mr. STEVENS: What is the total cost?

Mr. KING (Kootenay): This amount of $100,000 is required to complete the contract entered into with the Lumsden Engineering and Transport Company, Limited, for the construction of a breakwater 950 feet long and a return wing 70 feet long, the shore end, 450 feet, consisting of close piling and the balance rubblemound on a brush mattress, and towards further works in continuation of this development scheme. The work is estimated to cost $400,000 odd.

Mr. MANION: How much of that has been spent already?

Mr. KING (Kootenay): We spent last year out of the vote of $50,000, for harbour improvements $16,317.

Mr. MANION: That was the beginning of the work last year?

Mr. KING (Kootenay): Yes.

Mr. MEIGHEN: When was it started?

Mr. KING (Kootenay): Last year; the contract was let last October.

Mr. GARLAND (Bow River): What is the vital necessity for this work?

Mr. MEIGHEN: I notice the minister is doing his best to mortgage the prospects of future governments in their struggle to pull the country out of debt. It is not the money that is being spent so much as the commitments that are being tied around the country's neck.

Mr. KING (Kootenay): There is no question but that Oshawa is one of the large manufacturing towns of Canada, and anyone who visits the place will be confirmed in that opinion. It is situated on the beautiful waterway known as lake Ontario; and one can readily see that there should be harbour works at that point and the people permitted to use the waterway which nature has given them. The expenditure, or the commitment as my right hon. friend terms it, may be a large one; but parliament has been voting these appropriations for many years and in its day the government of my right hon. friend did the same thing. The improvements at Oshawa have been under consideration for years, and reports have been made on the development needed there. The matter has been carefully gone into by the engineering department, and it is suggested that this development can be carried out for the amount of money in question. In regard to the importance of the port one need only refer to the statistics available. The customs returns for 1912-13 showed a total of $270,000, and in 1917-18 the amount shown was $3,500,000. It is one of the largest manufacturing towns, possibly in Canada, and a very good business centre. Undoubtedly the people there should have access to the lake and to the accommodation that will be available by the construction of this harbour.

Mr. MEIGHEN: I certainly would be the last to say anything against Oshawa. It is one of the finest and most progressive towns in the country, and a very large manufacturing centre. It owes its manufacturing importance though to the policy which my hon. friend has done his best to suppress, especially when out of office and—

Mr. KING (Kootenay): It is not being suppressed though.

Mr. MEIGHEN:—it will owe its industrial future to the same policy. No, it is not being suppressed very fast, I know that, especially in ridings where the members support the government. It will owe its future to that policy; it will not owe it to any pouring of public funds into the water or anywhere else. I do not know as to whether the natural physical conditions are there which would warrant a new harbour being dug out or not; that is something that would need examination to say. I certainly think that the existence of business is a justification for water facilities as well as for railway facilities. There is business in Oshawa all right, and we all would like to do everything within our power to advance the fortune of so splendid a place. All I draw the minister's attention to is this: These things are always started in a small way with not very much done. An eye kept open for the next election seems to be the minister's habit, and then just so much voted as he thinks will be necessary to elect the government candidate.

Mr. GOULD: I would ask the right hon. gentleman if members can be elected in that manner?

Mr. MEIGHEN: No, I do not think so. This government could not elect members in any manner now.

Mr. SPEAKMAN: Is it expected that this harbour will be a revenue producer to any extent? Will there be port dues or harbour dues in connection with the use of the harbour?

Mr. KING (Kootenay): Oshawa should be a great producer of trade and contribute to the development of commerce throughout Canada. To-day it shows a total tonnage of 321,500 tons, and it is estimated that 152,000 tons will be water borne. Hon. members can understand that in the case of a harbour producing such a heavy tonnage the development of trade will be an advantage not only to western Canada but to the whole country.

Mr. SPEAKMAN: That was hardly my point. I have no doubt that if the expenditure is justified at all it will result in increasing business. My point was rather as to the necessity of adopting a policy, in the case of harbour construction of this magnitude, of charging dues or fees for the use of the harbour facilities after they are created?

Mr. KING (Kootenay): Generally speaking in the case of lake ports very little in the way of harbour dues is collected. But such dues are collected in ports like Montreal, St. John, Halifax and Vancouver. In certain of the larger inland ports also certain dues have been collected. If, after this port is established, the amount of business would indicate that harbour dues should be collected and officials appointed, the harbour will be turned over to the Department of Marine and Fisheries which will appoint the necessary officials and collect such dues as may be determined. But take the harbour of Goderich, where there is a very large tonnage in wheat going through, the collections, as I indicated this afternoon, are practically nil, and that is true largely of the lake ports. In the port of Toronto the harbour commission collects dues. At Port Arthur and Fort William, and other ports of that character the collections by the department are very small. Nevertheless the facilities at these ports give accommodation to the grain fleet and promote the movement of grain through the ports each year.

Mr. SPEAKMAN: That was my reason for asking the question. This afternoon the minister stated that at some ports, particularly at the smaller points, the amount of business was not sufficient to make it worth while to keep a collector there. But in the case of a harbour serving such an important centre as Oshawa, and which it is admitted will cost anywhere in the vicinity of half a million dollars, I would suggest that it would be sound policy to apply the same rules as are carried out in the case of the ocean ports. I agree with what was said this afternoon in that respect; that it is simply impossible to keep on adding to the harbour facilities in inland waters to the extent that we are doing to-day without charging a fee for the service. Frankly I cannot see the justice—and I did not mention it in connection with the small items because I saw the force of the minister's remark in those cases—of the country mortgaging its future to supply harbour accommodation on this scale for any town or any community without making it revenue producing in some respects. I cannot see why dues should be charged in ocean ports and not charged in inland ports of such magnitude as this. Therefore I suggest, if we intend to keep on providing such facilities and spending sums running up into the millions of dollars for the purpose, we will be obliged in self defence to make these harbours revenue producing, to the extent at least that they will carry a portion of the load.

Mr. KING (Kootenay): The discussion in connection with harbours has been very interesting and very instructive. However, I doubt whether the application of the system followed in the case of ocean ports to ports in inland waters will bring about any great results. Much of the traffic developed in the case of Oshawa will be local. At the same time ships crossing the lakes from United States ports will enter the harbour, as will also vessels passing up and down the lakes. Nevertheless, the tonnage entering the harbour will not be in the same category as tonnage passing in or out Atlantic or Pacific ports. And the dues collected in our ocean ports are largely in line with similar dues in other ports of the world. The hon. member for Marquette (Mr. Crerar) this afternoon indicated that a charge should be made for warehouses erected by the government. It was shown, however, that in the case of Goderich the tonnage amounted to 600 tons. At ten cents a ton for warehousing, which would be a fair charge, the revenue would only be $60 a year. But it is said "Why do the people interested not provide the accommodation themselves?" If the people were so organized that these facilities

could be provided through the municipality it would be all right; but if you allow your wharf or other structure to be used by individual steamship lines they immediately take hold of it and make it useful for their own purposes.

If we should adopt the argument advanced by some hon. members on the other side of the House, then we would go back to the days of toll-gates on our roads and bridges, when the people who used those facilities had to pay. I do not think it is the desire of parliament to make a retrograde step of that kind. These harbours and the business that goes in and out of them is all a part of the commerce of the nation, and as far as a development of this character is concerned, if the tonnage is such as we hope it will be, I would be very glad to consider if some revenue could not come to the Dominion treasury from the expenditure made at this point. My right hon. friend, the leader of the opposition, in criticizing the expenditure at Kincardine this afternoon, said that we should not reconstruct that harbour. It was a good harbour before confederation, when the people of Ontario expended large sums of money upon it, and that is true of other harbours. As far as this harbour is concerned, I think it would be a great mistake to allow the works there to go into disuse. There is an important Canadian industry there, producing a hundred tons of salt per day, and if the facilities in the harbour are not maintained that industry will go out of business. I do not think it is wise to suggest that this or any other government in Canada should cease development at the present time. Canada needs development and the introduction of new lines of industry. I think my hon. friend's remarks are quite in order, consideration will be given to them, and when this harbour is developed it will be for the government of that day to consider whether tolls should be properly charged.

Mr. MACLEAN (York): When the ocean steamships are enabled to come up from Montreal through the waters of lake Ontario, it will follow as a consequence that the government will be called upon to make seaports of all these harbours now being created in our inland waters, and the minister ought to be preparing himself for such a contingency.

Mr. SPEAKMAN: I would hardly expect, if there is only thirteen feet of water in the vicinity of these harbours, that we would ever be called upon to make them seaports; and I would suggest that if the available tonnage in any port warrants the expenditure of $400,000 or $500,000, a fair charge for the use of these facilities should be made. The comparison drawn by the minister between such ports and municipal undertakings such as bridges and roads is hardly a fair comparison, because as a matter of fact the bridges and roads are built and maintained to a very large extent at the expense of the municipalities. The minister suggests that these ports are largely for local use and paid for, not by the community, but by the country as a whole, and therefore the two situations are not comparable. I believe it would be wise for the government to inaugurate, now or in the near future, the policy that when the tonnage reaches a point which would warrant such large expenditure, it should be distinctly understood that a fair fee should be charged for the use of these facilities. It would have two good effects. In the first place it would be partially self-supporting, and in the second place the government would not receive applications from all kinds of places for large expenditures, if those communities knew that the expenditure would be partially paid for by themselves.

Mr. MANION: The minister spoke of the tolls at the head of the lakes. Could the minister tell me where I could get the figures of any collections made at those ports. I do not suppose the figures are very large, but I desire to point out to my hon. friend from Red Deer, that if we start charging at the lake ports we could hardly discriminate between one port and another; and if we charge heavy tolls or any tolls worth while, say for example at the head of the lakes, it makes another charge upon the grain, because my hon. friend knows that five-sixths of the grain from the prairie provinces passes through the head of the lakes, and possibly it would make too heavy a charge on the grain going to Europe. Can the minister tell me where I can get the figures as to the collections made from the harbours at the head of the Great Lakes?

Mr. KING (Kootenay): The Marine department would have that information, but I have a statement here that in 1922 there was collected at Port Arthur $143 and in 1923 $308.

Mr. MANION: At Port Arthur?

Mr. KING (Kootenay): Yes. I do not think I have the Fort William figures. Probably they are both included in this.

Mr. MANION: I hope the minister has not employed an agent to collect these charges.

Mr. KING (Kootenay): No, I think it is done through the Marine agent there. If we applied the same principle to the lake ports that we apply to Montreal and Quebec, then the tonnage coming in would be assessed and that would naturally have to come from the products coming through those ports. The discussion is interesting, and I think there is a good deal in it. A large expenditure of $400,000 or $500,000 probably should yield something to the treasury in the way of port charges or dues of some kind.

Mr. SPEAKMAN: The remarks of my hon. friend in connection with the grain coming through the head of the lakes are appropriate; but the growers of grain, who will undoubtedly be called upon to pay a part of these charges, as far as I have been able to learn, are willing that the grain should pay its fair proportion of charges everywhere, provided all other industries in this country pay their fair proportion of charges.

Mr. LUCAS: Could the minister state the amount of tonnage coming through this port at the present time?

Mr. KING (Kootenay): The present tonnage coming through the port is 321,500 tons.

Mr. LUCAS: Is that rail tonnage or ocean tonnage?

Mr. KING (Kootenay): It is rail tonnage. It is estimated that with the construction of the harbour 152,500 tons of water borne traffic will pass through.

Item agreed to.

Owen Sound—dredging, $83,000.

Mr. GARLAND (Bow River): This is a new work. Will the minister explain the item?

Mr. KING (Kootenay): The sum of $83,000 is asked for dredging, of which $75,000 is a revote, having lapsed in 1923-24. This is required to dredge the approach to an elevator that is now being constructed under the auspices of the municipality of Owen Sound. Our treatment here is the same as is being given in other cases, and is in accordance with the policy pursued by the department for years in the matter of providing facilities for the elevators at Port Arthur and Fort William.

Mr. LEWIS: How does dredging come under the Public Works department? We have other items of dredging scattered all through the estimates. I think all these items should come under one head, and then we would know how much money we were spending on the dredging of lakes and rivers.

Mr. MEIGHEN: You will never know.

Mr. KING (Kootenay): I think the Public Works department are in control and in charge of all the dredging in Canada, except that dredging which relates to the St. Lawrence ship channel and dredging in some railway operations or for canals and railway piers. Outside of that, the dredging is under the Public Works department.

Mr. STEVENS: I understand the municipality of Owen Sound is constructing a very large elevator costing, I think, in the neighbourhood of a million dollars.

Mr. KING (Kootenay): It is costing $450,000.

Mr. STEVENS: The total outlay by the municipality was, I think, about a million dollars. Will this dredging serve that elevator?

Mr. KING (Kootenay): Yes. The city of Owen Sound have passed a bylaw to raise $450,000, and they are constructing an elevator. It is to give entrance to this elevator that the money is being voted.

Mr. HOEY: Will the $83,000 complete the work?

Mr. KING (Kootenay): It will complete the dredging. I find on recent representations that we shall require an additional vote in our supplementaries to put down piling to protect the channel. That matter will come up later. It will be about $15,000.

Mr. KENNEDY (Edmonton): Is this a grain elevator?

Mr. KING (Kootenay): Yes.

Mr. KENNEDY (Edmonton): Why is the municipality building this grain elevator there? Is it really a necessity for the movement of western grain or is it something that is local?

Mr. KING (Kootenay): There is undoubtedly a necessity for further grain handling facilities on the Great Lakes. The city of Owen Sound have apparently sufficient confidence in the grain movement and the importance of an elevator to that community to ask the ratepayers to endorse, as the city council has endorsed, an expenditure of $450,-

000 for an elevator. This will not only serve the community by supplying grain and feed to farmers and local millers, but it will be a factor in the transhipment of grain from Port Arthur across the Atlantic.

Mr. BOYS: The town of Collingwood is contemplating something of the same kind, under a recent act passed by the Ontario legislature permitting municipalities to issue debentures for that purpose. The minister might think over that when he is considering the request of Collingwood for increased facilities.

Mr. WARD: I do not think the minister is serious when he contends that grain would be forwarded from Owen Sound across to any of the ocean ports, because we all know that it was stated that in days gone by elevators there were allowed to burn down because they were of no value. The Canadian Pacific, owing to the heavy grades that have to be surmounted in order to get out of the valley, found it impossible to haul grain from that port. Consequently, there has been no grain movement from Owen Sound for over twenty years. I was born and raised in that city and I know something about it. I am somewhat surprised to find these large votes. I was surprised at the hon. member for South Simcoe (Mr. Boys) making some references to the port of Collingwood this afternoon. Since coming to Ottawa I make a yearly visit to nearly all these ports, and I have no hesitation in saying that there is not fifty per cent of the trade in and out of Collingwood, Owen Sound or any other port on that side of Georgian bay following into lake Huron that there was thirty years ago. The hon. member spoke of the building of ships at Collingwood. There is not one ship built in that town to-day for every ten that were built twenty-five years ago.

Mr. BOYS: My hon. friend is entirely in error in his statement.

Mr. WARD: Not at all. When I was a boy I used to visit the port of Collingwood and ships were being built there all the time.

Mr. BOYS: That is so long ago we do not know what was going on.

Mr. WARD: As regards these ports along the shores of Georgian bay, I am at a loss to know why expenditures are being made.

Mr. BOYS: The Royalton, one of the finest boats sailing on the Great Lakes, was launched at Collingwood, last year and to-day there are three boats on the stocks.

Mr. WARD: How many ships have been built in Collingwood in the last ten years?

Mr. BOYS. How does my hon. friend expect me at the moment to answer a question like that? I do not live at Collingwood, but I know, with the exception of the last year or two, things have been extremely lively. Last year the Royalton was built, and at the present time there is work going on there. I regret to say there is nothing in sight at the moment after these three ships. Therefore, I want to urge upon the government to do something in the interest of shipbuilding at that wonderful plant at Collingwood and elsewhere. If the hon. member knows anything about Collingwood, he knows I am not exaggerating when I say it is a wonderful plant. Does the hon. member suggest for a moment there is not grain coming down the Great Lakes and going from Collingwood to Montreal?

Mr. WARD: Yes.

Mr. BOYS: Does he know what quantity of grain was handled there last year and the year before?

Mr. WARD: The hon. member told us before dinner.

Mr. BOYS: I certainly did. I do not know whether the hon. member heard me or not, but if he did, he cannot have paid much attention to what I said.

The CHAIRMAN: This vote is for Owen Sound, not Collingwood.

Mr. WARD: Quite true. This is a very large vote. I understand the elevator being built by the municipality of Owen Sound is being built purely for the purpose of handling feed grains, not wheat, with the exception of a small percentage of wheat that will be milled locally. It is being built by the municipality for the purpose of serving the country surrounding the city of Owen Sound. It is a sort of distributing centre for coarse grain. Many of the statements that have been made here are decidedly overdrawn. I can recall the days when I was a boy, when at least twice as much shipping was going in and out of any of those ports as there is to-day. I find, on looking over the estimates for years back, we have been spending a great deal of money on those ports, and I wonder sometimes what we have been spending it for.

Item agreed to.

Pelee island—wharf extension, $28,000.

Mr. KING (Kootenay): This is to complete a contract entered into with Mr. Ed Conroy of Peterborough for the construction of a stone-filled timber cribwork extension with concrete superstructure to the existing west pier, 100 feet long by 40 feet wide. The amount of the contract is $32,757.50 and the allowance for inspection and contingencies, $1,000, making a total of $33,757.50. The amount spent in 1923-24 was $252.01, and the amount spent in 1924-25 was $5,705.12, making a total of $5,957.13. The amount required to complete the contract is $28,000.

Mr. MEIGHEN: Does the minister not think he is doing a good deal for his colleague the Minister of Railways and Canals (Mr. Graham)?

Mr. KING (Kootenay): Not too much.

Mr. MEIGHEN: Would he enumerate what he is doing for the Minister of Labour (Mr. Murdock)? I am very much concerned about him. Why has the minister gone so slowly at the work? In two years only a little money has been spent, and now he wants just for one year five times as much as has been spent in two years. Can the minister not think of any reason?

Mr. KING (Kootenay): Yes.

Mr. MEIGHEN: The only reason the minister can give is one that he does not like to express.

Mr. KING (Kootenay): Tenders were called for in 1923 and the figures quoted were considered too high. But the contract was let at the end of 1924.

Mr. MEIGHEN: And how much was spent after that?

Mr. KING (Kootenay): The sum of $5,700.

Mr. MEIGHEN: Why the division of $5,000 last year and $28,000 this year?

Mr. KING (Kootenay): We are completing the contract this year.

Mr. MEIGHEN: But why such an uneven division? Is that the preference of the member who represents the riding?

Mr. KING (Kootenay): Every effort was made to press the contractor to get the work completed last fall. The crib is completed and is afloat in the harbour but owing to the unfavourable condition of the weather it could not be towed over to Pelee island after it had been constructed; the contractor preferred not to take the risk of towing it. On that account the contract has been delayed, and that I think is a reasonable and good excuse.

Mr. BOYS: On what date was the contract to be completed, according to the agreement?

Mr. KING (Kootenay): Completion was called for in November last, but it was shown after the crib had been constructed that it was impossible to tow it to Pelee island. It was late in the fall and, as I have already stated, the contractor did not like taking the risk of towing it. The department therefore consented to allow it to remain until the spring.

Mr. BOYS: The contract was let in May and up to November we are to understand that only $5,000 had been earned on it.

Mr. KING (Kootenay): That is true.

Mr. BOYS: It is evident therefore that the contractor had not been very diligent.

Mr. GRAHAM: That is what I said.

Mr. BOYS: And the minister says that the contract called for completion of the work in November.

Mr. KING (Kootenay): Yes.

Mr. BOYS: Most contractors want to complete their work and get their cheques as soon as possible. This contract was let in May, the best time of year I can think of in which to rush the work so as to get it done in November, when the contractor must have felt he could finish it. Yet all that he earns up to November is $5,000. Was the department making any effort to expedite the contract?

Mr. KING (Kootenay): I have already said that the department had pressed the contractor to get the work completed in the fall; but the crib, which was built at Kingsville some miles from Pelee island, was not in a position to be towed until late in October, when the contractor considered it would not be safe to take the risk. He asked for more time and as a matter of precaution we felt that he was entitled to it. We are merely asking for a vote to complete the contract.

Mr. BOYS: What penalty did the contract provide in case of failure to complete the work within the specified time?

Mr. KING (Kootenay): There was no penalty exacted. In the judgment of the engineers and of the officials the time was extended, and the contract will be completed during the present season.

Mr. BOYS: The contractor was supposed to start in May. When did he actually begin?

Mr. KING (Kootenay): I have not the exact date. After orders in council are passed and contracts are drawn, there is always a lapse of time before the signing of the agreement.

Mr. MEIGHEN: That is not a very good explanation for the work not having been completed within the stated time. The minister said that the contract was signed in May and the work was to be finished in November, and we find that by November there was a little less than one sixth of it done. Has the contractor towed the crib over to Pelee island yet?

Mr. KING (Kootenay): No.

Mr. MEIGHEN: Has he been afraid of the warm weather this spring?

Mr. KING (Kootenay): The weather so far really has not warranted its being towed.

Mr. MEIGHEN: What sort of weather is needed for the removal of the crib—election weather?

Mr. KING (Kootenay): There must be favourable conditions. My right hon. friend is not misleading anyone.

Mr. MEIGHEN: No, he never was.

Mr. KING (Kootenay): He will move the crib when the weather is favourable, and I hope he will take every precaution to see that it arrives safely.

Item agreed to.

Pembroke—wharf replacement and dredging, $64,500.

Mr. GARDINER: Will the minister explain this item?

Mr. KING (Kootenay): This will complete the contract.

Mr. LEWIS: How much was spent last year?

Mr. KING (Kootenay): We spent $39,500.

Mr. GARDINER: What expenditures have there been in the last few years?

Mr. KING (Kootenay): In 1923-24 we spent $19,955 and in 1924-25, $39,500. We are asking this year for $64,500, of which $10,500 will be a re-vote.

Mr. GARDINER: What were the expenditures in 1921-22 and 1922-23?

Mr. KING (Kootenay): There has been an expenditure on construction of $45,197 and on repairs, of $43,329. A total of $88,526 up to March 31, 1924.

Mr. MEIGHEN: For one year?

Mr. KING (Kootenay): No, for construction down to date.

Mr. MEIGHEN: But was there nothing for 1921-22?

Mr. GARLAND (Bow River): Does the minister mean to say that from confederation down to the present time the total expenditure has been only $88,000?

Mr. KING (Kootenay): To March 1924, yes; that is from the early days of construction.

Mr. MEIGHEN: How much was spent last year?

Mr. KING (Kootenay): We spent $19,000 in 1923-24.

Mr. MEIGHEN: And the year before?

Mr. KING (Kootenay): Nothing the year before.

Mr. LEWIS: Why have the expenditures been so great during the last two or three years?

Mr. KING (Kootenay): The works are in a state of decay and a renewal of the old construction is needed.

Mr. LEWIS: This will complete the work?

Mr. KING (Kootenay): Yes. The engineer reports that the present structure, notwithstanding repeated repairs, must be replaced, as the traffic at this point necessitates wharfage accommodation of a permanent character. The steamboat Oiseau makes four return trips weekly, handling passengers and general freight. The ferry boat operating between Pembroke and Desjardins makes eight to twelve return trips daily, except Sundays, from about April 15 to November 30. The wharf also serves as headquarters for the boats of the Upper Ottawa Improvement Company, engaged in log-driving operations, as well as a great many launches, and accommodates all the traffic of men and large quantities of supplies to these boats. A very large traffic of delivery vehicles and automobiles to the steamboats, ferry and launches is also provided for. A traffic count, while the wharf was undergoing repairs in June, indicated a weekly traffic of 408 motor cars, 241 single horse rigs and 288 double horse rigs, or 937 vehicles and 2,497 passengers.

Mr. LEWIS: Is this the first dredging to be done in this particular area?

Mr. KING (Kootenay): Yes, some dredging is included in this amount.

Mr. STEVENS: What will it take to complete the contract?

Mr. KING (Kootenay): It will take $64,500.

Mr. BOYS: What was the amount of the original contract?

Mr. KING (Kootenay): It was $116,718.

Mr. STEVENS: When was that entered into?

Mr. KING (Kootenay): In 1923 and 1924.

Mr. GARLAND (Bow River): The minister states that this $64,500 will complete the contract. Is another project in contemplation?

Mr. KING (Kootenay): No.

Mr. GARLAND (Bow River): This will finish all the work contemplated?

Mr. KING (Kootenay): Yes.

Mr. GARLAND (Bow River): What a relief!

Item agreed to.

Petawawa—wharf repairs, $1,800.

Mr. GARLAND (Bow River): What is this vote for?

Mr. KING (Kootenay): To replace a truss bridge six feet wide by a truss bridge twenty feet wide.

Mr. GARLAND (Bow River): What is this wharf used for?

Mr. KING (Kootenay): A steamer service between Pembroke and this point. This is a military camp and also a summer resort.

Mr. GARLAND (Bow River): It is just a tourist wharf?

Mr. KING (Kootenay): No, there is a very large government camp at Petawawa.

Item agreed to.

Point Edward—dredging, $30,000.

Mr. KING (Kootenay): It is proposed to construct an elevator at this point with a capacity of one million bushels adjacent to the site of the elevator that was destroyed by fire some years ago.

Mr. BOYS: Where is it?

Mr. KING (Kootenay): In Lambton county just above Sarnia. This is in line with the policy that is being followed at Owen Sound and Port Arthur—providing a slip for the use of the elevator in receiving and discharging cargo.

Mr. LEWIS: Is this to be dredged?

[Mr. J. H. King.]

Mr. KING (Kootenay): If the elevator is not constructed we will not do any dredging.

Sir HENRY DRAYTON: Who is building the elevator?

Mr. KING (Kootenay): C. S. Band, a large grain merchant of Toronto and others.

Sir HENRY DRAYTON: This elevator is going to be put up for commercial purposes?

Mr. KING (Kootenay): Yes.

Sir HENRY DRAYTON: It is quite proper that you should look after the elevator.

Mr. KENNEDY (West Edmonton): Is it a municipal elevator?

Mr. KING (Kootenay): It is a private elevator. It will cost us nothing.

Item agreed to.

Port Burwell—reconstruction of and repairs to piers, $97,100.

Mr. STEVENS: What is the explanation of this large sum?

Mr. KING (Kootenay): It is a revote:

(1) To complete the contract with the Bourassa-Clifford Corporation, Ltd., for the reconstruction of 271 feet of the inner end of the east pier, to be 24 feet wide..		$10,000
(2) Reconstruction of superstructure and reinforcing substructure with piles along each face of an additional section of east pier 470 lineal feet 24 feet wide, to consist of concrete superstructure, present substructure reinforced at $175 per lineal feet..	$82,250	
Inspection..	750	
		83,000
(3) Reconstruction of superstructure of outer portion of west pier—replacing face timbers in 120 feet length near inner end of west pier; redecking 110 lineal feet of said pier; placing 4 new mooring posts; painting 18 mooring posts and renewing 200 lineal feet walling and sheet pile wall east side of harbour 37,000 feet B.M. timber at $100..	$3,700	
4 new mooring posts—painting 18..	100	
1,200 feet B.M. W. O. Wales at $150-$180; Inspection and incidentals $120..	300	
		4,100
Total..		$97,100

Mr. BOYS: What county is Port Burwell in?

Mr. KING (Kootenay): East Elgin.

Mr. STEVENS: How much has been spent on this already, how much will be required to complete the work, and what then will be the total cost?

Mr. KING (Kootenay): This will complete the present contract. Last year we spent $32,121.70. This $97,000 will complete the work in hand now.

Mr. WARD: When was this work first begun?

Mr. KING (Kootenay): I have not the date. I think it is an old port dating back to confederation. Up to March 31, 1924, $1,022,000 had been expended. The revenue for the port to March 31, 1921, was $2,211,908.

Mr. GARLAND (Bow River): Is the total expenditure of $1,022,000 correct?

Mr. KING (Kootenay): Yes, that is the total expenditure on the port to date, exclusive of the vote we are asking for now.

Mr. BOYS: That is a port through which a large quantity of coal is brought in by the Canadian Pacific, I think.

Mr. KING (Kootenay): Yes.

Mr. WARD: Has the minister the total tonnage of coal and fish that passes through this harbour?

Mr. KING (Kootenay): In the year 1922-1923 there were 224,446 tons of coal brought in, with a revenue of $103,457. The total number of cars of merchandise was as follows: August, 668 cars, 32,000 tons; September, 660 cars, 31,000 tons; October, 850, 41,000 tons.

Mr. BOYS: Am I right, that coal is brought in there almost entirely by the Canadian Pacific?

Mr. KING (Kootenay): Yes, practically.

Mr. WARD: Has the minister the figures for fish at that port?

Mr. KING (Kootenay): No.

Mr. COOTE: The minister mentioned revenue collected at that port; is that customs revenue?

Mr. KING (Kootenay): Customs revenue.

Mr. COOTE: Anyone reading Hansard might think it was revenue that was collected by the port.

Mr. KING (Kootenay): No, it is customs revenue.

Item agreed to.

Port Colborne—repairs to breakwater, $5,500.

Mr. STEVENS: Is this part of a contract?

Mr. KING (Kootenay): Yes, it is to complete the contract.

Mr. GARLAND (Bow River): Is this hardy annual likely to bloom much longer?

Mr. KING (Kootenay): This is at the entrance to the Welland canal, and I expect there will be expenditures from time to time at Port Colborne. But this will complete the present contract.

Item agreed to.

Port Maitland—repairs to piers, $195,000.

Mr. BOYS: Where is Port Maitland?

Mr. KING (Kootenay): In Haldimand county.

Mr. STEVENS: What is the explanation of this vote?

Mr. KING (Kootenay): This will complete the reconstruction of the west pier at a cost of $2,500 and complete the contract with A. W. Roberston, Limited, for the reconstruction of the east pier at a cost of $189,460. Then there is $3,000 odd for inspection and contingencies.

Mr. STEVENS: What will be the total cost of the work?

Mr. KING (Kootenay): We spent last year about $26,000, which, added to the amount here, would give the total for reconstruction at that point.

Mr. STEVENS: This is a large sum. I would like to know what there is at the port to justify this contract for $220,000 odd.

Mr. KING (Kootenay): This is a rather important point. It is situated at the mouth of the Grand river on lake Erie five miles from the town of Dunnville, and the car ferry terminals and yards of the Toronto, Hamilton and Buffalo Railway Company are situated at this point. There is a 600-foot turning basin in the inner harbour and a deep water channel extending a considerable distance up the river. There are two piers forming a lake channel 170 feet wide. The west pier is of concrete construction extending out into the lake 1,400 feet, and the east pier of wooden construction extending out 1,175 feet. There is a lighthouse on the outer end of the westerly pier and a fog signal at the inner end. These piers were constructed in 1878 by the Public Works department, and the east pier reconstructed in 1907 at an approximate expenditure of $63,000. Since 1918 the above-mentioned car ferry company and others have been urgently pressing to have these piers reconstructed owing to their dilapidated condition which, they stated, amounted to a state of decay and disintegration, forming a menace

to navigation and allowing the harbour to become filled up by siltation.

In 1923 the Toronto, Hamilton and Buffalo Railway Company handled 8,618 loaded cars on their ferry northbound into Port Maitland, a total of 470,296 tons, and southbound out of Port Maitland, 2,212 cars, a total of 58,761 tons.

This company has incurred a capital expenditure of $1,500,000, inaugurating its cross lake ferry service and terminals, and is giving fast and efficient service unequalled by any of the other ferry services on the lake.

Mr. STEVENS: Is there any revenue derived from this port?

Mr. KING (Kootenay): The only revenue would be customs revenue, and I have not the figures for that.

Mr. STEVENS: Do I understand that the Dominion parliament constructs the car ferry wharves for this car ferry company?

Mr. KING (Kootenay): We construct the piers and works that make up the harbour, but the car ferry company construct their own piers for the handling of their traffic.

Mr. LEWIS: What head did this come under last year? I cannot find it in the main or supplementary estimates?

Mr. KING (Kootenay): It was shown in the railway estimates last year, an item for $75,000.

Mr. GOULD: We are now right at the eastern end of lake Erie, and before we go through the Welland canal or over Niagara falls, I should like to make an observation. Why hon. members representing constituencies in Ontario should worry about these expenditures I do not know, because I notice Ontario is receiving $207,425 more this year than last. Whatever significance there may be attached to that, whether it is because the government in the past two or three years has neglected these harbours and rivers and wharves and piers in Ontario, I do not know, but hon. members from Ontario should not worry, seeing that they are getting $207,425 more this year than last, and particularly when $63,765 of that $207,425 is made up by taking it from the three western provinces. There is $41,670 less for Manitoba this year than last, and $22,095 less for Saskatchewan and Alberta.

Mr. BOYS: You deserve better treatment.

Mr. GOULD: We must not suggest that these things are not distributed equitably. I do know that we have not as many harbours and rivers and lakes and wharves on the prairies as they have in the eastern provinces, but in addition to this increased expenditure for the province of Ontario, I notice an increase also in the expenditure for Quebec and Nova Scotia.

Mr. DUFF: Nova Scotia is half a million less than last year.

Mr. GOULD: The supplementaries are not down yet. I have always noticed that in connection with Nova Scotia the supplementary estimates invariably speak with a very loud voice. However, what I wished to say was this: Seeing that we are at peace and passing these estimates in a very nice, mild manner, that the facts are as I have stated, that there is a wonderful increase here but a decrease in the case of the western provinces, I hope that we may reasonably expect to have some consideration extended to us when the railway rate question comes up.

Mr. DUFF: We are building railways for you in the west.

Mr. GOULD: We are paying for all we get.

Mr. GARLAND (Bow River): What has been the total amount expended on this port from the commencement?

Mr. SPEAKMAN: While the minister is looking up that information I should like to tell the hon. member for Lunenburg that his comparison between the construction of wharves in the eastern provinces and the construction of railways in the western provinces would be a perfectly sound one were the service offered on the same terms; in other words that no charge were made for the use of the railways in the western provinces, the service in this respect being in the same class with wharves and harbours in the eastern provinces.

Mr. DUFF: In the first place my hon. friend is out of order in not addressing me through the chair; and in the next place I wish to tell my hon. friend that we pay for the wharves in Nova Scotia.

Mr. SPEAKMAN: Mr. Chairman, I asked the minister if any charge was made for the use of these wharves and he assured me there was not. I am glad to hear from the hon. member for Lunenburg that the minister was mistaken.

Mr. DUFF: If the minister builds wharves down there they are put under the charge of the Department of Marine and Fisheries and it collects the dues. Will that satisfy my hon. friend?

Mr. KELLNER: Will the minister tell me what amount of dues was collected in this harbour?

Mr. KING (Kootenay): I am sorry I have not the information as to the early expenditures that were made on this harbour. Formerly it was under the Department of Railways and Canals, but last year it was transferred to the Department of Public Works.

Mr. GARLAND (Bow River): With reference to the ferry traffic to which the minister referred, I take it that is a subsidiary ferry to the Canadian Pacific, is it?

Mr. KING (Kootenay): Yes.

Mr. GARLAND (Bow River): Indeed the most of this work is done in the interest of the Canadian Pacific. Would the minister state any work done that is not to the advantage of the Canadian Pacific at that place?

Mr. KING (Kootenay): Oh, yes.

Mr. GARLAND (Bow River): What is it?

Mr. KING (Kootenay): There is a large tonnage that comes in there consisting of coal, steel, brick, sand, chemicals, oil and miscellaneous articles.

Mr. GARLAND (Bow River): That is all Canadian Pacific freight.

Mr. KING (Kootenay): They are commodities that the people use, and in that way are an advantage to them.

Mr. GARLAND (Bow River): What wharfage charge is made to the Canadian Pacific for the use of the wharves?

Mr. KING (Kootenay): They have their own loading equipment; they provide their own facilities. We are dealing here with the piers that go to protect the harbour.

Mr. GARLAND (Bow River): Have the government any wharves there at all?

Mr. KING (Kootenay): No.

Mr. GARLAND (Bow River): Therefore the government would not be in a position to charge any dues.

Mr. KING (Kootenay): No.

Item agreed to.

Port Stanley—harbour improvements and repairs, $90,000.

Mr. STEVENS: Would the minister give an explanation of this item?

Mr. KING (Kootenay): This amount of $90,000 is required to provide for urgent repairs and renewals to existing works and to continue the harbour improvement scheme commenced in 1923. For urgent repairs and renewals to existing works the sum of $3,250 will be required. In the case of a new contract to be let for a 700 foot extension to the east breakwater, two 50 foot checkwaters of rubble mound, removal of old east pier and deepening entrance channel, the total estimated cost is $181,000, and the allotment for 1925-26 is $86,750, making a total of $90,000.

Mr. GARDINER: What amount has been expended on this particular work from the commencement?

Mr. KING (Kootenay): The sum of $958,660 has been spent up to March 31, 1924, in construction, repairs and dredging at this point.

Mr. COOTE: What tonnage is handled through this port, and what are the principal commodities?

Mr. KING (Kootenay): The bulk of the tonnage is shipped in bond to inland ports. In 1923 there was a total tonnage of 329,000 tons.

Mr. BOYS: Is not that brought in from Cleveland by water?

Mr. KING (Kootenay): Yes. There is considerable coal and steel tonnage brought in.

Mr. COOTE: What railway brings the coal in, the Canadian National or the Canadian Pacific?

Mr. KING (Kootenay): It comes by car ferry to that point, I think via the Père Marquette.

Mr. COOTE: Would the minister advise us whether any tolls or dues were collected at this harbour?

Mr. KING (Kootenay): Yes, we collected the sum of $14 in 1922, and the sum of $21 in 1923.

Some hon. MEMBERS: Oh, oh.

Mr. GRAHAM: An increase of 50 per cent.

Mr. KELLNER: Would the minister send that information to the member for Lunenburg. I think he ought to have it.

Mr. GARDINER: The minister stated that up to March 31, 1924, the total expenditure amounted to $958,000. When was that work first commenced?

Mr. KING (Kootenay): It goes back pretty well to the time of confederation or before that date. It is an old harbour.

Mr. GARLAND (Bow River): I simply wish to call the minister's attention, as quietly as I can, to the fact that he has been able to give

us, and I congratulate him upon it, a good deal of information this afternoon. That information he gave very courteously. In many cases he was able to give us the total expenditure, but in one or two instances he failed to do so. In many cases he was also unable to tell us what year the work was commenced. I wonder if there can be any explanation of that. Possibly the people were a little more careless in the early days.

Mr. KING (Kootenay): Of course there ought to be uniformity with respect to any information presented to the House, as to the date of the original expenditures, and so on. But in the case of work which started even before confederation to give details of this work from year to year, or even to ascertain the date of commencement, would involve a good deal of trouble and would serve no useful purpose.

Mr. GARLAND (Bow River): Oh yes, it would serve a very useful purpose.

Mr. KING (Kootenay): To give the original date of construction?

Mr. GARLAND (Bow River): Yes, it would show the unwisdom of some former governments and we might profit therefrom to-day. I would suggest the minister might have that matter looked into.

Mr. KING (Kootenay): I would be very glad to.

Mr. GARLAND (Bow River): I do not wish to embarrass the minister, but there have been some serious comments in the press and in other quarters on the lack of information by previous Ministers of Public Works. I congratulate the present minister on the fuller information he has made available to the House; but I suggest that it is quite a simple matter to include, on request, in his statement of expenditures, the date of the commencement of a particular work—a dock, a breakwater, or anything else—also the total cost to date, the amount of the present estimate, and the total expenditure expected to be made on the particular work before it is completed. The House would then be in a position to understand what was involved. We are voting millions every year, sometimes tens of thousands in one item. We do not know how much it is costing the country. We find one item costing a million and another $980,000 and so on. If we looked into all the items we would find the total would be five or six millions.

Item agreed to.

[Mr. E. J. Garland.]

Providence Bay—wharf repairs, $2,100.

Mr. COOTE: Where is Providence Bay?

Mr. KING (Kootenay): Algoma East.

Mr. MEIGHEN: I do not think one item should be taken up until the preceding item is carried. This Providence Bay seems to be in the same place as Blind River. This is a new item, not in last year's estimates at all. What pressure was brought to bear to get this item put in the estimates?

Mr. KING (Kootenay): The details of this item are:

Repairs and renewals to an existing structure. District engineer reports:

These repairs are required to keep the structure in safe condition for use. The yearly traffic consists of 150 tons dairy produce. Fish and so forth and 600 head live stock exported, and 600 tons general merchandise imported. Total value is $125,000. Therefore the commercial necessity is undoubted.

Mr. MEIGHEN: Is there any railway into the place?

Mr. KING (Kootenay): No, I think not. It is on an island.

Mr. CARRUTHERS: It is the only lake port on the south shore of Manitoulin island. There is a line of boats running from Bruce peninsula to that point, and it is also a harbour of refuge. Unfortunately it is in rather an exposed position, not a very good harbour, and in the winter time, and also in the spring of the year on account of the movement of the ice, it gets out of repair. I do not know of any wharf that requires repairs more than this. There is no railway within fifty miles of it. The harbour is the only way they have of getting their produce out.

Item agreed to.

Rainy River—wharf repairs, $2,800.

Mr. KING (Kootenay): This is in Fort William and Rainy River. The wharf requires repairs in places and some of the timbers are apparently in a decayed condition.

Item agreed to.

Rondeau—repairs to piers, $7,000.

Mr. KING (Kootenay): This is required for urgent repairs and renewals to the decking, face timbers and cross ties of the east and west piers and to repair existing shore protection for a length of 150 lineal feet.

Mr. STEVENS: Where is that?

Mr. KING (Kootenay): In the county of Kent.

Mr. STEVENS: Who represents that county?

Item agreed to.

Sault Ste. Marie—wharf repairs, $4,000.

Mr. GARLAND (Bow River): Any explanation of this?

Mr. KING (Kootenay): General minor repairs to walling and roadway approach of wharf, $1,000; repairs to old warehouse, replacing roof, $3,000, total $4,000.

Item agreed to.

Saugeen river—repairs to harbour works, $5,000.

Mr. GOULD: It is very interesting when we look at the long list of increased expenditures to recollect that we have a vast hinterland, each electoral district for instance on the prairie paying one and a quarter million, for which it gets nothing in return, only providing money to be spent on harbours and rivers. I like equity and I do not like things inequitably distributed. I would like on behalf of our province, to appeal to the Minister of Agriculture to see that these moneys are more equitably distributed. For instance, on the Saskatchewan river the municipalities or communities have to build their wharves half way across the river themselves, and here we have a much reduced vote this year. Before the money is voted, I wish to call the attention of the government to the very inequitable manner in which they are distributing money raised from the taxation of this country. This is just a fair word of warning to the government. The people will not forget this. The government is going to hear about it. I have protested time and again in this chamber, and I ask the government whether these expenditures are justified at the present time. If the government is going to be fair it will distribute the money equitably. I have requested time and again that a little bit of the money be expended in my district.

Mr. GARLAND (Bow River): The hon. member forgets that this is a government of economy.

Mr. GOULD: They are not economizing in the taxation they collect in my electoral district, but they spend every cent of it in some other place.

Item agreed to.

Southampton—repairs to wharf and breakwaters, $5,000.

Miss MACPHAIL: Will the minister tell us if this money to be spent in Southampton is to be spent on the long pier on Fisherman dock? Because I happen to know that the long pier is of no use at all.

Mr. KING (Kootenay): In reply to my hon. friend, the vote which has just been passed, Saugeen river, $5,000, is the expenditure that will take care of the fishermen in that vicinity. At Southampton the expenditure is as follows:

East breakwater, general repairs to face timbers and decking	$ 250
Commercial wharf, repairs	200
West breakwater, renewal of 300 lineal feet superstructure	4,500
Incidentals	50
Total	$5,000

Mr. GARLAND (Bow River): The minister stated a minute ago that the previous vote for Saugeen river, $5,000 would take care of the fishermen.

Mr. KING (Kootenay): Yes.

Mr. GARLAND (Bow River): The item says, "Repairs to harbour works". Just to what works does that apply?

Mr. KING (Kootenay): I do not know whether my hon. friend is familiar with the locality, but the Saugeen works were constructed many years ago. This is the mouth of the river which gives a very good shelter to the fishermen, and the fishing industry is a very considerable one in that district. It is proposed to reconstruct some of the piers or wharves there in order that they may be of use. There is a hope that some day we will be able to combine the two harbours, or make Southampton the main harbour for both the fishermen and the commerce of that country. But to provide for the fishermen would require a very considerable sum of money. At the present time we are making some improvements to the old works on the Saugeen, and keeping the main work at Southampton in repair.

Miss MACPHAIL: I know a good many of the fishermen who live in Southampton, and they certainly need a place to which they can bring their boats and leave them in safety. The old Fishermen's dock is a rotten old thing, you could hardly tie a horse to it, let alone a boat. Then in regard to the long pier for which this $5,000 is being spent, all the inhabitants in Southampton to whom I have spoken about it say that it is absolutely of no use except for people to go walking some nice evening or on Sunday. No boats can get into the long pier. Some wealthy American might come in once in a summer, but it does not seem quite right that we should spend these vast sums of money in order to let them have a pleasant landing. They could go further on and land at Kincardine quite as well. As there is a real fish-

ing industry there, and the only water service that is needed is required for the fishermen at Southampton, while this is not my riding, I would be most happy to see more money spent on docks for the fishermen to make things better for them than to have money spent on the long pier because every cent spent on it is simply money thrown away.

Mr. MEIGHEN: How much is going into this long pier? How long is the minister going to make it?

Mr. KING (Kootenay): It was constructed some years ago. A very large sum of money has been spent at Southampton in the construction of a pier and breakwaters. As regards the pier, we are spending $250 on the east breakwater and $250 on the commercial wharf, that is the long pier. On the western breakwater, which is the protecting breakwater of the harbour, it is proposed to expend $4,500.

Mr. LEWIS: Nothing for the fishermen at all?

Mr. KING (Kootenay): The fishermen have been taken care of in the previous vote, Saugeen river. I had an opportunity of meeting the fishermen there last year, and from my observations I felt that we should continue to provide accommodation where they are now located, where they have their establishments, at least until the breakwater which protects the mouth of the river is possibly destroyed. Then it may be necessary to move them to the main harbour, although that will not be kindly received by the fishermen. In fact, the locality they are in now is one that suits their industry and requirements.

Mr. GARLAND (Bow River): The minister has pointed out that the long pier is to cost quite a substantial sum this year.

Mr. KING (Kootenay): $250.

Mr. GARLAND (Bow River): He also states that this is a matter of long standing, and that is apparently the only justification he has given for this vote. Has the minister any real reason for continuing it? The mere existence of a thing does not justify keeping it in repair, unless there is some real merit in it. The minister has not given us any reason yet.

Mr. KING (Kootenay): If my hon. friend had local knowledge of the district surrounding Southampton and the moneys that have been spent there in constructing breakwaters and piers, he would not suggest for a moment that the government should abandon those works and let them go into disrepair. There will have to be annual expenditures to keep these works in repair.

Miss MACPHAIL: Does the minister really think the fishermen of Southampton would ever use the long pier? All their homes, the whole fishing industry, their fishing houses and everything connected with the industry are at the mouth of the river. They are a mile or more apart. The fishermen cannot afford to build new icehouses, fish houses and homes. I do not think there is any question of moving the fishermen's facilities from the mouth of the river to the long pier. They will all have to stay at the mouth of the river, or the fishermen will have to go to other grounds. I still protest against spending $250 for the long pier. Do more than two ships come into Southampton all summer long?

Mr. KING (Kootenay): I quite agree with my hon. friend as regards the fishermen and providing quarters there for them. I think I have explained the matter and provision has been made for them. As regards the pier, years ago large quantities of cordwood and timber came down and the harbour facilities there were used to take care of this. The structures there are large and they have cost a great deal of money. It is also a harbour of refuge and I do not think it should be allowed to go into disrepair.

Mr. MEIGHEN: Refuge for what?

Mr. KING (Kootenay): Steamers.

Mr. MEIGHEN: How many came in last year?

Mr. KING (Kootenay): I have not the record. In case of storm vessels will run into that port.

Mr. MEIGHEN: I do not know of my personal knowledge, but I know the minister has voted money not far away just to keep up a tradition, and that appears to be the only object he has in this case. He says that there once was a time in the great by and by when a lot of lumber went into that port, and inasmuch as there is a long pier, he thinks he had better put some money into it.

Mr. KING (Kootenay): Does the right hon. member think the work should be abandoned?

Mr. MEIGHEN: Yes, unless the minister can give a better reason than he has given yet. There may be most excellent reasons for maintaining the work, but we have not had them.

Item agreed to.

Stokes bay—repairs to pier, $4,000.

Mr. KING (Kootenay): This is for renewal of stringers, corbels and the top course of face timbers of all cribs, with 70 per cent of decking.

Mr. STEVENS: Where is Stokes bay?

Mr. KING (Kootenay): In Bruce county north.

Mr. STEVENS: Is this another harbour of refuge?

Mr. KING (Kootenay): No. It is a local harbour.

Mr. BOYS: I thought the hon. member for North Bruce (Mr. Malcolm) put his pen through many of these items.

Mr. MEIGHEN: The minister seems to have made him the pet of the whole Liberal family.

Mr. KING (Kootenay): I think not.

Mr. LUCAS: When was any money spent at this point before?

Mr. KING (Kootenay): The pier was built between 1904 and 1906. It cost $8,978. The last repairs made to it were attended to in 1913-14, bringing the total cost of this structure to date to $10,314.

Item agreed to.

St. Williams—repairs to pier, $2,250.

Mr. MEIGHEN: Where is this?

Mr. KING (Kootenay): In Norfolk county. This is for renewal of the outer end of landing pier including driving of sheet piling around present pier and filling with stone, repairing seven concrete piers between outer end and shore, and renewal of wale and decking in approach.

Mr. MEIGHEN: Does the government own this pier?

Mr. KING (Kootenay): Yes.

Item agreed to.

Thames river—repairs to lighthouse wharf, $1,000.

Mr. MEIGHEN: Where is this wharf?

Mr. KING (Kootenay): In Kent county.

Mr. MEIGHEN: Is this at the mouth of the river?

Mr. KING (Kootenay): The work is requested by the district engineer as being urgent. It is renewal of a lighthouse wharf.

Mr. STEVENS: Is there any traffic?

Mr. KING (Kootenay): This is to protect the lighthouse wharf. There is traffic on the river.

Mr. MEIGHEN: What is the lighthouse for? Does the minister seriously contend that there is traffic on the Thames river? If so, how far up does it go?

Mr. MURDOCK: The traffic runs up to Chatham on the Thames.

Mr. MEIGHEN: What kind of traffic?

Mr. MURDOCK: Excursion traffic from Detroit. The chief traffic however consists of sand and gravel barges.

Mr. BOYS: Is this in conjunction with Belle River?

Mr. MURDOCK: No. Belle River is about twenty-five miles further west.

Mr. BOYS: We were told in the committee the other day of the large amount of traffic that was to move from Belle River up the Thames to Chatham. I presume this lighthouse is to light the way.

Mr. KING (Kootenay): There has been a lighthouse there for many years; it is not a new thing.

Item agreed to.

Thessalon—to complete breakwater extension, $16,000.

Mr. MEIGHEN: Where is this?

Mr. KING (Kootenay): In East Algoma. This is a re-vote which is required to complete a contract for the extension of the existing breakwater which consists of rubble stone capped by large blocks. The amount of the contract was some $39,000. The expenditure in 1923-24 was $14,000 and in 1924-25, $9,000, bringing the total expenditure to date up to $23,000.

Mr. MEIGHEN: How much more is required?

Mr. KING (Kootenay): To complete the contract, $16,000.

Mr. MEIGHEN: Is this a new extension the government is starting? What is the length of it?

Mr. KING (Kootenay): Four hundred and fifty feet.

Mr. MEIGHEN: It is all in East Algoma I notice.

Item agreed to.

Thorah island—harbour improvements, $1,050.

Mr. KING (Kootenay): This is to complete the contract entered into last year.

Mr. MEIGHEN: What for?

Mr. KING (Kootenay): For the construction of crib-work to retain the wall, which is five feet wide and of a total length of three hundred and eighty feet.

Mr. MEIGHEN: This is an island?

Mr. KING (Kootenay): Yes.

Item agreed to.

Thornbury—wharf repairs, $6,200.

Mr. KING (Kootenay): This is in the north of Grey county. The vote is to take care of necessary repair work to the entrance of the pier.

Item agreed to.

Trenton—to take over from municipality Bywater dock, $13,100.

Mr. MEIGHEN: Was this promised in the by-election?

Mr. KING (Kootenay): No.

Mr. MEIGHEN: What does the minister know about it? It certainly was.

Mr. KING (Kootenay): It was promised many years before, I think.

Mr. MEIGHEN: This vote is to take over the structure from the municipality, who own the dock. Have they operated it lately? A bill was put through some time ago with relation to this matter, was it not?

Mr. KING (Kootenay): No bill has been passed by this parliament.

Mr. MEIGHEN: Well, some action was taken two or three years ago, and I think it was in the form of a statute.

Mr. KING (Kootenay): No. The Ontario government gave certain rights to Mr. A. E. Bywater of Trenton whereby he acquired a patent of the water lot adjoining Lot N, South Dundas street, Trenton. This property is adjacent to the government Trent canal bridge. It has been used as a fire dock and as a general public dock for many years, and it is a property which is of great importance to the public at large. Representations were made years ago that the Dominion government should secure it but no action was taken. Later on however the government of Ontario gave to Mr. Bywater the water lot in question, and the council of Trenton considered the matter of such importance to the municipality that they expropriated the property, paying the sum of $12,100.

Mr. MEIGHEN: To Colonel Bywater?

[Mr. Meighen.]

Mr. KING (Kootenay): Yes.

Mr. MEIGHEN: When did he get it from the Ontario government?

Mr. KING (Kootenay): In 1921.

Mr. MEIGHEN: What did he pay for it?

Mr. KING (Kootenay): I have not that information. There was an arbitration, as between the municipality and him, and the municipality paid $12,100 for the lot, in addition to the cost of arbitration amounting to $966.58.

Mr. MEIGHEN: When did the municipality take it over from him?

Mr. KING (Kootenay): In December 1921.

Mr. MEIGHEN: Immediately after he had got it from the Ontario government.

Mr. KING (Kootenay): Yes, shortly after he secured it. The property had been used by the public for many years and they have been contending that adequate warehousing facilities should be established in connection with it. The municipal council had taken expropriation proceedings under the Ontario Municipal Act, but in the meantime the provincial government had granted the property to Colonel Bywater, with reservations to the rights of the government of Canada. This matter was set forth in a petition drawn up by the municipal council, whose position was strongly supported. In a report on the matter the district engineer states:

> The department did some dredging in front of the wharf during the period November 16, 1912, December 16, 1913, covering an area of 105 feet by 500 feet; 6,138 cubic yards of solid rock was excavated to a grade depth of 14 feet below zero.
>
> Practically all freight and passenger traffic going in and out of the town by water is handled at the wharf in question, which is now called "Polly's wharf." Trenton is the terminus of the Trent valley canal, and is served by the Grand Trunk Railway, the Canadian Pacific Railway, and the Canadian National Railways. It is a port of call for all regular liners. Large quantities of coal are imported and unloaded. Apples and cheese are shipped in large quantities. Canadian Iron Mines operate a concentrating plant at this place. Trenton is an important commercial and manufacturing centre. Customs receipts amount from year to year to about $40,000 to $45,000. In 1913, the population was reported to be 4,300.

Mr. MEIGHEN: Does the government intend to spend much more money on this?

Mr. KING (Kootenay): Not at the present time.

Mr. MEIGHEN: When does the government intend to start?

Mr. KING (Kootenay): It will depend on necessities.

Mr. MEIGHEN: Political?

Mr. KING (Kootenay): No, fortunately not.

Mr. MEIGHEN: What is the idea of this vote now?

Mr. KING (Kootenay): The government will acquire the property with this vote, and in view of the information I have just given I do not think there is any reason why it should not do so in order to give the people of Trenton the service that is given other places. We are not asking for money for further expenditures; we simply want to acquire this property to bring it within the control of the Dominion government for public use.

Mr. MEIGHEN: There will be nothing in the supplementaries?

Mr. KING (Kootenay): I do not think so.

Mr. EVANS: In this vote we have passed many items such as this one which in my opinion should not properly come within the jurisdiction of the Dominion government at all. Many of these items, it seems to me, should come under the control of the municipality or the province and it is unjust to the taxpayers throughout the Dominion for them to be called upon to provide these local facilities for certain points on the Great Lakes and around the east coast and in Quebec. The Dominion might as well be justified in providing roads through the municipalities as in providing some of these facilities for which we have voted money to-day, this one among the rest. The provinces might just as reasonably ask to be relieved of the work of building bridges, and put it on the Dominion government.

Mr. KING (Kootenay): Under the British North America Act the responsibility for roads and bridges is on the provinces, while wharves and aids to navigation come within the federal jurisdiction.

Mr. EVANS: It would be a sound principle to adopt that only waterways of a national character should be looked after by the Dominion; the provinces should look after all others. This would be more equitable to the taxpayers throughout the country, and the work would be done more economically.

Mr. BOYS: This is the only wharf at Trenton?

Mr. KING (Kootenay): Yes.

Mr. BOYS: And the idea is that because other places have wharves which are paid for by the Dominion government, the people of Trenton feel that they should have this wharf provided in the same way; and they have asked the government to take it over.

Mr. KING (Kootenay): Yes.

Mr. BOYS: That is only reasonable, and I do not know why anyone should think that certain towns should get wharves at the expense of the Dominion government while the people of Trenton should pay for their own.

Item agreed to.

Wendover—wharf repairs, $6,000.

Mr. STEVENS: Is this to complete the work?

Mr. KING (Kootenay): This vote is for repair work.

Item agreed to.

Harbours and rivers—Nova Scotia—Avonport—rebuilding part of wharf, $7,200.

Mr. STEVENS: I think the minister ought to give us a résumé of these new items as we proceed.

Mr. KING (Kootenay): Yes. They are mostly repairs or renewals and improvements to harbours. It is proposed to rebuild a portion of this wharf which was damaged by a storm last year. The wharf serves a population that is engaged largely in the manufacture of brick and fishing. Five thousand barrels of apples, 700 cords of wood, barrel staves, pulpwood and other shipments were made last year. Up to March 31, 1925, there had been expended $10,426.

Item agreed to.

Bay St. Lawrence—breakwater extension, $3,000.

Mr. MEIGHEN: Who gets this?

Mr. KING (Kootenay): This is in Cape Breton North and Victoria county. The work is mainly to improve the shelter for fishing boats. The value of the catch at this point is about $50,000 each season. At present the fishermen are operating at a great disadvantage owing to the lack of landing facilities. The proposed improvement would also facilitate the landing of freight and passengers from the subsidized steamboat. During an average year about 200 passengers pass through this port, and the steamboat company collects about $1,000 in freight charges on imports and exports.

Item agreed to.

Black Point—breakwater repairs, $5,800.

Mr. GARLAND (Bow River): What is the explanation?

Mr. KING (Kootenay): This is to reconstruct the outer end of the breakwater, 114 feet long by 24 feet wide, with native timber crib work. The old work was destroyed by ice.

Item agreed to.

Cariboo—repairs, $3,000.

Mr. MEIGHEN: Where is this point?

Mr. KING (Kootenay): Pictou county.

Mr. MEIGHEN: What are the repairs?

Mr. KING (Kootenay): Reconstructing a portion of the breakwater with crib work. This is to give protection to the harbour, and is rendered necessary by damage to the breakwater during storms last winter. The people of the island also use the breakwater as a mean of access to the mainland in summer.

Item agreed to.

Chebogue—harbour protection, $2,600.

Mr. MEIGHEN: Where is this?

Mr. KING (Kootenay): In Yarmouth county.

Mr. MEIGHEN: What protection is going in there?

Mr. KING (Kootenay): It is to extend the existing beach protection a further length of 70 feet. The breakwater acts as a protection to the fisherman.

Mr. MEIGHEN: How could it be a breakwater? You could not extend a breakwater seventy feet for $2,600.

Mr. KING (Kootenay): This work is along a sandbar and will give the desired protection.

Mr. STEVENS: What is the form of construction?

Mr. KING (Kootenay): Crib work costing $2,520.

Mr. MEIGHEN: It is really shore crib work.

Mr. KING (Kootenay): It is breakwater protection off shore. If my right hon. friend has visited Toronto island he will recollect that similar work has been done there.

Mr. MEIGHEN: Yes, but the minister said 70 feet of that kind of work was to be done for $2,600. It could not be done for the money.

[Mr. J. H. King.]

Mr. KING (Kootenay): There is 21,000 cubic feet of crib work at 12 cents, making $2,520.

Item agreed to.

Cheverie—wharf repairs, $3,200.

Mr. KING (Kootenay): This vote is required to renew the plank, stringers and guard over an area of 8,000 square feet, and is the estimated cost. These repairs are required to make the wharf serviceable for shipping purposes. Farming, fishing and plaster mining are the local industries. The annual shipment of gypsum is 30,000 tons, lumber 1,000,000 feet, and laths and barrels are also exported to a large extent.

Item agreed to.

Dartmouth—pier, $5,700.

Mr. STEVENS: There was a very large expenditure last year.

Mr. KING (Kootenay): This vote is required to complete payments due the contractors for the construction of this pier. The contract was entered into in 1924, having been awarded to the lowest tenderers, the Halifax Dredging Company Limited and the Standard Construction Company Limited. The total amount was $135,659. The work is finished.

Digby—repairs and renewals to pier, $2,000.

Mr. KING (Kootenay): This is an annual charge.

Mr. STEVENS: Is there no end to it?

Mr. KING (Kootenay): No, it is a very large pier. There is a tremendous traffic there, and repairs and renewals are required every year.

Mr. MEIGHEN: Tremendous traffic?

Mr. KING (Kootenay): Yes.

Item agreed to.

Fisherman's Harbour—wharf, $5,000.

Mr. STEVENS: Is this a continuous one, too?

Mr. KING (Kootenay): This is to construct a wharf, 248 feet in length consisting of a stone and gravel approach 90 feet long and 16 feet wide on top; a block and span approach 108 feet long and 16 feet wide; a pile trestle approach 30 feet long and 16 feet wide, and a pile pierhead 20 feet long and 40 feet wide along the outer face. This amount is required to complete the contract entered into last year with the Russell Construction Company.

Mr. STEVENS: What is the total amount?

Mr. KING (Kootenay): For the contractor, $4,420; inspection and contingencies, $579; total, $5,000.

Item agreed to.

Great Village—wharf replacement, $5,500.

Mr. STEVENS: What about this?

Mr. KING (Kootenay): This is to replace the present wharf by a new structure at a site 800 feet farther down the river. It will consist of a pilework pier 90 feet in length by 40 feet in width, with an ell 70 by 30 feet at the outer end. The old structure, which was in a dilapidated condition, was entirely wrecked by a severe storm early in October, 1923.

Mr. MEIGHEN: Where is this?

Mr. KING (Kootenay): In the county of Colchester.

Mr. MEIGHEN: A little bit for everybody, here.

Sir HENRY DRAYTON: Is there an existing contract?

Mr. KING (Kootenay): No, it is being done by day labour.

Sir HENRY DRAYTON: What is the engineer's report?

Mr. KING (Kootenay): The engineer recommends that the work be done by day labour.

Sir HENRY DRAYTON: What does he say?

Mr. KING (Kootenay): He reports that it can be more efficiently and economically done by day labour.

Sir HENRY DRAYTON: What reasons does he give? It is over $5,000.

Mr. KING (Kootenay): The contract is for $4,500.

Sir HENRY DRAYTON: We have a vote here for $5,500, so it looks as if it were playing with it to say it is under $5,000. It is all very well to say it is better to do it by day labour, but what is the concrete recommendation of the engineer? What are his grounds?

Mr. KING (Kootenay): The price for the work is $4,500; wharf site and right of way $300; road construction and contingencies $700; making a total of $5,500. The engineer recommends that the work can be done more efficiently and economically by day labour.

Sir HENRY DRAYTON: Does he give any grounds?

Mr. KING (Kootenay): I think those are sufficient grounds.

Sir HENRY DRAYTON: That is no ground at all. He makes a recommendation, but on what grounds does he make it?

Mr. KING (Kootenay): On what grounds would he make it?

Sir HENRY DRAYTON: I do not know whether he has any grounds, or whether he thinks it is a good thing to have the handling of the money. I do not know whether he is doing it on grounds or on a whim. That is what I am trying to find out. If he has done it on grounds, those grounds should be shown.

Mr. KING (Kootenay): The grounds are shown.

Sir HENRY DRAYTON: What are they?

Mr. KING (Kootenay): Economy and efficiency.

Mr. MEIGHEN: Why day labour here and not elsewhere?

Mr. KING (Kootenay): Day labour is done in many cases.

Mr. MEIGHEN: What is the difference?

Sir HENRY DRAYTON: Whenever the department feels like it.

Mr. MEIGHEN: In view of recent reports, may I ask if this is all that is going to be done for the member for Colchester?

Mr. PUTNAM: Perhaps for Hon. F. B. McCurdy, the man who turned Liberal.

Mr. MEIGHEN: If anything is to be done for him I would be glad to hear it, too.

Item agreed to.

Grand Etang—repairs to piers, $5,000.

Mr. STEVENS: This ought to be an opportunity for the hon. member for Inverness to give us a little dissertation.

Mr. KING (Kootenay): The district engineer reports that Grand Etang harbour is dependent for its existence on the maintenance of the entrance piers. The proposed repairs are required to prevent continuous deterioration of the walls.

Sir HENRY DRAYTON: I am quite sure the member for Inverness can give us some real reasons why this should be done. I think in fairness to the minister and the House we should be given some real reason why this new expenditure is to be made this year by this government of professed economy. We have not had one reason given why the work should be done. Will not the hon. member give it to us?

Mr. CHISHOLM: The hon. member is always prepared to give reasons, and good reasons. These repairs are required for the pier on account of the neglect of the government of which my hon. friend was a minister. This is one of our inheritances from the late government. This work should have been done five years ago.

Mr. CLARK: Then why wait so long?

Mr. CHISHOLM: We are economizing as much as possible, and it is only urgent need that forces us to spend money. We have had to spend hundreds of thousands of dollars to repair works that hon. members opposite failed to look after when they were in power.

Mr. MANION: I hope the hon. member will see that it is spent this year. That would be good politics.

Mr. CHISHOLM: Do not worry. It will be spent.

Sir HENRY DRAYTON: I thought we would get something from the hon. gentleman. I wonder if the minister will kindly read the report of the engineer on which he is acting in starting this new work.

Mr. KING (Kootenay): I have already done so.

Sir HENRY DRAYTON: I did not hear any report read.

Mr. KING (Kootenay): The district engineer reports that Grand Etang harbour is dependent for its existence on the maintenance of the entrance piers. The proposed repairs are required to prevent continuous deterioration of the walls. The annual value of the fisheries is $100,000. Four subsidized steamers call at this place from two to six times weekly.

Sir HENRY DRAYTON: Is that the first report we have had or was a similar report made last year? I just want to see how near right the hon. member for Inverness is in his facts.

Mr. CHISHOLM: No, the explanation is simply this: The pier, which forms the entrance to the harbour, has taken a slant.

The pier was built by the government in 1895-1896, so it has stood very well so far. The object of this expenditure is to correct the slant in order to protect the entrance to the harbour.

Mr. MEIGHEN: When did it get the slant?

Mr. CHISHOLM: Since it was first built.

Sir HENRY DRAYTON: When did it get it bad?

Mr. CHISHOLM: Last year, but it has been getting worse continually.

Sir HENRY DRAYTON: Would not the hon. member in justice to himself like to correct his former remarks, because they are now found to be absolutely incorrect, and I do not like to see him left in that position? The fact is that, instead of this being an inheritance, it is something that just happened last year and is now being looked after. The story now is, not that the wicked former government was neglectful, but that nature was more kind when we were in office and the pier stood straight, but last year the pier took a slant of five degrees, or so.

Mr. CHISHOLM: It began to get bad years ago, but it got very bad last year.

Mr. MEIGHEN: Last year the government took a slant, too.

Mr. DUFF: That was in 1921.

Item agreed to.

Gulliver's Cove—breakwater, $15,000.

Mr. MANION: Has this anything to do with Gulliver's Travels?

Mr. DOUCET: Where is it?

Mr. KING (Kootenay): In the county of Digby and Annapolis. This amount is required to construct a cribwork breakwater 240 feet long and from 20 to 30 feet wide, for the protection of the fishing fleet and the development of that district. There is an excellent fishing station here capable of great development.

Sir HENRY DRAYTON: Is this a new work?

Mr. KING (Kootenay): Yes.

Sir HENRY DRAYTON: What is the business carried on at this point?

Mr. KING (Kootenay): Principally fishing.

Sir HENRY DRAYTON: In what volume?

Mr. KING (Kootenay): There are ten gasoline boats, fourteen other boats, two weirs, 1,500 lobster traps and ten fishing houses at that point.

Sir HENRY DRAYTON: What are the present facilities?

Mr. KING (Kootenay): I think the conditions are very difficult for the fishermen at the present time.

Mr. LOVETT: Perhaps I can answer the hon. gentleman with greater exactness. This place has never had a wharf, breakwater nor slip of any kind. The fishing grounds are valuable and the proposed conveniences will render them very productive. The wharf will furnish these fishermen with a harbour which does not exist at the present time. I wish to tell the committee that the present lack of facilities renders the lot of the fishermen very hard. When they go out to fish they have to haul their boats down to the shore with oxen. On their return they have to haul their boats up from low water, which adds very greatly to the expense. The place is from fifteen to twenty miles from the railway and labours under a great handicap in that respect. If ever an item in the estimates was justified this one certainly is. On previous occasions candidates of all parties have promised the people wharf facilities, with the exception of myself. I told them I would not make any promise, and I did not do so, but that I would look after their interests in every way. However, I am glad to have this item in the estimates; it will certainly be a great help to the people of that section who stand so much in need of these facilities.

Sir HENRY DRAYTON: Where is this place, in the bay of Fundy?

Mr. LOVETT: In the bay of Fundy.

Sir HENRY DRAYTON: Whereabouts?

Mr. LOVETT: About twenty miles down from Digby neck, on the bay of Fundy side.

Sir HENRY DRAYTON: It is on the sea side of the gut?

Mr. LOVETT: Yes. Having no harbour whatever one can readily understand the difficulties under which the fishermen labour. There is no harbour or shelter of any kind; the fishermen simply have to get their boats in and out the best way they can.

Sir HENRY DRAYTON: How many people are there in the settlement.

Mr. LOVETT: About 700 people. The construction of this wharf will bring a greater number of people there because the fishing grounds are good.

Mr. CLARK: Will the minister read the engineer's report on this?

Mr. KING (Kootenay): The engineer says the breakwater is required for the protection of the fishing fleet and the development of the fishing industry. He adds that it is an excellent fishing station and capable of great development.

Item agreed to.

Harbourville—breakwater repairs, $2,500.

Mr. KING (Kootenay): The work here is taking down and rebuilding in crib work a portion of the west breakwater.

Item agreed to.

Harbours and rivers generally—repairs and improvement, $55,000.

Mr. LEWIS: What amount was expended last year?

Mr. MANION: What are the largest items under this heading?

Mr. KING (Kootenay): Last year $55,017.50 was expended. The details vary from $16 up to $1,000, and in one case, I think, $2,000.

Mr. MANION: Where was the $2,000 expended?

Mr. KING (Kootenay): At West Bay wharf.

Mr. MANION: Is there any limit in connection with the expenditure of this particular open vote of $55,000?

Mr. KING (Kootenay): This vote is to take care of unforeseen repairs that may be necessary during the year. The expenditure is usually kept down within the $1,000 mark. Occasionally the damage is such that it will require a larger expenditure. If it should involve over $5,000 the department would submit the matter to council.

Mr. MANION: The minister could spend up to $5,000 under this vote?

Mr. KING (Kootenay): Yes, he could, but it is not the practice to do so.

Mr. MANION: Is the list of expenditures very lengthy? If not I should like the minister to read it.

Mr. KING (Kootenay): There are three pages of details.

Sir HENRY DRAYTON: There would not be many items over $1,000.

Mr. KING (Kootenay): No.

Sir HENRY DRAYTON: What are the items over that amount?

Mr. KING (Kootenay): Burlington Centre; Gabarous; Halifax office maintenance; Little Anse breakwater; McNair's Cove; Pleasant Bay; West Bay; West Chezzetcook.

Item agreed to.

Horton Landing—repairs to wharf, $2,100.

Sir HENRY DRAYTON: What does the engineer's report say in the case of this vote?

Mr. KING (Kootenay): The report says that the proposed work is general repairs to wharf, consisting of the renewal of stringers fenders, piling and so on, and the raising of the outer end of the wharf. The District Engineer reports:

This wharf is used by the community for landing coal and wood, and for shipping farm produce and apples. One cargo of pulp, 775 tons, was shipped from here during 1924. If this wharf is repaired, the pulp company expect to ship large quantities of pulp next year.

Sir HENRY DRAYTON: What is that pulp company?

Mr. ROBINSON: I might give some details in connection with the matter.

Sir HENRY DRAYTON: Perhaps the hon. member will tell us all about it.

Mr. ROBINSON: I do not know that I can give the name of the pulp company, but they are looking for a good place to ship from. This wharf has not been used, perhaps, for two or three years and the top is in a state of disrepair; teams cannot be driven over it. Last year shipments of pulp commenced over the wharf, and the complaint was made that the structure was in such a condition that teams could not be placed on it. The engineer estimates that $2,100 will put the wharf in a state of repair.

Sir HENRY DRAYTON: I wonder if the hon. gentleman could tell us where that pulp goes?

Mr. ROBINSON: I think it must go to the United States. It is partially manufactured and shipped in bales. There is a pulp mill back of Wolfville and Gaspereau where they manufacture up to a certain stage, and in that condition the commodity is shipped away.

Item agreed to.

[Mr. J. H. King.]

Hunt's Point—rebuilding landing wharf, $2,000.

Sir HENRY DRAYTON: Where is that place?

Mr. KING (Kootenay): In Shelburne and Queens.

Mr. DUFF: In Queens county.

Sir HENRY DRAYTON: What does the engineer's report say?

Mr. KING (Kootenay): It says:

This landing block is located immediately inside the breakwater and is a public convenience to the fishermen. I am convinced that our maintaining this landing means increased accommodation and naturally increased earnings to these men. There are twenty motor boats carrying 30 to 40 fishermen who fish from this place. The annual value of the fisheries is about $55,000.

Item agreed to.

Joggins—breakwater reconstruction and repairs, $8,000.

Sir HENRY DRAYTON: Where is this?

Mr. KING (Kootenay): In Cumberland county.

Sir HENRY DRAYTON: What is this all about?

Mr. KING (Kootenay): The work is of a public nature, and the breakwater serves as a protection to the coal loading pier from which coal mined in the town is shipped. It is also used as a wharf over which local freight from St. John and other points is handled. A considerable quantity of lumber is also shipped from this breakwater. During 1923, 800,000 feet, board measure, of lumber and 800 tons of coal were shipped over the breakwater at Joggins. During 1924 the shipments were not quite so large, and 500,000 board measure feet of lumber which has been cut, was not shipped owing to depression of the market.

Sir HENRY DRAYTON: What coal company ships at that point?

Mr. KING (Kootenay): The Joggins Coal Company.

Sir HENRY DRAYTON: Does that cover the whole cost?

Mr. KING (Kootenay): Yes.

Sir HENRY DRAYTON: Is there a contract as to that?

Mr. KING (Kootenay): No.

Sir HENRY DRAYTON: Day labour.

Mr. KING (Kootenay): Yes, in all probability. It is rebuilding an old structure; it is very difficult to estimate and make a contract for it.

Sir HENRY DRAYTON: It seems to me the department is getting loose about the work done by day labour and not following the rules closely; all they say is that it is difficult to let a contract. If they want to be on safe ground they should advertise for contracts, and if they find they are all too high, then do it by day labour.

Item agreed to.

L'Archeveque—dredging, $10,300.

Mr. KING (Kootenay): This is to complete work started in 1924, which consists of dredging a mooring basin 400 feet long and 180 feet wide and entrance channel 1,580 feet long and 80 feet wide. The channel will be dredged to a depth of 7 feet at sub-grade. The inlet at this place is a most suitable site for a fishery harbour between Fourchu, 18 miles towards the east and L'Ardoise, 11 miles towards the west. It is advanced with reason that this place is the nearest station to what is perhaps the best fishing ground in the southern coast of Cape Breton; and if this place were improved it would also serve as a harbour of refuge for boats—about 80 in number—from Petit de Grat and Arichat during the winter fisheries. The principal industries are fishing and farming.

Sir HENRY DRAYTON: The minister tells us that the work was already undertaken in 1924.

Mr. KING (Kootenay): Yes.

Sir HENRY DRAYTON: How much was spent on this work last year?

Mr. KING (Kootenay): We operated our own plant last year at a cost of $24,000.

Sir HENRY DRAYTON: How many yards were taken out?

Mr. KING (Kootenay): The number of yards was 14,500.

Sir HENRY DRAYTON: At a cost of what?

Mr. KING (Kootenay): The cost was $24,000.

Sir HENRY DRAYTON: That is a pretty heavy rate, is it not?

Mr. KING (Kootenay): Yes, it is very expensive dredging, not only on account of the material, but also on account of the exposed position and the loss of time.

Sir HENRY DRAYTON: Where did the money come from?

Mr. KING (Kootenay): The amount of the dredging vote for the Maritimes, page 40.

Sir HENRY DRAYTON: It came out of that vote last year and you are now dealing with it directly this year. What plant did you use?

Mr. KING (Kootenay): The departmental plant No. 11.

Sir HENRY DRAYTON: How many months did it work?

Mr. KING (Kootenay): It was there a considerable time. There was great loss of time on account of weather conditions, and the work cost more than was anticipated.

Mr. MANION: In whose constituency was that?

Mr. KING (Kootenay): Cape Breton South and Richmond.

Mr. MANION: Who is the member for that constituency?

Mr. KYTE: I have the honour to represent that riding.

Mr. MANION: Perhaps the hon. member will give us information regarding it.

Mr. KYTE: The minister gave all necessary information.

Sir HENRY DRAYTON: Perhaps the hon. member can tell us how it came to cost so much.

Mr. KYTE: I am not in as good a position as the hon. minister to give the information.

Sir HENRY DRAYTON: How many boats are there?

Mr. KYTE: A great number.

Mr. STEVENS: Is it to be done by contract?

Mr. KING (Kootenay): Yes.

Sir HENRY DRAYTON: I hope the minister will get a good deal cheaper rate than he got by day labour on the other contract.

Mr. STEVENS: The minister has not called for tenders yet?

Mr. KING (Kootenay): They have been called for.

Mr. STEVENS: Have you opened them yet?

Mr. KING (Kootenay): No.

Mr. MANION: Will this complete the work?

Mr. KING (Kootenay): It is a question as to whether it will or not. Tenders were called for some time ago and there have been

no responses yet. The cost to the department last year was about $1.45 a yard.

Mr. STEVENS: That is a very heavy cost.

Mr. KING (Kootenay): It depends on the location and the material.

Sir HENRY DRAYTON: How far would the material have to be carried?

Mr. KING (Kootenay): I do not know the distance.

Sir HENRY DRAYTON: That is one of the items of expense. Does the engineer's report not say how far it has to be carried?

Mr. KING (Kootenay): No, I have not that information here.

Sir HENRY DRAYTON: In the form of tender that is issued, what is asked for, and what are the stipulations? How far has the stuff to be carried, and to what depth has the dredging to be done?

Mr. KING (Kootenay): The material that is dredged is deposited at the direction of the district engineer. I have not the information as to where they dumped the material last year, but that will be worked out with the contractor, if we make a contract. The depth of the channel is seven feet at low water sub-grade.

Sir HENRY DRAYTON: What is the present depth?

Mr. KING (Kootenay): It varies from a depth now of one to three or four feet.

Sir HENRY DRAYTON: Is there no place where there is more water, where we could accommodate the people?

Mr. KING (Kootenay): No.

Sir HENRY DRAYTON: On the other hand, could we not get some shallower place where there would be a little more dredging at $1.45 per yard?

Mr. KING (Kootenay): No.

Sir HENRY DRAYTON: We can neither make it more expensive nor cheaper?

Mr. KING (Kootenay): It is a very difficult place. It is very exposed. They did not accomplish last year what we hoped they would.

Mr. STEVENS: What business is carried on to warrant the expenditure?

Mr. KING (Kootenay): Fishing and farming.

Mr. STEVENS: What is the quantity of goods shipped out and brought in each year?

[Mr. J. H. King.]

Mr. KING (Kootenay): The district engineer says:

> The inlet at this place is the most suitable site for a fishery harbour between Fourchu, 18 miles towards the east and L'Ardoise 11 miles towards the west. It is advanced with reason that this place is the nearest station to what is perhaps the best fishing ground in the southern coast of Cape Breton; and if this place were improved it would also serve as a harbour of refuge for boats (about 80 in number) from Petit de Grat and Arichat during the winter fisheries. The principal industries are fishing and farming. There are 18 resident fishermen and the export value of the fish marketed is $12,600 a year.

Mr. MANION: Eighty votes or eighty boats?

Mr. KING (Kootenay): There are eighteen resident fishermen.

Mr. STEVENS: And last year the minister spent $24,000, and now he intends to spend $10,000 more. How much was spent the year before?

Mr. KING (Kootenay): Nothing. There was an expenditure in 1913 and again in 1916. I have not the amount here. It was not a large amount.

Sir HENRY DRAYTON: Has the minister the previous expenditure?

Mr. KING (Kootenay): Not here.

Sir HENRY DRAYTON: How is it possible for fishermen to carry on business with a channel which varies from one, two, three to four feet in depth?

Mr. KING (Kootenay): They are having great difficulty. They can go over the bar only in high water. The purpose is to dredge this bar so that they can come in at low water with a depth of seven feet.

Sir HENRY DRAYTON: What is the character of the soil?

Mr. KING (Kootenay): Gravel and boulders.

Sir HENRY DRAYTON: Any hard pan?

Mr. KING (Kootenay): It is fairly hard material. There are a number of boulders.

Sir HENRY DRAYTON: How much do the engineers say it will require to keep this channel from silting up again?

Mr. KING (Kootenay): It is problematical. It varies in different localities.

Sir HENRY DRAYTON: What do the engineers say the whole thing will cost to make it so that it will stay?

Mr. KING (Kootenay): We were hopeful that we would get through last year with an

expenditure of $24,000. We did not succeed. The material was very difficult and the position was much exposed. The cost overran our estimate entirely.

Mr. STEVENS: How many yards does the minister expect to move under this contract?

Mr. KING (Kootenay): 10,301 cubic yards.

Mr. KYTE: This place is situated on the south shore of the island of Cape Breton. We are very deficient in natural harbours along that coast. There is, between St. Peters and Louisburg, a distance of sixty miles, really no harbour into which a boat or vessel may enter with safety. The south shore of the island of Cape Breton is the famous fishing ground of haddock and codfish. This fishing is carried on in the months of December and January. Boats from Canso and Petit de Grat as well as L'Archeveque and the district of L'Ardoise use those waters for the purpose of fishing, more especially the ports of Canso and Petit de Grat that are fitted out for winter fishing. It is a very dangerous occupation, as hon. members who are familiar with the storms on the Atlantic coast may know. In addition to the advantage which the opening of this harbour will be for the local fishermen, it will afford a harbour of refuge for fishing boats engaged in fishing on the south shore. When a storm comes on they must make for either Louisburg or Canso. With favourable weather they may get along, but in winter when snow storms come up hurriedly the fishermen run very great risk of loss of life. As a matter of fact, had it not been for the circumstance that the Department of Marine and Fisheries maintains a steamer at Canso for the purpose of saving men who are threatened in these storms, very great loss would have resulted from time to time. With the opening of this harbour comparative safety will be guaranteed to all these fishermen. That is the justification for the expenditure in addition to the local advantage in the district.

Mr. MANION: I understand this is dredging of a sand bar?

Mr. KYTE: It is gravel, boulders.

Mr. MANION: There will not be much chance of its refilling.

Mr. KYTE: No.

Mr. MANION: It will not have to be dredged every year.

Mr. KYTE: No.

Sir HENRY DRAYTON: Is my hon. friend really sure of that, because I have seen gravel bars made by storms almost over night?

Mr. KYTE: Not in South Cape Breton.

Sir HENRY DRAYTON: I do not know, but a great deal of repair work has to be done there from time to time, and apparently there is as much difficulty in maintaining work there as anywhere else as far as votes are concerned. What does the engineer say? I cannot believe we are cutting through a gravel bar which has been made by sea action and are going to leave it just to be filled up again by sea action. That is all that will happen and the minister knows that quite well. He said a moment ago it was problematical whether it would fill up or not. Let us have the facts.

Mr. KING (Kootenay): As regards the river, the fact that we have a gravel bar there now would indicate that the currents and wash of the sea will again pile it up. But the engineer in considering this must feel justified in recommending the expenditure, believing that it will be some years before the refilling will take place. I have not his report. If it were to take place in the next year, I am satisfied the chief engineer would not report favourably on this work.

Sir HENRY DRAYTON: He certainly seems to be affected with a great deal of modesty when he takes it for granted it is not necessary to say anything about a subject as important as this. The minister goes no further than to say that it will not fill up next year. If it will fill up in two years, would he feel it necessary so to report on it?

Mr. KING (Kootenay): I would not contemplate doing the work if that were the case.

Sir HENRY DRAYTON: Perhaps the minister would like to stretch that a little more. Would he or would he not report in favour of this work if he thought it would fill up in three years?

Mr. KING (Kootenay): It is problematical.

Sir HENRY DRAYTON: If the minister does not know on what basis is his engineer's report? I would suggest that in connection with these matters in the future, he sees that his engineers report on what will have to be done to maintain work that is done. It is idle to turn around and dig through a bar formed by the sea, which bar the minister himself says will again be formed by the sea, without at the same time providing some-

thing to prevent that. We get started at one of these things and we immediately find we have to do something else that has not been discussed. The House ought to know sometimes what it is doing. I admit generally it does not. That is no reason why we should not know what we are doing, and we cannot know unless the minister brings down a report dealing with the subject.

Mr. KYTE: I have in mind a case where dredging was done on the south shore of Cape Breton fifteen years ago. A cut was made through the bar and it was overcast. The material that was overcast was never removed, but the channel is still there. Even the material which was overcast was not swept back into the channel, and the channel is still as useful as it was when the overcasting was done.

Mr. GARLAND (Bow River): Surely the hon. member will admit that that is a rather rare occurrence.

Mr. KYTE: Not on the south shore of Cape Breton.

Mr. GARLAND (Bow River): But, generally speaking, it is a rare occurrence that sand will not silt in.

Mr. CLARK: How does the minister account for the difference in the cost between dredging by contract and dredging with a government dredge? I understand with the government dredge it costs $1.45 a yard, and while I do not know whether a contract has actually been let, I understand the minister expects to let a contract for about a dollar a yard.

Mr. KING (Kootenay): That was anticipated. I am very doubtful whether we shall get a tender of that character. Our original estimate was on the basis of a dollar a yard. In checking our costs recently, we found they exceeded that amount by 45 cents a yard, and that was actual cost. It will depend largely on conditions that exist when the work is being done. It is exposed to the swell of the sea. If the contractor or operator has a favourable season with no storms, his cost will be that much less.

Mr. CLARK: On the basis of $1.45 a yard the present estimate would not nearly complete the work.

Mr. KING (Kootenay): No.

Item agreed to.

Little Judique Ponds—breakwater, wharf, $10,800.

Mr. KING (Kootenay): The engineer reports that there were thirty-five boats using this port during the past year. In previous years there were more boats but the number has gradually diminished owing to lack of accommodation for landing the catch. At the time the survey was made in October, 1924, some 8,000 lobster traps were piled along the shore, and further facilities are urgently required. Native timber is used in the structure, which is intended for the protection of the fishermen of the harbour.

Mr. CLARK: I see that the minister has abandoned the item for repairs at Little Harbour.

Mr. KING (Kootenay): No, that item was called and carried.

Mr. GARLAND (Bow River): Is this entirely new work at Little Judique?

Mr. KING (Kootenay): It is new work. We require 72,000 feet of native timber cribwork, which is to be sheathed on the seaward side at a cost of 15 cents a cubic foot.

Mr. GARLAND (Bow River): Will this vote complete the necessary breakwater or is it just the beginning of a heavy expenditure?

Mr. KING (Kootenay): It is estimated that this will complete it.

Mr. GARLAND (Bow River): I suppose the engineers have looked into this matter and have decided that a breakwater constructed in the way the minister describes will last for some time. I note however that in his explanation of previous items the minister stated that concrete structures were necessary because the old timber breakwaters with their fillings had not proved effective. Would it not have been just as well, if this work is to be permanent, to have made this a concrete structure from the start and so save future expenditures?

Mr. KING (Kootenay): One would hesitate before putting in concrete structures in smaller fishing localities. The native timber is usually conveniently to hand and in the end, although the structure may be renewed from time to time, it will prove cheaper than concrete, which in salt water is by no means permanent. It has been found that through the action of the salt water concrete disintegrates as soon as creosoted timber if not sooner.

Mr. GARLAND (Bow River): I made the remark in view of the minister's previous statements to the effect that the timber was being replaced with cement or concrete in other works.

Mr. KING (Kootenay): That would be more in the lake country.

Sir HENRY DRAYTON: Were tenders called for for this work?

Mr. KING (Kootenay): It will be all done by contract.

Item agreed to.

Lunenburg—dredging, $60,000.

Mr. KING (Kootenay): This is to do further work in the harbour of Lunenburg, which is probably the largest fishing station in Canada, having a fleet of some 192 vessels at the present time. There is no accommodation for this fleet in winter under present conditions. The value of the catch for the year 1923 was $2,000,000 while the catch during 1918, when high prices prevailed, was $4,000,000. The catching, curing and shipping of fish are the chief industries, while shipbuilding, manufacturing and farming are also important industries. The population dependent upon the proposed work is estimated at 7,000. The total catch of fish by the Lunenburg fleet in 1924 amounted to approximately 171,000 quintals, about 25,000 quintals less than the catch of the previous season. Average prices however have been very satisfactory, and it is estimated that the catch returns will exceed those of 1923 by a quarter of a million dollars. It is expected that there will be an increase in the fleet next year.

Mr. CLARK: Why do they not winter off Boston?

Mr. KING (Kootenay): They are crowded in the harbour at present and adequate accommodation is needed. There is no doubt about the importance of this item.

Mr. LUCAS: What is the total amount spent on the harbour since the beginning of improvements there?

Mr. KING (Kootenay): Up to March 31, 1924, $39,808 had been spent.

Mr. SPEAKMAN: Will this be an annual expenditure to keep the harbour in proper condition?

Mr. KING (Kootenay): No.

Mr. SPEAKMAN: How much will it cost by the time the work is completed?

Mr. KING (Kootenay): This vote will conclude the programme at Lunenburg. The contract was $81,840 and this $60,000 will clean it up.

Mr. SPEAKMAN: I understood the minister to say that other ports which he has mentioned were not revenue producing inasmuch as they were inland. Is this one revenue producing?

Mr. KING (Kootenay): This port is used by the local fishermen and it is different from the port of Halifax for example, where large tramp and passenger steamers call on the trans-Atlantic trade. This port is for the fishing trade and is quite different from the larger ones.

Mr. SPEAKMAN: I appreciate the distinction but I understood the minister to say that the original distinction as between inland and salt water ports had reference to revenue. Is there any general traffic at this port, or is it purely local?

Mr. KING (Kootenay): There is the schooner traffic, but the port is not of the same character as Halifax or St. John.

Mr. SPEAKMAN: I quite understand that it is a matter of degrees. But does not any traffic from this port go to some of the United States ports?

Mr. KING (Kootenay): I suppose the fishing fleet goes to Gloucester occasionally.

Mr. SPEAKMAN: We always understood that a certain amount of traffic was carried on between the port of Lunenburg and certain United States ports.

Mr. DUFF: That is a libel.

Mr. SPEAKMAN: Am I to understand that no traffic is carried on between Lunenburg and the United States ports?

Mr. DUFF: None, except fish and lumber.

Mr. SPEAKMAN: I was not suggesting what kind of traffic was carried on, I was only asking if there was any at all.

Mr. DUFF: I knew what my hon. friend had in his mind.

Mr. SPEAKMAN: I meant exactly what I said. I did not have any particular form of traffic in my mind; evidently the hon. member for Lunenburg (Mr. Duff) had.

Item agreed to.

Malagash—dredging, $22,700.

The CHAIRMAN (Mr. Marcil, Bonaventure): I understand that the word "wharf" is to be inserted, making the item read "Malagash wharf?"

Mr. KING (Kootenay): Yes.

Sir HENRY DRAYTON: Is that work to be done by the government?

Mr. KING (Kootenay): It will be done by tender.

Item, as amended, agreed to.

Margaree—harbour improvements, $1,500.

Mr. STEVENS: Is this to complete the work?

Mr. KING (Kootenay): Yes.

Item agreed to.

New Harris—wharf, $2,000.

Mr. GRAHAM: Mr. Chairman, I move that this item be struck out.

Sir HENRY DRAYTON: What has happened, has the member fallen down there?

Mr. KING (Kootenay): When we made up our estimates we did not anticipate we would be able to complete the work before the end of March, but it was completed.

Sir HENRY DRAYTON: Evidently the member was busy.

Item dropped.

North Ingonish (McLeod's)—reconstruction of breakwater and dredging, $28,700.

Sir HENRY DRAYTON: That is not new, is it?

Mr. KING (Kootenay): It is under contract and is in the constituency of Cape Breton North and Victoria.

Mr. MANION: $6,000 was spent last year?

Mr. KING (Kootenay): Yes.

Item agreed to.

Parrsboro—harbour improvements, $39,000.

Sir HENRY DRAYTON: This is rather big, Mr. Chairman. What is the reason of this spasm?

Mr. KING (Kootenay): Parrsboro is a very important harbour. We have a contract for dredging and harbour improvements.

Mr. STEVENS: When was the contract let?

Mr. KING (Kootenay): December 10, 1924, to the Minas Basin Dredging Company.

Mr. STEVENS: There is no vote shown here for last year.

Mr. KING (Kootenay): There was an amount for dredging last year. This vote is to complete the dredging and for other harbour improvements.

Sir HENRY DRAYTON: But under what vote was that contract made? No vote is shown for last year.

Mr. KING (Kootenay): It is in the supplementaries.

Sir HENRY DRAYTON: It is no answer to say that it is in the supplementaries, because the vote last year ought to show everything.

Mr. KING (Kootenay): An order in council was passed October 9, 1924, granting authority for the acceptance of the offer of the Minas Basin Dredging Company, the amount of the appropriation being $25,000.

Sir HENRY DRAYTON: So these estimates are wrongly prepared in that regard? As a matter of fact a vote of $25,000 ought to be shown in the figures for 1924-25.

Mr. KING (Kootenay): Apparently they have not entered up the supplementary vote of last year. It should be shown.

Sir HENRY DRAYTON: Certainly, otherwise it does not give the House proper information.

Item agreed to.

Port Greville—breakwater reconstruction, $20,000.

Sir HENRY DRAYTON: Is that under contract?

Mr. KING (Kootenay): Yes.

Sir HENRY DRAYTON: Who are the contractors and what is the price?

Mr. KING (Kootenay): In July tenders were called for and received, the Reid Construction Company being the lowest tenderer. Last year $16,000 was expended under the contract and this is to complete the work.

Sir HENRY DRAYTON: Is it a lump sum contract?

Mr. KING (Kootenay): No, on unit prices.

Sir HENRY DRAYTON: What are they?

Mr. KING (Kootenay): The unit prices are not set forth here. The tender from the Reid Construction Company is for repairs to the breakwater at Port Greville at the unit prices quoted therein, totalling $31,627.

Sir HENRY DRAYTON: That is one bit of interesting information we do not get.

Mr. KING (Kootenay): There were six tenders received the lowest being $31,627, and the highest $50,928—a fairly wide range.

Item agreed to.

Portugese Cove—breakwater, $11,700.

Sir HENRY DRAYTON: That is going on this year?

Mr. KING (Kootenay): This is required to complete the work under contract.

Mr. STEVENS: What is the total amount of the contract?

Mr. KING (Kootenay): $15,203. We expended last year, $3,287.

Item agreed to.

Sheet Harbour—harbour improvements, $20,000.

Mr. GARLAND (Bow River): May we learn something about this?

Mr. KING (Kootenay): At Sheet Harbour there is a large development taking place. The pulp industry has recently been established there, and there is very considerable activity at that point. The government are contributing towards the cost of a wharf $7,500, and this contribution by the government is conditional on the structure being vested in the crown, together with the right of way thereto, which would make practically a public wharf and warrant the proposed expenditure by the government. By extending the wharf we will save a considerable sum of money in what might otherwise have resulted in a very considerable amount of expensive dredging.

Mr. GARLAND (Bow River): Why is the amount of $2,000 voted last year not shown?

Mr. KING (Kootenay): There was no amount last year.

Mr. GARLAND (Bow River): There was an amount for Sheet Harbour west; perhaps that is another place?

Mr. KING (Kootenay): Yes.

Mr. GARLAND (Bow River): One is West Sheet Harbour and the other Sheet Harbour?

Mr. KING (Kootenay): Yes.

Mr. GARLAND (Bow River): The minister said that under an agreement with the pulp industry there he was to have what he called practically a right of way. Either you are going to have a right of way or you are not. Just what does he mean by practically a right of way?

Mr. KING (Kootenay): We have the right of way.

Mr. GARLAND (Bow River): There is no question about it, no strings to it.

Sir HENRY DRAYTON: What is the name of the company?

Mr. KING (Kootenay): The American Perforated Wrapper Pulp and Power Company. They are constructing their plant now. The industry will be an active one, and I am satisfied the arrangement here is in the interests of the district. It will mean the employment of a great many men and a large development in the pulp industry at that point.

Item agreed to.

St. Mary's river—dredging, $28,000.

Mr. GARLAND (Bow River): This is a big item.

Sir HENRY DRAYTON: Are you dredging this yourself or is it under contract, or what?

Mr. KING (Kootenay): This is to complete the dredging of the St. Mary's river now under contract with the Halifax dredging company.

Sir HENRY DRAYTON: What rate per cubic yard?

Mr. KING (Kootenay): Fifty-six cents. This will complete the whole work.

Item agreed to.

Windsor—wharf extension, $24,000.

Sir HENRY DRAYTON: What about this?

Mr. KING (Kootenay): This is to extend the wharf at Windsor. It is strongly recommended by the engineer, by the board of trade, and the member. The district engineer reports that this work is necessary on account of the increased shipping at this port. The shipping consists of five million feet of lumber and two hundred thousand tons of gypsum. For the past season 82 vessels, carrying 194,600 tons of gypsum cleared at the custom house, also a number of vessels with cargoes of lumber for the American market, consisting of five and a half million feet of lumber, one million staves, and six and a half million laths. A great deal of gypsum is shipped over privately-owned wharves.

Mr. SPEAKMAN: Is this a revenue-producing port?

Mr. KING (Kootenay): Not very much.

Mr. SPEAKMAN: Are there any dues charged? This would hardly be classed as a local or shipping port.

Mr. KING (Kootenay): We got $153.52 in 1922 and $212 in 1923.

Sir HENRY DRAYTON: What was the cost of salaries?

Mr. KING (Kootenay): Not given.

Sir HENRY DRAYTON: I think they had better not be given.

Mr. HUGHES: There are no salaries.

Sir HENRY DRAYTON: That is reassuring.

Mr. GARLAND (Bow River): Who appoints the officer at the port?

Mr. KING (Kootenay): The wharf is under the control of the Department of Marine and Fisheries. They would appoint a wharfinger or somebody in control, and probably pay him a percentage of the receipts.

Mr. GARLAND (Bow River): Some local person?

Mr. KING (Kootenay): Yes.

Mr. SPEAKMAN: I have been trying to find out just what the policy is in regard to revenue. I understood at first a distinction was made between inland waters and ocean waters. Apparently also the nature of the traffic is a factor. In other words, no fees are charged where the traffic is local or such as fishing traffic. Does the real difference lie in the size and importance of the port, and is it only the larger and more important ports on salt water that are revenue-producing?

Mr. KING (Kootenay): Yes.

Mr. SPEAKMAN: That is the policy?

Mr. KING (Kootenay): Yes.

Sir HENRY DRAYTON: There are really very few of our ports that are revenue-producing, and those that do produce revenue do not count for very much when you take the expenditure into account.

Mr. KING (Kootenay): Except Montreal and Vancouver.

Sir HENRY DRAYTON: Outside of those larger ports there would be practically no revenue at all. I notice that last year it was costing us $10,000 to do this work. What is the reason for the increase? We started on something that would cost us $10,000, and now we have to spend another $14,000 because we spent $10,000 last year.

Mr. KING (Kootenay): The vote last year for $10,000 was for the purchase of property as follows: the Akins property for $6,500, the Curran property for $1,800, and the C. S. Smith wharf property for $3,000. These properties having been secured it is proposed to enlarge the structure.

Sir HENRY DRAYTON: Is there a contract

Mr. KING (Kootenay): There will be.

Sir HENRY DRAYTON: I notice that we have the usual item here "Appropriations not required for 1925-26, $366,355." Perhaps we could get a statement showing what work has been finished so as to get an idea of the activities of the department in Nova Scotia for the year, and what work has been dropped. If it is a long list I should think the committee would like it taken as read and put on Hansard, and thus save the minister the trouble, of reading it.

Mr. KING (Kootenay): If the committee will permit I will hand the statement to Hansard.

List of Appropriations not required for 1925-26

Nova Scotia

Harbour and rivers	Chargeable to income: Appropriation 1924-25	Chargeable to income: Expenditure to March 31, 1925
Anderson's Cove—pier and improvements	$ 12,000	$ 11,988 52
Apple River—breakwater repairs	2,000	1,978 36
Babin's Cove—wharf extension	1,700	1,699 68
Barrington Cove (Sydney Mines)—wharf repairs	6,000	6,003 31
Bass River—improvements	1,500	.....
Bayfield—breakwater repairs	6,000	5,912 17
Bay St. Lawrence—breakwater repairs	5,000	3,009 71
Broad Cove Marsh—replacement breakwater wharf	8,400	7,933 15
Cariboo Island—breakwater reconstruction	8,000	4,013 57
Carr's Brook—breakwater repairs	1,275	1,274 23
Chapel Cove (West L'Ardoise)—breakwater extension	10,000	9,038 99
Chester—to purchase, rebuild and extend wharf	5,400	4,774 20
Chimney Corner—wharf reconstruction	8,000	7,999 75
Comeau's Cove—breakwater improvements	4,900	.....
Cow Bay—breakwater repairs	5,500	5,499 99
Culloden—breakwater extension	10,600	9,827 89
D'Escousse—wharf repairs	1,420	1,419 92
East Bay—wharf repairs	1,600	1,600 66
East River—repairs to lock	3,000	2,283 36
Eastern Harbour—improvements	42,000	33,472 98
Ecum Secum—wharf	6,100	6,095 48
French Village—rebuilding, wharf	3,700	3,340 74
Friar's Head—harbour improvements	1,500	762 51
Grand Narrows—wharf extension	2,000	2,007 16
Half Island Cove—rebuilding breakwater	3,000	2,998 95
Hantsport—wharf repairs	3,250	3,249 71
Indian Harbour—wharf repairs	1,600	1,325 02
Inverness—pier extension	4,900	4,909 29
Irish Cove—wharf repairs	3,500	3,494 88
Judique (Baxter's)—wharf repairs	1,300	1,286 31
Kingsport—wharf renewals and repairs	18,000	17,673 31
Little Anse—breakwater repairs	2,000	.....
Little Bass River—repairs to channel protection work	1,200	1,294 91
Marble Mountain—wharf repairs	3,180	3,177 55
McKay's Point—wharf repairs	2,700	2,699 59
Merigomish—wharf repairs	1,400	1,397 56
Meteghan—wharf extension	6,500	5,825 32

Nova Scotia—*Concluded*

Harbours and rivers	Appropriation 1924-25	Chargeable to income Expenditure to March 31, 1925
Morden—breakwater renewals and repairs	1,500	1,499 81
Newellton—wharf repairs	1,500	1,500 01
Noel—wharf repairs	3,240	3,166 44
North East Point (Indian Brook Flats) rebuilding wharf	4,000	.....
North West Cove (Tancook)—breakwater wharf extension	8,500	8,076 36
Parrsboro—wharf repairs	2,000	2,011 05
Parrsboro—dredging	25,000	4,304 34
Pembroke—breakwater repairs	1,750	1,942 33
Port Hastings—wharf repairs	2,300	2,307 76
Port Hood—wharf repairs	5,800	5,424 42
Port Lorne—breakwater extension	8,000	7,997 70
Port Medway—to purchase and extend wharf	6,100	6,050 25
Selma—wharf repairs	1,300	1,260 18

Yarmouth Bar—breakwater extension	6,000	5,966 74
Yarmouth Bar—beach protection—repairs and improvements	2,000	1,927 96
Yarmouth Harbour—dredging	22,000	22,010 57
	$366,355	$301,124 94

Progress reported.

On motion of Mr. Graham the House adjourned at 11.15 p.m.

Monday, May 25, 1925

The House met at three o'clock.

DEATH OF MR. J. D. F. DRUMMOND, M.P.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, for the third time, within less than a month, it is my painful duty to be called upon to refer at the opening of Monday's proceedings, to the removal by the hand of death, during the brief adjournment over the week-end, of an hon. member of this House.

Three weeks ago it was hon. members on this side of the House who were bereaved of one of their numbers; last week, it was hon. gentlemen immediately opposite; to-day it is the leader and members of the Progressive party. In each instance, death followed swiftly upon a brief illness.

John Douglas Fraser Drummond, who died in this city yesterday afternoon, was the member for West Middlesex, in this province. He was in his sixty-sixth year. Mr. Drummond was one of the best-known farmers of western Ontario. He started farming as a boy on his father's farm in Middlesex, and attained marked success in mixed farming and in the raising of grade Durham cattle. He became actively identified with the United Farmers' movement when it took its rise in the province a few years ago, and at the last general election was returned to this parliament, defeating nominees of both the Liberal and Conservative parties.

Mr. Drummond's life was continuously associated with the interests of agriculture and the county he represented, which was also the county of his birth. Before entering federal politics he had during a period of thirty years, been successively councillor, reeve and clerk of his native township, having held the latter office for sixteen years.

Greatly respected by all who knew him, and especially by hon. members of this House, the country loses in the death of the hon. member a well-informed and faithful representative of its agricultural interests in parliament, and the constituency of West Middlesex one of her best-known and most devoted sons.

The sympathy of hon. members of this House will go out in fullest measure to the widow and others of the family of our late fellow-member who have been so suddenly and so greatly bereaved.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Mr. Speaker, it will be borne home upon all of us that the passing of eleven of our number in the short space of three years and four months emphasizes the uncertainty and the hazardous character of human life. I do not think that within any period of our history so many have been called in the duration of a single parliament. All of the hon. members who have gone were men of quiet, unpretentious demeanour and, with the exception of two, took no very ostentatious part in the affairs of this parliament. If they had infirmities they kept them to themselves. This was very em-

phatically the case as respects the hon. member for West Middlesex who, with tragic suddenness, was taken from us just yesterday morning.

As he came from that portion of the province in which I was born and brought up, I can well understand the type represented by Mr. Drummond. He was of that hard-headed, firm-principled group of men of Scotch descent who mainly settled western Ontario and to whom that favoured section of Canada owes to-day its greatness and its wealth. Mr. Drummond gained early in his career the confidence of his fellows, and carried that confidence into a wider sphere. I am sure we all concur in the graceful tribute of the Prime Minister, and to-day I can only add that among his associates in the House the same opinion was formed of his character and attainments as that gained by him in the section in which he was born. We on this side join hon. gentlemen opposite in sympathy with our friends to the left and extend to them, and still more to his family and to his neighbours, the expression of our deep regret for his loss and our sincere appreciation of his valuable labours in this House.

Mr. R. A. HOEY (Springfield): Mr. Speaker, in the absence of the leader of the Progressive party (Mr. Forke) I desire to associate myself with the words spoken by the Prime Minister and the leader of the opposition, and to join with them in their tribute to one of our number who has been called from our midst by death. The news of Mr. Drummond's death reached us with painful—shall I say tragic?—suddenness. Many of us were unaware until two days ago that he was ill; none of us realized that the illness was of a serious character, or one from which he might not speedily recover. The late member for West Middlesex was a quiet, sincere, unassuming man who undertook his work here seriously, and sought to accomplish it fearlessly and conscientiously. After years of service in the municipal sphere he entered this House at an age when a man less public spirited might think of retirement, ease and seclusion. He did so in an attempt to serve his fellow men. In that service he was stricken, and in the service of his country many miles from the home in which he lived, and many miles from his loved ones, he died. That the strain imposed upon him by his duties here in no small measure contributed to that physical collapse from which his strength did not enable him to recover no one will dispute. It is, with feelings of profound regret, mingled with that sense of sorrow and sadness inseparable from the severance of friendship's ties by death, that we, the members of the group to which he belonged, with those who have already spoken, ask you to convey to his sorrow-stricken widow, and to the members of the bereft family our most sincere and heartfelt sympathy.

Mr. SPEAKER: I shall convey to the hon. member's family the regrets that have been expressed by hon. members on his death.

RAILWAY ACT AMENDMENT

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals) moved for leave to introduce Bill No. 142, to amend the Railway Act, 1919.

He said: The object of this bill is to deal drastically with those found guilty of false billing of goods on the railway.

Motion agreed to and bill read the first time.

TORONTO TERMINALS RAILWAY COMPANY ACT

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals) moved for leave to introduce Bill No. 143, respecting the Toronto Terminals Railway Company.

He said: This is a bill really introduced on behalf of the Canadian Pacific Railway, as it gives some further latitude, I think, in financing operations which they find necessary in connection with the Toronto terminals.

Motion agreed to and bill read the first time.

LOAN COMPANIES ACT, 1914, AMENDMENT

Hon. J. A. ROBB (Acting Minister of Finance) moved for leave to introduce Bill No. 144, to amend the Loan Companies Act, 1914.

Motion agreed to and bill read the first time.

CUSTOMS ACT AMENDMENT

Hon. P. J. A. CARDIN (Acting Minister of Customs and Excise) moved for leave to introduce Bill No. 145, to amend the Customs Act.

He said: This bill provides that the smuggling of goods of the value of over $200 be made an indictable offence and punishable by imprisonment. The other section of the bill provides that the goods be forfeited without any power of remission on the part of the minister.

Motion agreed to and bill read the first time.

PRIVATE BILL

FIRST READING

Bill No. 141, from the Senate, for the relief of James Hooper Robbins.—Mr. Clifford.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

INCOME TAX ACT AMENDMENT

*Mr. SEGUIN:

1. Is it the intention of the government to amend the Income Tax Act, thus creating an exemption on the assets of the tax payer so as to afford greater security to the purchaser or lender in good faith?

2. Owing to the injustice which results from the fact that, under the Quebec provincial laws, the consorts married under the clause of separation of property are not on an equal footing with the consorts married under the clause of community of property, in regard to statements concerning the Income Tax Act, is it the intention of the government to do away with this anomaly by giving to the consorts married under the clause of community of property the same advantage as that given to those married under the clause of separation of property?

Hon. Mr. CARDIN: This matter is under consideration and the policy of the government will be made known in due course.

PUBLIC INVESTMENT IN PORT OF VANCOUVER

Hon. Mr. STEVENS:

1. Having reference to sessional paper No. 165 of the present session, page 22 has the government taken note of a statement signed by K. A. Blatchford, dated October 3, 1924, to the effect that certain eastern interests are putting up a big fight to blacken the port of Vancouver and no doubt succeeding to some extent?

2. If so, have any steps been taken by the government to protect the huge public investment in the port of Vancouver?

3. Has the government noted a further statement on the same page of the said return, indicating that the grading of grain east and west is carried on in a manner to discriminate against the Western route?

4. If so, will the government institute immediate inquries to determine who is responsible for same?

5. Under the Canada Grain Act, are certain grades of grain fixed?

6. If so, are the said grain grades uniform throughout the whole of Canada?

7. Is the government aware that the writer of the said letter, Mr. K. A. Blatchford, held at the time the responsible office of mayor of the city of Edmonton?

8. Will the government institute necessary inquiries to determine responsibility for the condition charged as existing by Mr. Blatchford?

Hon. Mr. COPP:

1. The government has observed the statement alluded to in communication signed by K. A. Blatchford dated October 23, 1924, addressed to the Secretary of the Vancouver Harbour Commission.

2. The government will continue its policy of protecting the public interest at the port of Vancouver.

3. In the return as brought down by the government there is no statement to this effect at page 22 or elsewhere.

4. Answered by No. 3.

5. Yes. The Canada Grain Act defines certain grades of grain which are known as contract grades. Other grades not defined are established in accordance with sections 47 to 51 inclusive, and are called commercial grades.

6. No. Grades of grain are not uniform throughout the whole of Canada, as the Grain Act provides separate and distinct definitions for grades of grain generally. Reference may be made to section 105 of the act. Section 107 of the act specifies the grades which apply only to grain grown in the western inspection division. Standard uniform samples are distributed to each inspection point and every effort is made to grade all grain in accordance with such samples.

7. Yes.

8. The government will institute necessary inquiries whenever definite and specific charges are made.

TOPOGRAPHICAL SURVEYS

Mr. KELLNER:

1. What are the grades of surveys engineers in Topographical Surveys of Canada?

2. What are the duties attached to each grade?

3. What are the principal determining factors in grading the employees?

4. What are the salaries attached to each grade?

Hon. Mr. COPP:

1. There are six grades, 1 to 6.

2.

Grade 1. Under direction, to act as an assistant to the chief of a survey party; on occasion to have charge of a sub-party in the field; in the office, to check, compute and plot surveyors' notes and returns, and to perform other related work as required.

Grade 2. Under direction, to have charge of a minor surveying operation; to act as senior assistant on major survey parties, and to assist in the supervision and direction of field work; to make astronomical and other observations and accurate measurements; to check and make difficult computations from surveyors' notes, and in some cases to supervise employees engaged on computation work; to assist in the preparation of maps, plans and reports; and to perform other related work as required.

Grade 3. Under direction, to have charge of one or more major survey parties; to supervise the compilation of data obtained by the surveys, and the computation and preparation of maps, plans and reports to assist in the training of field assistants; to be responsible

for the transportation of men and supplies and to perform other related work as required.

Grade 4. Under direction, to have charge of one or more major parties engaged in making legal surveys; or to be in responsible charge of a number of major survey parties in an assigned area; or to have charge of one of the smaller divisions of a large surveying organization; to be responsible for the organization, equipment and maintenance of survey parties, the transportation of men and supplies, and the preparation of notes, maps, plans and reports comprising the final result of the survey; and to perform other related work as required.

Grade 5. Under direction, to have charge of a large division of a large surveying organization; or to have charge of a special section of surveying work; to be responsible for the inspection of the work of field parties in a large surveying organization; to prepare instructions for parties engaged in field work connected with the division; to be responsible for the accuracy of plans and reports submitted by field parties, and for the preparation of statistics and the compilation of plans, maps, reports and other publications of the division; to make special inspections of difficult phases of field surveys; and to perform other related work as required.

Grade 6. Under direction, to have charge of one of the largest divisions of a large surveying organization; to prepare instructions for parties engaged in field work connected with the division; to be responsible for the accuracy of plans and reports submitted by field parties, and for the preparation of statistics and the compilation of plans, maps, reports and other publications of the division; and to perform other related work as required.

3. The qualifications as fixed by the classification of the Civil Service of Canada are:

Grade 1. Education equivalent to high school graduation; either graduation in engineering from a school of applied science of recognized standing, with two years of experience in surveying, or four years of practical experience in surveying; supervisory ability; good physical condition.

Grade 2. Education equivalent to high school graduation; either graduation in engineering from a school of applied science of recognized standing, with three years of experience in surveying, two years of which shall have been subsequent to graduation, or six years of practical experience in surveying; in some cases a commission as Dominion land surveyor will be required; tact, good judgment, and ability to handle men; good physical condition.

[Mr. Copp.]

Grade 3. Education equivalent to high school graduation; either graduation in engineering from a school of applied science of recognized standing, with five years of experience in surveying, at least three years of which shall have been in a position of professional responsibility, or seven years of experience in surveying, at least three years of which shall have been in a position of professional responsibility; in some cases a commission as Dominion land surveyor; ability to organize and manage large field parties; to deal with involved problems of transport; tact, good judgment and ability to handle men; good physical condition.

Grade 4. Education equivalent to high school graduation; either graduation in engineering from a school of applied science of recognized standing, with six years of experience in surveying, at least four years of which shall have been in a position of professional responsibility, or eight years of practical experience in surveying, at least four years of which shall have been in a position of professional responsibility; for legal surveys a commission as Dominion land surveyor will be required; ability to organize and manage large field parties, and to deal with involved problems of transport; firmness, tact and good judgment; good physical condition.

Grade 5. Education equivalent to graduation in engineering from a school of applied science of recognized standing, with at least seven years of experience in important surveying work, at least five years of which shall have been in responsible charge of such work in the field; preferably a commission as Dominion land surveyor or Dominion topographical surveyor; a thorough knowledge of higher mathematics as applied to surveying, and of surveying and mapping methods; ability to organize and manage men in the field and office, and to direct surveying operations; familiarity with modern office practice; firmness, tact and good judgment; good physical condition.

Grade 6. Education equivalent to graduation in engineering from a school of applied science of recognized standing, with at least eight years of experience in important surveying work, at least six years of which shall have been in responsible charge of such work in the field; preferably a commission as Dominion land surveyor or Dominion topographical surveyor; a thorough knowledge of higher mathematics as applied to surveying, and of surveying and mapping methods; ability to organize and manage men in the field and office, and to direct surveying operations; familiarity with modern office practice; firm-

ness, tact and good judgment; good physical condition.

4.

	Minimum	Maximum
Class 1..	$1,740	$2,040
Class 2..	2,100	2,580
Class 3..	2,580	3,120
Class 4..	2,700	3,300
Class 5..	3,000	3,600
Class 6..	3,300	3,900

TAX ON EXPORT POWER

*Mr. CHURCH:

1. Will the government afford the House an opportunity to discuss the tax on the export of power? If so, when?

2. Has any decision been given on the Carillon power project by the government, and has any application been received to date in this connection, and from whom?

3. Has any protest been received from the government of Ontario protesting against the export of this power?

4. Will the government secure the opinion of the Supreme Court of Canada as to the powers of this parliament and the government of the provinces on the whole question of the export of power, and also as to whether the export tax is ultra vires or not?

5. Will the Justice department be asked for such an opinion, or has one been given by the said department in the matter, and what is it?

6. Did the government recently promise a hydro deputation to secure such an opinion?

7. Have any protests been received regarding the export tax? If so, from whom and on what grounds?

Right Hon. Mr. MACKENZIE KING: The answers to these questions are as follows:

1. This question was on the order paper on the 8th of the month, and I would answer it by saying, that opportunity has already been afforded.

2. I think the discussion we had in the House brought out the fact that applications had been made to one of the government departments, but that so far as the government itself was concerned they had not been before the government for consideration.

3. I laid on the table of the House two or three days ago a letter from Premier Ferguson, which, I presume, is in the nature of a protest against the export of power.

4. The Department of Justice has expressed the view that the export tax is not ultra vires. It is not the intention of the government to secure an opinion from the Supreme court.

5. I have just answered this question by the answer to the one before it.

6. Some members of the government I think did make a promise when a deputation came before them that the opinion of the justice department would be obtained.

7. Protests have been received based on various grounds.

Sir HENRY DRAYTON: Will the Prime Minister table the opinion of the Department of Justice?

Mr. LAPOINTE: My hon. friend knows that opinions given by the Department of Justice to other departments have always been treated as confidential.

Sir HENRY DRAYTON: If my hon. friend wants to take that position, there is an end of the matter.

CANADIAN NATIONAL RAILWAYS—TRANSFERS, RIVIERE DU LOUP TO ST. MALO

Mr. POULIOT:

1. What are the names and the values of each of the twenty-two pieces of machinery which were transferred from the workshops of the Canadian National Railways at Rivière du Loup, to St. Malo?

2. On what date did said transfer take place?

3. What are the names and the respective occupations of the employees of the Canadian National Railways who were transferred from Rivière du Loup to St. Malo?

4. On what date did each of said transfers take place?

Hon. Mr. GRAHAM:

1 and 2.

Article—Value—Date

1 90 inch boring mill, $6,500, January 26th, 1920.

1 locomotive quartering machine, $3,000, January, 14.

1 locomotive wheel press, $1,800, January 14.

1 driving axle lathe, $700, January 14.

1 30 inch upright drill, $450, October 23.

1 18 inch travelling head shaper, $300, January 26.

1 48 inch x 48 inch x 20 feet planer, $5,500, January 15.

1 36 inch x 36 inch x 7 feet planer, $1,900, February 5.

1 28 inch lathe, $1,200, March 17.

1 6 foot radial drill, $3,500, March 16.

1 emery grinder 14 inch x 2 inch, $75, January 14.

1 4 spindle drill, $1,200, January 20.

1 24 inch cold saw, $900, January 20.

1 18 inch brass lathe, $500, January 20.

1 16 inch lathe, $400, January 31.

1 3 spindle test hole drill (staybolt), $250, January 20.

1 No. 8 Beaudry power hammer, $900, Jan-

1 1,200 pound steam hammer, $1,800, January 31.

1 shear 36 inch throat, capacity ¾ inch plate, $1,800, January 14.

1 flange punch, $2,000, January 14.

1 26 inch x 6 feet centre lathe, $600, January 14.

Article—Value—Date

1 22 foot H.S. lathe, $1,200, January 26.

ST. LEONARD CUSTOMS AND EXCISE EXAMINER

Mr. DOUCET:

1. When did the position of Customs and Excise Examiner at St. Leonard, Madawaska County, New Brunswick, become vacant?
2. When were applications called by the Civil Service Commission for the filling of this vacancy?
3. How many applications were received?
4. What is the name of the successful applicant?
5. Was an order issued by the commission to one Joseph Desjardins to report for duty and on what date?
6. Was that order withdrawn? If so, on what date and why?
7. When does the Department of Customs and Excise propose appointing a permanent official to that position?

Hon. Mr. COPP:

1. December 1, 1294.

2. The position was advertised September 26, the time limit for receiving applications was October 10, 1924.

3. Two.

4. Joseph Desjardins.

5. Yes. A certificate was issued by the Civil Service Commission April 3, directing Mr. Desjardins to report for duty upon instructions from the department.

6. The department rejected Mr. Desjardins by letter of May 5, 1925, stating that he was not suitable for the position.

7. A requisition has been received by the commission for a permanent appointment and the position is being advertised.

KRAFT CHEESE

Mr. STEWART (Leeds):

1. Have any applications been made since the 1st of January, 1924, for rebates of duty paid by importers of New Zealand or other cheese used in the manufacture of Kraft cheese exported from Canada?
2. If so, who are the applicants, and what is the amount of duty claimed by way of drawback or refund in each case?
3. Have any other applications been received for drawback or refund of duty on imported cheese during said period?
4. If so, by whom, what is the amount claimed in each case, and what payments have been made on account of such applications?

Hon. Mr. CARDIN:

1. Yes.

2 and 3. One application for drawback, amount claimed $11,719.60. It is contrary to the practice of the Department of Customs and Excise to give information which would disclose the business of an individual concern.

4. No payments made.

CANADIAN NATIONAL RAILWAYS—CREOSOTE TIES

Mr. KENNEDY (Edmonton):

1. Has the Canadian National Railways used any creosote ties?
2. If so, how many and on what parts of the system?
3. Is the creosoting of ties done by contract?
4. What is the cost per tie?

Hon. Mr. GRAHAM:

1. Yes.

2. 3,561,858—Atlantic and central region.

3. Yes.

4. The cost varies depending on the fluctuations in market price of petroleum, cresote oil, coal tar and other preservative materials used in the treatment of ties.

WELLAND SHIP CANAL

Mr. KNOX:

1. In what year was the new Welland ship canal started?
2. What is the total cost up to the present time?
3. What is the estimated cost to complete the project?
4. When is it estimated the project will be completed?

Hon. Mr. GRAHAM:

1. Surveys, 1908; actual construction, 1913.

2. To March 31, 1925, $51,203,488.15.

3. Approximately $100,000,000, including amount already expended.

4. If appropriations are available yearly to full capacity of contractors and no set-backs occur, it is expected that the project will be completed during the year 1929.

PRE-EMPTIONS HUDSON BAY RAILWAY

Mr. HUDSON:

1. What was the total area of land disposed of as pre-emptions under the provisions of the Dominion Lands Act, passed in the year 1908?
2. What was the total price for which these lands were sold?
3. What amount has actually been received in respect of the sale of these lands?
4. What is the total expenditure to date, (a) for the construction of the Hudson Bay railway, (b) for the harbour works at Port Nelson?

Hon. Mr. COPP:

1. 12,763,040 acres, approximately, including entries since cancelled.

2. $38,289,120, approximately.

3. To 31st March, 1925, $16,312,959.95.

4. The expenditure to March 31st 1925, for the construction of the Hudson Bay railway was $14,902,571.17, and for the harbour works at Port Nelson $6,244,599.49.

AUDIT ACCOUNTANTS

Mr. GARLAND (Bow River):

1. What are the qualifications required for Grade 5 Audit Accountant?
2. What are the qualifications for Grade 4 Audit Accountant?
3. What are the qualifications for Grade 4 Audit Accountant, as advertised in list 269, civil service positions?
4. Are there any clerks in the office of the Auditor General who are both university graduates and chartered accountants? If so, how many?
5. How many clerks of the Auditor General are eligible to try the examination for Grade 4 Audit Accountant, as advertised?
6. What is the nature of the work that requires such qualifications?

Hon. Mr. COPP:

1. There is no such class.

2. Education equivalent to university graduation; at least nine years of experience in a post of responsibility in auditing work in the Dominion service or in work of equivalent character and standard; thorough knowledge of the fundamental principles of double entry book-keeping and accountancy; thorough familiarity with the functions and work of the Auditor General's department and wide knowledge of the Dominion government's accounting system; administrative ability; mature judgment.

3. Education equivalent to university graduation; at least nine years of experience in a responsible position in auditing work; qualification by examination as a member of a recognized Canadian Association of Accountants; at least six years' subsequent experience in public accounting; knowledge of the law affecting the functions and work of the Auditor General's office; knowledge of the government accounting systems; administrative and supervisory ability; mature judgment; ability to prepare and construct high grade accounting organization procedure and practice, and to conduct and report upon inspections and examinations. While a definite age limit has been fixed for this competition, age may be a determining factor when making a selection.

4. No.

5. None.

6. One to have charge of the audit of revenue and the other audit of stores.

BUSINESS PROFITS WAR TAX ACT

Mr. GOOD:

1. Under the Business Profits War Tax Act: (a) How many taxpayers have requested an appeal to a board of referees; (b) how many of these pressed their appeals and were heard before a board of referees?
2. Did any taxpayers appeal to any other tribunal than a board of referees?
3. If so, to what tribunal or tribunals, and how many appeals were thus heard?

Hon. Mr. CARDIN (for Minister of Customs):

1. (a) The majority of so-called appeals are protests to keep the cases open for discussion.

No record has been kept of the number of such cases; (b) none.

2. No.

3. Answered by No. 2.

INCOME WAR TAX ACT

Mr. GOOD:

Under the Income War Tax Act: (a) How many taxpayers have requested an appeal to a board of referees; (b) how many of such appeals have been heard before boards of referees; (c) how many taxpayers have appealed to the exchequer court; (d) how many appeals either to a board of referees or to the Exchequer court have yet to be disposed of?

Hon. Mr. CARDIN (for Minister of Customs):

1. (a) The majority of so-called appeals are protests to keep the cases open for discussion. No record has been kept of the number of such cases. (b) None. (c) Seventeen. (d) Eight.

ARMENIAN IMMIGRATION

Mr. ELLIOTT (Waterloo):

1. How many Armenians have come to Canada since May, 1924?
2. Through what sources and to whom were the various permits issued?
3. Did those entering Canada fulfil the required regulations with regard to passports?

Hon. Mr. ROBB:

1. 257.

2 and 3. To furnish the evidence in detail in reply to Nos. 2 and 3 would involve an endless amount of work including a search of our indexes for eleven months, the selection therefrom of all applications relating to Armenians and the examination of every file, in order that those, where admission had been granted, could be separated from the unsuccessful requests. In view of this, I wonder what good purpose could be served by my hon. friend persisting in his question, but if he does, I shall have to ask that it stand as an order for return.

CANADIAN NATIONAL RAILWAYS—WAINWRIGHT OIL TESTS

Mr. SPENCER:

1. Has there been a test made by the Canadian National Railways officials of crude oil taken from the British Petroleum Well No. 4 in the vicinity of Wainwright, Alberta?
2. If so, what were the results obtained?

Hon. Mr. GRAHAM: I am not sure whether this question ought to be answered or not until we make further inquiries. If it is a private company that had officials of the Canadian National Railways make a test of its well for its own purposes, I would not think it would be right, without the consent of the parties who requested that the test be made, to reply to this question.

VANCOUVER GOVERNMENT PROPERTY

Hon. Mr. STEVENS:

1. Is it the intention of the government to pay the city of Vancouver the sum of $15,000 per year in lieu of taxes on government property in that city?
2. Will the government bring down an estimate this session covering said amount, or, in what manner will the said amount be paid?
3. Did Mr. George E. McCrossan corporation counsel for city of Vancouver, discuss this question with ministers of the crown during his recent visit to Ottawa?

Hon. Mr. CARDIN:

1. No.
2. No.
3. Mr. George E. McCrossan on behalf of the city of Vancouver urged that the Vancouver Harbour Commission should make a reasonable contribution to the city for services rendered in lieu of taxes on its property.

QUESTION PASSED AS ORDER FOR RETURN

TRANSLATORS

Mr. HOCKEN:

1. How many translators are employed by the Senate and House of Commons, respectively?
2. How many translators are employed by the public departments in Ottawa, or branches of the government service?
3. What are the duties of the blue book translation staff of the House of Commons?
4. Has the blue book translation staff been relieved of the duty of translating the annual departmental reports.
5. If so, why and upon whose authority.

Mr. SPEAKER: The answer of the department of the Speaker is ready, but I understand the question covers all other departments, so it will stand as an order for return.

WAR IMPRISONMENT OF DR. BELAND

Mr. H. A. STEWART (Leeds) moved:

For a copy of all correspondence, cablegrams and other documents passing between the government or any member thereof and Sir George Perley, the British government or any department thereof, the representatives of any foreign power charged with the conduct of the affairs of Germany during the war, and between any of the above the one with the other, relative to the illegal detention and imprisonment of Dr. Beland, M.P., during the late war.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I am not sure to what extent it may be possible to furnish the information requested. Such material as there may be in the departments of the government here, I can see no reason why the government should not bring down provided that the British government have no objection. The motion calls for papers between this government and the British government or any department thereof. It is possible that the British government may have reasons for not wishing to produce the correspondence at the present time. If my hon. friend is agreeable to let the motion pass on the understanding that papers will be brought down only with the consent of the British government and in so far as we are in a position to bring them down, that will be satisfactory to the government. My attention is drawn to the fact also that the motion refers to correspondence with representatives of any foreign power charged with the conduct of the affairs of Germany during the war. I should think it would be essential to obtain also the consent of all the powers concerned before bringing down the correspondence.

Motion agreed to.

UNOPPOSED MOTION FOR PAPERS

HALIFAX ELEVATOR

Mr. BLACK (Halifax):

For a copy of all specifications and contracts made regarding the new Halifax elevator.

ANIMAL CONTAGIOUS DISEASES ACT AMENDMENT

Hon. W. R. MOTHERWELL (Minister of Agriculture) moved that the House go into committee at the next sitting to consider the following proposed resolution:

That it is expedient to repeal subsection one of section six of the Animal Contagious Diseases Act, as enacted by chapter seven of the statutes of 1922, and amended by chapter three of the statutes of 1923, by which it was provided that the minister may order compensation to be paid to the owners of animals slaughtered under the provisions of the act at the rates of valuation therein prescribed, and subject to the limitation that the said subsection should only remain in operation for three years from the first day of July, 1922; and in lieu thereof to re-enact the said subsection with the same rates of valuation for compensation but without the said limitation as to operation.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the favourable consideration of the House.

Motion agreed to.

PROPOSED LOAN OF $164,000,000

Hon. J. A. ROBB (Acting Minister of Finance) moved that the House go into committee at the next sitting to consider the following proposed resolution:

That it is expedient to introduce a measure to provide authority for the raising, by way of loan, under the provisions of the Consolidated Revenue and Audit Act, by the issue and sale or pledge of securities of Canada, in such form, for such separate sums, at such rate of interest and upon such other terms and conditions as the Governor in Council may approve, such sum or sums of money as may be required, but not to exceed in the whole the sum of one hundred and sixty-four million dollars, for paying or redeeming or otherwise retiring the whole or any portion of loans or obligations of Canada and for public works and general purposes, and to provide that the principal so raised by way of loan and the interest thereon shall be a charge upon and payable out of the Consolidated Revenue Fund.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the favourable consideration of the House.

Motion agreed to.

QUEBEC HARBOUR COMMISSIONERS

Hon. P. J. A. CARDIN (Minister of Marine and Fisheries) moved that the House go into committee at the next sitting to consider a certain proposed resolution with regard to advances to the Quebec Harbour Commissioners.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the favourable consideration of the House.

Motion agreed to.

CANADA TEMPERANCE ACT AMENDMENT

Hon. ERNEST LAPOINTE (Minister of Justice) moved that the House go into committee at the next sitting to consider the following proposed resolution:

That it is expedient to amend the Canada Temperance Act, chapter one hundred and fifty-two of the Revised Statutes of Canada, 1906, by the addition thereto of Part V, to provide for the prohibition of importing, sending, taking or transporting of any intoxicating liquor into any province in which such prohibitions are in force; to further provide penalties for the violation of the proposed legislation, and to provide for the revocations when such have been declared revoked by an order in council of the Lieutenant-Governor of a province affected.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the favourable consideration of the House.

[Mr. Motherwell.]

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): It is not usual to discuss a motion of this kind at this stage, but so far as I can see the present motion is identical with one which the minister has already on the order paper and which has been before the House for some time. I should be glad if the minister would point out now the difference between the two and, as well, how each of them differs from the legislation which passed this House one or two sessions ago and which the Senate defeated.

Mr. LAPOINTE: This resolution precedes the introduction of a bill identical with the one that passed this House in 1923, but which was modified by the Senate in such a way that it was rejected upon its return to this House. It applies particularly to British Columbia. The other bill which is on the order paper at the present time applies to the provinces that come under part 4 of the Canada Temperance Act, that is to say, those provinces in which the provincial legislature has passed a resolution asking the Secretary of State to hold a plebiscite therein on the question whether the imports of liquor should be prohibited or not. When such plebiscite is voted in the affirmative the Governor in Council passes an order in council prohibiting such imports into those provinces. That legislation applies to Manitoba, Alberta, Saskatchewan, Ontario, Nova Scotia, New Brunswick and Prince Edward Island, the only two provinces in which such a plebiscite has not been held being British Columbia and Quebec. This bill will apply to those two provinces if they care to take advantage of it.

Mr. MEIGHEN: Will this bill if it passes, have the same effect exactly upon British Columbia and Quebec as the other bill, if it passes, will have on the other seven provinces?

Mr. LAPOINTE: No, this bill does not go as far as the other. The other bill prevents all importations of liquor into those provinces in which the plebiscite has been held, except as regards liquors for sacramental, medicinal, manufacturing and commercial purposes. The present bill, which was agreed to by the provinces to which it will apply if it passes, does not go so far. For instance, it will permit the importation of alcohol by brewers and distillers for the purpose of blending in the course of the manufacture of liquors, while under part 4 of the Canada Temperance Act even such importation is prohibited except through the province.

Motion agreed to.

SOLDIER SETTLEMENT ACT, 1919, AMENDMENT

Hon. J. A. ROBB (Minister of Immigration and Colonization) moved that the House go into committee at the next sitting to consider the following proposed resolution:

That it is expedient to amend the Soldier Settlement Act, 1919, and amending acts, and to provide that notwithstanding anything in the acts, in the case of any settler who has not repaid his indebtedness to the board, or who has not abandoned his land, or whose agreement with the board has not been terminated or rescinded, the board shall credit his account with an amount, in reduction of his indebtedness to the board, determined as follows:—

Forty per centum of the purchase price of all live stock advanced to the settler and purchased prior to the first day of October, 1920;

Twenty per centum of the purchase price of all live stock advanced to the settler and purchased on or after the first day of October, 1921; and

The settler's account shall be credited with the total amount, determined as aforesaid, as on the standard date in 1925.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the favourable consideration of the House.

Before asking the House to adopt the motion I desire to point out that in paragraph 3 of the resolution an omission has occurred either on the part of the officers having charge of it or on the part of the Printing Bureau. The paragraph should read:

Twenty per centum of the purchase price of all live stock advanced to the settler and purchased on or after the first day of October, 1920, and prior to the first day of October, 1921.

If the House will accept this correction, I beg to give the customary notice that at the next sitting I shall move the resolution.

Motion as amended agreed to.

CIVIL SERVICE ACT, 1918, AMENDMENT

Right Hon. W. L. MACKENZIE KING Prime Minister): Mr. Speaker, in the absence of the Postmaster General (Mr. Murphy) I beg to give notice that to-morrow he will move the following resolution which appears in his name:

Resolved, that it is expedient to amend the Civil Service Act, 1918, as respects certain Post Office employees, and to provide, (1) That when it has been determined by the Governor in Council that any post office, the employees of which do not come under the Civil Service Act, is to be brought under the said act, any person then employed in such office who has had at least two years postal experience, one of which was in the office in question, and who was, at the commencement of his service, within the limits of age prescribed by the Civil Service Commission, and who satisfies the Civil Service Commission that he possesses the necessary qualifications, shall be considered eligible for appointment to any position in such office without competitive examination, provided, however, that any person employed in any such post office on the date of the coming into force of this provision shall be eligible for appointment, even though he was not at the commencement of his employment within the limits of age prescribed by the Civil Service Commission;

(2) That upon an appointment being made, the person appointed shall receive the same salary as he was receiving immediately prior to such appointment, except that if the salary prior to appointment is less than the minimum rate of the position to which he is appointed, his salary shall be increased to such minimum rate, and if the salary prior to appointment exceeds the salary of which he would have been in receipt had he entered the service at the minimum rate of the class and had been allowed a number of annual increases equivalent to the number of years of his service, the salary to be paid to him upon appointment shall be fixed by the Civil Service Commission.

I am informed that His Excellency the Governor General has been made acquainted with the subject matter of this resolution and recommends it to the favourable consideration of the House.

Motion agreed to.

EMPIRE DAY

FLAGS ON PUBLIC BUILDINGS

On the Orders of the Day:

Mr. L. J. LADNER (Vancouver South): Mr. Speaker, I desire to draw to the attention of the government the deplorable absence of flags on the government buildings in this capital of Canada on such a memorable occasion as Empire Day. While flags are flying on the Connaught and Hunter buildings, as well as the two flags on these buildings, the bare flag pole in front of the Queen Victoria monument is a poor tribute to the memory of that great sovereign, and the bare flag pole in front of the monument to Sir John A. Macdonald is also a poor tribute to one of our outstanding statesmen. Although we may hold our sittings to-day, I think we could do so with greater propriety under the flags of our nation on such an occasion as this, and I think I am expressing the opinion of the great majority of the people of Canada in regretting that apparently no official authority has taken notice of this omission. In fact it was drawn to my attention by visitors from Montreal. May I ask the government if we cannot have our flags flying for the remainder of this day, or at least some time before sundown?

Hon. J. H. KING (Kootenay, Minister of Public Works): Mr. Speaker, I will make inquiries respecting the matter complained of. Of course, the flag on the Commons side of these buildings is flying half mast to-day on account of the death of one of our members. When the tower is constructed the main flag will fly from its summit. In the meantime

two flags are flown when parliament is in session, one on the Senate side and the other on the Commons.

Mr. LADNER: Mr. Speaker, the flags on the parliament buildings are always flying while the Senate and Commons are in session. I am referring to the flag poles in front of the monuments to Queen Victoria and Sir John A. Macdonald, and to those on the whole row of public buildings opposite this structure. No doubt the matter has been overlooked, and now it has been drawn to the attention of the government, I hope the omission will be made good without delay.

Mr. KING (Kootenay): It will be attended to.

PRIVILEGE—Mr. McBRIDE

Mr. T. G. McBRIDE (Cariboo): Mr. Speaker, I rise to a question of privilege. It has been circulated, both through the press and otherwise, that the member for Cariboo (Mr. McBride) has been canvassing the government for a seat on the Harbour Board of Vancouver. I desire to state most emphatically that the member for Cariboo has never canvassed any member of the government directly, or indirectly, for such a seat; nor would I be in a position to accept the honour if it was offered to me.

MARINE INSURANCE RATES

On the Orders of the Day:

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, the hon. member for St. John City and Counties of St. John and Albert (Mr. MacLaren) asked me on Friday last if the government had received a report from the Imperial Shipping committee dealing with marine insurance as affecting Canada, and if so, would I state to the House in a general way the terms of the report. I mentioned at the time that a report had been received dealing with the subject and that I would look it over and advise him later. I have in my hand an interim report, dated last year, which the government received and which I will put on the table so that my hon. friend may peruse it himself. I think, however, that what he has in mind is a second report, possibly the final report on this matter. I am informed that the final report is now almost ready for signature, but that it has not as yet been signed. I am therefore not in a position to reveal its contents.

Mr. MURRAY MacLAREN (St. John City and Counties of St. John and Albert): Mr. Speaker, I have had an opportunity of seeing the report that has just been placed on the table by the Prime Minister. As it happened, I had information, which I think was very reliable, that a further report had been forwarded to the Canadian government. That information came from England, consequently it must go back at least ten or twelve days. It may be that this final report will be received at an early date; or is it possible that the officials have not yet laid the report before the Prime Minister?

Mr. MACKENZIE KING: No, my hon. friend has doubtless been correctly informed from the Old Country as to the report having been forwarded, and I have in my hand what I think is the document he refers to. It is marked "secret", as it is simply a draft, but it was accompanied by a communication stating that it was receiving further consideration. I shall cable to England to ascertain whether the report has as yet been signed. As soon as I am advised that it has been signed I will endeavour to see that my hon. friend is favoured with a copy.

BUSINESS OF THE HOUSE

FURTHER LEGISLATION

On the Orders of the Day:

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Mr. Speaker, we are now in the last week prior to the month of June and close to the end of the fourth month of this session of parliament, but the chief business of the session is not yet before the House. I refer to what has been announced as the main public business of this session, namely, the disposition of the troublesome freight rate situation. I did rather hope that this motion of the Minister of Railways dealt with it, but his explanation disabuses my mind of that anticipation. It seems to me there is no reason why legislation of this character should be rolled in on the House when we are on the last lap of the session. If there was any that should have been first, it is this, for the reason that the rate situation in the country in the meantime is chaotic; gross discriminations are prevailing and gross injustices ensuing. I call the attention of the government again to this matter, which seems to me of paramount consequence. As a matter of justice to parliament it should have been down before and should now be down without further delay. The same remarks, with only less force, apply to legislation respecting the Home Bank. I do not see how that legislation could be difficult of preparation, whatever other difficulties may be entailed in it. There is no notice of that yet. These two are the paramount pieces of business of this session.

While I am on my feet may I call attention also to another matter, the reason for the delay in connection with which we know —that is, the Australian treaty. Previously I have urged upon the government that if they could not introduce their legislation—and I am unable to comprehend the force of the reason for that, although it has been given —I cannot see what possible objection there would be to placing on the table a memorandum embodying the proposals jointly agreed to, so that this House at least could have the advantage of studying those proposals and being prepared for such legislation as later may be submitted.

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals): The remarks of my right hon. friend in reference to what is known as the railway rates question are in accordance with the views of the government and, I imagine, with those of all hon. members—that is, as to its being a question of paramount importance. As he has pointed out, the rates question is now in a chaotic state, and I presume no member of the House has that called to his attention with greater regularity than the Minister of Railways. I hope to be able to bring down next week at the latest a bill dealing with this question.

Mr. E. J. GARLAND (Bow River): In view of the fact that the government intimated not long ago that they hoped to see prorogation reached by about the 15th of June, and as the leader of the opposition (Mr. Meighen) has already pointed out the shortcomings of the government, or the delay at least on their part, with regard to freight rates, it might not be amiss if I should suggest that there are still outstanding such important pieces of legislation as rural credits, revaluation of soldiers' land, and several other matters which are of paramount importance at least to the west. If the government intend to get through any of this legislation during the present session most of it should certainly be before the House now.

Hon. J. A. ROBB (Acting Minister of Finance): Answering my right hon. friend (Mr Meighen) regarding the Home
4 p.m. Bank, while I make no commitment in the matter I fully expect that the legislation in that respect will be brought down this week.

Mr. MEIGHEN: I would remind the minister that the last hope expressed in that matter was dashed to pieces long ago. Is this hope more reliable?

Mr. ROBB: Oh, I would not admit that any hopes I have held out to my right hon. friend have been dashed to pieces. Regarding the question of the hon. member for Bow River (Mr. Garland), had he been in the House he would have observed that I gave notice of a resolution to-day regarding the revaluation of the stock of soldier settlers.

Mr. GARLAND (Bow River): I suggest to the minister that this is the least important of the problems facing the soldiers. It is land revaluation they want, far more than the mere revaluation of stock; and that is what I referred to. May I also say that we received an assurance from one of the members of the government not long ago that legislation in this connection would be brought down this session?

Mr. MEIGHEN: I want to call the attention of the Acting Minister of Finance to the fact that he has not made reference to my request as respects the Australian treaty.

Mr. ROBB: In this chamber so many times I have given the answer to my right hon. friend regarding the Australian treaty that I have nothing to add to what I have already said.

Mr. MEIGHEN: Why not lay on the table a memorandum embodying the arrangement so far as arrived at?—because I believe an arrangement was completed. Why can we not have the memorandum so that we may know what we are going to have to face?

Mr. SPEAKER: Orders of the Day:

Mr. MEIGHEN: No answer.

EXPORT OF POWER

On the Orders of the Day:

Sir HENRY DRAYTON (West York): I would like to ask the government if they have come to any conclusion as yet with regard to the request of the municipalities of Ontario in connection with the long term contract for power export which is now burdening them.

Right Hon. W. L. MACKENZIE KING: (Prime Minister): The matter is still under consideration.

GERMAN SECURITY QUESTION

On the Orders of the Day:

Mr. WILLIAM IRVINE (East Calgary): I want to ask a question of the government arising out of a brief report in this morning's Citizen. The report is as follows:

The Canadian Press understands that the reply from France on the questions asked by the British government in regard to the meaning of some portions of the French draft of the reply to Germany on the security question has been received in London.

Some surprise was expressed in authoritative quarters at the suggestion that the British dominions were not kept continuously informed with the discussions on this subject, the fact being that in this, as in all other matters, the overseas dominions are kept fully informed of all developments.

If that is so; if we have been kept fully informed of all developments, can the government tell us what was the import of the answer of France to Germany on this question?

Right Hon. W. L. MACKENZIE KING (Prime Minister): The statement that the government is being kept informed is quite correct. I have before me at the moment a despatch, dated at London on Saturday and received at my office to-day, with respect to this matter, but it is marked "confidential." From the nature of it I can see that it is quite confidential and that it would be improper to communicate any portion of it to the public at the present time. It contains some matters to which the British government wish to give further consideration before making a public pronouncement. As soon as the British government is in a position to make a public pronouncement, we shall be in a like position.

CANADA-NETHERLANDS CONVENTION OF COMMERCE

The House resumed from May 18, consideration in committee of Bill No. 129, respecting a certain trade convention between His Majesty and the Queen of the Netherlands—Hon. Mr. Robb—Mr. Gordon in the chair.

The CHAIRMAN: All the sections of this bill have passed except the schedule.

Mr. ROBB: The schedule was held over at the request of the leader of the opposition who had some doubt as to the applications of the tariff regarding the British preference. I have a letter from the Consul General of the Netherlands in Canada, dated May 21, 1925, confirming a telegram which I also have and which I will read to the House. The letter, which sets forth the telegram, is as follows:

Consulaat General der Nederlanden.
511 St. Catherine Street W.
Drummond Building R. 823.
Montreal, May 21st, 1925.

No. 1652

Dear Mr. Robb,—With reference to my conversation with Mr. Russell, Commissioner of Tariff, I have the honour to inform you that I have just sent to you the following telegram:

"With reference to the point raised in Canadian House of Commons that article one of the Canadian Netherland convention of 11 July, 1924, might be interpreted to give to the Netherlands the benefits of the Canadian British preferential tariff and to my conversation on the subject with Commissioner Russell, I have the honour to inform you that according to a cable dated May 20th received from the Minister of Foreign Affairs at the Hague, the Netherland Government has not at all the intention to claim the benefits of the said British preferential tariff under article one of the said Canadian Netherland Convention, and, furthermore, that in the opinion of the Netherland Government the claiming of the benefits of the said British preferential tariff would not be justified under the text of the said convention. Confirmation of this telegram follows by letter.

Yours faithfully,

TH. H. DE MEESTER,
Consul General of the Netherlands in Canada

I hope this explanation will satisfy my right hon. friend.

Mr. MEIGHEN: Will the minister take similar steps to see that the other treaty is likewise protected? I am satisfied with the assurance given in this case; if I caught it correctly I think it covers the ground. Perhaps, now that we have emerged from the dignified atmosphere of the orders of the day, the minister would tell us whether he will not give us a synopsis of the arrangements with Australia, and let the House have the advantage of knowing it. I cannot see how he would be prejudiced by doing this.

Mr. ROBB: I should like to oblige my right hon. friend. I do not like to start on Monday refusing him anything, but no good purpose can be served by a continuation of the discussion of this question in the House. Let us wait until Mr. Ross, the Trade Commissioner, arrives in Australia, and then perhaps within a day or two afterwards the necessary facts will be available.

Mr. MEIGHEN: I have never suggested that there should be any discussion until the government brings its policy down; I know that would be quite improper. What I am asking for is merely information. Surely the minister does not think it is best for parliament that all these matters be loaded in upon us in the last few days of the session?

Mr. ROBB: It is not best for the minister in charge. I admit that.

Mr. MEIGHEN: I am afraid there is something wrong there.

Schedule agreed to.

Bill reported, read the third time and passed.

DAIRY PRODUCE ACT AMENDMENT

Hon. W. R. MOTHERWELL (Minister of Agriculture) moved that the House go into committee on Bill No. 72, to amend the Dairy Produce Act.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

On section 1—Regulation.

Sir HENRY DRAYTON: Has the minister considered the question of amendment there?

Mr. NEILL: Has this section been amended on the report of the committee on Agriculture?

The CHAIRMAN: No, apparently not.

Mr. NEILL: I understood it was.

Mr. MOTHERWELL: No. The bill was very fully discussed in committee and no change was suggested—in fact the committee was unanimous in endorsing the measure.

Mr. NEILL: The bill was very fully discussed in this House before it went to the committee, and there was a very strong expression of feeling that it required amendment by the leader of the opposition and others. With the general intention of this bill there is no complaint to be found. That is, if it is to prevent the exportation of inferior butter. But that could be arrived at by changing this section so that it would only apply to prevention of export. As the section is worded, however, the department takes the power to refuse to grade anybody's butter under any condition whatsoever. Now, that is not the right way to go about it. It is not right to prevent a man from caryying on his business. It is not right to say that because a man has once done wrong he should be put out of business altogether; that would be interfering with individual liberty in a free country, so to speak. If a man has done wrong he should be punished; if he continues to do wrong he should be punished again; but why say arbitrarily to that man, "Because you have once or twice exported bad butter we will never again grade your produce?" That is not compatible with—I was going to say—freedom of action; the object of the government could be well achieved by making this section give it power to refuse to give export certificates for bad butter, which is really the object aimed at according to the explanation furnished by the department itself. I should like to ask the minister what objection he has to making such an amendment?

Mr. MOTHERWELL: That is all the proposed legislation does apply to; we have no provision for grading butter for home consumption. The provision applies entirely to butter intended for export. If anybody wants his butter graded for home consumption such action on his part is entirely voluntary. The illustration given on the page opposite to the clause we are considering is only one but there are half a dozen reasons why we should refuse certificates in the case of butter for export. Some of the factories and creameries, for example, have been very dilatory in taking out their registration numbers. It is absolutely necessary that they should register and be given a number so that if anything goes wrong in the case of butter on the export market we can trace it right back to the very factory from which it came, and the very vat in which it was made.

Sir HENRY DRAYTON: I think the hon. member for Comox-Alberni (Mr. Neill) is absolutely correct. All he wanted, and all that any of us wanted, at the time the discussion took place, was to make it clear that while this grading should apply to butter or other products which ought not to be exported, in a word, to bad produce, a certificate should not be refused on any other ground except that the produce was bad. We suggested at the time that the provision should read:

> For refusing to grade dairy produce deemed unfit or unsuitable for export.

That was the only ground on which the minister himself thought the grading should be refused. This amendment is simply for the purpose of showing clearly that this grading shall only be refused in connection with butter which should not be exported.

Mr. MOTHERWELL: Let me repeat, Mr. Chairman. that the reason I have given is only one illustration why we should have the power to refuse to grade. In committee we went very fully into all the other reasons. For instance. suppose the producer refused to subscribe to the requirement in regard to the character of the boxes or the hoops to be used, or any other provision of the law and so tend to prejudicially affect our dairy products in the Old Country market, how are we going to get at him? A mere nominal fine will not bring him to time. We must in some way protect the rest of the dairymen; those who observe the law should not suffer from the odium incurred by reason of the conduct of one or two offenders. This is a power which we are exercising now, and we exercise it quite frequently in the case of cheese sent to Montreal, or any other point where there is cold storage and where we have graders. If the cheese is only three or four days old we refuse absolutely to grade it until the product is sufficiently

ripened to be worthy of the name of cheese. We are exercising this power now, but we really have no legal authority for doing so. If some person challenged our right to refuse to grade green cheese it would be found that we do not have that power under the law. However we are acting on the assumption that we have the power; and we reserve to ourselves the discretionary right not to grade green cheese until, at least, it is ten or twelve days old. Therefore we are only asking, in this section, the right to do what we are actually doing at the present time. As a matter of fact nobody has taken exception to our exercising that authority. However, supposing they did object and brought suit against us for not grading this green cheese when it was three or four days old, seeing that we are without any authority, we might lose the case before the courts. And yet it would be quite unfair to the legitimate makers of cheese that the grade should be issued when cheese was green. You cannot give a grade to cheese when it is green; at that time it is not cheese but simply pressed curd. It took about a year to get our creameries to register. The committee will remember that about two years ago a certain sample of butter was put on the market in Great Britain and was reported in the press as having made people sick. Doctors were called in and they discovered bacteria in it. Do hon. members mean to say that a creamery should be allowed to turn out a product that was going to prejudice the entire trade of Canada?

Sir HENRY DRAYTON: Certainly not.

Mr. MOTHERWELL: No. We should have the discretionary power. When the whole trade of the country is in danger we should have the power, not only to fine a man and correct the difficulty, but we should be able, if a man persisted, to stop him altogether. This provision only applies to export butter. Occasionally a man voluntarily comes to us and asks for a grade for butter for home consumption. We have very rarely given it; if we have time we give the grade, but if not we do not grade it.

Mr. NEILL: The minister's explanations are entirely apart from the line of argument I am trying to present. I am not objecting to his refusing export certificates for any product whatever. He does it every day in the week, and it is quite all right, so far as I am concerned; but I object to the department taking arbitrary power to refuse to grade the dairy products of any man because they do not like the colour of his hair or the place he comes from. If they do not like a man they can say to him, "I will not grade your products." The minister reads into the act something that is not there. He says we are only going to apply this provision to a man who habitually breaks the law and going to say to him, "Now we are tired of you, and will not grade your butter." But the act will also apply to the man who never had any produce graded. They may give some extraordinary reason, or none at all, and say to the man, "I will not grade your butter." That is not compatible with our ideas of justice. The remedy is to refuse to give him an export certificate. The minister says that is no punishment, because he will pay the fine; but if the man cannot export his product, he will very soon get tired of producing it, because if he cannot ship it he will have to take it home. There is nothing profitable to him in that. Paying the fine is not the principal thing, it is the loss of the shipment and being compelled to dispose of it in some other way; and if his product is continually rejected on account of being an inferior grade, he will stop trying to export it in a very short time.

Then another point: How is a man to know why his produce is rejected, if you refuse to grade it? They may say it is rejected because it is not a good product, but how do they know that? The product should be graded, and if it is inferior it should be rejected. That will penalize a man far more than a fine. But it is not fair to say "I will refuse to grade your product." Suppose a man, through the carelessness of his servants, has made one or two inferior shipments and they have been rejected. That is no reason why he should be put out of business. If a man reforms, intends to do better, and to exercise more care, he should be allowed an opportunity to go on. I observe a great deal of the legislation proposed by the Department of Agriculture is framed along the same lines and extremely arbitrary; they take upon themselves a power which no other department ever assumes. It may be that there is a lack of co-ordination between the Legal branch and the Department of Agriculture. Time and again we have had occasion to protest against the arbitrary powers assumed by some branch or other of the Department of Agriculture.

Mr. MOTHERWELL: We are endeavouring to raise the quality of good exportable farm products, and in doing that we increase the temptation to people to try to export inferior goods, and that means that we must have more restriction. There is not one-half

the arbitrary provisions in this law that you will find in the Australian or New Zealand laws.

Mr. NEILL: It is not a restriction; it is a prohibition.

Mr. MOTHERWELL: We do not say that we do not propose to grade anything because it is bad. We will grade the butter, as long as it is what it pretends to be. But if a man sends over adulterated butter, we have to prosecute him, and if he persists—and only under those circumstances—we decline to grade.

Mr. NEILL: That is not put in the act.

Mr. MOTHERWELL: That is the fact. Take the other illustration in regard to cheese. I submit that you cannot specify all the offences imaginable. If you try to do so, something else crops up and you cannot deal with it. I was illustrating that with regard to cheese that was found to have certain bacteria existing in it which allegedly endangered the life of certain parties who ate it. We have a bacteriologist who has been placed in charge to look after such things. If the man who sent the allegedly dangerous cheese had been allowed to continue his shipments he might have hurt our cheese trade, and if we are going to do justice to the cheese men of the country we must have this authority; there is no question about that.

Then with regard to registration: It was with the greatest difficulty that we prevailed upon the creamery and cheese factories to register. No registration fee was charged and all they were asked to do was to send their address and location and we would allot them a number. Having the number, it is possible to trace any cheese or butter back to the factory. If the factory persists in not having itself numbered or identified, we say, "All right, you persist in the refusal to register, and we will have to decline to grade your produce". That is not unreasonable. If my hon. friend thinks it would be providing any safeguard to say that this does not apply to butter for home consumption, I have no objection, but there will be a danger in that.

Sir HENRY DRAYTON: I think we all agree with everything the minister says, except the application he seeks to make of what he says to the subject before him. He does not want to do any injustice to anybody, and only desires to refuse grades for produce which is not a good quality, and to refuse certificates to those who habitually break the law. But why does he not say so? That would be the easiest thing in the world. We have the two points before us, and I think the protest of my hon. friend (Mr. Neill) is absolutely right. I do not know why the minister objects to it because what he asks is simply to put in writing what the minister says in words.

Mr. MOTHERWELL: We have it.

Sir HENRY DRAYTON: No, what we have here is something which would enable the department to withhold a certificate without any conditions, for any possible earthly reason, or for absolutely no reason at all. Surely that is not good legislation.

Mr. MOTHERWELL: Would my hon. friend suggest that we enumerate the number of offences?

Sir HENRY DRAYTON: No. In the first place two things came up. The first was the article itself. As regards the refusal to grade dairy produce, the word "grade" there, I assume, is not the testing of the butter but is used in the technical sense that after testing the butter, you give it an appropriate grade?

Mr. MOTHERWELL: Yes.

Sir HENRY DRAYTON: Of course, unless we use the word in that sense, the sentence would have no real meaning, because refusal to grade would mean refusal to consider, and I apprehend that is not what is meant. What is meant is that after the inspection is made and the test made, the appropriate grade is to be given. After the minister says that after that is done, they should have the right to say there shall be no grade at all and refuse all grades. He says: they should have that right because, if not, unfit produce may be exported to the harm of our whole export business. He is absolutely right. The claim is made that we should show what we are doing in using the word "grade" in the sense the minister uses it in his draft bill. He will get around that point entirely by inserting after the word "produce" simply the following amendment:

Deemed unfit or unsuitable for export.

Paragraph (g) will then read:

For refusing to grade dairy produce deemed unfit or unsuitable for export.

That is all he says he wants. I am taking him at his word. Then again he says: "But there is another case than the grading of the article itself. We want to be in a position to police people who will not properly carry on business. They may have a good article that ought to be graded, but they may do this, that or the other thing which renders it dangerous for us to give them a grade at all."

He says: That applies in the case of a man who habitually pays no attention to our regulations. Again that can be clearly shown. If clearly shown, the sentence would read thus:

And for withholding grade certificates to any person habitually guilty of disregarding the regulations under this act.

That is what my hon. friend says he wants to do. He says he wants to be fair to the trade. Why not do that? It covers both of his points.

Mr. NEILL: I think the situation can be met by a simpler amendment than that suggested by the hon. member. If we strike out the first seven words in paragraph (g), that will meet the whole situation. The minister will then be given power to withhold export certificates because the certificates are for export. A man cannot export butter unless he has an export certificate. If that is withheld the whole situation is met. The minister does not need power to refuse to grade. Such power might be used in a very arbitrary manner and there is no necessity for it. The explanation given on the right-hand page reads:

If such butter and cheese is not graded, and no certificate issued, it cannot be exported.

Let me read this again in a different way:

If such butter and cheese has no export certificate issued, it cannot be exported.

Refusal to grade is not needed at all. So long as you keep it from going out of the country, that will settle the situation as regards export. It will punish the man and prevent him from committing the offence again.

Mr. MOTHERWELL: Does my hon. friend suggest that the word "export" be inserted?

Mr. NEILL: I would strike out the first seven words of paragraph (g) and make it read like this:

For withholding export certificates.

Mr. MOTHERWELL: There is not very much difference. I have tried to assure my hon. friend that this is only for export but if he would feel better satisfied if the words "for export" were inserted, there will be no objection.

Mr. NEILL: Insert the word "export" instead of "grade."

Mr. MOTHERWELL: Why not make it read: "For refusing to grade dairy produce and for withholding grade certificates for export"?

Mr. NEILL: My whole case is my objection to giving power to refuse to grade butter for any man. That is an arbitrary

[Sir Henry Drayton.]

power. The minister says that he will not exercise it except under certain conditions, but those conditions are not stated in the legislation. He is taking full power to refuse to grade perhaps an honest man's honest butter because, he says—this power is sometimes required. That is not the way to handle the situation. The object is to prevent bad butter from being exported and this can be met by making paragraph (g) read:

For withholding export certificates.

Mr. MOTHERWELL: Again I assure my hon. friend that the question is not whether the butter is bad or good. The British market will consume anything that is fit for human consumption. When a man finds it more profitable to continue to commit an offence and to pay the fine so long as he can export, we want to say that he cannot export. There may be a dozen offences of this nature. We are exercising this power now and unless we have this legislation, somebody is going to challenge our power and we shall find that the door will be open to all kinds of exportable stuff. No arbitrary power has been or is being exercised in this matter, and the law is not one-half as strict as the laws of either New Zealand or Australia. Unless we tighten up our laws in many other respects, we are going to find our export in many other commodities will be gravely jeopardised by dishonest exporters.

Mr. NEILL: What more power could the minister need than when he has full arbitrary power to withhold a certificate for export? We have not the laws of New Zealand here for purposes of comparison. It is a standard argument that something else is done somewhere else. So long as we give the minister or his agents precise power to forbid any export, surely he does not want any more than that. He has the power to refuse any export certificate. Is that not sufficient? No, he says, in addition to that I will say to Tom Jones: "I will not grade your butter." Is that fair?

Mr. MOTHERWELL: We threshed this matter out pretty fully in the Agriculture committee and there was not a single dissenting voice. If the matter were otherwise, I would be disposed to ask that the committee rise and we discuss this further with my hon. friend because I do not think he understands the question at issue. But in view of the unanimity in the Agriculture committee and the fact that we are exercising this power now, I think that we should proceed with the bill. It is simplicity itself—the right to withhold a certificate from offenders of the law, as for instance, men who deliber-

ately refuse to register their factories. There are probably half a dozen other reasons. The thing is so elementary in its rightness. We should know now whether the department should have that power or not. If we cannot get that power and are assuming the right to exercise a power we do not possees, what will happen? We shall be unable to prevent goods being sent abroad that will do harm to our export business. I do not want to see that, and I do not think the committee wants it. No specific power is given now and we are merely exercising it without legislation. There is no complaint of abuse. Why should we abuse it? We are, if anything, erring on the side of leniency.

Section agreed to.

Bill reported, read the third time and passed.

ROOT VEGETABLES ACT AMENDMENT

Hon. W. R. MOTHERWELL (Minister of Agriculture) moved the second reading of Bill No. 116, to amend the Root Vegetables Act.

He said: I desire merely to have this bill given the formal second reading and referred to the select standing committee on Agriculture and Colonization.

Motion agreed to and bill read the second time.

PUBLICATION OF THE STATUTES

CONCURRENCE IN SENATE AMENDMENT

Hon. GEORGE P. GRAHAM (Minister of Railways) moved the second reading of and concurrence in an amendment made by the Senate to Bill No. 41, respecting the publication of the statutes.

Sir HENRY DRAYTON: What is the nature of the amendment?

Mr. GRAHAM: The only amendment proposed by the Senate relates to paragraph (a) of subsection 3 of section 10. The bill as it went to the Senate read:

> The members of the two Houses of Parliament respectively, who shall each be entitled to receive such number of copies as is, from time to time, directed by the Governor in Council,

The amendment proposed inserts, after the word "by" in the last line of this provision, and between the words "the Governor in Council", the following words:

> —joint resolution of the said Houses, or, in default of such resolution, as is directed by.

Sir HENRY DRAYTON: What the Senate has done is to preserve the present rights of parliament under the existing law.

Mr. GRAHAM: Yes.

Motion agreed to; amendment read the second time and concurred in.

MEAT AND CANNED FOODS ACT AMENDMENT

The House resumed from May 11 consideration in committee of Bill No. 73, to amend the Meat and Canned Foods Act—Hon. Mr. Motherwell—Mr. Gordon in the chair.

On section 1—"Canned foods".

Mr. NEILL: Does this apply to canned salmon?

Mr. MOTHERWELL: It was my understanding, and I think I am right in saying that it does not.

Mr. NEILL: "Canned foods", according to this section, includes "foods that have been pre-heated, cooked, preserved, condensed", and so on. If that does not cover salmon I should like to know why, how or where it does not.

Mr. MOTHERWELL: I understand that there is another act relating to salmon. My hon. friend (Mr. Stevens) asked me the same question on a previous occasion. I wonder whether he has looked the matter up.

Sir HENRY DRAYTON: Would it cover canned sardines?

Mr. MOTHERWELL: It does not apply to fish at all.

Mr. STEVENS: The minister will recall that on two previous occasions I drew his attention to this matter, not for the purpose of interfering with the passage of this legislation but because this is of some importance. We are passing a good deal of legislation of this character, some of which is regarded as harassing to business, although I am not saying that this is. We shall wake up to find, if this bill passes that under its powers the inspectors will be dealing with canned salmon as well as with canned foods generally. The section clearly refers to foods of all kinds.

Mr. MOTHERWELL: I will let the section stand.

Mr. STEVENS: The pure food law is the one to which the minister refers.

Mr. LOGAN: Would the section apply to canned tomatoes?

Mr. MOTHERWELL: I think we had better let it stand.

Section stands.

On section 2—Canned fruit or vegetables or food to be offered for sale in prescribed containers only.

Mr. MOTHERWELL: Heretofore the containers have been specified by dimensions but the specific gravity of the contents varying, the weight would vary, so that although a tin by measurement might be supposed to contain four pounds, the contents would not be quite up to that weight. It was therefore necessary that the containers should bear a label indicating that the weight was so much, less so many ounces. Now, instead of having the containers conform to a certain size, we are providing that the contents must weigh so much net. In the case of grain, a bushel of wheat might weigh more or less than a bushel of some other product; just the same as a bushel measure of potatoes will hold a very different weight from a bushel measure of wheat. So a four-pound syrup container, while it will hold this weight when the syrup is thick, will not when the syrup is thin. Consequently, with the specific gravity of these commodities varying so much, we find we cannot protect the public by specifying a certain size of tin; the only way is by prescribing that the tin must contain so many pounds net.

Sir HENRY DRAYTON: I wonder, Mr. Chairman, what the minister says about the meaning of the term "food or food products." If the question is open under the first section, it must also be open under the second.

Mr. MOTHERWELL: The principle embodied in the second section is the size.

Sir HENRY DRAYTON: Yes, but it applies to any food or food products just as much as the preceding section does.

Mr. CAHILL: Why should it not apply to all foods?

Sir HENRY DRAYTON: I am not answering my hon. friend's question; I had not anything to do with the preparation of the bill, and that was not the subject of my inquiry. Recently an hon. gentleman interested in the fish business—probably my hon. friend was not here—wanted to know whether the previous section covered salmon or not.

Mr. CAHILL: I was here; but this section refers to canned foods.

Sir HENRY DRAYTON: This is the same thing. Is the article salmon covered under the term "food or food products?"

Mr. MOTHERWELL: I think that that is very largely a technical objection.

[Mr. Motherwell.]

Sir HENRY DRAYTON: It is no more technical in one place, Mr. Chairman, than it is in the other.

Mr. MOTHERWELL: Oh yes, I think a real question was raised the other day by the hon. member for Vancouver Centre (Mr. Stevens).

Sir HENRY DRAYTON: The definition we have here is the definition under which this act is going to be administered. Of course, I may be making a violent assumption in thinking so. There is your definition, that "canned foods" includes "foods that have been preheated, cooked, preserved," and so forth, and this very next section says "all canned fruit or vegetables, or products thereof"—there is no trouble about that— "or any food or food products which may be named by the Governor in Council," and so forth. It is perfectly clear that if in the opinion of the minister this section ought not to apply to fish it is no good our considering it now. Why not let the whole thing stand?

Mr. MOTHERWELL: We might make a little progress, that is all.

Sir HENRY DRAYTON: I do not know that it makes a bit of difference letting it through while the other stands.

Mr. MOTHERWELL: If we find the interpretation clause has to be changed to exclude all kinds of fish, we can attend to it.

Sir HENRY DRAYTON: If you make the change in the first section it will have the effect of taking it out of this other section; there is no question about that.

Mr. MOTHERWELL: If we except fish, which we may have to do, then section 2 will be subject to the interpretation clause.

Sir HENRY DRAYTON: My hon. friend is quite right; that is how it should be, but it is not so drawn. It is another evidence of the careless way in which these amendments are drafted. This section is to apply to any food or food products, and everybody knows that fish is a food product. But I do not know that it makes very much difference so long as the whole matter is held over.

Mr. MOTHERWELL: I do not think it does either, but I should like to have the opinion of the committee as to the principle of selling the contents by weight rather than by measure.

Sir HENRY DRAYTON: I think everyone would say that that is right.

Mr. MOTHERWELL: All right, Mr Chairman, I move that the committee report progress and ask leave to sit again.

Mr. HUGHES: Mr. Chairman, before the committee reports progress, I should like to ask the minister a question. I heard him say that he might introduce an amendment excluding canned fish from the act. Now, is lobster fish or meat? I do not think the question has been settled.

Mr. MOTHERWELL: I do not know.

Mr. HUGHES: It is supposed by some people to be meat, and I think it is classed under that head.

Mr. COOTE: Why should not salmon be included in this act?

Mr. MOTHERWELL: I am under the impression that fish is dealt with in another act, and I must accept responsibility for neglecting to look it up so I could give the committee that assurance. I will certainly have that information ready the next time this bill is dealt with.

Progress reported.

SUPPLY

TRADE AND COMMERCE

Hon. J. A. ROBB (Acting Minister of Finance) moved that the House go into committee of Supply.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Before you leave the chair, Mr. Speaker, I would refer to the question raised the other day by the right hon. leader of the opposition (Mr. Meighen) as to the Minister of the Interior (Mr. Stewart) having gone into supply while we were in supply of some other department. I just wish to make it clear to my right hon. friend that to-day we are going into supply in the name of the Minister of the Interior, although we may take up, between now and six o'clock, some supply of the Minister of Trade and Commerce, and go on with supply of the Department of the Interior this evening.

Motion agreed to and the House went into committee of Supply, Mr. Gordon in the chair.

Trade and Commerce—Honorary Advisory Council for Scientific and Industrial Research (including the collection and distribution of information; fellowships, studentships and bursaries for the training of scientific researchers for service in Canadian industries and technical departments of the government service; grants in aid of scientific and industrial researches; special problems; salaries of the staff; printing and stationery), $120,000.

Hon. T. A. LOW (Minister of Trade and Commerce): Mr. Chairman, there is no change in this vote, which is for the purpose set out in the estimates.

Mr. STEVENS: Mr. Chairman, this item is of very much more importance than is indicated by the amount voted, although that is considerable. It deals with a subject which I know commands the interest and consideration of a very large number of the citizens of this country, particularly those engaged in educational and industrial affairs.

Parliament has from time to time given consideration to this matter; in 1918 or 1919 a very important committee of parliament studied it in considerable detail. It has been the view of many that the scope and usefulness of the research council should be extended and that their work should be recognized by larger support from the country. So far as I have been able to learn, the work they are carrying on is deserving of the highest commendation. Unfortunately I do not think the people generally either adequately appreciate the value of that work or are sufficiently acquainted with what is being accomplished, and parliament might very well spend an hour or two in the consideration of the activities of this very important branch of the public service. For myself I would like to see every member of the House become fully seized of the necessity and value of this work. As to the personnel of the council, presided over, I believe, by Dr. Tory, I think it is deserving of recognition; at least the efforts of the council deserve such recognition as parliament can give by a consideration of the work undertaken, the results accomplished, and the researches in prospect. Personally I would like to have seen the vote increased. I would like to see this type of work seriously taken up by parliament and the great educational institutions of the country, with a co-ordination of all activities to bring about the best possible results.

There is, for instance, the great question of the natural resources of Canada, to which I know the research council have given a great deal of study and in regard to which they have compiled some exceedingly valuable information—information which, if parliament were fully siezed of its importance, would have a great influence upon its decisions in various lines as regards bills presented, estimates passed, and so forth. I would ask the minister to give the committee an outline of the work of this important body.

Mr. LOW: I agree with the hon. member that the work being carried on by the research council is of great value to all classes of industry. It is carrying on a number of important investigations; I might give the committee some idea of the work by citing

a few of these from the list of researches being conducted at present:

New process in the treatment of the separation of silver, lead, zinc, in the concentrates of complex ores.

Investigation on ball milling and rock crushing with rolls.

Utilization of Canadian iron ores.

Certain phases of the destruction of piling by marine boring animals.

Research on the cereal grain rust problem of western Canada.

Deterioration of concrete in the alkali soils of western Canada.

Nature of winter hardiness in crop plants, alfalfa, clover and winter wheat.

Possibility of economically cultivating several essential oil and drug yielding plants in British Columbia.

Reforestation in New Brunswick

A co-ordinated and concentrated attack on tuberculosis in man and animal.

Relation of soil acidity to nitrogen-fixing bacteria.

To ascertain the food relation of certain minute organisms in the cultivation of fresh water fishes.

Number and kind of bacteria found in frozen fish obtained from the Atlantic and Pacific seaboards of Canada with a view of obtaining information that will be of service to the fishing industry.

The laws governing the sizing of crushed minerals on sieves.

Artificial propagation of the sturgeon.

Investigation of plant extracts containing glukokinin.

Best methods for obtaining accurate results in testing varieties, strains and treatments of grains.

The isolation of vitamin B and the determination of the chemical constitution by this compound.

Investigation of the life history and economic importance of the onion maggot in the Montreal district.

Processes in evergreen plants whereby they are rendered capable of growing and forming their organic compounds during the very low temperatures of the winter season.

Variation with frequency by the power loss in dielectrics.

Channel interference in wind channel testing.

Investigation into the distribution, life history, amount of damage caused by, and the best methods for reducing losses from wireworms.

These are some of the researches being carried on at present by the research council.

Mr. STEVENS: That is an interesting index, but it is not a very full or satisfactory description. May I ask the minister a few questions based upon the list he gave? He referred to matters affecting various phases of agriculture, such as soil bacteria, the question of rust, of winter hardiness in crop plants, such as clover, and so forth; tuberculosis in animals, and some investigations regarding grains, onion maggots, and wireworms. These are subjects directly connected with agriculture. Does the Department of Agriculture cooperate with the research council in this work, or is there duplication? We had a very lengthy dissertation of about an hour the other day on the part of the Minister of Agriculture on the subject of rust, in which, I must say, he displayed a good deal of personal insight into the question. Is the information he gave in that connection based on the researches of this body, or are the two bodies, the research council and the Department of Agriculture, carrying on separate investigations into the same subjects? We ought to bring all these investigations on each subject under one control so that there will be no waste of public money. It would be better, for instance, for the research council not to touch a question at all if another department is spending a considerable sum of money on the same line of research. That query is applicable not only to such matters as have been referred to, but also, for instance, to the fisheries. For example there is the sturgeon fishery, and other fishery ressources—are these being investigated by the officers of the Fisheries branch as well as by the industrial research council?

Mr. LOW: I am unable to speak authoritatively as to that, but I do know that each department co-operates to the very fullest extent with the research council. Whether in the particular instance my hon. friend refers to the investigation has been conducted separately by the research council, or jointly by the council and the department, I am unable to say. I understand that a very complete report on all these items has been placed in the hands of my hon. friend, and I have no doubt he has read it.

Mr. STEVENS: I rather regret the minister's suggestion that my questions to him are influenced by a desire to indulge in captious criticism.

Mr. LOW: Not at all.

Mr. STEVENS: I am not influenced by any such desire. I am deeply and honestly interested in the subject; I desire to support it and I want to see the vote passed. I should like to see this work enlarged, but I think it is due to parliament that we should have a very complete outline of what is being accomplished. I also think it is due to the industrial research council to have that done. As I have already stated I do not think their work is half appreciated by parliament owing to a lack of complete information as to what they are doing.

Mr. STEWART (Argenteuil): As one who, like my hon. friend (Mr. Stevens) is deeply interested in research work and who has had some opportunity to see the advantages obtained by the co-ordination of effort along this line I think I can assure my hon. friend that the desired co-ordination is going on just as rapidly as possible. I do not think the Department of Agriculture, and the officers

of that department, should be robbed of any credit due to them with respect to their investigations into tuberculosis; but as my hon. friend will admit a solution of the evil of tuberculosis is, perhaps some distance away yet. The bringing together of the activities of the research council and of the officers of the Department of Agriculture and the Mines branch is with the idea of effecting co-ordination; and at the moment I can assure my hon. friend the work is going on in a co-ordinated way. My hon. friend will also admit that our universities should be given a great deal of credit for what has been accomplished in the past. They have inaugurated research work in a great many directions but in each case the investigators worked along particular lines, and possibly there may have been some overlapping in Toronto as compared with the work carried on in the universities of Alberta, or British Columbia. The effort of the research council is to interest scientifically trained men from one end of the Dominion to the other in these investigations, and they are succeeding in that object. Not only that but, they are also bringing about co-ordinated effort in those departments of the federal government where work of a scientific character is in progress also. This is a matter in which I have been chiefly interested myself, and I agree with my hon friend (Mr. Stevens) as to the necessity for co-ordinated effort along such lines. With respect to the results so far achieved one needs only to mention the discovery of marquis wheat which has been so frequently referred to in this House. No one can over-estimate the importance to Canada of the introduction of this particular variety of wheat. Nor can one over-estimate the value—whether we consider human beings or the animal kingdom merely,—of the discovery of a cure for tuberculosis. It is only by continued experimentation, and by thoroughly exploring every avenue which offers a possibility of success, that such a desirable end can be accomplished. Of course there are difficulties in the way of securing co-ordination on the part of all those interested. Nevertheless we are succeeding, and we hope to accomplish even greater results in this direction. The Mellon institute in the United States is an admirable illustration of what can be accomplished for example, by private enterprise. It seems to me that so far as the government of Canada is concerned no opportunity should be left to encourage the work of scientific and industrial research of, and through the money voted annually by parliament provide such facilities as will enlist the co-operation of the best scientific minds available. I agree with the hon. member for Vancouver Centre (Mr. Stevens) that we know far too little about, and that we appreciate insufficiently, the tremendous value to humanity and to industry likely to result from work of this character when properly carried on.

Mr. NEILL: While this vote appears not to be reduced, in reality it is, inasmuch as I understand it is the intention of the government to have this appropriation furnish the money for the assistance previously given to the Standardization Association of Canada, as I think it is called. I understand that the vote under that heading has now been withdrawn, and the association in future will either have to obtain funds under this particular vote or else will have to cease its activities altogether. Should this prove to be the case I think it is a matter very much to be regretted. When the House opened I placed a resolution on the order paper dealing with this question and although it is not likely to be reached now the subject it deals with is worthy of great attention. Perhaps I may be permitted to read the resolution in question as expressing briefly my views of the matter. It would almost look as if I had taken this step as a result of being prompted by the officials of that particular association because they found their vote had been cut off and consequently were appealing to members of parliament to give them some backing. I can assure the government, however, that I never heard of the association until I had placed my resolution on the order paper. I was prompted to do so by seeing the measures Australia is adopting in this regard. I have not got my notes on the subject here, but if I recall rightly they were spending a large sum of money—if I am not wrong in the neighbourhood of $50,000—on the improvement and development of this branch of work. They realize apparently that it is going to be a very great thing for the industrial life of every country, and especially of every country that takes it up quickly. They have gone ahead on that line also in the United States, and as my resolution suggests it resulted in the saving of millions of money to the United States government and that only in its capacity as a purchaser because it was enabled to buy so much cheaper by standardizing its requirements. If the committee will allow me I will just read my resolution through. It is as follows:

Whereas, standardization in engineering, manufacturing, and other allied activities is becoming increasingly necessary in order to stop the huge economic loss

now occurring, and the subject is now engaging the attention of all the leading nations of the world.

And whereas, those countries which are advanced in national industrial standardization will have established a great commercial ascendancy over those that are not so organized.

And whereas, the progress already made in this direction in the United States has resulted in the saving of millions annually to the United States government alone in its capacity as a purchaser.

And whereas, some of the advantages of standardization are:—

Makes mass production possible.

Stabilizes production and employment.

Eliminates indecision in production.

Stimulates research and development as to the best types, and encourages the adoption of the best standards.

Helps to eliminate practices which are merely the result of accident or tradition and which impede development.

Provides a truly competitive market in which to buy material and equipment, giving accurate definitions to enable the purchaser to know what he is buying and whether he is getting what he bargained for.

Makes it easier to repair and replace equipment.

Reduces the cost of manufacture.

Simplifies the keeping of cost accounts.

Increases the production and efficiency of industry.

Will go far to eliminate disputes and litigation as to whether the product is in accord wtih the sample.

Or, otherwise expressed, standardization means to the producer increased production, better quality at reduced cost, and to the consumer a better article for less money.

Therefore, this House is of the opinion that the government should be asked to investigate and encourage the development of standardization in Canada.

I was not aware at that time that we had any association handling it, and I would earnestly urge the minister to consider the possibility of giving, in the supplementary estimates this session, sufficient money to carry on these activities. At present they have only a small grant. I think it is a retrograde step to do away with their investigations, and if you place the expense upon this vote now under consideration, it just means that some other necessary investigation has to go without sufficient funds. I submit the Minister of Trade and Commerce might well consider whether he could not see his way to give assistance to this very necessary work.

Mr. LOW: It is true as my hon. friend says that the vote for $10,000 included in last year's estimates has been dropped this year. This work will be carried on by the research council, and I will be very glad to take into consideration the recommendation of the hon. member that possibly an amount might be placed in the supplementary estimates.

Mr. HOEY: What amount was voted for standardization last year?

Mr. LOW: The amount voted was $10,000.

[Mr. Neill.]

Mr. MANION: I should like to offer my endorsation, for what it is worth, of the expenditure of money on scientific and industrial research in this country. It is one of the subjects we should all be interested in, because every industrial country in the world to-day is going into it to a greater degree than we are. Before the war Germany made many of her advances because of the high type of research in which she took part. There are in the northern section of Ontario two subjects upon which research will undoubtedly bring a great deal of value. I do not know that they are subjects—one of them at least is not—which the government should deal with; but at any rate any subject which would mean wealth to the country might be well considered by the government or by its staff of officers. The first subject I was thinking of—and I believe that a certain amount of work is now being done with regard to it in the Mines branch—is in regard to discovering some method by which the types of iron ore in Canada can be used economically. I know there has been a certain amount of work done in this matter, and if Canada could develop some method by which the magnetite ores in Canada—which are not of such a high grade as in the United States—could be developed, then Canada would have the greatest iron resources of any country in the world, because we have scattered all over the country hundreds of millions of tons of ore. So far, outside of the Helen mines, there have not been discoveries made of the hematite and the other types of ore which are most useful, but if we can discover some method, either by electric smelting—and we have great electrical possibilities in the northern country—or some other means of utilizing these magnetites in some portions of Canada, it would be of great value to the country. There is another subject—and this is the one which perhaps the government might say it was not their duty to deal with—and that is the question of pulp and paper. I remember on one occasion, speaking to Professor Macallum, who was chairman of the Industrial Research Commission, and he informed me—and the statement was concurred in by prominent men in the pulp and paper industry—that at the present time in that industry there are very valuable products which have been allowed to go to waste out of which great value will ultimately be taken. I do not know if I could go into an analysis of the subject, but he made the statement to me before a prominent pulp and paper man. who admitted it was correct, that that industry was merely in its infancy. I believe

those subjects are of such importance—and there are many others in Canada perhaps of like importance—that they might well be made the subject for research by the Dominion, even if ultimately the profits which came from those investigations go into the hands of private individuals; at least it would mean the development of the Dominion of Canada. I wish to endorse all that can be said in favour of this development in Canada at the present time, so long as the government sees its way clear to spend money to carry on this work. Could the minister tell me how much money was spent last year in scholarships to students?

Mr. LOW: The amount was $37,548.

Mr. MANION: And how much of the whole item was spent? Was the whole $120,000 spent?

Mr. LOW: Yes, practically the whole amount. With reference to the investigation being carried on in connection with the low grade iron ores, I might read a paragraph from the report. The report says:

Utilization of Canadian low grade iron ores.

A very great part of the iron ore smelted in Canada is imported amounting in some years since 1915 to as much as 96 per cent. The utilization of the vast deposits of Canadian ores under suitable treatment would help in reducing the adverse balance of trade and would establish a valuable industry.

The National Research Council has investigated this problem through its associate committee on mining and metallurgy and has issued a report on the findings of the committee. The facts established by the committee bring the utilization of Canadian ores within immediate sight of realization.

Mr. MANION: I am very pleased indeed to hear the report as read by the minister, because it would be of very great value to this Dominion if the provisions of the report were carried out.

Mr. LADNER: My hon. friend has referred to the mines. I do not know whether the research work in connection with forestry comes in any way under this item. The forest pathology work of the government here has been carried on for some time, but in British Columbia, where we have such extensive resources in forestry, there is quite a sentiment among the people that more research work should be carried out. The destruction of the forest by diseases, and the study of the causes and effects of diseases of trees, I think are about as important to the people of Canada, as the preserving of the natural wealth of the country and other natural resources, and I should like to ask the minister whether or not this vote applies in any respect to the encouragement of the study of the diseases of trees and the causes and effects of these diseases.

Mr. STEWART (Argenteuil): May I answer my hon. friend, because this happens to come in my department? We are endeavouring to co-ordinate scientific research work under the auspices of the council of scientific research in Montreal at the moment. As my hon. friend knows, at McGill we have established a laboratory in which the chemists of the department have been working. In answer to the hon. member for Rainy River, I will say that this work has been proceeding for years. We have a special laboratory dealing with the pulp and paper problem, and the work is being co-ordinated with the work of the scientific research council. What we have been endeavouring to do there is to utilize the jackpine, for example, which carries a large percentage of pitch, by working out the problem of elimination of the pitch and making the product useful for the manufacture of pulp and paper. So much has this appealed to the pulp and paper manufacturers that they are voting us this year $20,000 to assist us in this work. We are co-operating with the pulp and paper industry throughout Canada in this way.

As regards the diseases of trees, work of this character has been carried on in the eastern provinces. But again we have it in the different departments. In the Department of Agriculture the Entomological branch is carrying on work on that particular problem. Our own foresters are working on the question of the age of forests. What I tried to impress upon the committee was that the endeavour was to co-ordinate the efforts being made in regard to all these different problems because, as a layman, it seems to me, if we are going to get results, the thing to do is to bring the scientific men in council together to discuss these problems. The chemist may be dealing with the problem of iron, and he may supply the missing link that the man working on forestry has missed, because he is a scientifically trained man. That is why it is important to get the work co-ordinated by bringing the men together to discuss these problems. In that way we are going to receive value for the money invested and reap the greatest advantage.

Mr. LADNER: Have the officials of the Department of Agriculture—and I know some of them who are highly competent men, forest pathologists, engaged in forestry work—come into contact with the research body which is referred to in this vote, because I think it is highly important that they should.

In fact, I would urge upon the government, in view of the tremendous resources of timber in this country, the need of extending that kind of work. From inquiries I have been able to make and records of public accounts and estimates, I do not think enough research work is being carried on in forest pathology, because now that American capital is coming into Canada and acquiring our forests and the general development of that industry is under way in a very decided manner in British Columbia, the interests of the country would be furthered if more of that kind of work were carried on and if, as the minister has said, the different departments engaged in research work were coordinated so that their efforts would be unified.

Mr. STEWART (Argenteuil): That is the point. But I do not want my hon. friend to go away with the misapprehension that the Department of Agriculture were studying any other problem than that of the destruction of the forests by what is known as the spruce bud worm and other insect life. The other problem, that of diseases attacking trees, is being undertaken in the Forestry branch itself, but it so happened that the entomological work was being carried on by the Department of Agriculture.

Mr. MacLAREN: Will the minister give the details of the vote of $120,000? I think that will give us a better idea of the work it is proposed to accomplish.

Mr. LOW: The figures are as follows:

Expenditure, April 1, 1924 to January 31, 1925

1. Fellowships		$ 4,620 00	
2. Studentships		6,700 00	
3. Bursaries		12,866 66	
4. Assisted researches		10,555 00	
5. Fees, etc		299 55	
6. Administration:			
Committees	$ 696 96		
Travelling, members of council	3,389 05		
Travelling staff and advisory committees	1,986 48		
Library	1,137 90		
Printing	374 26		
Office supplies	1,086 67		
Salaries of staff	14,434 33	23,105 65	
			$58,146 86

Fixed charges and estimated expenditure, February 1, 1925 to March 31, 1925

1. Fellowships		$ 1,440 00	
2. Studentships		4,800 00	
3. Bursaries		9,000 00	
4. Assisted researches:			
Grants authorized but unpaid		3,500 00	
Applications under consideration, and to be considered		36,450 00	
5. Administration:			
Committees	$ 250 00		
Travelling, members of council	1,000 00		
Travelling, staff and advisory committees	1,000 00		
Library	500 00		
Printing	500 00		
Office expenses	400 00		
Salaries of staff	3,000 00	$6,650 00	
			$61,840 00
			$119,986 86

Mr. STEVENS: There is just one item that will come out of last year's vote, and that is applications under consideration, $36,450. If these have not been paid, under the law as I understand it, they lapse at the end of March and payment will have to come out of this year's vote.

Mr. LOW: I have no doubt that some of this has been paid out since this statement was prepared, but I do not know just what amount. The statement was compiled as quoted and was made up three months ago.

Mr. STEVENS: If it is not paid within a week or two after the end of the year, the vote lapses.

Mr. LOW: I quite understand that.

Mr. LADNER: In reference to the fellowships, studentships, and bursaries, are these provided for in Canadian universities, and

what do they refer to? For example, in the University of British Columbia, would fellowships and scholarships be provided? Have they been provided?

Mr. LOW: I think we have a list. I am sending for it.

Mr. EVANS: I should once again urge on the government the importance of carrying on investigations regarding the standardization of parts. Particularly is this of importance to those engaged in primary production whether it is in agriculture or other vocations. Perhaps one of the greatest object lessons to us today is the Ford car, repairs for which can be had in practically all parts of the world, and we know they are all the same and fit. Millions could really be saved every year in this country by the standardization of parts of implements of production in agriculture. Some two years ago when I attended the meetings of this council, they could not report any more progress than that they had standardized in that line only some plough bolts. That is about the only thing we have on the farm that we are sure will fit all shares. There are hundreds of parts which could, with profit, be standardized if the different machinery companies would deem it to be in their interest to standardize them, such as mower knives, sections, binder knives, guards, keepers and all those things. It could be done without very much expense to any implement company and it would be a great step forward in economy in every direction if we had some system of standardizing all implement parts in Canada. I should not like to see the work curtailed by reducing the grant by $10,000, and if anything of the kind is contemplated I think it would be well for the government to consider spending money for this specific purpose.

Mr. SPEAKMAN: I want to associate myself with those who support such expenditures as this. I think it is manifest to most of us who have given any serious consideration to the subject that practically the greatest hope for future prosperity in this country lies in the development and utilization of our own natural resources, many of which now lie latent and are therefore of no immediate value. I might refer to two of outstanding importance, which I understand would come under the purview of the research council: these are the tar sands of Athabaska and the oil shale of northern Alberta. The possibility of utilizing these tar sands and of extricating the oil on a commercial scale presents almost a boundless view of what may be achieved in the future. Few people in this country realize the enormous extent of these resources. When we read the opinion of noted geologists, that the oil shale in that province contains the greatest exposure of petroleum known to the world at the present time; when we consider the gradual depletion of the present sources of oil; when we hear that many of the oil fields will in a few years be totally inadequate to meet the increasing consumption; and when we know it is estimated that these sands themselves contain sufficient oil to supply the world, at the present rate of consumption, for over 3,000 years, it will be realized what an enormous source of wealth we shall have there when we have discovered the secret of extraction at a sufficiently low cost to make it a commercial possibility. I believe that if this work were properly carried on and full attention were paid to these resources the result would be a production of wealth that would represent a return, not at the rate of a hundred per cent but of thousands per cent on the expenditure we are now proposing. I concur of course in the opinions that have been advanced along various lines of research, but in my own opinion the examination into this particular subject with a view to utilizing these latent resources affords the greatest scope for activity on the part of the research council and the greatest possible hope that this country will be finally put upon a prosperous and paying basis.

Mr. WARNER: I do not believe that the public generally know just how to get in touch with the research council. Is there any official of the department in Ottawa to whom one may refer any subject in which he is interested?

Mr. LOW: There is a staff in Ottawa to whom inquiries may be directed, but if the matter is of considerable importance it must be referred to the whole council.

Mr. WARNER: I have not tried to become familiar with the work of the council and for that reason it may seem ignorant on my part to have to ask these questions. But I do not believe that the public generally are any better off in this regard than I am. I have in mind a matter of some importance to my own part of the country. At Tofield during the last winter something happened in the lake that killed practically all the fish there; at any rate, millions of them have floated to the edge of the lake since the ice has gone. Would a matter of this kind come

within the scope of the council, or would the Department of Marine and Fisheries look into it?

Mr. LOW: I think the hon. member might refer a matter of that kind to the Department of Fisheries.

Mr. WARNER: No one seems to know what the trouble was and I have been trying to get some information as to how we might get the matter investigated. Probably the Fisheries department would deal with it. I am quite satisfied that there is a great work for the council to do, and I was pleased when I heard that there was such a body.

Sir HENRY DRAYTON: The minister said something that interested me very much when he referred to the report that was made to him by the council. The statement was made that, judging by another report, the irons of Ontario can be so treated as to be made of commercial value. I cannot remember the exact words that were used, but that was their effect. I remember that some years ago a proposition was made to the then government which, if I recollect rightly, was referred to the council for investigation. The idea was to treat by electricity the ores in the province and to reduce them to a sort of iron briquette. It was claimed that if ore were treated in that way and freed from impurities it would bring a better price than not only ordinary ore but pig-iron as well. I wonder if this report deals with that question and, if it does, whether there is any proposition before the government in that direction.

Mr. STEWART (Argenteuil): The investigation is not complete.

Sir HENRY DRAYTON: How far has it gone? This is a matter of greater importance than any other single thing I can think of. If something practical could be done in this matter it would render of considerable value a very large part of the province which is now looked upon as a barren connecting link between one part of the country and the other. I should very much like the minister to tell us what was in the other report, or perhaps he can refer us to it and we can look it up for ourselves.

Mr. STEWART (Argenteuil): I doubt if the report is published. I have not yet seen it, and I can assure my hon. friend that I have been watching for the result of the investigation with keen interest. I thought it was of so much more importance to press into the service all the technical minds to work on the problem than to encourage the industry by bounty or other means.

Sir HENRY DRAYTON: Quite right.

Mr. STEWART (Argenteuil): Let us first, if we can, discover a process by which our low grade iron ores can be transformed into pig which will make their mining a profitable undertaking. Therefore I have urged my officers, who are working in close harmony with the officers of the Honorary Advisory Council for Scientific and Industrial Research, to devote their energies to a solution of this problem. But to say that it is completed or nearing completion would be perhaps venturing into the realm of prophecy.

Sir HENRY DRAYTON: I understood the minister to say that.

Mr. STEWART (Argenteuil): Yes; but I have reports so frequently that only one more process is required to do the trick that I am inclined to wait until that final process is discovered. But I feel confident that by the electric process the difficulty will be solved, and that it will be possible to transform our low grade iron ores into the desired product.

Mr. STEVENS: If there is no objection to the publication of this report, I think it should be published as one of the government publications. I am sure it would be very interesting to the mining industry of Canada. Of course, I am not asking that it be published if there is sound reason for not doing so.

Mr. STEWART (Argenteuil): There can be no reason why it should not be published. I think I said, when the mining estimates were up, that on this problem we have been consulting the American mining institutes, the United States Department of Mines and outside resources, including Germany, wherever they were working on problems of this character. So there is no desire for secrecy; rather the desire is to throw as much light as possible upon the solution of the problem of transforming these low grade iron ores into a commercial product.

Sir HENRY DRAYTON: I would point out to the Minister of the Interior (Mr. Stewart) in connection with this idea that electricity is the one thing which is absolutely essential, and I think that so far all the scientists are agreed that high potential electricity is probably the only way in which we can at all economically rid our ores of their impurities and give them the necessary beneficiation. I would also point out to him that if we ever do make anything with these low grade ores—and I cannot for one minute

think that we will not—he will find that instead of exporting our electricity he will be at his wits' end to get enough of it; and that he will also find in this connection that electricity which is available at the other side of the divide, or waters draining into the Hudson bay and the Arctic ocean—which is all very carefully set out in the survey of electrical power available in this country—will be absolutely useless for the purpose, being too far away, and that there is a commercial circle outside of which electricity cannot be handled.

Mr. STEWART (Argenteuil): It is always widening, however.

Sir HENRY DRAYTON: Yes. I remember when it started out at eighty miles with a potentiality of 30,000 volts; it is now two hundred and fifty miles with a potentiality of 110,000 volts. It may be we will arrive at a higher potentiality and transmit electricity further, but there is an end to it all, and the location of water power convenient to the mine is the one all-important thing for us to remember. We still have a few water-powers available in northern Ontario. But it is only necessary for me to draw this to the minister's attention, that for work of this kind you have to have a large quantity of power, that the available water-powers of this country shown in the resultant totals of water-powers available in Canada cover all water-powers of 50 horsepower and up, and that nothing but a large development is really of any use at all in connection with electric smelting. And the minister will also agree with me that we have very few large possible developments left within reasonable distance.

Mr. LADNER: Mr. Chairman, the minister has been good enough to send over to me details of the fellowships, studentships and bursaries which are awarded under this item. I find there are four fellowships, one for $1,500 and three for $1,200; twelve studentships of $1,000 each and thirty bursaries of $750 each. In addition there is provision for assisted researches. Seventeen of these grants are awarded to McGill University, fifteen to the University of Toronto three to the University of Manitoba, three to the University of Montreal and the Ecole de Montreal, one to Macdonald College, two to Queen's University, one to the University of Saskatchewan, one to the University of Alberta, and one to the University of British Columbia. The grant to the University of British Columbia refers to mines. I find that assisted researches are given for the study of the diet of foxes in captivity, the life and habits of the horsefly, in western Canada, the life and habits of onion maggots, and radio. Now, my purpose in referring to these in detail and segregating them is to suggest to the minister that, so far as western Canada is concerned, where the potentiality of natural resources is great and the need of research is about as acute as in any portion of the Dominion, perhaps the Honorary Advisory Council might consider the wisdom of granting fellowships or studentships with greater liberality than they have done heretofore to the universities of the west for the study of those things which are indigenous to that country. For instance, in British Columbia we have mining, lumbering and fishing industries, and even agriculture is carried on on a considerable scale. It seems to me it would be only fair to have research work carried on in these western universities as well as in the universities of McGill and Toronto, because I know from personal connection with the University of British Columbia that the men at the head of the various departments of research are of a calibre and possess facilities that would enable them to handle this kind of work most efficiently. In fact the government has already a Forestry branch there which has some relationship with the university. Has the minister any control over these awards, and if not is he disposed to suggest to the council that the distribution of fellowships should be on a more equitable basis? I know that McGill and Toronto universities have a very high standing; I happen myself to be a graduate of the University of Toronto. But when they take thirty-two of these awards out of forty-six, and when western Canada has only five out of the total, it would seem that the distribution could be more equitably arranged without in any way interfering with the scientific purposes for which such awards are given.

Mr. LOW: The grantees are allowed to select the university in which the post graduate work shall be carried on.

Mr. LADNER: Is it entirely in their hands?

Mr. LOW: Yes.

Mr. LADNER: If a grantee decided that he wanted to study in South America, would he be entitled to do so?

Mr. LOW: Preferably a Canadian university, but wherever it was possible to carry on his research.

Mr. LADNER: Some of them go to English universities. I notice one fellowship in the Department of Physical Chemistry at the University of Cambridge, England.

Mr. LOW: I understand that 15 out of 103 have selected foreign countries, but the selection of the university rests with the grantee.

Mr. MacLAREN: The point brought up by the hon. member (Mr. Ladner) is worthy of consideration, namely, an extension of the distribution of these scholarships and studentships in the general interest of scientific research itself and with a view to creating a wider field of interest. I notice that one bursary or scholarship was given to British Columbia. It would appear from the list that a fortiori there is an even more striking want of recognition in the east, because no name was read from the east at all. I do not mean that the research council are not considering various portions of the Dominion, because they are: I had an incident under my own observation in connection with the carrying out of investigations as to the growth of trees on burnt lands by methods of seeding. But there is a great deal in stimulating scientific work among our younger men in all portions of the country, and there would be more fairness and equality in a more general distribution of these studentships, bursaries and scholarships.

Sir HENRY DRAYTON: From an examination, during the brief time it has been in my hands, of the report the minister so kindly sent over to me, it is apparent that the question of the utilization of ores has been solved. Take, for instance, the first conclusion of the committee. It reads:

> The building up of an iron mining industry in Canada in the near future can be accomplished at a reasonable cost.
>
> There are large deposits of iron ore in Canada which under present conditions are lying idle because the ore cannot be profitably marketed, but which can be utilized to supply central Canada with iron ore if deemed advisable.
>
> The desirability of establishing an iron mining industry in Canada should be impressed upon the government.
>
> The most promising method of utilizing Canadian ores is to prepare them by beneficiation, if not naturally suited, for treatment in blast furnaces by the present blast furnace process.
>
> Special processes, including electric smelting, which have been devised to treat iron ores, are not under present conditions likely to be a big factor in building up the industry in Canada.
>
> During recent years good progress has been made in methods of beneficiating iron ores, prior to reduction by the blast furnace process, and these methods are applicable to Canadian ores.

I have had a chance only of glancing at this report, and my hon. friend will correct me if I am wrong, but it would appear that this ore can be commercially turned to immediate account, and that in order to get it turned to immediate account steps have to be taken by the government. Take, for example, recommendation 12:

> A bounty of fifty or seventy cents per ton of merchantable ore or concentrate would encourage operators to proceed with attempts to utilize Canadian iron ore. This bounty would be insufficient to warrant expectation of immediate profits from operation of the known deposits, but would perhaps be sufficient to warrant the operation of some mines now idle and the installation of plants for sintering the ores, and the carrying on of further large scale investigation which must be at least partly paid for from proceeds of the sale of iron ore and concentrates.

The great desirability of this being done in the interests of our railways is also pointed out, also the earnings we would make out of it. Then, of course, there would be a saving on account of our not having to buy so much ore, as we now do, from the United States. I observe that we have a direct recommendation in that respect. In the preface the committee say:

> The committee believes that if a small bounty of say fifty cents a ton was paid on the beneficiated Canadian ore, or any natural ore of equal grade and quality which might be discovered in Canada, for a period of about ten years, this would go far to even up the price difference—

That is, the price difference between this ore and the cheap American ore.

> —and would stimulate the miners of Canada to increase their efforts to cut down costs and deliver to the Canadian furnaces an ore which would replace the imported ore and thus not only save for Canada the $5,000,000 annually sent out of the country to pay for imported iron ore but also greatly increase the income of the Canadian railways through the transportation charges on the great tonnage of ore which would be handled.

So apparently in respect to this particular matter the work of the scientists is finished They say that this can be done if the government will take the necessary action. I understand that the government of Ontario are prepared to look after their share of it. What action has this government taken in regard to these recommendations?

Mr. STEWART (Argenteuil): I have not seen the report myself, but it quite coincides with my understanding of the matter. A year ago the Ontario government voted, I think, twenty-five cents a ton—I speak subject to correction—for the purpose, and this year—I speak again subject to correction—they have doubled the amount, which would correspond with what is contained in the report as to the amount to be offered as a bounty. Ontario is especially interested in this problem. But I assure my hon. friend that the electrical process that he and I were discussing a few moments ago has not yet reached the stage of finality. I am hopeful, however, that in due course it will not be necessary to provide

any bounty in order that the transformation of low grade ores into iron may be made profitable. It is to that end that we are bending all our energies.

Sir HENRY DRAYTON: What is the date of this report?

Mr. STEWART (Argenteuil): I do not know.

Sir HENRY DRAYTON: It is recently published?

Mr. STEWART (Argenteuil): Just out, I imagine.

Mr. LOW: For the benefit of the hon. member (Mr. MacLaren), I would like to cite one instance of the work being done by the research council. I quote from a memorandum I have before me:

It has been estimated that the lobster packing industry was suffering a loss of $700,000 a year not only through spoilage in the cans but also because of the fact that no methods have been devised which would make it possible to can lobsters so that they would keep their colour, flavour and texture for a year or eighteen months, the period required to market them. Through an investigation undertaken for the National Research Council by Dr. F. C. Harrison of Macdonald college, the council has succeeded not only in discovering the cause of the discoloration, smut, or blackening of the lobster in the cans, but has also been able to issue instructions to the lobster packers, which, if carefully followed will solve the problem.

Mr. MacLAREN: I think that work was done in connection with the biological station in St. Andrews. I mentioned certain instances of what they are doing, and no doubt there are many others. My point, however, is that these scholarships and student prizes might well be distributed over a much wider area than they are at present.

Mr. LOW: I have already informed the hon. member that the grantee names the university to which the scholarship shall go.

The CHAIRMAN: Shall the item carry?

Sir HENRY DRAYTON: No, Mr. Chairman, I want an opportunity to read the report on this matter.

Item agreed to.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

International Customs Tariffs Bureau, $660.

Mr. GARLAND (Bow River): Will the minister tell us something about this item? There is quite a reduction this year. What is the nature of the work carried on by the tariff bureau, and why is there a falling off?

Mr. LOW: It is a permanent organization located in Brussels, which translates all the tariffs of the world. The reduction, as will be noticed by the vote, is considerable. This vote is $1,140 less than last year, owing to the decrease in the cost of management of the bureau. This is the amount which was provided for this service before the war.

Owing to the marked increase in the expenses connected with the bureau, a few years ago Canada as well as other countries was requested to increase its normal allowance by four times the pre-war rate, in order that the work of the bureau might be performed with full accuracy and speed, and that full satisfaction might be given to the various states comprised in the agreement. Canada increased her contribution as requested.

Last year our estimates were reduced to three times the pre-war rate, but after they were prepared we were advised by the Under Secretary of State for External Affairs that the regular contribution of Canada for the thirty-fourth period, April 1, 1924 to March 31, 1925, was exactly 3,106 gold francs, which worked out to the amount stated.

Mr. GARLAND (Bow River): Was the total amount voted spent last year?

Mr. LOW: Last year $659.29 was spent.

Mr. GARLAND (Bow River): Did the minister say that the function of this international customs bureau was merely the translation of the customs tariffs of the various countries? Do I understand the minister to mean the translation from the language and terms of the other country into the language and terms, shall we say, of the bureau of Canada?

Mr. LOW: My hon. friend is right in his understanding.

Mr. GARLAND (Bow River): How many countries are engaged in that?

Mr. LOW: Thirty-nine different countries.

Mr. GARLAND (Bow River): Are any important countries not members of the bureau? For example, is Russia a member of the bureau?

Mr. LOW: I am unable at the moment to say whether Russia is included. All the important countries of the world are in it.

Mr. GARLAND (Bow River): Germany?

Mr. LOW: Yes, Germany.

Mr. GARLAND (Bow River): The minister does not know whether Russia is included or not?

Mr. LOW: No, I am unable to say.

Item agreed to.

Motion Picture Bureau (salaries of temporary employees; travelling expenses of officials; photographic supplies and chemicals: printing and stationery; repairs to instruments; sundry expenses), $25,000.

Mr. STEVENS: Will the minister give us some indication of the usefulness or otherwise of the work being carried on by this bureau? I am not quite certain in my own mind that it is worth the vote. It may be. I am not in a position to criticize it too strongly. At the same time I think we ought to scrutinize this vote with some care, with a view to ascertaining whether or not we are actually getting value for the work that is alleged to be performed.

Mr. LOW: The motion picture bureau under the Department of Trade and Commerce was established for the purpose of advertising abroad Canada's scenic attractions, agricultural resources and industrial developments. It performs work for all the departments of the government. Some revenue is derived from the project. It is not altogether self-sustaining yet, but splendid success has attended the efforts of the bureau in recent years, in the production of a series of one-reel film subjects which are now widely known as the "Seeing Canada" series. These "Seeing Canada" one-reel films have been circulated throughout the world. So successful has been the work carried on by the bureau that the Ontario government has adopted the policy of the Dominion government by opening up its own motion picture bureau in Trenton, Ontario.

The motion picture film as a medium of advertising, with special reference to the encouragement of tourist traffic has proved an invaluable aid in the work of spreading abroad a knowledge of Canada's attractions and opportunities. The National Railways recognized the power of the film for this type of advertising and the Canadian government motion picture bureau, as in former years, has co-operated closely with this transportation company in this respect.

The bureau has continued to co-operate closely with all federal departments requiring its services. The following list enumerates the various departments of the Canadian government which have availed themselves of this service:

Canadian National Railways.
Department of Immigration and Colonization.
House of Commons.
Department of Agriculture.
Department of Insurance.
Department of National Defence.
Post Office Department.
Department of Railways and Canals.
Department of Trade and Commerce.
Department of Marine and Fisheries.
Department of Mines.
Department of Public Printing and Stationery.
Department of the Interior.
Soldiers Settlement Board.

Thus the work has been accomplished at a great saving to the various federal departments. The work has also been produced in an efficient and satisfactory manner, to judge from the many commendatory letters on file, and the many repeat orders which we have received.

Mr. STEVENS: Will the minister give the distribution of the item under the various departments?

Mr. LOW: Film production activities. The following new "Seeing Canada" one reel film subjects have been produced since the commencement of the present fiscal year:

The Romance of the Rockies.
Where Beauty Dwells.
City of the Foothill.
Canada's Farthest North City.
Amid Alpine Snows.

Owing to the general slump in the short subject market in the United States, the bureau has not been able to invade this territory on as broad a basis as was anticipated. A contract was made some time ago with Bray Productions, Incorporated, but this organization has had rather difficult times lately. However, in a letter addressed to the director of the bureau, a few days ago, they state that they are again in the market to consider our product for theatrical distribution. There are thirty or forty companies in the United States to whom our films are sold, and we receive a great deal of advertising in that way.

Mr. STEVENS: What is the revenue? Would the minister respond to my previous request for the distribution of this item?

Mr. LOW: The revenue for the past five years is as follows:

1920-21	$11,917 06
1921-22	15,773 29
1922-23	16,141 10
1923-24	17,090 98
1924-25 to January 31	21,159 25

That shows a very marked increase each year, particularly last year.

Mr. MEIGHEN: When was this policy, which the Ontario government has adopted, first initiated in Canada?

Mr. LOW: I think within the last year or two.

Mr. MEIGHEN: I mean by the federal government?

Mr. LOW: In 1914. I understood my right hon. friend to ask about the Ontario government.

Mr. MEIGHEN: This government has adopted it as well as the provincial government?

Mr. LOW: Yes, the Ontario government inaugurated it within the last year or two.

Mr. WOODSWORTH: At the request of the city electrician of Winnipeg, I took up with the department the question of the supply of a film that was not safe to be used in the various places where it was shown in that city. I think the particular film objected to at the time was explained, but the city electrician still complained that very dangerous films were being shown by this department. The minister was good enough to show me a copy of a lengthy file of correspondence, but so far as I could see, the object of the city electrician was not fully met. He wrote them with regard to this as follows:

Under date of February 9, 1922, I addressed Mr. T. Grove Smith in reference to a number of nitro-cellulose films that were being shown in the churches in this city by a representative of the Dominion government Forestry department. This gentleman gave me to understand that when he got back to Ottawa he would endeavour to get these pictures printed on slow-burning film as he admitted that he had had a succession of objections made to the use of the films at different points throughout Canada, in fact, he was barred from using these in Toronto. Subsequently an official of the Dominion government Water Power branch came through the west with another series of films, these also being printed on nitro cellulose stock and he exhibited these at several points.

And so on.

You will gather from the above that there have been numerous cases where we have definitely pointed out that various officials of the Canadian government departments have been touring Canada with nitro-cellulose films and that your department has in various cases furnished this product; that the Canadian Pacific railway were in ignorance of their own regulations in carrying this dangerous product in sleeping cars and lending these films to all kinds of parties for use in churches, etc.; further we find that the Canadian National Railways are obtaining through the medium of a film exchange in Winnipeg full width nitro-cellulose film issued by your department and that we have been obliged to refuse permission to this company to show these films in Winnipeg, all of which goes to show that your department is, or has been, whether you realize it or not, instrumental in distributing one of the most dangerous products, from a safety to life point of view, that is known to-day.

There follow certain statements substantiating this contention. It would seem quite obvious that if any kind of film is being used that is dangerous to be exhibited under conditions in which it is frequently exhibited, this department ought to take such steps as are necessary to substitute the proper kind of film. I do not know whether this is being done or not. We ought to have some guarantee that such is the case.

Mr. LOW: I think I showed the hon. member a very full report from the director in charge of the bureau. We comply with the regulations of the different provinces so far as it is possible to do so. There is no duobt, as my hon. friend has said, that some of these films are inflammable, but as long as we meet the requirements of the provinces, we feel that we are within the law.

Mr. WOODSWORTH: This is a distinct statement that the requirements of the city of Winnipeg electrical department are not being complied with. That is why I am protesting. Although the minister was kind enough to show me this file of correspondence, I could not see that it met the objections of the city electrician.

Mr. GARLAND (Bow River): Probably a good deal of valuable advertising is passing through this bureau. I have indeed seen many of the magnificent scenes in the Muskoka lake district, Windermere district, Banff district and so on and I have appreciated them very much. When there was such confusion in this House some time ago over certain conditions in a particular area in this country, it might have been a good idea if the bureau had sent down some operators to take moving pictures of conditions in Cape Breton, shall we say? While one section was occupied at that business, another one could have been taking moving pictures with slowed up machines of this government going into action to improve the condition of affairs.

Item agreed to.

Printing of parliamentary and departmental publications, including cost of Canada Year Book, $90,000.

Mr. WARD: Is the Canada Year Book published in the Printing Bureau?

Mr. LOW: We turn the year book over to the King's Printer who arranges for its printing. Sometimes it has been given to outside printing firms but what was done in the last year or two I do not know.

Mr. STEVENS: Surely the minister can tell us who printed the Canada Year Book last year. I think his answer is rather thin. This is an important publication and if it is paid for out of this vote parliament is entitled to know where it is printed.

Mr. LOW: My deputy tells me that he turns it over to the King's Printer.

Mr. STEVENS: Does the minister mean to say that neither he nor his deputy can tell us who printed the book last year?

Mr. MEIGHEN: The head of the whole enterprise is sitting behind the minister. It is inconceivable that he could not inform the minister on a second's notice.

Mr. STEVENS: The minister does not expect parliament to allow this item to pass without any information at all. I do not think that is reasonable.

Mr. LOW: I shall be glad to give the information to-morrow if the hon. member will allow the item to pass.

Mr. STEVENS: Let it stand.

Mr. LOW: I have no objection.

Mr. LUCAS: How many copies are printed?

Mr. LOW: The estimate for this year is 9,500.

Mr. LUCAS: Is any revenue derived from it?

Mr. LOW: Some are sold but I cannot say offhand just what the revenue is.

Item stands.

Weights and measures inspection—	
Salaries of staff..	$196,970
Contingencies, including rent, travelling expenses of director, his staff at Ottawa, district inspectors and inspectors; postage, stationery..	102,630
International Bureau of Weights and Measures..	400
	$300,000

Mr. STEVENS: This is a very large item and no details are given in connection with it. I think we should have a complete statement from the minister as to what the whole item comprises. We have $196,000 for salaries of staff. That is a considerable sum and it is en bloc. I do not suppose there are any details in any other part of the estimates as regards this sum. If there are I want to find out; if not the minister might be good enough to explain the whole thing.

Mr. LOW: For the year 1923-24, the following were the expenses:

Salaries..	$192,243 28
Rent..	280 00
Travelling expenses..	90,246 11
Sundries..	10,946 55
	$293,715 94

The revenue for the same year amounted to $290,450.18. For the ten months ending January 31, 1925, the expenditures amounted to $255,456.03 and the revenue to $263,450.23. That will leave a surplus of $7,994.20, which I think is the first surplus in the history of this branch of the department.

Mr. STEVENS: There seems to be a drop in the revenue. Does the revenue keep pace with the degree of inspection?

Mr. LOW: There has been a gradual increase in the revenue.

Mr. STEVENS: But the revenue which the minister gave for the year before was some $290,000.

Mr. LOW: The revenue for the last year, as I have just quoted it, is for ten months only.

Sir HENRY DRAYTON: Where are these offices?

Mr. LOW: They are all over the country from the Atlantic to the Pacific, about 20 in all.

Mr. MEIGHEN: Is there a head office for each province?

Mr. LOW: No, these are district heads.

Mr. MEIGHEN: Is not some of this work also under the Customs department?

Mr. LOW: Not now.

Mr. MEIGHEN: Take the weights and measures office at Regina.

Mr. LOW: It used to be under Inland Revenue; they are all under the Department of Trade and Commerce now.

Mr. MEIGHEN: When did they come under that department?

Mr. LOW: In 1918, when the Inland Revenue department was abolished.

Mr. MEIGHEN: Were they never under Customs?

Mr. LOW: Other parts of the department went under Customs but this came under the Department of Trade and Commerce.

Mr. MEIGHEN: Is there not still a Weights and Measures branch of the Customs department?

Mr. LOW: No.

Mr. MEIGHEN: Will the minister say that there has not been since 1918?

Mr. LOW: My deputy informs me that the change was made in 1918.

Mr. MEIGHEN: Is there no scale inspection under the Customs department now?

Mr. LOW: No.

Mr. STEVENS: I read in the report of the grain commission which was submitted a few weeks ago that at a number of elevators in the prairies an extra notch had been filed on the beam into which the balances would fit, and that by this means those using the scales were enabled to defraud the persons taking wheat to these country elevators. I gathered from the report that officials of this department did make some investigation, and if I remember rightly two prosecutions were said to have been made. The offence was of such a vicious and, to my mind, unpardonable character that we should know whether or not these prosecutions were vigorously pursued in order to ascertain who were the responsible parties and to mete justice to them. I cannot conceive of a more heinous offence than a weighmaster actually filing a notch in the scales for the deliberate purpose of defrauding the farmer who was bringing his grain to the country elevator. It is worse than burglary, for a burglar does take some chance, but a wretch of this character is robbing more or less under cover. Can the minister tell us to what extent an effort was made to bring these offenders to justice?

Mr. LOW: My deputy informs me that we prosecute every case that comes before us.

Mr. STEVENS: Pardon me, Mr. Chairman. I really cannot think the minister is serious in giving an answer of that kind. I wish he would dismiss from his mind the idea that in bringing up this question we are simply trying to embarrass him.

Mr. LOW: I do not think so at all.

Mr. STEVENS: Everybody knows that the department is supposed to prosecute; but I am asking whether in this case of deliberately doctoring the scales to defraud the farmer of the correct weight of his grain any action was taken by the department. I give him the reminder that to the best of my recollection some twelve or fourteen cases are reported by the royal commission; there may have been others so far as I know. If my memory is correct, there were only two prosecutions up to the time the report was filed. I want to know what happened in those two cases, and why the others were not prosecuted.

Mr. LOW: Our inspectors visit the elevators periodically and inspect the scales, and when they find anything of the kind referred to they prosecute under instructions from the department. Unfortunately my deputy has not the list of prosecutions with him to-night, but it can be very easily furnished, and I shall be glad to supply the information to my hon. friend.

Mr. STEVENS: Does not the minister recall these very serious incidents?

Mr. LOW: No, it would be impossible for me to carry in my mind the names of the firms who were prosecuted; but there have been a number of cases.

Mr. STEVENS: But these are specific cases mentioned in the report of the royal commission. I want to impress upon the minister and upon the government the seriousness of these cases.

Mr. STEWART (Argenteuil): My hon. friend is referring to the report of the Royal Grain Commission?

Mr. STEVENS: Yes, to Mr. Justice Turgeon's report. I have not a copy of it under my hand, but as I recollect, he says that the attention of this branch of the Department of Trade and Commerce was called to the matter. What impresses me is that an offence of that kind would amply warrant the government making some special effort to prosecute. It is not like an inspector going into a country store and finding the scales a little out; that is not a parallel case at all. I know that this branch of the minister's department is, through its inspectors, daily inspecting scales that may not be true; but the case I am referring to was one of deliberate fraud, and I am surprised that the minister does not recall the cases mentioned in this royal commission's report. The matter should not be allowed to rest here. If the minister is not aware of it, or if his department has not prosecuted the offenders to the limit, then I think the government is open to censure, or at least these cases should be dealt with and an effort made to bring the criminals to justice.

Mr. LOW: The department is fully seized of the seriousness of any attempt to tamper with grain scales, and I am informed that in all such cases we have prosecuted to the limit.

Mr. STEVENS: I am telling the minister that this report of the royal commission distinctly states that only two cases were prosecuted.

Mr. LOW: I do not remember what is stated in the Royal Grain Commission's report.

Mr. STEVENS: There were some twelve or fourteen cases scattered among different companies. But this is such a serious offence that I am surprised to see the minister is so indifferent, and I want to impress upon him the fact that this is too serious a thing to let slide.

Mr. LOW: My hon. friend does not need to impress its seriousness upon me. I realize fully the heinous nature of such a crime, and I promise him that any of these cases brought to my attention have been and will be prosecuted to the limit. My deputy informs me that we have prosecuted every case to the limit.

Mr. MEIGHEN: Can the minister tell us how many cases were prosecuted last year, 1924?

Mr. LOW: I thought my deputy had that information with him, but he has not.

Mr. MEIGHEN: Surely he can give us an estimate? Has he not got that with him?

Mr. LOW: He tells me that he prosecuted every case that was brought to his attention last year. He thinks there were six or eight.

Mr. MEIGHEN: If there were only six or eight, surely he can recall whether the dozen mentioned in the report of the Royal Grain Commission included them.

Mr. LOW: My deputy informs me that he has nothing with him to-night respecting these prosecutions. I shall be very glad to send the information to my right hon. friend.

Mr. MEIGHEN: Can the minister suggest any subject on which his deputy has any information to-night? We have not been able to get anything yet.

Mr. GARLAND (Bow River): Mr. Chairman, I must rise to add my protest to that of the hon. members who have preceded me respecting this matter. When I read the report of the Royal Grain Commission I was struck by that very aspect of the case presented by Mr. Justice Turgeon. When I read that out of the large number of cases of defrauding farmers that were shown to have occurred, only two were reported as having been prosecuted, I wondered who was responsible and why a little more activity was not shown. I am just as anxious as the hon. member for Vancouver Centre (Mr. Stevens) to have some information from the minister with respect to this, and I hope that when he brings the list down he will let me have a copy of it.

Mr. LOW: I will.

[Mr. Low.]

Mr. GARLAND (Bow River): I should like to know what the department is doing, and how many check-ups of frauds of this character have been made during the past year. In connection with this item, can the minister inform me whether the same inspector goes around and examines the same sets of scales every year?

Mr. LOW: There are a number of inspectors for those districts.

Mr. GARLAND (Bow River): I know that. But is each inspector kept in the same district annually?

Mr. LOW: Yes.

Mr. GARLAND (Bow River): I think it might be just as well if that system were discontinued and the inspectors changed from district to district each year. I am not prepared to make any charges at this time, but I submit that, realizing the frailties of human nature, we can readily understand the danger that lies in leaving the same man on the same route every year. In view of the disclosures made in the Turgeon report, and of many other cases which no doubt the minister is aware of, I think he would be well advised to change his inspectors around from zone to zone every year so they would not always be in contact with the same men.

Mr. WOODSWORTH: Mr. Chairman, I should like to know whether the minister has considered the advisability of standardizing the ton weight. I am informed that in the coal mining industry it is customary for the operators to pay the miners on the basis of what is known as the long ton. On the other hand the operators sell the coal to the consumer on the basis of what is known as short ton weight. The one is the English ton; the other is the American ton. In Canada we ought to have either one or the other, and the same ton ought to apply to those who are producing the coal as to those who are consuming it. Has it been considered by the department whether we should have one standard for weighing coal and other such commodities?

Mr. LOW: It has not been considered by the department. I will make a note of it, though, and look into it.

Mr. GARLAND (Bow River): I suggest that the minister might go further than simply making a note of it and looking into it. He might seriously consider coming back to the House next session—if, indeed, he comes back—with a change in the regulations, if necessary with an amendment to existing legislation,

in order to prevent coal operators from defrauding either the public or the users of coal, or both. Let us have a standard ton weight. We have similar complaints with respect to the lumber business, but there are very plausible explanations for that; the condition is not quite the same. We buy two by four lumber and we get one and three-quarters by three and three-quarters, or something like that. However, that has been discussed already.

Mr. McBRIDE: The long ton is practically the standard weight in British Columbia. The miner mines the long ton, and the man who buys it gets a long ton, while the man who freights it from the mines figures on the basis of the long ton. There is always a certain amount of waste in the distribution of coal. It amounts to about 240 pounds to the ton, and when the merchant sells the coal he gets a very small price for what is practically dust.

Mr. WOODSWORTH: I bought coal frequently in British Columbia. I have not mined it. But I always received the short ton, to the best of my knowledge.

Mr. BRISTOL: I was present some years ago at an inspection of weighing methods in Fort William. It was disclosed on that occasion that it was quite possible by pressing a certain thing to weigh less, or pressing it a little later to weigh more. It was said that that practice prevailed particularly in Buffalo and that a difference could be made of 200 pounds to the ton without difficulty by several manipulations of that character. It seems to me that who the inspectors are and when they are going to inspect ought not to be particularly well known when an inspection is to take place.

Mr. CARROLL: In the vicinity of the coal mines coal is sold on the basis of the long ton, but when it is transported some distance it loses in weight. Probably the wholesaler buys it by the long ton, but it loses so much of its weight in transportation that he would be put out of business if he sold it by the long ton. The deterioration or loss in weight during transportation over long distances, with shipment and re-shipment, exposure to the air and so on, may perhaps account for the difference between the long and short ton so far as coal is concerned.

Mr. WOODSWORTH: I submit that that does not solve the matter at all. If a certain amount of waste has to be taken care of, there is that surely in connection with the handling of every kind of material, and it ought to be recognized. We have it in the handling of grain, in the handling of stock, and everything else. But we ought to know exactly how many pounds the ton stands for. It ought to stand for a certain fixed number of pounds, and it ought not to vary from place to place as it is doing at present.

Mr. CARROLL: Anyway, you get what you pay for, whether it be a long or a short ton.

Mr. WOODSWORTH: We may or may not. One of the most serious aspects of the whole question is that when computations are made we do not know whether we are dealing with the long ton or the short ton. Again and again we have heard that the miners get so much a ton for mining the coal and that the consumer has to pay so much a ton for the coal that he burns, and we do not know ordinarily that we are talking about two entirely different standards. We should know that we are talking about the same standard everywhere.

Mr. GARDINER: What do they do with the beams in grain elevators where they have been filed? Do they take them out or how do they dispose of them?

Mr. LOW: The scale is seized.

Mr. STEVENS: One of the chief difficulties in western Canada is a lack of confidence in various processes that take place in connection with the handling of the crop from the farm out to the ocean port. There is a feeling that the shipper is not receiving a square deal, that something is taken from him that is not warranted. I have already referred to the fixing of the scale by deliberate filing of a false notch and the use of that instead of the correct one in weighing into country elevators. In this report of the grain commission, which is rather voluminous—I cannot put my finger exactly on the citation—it is stated that twelve or fourteen country elevators had scales of that character. The Chairman calling the item passed a moment ago forced me to abandon my search for the reference, but I will read a paragraph of the report with regard to weighing:

> Elevators scales are now inspected officially, usually once a year. This inspection should be more frequent if possible, and the Board of Grain Commissioners should insist rigidly that all weights be taken on an even beam. We find the dissatisfaction from weighing very widespread and it is importatnt that all reasonable measures be taken to remove it.

I am aware that this does not refer directly to false beams, or doctored beams, or whatever you like to call them; it touches upon the

method of weighing, and it makes reference to inspection. It is not only necessary that we should guard against falsifying the scales, but it is in the interests of the producer and vendor of the grain that he should have a righteous weight, and that is not what he has been receiving. I think, perhaps, one of the main features of this report—particularly that section relating to country elevators—indicates that the farmer has lost substantially all through the years by not receiving the full weight of his grain. And now they ask in this report, as I have already indicated, that these inspections should be more frequent than once a year, and I think in this regard they are justified. For instance the rush season lasts for what period?—three months, four months, perhaps—and then the scales may be comparatively idle for a long period. Certainly there would be an opportunity to inspect the scales at the commencement of the season, because a scale might easily get out of order without any criminal intent and still the vendor of the grain be defrauded. If the scales are inspected in the early part of the season, and then some time during the busy season, there would be greater safeguards. I am sorry the minister cannot give us some idea of the degree to which these criminal offences have been followed up. I think the minister would be justified in taking extreme measures to apprehend those who were responsible. Let me point out to him what the difficulty is, and then I want to make a further suggestion. The difficulty, I think, is that out of twelve or fourteen companies one company had two scales that were out of order and the remainder were scattered amongst the other companies, the indication being that the offender was not a company but the individual who had charge of the elevator. I think, one is justified in accepting that on the face of it. The excuse is now raised that without any positive knowledge of the time the notch was filed they cannot locate the operator who was in charge of the elevator when the offence was committed, and naturally everybody now connected with the elevator denies all knowledge of the offence. I want to say to the minister that to my mind the offence is so serious it should not be allowed to rest there. No one now in charge of the elevator is going to admit the commission of this criminal offence. I think the minister would be justified in getting the ablest operators in the Royal Canadian Mounted Police to go to work on these cases and if possible run these criminals down. Because the offenders are at large somewhere, and if not doing this thing they are perpetrating some other type of fraud; any man who would deliberately file a scale would perpetrate any kind of fraud it is possible for him to accomplish. Therefore I think the matter should not be allowed to rest until the last offender has been run down and put behind the bars where he properly belongs. If the minister, or some minister on behalf of the government, would give us an assurance that that would be done I would have nothing further to say. My hon. friend from Lunenburg (Mr. Duff) suggests that an assurance be given. If he were minister he would do it to-morrow, I know his type. But I want the minister to realize that I am serious about this matter, and that a great many other people are serious about it. What we want is an assurance that these individuals shall be followed to the uttermost limit, and not allowed to rest until they are brought to justice.

Mr. LOW: I give my hon. friend that assurance at once.

Mr. BRISTOL: I should like to ask the minister whether there has been any evidence before the department as to the matter of surpluses of grain? For instance after weighing in and out at Port Arthur and Fort William it has been found on many occasions that as much as 50,000, perhaps 100,000 bushels have been left in the government elevator in days gone by. I wonder if that practice is going on still?

Mr. LOW: Of course from time to time all elevators have surpluses, more or less, at the end of the year when they weigh up. That is a well known fact.

Mr. BRISTOL: It is the practice then to give the farmers the worst of it when their grain goes into the elevator and to give the elevator the best of it when the grain comes out?

Mr. LOW: Those are the overages which are referred to in the report of the Royal Grain Commission. A case was decided a few days ago before the Supreme court in reference to that very same matter.

Mr. STANSELL: Is there any provision for inspecting the weight of coal in car load lots? My reason for asking the question is that I have received a number of complaints from coal dealers that it is practically impossible for them to get the full weight that they pay for when they buy the coal in car load lots, and they are unable to get any

adjustment because if they make any complaint they are not supplied with coal the next time they need it. Therefore in order to get regular supplies of coal they have to accept a continual shortage and either take the loss themselves or pass it on to the consumer. Is there any provision for the inspection of car load lots, and will the minister look into these complaints?

Mr. LOW: I may say that at the moment the Board of Railway Commissioners are now investigating complaints of shortages of coal in car load lots.

Mr. MEIGHEN: Will the minister say that he ever read that $200,000 report of Mr. Justice Turgeon and his associates?

Mr. LOW: I have read a large portion of it.

Mr. MEIGHEN: It seems to have passed out of the minister's mind very rapidly. What I cannot understand is this: Here is a report —the most expensive report this country was ever called upon to pay for—and one of its chief findings is these frauds in respect to grain elevators and it finds ten or a dozen. The minister says "We have prosecuted all brought to our attention," and then his deputy says "that all that were prosecuted were six," and he does not know who the six were. On the other hand the royal commission finds that of the twelve cases they discovered only two offenders were prosecuted. These statements do not agree. Which is right?

Mr. LOW: That may be in a period of two or three years.

Mr. MEIGHEN: Surely a report that cost that amount of money cannot be wrong.

Mr. LOW: Will my right hon. friend say that the twelve cases referred to were in the one year? My deputy informs me there were six or eight last year.

Mr. MEIGHEN: That has nothing to do with it. The revelation was last year. I presume the offences extend over many years but prosecutions take place at the time of the revelation. Now, where are the prosecutions following the revelation?

Mr. LOW: The department has been prosecuting every year.

Mr. MEIGHEN: Then the report is wrong.

Mr. LOW: I have not the paragraph in the Royal Grain Commission's report to which my right hon. friend refers before me.

Mr. MEIGHEN: The deputy will remember it. Surely some one in the department has a digest in his mind of this report. The hon. member for Vancouver Centre will be more detailed.

Mr. STEVENS: We must enlighten the minister a little I think in regard to this. If the Chairman will give me a moment I will locate that part of the report where the matter is dealt with; the report covers quite a large field. I do not want to read too much; I think I have the matter here:

9 p.m.

In the case in question a former agent of one of the companies—

I am reading from the Royal Grain Commission's report, page 26—

—told us that in the year 1921 he tampered with his elevator scales—

This individual said himself he tampered with these elevator scales—

—by filing a notch in the shoulder of the beam behind the zero mark in such a manner that the poise could be pushed back of this zero mark—

Mr. LOW: What year was this?

Mr. STEVENS: This is in 1921. Certainly 1921 is not this year; but let the minister dismiss from his mind whether it was this year, last year or the year before.

Mr. LOW: What I want to know is whether the offences cover one year, two years or three years?

Mr. STEVENS: If the minister will follow the matter through he will get the whole story. Simply to say that because it was in 1921 it is a long time ago—

Mr. LOW: That is not the point at all. I would like to know in what years the twelve offences referred to in the report were committed?

Mr. STEVENS: I am going to read this again:

In the case in question a former agent of one of the companies told us that in the year 1921 he tampered with his elevator scales by filing a notch in the shoulder of the beam behind the zero mark in such a manner that the poise could be pushed back to this zero mark and thus cause the scales to register false weight, and that he used the scales falsely adjusted in this manner during part of the season. He alleged that he performed this manipulation on the instructions of the travelling superintendent of the company. This superintendent gave evidence denying the allegation in so far as he was concerned and disclaiming all knowledge of the illegal filing. It also appeared that this superintendent had dismissed this agent from the company's services on the grounds of incompetence and carelessness. Giving due weight to all the evidence adduced in this case, and which it is unnecessary for our purposes to review here, we cannot hold the superintendent guilty personally of the charge made against him but

the scales were in fact found to have been tampered with in the manner described by the agent. The company has since removed this damaged scale beam and put in a new one. Under the rulings which have been given so far on this question the mere having for use in one's possession of scales in this condition, even without knowledge, is an offence under the provisions of the Weights and Measures Act rendering the defective beam liable to seizure and the owner to the penalty of a fine. This means that it is the duty of those who deal with the public in the buying and selling of merchandise to make sure that they have not in their possession and use scales which have been falsified.

In other words, it throws the onus upon the person who owns the scales.

We reported this case to the Department of Trade and Commerce recommending that it be followed up and that steps be taken by inspection to ascertain to what extent, if at all, the practice of tampering with elevator scales is being carried on.

I pause there to suggest to the minister now that the $200,000 royal commission has brought it to his attention, is it not extraordinary that he has not the information before him or in his mind? That is the point we are complaining of. Then I proceed to read:

We were informed that upon several occasions in the past beams containing a false zero notch, such as the one described in the case heard by us, had been seized by inspectors of the Weights and Measures branch, Department of Trade and Commerce. Upon receiving the report of the case brought before us at Moose Jaw in August, 1923, the department took immediate action to discover what elevator scales showed signs of having been manipulated, and twelve seizures and prosecutions have since taken place. In each of the cases the tampering was of the same nature as that described at Moose Jaw. A notch had been filed in the beam behind the zero notch so as to provide for the registering of an incorrect weight, the difference thus created in favour of the buyer ranging, in these eleven cases, all the way from thirty to a hundred pounds.

That is, thirty pounds in a wagon load, not in a car.

The wagon load is first weighed correctly, the poise being set at zero and a true weight given. Then after the grain is unloaded the poise is slipped back to the false notch, and the extra weight thus created is added to the weight of the empty wagon, thus increasing the deduction to be made from the gross to give the farmer the net weight of his grain.

Then the report continued:

In eleven of the twelve cases convictions were secured. In all these cases, however, nothing further was proved than that the companies had possession of the scales and were using them.

This is the point.

In each case the agents denied having used the false notch on any occasion. Some of them stated that they were unaware of the existence of the notch until it was pointed out to them by the inspectors. Others said they had found it on the beam when they took charge of the house. The superintendents of the companies likewise disclaimed all guilty knowledge of the condition of the scales. In some cases the company in possession had taken over the elevator only recently from a company now out of business, and the false notch might have been there prior to the change of ownership. Again the manipulation might have been

[Mr. Stevens.]

the work of a guilty agent making a profit for his own purposes. Many explanations, of course, are possible besides that of guilt attributable to the company itself. It is worthy of note that these twelve cases affect ten different companies, one company being found to have two such scales in its possession the others only one each.

Which I referred to a moment ago.

Mr. VIEN: Is my hon. friend not satisfied with eleven convictions out of twelve offences?

Mr. STEVENS: I am not and I will tell my hon. friend why. These convictions were merely formal convictions of a company having in possession a scale with a notch in it, the company having disclaimed all responsibility, each individual in the company disclaiming responsibility, and there the matter stands. What I am saying to the minister is this: The offence is of such a contemptible and vicious character that it warrants the government following it up until it discovers who put the notches in the scale, and I think it could be discovered. I do not say it could be discovered by simply examining those who were involved, or taking their word. These commissioners, it will be remembered, were sitting simply as investigators of the grain trade. They were not investigating this specific thing and just happened to run across it. Naturally you could not expect them to put persons on trial, but it was brought to the attention of the department.

Mr. VIEN: My hon. friend says they were convicted.

Mr. STEVENS: I think my hon. friend will agree with me that the convictions under the act simply meant that the company was convicted of having in its possession scales that were false.

Mr. CARROLL: The law gets after the owner of the scales; but, is there nothing in the act by which the man perpetrating the fraud can be convicted?

Mr. STEVENS: I have not the act before me and cannot quote the section. Certainly anyone who is guilty of perpetrating a fraud under the Criminal Code can be prosecuted. I do not want to appear to over-emphasize this matter but it is a case of deliberate and vicious fraud.

Mr. LOW: I should like to correct a statement I made a few minutes ago. The deputy said he thought there were six or eight prosecutions last year. The correct number is fourteen.

Mr. STEVENS: That takes in prosecutions everywhere. I am trying to get the government and the minister to appreciate the desir-

ability of hunting down these criminals, not the companies themselves, not punishing the companies for having the scales in their possession and disclaiming responsibility, but to ascertain who are the individuals responsible and to prosecute them.

Mr. WARD: A matter has been brought to my attention just recently, and if I am not in order in discussing it under this item then I will stand corrected. I have been informed that millers throughout Ontario who purchase wheat, say at points like Goderich, find that there is a systematic steal. One miller informed me that out of some forty cars milled last year, every 1,200 bushel car was an average of eight bushels short, and every 1,500 bushel car was an average of eleven bushels short. I am not sure that that is a matter for the Department of Trade and Commerce. It may be a matter for the grain commission, but if this systematic stealing has been going on as one miller put it, I think someone should look into the matter.

Item agreed to.

Mr. LOW: I would like to revert to item 372:

Printing of parliamentary and departmental publications, including cost of Canada Year Book, $90,000.

The right hon. leader of the opposition asked if the Canada Year Book had been printed at the bureau. The information I have now is that it has been printed there for the last four years.. About 1,500 to 2,000 copies are sold at $1 each.

Mr. STEVENS: Will the minister give us the total of this vote, not only the items of the cost of the Canada Year Book, but the balance of the vote?

Mr. LOW: There is an item of $22,000 for publications likely to be published in 1925-1926. I might give a detailed list:

Census:
- Bulletins: We hope to have all bulletins out before April 1, but it would be well to allow, say $1,000 in case of failure.
- Reports of 1921 census:
- Vol. III: Families, dwellings, ownership of homes, rentals, earnings.
- Vol. IV: Occupations and employment.
- Vital statistics.

Production:
- Monthly bulletin of agricultural statistics
- Fruit statistics.
- Fur farms.
- Dairy factories.
- Fisheries.
- The lumbering industry.
- Pulp and paper.
- Manufacture of wood and paper products.
- Central electric station.
- Preliminary mineral production report, January 1. to June 30.
- Preliminary mineral production report, 1924.
- Annual report on mineral production (final).
- Coal statistics for Canada.
- Chemical industries of Canada.
- Manufactures of non-metallic minerals.
- Manufactures of iron and steel.
- Manufactures of non-ferrous metals.
- Coal statistics.
- The textile industry.
- General manufactures.

External trade:
- Annual report of trade of Canada.
- Monthly report of trade of Canada.
- Condensed preliminary trade report.

Transportation:
- Railway statistics.
- Electric railway statistics.
- Canal statistics.

Internal trade:
- Grain trade report.
- Live stock and animal products.
- Prices and price indexes.

Financial statistics:
- Municipal statistics of cities 10,000 and over.
- Municipal statistics of municipalities of 3,000 to 10,000.
- Municipal statistics of municipalities of 1,000 to 3,000.
- Education statistics.
- Canada Year Book.
- Report of Dominion Statistician.
- Criminal statistics.

Mr. KELLNER: Has the minister in those statistics any estimate of the cost of grain production per bushel or per acre in the west? If he has, what is that cost?

Mr. LOW: I have no doubt that is given in some of the reports of the Dominion Statistician who issues a monthly bulletin. If my hon. friend will look through them, no doubt he will find them.

Mr. MEIGHEN: If the minister has three or four years to spare, I would suggest that he do it. I will undertake that at the end of that time he will not have found it, and I never had charge of the Department of Trade and Commerce.

Mr. STEVENS: I notice the minister included in this item of $90,000 an item for agricultural statistics of various kinds. A few nights ago we were passing agricultural estimates, included in which were several votes for printing. Are statistics, bulletins and reports issued by the Department of Trade and Commerce and also by the Department of Agriculture on similar topics?

Mr. LOW: We are endeavouring to eliminate all duplication. I do not think the same statistics are issued in the Department of Agriculture as in the bureau.

Mr. STEVENS: I think there was a vote for printing for the Bureau of Statistics the other night in addition to this.

Mr. LOW: I do not think so.

Mr. STEVENS: I am sure of it. I think the minister will find there was a very considerable vote for printing under the heading of Bureau of Statistics.

Mr. LOW: There may have been something under the item of the census.

Mr. MEIGHEN: Why is all the government printing not estimated for together and the detailed items given instead of being scattered around in this way? This, of course, is a mere fraction of what government printing is costing. Does this always appear in the estimates by departments? Are there not Printing Bureau estimates by themselves?

Mr. LOW: Yes. I am sure my right hon. friend, who has been in this House for so many years, realizes that each department has its own expenditure in connection with these items.

Mr. KELLNER: Does the vote for "Dominion Bureau Statistics, including western census," cover printing?

Mr. LOW: That covers the cost of the census and its publication.

Mr. KELLNER: It includes them, but there must be something else.

Mr. WARD: What is the cost of printing the Canada Year Book?

Mr. LOW: It is $23,000.

Mr. WARD: What is the balance of $90,000 made up of?

Mr. LOW: I have just read a long list of publications.

Mr. WARD: What is the system employed in arriving at the cost of production, say of manufactured goods of any kind?

Mr. LOW: Any information of that kind is gathered in from the different manufacturers of a particular line, similar to the procedure with agriculture.

Mr. MEIGHEN: Does this include the cost to the Printing Bureau of distributing these parliamentary and departmental publications?

Mr. MURDOCK: My right hon. friend will find vote No. 264 for the distribution of parliamentary documents and other governmental publications, $40,000. That is carried in the Printing Bureau estimates.

Mr. STEVENS: What is the total bill for the printing of the Department of Trade and Commerce? There were sums under other items such as the Bureau of Statistics, Intelligence service and so on. Under the item of public printing there are some items part of which no doubt come from the minister's department.

Mr. LOW: This item, with the amount included in the census, covers almost, if not the entire expenditure of the department in connection with printing. In addition to that $90,000 for the year 1923-24 there was a further sum of $28,784.36, making a total of $118,000.

Mr. MEIGHEN: Why is it that the salaries paid in weights and measures inspection work do not appear under civil government?

Mr. LOW: They are all outside Ottawa.

Mr. MEIGHEN: Should they not be brought into the serivce and placed under the Civil Service Act? We have 120 officers all over the country and there is no excuse now for leaving them outside; they are a permanent service, although they were temporary for a while.

Mr. LOW: They are all under the Civil Service Commission but in the outside service. The same is true of other departments.

Mr. MEIGHEN: But why should they not be brought into the permanent service so that we might have them in detail? It does not help us very much when they are lumped together in this way, because we do not know what anyone is getting.

Mr. LOW: They have been so treated for years.

Item agreed to.

Relief supplies for the Leeward islanders, $7,500.

Mr. MEIGHEN: Are the Leeward islanders the coal miners of Cape Breton?

Mr. LOW: This is a grant to the relief of the people of Antigua, the victims of a disastrous hurricane that swept those islands last August. This sum is required to pay for supplies purchased and shipped to the island of Antigua at the request of its governor, who sent out an appeal.

Mr. MEIGHEN: Have the Leeward islands a governor of their own?

Mr. LOW: Yes.

Mr. MEIGHEN: What form did his request take?

Mr. LOW: He sent a cable to the Prime Minister.

Mr. MEIGHEN: It came direct from the Governor General?

Mr. LOW: He is merely the governor of the island, not "governor general."

Mr. MEIGHEN: How does this come under the Department of Trade and Commerce?

Mr. LOW: We supplied the building material that went down; it went through this department.

Mr. MEIGHEN: They are British islands?

Mr. LOW: Yes.

Mr. WOODSWORTH: Why is it that our own native Canadians are discriminated against in favour of outsiders? If the Department of Trade and Commerce can give relief to the people of the Leeward islands why can this government not give relief to the Cape Breton islanders?

Some hon. MEMBERS: Carried.

Mr. WOODSWORTH: May we not get an answer to that question?

The CHAIRMAN: I do not think it is relevant to the item at all.

Item agreed to.

Prince Rupert elevator, towards construction of, $500,000.

Mr. LOW: When this item was under discussion a few nights ago an hon. member asked for the engineer's estimate of the cost of the elevator. I was not then prepared to give it to the House but I may state now that the estimate is $960,000.

Mr. MEIGHEN: How much will it go beyond that?

Mr. LOW: It will be below the engineer's estimate.
