Mr. FOSTER. I do not know whether it is the gentleman sitting here or not, but it seems to me the chief engineer is responsible for his resident engineers scattered throughout the country. This matter has come to the department, the minister said that he had information with reference to it. What have the minister and the engineer done? It would seem to me that if that state of things exists, as stated by my hon. friend, the resident engineer has some accounting to make. Why, would a gentleman who has a business who has a man in his employ, allow that sort of thing for a minute? Should the minister of a department, or the legislature of a country, who are acting as trustees for the people's money, allow that sort of thing for a moment? Case after case has been brought to light where bridges are really being built where a municipality or village is spared its proper expenses, and benefits by this subterfuge of doing something as a Dominion work. If that sort of thing were done in the vicinity of Kingston, where all men could know it, it would not pass. It is done in out of the way places, and I think the minister has a duty to sit down on that sort of thing. What he ought not to do is to make light of a case like that. It is the indication of a great deal else to make light of it in his department. It is one of the things which shows us on this side of the House that there is a necessity for a thorough investigation, and a reorganization of the system in the Public Works Department. There is too much of this hand in hand work between the representative and the resident engineers in the outside offices. They are continually putting their heads together, not to do justice to the country at large, not to do justice to the minister under whom they are serving and the parliament of which the representative is a member. At least the minister should have stated that he would look into it and see that discipline is carried out. He said that nothing like that should be done in the future. That is an admission that something wrong has been done, but a condemnation in a laughing way here is not enough. The officials at fault ought to be dealt with sternly and taught that they cannot indulge in that sort of thing with impunity.

Mr. PUGSLEY. This work was done some four or five years ago. It was done under a vote for improvements and dredging in the Saguenay river. Now, I understand that this glance pier was erected in the Saguenay just at the mouth of the du Moulin. When I became minister, the fact was brought to my notice that part of the pier had been used as a foundation for a bridge. I had no evidence, and I do not know that the hon. member for St. Antoine division (Mr. Ames) has any, that when the glance pier was placed there, it was built with any intention of being used as the foundation of a bridge. It was

placed there by the department on the report of the engineer that it would serve a useful purpose by preventing the silt from flowing into the Saguenay, and so rendering the dredging to a certain extent less effective.

Mr. GEO. TAYLOR. Is it up on the shore?

Mr. PUGSLEY. No, it is right on the Saguenay river just at the mouth of the Du Moulin. My hon. friend says that I turned this off in a laughing way. I have not done anything of the kind. I could not undo what had been done some years before I became minister, but I did what I could. I gave instructions that in the future no wharf shall be erected, if the main purpose is to utilize it as a foundation for a highway bridge. My hon. friend says that I should have disciplined the resident engineer. I suppose he means that I should have discharged him. Well, I did not feel called upon to do that because the resident engineer, in examination before the Public Accounts Committee, pledged his professional reputation that this work was one which might properly be done in connection with the improvements on the Saguenay river. I have done what I could so far as the future is concerned. I have given those instructions, and in several instances I have refused to authorize construction of glance or ice piers in the rivers where I thought they were not required for the improvement of the rivers, but as the foundations of bridges. Where urgent demands have been made I have refused to put any sums in the estimates for that purpose, and the vote we are now asking will be used entirely for dredging and other improvements in the Saguenay river and not for the construction of glance piers or piers of any description.

Mr. PRICE. I happend to know this locality very well, as I spent a couple of holidays there many years ago, and have many times passed that place. In my opinion those two piers were put there for the purpose of building a bridge. I can see no other reason. To say that a great deal of silt goes out into that river is nonsense.

Mr. PUGSLEY. Is the hon. gentleman correctly informed when he speaks of two piers? My information is that the government only erected one.

Mr. AMES. The government only erected one and the municipality erected another exactly opposite.

Mr. PRICE. I said two piers. There may be only one erected by the government and the other by the municipality. I do not think the government should have built this pier. As a matter of fact, it is used for a bridge, and I do not think that this government should build piers of that sort for bridges. That kind of work does not come under our jurisdiction.

Mr. AMES. As my hon. friend who has just spoken has said, he knows the place thoroughly. His company built a construction on that side and there is no silt going down at all. The bottom of the river is bed rock.

Mr. PUGSLEY. For what purpose did the hon. member's company build a construction on that side?

Mr. PRICE. When that part of the country was opened up, my people had a mill there, and they built those wharfs for the purpose of shipping.

Mr. PUGSLEY. Were they removed when this pier was built?

Mr. PRICE. No, they still remain.

Mr. PUGSLEY. It is your wharf that was shown on the photograph?

Mr. PRICE. Yes.

Mr. AMES. But a piece was cut out of that wharf in order to make room for the pier.

Mr. J. D REID In the building of these wharfs in the province of Quebec there appears to be case after case in which, instead of being used as wharfs, they are practically piers for bridges Where the public money is spent for a wharf and it turns out afterwards to be a bridge, what does the government do with the engineer? Before undertaking this expenditure does not the government send an engineer to report as to whether a wharf is necessary at that particular point, what boats are likely to land there, and what business is likely to be done ?

Mr. PUGSLEY. When a petition is presented for the construction of a wharf at any place, I send it to the chief engineer with instructions to report as to the necessity of it from a public standpoint and the cost. On receiving that report, the question of asking parliament for an appropriation is considered by the department.

Mr. AMES. The chief engineer is the man the minister asks to get a report?

Mr. PUGSLEY. Yes, and he sends to the resident engineer?

Mr. J. D. REID. When it turns out afterwards that the pier, instead of being a wharf, is required to be used as the foundation of a bridge is there any censure of the engineer on whose report the government acted? I have not heard of a case yet where any engineer has been dismissed or suspended for having made a report of that kind. Last session one of the members from an adjoining county, who seemed to

know all about the situation in a particular locality, stated that a wharf had been built there by this government, which turned out subsequently to be simply used as a municipal bridge.

Mr. PUGSLEY. Which one was that?

Mr. J. D. REID. The Disraeli wharf.

Mr. PUGSLEY. The department has caused careful inquiry to be made about the Disraeli wharf and the information is that there are three steamers and two gasoline vessels on the lake and they use the Disraeli wharf.

Mr. J. D. REID. This wharf was built—

Mr. PUGSLEY. This was not intended to be a wharf. This was a glance pier intended to give another direction to the silt coming down the Du Moulin river.

Mr. FOSTER. Before that was built, was a report made by the resident engineer to the chief engineer at Ottawa, giving a plan of the proposed work and estimating the cost, and was it approved by the chief engineer?

Mr. PUGSLEY. That is a very proper question and I shall have the information looked up and submitted.

Mr. FOSTER. I would like the minister to state in a definite manner the details of the whole transaction from beginning to end. I do not want to do any injustice to Mr. Lafleur or the resident engineer, but if the facts are anything like what have been stated some one has made a blunder that ought not to be passed over.

Mr. PUGSLEY. I shall get the information.

Mr. GEORGE TAYLOR. I will send over to the minister a photograph taken from the other shore and he will see that the pier is several feet up on dry land so that his statement cannot be justified that it was for the purpose of turning the channel and preventing the silt coming down.

Mr. PUGSLEY. If that is a recent photograph it may not give accurate information as to the beneficial results which have followed the erection of that pier because the pier itself might stop the silt in its progress and cause the very accumulation which we see there.

Mr. BLONDIN. Did the minister get the information which was asked for the other night about Mr. L. P. Girard ?

Mr. PUGSLEY. Yes, the evening this matter came up in the House I caused a telegram to be sent to Mr. Taché the resident engineer as follows :

Ottawa, 12th March, 1909.

To J. C. Taché, resident engineer, Chicoutimi.

Was Mr. Girard's son, who is now lawyer at Chicoutimi, ever employed at Clark City by the department? If so, when, for how long, and in what capacity? Was he in sole charge or was there an engineer over him? If an engineer, who? Reply immediately, minister wants information this evening.

(Sgd.) J. B. HUNTER,
Deputy Minister.

To that there came a reply from Mr. Taché as follows:

Chicoutimi, March 12, 1909.

J. B. Hunter,
Deputy Minister of Public Works,
Ottawa.

Yes, M. Girard was employed at Clark City under Mr. Lamoureux.

J. C. TACHE.

That information was not sufficient because it did not give all the information desired so I had this telegram sent:

Ottawa, 12th March.

To J. C. Taché, resident engineer, Chicoutimi.

Please give all information asked by my telegram. Your message no answer.

(Sgd.) J. B. HUNTER,
Deputy Minister.

To that there came this reply:

Chicoutimi, 13th March, 1909.

J. B. Hunter, Ottawa.

L. P. Girard was employed at Clark City in 1904, on the survey of Seven Islands bay, as chainman from 24th of June to 12th Sept., and in 1907, as assistant to engineer in charge from 15th of June to 18th of Sept. Joseph Lamoureux, of Ottawa, was the engineer in charge on both occasions.

(Sgd.) J. C. TACHE.

Then I received a memorandum from Mr. Lamoureux as follows :

March 15, 1909.

Memorandum for the Hon. the Minister.

Mr. Girard worked under me as sub-inspector and general help during the summer of 1907 at Clark City.

During that season the contractors removed part of the old work preparing the beds for new cribs. Two cribs, 100 feet in length each, were built and sunk. Mr. Girard helped me in taking levels, measurements, keeping gauge readings, &c., spending most of his time on the work under my instructions, when I could not be there, and reporting to me what was being done. During that summer I made surveys of Magpie bay, and at Ellis bay, Anticosta island, being away about two weeks at a time at each place. On my return Mr. Girard reported to me as to what was done by the contractors, and every difficulty that arose was adjusted by me.

He helped also in reducing the soundings taken at Magpie bay, and doing general office work.

(Sgd.) JAMES LAMOUREUX.
Assistant Engineer.

Mr. FOSTER. That was the son of the member ?

Mr. PUGSLEY. Yes.

Mr. AMES. Who is now practising law at Chicoutimi and who was then a law student?

Mr. PUGSLEY. Yes. My hon. friend was right as to that.

Mr. J. D. REID. Was Lamoureux working there the whole season?

Mr. PUGSLEY. Yes, except for about two weeks when he was working at Magpie bay.

Mr. J. D. REID. This young man was put there and he knew nothing about the work. He was simply a law student and this was a scheme of the government to pay him while he was on his holidays $2.50 a day and expenses, including Sundays. If Mr. Lamoureux required an assistant from June 24th until school opened in September he certainly required an assistant during the whole season or he did not require one at all. I do not know anything about this young man, but on the very face of it it is clear that the government adopted this scheme to pay him $2.50 a day and expenses during the holidays so that he might educate himself during the winter. You see, if he had been put on as chain man he would not get $2.50 a day, for the chain men on the St. Lawrence canals only get from $1.50 to $2.00 a day, and so in order to get $2.50 per day of the peoples' money, Lamoureux deceived the minister by putting him down as inspector.

Mr. FOSTER. Lamoureux states that he was sub-inspector, and he was paid as inspector. What has Mr. Lamoureux to say about that? Anyway what about this policy of working in with a member of parliament and making a situation for his boy? Is it not very poor business? The evidence shows that he was simply there to help to do some calculations, and that reported to the inspector would act occasionally as a chain man, and the like of that. Who was the inspector?

Mr. PUGSLEY. Mr. Lamoureux was the inspector and engineer in charge, and he used this young man as sub-inspector. For a number of years it has been the practice, and I have never heard it complained of, to give employment to students.

Mr. FOSTER. The sons of members?

Mr. PUGSLEY. Although the employment has been largely limited to the students of technical schools, this young man had been under Mr. Lamoureux in 1904, and it may be that he was an intelligent young man, able to do his work well, and could be relied on to keep the accounts and see that the men did their work. He was only paid $2.50 a day, although in some cases we pay inspectors $3 and sometimes $3.50 a day.

Mr. FOSTER. Does the minister defend that kind of transaction?

Mr. PUGSLEY. It would depend on the circumstances. If I knew that he was a capable young man, and did his work faithfully, I would defend him. But I do not know whether he was or not. I would assume, from the engineer having employed him, and having certified that he was capable, and that he did useful work, and did it well, that he was worth $2.50 per day. That is not an unreasonable wage, and is considerably less than we pay to the inspectors in charge of such work.

Mr. AMES. Is the minister aware that all his expenses were charged, so that what he got was $4 a day?

Mr. PUGSLEY. The expenses which were charged were his travelling expenses to and from the work.

Mr. AMES. And all his board while there.

Mr. PUGSLEY. The inspectors get thir board too when engaged on such work in remote districts.

Mr. J. D. REID. No, no.

Mr. AMES. Is it customary to pay a sub-inspector $2.50 a day and his expenses going and returning, and his board during the entire summer?

Mr. PUGSLEY. My hon. friend will bear in mind that this young man was employed by Mr. Lamoureux to act as his assistant, and that he did his work well, as Mr. Lamoureux certified, and I do not think $2.50 a day with board in that remote district would be an unreasonable wage to pay him.

Mr. TALBOT. Would my hon. friend on the other side (Mr. Ames) allow me to ask him if he is not a little severe in this matter? Mr. Girard is a member of parliament, it is quite true. He is the father of a very large family and a man of very limited means, and he is giving an expensive education to his son. We know that it is customary to give university students a chance to earn a little money during vacation. It is done in the United States and in every other country in the world. Because Mr. Girard happens to be a member of parliament, and his son, to whom he is giving a university education, is given a chance to make a few dollars to aid him in pursuing his studies, I do not think it is fair to accuse this poor man who has a large family and is doing the best he can with it.

Mr. BARR. I want to remind my hon. friend that this is not a charitable institution, and the fact that a man happens to have a large family is no reason why it should be supported by the country.

Some resolutions reported.

Mr. FOSTER. What business will the government take up to-morrow?

Mr. FIELDING. We intend to proceed in Supply. I understand that notice has been given that to-morrow afternoon is desired for a certain amendment, and that is in the hands of hon. gentlemen opposite.

Mr. MARTIN BURRELL. I beg leave to inform the government that to-morrow afternoon, on the motion of the House to go into Committee of Supply, I propose to introduce an amendment dealing with the question of deferred elections, and I will have the honour to transmit a copy of the amendment to the right hon. Prime Minister to-morrow.

At six o'clock House adjourned.

HOUSE OF COMMONS.

THURSDAY, March 18, 1909.

The SPEAKER took the Chair at Three o'clock.

QUESTIONS.

CREW OF DREDGE 'NORTHUMBERLAND.'

Mr. RHODES asked:

1. How many men are employed as officers and crew of the government dredge 'Northumberland'?
2. What are their names and places of residence?
3. On what terms are they severally employed?
4. If in the service of the government, where are they at present employed?

Hon. WM. PUGSLEY (Minister of Public Works):

1 and 4. At the present time there are only six men employed repairing and outfitting the dredge for the coming season. They are working at Pictou Landing, Nova Scotia.

2 and 3. Their names and the terms of their employment are as follows:—

U. H. Lyons, captain, $100 per month; J. Ledingham, chief engineer, $90 per month; H. Allen, second engineer, $80 per month; F. Rush, operator, $80 per month; G. Hunter, oiler, $35 per month; H. Oaks, fireman, $35 per month.

When employed by the government their residences were given as follows:—

U. H. Lyons, Barrington, Nova Scotia; J. Ledingham, New Glasgow, Nova Scotia; H. Allen, St. John, New Brunswick; F. Rush, St. John, New Brunswick; G. Hunter, Bridgewater, Nova Scotia; H. Oaks, Bridgewater, Nova Scotia.

The department has no record of their present places of residence beyond the fact that they are now at Pictou Landing.

FAIRY LAKE RESERVE.

Mr. JAMESON—by Mr. Rhodes—asked:

1. Is the Fairy Lake Indian Reserve, in the counties of Annapolis and Queens, N.S., under lease to any person or persons? If so, to whom, what is the date of the lease, the terms of lease and the rental?
2. What revenue, if any, was derived from this land annually during the five years next previous to date of lease?
3. Upon whose recommendation was lease granted?
4. Has permission been given to cut the timber on the reserve? If so, is such cutting going on?

Hon. FRANK OLIVER (Minister of the Interior):

1. Yes. The lease is dated the 5th of June, 1908, to C. W. Mills, and is for a term of 25 years from the 1st of May, 1908, at an annual rental of $30, for camping purposes.
2. None.
3. On recommendation of the local Indian agent.
4. No.

USE OF DISRAELI WHARF.

Mr. LENNOX asked:

1. How many vessels carrying passengers or merchandise regularly called or landed at Disraeli wharf during the navigation season of 1908, and called or landed at all during the season; what were the names of these vessels and of what tonnage were they?
2. What vessels, boats or craft of any kind called or landed at or used the said wharf during said season, and to what extent was it used?
3. What is the area of the lake called Lake Aylmer into which the stream passing under Disraeli wharf empties?

Hon. WM. PUGSLEY (Minister of Public Works):

1, 2 and 3. As no wharfinger has yet been appointed to take charge of this wharf, there are no records in the department to show the exact number of vessels which called or landed at Disraeli wharf during the navigation season of 1908. The resident engineer reports on March 16 that after inquiry he finds the following boats called during last season: the two steamboats of the Brompton Pulp Co., of 14 horse-power, called No. 3 and 4 respectively; the 'Francis' and the 'Coursier,' 35 and 40 feet long respectively, 12 horse-power each; the 'Strathford,' 10 horse-power; the 'Garthby,' 4 horse-power; the 'Borden,' 15 horse-power, and the 'Laurier,' 5 horse-power. All these boats land passengers, lumber, produce and general merchandise.

According to Lovell's 'Gazetteer,' Lake Aylmer is about eight miles long and three miles wide.

BOAT HARBOUR, SKINNER'S COVE.

Mr. MADDIN—by Mr. Rhodes—asked :

1. When was the work of Boat Harbour, Skinner's Cove, Pictou county, Nova Scotia, commenced?
2. How much has the expenditure been in each year since the work was commenced?
3. What is the total expenditure to date?
4. Is the work completed?
5. What further sum, if any, is to be expended to complete?

Hon. WM. PUGSLEY (Minister of Public Works):

1. 1st June, 1905.
2. 1904-05 .. .. $3,225 14
   1905-06 .. .. 7,763 95
   1906-07 .. .. 1,759 91
   1907-08 .. .. 822 37
   1908-09 (to date) 2,433 45
3. $16,004.82.
4. No.
5. $6,000.

IMPROVEMENTS AT ST. JOHNS, PROVINCE OF QUEBEC.

Mr. MONK—by Mr. George Taylor—asked :

1. What is the nature of the improvements being carried out on the Richelieu river at St. Johns, province of Quebec, what is their object and what is the estimate of the total cost?
2. Who prepared said estimate?
3. What is the object of the office opened at St. Johns, province of Quebec, last autumn in connection with said improvements?
4. How many are employed in said office and what is the cost per day of said office?

Hon. WM. PUGSLEY (Minister of Public Works):

1. (a) Dredging, blasting and construction of a movable dam. (b) To prevent flooding and improve navigation. (c) $185,000.
2. Engineer J. L. Michaud.
3. It was intended to let the dredging by contract, but the tenders received were so high that the department decided that, by providing its own dredging plant, the work could be done more cheaply; therefore an engineer was placed in charge, with an office at St. Johns. The latest reports received show that, in doing so, a considerable amount of money has been saved.
4. Paul Paradis, engineer in charge, $1,900 per year, $5.20 per day ; Albert Gosselin, assistant engineer, $3 per day ; Edmond Papineau, rodman, &c., (temporarily employed on surveys), $2.50 per day; rent of office $20 per month, 67 cents per day; total per day, $11.37.

COLD STORAGE SHIPMENTS.

Mr. SPROULE asked :

1. What amount of produce of the following lines has been shipped to Great Britain or other countries in cold storage, or cooled air chambers, during the years 1907 and 1908: apples, in barrels or other packages, pears, plums, tomatoes, grapes, fresh meat in pounds, fowl, fish, butter, eggs and cheese?
2. To what country or countries were they shipped, and what was their condition on landing?
3. What system of cold storage is principally in use on the steamships carrying such produce?

Hon. SYDNEY FISHER (Minister of Agriculture). This answer will be too long to read in the House and I would ask to have the question stand as a notice of motion.

Mr. SPEAKER. Stands as a notice of motion for a return.

SOUTH AFRICA VETERANS' WARRANTS.

Mr. EDWARDS—by Mr. Geo. Taylor—asked :

1. How many warrants have been issued to veterans on account of services in South Africa?
2. How many homesteads have been issued by virtue of such warrants?

Hon. FRANK OLIVER (Minister of the Interior):

1. 5,500 warrants issued by the Minister of Militia and Defence.
2. 4,993 land certificates issued by the Minister of the Interior, of which 230 have been located on homestead land, up to the last returns received in the department from the land agencies.

PURCHASE OF SUPPLIES FOR MARINE AND FISHERIES DEPARTMENT.

Mr. FOSTER. Might I call the attention of the Finance Minister to question No. 9, and ask him if he can have that facilitated so that we can get the answer tomorrow, if possible?

Mr. FIELDING. I will see the Minister of Marine and Fisheries later in the day on that subject.

SUPPLY—DEFERRED ELECTIONS.

Hon. W. S. FIELDING (Minister of Finance) moved that the House go into Committee of Supply.

Mr. MARTIN BURRELL (Yale-Cariboo). I beg to move in amendment

That all the words after 'that' be struck out, and the following words be substituted therefor:

This House is of opinion that for the purpose of enabling the electors to exercise the full rights and privileges of their franchise, the general elections should be held on the same day throughout all the provinces of Canada.

In introducing this subject dealing with deferred elections in Canada, I do so be-

cause I have had it impressed upon me that it is a duty I owe to my constituents, and I believe in a larger sense to a considerable portion of the people of Canada. I am endeavouring to introduce the question in such a way as that it will not mean in any sense a want of confidence in the government. In its broadest aspects I need not say that the matter is hardly controversial, the amendment simply enunciating a principle the soundness of which will be admitted by both sides of this House, and which I trust the government will be able to see their way to accept. In dealing with the question of the franchise we are dealing with a matter which is vital to the whole system of democratic and representative government. Underlying all democratic government is the basic principle that the source of political power is the people. It is true that this principle has been weakened, or distorted, in practically working out the transfer of power from the people to the delegates or representatives who finally wield that power. The process is very imperfect in most communities; and in passing I am free to confess that if the system of transferring such power were adopted which was recently so ably expounded in this House in a scheme of proportional representation, it might achieve far more satisfactory results than those we obtain under our present system, it would greatly strengthen the personnel both of the government and of the assembly, and would form a more faithful reflex of popular opinion. But sir, imperfect as our present methods may be, and imperfect as the results we want to achieve may be, yet in a very real sense the basis of political power is the suffrage, and anything therefore which touches the character of the suffrage, or the franchise, and its exercise demands, and I think will receive the thoughtful consideration of this House. Many hon. members who are present, representing as they do the people in the parliament of Canada, are doubtless familiar with the long struggles for constitutional power and for a more faithful expression of the public will, which took place in Great Britain for hundreds of years, and which is yielding to-day such beneficent and far reaching results. Gradually the scope of the franchise has been extended and widened. Many timorous people fear the results of its development, but they have got to adjust and reconcile themselves to the great movement which is leading, in nearly all cases, to a government by the people and for the people.

Now, Mr. Speaker, my belief, not only in the value of the franchise, but in the necessity of every man exercising his franchise in the true spirit, is the reason for introducing this amendment to-day. To my mind the time has arrived for the abolition of deferred elections throughout Canada. Nor do I believe, to use the words of the amendment, that the full rights and privileges of the franchise can be exercised or enjoyed by many thousands of people who are not permitted to take part, who are not permitted to raise their voice in helping to decide the great issues before the country in a general election. Under the attendant circumstances of a deferred election the franchise is crippled, is robbed of half its value, and by so depreciating its worth we are doing something we have no right to do, namely, we are lessening and weakening the interest which thousands of Canadians have to-day in the public affairs of the country.

Now the suffrage has been defined by one authority as a 'voice given in deciding a controverted question, or in the choice of a man for an office of trust.' By another high authority the subject has been defined as follows:

> A voice or an opinion of a person in some matter which is commonly to be determined by a majority of the voices or opinions of persons who are empowered to give it.

Judge McCreary, in his treatise on the American law of elections, remarks:

> In the United States the object of the suffrage is twofold: first, to select representatives of the people for their government; and secondly, to determine the will of the people upon such questions as may be submitted to them.

Now Sir, it will be noticed that in each of these definitions it is conceded that the one great value, the one great power of the suffrage, is that its exercise may enable the holder to perform a duty, and to perform his share in deciding great controverted questions. I am not taking the ground in this argument that in a vast and sparsely settled country like Canada all deferred elections in the past have been totally unjustifiable, but I am taking the ground, and I want frankly to express to this House the conviction, that in so far as their having any voice in deciding the great controverted questions before the country, the 30,000 or 40,000 electors in the constituencies where the elections have been deferred, have been, I may say, absolutely, disfranchised.

Now let me give you an illustration. I had the honour, and the very arduous task, of contesting an election in Yale-Cariboo, B. C., in 1904. The great question at that time before the country was, as hon. gentlemen all know, the Grand Trunk Pacific project as put forth by the government. For six months I had to campaign through the whole of that country, and campaign practically on the great issues concerned in that one great transportation problem. But towards the close of that campaign I found that I was out-manœuvred by the government postponing the election, because when the general elections

came round, that whole question was settled and the government was sustained by a majority of something like 66. Absolutely nothing more was to be said. For three weeks I had to face the people in that constituency practically with no programme at all, because this great question having been settled, there was a grievous lack of interest throughout the constituency, and certainly the voice of the people so far as that great question was concerned, was absolutely stifled. It means, practically, disfranchisement and it certainly also means apathy on the part of a large number of electors. It is injurious to the welfare of the state and it is an injustice to the individuals who compose the state. It is necessary that elections should, if possible, be held on the same day, and I think I can demonstrate to this House that it is possible to hold them on the same day and that there are no sufficient reasons why elections should be deferred in a country like this.

It may be retorted by some hon. gentlemen that election to the mother of parliaments in England are not all held on the same day. I need only point out in reply that the history and traditions of that country are entirely different, that the members are not concerned in appropriations for great public works, and that for a variety of reasons which I might point out, the case of England is not analogous in any way to that of this country. I have had the opportunity of discussing this question with public men of various shades of opinion in the old country, and I have found that there is a steadily increasing sentiment that they are coming to the point of one man one vote, and that elections should all be held on the same day. But let me turn from general argument to particular cases. I do not propose to deal with the question as it affects the province of Quebec as others are more familiar with that great province than I am, although I believe that the conditions attendant upon the postponement of elections are the same and that the same arguments will apply with equal strength to Quebec as to British Columbia. But I want to refer particularly to my own province and to deal with the various arguments advanced for the postponement of elections in that province. In 1904 there was the creation of a number of constituencies by the subdivision of larger constituencies. At that time Mr. Fitzpatrick was the Minister of Justice and he discussed the question of deferred elections. He proposed to defer the elections in a number of constituencies not only in British Columbia but elsewhere. The old constituency of Burrard was to be divided into Vancouver and Comox-Atlin. The constituency of Yale-Cariboo-Kootenay was to be divided into Kootenay and Yale-Cariboo. In Ontario the constituency of Algoma was to be divided into east and west Algoma and there was also the question of the constituency of Nipissing. In dealing with the arguments which were advanced at that time, arguments that were chiefly founded upon the impossibility of reaching all parts of these ridings in the statutory time to enable the elections to be held on the same day as the elections in other constituencies, Mr. Fitzpatrick spoke as follows and this seems to have been the whole force of his argument:

> Why should any group of men be deprived of their right to vote? Is it not fair to say that if the conditions existing at the time the elections are held are such that any important group in the community may be deprived of the right to vote that the returning officer shall have power to postpone the election in order to give them the right to vote?

The hon. leader of the opposition at that time, and also at a later date, made some observations and I will quote his exact words:

> There should be very strong, in fact, imperative necessity before any election is postponed.

With this I think we shall all agree.

He was referring to the province of Ontario, and he added that provincial elections were held on the same day in those ridings and that was a cogent reason for not postponing the federal election. Fortunately there were in the House at that time not only Liberals but Conservatives who were strongly interested in these Ontario constituencies. They knew their exact conditions, they were anxious to ensure the full value of the franchise to every elector and they put up all the arguments they could and showed the minister exactly what the conditions were. The result was that the minister dropped one after another of his proposals first in East and West Algoma, and then in Nipissing, conceding that the principle was right to hold the elections on the same day, if the conditions made it possible. I shall turn now to British Columbia and I shall quote his words again. The Minister of Justice said:

> As to the province of British Columbia I would ask the members from that province to explain the conditions there.

Unfortunately, there was in the House at that time no one familiar with British Columbia, or with British Columbia conditions, except the Liberal members and, Sir, I am absolutely within the truth when I say that in the case of my own constituency especially the reasons put forth during that debate were inspired by the knowledge that my opponent wanted a deferred election because he recognized the impossibility of winning in a fair and even fight. It was an

extraordinary thing to me because the people of that constituency—and I refer now to all shades of political opinion, to Liberals and Conservatives alike—did not ask that this election should be deferred and showed absolutely no wish to have it deferred. In justice to the hon. gentleman, the member for Kootenay at that time, Mr. Galliher, I ought to say that although he put up the bulk of the argument on that occasion I do not think he needed or wanted the election to be deferred as far as he himself was concerned, but that he was doing it to help a weaker brother in a section of the country to which they applied their argument. What was their argument? The argument, summarized very briefly, was that the territory was too great to permit the returning officer to get around with the notices and distribute the ballot boxes, that the geographical character of the constituency was such that the returning officer could not possibly get over the whole of that great district in order to post the proclamation and distribute the ballot boxes within the statutory period. I need hardly say that the argument is an essentially weak one inasmuch as we know perfectly well that the returning officer does not have to personally visit all portions of the riding for that purpose. As a matter of fact this work is done by the various deputies, the express companies, telegraph companies, the stage coaches and all the other facilities which he has at his command, and it is only a question of putting on a sufficient number of men to do the work throughout the riding. But, driven from one position to another the member at that time finally put the argument as follows:

So far as I am personally concerned I do not care to have the election postponed, but I am told that it is impossible to hold it on the day of the general election, and I know it is impossible.

Then we find that the member for Burrard at that time (Mr. Macpherson) came to the rescue with arguments about a constituency with whose conditions he was not entirely familiar. He referred to the new mining camps scattered at a great distance all over the district and he said that it would be impossible to reach Barkerville and other remote points in time. So, finally, a postponement in 1904 took place. I come from the riding of Yale-Cariboo, I know it perfectly well, I know its people, I know its conditions, I have been over practically every foot of that great territory to the farthest point of it, namely Barkerville in North Cariboo, and so far from it being impossible to reach Barkerville in 1900 and 1904 in the time prescribed I had a conversation with the deputy returning officer, a strong Liberal, a man who voted against me—not that I had any occasion to blame him in any way at all—and who told me emphatically that in 1896 the elections were held on the same day, that he was in Barkerville, the farthest point north in that constituency, the ballot boxes were delivered in time, that he polled his vote and that he resented having a deferred election subsequently. As far as that point goes, the people never asked for this postponement and I do not believe that it would have been possible to have got a petition signed by a dozen people, even Liberals, asking for the postponement that took place in 1904 or 1908, while it would have been possible to have got a large petition subscribed by people of all political shades of opinion asking that the elections should be held on the same day. When we come to 1908, once again the Election Act was amended and reasons were advanced for the postponement or practically for the disfranchisement, for that is what it meant, of 7,000 electors in my constituency. The contention was again advanced by this gentleman who was anxious to retain his seat because he felt he could not retain it in any other way. He found, however, he could not retain it even by resorting to that means. Again last year the question came up and the hon. member for Algoma (Mr. Boyce) moved an amendment designed to have the elections held uniformly on the same day, and although his amendment was defeated by the government supporters, I have to thank the hon. gentleman (Mr. Boyce) for placing the question before the House. In that debate the leader of the opposition asked the Prime Minister what he thought, and the Prime Minister replied:

I am told there are some provinces where it would be absolutely impracticable to hold all the elections on the same day. The member for Yale-Cariboo said it would be impossible in his own riding.

Well, I think I can prove beyond cavil that the member for Yale-Cariboo (Mr. Duncan Ross) had his own particular reasons for wishing the election deferred, and I do not think he was a safe authority for the Prime Minister to take. However, Mr. Macpherson again jumped into the breach and he asserted with great fervour that it was impossible to reach all parts of Yale-Cariboo within the time, and he said there was also great difficulty with respect to Comox-Atlin. Let me summarize the argument advanced by Mr. Duncan Ross. He first disclaimed any wish to postpone the election, on the very curious ground that once the Conservatives were hopelessly defeated at the general elections the Liberal organization would all go to pieces, and therefore he would not get as many votes as he otherwise would. This is a very extraordinary argument, because if the Liberal organization went to pieces with the Liberal government in power, what do you think would be the moral effect of a great Liberal victory upon

the Conservative organization? The insincerity of such an argument need only to be stated. I would remark in passing that my opponent admitted that there were about 1,000 less votes polled in a by-election in 1904 than there would have been at the general elections. Is it not a proof of the evil of deferring an election if it can have the effect of causing 1,000 people not to exercise their franchise? But Mr. Duncan Ross went further and he added that it would take three weeks, between nomination and election, also three weeks to post the proclamations in some parts of the riding, and he also said that on the line of the Grand Trunk Pacific, in the Peace river country, there were large settlements which it would take six weeks for the ballot boxes to reach. Inasmuch as only 19 days actually were allowed, the inconsistency of that argument will be apparent. As to the large settlement on the line of the Grand Trunk Pacific, referred to by Mr. Ross, I have in my hand a copy of the election returns from the total number of 161 polls in that riding which has an area of about 70,000 square miles, and I find that only three polls were held in that great north country. The total vote cast in my election was 6,518, and the total vote in that north country, where those people had to be looked after, as Mr. Ross said, was only 18 votes, of which my opponent got 10 and I got 8. I most certainly agree that every effort should be made to give every voter in a constituency an opportunity to exercise his franchise, but I must again refer to the insincerity of the argument of the then member for Yale-Cariboo in this respect, because no poll was held at Fort George, where there were a considerable number of voters. Based on insincere and incorrect arguments the election was deferred in that constituency in opposition to the wishes of the best people and with the evident design that a government supporter might be enabled to retain his seat. Now, although I believe that in 1904 every point in that constituency could have been reached within the statutory time, I will admit that in 1908 it would have taken 12 days between nomination and election to have reached the most northerly portion of it. But what are the facts? The tenth parliament of Canada was dissolved on September 17; the writs were issued on September 18, the general elections were held on October 26, giving an interval of 38 days. In order to do the same justice to the electors of Yale-Cariboo that was done to the electors of the rest of the country these 38 days afforded ample time to cover the whole territory, even allowing 12 days between nomination and election. Let me return for a moment to the governmental view of these matters, and let me endeavour to ascertain definitely the position taken by the government. Speaking of the province of British Columbia—and I think I may safely say the same applies to Quebec—the riding of Comox-Atlin is the most difficult of access of all. There would be more reason for deferring the election in Comox-Atlin than in any other electoral district. In 1904, Mr. Macpherson, then the member for Burrard, in arguing for deferred elections, spoke as follows (Hansard 7654) :

I would like to put the facts of the case before the leader of the opposition, who seems inclined to take the stand that the Dominion elections will have to be held upon the same day. The district of Comox-Atlin is 1,500 miles in length, as the crow flies, from the polling subdivision which will be at Squamish to Surprise lake. If the election is held in the winter time, you will require a dog train to take up the polling boxes; if in the summer time, you will require canoes to take them up. My hon. friend from Yale-Cariboo (Mr. Galliher) has said it is a physical impossibility to hold an election in Kootenay in the time required by law, and it is equally impossible in Comox-Atlin. In fact it is more difficult in Comox-Atlin than in any other district, for the reason that the facilities for travelling are much more difficult. To illustrate by a case in point. On the occasion of the last election the returning officer went into the then district of Burrard—Comox-Atlin is a little larger than the district of Burrard—and he was obliged to travel five days with a dog team. He had first to travel on snowshoes to break a trail for the dog team to bring the ballot boxes in. It takes him almost fourteen days from the time he leaves. If he takes Nanaimo as the central point of Comox-Atlin, it would be a physical impossibility for him to get into Surprise camp or to Atlin, as my hon. friend from Victoria (Mr. Earle) can substantiate, in less than fourteen days.

That is the argument advanced by Mr. Macpherson, and he supported it by adding that it would take a flying machine to get into these distant parts of the constituency in the statutory time. Well, the House will discount some of these statements when it learns that even in winter the provincial elections in these various constituencies were all held on the same day. It is true that Comox-Atlin is a more difficult constituency to reach than Yale-Cariboo, and much more difficult than Kootenay is, and the argument of the hon. gentleman from Kootenay (Mr. Galliher) in favour of deferring the election in that riding was absolutely without justification.

Let me point out that, not very long ago, there was a by-election in Comox-Atlin, by virtue of which—if that is the right word to use in this connection—my hon. friend the Minister of Inland Revenue (Mr. Templeman) sits in this House to-day. The time from the issue of the writ to election day in the general elections was 38 days. As everybody knew that the general election was coming on there was a certain preparation. In Comox-Atlin, in the

by-election, the result of which was that the Minister of Inland Revenue obtained a seat which he now occupies, there was no knowledge of an election to be held. There was complete darkness on the subject so far as the formation of public opinion went. I do not wish to suggest for a moment that there was not a certain amount of knowledge as between my hon. friend (Mr. Templeman) and the gentleman who resigned his seat that he might take it and also a few of their faithful friends. But, so far as the great public was concerned, there was no knowledge of an election coming on in that constituency, and I believe it was a matter of some doubt as to which constituency would be the best hunting ground for my hon. friend. This makes it all the more reasonable and natural and necessary that the election in this great district of Comox-Atlin, which district was so graphically described by Mr. Macpherson, should have all the notice that could possibly be given. But what happens? Let me turn to a series of questions I asked the government on the subject of the Comox-Atlin election. I refer to 'Hansard' of February 8, where it will be found that I put these questions:

On what date was the writ issued for the vacancy in Comox-Atlin?

What date was fixed for nomination and what date for polling day?

Who is the returning officer, and where does he reside?

Was such returning officer advised of his appointment by telegram?

Was he by telegram instructed to prepare the proclamation before the writ could reach him? If so, by what minister or official was the communication sent?

The answers I got to these questions were these:—That the writ was issued on 22nd of January, 1909; that the returning officer fixed the date for nomination and election, and the government therefore had nothing to do with it. (Of course, it is certain that the Minister of Inland Revenue—Mr. Templeman—would have a good deal to do with it), and that neither the Secretary of State, nor Clerk of the Crown in Chancery, nor anybody in authority had sent instructions by telegram. Now, let us examine this statement for a moment. The nomination in Comox-Atlin took place on February 8, and election day was fixed for February 20. So, from the time the writ was issued in Ottawa until the date of election there was a total of 29 days, or nine days less than the time allowed for the general elections. We are told by Mr. Macpherson, as I have pointed out, that this is the most difficult of all constituencies, that one would need a flying machine to reach speedily these places where some of the voters reside. Now, it seems to me the government must take one horn of the dilemma or the other. They have either proven by their action in this case that it is possible to hold all elections on the same day, or they have deliberately in the case of Comox-Atlin, disfranchised absolutely those whom the Minister of Justice described as groups of men whom it would not be right to deprive of their vote. Now, one further word in connection with this answer given by the government. The Secretary of State (Mr. Murphy) said that no telegram had been sent 'by the Secretary of State or by the Clerk of the Crown in Chancery, or, so far as I am aware, by anybody in authority.' Let us see, for a moment, how this thing works out. I have maintained, and still maintain, that, if any doubt were shown to exist of the possibility of holding the election in any constituency in British Columbia on the same day as in the rest of Canada, by sending out the writ by wire you would save practically seven days. However, we were told that this was not done. I am going to try to see what happened in Comox-Atlin. The writ was issued on January 22. It would take, as every one knows, at least seven days, and I am not sure but that, as the returning officer resides in Prince Rupert, it would take more for the writ to reach him. Even if he had come to some nearer point he would not receive the writ until January 29. He had fixed the date of nomination on February 8. But section 87 of the Dominion Elections Act provides:

Such proclamation shall be posted up in all the electoral districts at least eight days before the day fixed for the nomination of candidates, neither the last day of posting it up nor the day of nomination being reckoned.

That is, the proclamation would have to be posted up in Comox-Atlin on January 29. But the writ was issued on January 22, and if no telegram was sent, as we have been told, it would reach the returning officer only on the 29th, and he had no time to prepare the proclamation and send it out all over Comox-Atlin. We are driven by the logic of the facts to the conclusion that the gentlemen concerned did send that writ by wire, in spite of their statements.

I wish to deal for a moment with another aspect of the question of deferred elections I have already said that the case of England is different from that of this country, and it certainly is. To some extent, in a new country like Canada, a country in the making, a country which deserves and demands incessantly enormous appropriations for public works, we can understand that any great appropriations that the government will promise must necessarily have great weight in influencing constituencies, if the people are convinced that those who make the promises have the power to perform. This is appealed to by all parties; whatever party is in power gets into the habit of promising certain things. In the general election, there is some degree of

uncertainty whether the party promising will have the power to perform. But in a deferred election such as that of 1904 and 1908, when the government was returned by a substantial majority, appeals making these promises, when made by those in power and able to perform were made with almost irresistible force to the minds of people in a new country. Take as an illustration the election of 1904 went to show that every man who desires the growth of this country on progressive lines should favour the abolition of all deferred elections. In 1904, the present government was returned by a majority, if I remember right, of 66. Elections had been held in British Columbia, and all had gone Liberal. Other elections were deferred. For the last three weeks in that campaign, almost single-handed, I was confronted by about fifteen of the most prominent Liberals in the west. My ammunition, the Grand Trunk Pacific matter, had gone, and I simply had to appeal to the manhood of the electors, to the danger of big majorities—an appeal which after all had some foundation in reason as we have since found out—and ask them to judge the election on its merits. With what argument was I met? Simply with the big stick argument. On my platform, in my own town of Grand Forks, we had some very distinguished gentlemen. We had Mr. W. W. B. McInnis, late Governor of the Yukon and later the defeated candidate in Vancouver, who thundered against the folly of electing a man who was going to Ottawa to oppose the government and who consequently could get his constituency nothing, when they might elect a man who could get them everything they wanted. We had there also another distinguished gentleman, the Minister of Inland Revenue, Mr. Templeman, who was kind enough to say nothing to me personally, except what was pleasant. He said I was a very decent fellow, but he nullified that admission by asking: What is the use of sending him to Ottawa if you want the needs of your district attended to? So effective was that argument with a great many people—and one is not inclined to condemn them altogether—in my own town —so effective was the argument expressed with all the earnestness and the eloquence of the hon. minister and the propspect he held out that they were going to get a new post office and a lot of other things if they only elected the government candidate.—that the opposition candidate was left behind. But what have the people got after their four years' waiting? All they have got is a post office site, and they got that six days before my election last November The argument used over and over again with deadly, crushing effect—and used not only by speakers who might not be considered responsible men, but also by prominent public men, was that politics were only to be used for what could be got out of them. Their motto was that expressed in the familiar words of Hosea Biglow.

> It ain't by principles or men
> My prudent course is steadied;
> I scent which pays the best and then
> Go into it bald-headed.

When our friends went over to the neighbouring riding of Greenwood we had there most extraordinary exhibitions. Again the Minister of Inland Revenue went on the platform and among the things he said—he will correct me if I am wrong—was this, that if the people saw fit—and he was sure they would—to return a supporter of the government, in the person of Mr. Ross, he, the minister, would probably consent to come and spend three weeks at Greenwood and give the people during that time the light of his countenance.

Mr. TEMPLEMAN. My hon. friend's last statement as to what I said was no doubt a jest. But a moment ago he said that at some place in his constituency I had pointed out to the electors that it was useless to send my good friend to Ottawa because he could not get anything for the people. I challenge him to produce any evidence that in any one of the meetings in his constituency at which I was present I ever uttered such a sentiment.

Mr. BURRELL. Of course if my hon. friend assures me of that, I have, in a parliamentary sense, to accept his assurance. But I want emphatically to say that I am not quoting my own personal friends, but from friends of the hon. gentleman in Grand Forks.

Mr. TEMPLEMAN. I am astounded. I was never in Grand Forks at a public meeting.

Mr. BURRELL. Does the hon. gentleman say he was not in Grand Forks ?

Mr. TEMPLEMAN. I have not been in Grand Forks since I passed through going to the west with my deputy minister, visiting some of the mines, and no public meeting was held then.

Mr. BURRELL. My hon. friend will pardon me when I suggest that I am speaking of 1904.

Mr. TEMPLEMAN. I beg pardon.

Mr. BURRELL. I hope my hon. friend will understand that I do not want to strike a single blow below the belt in anything I say. I specifically stated that I referred to 1904, when I am convinced the hon. gentleman did go on the platform and take the line of argument to which I have drawn attention. The remark I made about his paying a three weeks' visit to Greenwood may be dismissed as a light matter, but he certainly did go on the platform at Grand Forks and other portions of my constitu-

ency and deal in that line of argument. Let me quote here what my opponent did say on the platform at Greenwood two nights before the election. I do not like to refer to him, as he is absent, in any way. De mortuis nil nisi bonum. Nothing but good of the dead, and of course, Mr. Ross is politically dead; and if I refer to what he said, it is because it vindicates my line of argument. I was on the platform at Greenwood, at a meeting of my own and extended to my opponent every courtesy and opportunity to speak. To my amazement he took the direct line of argument and said, in so many words that if the people wanted to get anything for their constituency, public works or anything of that kind, they could not get it by sending an opponent of the government to Ottawa, but should elect a man who supported the government. And I told Mr. Ross then that while I had heard that kind of doctrine occasionally spoken in private, that was the first time I had heard a man brazen enough to go on the platform and preach it in public. If my hon. friend (Mr. Templeman) had gone through so bitter, exhaustive and up-hill campaign as I had to go through in 1904, he would have felt sympathy for any man placed in the position in which I was; and in spite of every one of the influences attendant upon a deferred election, the majority after all against me was only 161. I am glad now to take this opportunity of expressing my appreciation of the loyal and unselfish efforts of those men all over my own constituency, who had absolutely nothing to gain but who felt that thy had a duty to perform and supported our cause to the last hour.

Let me refer again to the recent deferred election when we had the powerful influences of the government brought to bear against the man unfortunate enough to face a deferred election. We had in 1908, my hon. friend opposite (Mr. Templeman) speaking on the platform in my constituency, but the people did not attach so much weight to his speeches this time for an obvious reason. We had some other very distinguised gentlemen of the party opposite on the stump there. We had the Hon. Walter Scott, premier of Saskatchewan, my distinguished friend the Minister of the Interior, Mr. Oliver, other gentlemen from Alberta and a great many prominent men from British Columbia, who all concentrated their efforts to secure my defeat and the defeat of the other Conservative candidates.

Now, take the case of the Minister of the Interior—and again I, of course, dissociate myself from anything personal in these remarks, I am simply dealing with these matters with reference to the principle at stake. I am sure the Minister of the Interior (Mr. Oliver) will not deny being present at that meeting and saying such things, because I have here a copy of the the 'Inland Sentinel,' published at Kamloops on October 30, 1908. This paper is a recognized organ of the Liberal party in the interior or at all events in the Kamloops district. This copy contains a very careful report of the speech of the Minister of the Interior (Mr. Oliver) from which I shall read an extract. The minister spoke as follows:

> The people of Canada had said at the elections just held that they favoured the Liberal policy of development. That question is settled; the Liberals are in power and whichever way the people of Yale-Cariboo may go will not affect that fact. But the people of Yale-Cariboo now have to decide whether they favour western development. If they do they will vote for Mr. Ross; if they do not want western development then, of course, they will vote for Mr. Burrell and the government will be guided by the opinion so expressed. He pointed out that the influence of a member of parliament is measured—

I am sure that members on both sides ought to sit up and take notice of this doctrine,

> —by the vote he receives and the larger the majority given a member, the greater is his measure of influence in obtaining concessions from the government.

If I may apply that remark in its very broadest sense, then I trust the Minister of the Interior will remember how large my own majority was.

But upon that speech a leading article is based in this same paper. This article reads in part:

> So far as deciding whether Liberals or Conservatives shall govern the elections, the fight in Canada is finished and the people of the country have voiced their desire for a continuance of the policy of the Laurier administration. The fight in Yale-Cariboo is still on and will not be over until November 12. The question before the electors of this district is this: Now that the Dominion has placed the Liberals in power again, will the interests of Yale-Cariboo be best served by sending to Ottawa as its representative a man opposed to the government or a man friendly and whom the government regard with friendly eyes? There are many public works needed in this great district; who is most likely to get from the government the necessary appropriations to carry out these works? Will the opinion of Mr. Burrell be more likely to prevail with the government as against that of Mr. Ross? After all, that is the question the people of this district have to answer. If they wish to have the government carry on works in this district necessitating large expenditures, they can best show that desire by returning Mr. Ross at the head of the poll by the largest possible majority.

That is the way the matter is looked at out there. We now come to the Vernon district. I have here the semi-weekly 'Okanagan,' the Liberal organ in the great Okanagan country, dated November 4. It

contains a report of a speech of the minister in that city. Here is a phrase.

Western Canada has been the great work of the government; and to a great extent, this good city of Vernon and the beautiful settlements throughout the Okanagan valley are evidences of the success of the government's policy in the last 12 years.

If one had time it would be easy to show that for every inch of development in that valley due to the guidance or assistance of this government, there are a good many feet of development due to the assistance of the provincial government. However, I wish to deal with a leading article in this newspaper, which says in part:

Mr. Ross has, however, kept before his mind the highest, the best ideals of his duty to his constituents as a whole, and to say he has been pre-eminently successful in pressing upon the government the rights of this immense constituency, is doing him scant justice. . . During the years of Conservative rule, practically nothing was done for this constituency in general or the Okanagan district in particular. Now we have an excellent telephone service to almost every part of the district.

I am sure hon. gentlemen opposite will be glad to know that because there seemed to be some doubt some time ago as to whether there was a government telephone in existence. This particular government telephone service was put into operation just prior to my election campaign of 1904, and achieved the results intended. There were also very busy operations in the extension of this system just prior to the election of 1908. The article proceeds:

The mail service has been improved a hundred per cent. Public buildings in keeping with the growth and importance of Vernon and other towns are being built.

I shall deal with that remark and show what bearing it has on this whole question of deferred elections. The paper claimed and my opponent claimed that the government was doing a great deal for this particular constituency. It had waited, it had the promise of this public building, although this article assumes that the building was being constructed. I have here another copy of this same paper dated October 21.

This town has a population of 3,500 and a customs revenue of $35,000. It had waited for a public building for a long time and then on October 21, there appeared an advertisement calling for tenders for a public building. A remarkable thing is that the tender dated at Ottawa, October 20, 1908, asking for tenders for the construction of a public building at Vernon appears in this British Columbia paper the next day. The full tender and a beautiful cut of the building are published. There are also references to the advertisement. I call to your attention the picture of this magnificent building for which tenders were called shortly prior to my election. The article is headed in large type.

Tenders are wanted for new post office. Will cost between $30,000 and $40,000.

As will be seen by advertisement in another column, the Department of Public Works is calling for tenders for the new post office and customs house to be erected in this city. . . The new structure will be three stories in height, and will be of brick with stone facings. It is estimated that it will cost when completed between $30,000 and $40,000 and will be a credit to our city. One thing is certain, it will be much superior to any public building in Vernon if not in the interior.

The 'Okanagan' has obtained a photograph of this latest evidence of the progressiveness of the Laurier administration, which is reproduced below. The people of Vernon should know who to thank for this handsome structure. By dint of hard work and by constantly representing to the department the needs in the city of a building of this kind, our representative in the last Dominion parliament, Mr. Duncan Ross, succeeded in having provisions made whereby the same could be erected during the coming year.

They wind up by saying:

It will be a credit to our beautiful city, to the government which built it and to Mr. Duncan Ross, our representative, who, by his untiring efforts secured the same for us. This is only one of his many good works for his district, and he is deserving of the thanks of the community.

You can understand that when one is fighting the battle of his party on the questions of the day, in so far as he can in a deferred election, to encounter something of that kind does infuse a certain amount of bitterness into a man. He thinks it is reasonable to ask his opponents to conduct a fair fight. I do not think that sort of thing is justified and the extraordinary thing is that although we have this as an evidence of the latest phase of the progressiveness of the Laurier administration, and although the promise was not repudiated, yet, in spite of all, after the elections are over, lo and behold there was no magnificent structure, there was no post office at all.

Now, Mr. Speaker, I may point out that all this appeal had no effect so far as my opponent's wishes went, and for various reasons. One of the reasons why my opponent was not returned to this House was the reason which is the basis of my whole argument, namely, that the people of the western constituencies, regardless of party shades of opinion, had absolutely no use for deferred elections; they did not believe they were justified by conditions, and they did not believe they were justified by the facts, but they did believe that fair-play and a fair fight should be given, and should be the practice adopted by the government.

Now I want particularly to appeal to the Prime Minister, who from indisposition, I regret is not in his seat to-day, because I know that the Prime Minister, and I believe the other ministers as well, are not opposed to holding the elections on the same day if they knew there are no reasons for deferring them. The Prime Minister has certainly expressed that view. I have shown that in the case of Comox-Atlin not only was there no necessity for deferring the election more than 12 days after the nomination, but the government have cut the ground from under their own feet by doing it in less time than was given in the general election. I see no valid objection indeed to a longer time being given to the whole country, a period say, of six weeks after the issue of the writs before the general election. I believe then that not only could all the elections be held on the same day in all the provinces, but that the election could be held in the Yukon on the same day as well—but on that point my hon. friend representing the Yukon (Mr. Congdon) can speak with better authority. One of the objections raised to having a longer period before elections is that the country is too long a time unsettled. I would ask if there is any valid objection to such a proposition? After all, we in the larger constituencies who have to campaign something like four, or five, or even six months, cannot quite sympathize with that view. There is a great deal to be said in favour of a fixed term for holding elections, such as they have in the United States. Although a fixed term would perhaps involve quite a constitutional change, I believe that if we adopted a fixed term it would do away, as it does in the United States, with a great many of the evils to which I have referred. Of course hon. gentlemen opposite will retort to that argument that the form of the elections would not be so representative, the form of government would not be so representative as is ours, and they will argue that on any great question in the United States a fixed term for the elections does not allow so well for any rapid change in public sentiment. It is all very well to argue that way, it is right in theory, but how does it work out in practice? I may say that in many parts of Canada, although the theory is that our government being able to appeal to the country at any time is therefore more representative than it would be if elected at a fixed period, the custom is more honoured in the breach than in the observance. Let me give you two instances. If there was ever a case in the political history of Canada where, if this government was to be a reflex of popular opinion or wished to ascertain the public pulse and the public sentiment on big questions, and that therefore they were justified and compelled, in virtue of being a representative government, to find out what that sentiment was—if, I say, there were ever any occasions in which that theory should have been put into practice, it was on two notable occasions, when, in fact, it was entirely ignored, one was the Autonomy Bill, in regard to which the voice of the people was never heard until afterwards, and the next was this very question of the Grand Trunk Pacific. We know very well that that great measure was never referred to the people. It was brought up in the third session, and then there was another short session for the purpose of ratifying better terms for the company, but in neither case was the question referred to the people at all, until after the measure was passed, and when the people would have been placed in the position of repudiating a contract entered into by the government.

In quoting these two instances I am free to admit, that the argument will apply to all political parties alike, in greater or in less degree, and that unfortunately at these times statesmanship is merged in political opportunism, and is trying to get snap verdicts, because unfortunately those are times when all are for the party and none are for the state. Now I would like this point to be seriously considered. We in the larger constituencies are kept necessarily in an unsettled state for a very long time, some of us for months. As a matter of fact, the country generally knows fairly well that an election is coming on. If I wanted to give you proof that the country does know that elections are coming on, I need only read a portion of a letter that I have in my hands which was written by the Prime Minister of this country to my opponent as long ago as the 21st of March, although the elections did not come on until October 26. This letter I may say was written to the secretary of the Liberal Association of Yale-Cariboo, and this is the tenor of it:

Ottawa, 21st March, 1908.

My Dear Sir,—I understand that a convention is called for the purpose of selecting a Liberal candidate in the district of Yale-Cariboo. It is an encouraging sign to see that the Liberals in your district are thus getting ready for the contest. The loyalty and enthusiasm of the Liberals of the west have always been an inspiration and an encouragement, and I feel sure that my friends in Yale-Cariboo will see that so far as they are concerned there will be no breaks in the ranks of the solid seven from British Columbia.

The result was a somewhat ironical comment on the letter. It winds up:

It is not for me to interfere in the choice of the electors; that is a matter as to which they must be left absolutely untrammelled. If I may, however, be permitted to express a wish, I can assure you that no man could be more acceptable to myself and to the Liberal members of the House of Commons than our

friend Duncan Ross, the gallant sitting member.

Yours very sincerely,
WILFRID LAURIER.

I merely adduce this letter to show that after all, if there is any objection to the government giving six weeks before an election on the ground of unsettling public sentiment, public sentiment is really unsettled for a much longer period. Another illustration. Every hon. gentleman in this House knows that after a second session there is a possibility of appeal to the country, after a third session that possibility and that unsettlement are increased, and after a fourth session the country is getting still more unsettled as the inevitable election draws nearer. So there is no reason in the argument that a longer term would unsettle the country, or that it would be inadvisable to give six weeks or two months that the people might have full time to discuss the great controverted questions that agitate the country. I am persuaded that the unsettlement would not be objected to by the members of this House, or by the people of Canada, if it would prevent the wiping out of deferred elections the disfranchisement, practically, of 30,000 or 40,000 of Canadian electors.

In closing my remarks let me quote a few words from a well known writer, in which he arraigns our political system as it is conducted at the present time:

> In political life there is no rest or peace possible. Every one is either fighting or hiding in ambush, lying, listening, hunting for trails, or removing traces of his own; sleeping with one eye open and his gun in his hand; looking on every one he meets as an enemy, his hand against everybody and everybody's hand against him; slandered, traduced, badgered, provoked and wounded—in short, he must live like a redskin on the warpath in a trackless wilderness.

I am sure that any hon. gentleman in this House will feel the tragedy of public life as it is depicted in that passage. We can thank God that there is a brighter side to the picture; otherwise the burden on those who are taking up this life with a sincere desire to do something in the interest of our country, would be unbearable. But, we want to better the conditions and every man who wants honestly to better the conditions in Canada will willingly accept the unbiased verdict of the people whether it places him in a seat in this House or puts him out. I believe that I have shown that it is feasible and that the time for the abolition of deferred elections has arrived. I believe that the manifest evils of deferred elections have been abundantly proven, and I trust that the government, in spite of its natural desire for power, will see its way to adopt the full letter and spirit of this amendment and that we can all join in the abolition of deferred elections, which after all is a plain matter of justice to individuals and is necessary to the betterment of political conditions throughout the whole country.

Mr. F. T. CONGDON (Yukon). Mr. Speaker, the hon. member who has introduced this amendment (Mr. Burrell) told me some days ago that he proposed to direct the attention of the House to the matter of deferred elections and if there is any member of this House who is interested in deferred elections I think it will be generally conceded that it is the representative of the Yukon. Not only in this parliament, but in a former parliament, the member for the Yukon, by reason of deferred elections, was obliged to wander around the corridors of this building very much like a dismembered spirit seeking admission to the Elysian fields and only securing it after a long wait. When the hon. gentleman announced to me that he intended to introduce this subject, I expressed the greatest interest in it and I added that I hoped he would bring it before the House in such a manner as would enable the House to arrive at a practical solution of the difficulty that presents itself. I do not know whether the hon. gentleman is aware of the fact but the amendment which he has proposed to the House has eliminated altogether the question of elections in the Yukon from the consideration of this matter, because, as I understand, it is limited purely to the provinces and the Yukon is not yet a province of the Dominion.

Mr. BURRELL. I did that for the reason that as I was not thoroughly familiar with the conditions of the Yukon, it might perhaps be difficult for me to include it in the amendment, but I spoke of it and I specifically said that I believed it might or it would include the Yukon. However, I desire to say that I am entirely in sympathy with the abolition of deferred elections in the Yukon.

Mr. CONGDON. At all events the resolution will work no cure for the Yukon and will work no such cure as is desirable possibly for any of the other constituencies. The matter of these deferred elections is not a matter of fair play or justice; it is simply a matter of geographical considerations, and if it is possible that the election in any constituency can be held at the same time as the elections generally throughout Canada I think it will be conceded by both sides of the House that it would be desirable that it should be so held. With regard to the Yukon, when the hon. gentleman mentioned the subejct to me, it did seem to me that there might possibly be some practical way of holding the election in that constituency at the

same time as the elections in the rest of Canada, and no one, I am sure, in the Yukon will be better pleased if that result can be arrived at than I will be, because, undoubtedly, there is always a very much greater interest when the result of the election does not merely mean the selection of one man or the other but may possibly mean the determination of the fate of the government. I have looked over the various periods allowed since 1874 between the date of the issue of the writ for a general election and the date of the nominations for general election, and I think it must be generally admitted that these dates selected, partly by one political party and partly by the other, are fair indications of the periods which should elapse between the issue of the writ and the election. I find that in 1878, twenty-four days elapsed between the date of the issue of the writ and the date of the nomination; in 1882, 26 days; in 1887, 29 days; in 1891, 22 days; in 1896, 53 days; in 1900, 22 days; in 1904, 28 days, and in 1908, 31 days. So that these figures will give an average period, which I think is a reasonable period for a general election throughout Canada, of thirty days between the date of the issue of the writ and the date of the nomination. Now, it simply comes down, in my humble judgment, to a question of whether, in these various constituencies in which the elections are now deferred, it is possible to hold the elections within that period, allowing thirty days between the issue of the writ and the date of the nomination. I had thought at one time, considering the period of thirty-eight days which elapsed between the date of the issue of the writ and the holding of the last general election, that possibly in the Yukon it would be possible to hold the election within that period. It certainly would not be possible under the existing Act, but with the permission of the House I propose later to introduce some amendments to the Dominion Elections Act with the view of shortening time. The present Act does not contemplate at all possibility of an election in the Yukon concurrent with other elections. Under the Act it is absolutely essential to allow twenty-one days for the writ to reach Dawson from Ottawa. I think that period might be greatly shortened by making provision for telegraphic communication on this subject, as also there might be provision for telegraphic communication in other regards. But, as there needs to be a difference between the issue of the writ and the general election of somewhere about forty days, it is, in my opinion, utterly impossible to bring on the election in the Yukon at the same time as other elections. I can only say that in regard to this I would be most anxious that the election should be held there on the same day, but it comes down simply to the question of whether the House deems it advisable, and will pronounce itself to be of that opinion when the question is brought before it in a proper way that the Elections Act should compel a longer period than that which at present elapses between the issue of the writ and date of a general election.

Hon. W. S. FIELDING (Minister of Finance). Mr. Speaker, the principle of simultaneous polling is one which has been accepted in Canada for a very long time and I suppose we can accept it as a general principle. Strange to say, it is not so accepted in the mother country to which we usually look for our example, and I do not know that any very good reason can be given why it has not been adopted in the United Kingdom. There the conditions of transportation, the density of population, the means of communication by mail and telegraph all seem to make for the convenience of simultaneous elections. For reasons which seem to them sufficient that method has not been adopted, while we in Canada, with the many disadvantages in the way of communication, have, for a long time, found it possible to carry out that principle with very few exceptions. With our geographical conditions it might very well be expected that there should be occasional exceptions. In the resolution which the hon. member for Yale-Cariboo (Mr. Burrell) has put before the House he does not leave room for any exceptions whatever. I think we will all agree that as time passes and as distant places in the Dominion are brought into easier communication, as the population becomes thicker, and as the facilities for communication become better, we will be able from time to time to drop out some of those exceptions and apply the general principle of simultaneous polling, perhaps to some of the constituencies in which to-day we have deferred elections. My hon. friend, however, makes the general statement and declaration that there shall be no exceptions. He will take no account of any geographical conditions. I have not the knowledge of British Columbia which my hon. friend (Mr. Burrell) has nor am I familiar with the topography of the several constituencies in which elections are now deferred, or the transportation facilities available within them, but I am advised on good authority that even to-day it would be difficult to adopt without any exception the principle which the hon. gentleman has embodied in his resolution. Therefore, it would not be wise for the House to adopt the resolution, even though the general purpose my hon. friend has in mind might commend itself to us. I am obliged to take exception to the resolution on another ground. I was rather surprised to find my hon. friend (Mr. Burrell) stating that this

was not to be regarded as a vote of non-confidence, because if the hon. gentleman desired to move non-confidence in the government, the procedure he took would be the most effective for his purpose under our parliamentary practice. If we assume for the moment that there is need of reform in this matter then the question comes as to which is the best procedure to accomplish that reform. The hon. gentleman might have introduced a Bill striking out these exceptions from our Elections Act, or he might have put on the Order Paper a notice of motion—as my hon. friend (Mr. Monk) did with regard to a matter which he considered for the public welfare—a discussion of which would have opened up the whole subject and probably laid the basis for the introduction of an amendatory Bill. The hon. gentleman has brought this motion as an amendment to Supply, so that the House is confined to a consideration of the words of his motion and these words only, without being able to offer an amendment. Under the practice established in parliament his motion moved in this way must be regarded as practically one of non-confidence. I regret that the hon. gentleman—for whom I have the highest respect as a new member and an old friend—should have taken the wrong way to bring about a reform which in his mind he thinks necessary. I do not for the moment say there is no room for change; I do not say that the experience of the last few years may not have shown that some of these exceptions in the Elections Act might be removed without inconvenience, but since my hon. friend offers his suggestion in the form of a non-confidence motion I am obliged to ask the House to not approve of it.

Mr. F. D. MONK (Jacques Cartier). I could not help thinking, while the hon. gentleman (Mr. Fielding) was speaking, of the lines:

> On forms of government let fools contest
> What's best administered is best.

because my experience in this House tells me that in many instances supporters of the government of the strongest dye have proposed amendments to Supply and have had public questions discussed in this form, and then we have seen occupants of the treasury benches arise and gracefully accept these motions. I remember that a supporter of the Minister of Finance, who now sits on the bench of Nova Scotia, moved an amendment to Supply in exactly the same way as did my hon. friend (Mr. Burrell) this afternoon, and I think my memory does not fail me when I say that the Minister of Finance himself, speaking for the government, declared that the amendment would be accepted.

Mr. FIELDING. Probably it was a very good motion.

Some hon. MEMBERS. Hear, hear.

Mr. MONK. That is just the point. The government certainly does not regard all the amendments to Supply as motions of non-confidence, but I suppose it depends to some extent on the political complexion of the hon. gentleman who moves the amendment. For my part I think the procedure adopted by my hon. friend (Mr. Burrell) is quite appropriate to the ventilation of this grievance. He has brought before the House a long standing grievance, and I trust that after the very eloquent appeal he has made the government will take steps to end an abuse which has become intolerable all over the country. I rose merely to speak of this grievance as we experience it in the province of Quebec, where we have not the spirit of resistance which the people of British Columbia apparently have. We have in the province of Quebec the counties of Gaspé and Chicoutimi, which since confederation have been practically disfranchised by the system of deferring the elections in them. I do not say that at one time, because of the lack of communication within these counties, it may not have been necessary to defer the elections, but that day has past. It might be necessary in these counties to notify the returning officers a few days before the other returning officers were notified, but surely there could be no objection to that. The turmoil of a general election begins months before the day of nomination, and even if it were necessary to notify by telegram the returning officers in these counties the same day that the writs were mailed to the other returning officers, there would be ample time to have the general elections in Gaspé and Chicoutimi on the same day as the others. These two Quebec counties require public works, and post offices and government aid in one way and another, and so for twenty years it has been an understood thing that they would elect supporters of the government. In these counties they wait until the result of the general elections is known all over the country, and then they proceed as it were pro forma to the election of a government supporter.

Mr. TALBOT. Is that what happened in British Columbia this year?

Mr. MONK. In British Columbia they seem to take a different view, and that is why I spoke of the independence of the electors of that province. It is well known by those who take an interest in politics in Quebec that no serious candidature is offered in Chicoutimi and Gaspé until it is ascertained what party has been returned to power. These counties as I have said require public works and aid from the government in a multitude of ways, and under the shameful system of patronage, which is the bane of this country,

they can only get these necessary public works if they are represented by supporters of the party in power. I apply that to all parties. And that is the way the electors of these two counties have been obliged to proceed ever since confederation. Is this necessary? Is there any reasonable ground why the electors of these two large counties should not enjoy the franchise exactly as it is enjoyed everywhere else in Canada—perfectly independent electors to select to represent them in parliament an absolutely independent man. I say we have had conclusive reasons this afternoon why the present system should be abolished. I did not hear what was stated by my hon. friend (Mr. Congdon), representing the Yukon, but I understand that the rule could be made to include the Yukon also. After all, there are a great many people—and I am one of them—who think we should have the general election on a fixed day, without interfering with the prerogative of the Crown to have a dissolution when that is necessary. I think it would be far less unsettling to the country than the present system. At any rate, if the old custom is to be continued and a dissolution must proceed from the government, I do not see any reason why we should continue to persecute—because it is nothing else—a certain class of our electors.

Hon. RODOLPHE LEMIEUX (Postmaster General). I protest as vigorously as I can against the statement made by my hon. friend (Mr. Monk) that since confederation the county of Gaspé has been practically disfranchised. It certainly has not been disfranchised, if I have heard correctly the very severe criticisms during the discussion of the estimates in this Chamber. The county of Gaspé, as a matter of fact, has been represented by the true representatives of its people. There is in Gaspé a strong opposition; I have been favoured with it ever since 1896, and I have had to fight for my life at each election. But the hon. member (Mr. Monk) is not well informed concerning the peculiar geographical position of the county of Gaspé. Should a dissolution take place at this moment, or had a dissolution taken place say a month ago, it would not have been humanly possible to hold an election in Gaspé. This applies even to the mainland. We have there a stretch of 250 miles of coast without railway facilities—that is, the railway is under construction but, even when it is finished it will not be sufficient to meet the requirements of the case. In the course of this stretch of 250 miles of coast there are twenty-five or twenty-six rivers, some of them quite large, to cross. Unless the returning officer had the use of one of the government steamers to carry the ballot boxes, posters and other supplies necessary for the election, he could not cover the ground within the period allowed for the general election.

Mr. MONK. Do I understand the hon. gentleman to say that on the mainland the ground cannot be covered within the period?

Mr. LEMIEUX. On the mainland it can hardly be covered within a month—that is if the returning officer does his duty, chooses the polling booths, posts his proclamations, delivers his ballot boxes and so on, unless he divides the work with other people. There are three municipalities in the county of Gaspé. We have three court-houses, three jails,—they are always empty, I must say—and all the machinery of three municipalities. It is an immense territory. My hon. friend (Mr. Monk) has visited only that section of the coast which is frequented by the tourists in summer; but the other section, the portion traversed by what is called the maritime road is very hard to cover at any season of the year. But this is only the mainland. We have also the Magdalen Islands, one or two hundred miles distant from the mainland. At this season of the year, you simply could not hold an election on the same day as a general election—unless you wired the proclamation, the instructions to deputy returning officers and so on. But, even so, what about the ballots? There is no printing establishment on the Magdalen Islands; would you favour the system once followed in the county of Chicoutimi, where a match box was used as a ballot box, and the ballots were not printed but written by some of the officers?

Mr. MONK. If the law were amended so as to permit the instructions to be telegraphed to the Magdalen Islands, what possible difficulty would there be in holding the election on the same day as elsewhere?

Mr. LEMIEUX. Does not the hon. gentleman see that that is a system open to very serious objection? The date might be telegraphed wrongly. There might easily be an error in wiring the name of one of the candidates. It certainly is not a proper way of holding an election to wire the instructions, the names of the candidates and so on.

Mr. MONK. I only urge that point because I have taken the trouble to inquire of people who reside not only there but lower down the river, and I am informed that there is no obstacle to holding the election in Gaspé on the same day as elsewhere.

Mr. LEMIEUX. I have pointed out what seem to me very serious difficulties. If we had nothing but the mainland to consider, when the railway is completed from Paspebiac to Gaspé, the territory can be covered easily within the election period, but,

so long as the Magdalen Islands form part of the county it would be impossible to cover the whole county within the time at certain seasons of the year. At the last election—I was not there on the day of election, but I am aware of the fact, the returning officer had the use of two of the government steamers for the delivery of the ballot boxes on the Magdalen Islands and the mainland.

Mr. MONK. The hon. gentleman knows that they are not always used when necessary.

Mr. LEMIEUX. In this instance they were used because it was necessary in order to hold the election on the day fixed in the proclamation. Now, this point is not a ground of complaint on the part of any of the parties in Gaspé. Before 1896, and since, the two parties have admitted that the election cannot be held in Gaspé on the same day as elsewhere. Nor is this regarded as a grievance in that constituency. I repeat that the county has not been disfranchised. Ever since confederation there have been the two parties, well organized in that county. The county was Liberal when hon. gentlemen opposite were on this side. It so happens that the county has been Liberal ever since 1896, but that does not mean that it has been disfranchised. As regards Saguenay and Chicoutimi, the hon. gentleman is in error, because in the last general election the polling took place there on the same day as elsewhere.

Mr. MONK. But the law allows a deferred election.

Mr. LEMIEUX. If the election had taken place in winter, I suppose it would have been impossible to have the polling there on the same day as in the rest of the Dominion.

Mr. R. S. LAKE (Qu'Appelle). I just wish to point out that the only objection which appears to have been taken on the government side to the amendment moved by my hon. friend from Yale-Cariboo is that this resolution is an amendment to the resolution to go into Supply, and that this makes it impossible for the government to accept. That attitude was taken both by the Minister of Finance and the hon. member for Yukon (Mr. Congdon). The latter gentleman went further and expressed his approval of the general principles embodied in the resolution. I wish to point out that the government has accepted amendments to the motion to go into Committee of Supply. I myself moved such an amendment in 1905 on a motion by the Finance Minister to go into Committee of Supply, and my amendment was accepted by the government and adopted. Therefore the objection urged by the Minister of Finance to the adoption of this resolution has no sound foundation.

Hon. W. TEMPLEMAN (Minister of Inland Revenue). I desire to call attention briefly to another reason why this resolution should not pass. This resolution states:

> This House is of opinion that for the purpose of enabling the electors to exercise fully the rights and privileges of their franchise, the general election should be held on the same day throughout all the provinces of Canada.

I assume that means in every electoral district in Canada. This resolution should not pass because it is impossible to carry it out. There are three constituencies in British Columbia in which the elections were deferred, namely, Kootenay, Yale-Cariboo and Comox-Atlin. I am bound to admit that, as regards the constituency of Kootenay, I do not see any reason why there should be a deferred election there. At the last general election, the candidates on both sides were in favour of the returning officer taking the date of the general election as the date of the election in Kootenay, but for certain reasons, which I saw stated in the papers, such as the difficulties with respect to obtaining voters' lists, the returning officer decided against the wish of the defeated Liberal candidate, Mr. Smith Curtis, to defer the election to a subsequent day. As far as Kootenay is concerned, I think that the election should be held there on the same day as the general election, inasmuch as Kootenay is comparatively a compact constituency, and there are railways running to almost every polling division in it, so that it is accessible at all points. With regard to Yale-Cariboo, the representative of that constituency would be better able to advise the House as to what ought to be done. But with regard to the great constituency of Comox-Atlin which I represent, it would be absolutely impossible to carry out the recommendation contained in this resolution. I do not think that the hon. gentleman can have any idea of the difficulties that obtain in the Comox-Atlin electoral district. It is, I think, the largest electoral district in Canada. It is very nearly as large as the entire province of Ontario—approximately three-quarters as large. All over that immense country, in its greatest length 900 miles and greatest breadth 400 miles, comprising about 180,000 square miles, and particularly all along the coast there are scattered innumerable small communities. There is not a railway in the district. The only means of communication is by steamboat and trail, and sometimes dog sleighs. It would be impossible to hold an election in Comox-Atlin on the same day as the general election unless you make the day

of nomination two weeks before the nomination for the general election. The writs for the late by-election were issued in Ottawa on the 22nd and were received by the returning officer, I believe, on the 27th, and there were 12 days between the nomination and the polling day. These 12 days were too short. If we had had a contest, it is absolutely certain that in respect to at least half a dozen of the most remote polling places, the ballot boxes would never have got there.

Mr. FOSTER. Did they get there?

Mr. TEMPLEMAN. There was no poll. The election was by acclamation.

Mr. FOSTER. Was any preparation made to get them there?

Mr. TEMPLEMAN. Yes, it is after all a simple matter of distance and transportation and distance. There nomination was held on February 8. The polling was by proclamation fixed for February 20, and the proclamation was sent to the remote polls by wire. There are polling places such as at Telegraph Creek, on the Skeena river, Aldermere, some 60 miles away, east of Hazelton on the Skeena river, and Cape Scott on Vancouver Island, where there is only monthly communication by steamer. It will be easily understood what our difficulties would be in getting ballot boxes after a nomination to those places within that time. I believe that twelve days is too short. However, the election was by acclamation, which was fortunate, because otherwise in a number of polling places the electors would have been disfranchised. Take Telegraph Creek where there are perhaps forty electors. The returning officer had three government steamers at Prince Rupert on nomination day for the purpose of hurrying the ballot boxes off for distribution to other places. We purposed having a steamer go to Wrangle. There were dog teams at Wrangle to take the boxes in to Telegraph Creek, and I was assured by gentlemen who knew the country and all the difficulties, that it was not possible to make the trip in less than eight or ten days, and if the conditions were unfavourable it could not be done in that time. To Atlin of course communication is much easier, but on the western coast of Vancouver Island there is only a weekly steamer in some parts and in the north a monthly steamer. In many polling places on the mainland, such as Bella Bella and Bella Coola, steamers call only once a month. In all these cases special arrangements would have to be made for the delivery of the ballot boxes. Aldermere is a polling place 60 miles east of Hazelton, and it would have been probably imposible if we had had an election on February 20 to have delivered the boxes there in time. Thus it is necessary that the returning officer should give ample time to permit the ballot boxes to get to their destination in Comox-Atlin. I do not think that any member desires to have a postponed election. For my part I do not, and as a representative of the most difficult constituency in Canada in respect to transportation facilities I would be willing to support the proposition in the resolution if it can be shown to be practical to carry it out.

I cannot say anything about Yale-Cariboo. It is twice the size stated by my hon. friend, but I admit that the northern portion is still uninhabited. However, with the construction of the Grand Trunk Pacific within a year or two it will be necessary to establish a number of polling places 200 or 300 miles farther north than we now have them. Even in respect to Yale-Cariboo, great difficulties would be met with in attempting to hold the election on the same day as the other elections. These arguments do not apply to Kootenay and I believe that in future the election in Kootenay could be held on the same day as the general election.

Mr. W. W. RUTAN (Prince Albert). Mr. Speaker, as many references have been made to the constituency which I have the honour to represent, I wish to explain the position there. I am in the same position as the hon. minister (Mr. Templeman), it would be impossible to hold the elections on the day of the general election unless the law was so amended that there would be a longer interval between nomination and election. I know that the returning officer in Prince Albert was willing and anxious to have the election in that constituency on the same day as the general election, but when he went into details and found that we have polls 500 miles away from the City of Prince Albert which would have to be reached by dog train and boat and portages, he found it would be quite impossible. The original arrangement was to have the nomination on October 19 and the election on October 26. The nomination would close at two o'clock on October 19, and then all the ballots and the notices of election would have to be printed, the boxes prepared and the deputy returning officer and poll clerk would have to start out for the northern polls. We have polls at Beaver Lake, Cumberland House, Pas Mountain, Lac La Rounge, Montreal Lake and Pelican Narrows, all of which are from 250 miles to 500 miles distant. It took two days and two nights from noon on the nomination day to print a sufficient number of ballots to supply these polls. The officials then started on their trips and I do not think any hon. gentleman will contend that a man would have physical strength to make such trips as I have mentioned, and

hold the election within five days, as they would have to do to hold the election on the following Monday. These people living in the northern districts claim the same right of franchise as we do. Consequently it is unfair for any one to expect that the elections could be held on the same day and I do not believe our friends on the opposition are sincere in expecting this will be done under the circumstances. It was said by the opposition press that I had gone in with the returning officer to steal Prince Albert. I wish to assure hon. gentlemen in this House that that statement is untrue and utterly unfounded. I told the returning officer that if there was any way possible I would much prefer to have the election on the same day as in the rest of the Dominion, and as a proof of that desire, when the election was deferred, in place of having the nomination day after the election in the rest of the Dominion, it was placed on the day that the other elections were held so that we would not know anything about the result in the rest of the Dominion. Thus there was no chance of taking an unfair advantage of the necessary deferring of the election, as the news of the results in the rest of Canada could not reach these distant polls before the voting took place. It was used as an argument against me throughout the constituency that this was done for the purpose of gaining the election. It does not seem to me that this statement was sincere on the part of the opposition for the very reason that the great argument used by my opponents before notice of the deferring of the election was given, was that the government was about to be defeated, that the Conservative party would be returned to power. Consequently it seems to me that if there was any advantage to be gained by the deferring of the elections it was as great on one side as on the other, especially as the nomination was held before the result of the election in the rest of the Dominion could be known.

Mr. A. S. GOODEVE (Kootenay). Representing a constituency in which there was a deferred election, I wish to say a few words. I feel that the ground has been thoroughly gone over, and that the arguments advanced by the hon. member for Yale-Cariboo (Mr. Burrell) have been very logical. I am pleased to see that all the members who have followed him have agreed to the principle of the resolution that has been moved. Several speakers, while agreeing with the principle of the resolution, have given various reasons why, at this particular time, they should not support it. First, the Minister of Finance took the ground that to vote for this motion would be equivalent to voting want of confidence in the government and he pointed out that that had never been done.

Mr. FIELDING. No, I did not say that.

Mr. GOODEVE. He said it could not be done without a vote of want of confidence in the government. Now I desire to say that I have a record of a number of resolutions that have been moved by the opposition on going into Supply, and which were accepted by the government:

Amendments to supply adopted by government.

Votes and Proceedings, 1899, page 362, Tupper, responsibility of political heads.

Votes and Proceedings, 1900, page 234, Russell, preferential trade.

Votes and Proceedings 1901, page 288, Davis, Canadian Pacific Railway test case.

Votes and Proceedings, 1902, page 421, Bourassa, embargo cattle.

Votes and Proceedings, 1903, page 125, Costigan, Home Rule.

Votes and Proceedings, 1905, page 782, Armstrong, cold storage.

Votes and Proceedings, 1905, page 954, Lake, civil servants and elections.

Votes and Proceedings, 1908, page , Borden, access to original documents.

In all these cases the amendments were accepted by the government, and in no case were they considered as motions of want of confidence in the government. That being apparently the only argument advanced by the Minister of Finance, I trust that he will now be able to accept this resolution and ask his supporters to accept it. In regard to the question raised by the hon. member for the Yukon (Mr. Congdon), all his arguments were in favour of the principle of the resolution, his only complaint seemed to be that the Yukon was not included in this resolution. The explanation made by the mover of the resolution was that, not being familiar with the district of the Yukon, he thought it inadvisable to include it in the resolution. But I am sure that the member from the Yukon, agreeing as he does with the principle of the resolution, can vote with us on this question, and it would be an easy matter, when the Bill is drawn up, to include the Yukon. So much with regard to the arguments that have been raised by our friends on the government side.

Again, the Minister of Inland Revenue, in referring to the district of Comox-Atlin, pointed out that the time at present fixed for the general election was not long enough for the constituency which he represented. But as was shown by the actual dates given by my hon. friend from Yale-Cariboo, in the recent general election the actual time elapsing between the issuing of the writ and the polling day was 38 days, whereas in the by-election, as stated by the Minister of Inland Revenue, there were only 29 days. He himself stated that the writ was issued on the 22nd of January, was received by the returning officer on the 27th of January, and the nomination took

place on February 8. Now if we turn to the Elections Act, we find that it requires that the proclamation shall be posted eight clear days, not including the day of posting or the day of nomination, before the nomination can be held. If we had eight clear days to the day when the minister himself says the returning officer received the writ, namely on the 27th of January, you will see there was not sufficient time given, only two days were given. Again we find that in the recent campaign, if we may believe the public press, he himself stated that he was in favour of this very district of Comox-Atlin having no deferred elections; so he has practically pledged himself to our proposition.

Mr. TEMPLEMAN. I stated at Prince Rupert what I have stated here to-day. I pointed out the difficulties and the impossibility of holding the election in Comox-Atlin on the same day as the other elections.

Mr. GOODEVE. I accept the hon. gentleman's correction, but I understand that he made the stipulation that it would be necessary to have further time if they were to have it on the same day. I want to point out that we can fairly ask for the support of members on both sides of the House, inasmuch as we are only asserting a principle ; the details can be worked out in a Bill when it comes up for consideration. Now in regard to my own district of Kootenay which I have the honour to represent, let me point out that the people on both sides of politics in that great district are strongly of the opinion that there should be no deferred election in that district. I can advance no better argument than the statement of the Liberal candidate himself in the recent election. When he was nominated some months before the general election, he stated in his address accepting the nomination of the convention, that on no account would there be a deferred election in the constituency of Kootenay. When interviewed by the press, he again reiterated his opinion that the principle of deferred elections was vicious in principle and unfair in practice, and for that reason he assured the people of Kootenay that there would be no deferred election in that district. But he went further than that. When I was nominated by the Liberal-Conservative party in convention, the Liberal candidate wrote me a personal letter of congratulation, and again reiterated the statement he had made in public, that in no event would there be a deferred election in Kootenay, but they would fight it out in a fair field. But, Sir, what was the result? We find that notwithstanding the statement made by the Liberal candidate, both to his own party and through the press to the public, and again personally in writing to me over his own signature, as the campaign wore on, and there seemed to be in the minds of the people a general feeling that the government would not be supported, at least in the western provinces, and particularly in the district of Kootenay, his committee urged upon him over and over again the necessity of deferring the election. And what was the argument advanced by the committee for deferring the election? It was the argument that has been advanced by the hon. member for Yale-Cariboo in debating the evil of deferred elections, it was the argument that his only hope of carrying that seat was by deferring the election when, if the government should be returned to power, they would have the influence and the prestige of a victorious government to elect him. The result was that the attitude taken by his committee forced him to consent to deferring the election. In our campaign, both the Conservative press and myself on the public platform, gave the Liberal candidate credit for the attitude he had taken up at first. We felt that he had taken a statesmanlike and manly attitude in regard to this question, which was a burning one in that portion of the province. In every case where we spoke, and in every case through our daily papers, we gave him credit for that attitude. But the very first night when we had a meeting, and were both standing on the same platform, when we knew that the committee had urged upon him the necessity of deferring the election, I took occasion to express the opinion that they had taken an unfair advantage in the middle of the contest, in other words, that after they had agreed to certain conditions and we had accepted these conditions, it was not fair that they should then back out and place upon us a handicap. I may say that the audience agreed with me that the action of the committee was most unfair. Now I do not mention this matter for the purpose of ventilating any incidents of that campaign, but merely for the purpose of showing how unfairly deferred elections may be made to work against the opposition candidate. On that occasion the Liberal candidate asked my permission to address the audience, and he stated over and over again that as far as he was concerned he was still of the opinion that it was unfair and unjust to the district of Kootenay to defer the election, and he disclaimed any personal responsibility for it, and threw it all upon the government. He went further, and said on the day I was nominated that he had written down to those in authority at Ottawa and assured them that he had given his pledge that there would be no deferred election. On that ground he asked them that the writ be issued at the same time as the writs were issued for the general election.

When the writ did not come in time he

telegraphed them again saying that his personal and public honour was pledged to having the election on the same day and urging them to forward the writ. He said that notwithstanding that the writ was not issued in time to enable him to have the election on the same day, the argument being that there was no opportunity, when, as a matter of fact, the government themselves held back this writ against his wishes in order that they might have the advantage in that particular constituency of a deferred election. What is the feeling of the people of British Columbia in regard to this matter? Let us look at it from two or three phases that have not been mentioned. We have in this House 221 representatives from every portion of the Dominion and out of these 221 representatives there are seven from British Columbia, one at least of the greater provinces of this country. Of these seven representatives we had no less than three deferred elections, or, in other words, three sevenths of the entire electorate of British Columbia were practically disfranchised by deferred elections. I say that it is no wonder that the people of British Columbia felt indignant at the treatment that they received at the hands of this government. It is no wonder that they felt that they would resent such an injustice to them and to their province. That is one of the chief causes that led to the opposition to the government. But, there is another question that, it seems to me, enters into this. I believe that in deferring the elections in these various districts there is committed an injury to each particular district in which these elections are held. Let me illustrate: In Kootenay, which I have the honour to represent, as you know, in addition to the great mining industries that we have there, we have, in recent years, learned that the great valleys surrounding our lakes are suitable for fruit culture. Boards of trade and individuals have spent large sums of money in advertising the natural resources of that particular portion of British Columbia and of its adaptability to horticulture. They have sent these advertisements all over Canada, to the old country and to the United States. They have been advertising these resources and the chief argument they have advanced in regard to them was that not only were these districts capable of growing all kinds of fruit of the best quality but that they were also close to the market, that they had good railway facilities which would enable them to reach their natural market, the prairies to the east, Manitoba, Saskatchewan and Alberta. Under these circumstances they were offering inducements to people to come in there and settle the land. What was done? Just at the time when Canada was engaged in a general election, when every newspaper was devoting its front page and its editorial columns to the contest that was going on, just when the eyes of the mother country were focused upon the contest between the two great parties for the control of the affairs of this Dominion, it was announced that in certain portions of the province of British Columbia our means of communication were so backward that it was impossible to issue the writs and hold the elections on the same day as they were to be held in other parts of Canada. It did more harm to the district of Kootenay and those portions of British Columbia in which we had deferred elections than will be offset by many years of hard work and a large expenditure of money. I do not hesitate to say that the people of these districts resented the position taken by the government with regard to these deferred elections. They felt that they had been dealt an unjust blow. They felt that all the work that had been done for years was undone by the position which these hon. gentlemen took with regard to this question. As to the position with regard to British Columbia I venture to say that it applies largely to other portions of the Dominion.

In addition to the arguments which have been so logically advanced by my hon. friend from Yale-Cariboo (Mr. Burrell) I can only add that we have been unfairly dealt with in regard to advertising the great natural resources of that part of the Dominion. The time has come when we must show to the world at large that we have such good means of communication that all portions of the Dominion can be reached by the writs within the statutory time. It is a very important matter and one that affects every one of us. The country has spent large sums of money in making known its resources to other parts of the world. You find that the Minister of Agriculture and Minister of the Interior have spent large sums of money with regard to immigration and agriculture, advertising the great natural resources of the country and sending out agents at great cost, and yet, just at the time when a general election comes on, just at a time when we have an opportunity of advertising Canada, certain sections of the country are picked out and are unfairly dealt with by having it announced to the world that they are in such a backward position with regard to transportation facilities that elections cannot be held within these districts at the same time as they are held in other portions of the Dominion. I do not intend to take up the time of the House any longer with regard to this question. I believe that it has been fairly dealt with and I can only say that this is not a resolution that has any party advantage or object in view. I think we have shown that the time has arrived

when all men are agreed that we should have our general elections held throughout the Dominion of Canada on the same day. We are only asking the House to say at the present moment that this is a principle which should be adopted, and when we come to work out the details of a Bill all arguments with respect to particular constituencies may be considered. With regard to the argument of the hon. Minister of Inland Revenue (Mr. Templeman) when the Dominion Election Act was being discussed in 1908, my hon. friend the leader of the opposition (Mr. Borden), dealing with this very point, asked that the principle of this resolution should be adopted by providing that the time for the proclamation be set a few days or weeks earlier in those districts where it was proposed to hold deferred elections than in those districts where they did not require so much time to get out the proclamation, but that suggestion was refused by the government. If that suggestion had been adopted then the arguments which have been advanced by the hon. member for the Yukon (Mr. Congdon) and the hon. Minister of Inland Revenue, would have no foundation. I cannot see any objection to making the proclamation in these outlying districts twelve or fifteen days before the polling day. I ask, on these grounds, that the members of this House, regardless of party affiliations, declare themselves in favour of the adoption of the principle of the resolution as we have it before us.

Mr. RALPH SMITH (Nanaimo). Although not myself the representative of a constituency in which deferred elections are held, as there are three constituencies in the province in which that principle is adopted, it may be neecssary for me to give my opinion on the question which is under discussion. Last session, when the question of deferred elections in British Columbia was being considered, like my hon. friend the Minister of Inland Revenue (Mr. Templeman), I thought that it might be possible to provide for having the election in the Kootenay district on the day of the general election. But, I had very grave doubts from the knowledge I had with regard to Yale-Cariboo whether that would be possible there. I was absolutely certain that without some very serious change in the General Elections Act which would involve every constituency in Canada, it would be utterly impossible to provide for the Comox-Atlin district as the hon. minister has described to the House. From the days of confederation in Canada, and owing to its peculiar and extensive geographical conditions, it has been considered necessary, on the part of both parties, that deferred elections should be held. In England, as my hon. friend from Yale-Cariboo (Mr. Burrell) said, with its large centres of population, it has been considered necessary at certain periods to have deferred elections. The peculiar geographical conditions of Canada has necessitated all governments since confederation to defer the elections in certain constituencies.

Mr. BURRELL. Do I understand the hon. gentleman to say that I contended that geography had anything to do with deferred elections in England? Surely he knows that the elections are not held on the same day in England because of the basis of the franchise which gives a man the right to vote in several constituencies where he is qualified?

Mr. RALPH SMITH. I was stating that the conditions in this country gave far more reason for deferring elections than do the conditions in England. At all events all political parties since confederation have followed the same policy in that respect. My hon. friend (Mr. Burrell) based his whole argument against deferring elections on the beneficial results which he said would accrue to the candidate supporting the party in power, but no stronger refutation of that argument can be found than the living presence of the hon. gentleman in this House. If the voters elect a man because he has charge of the flesh pots and can distribute them, and if a deferred election gives a government supporter great advantages in this respect, then the hon. gentleman would not represent the people of Yale-Cariboo in this House. The hon. gentleman said he preferred the system of having the general elections on a fixed date which incidentally of course would mean that each parliament would be elected to sit for a specified and fixed term. Well, that is a proposed change in the British constitution which I am not prepared to subscribe to.

Mr. BURRELL. I did not say I preferred that system ; I merely said there were arguments in favour of it as there were arguments against it.

Mr. RALPH SMITH. Under the principles of the British representative constitution which we have incorporated into the constitution of Canada, the people of this country can at any time they find good reason for doing so turn out the government in power. Seven days after they have voted to put a certain party in power, they may, under the elasticity of the British system turn that party out of power again; but, under the United States system, which is less democratic, they elect their representatives for four years, and for four years whether the policy of the Congress may be approved by the people or not, the men so elected remain at the head of the nation. I am entirely opposed to that

system. Now, as to deferring elections, I agree that so far as it is possible we should hold all the elections in Canada on the same day. The hon. gentleman calls upon me to vote non-confidence in the government because they have, as all former Canadian governments have, deferred elections in certain constituencies Well, even supposing the government is wrong in that, surely we can find a remedy without voting against a good government which in other respects has done so much to advance the material interests of the people of this country. Even though I should disagree with the government in regard to one particular item in their policy, and that certainly not a very important one in comparison with others, I would be very loth indeed to vote against them on all questions because I might disagree with them on one point. I believe this debate will have a tendency to influence this government, and all future governments, to reduce the number of deferred elections to the narrowest possible limit. I said a year ago in this House that I believed it was not necessary to defer the election in Kootenay. My hon. friend from that constituency (Mr. Goodeve) has told us that the government candidate denounced the provision for a deferred election and stated in his election address that he preferred that the election should be on the same day as the general elections and we are told that on account of the alleged unnecessary and unreasonable deferring of the election a great many of the voters in these British Columbia constituencies voted against the government. It is quite evident, if this be true, that the Liberal party had no political motive in having a deferred election. If the Liberals of these districts and the government candidates for these districts were against deferred elections, how can my hon. friend say that there was any political motive in holding the deferred election? I believe the people of these constituencies generally do think that provision could be made to have the elections on the same day. Personally, I think it would be very difficult in Yale-Cariboo; it may be possible in Kootenay; I think it is impossible in Comox-Atlin. I am convinced that there are geographical conditions because of which, unless there is a very radical change in the law, it will be impossible to apply the rule of simultaneous elections in some of the constituencies for some years to come.

Hon. GEORGE E. FOSTER (North Toronto). It certainly is interesting to note that two very intelligent men on the other side of the House, the Minister of Finance, (Mr. Fielding), and Mr. Ralph Smith (Vancouver), could have persuaded themselves that they had convinced each other that this was a vote of want of confidence. If the hon. member for Vancouver was convinced by the argument of the Minister of Finance that this was a vote of want of confidence, does he accept the necessary conclusion that every amendment to Supply is a vote of want of confidence and that to vote for such an amendment is to vote against the government?

Mr. RALPH SMITH. I would ask the hon. member (Mr. Foster), in return, if it is possible for me to have my views expressed in the form of an amendment to this motion.

Mr. FOSTER. That is not the point. The hon. member (Mr. Ralph Smith) said that one of his reasons for not wanting to vote for this resolution was that he does not want to turn out a good government, notwithstanding the fact that, so far as the proposal in that amendment is concerned, it ought to be carried out if possible. The Minister of Finance rather surprised me by making the statement in the categorical way he did. He not only said this was a vote of want of confidence, but that the only method by which a vote of want of confidence could be moved was by amendment to a motion for Supply. I do not think he really believes that.

Mr. FIELDING. It is the most common way.

Mr. FOSTER. But the minister did not say that; he said it was the only way, and he called upon his supporters, in as clear terms as he could use, to vote against this amendment because it was a motion of want of confidence. My hon. friend from Kootenay (Mr. Goodeve) has cited seven or eight instances of amendments to Supply accepted by the government and carried unanimously, some moved on the government side, and some moved on the opposition side. Such instances occur almost every session.

Mr. LENNOX. We had two last session.

Mr. FOSTER. Yes, we had two last session as my hon. friend (Mr. Lennox) observes. Common sense is against regarding such an amendment as necessarily a vote of want of confidence, and all parliamentary practice is against it. A motion of want of confidence is defined by what the motion itself contains. If my hon. friend from Yale-Cariboo (Mr. Burrell) were to move that the administration of the Minister of Finance had been corrupt and wasteful and therefore unworthy of confidence, that would be a clear motion of want of confidence, and it would not make a bit of difference whether it was moved in amendment to Supply or as an independent motion. I quite agree that, if the ministry wish, they can declare any motion to be a motion of want of confidence, and call upon their followers to treat it as such. In such a case it is for the independent minds behind the

Treasury benches to decide whether it is a vote of want of confidence or not and also how they shall declare themselves concerning it.

Another point that has been made is that the amendment should not be passed because there are details which would make it impossible to carry it out except after amendment of the law. As my hon. friend (Mr. Goodeve) has pointed out, this is simply the declaration of a principle, a principle which has been accepted, in the main, by the Minister of Finance himself, by the Minister of Inland Revenue (Mr. Templeman), by the member for Nanaimo and by all the others who have spoken on the other side of the House. As this is merely a declaration of principle, if there are details to be arranged in order to carry it out, those details can be considered after. This would be a mere expression of opinion of the House, an instruction to the government, that the principle ought to be carried out; it would be for legislation to come in afterwards and make the merely mechanical re-arrangements with respect to time and distance to carry the principle into effect.

But I wish to call attention to an argument upon which the hon. member for Nanaimo seemed to plume himself a good deal. He said that the hon. member for Yale-Cariboo (Mr. Burrell) was a living demonstration that the position he took was not a valid position. It is true, I suppose, that dynamite exploded in proximity to a man is apt to damage the man. It is also true that a case may be found where the discharge has gone in another direction, so that the man, though apparently in imminent danger, has escaped damage. Would the hon. member (Mr. Ralph Smith) contend that because, in one case the man had escaped, that that was an argument against being careful about leaving dynamite around where it may explode when some unoffending citizen of this counary is near at hand? That was an argument used by my hon. friend from Vancouver which did not do him justice. He can make better arguments than that. But he has been up against it this afternoon; in order to find a reason to vote for the government he had to have recourse to an argument like that. If, now and again, a constituency rises superior to the influence of a deferred election, if a constituency, outraged by the continual application of this method decides that it will take the bit in its teeth, and, government or no government, will vote emphatic denial of such a principle, can that be considered an argument in favour of deferred elections? Because that happens now and then, is it an argument that you can use those things and should use them, and that the abuse should not be taken away. But the thing underlying that, and my hon. friend knows it well, is this: is it proper, when it is not necessary to have a deferred election, for the government to defer it and thus better use the kind of argument used in these constituencies. That is the principle which is under it, and my hon. friend is too intelligent and straightforward to stand for a thing of that kind. But what does he think of the action of his own government? The two candidates, Liberal and Conservative, who knew their constituency, who knew their geographic limitations, came to a compact and agreed that they did not want any deferred election but a fair, straight combat in the ring without any handicap. The Liberal candidate both wrote and wired his government to give a square contest on the day when everybody else was casting his ballot in the Dominion. But your Finance Minister and your Prime Minister, whom you do not want to turn out and censure, rode rough-shod over him and said: You shall not have a fair fight, but we will put a handicap in your favour, and will do it by means of a deferred election. There was not a word of reprobation of an act like that by my hon. friend. He is so anxious to stand at the back of the Minister of Inland Revenue and support his loins, his arms, his shoulders and his head, that he would not reprove the wrong action for fear he would cause some damage by imputation to that heaven-sent minister.

At six o'clock the House took recess.

After Recess.

House resumed at eight o'clock.

Mr. FOSTER. When the House rose I was dealing with some arguments adduced by the hon. member for Nanaimo (Mr. Ralph Smith). I always listen with pleasure and interest to what the member for Nanaimo (Mr. R. Smith) says. He is a man of wide experience, a man who thinks for himself and who appears to be exceedingly well informed on a wide range of subjects. I have heard him make most excellent arguments in this House. Of course it is difficult for a man to make a good argument if he has a poor case, and I attribute the weakness of his argument this afternoon to the poor case he had to defend. The member for Nanaimo (Mr. R. Smith) has won his spurs. He has conquered his constituency, he has kept it after conquering it; in many a hard fight he has proved the winner. After the election of 1908 he came here with his spurs on. I cannot say quite the same of the Minister of Inland Revenue (Mr. Templeman). The Minister of Inland Revenue did not quite win his spurs in the same way as the member for Nanaimo. It strikes me that some years ago there was something of a deal by the transference to the Senate of a par-

ticular person to give him a seat in this House and enable him to enter the cabinet. He entered the Cabinet without portfolio, but afterwards became a full-fledged minister. In the election of 1908, like many another good man, he went down before the wrath of the people and he is now here by virtue of another arrangement. The elected member for Comox-Atlin, the man who fought the contest, who stood at the polls and took the battle upon him, came out victorious and came here as a full-fledged member of this House. It seems that there must be sacrifice somewhere and in some way or other the sacrifice was accomplished and the Minister of Inland Revenue, by way of Mr. Sloan, sits in this House to-day. So I say that for a man who has won his spurs in many a hard fought battle, who has fought consistently and always in his own consituency. it must come a little hard and it must be from a high sense of public duty that he stands so loyally to the back of the minister and his colleagues. The member for Nanaimo (Mr. R. Smith) I think has good cabinet material in him, he had won his position and might well have looked for preferment when preferment was possible; but instead of that the member for Nanaimo is not recognized and a deal is made by which the Minister of Inland Revenue gets into this House. I was interested this afternoon when the Minister of Inland Revenue was making his argument. He told the House plainly that if there had been an election contest in Comox-Atlin large numbers of electors would have been disfranchised. Did the minister have it so arranged that he knew from the first there was going to be no election. Suppose that, contrary to his supposition, if he had any in that respect, some obdurate man had been found in Comox-Atlin who would have stood at the polls and have forced a contest; by the admission of my hon. friend himself a large number of people in Comox-Atlin would have been disfranchised. By whose action? By his own action. Before he left Ottawa he and his government had arranged exactly what time should be given and they so arranged the time that if in the natural course of things there had been an election a large number of residents and electors in his own constituency would have been disfranchised. My hon. friend this afternoon deplored anything of the kind. He is in favour of deferred elections lest perchance somebody in a constituency shall be disfranchised and yet he and his government set the whole machinery into operation by virtue of which, if there had been an election, hundreds of his own constituents would not have had a chance to vote. The only supposition that will reconcile the minister's actions with his expressed desire that no one should be disfranchised, is that from the first, when fixing the dates and arranging the machinery, he had a pretty good idea that there was going to be no election.

Now we come to the argument of the Postmaster General (Mr. Lemieux) who declared that in Gaspé it was physically impossible to hold the elections on the same date as the general elections, provided all the machinery was exactly as it is now. What were the arguments he used? Two hundred and fifty miles of an extension, but that is not insuperable in these times and finally the Postmaster General himself admitted that it would be possible to hold the elections on the mainland of Gaspé on the date of the general election, but he thought it might not be possible, under certain circumstances, on the Magdalen Islands. Yet the Magdalen Islands have complete telegraphic communication with the mainland. He was afraid there might be some possible mistake in a date in transmitting the telegram to the Magdalen Islands. It is the simplest thing in the world to have a telegram repeated so that the man sending it knows that it is received exactly as he sent it. Thus, by his own admission, it would be possible to carry out the general law. What is the kernel of the whole matter? It is the urging of a lot of technical and easily removed objections in order to retain a system which it is acknowledged by all should be abandoned if it is possible to do without it.

Now on the one side, what is it? Technicalities, geographical difficulties, mechanical difficulties and the like of that; on the other side, an acknowledged grievance, an acknowledged disability, an acknowledged bad method. Will any one stand up in this House and argue for a single moment that a deferred election is fair between man and man as candidates in a contest? I do not think any one will. In a contest where the whole Dominion is engaged upon public issues, public men on each side go into the contest and they have a fair field so far as it can be given to them. Each one has the right to argue and instil into the minds of the electors that his party is the best party, has the best methods, and will likely rule the country for the next four or five years. Each stands on a level. It depends on the men which of the two shall be the better persuader of his audience. But when you put a deferred election on, and you have the issue already decided in the Dominion, and it is no longer a question as to which party shall be in power for the next five years, no man can say that it is a fair fight as between man and man. Don't we believe in fair fighting? Whatever government is in power, does it want to keep in power by unfair fighting? Does it want to load the dice? Surely not. Then I say that one of the great evils of a deferred elec-

tion is that it does not play the game fairly, it handicaps one man in favour of another, and he the nominee of the government.

I say it is not only unfair between man and man but it is unfair between party and party. Go into a general election contest, even though we use those methods which we deplore, suppose the government candidate says: If you want public works in your constituency you had better elect me, for my party is going to be in power. The man who listens to him looks up in his face and says: Well, that is yet to be tested, you don't know, and we are not at all sanguine that your party will be in power. The candidate on the other side gets up and says: Vote for me, for my party, and for my party's policy; and he meets the argument of the other man by saying: I believe that my party will be in power, and that consequently we will have rule in the Dominion for the next four or five years. You put the two parties on as fair and equal footing for the fight as you can. But make it a deferred election, and what do you do? You handicap one party entirely, so far as you can, you read it out of any chance or hope of being successful in the election contest, because they are up against an issue which is decided already in the country. So it is not fair between party and party. I hold that no matter what a party may gain by that kind of thing, in the long run it loses if it offends the principles of fair play and just warfare as between the two great parties in the country. Some time or other it will come back on them. It hits first one party and then another, if it is carried on. But it is not good for either party.

But there is a higher issue than that. It defrauds the elector in the deferred constituency of any chance of deciding the public issues of the day. What is the whole theory of our free and responsible government? It is that by aggregating the units of voices throughout the whole country you get a proper conclusion as to the policy which shall rule the country. Is it not essential, then, that the contest should be carried on under conditions which give to each man a chance to have a voice in deciding the final issue? Your deferred election takes away that chance from the man in the minority party, and the moment he presents his policy he is told, the issue is already decided, and you have a matter of public policy in which the voter has no chance at all to decide what it will be, it has already been decided, and it is a dead issue in that constituency. Now what is the effect of that? What do we want in this country, dead constituencies or live constituencies? Is it best that we should have the finest spirit, is it best that we should have the liveliest and keenest discussion, is it best that we should have the energies of all the electors devoted to the solution of questions that come before them? Evidently so. But by the deferred election you destroy that liveliness, you destroy that independent participation, and you throw a dead issue into that constituency, and consequently you do what militates directly against public spirit, and the better public life of that constituency and of the country at large. It is not right, and it is not expedient. It is not right, because it deprives the elector of his proper position; it is not expedient, because in the long run it discourages public spirit and is a disadvantage to the country.

Well, then do we agree upon that? I ask the Finance Minister, in the way of reasoning this out, do we agree that it is not a desirable thing to go into any consituency and to try to get a vote by the bold promise of public works and of public patronage? No man, I think, will get up in this House and argue on that brute idea. He will hedge about it, even though he believes that he or his party will use that kind of an instrumentality, he will not advocate it baldly and boldly. The issues of the day, the discussion of these great public issues, the great public policies, the interests of the country at large, these are the things which should be discussed in the election, and to leave those aside and to replace them by, or give greater prominence to, the brute arguments and promises of what the government will do in the bestowal of money, and franchises, and public works, and that kind of thing, debauches the constituency. It is a course which is deleterious, nobody can stand up in this twentieth century, and go in for and advocate that sort of thing. But your deferred election gives force and power to that argument. The two men on a platform in a general election have a fair show, neither can say that his party is in, or that his principles will triumph. But in a deferred election a government is in, that government has the patronage, that government dispenses the money—Vote for me, or you will get nothing for your constituency in any way, shape or form. That is the bald argument used over and over again. It is used with tremendous force when all are fighting on the same day, it is used with tenfold more force when you defer an election and you give to one party or to one candidate power to say: 'We are in for five years, we dispense the patronage, we build the post offices, we appoint the officers, we do all that sort of thing, and you will not get a smell of patronage unless you vote for me. The government will be kind to its friends.' My good natured friend the Minister of Railways (Mr. Graham), says that is human nature, and that every party will always be more favourable to its friends. Another puts it in a different way,

and so we have it. But when it is put so baldly as that, and in a deferred election, even my good natured and human friend, the Minister of Railways, would, I think, rather balk at that kind of a statement in its bareness and its foulness, I do not think he would stand at the back of that. Therefore, I say that the deferred election is the enemy of the country, of the commonwealth, of good public life, because it gives the greatest possible force to the worst kind of arguments, the argument of patronage, when a man says, 'I belong to the party which is going to exercise this patronage for the next five years, make me your man and I will get these expenditures in your constituency.' What have you on the other side? You have, on the other side, simply what has been urged here this afternoon, that there are geographical difficulties in the way. You will have to use the telegraph; in some cases you will have to send couriers out; in other cases you will have to have this, do this and that as a mechanical expedient in order to expedite the work to have everything made ready for the decision on polling day. What are these things?—simply technicalities, little mechanical difficulties which, if it were determined that the principle shall triumph, we are abundantly able in half an hour to meet by legislation. The hon. Minister of Inland Revenue (Mr. Templeman) has shown how it can be met in Comox-Atlin and he has held up Comox-Atlin as a conspicuous example of a large and unwieldy constituency. That situation can be met by making the proclamation two weeks in advance. We are competent to meet that by legislation. It is the easiest possible thing in the world to do. If we want to establish this principle we can easily smooth out all these little mechanical difficulties and put the matter where it ought to be. But, remembering the illustration given by my hon. friend (Mr. Goodeve), I am afraid that the real reason why the deferred constituency is kept is that the government itself is favourable to it and does not want to relinquish the hold it gives. It will not hurt us to give that illustration once more before I stop talking on this phase of the subject. What was it? The Liberal candidate in Kootenay wanted no deferred election, the Conservative candidate wanted none, and the two, like brothers in a good, square, fair fight agree that there should be none. What happens?—the candidate of the government wires to the government: 'I want the election on the regular day.' He writes to the government: 'Please set the election on the regular day.' The government do not. Why not? Not because it is not feasible or practicable, but because it wants to handicap the man who is opposed to it and give an advantage to the man who is running in its interests. So long as that is the spirit of the government no wonder the Minister of Finance strains every constitutional and reasonable principle and declares that an amendment like this involves a vote of want of confidence and calls upon his followers to vote against it. No wonder that my self-sacrificing friend from Nanaimo (Mr. Smith) treats it, on the ipse dixit of the Minister of Finance, as being a vote of want of confidence and says: 'I do not want to turn out this good government: better a thousand deferred elections and all that they involve than that this government that I support should go out.' There it is. It is up to parliament just now to say whether or not we will adopt the principle which we all believe to be correct and then set ourselves to smoothing away the difficulties in the way of carrying it into actual practice, or whether we will go on in the old way, the way which accentuates the difficulties that we are strong enough to overcome now in the political life of Canada.

Mr. W. H. WHITE (Victoria, Alberta). Mr. Speaker, I have listened with a great deal of interest to the discussion on both sides of the House on the question of deferred elections. According to the speech made by the hon. member for Yale-Cariboo (Mr. Burrell) one would imagine that it was a Conservative candidate who in all cases suffered by deferred elections. I happen to represent a constituency in which I was the sufferer, and not only that, but a large proportion of the constituency was disfranchised by reason of the fact that the election was not deferred. I may say that although the member for Yale-Cariboo may think that he put the question, as it appeared to him, fairly, it must be remembered that there are other places in Canada as well as Yale-Cariboo. There are districts probably as large and just as hard to get over as the constituency my hon. friend represents. I have the honour to represent a constituency extending from the city of Edmonton to, you may say, the North Pole. I wish to inform the House that although there is a large settlement north of the Athabaska river there was no poll in my constituency north of that river. Some hon. gentlemen might think that there was a desire on the part of the Liberals in the late election to act unfairly and that there was some motive for not placing a poll north of the river, but, I want to point out that the district of Athabaska is represented in the Local House at Edmonton by a Liberal. He was elected by acclamation. I think I know the people in that country probably better than any man in the House, if not as well as any man in the Northwest, and I do not know the name of one Conservative north of that

river. I know that there are over 300 votes in that region and that we only had to place a poll there to secure those votes. The Liberal associations at Fort McMurray and Fort Smith applied for a poll but the government did not see their way clear to establish one although I, as the representative of the party in the recent contest, was very anxious to have one placed in that district. We could not get it and the result was that a large portion of the constituency was disfranchised. I would be sorry to see this occur again. I hope that in the next election these people will have an opportunity of casting their votes. Unless there are great changes which we do not now expect, such as the extension of railways into that north country, when the next election comes on these people will be in exactly the same position as that which they occupied in the last election. I think it is unfair that such a large proportion of the electors should be disfranchised and I am therefore very much opposed to the resolution doing away with the deferred elections while there are voters in remote corners of any constituency who do not have an opportunity to vote. My opponent in the late election was very anxious with regard to this matter. His agent approached me and said he hoped they would not place any poll in that country. His agent tried to make an arrangement with me which, of course, I had no authority to make, his reason being that it was impossible to go up there. If a poll had been placed there I would have had a great advantage over my opponent. The local member who is a friend of mine would have looked after my interests there while my opponent had no chance of sending anybody in and I would undoubtedly have secured the vote. If these people are disfranchised in the next election I do not think they will be very well satisfied, I do not think they should be, and I promised them that I would do all in my power to secure to them in the next election the opportunity of casting their votes the same as the voters in any other part of the district. I have only to add that I will vote against the resolution in the interest of constituencies which would suffer if there were no deferred elections.

Mr. W. E. KNOWLES (Moosejaw). Mr. Speaker. I shall endeavour to make my remarks fittingly brief, and in the first place I shall touch upon the observations made by the hon. member for North Toronto (Mr. Foster). The major part of the hon. gentleman's speech was devoted to jeering at the hon. member for Nanaimo (Mr. Smith), and at the hon. Minister of Inland Revenue. He takes exception to the manner in which the Minister of Inland Revenue finds a seat in this House. It is true that the hon. gentleman (Mr. Templeman) was defeated by a narrow majority at the recent elections, and it is also true that he was defeated by most despicable means. I for one who support the government am here to say that when we remember the means by which the Minister of Inland Revenue was defeated, he has not the slightest fallen in our estimation, but on the contrary we think the more of him. It is true, as the hon. member for North Toronto has said, that in 1906 the Minister of Inland Revenue found a seat in this House because of a vacancy caused by the resignation of Mr. Riley, now a senator. The people of the city in which the Minister of Inland Revenue lives were glad to elect him on that occasion and they would have been glad to have elected him on the 26th of October last if they had not been misled and deceived. But, when we look at the records of how the Minister of Inland Revenue has found a seat in this House and of how the hon. member for North Toronto has found a seat here, I do not think the comparison is very much to the credit of my hon. friend from North Toronto. I had rather be in the position of the Minister of Inland Revenue who found a seat in the city in which he lived for many years and of which he is one of the pioneers, known and respected, than be in the position of the hon. member for North Toronto who, I am informed, started his political career in a place called the County of Kings in the province of New Brunswick down by the sea. I am told that from there he went to another county ; he wandered to and fro on the earth, and he found a lodging place in the county of York——

Mr. AMES. Mr. Speaker, I ask, has this anything to do with the question before the House.

Some hon. MEMBERS. Sit down.

Mr. SPEAKER. Order. I will hear the hon. gentleman on the point of order.

Mr. AMES. I ask has this anything to do with the question under consideration?

Mr. FIELDING. I submit that it has as much to do with it as the speech of my hon. friend from North Toronto.

Mr. FOSTER. You don't mean that.

Mr. FIELDING. I do.

Mr. AMES. My point of order is that the remarks of the hon. gentleman (Mr. Knowles) are not pertinent to the subject under discussion, and I ask your ruling.

Mr. SPEAKER. The motion is that the House go into Committee of Supply, and on that motion considerable latitude is allowed. There is an amendment relating to deferred elections, and as I have allowed considerable latitude to the mover of that

amendment I think I would not now be justified in restricting the scope of the debate.

Mr. KNOWLES. My hon. friend (Mr. Foster) next went to the city of St. John, and he again was a candidate. There was no doubt good reason why he left the county of York, but there was no good reason evidently for his going to St. John, because he was defeated there by the late Hon. Mr. Blair who polled an overwhelming majority. Then, my hon. friend (Mr. Foster) went forth wandering to and fro on the earth, seeking whom he might——

An hon. MEMBER. Devour.

Mr. KNOWLES. Seeking whom he might represent, and in the course of time he came to the riding of North Ontario. in the old province of Ontario. He ran against a young man, a little more than out of his teens, and my hon. friend (Mr. Foster) with all his record behind him—I don't say because of his record, but perhaps I may be more courteous and say in spite of his record—with all his experience, with all his ability, with all his prestige as a prominent member if not the leader of the once great Conservative party; he went down to defeat before this boy, George Grant. My hon. friend (Mr. Foster) tried again at the general election of 1904, and he went to that city of Toronto where even the hon. gentleman can be elected, since he is a Conservative. I will admit this with regard to my hon. friend: He may be against deferred elections because he experienced great deferring of his own election on that occasion ; time after time for four years his election was deferred and the expression 'deferred election' is, I have no doubt, one which makes the hon. gentleman anything but pleasant. Let me remind the hon. gentleman that while he was a member of the Conservative government, I think for some eleven years, there was a general election in 1887, another in 1891, and another in 1896. During all this period the hon. gentleman was a prominent member of the Conservative government, a clever member, and I have no doubt a worthy member so far as I have any knowledge. But in each of these three elections the government of which the hon. gentleman was a member were responsible for deferred elections, and for these he must share the responsibility. It it only fair that I should say that he has by supporting the policy of the government of which he was a member admitted that deferred elections are not in themselves wrong, but are necessities, and justifiable under certain circumstances, or else of course he would not have supported his government. I have before me the Consolidated Statutes of Canada for the year 1886, and I find set forth in the Elections Act a list of constituencies in which there should be deferred elections and these constituencies are the electoral district of Algoma, the electoral district of Gaspé, the electoral district of Chicoutimi and Saguenay, and would the House believe it, every one of the electoral districts in the province of British Columbia. That is the law which was in force when my hon. friend was a member of the government, and it is only fair we should come to the conclusion that to-day he cannot consistently lay down the policy that deferred elections are in themselves never justifiable. My hon. friend (Mr. Foster) referred specially to the fact that Mr. Smith Curtis, the Liberal candidate in Kootenay, was desirous of having the election upon the same day as the other elections throughout the country. My hon. friend told us twice that the two candidates were desirous of standing up like brothers in a friendly fight, and say to each other: 'We will have nothing mean, we will fight this thing out fair.' By that, of course, he implies that the government endeavoured in the province of British Columbia to use underhand methods, and I have no doubt he in some way endeavoured to cast the asperations on the Liberal party for the manner in which they fought the elections in that province: I want to say that we have no need to sit at the feet of gentlemen opposite to learn how to conduct elections in British Columbia. It has been stated by some gentlemen that because an election is deferred, there is therefore a greater probability that the people will be unduly influenced to vote for the party in power. To my mind that is not a compliment to the people of British Columbia. The hon. gentleman from Yale-Cariboo has said that in England it is different because conditions are different, and that the electorate there are not susceptible to the influence of the government in power. I think that on reflection the hon. gentleman will withdraw the invidious comparison as between his own constituents and the voters in the British Isles, because I believe it will be found that the electors of the Dominion of Canada and the electors of British Columbia are just as competent to give a fair and unprejudiced vote on political affairs as are the voters in England, Ireland, or Scotland.

Only one case can I recall in which the people were ready to lay aside their allegiance to the principles of their party and support the Liberal party because it was in power, and that was the case of the recent by-election in which the Minister of Inland Revenue (Mr. Templeman) was elected. On that occasion, we found the Conservatives of Victoria, we found the Conservatives of Vancouver, so disgusted with the election methods of their party

last October, that they came out flat-footed and said: 'To show that we are ashamed of this system by which our party has disgraced us, let us call for the withdrawal of the man who has been put up in Prince Rupert. True, we elected Conservatives in October last, but we did so because we were deceived by forged telegrams, but now we know better.' And the result was that against his own wishes, and by the influence and pressure of the Conservatives in Victoria and Vancouver, he was withdrawn from the contest. And so these people to that extent, redeemed themselves and paid this compliment to the hon. minister. The hon. member for North Toronto (Mr. Foster) tried to make it appear that the hon. member for Nanaimo (Mr. Ralph Smith) had, so to speak, swallowed himself on this question. The hon. member for Nanaimo does not require that I should hold any brief for him. He has been many years in this House, and no member of this House is held in higher esteem. He is not the man to disguise his principles, nor can he fittingly be made the subject of such remarks as those of the hon. member for North Toronto. My hon. friend (Mr. Foster) also jeered at the hon. member for Nanaimo because in this instance he had been loyal to the Minister of Inland Revenue—'this heaven-born minister,' as the hon. gentleman said, with some sarcasm, I suppose. I will admit—nay, I will claim — that it is quite possible that the hon. member for North Toronto may not be able to understand loyalty to colleagues nor to the minister; we have heard of the 'nest of traitors.' To him, it may be a passing mystery, which he can only treat sarcastically as something that he cannot understand, that the hon. member for Nanaimo and other Liberal members who support this government have in their hearts an honest loyalty to the Minister of Inland Revenue (Mr. Templeman) as to every other member of the ministry. My hon. friend (Mr. Foster) was greatly exercised about the power of patronage—that the poor innocent elector should be misled or unduly influenced by the expectation that, since a certain party is in power, certain things will be done. That is something that would never be practised by the hon. member for North Toronto while in this House. Does he remember a trip that he made to Prince Edward Island? Did he ever hear of the building of a tunnel to Prince Edward Island? I am not going into the merits or demerits of that remarkable construction that was proposed; but I will say that I do not think it is any worse for candidates to say frankly to their electors that if they are returned to parliament their constituents will have the sympathy and ear of the government in presenting their petitions, than to hold forth to the people of Prince Edward Island the prospect that if the leader of the opposition is brought into power a tunnel will be built. I am not saying that I defend this style of electioneering, at all, but I say that the first of these is better than the other.

With regard to the specific matters that have been spoken of, if I understand my hon. friend from Yale-Cariboo, he himself admitted that it would require twelve days to reach certain parts of his district. I submit, there can be no justification for disfranchising these people who are twelve days' journey removed from the centres of population. These people have all the rights of franchise that people living in the city of Vernon have, or in the town of Grand Forks, or in the city of Kamloops, or in the city of Nelson. The principle which he himself declared for, this afternoon, the principle that nobody should be disfranchised, should cause the hon. gentleman to rise to-night and vote against his own motion, because he himself has shown that to do away with deferred elections means that you must disfranchise many hundreds of people in this Dominion. I think we had that very clearly demonstrated this afternoon by my hon. friend from Prince Albert (Mr. Rutan), whom I am very happy to see here. That hon. gentleman has demonstrated to this House that in his own riding there are seven polls where 228 votes were cast, which are from 250 to 500 miles from the city of Prince Albert, where, of course, the returning officer would almost necessarily live. That journey is made partly by pumping a hand car to the Pas, partly by portaging, and by hundreds of miles of canoeing up stream. That journey cannot be made in one day less than two weeks. And, away up there, there are about 250 people who have as much right to vote as the people of Prince Albert have. I was for ten days occupied in assisting my hon. friend from Prince Albert in that election, and I never met a single Conservative who seriously said there was any injustice in that deferred election. On the other hand, Conservative after Conservative admitted that it would have been an injustice and an outrage that these 228 votes should not have been cast, for the people in those remote sections had as good a right to cast their ballots as the people in the centres. We are not afraid of the polls in the cities nor those far removed. We say: 'Let all the people in all parts of the country have the opportunity to exercise their franchise.' Another illustration is that in the Dominion constituency of Edmonton there are two local provincial constituencies, Athabaska and Peace River. In the recent general election, because they did not have deferred elections, in the provincial constituency of Athabaska only one poll was held, and in the provincial constituency of Peace River, not

a single vote was polled, poll was held, or vote cast, because these British subjects were too far removed from the place of polling, and therefore could not exercise their franchise. In my own riding there were nine polls that could not be held, and were not held. If they had been held, I think, beyond question, I should have had a majority of 150 more. I do not say that to boast, but lest any person should think that there was purpose in not holding these polls. I see my hon. friend laughing sarcastically. My majority was over 1,000, so that I would not have been in danger even had these polls gone against me. If we had had a deferred election these votes would have been polled. The application of the very principle which my hon. friend (Mr. Burrell) asks this House to adopt, resulted, in the riding of Edmonton, in the disfranchisement of two provincial constituencies, and in my own riding it resulted in the disfranchisement of at least nine polls. There was one poll where they made their own ballot box, and their own poll, and cast seven solid Liberal votes. They wanted to vote for good government, but they had not the chance. Therefore I say that the people living in the outlying parts of the prairie should be protected; and instead of the hon. member for Yale-Cariboo (Mr. Burrell) and his associates in this debate endeavouring to further take away from that franchise, they would be much better employed if they would take better precautions to prevent the disfranchising of these electors.

Instead of having to apologize for the vote I propose to give, I should, if I voted for the principle contained in this resolution, be absolutely wrong. Let us bear in mind the circumstances and conditions which existed when the decision was arrived at to have deferred elections. It is well known that if a person is charged with wrong-doing, you must consider his conduct from the view point of the circumstances at the time he did the alleged wrong. It is said that we did wrong in deferring the elections. Before deciding, let us consider what were the circumstances which induced the government to defer them. According to the argument of hon. gentlemen opposite, the decision to defer the elections could only be wrong if thereby the return of the government was rendered more likely than its overthrow. But which was the more likely at the time ? My hon. friend the leader of the opposition, in an interview which he gave the press a few days before the general election, said that they would be a repetition of the general elections of 1878. Surely then he must have been convinced that the deferring of certain elections, if the result was to be in favour of the government, would have the effect of returning the Conservative candidates, since the general elections were to be a repetition of those of 1878 and the Conservative party be in power. The offense must be judged from the view point of the circumstances that existed at the time the wrong was committed; and since the circumstances then pointed to the overthrow of the Liberal government and party, the Liberal party stood to lose and not to gain by deferring these elections, and therefore the deferring of them was a kindness done the opposition, because after sweeping the country the opposition could come in and gather a few more crumbs.

Mr. G. H. BARNARD (Victoria, British Columbia). It was not my intention, Mr. Speaker, to take any part in this debate until I heard from the hon. gentleman who has just taken his seat (Mr. Knowles). He saw fit in his wisdom to dilate upon the circumstances of the election in the city of Victoria and to cast some animadversion on the Liberal-Conservative party in respect to that election and to profess a great deal of sympathy for the Minister of Inland Revenue over its results. Hon. gentlemen opposite have, during the present session, seen fit on more than one occasion to refer to that election in terms in themselves somewhat amusing, and for my part I was perfectly content they should so amuse themselves if they saw fit. It was not my intention or desire to lay before the House the facts concerning the career of the hon. Minister of Inland Revenue, (Mr. Templeman), as regards elections in the city of Victoria, so long as hon. gentlemen opposite confined themselves to their little pleasantries. But when they take part in a serious debate and raise that question in a wholly irrelevant manner, it seems to me high time that I should say something on the subject.

As regards the incident referred to by my hon. friend (Mr. Knowles) I had nothing to do with it, and am as innocent of any connection with it as the hon. gentleman himself. To be absolutely candid, I have probably more reason to regret it than has the Minister of Inland Revenue, for the very good reason that had I been defeated, I had no one to whom I felt called upon to make explanations, but my hon. friend the minister, I have not the slightest doubt, found that little incident very comforting to him when explaining to his chief how the government candidate came to be defeated in the city of Victoria. At the same time, I deny that that particular incident had anything to do with the result in that city.

Some hon. MEMBERS. Oh, oh.

Mr. BARNARD. Hon. gentlemen opposite may laugh, but let me just read to them a

few lines which I find in the Parliamentary Companion. I do not expect them to take my word for anything, but would like to read something which no doubt they will not hesitate to believe. Let me quote from the 'Canadian Parliamentary Guide,' this biography of the hon. minister:

An unsuccessful candidate for House of Commons at general elections*, 1891, at by-elections of 1896, and at general elections in 1896. Called to the Senate, November 18, 1897.

Now that same hon. gentleman, when canvassing in the constituency of Comox-Atlin, held a meeting in the town of Aberni in that constituency the other day. Some remarks were made on the platform regarding the same incident of which I am now speaking, and he was challenged and refused to deny that he had not stated in the city of New Westminster, where he was campaigning in the interests of the opponent of the present member for New Westminster, that the Asiatic question was not an issue in his own constituency at the general elections in October last. Furthermore, with regard to that particular telegram, I may say that I was perfectly satisfied with the situation and never asked for that telegram. I never wrote any one here to give me any declaration on that matter. On that question the issue was clear cut between the two parties. My leader told us he stood for a certain line of policy, and on the other hand we had a declaration from various members of the cabinet on a totally opposite line. There was therefore absolutely nothing for the Conservative party to gain by sending to Ottawa for any further declaration of policy.

What was the position with respect to that election. The Minister of Inland Revenue was in the Senate, and a minister without portfolio. In 1906, a by-election was held owing to his retirement from the Senate and to the sitting member, Mr. Reilly, resigning his seat in this House and taking that of the minister in the Senate. My hon. friend came to Victoria and ran a by-election and was elected by a majority of 800. Prior to that time, during the general election of 1904, the Minister of Inland Revenue posed as the leader of the Liberal party in the province of British Columbia. He stumped British Columbia from end to end, with the result that seven Liberal members were returned from that province and no Conservative. Of course the party which he led were very much pleased. They gave him a banquet in Victoria. All the Liberals of British Columbia attended that banquet; they dined and they wined and burnt incense in tremendous quantities at the shrine of the Minister of Inland Revenue (Mr. Templeman). He was the great man, the man who had brought them out of the wilderness and had given to the Dominion government that solid following of seven. He was the great man in British Columbia. That is the man whom I, an untried candidate for parliamentary honours, had to go up against in the Dominion election. Hon. members opposite talk about that telegram altering that election. I would ask any of the ministers what effect such a telegram as that would have if published in their constituencies at the last moment? Would the Minister of Railways go down to defeat on a question of that kind? Was he in such a position that it would defeat him? Why did it not have the same effect on the hon. member for Nanaimo (Mr. R. Smith)? The same paper that circulated the telegram in Victoria has the largest circulation of any newspaper in the constituency of Nanaimo. What difference did it make to him? If the Minister of Inland Revenue (Mr. Templeman) and his party had had the confidence of the people of British Columbia, not one telegram nor fifty of that or any other kind should have made any difference. Before the Saturday night before the election when that telegram was first produced to me and read by me at the close of the meeting, the minister, if he was worthy of his position in the government, should have had me beaten by 500. The trouble was that the people of British Columbia were at issue on not only the Asiatic but on many other questions, with the Dominion government. That particular incident of the telegram had absolutely nothing to do with that election and I think the Minister of Inland Revenue (Mr. Templeman) knows it himself.

My hon. friend who has just taken his seat (Mr. Knowles) said something about making the ballot boxes in his own constituency. We have heard of ballot boxes made by the friends of hon. gentlemen opposite before; we have also heard of special trains. I think that if hon. gentlemen opposite wish to make what are practically personal attacks on members of the opposition, they should first look at home and take the beam from their own eye.

House divided on amendment (Mr. Burrell).

Amendment negatived, and House went into Committee of Supply.

Saguenay river, dredging and other improvements, $30,000.

Mr. PUGSLEY. When the Committee of Supply last rose we were discussing item 143, $30,000 for dredging the Saguenay river and other improvements. I suppose the committee is now ready to adopt the item.

Mr. BLAIN. I would like the minister to state how much of this amount is for dredging and how much for improvements.

Mr. PUGSLEY. I think this is all for dredging.

Mr. JOSEPH GIRARD. (Translation.) Mr. Chairman, before we discuss this item for dredging the Saguenay river and other improvements, I beg leave to introduce some explanation about the discussion which occurred yesterday and last Friday, in my absence, and to which I have not been able to answer. I am greatly concerned at believing that in the understanding of some of my colleagues, who spoke chiefly yesterday, they could entertain a personal animosity towards myself, which I would be unable to explain.

Last year about July 15th, the question of the piers built at Rivière du Moulin, was brought up before the House. I was satisfied that I had at the time thoroughly explained the matter, and understood that no further reference would be made to it.

I see in yesterday's 'Hansard' that some hon. gentleman on the other side, in referring to this matter, seemed greatly exer-

cised because the government at a certain date had contributed to the cost of construction of what has been termed a municipal bridge; and some even went so far as to attack the officials who were consulted on the matter and reported favourably as to it. Furthermore, there was handed to the minister and to hon. members a photograph prepared expressly for the purpose of deceiving those who are ignorant of the circumstances, and an effort was made to satisfy the present minister, who was not at the time entrusted with the management of the Public Works Department, that his predecessor in office had been under a false impression directly after his officers, or indirectly by myself.

Well, I may be allowed to refer to the explanations which I gave to this House last year on July 15th. The hon. member for North Toronto (Mr. Foster) commenting yesterday on some photographs which had been exhibited, made in regard to responsible officers criticisms to my mind totally unwarranted. Let me remind him of some photographs which I laid before this House last year showing the piers of the bridge at Grande Décharge, Lake Saint John, the building of which he himself authorized when Finance Minister in 1894, at the request of his colleague, the Hon. Mr. Ouimet, then Minister of Public Works, an achievment of which he was quite proud, as a means of making friends in my district. If the Conservatives deemed it right and equitable and honourable to appropriate moneys from the federal chest for the building of piers as part of a bridge to help along colonization in the Lake Saint John district, a work wholly of provincial interest, is this government to be condemned for having done this very thing, admitting that they have done so, which I deny. True, this government have allowed the appropriation as made to appear openly in the public accounts; while, as evidence of the help contributed towards the building of that bridge in Lake St. John, the Department of Colonization at Quebec was called upon to give a voucher under the signature of Mr. Dufault, deputy minister, acknowledging the receipt of $2,000 as grant towards the building of the bridge.

If those hon. gentlemen who have criticised so loudly yesterday were to come to Chicoutimi and repeat their utterances, they might be surprised at the warm reception they would have at the hands especially of the farmers who signed the petition requesting that these works be undertaken and setting forth reasons in support.

I am aware that my hon. friends on the other side have had pointers from outside in regard to this matter. Let me tell them that they have made a grievous mistake in taking a certain Simon Lapointe, who approached some of them a couple of weeks ago as the authorized representative of the Conservative party in my constituency. Had they inquired before speaking, they might have found out that this very gentleman who poisoned their ears, is merely repeating slanders which others of the same kind, urged by personal spite, thought they might safely spread through the county, vilifying in the most atrocious terms the good name of public officers of the government, and my own, branding us as thieves, perjurers, and so forth. To their great surprise, as soon as the elections were over, some of them, and particularly the said Simon Lapointe, were summoned before the courts to answer for their conduct. Most of them promptly signed papers taking back all they had said; but Lapointe thought fit to let matters follow their course, and he now comes under the cover of hon. members whom he has supplied with information, though not allowing his name to be used, and attempts to vindicate himself by casting aspersions on the leading officers who objected to be made tools of by himself and his gang, a proceeding which is the more cowardly seeing that these officers are debarred from appearing on the floor of the House and defending themselves against these sneaking enemies.

If hon. members on the other side who have opened this discussion think they have thereby helped to make their party popular in my district, they are sadly mistaken. This they will find out by inquiring from the recognized leaders of the Conservative party in my constituency, whom they know, and appreciate no doubt, and whose names, I am confident, have never appeared on any of the documents which they have had or have, or will likely ever have in their possession.

I notice in his seat the hon. member for Quebec West (Mr. Price). I may say that I infinitely regret for the sake of his prestige among his numerous friends inhabiting my constituency that he should have thought fit to countenance this farce. True, this woodwork to which he referred and which is still in existence, was put in originally by Price Brothers. Nobody denies it or has ever thought of denying it. But if my hon. friend is conversant with the history of his firm, to the same extent as are the people of Chicoutimi, he will be bound to acknowledge that this woodwork was put in at the time in order to prevent the washing away by the waters of the Saguenay, and through the action of frost, of the strip of land which it incloses; and as a matter of fact, wherever the old woodwork is broken down, the shore is eaten up from year to year through the action of

those two factors I have just mentioned. In the near future, these old protection works have fallen to pieces, it will be necessary to renew them; otherwise this piece of land will be washed out in the same way as higher up along the course of the river, the most fertile lands of the parish of Sainte-Anne are yearly being eaten up by the waters of the Saguenay.

As further evidence of the beneficent and effective part played by the government on that occasion, I may state that while, in 1904, there was a large majority of votes polled against me, both in the town and parish of Chicoutimi, in 1908, there was a large majority of votes polled in my favour, although during the election strenuous efforts had been made in Chicoutimi by the Lapointe gang, with a view to securing the express condemnation of the policy pursued by the government in the shape of a large hostile vote which was loudly announced in advance.

The pier referred to was built at the request of the citizens of Chicoutimi, who forwarded a petition bearing numerous signatures of farmers and leading business men of the locality, and urging that the building of such a pier would be a safeguard for years to come, and the beginning of a great work destined to replace the wooden structure previously referred to. The officers of the department have taken the same view; and I contend that no hon. member in this House has the right to insinuate that the minister, the government and the House have been basely deceived in this connection, and that accordingly the officers of the department have acted wrongly. The department deserves credit for the building of this pier both as a work of art and utility, and as time goes by, it will be found, and before long, perhaps, that the insinuations of party politicians in this connection have no foundation in fact, and were inspired by motives other than public interest.

In conclusion, I return to what I said a while ago. Even admitting that this pier was built expressly to support a bridge, I cannot conceive why hon. gentlemen on the other side should flush with virtuous indignation, seeing that when they themselves were in power, they acted exactly in the same manner and instructed their agents to make the most of it in the interest of the party, for they were satisfied it was a meritorious deed, and so it was. Now, if in 1894, it was all right to act in that way, why should it be wrong in 1908? There is no sense in having double weights and double measures, even in politics. The country may reap actual benefit from a fair criticism of a government's policy; but such criticsm, if it be unfair and carried on in a partisan spirit is always injurious.

It is desirable, to my mind, that the necessity for public works should be gauged according to a variety of circumstances, and that the government should be at liberty to help on the development of sparsely settled districts as well as that of large towns and cities. We are called upon each year to vote large sums of money for the city of Montreal, the city of Quebec, and so forth. We appropriate millions towards the development of these important centres. If among the people inhabiting these cities, there were individuals or gangs similar to those met with in Chicoutimi, who would pry into the details of these large items of expenditures, in the hope of discovering something improper, it would be an all-round source of trouble and misfortune. Will my hon. friend from Saint-Antoine maintain in this House that the large expenditure of money made by the city of Montreal or by the city of Quebec could bear such severe scrutiny and unfriendly criticism as that indulged in as regards Chicoutimi? Would not such an inquiry cause the blood to curdle in the veins of so virtuous a man? Cheerfully does the House vote from year to year enormous sums towards the development of the larger cities such as Montreal and Quebec; and heretofore there has been on complaint that the House has been deceived; for we have not been called upon to listen in that connection to such petty discussions as that which has taken place yesterday. Such has been the trend of affairs since confederation be it under Liberal or Conservative rule.

My hon. friend from North Toronto, who felt so indignant yesterday, must have been apprised of the instructions given, in 1894, under the signature of the Hon. Mr. Ouimet, Minister of Public Works, for the building of two miles of a colonization road as an approach to a non-existent wharf. It seems to me that if he was in the right yesterday, he must have been previously terribly in the wrong, and his protest loses thereby a great deal of its weight.. I regret having to recall that circumstance, which he is unable to deny, but I have been constrained to do so. There is one important fact which strikes me in connection with this whole affair, and it is this: that informer Lapointe who is spending all his energy in ill-directed efforts to acquaint the opposition as to the state of affairs in my contituency, never thinks of mentioning an extraordinary attempt at robbing the public chest, engineered by the gang, and whereby $30,000 were to be secured from the government as the price of what was called the booms of the Chicoutimi Pulp Company on the River Saguenay, which booms were not

worth five cents to the government, as the hon. member for Quebec West is aware.

It was a downright fraud intended to benefit a select few only. Had the resident engineer and the chief engineer of the Public Works Department allowed themselves to be swindled out of that report, which at a certain time it was expected that they could be forced to do, in order to recommend that fraud, stupendous as was the transaction itself, these gentlemen would probably not have been treated as they were yesterday for acting conscientiously and in the public interest. The pack of boodlers who are hounding them with such hatred and cause them to be vilified before this House by well-intended members, who do not know them, would more likely perhaps leave them alone, while they busy themselves feasting upon the plunder. But the public interest of the county would have been sacrificed, and public opinion probably would not have approved of them at the last general election.

Now, I come to a purely personal matter, upon which I am loath to give explanations. This matter is all the more personal to me that I am at a loss to find out how it is that my hon. friends have suddenly discovered in the public accounts that, without previous intention or knowledge, a crime had been committed merely because one L. P. Girard had received certain sums of money, a few dollars perhaps, for services rendered the Department of Public Works ; that things have gone so far as to raise a suspicion upon the fitness of that person to carry out the work confided him, and to insinuate, to say the least, that unless that man were my son, he would not have been employed. I may be allowed to state that this charge can hardly be explained, unless it be that personal motives have actuated those who proffered it. It is all the more inexplicable that the payrolls of the Civil Service are crowded with the names of fathers, brothers, sisters, sons, cousins, step-sons, and other relatives of members of parliament, nay, of ministers, that this has been going on under all governments, Tory and Grit alike, and that nobody ever found fault with it. Why should my son be the object of such strong condemnation ? Why should he be signalled out among the throng of others, unless it be for personal vengeance, which, I am willing to admit, is not shared by my colleagues, but necessarily emanates from outside, and under the inspiration of the same crowd that I branded a while ago, and whose voice fortunately my colleagues have echoed in this House. Things have gone so far that aspersions of such a personal character have been cast upon me that I will not take them up. I am quite willing to admit that I am not a great manufacturer from the city of Montreal,

that I am not a millionaire, but I challenge every one of those who spoke yesterday on that question, to overpoise me by one single ounce in the great balance of rectitude and honour. My hon. friend from St. Antoine (Mr. Ames) may be wealthier than I, he may own a million, which I will never own, but as far as honour and respectability are concerned, I boast of as much wealth as he will ever have. My son, I think, worked three times for the Minister of Public Works. He was first a student at the seminary and then in the law faculty at the university. Each time he was regularly and honestly appointed by the Minister of Public Works, and not in any sneaking way by the resident engineer and myself, as was insinuated. He was one of a group of young men who were regularly appointed by the minister to conduct surveys in my district, surveys which the department needed to acquire information in answer to a great many demands by residents of the districts. Salaries were uniform for the whole staff and were fixed by the department and the minister. It has been customary, I think, for a great many years past, to help students, whoever they may be, during holidays, by teaching them practical life and getting them used to the hardships and struggles of life, and this by having them share in some of the government works. And I thought it proper for me, without humbling or depreciating myself, especially in the light of so many precedents, to have my son benefit of this current practice.

That is what the Conservative party had done, and which is still being done by the Liberal party without anybody generally finding fault with it. As I said before, every time my son was employed, the responsible minister duly appointed him, and never to positions which he could not honestly and conscientiously fulfil with as much advantage for the minister who had so appointed him as if he had been replaced by others. I have neither shame nor regret for what I have done, and I don't think I will ever have to repent for it. If any one thought yesterday that he was justified in suggesting anything wrong in connection with my son's appointment, I may be allowed to tell those colleagues of mine that there is as much honesty right here as can be found in them, not excepting even the hon. member for St. Antoine and that each of us individually has far more than the crowd which kept them posted in this matter.

Before I resume my seat, Mr. Speaker, let me claim for my constituency, which is the largest, the youngest and the less developed in the whole Dominion, all the advantages which it is entitled to from the government and from this House. The electors of my county don't raise their voice when millions upon millions of money are appropriated for works in the large centres

of population, such as Montreal and Quebec, for instance, but they regret every time to hear from the representatives of those cities such criticism as will stay their progress. The government of the day has given them their full measure of fair play, and I hope they will keep on treating them in the same manner in the future. I trust I shall have the support of the hon. member for Quebec West (Mr. Price), who is the leading manufacturer in my county and one of my electors, every time the question of improving the situation of the population I represent, both in large and in small matters, shall be up for our consideration.

Mr. P. E. BLONDIN. (Champlain). (Translation.) Mr. Speaker, as I was instrumental in bringing out this rather irate answer of the hon. member for Chicoutimi and Saguenay (Mr. Girard), by putting that question the other night, I think certain explanations are due. In looking up the public accounts, the name of L. P. Girard was met with, and, as was our duty, we thought we should ask for information. Unfortunately the information was of such a nature as to open up our eyes and to make us challenge the fitness of that employee, who did not seem to possess the qualifications generally expected from one in a similar position. Let me assure the hon. gentleman (Mr. Girard), that he is completely wrong in thinking that we were moved by sheer animosity in acting as we have done. I have not got the pleasure to be acquainted with his son, but I may say that all my sympathies are given to the students, to those young men who, during their holidays, try to spend their time in a useful manner. I will say moreover, that far from blaming the government for employing them, I think he is acting wisely in helping them. But it might be expected at least, that when such young men are called upon to superintend public works, they should possess sufficient qualifications to tally up to the usual amount of work expected from an ordinary employee. It is all very well for the government to entrust the superintendence of such works to students, but inasmuch as public documents do not specify that such men were competent to discharge their functions, no one need be surprised if more information was asked for.

I will not protract this discussion, but I am sorry that my hon. friend (Mr. Girard) has seen fit to speak so long, not to show that the information asked for was not proper, but simply for the purpose of casting aspersions upon men who are no more in this House, and others, who are still here, a speech the propriety of which I utterly fail to see. If I were to take up only three minutes of the time of the House, while my hon. friend took up twenty-three minutes, I should be afraid that the government papers would, to-morrow, charge the opposition with unduly obstructing the proceedings in supply. Even if he had not made those remarks, I can assure the hon. gentleman that he and his son would have lived just as high, in my estimation. Those observations do not in the least alter the facts. We are here to seek from the government all the information and explanations which are required by the public before voting any supplies. That is the position I took when I put that question the other day, but unfortunately I find that it aimed at one of my hon. friend's sons.

Mr. GIRARD. (Translation.) I will point out to my hon. friend (Mr. Blondin), that the long speech to which he takes exception in my case, still falls short of the lengthy discussion which took place yesterday on this subject, and which I find recorded in 'Hansard.' I may also tell my hon. friend that it was not he whom I aimed at in my remarks, because this is the first time I heard him on this question. 'Hansard' does not mention him in yesterday's debate.

Mr. BLONDIN. (Translation.) The hon. gentleman must have read hurriedly.

Mr. GIRARD. (Translation.) My hon. friend desires that students should be helped, provided they are fit for the work they are entrusted with. The officers of the department will tell him that every surveying party which my son went with has made satisfactory reports to the minister who hired him. I live at Lake St. John since 1880. I remember that there arrived at my door on the shore of the lake, a party of federal prospectors, made up of a dozen men who spent five or six months at work during the nice season, making a large consumption of strong liquors—to favourably impress the public, I suppose—and then returned to their respective homes in the fall, without finding any possibility of making a report to the minister who had hired and generously remunerated them. Were they better qualified than my son? I ask the question. These are notorious facts; they can be ascertained from the officers of the department here present. However, there were no pointed criticisms, to my knowledge, in the House on the matter; there were no indignant protest, such as this; there were no such malignant insinuations as those that were thrown out yesterday. This is a small matter of history which will in the future teach some that it is better to make sure before talking. Wherever went my son, the country got the worth of its money. Wherever others have gone, the country lost everything.

Mr. BLAIN. I asked a question which I would be glad if the minister would answer.

Mr. PUGSLEY. It is intended to expend the present vote entirely in dredging operations upon the Saguenay.

Mr. BLAIN. Will you strike out the other improvement?

Mr. PUGSLEY. No, there is no objection to our leaving that, but this is entirely for dredging.

Mr. AMES. The other night the minister promised to have a statement prepared for us as to the local expenditures in the counties of Gaspé and Bonaventure. Has that statement been prepared yet?

Mr. PUGSLEY. No, I am sorry it is not ready; it is being got ready as quickly as possible, and as soon as it is completed I will lay it on the table.

Mr. FOSTER. I asked the minister the other day when we were on this item if he would bring down the report of the engineers in reference to the work.

Mr. PUGSLEY. I have not that here to-night. It was some time ago and the papers had been removed from the chief engineer's office and had been laid away, the matter having been disposed of. But I may say that the record has been found of the different papers. It appears that there was a report from the resident engineer which was approved of by the chief engineer, but my hon. friend wants to get the report itself. I am trying to get it and I will lay it on the table as soon as I receive it. If this item is carried I think we might take up the Clarke City item and have that disposed of, because the question with regard to Mr. Girard arises with respect to Clarke city.

Clarke city (Seven islands)—wharf improvements, $4,600.

Mr. PUGSLEY. I do not know that I have anything further to say to the committee on that. I read the correspondence with Mr. Taché last evening.

Mr. MONK. I merely wish to crave the indulgence of the committee for a short time. I did not have the advantage of being present when the several items connected with river improvements in the province of Quebec came up for consideration. But I would say to my hon. friend from Chicoutimi and Saguenay (Mr. Girard) that I listened to his protest with a great deal of attention and in so far as what was done on this side of the House was calculated to shock my hon. friend's family feelings, I am perfectly certain that there could have been no such intention on the part of any hon. member on this side of the House. I think he might take our assurance as to that. At the same time my hon. friend must not forget, because he is an old parliamentarian of very varied experience, that as was very clearly pointed out by my hon. friend from Champlain (Mr. Blondin), our duty is to look into and find out the reason, why and wherefore of every expenditure. If, in the examination of an expenditure, we come across a name which happens to be associated in the county with the name of the representative of that county surely my hon. friend will not pretend that we are precluded from applying to such a name ordinary criticism. If he happens to be the son of the representative and nothing of an injurious character is levelled against him or his father we have absolutely the right and the duty of inquiring into the qualification of that person, and perhaps the duty is upon us of inquiring with more care than we would in the case of an ordinary person. That is the way I view it. I was not present at the discussion to which my hon. friend refers, but I caught enough of the protests of my hon. friend to lead me to believe that there was nothing in connection with that incident but that particular criticism. I can understand the feeling of the father towards his son going through a course of science and that he feels hurt at any criticism whatever no matter how absolutely just it may be. I think my hon. friend knows us well enough to feel assured that nobody here enters upon that field of criticism with the desire of satisfying a personal animosity against himself. There is no man in this House, I am sure, who would be less likely to be the object of such animosity than my hon. friend himself.

Now, I wish to come to the more general question of river and harbour improvements. What I find in my experience in this House in regard to the province of Quebec is this: We have before us this evening, and we have had for the past twelve years, a number of items of expenditure for harbours and rivers in Quebec. Up to 1900 I, like others, proceeded to criticise these expenditures. There was then before the country no complete scheme for the solution of the problem of transportation. Since I have been sitting in this committee during this session I have heard time and again ministers stating—the hon. Minister of Railways and Canals (Mr. Graham) so stated two or three days ago—that this is the vital question, that this is the question above all others which we must solve and promptly solve. Since 1904 we have had the report of the very ablest men in this country in regard to the solution of the problem, a report that has not been called in question on either side of the House, and which has been referred to in approving terms by the government time and time again. That report dates back now four years and it contains a plan of improvements necessary and urgent from one end of the country to the other. Before that report was presented I referred with others to the necessity of certain works. What happens? You may criticise a wharf in some small place on the River St. Lawrence. I will take an example, although it is very risky work to do so. I will

take the wharf at St. Sulpice, near Montreal, and I will criticise moderately but legitimately, giving reasons for my opinion of that public work. The very next thing which the member for that county does is to give the largest degree of publicity to my criticism throughout his county. He holds meetings, denounces the opposition and points out that you have singled out this small public work, costing $8,000 or $10,000, out of animosity to the county and for the purpose of doing as much injury as possible to the county and to your own province.

I need not say that in past years my experience has been that there was a regular complicity on the part of government supporters to do as much injury as they possibly could in this way. There is another truth, and I have stated it time and again here and I will repeat it in the hope that it may obtain some publicity; I say that the member of parliament who gives no sign of existence in this House, who does not go through the drudgery that most of us go through every day, who apparently takes no interest in what is being done for the advancement of the public business of the country, such a member undertakes as a rule to atone for that lashes on his part by endeavouring to obtain public works for his country so that he may claim that he has done something valuable and durable for his constituents. Look through the estimates any year and you will find confirmation of this. Such a man goes back to his county and he says he has done a great deal to execute the mandate that was confided to him because he has obtained a post office, or a wharf where there is no water. And what kind of a bill does the country have to foot on account of that tendency in our political life? We paid last year nearly one million dollars for works which did not advance us one single step toward the solution of the transportation problem to which I consider the country is pledged. This year we have half a million dollars spread over fifty items for improvements in the province of Quebec. I do not criticise them in detail for the reasons I have stated, but I say that the province of Quebec at the present time is more interested than any other province in the carrying out of the recommendations embodied in the report of the Transportation Commission. The Minister of Public Works tells us he is interested in that problem, and I wonder why a man like him will continue on in the same old rut that was followed, I admit, by all previous governments, although in those former days the question was not as vital as it is to-day. I wonder why the Minister of Public Works does not turn over a new leaf and begin to practise what he preaches. The report of that Transportation Commission deals with the solution of the problem from British Columbia to the Atlantic ocean and Mr. Reford and the gentlemen associated with him on that commission, men competent beyond all question to form an opinion, stated that the port of Montreal, and the port of Quebec, and the port of St. John, and the port of Halifax should be made free national ports. They reported that it was essential that Quebec and Montreal should be immediately placed on a national basis. Here is St. Sulpice which is some distance below Montreal, and surely the district for miles around there is immensely more interested in the nationalization of the port of Montreal than in the construction of a two-penny half-penny little wharf. There are twenty counties around there which are enormously more interested in the construction of the Georgian Bay canal than they are in these small works which are invariably undertaken to please a contractor or to carry out some parochial scheme which really has nothing to do with the general interest of the surrounding country. In Montreal—and I do not speak of my own division but of Montreal and the country tributary to it extending half way down to Quebec—what is our position. We have never received a dollar from the government for the port of Montreal. True, there was a wharf built when Mr. Tarte was minister; and we have excellent harbour commissioners, but our hands are tied and we cannot go a step farther towards nationalizing the port. And, in Montreal this year we are going to do a thing which is exactly the contrary of what they are doing in the United States ports; we are going to load the port with a new burden of increased port dues in direct opposition to the recommendation of the commission of 1904, and in direct opposition to the policy pursued in the ports of Boston, Portland, New York, and Newport News, in the latter of which they are actually paying a premium to bring the traffic there. Quebec has never paid the interest on its harbour debt. It is a very important port and the people of Quebec are sending a deputation to Ottawa to lay before the government what I am now laying before the committee. The Transportation Commission reported that it was essential and urgent that we should have a dry-dock in Montreal. We have room for a dry-dock there without expropriating any property; a plan was approved by the then Minister of Public Works some years ago, but there is still no dry-dock in Montreal and our shipping is immensely hampered as a consequence. In Quebec there is no dry-dock to accommodate large vessels. A few years ago the 'Bavarian' was salved, but she could not be kept afloat and she was hopelessly lost because not being in a condition to face an ocean voyage to an American port there was no dry-dock in which she could be repaired. Surely all these questions must ap-

peal to the government. I believe if such a policy were laid before the electors of the province of Quebec in its true sense they would endorse the immediate execution of these national schemes, including as they do works which are of great moment not only to the province of Quebec but to all western Canada. We had immense shipments of grain from Montreal last year, but they could not be handled economically because the port of Montreal was not as well equipped as American ports which are its competitors. For the reasons I have stated I do not like to enter into a criticism, beyond requiring knowledge and information, of the separate items. The result to-day is that you are denounced as being against improvements in the province of Quebec. And, let the committee notice, that I do not say that any of these works is absolutely useless. There are about fifty of them. I could point out about one hundred and fifty more where bridges, wharfs, some little dredging in a river to make it navigable for batteaux would be useful and pleasant for the people. So it is difficult to say that these works are absolutely useless, although inquiry I think, will give us the information that they are carried out in a most expensive way. But I base my criticism on a higher ground, and say that at the present moment in the province of Quebec, instead of spending from $1,000,000 to $1,500,000 on these small isolated works, it would be ten thousand times more beneficial to the people if we explained to them the expert opinion of the transportation problem in Canada, and why it is we must cease these small expenditures here and there and endeavour to place our province on a proper footing in regard to transportation.

Mr. PUGSLEY. I was wondering if I heard my hon. friend (Mr. Monk) aright, when he intimated that he was afraid to criticise these items lest this might be made a ground of attack upon him in the different constituencies. He will pardon me if I say that that is not what I would have expected from him as an old parliamentarian and a man of courage. I would have supposed that he would venture to do what he thought right, irrespective of local feeling or prejudices which might arise in regard to his conduct. I understood him to say that all he would venture to do would be to speak in a general way in criticism of these items, without venturing to call the attention of the committee to any special item of expenditure as being, in his opinion, not in the public interest. In my opinion, that is what our hon. friends opposite ought to do, if they think these votes ought not to be asked from parliament. If the hon. gentleman observes in these items any public work which he thinks ought not to be constructed in the public interest, I hold it is his duty to point that out to the committee. I would be prepared to justify the expenditure, and I say now to my hon. friend, that so far as I am aware, there is not a single public work in the province of Quebec for which we are asking an appropriation which cannot be well justified. I am afraid that my hon. friend looks at the question of appropriations too much from the standpoint of the city in which he happens to reside. To the hon. gentleman the city of Montreal is everything, the development, the building up of that great city is everything, and he would be willing to have all the public moneys expended for the benefit of that city and other great cities, although the smaller communities in the various parts of Canada were utterly and absolutely neglected.

Mr. MONK. Perhaps the hon. gentleman (Mr. Pugsley) will allow me to ask him in connection with what he is saying, why the government does not carry out the recommendations of the Transportation Commission in regard to the naturalization of certain ports?

Mr. PUGSLEY. The government is carrying out, just as rapidly as it can reasonably be done, the recommendations of the Transportation Commission. But let me say that, as one member of this government, and as having to do with the administration of public works, I fail to see that all other sections of the country should be sacrificed for the benefit of these great ports which are part of this great transportation system. What was the recommendation of the Transportation Commission? It was that the ports of Fort William and Port Arthur should be improved and made capable of rapidly assisting in the transportation of the products of the west to the eastern sections of Canada and the Atlantic seaports of our country; it was that the canal system should be deepened, that the port of Montreal should be improved, as also the ports of St. John and Halifax, and, on the Pacific coast the ports of Victoria and Vancouver.

Now, let us commence with the west and see what the government is doing. On the Fraser river, we have a powerful dredge that has been working there for some time, and another dredge in the harbour of Victoria. Within the last few months we have purchased two as good dredges as are to be found in either the Atlantic or Pacific waters of the United States. We have the 'Ajax,' a very powerful dredge, and lately we purchased in Germany a suction dredge of the most superior character, one capable of dredging to the extent of 1,000 cubic yards per hour—a thousand per cent greater capacity than the average dredge we have had working before this, a dredge with enormous capacity and one which will enable

us to do splendid work. Our idea is to make the Fraser river a great ship channel up to the city of New Westminster. We are dredging the approach to the harbour of Victoria, carrying out a definite scheme of improvement of that harbour with which the people there are well satisfied, as shown by the manner in which they expressed themselves through their board of trade and otherwise in appreciation of the work we are carrying on. In Vancouver we are entering upon the work of improving the harbour. This has not been necessary in the past, because the traffic was not congested as it has since become. We are putting on a dredge to improve the entrance to False creek, a very important part of the harbour, and we are having an examination made of the Narrows, the entrance to Burard inlet, and also of the Parthia shoals and some other shoals which require to be removed. Now, coming eastward to the western shores of Lake Superior, we find that this government is to-day spending millions to make Port Arthur and Fort William capable of accommodating larger vessels which ply upon the lakes, so that the traffic of our country may be handled with as great facility as traffic is handled at Duluth. Coming eastward to the eastern shore of Georgian bay, you will find that the government, in conjunction with the two great railway companies, the Grand Trunk and the Canadian Pacific, is developing the new harbours of Tiffin and Victoria. The railway companies are building new lines of railway almost as level as this floor, in order to divert the traffic which now goes to Buffalo and through United States ports to Canadian ports and through Canadian channels, spending on these railways no less than $50,000 to $60,000 a mile. The hon. gentleman (Mr. Monk) will see, if he looks at the estimates, that large appropriations are made for the dredging of these ports of Victoria and Tiffin, and he will see that for Port Arthur and Fort William the magnificent sum of $600,000 is appropriated for the carrying out of this part of the great transportation scheme which the commission has recommended to the government. Now, if he comes to the port of Montreal he will find that very recently the government has expended upwards of $1,000,000 on the new pier there, and also that we are lending to the Harbour Commission of Montreal money for the purpose of carrying on vast improvements there and lending at the low rate of 3 per cent. Coming to the Atlantic sea-board, you find that so far as the port of St. John is concerned, this government has departed altogether from the policy of its predecessor, which was that no work should be done by the government in the harbour of St. John unless immediately connected with the Intercolonial. Last year the expenditure of this government at that port amounted to three-quarters of a million. And if he will look at the estimates he will find an appropriation of $500,000 for the coming year, to carry on the work necessary to make St. John one of the great winter ports this also being a part of this great scheme of transportation. If he will go to the port of Halifax he will find great improvement there in connection with the terminus of the Intercolonial Railway. And if he will go to Quebec, he will find that we are engaged there upon works for the purpose of providing ocean terminal facilities, which will run into $2,000,000 or $3,000,000, before we get through with the very large scheme we have undertaken. If he will visit the south shores of the St. Lawrence at Levis, he will find that we have purchased there a property capable of being made into a splendid depot for our terminal, and we have an item in the estimates of $400,000 for the purpose of completing the purchase of this property and beginning the making of improvements. All along the line from the Pacific to the Atlantic, we have been moving forward to the accomplishment of the ideal which this commission had in view and recommended to the government; but while doing that, are we to sacrifice all the other sections of the country? Are we to refuse to give to the people living along the St. Lawrence in small towns and villages the accommodations in the way of wharfs and dredging which they require and the ordinary conveniencies of transportation? Let my hon. friend not forget that the trade problems of this country do not simply concern the great ports and the people inhabiting the large cities, but also the people living along the St. Lawrence and on the shores of our great lakes and the lakes and rivers of the maritime provinces, as well as the people of British Columbia, who live not alone in Vancouver, Victoria and New Westminster, but in Nanaimo and on the west coast and in many small harbours along the coast. All these people in all these sections are doing their part in contributing to the business of the small towns and cities, and these in turn are doing their part in building up the great cities of Montreal, Toronto, Quebec, St. John and Halifax. Therefore, so far as I am concerned, whilst giving attention to this great transportation problem, I am not prepared to lose sight of what might be called the smaller transportation problem, but still one which concerns many thousands of people. Take this item of St. Sulpice, and it is the only item to which my hon. friend ventured to refer. He says it might be criticised. The amount we are asking for is to repair a wharf 25 miles below Montreal, which was built by the Richelieu and Ontario Navigation Company and which has got sadly out of repair. The people are asking us to put it in repair. That is a place of some 700 to 800 people,

principally farmers, who send a good deal of produce from there, and it would be a great loss to them if the steamers were not able to call at that wharf. We are putting that wharf in repair in order that steamers may call there and the farmers get the accommodation to which they are entitled.

Mr. MONK. My hon. friend has given a glowing description of public works generally, but the simple question I put him he has not answered. I asked why the government had not carried out the suggestion of the Transportation Commission, which called for the nationalization of the ports of Montreal and Quebec, and the building of two dry-docks, one in Montreal particularly and generally the completion within as short a delay as possible of the improvements upon the St. Lawrence route. My hon. friend says they have spent a great deal at Port Arthur and Fort William. I say that the government has not even at these points carried out the urgent recommendations of the commission which required that the government, without any delay should expropriate the water front. That was the first recommendation.

Mr. PUGSLEY. At Fort William?

Mr. MONK. The hon. minister has not answered my question. I come now to the particular instance to which I referred. I did not state that a wharf could not be of some use at St. Sulpice. What I said was that the county in which St. Sulpice is situated and the neighbouring county were intensely more interested in the carrying out of the practical suggestions of the commission, such as the nationalization of the port of Montreal and the immediate construction of the Georgian Bay canal. These two works are of infinitely more use and benefit to St. Sulpice than the construction of a wharf. My information is that there was a wharf built by the Richelieu and Ontario Navigation Company, which does service in that locality and has done so more than half a century. Why should we interfere? Was it most urgent to make the wharf 15 feet wider? Was that as urgent as the other works to which I have referred? It was made 15 feet wider and the stones were used from the old wharf belonging to the Richelieu Company to fill up an additional 15 feet. The work was not done by contract. If it had been, it could have been done for $3,800, but it was done by days' work, and I think we have got to pay about $7,000. Was the old Richelieu wharf purchased?

Mr. PUGSLEY. It was.

Mr. MONK. There was great dissatisfaction at St. Sulpice at the wharf being where it is? These 800 people, to whom the minister referred, were greatly dissatisfied because the wharf was not at the right place, and in order to make things square all round, the mayor was appointed to oversee the work at $5 per day, although he knows nothing about it. He was, however, an influential man.

Mr. PUGSLEY. My hon. friend is only some 800 per cent out of the way. It was $3 instead of $5.

Mr. MONK. Is my hon. friend absolutely sure ? I think I am nearer the right figure than he.

Mr. PUGSLEY. I am sure the hon. gentleman is astray.

Mr. MONK. We want a competent man. It is not because a man is influential or is a mayor that he is particularly qualified to do the work. The wood was not called for by tender and nothing appears to have been done by tender. The wood was bought from a stone merchant, a very influential and important man to conciliate. Was it bought by tender ? I doubt it very much. That is what I have to say about the St. Sulpice improvements. I say that these people are more interested in the large works projected for transportation than in this little work for local convenience. The minister has multiplied words but he has not answered my question, why have the government not nationalized and made free the ports of Montreal and Quebec, when the Americans are competing successfully for our traffic making their ports free, equipping them for traffic and in some cases giving bonuses to the traffic?

Mr. J. P. TURCOTTE (Quebec Centre). (Translation.) Mr. Chairman, the hon. member for Jacques Cartier has declared repeatedly, to-night, that nothing had been done about dry docks at Montreal and Quebec. He even said that there was no dry dock at Quebec.

Mr. MONK. (Translation.) I beg pardon, I never said that. I did say that the dry dock at Quebec could not hold such large ships as the 'Bavarian,' which had coused the complete wreck of that ship.

Mr. J. P. TURCOTTE. (Translation.) There is a dry dock at Quebec, which was built by the Liberal party as we all know, which cost a considerable sum of money, and has been in use until lately. Everybody knows that such undertakings are very important and cannot be brought to completion within a day's time.

I expected the hon. member for Quebec West (Mr. Price) would contradict the statement made by the hon. member for Jacques Cartier (Mr. Monk).

I am well aware of the fact that pressure is being brought to bear upon the government in order to induce them to comply with the wishes of the hon. gentleman. But

there is many a slip between the cup and the lip and the hon. gentleman will have to wait till the country is wealthy enough to accomplish the dream which haunts his sleep. When his friends were entrenched in power, they neglected to make those improvements. Public money was squandered in the port of Quebec, and that expenditure gave rise to public scandals. But it was the people's money that was spent, when those millions were being squandered, and thrown into the waters of the St. Lawrence, and what was the outcome? As all the hon. gentlemen know, it was those scandals that brought about the downfall of the party then in power

I may say that a strong agitation is being carried on by the interested parties both in Montreal and in Quebec, with a view to securing the building of dry-docks large enough to meet the actual requirements of trade. Influential delegations from Montreal and Quebec have waited upon the government and have had interviews with the right hon. the Prime Minister and the Minister of Public Works.

Mr. MONK. (Translation). With what results?

Mr. TURCOTTE. (Translation). The matter has been thoroughly discussed. On the part of the government there was no such answer given as 'non expedit,' that is to say, nothing to show that the government were unwilling to take action. What was stated was that owing to the financial situation, and the vast public works that were being constructed, although the proposal was worthy of consideration, it was not deemed advisable for the present to start works the necessity and urgency of which are fully acknowledged but which could not be constructed within a short time.

All along the shores of the St. Lawrence, chiefly between Montreal and Quebec, vast improvements have been carried on; other great works are being constructed or will be resumed, during the next season. It is in the interests of Quebec and Montreal that the steamer 'Montcalm' is now busy dredging the channel between those two cities, in order to have the river opened up to navigation earlier in the year. Those improvements call for large expenditures which are incurred, no doubt, in the public interest, but more particularly in favour of the county which the hon. member for Jacques Cartier thinks has been sadly neglected by the government.

I do not think there has been any such neglect either in that part of the country or elsewhere. Such sweeping criticisms are calculated to lead astray public opinion and fool the people into believing that we are remiss in our duties. My hon. friend from Quebec West is well aware that such is not the case. He knows that within twelve or eighteen months, the government are going to place at the disposal of the Minister of Public Works with the consent of parliament the appropriations required to complete the necessary and urgent improvements in the harbours of Montreal and Quebec.

River St. Francis, St. Francis du Lac, on west side of river, $4,000.

Mr. DOHERTY. Could the minister give any information as to the extent to which the river is navigable at this point and the amount of navigation there is?

Mr. PUGSLEY. I am not sure as to the depth of water, but my information is that there is considerable traffic between this place and Montreal. I suppose it would be by one of the market boats. I am not able to give my hon. friend the information which I suppose he would desire as to the depth of the water.

Mr. DOHERTY. Is the minister in a position to say that there is water enough for any boat to run for more than perhaps a month in the spring time?

Mr. PUGSLEY. If the hon. gentleman asserts from personal knowledge that there is not, I will take his statement.

Mr. DOHERTY. I am not asserting it; I am asking the minister for information.

Mr. PUGSLEY. I am not able to say.

Mr. DOHERTY. It seems to me that is a matter on which we should have information before voting money.

Mr. PUGSLEY. This is to complete the work. If this were a new work I would have the details but I have not. It is to go on with the work to completion.

Mr. DOHERTY. I cannot make any personal statement but I have information that seems to me to be reliable that it is not possible for any boats to get to that wharf except for about a month in the spring time.

Mr. GEORGE TAYLOR. What county is it in?

Mr. PUGSLEY. Yamaska.

Mr. GEO. TAYLOR. How much is the wharf going to cost?

Mr. PUGSLEY. The total expenditure outside of the dredging will run up to about $15,000.

Mr. GEO. TAYLOR. Is it possible for the minister to spend $15,000 where there is no navigation except for about a month in the spring?

Mr. PUGSLEY. There may not be navigation for deep draft vessels, but there is navigation for market boats.

Mr. DOHERTY. The minister has asked me if I had personal knowledge of the

matter. I think it is a fair question to ask him if he is in a position to affirm that there is any navigation there for more than one month in the spring?

Mr. PUGSLEY. My hon. friend will see that it would be necessary for me to look up the files of the department to get that information. If this were a new work for which I was asking parliament to make an appropriation, I would have fortified myself with the reports of the engineers. But this is to continue a work to which parliament is already committed, and to which I presume parliament committed itself with all the reports before it at the time.

Mr. DOHERTY. Would it be asking too much of the minister to fortify himself with that information for the benefit of the present parliament?

Mr. PUGSLEY. I will be glad to do so.

Mr. DOHERTY. I think we ought to have the information so as to see the result of the fortification.

Mr. PUGSLEY. We have to finish the work already begun. But I will get the information and lay it on the table.

Mr. GEO. TAYLOR. How much is the minister asking for to complete?

Mr. PUGSLEY. About $4,000.

Mr. GEO. TAYLOR. We had an item up last night where there was no navigation. This appears to be something in the same way.

Mr. PUGSLEY. There is no suggestion of a bridge here.

Mr. GEO. TAYLOR. I think we had better have the information before passing the item.

Mr. PUGSLEY. I may say to my hon. friend that there is an item in the supplementaries for the current year, upon which he can discuss this item, and in the meantime I will bring down the report.

Mr. AMES. Will the minister at the same time bring down a report in reference to the dredging that is done there in the same river?

Mr. PUGSLEY. I will make a note of it and have it brought down.

River St. Jacques (Laprairie)—ice piers near mouth on River St. Lawrence, $1,000.

Mr. PUGSLEY. This is under contract, and the item is to pay the balance of the contract.

Mr. GEO. TAYLOR. Any bridge being erected on these piers?

Mr. PUGSLEY. No. It will protect a bridge, but there is no bridge to be built on these piers.

Mr. DOHERTY.

Mr. AMES. It is to prevent the bridge that crosses a small river from being damaged by the spring floods.

River St. Maurice—channel between Grandes Piles and Le Tuque, $15,500.

Mr. AMES. What does the minister intend to do with the dredging plant on the St. Lawrence this year?

Mr. PUGSLEY. This amount is to continue the plant at work for the removal of boulders and improving the river generally.

River Yamaska—landing pier at St. Michel d'Yamaska, $4,500.

Mr. DOHERTY. With regard to this wharf, will the minister furnish the same information we asked for in the other case?

Mr. PUGSLEY. Yes, I will get that, and it can be discussed at the same time with the other.

St. Alphonse (de Bagotville)—addition to wharf on south side, $25,000.

Mr. AMES. I want to take occasion on this item to say a little more upon the matter of improvements in the county of Chicoutimi and Saguenay. The hon. member (Mr. Girard) who spoke earlier this evening, was greatly grieved because he was under the impression that we made this subject a matter of personal animosity towards himself. Now I wish to assure the hon. member that so far as I am concerned I have absolutely no animosity towards him, nor am I attacking certain items of expenditure in his county through any reason that his personality has anything to do with. I think it is hardly fair for a member of this House to put on a sour face and to consider himself persecuted, greatly wronged and injured if members on the opposition side of the House, in fulfilling their duty, which they are sworn to perform, and in exercising their right of criticism, happen to find occasion to criticise the government and the officers of the government in respect to any item. It was no defence for the hon. member to say that these various expenditures in the county of Chicoutimi and Saguenay had the approval of the Conservatives of the county; for certainly I for one wish to go plainly on record here that whether Conservatives or Liberals in any county in the Dominion are in favour of an expenditure which I may consider to be illegal and illicit, my criticism of it would be just the same if every Conservative in the county was in favour of it. We have no objection to a county having spent in it federal money for strictly federal purposes when there has been presented in this House a statement which parliament accepts, and on which parliament votes money, and when that money is being spent as parliament agreed and intended it should be spent. Now in respect to this place, St.

Alphonse de Bagotville, we can quote another little piece of history on a par with that which we discussed in connection with the River du Moulin, another case in which the ministers have from time to time given incorrect information to this House, and in which the records of the departments have given an incorrect impression, and in which money has been voted and expended in a different way altogether from what parliament intended. An item came up in 1905 for an expenditure at St. Alphonse de Bagotville. This is the way the item was presented in the estimates :

St. Alphonse wharf—removal of rocks from approaches, $1,000.

Mr. Hyman, who was then Minister of Public Works, made this statement :

This is a large parish, and it is a small amount of money, $1,000 merely, to be spent for improving a channel.

The item passed on that recommendation. Next year the Minister of Finance had charge of the estimates, and he had an item like this in the estimates :

St. Alphonse de Bagotville, wharf repairs, $1,000.

And Mr. Fielding said:

This is to build piers in connection with the repairs to the wharf and to remove boulders from the approaches to the same. There is $1,000 in the main estimates and the total cost will be $2,000.

Evidently Mr. Fielding was under the same impression as Mr. Hyman. When the Auditor General's Report came out and showed how this money was spent this is the way the item appeared.

St. Alphonse de Bagotville, removal of rocks from approaches.

When the pay-rolls were brought down this is the way the pay-rolls read:

To remove rocks from approaches.

The explanation of Mr. Hyman and that of Mr. Fielding showed plainly that what they thought we were voting the money for was to remove the rocks from the channel and make it possible for the boats to get to the wharf. That would have been a perfectly legitimate federal expenditure. In several successive years this House was called upon to vote money for this purpose. How was that money spent? St. Alphonse de Bagotville is a town which lies at the southern end of Ha-Ha bay. The wharf has been built out into deep water, it is close up to the town of St. Alphonse de Bagotville and serves the purposes of the people of that town. I have been there and I know what I am talking about. There is a wharf to serve the purposes of the people in the town and they use it to get up the Saguenay and to keep in touch with Quebec and Tadousac. But on the other side of the bay half a mile from where the wharf is situated there is a ridge of land that runs down into the sea and on the far side of that ridge of land there is a little hamlet called Anse à Benjamin. The people who live over in that settlement were anxious to get a road built to the wharf. They had, for a number of years, been trying to raise money to build that road. They had put some of their own money into the road, but it was necessary for the road to go up a hill 250 feet high and go down the other side. They wanted a cliff road built which will be practically a level road from Anse à Benjamin to St. Alphonse de Bagotville. They got these thousands of dollars spent year after year in blasting the rock from this road which the people of the municipality should have built for themselves. It was charged as 'removal of rocks from approaches' and Mr. Fielding and Mr. Hyman thought it was to take out rocks in the channel to the wharf. The Auditor General's Report and the pay-roll conveyed the impression that it was to take out rocks from the channel. As a matter of fact it was to build a road to a wharf that we had no right to build, it was not a proper federal expenditure, but it was an expenditure which was undertaken by the people themselves, and they, having been able to get the member interested and having got the local engineer to send in a favourable report, it was built with federal money. I have photographs of it and I will be glad to send them over to the minister. He will see where the road is blasted out of the rock although this expenditure is charged to the removal of rocks from approaches.

Mr. PUGSLEY. Does not my hon. friend know that at St. Alphonse de Bagotville there are no rocks in the channel, that the water is very deep and that it is a place to which ocean vessels can come? I am surprised that my hon. friend should have misunderstood what the vote was for. He must have known that it was to remove rocks and make an approach to the wharf by the land.

Mr. AMES. The minister says 'to be spent for improving the channel.'

Mr. PUGSLEY. Well, Mr. Hyman was evidently misinformed. He is not the first man who has been misinformed.

Mr. GEORGE TAYLOR. I am simply surprised to see the minister get up and attempt to justify this expenditure. We voted that money for the purpose of improving navigation and yet, according to the statement of my hon. friend from St. Antoine (Mr. Ames), it has been expended for the building of a road. I would like my hon. friend to send those photos over to the minister and ask him to justify

the statement he made to the House when he asked us to vote this money.

Mr. PUGSLEY. I can understand that on some occasions the minister might be misinformed, and I know that since I have been minister sometimes some items go through very quickly. Hon. members sometimes are not as careful about millions as at other times they are about a fifty cent piece.

Mr. GEORGE TAYLOR. We took the minister's statement as being true but we were evidently misled by him.

Mr. PUGSLEY. Evidently if the minister made that statement he was under an erroneous impression, but there was nothing in the item itself which would lead to the impression that it was to dredge out the channel because it says that it was to clear out rocks from the approach to the public wharf. It is not at all an improper expenditure to make a road leading up to a public wharf for the accommodation of the public. That has been done very frequently. The department has always made it a practice to buy the right of way to a public wharf and to improve it. There are several cases which have come under my own supervision in which I have given directions as to the approaches to public wharfs. Otherwise the wharf would be of no use. If you build a wharf you must reasonably provide an approach to it so that the public can use it. I do think that my hon. friend (Mr. Ames) ought not to be too critical with regard to an expenditure like this which was undertaken to make an approach to a wharf to give people free access to such transportation facilities as they have. They have no railways there. People in other parts of the Dominion enjoy the convenience of railways. When they go to the railway to take the train, they have a station and they can go into the waiting room and be comfortable, but in this particular locality the people, in winter time, are completely shut out from the larger cities and in the summer time they have to depend entirely upon steamers to get their produce to market, and to go to the cities of Quebec and Montreal and other places. It was a small expenditure of $2,000.

Mr. AMES. Nearly $4,000.

Mr. PUGSLEY. The people of that place ought to have some accommodation and I do not think this expenditure is out of the way. I am sure that my hon. friend will not suggest for a single moment that either Mr. Hyman or Mr. Fielding intended to make a mis-statement to the committee because if they had asked for that vote for clearing out a roadway the committee would have granted the appropriation just as readily as though they had thought it was for another purpose.

Mr. G. TAYLOR.

Mr. AMES. I do not say that either Mr. Fielding or Mr. Hyman deceived parliament, but I do say that both of them were deceived by the representations that were made to them and I do say that parliament was deceived by the representations made to them. I admit that it is not a very large sum but the question is one of principle. We are deliberately being deceived in reference to these different expenditures. In this particular case, if the minister had come to us, laid down a plan and said that this money was to be expended in building a road three-quarters of a mile away from the wharf, where the wharf was right opposite a thriving town and thoroughly accessible to the right of way I doubt if the committee would have sanctioned it, especially as there was no more excuse for building that road three-quarters of a mile away than there was for building any other road in the county of Chicoutimi. If the minister had said: I want to build a road along the opposite side of the bay in order to connect the two hamlets do you suppose that parliament would have agreed to it?

Mr. PUGSLEY. Was it not to enable the hamlet to get to the wharf?

Mr. AMES. It was to enable the hamlet to get to the town. Where ninety people go to the town ten people go to the wharf. It was purely to enable the people to get from the federal government what they should have done for themselves. If you had asked this House to vote that money for that purpose I guarantee you would not have got it. With that photograph in his hand, do I understand that the minister says blandly that we would have done that work for these people if they wanted it? Of course, if the minister establishes that principle then we can have no confidence whatever in the votes he proposes.

Mr. PUGSLEY. After looking at that rocky shore and looking at the approach to that wharf there I say that I believe parliament would have granted this appropriation. Look at the rock-bound shore; you would not want the people to climb down the rocks, you would say at once: Give them a road to the wharf. These photographs afford the strongest argument for that roadway.

Mr. GIRARD. I do not remember what explanations were given to the House when this appropriation was first asked, but I do know that petitions for this work were sent to me to be presented to the government. I can tell the hon. gentleman that this approach was made to get to the wharf and not to get to the town. I live in that district and I know the conditions well, and as my hon. friend (Mr. Ames) has been there once or twice in his life he no

doubt has noticed that just in front of the St. Alphonse wharf the water is about 150 feet deep and surely there would be no necessity for removing boulders there. But there is an immense hill there which prevents the people getting to that wharf and the farmers of the vicinity instead of using the St. Alphonse wharf found it better to drive, many miles out of their way to the Chicoutimi wharf. Under those circumstances the government agreed to build an approach to the wharf.

Mr. GEO. TAYLOR. Call it a road.

Mr. GIRARD. Call it what you like; it is an approach to the wharf. Let me ask my hon. friend (Mr. Ames) if it is worse to make this approach to the St. Alphonse wharf which was built, than to build three miles of a road as an approach to a wharf which did not exist at all as the Conservative government did.

Mr. PUGSLEY. In what year?

Mr. GIRARD. About twenty years ago. When Mr. Ouimet was Minister of Public Works he contracted for the construction of three miles of road to help the settlers in canton Taillon, and nobody growled in this House over that; no one came here and pretended to be very much scandalized. I am much surprised that what hon. gentlemen opposite advocate to-day differs so widely from their own practices when they were in power. The difference between this government and the Conservative government is that the Liberal government built an approach to a wharf at St. Alphonse where there is a wharf actually in existenec, and the Conservative government built an approach to a wharf at Taillon where there was no wharf at all. I understand that my hon. friend (Mr. Ames) is fond of taking photographs.

Mr. AMES. And I use them to good purpose.

Mr. GIRARD. I hope so, but I regret very much that the only place he seems to be in the photographing business is in the Chicoutimi district.

Mr. AMES. I have lots of others.

Mr. GIRARD. I believe if the hon. gentleman is honest he will tell us that he does not bring this matter up on his own initiative; he knows very well that somebody else is at the bottom of it, who I can tell him is not a friend of his although he may think he is. I register my protest against that. These people have not courage enough to authorize the hon. gentleman to give their names here when they come hypocritically attacking the government and myself and trying to make the House believe that nothing but crooked business is done in my district, and that the government is always wrong when it does anything for my constituents. I am glad the hon. gentleman declared that he had nothing personal against me.

Mr. AMES. Nothing personal against you at all.

Mr. GIRARD. I want the hon. gentleman to understand that he is the instrument of some one who has personal malice against me, and I would remind him that of all those employed by the government on that work the only name to be selected was that of my son. How did my hon. friend get on to that unless some one pointed it out to him? Does not that show personal malice? I know very well that the hon. gentleman never himself knew that L. P. Girard was my son, but I know that Mr. Lapointe came here to give him the information to try to make trouble for me. I invite the hon. gentleman to inquire about Mr. Lapointe. I know what kind of a man he is, and I know he is making all that trouble because he has now suits in the courts against him because during the election he attacked the government and he attacked myself and he attacked the employees of the government and called us all robbers. He now has got himself into a corner and he wants to try and save his own skin by attacking me. I thought my hon. friend (Mr. Ames) was so high that he would not descend so low as to bring such matters before the House.

Ste. Anne des Monts, harbour improvements at mouth of Grande rivière, Ste. Anne, $2,500.

Mr. PRICE. What is the explanation of this?

Mr. PUGSLEY. This is to construct certain works at this point and if the object is accomplished it will make quite a safe and commodious boat harbour for small vessels in that part of the St. Lawrence. The total estimated cost is $17,750, and this I think will complete the work.

St. Fulgence wharf, $1,000.

Mr. AMES. How much more is going to be spent on this wharf?

Mr. PUGSLEY. This is to complete.

Mr. AMES. Does the minister state definitely that this will complete the work?

Mr. PUGSLEY. The minister states that just as definitely as one can relying upon thoroughly competent engineers; oh, yes, this will complete.

St. Jean des Chaillons wharf, including dredging, $3,500.

Mr. AMES. When was that work commenced ?

Mr. PUGSLEY. About eight or ten months ago.

Mr. AMES. That is, it began about June ?

Mr. PUGSLEY. Yes.

Mr. AMES. When was it discontinued ?

Mr. PUGSLEY. This is to make further provision for the work which includes dredging in front of the wharf to clear away the spoil material removed from the St. Lawrence ship channel, apparently dumped there through the carelessness of those operating the dredges. A depth of only ten feet of water has been left at a distance of 85 feet north of the new structure, where there was a depth of over 16 feet. We are also prolonging the side wharfing commencing at the foot of the cliff, and constructing on its slope a retaining wall of open-face cedar crib-work to prevent the earth and trees from sliding into the river, and obstructing the present roadway leading down to the wharf.

Mr. AMES. The minister has not answered my question. He says the work began ten months ago. When did it cease ?

Mr. PUGSLEY. I can tell the hon. member (Mr. Ames) the work that has been done, but I cannot tell the exact date when it was discontinued. I suppose it was discontinued at the close of the season. The work done during eight months included building about 110,000 feet of open-face cribwork of which 160 feet in length of side of the wharf averaging 6 feet high, 30 to 33 feet wide on 137 feet and 18 to 20 feet on 23 feet. Of the protection wall there was built 99 feet in length by 12 feet in height, and partly filled up with stone ballast to secure its stability. To overcome the steep elevation of the hill, ascending towards the public highway, a crib of open-faced work was erected on the east end of the wharf, its dimensions at base being 29 x 33 feet rising up to 29 feet with 2½ feet batter on side, giving it a 24 foot square platform on top, extending and working backwards into the cliff as it worked upwards. A trestle roadway of 76 feet by 24 at platform and 44 at upper end is to connect with road on hilltop.

Mr. AMES. What I want to know, if the minister can tell me is, when this work commenced, and when it ceased. Here is a case where the county is not getting justice, if my information is correct. Instead of opposing this work, I am asking that it be gone on with in earnest. If my information is correct, this work was commenced about a week before the provincial general election—that is it was commenced on the 1st of June. And, as soon as the elections were over, say on the 10th of June, the work was discontinued. Again it was taken up a short time before the Dominion elections in October, and when they were over it was again discontinued. The work should be taken up and finished, instead of being gone on with only when there happens to be an election.

Mr. PUGSLEY. I think, perhaps, the hon. gentleman (Mr. Ames) has in mind the work on the roadway. During the harvest season it is hard to get labouring people to leave their farms, but later in the season they could easily go on with this work. It happened, perhaps unfortunately, that the elections came on shortly after harvest, when the men could leave their farms without disadvantage. But I think that what the hon. gentleman says would not apply to what might be called the wharf work, which I think, went on pretty continuously. The hon. gentleman, then, agrees with me that it is a very necessary work, does he not?

Mr. AMES. The hon minister (Mr. Pugsley) pays the climate of Quebec a great compliment when he suggests that the harvest season commences on June 10, and that it was necessary to take the men off the work on the roadway two days after the election.

Mr. PUGSLEY. I was speaking of the harvest in August and September.

Mr. AMES. The minister had better try to get another excuse; this one is very thin.

Mr. PUGSLEY. Strange to say, at this moment, I cannot do better than that.

Mr. GEO. TAYLOR. Perhaps the hon. minister will bring down the pay-sheets when he brings the other information.

Mr. PUGSLEY. I will bring everything; I will get an ox cart and bring everything down.

Mr. AMES. Here is a case, where again, you are playing with a public work, taking it up when a provincial or federal election comes on, doing a little work, and then dismissing the men when the election is over. If the work is worth doing, do it; if it is not worth doing, do not make a pretense of doing it merely because an election is coming on.

St. Nicholas—repairs to wharf, &c., $2,850.

Mr. AMES. Is the St. Nicholas wharf leased, and if so, to whom, and at what price?

Mr. PUGSLEY. I have no record of any lease.

Mr. AMES. In the Auditor General's Report the minister will see it stated that it has been leased at $25 a year. To whom?

Mr. PUGSLEY. That would be by the Department of Marine and Fisheries.

Mr. AMES. Did we build it with a view to leasing it to some one? If so, to whom?

Mr. PUGSLEY. As my hon. friend, perhaps, knows, my department does not col-

lect revenue for wharfs, but if we transfer to the Department of Marine and Fisheries, it collects tolls, or, it may perhaps give relief from tolls—I am not quite sure. If there were any lease, it would be a matter entirely in the Marine Department. I have no knowledge of it.

Mr. GEO. TAYLOR. There was $3,000 voted last year.

Mr. PUGSLEY. Yes, this is a revote of $2,850.

Mr. GEO. TAYLOR. What was done with the $150?

Mr. PUGSLEY. There was a little work done.

Mr. GEO. TAYLOR. At election time ?

Mr. PUGSLEY. There was some planking done with that.

Mr. AMES. The question to my mind is whether we have built that wharf in order that it might be leased to private parties, and in that case whether the public still have rights to the wharf?

Mr. PUGSLEY. The public have complete rights on the wharf. It is against the policy of the government to give exclusive privileges to any one.

Mr. AMES. Was the expenditure incurred in order to lease it to some party at $25 per year ?

Mr. PUGSLEY. Where does my hon. friend get that information that it is leased ?

Mr. AMES. In the Auditor General's Report.

Mr. PUGSLEY. If my hon. friend will look closer, he will see that that is simply the revenue derived from the steamboat company which, instead of paying tolls on goods landed at each trip, pays an annual charge. The wharf is open to all who wish to use it.

Sorel—deep water wharf, $86,000.

Mr. PRICE. Is that the wharf which turned over last summer ?

Mr. PUGSLEY. No, the wharf which turned over was built some years ago. We are rebuilding the wharf but upon a different design, and after making very careful examination of the bed of the river, we are quite satisfied the wharf we are now building will stand. The sub-soil there is very shifty in its character, there is a good deal of quick sand, and having tested the foundation, we are building a different substructure altogether.

Some resolutions reported.

Mr. TAYLOR. What business to-morrow ?

Mr. FIELDING. We contemplated proceeding with the loan resolutions of the Grand Trunk Pacific, but as some information desired by hon. gentlemen opposite is not quite ready, we will postpone that matter until Tuesday. To-morrow the House will be moved into Committee of Supply, and the estimates taken up. I move that the House do now adjourn.

Motion agreed to, and House adjourned at 11.45 p.m.

HOUSE OF COMMONS.

FRIDAY, March 19, 1909.

The SPEAKER took the Chair at Three o'clock.

AGRICULTURAL FERTILIZERS.

Hon. WM. TEMPLEMAN (Minister of Inland Revenue) moved for leave to introduce Bill (No. 110) respecting agricultural fertilizers. He said: The present Act has been found unworkable and ineffective as a protection to the purchaser of fertilizers. It is proposed to repeal the present Act and substitute this one. There are some very important changes but the Bill is along the lines of the existing Act. It is desired to give greater security to farmers in purchasing fertilizers. It requires that all manufacturers of fertilizers shall register and that they shall sell their products under registered numbers. It also provides that a guaranteed analysis shall be placed on every package of fertilizer sold and provides penalties for contraventions of the Act. A Bill was prepared last session, submitted to the Senate, brought to its second reading and circulated with a view to bringing it before the farmers and others interested in fertilizers. We have had a great many replies and criticisms of the proposed measure and they have been almost unanimously in favour of making a change. The present Bill therefore is in the form of a Bill introduced in the Senate last year with certain modifications and changes to meet the criticisms we have received.

Mr. J. D. REID (Grenville). Could not the minister insert a clause in this Bill or introduce another Bill making similar provision with reference to the sale of feed for stock ? I have had many complaints from farmers that when they purchased feed, seeds and other things which they did not purchase were found.

Mr. TEMPLEMAN. The question of an Act regulating the sale of food for stock has been under consideration since last session. Several delegations have visited Ottawa and had interviews with the Min-

ister of Agriculture and myself, and the question of preparing and submitting a Bill at the present session, something along the line of this Bill, is receiving consideration. I hope to come to a conclusion in a week or so with regard to it.

Motion agreed to, and Bill read the first time.

DOMINION LANDS ACT AMENDMENT.

On the order for the consideration of an amendment made by the Senate to Bill (No. 8) to amend the Dominion Lands Act.—Mr. Oliver.

Hon. FRANK OLIVER (Minister of the Interior). The amendment proposed by the Senate is made at the suggestion of the department and is intended to meet a condition which has arisen by reason of the very large numbers of patents now being granted. Section 90 of the Act relates to the preparation and signing of patents. Provision is made that the patent shall be transmitted to the Secretary of State, by whom, or by the Under Secretary of State, it shall be countersigned. The number of patents has become so great that the signing of them becomes too great a tax upon the time of either the Secretary or the Under Secretary of State and the amendment prepared by the Senate and offered for the assent of the House provides that the patents may be countersigned either by the Secretary of State, the Under Secretary of State as at present, or by 'some other person thereunto specially authorized by the Governor in Council.' That is the whole amendment and its purpose.

Amendment concurred in.

SUPPLY—TWO CENT FARES ON RAILWAYS.

Mr. FIELDING moved that House go into Committee of Supply.

Mr. W. F. MACLEAN (South York). Mr. Speaker, before you leave the Chair I desire to bring to the attention of the House a letter which I received this morning as follows :

36 Craig Street West, Montreal.

Dear sir,—I want to ask you to help me to get my money refunded from the Grand Trunk Railway. I came from Toronto and left there Tuesday last. They sold me a second-class ticket and checked my luggage. No one said a word or stopped me getting on the 10.15 p.m. train, but when the conductor came round he demanded $3.35 from me or to make me leave the train. I paid under protest and send you the receipt. I know you are the man who is fighting this question and can get what is right for me.

Some hon. MEMBERS. Hear, hear.

Mr. W. F. MACLEAN. Sometimes we do get a little compliment outside of this House. The letter continues:

I have travelled by the same train, 10.15 p.m., from Toronto to Montreal, three times before and they have always taken my second-class ticket without a word. I am told that the company are bound to carry second-class passengers by that train. Will you put me right on this matter? Thanking you in anticipation.

Yours truly,

GEORGE MOORE.

The receipt is enclosed. My contention is, as I have often said in this House, that this man or any other person was entitled to travel for two cents a mile on that Grand Trunk train. His right to travel on a Grand Trunk train at that rate has been vindicated by the highest court in this realm. We had a judgment the other day from the Privy Council in England which declared that the Grand Trunk Railway Company was bound to give a penny a mile service at least once a day on its line from Toronto to Montreal. We know also that this has been confirmed by the Railway Commission of this country and by all the courts, and still the Grand Trunk compelled that man, when he endeavoured to travel for two cents a mile, to pay first class fare and threatened to eject him from the train if he did not pay it. I want to know who is looking after the public interest in this matter. I am getting rather tired of it; at least I am willing to continue the work but I would call upon the government, upon the Minister of Railways and Canals, or upon some official of this country to see that the public get what they are entitled to. For the last few days I have had to devote my time to preparing a case in order to bring another action before the Railway Commission so as to try and get this penny a mile service between Toronto and Montreal, or, in fact, to get it for all of the province of Quebec. According to my interpretations of the law, and according to the advice I get from eminent counsel, the people of the province of Quebec and certainly of Ontario up to Toronto are entitled to this penny a mile service. But instead of that this man is refused the right to travel at that rate. He is threatened with being put off the train and he is compelled to pay the additional money. The government, the Minister of Railways and Canals, and the Minister of Justice should be busy at this moment seeing that this man gets his rights.

Mr. FOSTER. Had they no second-class accommodation on that train?

Mr. W. F. MACLEAN. I am not in a position to say whether they had or not, but the man was entitled to travel at that rate. It makes every Canadian's blood boil with indignation at the thought that the Grand Trunk and Canadian Pacific Railway Companies carry all the travel that originates in the United States across Canada for

two cents a mile or less, gladly accepting that fare, and at the same time threaten to eject a Canadian who demands similar treatment. How long will we stand that in this country? Yet, it is going on every day. I have investigated it, and I have had it proved time and time again that on travel which originates in Michigan or New York state, the same being true at the Soo and on the Manitoba border, it is carried for two cents a mile while a Canadian must pay three cents and he is not even given second class or third class accommodation. The conductor holds him up and says: If you do not pay this additional sum we will stop the train and put you off in the wilderness. They have done it. The case that we won in the Privy Council arose out of stoping a train and putting a reporter off because he would not pay the additional sum. I am not here to antagonize the railways of this country; I am not here to say or do anything against the Grand Trunk. But, I am here to ask these railways in the first place, to carry out their charter obligations, and, in the next place, to treat Canadians as well as they treat Americans. It is not antagonizing the railways. It is not making an attack upon their credit or their capital ; but my contention is that they are bound to do this and that if they would agree to do it they would make more money and the people would appreciate it. At this very moment this same Grand Trunk Railway Company is a suppliant to parliament, asking this country to come to its relief in connection with the Grand Trunk Pacific Railway, and we have already been told that it is to get relief. If the managers of that road are coming to parliament asking for relief is not this the time to put it up to them and say: You are not going to get any help until you carry out your charter obligations and until you agree to give as good treatment to Canadians as you give to people across the line. I know that Mr. Hays and some of his newspaper friends in this country say that I am making an unjust attack on the road and that the Canadian roads cannot live if they carry people at two cents a mile. It has been proved in the United States, as it has been proved wherever it has been tried, that cheap railway travel increases the revenue of the railways. I am prepared to stand here and prove that such is the case and that these roads are not going to be hurt. The attitude of Mr. Hays and of the railway companies is to give as little service as possible and to go at the public with a club. My contention is that they will make more money if they give a better and cheaper service. The people will spend as much money on railway travel but they will get a better service and there will be a better understanding between the railways and the public. I hope that I will have the assistance of the Minister of Justice and the Minister of Railways in trying to get better treatment accorded to the Canadian travelling public and that no Canadian in future will be ejected from a train because he is asking for his rights and for equality of treatment.

Now, I want to pass to the question I raised the other day in this House with regard to the capitalization of the Canadian Pacific Railway Company. I then told this House that the capitalization of railway companies was an important matter, that it bore directly on the traffic charges and I said that that had been found to be the case in the United States, and that if we would wait a few days we would hear the deliverance from the incoming president on the subject. Almost the first paragraph of President Taft's inaugural address the other day at Washington was to the effect that the time had come when the capitalization of interstate railways had to be regulated, and that the people who used the railways had to be protected with regard to tariff rates through the regulation of the capitalization of these railway companies. They have found it desirable in the United States that somebody should exercise a scrutiny over proposed increases in the capital of railway companies. Yet, here in Canada we have allowed the Canadian Pacific Railway Company to increase their capital by an immense amount, to divide over $60,000,000 amongst the shareholders, thus putting an unnecessary tax, I contend, on the traffic of this country to the extent of whatever the earnings on $60,000,000 may be. I was told that we had no concern with the capitalization. I have proved that we have by the statement of the President of the United States and by the law in existence in the state of New York, and I am now going to show something else which follows from over-capitalization. If we in this country are to establish the idea that this cutting of melons is to be the rule who will invest anything in railway securities unless a melon goes with it? And, strange to say, that very thing is being demonstrated in our own day. If the Canadian Pacific Railway cuts a melon, if it becomes the rule to issue stock in that way and if all the shareholders have the prospect of becoming—shall I say—millionaires, it will continue to do that business and nobody will buy any railway security that has not a bonus or a melon with it. What has happened? The Canadian Pacific Railway can sell all the stock they wish as long as there is a bonus or a melon to cut. The Grand Trunk cannot sell a dollar's worth of stock and they are to-day coming to this country for relief. If they had a melon to cut they would get their money, investors would take up their stock, but what the investor looks for is a security that has a melon attached to it and the Grand

Trunk Pacific cannot sell one of their securities. This man of melons, this man who is making this new class of melonaires, Sir Thos. Shaughnessy, is able to come to the relief of the government and buy some of these Grand Trunk securities that cannot be sold. That is the position of things in this country with regard to railway securities. It is high time that there was a change and that the government undertook to scrutinize all these issues of stock. The government ought to confine the Canadian Pacific Railway to an issue of 4 per cent bonds. Then I was told by the Minister of Justice that instead of finding out what was the actual investment in the Canadian Pacific Railway as provided for by the charter, the minister had agreed to hang up for an indefinite period the ascertainment of what the actual cost of the Canadian Pacific Railway was. In other words, the Canadian Pacific Railway having been sentenced to be hanged on a certain date, as long as it was pampered and allowed to issue melons it would not ask to be hanged. That is the position in regard to the regulation of its rates as we are entitled to have them regulated under the original agreement.

Then, I want to tell the Minister of Finance how far this bonus business has got to in this country. You cannot issue hardly a security of any kind in Canada unless there is a bonus of some kind with it, and we find our Canadian banks and some of the Canadian insurance companies parties to a new kind of what I consider dangerous financing in this country. They are raising money every day for the development of electrical industries in South America, Central America and Mexico, and all these securities are put on the market largely with the assistance of Canadian financing institutions, and the proposition is in the shape of bonds and with the bonds there goes bonus stock so that you buy a bond for $1,000 and you get $1,000 of bonus stock. That kind of financing is producing a bad effect in this country and it is getting so that people will buy no security unless a bonus of stock goes with it. And while I say Canadian capitalists are free to invest in any way they like, I do not quite think that the Canadian banks and the Canadian insurance companies with the savings of the Canadian people ought to be floating propositions for the development of foreign industries. We have enough industries at home to develop and enough necessity to keep our money here. I want to see the Grand Trunk Pacific built, and if there is Canadian money I would like to see it put in that enterprise. But you will never get investments of that kind taken by the Canadians if this practice of issuing bonus stock is continued. There was a gentleman defending the insurance companies the other day and he said he regarded the government proposal to limit these companies so that they should not indulge in this purchase of bonds along with which went bonus stock, but I say the legislation in that direction is right and that the practice has got to be stopped in this country so far as public action can stop it. We have got to tell the Canadian Pacific Railway Company that never again will they be allowed to cut a melon and to issue to their shareholders at par a security that is worth $170 and soon will be worth $200. We have got to stop that once and for all, and in the name of the Canadian people I tell the government here to-day that that must never occur again, and later on I intend to test the feeling of the House on that very proposition. I want to tell the House here to-day that we must stop this financing of foreign corporations with the savings of the Canadian people on this basis of issuing bonus stock with bond securities. It is not in the interest of the Canadian people. Once we establish that habit in this country of distributing bonuses of one kind or another with public securities, then we will have to give bonuses with all our securities and the first thing we know when this government goes on the London market to get a security issued it will be asked: What bonus are you going to give us; can't you give us some kind of common stock that some day will be of some use to us, or cannot we get some kind of rights? So, the thing is going on and it is time it was stopped and it must be stopped. I am availing myself of this occasion when the Grand Trunk Pacific Railway and the Canadian Pacific Railway is here before us to-day asking for favours ; the Canadian Pacific Railway is before us asking for an increase of its capital stock and the Grand Trunk Pacific is here as applicants for assistance. I say now is the time to compel these great corporations to treat the people of this country fairly, and to give us a 2-cent passenger rate, as they give to the American travel on their roads. Again I say that the Canadian Pacific Railway financing of this kind must be stopped, and the way to stop it is to tell them not only that they must come under the general Act under the control of the Railway Commission, but that they must use the funds they now have in their treasury, that they must sell their lands, and abandon that exemption clause which protects them in the west. All these privileges can be wiped away when they come here as suppliants, and some kind of concession can be got from them in this respect. Later on I intend to test the feeling of the House on this question. I have now got my facts fairly well before the House and I leave these facts with the House, and this letter which I have read from a common ordinary Canadian traveller on the Grand Trunk Railway, who was threatened with ejectment because he would not pay something he was not

entitled to pay, I commend to the consideration of the Minister of Railways and I hope he will compel the Grand Trunk Railway Company to treat that Canadian as he ought to have been treated and compel them to return to him the three dollars and odd cents which he was forced to pay.

Hon. G. P. GRAHAM (Minister of Railways). I will detain the House but for a moment. The question of the Canadian Pacific Railway issue of stock has already been discussed and I will not further discuss it now. My hon. friend (Mr. W. F. Maclean) tells us, and rightly, that there was something in President Taft's address in reference to the issuing of stock. I think his statement was fairly general on that point.

Mr. W. F. MACLEAN. Very.

Mr. GRAHAM. President Taft carefully kept away from any detail; he was not as courageous as my hon. friend (Mr. Maclean). What he will do or what he will not do nobody on earth can know from reading his address.

Mr. W. F. MACLEAN. I'll bet you what he will do.

Mr. GRAHAM. As the hon. gentleman told us what President Taft was going to say perhaps he can tell us now what he is going to do. With that true newspaper instinct of his he had a scoop on the rest of us as to the contents of the address a day in advance, although if I were actively in the business now as I used to be perhaps I would be as fortunate as he was. However, the two cent rate matter was the gist of the hon. gentleman's remarks. I do not know the particulars of his complaint except that as he tells us a man got on the fast train of the Grand Trunk and his second-class ticket was not honored. Well, as I understand it, the judgment of the Privy Council only provides for one train a day between Montreal and Toronto at the two cent rate.

Mr. W. F. MACLEAN. Was it there?

Mr. GRAHAM. The judgment of the courts would not allow the man to select the fastest train for his two cent ticket and no railway in the world would give him a two cent rate on its fastest train. This train no doubt was selected for the purpose of showing that the road would not give him a second-class fare, but that train I understand does not carry a second-class car at all; it is one of the very fastest trains on the Grand Trunk.

Mr. SPROULE. I went up on that train the day before yesterday and a lady sitting on a seat in front of me had a second-class ticket was sent out to the second-class car.

Mr. GRAHAM. This occurred on the night train going east?

Mr. SPROULE. My experience was on the fast train going from Montreal west.

Mr. GRAHAM. This occurred on the night train which carried the sleepers, and there was a train on the Grand Trunk which travelled in the same direction a short time before it and on which the second-class ticket would have been honoured. The fast train only carries the sleepers and the first-class car. It is very questionable to my mind whether the gentleman who wrote that letter had any grievance at all. It is questionable whether if the law were enforced to-day that gentleman would have any cause of complaint because the law only requires the Grand Trunk to put on one train per day for the accommodation of second-class passengers and surely they can run as many other trains as they like without a second-class car and not violate their charter. However, the question of a two cent rate is a very large one. My hon. friend will have noticed that within the last few days one of the states he quoted as having a two cent rate has had that law declared unconstitutional simply because the railways cannot carry people at two cents a mile and live. We forget often that the railways in this country are of as much importance to the country as this House itself is; the country cannot prosper without the railways; we are partners in the railways and while I believe in making them live up to their contracts and give the people a good service at a minimum price, we must not run away with the idea that every time we attack a railway we are doing something for the country, while the fact is that we may be injuring the country in pursuing such a course. Perhaps I should not say so, but at the present moment I do not believe that the railways of Canada run through a population sufficiently dense and affording sufficient traffic to give the people a two cent rate with any kind of living profit to the railways. I believe that is the situation at the present time, and if parliament were asked to pass a law now to compel the railway companies to give a two cent rate I do not believe the House would consent to it. While I agree that my hon. friend (Mr. Maclean) has a perfect right to adhere to his idea with regard to a two cent passenger rate, I am inclined at present to take the other view. We cannot compare Canada with the United States or with Great Britain in this respect. In Canada the rate for transportation cannot be governed by the density of population. Canada is a sparsely settled country, as long as the United States, with seven millions of population to feed railways extending from one end of the country to the other, while the United States has over eighty millions of population. It is out of the question, therefore, to expect as low a rate in Canada as there is in the United States. I do not know that I have anything

more to say. After all, if we compelled the Grand Trunk to adhere to what my hon. friend calls the terms of its charter and to the judgment recently given, I doubt if the gentleman who wrote that letter would have any claim at all.

Hon. G. E. FOSTER (North Toronto). When a railway like the Grand Trunk has some trains on which it honours second-class tickets, is it not obliged to point that out by way of advertisement? A traveller may know generally that there is a two-cent fare on the railway, but he may get on the wrong train inadvertently. Is there not a duty on the railway to guard travellers against misapprehension of that kind?

Mr. GRAHAM. I think that on every time-table, including those posted on the walls of the stations, there are particulars that enable any one to glean that information; but at the city of Toronto the arrangements are so imperfect, too imperfect for a large city, that people are liable to get on the wrong train. I hold with my hon. friend that the railway should have a regulation to prevent people getting on the wrong train, such as there is at Chicago and elsewhere.

Mr. FOSTER. When a ticket agent sells a second-class ticket, he should point out to the purchaser what the arrangements are.

Mr. W. F. MACLEAN. The minister has missed my point, which is that there were Americans travelling at two cents a mile on the same train on which Canadians were given this unfair treatment.

Mr. GRAHAM. I do not know that we have any proof of that.

Mr. W. F. MACLEAN. I have, on every train.

Mr. GRAHAM. There is this to be remembered in regard to railway travelling, that the rates are governed to a certain extent by the place where the traffic originates. That is true of passenger rates as well as freight rates. Traffic originating in the United States has to compete with the rates prevailing in the United States, and it can be sent either by the American route or by the Canadian route. The railways have to give these rates to comply with the laws of the United States. If they had any traffic originating in Canada, they would have in the same way to comply with the laws of Canada. This arrangement is perfectly feasible, and if brought before the Board of Railway Commissioners to-morrow, they would deal with it just as they deal with this proposition, and my hon. friend gets the benefit. A place like the city of Toronto gets a distributing rate which is not given to other places, and that is what enables the city of Toronto to become a wholesale centre. If my hon. friend's idea were carried to its logical conclusion, that distributing rate would have to be abolished, and our larger cities would not be the wholesale centres they are at the present time. To nibble at the shell of the traffic problem gives one only a little information; but railway tariffs are based on scientific principles. You cannot take an isolated case and make a system out of it. You have to go through all the tariffs and ascertain the principles on which they are based, and then form your conclusion.

Mr. J. G. TURRIFF (Assiniboia). May I ask the hon minister a question? When the Canadian Pacific Railway Company disposes of $50,000,000 of stock, for what authority has been given by order in council, and distribute that stock among their own shareholders at par, which will be practically dividing $50,000,000 among their shareholders, as the stock is worth intrinsically $200, will they be in a position to say to the Railway Commission, we will no longer allow you to fix our rates, and we want this lawsuit brought to a conclusion?

Mr. GRAHAM. I suppose they are able to force this law-suit to a conclusion at the present time, but the Canadian Pacific Railway will never do it. There is no question about their being in that position, and I see no great benefit to be derived to the people of Canada in having it pushed to a conclusion, so long as they do as at present, allow the rates to be governed by the Railway Commission. As I say, I think there is nothing to hinder them asking the case to be pushed to a conclusion, or the government doing the same thing.

Mr. E. GUSS PORTER (West Hastings). I only arose to call the attention of the hon. minister to the case in hand, to which his attention was particularly called, and to remark that he had apparently overlooked the salient feature of that letter. The man applied for a ticket and checked his baggage for the 10.15 train, and when he did that, one would naturally think that he should have been made aware of the fact that he could not travel on that train on that ticket. A second opportunity is afforded when he comes to check his baggage. He must present his ticket, and when he did he should have been told that he could not have his baggage checked by that train. But they allowed him to purchase his ticket and check his baggage, and when he got on the train they put him off, although he made three previous trips under the same circumstances.

Mr. GRAHAM. He knew better, then.

Motion agreed to, and House went into Committee of Supply.

Intercolonial Railway—cut-off line at Moncton, N.B., $50,000.

Hon. G. P. GRAHAM (Minister of Railways and Canals). This is an item I want to explain, because this small expropriation does not really cover what is meant. This line will cost about $357,000. It will be two and a half miles and double-tracked. The idea of this is to save running the heavy freight through the city where there are high grades.

Mr. FOSTER. What are you going to get by it?

Mr. GRAHAM. We will reduce the distance quite a large extent and get rid of a very heavy grade and actually make a grade of five-tenths of one per cent that will save our going through the city with the heavy traffic.

Mr. J. HAGGART. How did you get along before ?

Mr. GRAHAM. Our shops are moved west of that city quite a distance. Before they were in the city. We are going to cut off a loop practically, and the Grand Trunk Pacific will connect with the Intercolonial just at that point.

Mr. J. HAGGART. This seems a large expenditure for something never wanted before. It is estimated to cost $350,000, but before completed it will cost half a million dollars, if the usual record on the Intercolonial Railway is not departed from.

Mr. GRAHAM. Our engineer thinks it is absolutely necessary and we will save on the haul as well as on the distance.

Mr. FOSTER. When was it begun?

Mr. GRAHAM. It has not been begun. It has always been the intention in the laying out of the yard.

Mr. J. A. CURRIE. $350,000 is a large amount for two and a half miles of railway.

Mr. GRAHAM. It is a double-tracked line.

Mr. J. A. CURRIE. How much cutting and filling in to make it cost so much ?

Mr. GRAHAM. I have the items here. 41·2 acres of land, right of way; 17 acres clearing right of way; 3 acres grubbing; 1,000 cubic yards solid rock excavation; 30,000 loose rock; 16,000 ordinary excavation; 200,000 earth excavation; 1,800 yards standard fence; 24 gates; 28 cattle guards; 30,000 lbs. of rails for culverts; 854,000 lbs. of steel trussel at Hall's Creek; one under crossing at north street; 5 miles track laid.

Mr. J. A. CURRIE. What do you estimate the cost of the land for right of way?

Mr. GRAHAM. $50,000.

Mr. J. A. CURRIE. If that is intended to be used as a marshalling track, you will require more than two tracks.

Mr. GRAHAM. It is not really a yard. We have an extension yard outside of this. We have constructed a new yard altogether and one shop west of the city. This will start where the Grand Trunk Pacific reaches our tracks and will not run through the city proper. We will escape the trade going down the city.

Mr. J. A. CURRIE. If you are to have 28 cattle guards, that means 14 street crossings on 2½ miles of track.

Mr. GRAHAM. There are 2 for each street, and then there are double tracks, which will make 7 streets all told and one viaduct.

Mr. FOSTER. Has the land been yet secured?

Mr. GRAHAM. No.

Mr. FOSTER. Has the line through which this road is to run been decided ?

Mr. GRAHAM. It has practically.

Mr. FOSTER. Then the hon. gentleman is in this position. He has laid down his railway tracks and has not taken any opportunity to secure the land. How does he propose to get the land now?—by expropriation?

Mr. GRAHAM. We have really two lines surveyed, and we propose not to be tied up to either. We are getting a man to make an estimate and get offers from these people. If we do not get a fair price, we will expropriate the land.

Mr. FOSTER. But you make the whole matter public.

Mr. GRAHAM. It was difficult not to do that, seeing that we had located our shops there.

Mr. FOSTER. We have had land transactions in Moncton before now. The minister was urged, I think by the present deputy minister, though I am not sure, both with reference to Moncton and Halifax land, that it would be better not to let a word get out concerning the government's intentions until they had options on the land. That was the whole argument, in fact, that, if the thing were known, the government would put itself in the hands of the land owners, and that the necessary course was to secure options in advance. Now, the department, with a different minister, but, I think, with the same deputy, thinks it well to come to parliament and advertise the matter of an expenditure of $354,000, although it is tied up within a very small radius of land. I cannot see the consistency of these two situations in the one department. Unless you are going to

expropriate in any event, it would seem not very wise to advertise the whole thing in this manner. We remember that in the matter of the purchase of the sand lands at Kentville for military purposes, we were told that it was necessary to get hold of these lands before it became known to the public that the department wanted them, or they would have to pay through the nose for them. Is this a new diplomacy that the Minister of Railways and Canals is introducing in the management of his department? I would like to see how he works it out.

Mr. GRAHAM. I will tell my hon. friend, and he will see it in a moment. The purchase of the sand lands, or even the purchase of a building site in Halifax, was a different case. The government could buy in one place or in another. But, in the case now before us, the range of choice is very little, for the railway has to go through from one point to the other.

Mr. FOSTER. The minister must go back further than that in order to make it clear. It must have been known several years ago that these shops were to be erected, and it must have been foreseen that, at some time, you would need more land there. Why did not the government, before the shops were built, take measures to secure the necessary land, and so apply the principle which has been so often advocated before, that of securing control before the public knowledge of the government's intentions makes the land immensely valuable? The minister can do what he likes, but, in this case, he will pay a great deal more for the land than he would have had to pay had he gone at it in a business-like way. Even an expropriation court will give the owners a larger award now than it would have given before.

Mr. JOHN HAGGART. This line was not contemplated when the shops were built?

Mr. GRAHAM. My deputy tells me that part of the surveys were made as long ago as two years. It has always been his idea to have this line connected in this way since the building of the new shops. And the building of the new shops was rendered necessary by the burning of the old ones.

Mr. J. A. CURRIE. I understand that the cut-off is 2½ miles. What is the length of the existing line?

Mr. GRAHAM. Nearly a mile longer.

Mr. J. A. CURRIE. And what is the grade? What is the ton-mile saving over that piece of road?

Mr. GRAHAM. The grades will be reduced about one-half.

Mr. FOSTER.

Mr. J. A. CURRIE. How many cars can you take over that grade now with a hundred-ton locomotive such as you ordinarily handle freight with?

Mr. GRAHAM. The difference would be as between 1,000 tons and 1,800 tons.

Mr. LALOR. Is this line to be used jointly by the Intercolonial and the Transcontinental?

Mr. GRAHAM. We expect that the terminals with which this connects will be used by the Grand Trunk as their Moncton terminals or, at least, as a portion of them; and as the freight starts east from there, it will use the double track with the lesser grade. It will be part of the eastern line from our shops.

Mr. LALOR. Is the minister charging the whole of this amount to capital account of the Intercolonial or dividing it between the two lines?

Mr. GRAHAM. This is all ours. Should we make an arrangement with the Grand Trunk Pacific, they would pay for whatever rights they secured.

Mr. FOSTER. Is this improvement necessary for the traffic of the Intercolonial as it is at present?

Mr. GRAHAM. It could be got along without, but as we are doing the work we thought that we might as well make a complete job of it, instead of being compelled to go back and finish it. We are building our shops and getting them in splendid shape. The whole work will take us two or three years, as the committee will see by the amount asked for in this vote.

Mr. FOSTER. Does it not strike the minister that, particularly this year, this is a pretty large expenditure unless it is really necessary? As I understand it, it is not really necessary for the traffic of the Intercolonial, but will only become necessary because the Grand Trunk Pacific is going there and it is believed you will want this cut-off when you get access to the traffic that you expect you will have when that road enters Moncton. The $350,000, which I suppose will run to nearly half a million before it is through, is a very large expenditure for a cut-off of 2½ miles. The question would be, I would think, whether it is so necessary that it should be gone on with at once. You are making large expenditures at Moncton, I think the information was it would take $500,000 more to finish the shops. These shops of course would not be necessary simply for the Intercolonial Railway.

Mr. GRAHAM. Oh, yes they are.

Mr. FOSTER. You are making them more expensive simply because you are looking to joint interests by the Grand

Trunk Pacific and the Intercolonial Railway.

Mr. GRAHAM. The longer we leave this the more expensive the land will become. The moment the Grand Trunk Pacific gets to Moncton the city as a railway centre will increase in size.

Mr. S. SHARPE. What is the estimated cost of cattle-guards and is there a uniform pattern?

Mr. GRAHAM. The estimate here is $25 each. They are a steel cattle-guard which we get from the Fairbanks Company. We use this kind in anything new we put in.

Mr. FOSTER. That is not a very heavy sum. What is it that will cost so much?

Mr. GRAHAM. Here is a filling, 400,000 cubic yards, that will cost $80,000. Then we have a trestle, 854,000 pounds of steel trestle, that will cost $38,430. Eighty-pound rails and fastenings will cost $21,000.

Mr. LENNOX. In connection with cattle-guards, the other day we got a return as to the number of protected crossings in Canada. It is stated that there were 15,000 crossings in Canada of which 3,115 were protected, but we could not get particulars as to how they were protected. It now transpires that there has been a great mistake in that matter. The Grand Trunk Railway mistook protection for the people for cattle-guards and in reply to the question sent to them stated that they had 2,888 protected crossings, but this included all the cattle-guards on their line. They have only a couple of hundred protected crossings, and instead of 3,115 we have probably not 500 protected crossings in Canada. I hope the minister will amend his Bill because the cattle-guards do not serve the purpose of protecting the public in the way intended by the legislation before the House.

Mr. FOSTER. Who is making inquiry and looking after this land purchase?

Mr. GRAHAM. The deputy has been negotiating himself for the purchase of this land. Some of the land belongs to the Moncton Land Company and some to Humphries. It is mostly vacant land.

Mr. J. A. CURRIE. One hundred dollars a lot should be a good price for the land.

Mr. GRAHAM. I think so, some will run a little higher and some a little lower.

Original construction, $800.

Mr. FOSTER. What is that?

Mr. GRAHAM. Every year little claims come up for damages on account of original construction that have not been presented or that have been overlooked. We generally have a small appropriation for that.

Mr. FOSTER. It seems to me this is worse than the United States pensions.

Mr. GRAHAM. It is something on the same line I admit. There are some peculiar claims. Sometimes heirs return or something of that kind occurs. We carried last year $1,000 and paid out $634.84 on that account.

Mr. TURRIFF. Before leaving the branch lines, I would like to discuss for a few moments the general question of the acquisitions of branch lines by the Intercolonial Railway.

Mr. FOSTER. How can we do that in Committee of Supply on an individual item? I found the very same difficulty. I did not get off what I wanted to get off the other night, but I do not see how it is possible for me to get it off on individual items. I did not know that the minister was going into Supply this afternoon or before he had gone in I would have discussed with him some points. I think my hon. friend (Mr. Turriff) had better take some other opportunity. If we are all going to take up these general questions of policy and discuss them on individual items it will be unsatisfactory, and I do not see how we would get through with the estimates. I would like the minister to let me know the next time he is going into Supply, and then I will be prepared to take up some of these other questions.

Mr. GRAHAM. I have a general one held over—the Trent canal.

Mr. TURRIFF. I am quite prepared either to go on now for fifteen minutes or wait for a further occasion. The other night, when the matter was discussed generally, it was passed around that the minister would adjourn the debate, and I took it for granted that the question would not come up again, or that if it did come up again we would all have an opportunity of placing our views before the House. The particular reason for wishing to place my views before the House is that on that occasion all the members who spoke favoured the taking over of the branch lines, and I thought that if the matter did not come up again the government would likely come to the conclusion that in so far as members on this side of the House were concerned, they were all in favour of the proposition of additional branch lines in connection with the Intercolonial Railway. I was under the impression that possibly we could discuss it on these estimates, but if not we can discuss it on another occasion.

Mr. DEPUTY SPEAKER. I would not like to refuse any discussion on this question of branch lines on any particular vote, but I have ascertained that the question the hon. gentleman wishes to refer to is still on the Order Paper, and may come up

again. A long discussion on branch lines and their merits would not be in order at this moment, especially as it is still on the Order Paper, although the question might be referred to.

Mr. TURRIFF. If we had the assurance that we would have an opportunity of discussing it again on the resumption of the adjourned debate that would be quite satisfactory, although, in adjourning the debate, the minister took the opportunity of saying that he would refer to the policy of the government on branch lines when he made his statement in connection with the Intercolonial Railway.

Mr. FOSTER. So he did to a certain extent.

Mr. TURRIFF. As long as I have the opportunity of discussing it later on that is all I want.

Mr. FOSTER. I think it would be better business to take up these matters when the minister next goes into Supply if he will be good enough to inform us when he next proposes to move the House into committee.

Mr. GRAHAM. All right.

Mr. BLACK. I would like to ask the minister why an examination was not made of the Dominion Atlantic Railway at the time the other branches were examined?

Mr. GRAHAM. The Dominion Atlantic is in a somewhat different position from some of the other roads. I did not know that they had neglected to give us a report on that until my attention was drawn to it. It seems that the commissioners had some little difficulty with the Dominion Atlantic as to their transportation and that instead of facilitating them they put everything in the way of getting a report on the Dominion Atlantic. However, we have the sworn returns of the road every year, and have a pretty good idea of its value, its earnings, and that kind of thing. It is in a different position from some of the other lines because the Dominion Atlantic does not want to lease or sell and the other lines practically all do.

Sir FREDERICK BORDEN. But the people living along that road may want it.

Mr. GRAHAM. It would be a question how far you could go in expropriating a railway that did not want to sell or lease.

Mr. BLACK. I do not think that it is correct to say that the Dominion Atlantic people do not want to sell. There are too many shrewd business men in the company in London to say openly that they want to sell it. They prefer to hold off and be in a position to make the best bargain they can. I was talking to the manager of that road and he said in one breath that they would not sell and in the next that anybody who bought the road must buy the steamers also. It has been in the air for the last five or six years that the road is for sale and that other companies have been after it. If the road were in the hands of anybody who would give encouragement to manufacturers and industries located upon it, it would pay more than it does now. The road is being run, not to the advantage of the country, of the farmers or of the manufacturers, but it is being run in order to skim all it can out of the country, being owned by a company which is out of Canada and which has no interest in it.

Mr. W. F. MACLEAN. Is that the Evangeline route?

Mr. BLACK. That is the Evangeline route. I have received a letter from a manufacturer in one of the towns there complaining that the policy of the road is one of obstruction instead of assistance in the work of developing their trade. They are in continual trouble.

Mr. J. A. CURRIE. How much does that road pay?

Mr. BLACK. The earnings over operating expenses are $280,586.

Mr. J. A. CURRIE. How many miles?

Mr. BLACK. Counting the branches and sidings, 298 miles. I think the straight run is about 225 miles from Yarmouth to Halifax.

Mr. J. A. CURRIE. Who is the manager of the road?

Mr. BLACK. The local manager is Mr. Percy Gifkins. The road is owned in London.

Mr. J. A. CURRIE. Do you not think it would be a good scheme to sell the Intercolonial Railway to that road or buy that manager?

Mr. BLACK. I think it would be a good thing to buy that manager.

Sir FREDERICK BORDEN. This Dominion Atlantic Railway passes through my county and I think it is only fair to the corporation to say that it is a road owned by private individuals and is not owned by the government and run, as the Intercolonial is, for the purpose of carrying out the scheme of confederation or of promoting trade between the western and eastern parts of the Dominion, one of the objects for which the Intercolonial Railway was originally conceived and constructed. This railway is owned by private individuals. It must be run in such a way as to pay running expenses and something more or go into insolvency. It had its difficulties in its early years and more than once was on

the verge of insolvency, but I think that during the last 15 or 20 years it has paid running expenses and possibly some dividends. I am not prepared to say that the rates are higher than they ought to be, but I do know that the rates are higher than the rates on the Intercolonial Railway. And, I do know that the people in western Nova Scotia have complained—in fact in former years I brought this matter to the attention of the House on several occasions—that they were placed at an unfair disadvantage in the city of Halifax their principal market, as compared with their friends in eastern Nova Scotia through whose counties the Intercolonial Railway runs. I do not intend to carry this discussion further, but I think it is only fair to the Dominion Atlantic Railway and its management to say that they are operating a railroad owned by private individuals and built with private money. I do not think it is fair to charge them with levying too high rates. Their rates are controlled by the scale of rates adopted for all company owned railways, and they are subject to the control of the Railway Commission. If the rates are unduly high it is very easy for any one to make a complaint to the Commission and to have them adjusted. As to the taking over of this road and the policy of acquiring the branch lines which are feeders of the Intercolonial, should that policy ever be adopted I think there would be no very great difficulty in this case, because if I remember correctly in the original charter under which this road was constructed there is a provision by which the government can take it over at a price to be fixed by certain judges who are named in the charter for that purpose.

Mr. W. F. MACLEAN. Do I understand the Minister of Militia to say that the government-owned road treats the public better than this private-owned road ?

Sir FREDERICK BORDEN. Yes.

Mr. W. F. MACLEAN. Well, I am glad to have that on record.

Sir FREDERICK BORDEN. It is a fact, and we have a deficit on the Intercolonial Railway as a result.

Mr. W. F. MACLEAN. You would not think of going back to private ownership later on.

Sir FREDERICK BORDEN. No; it does not go through my county.

Mr. BLACK. I had a letter from the chairman of the cotton company in the town in which I reside, and he gives me the schedule of rates paid by their company on the Dominion Atlantic Railway and on the Intercolonial Railway, and the last clause of his letter states that it will be seen by the schedule that his company is paying six times as much for their cotton goods on the Dominion Atlantic Railway as on the Intercolonial Railway. Furthermore, I think I am right in saying that whatever financial difficulty the Dominion Atlantic road has had in years past was not caused by the running of their railroad, but that the loss was made in purchasing steamers and attempting and succeeding in running a rival steamship off the route between Yarmouth and Boston. There was a local steamship line owned by the Eastern Steamship Company which had been in successful operation, and it came into the minds of the London management of that railway that they wanted to compete on that route, and they bought steamers and cut rates and finally ran the local steamship company off. In the end they bought the local company's steamers and then found they had too many boats on their hands. I think that is about the only loss the Dominion Atlantic has made. I believe that the steamship route does not pay yet, and so it cuts down the large profits which are made on the railway itself. But, that the railroad is a paying concern there is no doubt, and that it could be made still more paying there is also no doubt. It could be made mutually to the advantage of the Intercolonial Railway and to the people along the road, because it runs through one of the richest fruit and farming countries in Canada. A country well suited for manufactures and a country that must prosper. But the industries along that road are hampered by the penny wise and pound foolish management.

Sir FREDERICK BORDEN. I may say to my hon. friend (Mr. Black) that the time to which I allude was long prior to this company owning any steamer.

Mr. BLACK. They only owned a piece of the road then.

Sir FREDERICK BORDEN. As I remember they had some difficulties five or six years after they commenced to operate, and I think the company's road was opened about 39 years ago. The difficulties have not resulted since the steamships have been owned by the railroad. This Evangeline route affords a continuous line from Halifax to Boston and incidentally to St. John and to Montreal via St. John. It is absolutely necessary they should have lines of steamships. It is operating very successfully several steamships from Yarmouth to Boston, one to New York, and one or two across the Bay of Fundy from Digby to St. John. It would be a great deprivation to the public if these steamships were not operated and it is not fair to charge up to the steamship lines any loss that may be made on the operation of the system. It would be very difficult to separate the steamships from the rest of the system. It is a through line partly by

steamship and partly by railway from Halifax to Boston on the one hand, and from Halifax to Montreal via St. John and the Bay of Fundy on the other. I have added these further remarks so that the situation of the line may be fairly understood.

Strengthening bridges, $70,000.

Mr. GRAHAM. Last year we had a vote of $190,000 to do this work and we spent $120,000; this $70,000 is a revote.

Mr. J. HAGGART. Is this a renewal of the old bridges?

Mr. GRAHAM. It is practically putting in new bridges. These bridges were all old and we are putting in steel bridges in most of the places.

Mr. J. HAGGART. You are charging the whole cost to capital account?

Mr. GRAHAM. Where a new work is constructed we deduct the value of the old work and charge to capital the difference between the old and the new.

Mr. J. HAGGART. What deduction has been made for the value of the old work ?

Mr. GRAHAM. It would take quite a long while to get that information. Some of the old bridges have been sold and we give credit for them.

Mr. R. L. BORDEN. Perhaps the minister takes a short cut by valuing the old work at nothing?

Mr. GRAHAM. Oh, no.

Mr. J. HAGGART. He does not intend to make any deduction because he is charging the whole vote to capital account.

Mr. FOSTER. This is important as it involves the whole principle as to what it is proper to charge to capital account in the administration of a railroad in reference to which you are keeping current and capital account and have to make your reports to the country. Is the minister adopting the same principle that the great railways in the United States adopt? When they strengthen bridges they have a well defined policy and they are kept closely to it not only by their innate sense of what is proper and right in the interest of the road itself, but because their system of bookeeping and publicity forces them to accuracy and consistency in this matter. When the minister wants to strengthen any of the bridges or to do some similar work on the road, is he following the same lines of division as the great American railways?

Mr. GRAHAM. I think it will be found that the policy adopted on the Intercolonial Railway in regard to the distribution of expenditure in the different accounts is the same as that adopted by all railways. When an old wooden bridge, such as those on the Canada Eastern branch, is replaced with an iron bridge that is absolutely new work, and is chargeable to capital.

Mr. FOSTER. Are these all on the Canada Eastern?

Mr. GRAHAM. Not at all, but the two largest items are.

Mr. FOSTER. Suppose I put a concrete case. The Pennsylvania Railroad, on a portion of its line, may have a wooden bridge left. Every day the traffic goes over it, it carries the burden and does the work; but the company decides to replace it with a good modern structure, which will cost probably more than the old structure did, but will in the main do the same kind of service, but probably with greater safety. Do they always charge the difference between the value of the old and the cost of the new to capital, or charge it all to revenue ?

Mr. GRAHAM. I am inclined to think that they charge it all to capital account.

Mr. FOSTER. Does the minister know that?

Mr. GRAHAM. I am speaking from information given to my deputy. If it were an iron bridge of an ancient date which was being replaced with one of the modern style, they would sell the old bridge for what it would bring, and charge the difference between that and the cost of the new bridge to capital.

Mr. FOSTER. I understand that theoretically that is so, but I am told that the practice more and more is to charge all betterments on an old line of railway to revenue; and I am not sure that under the rules of the commission that is not becoming to a certain extent a necessity.

Mr. GRAHAM. Every year hundreds of millions of dollars are expended on capital acount on old lines, for replacing bridges, improving grades and increasing rolling stock.

Mr. FOSTER. My hon. friend is perfectly right in saying that these railroads spend millions on capital account, but he has not traced out the details. If he does that, I believe he will find that these betterments are in a great measure not charged to capital but to revenue account. Of course, if they built an extension, or increased the quantity of rolling stock, these expenditures would be charged to capital account; but I am informed that a great deal of the renewal of rolling stock, even though the new is of greater capacity than the old, is not charged to capital, but to revenue, and that is becoming more and more the case.

Mr. GRAHAM. That is just what we do with a lot of our rolling stock. This year we have constructed a lot of rolling stock,

much heavier and larger than that which it replaces, out of revenue. The principle is that where you are putting in new rolling stock equal in carrying power to the old, you charge it to revenue; but where you are getting something new, that is charged to capital. The Pennsylvania Railroad has expended within a comparatively short time, between Philadelphia and New York, $200,000,000, all charged to capital acount; and that is not a new road, but an old road. By the returns I find that the railroad companies are sinners somewhat in this respect. When their revenues are buoyant, they stick to the line pretty closely; but when their revenue falls off, they charge to capital account what they formerly charged to revenue.

Mr. FOSTER. I am not inclined to place implicit confidence in that. I want to show how easy it is to make an impression with nothing underlying it. My hon. friend has stated that the Pennsylvania Railroad spent of late between New York and Philadelphia about $200,000,000. What has that been spent on? On the great New York terminals in the neighbourhood of 42nd street, on tunnels, and on electrifying the system within fifty miles of New York city. That $200,000,000 has almost entirely gone into that kind of improvement. That is not taking a bit of a bridge on the Miramichi and replacing it and then putting that to capital account.

Mr. GRAHAM. I made no reference to terminals or tunnels.

Mr. FOSTER. The hon. minister in his statement paraded the idea that they had bought rolling stock and charged it to capital. That is true of every road. Is it not true also that you have bought a mighty lot of rolling stock and charged it to capital?

Mr. GRAHAM. Certainly.

Mr. FOSTER. And that you have lame engines and acres of rolling stock standing along your whole road from one end to the other, which you should have repaired and charged to revenue but which are lying idle, and you have kept your road going by a large expenditure on rolling stock charged to capital account. Suppose you put an independent man on that Intercolonial Railway and have him take an inventory of every bit of damaged rolling stock and tote up what that would cost for repairs to be charged to revenue, you will have a different set of accounts from those brought down to us. Of course you have paid for rolling stock out of revenue, but I am inclined to think you have paid illegitimately for rolling stock out of capital rather than face the repairing of the old stock and deduct that from revenue. But with reference to the $200,000,000 expenditure on the Pennsylvania road charged to capital, you will find that the largest part was sunk in legitimate capital expenditure, comprising the almost unrivalled terminal facilities which that road has procured in New York.

Mr. GRAHAM. The amount I have stated would not cover the terminals or tunnels. It has spent an enormous amount getting rid of grade crossings and making viaducts, over-head tracks and levelling the road. It is the same old road and all these things have been charged to capital. Every railway in the world has to spend a certain amount each year and charge it to capital account. As to disabled cars, last year I had the matter looked up and got a percentage made which I gave to the House. According to that, the percentage of disabled rolling stock was slightly less on the Intercolonial Railway than on the Grand Trunk Railway. Every railway has a certain percentage of rolling stock disabled, and ours was a little less than the Grand Trunk Railway a year ago. To-day I state unreservedly that the Intercolonial Railway has not a greater percentage of disabled rolling stock than the Grand Trunk Railway or the Canadian Pacific Railway.

Mr. JOHN HAGGART. I shall not discuss again the question of charging to capital, because in my view there should be no capital account whatever on the road. Here is a road which had an excellent bridge at Miramichi, an iron bridge, which lasted 30 years. When it became nearly worn out, we took it down and transferred a portion to the Prince Edward Island Railway. And the new one we substituted is charged to capital account. Let me mention another thing. We took over the Canada Eastern road in New Brunswick at a cost of some $800,000. And we had the assurance from the minister of that day that the road was in perfect order and could be run a number of years without any expenditure on repairs. Yet within three years we have spent on that road the full amount of its cost. And to-day the minister asks us for a large sum to replace two bridges upon that road. These bridges were perfectly good two years ago, when we were buying that road at a large price, but to-day they are useless and must be renewed. Such statements as that tend to throw discredit on all statements made with regard to that road. We paid some $800,000 for that Canada Eastern Railway. And then when we bought it, we had the report of the chief engineer that it was in excellent order and would not require repairs of any consequence for a number of years. Yet in a couple of years we have paid in repairs the entire cost of the road.

Improvements at Sackville, $10,000.

Mr. GRAHAM. This is to complete a freight shed. The total expenditure at that station has been $84,515 on everything. In

1907 we expended $26,000; in 1907-8, $58,344; and last year $23,134, making a total of $107,649.

Mr. FOSTER. From what date do you count that expenditure?

Mr. GRAHAM. The Intercolonial keeps a record of the money expended on capital account at any station since the beginning of the road.

Mr. WRIGHT. How large a place is Sackville ?

Mr. GRAHAM. I understand it has a population of about 2,000 or 2,500. It is a university town.

Mr. LOGGIE. It is the junction point of the road that runs through to Cape Tormentine.

Mr. FOSTER. The backbone of the country, I fancy, is the farming industry.

To increase accommodation at Halifax, $180,000.

Mr. GRAHAM. This has been a very large work, as my hon. friend (Mr. Foster) knows. It includes the Water street yards and the new shops. There has been expended at Halifax by the Intercolonial on capital account, since the road first ran to Halifax, $4,155,000. This amount includes the new terminals. Last year we had a large amount voted—$500,000. The present vote of $180,000 is to be spent in this way:

Tracks, ballast, ties, west side Water street..	$20,000
Heating and piping building (Kempt yard)	5,000
Boilers for power plant..	15,000
Double tracking cotton factory branch, grading and subway, and grading new yard..	40,000
Land and legal expenses, right of way cotton factory branch..	7,000
Tracks, ballast, ties..	15,000
Engine house..	50,000
Rails and fastenings and ties for engine house..	6,000
Tracks, Richmond yard..	2,000
Water supply..	5,000
Land at Richmond..	10,000
Electric lighting..	5,000

Mr. FOSTER. How many men are expected to be employed in the machine shop there?

Mr. GRAHAM. Not many. This is only for ordinary road repairs to engines that come in.

Mr. FOSTER. On engines used all the way from Sydney to Halifax?

Mr. GRAHAM. Yes, we also do repairs for the Dominion Atlantic and the Halifax and South Western. Our larger shops are of course, at Moncton.

Mr. FOSTER. Does this mean a duplication of your shops at Moncton?

Mr. GRAHAM. It means the same shops on a very small scale. Such shops are at the end of every division of a railway to carry on what are known as light repairs. For heavier repairs, such as remodelling or remaking the locomotives are taken to the central shops at Moncton.

Mr. FOSTER. Have you a similar shop at Sydney?

Mr. GRAHAM. No, our shops are at Rivière du Loup, Halifax and Moncton.

Mr. FOSTER. None at St. John?

Mr. GRAHAM. We have a roundhouse at St. John.

Mr. FOSTER. Were these works done under contract after tenders publicly called for?

Mr. GRAHAM. Yes, every one of them. I have here a list of the prices.

Mr. FOSTER There is nothing done there by day's labour?

Mr. GRAHAM. No, this is all by tender and contract.

Diversion of line, Sydney Mines to River George, $50,000.

Mr. GRAHAM. Last year, we had an item in the estimates for this, and some work was done, but not a great deal. I think I announced to the House that we would go on with the work this year, but, owing to the conditions we have found we have decided that we will merely do as we are doing at Moncton—get the right of way as far as we can and not proceed with a great deal of the work this year.

Mr. FOSTER. You had the surveys last time?

Mr. GRAHAM. I think the surveys are made.

Mr. MADDIN. Were the surveys completed from River George by Little Bras d'Or to Sydney Mines last fall?

Mr. GRAHAM. Yes.

Mr. MADDIN. What was the cost, $3,500?

Mr. GRAHAM. About $3,600, I think.

Mr. FOSTER. When were the surveys carried on?

Mr. GRAHAM. I think they were begun immediately after the House rose last year.

Mr. MADDIN. And carried on until when?

Mr. GRAHAM. Until the work of survey was completed, I think.

Mr. MADDIN. When was that?

Mr. GRAHAM. I do not remember the date when the survey was completed. They did not stop work until it was completed, and started it as soon as I could get an engineer after the session closed, and he continued the work until it was completed.

Mr. MADDIN. What is the estimated cost of the line to Sydney and River George?

Mr. GRAHAM. $394,135. It is 8¾ miles.

Mr. MADDIN. When is it proposed to go on with the work?

Mr. GRAHAM. I had hoped and fully intended to go on this year, but owing to the conditions that have arisen it has been deferred.

Mr. MADDIN. What are the conditions that will interfere with the carrying out of the work?

Mr. GRAHAM. The financial conditions.

Mr. MADDIN. Are the financial conditions any worse now than when the House rose last fall?

Mr. GRAHAM. I would not like to make a statement as a member of the government on that point. Every one who has discussed pro and con the financial position of the world will, I think, approve of the conclusion come to by the government that for this year it would be advisable not to proceed with these larger works or to undertake any new ones. This would involve a large expenditure of money.

Mr. FOSTER. Not more than the Moncton cut off.

Mr. GRAHAM. The Moncton cut off calls for only $50,000 this year. We are treating them both in the same way. At Moncton we are asking for $50,000 only instead of $374,000, and in this case we are taking a vote to go on, as far as we can, with the right of way. I can asure my hon. friend there is no other consideration in view in connection with this.

Mr. MADDIN. Was not the necessity of this work impressed on the government to overcome some heavy grades there?

Mr. GRAHAM. Yes.

Mr. MADDIN. Is there not a great deal of heavy freight to be handled from that end of the island?

Mr. GRAHAM. Yes, a great deal of freight.

Mr. MADDIN. Is it not important that these grades should be overcome as soon as possible? Are they not more important than the cut off at Moncton?

Mr. GRAHAM. We are treating this in the same way. They both cut off grades, and my hon. friend is mistaken if he thinks I am treating them differently.

Mr. MADDIN. I thought one more important than the other.

Mr. GRAHAM. No, the one is not being held back on account of the other, and I am as much disappointed as my hon. friend that this is not going on this year.

Mr. MADDIN. Can the minister give any assurance that this will be done next year?

Mr. GRAHAM. I would not like to say absolutely. I am not a good promiser, I like to do as I say. I assure my hon. friend that this is one of the first works that will be done as soon as the conditions will warrant such expenditures.

Mr FOSTER. There is not much activity there now, but there was a lot last October. I happened to be down there and went out one beautiful afternoon to enjoy a drive, and we had to keep a look-out at the masthead for fear of running over these numerous stakes. We called at one store where there was one set of stakes in front and another at the back door; the proprietor was staked before and behind. We were in dire peril of destroying government works and being taken up therefor.

Mr. GRAHAM. You escaped pretty well.

Mr. MACKENZIE. This is not at all a new question and it is entirely wrong to suppose it was gotten up for election purposes last fall, although it happened to be prominently before the people, I suppose, at that time. Twenty-two years ago, when the road was located in Cape Breton the island was not as important as it is to-day, the traffic was not so large and the prospects not so bright as they are now. The road was laid out 22 years ago and the best grade and the best route were not selected. The Liberals of the county of Cape Breton and their leaders always contended that the route was wrong, particularly between George's river and Sydney. A short cut was taken between Leitches creek and George's river, over a mountain where there are high grades on both sides. It was always contended by those in opposition in 1887 that the road should have followed the shore as is proposed now, and come down to the town of Sydney Mines, which is an important town of 7,000 or 8,000, putting that town upon the main line, then continuing the line to North Sydney, where the hon. member was tumbling over the stakes, putting it also on the main line and then running on to Sydney. That would have been the proper

course and would have given the level line that you must now, at great expense, obtain in order to handle the traffic. Delegation after delegtion came to Ottawa during Conservative and Liberal rule to have this matter rectified. At last the present Minister of Railways and Canals was persuaded that the change was necessary and that in order to handle the traffic we must have a better route than we have had. It is now found necessary to make that diversion from George's river around by Sydney Mines and thence to North Sydney and to Sydney on the best available route. I think the item is not well worded, diversion of lines Sydney Mines and River George. I understand this to mean a diversion of the line from George's river to Sydney Mines thence using the present line to North Sydney and continuing to Leitches creek to make the proper connection with the Intercolonial which is the intention and is a longer distance than was mentioned by the minister in answering the member for South Cape Breton (Mr. Maddin?. The distance from George's river to Sydney Mines would be 8½ miles, and there is the further distance from North Sydney to Leitches creek which would be two or three or four miles more. I must express my own particular desire that this work should be proceeded with as rapidly as possible. It will be of great advantage to the two towns and to the road itself. I think the deputy minister and the minister know that the train load that can be hauled over this heavy grade from Leitches creek across this high hill to George's river now is not more than one half the train load that could be carried all the way from Sydney to Point Tupper if this diversion was completed. I trust therefore that every effort will be put forth at as early a date as possible to have this road completed and this advantage given to the people of North Sydney and Sydney Mines, as well as to the management of the road. Talking of freight, the smaller of the two great companies down there paid to this road last year the handsome sum of $250,000 in cash for freights. Therefore it will be understood that to give proper accommodation to such a customer as the Nova Scotia Steel Company is itself important if there were no other important customer at that particular place. What applies to it I would say, although I have not the figures, would apply with equal force to the Dominion Steel and the Dominion Coal Companies. There are customers of the road that will all be accommodated by the completion of this diversion of the line. I am disappointed that the work is not being proceeded with this year. Of course, I must accept the explanation of the minister that he is not in a position to go on with it now. I hope that my impression and belief are true that the matter will be taken up and that steps will be taken this year to obtain the right of way and to fix the line where it should be and where it is going to be and that as soon as possible the road will be constructed along the line that will be agreed upon.

Mr. GEORGE TAYLOR. They will keep it for the next election.

Mr. McKENZIE. My hon. friend says something about the next election. It is a long time away and the hon. whip, who is getting to be an old man, should be thinking more about the world beyond than about the next election. I am sorry that such frivolous things should bother him so much and that he should forget better things.

Mr. FOSTER. You must be qualifying for a divinity student.

Mr. McKENZIE. There is so little divinity on the opposition benches that I think it would be well for them to borrow some from this side.

Mr. FOSTER. You look a good deal like a bishop.

Mr. McKENZIE. There are a great many things that I would like to point out in reference to this matter, but I think the minister understands the necessity of carrying out this work, having taken the very important step that he did take, and I hope it will be followed up to completion as speedily as possible.

Mr. MADDIN. My hon. friend from Cape Breton North and Victoria (Mr. McKenzie) has pointed out that this question of diverting the line has been agitated by members of his party in that part of the country for the past twenty years and that it is a mistake to imagine that it was to meet any political exigency that an item was put in the estimates last year to provide for this work. I would like to point out that it was very significant that, although members of the hon. gentleman's party had been sending delegations and praying this government to divert the line, as it is proposed to divert it at the present time, during the years of boasted progress, prosperity and overflowing treasury that this country is alleged to have enjoyed, the government did not undertake to make this diversion until on the eve of the election last fall when their resources were very much inferior to what they are to-day. I think the fact that the government now say that they are unable to carry on this undertaking would indicate that there is something to found the suspicion upon that the sum of $25,000 which was put in the estimates last year for this proposed line was to meet some political exigency. The fact that the hon. member is satisfied

with the explanation and that he believes that the work will be completed is not a very satisfactory guarantee looking towards the future. I may say to the committee that the surveyed lines of railway have intersected that county to such an extent that a plan of the county looks like a cobweb. One particular line of railway has served, within my recollection, no less than seven elections. I do not know how many this one is calculated to serve. I think it was not asking the minister too much to say that he would undertake to have this much-needed railway constructed during the next fiscal year. With regard to the friends of the hon. member for Cape Breton North and Victoria having always held that this road was built on the wrong line, that was certainly a matter of opinion and the election was run in that county on the question of two certain routes. The railway was built, as the result of the election issue, by way of the route that it follows at the present time. The route which is in operation now was quite competent to carry the freight at that time. The town of Sydney Mines, as the hon. gentleman points out, has a population of perhaps 7,000 or 8,000. It has grown from a small mining village with a population of only 2,000 or 2,400. The works of the Dominion Coal Company were not then in existence, although some of the older pits were in operation under previous owners. The road, when built, was built to suit conditions as they existed, but it is a well known fact that in the last nine years conditions have arisen there that have called for an alteration of its route and, when the hon .gentleman says that his party have always urged upon the government the alteration of the route, it has to be borne in mind that the opinion in regard to the alteration of the route is shared by all parties in that country regardless of political affiliations.

Mr. McKENZIE. I am sorry that the hon. member for Cape Breton (Mr. Maddin) thinks it necessary to import severe party politics into this question. If he wants to go into the history of the building of that road in Cape Breton county and if he wants to know something about whether it was ever known politically or not, I would say to him that if he had lived in Cape Breton county at the time this road was surveyed he would know that men were up to their waists in snow banks cutting the trees out of the right of way on the verge of the election of 1887. He would know that a few of our strong Liberals in Cape Breton county had been switched over from Liberalism to Toryism by giving them large contracts for clearing away the woods in the midst of the election of 1887. No influences of this kind have been used in our day and nothing was said about the building of this road last summer to influence any individual or any set of individuals. The hon. gentleman is too young a man to know much about the political history of the county of Cape Breton, but if he knows anything about conflicting routes in that county he ought to know better than to suppose that there was any conflict between the George's river and Sydney Mines route, and that across the hill from George's river to Leitches creek. The two routes were the southern route via St. Peter's and the central route.

Mr. MADDIN. I did not say that the route proposed to be diverted and the present route were in dispute at that time.

Mr. McKENZIE. I understood the hon. gentleman to say that the election of 1887 settled the difficulty.

Mr. MADDIN. Not as between these two proposed routes—certainly not.

Mr. McKENZIE. My hon. friend gave me a wrong impression then when he said that the election of 1887 settled the question as between the route from Georges river to Leitches creek and the proposed one.

Mr. MADDIN. It did not.

Mr. McKENZIE. They were canvassing this change for election purposes. My hon. friend is quite aware that in 1895—I think it was—when the right hon. Sir Charles Tupper was running an election in our county, he made it a part of his platform and he laid it down as the policy of his government to build this road from Georges river to Sydney Mines. It has been continuously agitated ever since that time in the county. It so happens that the hon. gentleman who is now occupying the position of Minister of Railways and Canals was the first Liberal Minister of Railways who had the courage and enterprise to declare the expediency of this work being undertaken and completed. But the hon. gentleman for Cape Breton must not say the Liberal party did not do anything towards accomplishing this purpose. The hon. member well knows, if he wishes to give the present government the credit for it, that this government extended the line from North Sydney to Sydney Mines; that it has given Sydney Mines the benefit of railway connection, that it has given North Sydney the benefit of that continuous connection. I can tell the hon. member (Mr. Maddin) that his predecessors in the representation of the county of Cape Breton sat quietly in this House and supported the Conservative government in a proposal to build a road in the county of Cape Breton that clean shut off the two important towns of Sydney Mines and North Sydney. My hon. friend (Mr. Maddin) speaks of Sydney Mines in these days as an insignificant

little village by the wayside. Well, it was just as important as the town of Sydney. The town of Sydney Mines and North Sydney were much upon a par. North Sydney was larger at that time than Sydney, and without saying anything disparaging to the town of Sydney which was the capital, Sydney Mines was just as important as either of the other two. North Sydney and the town of Sydney were incorporated about the same time, and the fact that Sydney Mines was not incorporated did not make it any smaller or any less important. If the hon. gentleman (Mr. Maddin) wishes to discuss the history of both political parties in respect to railways in the county of Cape Breton, what he has to confront is that the members who then supported the Tory government in this House were perfectly satisfied to get this road any way at all before the Dominion elections of 1887, when they were trembling in the balance, and if it were not for this road and the impetus given their canvass they never would have been returned. They cared not where the road went once it passed the Grand Narrows. Once it came to the door of the man who was then supporting the government, once it brought grist to his mill they cared not how it got to Sydney. And the hon. member who sat with this gentleman at that time agreed that it did not make very much difference whether North Sydney or Sydney Mines were left out in the cold or not. They had no railway accommodation; we got a section of the road built into North Sydney for which we undertook to pay for all the right of way ourselves. That is the history of his friends in regard to getting railway accommodation to North Sydney and Sydney Mines. But as soon as the Liberal government came in we got better treatment. Up to the time the Liberal government came to power the railway was left out in the woods with no communication with the shore or with tidal waters at all. The Liberal government extended it to the shore, gave us a first-class wharf, gave us communication with Newfoundland, and we have now a steamer running between North Sydney and Newfoundland which is a great feeder to this railroad and which is of course a benefit to the people of Newfoundland and to the people of North Sydney and the country generally. This government gave us further an extension of the railway to Sydney Mines which of course is very beneficial to that town. The road from North Sydney to Sydney Mines was built with a view of its extension to George's River and ultimately with a view to the completion of that road in the place where it was intended from the first and where it should have been. Now, Sir, that piece that is built between North Sydney and Sydney Mines will not be lost because it is part of the main line and will link on to it.

My hon. friend (Mr. Maddin) has said that the Liberal government has done nothing during the last twelve years to establish this line of railway. Well, we have done that much, that we have built into North Sydney and Sydney Mines, and that part is completed and the right of way and everything belonging to it is the property of the government. The Liberal government and the supporters of the Liberal government have nothing to be afraid of in comparing their history with the history of the Conservatives, and of my hon. friend's predecessors with regard to this matter. I had no desire to introduce any politics into the question; I had no desire to treat it in any other way but as a question affecting the whole of the people and which is of great importance to them, but if my hon. friend wishes to launch into political criticism, or if he wants to make any political capital out of it, then, if the hon. gentleman chooses upon the floor of this House to cross swords with me as to the political history of the two parties in this matter he shall always find me ready to meet him.

Mr. MADDIN. I do not know that it is very good taste on the part of the hon. member (Mr. McKenzie) to throw down the gauntlet and then take it up in Committee of Supply. I do not think it is a thing upon which he can compliment himself very much when he says that I have not lived long enough in the county of Cape Breton to be as familiar with its railroad history as he is. I can tell the hon. gentleman I have lived long enough in that county to be as familiar with the best railway routes as he is, and I am prepared to enter into a competitive examination at any time before the Minister of Justice in order to satisfy him that I am just as familiar with the railway history of the county of Cape Breton as he is. The hon. gentleman refers to the great things that have been done by the Liberal party for railway development in the county of Cape Breton, and in enumerating all these great things he points to the extension of the railway from Sydney to Sydney Mines. Why Sir, do you know that in the county of Cape Breton every mile of railway in that county owes its existence to the Conservative government with the exception of this two and a half miles from North Sydney to Sydney Mines? If the hon. member (Mr. McKenzie) wants to boast about the records of the Liberal government in connection with that insignificant piece of railway it will redound very little to his credit or to the credit of the Liberal party. And further, when the House learns that it took five years from the time it was undertaken until its completion, and that it cost the people of this country no less than $58,000 per mile, running as it does parallel with the Nova Scotia Coal and Steel Company's road and partly on the same roadbed, the House will see

that the hon. gentleman (Mr. McKenzie) has not much room for boasting. When the hon. gentleman talks about the great benefits the people of Cape Breton county have derived from this government in the matter of railway facilities, I wish to say that they have had to be content with what was handed to them on the eve of the last election. There has never been even an election for municipal councillors that the Liberal party in that county have not proposed some railway scheme or another. It was not an unusual thing in connection with the last election to find a man and a boy bailing water out of a post hole four or five feet deep at high water mark and having to go back into the Bras d'Or lake.

Mr. FOSTER. And charging it up to capital?

Mr. GRAHAM. That looks like watering stock.

Mr. MADDIN. Surely that would compare with the condition of affairs in 1887 when men stood to their waists in snow chopping down trees, as depicted by the hon. member (Mr. McKenzie). However, I submit that two wrongs do not make a right, and if the hon. member wants to point out that in 1887 the Conservative party engaged men in midwinter to make a survey of a line; if that was wrong it should not be a justification in the year 1908 for the Liberal government putting in the estimates a sum of money which they did not intend to spend and did not spend, and having a survey made and stakes put down at every other man's front door or back door for a proposed line of railway, all of which took place between the time intervening after the prorogation of parliament in July and the elections on the 26th of October, and all of which is too significant to require any comment. The hon. member (Mr. McKenzie) may be quite content with the hope that now that the survey is made this railway will be completed, but the industries of the county are not content that it should rest in that manner. This extension is so absolutely essential to move the heavy trains from the Nova Scotia Steel and Coal Company, from the Dominion Iron and Steel Company, and from the Dominion Coal Company, that it is important the work should be undertaken at once. I have no doubt that the hon. member will be quite content that a sum be put in the estimates and that the scheme will be delayed from time to time, so as to help Mr. Murray in the local elections in the course of a couple of years, and may be to help the hon. gentleman himself when he comes before his constituents at the next general election. But that method of carrying on public works does not meet with the approval of the people of the country. It is not calculated to serve the industrial centres in that part of the country, and I would urge upon the minister the desirability of having this grade changed at as early a date as possible.

Diversion of line at Chatham and branch to wharf, $36,000.

Mr. FOSTER. What is this?

Mr. GRAHAM. This is an item which we had in the estimates last year. I expected this year to proceed actively with the work, but the conditions were not favourable. I am asking for a revote for the purpose of getting the right of way as far as possible. That is what I had in mind in asking Mr. Henry Reid to go down and negotiate for the land; but he would not accept the position, and we shall have to get some one else.

Locomotive and car shops with equipment and new freight yard at Moncton, $400,000.

Mr. GRAHAM. The total cost of these, with the line, is estimated at about $2,000,000. The total amount expended has been $1,351,446.76. In addition to this vote, we are asking for another amount, which will make for machinery about $500,000.

Mr. FOSTER. How are they off for machinery there now?

Mr. GRAHAM. I think about $100,000 will finish the machinery.

Mr. FOSTER. Where does the minister buy that?

Mr. GRAHAM. We buy it in practically all cases by tender, and nearly all from Canadian manufacturers.

Mr. FOSTER. Who has charge of machinery.

Mr. GRAHAM. Mr. J. R. Joughins is our superintendent of motive power.

Mr. FOSTER. Is a certain amount of it bought in the United States?

Mr. GRAHAM. Necessarily and occasionally, some machinery which we cannot get in Canada. But we make it a point to buy everything practicable in Canada.

Mr. FOSTER. Does the minister give bona fide public notice in these matters?

Mr. GRAHAM. Yes. We send specifications to every manufacturer of these goods in Canada.

Mr. FOSTER. Open competition and tender?

Mr. GRAHAM. Absolutely.

Mr. FOSTER. Is all this paid for out of capital?

Mr. GRAHAM. Yes.

Mr. FOSTER. Suppose you have a station house at Sussex which is sufficient

for the business and some night it burns down and you build a new station house in the place of it, do you charge the new station to capital?

Mr. GRAHAM. It would depend on circumstances. It would depend somewhat on the question of the new style of station we put up. The Canadian Pacific Railway built their Angus shops at Montreal and equipped them out of capital. Conditions vary so much that the railway companies do not stick to one absolute line. These shops at Moncton are absolutely new. The old shops are still there, except the portion that was burned. We had an offer to lease them, but it was so small that I would not accept it.

Mr. FOSTER. I understand that the answer the minister would have given is that the new station at Sussex would be charged to revenue?

Mr. GRAHAM. Several of the smaller stations have been replaced out of capital.

Mr. FOSTER. When you replace the old shops with new ones, which are a great deal better than the old, would it not be fair to charge some portion of the cost to revenue?

Mr. GRAHAM. The old shops were repaired out of revenue. We spent on them about $56,000 out of revenue. Even if a fire had not occurred, these buildings would have had to be reconstructed. During the last year or two we have been working there under great disadvantages. We hope to cheapen the cost of our productions by having the new shops.

To increase water supply, $74,700.

Mr. GRAHAM. We are endeavouring to improve our water supply at many points along the line, in some cases making a new supply. I have a long list of the places.

Mr. FOSTER. Is there a special contractor who gets the most of these?

Mr. GRAHAM. No. Take the water supply at Little Metis, tenders were asked by posters and four were received and the contract given to the lowest, Mr. McManus. At St. Charles Junction, also four tenders were received, and Mr. McManus was again the lowest.

To increase accommodation and facilities along the line, $133,000.

Mr. GRAHAM. This is for a large number of expenditures. Altogether we have expended at different times, since the Intercolonial Railway was constructed, along the line, $539,809. These expenses comprise new Windsor Freight Office, $82,000; Upper Dorchester Sidings, Marieville Freight Sheds and additional sidings, additional sidings at Boiestown, electric semaphore at Petit Rocher, station and platform at Little Metis, and other items of like character.

Mr. FOSTER. Was there no station at Little Metis before ?

Mr. GRAHAM. The old building was worth but $1,200 or $1,300 and was practically no station at all, and the tourist traffic demands a decent station. Then there is $7,000 at Princess Pier for additional siding accommodation and track scale; $6,000 for a crossing siding at St. Pacôme, and 35 miles of track fencing, not previously fenced, $23,500.

Mr. FOSTER. Any buckets or tin pails?

Mr. GRAHAM. No, none in this list.

Mr. McKENZIE. I would like to call attention to a specific case in North Cape Breton, that at Christmas Island. That is a very important country centre at which some very important people live, and it has no station at all. We had a small building there, but it was burnt down a year or a year and a half ago, and I would not care to describe the condition to-day. I hope that out of this general vote provision will be made for a station house, properly equipped and commensurate with the amount of business transacted. It is one of the most important country districts in North Cape Breton. We do not look for anything very expensive, but ought to have a presentable wooden structure which will meet the requirement.

Mr. GRAHAM. I will consider that matter very fully.

Improvements at Ste. Rosalie, $55,000.

Mr. GRAHAM. This is entirely a revote. It is a junction of the Grand Trunk Railway east of Montreal. We are putting up a round house and making an accumulating yard where we have to gather our freight and our trains.

Mr. FOSTER. How far from Montreal?

Mr. GRAHAM. Thirty-six miles.

Mr. FOSTER. Is that on the leased line?

Mr. GRAHAM. At the junction of the leased line and our own.

Mr. FOSTER. The lease provides that we are to participate in their terminals and improvements, I understand ?

Mr. GRAHAM. At Montreal, but they have none at Ste. Rosalie.

Mr. FOSTER. Could not this assembling be done at Montreal?

Mr. GRAHAM. On the Grand Trunk branch from Ste. Rosalie into Montreal we carry big trains. One engine from Ste. Rosalie hauls nearly equal to two trains. We have all these cars to re-arrange. We interchange with the Canadian Pacific Railway as well. Therefore, we must have large yards to handle the cars. The Grand Trunk are not under obligation to give us terminal accommodation there.

Mr. FOSTER. Do they give us in Montreal all that we expected to get?

Mr. GRAHAM. We use their terminals in Montreal. They think we utilize them too much, but we think we do only what we have a right to.

Improvements at Drummondville, $5,000.

Mr. GRAHAM. This is to provide additional yard accommodation. The whole amount is a revote; we did not get that extended last year. I am surprised that, in the face of an election, we were so moderate.

Mr. FOSTER. It was hung up there all the time.

Engine-house, machine shops, &c., at Rivière du Loup, $158,500.

Mr. GRAHAM. This is for the machine shop at Rivière du Loup that I spoke of a little while ago. It is something along the line of the Halifax shops, designed to carry on light repairs.

Mr. FOSTER. Are these shops at all equal to those at Halifax?

Mr. GRAHAM. Not so large as at Halifax. This is more for locomotives; the car repairs are made more in the Halifax shops.

Mr. FOSTER. How much has been expended there?

Mr. GRAHAM. Altogether, since there was a railway, $329,580.81.

Mr. FOSTER. How many men have you there?

Mr. GRAHAM. About 150 employed there now.

Mr. FOSTER. How many at Halifax, when you were in full swing, but with no election on?

Mr. GRAHAM. I don't think it would vary much—about the same number as at Rivière du Loup.

At six o'clock Mr. Speaker took the Chair.

BUSINESS OF THE HOUSE.

Mr. FOSTER. What is to be taken up after eight o'clock?

Mr. FIELDING. Of course, there will be Private Bills for the first hour, and then my hon. friend the Minister of Railways and Canals (Mr. Graham) will continue, to be followed, should he finish, by the Minister of Public Works (Mr. Pugsley).

Mr. FOSTER. We shall not be able to go on with the item with reference to the Intercolonial, collection of revenue. We shall have to have our discussion on that. Could we take some part of it, or is it in one lump sum.

Mr. GRAHAM. In a lump sum.

Mr. FOSTER. We want a discussion on going into supply on that. We could finish the capital votes to-night, I suppose. Before Mr. Speaker leaves the Chair, I desire to say just a word with regard to the proposed work of Tuesday. Certain information was asked for by the leader of the opposition (Mr. R. L. Borden), and the Finance Minister (Mr. Fielding) has said that it would be supplied. But the Finance Minister will see that we ought to have it printed, and in time so that we may have an opportunity to study it. Does the hon. minister think he can have that information printed for us in good time for Tuesday?

Hon. W. S. FIELDING (minister of Finance). I should hope to give the information on Tuesday. The bulk of it does not require much time to digest. The essential elements are simple.

Mr. FOSTER. We can talk it over on Monday. But the minister had better keep it in mind. This is a very important question, and we should be placed in a position to discuss it intelligently.

Mr. FIELDING. Yes. As soon as mention was made of the matter, I put it in hand and an officer was sent to Montreal to expedite, as much as possible, getting the information concerning the company's affairs.

At six o'clock House took recess.

After Recess.

House resumed at eight o'clock.

PRIVATE BILLS.

MR. THOS. L. SMITH.

Mr. BICKERDIKE moved the third reading of Bill (No. 71) respecting a patent of Thos. L. Smith.

Mr. PERLEY. The gentleman who objected to the passage of this Bill the other evening simply wished to know whether the Minister of Agriculture had had it under his notice and was satisfied to have it go through.

Mr. FIELDING. I am sorry the minister is not here. If no objection has been taken

to the Bill the assumption would be that it has received his approval, but I have not spoken with him concerning it.

Motion agreed to, Bill read the third time and passed.

CONSIDERED IN COMMITTEE—THIRD READINGS.

Bill (No. 48) respecting the Montreal Terminal Railway Company—Mr. Geoffrion.

Bill (No. 66) respecting the Abitibi and Hudson Bay Railway Company—Mr. Geo. Gordon.

Bill (No. 67) respecting the Alsek and Yukon Railway Company—Mr. W. McIntyre.

Bill (No. 68) respecting the Athabaska Railway Company—Mr. W. McIntyre.

Bill (No. 70) respecting the St. Mary's and Western Ontario Railway Company—Mr. Nesbitt.

SUPPLY.

House in Committee of Supply.

Improvements at Campbellton, $64,500.

Mr. PERLEY. Will the minister please explain this?

Mr. GRAHAM. This is for continuing the improvements that we have been carrying on at Campbellton. This is for the extension of the water supply, additional accommodation for baggage and express, oil house, six stall section of new engine house, turn table, enlarging station, ice house, &c. There was an expenditure last year of $8,887.78. Tenders were asked for by posters.

Mr. PERLEY. As the vote is very much larger this year than last, are some of these new works that you are undertaking?

Mr. GRAHAM. This is a continuation of works that were undertaken last year. They are not new.

Improvements at Point Tupper, $4,000.

Mr. GRAHAM. This is for a brick building, for transfer bridge, engine house, to raise reservoir and a few other minor things.

To provide a subway crossing at Eastville, berts, about two miles north of Londonderry station, $5,000.

Mr. GRAHAM. This is to remove a level crossing.

To provide a subway crossing at Eastville, about one mile south of Londonderry station, $10,000.

Mr. GRAHAM. This is a dangerous crossing in a very deep cut. There have been some accidents and we have decided to remove the crossing.

Mr. FIELDING.

Rolling stock, $170,550.

Mr. GRAHAM. This is to provide a commissary car, to equip 500 platform cars with racks for carrying pulpwood, to increase the size of steam heating pipes in passenger cars, to equip cars with new gas light apparatus and several other contingencies.

New machinery for locomotive and car shops, $95,800.

Mr. GRAHAM. This was explained pretty well before we adjourned for dinner in connection with the several works at the Moncton shops.

Prince Edward Island Railway—branch line, Harmony to Elmira, $50,000.

Mr. FRASER. I wish to ask the minister if it is the intention of the government to build that railway the present year. I had some questions on the Order Paper some time ago, and I regret to say that the answers were not quite clear. One question was this:

Is it the intention of the government to begin the construction of the road during the present year?

The answer is as follows:

It is the intention to begin the work.

Does that mean that the government is going to start the construction of the road this present year?

Mr. GRAHAM. We have asked for tenders and to assure my hon. friend that we mean to go right on with it we have asked the people submitting the lowest tender whether, if we accept their tender, they will agree to proceed as far as this appropriation will allow them this year, on the understanding that we will provide for some more expenditure during the following year. We are awaiting their reply. We expect to let the contract shortly. We intend to proceed with the work just as soon as the conditions will allow us to.

Mr. FRASER. The contract has not been let then?

Mr. GRAHAM. It is just in the condition I have described. We have the tenders and the lowest tender will be accepted if they will agree, as I have suggested, to be content with this expenditure this year, in the hope that we may be able to proceed more rapidly with the work next year. I am asking them to accept the contract on that understanding.

Mr. FRASER. The minister is well aware that this is only a very short piece of road and it seems like making two bites of a cherry to extend the construction over two years. The road is only ten miles in length.

Mr. GRAHAM. It is estimated to cost $380,000.

Mr. FRASER. The lowest tender is not quite as high as that, I understand.

Mr. GRAHAM. I have not the lowest tender with me. I would not care to make it public until it is accepted.

Mr. FRASER. Is it the intention to build the road on the line surveyed? This road has been used as a political football.

Mr. GRAHAM. I would not think that.

Mr. FRASER. It is very hard to be responsible for what the minister may think on these matters. I would not like to hold myself responsible for his thoughts.

Mr. GRAHAM. It would be a dangerous experiment.

Mr. FRASER. The first survey that I remember was started in 1904, just as the elections were going on, and it ran from Souris in a different direction from the route according to the last survey. The survey in 1904 was run in the direction of Souris, and although that survey cost three or four thousand dollars, when the elections were over no effort was made to build the line and the whole thing was hung up until the general elections were approaching last year. Then, they ran a survey out to Harmony six miles within the previous survey, and just before the elections tenders were called to be opened on the 31st of October, five days after the elections. Why, the woods were full of people running surveys.

Mr. GRAHAM. It did not seem to do any good in your county.

Mr. FRASER. Well, you can fool all the people some of the time and some of the people all the time, but you cannot fool all the people all the time, and as you could not fool them they elected me. The people were tired and sick of this surveying business. In my county during the last two elections there were surveys made for five or six branch lines of railways and no wonder there is a deficit on the Prince Edward Railway when you are wasting thousands of dollars in fruitless surveys like this. In one of the leading Liberal papers in my constituency published on the 16th of March I find this statement:

> The contract for building the Elmira branch will shortly be let and the work is expected to start on the 1st of June.

I ask the Minister of Railways is there any foundation for that report?

Mr. GRAHAM. I am not responsible for what every newspaper publishes, but I have stated clearly and distinctly what is to be done, and I cannot make it clearer if I should repeat my statement.

Mr. FRASER. Then, if the tenderers are not satisfied to take the contract with the conditions stated the contract will not be let. Is that your answer?

Mr. GRAHAM. The hon. gentleman will not get me to make any statement along the lines he suggests. We are going to spend the amount of this appropriation on that branch this year, but not any more, owing to conditions which I have explained to the House, and which I think the financial world will say are justified under the circumstances. We intend to build this road from Elmira to Harmony and the fact that my hon. friend was elected will not change our intention one iota. We expect to build a good road there with all possible speed, but owing to present conditions we will not spend more than $50,000 on the work this year.

Mr. FRASER. I am pleased to hear the minister say that the road will be built.

Mr. GRAHAM. Don't stop the estimates then, and let us get a start.

Mr. FRASER. The minister says the estimate for this 10 miles is $300,000?

Mr. GRAHAM. $380,000.

Mr. FRASER. My memory is that it was stated it would cost about $200,000.

Mr. GRAHAM. $380,000 is the estimate, and I think the hon. gentleman will find it will cost that before we are done with it. I do not think a railway can be built for less than $38,000 a mile through that country.

Mr. FRASER. Is it the intention of the government to delay this until there is another election coming on.

Mr. GRAHAM. My hon. friend is not serious in asking that. By the way, there possibly may be a by-election; has my hon. friend any fears about that?

Mr. FRASER. No one on either side of the House can say when these by-elections may come. We have heard complaints in this House about deficits on the Prince Edward Island Railway, but the minister knows very well that part of the waste takes place during election years, and that the deficit in an election year is always larger than in any other year.

Mr. GRAHAM. This year is an exception. I am happy to say the Prince Edward Island has done better this year.

Mr. FRASER. That may be, but the history of that railway is that for a month or two before the elections there are spare hands and extra hands employed along the railroad until they are almost as thick as potato bugs. I have a map here which

shows that there were five or six branch lines from Montague under survey last summer previous to the election, but not one mile of railroad has been built and there is not one dollar in the estimates to build it. Is it right to use the people's money in this way, sending a number of people out picknicking and chasing rabbits and partridges through the woods in the fall of the year, when you are pretending to make surveys.

Mr. McKENZIE. What about the tunnel?

Mr. FRASER. We will come to the tunnel later on and I hope you will not oppose it. I can tell the minister that if the government is going to build the road from Elmira to Harmony according to the last survey it is going to inconvenience the people from Elmira a great deal because they will have to travel by rail about five or six miles further than if the government had built the railway according to the survey of 1904 which came in on the old line and went through the village of Souris. That is the proper route on which to build the railway if ever it is built. Last year however, they changed the survey and took it out to the old line and you have to travel out to the old line about six miles before you come to the branch, and the people from Souris and east of Souris who will use this railway will have to pay extra freight and passenger rates on this additional six miles which they would not have to pay if the line was built as at first surveyed through the village of Souris and out east. This is one of the things that leads the people to believe that the government is not serious about building that road. Can the minister tell us why he changed the route, and instead of starting the railway from Souris, he started it from Harmony?

Mr. GRAHAM. This matter was left to the engineer to give us the most direct route, and I understand that he did. My hon. friend may be speaking for a particular section, but I understand from himself that this road runs through a section of country which it would not run through if it took the route he suggests, through a section which has already railway facilities.

Mr. FRASER. I do not think the minister understands the matter clearly. The old route runs almost east and west, but at Harmony it turns and runs almost directly south for a distance of five miles to the village of Souris. Then it runs in a northeasterly direction to Elmira. This route was surveyed in 1904, and it is the proper location. This time, instead of turning into the village of Souris the route stops at Harmony, and runs in an easterly direction to Elmira. The railway will not begin at Souris, but at a side station called Harmony. The people of all parts know that the proper location is the one surveyed in 1904, to give accommodation to the people of Souris and the public generally. I would ask the minister why he changed the location since?

Mr. GRAHAM. The minister made no change at all. He asked the engineer to survey the most direct route, and he did so. My hon. friend is speaking for Souris, of course, but Souris has already railway accommodation, and to run that line to Souris would be to give it a second line. This line is not continued to Souris, but when it reaches Harmony it goes straight on. I do not blame my hon. friend for urging the claims of Souris; that is natural; but we want to accommodate the most people, and from the railway standpoint, we regard the present route as the best.

Mr. FRASER Why was the survey made in 1904?

M. GRAHAM. I cannot speak as to that. I am speaking of what was done last year. I may say that the chief engineer is going to visit the ground before the road is constructed, and will report upon it himself.

Mr. WARBURTON. I know a good deal of this section of country, having spent a good many summers there, and I think the route chosen will be found to be the most direct. Personally I would like the road to go to Souris, but that would probably lengthen it. By bringing it to Harmony, and continuing it from there to Elmira, as is proposed, you get a direct and straight road; whereas if you turned to the south at Harmony to carry it to Souris, you would of course reach the harbour, but you would then run northward again and skip a certain portion of country in the centre. The northern shore, near the east point of Elmira, is a very fine part of the country. If you deflected the line to the south, you would neglect the northern and central portions of Kings county. The centre of Kings county is a very fine section, but it has not been very much developed. The woods are excellent and the soil exceedingly good. If it were made fairly accessible, it would be one of the most fertile sections of Prince Edward Island, which is saying a great deal. The line as proposed will be a very direct line to Elmira or East Point. The hon. member for Kings (Mr. Fraser) in criticising the surveys made last year on Prince Edward Island, spoke of some seven lines having been surveyed. I may say that that is a rather unfortunate number for Conservative members to refer to; because I remember that in 1896 the then leader of the Conservative government came to Prince Edward Island, and he used this mystical number of seven in promising branch railways to the people; but it happened that they did not place much confidence in his promises. Among the lines he promised

was this Elmira branch. Every time there was to be an election it was brought up. It was like the robins coming in spring; whenever you heard of the Elmira branch, you knew that an election was coming on. It became a proverb in Prince Edward Island. The same thing happened in Kings county with regard to the Murray Harbour branch, which used to be surveyed whenever an election was coming on; but as soon as the election was over the surveyors were called off. It became such a humbug that in 1896, the last time the Conservative government's surveyors came, the farmers pulled up their stakes and drove them off their places . I am glad to say that that road has been since built by the present government. Last year surveys were made where several short spurs were required. Our Conservative friends thought, or said they thought, that every one of these tidal surveys meant a railway which the present government was offering to the people in order to get their votes. One of these surveys was made in my own county, and I hope to see a railway built there before long. It is needed. I have been inquiring, and find that the surveys were completed. The plans and reports are not yet in, but I hope they soon will be. These surveys were made, the people were told at every public meeting, for the purpose of persuading them that they would all have a railway at their own doors. That was not the case. They were made for the purpose of ascertaining what would be the best route, and the best route would be selected, as will be done in the case of the Elmira branch. No doubt that is the reason so many trial surveys are made, but my hon. friend seems to think they were done for the purpose of influencing the election. Several of the branches are much needed, and no branch will be built. The Elmira branch will no doubt be constructed. It was proposed by the Conservatives some thirty years ago, but the only hope the people have of getting it is from the present government.

Mr. GEO. TAYLOR. Have the engineers who were on these surveys made their reports ?

Mr. GRAHAM. Yes, but I have not got them here. I will give them to my hon. friend.

Mr. GEO. TAYLOR. I want to read a quotation from a letter I received from a friend of mine a few days ago. In that letter he says:

The great engine in their hands was however railway surveys. Survey parties were at work over nearly the half of Queens county. The place were dotted over with white tents, where so-called engineers with crews of 12 to 14 men were driving stakes through farmers' fields. The railway was of course going through their farms and liberal payments were to be made for the rights of way, and there would be abundance of work and good pay for everybody. Those were called trial surveys, and went to French River, New London, Stanley Bridge, Wheatley river, North and South Rustico, Stanhope, Bedford, Suffolk Covehead, Bedford. Also Valleyfield, Hackendale, Murray Harbour Road, Bellevue, Iona, Grand View, Lyndale, Fairville, &c.

The minister has the reports on all these routes and will, no doubt, as he promised, lay them on the table.

The Minister of Railways in the last of the session placed $10,000 in the supplementary estimates, and it was used solely to defeat us. The accompanying map may give some idea of the work. The reports of these engineers should be asked for.

Did the minister put $10,000 in the supplementary estimates of last year, and was that spent paying these tenting parties, which came out just a week or two before the elections and drove stakes and made surveys. My correspondent sends me maps of the lines of survey, and there are red lines in all directions covering every farm on the island.

Mr. GRAHAM. I will bring down the reports and a statement of the whole thing.

Mr. PERLEY. How much of last year's estimate of $30,000 was spent?

Mr. GRAHAM. $3,000.

Mr FRASER. What was that $3,000 for?

Mr. GRAHAM. It was paid for the survey.

Mr. GEO. TAYLOR. Did that cover it?

Mr. GRAHAM. It covered the amount spent on this particular branch.

Mr. GEO. TAYLOR. How much was spent on the island?

Mr. GRAHAM. I will give a statement of that.

Mr. GEO. TAYLOR. Has the hon. gentleman the expenditure in connection with the Prince Edward Island survey ?

Mr. GRAHAM. No, I have not.

Mr. WARBURTON. A great many of those surveys were done since the election.

Mr. GEO. TAYLOR. No, they were called off the next week.

Mr. FRASER. Some time ago I put a question on the Order Paper asking how much had been spent out of this $31,000 for construction and I received an answer that $3,077 had been spent for construction on the Elmira branch. I was very much pleased to hear the minister say that before this branch was finally located, an engineer would go down and locate it where it will do the most good to the greatest number of people. When the engineers do so, no doubt the branch will be located where the survey was run in 1904.

and that is through the village of Souris East. Souris is the only shipping port in that part of the country for many miles, and all the freight would have to be carried there from East Point and Elmira. If the road is put where the last survey ran, or six miles farther than they would over where the 1904 line was located, because the branch running from Souris to Elmira will be very little if any longer than the branch running from Harmony to Elmira. But when they get to Harmony, they will have to go in five or six miles over the old road and will have to pay passenger and freight rates on the six miles, which will be a considerable expense and not give accommodation to the people through Souris as if the branch were built through Souris as outlined in the survey of 1904. If the minister will say that before this branch is finally located, an engineer will be sent, that will give assurance to the people because the people want to have the line into Souris East.

Mr. GRAHAM. The chief engineer will go down himself.

To increase accommodation at Charlottetown, $184,000.

Mr. GRAHAM. This is for a wharf and freight shed, $53,000, extension of the east side of wharf $11,000, engine house $11,000, additional freight accommodation $10,000 There was expended last year $138,000. There has been expended at Charlottetown all told something like half a million dollars. Tenders were asked for the wharf and Messrs. Reid and Archibald got the contract. Mr. Clark got it for the freight shed.

Mr. FRASER. Has the minister received any complaints concerning the new station built at Charlottetown about a year ago? I have a letter, lately received, saying that the roof is leaking badly, that the plastering is falling down and the workmen are engaged already making repairs, and also that there are several large cracks in the stonework and in the concrete around the building. Has the hon. gentleman any information as to the defective work that seems to have been done there?

Mr. GRAHAM. I think the defects cannot be very serious, for we have not heard anything of them in the department. I have had the misfortune to do some building myself, and I imagine that there is no building in the world, if looked at twelve months after construction by a person who wishes to find fault, but some defects will appear. I am informed hat this building in Charlottetown is a first-class building.

Mr. FRASER. I am only furnishing the information I have, and if it is true there must have been some very defective work there.

Mr. GRAHAM. We will make inquiries.

Mr. PROWSE. I had the privilege of going through there two weeks ago. There were a couple of places where the roof leaked, but not seriously. I did not hear about any cracks, and if they had been there I think I should have heard about them. Some people are apt to make mountains out of molehills, and you cannot always rely on what you hear.

Mr. GEO. TAYLOR. I must ask the minister to let the next two items stand—the Transcontinental and the Hudson Bay Railway.

Mr. GRAHAM. Does the hon. member want the Hudson Bay item to stand also?

Mr. GEO. TAYLOR. Yes; the leader of the opposition (Mr. R. L. Borden) cannot be present to-night, and he has some inquiries to make.

Mr. GRAHAM. The hon. member for North Toronto (Mr. Foster) asked me not to go on with the working expenses item to-night, and if these others are not to be taken up, I have no more estimates to go on with. I would not have agreed not to go on with the revenue item if I had known that exception would be taken to going on with any of these expenditures on capital.

Mr. GEO. TAYLOR. There are only two items here.

Mr. GRAHAM. I think it not unreasonable to ask that the Transcontinental item should stand, but I think the Hudson Bay item should go through.

Mr. LAKE. The minister might give some information as to the Hudson Bay vote, and that might be sufficient to allow it to pass later on. We would like to hear as to the surveys, and also as to the future policy of the government in this matter.

Mr. GRAHAM. Some days ago, I laid on the table all the information with regard to the surveys up to a couple of weeks ago. The gist of that information is the raising of the question as to whether Fort Nelson is not a more favourable harbour than Churchill. As we wish to get the best possible harbour, I am asking for an appropriation to make a further survey of Nelson as well as Churchill. If I remember well, the engineer figures that the route to Nelson will be sixty miles shorter than to Churchill. If that be the case, and if we can do as well or better by going to Nelson, it would be foolish for us to build these sixty miles of road. The country toward Nelson, I believe, is equally as good as the other. That question having been raised by the engineers, my idea was that

we ought to spend a little more money and learn just where is the best port. The road will stand in just the same position as before so far as construction is concerned. We have no idea of abandoning the project, and will proceed at the earliest possible moment that the conditions will warrant, but I am asking for $65,000, part of it a revote, to learn the best route and the best harbour,—but, of course, not to proceed with actual construction.

Mr. LAKE. No survey of Churchill has been made?

Mr. GRAHAM. Yes, they have made a survey of Churchill.

Mr. LAKE. But not of Nelson?

Mr. GRAHAM. No.

Mr. LAKE. Do we understand that this money is simply for the examination of the harbours and nothing beyond that?

Mr. GRAHAM. It is absolutely for survey work; it is to be spent to gain information. Of course, with this amount, we could not do anything in construction.

Mr. LAKE. There will be an examination of the harbours, I suppose ?

Mr. GRAHAM. Yes, we are asking our engineers to get all possible information as to the harbours also. The hon. member (Mr. Lake) threw out the suggestions as to the possibility of making ocean navigation as far as Winnipeg. That does not enter into our calculation in asking this amount; that is a question for the future. Our present object is to make sure of the port to which we should build the road.

Mr. LAKE. It was understood by this House, I think, that the money to be expended on the construction of the Hudson Bay Railway was to come from a special fund to be created by the sale of pre-emptions.

Mr. GRAHAM. Yes.

Mr. LAKE. I understand that a certain amount of that fund has already been provided. Does the minister know how much that fund is at present, and can he estimate how much will be available twelve months from now, when, as I understand, he expects the actual work of construction to go on?

Mr. GRAHAM. This is not in my department, but in the Department of the Interior, but I think little or none of that money can be available yet. If my memory serves me well, the purchasers of these lands have a certain time in which to make payments, and so there will not be any money in the treasury from the sale of these lands at present. An hon. friend near me informs me that there is a small amount on hand. But, of course, it must go into the Consolidated Fund and be voted out just as though it were not the proceeds of the sale of these lands. There is no intention of abandoning the work, but it is in the same position as other large works and at present we do not feel like proceeding with it. Construction will be proceeded with as soon as conditions prevail that will allow us to undertake it. We want in the meantime to ascertain the best available route with the best available port, as between Fort Nelson and Fort Churchill. Perhaps the Minister of the Interior could give the infromation as to the money obtained from the pre-emptions.

Mr. OLIVER. I had the figures here a few days ago but I have forgotten exactly what they are. The payments on pre-emptions do not become due for three years so that no money has yet been received, but about two millions acres of land have been taken as pre-emptions. Whatever has been paid in on account of purchased homesteads, upon which the first payments are made with the entry, will be in the treasury and could be considered as available for construction purposes, but what the amount is I cannot at the moment say.

Mr. LAKE. Will the government wait until they derive sufficient money from pre-emptions before commencing work or will they place the money from the pre-emptions in a special fund and pay for the construction of the railway from that fund, providing the money for construction immediately and recouping themselves from the fund afterwards?

Mr. GRAHAM. I think that the question of the amount of money received from the pre-emptions would not control the beginning of the road and as proof of that, if conditions had not arisen which have impelled us to cease for a time from undertaking these large works the construction would have been started perhaps this season, but that condition having arisen and there being also the other question which the hon. gentleman has raised as to the comparative merits of the two ports, I think it would be advisable even if we had the money on hand and were otherwise ready to start, to wait until we made a full and complete survey of the other route.

Mr. LAKE. I agree as to the advisability of waiting to ascertain which is the best port, but that will not occupy the whole of the next year and the money might now be taken for the commencement of construction. However, the government have decided not to take that money and the opposition have no power to move an amendment in that direction; we have to accept the position as it exists. Is it the policy of the government to construct the road as a government work or to place it in the hands of a private corporation?

Mr. GRAHAM. The question of how the road shall be constructed is a large one. I think that last session it was left in this way, that the government proposed to construct or to have constructed a line from The Pas to a port on Hudson bay. The Premier during his tour stated that the government proposed to construct it as a government road. I do not pretend to be quoting him literally but I think that was the meaning of his utterance at Niagara.

Mr. LAKE. I do not think it was as definite as that; I understood at that time he had not made up his mind. He may have made up his mind since, but at Niagara I think he said it was still an open subject as to whether it should be dealt with by the government or handed over to a private corporation.

Mr. GRAHAM. I would not care to go any further than the Premier's statement at Niagara, and I have given what I construed to be the meaning of that statement.

Mr. LAKE. The minister stated that the government was prepared to construct a line to the Hudson bay from The Pas on the Saskatchewan river. What is the condition of the line now running to The Pas? Are trains running over it and do the government propose to make it part of their system or will they construct a road quite independently of the present line to The Pas.

Mr. GRAHAM. The government's idea was to construct from The Pas Mission to a port on Hudson bay and not to duplicate a line already constructed. The idea of the construction of the government road was to give railway connection from the nearest line to a Hudson bay port. I think I had some complaint a few weeks ago that trains had not been running regularly on this line. I communicated with the railway company and was informed that the trains were starting on a certain date and since that time I have not had any complaint.

Mr. LAKE. The line as I understand was reported completed to a considerable distance last year and the land grant of 12,800 acres a mile was granted to the Canadian Northern Railway. Were trains running over the line so reported as completed during last summer? I understand that trains can run over the line in winter when the ground is frozen. But I have had information given to me from a credible source that it is practically impossible to run trains over that line during the summer season when the frost is out of the ground. Could the minister give the committee some information in regard to that particular matter? It would be very interesting to me to hear what the condition is and whether the government is proposing to take any steps to have that line put into a condition that trains can be run regularly over it during the present season?

Mr. GRAHAM. If I had any information concerning it I would be delighted to give it to the committee. The only complaints concerning this line, as far as I can remember, except my hon. friend's observations last session in the committee, were the ones to which I have referred and no further communication having been made on the subject for a certain length of time——

Mr. LAKE. How long?

Mr. GRAHAM. I cannot just say. It was for some time, but I am not prepared to say because my memory does not serve me. But, on communication with the railway company they said that they were starting a train. I conveyed this communication to the gentleman who made the complaint. Since then I have not heard. They may be running a train or they may not be. But I should think that a question of that kind would be the subject matter of a complaint to the Board of Railway Commissioners.

Mr. LAKE. The minister has stated that it is the intention of the government to run this line simply as far as The Pas from the Hudson bay. I hope he will reconsider that decision. It appears to me that if this line is to be run as a government undertaking, as I understand from the minister that is his general idea of the matter at the present time, it would be very inexpedient to run it simply as a feeder to the Canadian Northern Railway. I have always held the opinion that the Hudson Bay Railway should be a government undertaking and that it should be run so that it could make connection with the three great railways of that country, the Grand Trunk Pacific, the Canadian Pacific Railway and the Canadian Northern Railway, so that the shippers on these lines of railway will be able to get the full benefit from its construction and operation. I hope the minister will come to see that that view of the case is the correct one, and that he will not start out with the idea that his railway is simply to stop at The Pas.

Mr. MAGRATH. I would like to ask the minister if I am correct in understanding him to say that no work will be done on the construction of the work this year?

Mr. GRAHAM. No.

Mr. LAKE. I would like to ask the goverment whether the inspector has passed the whole of the road from Etiomami to The Pas? I think the latest information which was given to this House was that a considerable portion of the road had been accepted and passed by the government inspector. Has it all been passed and has the land grant been given upon the whole of the railway up to the present time?

Mr. GRAHAM. My present information is that it has not been altogether, but I would not say that for sure. I can get that information and give it to my hon. friend to-morrow.

Mr. W. H. SHARPE. From what point is this new survey going to start?

Mr. GRAHAM. It will start from The Pas Mission or from a point on the survey already made to Nelson. It will go along the Nelson river probably.

Mr. LAKE. I understand the minister has agreed to give me this information the next time his estimates are up?

Mr. GRAHAM. I will send it to my hon. friend.

Mr. BRADBURY. I find in the Votes and Proceedings of last session, No. 39, that the following subsidy was given to the Canadian Pacific Railway:

To the Canadian Pacific Railway Company, for a line of railway from Winnipeg beach northerly to Gimli, not exceeding 9½ miles; and a line from Gimli to Riverton, not exceeding 25 miles; not exceeding in all 34½ miles.

Under what conditions was that subsidy granted and how long have the Canadian Pacific Railway Company to build that line? This is a very important line to the settlers in that district, and I would like to know if this is just to remain a subsidy or whether the road is to be actually built. The people have been promised this road for years. Before the elections this subsidy was used in that part of the constituency as an inducement to the electorate to vote for the government candidate. I want to know if the government are going to ask the Canadian Pacific Railway to build that line?

Mr. GRAHAM. Of course, this is in the statute now and so long as they comply with the statute the government have no power. They are given the regular time in their charter to begin and to complete the railway. The House need not renew that charter and when their charter lapses their subsidy also lapses. The Subsidy Act itself fixes the time for starting and completing the work. If they do not comply with the statute and if they ask for a renewal of the subsidy, parliament, in its wisdom, may not renew it.

Mr. BRADBURY. How long will it be before they will have to ask for a renewal?

Mr. GRAHAM. I would not like to speak from memory. If my hon. friend will look up last year's statute he will find it stated there.

Mr. BRADBURY. There is another matter I want to draw the minister's attention to and that is the condition of the Komarno branch through to Icelandic river. They have built that road to a point on Russell lake. The work was stopped last September and the contractors were taken off, but just on the eve of the election, my opponent, Mr. Jackson, went out and engaged 150 Galicians and put them to work on the dump. As soon as the elections were over these men were taken off. I would ask it the Canadian Pacific Railway will be required to complete that road at once. It is a great hardship to the people of Icelandic river that the road should not be completed. I do not know whether the government or the Canadian Pacific Railway were responsible, but somebody was responsible for putting these men on.

Mr. GRAHAM. These roads are all being constructed under the same condition. I am surprised, to put it mildly, that the Canadian Pacific Railway would do anything to assist the present government. I did not suspect them, but if my hon. friend assures me that it is so I would take his word absolutely, even although I were not obliged to, because I believe it would be correct if he said so, but it inspires a new feeling within me to think the Canadian Pacific Railway did that.

Mr. BRADBURY. I want to assure the minister that it is an absolute fact that 150 men were put on the road and that immediately after the election the men were taken off the work.

Mr. GEO. TAYLOR. They were paid out of the election fund.

Mr. BRADBURY. I do not know how they were paid. They got their money I presume.

Public Works, Ont.—Blanche river—improvements on main stream and south branch, $6,500.

Mr. PUGSLEY. This is to remove snags and cut channels through shoals obstructing navigation at low water on the Blanche river which empties into Lake Temiskaming. There is quite a settlement on that river. The work was commenced in 1904-05.

Mr. GEO. TAYLOR. Is there navigation?

Mr. PUGSLEY. Yes, for small vessels; there are four boats now on the river.

Burlington channel piers—reconstruction, $50,000.

Mr. PUGSLEY. This is contract work. It is for reconstructing the piers destroyed by storm.

Mr. HENDERSON. When were they destroyed?

Mr. PUGSLEY. In the spring of last year.

Mr. HENDERSON. Will the piers be of concrete?

Mr. PUGSLEY. Yes. This forms the entrance to Hamilton harbour. We are building piers both on the lake side and on the bay side.

Mr. HENDERSON. Will this vote complete the work?

Mr. PUGSLEY. No; the total probable cost will be $110,000.

Mr. A. HAGGART. Why is the work not included in one contract?

Mr. PUGSLEY. The head blocks are by contract, but much of the other work is repair work and the engineers say that it can be more economically done by day's labour.

Mr. HENDERSON. Who is the contractor?

Mr. PUGSLEY. Joseph Battle.

Mr. HENDERSON. The work on this channel has been going on continuously year after year for a long time. It is the duty of the government to keep that channel open and it is absolutely necessary to do this work because this forms the outlet from Lake Ontario to the city of Hamilton. I remember that at one time I suggested that instead of spending $50,000 a year the government had much better ask a sufficient amount to complete the whole job at once.

Mr. PUGSLEY. Since confederation $200,000 have been spent there and before confederation, $400,000.

Mr. HENDERSON. It would be much better to complete the work at once and give the people of Hamilton the benefit of it rather than to make this vote a kind of hardy annual.

Mr. PUGSLEY. Repairs have been necessary from year to year, but last spring there was a large amount of damage done.

Mr. BARR. When will the work be finished?

Mr. PUGSLEY. In about two years.

Mr. MARSHALL. What is the length of these piers?

Mr. PUGSLEY. The wooden superstructure to be replaced by concrete on the south pier is 1,500 feet by 20 feet and there is a further reconstruction in concrete 420 feet by 30 feet. I presume the north pier is about the same length.

Cobourg—Extension of breakwater, dredging, &c., $60,000.

Mr. PUGSLEY. This is contract work and the total probable cost to complete the improvements will be $154,000 outside of the dredging.

Mr. GEO. TAYLOR. Who has the contract?

Mr. PUGSLEY. The Randolph Macdonald Co., Limited, has the contract for the breakwater; W. E. Phin has the dredging.

Mr. BARR. What do you pay for the dredging?

Mr. PUGSLEY. For rock $3 a yard; all other materials, such as sand and clay, 18 cents a yard, scow measurement.

Goderich harbour, repairs to piers, &c., $5,350.

Mr. PUGSLEY. This is for renewals of the walings on the piers, and general repairs, estimated at $1,000; and for 290 feet lineal of protection work on the inner harbour. This work is done by day's work.

Mr. GEO. TAYLOR. Why not put it under contract?

Mr. PUGSLEY. These repairs can hardly be put up to tender.

Harbours, rivers and bridges, general repairs and improvements, $25,000.

Mr. HENDERSON. I think the minister said that the piers of Burlington channel were destroyed or badly damaged a year or so ago by a heavy storm. I may say that at that part of the lake there appears to be a good deal of washing away of the banks. The village of Burlington is within about half a mile of the Burlington channel, and there is a continual washing away of the shore in front of the village, and also two or three miles eastward; and the people there have an impression that it is the duty of this government to construct a breakwater to prevent this continual washing away, otherwise the village may be gradually wiped out. It is already encroaching very closely on the leading street of the village. The village has a population of only 1,700 or 1,800, and could not afford the expense of constructing a breakwater, and the people are looking to this government to do something of the kind.

Mr. PUGSLEY. Why to this government ?

Mr. HENDERSON. I will tell the hon. gentleman why, and I have a very good reason. The gentleman who opposed me in the last election promised the people that if he were elected he would secure a breakwater. I assume that he did not make that promise off his own bat, but that he must have had some instruction from the Minister of Public Works that a breakwater would be constructed there, and he held that out as a reason why the people should vote for him instead of for me.

Mr. PUGSLEY. What did the hon. gentleman promise?

Mr. HENDERSON. I promised nothing. I simply promised that I would call the minister's attention to it.

Mr. PUGSLEY. I suppose that is all the promise he made.

Mr. HENDERSON. No, he promised a great deal more than that. I have been informed that he promised the breakwater. The Minister of Agriculture went into that county to speak on behalf of this gentleman, which gave him a standing, and the people had the right to expect that any pledge given by him would be carried out by the government for which he was seeking their support. If the promise was made in good faith by the government or through the government candidate, I think the minister ought to do something about it. I think it is a proper thing to do, and I believe the government is spending money in a great many instances where possibly it would not be doing as good service. I may say that while there is a considerable amount of shipping from that port, it has never to my knowledge had a dollar of government money expended there, either in dredging or in building a dock. Any docks there are private docks, and the government could well afford a do something of this kind for the people. I think it is the duty of the government to protect the village, and not allow a portion of it to be practically washed away. Since the promise was made by the government candidate, I hope the hon. minister will send an engineer to look into the matter and see if something can be done. The matter will have to be dealt with some day, either by the municipality or by the government. I do not see that the provincial government can be called on to do it.

Mr. PUGSLEY. Why not? Is it not purely local in its character?

Mr. HENDERSON. There are a great many local things done by the government. The building of the Burlington piers is local.

Mr. PUGSLEY. That is for the advantage of navigation.

Mr. HENDERSON. And the other is for the protection of the village.

Mr. PUGSLEY. Is not that the distinction?

Mr. HENDERSON. I do not know that the distinction is sufficient. The inland waters are, I think, under the care of this government.

Mr. PUGSLEY. Only navigation.

Mr. HENDERSON. And it is the inland waters that are practically washing away the people's farms and highways. It seems to me that this is the government that will have to do that work by and by, and the sooner it is undertaken the better. If this washing away is allowed to go on for a few years longer, a great deal of harm will be done, and it will certainly cost more to prevent it five years after this than it will now. I would suggest to the minister that while his engineers are engaged in examining the Burlington canal, which is within two and a-half or three miles away from the places I speak of, it would be well to send one to look into this matter.

Mr. PUGSLEY. Do I understand my hon. friend to say that he knows personally that the Liberal candidate promised that a breakwater would be built and that he had the authority of the government for making that statement.

Mr. HENDERSON. I did not hear him make that statement, but I have it on authority perfectly reliable, and I have no doubt he promised those people that he would apply to the government for the construction of a breakwater there to prevent the shore from washing away.

Mr. PUGSLEY. That is a different statement? He said he would apply to the government.

Mr. HENDERSON. But he did not get elected.

Mr. PUGSLEY. That is not his fault.

Mr. HENDERSON. The people, I presume, did not put much confidence in him and had the good sense to believe that the Minister of Public Works would not be so corrupt as to build a breakwater only on condition that a supporter of the government would be elected. If it is a proper and wise thing to build that breakwater, I have no doubt the minister would do it just as well as if the other gentlemen were elected. I was not present at any of the meetings and did not hear the gentleman make that statement, but that was the current report, and I have not the slightest doubt as to its accuracy. But apart from that, the claim is a proper one. That important village and shore has never received any government consideration whatever. It is a place of considerable importance. There is a large amount of grain and apples shipped from there, and they have never received a dollar for the construction of a pier or the dredging of their harbour. I am happy to say that they have a sufficient depth of water without dredging, but as for the docks, they are private and belong to the men who do the shipping business. If the minister will promise to send an engineer to look into the matter and see what can be done, he will be taking a step in the right direction.

Mr. PUGSLEY. The reason I asked my hon. friend if he ever heard the statement made by the Liberal candidate that this breakwater would be built, was because I have heard a good many rumours as to

alleged statements made by Liberal candidates and have found, on inquiry, that they were absolutely without foundation.

Mr. HENDERSON. No doubt the hon. minister will find that this one is correct.

Mr. PUGSLEY. If my hon. friend had heard the statement he would be sure.

Mr. HENDERSON. I did not hear it myself, but have it on the best authority.

Mr. PUGSLEY. What I would rather assume is that probably the Liberal candidate, being impressed by the necessity for this work, promised that if he were elected, he would urge it on the favourable consideration of the government, and I would rather infer, from the last version which my hon. friend gave, that that was all the candidate said. This matter had not been very strongly brought to my attention, and I certainly gave no assurance that a breakwater would be built there and did not authorize any one to give that assurance. But as the matter is brought to my attention, I shall have it looked into.

Mr. HENDERSON. That is all I can expect the hon. minister to say at present.

Mr. PUGSLEY. With regard to many improvements of this character a question of great importance is arising and will no doubt be pressed home upon us very strongly in the future, and that is how far the federal government should go in the carrying on of protection works which are not for the purposes of navigation, but to protect towns and villages situated as Burlington is. I have during the past year been asked to join in the cost of building protection works on the Fraser river; and as towns and villages grow up on that very extensive river, there will be very large demands of a similar nature from them in the future. If I would undertake these works on behalf of this government, the federal exchequer would have very heavy burdens imposed on it. In the past we have done works of this character. On the Fraser river we have borne one half the cost, sharing the cost jointly with the provincial government. We have been asked to do that on the Saskatchewan river near Edmonton and at other localities where there is equal danger. Only the other day my hon. friend from Chicoutimi and Saguenay (Mr. Girard) wrote a very strong letter inclosing petitions setting forth, the very serious condition of affairs at a place some distance below the Saguenay where there is a large village located on the banks of the St. Lawrence, and where the banks are very high and there is considerable danger of their sliding into the St. Lawrence, causing great destruction of property and loss of life. I did not feel that this was a federal work for which I could pledge the government to ask parliament for an appropriation. The work has nothing to do with navigation, it is purely local in its character, and hon. gentlemen will see how difficult it is to draw the line. It requires great consideration, because if we undertake in a general way works of this character, it is difficult to estimate where we shall be able to stop.

Mr. GEO. TAYLOR. The village of Burlington, on the shores of Lake Ontario, has been a very prosperous place for a great many years and a large shipping point, yet not a dollar of public money has ever been spent on the wharfs. Look at the millions we are voting to other provinces for similar works. But you may begin at Burlington and go down all the way as far as the province of Ontario extends and all along the shores of the St. Lawrence and Lake Ontario, and you will find that all the wharfs there have been erected by private individuals. In other provinces however the government not only builds the wharfs but will come down with an estimate for a wharf and turn it into a bridge. Here at Burlington, on the shores of Lake Ontario, the people built their own wharf, and not only the wharf, but the town is likely to be undermined from the lake, yet the government will pay no attention to it although their candidate promised that they would give relief if he were elected. I have drawn attention on several occasions to the township of Wolfe Island. The people on that island have no means of getting off except by boat, and they have to put their hands into their own pockets and build their own wharfs. Wolfe Island is at the foot of Lake Ontario. The only way to get there is by steamer. Steamers ply on both sides and the government have never contributed a dollar. If it were a little creek in some of the other provinces, the government would build the wharfs themselves, and construct docks where there is no navigation. Application has been made on behalf of Burlington, and that application should be recognized by the government without delay. Last night we discussed a work carried on by this government—building a concrete pier for the municipality to set a bridge upon—

Mr. PUGSLEY. That was four years ago.

Mr. GEO. TAYLOR. We had it before the committee last night. It was shown that it was built inshore from the current where it would not prevent the silt from coming down as was said to be the purpose. Why should not the provincial government or the municipality be called upon to do that work? It would seem that the municipalities in constituencies that return supporters of the government are treated differently from those that return members of the opposition. I think it is time that the government should come to some definite

understanding as to the kind of works it is their duty to erect and as to those which should be left to the province or municipality.

Little Current—improvement of Northern channel in Georgian bay, $28,000.

Mr. PUGSLEY. This is to complete the dredging work of the year. It is very important work.

Mr. ARTHURS. At what portion of the channel ?

Mr. PUGSLEY. Right at the town of Little Current. We are widening the channel and straightening it. There is a very swift current there, and this work will make what is known as 'the inside route' for steamers. That is, it will pass inside Manitoulin Island.

Mr. W. R. SMYTH. Is this vote of $28,000 for work that has been done or for work that is to be done ?

Mr. PUGSLEY. Work to be done during the coming season.

Mr. W. R. SMYTH. I notice that in the supplementary estimates there is a vote of $82,000 for the same work.

Mr. PUGSLEY. That is to close up for work done during the current year.

Mr. W. R. SMYTH. Does the minister intend to deepen the channel beside Picnic Island out of this $28,000?

Mr. PUGSLEY. No, there would not be enough for that purpose.

Mr. W. R. SMYTH. How much of the channel is to be completed? I think there is about 1,200 feet already dredged.

Mr. PUGSLEY. There was about 1,800 feet in which work had to be done, and this is to complete the work.

Mr. W. R. SMYTH. I suppose that, under this item, the minister could give no information as to the work done on Honora wharf?

Mr. PUGSLEY. No appropriation is being asked for that wharf, and therefore I have no information before me with regard to it. If he desires it, I will get the information.

Mr. W. R. SMYTH. The minister is aware that a wharf was built there just before the elections. I shall have something to say about it later on.

Mr. PUGSLEY. I do not know when it was done. The House did not rise until about the first of August.

Mr. W. R. SMYTH. To what depth has this northern channel been dredged?

Mr. PUGSLEY. Twenty-two feet.

Mr. W. R. SMYTH. And what is the present depth of the part that is being dredged?

Mr. PUGSLEY. Twenty-two feet.

Mr. W. R. SMYTH. And what is the present depth of the part that is being redredged?

Mr. PUGSLEY. When we began the work, the depth was about 14 feet. It will be noted that this is rock drilling and blasting.

Mr. W. R. SMYTH. And there is no appropriation for widening the channel towards Picnic Island?

Mr. PUGSLEY. No. To widen it would be very expensive. It is a needed work, but it cannot be done at present.

Mr. W. R. SMYTH. I presented a petition to the minister from the vesselmen showing the necessity of widening the channel at this point. Does he purpose doing anything about it?

Mr. PUGSLEY. We have a report on it, and I recognize the necessity for it. But it is one of those works not imperatively necessary at the moment, and I regret to say that we shall be obliged to let it stand over for a short time.

Mr. GEO. TAYLOR. Last session, $125,000 was voted. Did the minister expend that and $82,000 besides on that work ?

Mr. PUGSLEY. Some money was due from the previous year. I could get the full details if the hon. gentleman (Mr. Geo. Taylor) would like them.

Mr. GEO. TAYLOR. Where did the money come from for the work which has been referred to as having been built just before the elections?

Mr. PUGSLEY. That has nothing to do with this appropriation.

Mr. GEO. TAYLOR. Was there an appropriation for it?

Mr. PUGSLEY. I think there was. But we have a general vote of money for repairs.

Mr. GEO. TAYLOR. How much was spent out of the general vote, or out of any vote on this work?

Mr. PUGSLEY. I have no memorandum of it here.

Mr. GEO. TAYLOR. Will the hon. gentleman get it?

Mr. PUGSLEY. I shall be glad to do so.

McGregor's creek—renewal of bank protection work at Chatham, $7,100.

Mr. GEO. TAYLOR. This is protection work on a bank.

Mr. PUGSLEY. This is to complete the renewal of sheet piling protection on the south bank of McGregor's creek, reported by the engineer in charge to be needed to prevent the bank sliding into the creek. Since this estimate was made, a further break has occurred endangering the houses, in fact, some of the houses have actually fallen in. I think a distinction can be made between this work and the work at Burlington, because, in the opinion of the engineer, this has followed dredging operations carried on by the federal government, and therefore we have thought it our duty to build protection works. When I speak of dredging by the federal government, I do not mean the present government, because this was done before the present administration came into power.

Mr. MARSHALL. Is this work to be done in the city of Chatham?

Mr. PUGSLEY. Yes.

Montreal river—improvements above Latchford, $25,000.

Mr. W. R. SMYTH. Is this in connection with the dam to be built there?

Mr. PUGSLEY. This is to construct a dam just above Latchford for the purpose, as the expression is, of drowning out the Pork rapids, and so affording navigation for the conveyance of the large number of people who are going up that river to engage in mining operations and to settle on the land.

Mr. W. R. SMYTH. Have negotiations gone on between this government and the Temiskaming and Northern Ontario Commission relating to the land about to be drowned?

Mr. PUGSLEY. Negotiations have gone on for a very considerable time, and it is largely in consequence of these not having been brought to a successful issue that the work of building this dam has not already been undertaken. I desire to say, and I say it with regret, that the commissioners of the Temiskaming and Northern Ontario Railway have not shown the disposition which I should have expected them to show to facilitate this work. We have endeavoured to get them either to make a reasonable settlement as to land damages or to waive any claim for damages because the building of this work will be of great benefit to the interests of the province of Ontario, but so far we have not been successful in coming to an arrangement.

Mr. W. F. MACLEAN. Are any further improvements contemplated in the Montreal river?

Mr. PUGSLEY. There is another rapid at which we have been urged to build a lock but we have not decided upon that.

Mr. W. R. SMYTH. Has the matter been brought to the attention of the Minister of Lands, Forests and Mines of Ontario?

Mr. PUGSLEY. Yes.

Mr. W. R. SMYTH. I understood him to say he was disposed to make any arrangement to get that improvement.

Mr. PUGSLEY. We went to the trouble and expense of appointing Mr. Davis of Latchford to get the land damages settled. He reported that he had interviews with the Commissioners and also with the Ontario minister to whom my hon. friend refers, but he was not successful in coming to an arrangement. I hope that now the matter has been brought more forcibly to the attention of the Ontario government we will be able to come to a satisfactory arrangement soon. The work is important and I regret that we have not felt it was desirable or safe to enter into the contract because of the possibility of having these claims outstanding. The moment I can see daylight, so far as land damages are concerned, I am prepared to go ahead with the work and let the contract, but I do not want to enter on the work with an uncertainty as to the amount of claims to be brought against the government for flooding the lands.

Mr. R. L. BORDEN. Is it not within the power of the government to expropriate the right to flood these lands?

Mr. PUGSLEY. Possibly it is, but I do not think that when the federal government is prepared to engage upon a large expenditure for the purpose of improving the navigation of a river like the Montreal river, which would give accommodation to people going in there to settle upon the lands of the Ontario government, to develop their mining properties, that the Ontario government which owns the townsite upon the shores of Temiskaming lake should make any claim against us for damages that might occur through the flooding of unoccupied lands and particularly of town lots unsold, and not built upon. I do think they should join with us to that extent in having these improvements made and give freely and without compensation the lands which would be affected by the building of the dam.

Mr. R. L. BORDEN. Of course I appreciate that the hon. gentleman thinks that the chairman and other members of the Commission and the Minister of Forests, Lands and Mines are not acting in a reasonable way, but it is not impossible that these gentlemen have the same view in regard to himself. I know the chairman of the Commission and some of the members and also have the privilege of knowing the Minister of Mines, and I be-

lieve him to be not only a very capable but a very reasonable gentleman who would be sincerely desirous of doing everything possible to facilitate the improvement of navigation for the benefit of people using that river. Perhaps the minister would bring down any correspondence he may have in reference to the matter, which is of some importance, as the river in the summer should be a very excellent highway, affording access to a country lacking in other communication.

Mr. PUGSLEY. I shall be glad to bring down the correspondence.

Mr. WRIGHT. Did the minister give directions to his department at Toronto to look after this matter? It would seem to be of sufficient importance not to leave it to an irresponsible gentleman in that northern country.

Mr. PUGSLEY. I do not accept the suggestion that the matter was left to an irresponsible gentleman. We appointed a gentleman of high standing in Latchford to endeavour to make a settlement with the owners of land which we thought would be flooded by building the dam. Among the owners were the Commissioners of the Ontario and Temiskaming Railway, representing the Ontario government. We instructed Mr. Davis to confer with the Commissioners and also with the Ontario government and he reported that he had several interviews with the Minister of Lands and Mines of Ontario as well as with the Commissioners, and that he was not able to make a satisfactory arrangement.

Mr. W. R. SMYTH. What is his profession?

Mr. PUGSLEY. A lawyer.

Mr. W. R. SMYTH. He knows nothing, of course, about the value of lands.

Port Stanley—groynes on east side of harbour entrance, $7,100.

Mr. PUGSLEY. This is protection work for the protection of new Orchard Beach from further erosion. The groynes are to be built on the east side of Port Stanley entrance. The claim is made upon us—and this also differentiates this from the case to which some hon. gentleman referred to-night—that by reason of the breakwater built there the waters of the bay were given a certain direction and caused erosion of the soil. The department recognized the strength of that claim, and the work of building these groynes for the protection of the land was entered upon.

Mr. MARSHALL. I think the minister is justified in spending that money just as he says. I know the location and it is necessary work. Will the work be done by day's labour or by contract?

Mr. PUGSLEY. It is to be done by contract and the contract has been let to John H. Smaill, of Port Burwell. The contract price was $6.535.

Mr. MARSHALL. Who is the overseer? The gentleman in charge now is named Smith.

Mr. PUGSLEY. I do not think an overseer has been appointed; Mr. Smith may have been appointed recently but I have no memorandum of it.

Mr. MARSHALL. This expenditure is very necessary. Port Stanley is an important harbour where there is a large revenue from the coal traffic. The amount is not too large. I find nothing for Port Bruce. Is it the intention of the minister to spend any money in improving that harbour this summer?

Mr. PUGSLEY. It has not been decided to spend anything at Port Bruce during the coming season.

Mr. MARSHALL. I hope the minister will spend some money there. It is an old harbour gone down. It is now used as a fishing port. There are men engaged in fishing there who have their homes, boats and nets and everything invested in their plant, and unless the harbour is kept open it will be useless. Unless the harbour is improved it will be useless. I hope the minister will set aside something, not a very large amount, to keep the harbour in such a condition that fishermen can go in and out.

Mr. PUGSLEY. I will make a note of it and have it looked into.

Richard's Landing—St. Joseph's island—repairs to pier, $1,700.

Mr. GEO. TAYLOR. What is the explanation of this? Is not that the wharf that was built up there where the summer hotel was erected?

Mr. PUGSLEY. No, this is away up in the district of West Algoma not far from Sudbury.

Mr. GEO. TAYLOR. Will this complete it?

Mr. PUGSLEY This will complete the repairs.

Mr. W. R. SMYTH. Were any of those repairs done last season?

Mr. PUGSLEY. We will require $1,700 for repairs during the coming season. We have spent, up to the 30th November, $1,398.46. Repairs have been going on during the winter, so that we will have spent about $1,600 by the 31st of this month.

Mr. GEO. TAYLOR. In addition to the $3,000 voted last year?

Mr. PUGSLEY. Yes, the total estimated cost is $4,700; $3,000 was voted last year and we are asking for $1,700 this year.

River St. Lawrence—improvement of Canadian channel between Kingston and Brockville, $75,000.

Mr. PUGSLEY. This is to improve, by blasting and dredging out what will probably be all rock, the Canadian channel between Kingston and Brockville, so that vessels navigating the St. Lawrence can go through the Canadian channel instead of being obliged to use the American channel. The work is being done under contract. The total estimated cost is $125,000.

Mr. GEO. TAYLOR. Who has the contract?

Mr. PUGSLEY. Frank Gilbert, of Montreal. Tenders were called and in response to a public advertisement these tenders were received ranging from $3.95 per cubic yard of rock to $4.98. The contract was awarded to Frank Gilbert, his being the lowest tender, at $3,95 per cubic yard of rock.

Mr. GEO. TAYLOR. I understand that most of this is removing an island at Fiddler's Elbow?

Mr. PUGSLEY. There is quite a large number of points at which material has to be removed.

Mr. GEO. TAYLOR. That work will be proceeded with this summer?

Mr. PUGSLEY. Yes, it is being proceeded with this winter.

Rondeau harbour—improvements, $25,000.

Mr. BEATTIE. What is being done at Rondeau?

Mr. PUGSLEY. There are breakwaters to be built.

Mr. BEATTIE. I was there a short time ago and I thought the piers were very good.

Mr. PUGSLEY. This is to extend the breakwaters to afford protection to the harbour. There is a contract let for the construction of breakwaters and dredging.

Mr. BEATTIE. This is to further improve the harbour?

Mr. PUGSLEY. This is to extend the breakwaters to a thousand feet.

Mr. BEATTIE. This is to extend the piers outward? The piers were very good as far as they went. This has become a very important harbour, there is a very large coal business being done and large steamers come there. I think this is a desirable work. Port Stanley and Rondeau are two of the most important harbours on the lake. Besides doing a large coal business I do not know but that they are good harbours of refuge in case of a storm.

Sault Ste. Marie wharf — dredging approaches, $55,000.

Mr. PUGSLEY. This is to complete the work.

Mr. TAYLOR. That is under contract?

Mr. PUGSLEY. Yes.

Southampton—extension of and repairs to town dock, $6,000.

Mr. PUGSLEY. This is under contract also.

Toronto harbour—improvements, $375,000.

Mr. PUGSLEY. This is the western channel with which the committee is familiar.

Mr. GEO. TAYLOR. This is under contract?

Mr. PUGSLEY. Yes.

Mr. WRIGHT. Before leaving the Ontario items, I want to draw the minister's attention to the fact that last year a vote was put through for a wharf at Gravenhurst. I also want to draw the minister's attention to the fact that it was not built and that nothing has been done there. It was kept before the electors all summer and when the election time came it was a very important issue whether the people would get their wharf or not. A communication was sent to the minister right in the midst of the election and a telegram was apparently received from him which was published and put in the hands of every elector in the town, stating that it was owing to the persuasive qualities of the Reform candidate that the minister had come to the conclusion that a wharf was necessary.

Mr. PUGSLEY. Was that a telegram from me?

Mr. WRIGHT. From you. I would draw the attention of the minister to the fact that from time to time representations have been made from the town council of Gravenhurst, and strong deputations have waited upon the government urging this public work. I suppose the government came to the conclusion that they would put a little vote in the estimates for that wharf and apparently the Reform candidate was sent for and came down here so that he might get credit for this appropriation. As I have said, the telegram of the minister was used to that effect in the riding of Muskoka and in the town of Gravenhurst, and the people were led to believe they would get the wharf at once. This was used with very telling effect against myself in the campaign and it lost me a considerable number of votes, and had it been that the minister had twenty-five or thirty wharfs to build in the riding, I

might have lost my election. However, I simply want to express the hope that the persuasive eloquence of my opponent which had such an effect on the minister will not have ceased to exercise its power, and that he will not forget that the town of Gravenhurst needs a wharf very badly. If there are supplementary estimates brought down I hope the minister will include in them an appropriation for this work and that at the very earliest possible moment he will have a decent wharf constructed in the town of Gravenhurst. I have drawn the attention of the minister and of his predecessor to the fact that there is a great deal of shipping in these northern waters and that this accommodation is badly needed. I can tell him that if the wharf is built the people will appreciate it very much.

Mr. PUGSLEY. Did the hon. gentleman issue a circular during the campaign in regard to his own action in reference to that wharf?

Mr. WRIGHT. I issued no circular with regard to the matter.

Mr. PUGSLEY. My information was that during the campaign the hon. gentleman either had issued a circular or made a statement that he had succeeded in getting the item in the estimates for the Gravenhurst wharf and repudiating the fact that our friends had anything to do with it. I was asked whether that statement was true and I did either write or telegraph giving credit to the gentleman who had come to Ottawa upon at least one occasion and urged very strongly the necessity for a wharf at Gravenhurst. I placed the credit where it was due so far as obtaining the appropriation for the wharf was concerned, and to correct any misapprehension which I had been informed my hon. friend was endeavouring to spread among the electors. With regard to the wharf itself, I was impressed with the necessity for it. There is a good deal of shipping at Gravenhurst and the amount was put in the estimates in good faith last session, but unfortunately owing to the condition of the revenues this wharf must stand over for a short time as many other necessary public works.

Mr. GEORGE TAYLOR. Will the minister give us a copy of the telegram?

Mr. PUGSLEY. I have not a copy; I think it was a personal telegram sent from St. John.

Mr. ARTHURS. I want to call the attention of the Minister of Public Works to two wharfs in the district of Parry Sound for which appropriations were made last year. One of these appropriations was for a wharf at the village of Maganatawan on the Maganatawan river. I understand the minister said that these works which had been commenced would be carried to completion. In this case a grant of $1,200 was made for that wharf and something over $500 was spent for the purchase of the old wharf, the apparent intention being to extend it. I call the attention of the minister to the fact that the existing wharf is entirely inadequate. At present the boats are being tied on the banks of the river at various places and unable to reach the wharf. I shall be glad to have an assurance that the balance of this appropriation will be expended in enlarging that wharf. Then also with regard to Parry Sound, there were some thousands of dollars placed in the estimates last year for the extension of the wharf there. The work was prosecuted in the days immediately preceding the election and carried on for a week after the election when it was discontinued. A large amount of timber is at present on hand and the appropriation has not been exhausted. In this case also I would like to have the assurance of the minister that the balance of the appropriation will be used as the work is necessary.

Mr. PUGSLEY. Would the hon. gentleman (Mr. Arthurs) say whether in his opinion both these works are necessary public works and works which should be carried on in the public interest?

Mr. ARTHURS. I think the minister will agree with me that the work at Parry Sound is most necessary and that the wharf accommodation there is very small considering the importance of the port.

Mr. PUGSLEY. What about Maganatawan?

Mr. ARTHURS. That is exactly in the same position. There are 20 or 25 steamers plying there and there is not room at the wharf purchased by the government for more than one steamer at a time.

Mr. PUGSLEY. I am very glad that my hon. friend conforms to the opinion I entertained last session that these works were necessary, and I regret that I have been obliged not to include in the estimates an appropriation for them for the coming year; they have to stand over the same as many other public works throughout Canada.

Mr. ARTHURS. Am I right in assuming that the minister has stated in the House that those works which had been commenced would be carried on to completion and that the works which had been left aside were those which had not been commenced or for which tenders had not been called?

Mr. PUGSLEY. I stated to the committee that in drawing the line in reference to works which were to stand over we had provided that where contracts had been let

or where the work had been undertaken by day's labour they should be carried to completion. If any work has been done on the Maganatawan wharf which would be of no value to the public unless there were further work done, or if the work were likely to be damaged if it were not completed then I think it ought to be completed. But if a further extension is only needed to get increased accommodation I think it might stand over without detriment to the public interest the same as many other works in different parts of the country.

Mr. GEO. TAYLOR. The timber is bought and lying there rotting.

Mr. PUGSLEY. So far as the wharf at Parry Sound is concerned I think that is being done by day's work, and if the timber is there—

Mr. GEO. TAYLOR. Rotting.

Mr. PUGSLEY. It cannot be rotting because it is only there a short time and we will see it does not rot. I will make inquiries of the engineering department and see what can be done.

Mr. MIDDLEBRO. I draw the attention of the Minister of Public Works to Meaford harbour situated on the Georgian bay. I understand that recently a petition has been sent to the Minister of Public Works with reference to that harbour. I quite re-recognize his policy of cutting down the estimates for Public Works, but at the same time I think that in the case of Meaford there should be an exception made. As I understand, the government adopted some plan or scheme for the improvement of the harbour, and in accordance with it have already spent $70,000 or $80,000, for which the town is grateful. But a storm of last fall proved beyond doubt that that plan will have to be radically changed, because it is not such as to prevent the devastation of the harbour. A number of boats lying in the harbour were tossed about and some of their upper parts destroyed 'and some had to be removed to Owen Sound.' I would therefore ask the minister if he can put something in the estimates of the present year to preserve the harbour. This is one of those cases in which, if nothing is done, what has already been done by the government may be permanently destroyed. I understand that a deputation from Meaford is about to come to Ottawa to interview the government and to present a memorial on this subject. The harbour of Meaford is not a small harbour. It has many manufactures, a large elevator and a great deal of the grain from the west passes through that harbour on its way to the sea-board; so that it is more or less a national port. I would ask the minister in all earnestness to see if something cannot be done during the present year, either by a vote in the supplementary estimates or otherwise, for the purpose of preventing the destruction of that harbour and whether he cannot have an inquiry made as to whether some change should not be made in the plan or scheme adopted.

Mr. PUGSLEY. I may say to my hon. friend that I have received the memorial to which he refers and I intend to look into the matter very carefully. But as to making provision during the present session—

Mr. GEO. TAYLOR. You have a general vote.

Mr. PUGSLEY. But out of that we can only provide for small works; we cannot build wharfs or breakwaters. As to putting an amount in the supplementary estimates, I regret that I am not able to give my hon. friend any assurance at the present moment that there will be any supplementary estimates and there is nothing in the present estimates that would warrant me in proceeding with the work in the present year. If there should be supplementary estimates, I will give the matter consideration.

Mr. MIDDLEBRO. Would the minister send a competent engineer there for the purpose of making an examination?

Mr. PUGSLEY. I have already referred the memorial to the chief engineer of my department.

Mr. MADDIN. Would the Minister of Public Works tell us why the objects for which moneys were voted in the supplementary estimates of last session are not being carried out by revotes this session?

Mr. PUGSLEY. Because our revenues will not warrant us in doing so. During the past year there has been a falling off of about $12,000,000 in the revenues, and, as I have already explained several times in the committee, we had to cut down the estimates in my department by some $7,000,000 or $8,000,000. It became necessary therefore to postpone the construction of a large number of very necessary public works which were provided for in the estimates of last year.

Mr. MADDIN. Is it not a fact that the country is better off financially at the present time than it was when the supplementary estimates were brought down in July last? Is not the fiancial condition of the country as good now as it was when he sent that telegram to the province of Ontario to which the hon. member for Muskoka has referred?

Mr. PUGSLEY. That telegram was only to correct what I thought was a wrong impression that was sought to be conveyed.

Mr. MADDIN. But there was an amount in the estimates?

Mr. PUGSLEY. Of course there was, and I was only speaking of that, not making any promises for the future.

Mr. MADDIN. Is not the financial condition of the country now better than it was when that amount was put in the estimates?

Mr. PUGSLEY. I am satisfied that the outlook now is exceedingiy good.

Mr. MADDIN. Is not that a reason why the hon. minister should live up to his pre-election promises in respect to public works?

Mr. PUGSLEY. What pre-election promises?

Mr. MADDIN. They were contained in the estimates.

Manitoba—harbours and rivers and bridges —general repairs and improvements, $6,000.

Mr. PUGSLEY. This is a general vote to do work which is not specially provided for.

Mr. ROCHE. At what places are you going to have it expended?

Mr. PUGSLEY. I have no special places in mind at present. Last year the expenditure up to the 31st of December was $3,667, leaving a balance of a little over $2,000 unexpended. There are always repairs and small works to be done in different sections of the country.

Mr. BRADBURY. Some little time ago I interrogated the minister regarding the bridge at Lac du Bonnet. The bridge is too low. I understood that the matter was referred to the resident engineer. It is a very serious matter. I have had several letters in the last few days asking if the government has taken any action.

Mr. PUGSLEY. Who constructed this bridge?

Mr. BRADBURY. The city of Winnipeg.

Mr. PUGSLEY. That would not be a matter for my department specially to interfere in.

Mr. BRADBURY. The bridge is across a navigable stream, and I think the government owns it. I do not think the government would allow it to be constructed without its approval.

Mr. PUGSLEY. The plans would have to be approved.

Mr. BRADBURY. I am informed that at high water there is less than four feet between the water and the girders of the bridge, and as the current is very rapid, it is a menace to life and property. Something ought to be done, and done at once.

Mr. PUGSLEY. My hon. friend can easily understand that if a bridge was not built according to the plans, it would be quite open to any one to file information and compel the city of Winnipeg to remove the bridge. I do not think it would be the duty of my department to do that; it would rather rest with the Attorney General of the province. He is the man in whose name any information for that purpose would have to be laid. However, I have given instruction to have a report made, and shall be glad to lay it before the House as soon as it is revised.

Mr. BRADBURY. If the plans were approved by the Department of Public Works, in what position would the government be?

Mr. PUGSLEY. I would not like to say what would be done in that case. That would show that somebody had blundered in case the plans were defective.

Mr. BRADBURY. If the city of Winnipeg had not carried out the plan submitted to the government the city was responsible.

Mr. PUGSLEY. Yes.

Mr. BRADBURY. On the other hand, if it had built according to the plan submitted to your engineer, surely the government is responsible.

Mr. PUGSLEY. It would be the fault of our department, but as to whether there would be any legal responsibility, I am not at the moment prepared to say. It might be an error of judgment. I have sent for a report.

Mr. BRADBURY. This is a serious matter and I hope the minister will take it up seriously. There is another matter to which I wish to call his attention. There was placed in the estimates of last year, just previous to the general elections, an amount of $7,500, for the purpose of commencing what was termed a protecting pier at Winnipeg beach. This amount is conspicuous by its absence in the estimates of this session, does that mean the work has been abandoned?

Mr. PUGSLEY. The fact of its not appearing in the votes ought to be convincing proof to my hon. friend that it will not be possible for me to go on with the work during the present season.

Mr. BRADBURY. I want to recall to the hon. gentleman that on the 1st of February I asked him the following question across the floor, as will be seen in 'Hansard,' page 352:

What has the government done regarding protection pier at Winnipeg Beach? Is it the intention of the government to proceed with the construction of this pier at once? If not, when?

The minister replied as follows:

Plans and specifications have been prepared contingent upon certain work being performed by the Canadian Pacific Railway and the Boundary Park Realty Company. It has not yet been decided to go on with the work, but a decision will be come to before very long after we hear what the Canadian Pacific Railway and the Boundary Park Realty Company are prepared to do.

This reply conveyed the impression that the Boundary Park Realty Company and the Canadian Pacific Railway had not carried out their part of the understanding which must have existed between the government and these companies. The reply which the minister gave me at that time was published in one of the Winnipeg papers, and in that way came under the notice of the Boundary Park Realty Company, and the secretary of that company wrote me a letter which I think I should read to the committee for the information of the Minister of Public Works:

Winnipeg, Feb. 3, 1909.

G. H. Bradbury, Esq.,
Ottawa, Ont.

Dear Sir,—In a despatch from Ottawa it is stated that the building of the protection pier at Winnipeg Beach was being held up by the Canadian Pacific Railway and the Boundary Park Realty Company.

Speaking for the Boundary Park Realty Company, I may say that we completed our part some months ago by giving a clear title, free of cost, to the Canadian Pacific Railway to about seven (7) acres of land fronting on the proposed harbour.

They in turn gave us a written agreement to the effect that they would do the necessary work inside within a certain time after the Dominion government built the pier. We have done our part and the Canadian Pacific Railway cannot do anything until the outside work is completed by the government. I understand that the railway are willing and anxious to go on with the work at the earliest date possible.

Any further information you might want from us would be gladly given. We are very anxious, as are all the other Winnipeg Beach residents to see the matter go through without delay as we have waited for over a year for a safe anchorage for our boats. Thanking you in advance for the trouble you are taking in this matter,

I remain, yours truly,
C. GORDON CRUIKSHANK.

I submit that the inference which the minister wished me to draw from his reply was that these companies had not carried out their part of the understanding.

Mr. PUGSLEY. My answer does not say that. It says that we were waiting to hear from them and then will decide what we will do.

Mr. BRADBURY. I think the fair inference is that these companies had not done what they agreed to do.

Mr. PUGSLEY. I did not say that.

Mr. BRADBURY. I think that is the fair inference. When the despatch was published in the Winnipeg papers, that was the inference which the Realty Company drew from the reply.

Mr. PUGSLEY. The telegram apparently was a misstatement. The telegram said it was alleged that the work was hung up by these companies. I used no such expression in the House. Therefore the company must have been misinformed by the telegram.

Mr. BRADBURY. The minister said that the plans and specifications had been prepared contingent on certain work being performed by the Canadian Pacific Railway and the Boundary Park Realty Company. The government therefore were to go on with the work if these companies did what they had agreed to do. Well, the realty company, on the strength of the appropriation voted last year, did dispossess itself of seven acres of valuable land fronting on this proposed pier, and the Canadian Pacific Railway gave them an undertaking that as soon as the government carried out its part of the work, the Canadian Pacific Railway would proceed and do their part.

Mr. PUGSLEY. Do you not think my department ought to have some word from the Canadian Pacific Railway? Do you think we are bound by a private arrangement between the Canadian Pacific Railway and the Realty Company of which we were not informed?

Mr. BRADBURY. I cannot help but feel that the reply of the minister was hardly ingenuous. I think the inference he wished to convey was that these companies had not implemented their pledges; and in view of what has taken place in this committee from time to time, it is evident that when the money was voted last year, previous to the election, there was no real intention on the part of the government to proceed with the work. The minister said to-night that the reason why the government did not proceed with some public works was because of the falling off in revenue. That would be a good reason, were it not for the fact that in the lower provinces the government are providing in the estimates for the expenditure of hundreds of thousands of dollars for works not really as necessary as this one at Winnipeg Beach. At that place it is really necessary, in the interests of life and property, that a harbour should be built. The building of that pier, if I understand the purpose of the government, is required for a harbour. There is no harbour within 25 or 30 miles

along the lake front, so that a very dangerous condition exists. I would strongly urge upon the government to make that expenditure this year. In view of what I know, it strikes me that this was simply a pre-election promise.

Mr. PUGSLEY. A promise to build an unnecessary work.

Mr. BRADBURY. If the minister thinks it an unnecessary work why did he put a vote in the estimates for it last session? Either he must have known then that it was necessary or he was deceived by the then member for that constituency in this House, because when the late member, Mr. Jackson, came before the electors, he referred to that in his address. In that address he said :

> $7,500 has been voted for a pier at Winnipeg Beach. This pier is to cost $16,000. The contract will be let this fall.

In addition to that statement in his published address, we had men coming down from Winnipeg and Selkirk, purporting to be contractors and going over the work and measuring it, and giving out all through the district that they were going to proceed with the work as soon as the bay was frozen over. In addition to that, we had the government tug lying there, with its engineer and staff of helpers, during the time of the regatta held there late in September. With four or five thousand people there, this government tug was pointed out by the friends and admirers of Mr. Jackson as proof of how the government was taking care of the people and was so prompt in responding to the request for the building of a pier. They were told that the pier would be proceeded with and that before spring they would have the pier completed and would have a first-class harbour. This work was dangled before the eyes of the electors during the whole campaign. The same is true of the Elmwood post office. A vote of $10,000 was put in the estimates for this work. And, further up the lake, $4,000 or $5,000 was to be spent at Gimli. This last-named work was proceeded with, and it was the only one that was proceeded with. It was gone on with during the campaign; men were hired by the day, and the whole dredging outfit that had cost this country a large sum of money was moved, at great risk, from the mouth of the Winnipeg river to the Icelandic river, where it was kept going for several weeks, and $4,000 or so was spent in dredging. I hold that this principle of making appropriations on the eve of a campaign, even if the government is serious and intends to spend the money, is a bad one. But how much worse is it when large appropriations are made running up into tens of millions of money, only to be dropped the following year. Of many of these appropriations made last year, not a dollar is to be found in the present estimate. It looks like making pledges to the people that the government never intend carrying out. I am satisfied there were thousands of voters fooled and tricked by these appropriations into voting for the government. It is a deplorable thing that the government of a big country like Canada should be guilty of such conduct as I believe this government stands guilty of. If there were words that I could use that would be strong enough to induce the minister to reconsider his decision in this matter and to implement the pledge that was made——

Mr. PUGSLEY. I must say the hon. gentleman (Mr. Bradbury) has not a very coaxing way about it.

Mr. BRADBURY. I grant you, Mr. Chairman, that I have not the same smooth way that the Minister of Public Works (Mr. Pugsley) has.

Mr. PUGSLEY. It sounds as if you were declaring war.

Mr. BRADBURY. I wish to point out to the minister that we are not blind to what the minister and the government did previous to and during the last campaign. The mere fact that, when I asked that question in the beginning of the session, and received the answer I did from the Minister of Public Works, the Boundary Park Realty Company and the Canadian Pacific Railway Company had fully discharged all they had undertaken to do, convinced me that the minister and the government had no intention, when that money was put into the estimates, of ever expending it. But this is not a political question so far as I am concerned. While this work will be in my constituency, the building of that pier would not go to accommodate my constituents. It would be built at a summer resort and would mainly benefit the people of the city of Winnipeg. I want to to say that this is a very serious matter. Several lives have been lost on that beach, because there was no harbour in which boats could seek shelter from the storms. There is no doubt that the promise was made to build that pier, and the appropriation put in fooled quite a number to vote for the government candidate last election. I have not any great hope, I confess frankly, of inducing the minister to reconsider his decision, because I have noticed his attitude in the House in regard to several of these things, and, no doubt, the government will take the position taken by the minister, that on account of the falling revenue, it is not wise to proceed with this work. I have already pointed out that if this be a good reason now, it was much stronger when this vote was put in the estimates, for everybody who knew anything about the country's finances knew that the revenue was falling and that this condition

would continue. But this did not stop these gentlemen making the appropriation. They were on the eve of an election, and they opened the flood-gates and voted, not merely millions but tens of millions, and, as I have said, fooled thousands of the electors from the Atlantic to the Pacific, into giving votes that they would not otherwise have given.

Mr. PUGSLEY. The hon. gentleman (Mr. Bradbury) has certainly presented an argument against engaging in this work in Lake Winnipeg. I had supposed, from the arguments presented to me last session by the gentleman who then represented the constituency that while Winnipeg Beach was resorted to in summer by many people, yet this work was necessary in the interest of navigation as well, and would be an advantage to the commerce of the lake. But the hon. gentleman, says that it is used only as a summer resort for the people of Winnipeg. He presents an argument which makes it very important to consider whether or not this work should be postponed, pending the completion of works that are essential for the commercial and navigation interests of the country. It is a question, and always will be a question, how far the federal government is justified in spending money simply to afford summer resorts for the people of large cities. However, that is a matter that has not been brought to my attention as it has been by the hon. gentleman this evening. But, though he has presented that view of the case, while I do not say that the work will be abandoned, I do say that it will have to stand over the same as many other public works of greater necessity than this would appear to be from the hon. gentleman's statement. I do not think, if he is sincerely desirous of accomplishing anything for his constituency, that he has gone about the matter in a way which one would expect. He acts as if he were seeking to provoke some quarrel—not personal, but political—with myself in respect of this work. I repeat what I have said, that, when this item was put in the estimates last session, it was put there in good faith upon the urgent representation of Mr. Jackson, who then represented the constituency.

Mr. BRADBURY. And just on the eve of an election.

Mr. PUGSLEY. It was put there at the only time when it could be put there. Parliament had to be asked for the appropriation, and parliament did not rise and the Supply Bill was not passed until about July 20. After that we had to consider how rapidly we could go ahead with the works parliament had authorized. The hon. gentleman speaks of Elmwood public building. He does not do himself justice or seek to do me justice in that because we proceeded with that as far as we could reasonably go, we purchased a site, we showed our good faith in that way and we now have the site vested in the Crown and will be in a position to go ahead with the work whenever parliament puts me in a position to do so. All the items were put in the estimates in good faith and not with a view to dangling them before the electors or misleading the electors. The best evidence that we have acted in good faith is that in many constituencies, I would almost say scores of constituencies, which have returned our freinds to parliament we have deferred going on with many of these public works. We have not shown any discrimination and intend to treat the various works in good faith, and with a desire to carry out, as far as possible, the wishes of the people in respect of works which are really necessary and to meet the public convenience as far as we reasonably can. My hon. friend has referred to an answer I gave in this House and he has followed the example of one or two hon. gentlemen opposite, an example which I do not think he should follow. He says he does not think I was ingenuous in making this answer. Let me see if he was justified in that statement. First, let me say that the answers in my department are not prepared by me, nor are they prepared by the ministers in other departments. We send them to the proper official who prepares the answer in accordance with the facts, and I rarely see the answers until they are completed and ready to submit to the House. His insinuation that I was not ingenuous is not justified. The question was:

1. What has the government done regarding protection pier at Winnipeg Beach?

2. Is it the intention of the government to proceed with the construction of the pier at once? If not, when?

My answer was:

Plans and specifications have been prepared contingent upon certain work being performed by the Canadian Pacific Railway Company and Boundary Park Realty Company. It has not yet been decided to go on with the work, but a decision will be come to before very long after we hear what the Canadian Pacific Railway and the Boundary Park Realty Company are prepared to do.

My hon. friend says the Boundary Park Realty Company has made an arrangement with the Canadian Pacific Railway; but my department has not been informed of that. We were to undertake this work if the Canadian Pacific Railway did a certain amount of work towards the completion of these harbour works. We have had no communication, as far as I am aware, from the Canadian Pacific Railway, and no information as to the arrangement between that company and the Realty Company. When we get word from the Canadian Pacific Railway as to what they are prepared to do,

then I am prepared to bring the matter before my colleagues and the decision as to when the work shall proceed will rest with the government.

Mr. BRADBURY. I do not feel like allowing the minister to place a false construction on what I have said and I feel he has done that. In the first place, regarding what was said about the pier being of no use to the navigation of Lake Winnipeg, I stated distinctly that lives and property were lost last year because there was no harbour there.

Mr. PUGSLEY. Did he not say it was purely a summer resort for the people of Winnipeg?

Mr. BRADBURY. I did not say it was purely a summer resort. I said it was a summer resort and was largely used by the people of Winnipeg, and not so much by residents of the county of Selkirk. If the pier were converted into a harbour, as it ought to be, it would be of very great value to the navigation of Lake Winnipeg; but according to the hon. gentleman it is to be simply a pier and he says it is contingent upon the Canadian Pacific Railway doing certain work. The fact is that the Canadian Pacific Railway could not do any work until the government had built the pier; their work came in after the pier was built.

Mr. PUGSLEY. Surely they could enter into an agreement to do the work?

Mr. BRADBURY. There must have been some understanding between the government and the Canadian Pacific Railway and the Boundary Park Realty Company before the hon. gentleman authorized an appropriation of $7,500 to start this work. On the face of it it is evident there was, because the Boundary Park Realty Company, on the strength of that agreement, dispossessed itself of seven acres of valuable frontage to the Canadian Pacific Railway and the Canadian Pacific Railway gave an agreement to the Realty Company that as soon as the government would carry out their part of the work, the Canadian Pacific Railway would complete their part. It must be plain to the committee that the fault lies with the Department of Public Works and not with the two companies. The government have failed to implement the promise they gave to the people and the understanding must exist some place between the Canadian Pacific Railway and the Boundary Park Realty Company and the government. The hon. gentlemen say there is no agreement, and that they have had no communication from the Canadian Pacific Railway.

Mr. PUGSLEY. I did not say that we had had no communication. I said we have had no communication as to the completion of the agreement, and no agreement has yet been entered into. There was some time ago a proposed agreement, but we had not been informed of the completion of the agreement with the Realty Company and no agreement has been entered into.

Mr. BRADBURY. I do not know how the minister can justify the appropriation of last session if there was no arrangement between the companies interested. There is no question that the two companies had carried out their part of the agreement and the government had failed to carry out theirs. The minister accused me of being unfair in saying he was not ingenuous in his replies and he stated that he had nothing to do with the making up of the replies handed to him. I am not supposed to know that, I am simply taking the reply given by the gentleman across the floor of the House. I cannot hold the deputy responsible for his replies; I must hold the minister who made the replies.

Mr. PUGSLEY. And the reply happens to be according to the actual facts.

Mr. BRADBURY. If the reply is according to the facts, I was quite right in saying that the minister was hardly ingenuous in making the reply, because if he knew the facts, his statement that it was contingent upon the Realty Company and the Canadian Pacific Railway doing something was not accurate. Consequently I think my statement that the minister was not perfectly ingenuous is in accordance with the facts. I do not wish to antagonize the minister; but I am here a new member and I have a duty to my constituency to perform. This work should have been carried out to protect life and property. If the intention of the government is to create a harbour at that place there is no question that one is needed, that would be open to the lake boats. I understood from the minister that it was simply a pier, and when I made the statement that I had thought it was used principally by people from Winnipeg I stated what was accurate and at the same time if a harbour was created there it would be a great benefit to the lake traffic. I do not intend to take up any more time upon this question, but I am sorry that the minister has seen fit to make the statement across the floor of the House that I have been guilty of conduct that an hon. member should not be guilty of.

Mr. DEPUTY SPEAKER. A statement by an hon. member that another hon. member had been guilty of conduct unbecoming to a member of the House would have been checked by the chairman.

Mr. PUGSLEY. I did not use that expression.

Mr. BRADBURY. I do not think I am misquoting the hon. gentleman. I think he made the statement that when I said he was not ingenuous I had done what no hon. gentleman should do in this House. I hold that when I made that statement I was stating simply what the facts warranted me in stating and I think the hon. gentleman ought to withdraw his statement.

Mr. PUGSLEY. I did not make it; therefore I could not withdraw it.

Mr. ROCHE. Is this vote for the repair of bridges built by this government?

Mr. PUGSLEY. This is a general expression. It says Dominion bridges. There would only be one at Shellmouth.

Mr. ROCHE. Is that the only Dominion bridge that has been constructed in Manitoba?

Mr. PUGSLEY. I think so. I am not aware of any other.

Mr. ROCHE. The minister will remember that a short time ago I had some communication with him in reference to a bridge across the Assiniboine river not far from the town of Roblin. The minister's reply was not favourable stating that this bridge could not be looked upon as a Dominion work and explaining that in the province of New Brunswick all interior bridges were constructed by the provincial government. That was not very useful information to me inasmuch as each province probably has its own particular system. The province of Manitoba grants fifty per cent of the cost of the construction of bridges and the municipalities contribute the other fifty per cent. In this case the bridge I asked for is very much in the same position as the Shellmouth bridge inasmuch as it is across the same river, close to the boundary line between Saskatchewan and Manitoba, and the people of Saskatchewan make the town of Roblin on the Manitoba side their market town. I might draw the minister's attention to the fact that the people there have been very hard hit for a couple of years past, they have been visited by frost, their crops have been injured, they are not wealthy people and they are not in a position to construct this bridge. Inasmuch as it is really, in effect, an interprovincial bridge I thought I was justified in asking the government to give a grant as they did in the case of the Shellmouth bridge. I would like to ask the minister to reconsider his decision in that regard. There is this to say about the Shellmouth bridge, that it is a splendid bridge, but far more money was expended on that bridge than there was any necessity for. Upwards of $43,000 was expended upon that bridge, it was built higher by several feet than there was any necessity for and the result was that it imposed an unnecessary expenditure upon the municipality to build the approaches to the bridge. There have been other bridges across that river constructed by municipalities in Manitoba at a cost of less than $10,000. This has been a very expensive bridge and the government could easily have constructed three bridges with that amount of money and thus have given accommodation to a greater number of people. I would ask the minister if he does not think that this bridge, is just as much entitled to a grant from the Dominion government because it is as much an interprovincial bridge as the bridge at Shellmouth ?

Mr. PUGSLEY. It would be pretty difficult to justify the building of this bridge. We were criticised a good deal by reason of having built the Shellmouth bridge.

Mr. ROCHE. Adversely criticised ?

Mr. PUGSLEY. Yes.

Mr. ROCHE. By whom?

Mr. PUGSLEY. I do not know by whom; probably by hon. gentlemen on that side of the House. If the hon. gentleman had been here last night he would have heard a very severe criticism of my department because, two or three years ago, permission had been given to a municipality in the province of Quebec to rest one end of its bridge upon a wharf which had been constructed by this government. Suppose the constituency which my hon. friend so worthily represents had been represented by a Liberal and he had found an item for building a bridge in that constituency how the hon. member from Jacques Cartier (Mr. Monk) the lieutenant of the leader of the opposition, would have railed against us for engaging in the construction of what should have been a local work. The ground upon which the Shellmouth bridge was justified was that the territory adjoining the province of Manitoba was not a province but was part of the Northwest Territories and all public works at that time in the territories were carried on at the expense of the federal government. It was also justified on the ground that the Dominion government owned a large area of land to which this bridge would give access. It was somewhat difficult to justify it, quite a point was strained, but I am afraid that if we were to build another bridge wholly within a province it would be difficult to justify it. At all events I was obliged to give to my hon. friend the answer that I did give, that I did not feel that I could ask my colleagues for an appropriation for constructing what would be entirely a provincial bridge.

Mr. ROCHE. I think the minister is quite incorrect when he says that the grant was adversely criticised in this House. The only criticism called forth by the item was by myself, and it was not adverse criticism, but rather because of the fact that the vote appeared year after year in the estimates and very little progress was made with the construction of the bridge. The item first appeared in the estimates in 1904 prior to the election at the instigation of the then Liberal candidate who made the construction of that bridge his principal drawing card in the contest. This is the first occasion upon which I have heard the reasons assigned by the minister to-night. One was the fact that the government had a certain amount of land in that vicinity and the other was that the province of Saskatchewan had not been formed at that time. I feel convinced that the bridge, the construction of which I am urging upon the government, is just as necessary and just as much entitled to a grant from the Dominion government as was the Shellmouth bridge. The minister told us that he had some difficulty in persuading his colleagues around the council board and in justifying the grant to the Shellmouth bridge. I thought that most strange because the bridge was nearly completed before he came into the cabinet at all.

Mr. PUGSLEY. I had to call for a large additional vote to go on with the work.

Mr. ROCHE. $43,000 was too much to expend on that bridge and there is no necessity for any such expenditure.

Lake Dauphin—lowering lake by removing obstructions from bed of Mossy river, $5,000.

Mr. PUGSLEY. The government are doing this with their own plant.

Mr. GEO. TAYLOR. $10,000 was spent last year.

Mr. PUGSLEY. Yes. Carried.

Mr. CAMPBELL. You would not carry that? I would like to know how that expenditure of $10,000 was made last year.

Mr. PUGSLEY. Cost of material purchased $1,025; day's labour, chiefly the building of the dredge, $8,263.77.

Mr. CAMPBELL. What was the material that cost $1,025?

Mr. PUGSLEY. It would be lumber for the dredge and machinery as well.

Mr. CAMPBELL. Where is this dredge being built?

Mr. PUGSLEY. Right at the site of the work.

Mr. CAMPBELL. Where is the site of the work?

Mr. PUGSLEY. At the Mossy river.

Mr. CAMPBELL. Which end of the Mossy river?

Mr. PUGSLEY. I cannot tell which end; I think it is about the middle of the river.

Mr. CAMPBELL. Was this material bought by tender ?

Mr. PUGSLEY. No, bought at the lowest price in the usual way. We got prices.

Mr. CAMPBELL. From whom ?

Mr. PUGSLEY. I cannot tell you, a great deal of it would be lumber.

Mr. CAMPBELL. Has that dredge been built?

Mr. PUGSLEY. Not completed.

Mr. CAMPBELL. Is it even partially built?

Mr. PUGSLEY. Yes.

Mr. CAMPBELL. Well, I was at that place and there is no sign of a new dredge being built although there is a pile of lumber there which I was told was for the purpose of building a dredge.

Mr. PUGSLEY. When was the hon. gentleman there?

Mr. CAMPBELL. In November. When were these expenditures made?

Mr. PUGSLEY. I have not the dates of the expenditure. We have not had a report recently from the resident engineer.

Mr. CAMPBELL. Who is the resident engineer?

Mr. PUGSLEY. Mr. Dufresne, at Winnipeg. He thought he would complete it in three months.

Mr. CAMPBELL. In the case of a large expenditure like this I am perfectly justified in asking from whom the material was bought and why it was not bought by tender. My late opponent was in the lumber business and I want to know how much he has profited, if at all?

Mr. PUGSLEY. The department would have to communicate with the resident engineer and I would be glad to get the information and lay it on the table or hand it to my hon. friend. I will undertake to wire to Winnipeg.

Mr. CAMPBELL. If it was bought from the source I suspect, it came very near to be a violation of the Independence of Parliament Act. Will you please take that into consideration?

Mr. PUGSLEY. I will get the information.

Mr. CAMPBELL. Where is the work to be done with this expenditure of $5,000?

Mr. PUGSLEY. On the Mossy river.

Mr. CAMPBELL. Where on the Mossy river?

Mr. PUGSLEY. Between Lake Dauphin and Lake Winnipeg. There are about 3,500 feet of river to be improved and of course the work will be done where there are most obstructions.

Mr. CAMPBELL. The purpose is to lower Lake Dauphin?

Mr. PUGSLEY. To clear the bed of the river, remove boulders and straighten the course.

Mr. CAMPBELL. I am anxious for information about this because the government dredge has been working at the mouth of the Mossy river for the past five or six years and if this new dredge is going to be operated as the old one was it will not be of much use. The old dredge was equipped with a crane and the sand and mud taken out on one side of the dredge were dumped again into the creek at the other side of the dredge, to be washed back into the channel with every northeast wind.

Mr. PUGSLEY. How many years ago is that?

Mr. CAMPBELL. As late as the time of the general elections last year.

Mr. PUGSLEY. Will you allow me to say——

Mr. CAMPBELL. Excuse me first, because I don't want you to put words in my mouth, as I notice you are very fond of doing.

Mr. DEPUTY SPEAKER. The chairman should be addressed, and if reference is made to any other hon. member he must be referred to in the third person.

Mr. CAMPBELL. I submit of course to the ruling of the chair. Does that rule apply both ways?

Mr. DEPUTY SPEAKER. Yes.

Mr. CAMPBELL. Then I would ask the chairman to notice that the Minister of Public Works has been addressing me as 'you.' What is sauce for the goose is sauce for the gander.

Mr. DEPUTY SPEAKER. The remark I made is applicable to both hon. members who used the expression.

Mr. CAMPBELL. The people living on Lake Dauphin are very anxious that this work should be done, and I trust that the money will be properly expended and not absolutely wasted as it has been at the mouth of the river for the past five or six years. They have succeeded in removing in six or seven years one boulder down at the mouth of the river, and as there are some thousands of them to be removed at the source of the river it will apparently take a considerable time to complete the work. How you are going to remove the boulders with a dredge is beyond my understanding. That dredge has been nothing more or less than a political dredge and the money expended there has been wasted. The government tell us that these are hard times, and so I want the money used and not wasted.

Mr. PUGSLEY. Hear, hear, that is right; that is the way we try to use it.

Mr. CAMPBELL. Mr. Chairman. Is it permissible to look a little lower down in the estimates and to ask if money which is going to be expended in other places should be expended in my riding where it is more necessary?

Mr. DEPUTY SPEAKER. It is not in order to move that the money in one item should be used for another purpose.

Mr. CAMPBELL. If it were in order, I would have very much liked that some of the useless expenditure which I see is going to be made in Saskatchewan, for instance, should be made in Lake Manitoba.

Mr. BRADBURY. A few evenings ago I directed the attention of the minister to the condition the bridge is going to be left in across the St. Andrews rapids, and I now want to renew my statement that it is the duty of the government to complete that bridge. There is no question that the bridge has cost a great deal of money. The provision for the bridge is made, and I presume that it will be completed and planked, and that it will then be left standing in the middle of the Red River, with no connection at either side. I contend that the large expenditure that has been made on it is entirely unjustifiable if the government does not complete it. The bridge will remain and the planks put on it will rot, and it will stand as a monument that will be no credit to the Minister of Public Works. The reply I got from the hon. minister was that the local government or the municipalities ought to make these connections. Every one from Manitoba knows that the municipalities are utterly unable to provide the money that will be necessary to make those connections. I am told by competent men that it will take from $75,000 to $100,000 to complete the bridge so that a vehicle could drive across it, and it is of course utterly impossible to expect that the municipalities can supply that money. The government have expended nearly $1,250,000 in providing the dam across the river and putting the bridge there, as far as they have gone.

Mr. PUGSLEY. Building locks as well, so that there would be a bridge under any circumstances.

Mr. BRADBURY. There would be a working bridge; but if provision had not been made for a passenger bridge I am satisfied that it would have cost the country at least $100,000 less than it has cost. My argument is that the government having seen fit to make provision for a passenger bridge, which I think was wise, the intention was to give the residents on both sides of the river a first-class bridge, but if the bridge is allowed to remain as it is, it will simply be useless as a passenger bridge, and the municipalities are not in a position to provide the connections. I again urge the government strongly to complete the work in its own interest.

Mr. PUGSLEY. I want to correct one statement of the hon. gentleman. He speaks of the planking on the bridge rotting. I may say there is no planking on the bridge. It is to be steel and concrete entirely.

Mr. CAMPBELL. Before the item passes, I would like some assurance from the minister that he will see that this money is expended in a proper way, and not in the ways that moneys have been expended in the past.

Mr. PUGSLEY. That assumes something of which I have no evidence—that there has been any improper expenditure in the past. He would not expect me to admit that.

Mr. CAMPBELL. I would like an assurance from the hon. minister that he will see that this money is properly expended for the purposes stated here.

Mr. PUGSLEY. I think the hon. gentleman can rest assured that the same prudent and economical management will take place in connection with this expenditure as we endeavour to have in all matters connected with my department.

River Assiniboine—improvements near Portage la Prairie, $1,000.

Mr. ROCHE. Is this for the same work that was carried on there last fall?

Mr. PUGSLEY. The same work. This is to settle land damages. The work has been completed.

Some resolutions reported.

On motion of Mr. Fielding, House adjourned at 11.45 p. m.

HOUSE OF COMMONS.

MONDAY, March 22, 1909.

The SPEAKER took the Chair at Three o'clock.

REPORT PRESENTED.

Report of the Department of Trade and Commerce for the year ending March 31, 1908, part III.—Sir Wilfrid Laurier.

RAILWAY COMMISSION.

On the orders of the day being called:

Mr. S. SHARPE. Mr. Speaker, I would like to draw the attention of the hon. Minister of Railways and Canals (Mr. Graham) to a despatch which appeared in the 'Mail and Empire' of March 14, with respect to the Railway Commission. It says that Mr. Buell, of Brockville, representing the government, is presenting the complaints against the express company. I would like to ask the Minister of Railways and Canals if this is a permanent counsel appointed in connection with the Railway Commission and, if so, why is there this discrimination in favour of the western shippers as against the eastern shippers? Why are not the farmers of North Ontario provided with counsel the same as the shippers of the west are?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). This is rather an old story. Mr. Buell has been engaged for some time investigating express matters for the commission. I do not know just what this particular work is but he is not a counsel engaged to present the general complaints of the people against the railway companies. This is rather an investigation into the methods of the express companies which has been going on for a year and a half or two years.

QUESTIONS OF PRIVILEGE.

Mr. SPROULE. Mr. Speaker, I rise to a question of privilege or explanation. Bill (No. 69) has been on the Order Paper for a considerable length of time. I was expecting that it would be reached and when it was reached I intended to make an explanation which was due to the House with regard to something I said when the Bill was introduced. It was a Bill to amend the Land Act and I made the statement based on a memorandum handed to me containing the minutes and proceedings of the Senate, which showed that the Bill as it had passed the Senate had contained an amendment. I stated that the amendment made by the Senate had been dropped and that the Bill had passed this House and received the assent of His Excellency without the amendment. I also referred to section 42 of the Bill, but I do not purpose saying anything in reference to that now as at some future time I may have an opportunity of dealing with it. I simply want to say that I made a very careful inquiry into the whole matter and I found that a misapprehension had been created owing to a mistake made with respect to the matter in the Minutes and Proceedings and the 'Hansard' of the Senate. I have a copy of the minutes which gives the facts exactly as I gave them to the House, but I

find that the minutes are entirely wrong. The clerk of the Senate turned up the record and showed me that the Bill had passed the House without this amendment being in it, although the minutes stated that it had been carried in the affirmative. It came to this House and was passed. I was quite satisfied that I had done a grave injustice to some person, myself and the House by basing my remarks on a statement that was not justified by the facts. I merely make this explanation in justice to the clerk of the Senate and to others through whose hands the Bill passed. The mistake was entirely unintentional.

Mr. BLACK. I want to say a word on a question of privilege. On Friday last I made some remarks with reference to the Dominion Atlantic Railway which runs through the county in which I live. In these remarks I said that I had had an interview with the manager of the road. The sentence I used was this:

I was talking to the manager of that road and he said in one breath that they would not sell and in the next that anybody who bought the road must buy the steamers also.

I said that the manager said that they would not sell. 'Hansard' reported me as saying that the manager said they wanted to sell. This may appear a trifling matter, but it is quite a serious matter to the manager of the road. I would like a correction made more in the interest of the manager of the road than of myself.

INVESTIGATION INTO DEPARTMENT OF MARINE AND FISHERIES.

Mr. R. L. BORDEN. Mr Speaker, may I be permitted to renew my inquiry to the right hon. Prime Minister (Sir Wilfrid Laurier) as to when there will be some information given to parliament and to the country as to the action which the government propose to take, if the government propose to take any action, with respect to the report of Mr. Justice Cassels relating to the investigation which he has made. The Prime Minister will no doubt remember that I made this inquiry on Wednesday, I think it was, the week before last. The Prime Minister then thought he would be able to make some announcement with regard to it during the then coming week. I understand perfectly that he has been unable to do so and I am not complaining of that, but as the matter may have escaped his attention I take the opportunity of referring to it again.

Sir WILFRID LAURIER. The matter has not escaped my attention, but owing to some circumstances I could not take it up last week. Perhaps I may communicate with my hon. friend again on this matter to-morrow or the day after.

Mr. SPROULE.

INQUIRIES FOR RETURNS.

Mr. BARNARD. I would like to ask the hon. Minister of Public Works (Mr. Pugsley) when the return may be expected that I moved for on the 17th February in connection with the expenditure of public moneys on wharfs in British Columbia.

Mr. PUGSLEY. Orders have been given to hurry it as rapidly as possible, but I will make inquiry.

Mr. LENNOX. I wish to ask the Minister of Public Works as to the return in reference to Bonaventure?

Mr. PUGSLEY. That is being hurried along too.

Mr. LENNOX. I would like to call the minister's attention to the fact that we are now a month and twenty-two days waiting for it, and it is a long time.

Mr. PUGSLEY. My hon. friend must bear in mind that there are a great many motions for returns and that ordinarily they have to take their turn in the department. They are being hurried as rapidly as possible. I will make inquiries.

CANADA LIFE ASSURANCE CO.

Further consideration in committee of the whole of Bill (No. 56) respecting the Canada Life Assurance Company. Mr. A. H. Clarke.

On section 1,

Mr. LENNOX. On this Bill we have a very eminent legal opinion on behalf of the policy holders, and as consideration was adjourned so that we might hear the opinion of the Minister of Justice I think we should have that opinion now.

Mr. A. H. CLARKE. That does not apply to the first section.

Mr. LENNOX. The opinion of the Minister of Justice may go to the root of the whole matter as to whether we should pass the legislation or not.

Mr. A. H. CLARKE. Section 2, is the section with regard to which an opinion has been asked. This first section simply deals with the date of the annual meeting of the company.

Mr. MEIGHEN. It is quite true that section 1 is comparatively inoffensive but when the Bill was brought before us a week ago the member for North Simcoe asked that it be held over pending the opinion of the Minister of Justice both as to its legality and as to the wisdom of passing the legislation asked for. If we pass the recital of the Bill we in a measure commit ourselves to the principle. What can be gained by passing this one clause alone?

Mr. A. H. CLARKE. We are on the first clause and not on the recital.

Mr. LENNOX. I do not suppose that the first clause is very important but the question now is whether or not we shall have the opinion of the Minister of Justice on this important question to the people of Canada. We might as well get down to the root of the matter once and for all. We have had the gratuitous opinion of the Minister of Justice in a very defined way; I might almost say in an extravagant and heated way, upon a question not so important as this, and if the opinion of the Minister of Justice is not yet ready on this Bill we had better postpone its consideration. I do not say I will be guided wholly by the opinion of the Minister of Justice but I will certainly be influenced by it to the extent of giving it very serious consideration. We have the opinion of a very eminent counsel in England on this Bill and we know generally speaking that the Minister of Justice has very pronounced opinions upon giving legislation retroactive effect. This is a question that affects 35,000 policy-holders in Canada so that it is a matter of great importance.

Mr. A. H. CLARKE. I submit that this discussion is entirely out of order and I ask the Chairman to rule that when one section is being discussed it is not in order to discuss a subsequent section of the Bill.

Mr. TURRIFF. I do not agree with the promoter of the Bill (Mr. A. H. Clarke). The discussion on this Bill was adjourned for the purpose of getting the opinion of the Minister of Justice, and after we get that opinion we may not want to go on even with the first clause. I think the promoter of this Bill will make more progress if the Minister of Justice gives his opinion now, as some of us will be guided to a very large extent by that opinion.

Mr. AYLESWORTH. I understand that some members of the committee have expressed a wish that I should pronounce some sort of opinion with reference to this legislation. I scarcely know upon what point that opinion is desired. Upon any legal question that arises with regard to this or any other legislation which may be under consideration I am at any time ready to express any opinion that I may entertain, but my difficulty is in seeing what legal question arises upon the legislation now before the committee. It may be that the question is as to the necessity for this legislation, and I can quite understand that there may be different opinions in that respect; it may be that there is no need for it. On the other hand it may be that under the true construction of the statute of 1879, which this legislation proposes to amend or to interpret, a result has been reached which was not the intention of parliament in 1879 when the previous legislation was passed. Now, with respect to what the true construction of the statute of 1879 may be, the whole question is no doubt one of law as to the interpretation of the language then used. Upon that subject I formed an opinion some months ago when the question was raised before the Department of Justice upon a reference to that department by the superintendent of insurance, and the opinion which I then expressed and which for my part I still entertain as a matter of law is, that under the wording of the Act of 1879, and giving to the language there used its strict legal interpretation, the company or the shareholders of the company cannot deduct from the general earnings of the company a percentage by way of interest upon the amount of their capital stock before calculating 90 per cent of the profits for distribution among the policy-holders.

I presume that the legal advisers of the company are of the same opinion, or this legislation would not be presented. So much for the opinion which as a matter of law I entertain as to the meaning and effect of the legislation of 1879. I do not know any ground upon which the competence and power of this parliament to pass the legislation which is now under consideration could properly be questioned. The matter is, so far as I can see, entirely within the jurisdiction of this parliament. I do not know any other question of law that arises. If it is a question of the propriety or wisdom of passing the legislation which is now before the committee, I respectfully take the position that every hon. member of this House is as well qualified as I am to come to a conclusion on the subject. That is not any matter of law. That is merely a matter of the propriety and advisability of passing or refusing to pass this legislation. But if any hon. gentleman desires to know what course I propose, as an individual member of this House, to take with regard to this legislation, I have no objection to stating it, whatever it is worth. So far as I am concerned, I intend to support the legislation, and I rest myself in doing so upon the action of the committee to which it has been referred. I think, in the matter of any private Bill, it is not usual for this House, or this Committee of the whole House, to decline to accept the considered action of any special committee which has taken the legislation into consideration and has passed an opinion with regard to it; and certainly I am prepared to credit the special committee in this case with having had established before it, before its report was presented to the House, such considerations as in its view justified it in the report which it made

favouring the proposed legislation. It seems to me peculiarly a question for consideration before a committee. The second section of this Bill, which is I suppose the only one about which any special amount of controversy would be likely to arise, is a declaratory section, stating what was the intention with which the legislation of 1879 was passed. That I take it is a pure question of fact in regard to which the committee which investigated this question is in a better position certainly than I am, and probably than any member of the House can be, to come to a correct conclusion. In the everyday experience of a practising lawyer, it is not an infrequent thing to find, in any legal document, that the true intention of the parties to that document may not have been correctly expressed. Every lawyer is familiar with an action brought by one of the parties to a contract, before a court of equity, to have the language in which that contract, if it has been reduced to writing, has been expressed, rectified by the court—to have the language of the document made to express what was the true intention of the contracting parties. In any such action, if it is resisted, we always have of necessity the opposing litigant declaring that the document as drawn expresses the true intention, that he so understood the bargain; and perhaps he will contend that he has altered his position upon the faith of his understanding of the language used in the document which expresses the contract. To determine what is the truth, in such a controversy, is the function of the court, and the court if it reaches the conclusion that the complainant is right, and that the written document does not truly express what was at the time of the contract the intention of the parties, does not hesitate to correct the writing and to express what it finds to have been the true intention with which the writing was signed. I take it that is exactly the position here. No court could correct this error in the language used by the parties thirty years ago; no court of equity could interfere in a matter of this sort. The only tribunal which could correct the mistake, if there has been one, is this tribunal, the high court of parliament; and in coming to a conclusion whether or not that correction should be made, this high court of parliament, I take it, ought to act not only cautiously and judiciously, but also judicially and on judicial principles. The first thing to be satisfied is that there was a mistake. It was, I take it, the function of the committee which considered this legislation to be satisfied of that; and in the view that before reporting this Bill the committee must have been satisfied that such a mistake did occur, it seems to me there is no difficulty on the part of members of the House who rely upon the work of the committee in accepting its conclusions. If it is the fact that there was a mistake in the language used in the legislation of thirty years ago, then that mistake ought to be now corrected. If the conduct of the parties interested, through all the years since 1879, demonstrates that there was such a mistake, and that that mistake was common to both parties interested, I presume that there would be no difficulty in coming to the conclusion that parliament to-day ought to say in clear terms what it would have said in 1879, if the danger of misunderstanding or erroneous interpretation had been then present to the mind of parliament. This legislation proposes to enact that in the language used in the Act of 1879, what was intended was that before arriving at the amount, annually or quinquennially, as the case might be, of the profits of this company, which were to be distributed to the policy-holders, the interest upon the amount of paid up capital might be deducted.

If that was the intention in 1879, and if that intention had then been clearly expressed, of course there would be no need for this legislation. We are asked to-day to determine what was the true intention in 1879 and to give expression to it. I was not present in the Committee on Banking and Commerce and am not able to say what facts were brought before that committee to satisfy it that this was the intention in 1879; but it has come to my knowledge in various ways that ever since 1879, the business of the company has been carried on under that impression. If we look at the conduct of the policy-holders, who received, under the statute of 1879, certain increased benefits, I would think that there was evidence in their conduct pointing to a like interpretation on their part. So far as I understand the situation, from that day to this, every policy-holder has acquiesced in this course of business. I have not heard that from 1879 up to the present time, any policy-holder has effectively objected, by bringing an action to have it declared that the course of business pursued by the directors in this respect was contrary to the true meaning of the statute of 1879. If any such action were before the courts, probably different considerations might arise. Probably, the question then for consideration by this committee would be whether or not such action could be interfered with by legislation. But so long as no litigation is on foot in connection with this difficulty, it seems to me that what we have is at most a difference of opinion between the shareholders and the policy-holders as to the meaning of the old statute of 30 years ago. I do not know that there is such a thing as a vested right arising out of a mistake. I have never heard that any defendant, resisting an

action brought before a court of equity to rectify the terms of a writing into which he had entered, could be heard to say that while the writing did not truly express the bargain, he had a vested right to hold his adversary to the consequences of the mistake. The whole question for the court to determine would be whether or not there was a mistake; and if the court came to the conclusion that there was, it would disregard any contention of the defendant that he had a vested right to hold his adversary to the consequences of a common mistake between the two. I speak with some deference. I have a personal interest in this matter. I am a policy-holder in the company to a considerable amount and am not a shareholder. If this legislation does wrong to the policy-holders, it injures me personally as much as any policy-holder whose policy is not greater than mine. But the whole question narrows itself down to the one question of fact, whether or not the Act of 1879 did really and accurately give expression to what then was the intention of parliament and of those who applied to parliament? If it did not, the mistake ought to be corrected, and no one has any right to claim that he is being injured because that mistake is now being made right.

Mr. DEPUTY SPEAKER. The clause before the committee is No. 1, regarding the annual meeting. If it be the desire of the committee to discuss clause 2, there should be a motion to that effect. Otherwise the committee must confine itself to clause 1.

Mr. MEIGHEN. I move that clause No. 2 be considered.

Motion agreed to.

Mr. MEIGHEN. If it was the desire of hon. members to ascertain from the Minister of Justice what position the government took with respect to this Bill and the retroactive character of the legislation proposed, that desire has been disappointed. If on the other hand, it was the desire of hon. members to secure any light on the subject from the Minister of Justice himself, in his personal capacity as a member of this House, then that desire has also been disappointed. But if the members of this House expected to have an expression of opinion from the hon. minister, based on reasons that are utterly unfounded, that expectation has not been disappointed. The Minister of Justice takes first the ground that this legislation has reached a status by reason of its having passed the Committee on Banking and Commerce, where he is not as free to oppose it as he otherwise would be. Not being a member of long standing, I do not wish to discuss at any length that position; but I am not aware that the mere passing of a Bill of this character through the Committee on Banking and Commerce places it in a position where is is beyond the responsibility of the government and does not require any endorsation from the minister, within whose particular province it falls. But on the other hand, I would draw the attention of the Minister of Justice to this feature of his own argument. He assures us that he holds a specific opinion, which he has entertained for some time, as to the legal effect of the amending Act of 1879, which opinion he believes the solicitors of the Canada Life Insurance Company also entertain. Let me point out to him that the very solicitor of the Canada Life who urged the passage of the Bill through the committee, did not make any such representation to that committee but the very opposite. Therefore if the position on that point taken by the Minister of Justice be correct, we should refer the Bill back to the committee, because the committee was absolutely misled regarding the position taken by the legal advisers of the Canada Life. The legal advisers of the Canada Life Assurance Company, or, at least, the adviser who was before the committee, distinctly stated to the committee that, in his view, the amending Act of 1879 meant what they now desire to have it declared to mean—meant that the profits there referred to did not include interest on capital stock. He stated that a contrary opinion had been given, and it was to remove the utmost possibility of doubt that this Bill was before the House. That is very different, and very materially different, from the position taken by the Minister of Justice, which position, he assures the House, is the legal stand taken by the solicitors of the Canada Life. Therefore. the Bill was put through the committee in such a way that it should not receive further sanction or higher status in the eyes of either of the Minister of Justice or of any member of this House. Now, the Minister of Justice goes on to further argue that only a pure question of fact was before the committee, and that that committee was as competent to judge of the fact as he or any other member of the House. What are the facts? In 1849 the Canada Life Assurance Company took out a charter. By the terms of that charter they were required to distribute their profits to the policy-holders and shareholders on the basis of 75 per cent and 25 per cent respectively.

Mr. A. H. CLARKE. What section of the Act?

Mr. MEIGHEN. I have not the Act before me, but the hon. gentleman (Mr. A. H. Clarke) will not deny——

Mr. A. H. CLARKE. The hon. gentleman (Mr. Meighen) refers to what was in the deed of settlement. In the Act there

was nothing of that kind, it was left entirely to their discretion.

Mr. MEIGHEN. Perhaps it was in the deed of settlement of 1847——

Mr. A. H. CLARKE. You are right.

Mr. MEIGHEN. The point is immaterial. As the law stood at the time of the Act, and perhaps for some years before, the distribution had been on the basis of 75 per cent and 25 per cent, the company besides laying by a reserve of 4·67 per cent interest on their capital stock. By the amending Act of 1879, procured at the request of the company, a clause was inserted reciting that the company had been distributing during these years their entire profits and enacting that thereafter the distribution should take place in the proportions of 90 per cent and 10 per cent instead of 75 per cent and 25 per cent. Now, for some thirty years the Canada Life has proceeded upon the basis of the Act but has continued to put by a reserve of 4·67 per cent for the shareholders before arriving at the profits which they were to distribute in the proportion of 90 per cent and 10 per cent. The Minister of Justice takes the position that the question before us is simply a question of fact. He says the high court of parliament is in the position of an ordinary court of justice which has to deal with two litigants who have entered into a contract, one claiming that the contract is a mistake and the other resisting the claim, and the one resisting the claim perhaps setting up that he has acquired rights under that contract on the basis of that alleged mistake. The minister says that the parties now come before the high court of parliament in an analogous position. That is the foundation of his case. Is that a correct statement of the position? I submit that it is not. Do the two parties who entered into that contract in 1879 appear before parliament? They do not. The only party to that arrangement of 1879 was the House of Commons of Canada. The parties to the contracts appeared later, and they were the Canada Life Assurance Company and the 35,000 policy-holders, who, since that date, have acquired rights by the Act of 1879. The two parties as they existed in 1879 do not come before the high court of parliament. If there was any mistake, then it cannot be attributed either to the Canada Life Assurance Company or to the policy-holders, nor can it be attributed to the shareholders of that time. The mistake, if there were a mistake, is to be attributed to the parliament of Canada alone. Therefore, the legislation which the Minister of Justice now favours is not to correct the mistake of any of these other parties in 1879, but to correct a mistake of the parliament of Canada—that is, granting that it is a mistake. But who are the parties who are interested in this matter at the present time? Even assuming that the Minister of Justice's statement as to the analogous position of the parties is right—that is, that the parties to this contract who erred were the shareholders and the policy-holders of 1879—are they the parties in any sense who come before this House now? They are not. The parties before this House are the shareholders and policy-holders of 1909—different parties altogether. Thirty-five thousand policy-holders have come in since 1879 who were not parties to the alleged mistake of 1879, who derived no rights from the parties to that mistake, but stand in an absolutely distinct position and on a higher level altogether, and it is from the point of view of these policy-holders that this Bill should be considered. Has the Minister of Justice discussed the case from the point of view of the 35,000 policy-holders who have come in since 1879? Not a word has he uttered in his statement, which has been looked forward to for eight days in this House, with respect to the policy-holders; not for one moment has he stood in the position of these policy-holders or argued the matter from their point of view. The innocent policy-holders are the first to be considered. They are greatest in number and their rights are the greatest, and we should discuss this matter, and the Minister of Justice should have discussed this matter, from their point of view.

The Minister of Justice goes on to argue that the policy-holders have acquiesced. I have yet to hear it argued in a court of justice—where some very strange things are sometimes argued—that the acquiescence in any position of any party who is not a party to the original contract is a reason why that party should be deprived of rights which he otherwise would have. These 35,000 policy-holders either have rights under their contract with the Canada Life Assurance Company, or they have no rights. The Minister of Justice was considering whether or not they had rights which this Bill affected, and he frankly comes before this House and tells us that he thinks they have rights and that this Bill affects those rights. But he says that they have had these rights for thirty years and have never come before a court of justice and asked for redress. Is he going to set it up as a precedent that because certain citizens of Canada have slept on rights for thirty years that that is justification for the House of Commons of Canada to pass an Act to cut under those rights and take away the foundations on which they rest? If he does, where will his precedent carry him? If rights are not to be observed simply because no one has chosen to enforce them in courts of justice, then by what criterion does the Minister of Justice decide whether

he cuts into vested rights or not? This afternoon he comes forward and says there is no litigant. I regret that the rules of the House forbid me from referring to a discussion that took place about two weeks ago in reference to a similar principle. I will say, however, that the acquiescence of parliament has never in the past been held to have destroyed the rights of citizens in any way. Now they have the rights, but the Minister of Justice says they are not in litigation, therefore he says parliament is justified in cutting them out. Does the Minister of Justice lay it down as a principle that vested rights are not vested rights until they are in litigation? Have they no status in his mind until they reach the status of litigation? Are not vested rights just as sacred to him and to this House before they are the subject of a lawsuit as they become by virtue of a lawsuit? Will they by virtue of a lawsuit reach a position and a degree of sacredness that they did not possess before? Furthermore, has it ever been argued by the Justice Department of this country, has it ever been argued within three weeks of this date, that the outrage, that the violation of the 8th commandment consisted in taking away the position of a litigant, the footing of a litigant, after he got into court? Has it not rather been argued that the outrage and violation consisted in denying the right to litigate? It was the right to litigate that was before sacred in the eyes of the minister, it was access to the courts of justice that was sacred to them, and it was the taking away of that access that was an outrage. Why is it not an outrage to-day? Surely it is not the policy of the House of Commons to stand between a litigant and the court. Is it any more right and just to step in between the litigant and a court of justice than to go to the court and throw the litigant out? I see no difference. It has always been, as I have understood, the doctrine propounded by the Minister of Justice himself, and by the hon. gentleman who proposed this Bill, that the cardinal outrage of legislation of this kind was in cutting out the right to litigate, and not in throwing the litigant out of court. Why is that position changed? Why do the promoters of the Bill now come to parliament and say that these people cannot be said to have vested rights because they have not yet asserted them? Surely, that position is unworthy the dignity of this House, and unworthy the dignity and high standing of the Minister of Justice.

Now, what position are we to take? One of three positions we must take. Either firstly, the Act of 1879 is clear in its terms, and means that the profits include the same profits that any other business would include as profits, and include the interest on capital. If that is the case, then policy-holders who have come in since that time have absolutely vested rights, and this Bill is retroactive and takes away those vested rights. Surely the Minister of Justice, in receipt as he is and as he will not deny, and the Minister of Finance, in receipt as he is, and as he will not deny, and the Prime Minister, in receipt as he is, and as he will not deny, of specific statements of claims from policy-holders, from a policy-holder who has come in since that time, not only of a specific statement of his rights but of an absolute statement that he wishes to litigate those rights, surely these hon. gentlemen, in receipt of that very statement, and knowing his position as a responsible policy-holder of this company, will not say that they are not doing now exactly the same thing as taking away the rights of the litigant, and throwing him out of court as well. That is one case that may exist. Secondly, the Bill of 1879 may be absolutely clear in its provisions, and it may not mean that the profits include interest on the capital stock. If that is the case, then this legislation is null and void in so far as the second clause is concerned. Then the Canada Life Assurance Company would have no reason to come before this House and ask for an interpreting statute, because the legislation is now just in the position they want it. So that on the first two grounds they have no right to ask this parliament for legislation. But another state of affairs might exist. It might be that the Act of 1879 is doubtful in its meaning, that there is a latent or a patent ambiguity in it, and that it may mean that profits should include interest on capital stock, or it may not mean that. But if the third position is a correct statement of the case as it stands, then the courts of this country are established for the purpose of interpreting Acts of parliament; they are established for the purpose of saying what is the real meaning of this clause in the Act of 1879, that contains a latent or a patent ambiguity. Why should the House of Commons, in this case, step in and interpret this legislation, if it is doubtful, unless it proposes similarly to interpret legislation in every other case where it is doubtful, unless it proposes to usurp the functions of the court and act as interpreter as well as an author of legislation? Why does it step in in the interest of a large corporation against the interest of many poor policy-holders? If the meaning is doubtful, it is the province of the courts to interpret it; and I say that when this comes before the courts for determination, the considerations urged by the Canada Life Assurance Company and by the promotors of this legislation will be given such weight at the hands of the court as they ought to receive, as those considera-

tions should receive, no more and no less. Considerations of the intent of parliament, in certain cases, are entertained by the court; considerations of the intent of the promoters of the Bill in certain cases, are entertained by the court, and in every case where those considerations are entertained, they would be entertained in this case. Principles of equity and of justice in this country have determined to what extent and at what time such considerations as intent should apply. Why not leave it to the courts. The answer is that the Canada Life Assurance Company taking the ground that if this Act is doubtful in its meaning, want more consideration given to the intent on our part even as against innocent policy-holders, than they are entitled to have given it in a court of justice.

We want certain provisions to have certain definite meanings just as they would have if they were placed before the proper tribunal for interpretation. We want the rules of equity that apply in courts of justice to apply to this case in order to bring it to a definite conclusion and to achieve a definite result. I say that if this is a matter of doubtful interpretation as they themselves contend it is, it should go to the proper tribunal which will give every consideration its due and proportionate weight and no more. On whatever ground, on whatever principle we may apply with respect to the meaning of the Act of 1879, whether it be the first as outlined, that 'profits' have to be taken as meaning interest on capital, I say, it involves the principle of retroactive legislation and therefore this Bill is distinctly retroactive and unjustifiable on every ground of justice and equity. If it be the second, if the Act is clear and if the word 'profits' does not include interest on capital stock, then there is no need of the Bill at all. If it be the third, then it is clear, and the Minister of Justice will not deny, that it is the province of the courts of justice to interpret legislation. I think I have covered the ground as put forward by the Minister of Justice. Let me now call the attention of the committee to another consideration, which I frankly admit should not bear heavily with the members of this House, and which I do not think comes really to the kernel of discussion, because the kernel of the discussion is whether we are going to cut off these 35,000 policy-holders or not from any sound claims to which they are entitled and from which they will be cut off if this Bill should pass. The phase I desire, however, to refer to is that of an adequate return on invested captial. It is a well known fact that from the time the Act of 1879 was passed up to 1899 the capital stock of the Canada Life Assurance Company was $125,000. On that capital stock 4·67 per cent was laid aside as interest before the profits were arrived at. In 1899 that capital stock was increased and up to that time the reserve for interest amounted to the insignificant sum of some $5,800. The Minister of Justice might, in laying this matter before the House, have pointed out, I think very reasonably, that the policy-holders would not have benefited to any appreciable extent individually, by the compelling of their rights in a court as he says they should have done. It is only since 1899 that that might have been done and I think no one would contend that the results to the policy-holders would before 1899 have been at all commensurate with the outlay which would have been entailed in court. During these years from 1879 to 1899 the shareholders of the Canada Life Assurance Company were in receipt of very considerable premiums. They tell us now that unless this Bill passes we, who have put a million dollars into this company, will only get 3·6 per cent or 3·8 per cent and therefore at a very opportune time the Canada Life Assurance Company comes to this House and asks for this legislation. But, it was not always thus, nor would it be always thus? For twenty years, prior to 1899, their capital stock was receiving dividends and interest to the extent of 20, 30 and as high as 70 per cent. It would average, I believe, 30 per cent or probably more for the twenty years on the $125,000 of capital stock. Now they have increased the basis of their capital in order that they might get eight per cent on their money and they have come before us at the very time that the proportion of their capital stock, compared with the volume of their business, is large and when they are not able to extract the enormous dividends which they were enabled to extract in years gone by and which they will be able to extract in years to come. At a time when dividends are at the lowest they seize the opportunity to come before this parliament and ask for legislation. Is there any reasonable anticipation that the low dividends will continue? Just as in years gone by, before 1899, the volume of business as compared with the volume of their capital stock, was great and the dividends that they derived brought them thirty per cent, so, in years to come, as the volume of business of the Canada Life Assurance Company steadily increases, as the volume of business of all large life insurance companies is almost mathematically certain to increase, if this Bill fails to pass, it is practically a mathematical certainty that the rate of dividend which will accrue upon the million dollars of capital will be a great deal larger than it is today. So, we need have no apprehension on behalf of the shareholders. It is practically certain, there can be no reasonable

doubt, that the condition that prevailed before 1899, when the volume of business held a large proportion to the volume of the capital stock, will recur in years to come and that the volume of business will attain to the same proportion of the capital stock as in days gone by. There is no reasonable apprehension that these people under the law as it stands will not receive an adequate return on their money. The shareholders got together in 1899 and added to their capital stock to the extent of $875,000. Were they compelled to do so by any legislation from this House? I think not. They did so voluntarily and if I am permitted to quote the Royal Insurance Commission, they unwarrantedly increased their capital stock to the detriment of the policyholders. I am quoting that statement from the report of the Royal Commission. The Act of 1879 meant the same in 1899 as it means to day and will always mean unless this retroactive legislation is passed. They added to their capital with their eyes open and if that be so why should we come to the assistance of these people and relieve them from the situation into which they voluntarily plunged and plunged for their own benefit? I do not propose to go on and discuss the action of the Canada Life Insurance Company in piling up systematically, hurriedly, precipitately, its reserve to some $2,500,000 instead of following the course outlined in the Insurance Act except to say that by that very action the Canada Life Assurance Company have put between the shareholders and possible loss in time to come that fortification, and that absolved them, one would reasonably think, not being an insurance expert, from any necessity of adding to the volume of their capital stock, and it would certainly absolve them from any right to come to this parliament and say that by virtue of adding to their captial stock and of the results thereof they are entitled to an Act declaring the meaning of an Act thirty years old and interfering with vested rights that have grown up during those thirty years. Let me, before concluding, make one reference to a statement of the Minister of Justice. The Minister of Justice says that the policyholders have slept on their rights for thirty years, that they have for these years been in that position and that they could have gone to the courts. The same argument exactly applies to the shareholders. The shareholders, for thirty years, have let the legislation stand while they could have gone to the court or come to parliament to ask to have it changed. I do not think it is fair to state that the policy-holders have stood on their rights for that time.

The fact that I am a policy-holder in this company for one thousand dollars only will not I hope influence my position on the Bill, but it enables me to say that for the eleven years I have been a policy-holder I do not recall ever receiving any statement from this company to show that interest had been cut off before the profits were determined. It is only reasonable to assume that very many policy-holders would be in the same position, and even if they took the trouble to scan this report and compare it with the Bill very few would even suspect that their rights were being infringed. We are here to preserve rights as they are and not to preserve rights after they are in litigation. I want to make an appeal to members of the House who perhaps up to this point have been led to support the Bill without knowing its real meaning. I believe there are many members in the House who supported the Bill in select committee without knowing it has a retroactive character as the Minister of Justice has frankly admitted it has. Therefore, the vote of these hon. gentlemen in the select committee in no way binds them to support the Bill in this Committee of the Whole. Let hon. gentlemen who support this Bill, seriously consider what they will be able to say in years to come when people may come to them and state that under a misapprehension of the law they have invested money, and now want parliament to help them out of their difficulty. How can we ever deny to such people redress, even at the expense of innocent parties, if we set a precedent now which I submit will be fatal in years to come?

Mr. SAMUEL SHARPE. I wish to raise an objection as to the insufficiency oi the notice to the policy-holders who are affected by this legislation. I wish Mr. Chairman, to call your attention to No. 90 of the rules of the House :

> All applications to parliament for private Bills, of any nature whatsoever, shall be advertised by a notice published in the 'Canada Gazette'; such notice shall clearly and distinctly state the nature and objects of the application.

Now, in the face of that rule I desire to call your attention to the notice published by the promoters of this legislation :

> Notice is hereby given that application will be made to the parliament of the Dominion of Canada at the next session thereof for an Act to amend the Acts relating to the Canada Life Assurance Company by changing the date of the annual meeting and making necessary changes as to notices of meetings consequent thereon, and providing for any further changes in the date of such meeting.

You will see that this is a very formal notice and that it does not really go to the essence of this legislation. Next follows a very innocent little clause in the advertisement which sets out the notice to the

policy-holders who will be affected and it says :

Defining the provisions as to division of profits.

I submit for your ruling, Sir, that this is not sufficient notice to the policy-holders who are going to be affected by this legislation and that it does not conform to the rule of the House as to setting out the nature and object of the application. Then there is another objection which I take and on which I ask your ruling.

Mr. DEPUTY SPEAKER. I submit to the hon. gentleman that it would be more convenient to raise one point of order at a time and have that disposed of.

Mr. SAMUEL SHARPE. Then, Sir, I ask your ruling on that point, and I submit that the committee should send the Bill back to the Committee on Standing Orders to investigate as to the insufficiency of the notice. I do not believe that any member of this House can think such a notice sufficient to the 35,000 policy-holders, especially in regard to retroactive legislation which is undoubtedly detrimental to their interests. The notice does not say whether this legislation is in the interests of the policy-holders or against their interests; it is so bald that they could learn nothing from it as to the true meaning of the legislation. Then the notice continues to say:

And extending the powers of the company as to holding real estate in Ontario and for other purposes.

It will be seen that the most vital matter in the whole Bill is inserted in the most innocent way between two other matters of a subsidiary character. The policy-holders have not received proper notice that this important legislation of a retroactive nature which is detrimental to their interests will be proposed to this parliament. I ask you, Mr. Chairman, if in your opinion you think that notice conforms to the orders and rules of the House?

Mr. DEPUTY SPEAKER. Whatever weight there may be in the point raised by the hon. member may be argument against proceeding with the Bill, but this committee is instructed to consider this Bill, and I do not think the point of order is well taken as such. The objection raised by the hon. member should be dealt with either in the previous select standing committee or by the House itself. I do not think it is a question for this committee of the whole.

Mr. SAMUEL SHARPE. The next objection I desire to take against proceeding with the Bill at this time is, that the Select Committee on Banking and Commerce has introduced an amendment to the Bill that was not contemplated in the notice given to the public. I refer to clause 4, in which the select committee has changed the denomination of the shares. That goes to the very existence of the company because it gives the power of re-dividing the shares into denominations of $100 from denominations of $400. In other words it gives the shareholder four votes where previously he was only entitled to one vote. I submit that the policy-holders and the shareholders should be heard on this amendment before it is considered by this House. Clause 4 reads:

4. The shares of the capital stock of the said company, which are at present one hundred pounds (Canadian currency) or four hundred dollars each, shall hereafter be divided into shares of the denomination of one hundred dollars each, and each shareholder shall thereupon become entitled to, and be deemed the holder of, four shares of one hundred dollars each in respect of each of the shares held by him; and the books and share registers of the said company shall be amended so as to conform to the provisions of this Act.

In support of my objection I refer to Bourinot third edition, page 779.

Mr. NESBITT. Mr. Chairman, you have given your ruling and I would ask if the hon. gentleman is in order?

Mr. DEPUTY SPEAKER. The hon. gentleman is in order; the previous point of order having been disposed of the hon. member is now raising another point of order.

Mr. SAMUEL SHARPE. I quote from Bourinot, third edition, page 779:

It is the duty of the committee to which any private Bill may be referred by the House to call the attention of the House especially to any provision inserted in any such Bill that does not appear to have been contemplated in the notice for the same, as reported upon by the Committee on Standing Orders.

In case the committee do not so report, and a member is of opinion that certain provisions of a Bill are not contemplated in the notice for the same, he may raise a point of order, and it will be for the Speaker to decide. In such a case it is the more regular course to discharge the order for consideration in Committee of the Whole, and then refer the Bill to the Committee on Standing Orders.

The committee on a Bill have no authority to make any amendments therein which may involve an infraction of the standing orders, or which may affect the interests of the parties interested, without due notice having been given to the same.

These amendments were not mentioned in the notice to the public, and therefore I hold that we cannot proceed with this Bill. I ask your ruling, Mr. Chairman, on that objection.

Mr. A. H. CLARKE. Before you rule, Mr. Chairman, I would like to say that

the point of order which has just been taken has no reference whatever to section 2, which is now under the consideration of the committee. When we come to section 4, to which the objection refers, then will be the proper time to discuss it.

Mr. SAMUEL SHARPE. I might also, Mr. Chairman, call your attention to the following, in the journals of the House of Commons, of the 28th March, 1870, volume 3, page 116:

The orders of the day being read, for the second reading of the Bill to amend the Acts of incorporation of the Great Western Railway Company;

The Hon. Mr. Carling moved, seconded by Mr. Shanly, and the question being proposed, that the Bill be now read a second time;

And objection being taken by Mr. Cameron, member for the electoral district of the south riding of the county of Huron, that certain of the provisions of the said Bill as amended by the Select Standing Committee on Railways, Canals and Telegraph Lines were not contemplated in the notice given under the rules of the House, nor in the petition praying for the passing of said Bill;

Mr. Speaker decided that the Bill should be referred to the Select Standing Committee on Standing Orders to report whether the powers to be conferred are in excess of the notice given, or whether they are substantially included in it.

On motion of the Hon. Mr. Carling, seconded by Mr. Shanly,

Ordered, that the said order be discharged; and the Bill be referred to the Select Standing Committee on Standing Orders.

This is a case identically in point, in which the Committee on Railways and Canals made an amendment to a Bill that was not contemplated in the notice. This amendment, changing the denomination of the shares from $400 to $100, goes to the very essence of the constitution of the company and affects the voting power of the different shareholders. Consequently I submit that we should not proceed with the Bill until notice of this amendment is published, so that the parties affected may be informed that such a change is proposed to be made in their vested rights.

Mr. DEPUTY SPEAKER. It does not appear to me that the point of order is well taken. It is an argument or reason why this committee might refuse to continue consideration of the Bill and not really a point of order. The words quoted by the hon. gentleman state the fitting course in the House.

In such a case it is the more regular course to discharge the order for consideration in Committee of the Whole, and then refer the Bill to the Committee on Standing Orders.

As the Bill has been referred to this committee for consideration, I do not think the point of order which the hon. gentleman has raised holds.

Mr. S. SHARPE. Do you hold, Mr. Chairman, that I am in order to make that motion?

Mr. DEPUTY SPEAKER. The hon. gentleman may move that the committee rise and report progress, and then the question will be before the House.

Mr. S. SHARPE. I move that the committee rise and report progress, and that the order be discharged and the question be referred to the Standing Orders Committee.

Mr. DEPUTY SPEAKER. I do not think this committee can accept such a motion. The hon. member may move that the committee rise and report progress and ask leave to sit again, or that the Chairman leave the Chair. I would desire further advice on the point, but I am not sure that this committee has any power to discharge a bill or refer it to any other committee.

Mr. R. L. BORDEN. I think that is correct. An order for the consideration of a Bill can only be discharged by the House with the Speaker in the Chair. The only course to be taken to carry out the intention of the hon. member would be for the committee to rise and report progress. Then, if the House thought proper, the Bill could be referred back to the Committee on Standing Orders for a further report on the sufficiency of the notice. I would like to point out to the Prime Minister that the notice in this case is extremely meagre, and does not seem to have covered what was intended to be done. The only portion of the notice which could by any possible straining of the English language refer to what was contemplated are the words :

Defining the provision as to the division of profits.

If the notice had announced what was the obvious intention of the promoters of this Bill, it would have stated that it was intended to declare by the legislation contemplated that 90 per cent and 10 per cent of the profits as expressed in the Act of 1879 should not in any way include the profits derived from the investment of the company's capital. That would have given ample notice to every policy-holder throughout the country of what was intended. I do not imagine that there is an hon. member of this House who really believes that the notice as printed in the 'Canada Gazette,' gave the slightest intimation to any policy-holder of the real intention of the promoters. As a matter of fact, every one of us knows that no such intimation was made to the policy-holders of the Canada Life. The result is that, without any actual hearing of the men who are entitled to a hearing, this Bill has been passed by the

Committee on Banking and Commerce ex parte in the true sense of the word, without the persons interested in that particular aspect of the question having the slightest notice to come here and maintain their rights. In my opinion the Bill ought to be sent back for that reason, if for no other.

Sir WILFRID LAURIER. My hon. friend from North Ontario (Mr. Sharpe) has raised, as I understand it, two points of order. The first one is the general one that the notice given was not sufficient to enable the policy-holders as well as the shareholders to know what was the intent of this Bill. I understand that the Chairman has ruled against this objection. The second objection which my hon. friend has taken is that a section has been introduced in the Bill changing the character of the shares by providing that shares of $400 can be converted into shares of $100. This seems to be an objection which is worthy of consideration. But I would suggest to my hon. friend that, as section 2 is now before the committee, we had better pass that section, and when we come to section 4, it will be open to my hon. friend to raise his point, and we shall then give it the best consideration at our command. There is some force in the objection raised by my hon. friend the leader of the opposition, that the notice has not been sufficient to cover the Bill. That is a point which has been passed upon already by the Standing Orders Committee, by the Banking and Commerce Committee, and by the Chairman of this committee. It is not too late to take it up again, but I would suggest that we had better go on with this Bill and then raise the point when the Speaker is in the Chair, if it be considered necessary to raise it.

Mr. R. L. BORDEN. I understand that our Chairman has ruled, and ruled very properly, that this is not really a point of order at all. Even if it were demonstrated to him that no notice had been given, he could not entertain that as a point of order, nor could he entertain as a point of order the fact that sufficient time had not been allowed in the notice. I entirely agree with you, Mr. Chairman, in your ruling, but that does not absolve this committee from its duty. It does not absolve this committee from saying whether or not the 35,000 policy-holders in the Canada Life are entitled to better notice of this Bill than is to be found in the 'Canada Gazette.' Some time or other this committee will have to determine that, and that question arises just as well on this section as it will on section 4. I venture to repeat my conviction that the notice given is not such as was contemplated by our rules.

Mr. TURRIFF. As a policy-holder I may say that I did not receive any information of this legislation. I understand now that the matter was advertised in the 'Canada Gazette,' the Toronto 'News,' the Monetary 'Times,' and some other financial papers. I believe I am in about as good a position to have received the notice as the average holder of the 35,000 policy-holders of the same company; and I am free to admit that if I had received that notice, I would not have been able to understand from it the legislation contemplated in the Bill now before us. Therefore, I think the point is very well taken, and that this Bill should be referred back on account of the insufficient notice. We must bear in mind that there are 35,000 policy-holders whose money is at stake and that this legislation proposes to be retroactive, and that it wipes out, to a certain extent, rights which these policy-holders possess or think they possess. In my opinion, had the Committee on Banking and Commerce been given the opinion of the Minister of Justice, they would never have passed this Bill. As the notice sent is not sufficient, this Bill ought to be sent back, so as to give the policy-holders an opportunity to come before the Committee on Banking and Commerce and state their views.

Mr. A. H CLARKE. I hope my hon. friend will not go on the platform in his constituency at the next election and make such a grave admission of incapacity as he has just given us.

Mr. TURRIFF. I will take my chances.

Mr. A. H. CLARKE. He says he has not any knowledge of what is proposed in this Bill almost up to the present moment. Well, the first reading was on the 11th of February, 1909, and the Bill has been on his file in his desk for more than a month. During all that time he has had before him the full text of the section we are now discussing. It is therefore rather surprising that he should get up in his place and say that he has not learned the contents of this Bill up to the present time.

An hon. MEMBER. He did not say that.

Mr. A. H. CLARKE. I do not understand that the rules of the House require that full particulars of a Bill should be given in the notice. The notice is to draw attention that a Bill is to be introduced on a particular subject, and I venture to say that in the notice referred to, there is as much information as is contained in any notice of the kind. There is certainly as much information regarding the division of profits as regarding the change of date and the acquisition of more real estate. We have an officer here whose business it is to deal with these matters. Rule 95 is very clear:—

There shall be an examiner of petitions for private Bills.

Petitions for private Bills, when received by the House, are to be taken into consideration by the examiner, who shall report to the House in each case the extent to which the requirements of the rules regarding notice have been complied with; and in every case where the notice is reported by the examiner to have been insufficient or otherwise defective, the petition shall be taken into consideration without special reference by the Committee on Standing Orders, who shall report to the House recommending the course to be taken in consequence of such insufficiency of notice or other defects therein.

Everything was conducted regularly. The petition came before the examiner and he examined whether the requirements regarding notice had been complied with. I suppose if the notice had been put in the Toronto 'Globe' instead of the Toronto 'News,' my hon. friend would have seen it. but it would not have been seen by others equally interested who read the Toronto 'News' and do not read the 'Globe.' The examiner is an official of great experience. He has been in the employ of the House of Commons many years. He examined the notice in this case and reported that it was in every particular in accord with the requirements of the rules; and on his attention being again drawn to the matter, he still maintained the opinion that the notice was sufficient.

Mr. MAGRATH. As a policy-holder, I am exceedingly sorry this matter is being discussed here. This discussion will not do the Canada Life any good. Some gentlemen who have amassed wealth may become too aggressive. There is too much haste about this Bill and the way it is going through this House. Two classes of securities are concerned in it—those held by the stock-holders and those held by the policy-holders. The first represent $1,000,000, and the second $25,000,000. I am not saying whether this Bill is right or wrong. As a policy-holder, I do not want my heirs to draw one dollar which belongs to the stockholders, but I do not propose that the shareholders shall draw one dollar which belongs to my heirs. As a policy-holder, and I suppose as a citizen of average intelligence, I should have something to say about legislation affecting my rights, and I positively got no intimation from the Canada Life of what they contemplated. That company, as a business organization, should have notified the people it was doing business with, and for whom it acts as trustee. We have other corporations coming before this parliament for legislation, corporations which have bondholders as well as stockholders; and it is a principle, I understand of legislation, which this parliament insists upon, that the assent of the bondholders should be obtained, up to a certain percentage, before any legislation affecting their rights is passed. I am not asking that in this case, but I say that we should insist that the people who are interested should be properly notified. I am personally strongly of the opinion that in the Insurance Bill before this House, there should be a clause providing that where insurance companies seek legislation affecting the interests of the policy-holders, they should be compelled to give each policy-holder two or three months' notice so that he may be in a position to protect himself. I say again, I do not know that this legislation is bad, I do not know that it is good, but I do know that the people who have a large amount of money in it have not been advised. And I say that it is no excuse to plead that these companies give notice in the papers. Other corporations who come for legislation likewise give notice in the papers, but this parliament insists that the stockholders shall have the assent of the bondholders before that legislation becomes effective. And I think that is a fair position to take. These gentlemen ought to be told to go back, and the policy-holders should be given an opportunity to consider their interest in this matter. It is true, there is a gentleman, Mr. Laidlaw, who has been sending around literature on this subject. I can say that Mr. Laidlaw does not represent me; he has never had authority from me as a policy-holder, to send out complaints to this House. I have not been consulted as a policy-holder. I think it is wrong that this legislation should pass under the circumstances.

Mr. NORTHRUP. The motion before the committee, as I understand it, is that the committee rise and report progress. I think that every hon. member will admit that we are now in a very unusual position. I think that every hon. member will admit that the importance of this Bill and the gravity of the issues involved are such that it would be most regrettable if hon. members, in dealing with this unusual position, did not approach it with perfect calmness and impartiality, and with a sincere desire not only to do justice but to maintain the dignity of the House. I think that your ruling, Mr. Chairman, is, beyond question, correct. I think that no hon. member will dispute the soundness of your statement that the objection taken—that notice was not sufficient—while, in my judgment, a good objection, was not taken when effect could be given to it. But we are in this peculiar position: Here is an important point raised, yet it cannot be adjudicated on the merits. We are in a peculiar position also for this reason—and I think I may refer to it on this motion that the committee rise and report. This Bill came before the House a few days ago and the House thought the opinion of the Minister of Justice of such importance that it was

agreed unanimously to let the Bill stand until that opinion could be obtained. The Bill everybody recognizes as retroactive legislation. But the gentleman who promoted the Bill before the committee—I am not a member of the committee, but I am informed—denied that this Bill was retroactive legislation, but said that, inasmuch as the words of the Act of 1879 admitted of the possibility of a different construction, therefore to prevent the possibility of a construction which the House had not intended, it was desirable that this Bill should pass. Now, under the view of the Minister of Justice as laid down, it is perfectly clear that this clause, if it passes, will be retroactive legislation. If that be the case, and if the gentlemen before the committee distinctly repudiated that stand but asked to have this clause passed on entirely different grounds, I think we should not be casting any reflection upon the committee if the House, in its wisdom, should send the Bill back to the committee and ask them to consider this important legislation in the light of the opinion of the Minister of Justice which, for the first time, has been made public to-day. When it comes to the question of the word 'profits,' in the notice given in the 'Gazette,' it strikes me that the notice was really no notice at all, because this word 'profits,' as used in the notice, is a new word coined for the occasion. I am not aware of any case in the English language in which the word is used in the sense in which it is used here in section 2. If a person of ordinary English education finds the word 'profits' in a notice of application to parliament, he naturally takes it in the sense in which he has been accustomed to hear it used, and the sense in which any dictionary to which he might refer would authorize its use. It is a common word; we have banks, loan companies, other insurance companies in relation to which the word 'profits' is used. It cannot be a matter of great difficulty to find out what the word means, and I venture to say that the shareholders of any bank, the Bank of Montreal, for example, would be very much surprised to find that the 'profits' of the bank were only a certain small sum after the interest on the capital—and, I suppose, reserve also for that matter, for that is really part of the capital—had been deducted. Surely, the idea is so monstrous that the only way one can account for its being used in the sense in which it is used in this notice is that the individual and the company have become, as it were, synonymous, and so the gentlemen drawing the application for the Bill fail to distinguish between them. But, in law, they are very different indeed, even though these gentlemen may not be aware of the fact. It is the company that makes profits, and it is not reasonable to speak of the company as making profits apart from its capital. The money is the money of the company; it is not the shareholders' money. When the shareholder pays in his money for his stock, it becomes the company's money. The company goes into business with the money, employs agents and does everything else required in the business, and makes certain profits, including interest on the money paid in, which is the money of the company, not Senator Cox's, or that of any other individual. It does seem to me, in view of the peculiar circumstances, in view of the fact that the hon. member for North Ontario (Mr. Samuel Sharpe) has pointed out, that there is a very grave doubt as to whether the notice has been sufficient, and in view of the fact that the Minister of Justice had laid down an opinion not before the committee, it is most important that every opportunity should be taken to consider this matter very carefully. Therefore, I have great pleasure in supporting the motion that the committee rise and report progress, and I do so with the hope that when the Bill again comes before the House it will be sent back to the committee to see that justice is done to all parties.

Mr. R. L. BORDEN. May I ask the attention of the Prime Minister (Sir Wilfrid Laurier) to the exact language of that portion of the notice which relates to this matter. The words are 'Define the provisions as to division of profits.' I am inclined to go further than when I first brought this to the attention of the committee and to say that that phrase seems to have been very carefully designed to withhold any information as to what was the real character of the legislation contemplated. It would be perfectly easy to give proper notice in a few words. Let us suppose that the gentleman, whoever he may have been, who drafted that notice, had inserted these words, 'providing that policy-holders are not entitled to profits accruing by way of interest earned on paid-up capital.' That would have given notice, with a minimum of language, to every policy-holder throughout Canada. They would have understood exactly what was contemplated by the legislation proposed. But when, instead of that, you have an expression of a very nebulous character in these words, 'defining the provisions as to the division of profits' it seems to me a not unreasonable inference that there was no desire to give very useful information to the policy-holders throughout the country and in that way to prevent the organization of the policy-holders in opposition to the proposal of these gentlemen. I am not discussing the merits of the Bill at present, but I am in-

sisting that reasonable notice to the persons interested ought to be given. And I would point out to the Prime Minister a reason which has been already hinted at, but, perhaps, it has not been emphasized, as to why a notice of this kind in a case such as this ought to be very explicit indeed. The shareholders and directors of life insurance companies, under the conditions which attend the carrying on of that business in this country and in all English speaking countries, are such that the directors and share holders stand in a position of trust towards the policy-holders. They have charge of enormous funds, which they are bound to administer in a certain fiduciary capacity. Now they are entitled to make a profit out of the business; they are bound on the other hand, to do justice to those who have insured their lives and made provision for their families by means of the business so carried on. When the directors of such a company come before the parliament of Canada asking that the business conditions as between themselves and the persons for whom they are trustees, shall be altered—for that is the effect of this Bill—then I say that they ought to be held to the very strictest observance of the rules of this House, and every committee of this House ought to see that the notice given by the persons acting in that fiduciary capacity, is such that there can be no possibility of any misunderstanding. I think that is a reasonable proposition, which ought to commend itself, and will commend itself to the Prime Minister. It is very different from the conditions which meet us in respect of ordinary Bills coming before this House. Here we have the directors of the Canada Life Assurance Company, both as share holders in their own interest, and acting as trustees of the interest of 35,000 policy-holders, coming to parliament and asking that the provisions of legislation passed 30 years ago shall be altered in their advantage, and to the detriment of the 35,000 policy-holders; and it seems to me that, without discussing the provisions of the Bill at all, it is a firm foundation to stand upon that we should insist that the notice of that intention shall be expressed in the plainest possible way.

Mr. LENNOX. I do not feel disposed to quarrel with your decision, Mr. Deputy Speaker. As to the first point taken by the hon. member for North Ontario, taken as a technical objection, I can realize that you are probably right in saying that you could not entertain it. The second point, probably in the same way, though I was not present. But that throws upon us, the members of this committee, the duty of saying whether, under the circumstances as displayed by that notice, we are going on to legislate against the interests of the policy-holders. Now it is perfectly clear to me that that notice could not convey to the policy-holders an intimation of what it is now proposed we should do. No person reading that notice could possibly gather from it that we proposed to enact retroactive legislation affecting the rights of policy-holders; and because you, Sir, as chairman, have the right to rule it out as a matter of order, does not take away the fact that it goes to the very merits of the matter we are dealing with; and that we, as a committee, and the right hon. gentleman who leads this House, especially, and the Minister of Finance likewise, who is our guide in matters of this kind, should see to it that this legislation should not progress until it is made perfectly clear that everything has been done to bring to the knowledge of the policy-holders that their rights are being attacked. I am not prepared to say at this moment what attitude I should ultimately take as to what legislation should be enacted in this case. I have a strong feeling against this legislation as it is presented to us, yet I am prepared to consider whether it should be ultimately enacted. But I am firm upon this point, that we should one and all unite to say that until every reasonable facility has been afforded the policy-holders of knowing just what these people are asking, we should not, as a high court of parliament, enact this legislation, or proceed further with the Bill.

Mr. FOSTER. I have just one word to say with reference to this, and it depends almost entirely for the present upon the matter of the notice. Until I heard the notice read by the hon. member for North Ontario the other day, I had not seen it, I had not paid any special attention to it. With reference to what had been the practice by this company, with reference to what had been the practice of other insurance companies in the distribution of their profits as between shareholders and policy-holders I knew pretty well what the general practice was. In that respect I had no great quarrel with this Bill. If it had always been the practice to divide the profits on the basis of a certain reservation, first, as remuneration for the shareholders, if that had been apparently agreed to by both parties, and sanctioned by a practice of twenty years, if that was the practice with other great insurance companies, and if there had been a mistake made at first, even although that practice in 1879 was contemplated, which was afterwards carried out, then I would not have been disposed to give much opposition to the Bill. But there was one thing that I should like to have known then, and one thing upon which I got very little light before the Committee on Bank-

ing and Commerce, that is, as to the views of the other party to the agreement in 1879, because the other party to the agreement was conspicuous by his absence—if you can apply the personal pronoun to the policy-holders. But when I heard the other day the notice that was given, and when I knew it was the essence of the law and the essence of the practice of parliament that the notice to be given should be full and explicit, no matter whether the matter is important or unimportant—although I agree that the matter is greater in proportion as the interests involved are more generally distributed and are of greater importance—I came to realize then that that notice would not have been to me, if I had been a policy-holder in this company, the least intimation in the wide world as to what was going to be done; the place that the notice occupies would seem to me to give it no prominence. What are the other things asked for? First, there is to be a change as to date of meeting, and notice as to this change of meeting. Then it goes on to mention a provision as to the division of profits. Then there is a third, extending the powers of the company so that they may hold real estate in Ontario, and for other purposes. I do not know what might be held as a sufficient notice under these words 'and for other purposes', but to me as a policy-holder, they would not have any meaning at all, and to my mind they would be no sufficient notice of a meeting.

However, I want to proceed with the second one, that defining the provisions as to a division of profits. Now do we not all know, those of us who were in the Committee of Banking and Commerce, as well as those of us who are here to-day, that the one important thing these gentlemen wanted in coming to this parliament, was to make a change in the division of profits? The important thing is not that they should change the date of their annual meeting, the important thing was not that they should regulate the form of notice which should be given of meetings, the important thing was not extending the power of the company as to the holding of a little real estate in Ontario, but the all-important thing was as to this arrangement about the division of profits. I want to read the whole of the notice to the Prime Minister so that the relation will be seen.

Notice is hereby given that application will be made to the parliament of the Dominion of Canada at the next session thereof for an Act to amend the Acts relating to the Canada Life Assurance Company by changing the date of the annual meeting, and by making necessary changes as to the notices of meetings consequent thereon, and providing for any further changes in the date of such meeting, defining the provisions as to the division of profits, extending the powers of the company as to the holding of real estate in Ontario and for other purposes.

That is placed there, not as the main object of this legislation, but it is tucked in quietly and comfortably between two other demands, one as to the dates of meetings and one as to the holding of real estate. It does not have the prominent position that it inevitably and certainly has in the Bill based upon this notice. Suppose I had looked at those words 'defining the provisions as to division of profits,'—what would I have said of it? It could have no other meaning than this: Here is a company with policy-holders and shareholders which is engaged in a business; it requires a certain amount of money to run the business and a certain amount is set aside for reserve and the rest is profits. This meeting is held to define as to how these profits shall be divided. Divided between whom? Between the earning corporation and those who have interests in the corporation. That would be the sole idea that would be brought to my apprehension by reading that notice. I would think of nothing else. But when we read the legislation, what is it? It is not as to the defining of the division of the profits, but it is as to discriminating after the profits have been made between the different parties to the corporation as to how much each should relatively get. That is the whole gist of the legislation. If it had read 'defining the provisions as to division of profits between the policy-holder and the shareholder', then I would have felt that there was something in the provision, which, if I were a policy-holder I would like to know more about, and which, if I were a shareholder, I would like to know more about, and I would say to myself: I am going to see what this is going to be. The notice is altogether insufficient, it seems to me, to express, in the plain use of English words, its meaning, and it would, to me, reading it, and I think to almost every other man, simply imply that, after the year's operations were through, the expenses were paid and the necessary reserve was laid aside, there was a plan to be proposed as to how the resultant profits should be distributed as between the corporation and those who held a special or individual interest in the corporation. We should be very careful how we pass legislation of this kind. We should be especially careful that the spirit as well as the form of the law and the rules of the House are thoroughly carried out and that the notice is sufficient. I do not believe that the notice is a sufficient one in this case, and therefore I should rather see it go back to the committee so that they might go into that matter specially. I beg leave again to dissent absolutely from the position taken by the hon. the Minister of Justice that my conscience is

absolved, that my responsibility is done away with as a member of this House, because, forsooth a certain recommendation comes from any committee of this House. Even if I were a member of a committee myself and the committee came to a certain understanding and so reported I would have a perfect right in this House, and my duty is not done as a member of this House unless I exercise that responsibility, to dissent and not hide myself behind the supposition that all has been done that has been necessary and that you must not question the result if, forsooth, the Committee of this House have recommended it by a majority vote. I appeal against any proposition of that kind, and I refuse absolutely to be bound by it. It is our right, as it is our duty to discuss the report of any committee and to feel ourselves absolutely free to dissent from it.

Mr. AYLESWORTH. As far as I have understood the observations of the hon. gentleman who has just taken his seat I said altogether the contrary in regard to this committee. I said that I was prepared to rest upon the finding of fact, which I assumed this committee had made, that there was an error, or mistake in 1879.

Mr. FIELDING. It is a well understood rule that where a member has not had an opportunity or when, for any reason, a member fails to make any very close investigation of a private Bill, he accepts the judgment of the committee, not necessarily as a finality, but because the committee has undertaken the work which he perhaps was not able to do. It is only in that sense, I am sure, that any member would urge the principle that the finding of a committee should be accepted. I hesitate not to say that if any member is willing to go to the trouble to look into a Bill for himself and to make a careful investigation of it he is not bound to pay the slightest attention to the judgment of the committee. But with regard to most of these private Bills, it happens that many members, either from disinclination, or occupation in other directions, do not attend the committees and do not give close attention to the details. It is therefore the practice of the House in such cases to accept the findings of the committee, and I think that as a rule that practice has worked well. Let me say, that the point as to the insufficiency of the notice has perhaps considerable strength. In a matter of such grave importance, affecting the interests of a great financial institution and affecting the interests of a very large body of shareholders and stockholders, there is everything to be gained by proceeding cautiously and slowly. It should not be said that this House is disposed to pass any legislation of this character if the legislation will not bear careful investigation and critical examination, just as any legislation that we pass should, and I would therefore say to my hon. friend in charge of the Bill that I hope he will accept the suggestion that the Bill be not proceeded with further to-day, but that progress be reported with the view of permitting the Standing Orders Committee to make further inquiry into the question as to the sufficiency of the notice. Speaking entirely for myself, as this is a private Bill which does not call for any declaration of policy on the part of the government, I am inclined to think that this Bill is a good one, that it is a Bill that is necessary in the interests of a great number of people. I did not take any part in the discussion in the Committee of Banking and Commerce, but I listened very closely to the proceedings. I was particularly impressed by the powerful speech in support of this Bill made by the hon. member for East Hamilton (Mr. Barker) who, with a full knowledge of all the facts and of the history of the Canada Life Assurance Company, reviewed all the circumstances of the case and gave very powerful reasons why the Bill should pass, reasons which influenced his mind as well as mine. For 30 years it has been the practice of the Canada Life Assurance Company to apply this method of declaring their profits, first to charge interest on their capital and then to strike the balance and distribute the profits accordingly. We have therefore the practice of 30 years of the Canada Life Company which has never been called in question. There must be some statutory limitation in all these things. And, while one may hesitate to adopt legislation which is of a retroactive character, while one may hesitate to adopt legislation which would take away some man's private rights, I say there ought to be some statutory limitation and that if men have slept upon their rights for 30 years they ought not to complain very much if it becomes necessary to confirm a practice which they themselves have acquiesced in.

Mr. FOSTER. What about the policy holder of a year ago?

Mr. FIELDING. Then there is the next point: that the practice of the Canada Life has been the practice, I am advised, of every other company issuing a participating policy in Canada; it certainly is the practice of the companies generally. I do not know that there are any exceptions, but as a rule the same practice which has been followed by the Canada Life for thirty years is followed by the other companies. That practice has been subject to the inquiry and investigation of the Insurance Department and no question has ever been raised as to the propriety of that method of computing the profits. The third point is that

it is, I am advised, the practice in England, where under precisely similar conditions interest on capital is charged before profits are declared. Now, all these are strong reasons I would say for confirming the practice which has existed for such a long time, and that practice is so well established in the minds of insurance men that in the preparation of the general Insurance Bill which is now before the House that practice has been imported into the Bill, and it is specifically declared that in the computation of profits you shall first charge interest upon capital. That provision in a general Bill will of course not be retroactive ; and of course this special Bill would be necessary to make the provision retroactive.

There is another view: that for many many years the capital of this company was $125,000 and the profits were distributed over that sum. After this practice which has now been called in question had been continued for a very long time, the shareholders put in $875,000 of new capital. I submit that these shareholders in putting in that new capital had a right to expect the continuance of the practice as to the regulation of profits that had been in existence for so many years. And when, a few years ago, they put in $875,000 of new capital with the full expectation that they were to receive interest on that capital before profits were declared, that being the practice of the company from its beginning, then if we are to turn round now and tell them that practice is wrong, the shareholders who put in that new capital are the men who would have the right to be aggrieved. If it be declared that the interest is not to be allowed before profits are declared, then clearly they were induced to invest that $875,000 of new capital in that enterprise upon a misunderstanding, to put it in the mildest form. And if this modern contention, which is only now brought to the front, is to prevail, then surely these gentlemen have a perfect right to say to parliament: let us take back the $875,000 which we invested upon the faith of an understanding which it now appears is wrong, I will put it as strongly as possible and I will say that I think this is retroactive legislation. Taking the opinion of the eminent English counsel which has been published in one of the documents; taking the opinion of the Minister of Justice; taking such information as I can get upon the subject I am inclined to think that while there would be no absolute certainty in the matter—while it may very well admit of a legal dispute and I suppose you can get good lawyers on one side or the other to argue the case—I am rather inclined to think it is retroactive legislation. I am inclined to think it interferes with rights which policy-holders may have. But, they are rights which the policy-holders never knew they possessed, rights which they never expected to possess, rights which they are not entitled to possess in equity, and therefore I would say that notwithstanding the fact that it may be retroactive legislation ; nothwithstanding the fact that you will say some action has been raised in court—although I believe that while there is actually no suit in court there may be one at any moment—notwithstanding all that, if we were dealing with the merits of the question, I should say that for the prevention of confusion and disorder it would be wise for this parliament to pass this Bill. See what will happen if you do not. Thirty years ago a shareholder in the Canada Life received a larger measure of profits than he was entitled to receive; he is dead; his estate has been closed up; if you want to get the money back how are you going to get it? Take the other side of the argument —thirty years ago a policy-holder received less profits than he was entitled to receive; hedid not get what he was entitled to ; he is dead and his estate is closed up; how are you going to adjust the matter now ; how are you going to get it from the shareholder who is dead; how are you going to find the policy-holder to give him what he should receive? There are possibilities of great disorder and of great trouble. I say there would be no wrong in giving legal effect to the understanding and practice which appear to have existed for thirty years and which every policy-holder of the Canada Life, so far as he knew anything about it at all, accepted. I say there would be no wrong in giving legal enactment to such measures as are necessary to carry out that understanding.

Mr. SPROULE. In view of the statement of the Minister of Finance that the policy-holders have never raised objection I want to say a word from their point of view. The fact is they never knew they were being improperly dealt with. I have a very strong letter from one who has been with the company for many years and his statement is that the profits he supposed were properly divided until of late years, seemed to dwindle away and could not be accounted for, and he says : I did not object because I did not know but that what I was getting was all that the law entitled me to. I expect that would be the case with practically the 35,000 policy-holders of the company. If they did not raise a claim because they were not getting what was coming to them under the law it was because they were not in a position to know how the division of profits was made and they took it for granted that the division was made according to law by honest men. But now it is brought to their attention and they feel very keenly with regard to it. The next question is as to whether they were or were not deceived. Take

the preamble of the Bill of 1879 and what would any ordinary business man in this country think of this :

The profits allotted are divided amongst the persons assured upon the participation scale; 75 per cent of all the profits realized from the entire business.

Would not any business man say that included profits from any source? If the English language means anything it means that, and if the policy-holder believed he was getting a fair division of all the profits realized from the entire business of the company, then he would naturally come to the conclusion he was getting all he was entitled to. The Prime Minister told us that the objection taken did not apply to the clause we are considering; but my answer is that the question of the sufficiency or insufficiency of the notice vitally affects the whole Bill and every clause in it. We would not be doing our duty in my opinion if we proceeded with the consideration of the Bill without knowing whether the notice was sufficient or insufficient, and I believe the only proper course for the committee to take is to report progress and let the House deal with the Bill.

Mr. A. H. CLARKE. Though I have charge of this Bill, I have no other interest in it other than that of a policy-holder; so that I am dealing with it in my own interest as such, and I believe that if the construction now sought to be put upon it should prevail, it would virtually ruin the company. It would reduce the dividends of the shareholders from 8 per cent to less than 4 per cent, while the corresponding benefit to the policy-holders would be insignificant. Based on a capital of $125,000 it would not amount to over five cents a year on a $1,000 policy. The interest of the policy-holders is wrapped up in the security of the company; it is of the utmost interest to every policy-holder that the permanency of the company be established. But if you reduce the stock to a basis of less than 4 per cent and compel the shareholders to contribute 90 per cent of their earnings on the stock of the $875,000 as well as the original capital of $125,000, they will get less than one half of one per cent on the capital they put into the company in 1900. It seems so unfair a proposition that I cannot imagine that any policy-holder would seek to put such a construction on the Act.

Mr. SAM. SHARPE. Was this an important question when there was only $125,000 of stock paid up? It only became important after the shareholders put in the additional stock?

Mr. A. H. CLARKE. Quite so, because in the one case they would only pay on $125,000, while in the other case they would pay on the whole $1,000,000. If the interpretation now sought to be put on the Act is right, the shareholders, in paying up the stock of $875,000 in full, were making the company a charitable institution. People may be charitable if they wish to be, but it is not the business of the legislature to compel them to be charitable. It might be that the policy-holders of to-day would get an immediate benefit; but in the ultimate interest of the policy-holders it would be one of the worst things that could happen for the company to be placed in such a position that the shareholders would not get such a rate of interest on their investment as would induce them to carry on the company. I have no personal interest in this Bill. I told Mr. Bruce, the representative of the company, that I would take charge of it if it were a meritorious and reputable Bill, and he assured me that it was. Whatever hesitation I may have had about it, the more I have studied the question, the more convinced I am that the Act which this House is being called upon to confirm is not only doing justice to the shareholders and preventing a fraud being committed on them, but is in the interest of the policy-holders themselves. Having stated my position a week ago to-day, although it was said that the Minister of Justice had been asked to give an opinion upon the Bill, I understood that it was desired to leave it over in order that it might be further considered, and I immediately acquiesced. Far be it from me to try to force this or any other Bill through the House if it has not had proper consideration. What is the object of the notice? Notice of a Bill must be given five weeks before it comes up. That is to inform the public that a Bill involving certain questions is to be brought before parliament. That notice, I suppose, is not seen by one out of a thousand of the insured. Very few people ever see the 'Canada Gazette,' and very few read the newspaper advertisements. But the matter becomes known when the Bill is introduced in parliament. Then all the newspapers put the facts, not in their advertising columns, but in their news columns, and the policy-holders and every other class of people find them out. I have just come from the west, where everybody knows about this Bill, and is talking about it. Although I am not a member of the Committee on Banking and Commerce, I was there one day, and I do not think it is possible to advance any argument here that was not brought up there. I think the notice was sufficient, and the opinion of a man like Mr. Panet, who has been in charge of that class of work for many years, that it was sufficient, leads me to feel that we are not very far astray in

accepting it as sufficient. However, if members want to further consider the Bill, I am not going to stand in their way. Though I am a little suspicious that these tactics are obstructive, I am going to give the benefit of the doubt to those who say they want to have further light on the measure, and therefore I am willing that the Bill should stand until next Monday, as I cannot be here again before then. I will therefore move that the committee rise, report progress, and ask leave to sit again.

Motion agreed to, and progress reported.

THE CANADIAN PACIFIC RAILWAY COMPANY.

House in committee on Bill (No. 79) respecting the Canadian Pacific Railway Company.—Mr. W. McIntyre.

Mr. RUTAN. By subsection A of this Bill the Canadian Pacific Railway are asking for authority to build a branch line from Lannigan into Prince Albert, but our people think this branch line comes really under the charter for the Manitoba North Western Railway, which charter is also owned by the Canadian Pacific Railway. The people of Prince Albert are not satisfied to accept the mere promise of the Canadian Pacific Railway, and feel that they should be given some surety that the Canadian Pacific Railway will implement its promises. That company should be compelled to build a certain number of miles every year, under penalty of forfeiting its charter. The old Manitoba and North Western Railway was given a charter in 1883, and previous to that a charter was granted to the Portage and Western Road. In the former there was a building clause provided, under which a certain number of miles were to be built each year, and by 1890 the road was to be completed into the town of Yorktown. But this building clause was not carried out, and in 1893 the Canadian Pacific Railway acquired the Manitoba and North Western charter. That charter also carried a provision that at least 20 miles a year should be built until the line was completed into Prince Albert. But this was not done, and the Canadian Pacific Railway repeatedly came to parliament asking for an extension of time, until 1902, when the Canadian Northern were building their line from Dauphin north and west to Prince Albert. The Canadian Pacific then made two surveys over the old proposed line of the Manitoba and North Western, for the purpose of hampering the competing line, but they did not build a mile of that railway. They then came back to this parliament and applied for authority to divert their own line from Shebo west to Saskatoon. And on this occasion, the people of Prince Albert endeavoured to have a clause inserted providing that for each mile of railway built west, there would be one built northwest. This was not accepted by the company, and parliament allowed them a charter to build west. There are people in that section who moved out some 60 or 75 miles expecting this railway to be built because the charter carried a clause requiring so many miles to be built each year. Many hon. members here will know that Prince Albert district was settled as early as Regina on the main line of the Canadian Pacific Railway, and therefore had the right to expect some consideration from the granting of the charter to this Manitoba and North Western Railway.

It was not until the Canadian Northern had purchased the line from Regina to Prince Albert that the Canadian Pacific Railway asked for a charter to build from Lannigan to Prince Albert. This charter was granted, and it was thought by the people of that section that the Canadian Pacific Railway would fulfil this promise because they had been cut off from their connection with the city of Prince Albert, but we find to-dav that they are not prepared to go ahead and build although they have had their charter two years. Instead of doing so, they are again asking for an extension of time. As they have been promising to build the Manitoba and North Western over 16 years, the people of Prince Albert are justified in questioning the sincerity of the company, and are asking that they should be compelled to give some evidence of good faith by building a certain amount of road each year. The Canadian Pacific Railway have another Bill asking for an extension of time to build the Manitoba and North Western to Prince Albert. I do not think it is possible that they intend building two lines into Prince Albert. It would rather seem to me as if they wanted to hold the two charters and blanket the two passes available from the south and southeast into Prince Albert through the Birch Hills in order that no competing company may get a charter through those passes. Evidently in 1902 and for some years later, when the Canadian Northern was building branches through the west, they and the Canadian Pacific Railway were common enemies, but apparently there is to-day an understanding between them to try and cut out the Grand Trunk Pacific and other lines from getting charters to build through these routes. The people out there are compelled to haul their grain long distances and they feel that they should not be asked to take the mere promises of this railway any longer without insisting on some guarantee. I therefore beg to move as a subsection to clause one that the company, build 30 miles in 1909 and 30 miles each year until the road is completed.

Mr. DEPUTY SPEAKER. The amendment proposed is hardly in order in its present form, because paragraph A of the Act of 1907 does not appear in this Bill. There is merely a passing reference to it. The amendment might apply as a separate subsection.

Mr. RUTAN. Then, I move it as a separate subsection.

Mr. TURRIFF. I also wish to move an amendment——

Mr. DEPUTY SPEAKER. If there is no notice given of the amendment, it may not be in order at this time.

Mr. TURRIFF. The amendment I wish to move, Mr. Chairman, after you have disposed of the one now before you, is that letter (g) be struck out of section 1 of the Bill under discussion.

Mr. DEPUTY SPEAKER. For such an amendment as that, one day's notice would be necessary.

Mr. TURRIFF. Then, I give the necessary notice, and, as the hon. gentleman (Mr. Wilbert McIntyre) who is in charge of the Bill is absent, I move that the committee rise, report progress and ask leave to sit again.

Motion agreed to, and progress reported.

CANADA LIFE ASSURANCE COMPANY.

Mr. SPEAKER. The Committee on Bill (No. 56) respecting the Canada Life Assurance Company reports that it has made some progress and asks for leave to sit again. When shall the committee have leave to sit again?

Mr. SAMUEL SHARPE (North Ontario). I understood that the arrangement was that this Bill was to go back to the Banking and Commerce Committee.

Mr. A. H. CLARKE. Why should it go back?

Mr. SAMUEL SHARPE. There are two reasons: In the first place, the committee could inquire into the sufficiency of the notice, on which point, if necessary, they could refer it back to the Committee on Standing Orders. In the second place, they could take into consideration the opinion given in this House to-day by the Minister of Justice (Mr. Aylesworth). Therefore, I move, in amendment, that the order be discharged and that the Bill be referred to the Committee on Banking and Commerce.

Hon. W. S. FIELDING (Minister of Finance). If the point is to be as to the sufficiency of the notice, I am not sure that the Banking and Commerce Committee is the proper one to refer it to.

Hon. GEORGE E. FOSTER (North Toronto). It seems to me the proper committee would be the Committee on Standing Orders. Then, it can come back to us from the Committee on Standing Orders and we can refer it then wherever we like.

Motion agreed to.

QUESTIONS.

GRAND TRUNK PACIFIC—NATIONALITY OF EMPLOYEES.

Mr. SIFTON—by Mr. A. H. Clarke — asked:

1. What is the total number of employees upon the operating staff of the Grand Trunk Pacific Railway above the rank of brakemen?
2. Of the total number how many are British subjects, and how many are citizens of the United States?
3. What is the total number of employees upon the engineering staff of the Grand Trunk Pacific, exclusive of labourers?
4. Of the total how many are British subjects, and how many are citizens of the United States?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. The information to answer this question is furnished by the vice-president and general manager of the Grand Trunk Pacific Railway, as follows: Total number of men above the rank of brakesmen, is 135.

2. It would seem to be impossible to secure information as to the nationality of the men mentioned without making a complete canvass from Edmonton to Prince Rupert, where many of the employees are in practically inaccessible locations at this time of the year. The correspondence indicates that it would take at least three months to get the information. It is also stated that 90 per cent of the employees referred to are British subjects or have been residents of Canada for from three to ten years, this assertion being based on the March pay-rolls and from information at hand.

3. 231.

4. Answered by Number 2, in addition to which it is stated that the following are British subjects: Second vice-president, chief engineer, bridge engineer, freight traffic manager, assistant freight traffic manager, travelling freight agent, assistant passenger traffic manager, district passenger agent, general solicitor, assistant solicitor, general auditor, auditor of disbursements, auditor of freight accounts, auditor of passenger accounts, travelling auditor, treasurer, local treasurer, manager of telegraphs, land commissioner, right of way agent, master mechanic, assistant master me-

chanic, purchasing agent and representative at Vancouver, car service agent, chief medical officer, and district medical officers.

BRITISH COLUMBIA RAILWAY BELT—LITIGATION BETWEEN DOMINION AND PROVINCE.

Mr. J. D. TAYLOR asked:

1. Are there any matters in litigation between the government of the Dominion and that of British Columbia respecting rights within the Railway belt in British Columbia? If so, what are the issues, and what progress has been made towards determination?

2. Does the Dominion government exert any jurisdiction over the foreshores of the Fraser river? If so, to what point on the river does the asserted jurisdiction extend?

Hon. A. B. AYLESWORTH (Minister of Justice):

1. An action is pending in the Exchequer Court on the information of the Attorney General for the Dominion against the Burrard Power Company, Limited. The claim in the action is to have the court declare invalid a grant to the defendant company by the Water Commissioners for the district of New Westminster of certain rights to the waters of the Lillooet lakes and river, and for an injunction to restrain the company from taking any further steps in regard thereto. The matter was referred by the court to a special referee to take evidence and report upon the facts. The government of British Columbia was made a party in the proceedings upon the reference, evidence was taken and the report of the referee has been filed. The case now stands for hearing on a motion for judgment, made on the 16th March instant, and then adjourned to a date not yet reached.

2. So far as the Fraser river lies within the limits of the railway belt in British Columbia, or so far as relates to subjects covered by the 91st and the 108th sections of the British North America Act, the government is advised that the river and its foreshores are within the jurisdiction of Dominion authority.

WOLFE ISLAND CANAL.

Mr. EDWARDS asked:

1. When was the Wolfe Island canal constructed?

2. Did the government contribute to the cost of said canal? If so, to what amount?

3. Has the Dominion government contributed anything to the maintenance of said canal? If so, in what years, and to what amount in each?

4. By whom is the canal now owned?

5. How long since the canal has been used?

Hon. WM. PUGSLEY (Minister of Public Works). There are no records in the department from which an answer could be given.

Mr. GRAHAM.

MARINE AND FISHERIES DEPARTMENT—PURCHASE OF SUPPLIES.

Mr. SAMUEL SHARPE asked:

1. Has the Marine and Fisheries Department continued to buy supplies, or give contracts to the individuals, supply men, or companies on whose behalf commissions, gratuities or interest were paid to officials of the department, as found by the Cassels Commission?

2. If so, what are the names of such individuals, supply men and companies, and the amount paid or to be paid to them since the receipt of said report by the government?

3. Have any other departments purchased supplies or given contracts to any such individuals, supply men or companies since the receipt of said report by the government? If so, what are the names and amount thereof?

Rt. Hon. Sir WILFRID LAURIER (Prime Minister):

1 and 3. There may be cases in which it will be in the public interest to do business with some of the parties referred to. Each case will have to be considered on its merits as it arises.

2. If any particular name be mentioned the information will be given to the House.

Mr. FOSTER. I call the attention of the Prime Minister to the fact that the first clause of the question is not answered. It is as to whether it may be done or not; has the Marine and Fisheries Department continued to buy supplies?

Sir WILFRID LAURIER. I think the second answer governs that.

DREDGING IN OTONABEE RIVER, PETERBOROUGH.

Mr. BRADBURY asked:

1. What is the name of the contractor doing dredging at or near Hunter street bridge, in the Otonabee river, at Peterborough?

2. What was the object of said dredging?

3. What amount of dredging has been done by the government during the year 1908 on said work, and what was paid during 1908 for said dredging?

4. Did the government own any boats or machinery used on this work?

5. Was any of the government material or machinery used on this work sold or transferred? If so, to whom, and what was received for same?

6. Were any contracts made by tender for this work? If so, were they called by public advertisement, and how many were received?

7. What are the names of the parties whose boats or dredges have been employed in connection with said dredging?

8. Have any of those engaged upon said works been employed by the government otherwise than by contract? If so, how much did they receive?

Hon. WM. PUGSLEY (Minister of Public Works):

1, 6 and 8. Work done by day's labour with dredge hired from Conroy Brothers.
2. Construction of turning basin above Hunter street bridge.
3. Some 2,167 cubic yards dredged during 1908; nothing paid yet.
4. No.
5. No.
7. Conroy Brothers.

FILE HILLS INDIAN AGENCY.

Mr. CAMPBELL—by Mr. Bradbury—asked:

1. Has Mr. Godfrey, clerk to Inspector Graham, of File Hills Indian agency, resigned?
2. Has Mr. Godfrey made any charges against inspector? If so, what are the charges?
3. Is it the intention of the government to investigate the charges? If so, when?
4. On whose recommendation was Mr. Godfrey, lately clerk to the inspector of South Saskatchewan inspectorate, appointed?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):
1. Yes.
2. Mr. Godfrey has made certain statements to the effect that Inspector Graham has not been dealing honestly with the department's funds and other property.
3. The department has the matter now under consideration.
4. The appointment was made upon the department's being satisfied that it was necessary.

SQUATTERS ON LANDS NEAR DAUPHIN.

Mr. CAMPBELL—by Mr. Bradbury—asked:

1. Is the government aware that houses and outbuildings of squatters on lands south of Dauphin, lately taken into the permanent timber reserves, were said to have been burned last fall by government officials?
2. Did the government give instructions to have these buildings burned? If so, is that the policy of the government?
3. Did the government take any steps to care for the women and children so rendered homeless at the beginning of the inclement winter season?
4. Did the government give instructions to its officials to seize hay put up by said squatters? If so, have they paid or do they intend to pay for such fodder?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. Yes, but the statement was not correct.
2. No.
3. Any provision necessary to assist squatters removed from the reserve was made and most of them have made written statements that they are well satisfied with the treatment given them.
4. No. If the squatters obtained the hay under permit it would be their property

96½

INDEBTEDNESS OF GRAND TRUNK RAILWAY TO CANADA.

Mr. COWAN—by Mr. Blain—asked:

1. What is the present indebtedness of the Grand Trunk Railway Company to the Dominion of Canada?
2. What are the several dates on which that indebtedness was incurred?
3. What rate or rates of interest does that indebtedness bear?
4. What payments have been made on account of that indebtedness or interest, and when?
5. If the company's indebtedness has been wiped out or reduced, how and when was this done?

Hon. W. S. FIELDING (Minister of Finance). The hon. gentleman will find that information was given to the House several days ago. I would refer him to the 'Hansard' of March 17, page 2840, which I think covers the whole question.

OSHAWA HARBOUR.

Mr. HUGHES asked:

1. Since taking over Oshawa harbour what officers have been appointed and what are their salaries, for duty at that harbour or in connection therewith?
2. What products have been landed at the said harbour by water route since the date referred to?
3. What duties, fees or receipts of cash have been collected by each department of the government since that date?
4. What expenditures upon the harbour or any part of it have been made by each department of the government since the date of taking over?

Hon. WM. PATERSON (Minister of Customs):

1. No customs officer has been appointed since taking over Oshawa harbour, 8th April, 1901, for duty on account of such harbour.
2. Anthracite coal to the value of $79,251 has been landed at said harbour by water route since 8th April, 1901.
3. No customs duties have been collected on goods landed at said harbour since that date.
4. There has been no expenditure on said harbour by the Department of Customs.

Hon. WM. PUGSLEY (Minister of Public Works).
4. Expended by the Department of Public Works, $21,279.49.

POST OFFICES IN PEEL COUNTY.

Mr. BLAIN asked:

1. How many post offices are there in Peel county, and what are their names?
2. Is each office in receipt of daily mail?

Hon. RODOLPHE LEMIEUX (Postmaster General):

1. There are 63 offices in the county of Peel, as indicated by the following list:—

Albion, Alton, Alloa, Bolton, Belfountain, Boston Mills, Brampton, Britannia, Burnhamthorpe, Castleberg, Cedar Mills, Coventry, Caldwell, Caledon, Caledon East, Cataract, Credit Forks, Campbell's Cross, Cheltenham, Claude, Churchville, Clarkson, Cooksville, Castlemore, Coleraine, Derry, Dixie, Elmbank, Erindale, Grahamsville, Huttonsville, Hanlan, Inglewood, Kilmanagh, Lockton, Lisgar, Lorne Park, Macville, Mono Mills, Mono Road Station, Mount Wolfe, Mellville Cross, Mayfield, Malton, Meadowvale, Mount Charles, Nortonville, Palgrave, Palgrave Station, Port Credit, Rockside, Sleswick, Star, Sandhill, Snelgrove, Streetsville, Summerville, Stanley Mills, The Grange, Terra Cotta, Tullamore, Woodhill, Wildfield.

2. No.

DUTY ON BEET SUGAR.

Mr. HUGHES asked:

1. Is there any agitation or movement to have beet sugar refiners prohibited from importing their raw sugars from Europe under the preferential tariff?

2. Is it the intention of the government to grant to the beet sugar refiners the same rate of duty on European sugar as refiners now obtain on their raw sugars?

Hon. W. S. FIELDING (Minister of Finance). If there is any agitation it is rather the other way. In regard to the second question, it is not expedient to make any announcement except in the Budget speech.

MAIL CARRIAGE—PICTOU TO MAGDALEN ISLANDS.

Mr. FRASER asked:

1. Has the contract been let for the carrying of the mails by steamer from Pictou to Magdalen Islands?

2. Were tenders called for the said contracts?

3. What are the names of the tenderers and the amount of each tender?

4. What class of steamer did the tender call for?

5. What is the class or description of steamer provided by the successful tenderer?

Rt. Hon. Sir WILFRID LAURIER (Prime Minister):

1. Yes.

2. Yes.

3. Messrs. Bouchard Bros., Quebec, $10,995; Wm. Maclure, Pictou, N.S., $12,000; Magdalen Islands Steamship Co., Halifax, N.S., $10,000; Magdalen Islands Steamship Co., Halifax, N.S., $15,000.

4. The call for tenders required that the tenders should state speed, class and capacity of vessel to be employed.

5. Built 1895. Length 188 feet 6 inches, breadth 29 feet, depth 11 feet 1 inch. Gross tons 565. Net tons 159. Speed 11¼ knots.

Mr. LEMIEUX.

PULP AND PAPER EXPORTS TO UNITED STATES AND GREAT BRITAIN.

Mr. BELAND—by Mr. Lavergne—asked:

1. Has the government any information regarding the production in Canada of pulp and paper during last year? If so, what are the figures in tons?

2. What quantity of pulp was exported to the United States and England, respectively, during last year?

3. What quantity of paper was exported to the United States and Great Britain, respectively, during last year?

4. What amount in cords of pulpwood was exported to the United States during last year?

Hon. WM. PATERSON (Minister of Customs):

2. During the last fiscal year, ended March 31, 1908, the quantity of pulp exported to the United States and Great Britain was as follows:

	United States.	Great Britain.
Wood pulp, chemically prepared, cwt..	769,514	13,660
Wood pulp, mechanically ground, cwt..	3,033,885	973,598

3. The exports of paper during the above period to United States and Great Britain were as follows:

	Great Britain.		United States.	
	Quantity.	Value.	Quantity.	Value.
Wall paper, rolls.	512	$ 159	19,794	$ 6,440
Felt paper, rolls.	5,060	21,896	109,863	101,835
Wrapping paper, lbs..			594,695	$ 24,265
Paper, n.o.p. . .$		354,887		34,673
Printing paper .$		922,278		791,533

4. Cords of pulpwood exported to the United States during the above period were 901,861.

DRY DOCK AT NEW WESTMINSTER.

Mr. J. D. TAYLOR—by Mr. Burrell—asked:

1. Has the government under consideration any application for assistance to a dry dock or marine ways enterprise at New Westminster?

2. If so, by whom was such application made, and what is the extent of assistance applied for?

3. Are there any other enterprises of like character in the neighbourhood? If so, what is the extent of the assistance extended to them by the government, or contemplated to be extended?

Hon. WM. PUGSLEY (Minister of Public Works):

1. Yes.

2. By Mr. Ed. Mercer, who asks that government subscribe fifty per cent of cost.

3. Yes. No assistance rendered and none applied for.

MILES OF RAILWAY IN ALBERTA AND SASKATCHEWAN.

Mr. McCARTHY—by Mr. Herron— asked:

How may miles of railway were under operation in the territory now comprised within the boundaries of the provinces of Alberta and Saskatchewan, respectively, on December 31, 1896, and December 31, 1908, respectively?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). To the 30th June, 1896, 1,772 miles; to the 30th June, 1908, 3,404 miles.

PORT OF PORT CREDIT.

Mr. BLAIN asked:

1. What was the total revenue for customs at Port Credit for the last three fiscal years, respectively?
2. Has the sub-collector been superannuated? If so, what is his superannuation allowance?
3. Has his successor been appointed? If so, who received the appointment, and at what salary?
4. What are his duties?
5. Upon whose recommendation was he appointed?

Hon. WM. PATERSON (Minister of Customs):

1. The total revenue has been as follows:
Year ending June 30, 1906.. ..$22,000 98
9 months ending March 31, 1907.. 25,759 54
Year ending March 31, 1908.. .. .. 45,209 28
2. Yes; $343.33 a year.
3. John W. Heary has been appointed acting sub-collector of customs at Port Credit. Salary, $850 a year.
4. His duties are to receive customs entries and duties and perform the usual work of a customs collector.
5. He was appointed by the Minister of Customs.

DEPARTMENT OF PUBLIC WORKS—CONTRACTS FOR DREDGING.

Mr. MACDONELL—by Mr. Geo. Taylor—asked:

1. What were the contracts awarded early in 1908 by the Department of Public Works for dredging in the provinces of Ontario and Quebec for work to be done during the year 1908, and did such contracts terminate and expire when the season closed?
2. If not, what contracts extended into and to be continued during the present year in said provinces?
3. Has the Public Works Department expended or awarded any of such contracts in said provinces for work to be done during the present year? If so, to whom and at what points and prices?
4. Were public tenders called for any such renewals or new contracts?
5. Is it the intention of the government to advertise for tenders for work to be done at the several points as mentioned in current estimates where work is to be performed in said provinces? If so, when will said tenders be called?
6. Is it the intention of the government to renew any dredging contracts in said provinces which expired last year, without advertising and calling for tenders in the usual public manner?

Hon. WM. PUGSLEY (Minister of Public Works):

1 and 2. In Ontario: Blind river, Burlington, Cobourg, Collingwood, Goderich, Hamilton, Kincardine, Little Current, Meaford, Midland, Nigger and Telegraph islands, Owen Sound, Penetanguishene, Picton, Point Edward, Port Burwell, Port Elgin, Rondeau, Summerstown, Thames river, Thornbury, Toronto, Trenton harbour and Dark channel, Waubaushene, Wiarton, Wingfield basin.

In Quebec: Batiscan, Bécancour river, Blanche shoals, Chateauguay river, Dorion, Fraserville, Godfroy river, Hay island, Hudson, L'Assomption, Maskinongé river, Nicolet, Port St. Francis, River Jesus, Rivière du Loup (en haut), Rivière Ouelle, Saguenay river, St. Francis river, St. Lambert, St. Maurice river, St. Pierre les Becquets, St. Placide, Vaudreuil, Yamachiche river and Yamaska river.

All these contracts were made subject to extension if considered advisable. Contract with the C. S. Boone Dredging and Construction Company for dredging at Little Current specifies that work shall be completed within two years from date of signing, viz., 26th June, 1910.

3 and 4. No.

5 and 6. Matter under consideration.

DOMINION ARSENAL AT QUEBEC.

Mr. STANFIELD—by Mr. George Taylor—asked:

What were the names of the bidders, the brands, and the prices in connection with the recent tenders for spelter for the Dominion Arsenal at Quebec, for which tenders were called for January 31, and opened on February 1, as the former date was Sunday?

Hon. Sir FREDERICK BORDEN (Minister of Militia and Defence):

No tenders were called for January 31, nor opened on February 1, and therefore the gratuitous information that the former date was Sunday lacks point.

Tenders for ingot copper, pig lead and spelter were invited for January 30, and opened and awarded same day, by circular letter by the superintendent, Dominion Arsenal, Quebec, dated 22nd January last, from the following firms: Thos. Robertson and Company, Montreal; B. J. Coghlin and Company, Montreal; Lewis Bros., Montreal; Jas. Robertson and Company, Montreal; H. A. Drury and Company, Montreal; the General Supply Company of Canada, Ottawa; Mr. L. S. Macoun, Ottawa.

The quantities required were: Copper ingot for brass strip work, 219,000 lbs.; copper ingot for cupro-nickel strip work,

142,000 lbs.; pig lead, 290,000 lbs.; spelter, 122,000 lbs.

Contracts were made as follows: With B. J. Coghlin and Company for copper at $13.95 per cwt.; with Thos. Robertson and Company for lead at $3.31 per cwt.; with L. S. Macoun, for spelter at $7.75 per cwt. each of these being the lowest tender received.

The only other tender for spelter received besides Mr. Macoun's was Messrs. B. J. Coghlin and Company's at $8.10 per 100 lbs.

Messrs. Coglin's tender was for 'Golden Rod' spelter; Mr. Macoun's for 'Bertha' spelter; both in accordance with specification. A copy of the specification governing the supply of spelter is attached hereto.

The circular letter of the superintendent of the Dominion Arsenal inviting tenders, read in part as follows:

Sealed tenders marked on the outside 'Tenders for supplies Dominion Arsenal' addressed to the Director of Contracts, Militia Department, Ottawa, will be received up to 12 o'clock noon on 30th January, 1909, for supply of materials specified in attached statement.

Tenders were accordingly received by the director of contracts and opened by him and by a clerk in his branch conjointly, at 12 o'clock noon on Saturday, January 30. the successful tenderers and the superintendent, Dominion Arsenal, were notified, by telegraph, within one hour of the opening of the tenders.

SPELTER SPECIFICATION TO GOVERN SUPPLY.

1. The spelter to be of good quality and must not contain more than 0·1 per cent of iron or 0·1 per cent of lead and only traces of any other impurities.

2. Each is to bear the manufacturers' name or recognized trade mark and customary brand for quality of metal supplied.

3. Specimens will be taken indiscriminately from the supply and chemically analysed to ascertain if the metal conforms in quality as above.

4. The supply will be subject to the inspection and approval of an officer of the department.

NOTE—Certain Brands, viz: 'Lehigh Valley', 'Empire', 'Vieille Montagne', 'Extra Pure', 'Bertha', and 'Crescent', or any brands of equal quality and similar conditions, are found to be worked in this department—samples may be seen.

THE COASTING TRADE.

Mr. STANFIELD—by Mr. Geo. Taylor—asked:

1. Was an order in council passed in December, 1908, changing the date allowing small vessels carrying coal, under 1,500 tons, in our coasting trade from July 1, 1909 to 1912? If so, at what date and at whose solicitation?

2. Was an order issued by the Customs Department regarding the coasting trade of Canada in December, 1908? If so, what were the orders issued by the collector of customs?

Hon. W. PATERSON (Minister of Customs):

1. No.

2. The orders issued by the Customs in December, 1908, are as set forth in memo. 1510-B of December 17, 1908, and memo. 1514-B of December 31, 1908. I attach the memos:

File No. 71723. No. 1514 B.

MEMORANDUM.

Department of Customs, Canada,
Ottawa, 31st December, 1908.

To Collectors of Customs:

Coasting Trade of Canada.

Referring to memo. 1510 B, in the above matter, you are advised that by order in council of this date it is declared that steamships of foreign countries which had been admitted to, and were under charter to engage in the coasting trade of the Dominion of Canada, at 31st December, 1908, shall be permitted to continue in the coasting trade of Canada, in the carrying of goods and passengers coastwise in the provinces of Nova Scotia, New Brunswick, Prince Edward Island and Quebec, on the same terms and conditions as are applicable to Canadian vessels until the first day of July, 1909, notwithstanding anything in the order in council of 17th December, 1908, respecting the coasting trade of Canada.

JOHN McDOUGALL,
Commissioner of Customs.

Mailed direct to outports and stations.

File No. 71723. No. 1510 B.

MEMORANDUM.

Department of Customs, Canada,
Ottawa, 17th December, 1908.

To Collectors of Customs:

Coasting Trade of Canada.

Referring to memo. 1452 B, of 13th January, 1908, you are advised that an order in council, dated the 17th December, 1908, contains the following provisions, viz.:—

At the Government House at Ottawa,
Thursday, the 17th day of December, 1908.

Present:

His Excellency the Governor General in Council.

Whereas, by an order in council dated 13th January, 1908, it is provided that certain orders in council by which ships and vessels of certain foreign countries had been admitted to the coasting trade of Canada, are repealed on, from and after January 1, 1909.

And whereas applications have been made to allow the ships and vessels of certain foreign countries to participate in such coasting trade to a limited extent and for a temporary period, pending the acquisition of suitable British ships, to which class of vessels

under the provisions of the order the coasting trade would on and after the said date be confined.

Therefore, His Excellency the Governor General in Council is pleased to order that the said order in council of the 13th January, 1908, shall be and the same is hereby revoked and the following provisions substituted for the provisions therein contained:—

All orders in council admitting ships or vessels of any foreign country to the coasting trade of Canada shall be and the same are hereby revoked on, from and after the 1st January, 1909, and thereafter such ships and vessels shall be subject to the provisions of sections 952 to 957 of the Canada Shipping Act, both inclusive;

Provided, that steamships of not less than fifteen hundred tons gross tonnage each, of the following countries, namely: Italy, Germany, the Netherlands, Sweden, Norway, Austro-Hungary, Denmark, Belgium, the Argentine Republic and Japan shall be admitted to the coasting trade of Canada in the carrying of goods and passengers coastwise between any port in the province of Nova Scotia and any port in the province of Quebec, and vice versa, on the same terms and conditions as are applicable to Canadian vessels, until the 31st day of December, 1811.

JOHN McDOUGALL,
Commissioner of Customs.

Mailed direct to outports and stations.

REPAIRS TO CANADIAN SHIPS, &C.

Mr. J. A. CURRIE asked:

1. Were representations made to the Customs Department by any person as agent for the Dominion Marine Association, urging the government not to impose a duty on repairs made to Canadian ships in certain cases? If so, what are the names of such persons?

2. What ships have been purchased by the Dominion government from British shipbuilders since 1896?

3. What are the names of the shipbuilders who built each ship and the purchase price of each ship?

4. Were any tenders received for the building of these ships from Canadian shipbuilders? If so, what were the amounts of the Canadian tenders for each ship and the names of the tenderers?

5. What amount of money was spent on each of these ships for changes, improvements, additional equipment and repairs since they were taken over by the government?

6. Who were the Canadian agents, or persons representing each individual British ship-builder who secured a tender for the building of any ships for the government of Canada?

Hon. W. PATERSON (Minister of Customs):

1. Mr. F. M. King, secretary of the Dominion Marine Association, has represented to the Minister of Customs that by unanimous resolution the Annual General Meeting of the Dominion Marine Association resolved to ask that the statute of last session imposing duty upon vessel repairs should be amended so that vessels should only require to go to a Canadian dock in cases where the accident occurred nearer to a Canadian dock having proper facilities for repair work, than to any dock in the United States; and then only when a Canadian dock is immediately available. My colleague, the Minister of Marine and Fisheries will have to answer the other question.

Mr. J. A. CURRIE. Let it stand as a separate question.

Mr. PATERSON. I understood my colleague to say that he would like to have it stand as a notice of motion for a return.

Mr. J. A. CURRIE. It is so very simple that it is hardly worth while to let it stand.

Mr. SPEAKER. Stands.

MR. W. A. HICKMAN.

Mr. J. D. TAYLOR asked:

1. Was W. A. Hickman employed at any time between the years 1898 and 1904 by the Department of Agriculture in connection with immigration work or any other work in New Brunswick or elsewhere, or by any other department of the government?

2. During what years was he employed, and for what length of time each year?

3. At what kinds of work was he employed?

4. What was the rate of wages or salary paid to him, and for what period was he paid?

5. What was the total amount paid to him for salary or wages, for expenses, and for any other purposes, respectively?

6. What was the total amount paid to him for all purposes?

Hon. G. P. GRAHAM (for Minister of Interior):

1. Yes. By the Department of the Interior.

2. From 1st May, 1902 to 30th September, 1903, continuously.

3. Immigration.

4. $100 per month; see answer to No. 2

5. Salary $1,700, expenses $3,496.36, other purposes nil.

6. $5,196.36.

At 6 o'clock House took recess.

After Recess.

House resumed at eight o'clock.

MOTIONS AGREED TO WITHOUT DISCUSSION.

For a return showing the claims of any person or persons in Nova Scotia against the government, by reason of personal damages or losses of animals or damages to property on account of the Intercolonial Railway, settled or paid between June 1 and December, 31, 1908; together with names and addresses of such persons, the nature of their claims, how settlement was effected, and on what date settlement was effected in each case.—Mr. Rhodes.

For a copy of all correspondence, petitions and reports addressed to the government, or Post Office Department, and all correspondence and orders consequent thereon, relating to the change of the name of the post office of Weymouth to Weymouth North, and of the post office of Weymouth Bridge to Weymouth.—Mr. Jameson.

For a return showing the names of villages, towns and cities in each province where post offices, customs buildings and armouries have been constructed during the years from 1903 to 1909, and cost thereof, the expense in each case of the yearly lighting, heating and caretaking, the revenue, if any, from any of these buildings, a list of buildings now under construction, the contemplated cost, and the probable expense of yearly lighting, heating and caretaking.—Mr. Samuel Sharpe.

For a copy of all orders in council directing that repairs be made on different wharfs in the county of Soulanges, a copy of all correspondence, reports, accounts and pay-rolls relating to the valuation of these works, the payment and the list of names of all who were employed as day labourers on these works; a copy of all letters, reports and recommendations exchanged between the government and all other persons relating to the choice of men to be engaged on these works and those who should be refused employment; a copy of the report of accounts produced by Mr. Alfred Bissonette, wharfinger at St. Zotique and of Mr. Trefle Poirier, wharfinger of the wharfs of the canal and river St. Lawrence in the parish of Des Cedres, and of those of Mr. Isaie Lalonde, son of Albert, farmer, of St. Zotique, a copy of accounts for furnishing wood, iron, cement, sand and stone used in the building of said wharfs, and also a statement of the materials purchased as aforesaid, paid for by the department, and which were not used because they were considered unfit for the building of these wharfs.—Mr. Lortie.

For a copy of all letters, correspondence, statements and writings between the Grand Trunk Pacific Railway Company, or its engineers or agents, and the commissioners of the Transcontinental Railway, or their engineers or agents, and between the commissioners and their engineers, and between the commissioners and their engineers and agents and the contractors or sub-contractors on districts B and F after-mentioned, as to classification or alleged over classification on districts B and F of the eastern division of said railway, and of all estimates, returns, certificates, memoranda, statements or writings, showing classification or over classification of the cuttings and work on said districts B and F.—Mr. Lennox.

For a return showing the names of Intercolonial employees dismissed or suspended during the year 1908, the position held by each, the date of dismissal or suspension, and the special cause alleged therefor; also the names of any such persons so dismissed or suspended who have been reinstated up to February 28, 1909, and the dates of reinstation?—Mr. Foster.

For a return showing: 1. Who were employed to value the land of the right of way for the canal from Holland river to Newmarket, and what other duties than valuation of lands these parties were entrusted with.

Mr. GRAHAM.

2. The remuneration of each of these valuators.

3. How long they were employed, and upon what terms.

4. (a) What properties they valued, (b) at what amount or rate in each case, (c) the acreage of each property, (d) in how many cases, by names, the valuations were accepted by the owners, (e) in how many cases, by names, the valuations were finally rejected by the owners, (f) in what cases expropriation proceedings were resorted to, and (g) the result as compared with valuators' figures.

5. What titles to all properties have been required.—Mr. Lennox.

For a copy of all correspondence, communications in writting and documents to the Minister of the Interior, or any official of the department, and the replies or communications from the minister or any official of the department, since January 1, 1905, relating to the transfer of certain swamp lands in the Big Grass Marsh, in the province of Manitoba, to His Majesty King Edward VII., for the purposes of the province of Manitoba.—Mr. Malloy.

For a copy of all correspondence, tenders and documents in connection with the construction of an ice-breaking steamer for Northumberland straits, let to Messrs. Vickers Sons and Maxim; also the same in connection with the construction of a lighthouse tender and buoy steamer for the Great lakes, by Messrs, Swan, Hunter, Wingham and Richardson.—Mr. J. A. Currie.

For a copy of all correspondence and memoranda relating to rural mail delivery in the province of Alberta?—Mr. McCarthy.

For a return showing the amount of produce of the following lines shipped to Great Britain or other countries in cold storage, or cooled air chambers, during the years 1907 and 1908: Apples, in barrels or other packages, pears, plums, tomatoes, fresh meat, in lbs., fowl, fish, butter, eggs and cheese; to what country or countries they were shipped, and their condition on landing; the system of cold storage principally in use on the steamships carrying such produce.—Mr. Sproule.

GRAND TRUNK RAILWAY INDEBTEDNESS TO THE DOMINION.

Mr. GEORGE TAYLOR moved :

For a copy of all orders in council, reports, accounts, contracts and other papers and documents of every kind, nature and description, touching or relating to the indebtedness of the Grand Trunk Railway Company to the Dominion of Canada.

Mr. FIELDING. There is no objection to the motion passing, but I do not think there are any papers; I think all the information on the subject was given to the House the other day.

Motion agreed to.

GEODETIC SURVEY OF CANADA.

Mr. A. K. MACLEAN (Lunenburg) moved :

For a copy of all correspondence, reports, documents, orders in council in the possession of the government relating to the establish-

ment of a geodetic service bureau, and the commencement of a geodetic survey of Canada.

He said : I must confess that what little knowledge I have on the subject of a geodetic and trigonometrical survey is due to the fact that last year some members of the Canadian Royal Society together with some members of the Canadian Institute of Engineers placed in my hands some literature on the subject and requested that I should discuss the matter in the House with a view of endeavouring to enlist the interest of members of parliament in this question which to them is of very considerable importance.

The terms ' geodetic ' and ' triangulation ' as applied to surveys may be alarming to some hon. gentlemen, as they were to me, when first I heard of them, and possibly I had better venture, in an imperfect fashion no doubt, a brief statement as to the import of these terms.

There are two methods of fixing a position on the earth's surface; first, there is the astronomical method, wherein the latitude and longitude of a given point are fixed by observations of the heavenly bodies; secondly, there is the geodetic method, whereby positions are located or determined from observations or measurements, made from a known point on the earth. The former method is open to error, owing to what is technically known as the ' deflection ' of the plumb line, or the deviation of the spirit level from the horizontal plane. This error varies with the topography of a country, and is more pronounced in mountainous countries. Errors in astronomical surveys amount in the average to one hundred yards, and in extreme cases to a mile or more. It is obvious therefore, that for accuracy a fixed and accurate starting point on the earth's surface is necessary, and this is obtainable only by a geodetic survey, or geodetic methods. It might be of interest to relate that McGill observatory in Montreal is the best located point in America, in other words, it is the primary meridian as regards longitude in America, and has been adopted by the United States Coast and Geodetic Survey.

The phrase ' triangulation survey,' or ' trigonometrical survey ' may be defined as one where a base line is very accurately measured between two stations; and one or more of the points are accurately fixed geographically, by determining the longitude and latitude to the nearest practicable limit. These triangles are then expanded working on the sides all over the country, thus ensuring accurate measurements; and all permanent points of the country are tied in to the triangulation—in this way permanently recording the fixed features of the country by a method that cannot vary; namely, that of tying it to the stars through the latitude and longitude of the determining points.

The importance of accurate maps for military and other purposes in connection with the administration of the country and the development of its economic resources are obvious. Possibly I cannot do better than to quote from Major E. H. Hills, head of the Topographical Section of the War Office, who some years ago made a report on the survey of Canada at the request of the Canadian government to show the value both to the state, and to private corporations or individuals, of a comprehensive series of topographical maps of the country. He enumerates them as follows:—

(a) Administrative and Political.

In all questions relating to the administration of public lands the sale and transfer of such; the setting out upon the ground of provincial, township and other public boundaries, the valuation of property for the equitable adjustment of sales, taxation and assessment, the administration of public works, such as canals, reservations, parks and highways; the reclamation and improvement of waste lands, and as base maps for all statistical purposes for the graphic representation of facts relating to population, industries, products and similar information.

(b) Military.

For military purposes such maps are invaluable in peace and necessary in war. In peace they are used for training and manœuvre purposes; for the laying out of camps and exercise grounds; for the planning of permanent defensive and offensive works; and for the representation and discussion of all military and strategical problems connected with the defence of a country and the successful prosecution of military operations on or outside its frontiers.

In war accurate maps are a matter of vital necessity and are of use for conveying information as to the nature of the country, means of communication, water supplies, natural resources, &c., and for planning marches, camps, fieldworks and general strategical operations.

(c) Engineering and Economic.

As preliminary maps for planning railroads, highways, electric roads, canals, aqueducts, sewerage, drainage and water supply schemes. In all such works the cost of preliminary surveys is thus saved.

For showing the extent, location and accessibility of lands, waters, forests and valuable minerals.

As base maps for hydrographical, geological, and mineral surveys.

I may say that all countries have recognized the value and necessity of carrying out precise surveys of their territory such works as completed were in progress in the United Kingdom, British India, British South Africa and in all the European countries with the exception of Turkey.

It might be interesting to note at this stage what work of this character has been

performed in Canada by the federal or provincial governments, and how far it approximates accuracy and general usefulness. We have land surveys carried on by the provincial governments; Dominion land surveys, and the surveys of the railway belt by the Dominion Surveyor General, and topographical surveys by the Geological Department. In addition to this may be added military sketch maps made by cadets from the Royal Military College during summer trainings, and surveys of the coast by the Admiralty and the Department of Marine and Fisheries.

Again perhaps I could not do better than to read to the House some of the comments of Major Hills upon the character of these independent and disconnected surveys respecting provincial land surveys. He says:—

The provincial land surveys have been done by various methods, and, as naturally might be expected, are of varying orders of accuracy. Roughly speaking, all those dating before 1850 were done with the compass and are liable to large errors. Since that date they have, for the most part, been carried out with theodolite and chain, and there has, no doubt, been a considerable increase in precision in this work in recent years. At the same time it must be remembered that much of it has been done by inexpert men who, having been paid upon the piecework system, have had little inducement to strive for any degree of perfection. The actual work of the provincial surveyors has been marking out of the township and subdivision lines upon the ground. The townships in the older part of the country average about 10 miles by 10 miles, in the newly settled districts they are made 6 miles square, divided into 72 lots of 320 acres each. The surveyors are supposed to record any features, roads, streams, &c., which cross the boundary lines, and to make a traverse survey of any lake of which the area exceeds 20 acres.

These townships plans have been put together by the provincial land department into maps. In the work of compilation the actual position on the map depends upon points determined astronomically by crude methods. In the eastern provinces the fundamental positions are those of the old admiralty charts. There has as yet been no attempt to recompile them upon the precisely determined fundamental points which are now available. It is furthermore, evident that the combination of a number of plans, themselves inaccurate, can only result in the accumulation of large residual errors; so it is hardly surprising that such maps should be described by a competent authority as 'grossly erroneous.' All the work of the several provincial departments is valueless as a basis for a topographical map of any pretentions to accuracy. It is possible that some of the traverse lines especially those done in recent years and where the original records are available, might be of some slight assistance in the progress of a topographical survey, though it is questionable whether the attempt to use them would not ultimately prove unprofitable.

The land surveys carried out under the direction of the Dominion Surveyor General in Manitoba and the Northwest and along the railway belt in British Columbia, are of a far higher order of precision. The work in this case is of the same nature, namely, the demarcation on the ground of the township and section lines, and the method of execution is that of accurate chainage from well determined astronomical points. Many of the positions are referred to the international Canada-United States frontier, which was determined by a joint commission, using the Talcott method of latitude determination. Other astronomical latitudes have been fixed in recent years with all the precision of which this method is capable and the longitudes of fundamental points have been determined by the exchange of telegraphic signals. The surveys are not topographical, in the sense that they include neither heights nor contours, nor other representation of the form of the ground, but the points are probably fixed with an accuracy sufficient to enable a preliminary topographical map to be based upon them.

In the course of the survey of the railroad belt of 20 miles on each side of the Canadian Pacific railroad line a chained traverse has been carried over the whole line from Calgary to Vancouver. The precision of this work is not quite up to the standard of which the method is capable, but it is not probable that the position of any point on the road is in error by more than a quarter mile. A certain amount of topographical work has been done along the railway and a map of the whole belt on a scale of 1: 500,000, or 8 miles to an inch has been produced. It is the intention of the department to extend the map to the southern boundary of British Columbia.

The work done by the Geological Survey Department may be defined as a mixture of compilation and original survey. In the eastern provinces, New Brunswick and Nova Scotia, where the provincial surveys are either non-existent or valueless, the work has been entirely redone by the method of chained traverses filled in by the compass. The resulting maps therefore attain a considerable degree of precision and in the case of Nova Scotia, where the survey on the 1-inch scale is about two-thirds completed, could doubtless be used as the basis for a preliminary topographical map. The fundamental position upon which the maps of this province are based is that of Halifax as taken from the admiralty charts. The latitude and longitude both of this place and of points at the north and south end of the peninsula, say Sydney, Cape Breton and Yarmouth, might now with advantage be redetermined.

In the case of New Brunswick a map of surface geology and forests on a scale of 4 miles to an inch, is now nearly completed. Three sheets in the northern part of the province remain to be done. In this map a number of heights taken from the railway profiles and from aneroid observations are given, the hills are shown by vertical hachures, and all the features as far as is possible on the scale are indicated. With a revision on the ground to add new roads, etc., and if reprinted with the elimination of the geology this map would make a fair preliminary topographical map of the province. The determination of the astronomical position of one part in the

province, say Moncton, should at the same time be undertaken.

In Ontario and Quebec the provincial surveys have been readjusted on new traverse lines and astronomical positions, and in the west also the work is partly original and partly based upon the Dominion land surveys. Most of the maps, with the exception of those covering Nova Scotia named above, and a few special sheets are on a scale of 4 miles to an inch in the east and centre, and 8 miles to an inch in the northwest

Three special topographical sheets, on a scale of 4 miles to an inch, have been done in the mountain region adjoining the railroad line. The method employed has been a very rough triangulation, based upon the points on the railway determined by the traverse already alluded to, with the details filled in by sketching. These maps have been reproduced in an attractive form with contours and hill shading, but they cannot claim to be more than reconnaissance sketches.

In addition to the work carried out by the civil departments, a considerable amount of military sketching has been done by the cadets of the Royal Military College, Kingston. Owing to the short time available for instruction and to the unsystematic way in which the work of the different men has been put together, the maps compiled from these sketches have hitherto been of less value than might fairly be expected. Lately a more scientific method of compilation has been adopted with a corresponding improvement in the results, but no method of compiling can by any possibility lead to the production of a complete map of a country which will, for a moment, stand comparison with one produced by actual survey.

In the report of the Geographer to the Department of the Interior for 1902, Mr. White, alluding to the difficulties met with in compiling the map of Canada on a scale of thirty-five miles to an inch, wrote:

The lack of an accurate topographical survey, the numerous sources from which information must be obtained, the difficulty in many cases of obtaining access to the plans of old and almost forgotten surveys, the necessity of incorporating surveys that are being made concurrently with the compilation of the map, which frequently alter the work almost as soon as completed, all tend to make the compilation of such a map a long and tedious operation.

Further on in the same report he wrote:

The difficulties encountered in compiling the new map of Canada emphasize the need of a topographical survey of at least the well settled portion of the Dominion. A few years ago I made a survey between two well determined points on Georgian bay and the west of Lake Ontario respectively, which showed that part of central Ontario, as shown in the best existing map, was over two miles out in longitude, and over a mile in error in latitude. Although our maps show streams, lakes, &c., even in the extreme north much of the information upon which they are based is of the vaguest kind.

A geodetic survey of Canada has been the subject of discussion by the Royal Society of Canada. On January 7, 1904, a deputation from the Royal Society of Canada waited upon the Hon. Clifford Sifton, then Minister of the Interior, to present the views of that society. The delegation consisted of Mr. T. C. Keefer, Sir Sandford Fleming, Prof. C. H. McLeod of McGill University and Hon. Senator Casgrain. This delegation urged upon that minister the necessity of a trigonometrical survey.

The Canadian Society of Engineers has memorialized the government upon this subject, and I desire to read just one feature of their address to which I particularly desire to call the attention of the House. It is as follows:

Referring to these requirements, it is understood that there are at the present time in the Dominion government some eight or more independent or semi-independent surveying branches, each of which conducts its operations after its own methods. These methods being conceived separately and in each case for special objects, do not of course accord, and the results obtained through them cannot be of a uniform standard as regards accuracy or topographical detail. The representations of such work on maps or plans are also carried out under varying methods of projection and on a great variety of scale. Such lack of unity of method and also of proper connection between separate surveys must obviously reduce very largely the permanent value of the work as a whole, and there is therefore not realized from our surveys that return which the money expended upon them would seem to justify.

Later, in November, 1906, by order in council, a committee on surveys was appointed to consider and report upon the necessity of an accurate survey of the Dominion, and the production of a topographical map of Canada based upon a network of triangulation. The committee consisted of the chief astronomer of the Interior Department, the Deputy Minister of Railways, the director of the Geological Survey, the chief of the general staff of the Militia Department, the Surveyor General of the Interior Department, the chief clerk of the Engineering Branch of the Department of Public Works; the chief of the Hydrographic Surveyor of the Marine Department, Prof. C. H. McLeod, Professor of Surveying and Geodesey, McGill University, Prof. Stewart of Toronto University, and the Principal of the Polytechnic School, Laval University. The committee on February 15, 1907, submitted the following conclusions to the Minister of Militia and Defence:

1. The committee is of opinion that a comprehensive and reliable survey of the Dominion for the production of an accurate topographic map, based upon a network of triangulation and showing the natural and artificial features of the country, is of urgent

necessity to the people of Canada, from the standpoint of public economy, the extension of public undertakings and the development of the natural resources of the country.

Public economy will be served by the early production of accurate maps, by the collection and record of reliable data for the benefit of all parties interested, public or private, and by the avoidance of the duplication or overlapping of survey work which at present frequently occurs, different parties surveying the same area independently for different purposes.

The extension of every class of public undertaking will be promoted, because such topographic maps will greatly assist in the location of roads, railways, canals, water supply, drainage and irrigation works. This has been found to be the case in all countries where such maps have been produced.

Development of the natural resources of the country will be furthered by the assistance which a reliable survey will afford to the geological examination of areas likely to possess mineral deposits, by the information it will give as to the location of agricultural or timber lands, and by the data it will afford for the preliminary investigations of water-powers, waterways, or other natural aids to industrial enterprise.

A reliable topographic map of Canada is absolutely essential for military purposes, to afford the fullest possible information as to the configuration of the country, its natural and artificial features.

It would be a basis for maps graphically illustrating all matters in connection with statistics such as population, industries, the products of the country, the areas of economic minerals and forests, qualities of soil, drainage and catchment basins of rivers and streams, the position of water-powers and the like.

I desire to call attention to the following remarks contained in this report, being a reference to the bearing of a geodetic survey upon hydrographic surveys. I was told some months ago by a gentleman qualified to speak, that some years ago, on the Atlantic coast it was discovered that a certain point of danger was inaccurately placed upon our charts, the error being some several miles. I do not recollect the exact point. The report proceeds:

An important benefit to be derived from a topographical and hydrographic survey would be the accurate delineation of the coast line of the Atlantic and Pacific sea-boards and the inland waters. It is inevitable that until this is accomplished many disasters must happen to shipping, which might be avoided in a great measure, if there were reliable charts of these waters. One of the first requisites in making hydrographic surveys for the production of accurate charts, is that control points must be accurately established on the shore. Large sums of money are annually expended on harbours, lighthouses and other improvements, yet in many cases the geographical positions of thse harbours and improvements have not been accurately determined.

Mr. A. K. MACLEAN.

The report goes on to say:

In political and legislative matters, a topographical map would furnish useful and accurate information as to the boundaries of villages, towns, municipalities, &c., and it would also be of great utility in the administration of all public works and services.

It is possible, with a good topographic map, to plan and lay out engineering works to better advantage than by means of the ordinary preliminary survey. A topographic map would thereby effect not only a saving of large sums of money now annually expended by the government and by private companies in surveys for such undertakings, but would minimize to a great extent the cost of construction, since a better location may be obtained in many cases from a topographic map than from preliminary surveys.

In short, the benefits arising from a good general topographic survey may well be described as practical, political, administrative, military, statistical and economic.

2. The elaboration of a comprehensive scheme that will permit of a satisfactory co-ordination of existing survey material, whether due to the work of government survey departments or to private enterprise, is also a matter of national importance and great practical utility to the people of Canada.

For the proper co-ordination of existing surveys and the effectual control of future surveys, it is necessary to establish in a permanent manner the network of triangulation already referred to, so as to provide a series of points of reference, at convenient distances apart, whose geographical position and absolute altitudes have been accurately determined by appropriate astronomical observations, chains of refined geodetic triangulations and nets of precise spirit levelling.

3. Provision should be made for perpetuating bench marks, points of control, and important points in the interior detail of surveys by permanent monuments. This rule should be applied to all surveys of standard accuracy made under Dominion authority.

4. In order to secure the maintenance of adequate records, there should be a central record office in a suitable fireproof building, where the results of all surveys, inclusive of accurate copies of plans and profiles with brief descriptions, should be filed. For purposes of reference, these documents, when not required to be treated as confidential, should be made readily accessible to all departments or branches of the government service and to the public.

Deposit in this office of all such results, plans or other documents should be made compulsory upon the departments conducting surveys, and upon railway and other companies working under Dominion charters.

5. It is highly desirable that all general and sheet maps should be produced under standard arrangement as regards scale, projection and execution.

For the production of such maps the existence of a central bureau, where maps may be compiled, edited and engraved for the general survey, and, on repayment, for other departments requiring the same, would present many advantages. This provision should not prevent any department equipped for the

purpose from preparing its own plans or maps.

6. In order to secure unity, co-ordination, and efficient administration, as well as the systematic utilization of all survey material, and for the production in sheets of an accurate topographic map of Canada, it is desirable that the controlling and topographic surveys, the land triangulation basis of the hydrographic survey and the map bureau and record office should form branches of one department of the public service.

It is also desirable that these branches should be included with the department of the Geological Survey, together with such other branches of the public service as deal with the natural resources of the Dominion and the quality of whose work depends largely upon accurate maps of the areas under investigation.

7. The prosecution of surveys for special purposes, such as construction of canals or railways, improvements of rivers and harbours, laying off land for settlement, and the like, would be left to the departments to which these matters now appertain, but the departments interested in such surveys should be invited to carry them out, so far as consistent with the end in view, in accordance with such system as may appear best adapted to render the results of permanent value for topographic purposes.

8. The co-operation of the provincial survey departments should be invited.

The report then proceeds to deal with the cost of this proposed work, which I had better put upon 'Hansard' at this point, although that phase of the question is hardly applicable to this division of my remarks. It says:

9. It is not contemplated that surveys extending over the whole country should be undertaken at once. Their extent must be determined by the urgency of the requirements, and the control survey would in the first instance be confined to the better settled parts of the country and to those portions where geological and other researches into the natural resources of the country demand reliable maps upon which to base their operations.

The appropriations in the estimates now before parliament for the work of the branches which we recommend should be brought together are:

SALARIES AND EXPENSES.

Geological Survey, Supt. of Mines Branch..	$242,475
Hydrographers' Branch, including veys..	269,067
Hydrographers' Branch, including new steamer 'Tidal' survey..	349,500
Geographers' Branch..	58,890
Total..	$919,932

The money provided in these estimates if administered under the unified management, is sufficient, subject only to such natural development as may take place in the future, for the establishment of a systematic survey, without additional appropriations therefor by parliament.

Of the sums mentioned above there is available for field work of surveys:

Geological survey..	$ 25,000
Astronomical branch including Boundary Surveys and Trigonometrical Survey..	204,000
Hydrographic Branch..	150,000
	$379,000

Out of the chief astronomer's vote, $50,000 has already been noted in the estimates as for the trigonometrical survey, in connection with which some work has been done in the vicinity of Ottawa in 1905 and 1906, and triangulation forms part of the plan of operations of the International Boundary Surveys. A portion of the expenditure for the latter, say $10,000, may be consequently credited to control work making, with $50,000 above mentioned, a total of $60,000, available for purposes of control.

This will be sufficient to carry on the triangulation eastward from Ottawa towards Montreal and the Richelieu river, to conduct some triangulation on the River St. Lawrence, to assist the hydrographer who will thereby be enabled to devote the funds at his disposal more directly to sounding, &c., and to contribute towards control of work in the west, such as the continuation eastward along the 49th parallel of the boundary survey triangulation. All this work is such as will necessarily be included in the Geodetic Survey so soon as the methods of conducting the latter and the areas over which it shall extend shall have been determined.

Meanwhile the control work may be gradually extended over the country connecting the new surveys and correcting the old. It is thought that, with the union of the surveying departments mentioned, it will be possible in future years so to distribute the funds devoted to surveys among the several branches as to develop the topographic map systematically.

The inauguration of a systematic survey of Canada, therefore, calls for no immediate increase of expenditure. Whether there shall be increase, or continuance of the present expenditure in the future is a matter for future decision, based on consideration of the cost of the work in relation to the beneficial results obtained from it. This decision will rest wholly with the government and parliament.

10. For the complete working out of all the details which will arise from the foregoing, and especially to provide for that accord which is necessary in the operations of the several survey branches of the Dominion a Permanent Survey Board should be appointed.

The board should be similar in composition to the present survey committee, and have power to call in consultation such other persons as from time to time it may desire.

The board should advise as to the development and methods of the control survey. It should suggest such regulations as it might consider necessary or desirable regarding all surveys and mapping, and should invite co-operation towards securing the practical application of the same. It should constitute a board of conference for the several survey departments.

A reasonable appropriation, say $8,000 per annum, should be made for the necessary expenses of the board.

In the event of these recommendations receiving the approval of the government the immediate appointment of the board is urged, in order that they may undertake their duties without delay.

I do not know that I could do better at this stage than give to the House statements from individuals and reports showing the benefits that are possible from accurate topographical surveys. I desire to give to the House first a statement made by President Van Hise, of the University of Michigan, and which is, I think, a very practical illustration. He says:

A railroad company owned two lines in northern Michigan and Wisconsin which they wished to connect by a branch some forty miles in length. The country was unknown between the two lines. Under my direction topographical, geological and timber maps were made of about twelve hundred square miles, at a cost of about $25,000. After these maps were made the line was laid down in the office with a beautiful grade, and with the best location possible with reference to iron ore and timber. One of the features of the line was that it crossed a bold trap range which was supposed to be impossible to cross except at great expense, by finding gaps through it. This line crossed the branch of another railroad about twelve miles long, which because it went around the end of this trap range, when the gap was directly in front of it, was at least two miles longer than was necessary. These two additional miles of road cost fully as much as the entire survey of the twelve hundred square miles.

It is my profound conviction if topographical surveys were made of broad zones where it is expected to project railroads through forested country, that many times the cost of the survey would be saved in the construction of the railroads, besides getting a better location both as to resources and to grade than is possible by the random methods employed at the present time for the locating of railroads in rough forested country.

In answer to a question asked by the member for Cumberland a few weeks ago the Minister of Railways stated as to a recent survey for a projected diversion of the Intercolonial Railway, completed only about two months ago, that the cost thereof was $9,914.05. The greater portion of this amount might doubtless have been saved had that section of an old province like Nova Scotia been properly surveyed in the past. The statement has been made by General Francis A. Walker that:

If the state of Massachusetts had had a good topographical map in 1863, some $20,000,000 would probably have been saved in its public railway expenditure.

The area of the state of Massachusetts being 8,315 square miles, this saving would amount to over $2,400 per square mile. The topographical survey of the state has cost $13 per square mile. Dr. Frank D. Adams in a recent paper read before the Canadian Institute quotes from a letter from Dr. C. D. Walcott, lately director of the United States Geological Survey, as follows:

Such maps——

—those of the the United States Geological Survey——

—are as essential to the proper development of all the resources of a state. We have reached the point where officials of railroads, of trolley lines, those interested in highway improvements and in the development of city water supplies and sanitary measures as in general engineering work, do not think of spending one dollar on field surveys until they have first procured from this office the topographic maps and the records of levels run in connection therewith. We are in daily receipt of testimonials showing the sums of money and the time saved in connection with all preliminary and also of some location surveys for such enterprises. Above all, however, is the topographic map, an essential to the study, along modern lines and by best methods, of the mineral resources of a region. The old descriptive methods of discussing the geology of a district have long been abandoned in this country. It has been found that every dollar expended in preparing a mathematically correct base map upon which to map the geologic formations for strikes and dip and from which to construct structural sections, is returned many-fold in the value and accuracy of the resulting studies of the geologic formations and their economic possibilities. A good topographical map is just as essential a frame work upon which is to reproduce a facsimile of the underlying geology, as is the steel frame which modern architects use for, and support a masonry building of modern design.

I might give to the House many other statements and reports upon the urgent necessity of a trigonometrical survey of the Dominion, but it appears to be unnecessary to extend those already given. Now, I think this is an important matter and I believe a geodetic survey should be commenced as early as possible and that some work, even though but little, be performed each year. I believe also that this work should be carried on by a new departmental branch to be established, and not by one of the existing departments. This branch might be officered by the deputy heads of the departments now carrying on survey work. However this is but a matter of detail, and after all, is secondary to the main idea of a geodetic survey. I trust the government will see fit to take this matter into consideration and adopt at an early date a policy which will ensure the commencement of an accurate survey of Canada.

Hon. FRANK OLIVER (Minister of the Interior). There is no question as to the importance of the survey work carried on from time to time in this country, as any one may judge from a glance at the estimates or at the Auditor General's Report. It is a necessity in the development of our

country, and it is right that the fullest attention should be given to the matter. I am glad that my hon. friend has brought this matter before the House. I can hardly allow the motion to pass, however, without giving some information, and the views I hold based upon that information, which views are not altogether in accord with those my hon. friend has expressed. There is no doubt that the great feature of a survey is that it should be accurate, and that the various surveys should be properly related to each other. If it were possible that there should be a geodetic survey of the Dominion of Canada in advance of all other surveys, it certainly would be in the end a measure of economy, and would undoubtedly secure an accuracy that is not at present possible. But I need hardly suggest to the House that when it costs so much money as it does to keep within measurable distance of the actual survey requirements of the country as it progresses, the task of keeping ahead of the requirements with a geodetic survey would cost a sum beyond which I think the country could afford, or that parliament would sanction. If it were possible to keep in advance of settlement, in advance of railway construction, in advance of geological investigation, by a geodetic survey, still I do not think it would be advisable for the government to enter upon the enterprise, unless we assume that the country is made for the surveys and not the surveys for the country. A railroad survey is necessary because, for one reason or another, it is in the public interest that a railroad should be built, although there may have been no other reason for survey in the locality traversed by that railroad. It is desirable that there should be geological exploration, which should only be limited by the extreme bounds of our country; it is desirable that there should be lands laid out for settlement, well in advance of settlement, so that pioneers may have security in their holdings. But it would not be well that all these enterprises should have to wait until an accurate survey had been made in that part of the country where it was required for these various purposes. The theory that my hon. friend has expressed is an excellent theory, and no doubt it would work well if Canada were an island or a small and fertile country. But Canada being so extensive, the conclusion to which I am forced to come is that the proposition is not a practicable one, is not a business proposition, is not within the resources of the country, and would be greatly to the disadvantage of the country if it were undertaken. I speak however of a geodetic survey made in advance of the actual requirements, which is the ideal condition that my hon. friend has suggested. But a geodetic survey that will follow these requirements which I have mentioned, that would check up and bring into their proper relationship the surveys already made, is another matter. It is not as theoretically sound, but it is much more sound practically. It is within reach, it is possible and it is not only being undertaken but it has made very substantial progress. The representations which my hon. friend has mentioned were made to the government some years ago have been dealt with, have been acted on to a certain extent; and the astronomical surveys branch of the Department of the Interior, some two or three years ago, took up the subject of the making of a geodetic survey of Canada, beginning in those parts which were already settled, where surveys for settlement, or railways and roads had already been made. These surveys were not in themselves accurate and it was thought necessary and desirable that they should be established in their proper relationship to each other. In pursuance of that work parliament has voted, from year to year, a considerable amount of money and is being asked to vote $50,000 for it during the present session. The work of the geodetic survey has been in progress, has covered a very considerable portion of the better settled portions of Ontario, and is also in progress in the St. Lawrence valley in the province of Quebec. A number of members of the House have, from time to time, inquired as to the purpose and meaning of certain wooden towers which they have seen in different parts of the country. These towers are in connection with the geodetic survey and it may relieve the minds of hon. members of the House to know that they are not for any more harmful purpose than merely to establish the proper relationship of different points on the different surveys to the parts of the country in which they are situated.

Mr. SPROULE. Are they all wooden towers or are some of them iron?

Mr. OLIVER. I think they are wooden. They are for the purpose of observation. The work has been undertaken, has made good progress and so long as parliament is willing to pay for the work so long can it be continued. There is no difference of opinion between myself and my hon. friend as to the desirability of a geodetic survey, but what I want to place before the House is the difference between a theoretically desirable geodetic survey which shall be in advance of all other surveys and a practical geodetic survey which shall, as circumstances admit, follow upon the surveys already made for the various purposes for which surveys are necessary. It is true that there may be to some extent a duplica-

tion of work in the surveys which have been made. That is only to a very limited degree. The survey which is required in the western country for the allotment of settlers and the surveys which were required in this country in the early days for the allotment of settlers do not interfere with or duplicate the surveys necessarily made for the construction of railways or in geological investigations. There may be instances where the work overlaps but these instances are of very trifling moment. The main point is that the need of the country, as it is at the moment and in the places in which it exists, is met as at present without delay, or with the least possible delay and that, I submit is the object and purpose of any system of surveys. The absolute accuracy that is secured by the geodetic survey is something we can wait for until we can afford it, but we cannot afford to wait for it in pushing settlement and enterprise throughout the vast extent of this stupendous country. A geodetic survey of Belgium, or the state of Massachusetts, or of Ireland even, is one thing; a geodetic survey of the Dominion of Canada is quite another thing. Even a geodetic survey of the United States with its population of eighty millions and its stupendous revenue is quite a different thing from a geodetic survey of the Dominion of Canada with its population and revenue.

Mr. R. L. BORDEN. What progress has been made in the United States?

Mr. OLIVER. I have no idea.

Mr. J. A. CURRIE (North Simcoe). Mr. Speaker, this is a very important subject and one that the House should not dismiss hastily. I very heartily agree with the remarks made by the hon. member for Lunenburg (Mr. Maclean). The hon. Minister of the Interior (Mr. Oliver) who has just sat down, unfortunately, does not seem to grasp the basic idea of the remarks of the hon. member for Lunenburg. He seems to think that a geodetical or a topographical survey is a theoretical survey and that the only practical survey is the method at present in vogue by his department in laying out town lots, farm lands and work of that character. Let me assure him that as far as practical work is concerned the most accurate method is that which conforms to the requirements of the triangulation and topographical survey, and that the theoretical and purely nebulous idea is the idea at present in vogue of having surveys made without having any fixed point and without showing any topographical features. It is well known that in every country in modern Europe and in the United States there is a topographical and geodetic survey. The hon. member for Lunenburg has explained very clearly the difference between the present system of surveying and a geodetic survey. Let me point out here that a geodetic survey commences first with the measurement of a known base. This base is measured with very accurate instruments and the error in a mile would not amount to the thousandth part of an inch. Taking a point say at McGill university,—a mile would be measured and from that the whole country would be triangulated and measured within the thousandth part of an inch. This work should be done, if it is to be done by us, with exceeding accuracy. The United States government undertook a survey of this description of the great lakes and I noticed by reference to some of the correspondence of the Waterways Commission, that the survey of the great lakes has proven to be false in many respects because there was a slight error, possibly when they began, which, of course, increased into a vast error when the large number of angles were triangulated and closed up. Of course, the triangulation of the country in connection with a geodetic survey could be very rapidly done and could be completed from coast to coast possibly within three or four years. Following that comes the topographical survey which radiates from the points fixed by the triangulation. I know a little about the subject and I may therefore be excused if I deal with it briefly.

The Department of Militia and Defence has already had a number of these topographical surveys made and I must say they are admirable so far as they go. Now, suppose the surveyors of farm lands throughout Canada were compelled to insert the topographical features necessary for a military map, the added cost would not be 25 per cent over the present cost and the work would be done at once and finished for all time. We were told by the Minister of Militia that the great general staff system of England is to be adopted in Canada. In every country in Europe one of the functions of the great general staff is to carry out an accurate topographical survey of the whole country. Nobody can doubt that at present there is an enormous waste in the making of surveys under our system. Even in the older sections we have surveyors privately employed in every township and their work is never finished because if they require to draw a second line after having drawn a first, there is no map and the work has to be done over again. We have also, under one department of government, the surveying of land into sections and quarter-sections, and that survey could just as well be conducted on the lines of a topographical survey in the first place. To do this it would need only the addition of one or two extra men to the surveyor's staff, because experience has shown that one square mile per day can be done by two men with such

a degree of accuracy that in no place will the work be out more than a foot or two at any particular point. Compared with the geological maps of the United States, our geological maps are but a laughing stock and as the attempts of school children. The railroads of the country do a great deal of topographical work, but the government of the country does not benefit by that at all. Then, the provincial governments are constantly spending money in making surveys and the existing system does not enable these to be available to the general advantage of the people of the country. We should understand, however, that a great many of the old surveyors are entirely opposed to a topographical survey because their system compared with the system which obtains in the best and most modern surveys is as different as night from day. They work with a chain, a field book, and a theodolite, but the modern system adopted in other countries is to do this work by the plain table method. Not one out of five of the old surveyors, good men as they are, understand anything about topographical work, using what is known as clinometer and prismatic compass and running various section lines over a square mile of territory, sketching the under features on a small portable drawing board as they go along. That is the military system of surveying, and it is as far in advance of the old method as the modern trolley car is ahead of an ox-cart. In the United States the engineering and surveying work is under the control of the war department, but in Canada almost every department of government has its engineering staff and at the present time we have the Public Works Department conducting a survey of the Niagara Peninsula to ascertain the best place to run the Welland canal, when at the same time we have an excellent map, prepared by the Militia Department, which would give the Public Works Department in fifteen minutes all the information required without going to extra expense. Here is an instance of duplication. If we are going to adopt the methods which have been found satisfactory in England and other countries we must group all our engineering staff under one department and that one department should be the Department of Militia and Defence. I say this with a good deal of diffidence, because of my being associated to some extent with the militia of Canada, but it is a fact that in the United States the geological survey and other surveys and all public works are carried out under the supervision of the war department, and with possibly one or two exceptions the records of the Uuited States for the last twenty years have shown nothing dishonourable in connection with contracts, and the contractors have had to live up to their agreements, because the men in charge of the engineering work were men of as high honour as could be found in any service in the world. We have in Canada the Royal Military College, which is educating the very men best fitted for this kind of work. The Minister of Militia will agree with me that every graduate of the Royal Military College must be a thorough topographical surveyor as well as an ordinary surveyor. If all the surveying and engineering work of the government were grouped into one bureau, then the various departments of the government could submit their proposals to that bureau, the engineering work could be done by it; and we would avoid the duplication of effort which we have at the present time, and I believe several millions of dollars per annum could be saved to the country. I submit that this board which has been referred to should be made a section of the general staff and we should in its initiation include among its members the very ablest engineers and surveyors in the country. Any one who looks at the German maps will see that they are done in two colours, black and white, and you can tell from a glance at them where every vineyard, every stable, every house, every elevation or under feature of the ground is located. As has been pointed out in the statement of Professor Van Hise, the cost of this work is trifling, and when once it is done it is final. If you want to find out anything about the topography of the country you will not have to send a band of surveyors to run lines or go on a voyage of discovery; any engineer can take a map of that kind and ascertain where a railway or a street car line or a canal should be located and all that remains to be done in any engineering scheme is to put down the posts in the places marked on that map.

This is a subject which I think this House should take into its very serious consideration, because it is not wise for us at enormous expense to commence adding additional boards or commissions or departments of work. Would it not be better to have more centralization of this work and to have it under a competent head? I know I am advancing revolutionary sentiments, so far as the ministers in certain departments are concerned; but ministers in charge of departments carrying on public works must realize that this is the way work of this kind is done in the mother country, to whose experience we constantly appeal for the best methods. The Minister of the Interior says that this system would tend to make the country for the surveyors rather than the surveys for the country. I claim that it would not. Any engineer who understands topographical surveying will testify that the additional cost, for instance of laying out a country in the north-west by a complete topographical survey

would not be more than 25 or 30 per cent. The only additional cost would be in having a department where the maps would be accurately defined on copper plates, and the plates would be kept in a safe place, so that if at any time additional maps were required, the plates could be taken and the maps printed from them. I understand that the Waterways and Boundary Commission are adopting that method for the lake surveys. A department has been established in Buffalo where all the work of their engineers is transferred to copper plates, so that it will form a permanent record. I think this House cannot do better than adopt the resolution, or at least the sentiments, of my hon. friend from Lunenburg. The hon. Minister of Militia is doing excellent work in this direction; and though his colleagues may think that he is throwing away good money in having topographical maps provided, I think that he who understands the matter will assure this House that for the defence of the country alone it is a wise expenditure of money. It is only within the last year that we have had any topographical maps of this country which would enable officers not acquainted locally with the country, even in the older sections, to find their way. An officer who understands the reading of such a map and knows its scale, can fix his position on the map in two minutes, and if ordered to march twenty or thirty miles to a given point, he could, by means of his compass, find the direction in which to go; and, even if he had to pass through forests and ravines, he could come within a few feet of the very spot to which he was required to go. I would like very much to hear from the Minister of Militia on this question, in view of the fact that we have now pledged ourselves as a country to accept the staff system adopted by England; and it should be our desire to carry out that system faithfully by establishing a department for carrying out both topographical and geodetic surveys.

Mr. C. A. MAGRATH (Medicine Hat). Mr. Speaker, being in an agreeable mood to-night I am disposed to agree to a great extent with the gentlemen who have preceded me. We had a scientific survey, topographical and geodetic, started in this country in 1876, in Mr. Mackenzie's time. That survey was carried on in the western country for three or four years, and was then abandoned; but provision was made in the Surveys Act under which men were to be qualified and known as Dominion topographical surveyors. I have devoted considerable study to that branch of my profession. There are two interests to be served in connection with surveys, the commercial and the scientific. While I agree with the mover of this resolution that it is very desirable to get a scientific survey started, I must at the same time admit the position taken by the Minister of the Interior that our great work is to get the country settled and to make the necessary surveys for that purpose. One criticism which I have to offer in regard to the move made by the government in collecting information is this, that it placed the matter in the hands of the officials of the various branches. While I have nothing to say against those gentlemen, while they are very able men, I feel that there must always be a certain amount of jealousy between the difierent branches. Under these circumstances it is desirable, if you are going to appoint a commission to investigate the question of a scientific survey, to go outside of your own officials. For my part, I would like to see a commission appointed by the government to investigate the methods in use in the United States, in France and in other countries, and to prepare Canada to take up a geodetic survey on the very best and broadest lines. I see no harm in that; I think it is a good move. I want to draw the minister's attention to the fact that in our western country we have a treeless area of from 50,000,000 to 70,000,000 acres. We have streams there running from the mountains and discharging into Hudson bay at from 200 to 300 feet below the level of the prairie. We have a soil largely clay, through which there is practically no percolation, so that it is almost impossible for people to get water in springs; and I take the position that any country where that is the case must be pronounced largely semi-arid in its character. I am not going to mention any particular localities; but if you examine the meterological returns covering fifteen or sixteen years, you will find many settlements where there is not on the average more than nine or ten inches of rainfall in the year. In this district near the Ottawa river, the water is carried near the surface, and the character of the soil is such that the water percolates through it, and in addition there is a very heavy rainfall. If nine or ten or eleven inches of annual rainfall is sufficient for crops, and if we are going to put an immense population into that western country, we shall have to have some system of water distribution. We cannot depend on the rainfall to secure for a very large population sufficient water both for domestic purposes and to supply the necessary moisture for crops. That in my opinion is a serious question, one that concerns every member of this House; because if there is any ground for my fears, we want to get busy, and get busy very quickly to see what we can do to help the people of our western country in this matter.

The mover of this resolution referred to Dr. Walcott and the work of the geological survey of the United States. That work was taken up some 15 or 20 years ago. In addition to taking thorough measurement of the

various streams, they also established contour lines throughout the country. The work is done at very reasonable cost, but it takes a series of at least 15 years for any scientific investigation to get with any reasonable accuracy what that water service is going to amount to, and the sooner we start that work on good broad lines the better. Take the river that passes our door, that river has been changing the last ten years or more. If we had been measuring that stream during all those years, we would have been notified by those measurements of certain things transpiring within the drainage area of that stream, and the same remark applies throughout the whole country. Our waters are the most valuable asset our country possesses and the sooner we get to work to obtain better measurements of our various streams the better. This is a matter which I commend to the hon. the Minister of the Interior for his most serious consideration. In the estimates there is a sum of about $10,000 for that purpose, but that is not sufficient. I spoke of this to the former Minister of the Interior a few months before he retired (Mr. Sifton), and he told me he would endeavour to put $20,000 in the estimates for that kind of work. We need a great deal more than that to do the work properly. The commercial end we must look after, and the scientific end will follow. Take the west, where we have these irrigation companies, we ought to have certain surveys made there. Let me mention one case for the benefit of the Minister of the Interior. We ought to have a survey made from the Old Man river to see if it is not possible to carry water from it into the district in between the Little Bow river and the Belly river, for the purpose of running small creeks through the country to supply domestic needs.

I had no idea this matter was coming up to-night, or I would have been prepared to go into it to a much greater extent, but I should think it would be only necessary to draw the attention of the Minister of the Interior to the work for him to see its necessity. I want to get from under the load if there ever should be a time in the prairies when the people will not find sufficient water for their necessities. The matter is one of most serious import to that country, and I most sincerely trust the hon. Minister of the Interior will take the same view of it.

Hon. Sir FREDERICK BORDEN (Minister of Militia and Defence). We are very much indebted to the hon. member for Lunenburg (Mr. Maclean) for having brought this matter up and also the hon. member for North Simcoe (Mr. Currie) for the very able manner in which he seconded the motion. We are much indebted to these gentlemen for the very clear way in which the question has been discussed and the very valuable information vouchsafed to the House. I did not intend saying anything but since the hon. member for North Simcoe (Mr. Currie) has appealed to me, I feel it would be only courteous that I did say a word or two, particularly as I have had something to do in a small way with certain surveys which he has been good enough to characterize as excellent and which, I am happy to know, have been appreciated throughout the country. I do not intend to enter upon a discussion of any controversial character. It is a matter of little consequence to me whether the surveys are carried out by the Militia Department or by the Department of the Interior, so long as an accurate survey is undertaken promptly, and I am glad to hear from my hon. colleague the Minister of the Interior that such a survey is actually being carried out. In the United States, as my hon. friends from North Simcoe and Lunenburg have observed, these surveys, and in fact all engineering work, are absolutely under the control of the war office, and after the experience of a century the system has been found to work amirably. As the hon. member for North Simcoe, (Mr. Currie) has said, in not more than one or two cases has the good faith of the engineers in the United States, connected with public works, ever been questioned in the slightest degree. It seems to me to be reasonable too that if in a peaceful country such as the United States has generally been, and in Canada such as we hope it will always be, it is necessary to maintain a military force and an engineering branch in connection with that force, it is very desirable that some important work should be given to that engineering staff. In the United States the engineering staff has been engaged in work of this kind. I think it would be desirable, in view of the class of men we have now in the engineering branch of the Canadian militia, that some work of this kind should be given them, and we have undertaken to do mapping work and surveys for the defence purposes of those portions of the Dominion of which an accurate knowledge of the topography is absolutely necessary if we are to know anything about the means of defending the country in the event of an attack being made.

As to how quickly this work shall be done that is a question, as my hon. colleague has pointed out, very largely of money, and I did not understand him to say that he in any way objected to carrying on a geodetic survey or a triangulation of the whole Dominion except from the point of view of the very great expense, and his

view is that it should be done gradually and that the surveys already carried out should be co-related for future use, I should hope that the report moved for will be brought down and printed and that every hon. member will carefully read it, and that parliament will be ready to vote to my hon. colleague the necessary sum to enable this geodetic survey and triangulation to be carried out in the most rapid manner possible, which very likely would not take, at the most, more than ten years.

My hon. friend from Lunenburg (Mr. A. K. Maclean) has quoted the statement of a very prominent gentleman of Massachusetts, a statement which I have read myself, to the effect that if there had been a geodetic survey of the state of Massachusetts fifty or sixty years ago, millions upon millions of dollars would have been saved to the state in the construction of railways and other public works. The same thing would be true of this country. Fortunately for Canada, the country has only begun to be settled, and it will be possible, I hope, to have the advantage of a geodetic survey in many portions of the country before the construction of railways is extensively undertaken. The papers moved for, I believe, are under control of the Militia Department. I shall have pleasure in having them brought down, if this motion is carried, almost immediately.

Mr. ANDREW BRODER (Dundas). Mr. Speaker, I have listened with a great deal of interest to the discussion on the motion of the hon. member for Lunenburg (Mr. A. K. Maclean). I think that surveys of this nature, so far as this country is concerned, have been perhaps too much a matter of secrecy; the public generally have not had the advantage of the information contained in those surveys. I think we differ somewhat from the Americans in that respect. There is not the slightest doubt about the benefit to the public in the United States from the topographical maps. For one thing, they have saved a great deal of expense to the agriculturists of that country in the carrying out of drainage works. The federal government has undertaken the reclamation of large areas of swamp land, and these surveys have been very valuable to the people interested in that matter. I think they estimate something like 73,000,000 acres of swamp lands to be reclaimed east of the Rocky mountains, and these maps which have been issued to the public have been used largely with a view to assisting the agriculturists in that respect. It seems to me that, under whatever department these surveys may be made, they ought to first take up the country that is more thickly settled, and where the information would be of greater interest to the public than in the outlying district. I can quite understand the force of what the Minister of the Interior (Mr. Oliver) says in reference to the expense. In a new country like this, we have to do a good many things in the rough, so to speak, because we must keep in advance of the immediate requirements of the people and the development of the country. The relation that these surveys may have to commercial enterprises is manifest, and I think that if they were taken up with a view to assisting in these as well as in military work, it would be greatly to the advantage of the people in the more rapid development of the country.

Mr. R. L. BORDEN (Halifax). I listened with a great deal of attention and interest to the very instructive speech of the hon. member for Lunenburg (Mr. A. K. Maclean) and I entirely agree that he is entitled to the thanks of the House for having brought a matter of so much importance to our attention. The subject was mentioned to me, I think about a year and a half ago, by Professor McLeod, of McGill, the professor in charge of this work in that great university. I was very much impressed with the view which he then urged, and on that account I have listened to the debate this evening with all the greater interest. I appreciate what has been said by the Minister of the Interior (Mr. Oliver). We cannot expect settlement or mining development or any other of the great enterprises of this country, to wait until we have had a thoroughly scientific survey. That goes without saying; it is hardly necessary to urge it. I did not understand that the hon. member for Lunenburg did urge it. But he did urge the very great importance of having a thoroughly scientific and accurate survey undertaken and carried out as rapidly as might reasonably be expected, having regard to the undoubtedly very great cost of work of that kind. The minister tells us that the work had been undertaken and has already made considerable progress. I should have been very glad indeed if he could have given to us a little more information as to the progress made, but that, perhaps, will be disclosed in the documents moved for by the hon. member for Lunenburg. The Civil Service Commission of 1907 pointed out in their report, if my memory serves me correctly, that a good deal of work in surveying by the different departments was duplicated, or perhaps, done three or four times by different departments. My hon. friend the Minister of the Interior does not seem to attach very much importance to that. But, possibly, there is more waste of that kind than one would gather from the hon. gentleman's speech this evening. Of course, we should all think it highly desirable that duplication of work in that way should be avoided, that the departments should co-ordinate to work a little more. I suppose there is always a certain amount of red tape wherever there are departments.

I remember my surprise some years ago on being told by a certain minister of the Crown of that day that his department had been obliged to pay demurrage for, I think, about ten days, while another department of the government was making up its mind whether it could use the wharf of that department. In the meantime, the public money was being paid over to the owner of a steamship with certain commodities aboard designed for the use of one of the departments. This friction and red tape as between the departments, should be put on one side, and these surveys should be carried on, as much as possible, without duplication of work. I do not know how far this work has progressed in the United States. They have been at work for many years. I should have been glad of information from the Minister of the Interior (Mr. Oliver) or the Minister of Militia (Sir Frederick Borden) on that point and also on the question how much these may expect to accomplish in ten or fifteen years. We have not received much information on that point. Perhaps it also will be disclosed in the papers brought down. I understand that the military surveys which have been referred to by the hon. member for North Simcoe (Mr. J. A. Currie) and the Minister of Militia (Sir Frederick Borden) are topographical and not geodetic. Passing from that for a moment, let me draw attention to the necessity of emphasizing the views put forward by the hon. member for Medicine Hat (Mr. Magrath). I am not nearly so familiar with conditions in the west as is that hon. gentleman or the Minister of the Interior, but I have been through the west on three or four occasions and have every reason to believe that settlement there is being retarded at the present time by the lack, in certain portions of that country, of water necessary for domestic use. The hon. member for Medicine Hat has pointed out the necessity of an accurate survey, especially in the west, of our water supply, that is water supply not only for purposes of irrigation, but for domestic use.

He intended to point out, as he has just now observed to me, the importance of some scheme by which the abundant supply of water flowing from the mountains through the great regions of the west which might be regarded as semi-arid, could be utilized to a greater extent than it has been utilized for domestic use, and he is under the impression that that could be done by a series of creeks or channels which would forward settlement very much in some of the regions where settlement has hitherto been difficult, and in that way give to the people of that western country a supply of water for domestic purposes which has been lacking to a great extent. When I was in the west about five years ago I was approached by the inhabitants of two or three different communities, who told me that they had been sinking artesian wells in various places to a great depth, but had not been able to secure water, and that some intervention or assistance from the government was absolutely necessary if those communities were to continue. It may be that in the particular instances which I have now in mind some relief has since been found, but there is no doubt whatever that this is a very serious matter in some portions of the west, and that it deserves the consideration of the government and of this parliament. I would only say in conclusion that while I thoroughly appreciate the attitude of the Minister of the Interior as to the necessity that great enterprises of settlement should go on without waiting for a scientific survey, still I am of the opinion advocated by my hon. friend from Lunenburg (Mr. Maclean) that an accurate scientific survey such as has been carried on, or is now in a very far advanced stage, in every civilized nation of the world, should be carried on in this country as well, and that a reasonable amount of the revenues of the country should be yearly diverted to this purpose in order that we may not be behind other great nations in this regard.

Motion agreed to.

DIVERSION OF THE WATERS OF THE ALLEGASH RIVER.

Mr. PIUS MICHAUD (Victoria, N.B.) moved for

Copy of all corespondence and reports between the United States and the Dominion governments respecting the diversion of the waters of the Allegash river, a tributary of the St. John river.

He said: I desire to submit to the House a few remarks in support of this motion. We see in volume 1 of the United States statutes, under the heading 'Constitution of the United States,' that the constitution and the laws of the United States made in pursuance hereto, and all treaties made and to be made with other countries, including those with respect to boundaries between Canada and the United States, are to be regarded as the supreme law of the United States, and every state in the union is bound thereby, notwithstanding any legislation it may pass. By the Ashburton treaty, the River St. John, which is 450 miles in length, taking its source in the state of Maine and in the province of Quebec, was made the international boundary between the United States and the province of New Brunswick, at a certain point where the said state borders opposite Madawaska county. By this treaty it was provided that in order to encourage and promote industry of the inhabitants living in the state fo Maine, or the province of New Brunswick, the waters of the River St. John and its tributaries, be free for the transportation of the products of

the forest and of agriculture. Now, Mr. Speaker, I desire to state that by the provisions of that treaty all lumber cut at the head waters of the St. John river was to be free to float down to the mouth of said river at St. John, on the Bay of Fundy. The Allegash river is a tributary of the St. John river, and is entirely within the state of Maine. In 1841, a year previous to the Ashburton treaty, an application was made for the purpose of cutting a canal between Lake Chamberlin and one of the branches of the Penobscot river. We find that this application was refused, for several reasons. In 1846 a company known as the Lake Telos and Webster Pond Log and Sluiceway Company was chartered by the legislature of the state of Maine, and was authorized to cut a canal between Lake Churchill and one of the branches of the Penobscot river. I desire to explain that the River Allegash takes its source in Lake Churchill, Lake Chamberlin and Lake Heron and a few other lakes. In 1874, another application was made for authorization to build a dam at the foot of Lake Churchill in order to divert the waters of the Allegash river into a branch of the Penobscot river, and prevent the lumbermen on the River St. John from enjoying the benefit they had derived from the waters of that river. Under the authority expressed or implied in this Act, the lumbermen of the state of Maine cut the canal and diverted practically part of the waters of the Allegash river into a river of their own. In 1903 our American friends were not satisfied with having diverted the waters of that river to their own use, and they made another application to the legislature of the state of Maine for authorization to build the dam a litle higher in order to secure still greater advantages. The people of the province of New Brunswick at that time were aware of what was going on, and they hired a lawyer and sent him over to Augusta, the capital of Maine, to oppose that legislation.

I am sorry to say that the legislature granted the application and consequently further authority was given to build dams, to cut canals and to divert more water from these lakes and from the Allegash river. What is the result of diverting that water from the St. John river? The lumbermen in the northern part of the province of New Brunswick are suffering every year. The lumber is driven down in the early part of the season passing the point at which Allegash river falls into the St. John river. In the beginning of June the water of the St. John river is lowered and a large quantity of lumber driven down from the headquarters of St. John is held back and part of it remains along the shore of the St. John river all summer. We know as a matter of fact that when a log remains exposed to the weather and the heat of the sun all summer its value, when it is manufactured into deals and boards the following season, is found to have decreased by probably one third. This is a great loss to the lumbermen of St. John and along the St. John river. This is a matter that I think should be brought prominently before the parliament of this country. We have tolerated the course of our friends in the state of Maine for years but I think the time has arrived when we should take steps to put an end to this grievance. We have now to submit our grievance to a commission and I am glad to say that the hon. Minister of Public Works (Mr. Pugsley) has seen fit to look into the matter very closely and that a commission has been appointed to deal with it. The commissioners, I understand are about to commence their investigation in connection with the troubles which now exist between the lumbermen in the state of Maine and those in the province of New Brunswick. The treaty lays it down most distinctly that the interests connected with the St. John river should be protected. It is a matter of surprise to know that on different occasions the state of Maine has passed a law authorizing people in that state to cut canals, build dams, and divert the water of the Allegash river into the Penobscot. The laws under which treaties are made are called the supreme laws of the land. I cannot understand how the government, the legislature and the senators of the state of Maine should have passed laws at direct variance with the provisions of this treaty. We cannot help feeling very deeply the injury done to our industries by not abiding by this treaty. We have felt the insult to our honour as Canadians and British subjects. The treaty has not been carried out to the letter as it should have been by our friends. Since they call every treaty made under their institutions the supreme law of the land they should be the first to observe it. I hope the commission already appointed will take this matter into their serious consideration. I hope they will not only inquire into the trouble which now exists between the two countries but that they will go farther and ascertain the damage which our people have suffered for forty or fifty years by the diversion of the water of the Allegash river into one of their own rivers.

Hon. WM. PUGSLEY (Minister of Public Works). Mr. Speaker, the question which my hon. friend (Mr. Michaud) has brought to the attention of the House is certainly one of verv great importance not only to the people of the province of New Brunswick who are engaged in lumbering operations upon the St. John river, but also to a considerable section of the inhabitants of the state of Maine, who are also carrying on lumbering and business

operations on the river and who are equally interested with the people of New Brunswick in seeing that the navigation of the river is preserved. This diversion of the waters of the Allegash from the river St. John into the Penobscot took place a great many years ago and, as my hon. friend has so well stated, it has been the cause of a great deal of dissatisfaction on the part of the people living on the St. John river, and it has led to very serious difficulty on several occasions, and, I think, I am safe in saying that upon more than one occasion it has almost led to bloodshed. Our people have felt that those who have acted under the authority of the legislature of the state of Maine have acted in disregard of those national obligations which the people of that country ought to observe towards the people of a friendly nation. While I was a member of the government of the province of New Brunswick I was the medium through which his honour the Lieutenant Governor was recommended to have a communication sent to the British ambassador in the hope of inducing the United States government to intervene and to prevent this diversion of which our people complain. The protests were sent forward by this government in the ordinary way and through the ordinary channels, but, unfortunately, they have not so far resulted in the grievance being remedied. Of course, one difficulty under which our people have suffered is that we can have no redress in the courts, because, if we were to proceed in the courts of the state of Maine, our people would be met by the fact that there has been passed a statute of the legislature of the state of Maine authorizing the company to which my hon. friend has referred to divert the waters in the manner which has been complained of. Therefore, it would seem as if the only recourse we could have is through diplomatic correspondence in the hope of inducing the government of the United States to take such action as may bring about a discontinuance of the interference with the navigation of the St. John river. I am happy to say that I believe, that, as a result of the feeling to which expression has been given by the government of the United States in agreeing to the waterways treaty and also in agreeing to the commission to consider the obstruction to the St. John river, there is apparent a desire, a sincere desire that these difficulties shall be overcome and that all the causes of friction shall be done away with. It is a very important fact that in the waterways treaty which has been submitted to parliament it is expressly provided that there is reserved to each country the right to insist upon the necessity of navigation being preserved, and that neither country shall have the right to divert any waters flowing into boundary waters or boundary rivers which would in any way materially lower the level of the water or interfere with navigation. If this treaty should become law, we will have in it a recognition of that principle and that right, and the logical consequence which I hope will follow at no distant day will be, that the United States government will take steps to do away with the provisions which have been made for diverting the waters of this very important river into a river in the state of Maine, and allowing it to flow again in its natural channel, thus preserving to our people the navigation of the St. John river which, as the hon. gentleman has said, is of extreme importance to the Dominion. I can assure my hon. friend (Mr. Michaud) that the papers for which he has now moved will be brought down as soon as possible.

Mr. JAMES CONMEE (Thunder Bay and Rainy River). The question raised by the hon. member is of more far reaching importance than its relation to any particular locality. I take it for granted that many of the boundary streams could be affected by conditions similar to those he has represented in this case. What has been decided by the authorities of the United States having charge of the department which deals with waters of this character ought to be applied here. A question arose of a very similar character with regard to the diversion of waters from the Rainy river. An American company, relying on legislation which it had obtained in the state of Minnesota applied to the department at Washington for the ratification of plans for the permanent diversion of a portion of the waters of the Birch lake drainage basin which was solely within the state of Minnesota, but in its course discharged southwesterly into the Rainy river which is an international stream. The Waterways Commission dealt with this matter and their report was ratified by the Secretary of War of the United States, and in giving their reasons for their finding and quoting authorities, they quote the opinion of Mr. Evarts, at one time Secretary of State of the United States, on a question between the United States government and the Mexican government with regard to the waters of the Rio Grande river which takes its rise in one country and flows into the other. The complaint in that case was that too much of the water was being diverted for irrigation purposes in the one country to the detriment of the citizens of the other who desired the water for the same purposes, and it was on that point that Mr. Evarts gave his opinion. The Waterways Commission commenting upon Mr. Evart's opinion reports :

It would seem that comity would require that in the absence of necessity the sovereign

power should not be exercised to the injury of a friendly nation or of its citizens or subjects without the consent of that nation.

If I understand aright the contention of the hon. gentleman (Mr. Michaud) it is not that there was diverted into the state of Maine the actual boundary waters of the St. John river, but the waters of a tributary of that boundary stream, and this was a similar case :

The common law protects riparian owners against permanent diversions of waters which injuriously affect their rights, and this law is founded on principles not merely of social necessity, but of justice and right. While the common law is not a part of the law of nations its principles so far as they are founded in justice and equity, ought, where practicable to be applied by nations acting in their sovereign capacity. The Department of State of the United States has adopted this principle in the past and although the application was made in the case of conflicting riparian rights on a boundary stream.

That is very close to the conditions here:

Yet the commission can see no sound distinction between the position taken by the government of the United States in the case referred to, and cases of diversion of water wholly within one country where the diversion injuriously affects riparian owners in another country.

That, I take it to be upon all fours with the situation in this case. Then it says :

This application of the common law was made by Mr. Evarts, Secretary of State.

So that, having regard to international law and to the comity between friendly nations and to equity and right as laid down by this authority, it seems to me that the diversion of the waters in this case was not justified. I call attention to this for the reason that it is not happening on the St. John river or on the Rainy river alone, but that it may happen and is likely to happen in very many other cases, affecting vitally the interests of this country. I think, Sir, there ought to be a little more attention paid to this subject and still greater supervision in regard to these matters.

Motion agreed to.

THE HOME MARKET FOR COAL.

Mr. D. D. McKENZIE moved:

That in the opinion of this House such steps should be taken as may be deemed most effective in conserving the home market to the Canadian Coal Operators.

He said: Mr. Speaker, it is only the urgency of this question that tempts me at this rather late hour to detain the House for a short time while I bring to the notice of the government and of the country generally the great question of the coal industry in Canada. That question has been receiving attention in parliament ever since we first had a parliament, that is, since the days of confederation; and in connection with that question has been considered the question of free trade or protection in relation to the conservation of the market for our coal in Canada. I only call attention to the question now because of the great agitation that is going on at present in respect to the future of the coal market in this country. Let me point out the great interest that are involved in our coal trade. In Ontario and in the great west it may not be generally realized to what proportion the coal interests have grown in the province of Nova Scotia, particularly since the year 1893, when what is known as the Whitney legislation brought a large influx of capital into the province and put the coal industry on a much stronger footing than it had been before. To show the extent of the commercial interests of the province of Nova Scotia, let me lay before the House a synopsis of the trade of the province during the last calendar year:

Coal	$ 16,200,000
Coke	2,000,000
Gold	237,000
Gypsum, limestone and other materials	725,000
Stone and other building material	250,000
Pig iron	1,425,000
Steel	3,800,000
Steel rails, rods, &c	8,112,000
Fisheries	8,000,000
Manufactures, ships and freights	38,000,000
Products of the farm	26,500,000
Products of the forest	2,000,000
Total	$107,249,000

I give these figures because at the very basis of the prosperity of Nova Scotia as a country, in its various industries, lies the coal trade. And this is so not only in the province of Nova Scotia, but throughout the whole Dominion of Canada. For that reason I think I am justified in calling the serious attention of this House and of the country generally to anything that may detrimentally affect that very important trade. I might point out also the amount of capital that is involved directly in the coal trade of other parts of Canada. The annual coal production of British Columbia between the years 1836 and 1865 amounted to only 5,500 tons, from 1865 to 1898 it had grown to 1,000,000 tons; from 1898 to 1906 it had grown to 2,000,000 tons; and I suppose that to-day it amounts to about 2,500,000 tons. The capital invested in the industry in that province amounts to a large sum. The Wellington colliery has invested in it about $10,000,000, and it is equipped for a daily production of 5,500 tons.

The Western Fuel Company has a

capacity of 5,400 tons daily. Other companies in British Columbia are developing their properties very rapidly, and will in a short time have a production equal to that of the older and larger companies. The approximate amount of capital invested in British Columbia in coal alone is about $20,000,000. In the province of Alberta there is invested about $15,000,000. In that province there is an immense area of coal, extending from the Rockies to Manitoba and from the international boundary to the Peace river. In the province of Nova Scotia we have invested in coal alone, the following amounts:

Cape Breton	county..	$39,080,000
Inverness	"	10,500,000
Victoria	"	500,000
Richmond	"	2,000,000
Pictou	"	5,350,000
Cumberland	"	7,490,000
Total..		$64,920,000

In the industry of iron and the making of iron and steel and steel rails, which is almost directly dependent on the success of the coal industry we have a capital invested in the Dominion Iron and Steel Company of $30,000,000. I am not in a position to say exactly what the capital of the Nova Scotia Steel Company is, but it is a very large and prosperous company. The Londonderry Drummond Company has $1,000,000 invested in iron in the county of Colchester, and this industry depends to some extent for its existence and growth and prosperity upon the prosperity of the coal trade in the province. I am bound to say anything that I can say in support of this industry from the standpoint of capital, for it is important to us in Canada that every man who invests a dollar in any industry in this country should receive attention and protection from this House so far as this House can afford that protection consistent with the general interest of the country.

I am bringing up this question because this House is the tribunal which alone can deal with questions of this wide character, affecting the different provinces. If it could be dealt with by the legislature of Nova Scotia, if that legislature could protect and safeguard this great industry, I would not be troubling this House with any argument on the matter. But this question does not come within the sphere of any provincial legislature, and therefore I am obliged to appeal to the only tribunal which can deal with it. While it is the interest of this country that capital should be safeguarded and capitalists the world over be given the assurance that in Canada we have a parliament and parliamentarians who always keep their eye upon the best interests of those who are willing to invest their capital in this country, it is equally in our interest that we should likewise keep in mind the men, women and children who are dependent upon this particular industry in every part of Canada, and in doing this we are likewise improving the position of those who invest capital in Canadian industries. We have in Nova Scotia 103,000 people who are depending for their livelihood upon coal cutting and mining. That is a very large number of people. I do not think it would be exaggerating to say that the average family of the miner numbers four and that consequently four people are directly dependent upon every head of a family of every mine operator. I have said in Nova Scotia there are 103,000 people employed in the mines, and taking in those employed directly in the coal mines in other parts of Canada, we have 113,109 miners engaged in the mining of coal. Multiply that by four, and you have 452,436 directly dependent on this work. If you undertake to feed them as they must be fed and estimate the cost at the very small amount of $10 a month, you have $4,524,360 for the feeding alone without saying anything about their housing and clothing. That is an amount of money which even Canada, with its enormous trade, cannot afford to treate lightly, and it is an amount which the traders in Ontario and Quebec, who are directly interested, must not ignore. We are apt, in the provinces of Ontario and Quebec, where the great question seems to be to get coal without paying any duty and therefore as low as possible, to ignore this factor. To get coal cheap seems to be the paramount question of importance in Ontario and Quebec regardless entirely of the trade dependent on the production of coal in this country. I submit that taking the 103,000 in my own province engaged directly in the production of coal, not more than ten per cent of their requirements is found in that province. You would be surprised to know that of these 103,000 people, mostly all are non-productive, that is as far as what they eat and what they require for clothing are concerned. It is important therefore that the large manufacturing centres of this country should realize that the flour, beef, pork, molasses, sugar and other goods which these people consume do not come from Nova Scotia except in a very small proportion. I venture to say that 75 per cent comes from Quebec and Ontario. For that reason it is highly important for those two provinces that the coal industry in the county of Cape Breton and the other parts of Nova Scotia should not be neglected.

There is one point I wish to make in respect to the trade in coal between Cape Breton and the city of Montreal and in respect to the steamers that ply back and forth between Sydney and Montreal. The idea seems to be in Ontario and Quebec

that if we had reciprocity the coal from Sydney and Louisburg would go to Boston and other New England ports. But our friends in the upper provinces who are now trading extensively with us in Nova Scotia, must not forget that if the coal trade of the maritime provinces should go to Boston, there also will go the other trade in dry goods and provisions and everything else which the miner requires. To-day the steamers which go to Montreal with coal bring back no other goods except those which the miner purchases, and these goods enjoy the advantage of cheap freight rates; whereas if the trade is directed elsewhere, we shall not have that steamer connection and these goods will not be sent to the people of Cape Breton as they now are. That is the point I wish to emphasize. I wish to point cut that this question of protecting coal is not a one-sided one. There is no class of people so profitable to the traders as the coal miners. A farmer may be well off and a merchant or a professional man, but, so far as purchasing powers are concerned, the coal miner is a much more profitable citizen so long as he has the money to spend. He is not as a rule stingy about spending money. He feeds and dresses his family well and is not at all conservative about his wealth. For that reason the miner and the working men generally in the coal mining districts are the best kind of customers, and it is well worth the while of our manufacturers and traders to see that the coal miner is in a position to bring up his family well and be of such assistance to the commercial world as he now is. What has startled myself and some others is the falling off of our trade in the St. Lawrence. I am not in a position to say exactly what is the cause, but what we do know is that year ofter year, particularly for the last two or three years American coal is gaining ground along the river St. Lawrence, in the province of Quebec, to the exclusion of our own coal. Let me draw your attention to the figures for the seasons 1906, 1907 and 1908.

Comparative Receipts of Coal in the St. Lawrence—Seasons 1906, 1907, 1908.

Names of Coal Companies.	Montreal.			Sorel.			Three Rivers.			Quebec and Lévis.			Recapitulation.

" 1908			1,533,523			38,727			91,857			358,800			2,022,907

Now, I wish to bring particularly to the notice of the people that, so far as efforts to bring about reciprocity are concerned, reciprocity in coal in former days has not been a boon to the investors in coal mines in Nova Soctia or elsewhere in Canada. And when I speak of the coal trade of Nova Scotia, I am sorry to say I am not speaking of money invested by the people of Nova Scotia alone. The wealthy men of Quebec, Montreal, Ontario and other parts of Canada, have invested in these mines rather than the people of Nova Scotia. And, when I call upon the representatives in this House of all parts of Canada to take an interest in this question and safeguard the coal trade in the province of Nova Scotia, I am not asking them to safeguard the interest of the people of Nova Scotia only, but the interest of the people of every part of Canada.

In the year 1865, the coal trade had become such an important factor to the province of Nova Scotia, through the increased coal sales of the new collieries, which were opened out when the leases were granted, outside of the general mining association, that it was deemed necessary to appoint an inspector of mines, who could look after the mining interests of the province. This appointment was the first inspector of mines in America. In the year 1867 the government of the United States imposed a duty of $1.25 per ton on all coals entering their ports. The imposing of this duty very materially affected the output, and expansion of the trade of the whole province of Nova Scotia, as up to this time the New England states had always been their best customers, no other markets being then available, as at that time the local markets were small and restrictive, few miles of railway having been built, and all the coal being water carried by sailing vessels.

From the year 1850 to 1854 coal was admitted into the United States at a duty of 24 per cent ad valorem, and in 1853 the coal shipped amounted to 124,764 tons. From 1854 to 1866 coal was admitted free, when the exports rose from 139,125 tons to 404,252 tons. In 1864, a duty of $1.25 was imposed, when the shipments fell to 165,431 tons. In 1892, the duty was reduced to 75 cents, and the exports gradually fell until 1893, when the entire shipments of Nova Scotia coal to the United States only amounted to 16,099 tons. In 1894 the duty was changed to 40 cents for screened coal, and 15 cents for slack—through ½-inch apertures in screen bars. In 1896 the shipments of coal amounting to 174,919 tons. In 1897 the duty was made 67 cents. The shipments had increased until 1903, when the shipments were 968,832 tons, but have again decreased to 616,312 tons in 1907 and less for 1908, as the figures for the Port of Boston (Everett) are: 1907, 545,652 tons; 1908, 370,709 tons, a decrease of 47.18 per cent.

The great fluctuations of the duty in the United States made it imperative upon us, as early as 1893, to look elsewhere for markets for coal. I have already stated, the Whitney legislation of 1893, with which the Minister of Finance (Mr. Fielding) had so much to do and which was so successful in bringing about a happy solution of the difficulty at that time and has proven such a boon to the coal industry of Nova Scotia ever since. In 1905, some years after the Whitney legislation, the home consumption of coal in Nova Scotia had reached 1,651,735 tons, or 400,000 tons more than the total production of 1885. The neighbouring provinces bought from us in that year 2,120,148 tons. And we exported to other countries 703,401 tons. The total sales of Nova Scotia coal that year amounted to 4,475,284 tons.

For the year ending September 30, 1907, the following figures show how the coal produced in Nova Scotia was disposed of:

Nova Scotia consumed 1,842,419 tons or 36·50 per cent of the total sales.
New Brunswick, 424,128 tons or 2·92 per cent.
Prince Edward Island, 77,493 tons or 1·53 per cent.
Quebec, 1,709,592 tons or 33·87 per cent.
West Indies, 2,598 tons or ·05 per cent.
Mexico, 7,591 tons or ·15 per cent.
Other countries, 12,483 tons or ·24 per cent.
Bunker coal for steamers, 204,572 tons or 4·05 per cent.
United States, 616,321 tons or 12:23 per cent.

Of the total sales of 5,046,690 tons the home market and St. Lawrence ports consumed 4,203,134 tons equal to 83·28 per cent of the total sales, while the United States only ordered 12·23 per cent. Of the total sales Cape Breton county contributed 73·45 per cent. Pictou 12·46 per cent. Cumberland 8·14 per cent. Inverness 5·93 per cent.

We find that Nova Scotia exports of coal to the United States have fallen from 465,194 tons in 1865 to 88,495 tons in 1878. While Canada importations of coal from the United States have risen from 162,200 tons in 1865 to 746,516 tons in 1878. With a duty varying from 75 cents to $1.25 cents per ton on coal, the United States have increased their production of coal from 21,000,000 tons in 1866 to upwards of 50,000,000 tons in 1878, and this tonnage was raised to 480,363,424 in 1907 equal to 39·7 per cent of the world's production, while Canada produced 10,510,961 tons or 0·87 per cent of the world's production.

In reference to the production of coal in the United States, and taking the figures of Mr. E. W. Parker, the coal expert, and chief statistican of the United States Geological Survey for the year 1907, the latest returns available to date. We find that

the world's greatest production of coal to be 1,209,184,109 tons. Of this immense number of tons of coal produced, 39·7 per cent is credited to the United States. It will be observed that while Great Britain raised 299,970,677 tons of coal, or 24·8 per cent of the world's production, the United States produced 60 per cent more coal than Great Britain, and over 100 per cent more than Germany. Exclusive of Great Britain, the United States produced in 1907 more coal than all the countries of the world combined. It may also be noted that more than 98 per cent of the world's production of coal is from countries north of the equator, the countries south of that line producing less than 20 million tons of coal annually. In the United States the available supply of coal that is easily accessible is 2,200 million tons, and in Canada, according to the best calculations that we can make, the available coal supply is 32,893,240,000 tons. That is the percentage our coal area and our coal in sight, so to speak, bear to those of the United States.

In the year 1873 the government of Nova Scotia received in royalties from the sales of coal the sum of $83,000. This year, to show what an important factor the coal of Nova Scotia is, we have received into the coffers of that province $666,000 from royalties alone, considerably more than one-half the whole revenue of that province. Now to show to what degree expansion has taken place in some of the collieries, the following figures may be cited:

In the year 1877, Mr. John Rutherford, ex-inspector of mines, stated that between Sydney Mines and Lingan Mines, they had 260 to 270 coal cutters employed. In the year 1898 Sydney Mines alone had employed underground 492 men and boys, and on the surface, 243, a total of 735 who mined and shipped 267,000 tons of coal.

In the year ending September 30, 1907, the Sydney Mines had employed:

Underground—	
Skilled labourers	893
Labourers	535
Boys	100
Surface—	
Skilled labourers	112
Labourers	205
Boys	9
Total	1,864

They mined and shipped 664,404 tons of coal.

Now, Mr. Speaker, I have pointed out the very large development we have made in the production of coal in Nova Scotia, the very large amount of capital that is invested in the coal industry, and that we are rapidly being encroached upon and our market taken away by a foreign country. I think it is fair to point out that some steps should be taken to prevent this rapid falling away of our market in the St. Lawrence, which is our principal market, and in some way to conserve to us the market which is so profitable and important to us. I find here a statement made by so good an authority on the coal question as the Hon. R. Drummond, one of the leading authorities on the coal trade in Nova Scotia, who views with some alarm the importations of United States coal into Canada. 'Are,' he asks, 'the Americans beating us both in quality and price? And if not, how are the following increases in importations of American coal to be accounted for':

	Tons. 1906.	Tons. 1908.
Quebec	20,000	66,000
St. Hyacinthe	3,500	41,000
Montreal	22,000	243,000
Sherbrooke	1,500	11,000
Three Rivers	1,500	9,000
Sorel	334	12,000
St. Johns	1,500	17,000
Total	51,000	432,000
Summary of Quebec imports—		
Anthracite	563,655	737,624
Bituminous	51,000	451,000
Coal dust	15,000	105,000
Total	630,000	1,295,000

I have here tables carefully prepared showing the increases in the different mines the percentage, the number of men who are engaged in the work of producing coal at the different points, the capital invested and where the different mines are located. I suggest, Mr. Speaker, that these tabulated statements be accepted as read and handed in to the reporter:

Coal Companies.	Location of Mines.	Production.	Sales.	Motive Power.	Workmen.	Percentage of output used for motive power and by workmen.
	Cumberland county—					
Canada Coals and Railway Company	Joggins	50,385	32,623¾	11,192	1,919	26·02
Cumberland Railway and Coal Company	Springhill	339,039½	280,474½	36,759	16,436	15·69
Maritime Coal, Railway and Power Co.	Chignecto	44,143	36,015	5,164	1,333	14·71
Minudie Coal and Transportation Company	River Hebert	44,107	35,954	2,336	960	7·47
Prospect Coal Mining Company, Atlantic Grindstone C. R. Co.	Lower Cove	4,769	3,464	412	428	17·59
Scotia Coal Company (Ripley and Blenkhorn)	Maccan	2,088	1,615	265	128	18·82
Strathcona Coal Company	River Hebert	23,670	21,463	1,561	646	9·32
	Pictou county—					
Acadia Coal Company	Stellarton	385,006	312,687	64,515	8,924	19·08

Without saying very much upon this point I think I have shown sufficient of the facts and made out a case strong enough to call the attention of the government and the House generally to this very important question and to impress them with the necessity of taking some steps to preserve to the people of Canada the excellent market which we now have for the coal of Nova Scotia and wherever else coal is produced. I would submit, Sir, that while it may be a hardship in some cases to buy coal, as we sometimes consider it dearer than we would like to pay, we should not forget that the people of the great country to the south of us have pursued the policy which I am advocating. The people in the New England states have no coal, they have to receive their coal from the west and they pay a higher price than they would have to pay for Nova Scotia coal. Still, there is enough national spirit to induce them to bear with any little extras they would have to pay in order to develop in the west great coal centres and keep the trade within their own bounds. I submit that in the centre of Canada our people do not view with a proper spirit the necessity of developing the coal of our own country. The proper thing to do in Canada is to develop the coal resources of Saskatchewan, Alberta and British Columbia so that they can be made available for the necessities of the people in the great centres of the west which are now being developed. We heard to-night of the necessity that exists for providing water for the people in the west. I certainly approve of any means that are adopted to bring to their doors those things which are necessary for the purposes of the great development that is now going on there, but if the settler must have water to boil the meal and if he must have water to drink he must also have fire with which to cook his meal, to keep warm his children and for the comfort of his household. It is necessary to have that and it can only be obtained by the proper development, the bringing of that coal to the doors of our people in the west. We have inexhaustible stores of coal in Saskatchewan, Alberta and British Columbia and when the excellent railroads that they are building there with low grades and equipped with big locomotives are completed the loads that can be hauled will be simply enormous and something that we do not calculate upon to-day. For that reason I think it will be quite proper to direct our attention to furnishing fuel to our own people in the west from our own mines. We are expending a great deal of money upon our militia and the development of arms in this country. It is quite proper, but I want to know how long we could stand a war in this country if we had it in mid-winter without the capability of supplying our own people in the west with fuel. The Americans would starve us out in two days. There is nothing said about that. We are furnishing the militia and the arms, but we are making no provision for supplying fuel in winter to our people and we can imagine what would happen if our fuel supply in the United States were stopped in mid-winter. At no time in winter is there more than a two week's supply in the province of Ontario of the quality of coal which they get from the United States because they depend upon getting it on short notice, and if communication with the mines of the United States were suddenly cut off they would be in a position to which they have not given sufficient thought. I say, after deliberation and after having given the subject a great deal of thought, that I believe that with some attention to transportation we can send our coal from the east as far as Toronto, and I submit that with proper attention to the question of transportation that portion of the country west of Toronto can be supplied from the west. I say that as a country that expects to develop, that expects to be independent of the outside world, to as great an extent as any country can be, with reference to the question of power, as power is produced or generated by coal, and as far as everything that is produced or dependent upon coal is concerned, the wise policy on our part is to develop our own coal resources and coal trade and not depend upon the whims of any outside country. As far as Nova Scotia is concerned, so important was this question in 1897 that the premier of that province dissolved the legislature and asked the verdict of the people on the question as to whether or not they wanted the duty retained on coal in the Dominion of Canada. The verdict of the people was almost unanimous in favour of the retention of the duty. I believe that the same verdict would be rendered to-day if that question were to be submitted to the people there. It is important in Nova Scotia and it is also important in every other part of the country, in Prince Edward Island, New Brunswick and Quebec, because of the great trade which we furnish to the people of Canada and if measures are not taken to protect this industry and to keep the prosperity which we have to-day it may not be so useful to the country as it is at the present time.

Now, I simply want to point out one more thing to the government and to the House and I shall consider that I have put this question, as far as I have any figures or facts at my disposal, before the House to the fullest extent. This government has undertaken to do some things for other industries in this country. A few years ago the steel industry in Canada was in such a position as to require care, protection and fostering at the hands of this government. The government was equal to the occasion and took steps to safeguard the capital that was invested in that great

industry and also to safeguard the people whose living and every day employment were dependent upon it. As the government has encouraged our steel and iron industry by bounties and duties for protection and assistance, and as we are paying out our good money to assist that industry, there is no reason why some steps should not be taken and even some sacrifices indirectly incurred in order to safeguard our coal mining industry. I have reason to hope that the government will be equal to the occasion and that this House will support the government in inquiring into the cause which is bringing about such a great influx of American coal into Canada to the exclusion of the use of our own Canadian coal, and that whatever steps are necessary to conserve to us our own markets and to exclude American coal shall be taken. I regret that I have been obliged to speak at such length but the question is a very important one. I am not presenting alone the case of the capitalists for whom I can assure you I have no retainer, but I feel that it is my duty as representing a large number of working men to bring their case as near to the foot of the Throne as I can, and so far as I am able to submit to the government and to the people generally that some measures should be taken to enable these working men to have employment every day and to earn sufficient money to support themselves and their families in comfort. I regret that this winter they have not been kept in continuous employment because of this displacement of Canadian coal in the home market by American coal. It is not at all necessary for one to call himself a labour candidate or to sit in this House as a labour member in order that he should put these issues before the House. Representing as I do a large number of working people, although I do not pose as a labour candidate, I believe that it is my duty to the best of my ability to present to the country and to the House the interests of these people, and to appeal for a remedy to the only institution in the land which has the power to provide a remedy which will relieve us from any further imposition of this kind, and which will hold the markets of Canada for Canadian coal which we are capable of producing just as well as they can produce coal in a foreign country. One more observation Mr. Speaker, and I have done. It has been contended that the price of Nova Scotia coal is too high, that we are making too large profits on it, and that the people who have to buy our coal in Montreal and other cities are obliged to pay too high a price for it. I do not know whether it is a popular suggestion to make or not, but I submit that if the day should ever come in Canada when there is any hardship on the Canadian consumer because of the high price of coal there is power in this House to put the regulations of the price of that commodity in a commission just as the value of other public utilities is regulated. I consider that the power that is in coal is a public utility, and if ever it should come about that the people of this country are imposed upon, this parliament has the power to protect the consumer so that none but a fair price should be charged. I have presented my views and these statistics to the House in the hope that the government will take into serious consideration the circumstances of those who are dependent on this trade for a means of livelihood as well as those who have had the courage and the enterprise to invest millions of dollars in the development of our coal areas in Nova Scotia and elsewhere in Canada.

Mr. J. A. CURRIE. Would the hon. gentleman (Mr. Mackenzie) please tell the House the price of coal at the pit mouth in Nova Scotia and the price of the same kind of coal at the pit mouth in the Alleghanney Valley or in Ohio?

Mr. McKENZIE. I do not pose by any means as a coal expert and I only speak of the facts as I know them. I can, however, tell my hon. friend that for domestic use, at the pit mouth in Nova Scotia we pay $3 per ton, although I understand that those who buy in large quantities get it cheaper.

Mr. J. A. CURRIE. As a purchaser of coal I can tell my hon. friend that the price of soft coal at the pit mouth in Pennsylvania is from 65 cents to 85 cents per ton.

Hon. Mr. GRAHAM. Run of mine?

Mr. J. A. CURRIE. Yes, run of mine. That coal comes in here and pays 53 cents a ton duty and it competes with Nova Scotia coal which you cannot buy at the pit mouth in Nova Scotia for less than $2.50 per ton. It is quite clear, therefore, that unless there is a reduction in the price of Nova Scotia coal to a reasonable figure or until there is a corresponding increase in the price of Pennsylvania coal, the Nova Scotia coal must necessarily be cut out of the Canadian market. I for one as a consumer of coal in Ontario feel that we would like to use Nova Scotia coal altogether even if we had to pay a trifle higher for it, but if we have to pay $1 or $2 per ton more than for Pennsylvania coal then it becomes another question altogether.

Hon. W. S. FIELDING (Minister of Finance). I do not imagine that my hon. friend (Mr. McKenzie) desires to divide the House on this question to-night, especially as there is a very slim attendance of mem-

bers present. I take it for granted that the purpose of his motion was to have an opportunity of presenting these very interesting statistics to us and to urge, if it be necessary to urge, the importance of this great mining industry. There will be no difference of opinion in that respect. We all recognize that the coal industry of the country, not merely in Nova Scotia but in other parts of the Dominion, is a very great industry and that whatever may reasonably be done to advance the interests of our Canadian miners should be done. It is, however, a very vexed question. It is a question on which there will not be by any means unanimity of opinion. I do not imagine that my hon. friend desires to-night to challenge an opinion, and I would suggest therefore that the debate be adjourned so that at a later date, when there is a better attendance of members, any hon. member who desires may continue the discussion.

Mr. LENNOX. Will it ever be reached again?

Mr. FIELDING. It may be.

Mr. GEORGE TAYLOR. We are all prepared to support his motion on this side of the House, we are all protectionists.

Mr. FIELDING. My hon. friend from Simcoe (Mr. Currie) wants the price reduced before he says very much about that.

Mr. D. HENDERSON (Halton). I have been very much interested in listening to the remarks of my hon. friend from Cape Breton (Mr. McKenzie) and I congratulate him upon having made a strong protectionist speech. Sometimes we on this side of the House are taunted by the Minister of Finance with divergence of views on a question such as this, but I think we never have made such a great departure from our political principles as the hon. gentleman (Mr. McKenzie)) has made from his to-night. All I wish to say is that it has delighted me beyond measure to hear my hon. friend (Mr. McKenzie) free trader as he is make such a strong protectionist speech. It shows just how far a man can get right when his own interests are brought into question.

Mr. ROBERT SMITH (Stormont) moved the adjournment of the debate.

Motion agreed to, and debate adjourned.

Mr. FIELDING moved the adjournment of the House.

Mr. GEORGE TAYLOR. May I ask the hon. leader of the House what the business for to-morrow will be?

Mr. FIELDING. We had in contemplation proceeding with the resolutions respecting the loan to the Grand Trunk Pacific Railway Company, but by arrangement that goes over till next week. In the meantime, with the view of expediting the passing of the estimates, both for the current year, which will expire in a few days, and for the coming year, the House will be moved into Committee of Supply. I understand that a motion is to be made in amendment, bearing on one branch of the public expenditure. I take it that will not occupy much time, and afterwards we will go into supply and take up the estimates of the Public Works Department and several items scattered through various departments.

Motion agreed to, and House adjourned at 11.25 p.m.

HOUSE OF COMMONS.

TUESDAY, March 23, 1909.

The SPEAKER took the Chair at Three o'clock.

INQUIRY FOR RETURNS.

Hon. GEO. E. FOSTER (North Toronto). Before the orders of the day are called I would renew the inquiry I have so often made for the following returns : February 2, the House ordered a return of the different armouries; February 25, return for certain statistical publications; February 26, appointees to service under the Transcontinental Railway Commission; February 26, permanent loans and cost of the same; February 5, with reference to the Royal Mint; February 8, orders in council, correspondence, &c., re loans negotiated since January, 1907; February 10, with reference to the dredge industry.

Hon. Sir FREDERICK BORDEN (Minister of Militia and Defence). My deputy informed me this morning that he had told the Secretary of State that so soon as that portion of the return which was pertinent to the Department of Public Works was ready, the portion required from the Militia Department would be ready. He also told me that a similar return had been brought down last year or the year before, and he presumed it would be only necessary to bring the information up to date.

Hon. W. S. FIELDING (Minister of Finance). One of the returns with regard to the loans will be brought down to-day or to-morrow; I will inquire as to the second one.

Hon. WM. PUGSLEY (Minister of Public Works). Out of the 26 returns which have been moved for from my department 13 have been brought down. There is a great deal of work involved in preparing these. As an illustration, one return asks for all the expenditure upon public works running over a good many years in New

Brunswick, Nova Scotia and British Columbia, and there is also a very lengthy return in regard to the county of Bonaventure. The clerks are working on these returns as rapidly as possible and in the course of two or three days quite a number will be presented.

Mr. FOSTER. I venture to say that any clerk in 20 minutes time could bring down everything in reference to the dredge industry.

Mr. PUGSLEY. These returns must come in turn and they require a great deal of care.

Mr. FOSTER. What care ?

Mr. PUGSLEY. To have them correct.

Sir WILFRID LAURIER. In what department is that statistical return ?

Mr. FOSTER. All departments. The order was passed on February 25. The Prime Minister has not yet referred to the matter of bringing down the report of the Civil Service Commission.

Sir WILFRID LAURIER. I told my hon. friend some few weeks ago that the commissioners did not interpret the law, that they were bound to make a report this session.

Mr. FOSTER. The law exists requiring that report to be brought down within so many days of the opening of the session and that should be attended to.

Hon. G. P. GRAHAM (Minister of Railways and Canals). With regard to the employees of the Transcontinental Railway Commission, the delay is caused by the commissioners finding it almost impossible to get the residences of all these men; the other information is ready.

GRAND TRUNK PACIFIC LOAN.

Mr. R. L. BORDEN. When may we expect the details relative to the proposal on the Order Paper as to the loan to the Grand Trunk Pacific ?

Mr. FIELDING. The information was furnished me last evening but I found some errors which will have to be corrected. It ought to be ready to-day or perhaps to-morrow.

THE BUDGET SPEECH.

Mr. R. L. BORDEN. If the Minister of Finance is not now in a position to announce the probable date of the Budget speech, I would like to ask that the usual notice of its delivery be given a few days in advance.

Mr. FIELDING. Assuming that the Grand Trunk Pacific loan resolutions were to be taken up now I had purposed going on with the budget the first of next week, but the postponement of the Grand Trunk Pacific resolutions rather upset that plan a little. I will see that several days notice is given.

SUPPLY—THE NEWMARKET CANAL.

Mr. FIELDING moved that the House go into Committee of Supply.

Mr. THOS. G. WALLACE (Centre York). Mr. Speaker, I would ask the indulgence of the House for a few minutes while I bring to its attention a matter of considerable importance, not only to the county which I represent, but to the Dominion of Canada in general. We have at present in this country a state of affairs in which the revenues are decreasing and the expenditures are not being correspondingly reduced. I think this is a good time for the government to cut out all expenditures that are practically useless. One of these is the expenditure on what is known as the Newmarket canal in the county of York. This so-called canal extends from Cook's bay to Newmarket, and is in two sections. The portion from Cook's bay to Holland Landing, is section No. 1, and the portion from Holland Landing to Newmarket is section No. 2. We understand, from the statement of the Hon. Minister of Railways and Canals, that there has been no expenditure on section No. 1, which in my opinion is the only part that could be made of any particular use at all. Section No. 2 is the expensive part, and on this so far there has been expended nearly $200,000. The estimated cost of the canal is nearly $1,000,000, although as yet no accurate estimate of its cost has been made. In my opinion, the expenditure on this canal is an absolute waste of public money. I have spoken to a good many people in the county of York in regard to this canal, and every person to whom I have spoken is of the same opinion, that it is an utterly useless work. The hon. gentleman who represents that constituency in parliament (Hon. A. B. Aylesworth) disclaims any responsibility or credit for this canal, saying that it was instituted before he entered parliament. I understand that it was started in 1904, although no work of any extent was done on it until the year 1908, as expended previous to March 31, 1908, $31,444.26; expended since March 31, 1908, the following figures will show:

In April	$ 440 06	
May	10,330 00	
June	12,168 72	
July	10,073 26	
August	10,962 50	
September	26,986 50	
October	43,218 48	
November	22,145 73	
December	20,548 40	
		156,873 65
Total to December 31, 1908		$188,317 91

The first estimate of the cost of this canal made in April, 1905, was $291,249; the second estimate, made on June 19, 1908, was $967,814.50; and these estimates did not include reservoirs south of Newmarket for the conservation of the water to be used in the canal, which according to the reports of the engineers are necessary. We have no accurate estimate of the cost of these reservoirs. The hon. gentleman who represents North York said that there was only one opinion in that constituency in regard to this canal. In that I entirely agree with him: There is only one opinion, so far as I have heard, and that is that the canal is absolutely useless. Even if it were feasible, there is no business for it to warrant such a great expenditure by the government. There has been spent on the work already nearly $200,000, and the hon. gentleman who represents the constituency asks if it would be wise to throw away $200,000. I think it would be better to throw away $200,000 now than to throw away $2,000,000 in the future. My reason for bringing this matter before the House is entirely non-political. The constituency of Centre York, which never before, since 1867, elected a Conservative to parliament, has sent me here, by the votes of independent men, to give my best ability to looking after the expenditure of public money. There may be other parts of the Dominion where public money is being expended as lavishly and wastefully as it is in this particular work, but I do not know so much about them. I do know, however, about this work, and I ask the House to take into its serious consideration the expenditure of this large sum of money on a canal which, not only in my opinion, but in the opinion of every man who knows anything about it, is absolutely useless. For these reasons. I desire to move the following amendment:

That all the words after the word 'that' in the proposed resolution be omitted and the following substituted therefor:

The original estimate of the cost of the proposed canal between Newmarket and Lake Simcoe, in the riding of North York, was less than $300,000; but that estimate has now been increased to nearly $1,000,000, which latter sum, according to the engineer's report, does not include the proposed expenditure for conservation of water south of Newmarket;

That the total cost of the said canal when completed is as yet unestimated and can only be conjectured;

That the said canal when so completed will be practically useless; that the expenditure thereon is wholly improvident and unwarranted, and constitutes a wanton misuse and waste of public money.

Hon. G. P. GRAHAM (Minister of Railways and Canals). Mr. Speaker, I had hoped that some other gentlemen who I know are interested in this matter would have spoken on it so that I might have seen their point of view. However, it is not a matter that need occupy a great deal of time. It might not be out of place for me to say a word or two on the canals of the world generally, to show the important part they play in the transportation problem.

Mr. R. L. BORDEN. It is well to talk about some other canals.

Mr. GRAHAM. There are others I could talk of. There is at least one, that, if my hon. friend is right, would be similar to this, but I submit it is not as useful as this will be. Here are the figures of the total canal mileages:—

France, 2,986 miles; Germany, 1,221 miles with about 774 miles of canalized rivers; Great Britain, 3,511 miles, exclusive of ship canals; Holland, 2,050 miles of navigable waterways, including rivers and canalized rivers; Belgium, 347 miles of canalized rivers, 454 miles of large canals, and 143 miles of small canals; Italy 549 miles of canals; Austria-Hungary, 217 miles of canals.

In Canada, we have some 19 canals, as follows:—

Name of Canal.	Miles.	No. of Locks.	No. of Dams.
Lachine	8½	5	
Soulanges	14	4 lift. 1 guard.	
Cornwall	11	6	
Farran's Point	1	1	
Rapide Plat	3½	2	
Galops	7½	3	1
Welland	26¾	26 lift. 1 guard.	
Sault Ste. Marie	1¼	1	1 moveable.
Grenville	5½	5	
Carillon	¾	2	1
St. Anne's Lock	⅛	1	
Chambly	12	9	

Name of Canal.	Miles.	No. of Locks.	No. of Dams.
St. Ours Lock	1	1	2

* The new Soulanges canal having been completed, the Beauharnois canal is practically abandoned for navigation purposes. † Partly completed.

We have in Canada altogether completed 109½ miles and something over 200 miles partly completed. There are 102 locks. These do not include the lift-locks on the Trent. In these canals we have 20 dams.

Mr. FOSTER. There will be more in this.

Mr. GRAHAM. I mean dams for the retention of water. This question of transportation by water is of course a very large one, and one of great significance. My hon. friend talks of the expenditure on the Newmarket canal. He says it will cost a lot of money and that it will be useless. To his first proposition I agree, but from the second I dissent. The canal, if we are to take the word of men who ought to know as engineers, is a perfectly feasible proposition, and will, when completed, furnish navigation equal to the Erie, which for years has carried the grain trade of the west from Buffalo to New York

Mr. J. A. CURRIE. Is the grain trade of the west going through this?

Mr. GRAHAM. My hon. friend cannot tell what may happen, but to-day it is not, as the canal is not yet constructed. Regarding the water supply, some one has made merry over the possibility of the Minister of Justice and myself having to use a pump handle to get water into that canal. I think I have seen a cartoon to that effect. Well, it may be surprising to know that some of the canals in other countries are aided in their water supply by a pumping system from artesian wells. I want to call attention to a very important work on canals by Mr. Harcourt which deals with the question of their water supply. He proves that the majority of canals would be dry and useless were it not that their water supply is conserved by dams or other means. I ask the patience of the House while I read from this work on page 365:—

Mr. GRAHAM.

An adquate supply of water must be provided for a canal, to make good losses from leakage, evaporation, and expenditure of water in locking. Frequently this supply can be furnished by adjacent streams, or by the main river in the case of a lateral canal, or sometimes by a lake, springs, artesian wells or pumping; but when a constant supply is not procurable from these sources, which is especially liable to be the case at the summit level of a canal, an artificial reservoir must be formed, at a sufficient elevation, by placing a dam across the valley of a water course, which being filled in the winter, is able to furnish the necessary quantity of water to the canal throughout the dry season.

This is the principle which is being applied to the canal in question:—

The largest reservoirs, dams for impounding water in artificial reservoirs in the valleys of rivers, have been constructed for the water supply of towns and for irrigation, to which branches of engineering the formation of reservoirs mainly belongs. Nevertheless, many canals are partially supplied, particularly in their upper reaches, by numerous reservoirs which have been mostly formed by means of earthen reservoir dams placed across the valleys of small rivers at suitable points. Thus the Grand Junction canal is fed by eight reservoirs along the Tring, summit level, and by two reservoirs at the Braunston summit level, having a total capacity of 7½ million cubic yards, and the Leeds and Liverpool canal is supplied by six reservoirs with a capacity of 5¼ million cubic yards, and the Rochdale canal navigation by seven reservoirs with a capacity of 9½ million cubic yards. The Crinan canal draws its supply from nine reservoirs, having a capacity of 9½ million cubic yards; whilst the Caladonian canal is fed by the lakes through which it passes, and the Ellesmere canal by Bala lake as well as by two reservoirs.

Just another quotation from this work:—

The principal reservoirs, however, in Russia have been formed by dams across the upper portions of rivers, closed on the melting of the snow to provide water for navigation in

the river below during the summer. These dams, which constitute in reality draw-door weirs, are generally made entirely of wood, though sometimes masonry piers have been introduced, and the head of water retained does not exceed 17½ feet.

It may be asked why I quote from this work. Simply to point out to hon. gentlemen, who seem not to take the time to think it out along this line, that very few canals would be practicable were it not for a system of reservoirs as is proposed in the case of the Newmarket canal. The canal system, except in the case of canals along rivers such as the St. Lawrence, is based on the fact that there is water which can be conserved and forced into use either by power or by the use of dams. It would be impossible to have navigation to-day on the Trent canal, just as it would be in the Newmarket portion of that canal, if dams were not used. Every one who has gone through the Trent Valley canal must be aware of that. I can remember when men on both sides made jests, making light of the Trent Valley canal in any of its reaches, just as my hon. friend makes light of the Newmarket branch. When our Conservative friends were in office, the Liberal opposition pointed out that the Trent Valley canal was a mere ditch used more for mere political purposes than for practical reasons. And our friends opposite when in opposition, made the same references to that canal when it was out of their control. But owing to the scientific placing of dams and reservoirs there is going to be from Georgian bay to Lake Ontario a system of navigation which will be better than the Erie canal ever has been, which has carried the grain trade from the west to the east.

I think I speak with good authority when I say that the Newmarket section of the Trent canal will be as navigable in every part as the Erie canal is at the present time. Take the history of the work. As my hon. friend has pointed out, the estimate made was much smaller than the cost will be. But I think it is only fair to point out to him that the cost of materials and labour at the present time is at least from thirty to fifty per cent higher than it was three or four years ago, or perhaps, two years ago. In the construction of new works, where contracts are asked for, the Railway Department find that prices have risen, and when we make purchases we find that the prices are much higher than they were two or three years ago. Leaving aside that argument, and taking the mere fact that the cost will be more than the estimate, I want to say that the canal will be as practicable as any other portion of the Trent canal.

My hon. friend (Mr. Wallace) has read the reports, but I have before me only a brief synopsis. On July 17, 1905, Mr. Walsh reports on the work and points out that he had investigated the question of the sufficiency of water supply for the operation of the canal, and that he had weir measurements taken of the main stream and its chief tributaries about Newmarket. He states that the measurements were made during the preceding winter—the winter of 1904-5—after a dry season of two months' duration, during which numerous wells and other sources of water supply had gone dry that, he was informed, seldom failed.

Mr. J. A. CURRIE. As the hon. minister is dealing with that point, will he tell us what the estimated average number of cubic feet per minute will be?

Mr. GRAHAM. I shall come to that in a little while. If I leave this part of the matter, I may not get back to it again.

Mr. J. A. CURRIE. That estimate of Walsh's is altogether wrong.

Mr. GRAHAM. I will come to the estimates that have been made. The result of Mr. Walsh's test showed an average flow of 30,420 cubic feet of water per hour. He further said that it was safe to assume that at no season of the year would the amount fall below this. He points out that to fill one of the locks would require about 28,000 cubic feet of water, and consequently a supply for the lock could be furnished in fifty-five minutes without damming or impounding water, but that he proposed to build dams at suitable places for storing freshet water and to have side ponds approximately close to the locks. It is the usual practice as I have stated, to supply water for the canals, except in the cases I have mentioned. Mr. Walsh goes on to give a computation of the drainage area tributary to Newmarket, and after making due allowance for loss through evaporation, &c., concludes that the available rainfall, which he takes at only one-sixth of the whole rainfall, would be 174,240,000 cubic feet. He concludes his report as follows:

In the meantime, I consider that sufficient data is afforded to establish beyond question the fact that the proposed canalization of the section of the Holland river between Newmarket and Holland landing, and the proposed improvements of the river between the latter place and Cook's bay is in every respect feasible.

That was the report of the engineer at that time, a report any department would be justified in proceeding upon, and that the House felt itself justified in proceeding upon. In the final report of Mr. Walsh, dated September 29, 1906, Mr. Walsh summarizes the question of water supply and states that the east branch of the Holland river above Newmarket has a drainage area of approximately sixty-one square miles, with an average annual rainfall from 1896 to 1905 of 30·67 inches. The annual precipitation of the whole watershed is, therefore,

3,921,259,584 cubic feet, and allowing for loss through evaporation, absorption by plants, &c., and, for this purpose deducting sixty per cent, he finds that the available water —which runs off to Lake Simcoe—for storage purposes is 1,568,503,834 cubic feet. The stream between Newmarket and Holland Landing has a drainage area of about fourteen square miles; it is not, however, thought necessary to consider this additional source of supply. The minimum flow of water in the stream above Newmarket was found to be 507 cubic feet per minute. This was ascertained by careful weir measurements taken at the very lowest stage of water, at the dryest season of the year and after a prolonged drought of two months' duration.

Mr. J. A. CURRIE. Now, would the hon. minister give the report of Mr. Grant on the same point, which he read here in answer to a question from myself some weeks ago?

Mr. GRAHAM. I am going to give them all before I get through. I have a synopsis here of the three reports. To ascertain the feasibility and cost of supplementing the water supply to which I have referred, extensive surveys were made at several suitable places on the watershed for establishing storage reservoirs. The tabulated report on this point has been laid on the table. Mr. Walsh selected Lake Wilcocks, on the height of land—known as 'the Oak Ridge'—between lakes Simcoe and Ontario, the source of the Humber river, as being the best additional source of supply should it be found necessary to resort to the same, but, in his opinion, not required. After discussing a number of other points as sources of supply, he concludes, on page 9 of his report, that it would be possible to lock through a total of 4,707 vessels, or about twenty per day during seven months of each year, providing all the sources named by him were used. He gives his estimate, which, as my hon. friend has pointed out, is too low, amounting to $354,536. The storage capacity provided for in his proposed plans aggregates 88,667,925 cubic feet.

Now, let me go a little more into the history of the work as it has proceeded, giving also a digest of Mr. Grant's findings. Let us take section 2, Holland river division. On February 12, 1908, Mr. Grant, who is one of the most efficient engineers in the whole department, after giving the results of the analysis, points out that the rainfall for 1907, which was a very dry year, was somewhat less than 30 inches, still showing that there was ample rainfall to operate the canal, if properly conserved. Mr. Grant himself has gone over the figures very carefully, and, in his report of 1907, although he finds that the rainfall was less than thirty inches, and less, than Mr. Walsh found it, there is still ample water to operate the canal. A good deal has been said about the necessity for conserving the water. I have discussed that point. As a matter of fact, we have to conserve the water on the Rideau canal, the Chambly, the Carillon and others—probably nine-tenths of the canals are run on this principle. The Erie canal could not exist but for the conservation of water by reservoirs and dams. Whatever differences of opinion may exist as to the traffic that may arise incident to this branch of the canal, or whatever differences of opinion may exist as to this work from a commercial standpoint, no doubt exists in my mind, and I think no doubt can exist in the mind of any person who bases his opinion on the statement of practical engineers, that there will be more than sufficient water to carry all the traffic that can be carried on the Trent Valley canal. I am not going to dilate on the trade of the county of York. Several gentlemen interested in trade not only in Newmarket, but in the city of Toronto, have spoken to me of the benefit to come to the city of Toronto if the canal were completed from the Georgian bay even to this Newmarket canal. I am not going to discuss that, because it is a question I have not gone into; I refer to it because one or two who are level headed business men have told me that I was free to say that in their opinion it would be a great benefit to the trade of Toronto to get water navigation direct north after a few miles of railway haul to join the Trent Valley system to Newmarket. The county of York is perhaps one of the most important counties in the Dominion of Canada. Not to impress my hon. friend with the fact of its greatness or with its traffic, I took some pains to gather statistics to find out the business done in the county of York. I find that the value of lands and buildings in that county is $30,000,000; field crops, $4,000,000; fruits and vegetables, $465,212. These figures are taken from the last census, the products of the county have largely increased since then. Value of animals killed and sold, $1,343,369 in the year the census was taken. I find that the total manufactures in the county of York amounted to something over $14,000,000. That does not include the city of Toronto, but the region of the county outside the city of Toronto. I merely call attention to these figures, to point out the importance of that county. I wish further to say that if the building of this canal to Newmarket, or to any other point in the centre of that thriving and prosperous county where there are manufacturers as well as agricultural industries would tend to cheapen freight rates in any way, and bring to the people a lesser rate of freight for their goods coming in or their products going out, I think it would be sufficient benefit to warrant this

great outlay, because all the many millions we are spending throughout Canada on transportation has that one object in view.

The country is committed to building the Newmarket canal. It has cost a great deal more money than was estimated. In that particular regard it is not alone because nearly all the great works that are undertaken, either by private individuals or by public corporations, have cost a great deal more than their first estimate. If any of my hon. friends have undertaken to build even a modest house, they must have found that out. But in order that there may be no misunderstanding as to the cost—and I say this on account of the resolution of my hon. friend who states that it is only a conjecture—I may state that the cost as estimated by Mr. Grant is, as my hon. friend has pointed out, nearly a million dollars. Mr. Butler has estimated that the reservoir will cost $80,000; I think that will fully cover it. The canal itself will cost in the vicinity of a million dollars; it will be a benefit, and will be promoted as a means of transportation for any boats that can go through any other part of the Trent Valley canal system. These being the circumstances of the case, I think my hon. friend, while I disagree with him as to the cost, is altogether wrong in asking the House to vote for the resolution which says this canal will be practically of no use whatever. I submit to the House that it will be of use, that it will be of as much use as any other branch of the Trent canal; and in conclusion I must ask the House to allow us to proceed to its completion and make it, as I believe it will be, an important branch of the transportation system.

Mr. R. L. BORDEN. Before the minister concludes, will he give us an idea of the probable tonnage that will go over it?

Mr. GRAHAM. As I told the House the other evening, I have made no estimate of the tonnage.

Mr. SAMUEL SHARPE (North Ontario). As this Newmarket canal is being constructed in a constituency that adjoins the one I have the honour to represent, I desire to trespass a few minutes on the attention of the House to speak in support of this resolution. It is not my intention to follow the minister so far afield as to ascertain and calculate the canal mileage of the world. The minister in his statement to the House, agrees that the canal is going to be a very costly undertaking; he also says it is going to be feasible. But that is a very flexible word; what is feasible may not be expedient or desirable in the interest of the country. The main question, in my opinion, is whether the canal is going to serve any useful public purpose. If it is not, then it is not in the interest of this country to incur such a large expense, particularly when the times are so stringent that it is necessary to curtail the expenditure of the country. When the minister was reading about canals which could only be made navigable by adopting an artesian well or a pumping system, I drew a picture in my mind's eye of a thousand electors in North York working pumps at election time at $2 a day to fill this canal. The Minister of Railways and Canals also stated that the original estimate was laregly exceeded, that the original estimate was something around $300,000, but that subsequent estimates which largely increased this amount were due to the increased cost of materials. I think he placed the increased cost of materials at from 40 to 50 per cent. But he failed to inform us that the original estimate had been increased some 300 per cent. I submit, Mr. Speaker, that it is an absurd comparison, to compare a canal that is connecting Cook's bay at Lake Simcoe with a dead end at Newmarket, with a great canal such as the Welland or Erie canals. The hon. Minister of Railways and Canals also took pains to gather statistics in regard to the great industrial prosperity of the county of York. It is a wonder that the hon. gentleman and his colleagues, before they initiated this project which is going to cost between a million and two million dollars, did not collect some statistics to show what the possible tonnage might be on this canal. You would think, Mr. Speaker, that the first consideration of the hon. gentlemen opposite, before embarking upon an expenditure of this kind, would have been to calculate the possible tonnage that would utilize this waterway.

But, Sir, this unique canal has certainly a very interesting history. It was first mooted prior to the general elections of 1904. It was initiated on the petition of nine electors, only nine electors of North York. They petitioned merely for the deepening and straightning of the Holland and Black rivers. So that it started as a very small and insignificant undertaking; but like the proverbial snowball it gathers in proportion and momentum as it goes along. I assure you, Mr. Speaker, that no person within a radius of thirty or forty miles considers it other than as a political undertaking, certainly not a commercial undertaking. North York, as we know, is represented by the hon. the Minister of Justice; prior to his advent to this House it was represented by Sir Wm. Mulock, and it always had a normal Reform majority of 700 or 800. But when Mr. Lennox, a young Conservative, captured the constituency for the local legislature, consternation seized the Liberal workers. Something had to be undertaken in order to hold the seat for the Dominion House. Consequently a council

of war was held to consider ways and means of spending the public money in the interest of the party. No person pretended to suggest that it would serve any useful public purpose. But the main object and purpose was to devise some means whereby the public moneys might be spent in North York in such a way as to save the constituency to the federal House. For all the good the canal is, they might have suggested building a railway to the moon, because no person considers seriously that it is of any commercial utility whatever. But they proposed the building of this canal, no doubt because it will cost more money, and the present generation will certainly not live to see its completion. No doubt, in the view of those who initiated this foolish project, it will be a never-failing source of income to generations of young Liberals yet unborn.

What are the cold facts in connection with this canal? The distance from Lake Simcoe to Newmarket is 10½ miles. The difference in elevation between the town of Newmarket and the water in Lake Simcoe is 45 feet. The whole project is based on the report of an engineer dated March 17, 1905, in which he says:

> This canal would, in my opinion, prove of great advantage to the towns of Holland Landing and Newmarket and the country tributary to those, and more especially to the latter town, where there are several thriving industries which should be a valuable feeder to the main Trent canal.

The engineer talks about the town of Holland Landing. I endeavoured to ascertain where the town of Holland Landing is situated. I looked up the list of mayors, boards of trade and directories, but I could not find any trace of the town of Holland Landing. I looked up the post offices and ascertained that Holland Landing consisted of 79 houses and 446 persons. The town of Newmarket has a population of 2,125, and a postal revenue in 1908 of $5,297. The real estate assessment of Newmarket is $714,865, and the real estate assessment of Holland Landing is $66,249, for a total real estate assessment of $781,114. These are the important commercial metropolises that this great canal is to serve. The expenditure on the project will exceed the assessed values of the two towns mentioned by the engineer. When the engineer drafted that report he knew he was deliberately misleading the authorities, and the authorities should have made further inquiries before embarking on such an undertaking. The estimates of expenditures on public works always show great elasticity when prepared by government engineers. The estimated cost of this project as given in an estimate dated March 17, 1905, was $291,249.86. On July 11, 1905, a few months afterwards, the expenditure was estimated at over $300,000. On February 20, 1909, the estimated expenditure was $967,814.50. In addition to that last estimated expenditure the engineer puts a rider:

> The above estimate does not include any sum for conservation of water south of Newmarket, and I do not know what this item will cost as no plans or estimates have yet been prepared for storage reservoirs.

The steady increase in the estimated cost of this work shows the utter incapacity of the engineers and indicates that no reliance should be placed on their reports. Then there is no estimate for land damages, which will amount to thousands and thousands of dollars. I would suggest that the First Minister should take a trip into North York and see what an undertaking this is, how much damage is being done to the land and how many thousands we are paying for lands in addition to the real construction of the canal. There are four different road crossings to be provided for, and they will be overcome by overhead crossings with concrete abutments and steel superstructures. Then there are to be 4 or 5 locks between Holland Landing and Newmarket, and there must be dams and storage reservoirs to impound sufficient water to make the canal navigable. Houses for lock tenders must be constructed at considerable expense and the land damages will be very heavy. The annual upkeep must also be high. Interest charges at 5 per cent on the total cost will amount to about $100,000 per annum. In addition to that there are wages of lock-tenders and expenses of operation coming to at least $5,000, so that the annual upkeep or expense to the country for the canal after its completion must not be less than $105,000.

The question naturally suggests itself: what public utility is this canal going to serve? There are in my opinion two insuperable barriers to its successful operation: In the first place there is no water and in the second place, if there were water, there is no traffic for which the canal could be used. I am not surprised that the Minister of Railways and Canals (Mr. Graham), when the estimates for this work were being put through, refused to defend this in a vigorous and whole-hearted manner. He called upon the Minister of Justice to defend this peculiar expenditure which is to be made in his constituency. The Minister of Justice shifts the responsibility on his predecessor, the late Postmaster General; each endeavours to shift the responsibility on some one else. The Minister of Justice is so legal and judicial in his temperament that he does not like to be bothered with embarrassing questions of fact. We saw that yesterday in connection with the Canada Life Bill. When there was a simple question of fact to decide he shifted the responsibility to the Banking and Commerce Committee and

said he would accept their dictum. The other day when defending this estimate, he said: I rely upon the engineers; they ascertain as a question of fact whether it is feasible or not and I accept their dictum. The rest of us are confronted from day to day by embarrassing questions of fact and we have to find a solution for these questions of fact; I do not see why the Minister of Justice (Mr. Aylesworth) does not apply a little common sense to these matters and decide these questions of fact for himself. I desire to say with all seriousness that this canal is an object of great curiosity in North York. There is no use side-stepping these questions, the construction of this canal is a political and not a commercial undertaking, it is useless to consider this question without calling a spade a spade. The residents of North York themselves say that it is ridiculous; the newspapers are a unit in denouncing this gross, wanton and useless extravagance. The people for miles around drive to see it as a curiosity. As the hon. member for York (Mr. Wallace) so well said, when the government are curtailing expenditures in other departments, why do they go on with the extravagant expenditure in connection with this work? Take the estimates for agriculture. You will find that the miserable sum of $931,000 has been appropriated for that industry, the staple industry of this country. The appropriation for this year was cut from $130,000 to $98,000 for experimental farms, a reduction of $30,000 and yet hundreds of thousands of dollars are being squandered on the North York canal. So with the votes for the development of the fruit industry, the encouragement of the growing of pure seed, the encouragement of the raising of live stock, and experimental farms, health of animals, There is a total reduction in the votes for agriculture this year of $585,500, and yet we see hundreds of thousands sunk on this waterless ditch. There are only $98,000 for experimental farms and there are $1,000,000 for the North York canal. There is a reduction of $585,500 in the estimates for the most important and staple industry in this country and $1,000,000 for the canal which will be of no use unless the government can devise a means of making water run up hill, in defiance of the laws of gravitation. One million dollars would accomplish a great deal in the encouragement of the agricultural industry. It would establish 40 experimental farms at $25,000 each or it would establish and equip 20 hospitals for the treatment of preventive diseases at $50,000 each. I say that it would be in the interest of the country and to the credit of the government if they would take a sensible and proper stand upon this question and stop all operations on that so called canal. Let them put up for sale the land they have expropriated and let them discontinue this absolutely useless scheme. Such a stupendous undertaking as this should not have been lightly entered upon by the government, and the conclusions that should have moved them to initiate it were twofold, namely: was the scheme practical and if practical was it expedient? Certainly neither of these could have influenced the government or otherwise this work never would have been commenced. No words are too strong to criticise this bizarre and fantastical undertaking because it is nothing else. It is an insult to the intelligence of the electors of Canada to have hundreds of thousands of dollars squandered on this ridiculous project. I agree with the concluding paragraph of the motion which says:—

That the said canal when so completed will be practically useless; that the expenditure thereon is wholly improvident and unwarranted and constitutes a wanton misuse and waste of public money.

Mr. WM. WRIGHT (Muskoka). Some two or three years ago when this project was first proposed to the House it was described as the Holland river and Newmarket canal, and we all knew what we were voting for, but for some reason or other later on the government hid it in a general vote for the Trent Valley canal, a proceeding which was unfair to the members of the House, because I know there are many hon. gentlemen here who would have entered a strong protest against it last year were they not deceived by the new title it got in the estimates. When the scheme was first proposed I protested and I expressed the opinion that the House was wasting time in discussing the question of the water supply, because this canal would be just as valuable dry as it would be wet, I pointed out that there never would be any vessels to navigate it and if it was to be used at all it would have to be used for some other purpose than a canal. What moved the government to undertake this is more than I can understand. We know that prior to 1904 the Minister of Justice (Mr. Aylesworth) ran in the county of Durham as a Liberal candidate and he had a mouth for the Trent Valley canal in that county and another mouth at Port Hope or some place else. It would appear that one of these mouths must have got lost and that it travelled up the Trent Valley canal and got into Lake Simcoe and in searching for an outlet it happened to discover the mouth of the Holland river and it dug itself into the bank and that was the end of it. If the expenditure on this work were trifling it would not require so much attention from parliament, but when there is $1,000,000 to be wasted it is time for hon. gentlemen to enter a protest and to declare that it would

be in the interests of the country to cut out this appropriation altogether. Many years ago the Trent Valley canal proper—of which of course the Holland river scheme is no part at all—was undertaken by the country and both parties were committed to it. The Minister of Railways has told us this afternoon that when the Trent Valley canal is completed it will serve as useful a purpose to Canada in carrying the grain trade of the west as the Erie canal does in the state of New York. I hope that is true, and if it be true, then it behooves the minister to use every available dollar he can get for the completion of the Trent canal instead of squandering the money in this Holland river ditch. Those who are conversant with the Trent Valley canal project know it is intended to connect the Georgian bay and the great lakes with Lake Ontario and if that canal can be made a useful factor in the great transportation problems of this country then we would be justified in building it, and in completing it at the earliest possible moment. Instead of wasting the money in this useless Holland canal project it might far better be expended in securing an outlet for the Trent Valley canal either on the east or on the west. We know that so far nothing has been done between the Simcoe lake chain and the Georgian bay at the westerly end, and neither has anything been done as far as I know in opening out into Lake Ontario at the eastern end, so that at the present moment although we have spent millions of money upon the Trent canal it is practically useless for the great purpose for which it was designed. I think it was commenced in the wrong way in the first place. I think it should have been commenced from either the easterly end or the westerly end, but whatever may have been the mistakes of either or both governments in the past it is the duty of the present Minister of Railways to complete that canal at the first moment the finances of the country will permit. It is his duty now to stop construction upon this useless Holland river undertaking and to open up either the easterly or the westerly end of the Trent Valley canal proper. We know that the government is spending large sums of money at Tiffin, and at Midland and at other Georgian bay ports, so that large steamers can convey the grain trade of the west from the head of the lakes to these ports. In the fall the elevators at these ports will be filled with grain and we know that in the rush season there are not sufficient facilities to transport that grain to the sea-board. We know that if the Trent Valley canal proper were completed vessels could load at Tiffin and Midland and other ports so as to relieve the pressure at the elevators and allow the grain to move expeditiously. Looking at it from that standpoint and realizing the necessity for completing the Trent Valley canal at the first moment possible I deprecate this useless expenditure of money on the Holland river. Every one in that section of the country knows that it is an absolute waste of public money to construct this canal in the first place, and that its upkeep will entail a future waste of money for all years to come. If the Minister of Railways and his predecessors had considered carefully all the conditions surrounding this Holland river canal there would have been no necessity to discuss the water supply because the canal never would have been undertaken. I do trust that the government, even at this late date, will take the money that it is intended to waste on this ditch and put it into the Trent Valley canal proper so that it may be completed and available for the accommodation of the trade of the west. Again I deprecate the hiding of this vote for the Holland river under the general vote for the Trent canal, because there are members in this House who would wish to continue the Trent Valley canal but who at the same time desire to stop this wasteful expenditure on the Holland river. In conclusion I enter my most vigorous protest against the carrying on of this useless work.

Hon. A. B. AYLESWORTH (North York) Mr. Speaker, as I took occasion, when this matter was under consideration in Committee of Supply some three weeks ago, to express myself with regard to it, I should have contented myself with what I then said except for the circumstance that, as this particular public work concerns more intimately than it does any other part of the country, the riding which I represent, I suppose something is expected from me upon this occasion. I do not want to repeat what I have already said in this House on the subject, though perhaps what I have to say may be to some extent an amplification of what I said before. It is charged that this undertaking is not of commercial character, but is purely political. I thought that I had disposed pretty effectually of that contention in what I said on the subject three weeks ago. I suppose I was mistaken, and I suppose that as long as we have politics in this country, and as long as it is thought that some political advantage can be gained by attacking an opponent upon the ground that this is a political undertaking, we shall have that line of attack continued. But every member of this House must be perfectly aware of the fact that, as far as I am personally concerned at any rate, I have no right to claim any credit in connection with this undertaking, and am not on my defence in regard to it. I would willingly, I would gladly, claim the credit of it if I did not feel that I should be an imposter in so

doing. This enterprise was initiated months before I was a member of this House, and months before I had the remotest idea that I should ever be the representative in parliament of the riding of North York. Four years ago and more a deputation from the constituency of North York came to Ottawa to urge on the government that this work should be undertaken. The deputation was of absolutely non-political character. It is possible that in the very large number of men who came from North York to Ottawa upon that occasion and upon that business there were more Liberals than Conservatives. I do not know how that may be; but as there are more Liberals in the riding of North York than Conservatives, it is very possible that the like proportions were maintained in the delegation. I gave to the House three weeks ago the names of half a dozen or more of the most prominent members of the Conservative party in the riding who took part in the proceedings of that delegation. I could supplement those names if that would be of any use by an equal or greater number of additional names of men who are leading men in the county, well known and recognized life-long Conservatives, who attended on that occasion as members of the delegation to assist in urging on this government that it should undertake that work. The delegation seems to have been an unusually large one. It certainly was a fully representative one, having on it men from every municipality in the constituency. It came accompanied by resolutions of every municipal council of every township, every town, every village in North York, which were presented by the secretary of the delegation and read to the members of the government who received the delegation. Now, I need not say that there are municipalities in that county in which there are majorities of Conservatives as well as others in which there are majorities of Liberals. I do not know what the political complexion of the various municipal councils of the riding at that time may have been, but I find the names of men who are most prominent in the Conservative party in the county as appearing on that delegation and as taking a most active part in the proceedings. I mentioned three weeks ago particularly the name of a most respected gentleman who at the present time occupies a high official position in the local Conservative organization for the riding, Mr. T. H. Brunton, of Newmarket, who appears to have been the secretary or official spokesman of the delegation on that occasion. I referred to the reports which appeared on the following day in the Toronto newspapers; and that I may do nobody an injustice in that regard, I want to read to the House some extracts from the report which appeared in the Toronto 'Mail and Empire.' The delegation attended here apparently on the 22nd of February, 1905, and on the 9th page of the 'Mail and Empire' of the 23rd of February, 1905, appeared half a column under date of Ottawa, February 22, describing what then took place in these words :

A deputation from York county on behalf of the Trent Valley Canal Extension Association, waited on the government to-day, asking for the widening and deepening of the Holland river.

Then, after going over the statement of the matter which was made by the delegates, the report in the 'Mail and Empire' goes on in this way—and I ask the attention of hon. gentlemen to it, in view of statements which were made in the House three weeks ago by the hon. member for South Simcoe (Mr. Lennox) :

Haughton Lennox, Conservative M.P. for South Simcoe, gave his cordial endorsation to the deputation's request, and said that although opposed politically to Sir William Mulock, he was proud of him as the member for North York and one of the Premier's ablest colleagues.

That is the summary of that hon. gentleman's remarks on the occasion of the visit of the delegation, as contained in the 'Mail and Empire' of the following day.

Mr. LENNOX. Will the hon. gentleman allow me to say that this is the first intimation I have had of such a report having been made. I was requested by the hon. Sir William Mulock to attend and hear what was said, and I attended and remained for about ten minutes. Except to speak to some persons with whom I was acquainted, I never opened my mouth, and the statement that I endorsed the action of Sir William Mulock or said anything in praise of him is absolutely and wholly untrue. On the contrary, I said specifically and definitely in this House to Sir William Mulock that I thought the thing was wholly unjustifiable, and I have never changed my mind.

Mr. AYLESWORTH. Of course, I know nothing as to the fact; I accept the statement of the hon. gentleman on the subject, whatever it may be. I can but call attention, as I have done, to what he was reported in a not unfriendly newspaper on the occasion in question to have said on this subject. In an account of the same occasion which is given on the same 23rd of February, 1905, by the 'Globe' newspaper it is stated that :

The secretary, T. H. Brunton, presented petitions in favour of the work from the municipalities of Bradford, townships of west and east Gwillimbury, the town of Aurora, township of King and Whitchurch, village of Holland Landing, town of Newmarket, village of Sutton, and townships of north Gwillimbury and Georgina—

thus mentioning individually every municipality in the riding of North York, with the exception of the town of Stouffville, which is in the extreme south-west corner, and half of which was in the constituency of East York for local purposes.

The account in the 'Globe' goes on to say:

The various speakers impressed upon the government the advantages the improvement would bring to the large and populous district which would be given the boon of competition in rates by water carriage. The Holland river, it was pointed out, was already navigable a large portion of the distance. It was stated that manufacturers would save a large portion of the cost for fuel, and that there would also be large savings to the farmers for carriage of their grain through water competition.

I have no knowledge of what then took place or of what considerations moved the government of that day to recommend the undertaking of this work, but that recommendation was made to parliament during that session, before I was a member, and parliament passed a resolution devoting an amount of money to this project. The House of Commons at subsequent sessions provided from year to year for that work by voting additional sums to carry it on. There has not been any occasion, during the time I have been a member of this House, for me to speak on the subject by way of defending or supporting a proposition to appropriate money for this work, but if there had been, I should have been very ready at any time to do so because I am satisfied that this is a work for the benefit particularly of the riding I represent and which will also be for the general advantage of the rest of Canada, indirectly it is true, but in the same sense as any similar work is an advantage to the whole country.

A good deal of joking has been indulged in with regard to the possible insufficiency of the water supply for the canal when constructed. I stated practically everything I had to say on that point when addressing the Committee of the Whole House three weeks ago. It is an engineering question, of which I know nothing. If I were to sit down and examine for hours the reports of the engineers I should know no more about it when I finished than when I began. All I know is that two or three years ago, when the first hint of insufficiency of water was made in a newspaper, I asked my old friend Mr. Butler, as an engineer, whether there could be any question in that connection. He said there was none and I have relied with perfect confidence on that opinion from that day to this. I do not suppose that Mr. Butler made personal examination, no doubt he relied on the reports of the engineers who made such examination, but I do suppose that he applied to those reports his knowledge as an engineer of eminence and experience and that, speaking from the facts those reports disclosed, he was in a position to say that there is no question about the sufficiency of the water supply. I am content certainly to rest upon that, and I do not think the hon. gentleman could find any better foundation for an opinion on a subject of that character.

With regard to the benefits which this work will give to the people, in the first place, of the immediate locality, and through them to people who are further away, it seems to me that the considerations which have been advanced in general terms by my hon. colleague, the minister in charge of the department, ought to be satisfactory and conclusive. I suppose that for every one there is no place like home. I suppose that every member of this House thinks his own constituency is the finest. I certainly have that opinion of mine. When I was a younger man, I used to think that nowhere in this country were farms to be found equal to those of Ernesttown and the Fredericksburghs and Adolphustown. I have changed my mind since, and I say—speaking with as much knowledge in a general way of the province of Ontario as any man here—I do not believe there is any section of the province of Ontario or of the whole of Canada, in which superior farms, better farm buildings, or more prosperous, thriving farmers are to be found than in the county of North York. If this constituency is one in which prosperity abounds, if it is a fine agricultural country and has the advantage of manufacturing establishments, the equals at least of those which any other community of the same size enjoys, what reason is there, when the advantage of water communication can be secured to the heart and centre of that territory by the digging and widening of a stream for a distance of some three or four miles, why that should not be done?

But the question to-day is not whether or no this work should be undertaken. The question before the House is ought we to discontinue it? Should we, by adopting the resolution proposed, condemn the government of four years ago and of to-day for recommending the undertaking of this work? Ought we now to abandon the work and lose the amount of money we have put into it? Facing that question and with the necessity of saying by our vote whether or not we want to censure the government and abandon the work which has been undertaken and upon which a large amount of money has been spent, I cannot see how any hon. gentlemen can hesitate to vote against the resolution. We have undertaken this work, we have committed ourselves to it, we have no reason to doubt that it will be efficient when competed, and we have as satisfactory reasons for believing that it will be beneficial to the community in which it is situated and, through that community, indi-

rectly to the remainder of the country, as we have with regard to any other commercial undertaking which this country is now concerned in as a public work. I can understand the local jealousy which might cause people, who reside at some little distance, to think that their own personal peculiar interests would be injured by the completion of this work and to seek to prevent its completion. But when we are told that nothing of that kind exists, that it is absurd to suppose there is any kind of local jealousy on the part of the great city of Toronto, into which millions of the people's money have been poured in the past and to which the voters and ratepayers of North York have contributed their full quota, I cannot see why this enterprise should be singled out as one to be condemned and abandoned when I am convinced, on the reports of scientific men and my knowledge of the local conditions, that it will be of great benefit to the people of that locality and through them to the people of the whole surrounding country.

Mr. J. A. CURRIE (North Simcoe). Mr. Speaker, this question has been before the House in several forms during the present session. Objection has been taken to the form in which the vote for the Trent Valley canal appears in the estimates. The vote is in one lump sum of $1,000,000 without division. That matter has been briefly referred to by the hon. member for Muskoka (Mr. Wright). I think that his ground is well taken; for we find that in the Supplementary Estimates, for instance, there is a vote for the Prince Edward Island Railway—a vote relating to this same Department of Railways and Canals—but it is divided into items with the amount specified for each. Throughout these estimates from end to end, we find the same form quite common. But, whenever there is a high-smelling item that is to be carried through, it is always coupled with two or three others and we are asked to swallow the pills, box and all. Many hon. members of this House support the continuation of work on the Trent Valley canal but they would like to see some effort made to complete the system, and are not satisfied with the prospect held out that our children's children and not they will pass by this outlet into Lake Ontario or Georgian bay. And of those that favour expenditure on the Trent Valley canal, many are prepared to vote down this expenditure on the Newmarket canal. The Minister of Railways and Canals, in his effort to defend a very bad case, has wandered far afield. He has quoted masses of statistics showing the number of canals to be found in the older countries of Europe, but he forgot to say that eighty per cent of those canals were built long before the days of railways, and that since the advent of railways very few small canals of this description have been constructed. Any one who knows anything about the United States knows that canals of this kind were built through Pennsylvania and Maryland years ago, and you can see them there now choked with weeds and unused because the work for which they were designed is now better done by the railways.

Let me point out where this Newmarket canal is and what it is. One has only to look at the map to see where Lake Simcoe is. Lake Simcoe lies at an altitude of about two hundred feet above Lake Ontario. Of course, it has a natural basin with its own drainage system on all sides, and it empties into the Georgian bay by way of the Severn river. A number of small rivers empty into Lake Simcoe from the south. The greatest of these is the Holland river, and, a few miles from its mouth, the Holland river branches into what is called the east branch of the Holland river. The Black river runs a few miles to the east and empties into the lake at Jackson's point. Each of these rivers covers, in its course, a distance of from ten to twenty miles, and, at one time, they were navigable for two or three miles from their mouths for canoes and the batteaux used by the Hudson Bay Company and the settlers of the old days. Each river has its source from a height of from thee hundred to six hundred feet above the level of Lake Simcoe, making the fall in a distance of from ten to twenty miles. The Holland river rises only a few miles from Wilcocks lake, the source of the Humber. The east branch of the Holland river, from about Newmarket, runs through its own valley, and, to reach the main river from Newmarket westward you have to overcome a rise of probably 150 feet. To reach the Black river on the east side you would have to cross another divide about equally high. So, the only territory tributary to the east branch of the Holland river, lies along the Northern Railway. The drainage area of the branch of the river is stated at 61 square miles, which means, roughly, a territory ten miles by six. All the figures given us by the hon. minister relative to the tonnage of the county of York has no bearing on the question, because this tonnage nearly all travels in a different direction. That in the valley of the Holland river travels to the Canadian Pacific Railway and down to Toronto by Kleinburg. That on the east side goes to Toronto by the valley of the Don over the old Midland railway. None of that tonnage could be brought to this waterway because of the expense. The greatest extent of country to be served would be twenty miles by six miles.

I have been at great pains to go through the papers relating to this matter and learn why this ditch was begun. A petition

was presented—no date given—signed by several gentlemen. One hon. member who spoke said that it had been signd by gentlemen in North York. A number of those who signed it were from Barrie and other places. And what did they ask? Simply for the dredging of the mouths of the Black river, the Holland river and the East branch as far as Holland Landing to clear out the weeds and allow the barges that come through the Trent Valley canal system to go to Holland Landing, for their cargoes. In other words, they asked that these places be made harbours, like Barrie, Jackson's Point, or Beaverton, and not that a canal should be built. The section between Cook's bay and Newmarket is ten miles. From Holland Landing to Newmarket four and a half miles—the latter is all the country that has need of canalization. That is all that is to be covered by the canal. The rest is merely clearing out silt, and dredging out sand bars and other obstructions. But now, let us see the genesis of this work. The first mention of this canal was immediately before the election of 1904. Some time in October, 1904, Mr. Walsh, an engineer of the department, was hurriedly called from Orillia to that section of country to make a survey of this particular branch. There is a considerable vote around Newmarket and Holland Landing He had to ascertain if something could be done to make a canal or bring about the building of some public work there. Mr. Walsh goes down to that country, and in a few days every loose fish in Newmarket is driving stakes and eating his dinner at the country's expense.

By the way, it was just two or three weeks before the election, and every voter that could possibly be put to work was put to work on the job, and within a very short time they blew in $25,000 of this country's money in making these surveys. Bear in mind immediately before the election. Now you have the whole secret of the purpose of this canal. It was designed for a political purpose. It was so intended by the then Postmaster General, Sir Wm. Mulock, to enable him to carry that constituency, which was gradually going to the bad. Politically we find at the same moment that the hon. gentleman who succeeded him, as Postmaster General, and who is now the Minister of Justice, was carrying on an election down in Durham. The question of the Trent Valley canal was made a burning question in Durham. The hon. gentleman being new to politics, thought that he would enter political life with a bludgeon, and he decided the easiest way to secure a majority of the votes was by offering and promising large public works to his constituents. At the same time a gentleman by the name of R. R. Gamey appeared in Durham. Apparently there had been some differences of opinion between the Minister of Justice and Mr. Gamey previous to that Durham election, and Mr. Gamey and the present Minister of Justice had it out in East Durham, with the result that Mr. Gamey succeeded in landing his man, and the Minister of Justice was defeated.

The next we hear of this work was this great deputation that came down to the government asking to have this work carried on. They found out that although they had got the surveys, the thing was beginning to get a little cold, either that, or the retirement of the Postmaster General, then the Hon. Mr. Mulock, was in contemplation, and it was necessary to make that riding sure for his successor. The gentleman who was to succeed him did succeed him. Bear in mind that the election was in the fall of 1904, this deputation came to see the government on the 22nd of February, 1905. The agitation was kept up during that whole period until away along in the fall of that year, when, on the 16th of October, 1905, the present Minister of Justice was appointed Postmaster General. It was well known at that time that Mr. Mulock had made himself possibly too busy with the question of public utilities, and that his views along the same lines as those of the hon. member for South York (Mr. Maclean) running in parallel grooves, did not meet with the approbation of the leader of this government. He was going to retire, his health being very poor at that time. Subsequently it got better when he became a judge. But this constituency must be kept in a ferment of excitement so that there might be a loyal supporter of the government appointed. The matter was carried on in that way. The Postmaster General, now the Minister of Justice, went up for election on November 22, 1905, against a farmer by the name of McCallum, and in spite of this canal agitation, no work having been done at that time, in spite of the surveys he carried the constituency by a reduced majority of 149. The minister says it is a great Reform riding. It is not a great Reform riding apparently, from that majority. Now, succeeding that, Mr. Walsh was asked to make a report. Mr. Walsh is the engineer of the government, who is apparently ready to make a report on anything at a moment's notice, and so far as his figures in this connection are concerned they are misleading in every respect. I do not think the Minister of Railways and Canals will rise in his place and say to this House that any single figure that has been given by Mr. Walsh to him as the responsible minister in charge of that department, in connection with this work, has been within 200 per cent of what the work actually cost, or of the estimate that was made by the responsible man, Mr.

Grant. We have had Mr. Walsh's report quoted to us. Mr. Walsh said in his first report that the amount of damages for the right of way to Newmarket would be $6,000. What is the amount of damages so far? $27,000 actually paid and the work is not all finished yet. Mr. Walsh also said that the original work would cost something like $300,000. His first report was made to Mr. Collingwood Schreiber, in which he placed the amount at something over $300,000. He made a subsequent report on the 17th of March, 1905, which the minister did not quote, and the amount was $291,249.86. With that report in their hands the work was divided into two sections, the lower section or the Holland river section, that is to say, from Cook's bay to Holland river, or Bradford road, and the upper section of the Bradford road up to Newmarket, four and one-fifth miles further on. Tenders were called for the first section. There were four or five tenderers, and the successful tenderer was the Lake Simcoe Dredging Co.,in which Mr. Cane, a very prominent Liberal of Newmarket, was a leading member, assisted by Dr. Spohn—I do not think he is a Conservative, he lives up in Penetanguishene, and used to be in charge of the government asylum at Orillia. This Lake Simcoe Dredging Company built a scow and placed a dredging apparatus on it. They took the contract for $46,497.10, and commenced work. As a result of their operations, in a very few months they discovered that their dredge would not work, and it is very amusing to read the comments of Mr. Grant on the apparatus they had there at work. He calculated there was some 270,000 cubic feet of earth to be removed, and although they had been at work dredging all the summer and fall, all they got out was 3,500 yards. You can calculate how many years it would take them at that rate to finish the work. Mr. Cane wrote letters to this government calling on them for the love of everything good to send them a cheque, that they were hard up. Even when there was only something like $1,500 coming to them, he had the modesty to ask the government to send them $10,000 or $15,000 to help them out. However, nothing was done so far as that is concerned, with the result that this company, not having carried on its work, lost the contract and a new tender had to be called for. New tenders were prepared and were called for. The matter was taken hold of by Mr. Grant, and he made another estimate for the second tender. He estimated No. 1 section for the department at $131,239. I wish the House to note these figures particularly, they were the figures of the department. Tenders were called and a gentleman named Riley was one of the lowest tenderers. His figure for that work was exactly the same as the government estimate, except that in the hundreds column he changed the two into a three. His tender was $131,392, and he added 65 cents. That was a very strange coincidence. However, that contract was not let. The first tender was some $41,000, and after that section had been revamped and looked over on the very same drawings, the lowest tender was $131,000. The gentlemen who tendered were all returned their checks and No. 1 section, which common sense would have suggested should have been the first portion to be constructed, was neglected and nothing has been done upon it since. Why? Because the bullfrogs of Cook's bay have no votes. There was nobody living on that section who had a vote. Immediately an election loomed upon the horizon, it became necessary that something should be done where there were voters and an estimate was made, tenders were called for and the contract let for the second section of the canal. Mr. Walsh made several attempts or bluffs at an estimate on the second section but Mr. Grant, who is without doubt a very experienced engineer, made an estimate of that work which was far short of the lowest tenderer. Mr. Grant's estimate on section No. 2 was $596,826, and the lowest tender received in answer to the call founded on that estimate was $652,009.50. That tender was by this very same Mr. Riley. When the government called on Mr. Riley to accept and sign his tender, he began side-stepping and correspondence went on for some months on this contract—and strange to say some correspondence of W. M. German appears on the files to aid Mr. Riley out of what was apparently a difficult hole. A syndicate was formed which finally took over the work from Mr. Riley and the work is now being carried on by this syndicate or company.

The lowest tenderer on No. 1 as revised, that is the tender by Mr. Riley, although there were six or seven responsible tenders, was $131,392.65. The present tender for No. 2 section is $652.609. The money blown in on surveys previous to the election of 1904, amounted to $25,000. There has been paid out for the right of way, so far, $27,102.90. A strange thing in connection with these payments for right of way is that a gentleman named Widdifield appears as a partner in about 50 per cent of the transfers of land made in and around Newmarket for this canal. I am told that Mr. Widdifield is a defeated candidate in that riding and a very close friend of our hon. friend the Minister of Justice. I cannot see why the government could not buy these lands direct from the owners without having a partner appear in all transactions. In addition to the right of way there will be heavy expenditure for bridges. I need not point out that there are steel bridges

in connection with this work. Of these two must be steel swing bridges of 88 feet span each, one of 49 feet and one of 64 feet. Any one who knows anything about steel construction will say that you cannot build a steel swing bridge at less than $500 or $1,000 per foot, and the cost, instead of being the $91,000 in the estimate, would be nct far short of $150,000.

Then there are the land damages and the work at Wilcox lake. No one has made an estimate on that work except our good, Christian friend Walsh who says $41,000. Mr. Walsh estimated at $290,000 work which has now reached $900,000 so if he says that this work will cost $41,000, we are safe in saying that it will cost not less than $150,000, which with the land damages to be paid, farms expropriated, &c., will bring the total cost of the conservation up to at least $250,000. That would make a grand total for the work of $1,236,104.55—we will drop the 55 cents for the benefit of the Minister of Railways and Canals (Mr. Graham).

Now let us come to the vital point. The one string harped on by hon. gentlemen opposite with reference to the canal is the feasibility of this work. Any one who knows anything about engineering will tell you that there is practically no engineering problem that cannot be solved. We all know the point to which engineering science has reached, so that to bring into the argument at all the question of the feasibility of the work is to treat us as a lot of children. The great question should have been, not the feasibility, but the commercial value of the work as a public undertaking.

I have pointed out to you how the various lines of traffic parallel each other in the county of York. I have pointed out that the only basin that could be served by this canal is something like 60 square miles in that portion of York. The distance to be saved is about 4 1-2 miles, because I eliminate from the question the amount necessary to dredge the mouth of the river. It is really the 4 1-2 miles that is costing the $1,000,000, as there is a lift of 45 feet in that distance. I have also considered the tonnage arising in Newmarket. I do not believe there is over 60 tons daily all the year around of tonnage in and out of Newmarket. Of that amount 50 per cent will go south to the city of Toronto and the greater portion of the balance will go north of Newmarket so that the total in and out tonnage of Newmarket on which the freight charges could be reduced by this canal would not amount to 20 tons a day. What would the reduction be on 20 tons a day? You can haul a ton 4 1-2 miles on a wagon for a dollar; that is a fairly good price. Therefore, this canal will at most save the people in the immediate vicinity of Newmarket about $20 a day, and as the canal will be opened for about 200 days in the year the saving would amount annually to $4,000. But, we will give good measure and we will double that amount and we will suppose there is a saving of $8,000 a year to the people of Newmarket and its vicinity.

Now, Sir, if we take the total amount that that canal will ultimately cost and figure it at the rate of 4 per cent., there will be a charge on the people of this country of $40,000 a year. Added to that, at the very lowest estimate there will be a charge of $10,000 a year for the maintenance of the locks and for lock tenders, and you therefore have $50,000 a year that the people of Canada will have to pay by reason of the construction of this canal in order to save $8,000 a year to the people of Newmarket and its vicinity. Does any sane man think that that is a good business proposition? I think political economists would say, considering the conditions of this country at the present time, that if the government proceeds to spend say half a million dollars on any given work it should be ranked as a national enterprise, and before such a work is undertaken it should receive the most careful consideration. The question should be asked: will this work be of such a nature that it will serve the people of the country as a whole and not merely the people of a small section? Now, I challenge any man on the government benches to state that the building of this Holland river ditch will cheapen by the smallest fraction of a cent the cost of hauling grain from the wheat fields of the west to the sea-board. As a matter of fact the direction of the canal is north easterly, and as everyone knows the traffic of the west would naturally seek the opposite direction as an outlet. The one million dollars which this canal is going to cost if spent in carefully devised improvements at the terminals on the great lakes would appreciably reduce the cost of freight and to that extent benefit the farmers of the west and the people of the country generally. The Minister of Justice declared this afternoon that Toronto was jealous of the expenditure of this money in his riding. What nonsense. Why, the aggregate annual business done in that section of the riding that would be served by this ditch would not equal the business done in one city block in Toronto in the course of a year. But, whenever the Holland ditch is mentioned the Minister of Justice flies into a passion, and he seems to think that a political attack is being made on him. Sir, this is not a personal matter; it is a far graver question, of national concern. The Minister of Finance tells us that there is great difficulty in financing on the money markets of the world at the present day, and that there are small clouds

on the financial horizon which forbode danger. That being so, is it wise for us to spend such a vast sum of money for the mere sake of constructing a political work for the benefit of a single minister of the Crown? To my mind the Minister of Justice should be broader; he should not take such a narrow and sectional view of his interests. The Minister of Public Works told us the other night that expenditure was curtailed this year, and that even a great many necessary public works in his riding could not be proceeded with because the country could not afford it. Why does not the Minister of Justice try to get into the same frame of mind. He cannot; he looks at every thing in a narrow partisan spirit; he is like the man who lived all his life in a political barrel and knows nothing except what he sees through the political bung hole. Let me urge the government once and for all to stop operations on this canal. We have been told that the country is committed to the project, but what has been done already had far better be lost than that additional useless expenditure should be incurred. Sir, this is a political work and nothing else. It may suit the Minister of Justice in his own particular constituency to have us condemn this work, but I can assure him that if he forces it on the country it will not add anything to his political prestige in the rest of the province of Ontario where public works are urgently needed and with regard to which we have with great forbearance agreed to their postponement for this year. It shall afford me great pleasure to vote for this amendment. A political job costing $5,000 or $6,000 is wrong in principle, but when the cost runs into the millions and when it means a charge of 25 cents on every man, woman and child in Canada, it is a political crime.

Mr. SPEAKER. I would like to remind the House at this stage that in my opinion this discussion is irregular. The estimates contain item 103 for the construction of the Trent canal, and I find from 'Hansard' that this item was being discussed before the committee on the second of March, and that it remains open for discussion again when the House is in Committee of Supply. This debate seems to have proceeded so far by consent of both sides but under the circumstances it is irregular. If the House is willing to allow the discussion to proceed I am prepared to submit, but I think it my duty now to remind the House that in my view the procedure is irregular.

Mr. F. R. LALOR (Haldimand). I listened with a great deal of attention to the speech of the Minister of Railways and I thought he deserved the sympathy of the House in his laboured attempt to justify the expenditure on the Newmarket canal. Since the Minister of Railways came to the House I have always admired him for the candid manner in which he has given us information and for the frankness with which he has discussed questions relating to his department. But to-day we witnessed the most laboured effort he has ever attempted here. He has our sympathy as no doubt he has the sympathy of his friends. We have seen in the press of the country amusing cartoons in reference to the Newmarket canal, and the Minister of Justice has been portrayed as pumping water out of a well to furnish the canal with a water supply. I thought at first that was only a joke, but it seems the Minister of Railways takes it seriously and he actually informs the House that it is possible to pump water to supply that canal. It would seem that the hon. gentleman thinks that such will be the ultimate result and that water must be pumped from artesian wells to enable the canal to float anything.

Therefore in his efforts all the way through he had the sympathy of the House. One of my reasons for speaking on this matter is that there is in my riding a canal somewhat similar to the Newmarket canal, that is, the Welland canal feeder. That was originally built for a good purpose: for a good many years it supplied the old Welland canal with water drawn from the Grand river. That continued until the Welland canal reached the Lake Erie level, and from that time it has got its water supply from Lake Erie. That canal feeder extends for twenty or twenty-two miles from Dunnville or Port Maitland on the Grand river to Welland, through a good section of country, with Port Maitland at one end and Port Colborne at the other. That is a rather important canal, and one might naturally suppose that it would be of a great deal of service and benefit to the section of country through which it runs, but let me tell the hon. minister and this House that apart from the original purpose for which it was built, that of supplying the Welland canal with water, it is of little practical value to the people of that section of country. In fact, it is never used. The Minister of Railways and Canals tells us that he has been told by prominent citizens of Toronto that manufactured goods might be shipped from Toronto to Newmarket, transferred there to the canal, and transported to the Georgian bay. I think every one of us knows that that is absolutely ridiculous. You could not do that and make it pay. I believe that that canal of ten miles or more, which is now being built at a cost of between one and two millions of dollars to the people of this country, will be just as useless when completed, as the Welland canal feeder, for the purposes of transportation. It will be of no benefit whatever to the farmers of

that particular section. The Minister of Railways and Canals tells us of the great extent of the farm products of the county of York. One would suppose that he expected these to be transported over this canal. He could apply the same argument to the counties of Haldimand and Welland through which the Welland canal feeder passes. Let me tell the hon. gentleman that there are practically no farm products whatever passing through that canal. A short time ago I put a question on the Order Paper with reference to the Welland canal feeder, asking among other things how many vessels had passed through it during the last five years, and what their tonnage was. The question and the answers were published in the local papers of my county, and created a good deal of amusement, because it was stated that 700 vessels had passed through it in the last five years, when the hon. gentleman would have been nearer the mark if he had said seven. I believe the Newmarket canal will be just as useless to the people of the county of York as the Welland canal feeder is to the people of the counties of Haldimand and Welland for the purpose of transporting farm products or manufactured goods. The day has gone by for little branch canals. They never can be made to pay, because nobody uses them. We want through canals, and as a member of this House I am prepared to support any reasonable transportation project which the government may bring forward; but I am not doing my duty to the people of the county of Haldimand, whom I represent, if I do not on their behalf protest against an expenditure of nearly two million dollars which I believe is absolutely wasted. The people of my county must contribute their portion of that money, and on their behalf I protest against this expenditure as being unwise and not in the public interest.

Mr. SAM HUGHES (Victoria and Haliburton). Mr. Speaker, at the outset I may tell the Minister of Railways and Canals that I am in favour of main canals, and I am in favour of branch canals where there is any possible excuse shown for their construction. What are the facts concerning the Newmarket canal? Newmarket stands at an elevation of 770 feet above sea-level; Lake Simcoe stands at an elevation of 717 feet; so that there is a rise between Lake Simcoe and Newmarket of 60 feet. The distance from Newmarket to Lake Simcoe is 6·7 miles. The distance from Newmarket to Holland Landing, where navigable water is found is 3·6 miles; and the country is asked to vote an expenditure for a little canal for this distance, in order in the first instance to secure the election of the then Postmaster General, and later on to secure the patronage for the succeeding Postmaster General, now the Minister of Justice, at a cost of $1,000,000. If this were a through canal or if it were to connect with a through canal, some excuse might be made for it. We find that grain is brought in transit by rail to the country towns, where it is ground, and then it is sent on to the sea-board on a through rate by train; but there is no such thing as a through rate for part water carriage and part land carriage. If this canal had the excuse of being on a through route, so that the grain could be brought in barges, ground, and then shipped on to its destination on a through rate, there could be some excuse for its construction; but there is no possible excuse for the construction of this canal. In the three and a half miles from Holland Landing to Newmarket there is a rise of sixty odd feet, and the water supply is absolutely inadequate, unless, as the minister suggests, reservoirs are constructed to catch the rainfall, or unless he sets all the boys in the country around pumping water with their house pumps. I know of no expenditure in the country more wasteful than this expenditure. I can direct the minister's attention to a part of the country where he might have a proper expenditure. Balsam lake is 838 feet above sea-level. Extending northward from it is the chain of waters which supply the Trent canal system with water. With one lock at Coboconk, one at Norland, one at Elliott's falls, there would be communication for thirty miles inland. All that thirty miles is a timber and an agricultural country in which the farmers have no proper access to the markets, and there are many more farms along that thirty miles than there are along the three and a half miles between Holland landing and Newmarket. The country along those three and a half miles has two lines of railway, one on one side of that little stream, and one on the other. In fact the distance between the railways in some places and the creek is not much more than the Minister of Railways could have taken in a jump in his young days. There is no trouble crossing the stream at any time, and both the electric and steam railways are close together so that the people are absolutely served in every respect. If the people of Newmarket want to bring up any logs, they can do so by rail at a through rate, but they cannot bring them partly by water and the rest of the way by rail at any such rate. I venture to say that the hon. minister can take one-tenth part of the sum he admits this Newmarket canal will cost, and with that money have a canal built for 30 miles north of Coboconk and by the construction of a trestle north of Minden to Mountain lake and a dam between Mountain lake and Horseshoe, which would raise the water sufficiently to give 30 miles additional navigation; that by an expenditure of less than $250,000, 60 miles of naviable water could be added to the Trent system, and that would go through a country not served by

any railway or even by a decent wagon-road. There are so many ways in which this money could be better expended that I have never been able to see the first motive for building this Newmarket canal. There is not enough water to feed it and there is no need for it. Three and a half miles is a short distance from a town to a port, and if Newmarket were to grow in size it would be down to Holland landing in a short time, and there would be no need to bring this canal up to the mill of a strong supporter of the government. For the life of me, I cannot conceive any justification for this expenditure, and I do not see why the present minister is carrying it out. I regret I was not present when he made his explanation, but with all his astuteness I am satisfied he could not give any justification for this, and I believe that in his heart of hearts, he would be delighted to see this canal wiped out of existence and no part of its construction proceeded with. But even supposing there is a grain of justification for the construction of this canal, the work should have been delayed until the ends were constructed, or in other words until the Trent canal is completed from the Georgian bay to Lake Ontario. There is no need for this Newmarket canal. There is no timber on Lake Simcoe to bring to this man's mill and no goods to bring to Newmarket. The canal never should have been begun; but if the government are determined to construct it, its construction should be withheld until the Trent canal is completed from the Georgian bay to the Bay of Quinte. Its construction should also have been given second place to the branch canal I have referred to running up to the lakes in Haliburton county, where there are thousands of settlers who have to drive miles to the nearest railway and where there are millions of feet of timber which cannot be hauled long distances to railways. This timber is not floatable and can only be got to market when a canal is opened. I trust that the hon. minister will reconsider his decision. In the first place I object to the item appearing as part of the Trent Canal system. That system has enemies enough. It has taken a long time to educate public opinion up to the point of considering the Trent as a useful waterway, but to have the Newmarket canal placed in the estimates as part of the Trent canal is adding insult to injury.

Mr. FOSTER. How far is Cook's bay from any other portion of the Trent canal?

Mr. SAM HUGHES. The Trent canal runs into Lake Simcoe. That part which is at present constructed runs from Heeley's Falls to Balsam lake which is the height of land and onward down the waters of the Talbot river into Lake Simcoe. It is further navigable from Lake Simcoe into Lake Couchiching. This million of dollars which is being squandered on this Newmarket canal would go far to open up one of the ends of the Trent canal not yet completed. But in place of doing this and giving the traffic of our great northwest easy access to market, the minister is frittering away the public money on little side issues such as the one under consideration. I would not object if there was any use for this Newmarket canal after it is constructed, but it would pay the government forty times over to take this sawmill of this supporter of theirs for whom they are building this canal, and bring it down to Holland landing rather than squander the public money as they are doing. I give the minister warning that with all his dams and reservoirs, he will never have sufficient water to navigate this ditch in the summer season; and I trust he will see his way clear, before the item is passed, to withdraw any reference whatever to its being part of the Trent Canal system, and let this item stand distinct under its proper name of the Newmarket canal. It is not a canal, it is not even a decent ditch. In dry seasons, not more than a pail of water a second runs down that stream just below the town, I trust the minister will see his way clear to withdraw this vote.

Mr. E. B. OSLER (West Toronto). I am glad to be able to add a few words of protest against this proposed expenditure, because I am thoroughly familiar with the district in which this work is to be built. I should like very much to see the first report advocating this canal and the reasons it gives in favour of the work. With regard to the water supply, I think enough has been said about that, because no man who has been in that country year after year but must laugh at the suggestion that there is to be a supply of water for this canal except by artificial means. But I would not worry much about that, for there will be quite enough water for all the purposes for which this canal will be required. In the sixties, seventies and early eighties, Lake Simcoe presented a very busy sight. Steamers and tugs innumerable were on the lake. Going out at night, during the sawing season you were never away from the sight of a mill, while rafts were constantly being towed about the lake. I have lived there in summer for the last twenty-two or twenty-three years, and have seen the tugs towing the rafts. About fifteen years ago, I and many others witnessed the melancholy sight of the last tug and raft on Lake Simcoe. The logs that had drifted to the shore had been carefully picked up and a raft made, and it was towed to Bradford. Bradford is a very enterprising village, about one-third the size of

Newmarket. It has perfect water communication up the Holland river. There used to be enormous saw-mills there. Logs were towed up that river until there were no logs tributary to Lake Simcoe. The mills were burnt or torn down and the mills at Belle Ewart had been abandoned years before. Not for fifteen years has anything larger than a small gasoline boat gone up to Bradford. For years, as a resident at Roach's point, I used to take a party of youngsters up to Bradford every year to play cricket. There is perfect navigation there, unless the stream is over-grown with weeds. But there is not a stick of merchantable timber on Lake Simcoe. Nor is there a carload of bark. Newmarket has two factories and a tannery and they cannot get a stick of timber or a carload of bark for the factories and tannery from the waters tributary to Lake Simcoe. I am as certain as that I stand here that there will not be a ton of freight offered on this Newmarket canal; the work will be absolutely and entirely useless. There are wharfs on different parts of Lake Simcoe. The old Northern Railway built a very extensive wharf at Belle Ewart. The railway had a very prosperous branch while there was business on Lake Simcoe. When the mills were burned down, the Northern Railway took up its tracks running from Lefroy to Belle Ewart, a mile and a half and abandoned the wharf. A few years ago, the railway re-tracked that line because large ice-houses had been put at Belle Ewart. I do not think there is a more melancholy sight than that one sees when one goes down to the old abandoned wharf there. It has rotted and there is no timber, but the stones are there, and on either side are the wrecks of tugs and boats that plied on Lake Simcoe when business was done there. There are the hulls of five or six tugs and two or three passenger boats. There is only one passenger boat on Lake Simcoe, and it is run because they take excursions now and again in the summer. But there is no business to be done, and not a possibility of any business on this canal. And the expense of it will be about a million and a quarter of dollars. Now, the ministers of this government are trustees for the people, and they are wasting every dollar of the people's money that is put into that canal just as completely as if they threw it into the river; in fact, it would be better for them to take that money and throw it into the river, for that would end the expense, whereas, spending it in this useless canal, there will always be more or less expense of maintenance. I passed that ditch yesterday. I went up to my summer place for the purpose of trying to get the facing for a wharf there—not a wharf for commercial purposes but only for bathing purposes. And I could not get even enough timber there to face that small wharf thirty feet long. The timber has to be brought from Toronto by rail to build that little bit of a wharf. The wharf that the government built there three or four years ago has been of great service. It is spoken of very highly by all the summer outsiders, and I was told yesterday that as many as twelve black bass had been caught by the boys off the end of that wharf last season. The bass are getting very scarce.

Mr. FOSTER. By and by they will be gone.

Mr. OSLER. They are nearly all gone now. Bradford is probably a more important point than Newmarket so far as grain is concerned. It is a large grain-buying centre. But the idea of buying grain at Bradford and shipping it by canal never entered the head of any sane man. I think, in all fairness, that a million dollars is a good deal of money, even in flush times. This government did not seem to think so when times were good, but now, I should think with the revenues in a less satisfactory condition, even they would look upon a million dollars as an amount of fair importance. Before spending the money on this work, it would be well to get a business man—not an engineer, he does not report on the business—but get one or two business men to report on the possible business for that canal when it is built. On the trolley cars, going up yesterday, this work was discussed by almost every one, and the general talk among those going in and out of the car was that the work would not go on any further. The thing was a laughing stock; one after another as he came in said, 'Well, I guess that is the last money that will be spent there.' The government will do wisely to have a report from a business standpoint and carefully reconsider their position. Then, let them have the boldness to say that they were mistaken in what they have done and cut it out, because this money will be lost just as surely as it is put into this work.

It has often been a matter of remark and wonder that there seems to be so little feeling of the responsibility of trustees on the part of the government in regard to these matters. It has been remarked in my hearing over and over again, and I think it is generally recognized, that there is a great want of the responsibility of trusteeship in our public life. Now how can we expect anything else if the trustees for the government recklessly, deliberately throw away a million or a million and a half of the people's money without the first shadow of excuse for doing so? I make the assertion that that canal when built will be absolutely useless, that never a ton of freight will go up or go down it. There is one saw-mill, or factory, there, which uses lumber, but it uses nearly all hardwood. Now there is no hardwood on Lake Simcoe

or on any tributary to it, indeed there is no timber of any sort. Even cordwood has reached such a price that it is cheaper for the farmers to pay freight rates on coal. They have to pay now $5.75 a cord for wood. I speak of what I know, and I appeal to the minister and to the government to reconsider this project and to save the country a million dollars.

Mr. T. S. SPROULE (East Grey). I wish to say a few words with reference to this before the debate is closed. It seems to me that in considering whether it was wise or not for the government to expend this great sum, they ought to have had some estimate of the tonnage that was likely to be hauled over that canal. So far as regards any information disclosed to this House to-day, we have had no such estimate. No engineer seems to have estimated for the government the amount of freight that is likely to be hauled over that canal. The question was asked the Minister of Railways, but either he did not deign to give the information, or he did not have it. Now in view of the fact that there was no information, what justification can the Minister of Railways give to the House for going on with such an unwise expenditure? We ask ourselves, we who have some knowledge of the locality, what kind of trade is likely to spring up? The hon. gentleman behind me (Mr. Osler) said that there will not be a ton of freight carried over it. I would not go that far. There is one grist mill in Newmarket. The time might come when grain would be delivered from the Northwest at Victoria Harbour, and if small boats could go down the Trent Valley canal into Lake Simcoe they could bring a portion of the grain from Lake Simcoe into Newmarket. That is the only way of bringing in freight from the outside. With regard to the possibility or probability of handling the trade of that great and rich county of York, and the Minister of Railways seems to think there was a possibility when he spoke of its immense wealth, I think that might be well left out of the question entirely. Why? Because the trade of that whole county of York goes to the great city of Toronto on the south, and the canal is away in the north. He said it was likely to cheapen freight rates. How could it cheapen freight rates, how could it come into competition with railways that are carrying trade from that county to-day? The only way to get trade for the canal would be to go round nearly 200 miles to carry freight that is carried on the railways to-day to Toronto from Newmarket, which is only 25 miles. What kind of competition would you have if you had to carry freight over 200 miles where the railways can carry it only 29 miles? There would be no competition at all. The thing is so absurd that no one who knows the geography of the country and the direction of the trade of the country, would consider it for a moment. What other enterprise is it going to serve? Mr. Cane was the man who was chiefly instrumental in getting that enterprise started by the government. I think there is a fatality about it in some way or other, because we are told that he took the contract for dredging at $46,000, and after he had worked at it for a length of time, the contract had to be taken off his hands. The very man that was instrumental above all others in getting the government to build it is the man who is now going to suffer for it, and for what purpose? To bring in logs for his saw-mill From where? The hon. member for Toronto (Mr. Osler) says there is no timber, practically, around Lake Simcoe. He is correct. Forty years ago there was lots of timber, when the 'Emily May' was running on Lake Simcoe, and the 'Ida Burton' and other small boats; there was timber all around it. But the timber has all been taken away, and there is no trade left in that line.

But there is one line of commerce that the Minister of Railways did not mention, and only one that is at all probable or possible. That is a trade that was carried on very successfully between thirty and forty years ago by men living on that marsh where this canal is going. What was it? Catching frogs and sending them down to New York. That trade is going on yet, and there may be some freight carried in that article of commerce. I think it is capable of great development, because that marsh is a very extensive one, it is a marsh where the frogs grow to a very large size, and the business is likely to afford a permanent trade, and the only trade that the canal is likely to find. They used to carry the frogs by stage from Keswick to Newmarket, and ship them from there to Toronto, and thence to New York. Now they can swim the frogs down the canal and take their heads off at Newmarket, and ship them from that place, that will save something in transportation for at least a portion of the distance. That is the only permanent trade that will be found.

Now in regard to the water supply. I have jumped across that creek, I venture to say, hundreds of times—if I said a thousand times, I think I would be within the mark. That will give you some idea of the water supply. The minister said that 507 cubic feet of water passed over that per minute. Where under Heavens did it come from? I dont know, nor can any man imagine, who has ever lived in that locality. I have lived there, and crossed it a thousand times. When you talk like that, why, it is totally absurd and totally incomprehensible for any one to think of it. It reminds me of a story that was told in the west, when some one was asking

who were the three greatest liars in the world. He said they were in the west, that a certain man was one liar, and he was the other two. I think the Minister of Railways and Canals must be the whole three. He must have had water on the brain, or a very fertile imagination. I say the expenditure of this money cannot be justified. Not only will it be a living monument of folly, but it will stand to the discredit of the Minister of Railways and Canals, and of every hon. member who supports it, and of every one who takes part in the expenditure of that money.

At six o'clock House took recess.

After Recess.

House resumed at eight o'clock.

PRIVATE BILLS.

THE CANADIAN PACIFIC RAILWAY.

House in Committee on Bill (No. 79) respecting the Canadian Pacific Railway Company—Mr. W. McIntyre.

On section 1,

Mr. RUTAN moved:

That subsection (a) of clause 1 be struck out and the following added as a subclause:

The line of railway described in subsection (a) of section 3, of chapter 74 of the Statutes of 1907, shall be commenced within one year from the passing of this Act, and at least 30 miles of said line shall be completed in each year thereafter until the whole be completed.

Mr. NEELY. As this line of railway, in reference to which the Canadian Pacific are applying for a renewal of its charter, has a direct interest to the people in the district I represent, I wish to strongly support the amendment, which I believe should receive the support of this House. I understand that a similar amendment was suggested in the Railway Committee, but for some reason it was not accepted in that committee. There can be no objection to the passing of this amendment as the Canadian Pacific Railway are in a position, so far as I know, if they have the wish and the will, to commence operations on this branch line of railroad within the next twelve months. Unless it is the intention of the Canadian Pacific Railway to undertake this work in the immediate future, we should not grant an extension of time. Between the main line of the Canadian Northern Railway and the most northern branch of that railway, which ends at the city of Prince Albert, there is a distance of 80 or 85 miles. That section of the country is well settled; every homestead quarter-section is taken up and farmers living in that part of the country are to-day hauling their grain from 35 to 40 miles in order to reach a market. If this branch line of railway from township 32, range 21 or 22, to the city of Prince Albert, were built, I have every confidence that it would be a paying line of railway, right from the date of its completion. Objection has been taken to the imposing of great restrictions on the granting of these charters. In some cases that argument, I think, is good, but I do not see any reason why we should not place this restriction on the granting of charters to the Canadian Pacific Railway. We know they are in a position financially to construct these branch lines of railroad that are asked for in this Bill. We have evidence of their strong financial position in the recent issue of $50,000,000 of additional capital stock.

I am strong in my support of this amendment of the hon. member (Mr. Rutan) because I have a lurking suspicion that the Canadian Pacific Railway do not intend to carry out their proposals as contained in this charter for which they are asking. They have had this charter for the past two years and they have done practically nothing in the way of commencing operations. Why should they seek for a renewal and for an extension of time if they do not purpose going on with the road? The answer to that question is that there is a suspicion in the minds of the people of the constituencies of Prince Albert and Humboldt that the Canadian Pacific Railway's policy is to blanket that territory so as to hamper the construction of branch lines by other railroads. The Canadian Pacific Railway did practically no railway construction in northern Saskatchewan until the main line of the Grand Trunk Pacific was carried through the central part of that province and then we found the Canadian Pacific Railway pushing forward the construction of their Kirkella line, which, east of Saskatoon for some 75 miles and for a great many miles west of Saskatoon, parallels the main line of the Grand Trunk Pacific. Just as soon as the Grand Trunk Pacific commenced building the Canadian Pacific Railway got busy with their Kirkella extension. Now, the people of the constituency of Humboldt and of Prince Albert want this branch line constructed from or near the town of Lanigan in the district of Humboldt to the city of Prince Albert. We have no reason to believe that the Canadian Pacific Railway actually intend to build this line; in fact I have it on good authority that the president of the Canadian Pacific Railway was interviewed recently by some persons who were very anxious to see the road built and he gave no assurance whatever that the company would undertake its construction either next year or in the year following. We have a suspicion, nay we have a belief, that the Canadian Pacific Railway are simply asking for this renewal and extension of time for the purpose of covering that territory by this charter and that being so we ought to insert the restrictions called for by the amendment.

Some may argue that the granting of this charter to the Canadian Pacific Railway does not tend to keep another railroad from building through the same territory but to my mind that is not a convincing argument because, just as soon as another railway obtains a charter through the territory and commences operations the Canadian Pacific Railway is in a position to step in ahead of them and effectually cut off the other company from constructing. We have reason to believe that a branch line can be obtained from the main line of the Grand Trunk Pacific right over this same territory and that aid can be secured for such a branch line from the government of Saskatchewan. But, if this House grants this charter to the Canadian Pacific Railway without restriction as to time, then, just as soon as the Grand Trunk Pacific commences work on the line they might propose to build, the Canadian Pacific Railway can step in and parallel them every foot of the way to the city of Prince Albert. On behalf of the people of those districts who are asking for railroad communication and better transportation facilities I strongly support this amendment. To prove conclusively that the Canadian Pacific Railway are conspiring to blanket that country with these branch line charters I may say that they also have a charter which they obtained through the taking over of the Manitoba and North Western and which enables them to build some considerable distance east of the line for which they now ask an extension of time. That runs through the Fishing Lake country east of the Great Quill lakes and also north easterly to the city of Prince Albert. By another Bill, they are asking for an extension of time on that branch line although they have had that charter since 1893. For 16 years has that charter been in possession of the Canadian Pacific Railway and they have done absolutely nothing to carry out its terms. These two branch line charters into the city of Prince Albert; the one under the Manitoba-North Western charter and the one contained in this Bill, practically cover the only two available routes into Prince Albert from the south and east, connecting with any of the main lines of the great trunk railways. The fact that they are also applying for an extension of time on this other charter is evidence that they are simply trying to cover this territory by charters so as to prevent any other railroads from being built. On behalf of the people of the constituency I represent and who require this line to be immediately constructed I very strongly support the amendment of the member for Prince Albert.

Mr. LAKE. This question has been raised in the House and in the committees during the last few years, amendments have been moved on the lines of the present amendment and the whole question has been thoroughly discussed. But, the question for us to consider now is whether any good result is likely to come from the passing of such an amendment and whether if passed it would result in any of these railways being built any the quicker. I suppose there is no member from the north west who has not received constant protests against the renewal of charters, not only of the Canadian Pacific Railway but of the Grand Trunk Pacific branch line company, and of the Canadian Northern Railway Company as well. I have received such protests couched in the very strongest language asking that this parliament should not renew charters unless definite guarantees were given that the lines would be built in the very near future. I have a protest in my hand from a meeting held at a place called Wiggins, Saskatchewan, protesting against the renewal of the charter for the Moosjaw-Lacombe branch, which is included in this clause, and I would ask the Minister of Railways to state whether he has taken any steps to endeavour to remedy the grievance which the people of Wiggins feel they are suffering under; whether he has approached the Canadian Pacific Railway Company and asked them whether they are prepared to undertake the building of this branch in the near future, and whether he has used any argument with them to induce them to do so. I think it is up to the Minister of Railways to show that he has taken some such step. There is no doubt that the people of that section of country are suffering under a great sense of injustice in having been induced to settle in that country far away from the railway. The government is in a position, in dealing with the three great companies that have lines in the Northwest, to bring some pressure to bear upon them to build branch lines where they are most needed. For instance, in the case of the Canadian Pacific Railway, we have been informed that the government have given their consent to the issue of common stock by the company at a rate which is generally conceded to be far below its real value. That, I take it, is a concession to the company, and when these great companies come to the government asking for concessions, the government have it in their power to endeavour by negotiation to induce them to give something in return. I would therefore ask the Minister of Railways whether he has had a protest from Wiggins, the one which I have in my hands states that a similar one has been addressed to him--and whether he has taken any steps to endeavour to procure for these people the building of the railway which, no doubt, they were promised in the

past, and which, it is to be hoped, they will receive at some time in the near future.

Mr. J. G. TURRIFF. I wish to support the amendment moved by the hon. member for Prince Albert (Mr. Rutan). That hon. member and the hon. member for Humboldt (Mr. Neely), the two members representing the people in that part of the country through which this short line of about 130 miles will run, should be in the best position to know whether this charter should be renewed or not. My hon. friend who has just taken his seat says that it is a question whether the passing of such an amendment will increase the building of railroads in the country. Perhaps it may not; but speaking from the experience of my own district, I can say that where we cannot get the roads built, the people are unanimously in favour of the charters not being renewed; and if the representatives from that part of the country who know what the people want, ask for a certain thing, I think it is up to this House to pass the amendment they propose.

Mr. W. F. MACLEAN. I also agree with the previous speakers to this extent, that I think the government and this House ought to exercise serious control over the great roads in the west. It is a fact that there are large districts there which have no railroads, and the people in those districts are very anxious to have railroads; but it is also a fact that the great railroad companies, instead of devoting their attention mainly to giving to the people the accommodation they require, are engaged largely in a kind of strategy one against the other. I contend that the Minister of Railways has sufficient power to control the situation, and if he exercised that power he would see that none of the plans of these railroads which are for the mere purpose of strategy should be approved of while roads which are necessary for the settlers are not being built. The government should see that the funds of these companies are not wasted in building parallel lines merely to compete with existing lines. That is not opening up the country; it is only enabling these companies to play a game the one against the other. It is time that all that was stopped, and that any money which any of these companies have for the construction of new lines should be applied in opening up roads in new districts and giving a service where there is none at the present time.

Mr. BRADBURY. I am surprised at the action of the hon. member for Prince Albert (Mr. Rutan) and the hon. member for Humboldt (Mr. Neely), and I might say the hon. member for Assiniboia (Mr. Turriff). A few days ago when we had another question similar to the present one before the committee, an amendment was moved by my hon. friend from Dauphin (Mr. Glen Campbell) to compel a railroad company to build 25 miles of road during the first year. That amendment was carried by the committee, though it was opposed by all of these gentlemen. The very same arguments which are put forward to-night in support of this amendment were put forward at that time by the hon. member for Dauphin and myself in support of the amendment he moved, with regard to the Winnipeg and Northwestern Railway Company. That company had four or five alternative routes, practically blanketing the whole country. The hon. member for Dauphin had petitions from every municipality in his district, asking the government not to grant an extension to the company without compelling it to build a certain number of miles every year. We carried that view in the committee, but when the Bill came before the House the gentlemen promoting it had it referred back to the committee, and it became practically a political question. Every hon. gentleman on the opposite side of the House was arrayed against the amendment, and defeated it, though it was entirely similar to the amendment moved to-night. Consistency ought to be the rule of this House, and I am surprised that a member can take one attitude in the committee and an entirely different attitude in this House. I have no brief from the Canadian Pacific Railway; I have no reason for having a brief from that company. In my own county the Canadian Pacific Railway Company last fall stopped work on a railroad which was very much needed, and just in the midst of the political campaign, allowed my opponent, assisted I believe by the Canadian Pacific Railway engineers, to put on a large staff of men in the effort to compass my defeat. I mention this to show that I have no brief from the Canadian Pacific Railway Company. I would like to see consistency in the House, and I am not prepared to support this amendment because I believe that the men who have moved as they did in the committee and did not succeed do not deserve any better success on the floor of the House.

Mr. CAMPBELL. I am not going to detain the House at any length. I simply want to bring to its attention the fact that various gentlemen who have spoken to-night have shown the utmost inconsistency. I am not going to refer to the other Bill, which has been referred to by my hon. friend from Selkirk (Mr. Bradbury), further than to say that it seems with certain members in this House, to make a very great difference whose ox is gored. Those same gentlemen took a very prominent part in fighting against the wishes expressed in the petition of the men who sent me down here to represent them, and then they ask us to pay some attention to what their own people want. I wish to point out that it is certainly the people of the districts

through which these railways are to run, who should know what they want, and they have expressed, through their representatives in this House, what they do want. They want railways, but they strongly object to charters for hot air lines being granted, and long experience has given them good reasons for their objection. These charters have done more to retard settlement than anything else, and it is but right that this committee should pay attention to such expressions of opinion, coming from the people who are directly interested. If the Canadian Pacific Railway intend to build those branch lines, it is no great hardship to ask them to show their good faith by building 20 or 30 miles the first year. The committee should certainly pay great attention to the message sent them from Prince Albert.

Mr. GRAHAM. It is easy for my hon. friends to ask this government to straighten out all these things.

Mr. LENNOX. This is the place.

Mr. GRAHAM. There is a place called the Railway Committee where attention should be paid them. We have a duty to perform as representatives as well as members of the government. I shall not have to make any apologies for the position I take on this Bill because I have taken it on other Bills as well. I take it that what the petitioners want in these various localities is a railway as speedily as possible. I may be wrong, but in my opinion to pass an amendment in this line will rather injure than hasten the prospects of getting that road. To say to the Canadian Pacific Railway that they must construct so many miles this year is only repeating in another way what we do say in their charter, and that is that they must begin operations in two years and build in five. If this amendment were going to hasten the building of the railway, it would be different, but it is more likely to defeat the object which hon. gentlemen have in view. This question does not come up only in the renewal of this charter but comes up regularly in the railway committee in the renewals of many charters. To place a clause of that kind in the charter would simply mean that these people would be back sooner for another renewal. If they are ready to construct the line, and if it be in their interest to do so, they will construct. But if we put in a more stringent clause, it will mean that the Canadian Pacific Railway will not build any more quickly but will come back in twelve months instead of two years, and ask for a renewal. Our object is to get railways into these parts of the territories that are not now served by them. I understand thoroughly, as the hon. member for South York (Mr. W. F. Maclean) has said, that there are many instances where these companies spar for situation or location, not having, for the time being, any great desire to build, but rather to keep some other line from building; but on the whole, the course we have pursued has been reasonably successful in getting lines built as rapidly as settlement required. It is a fact that many people have gone into remote parts of the west, and are in very needy circumstances so far as railway lines are concerned. My hon. friend from Qu'Appelle (Mr. Lake) handed me a petition, of which I think, I had already received a copy. My usual plan, on receiving a petition, is to make an extract from it and call the attention of the railway company concerned to the fact that I have received it, and urge them to do everything to grant the prayer of the petitioners. Suppose we put the provision asked for into this charter, we will have to put it into every charter for a branch line in the Canadian Pacific Railway. But it is impossible for any railway company to cover all the territory which requires a railway. It stands to reason that where the most people are found, the greater necessity exists and the greater traffic there will be for the line, and it is natural for a railway company to build where it will get the most traffic. Consequently, the places most needing railways will get them first. I am anxious to see this line extended, but I do not think the placing of this in any charter will help one iota to get a railway constructed but will rather have the opposite effect. In the Railway Committee, I have taken that ground. I have asked the committee on several occasions not to place such a clause in the Bill and I must ask the Committee of the Whole House to take that ground. I make that request in order to be consistent and for the further reason that I do not believe that the insertion of such a provision in any charter will facilitate the building of the road but will rather retard it.

Amendment negatived.

Mr. TURRIFF. I beg to move that letter G, clause 1, be struck out. This letter G refers to a short line of about 100 miles from the town of Estevan in a northwesterly direction. I am not going to ask this House to put in a clause providing for the building of 25 miles this coming year, simply because my experience during the past five years makes me understand thoroughly that it will not be carried. But I believe that I represent absolutely the views of the people in that part of the country where this charter exists, and consequently I move that that clause be struck out alto-

gether and the charter cancelled. If we cannot have a railway built in the near future, we do not want that charter on our statutes, because, so long as the charter is there, the Canadian Pacific Railway will not take any steps to go on with the building of the line, but will stand as a block in the way of others building it. That country has been settled the last 18 or 20 years and well settled, and the farmers there have to draw their wheat from 30 to 40 miles, if they draw it to a Canadian town and 10 to 20 miles if they draw it to the American town of Ambrose, in North Dakota. Last year, about 150,000 bushels of wheat was drawn from that corner of my constituency into North Dakota and shipped over the Jim Hill system. As I have said before, I want the Minister of Railways and the government to understand that unless some change is made in the handling of these railway companies, unless they are ocmpelled to do better in the future than they have in the past, the strongest effort will be made on the part of the people in the southern portions of Alberta and Saskatchewan to have the Hill system brought into the country. And if conditions continue as they are, while I should be sorry to see the traffic go out of the country and through the United States, yet, I, for one, will welcome any change in the state of affairs, and I know that ninety-nine, if not one hundred per cent of the people I represent will take the same position. I know, also, that in asking the committee to strike out that clause I am representing faithfully and correctly the views held by my constituents. And whose views should carry in this matter—the views of the Canadian Pacific Railway who have had charters for fifteen or twenty years for roads which they have not built, or the views of the farmers? Whose views should we in this committee consider? I am not asking for any favour of building twenty-five miles a year, but I am asking that that clause be struck out, so that other companies may be given an opportunity to come in and build these railways.

Mr. LAKE. I would support, as I did last year, the motion to place in all charters and all renewals of charters provisos that a railway company should commence to build its line within a reasonable period of time. But I do not think it is quite right to make exceptions in these matters.

Mr. TURRIFF. I am not asking to have any of the other charters interfered with. This is the only one in which I am asking to have this clause dropped, and the Bill we are discussing now covers other branches.

Mr. LAKE. That is just the case; the hon. gentleman is asking that the renewal of one particular charter be refused.

Mr. TURRIFF. Yes.

Mr. LAKE. Thus making an exception in that case. I think we should treat all cases alike. The hon. gentleman has taken very strong ground with regard to the Canadian Pacific Railway, but that is the only company we ever heard him speaking against in connection with these matters.

Mr. TURRIFF. That is the only one in my constituency.

Mr. LAKE. Only last year the Grand Trunk Pacific Branch Lines Company, asked for a renewal of their charter, a charter given them three years before, blanketting an immense area of country for the construction of branch lines, not a single one of which had they started to build. Yet this House decided that their charter was to be renewed. I do not think that we should make fish of one and fowl of another. Until this House decides, as I think it ought to decide, that a provision shall be put in all charters requiring the company to begin and complete its work within a reasonable time, I think we should go on as we have gone on in the past, practically allowing free trade in charters.

Mr. STAPLES. It is somewhat amusing to me to note how jealous the hon. member for Assiniboia (Mr. Turriff) is of his own We have been fighting in the committee and in the House for just what he proposes in this particular case—we have asked that no charter should be renewed except on the condition that the company shall construct a certain portion of the line within a certain time. We had a case of this kind before the committee a short time ago and got such a provision put in the Bill. And what did the hon. gentleman (Mr. Turriff) do? He got up at the next meeting and asked to have the Bill reconsidered, and then we found him voting down the amendment we had already carried in the committee. He seeks to make that limit in his own constituency. But the Bill I have just referred to related to my constituency. I am quite willing to guard the interests of his constituents, but I would like him to reciprocate by assisting us who are just as anxious as he is to have railways constructed to serve our people. The hon. gentleman is very emphatic in that. He wants to get on the floor and make a little spiel that it may go to his constituents showing how strong he is on this subject. I am prepared to support the hon. gentleman notwithstanding his attitude on the general question.

Mr. NEELY. The hon. member for Assiniboia (Mr. Turriff) and some other hon. members of this House, myself included, are charged with inconsistency in the position we take on this charter and on a certain other charter that came before the Railway Committee and before this House some time ago. So far as I am concerned, I do not feel that charge. I do not intend to speak for the hon. member for Assiniboia or the hon. member for Prince Albert (Mr. Rutan) or any other hon. member. But it seems to me that every case ought to be taken on its individual merits. The hon. member for Macdonald (Mr. Staples) knows that this is not a similar case to the other.

Mr. STAPLES. Explain the difference.

Mr. NEELY. The hon. gentleman knows that the Canadian Pacific Railway is in a position financially to go ahead with the construction of these branch lines for which they are asking extension of time. He knows that they could, within twelve months, build twenty-five miles on these branch lines if they wished to do so. But he knows that in the other case referred to, the company was not in a position to go ahead. If any leniency is to be shown, it ought to be shown to new companies, for they have their organization to complete, their financing to do, and other preliminary work to get through with. But the Canadian Pacific Railway has its main lines constructed and also has money to build these branch lines. The cases are not parallel, and the charge of inconsistency made by the hon. member for Macdonald and the hon. member for Dauphin (Mr. Campbell) are not well founded.

Amendment (Mr. Turriff) negatived.

On section 2,

Mr. HERRON. I would like to have an assurance from the minister that he will give the people ample time to be heard before he accepts the route laid down by this company. There was an amendment passed in committee in reference to this clause, we inserted the words 'High river' in the charter. I would like the minister to consider the distance these people are from the head office at Ottawa, and that he will allow them, I should say, thirty days. It is sometimes important that these people should have ample time to take these things into consideration. I think the minister told the committee they would have at least two weeks. I would like an assurance that they will get ample time.

Mr. GRAHAM. I would not like to be put in a position to define ample time. We always give sufficient time, or what we think is sufficient time for all parties to be heard. That is the rule of the department. My hon. friend says thirty days. It strikes me that would not be necessary. However, we will telegraph to the people in those localities that we are going to have a hearing at such a date, perhaps a little less time than he mentions. However, we will see that they get adequate time.

Bill reported, read the third time and passed.

SUPPLY—THE NEWMARKET CANAL.

House resumed debate on motion to go into Committee of Supply and the amendment thereto.

Hon. GEO. E. FOSTER (North Toronto). I want to say a few words on this motion before it comes to a vote. Primarily the motion affects the locality in which the work is situated, but it is that kind of a motion which I think, if we are attentive to our duties and mindful of our responsibilities, challenges the attention of every member who has a seat in this House. It is a case of the expenditure of a million dollars of the public money for a work in a locality the grounds for which are altogether inadequate. The discussion well illustrates three positions: First, the way in which the money is sometimes appropriated—I wish I could say 'sometimes,' I think I ought to say in which the money is very frequently appropriated by this government; in the second place, it is illustrative of the way, after the money is placed in the hands of the responsible ministers, it is used for the work; and lastly, it has been illustrative of the methods by which ministers undertook to defend, if you can call it a defence, a vote of this kind, appropriated in this way, and carried out as this has been carried out. Now I made a motion for the papers, and one of the cardinal points I made in that motion was this: I asked for all reports, or papers, or documents which had regard to the commercial foundation of the transaction. After all, ought that not to be the basis and the beginning of the whole thing? Surely it is not enough to say that you will appropriate money because an engineer tells you that what you want to build is feasible and can be properly built? The foundation of the whole thing is this: Is it a necessary or an advisable work? Is it in the interest of the development and commerce of the trade of the country; and if it is not a military necessity, if it is not a national necessity, there is no other ground upon which to place it than that it is a work necessary and advisable, and for which that amount of money is not too much to appropriate. Now, when these papers were brought down, what did I find? —or rather what did I not find? I did not find one syllable from the beginning of the papers to the end showing any attempt by anybody to find out whether there was a commercial basis for this transaction, not one. The only thing that is given with reference to the commercial side of it, if you

can call it such, is that the petitioners asked in the first place, not that a canal should be built, and that the Holland river and its branches should be deepened and straightened and made serviceable for the purposes of the districts through which they run. That would not have been an unreasonable request. It may have been very questionable whether a large amount of money should have been expended for that purpose. But that would have taken comparatively a small amount of money. The petitioners commenced with that, and that is the only allusion made to it. The other allusion is made, not by commercial bodies, not by any representative trade bodies, but there is an allusion in the report of the engineer whose business is to report upon the feasibility of the proposition, that he thinks it would help the trade of Newmarket and of the town of Holland Landing. Those are the only two allusions made.

Now, when a government, headed by the Prime Minister who sits opposite to me, collects the people's taxes out of hard-earned wages and puts them in the strong box and becomes the trustee for these, sworn to expend them in the interest of the people, when they are asked by anybody, I do not care whether they are reeves of townships or wardens of municipalities, or any one else, to go into the strong box and take one million dollars of the taxes so collected and put them into any work, I think it is a duty incumbent upon them to find out whether there is a commercial necessity for that work. There is not on record a scrap of paper showing that the government, or any minister of any department, ever made any inquiry into that direction, and there is not in the papers a single writing or representation with reference to that matter. What happened was that a deputation came. Why, the Minister of Justice this afternoon in arguing the question gave the whole thing away. He showed with what particular care the thing had been worked up so that from every municipality, the smallest in the county, there should be a resolution asking that this improvment be made—not asking that this one million dollar canal be built, but asking for the improvement of the Holland river and its branches so as to make it serviceable. This deputation appeared here as deputations do from all municipalities asking for improvements or public works—whether it is engineered from a party point of view or whether it starts among the people themselves,they come here and press that claim; but is that an argument that the claim should be granted and the expenditures made? Not a syllable, not a word, not a single scrap of information as to the necessity of the work in a commercial or development point of view seems to have been asked for or produced. That is the way money is appropriated. In this case it was first voted to give a boost to the then sitting member, one of the members of the cabinet, and in the second place to give a boost to another, the present Minister of Justice, and you have the sorry spectacle—I am bound to use these words—of a Minister of Justice in the present case, and in the other case of one of the greatest sticklers for economy in the public service we have ever had in this country, so far as his professions in parliament went, the former member, both pressing for and defending in this House the expenditure of one million dollars on such a work as we heard explained this afternoon. We have the Prime Minister of Canada sitting in front of these two defenders of the project, and of the Minister of Railways—such a defence as they did put in—listening to their arguments. I would like to get inside of the brain of my right hon. friend for a moment, and see if I possibly could what were the thoughts running through his brain when he heard the defence, such as it was, given by the Minister of Railways and the Minister of Justice this afternoon for going into the strong box and taking a million dollars to put into a work of that kind. The speech of the Minister of Railways—I say it kindly—was made up of two parts. First there was a burlesque and afterwards there was the semblance of an argument degenerating into farce. The burlesque was pleasant, but the argument to my mind was not an argument. He took a Zeppelin airship and made a world-wide trip, sailing through all countries. He sailed past the Suez canal, the Panama canal and all other canalized systems in the world, and then he came back to Newmarket and Holland Landing and said: See our brothers and sisters in the world's great canalization system. Did he think he would canonize this ditch by placing it alongside all the great canalized systems of the world? He did not himself feel that he was doing anything else than jollying the House away from looking at the main points of the proposition. But when he came down to argument he showed his wisdom by devoting as little time as he could to this question.

Let us look at one of his arguments: This is a great county, the farmers of York are good farmers, they actually kill so many cattle every year and therefore they ought to have a million dollar canal from Newmarket to Holland Landing. If he had been addressing a public meeting and a small boy had held up his hand and asked him: Now, Mr. Minister, of all those cattle killed each year in that county, how many will be carried on the Newmarket canal out to the waters of Lake Simcoe, what would

he have said? You could apply the same question to every county in Canada and say that because the farmers raise and kill a certain number of cattle every year they ought to have a million dollar canal. The Minister of Justice (Mr. Aylesworth) was on much the same plane. The Minister of Justice may be a good lawyer and he may gain his cases, but I am certain if such an argument as he used this afternoon before this House, if used before a judge or the Supreme Court, would not meet with such success. What was his main argument when he left the persiflage? It was: Can any reason be given why this work should now be stopped after it has been commenced? Why should the government go back after it has put its hand to the plough? Is there any reason why North York should not have this million dollar canal? These are not arguments why the canal should be built. These are simply interrogatories in the way of declamation which a man uses when he has no argument to make positive proof. What is the traffic that is going to come in and out by this canal? What are the interests that are to be served? There are 25,000 good people in North York, here is one little town of 400 and here is another little town of 2,100. The very fact that they are there, the Minister of Justice says, entitles them to a million dollar canal. Can any one give a reason why it should be given to them if those are the circumstances? The thing to do, it seems to me, when we dispense $1,000,000 of public money, is to know that the country is going to get value for it. What business is there for this canal to do? Did the Minister of Justice make an argument which should convince this House when he said he had a report of an engineer to the effect that they could pump water enough in there to pass 4,400 vessels through these locks in seven months? The thought that came to me was, where under Heaven will the 4,400 vessels come from to be sent through the locks? We listened this afternoon to the hon. member for West Toronto (Mr. Osler) who is a business man, no one will deny, and a man of wide experience in that section of the country, which he knows well. We heard him in a very few plain words rapidly describe that section of the country and Lake Simcoe out of which they propose to draw the traffic. Any one who understands the facts as he stated them will surely find it most difficult to conceive where the traffic is to come from. Here you have a canal running from Newmarket to Lake Simcoe. What is it to carry out? What is it to carry in? At the town of Newmarket you have a factory or two. Can they get their lumber out of Lake Simcoe? If they get it out of Lake Simcoe, can they get it there economically? The facts are, and the Prime Minister has heard them this afternoon, that the kind of lumber they use does not grow around Lake Simcoe and consequently there is no supply of lumber to come out of Lake Simcoe for that comparatively small concern. What will come out of Lake Simcoe up to Newmarket and Holland Landing? Will none of the ministers take upon himself the duty of telling us what is to come out of that region as traffic for that canal? Will the Minister of Railways instead of going to the Suez canal and the Panama canal and the canals of Belgium and Holland; will he stop at home and tell us what traffic is coming out of Lake Simcoe over that four or five miles of canal with five locks, which would justify the expenditure of one million dollars? On the other hand what is to go out of that canal into Lake Simcoe and where is it to go? The minister told us that business men in the city of Toronto had said to him they thought there would be great gain because merchandise could be taken from the city of Toronto up to Newmarket, transhipped to the canal boats and taken through five locks in four and a half miles and then sail out on Lake Simcoe. To what port would it sail, to what consignee would it go? Business is not done in that way nowadays. The man who wants to get his goods from Toronto to Parry Sound will ship direct by rail and not through the devious paths of this canal. I have passed up and down along that place time and again and I have never yet heard on the train a single word but of ridicule at the project and deprecation of such waste of good money.

Mr. HUGHES. Did you ever see the creek?

Mr. FOSTER. I have looked for the creek but I have not seen it yet. Now, as to the engineering part of this work, I ask the Minister of Railways if under the circumstances surrounding it he thinks this House or the country can have any confidence in his enginering department. What are the facts? The canal is divided into two sections and one section takes you from Lake Simcoe to Holland Landing, that being the improvement of a waterway and not the building of a canal. That is the first section, and the one which one would suppose it would be economical to build first. But what happens: the Minister of Railways sent his engineer and told him to make his examination and give an estimate of what it would cost to put it in shape and the engineer gave him an estimate of $46,000 and the contract was let for $46,000. For two years the contractors held that work and did absolutely nothing. Under what rule did the department leave that work in the hands of the contractors—some of them their own friends and very near and strong friends and influential in the constituency—by what rule were they en-

abled to hold that for two years without doing any work? The contractors had a pumping machine, the engineer was on the ground, he had no faith in the machinery from the first. After the contractors had been at it a year and done practically nothing he wrote to the department that he had no more faith in the machinery and their capability of doing the work than he had a year before and yet the work remained in the contractors' hands, they doing nothing. But the gravamen of the charge against the railway department is that when it came to a second letting of the contract and the making of the second estimate, the engineer of the department estimated the work to be worth not $46,000 but $131,000. What reliance can we place on the engineers of a department who will take the very same piece of work under the very same conditions, with a lapse of two years, and make such a difference in the estimate. But up to this date not a stroke of work has been done on this initial part of the undertaking. That was dredging work and nothing could work on it but a dredge and the few men engaged on the dredge. It did not distribute the patronage sufficiently and the election was coming on in October, and instead of going on with the first part of the work the department gave their energies to the second part of the work where they could multiply the employment of men and teams and spend $150,000 or more during the few months preceding the elections. What happened? The minister's engineer made the first estimate of the cost of the whole canal at $291,000, and that was the estimate we had when we first voted money for this; in fact I think we were told it would cost less. A little while after the engineer made another estimate and it came up to about $328,000; he afterwards made another estimate of the whole thing, and it came up to $354,000, and a short time afterwards another engineer of that department went on the very same ground and put on it an estimate of $596,826. How are we to reconcile operations of that kind with a well conducted department and a competent set of engineers. Tenders were called for and the lowest tender was $652,000 and the contract was let at that price, which was $50,000 or $60,000, more than the estimate. And now, at the very last we have dragged out of the department that this work which at first was to cost about $300,000, entered into by parliament on an estimate of $291,000—is now estimated to cost about $970,000, not taking into consideration the water conservation which is necessary, and which will bring the total cost up to about $1,200,000. In that way we were led by misrepresentation, absolute misrepresentation, and whether by the engineer or the minister matters very little to this House. I challenge any man to show a business foundation for that undertaking. What does it mean? $1,200,000 taken out of the people's taxes and put into that place, when all over this country men are starving for railroad facilities in the west and in the east, and cannot get a dollar for development because of such expenditures as this. The other day, in the far east, a much desired and long promised bit of railway was pleaded for by members on both sides of politics. It would cost altogether some $300,000 or less. What was the plea for not building that railroad? 'These are times of financial stress; we have not the money, and we cannot go on with the work.' To-day we have coming from every portion of the great northwest, where the hardy sons of the older provinces and the men we have invited from other countries have gone and taken their lives in their hands, and with their small families have settled in advance of the great lines of transport, appeal for transport facilities; and you tell them that you cannot raise the money to subsidize railways; but you can find a million dollars to put into a ditch at the request of our Minister of Justice who must be buttressed by things of that kind. How much is there to be done in this country? What forest conservation is there staring these men in the face, and how little are they doing to come up to their responsibilities in that respect; it cost money; but a million dollars can be found to put into this place in North York, and the Minister of Justice has nothing better as a plea than to say, with his accustomed modesty, that he does not want to take the credit of having originated the work, but he would be proud if he could take that credit, and anyway he stands up for it.

Mr. Speaker, I only wish we could have in these galleries the taxpayers from every part of this country, to listen to this discussion of what I am sorry to say is but a sample of the many ways in which their money is wasted. We are not charging any graft; we are not charging any dishonest work in the department or with the contractors in this case. There may be graft; we do not know it, and we are not charging it. This case rests entirely on its business merit. It is cheap logic, very cheap logic, for the Minister of Justice to try to turn the point when the argument is against him, by saying that it is the jealousy of other constituencies, or party zeal, that is urging this discussion. For my part, party does not enter into it, nor do I believe that it does in the case of other gentlemen who have spoken on the subject. I tell you, Mr. Speaker, it is painful, absolutely painful, to see the waste of money in such a place and on such a construction and to see it going through this House apparently

treated in a spirit of light comedy by the responsible minister, and with absolute indifference by the other ministers of the Crown. Will any of them stand up and give us a reason for it? Let them show to the representatives of the taxpayers, who if not here to-night, may hear something of this by the only voice we have to reach them, the voice of the press, how they can justify this expenditure. We have dug things out in the province of Quebec that have been shameful, in the Public Works Department and in other departments; we have dug things out in other provinces which have been shameful; but for sheer, wanton, absolute waste, I do not know anything that equals this case of a million dollars of the people's money thrown into a profitless ditch.

Sir WILFRID LAURIER. Mr. Speaker, my hon. friend, in the course of his observations, did me the honour of saying that he would like to know what was passing in my mind when I was listening to the debate. I am glad on this occasion to be able to gratify the curiosity of my hon. friend. What was passing in my mind, when I was listening to my hon. friend and to some of his associates, was that this motion was a fair sample of how scandals are manufactured.

Mr. FOSTER. I am sorry that you had not anything better than that running in your head.

Sir WILFRID LAURIER. To-morrow we shall have in the press the speech of my hon. friend, the gist of which, coming after the other speeches to which we have listened, is that the government are corruptly spending $1,000,000 for the purpose—to use the elegant language of my hon. friend—of boosting a minister of the Crown.

Some hon. MEMBERS. Hear, hear.

Sir WILFRID LAURIER. I am glad to find that I interpret correctly the sentiment that prevails on the other side of the House. This is the reason we have now another scandal. The scandal in this instance is that we are spending $1,000,000 for the purpose of boosting a minister of the Crown. The minister of the Crown at that time was a gentleman who was much respected in this House while he was here, and who is much respected in the position he now occupies—Sir Wm. Mulock. For my part, I do not believe that any man in Canada who knows Sir William Mulock will believe that he ever tried to encourage any work in his constituency for the purpose of boosting his own political fortunes. I think the reputation of Sir William Mulock is above any aspersion that can be cast against him by my hon. friend or anybody else. I think his reputation is above any such argument, if I can dignify anything of that kind by calling it an argument. But, Sir, how did we come to undertake this work? If it was for the purpose of boosting the election of my friend and colleague at the time, Sir Wiliam Mulock, how was it that it was the opponent of Sir William Mulock who came here and asked the government to undertake this work? My hon. friend said, in almost the last words he pronounced, that he would be glad if we had in this room the taxpayers of the country to see how their money was wasted. Why, Sir, if there is any wasted money in this instance, it was at the instance of the taxpayers of this country. We had a delegation here of the sound electors, the best men in the riding of North York. We had the mayor of the town of Newmarket, and the leading citizens of that town and its vicinity. They were not party men, not political friends of Sir William Mulock coming here to boost his election, but men who came in their capacity as citizens, laying aside all party differences, and asking us, in the interest of the town of Newmarket and the riding of North York, to undertake this work. I remember that delegation very well; it was one of nearly one hundred, certainly more than fifty. So large was it, at all events, that there was not room in the ordinary rooms of ministers to receive it. We had to get the use of the Railway Committee room for the purpose, and there man after man rose up and told us that this was not a party question, but that they asked us, in the name of the town of Newmarket and the riding of North York, to give them that improvement.

Now, is the Holland river to be improved? If a boat is to be taken from Lake Simcoe to Newmarket it cannot be taken any other way than the way contemplated by the present work. My hon. friend tells us now that all these representations made to us by men of his own political persuasion were ridiculous, and if I am now to take the word of Conservatives in the House of Commons, the Conservatives in the town of Newmarket and the riding of North York are not trustworthy and their representations are to be treated with contempt. This is the position after all. My hon. friend told us we had not taken any precaution to ascertain whether or not there would be any business for that canal when built. That is not fair. We had the representations of these men all. My hon. friend told us we had not treated their statements with the contempt with which my hon. friends opposite now treat them. We treated them as the representations of honest men, but my hon. friends say no, this whole thing is ridiculous. We complied with the requests of these men, and are we to be told that we did a corrupt action because we took their statements and representations as those of honest men? Yet that is the

position hon. gentlemen opposite are taking in order to make a point against the government. These gentlemen are ready to throw contempt on men of their own political persuasion in order to make a point against us. What was our answer to the petition presented by these men? We did not tell them it was ridiculous. We told them it was worthy of consideration and that we would send an engineer to investigate. We did send an engineer, and he reported that the work could be done for some $300,000. Well, we thought that if we could have that useful work done for the town of Newmarket and the riding of North York for an expenditure of $300,000 we ought to do it. It turns out, however. that the work is costing more than was expected. That is not unusual in works of this character. My hon. friend says it is going to cost a million dollars. But even if it should, even if there be a mistake, that is very different from a corrupt act. My hon. friend, however, will not make that distinction, and says it is a useless waste of money. That is not the impression I gathered from the debate. I was not present when my hon. friend from West Toronto (Mr. Osler) spoke, but I remember a speech he made some two or three years ago on this same question. I admit that he then opposed the grant, but he also stated that there would be work for the canal, and the ground of his objection was that there would be no water for it. This is what he said on the 12th of July, 1905:

> There is a very extensive manufacturing concern in Newmarket but there is no guarantee that that factory will remain there a month. Any one conversant with business knows that if that factory at Newmarket had to be located again, it would not be located at Newmarket. It is not a town that is suitable for a factory such as this, and there is no guarantee that it will remain there.

That was all the exception he took, namely, that there was no guarantee that the factory would remain there. He did not say that there was no work for the canal, but he was not sure that the enterprise would remain where it was. But if the factory be still there, I presume there is a fair amount of work to be done.

Mr. OSLER. I think I said a great deal more than that. Senator Campbell, who then represented North York in this House, said the canal would be used to bring lumber up to that mill, and I said that the logs were hard wood and would not float. He, however, said they would float.

Sir WILFRID LAURIER. That was work to be taken to the town, but the products of the factory are to be taken out of the town, and all my hon. friend had to say was that he was not sure the factory would be there for ever. But if he was sure it would be there for ever. I take it for granted he would be satisfied.

Mr. OSLER. I can quite understand why the minister and his government have gone into this canal if he assumes that by my statement that is what I meant.

Sir WILFRID LAURIER. I am sorry to say that is another evidence that we are not to trust Conservatives when they address us, whether as members of the House or as a delegation. If a delegation should ever again come to us as Conservatives and represent that what they want is not a party question and is for the advantage of the locality they represent, and if I should be still in the position I enjoy to-day, I shall profit by the lesson I have just learned and will tell them: You say now it is no party question, but you will make it one as soon as the work is done.

Mr. SAM. HUGHES. But before the vote was cast in this House, did the right hon. gentleman not hear from Conservatives that this work was perfectly useless?

Sir WILFRID LAURIER. Certainly.

Mr. SAM. HUGHES. Then why did you go on with it?

Sir WILFRID LAURIER. That was after we had listened to the Conservatives in North York and made up our minds and brought down the estimates.

Mr. J. A. CURRIE. Had there been any money spent on this work before that delegation of Conservatives and Reformers waited on the government?

Sir WILFRID LAURIER. Is my hon. friend serious? I tell him very seriously there was none.

Mr. J. A. CURRIE. There was $25,000, as my right hon. friend will see if he will look up the record.

Sir WILFRID LAURIER. I am satisfied there was no money spent until we heard of the project from that delegation.

Mr. J. A. CURRIE. $25,000 was spent on surveys in October, and the delegation waited on the right hon. gentleman in the February following, after all this work had been done.

Sir WILFRID LAURIER. There might have been a survey, but I do not understand that a survey is the work itself. What is the trend of this motion? It is that while this work is going on we should stop it. Why, even if a mistake has been made it would be a greater mistake not to go on. It is sometimes a mistake to do certain things, but once a thing has been undertaken it is best to follow it to the end. In this matter we have the Con-

servatives of the county of North York and of the House of Commons at variance, and I am disposed to listen to the voice of the Conservatives of North York.

Mr. R. L. BORDEN (Halifax). The right hon. Prime Minister (Sir Wilfrid Laurier) has accused us on this side of the House of unworthily casting ridicule and contempt upon this work which had been advocated by a delegation, which, as he says, was composed partly of Liberals and partly of Conservatives. He seems to be seized with amazement that any opposition to what we regard as an absurd expenditure should be offered by us in this House, considering that some Conservatives were members of that delegation. That certainly is a remarkable view to take of the duty of hon. gentlemen on either side of this House. The right hon. gentleman may establish that criterion, if he likes, for the members of his own party;—I do not now know how many of them will be prepared to accept it ; but if he supposes that hon. gentlemen on this side will refrain from criticising an unjust expenditure, simply because it is advocated by Conservatives as well as Liberals in the particular riding affected, I desire to tell him that he has absolutely mistaken the temper and disposition of hon. gentlemen on this side. He tells us that ridicule and contempt have been cast upon this undertaking by the lack of defence on the part of himself and his ministers. His concluding words declared that because $200,000 had been expended already on this manifestly absurd and useless undertaking, therefore we should go on and spend $800,000 or $900,000 more. To state the argument is to refute it. The severest condemnation of this undertaking is the reply of the three ministers who have spoken. The argument in defence of this proposal is two-fold. In the first place, the argument is that this work is feasible. Feasible ? Of course, it is feasible. If you spend $10,000,000, no doubt, you could build a canal in a portion of the country that now has no water communication at all—and the work might not be worth $10 when completed. If you spend enough money on this undertaking, I suppose you can construct the canal under discussion, unless the absolute lack of water stands in the way. Next the defence of the Minister of Railways and Canals (Mr. Graham) and of the Minister of Justice (Mr. Aylesworth) is that Conservatives and Liberals have asked for this work. Well, perhaps you could embark upon many expenditures in different ridings in this country that would receive the support of some Conservatives and a great many Liberals. But does that absolve—the prime minister seems to think it does—the government as trustees for the people from all responsibility in connection with the expenditure of the public money? Does he lay down as a doctrine to be accepted by this House and by this country that, if you can get Conservatives and Liberals to demand a certain expenditure, and if you convince yourself that the undertaking can be carried out within the revenues of the country, the government, without further consideration, should embark upon it ? I ask the Prime Minister, as I asked the Minister of Railways and Canals this afternoon, what estimate is he able to give to the members of this House as to the business to be done on that canal and the tonnage to be carried over it in one year? Is the Prime Minister prepared to offer an estimate?

As the right hon. gentleman remains silent, his silence when that question is put to him across the floor of this House is an absolute condemnation, not only of the enterprise itself, but of the conduct of his government in entering upon it. Have we so much money in this country that we are ready to put a million or a million and a half into any enterprise, provided that money will carry it out, and provided that some Liberals and some Conservatives go to the government and ask for it? Yet, I leave it to hon. members who have listened to the Prime Minister and to the gentlemen who preceded him, whether there has been any defence of this undertaking other than that I have just mentioned. The right hon. gentleman seems to hint that it is a reproach to us for attacking this unjustifiable expenditure that three or four or half a dozen Conservatives advocated it three or four years ago. He seems to forget that what that delegation asked for, as I have understood it, was not the construction of a canal at a cost of a million or a million and a quarter of dollars, but the dredging of the Holland river; and, as pointed out by the hon. member for North Simcoe (Mr. J. A. Currie) I venture to think that the enterprise had been already engaging the attention of the government, because it appears they had spent some $25,000 in surveys before that delegation was brought down. It looks very much as if the delegation had been brought down for the purpose of the enterprise, and that it did not initiate the enterprise in the mind of the government.

Mr. LENNOX. That is perfectly correct, as I know.

Mr. R. L. BORDEN. Without knowing the facts, that is what I should be inclined to think the true explanation of this case. So far as this expenditure is concerned, there has been absolutely no defence worthy of the name made in this House to-day. There is no estimate—there never has been an estimate—of the traffic to be carried on the canal. When all parts of this country, as my hon. friend

from North Toronto (Mr. Foster) has said, are clamouring for the expenditure of public money in aid of transportation, the government, in their flush times, when they used to ask from their supporters throughout the country applications for the expenditure of public money, handed out a million and a quarter of dollars with no more benefit to the people than if they had thrown it into the sea—with less benefit, indeed, because, as the hon. member for West Toronto (Mr. Osler) has said, not only will the money spent in the work be wasted, but if it is attempted to maintain the canal, from $20,000 to $40,000 a year must be taken from the public revenues for that purpose. I do not desire to prolong this discussion. There has been no defence of this expenditure from the mouth of any minister. The right hon. Prime Minister tells us that he has given us his mind in this case. Perhaps he has. But I venture to think that if that is all that has been in his mind about it, he quite justifies the boast he made during the late election campaign, that he could not be troubled with so small matters as questions of proper or improper expenditure of the public moneys, that his soul—as he quaintly expressed it—is turned to higher things. I do not know whether that is a very great advantage to the people of this country after all. It seems to me that if his soul, on this occasion, could have been turned to the question of the traffic that would probably go over that canal, if his soul could have been turned to a consideration of the business aspects of this enterprise, that would have inured more to the true interest of the people than some of these eloquent phrases which we hear from the right hon. gentleman both in this House and on the public platform. As I have said, Mr. Speaker, the expenditure is absolutely undefended. If a judge in a court were addressing a jury on the arguments pro and con in connection with this expenditure, he would be obliged to tell the jury that it was an absolutely undefended case. That is the way it stands before parliament and before the people of this country to-day. No minister of the Crown has ventured to say that there was the slightest estimate or consideration of the traffic that would go through that canal. The Minister of Railways and Canals told me that very frankly across the floor of the House this afternoon. When I asked the Prime Minister, after he had spoken upon this question and endeavoured to justify this expenditure, if he could give me the slightest idea as to what traffic will go over those four and a half miles of canal, he sat silent in his seat and returned no answer whatever. And yet the Prime Minister tells us that it was not a purely political enterprise. Under these circumstances I venture to submit that the resolution which has been proposed in this House is a proper one, and that, to use the words of that resolution, this is an absolutely 'wanton misuse and waste of public money.'

House divided on amendment (Mr. Wallace).

Amendment negatived.

Motion agreed to, and House went into Committee of Supply.

Trent canal construction, $1,000,000.

Mr. WRIGHT. How much of this vote will be devoted to opening out the two ends of the canal into Lake Ontario and the Georgian Bay?

Hon. G. P. GRAHAM (Minister of Railways) As a matter of fact the contract for the western end into the Georgian bay has not been let at all and no money out of this vote will be spent on it. The outlet to the Bay of Quinte has been let to Larkin & Sangster.

Mr. HUGHES. Has the whole work of connecting the navigable waters of Rice Lake to the Bay of Quinte been placed under contract?

Mr. GRAHAM. There are two contracts not yet let.

Mr. WRIGHT. Is it not the intention of the minister to go on with the opening of the western end at once? It would seem to me to be the most important part of the work. Until the ends of the canal are opened up the canal will be useless for the purpose for which it was designed.

Mr. STRATTON. When does the minister expect to place under contract the section between Lake Simcoe and the Georgian bay?

Mr. GRAHAM. We have had two surveys made and the report on one of them at least has not yet been placed before me in its entirety.

Mr. J. A. CURRIE. Were there not three surveys?

Mr. GRAHAM. One by the Severn river and the other by Kempenfeldt bay. No decision will be arrived at until my hon. friend (Mr. Currie) will have full opportunity to come down with a deputation of his friends and advocate what he thinks is the better route.

Mr. FOSTER. If the deputation has both Liberals and Conservatives on it I suppose the thing will go?

Mr. GRAHAM. As I said at Barrie during the last campaign, whichever the engineer thinks the more feasible route will be accepted.

Mr. J. A. CURRIE. When the minister referred to this matter in Barrie during the last campaign the people living along the valley of the Nottawasaga river inferred from his remarks that the canal would surely be built along the valley of that river. As a matter of fact the county of Simcoe has appointed a committee on canals to take the question up, and the chairman of that committee has written to me to know if I could ascertain whether there has been a survey and a report made. If the question is considered on its merits it will be found that the canal can be built much more cheaply via Kempenfeldt bay and the Nottawasaga river than by way of the Severn river, because there is nothing but sand and gravel and clay on the western route whilst on the eastern route there will be a tremendous amount of rock cutting, and as every engineer knows one yard of rock cutting will cost about twelve times as much as a yard of gravel. I strongly urge that the minister give favourable consideration to the western route. Notable engineers of the past who have surveyed these routes unhesitatingly give their opinion in favour of the Kempenfeldt bay or Barrie-Nottawasaga river route. I strongly urge the advisability of completing the report as soon as possible so that I may

have the opportunity of bringing down here a lot of good Reformers to interview the minister, and incidentally I suppose I may be allowed to bring a few Conservatives who are also interested in the matter. There is no doubt but that the western route is the easiest and the best route. It was the route followed by the early voyageurs; it was the war route in 1812, and from an engineering standpoint in the present day it is undoubtedly the most acceptable. Then, I would urge upon the government that they should seriously consider the advisability of making it a modern canal from Lake Simcoe on and not have it in the same category as the canal on the Trent route. The cost of making the locks larger and the waterway deeper would be comparatively small once the plant is erected there, and what a magnificent idea it would be to have these large freighters coming into Lake Simcoe and discharging their cargoes at Beaverton or at this dock at Holland Landing. The minister will be well advised if he does not give the preference to the Severn river route, although during the last campaign a supporter of the government was elected in that riding. This canal has been a political question for so many years that it is time for us to call quits and turn it into a business enterprise at last.

Mr. SAMUEL SHARPE. The Lake Simcoe Dredging Company had a contract dated April 7, 1906, which they were in default with respect to. Did they get back their deposit of $4,649?

Mr. GRAHAM. No; we forfeited it.

Mr. SAMUEL SHARPE. Did they get the balance of $750 which they claimed?

Mr. GRAHAM. Not yet.

Mr. SAMUEL SHARPE. Are they still claiming it?

Mr. GRAHAM. They still claim and the matter is under consideration.

Mr. FOSTER. Did they get anything?

Mr. GRAHAM. They got about $1,600 on progress estimates for work done.

Mr. SAMUEL SHARPE. Is that all they are going to get?

Mr. GRAHAM. I think so; the $700 is under consideration.

Mr. SAMUEL SHARPE. On July 15, 1908, tenders were called for a second letting and the lowest was $94,960 and the highest $167,023. Why was not the contract let on these tenders?

Mr. GRAHAM. The figure was so much larger than the original contract that——

Mr. SAMUEL SHARPE. 'Your Engineer's' estimate was $131,000.

Mr. GRAHAM. I did not say the estimate; I say the figure was so much larger than for the other contract which had been cancelled that I did not consider the matter so urgent that I should not look into it thoroughly. I had not the engineer's estimate with me at the time as I was away from the department and I would not accept it without inquiry.

Mr. SAMUEL SHARPE. It never was accepted?

Mr. GRAHAM. No. If the approaching elections had anything to do with it, I would have let the contract immediately to get men to work.

Mr. SAMUEL SHARPE. My information is from prominent men in Newmarket, that political friends of the hon. gentleman's party were interested in the contract, and that they dare not let it to the lowest tenderer.

Mr. GRAHAM. Nonsense.

Mr. SAMUEL SHARPE. Will the hon. gentleman explain in what way Mr. Widdifield is identified with almost every lot that has been taken and paid for in damages there?

Mr. GRAHAM. Mr. Widdifield, a lawyer, is the agent of the Minister of Justice, and as such passes the titles when we take possession of the lands. We do this, not directly, but through the Department of Justice, which has an agent at each of these places.

Mr. SAMUEL SHARPE. Does the minister know whether or not Mr. Widdifield has any personal connection with or interest in these lands?

Mr. GRAHAM. I do not know. The business is not done through my department.

Mr. SAMUEL SHARPE. The reason I ask is that there are some lots in which neither Widdifield nor the other agent appears, but the parties deal directly with the department.

Mr. GRAHAM. I do not think there is any case in which there is no agent. There must be a legal agent representing the Department of Justice.

Mr. SAMUEL SHARPE. There are two cases in which there is no agent.

Mr. GRAHAM. I am informed that they cannot be for that.

Mr. HUGHES. Is each of the parties who is indemnified for drowned land paid the full amount of the cheque issued to Widdifield?

Mr. GRAHAM. I think there is no question about that.

Mr. HUGHES. There was a question about it many times. We have had many instances in which the farmer who was being indemnified had 20 per cent commission taken from the amount of the cheque for party purposes.

Mr. GRAHAM. In any of these cases?

Mr. HUGHES. In none of these cases, but there was a case only a few years ago.

Mr. SAMUEL SHARPE. What is the name of the other agent?

Mr. GRAHAM. Williams. He is also an agent of the Department of Justice.

Mr. STRATTON. I may say, for the information of the hon. member for Victoria (Mr. Hughes) that in all cases in which damages were paid in the county of Peterborough, the full amount was paid to the people who had the damaged land. There was no deduction in any case.

Mr. J. A. CURRIE. Was the cheque a joint cheque?

Mr. STRATTON. Yes, but there was no such deduction made as the hon. member for Victoria alleges. The Department of Justice itself paid for the legal work done by the solicitor.

Mr. HUGHES. The instance to which I had reference was an old one. I referred to the drowned land around Cameron lake, in which the agent of the government, part of the time, took 20 per cent commission from the people. But we discussed that, and I presume the practice was stopped. I desire to ask the minister about the surveying of the drowned land. I happen to know that at the present time in the county of Peterborough an engineer is surveying the drowned land and that he does not start from any known level of the canal or waterway, but just goes by the water mark on the trees. I am not finding any fault with him, because he is one of the most honourable men in the country; but it strikes me that there should be some datum point from which to take the level.

Mr. GRAHAM. The chief engineer informs me that that is done in every case.

Mr. HUGHES. Then, the man who is doing it does not seem to know that. Will the minister give us the data concerning the dam being erected at Lindsay? Is the water going to be higher than before, or lower? Is it going to be maintained at an even level, or is it going to be allowed to fall to five or six feet below the top of the dam? Are there fish slides in the dam and passages for small launches?

Mr. GRAHAM. The intention is not to raise the water, but to keep it at a level. The question of fish slides is one on which there is a difference of opinion. Within the past ten days I have discussed that question with a deputation that came to see me on other matters, and their opinion was that where there were locks a fish slide was not necessary or satisfactory. The fish pass through when the locks are opened, while the fish slides get clogged up in a few weeks. With regard to small launches, there is no provision beside the ordinary locks.

Mr. HUGHES. The minister promised that he would provide a small lock or something of that kind.

Mr. GRAHAM. We have considered the question of putting in intermediary gates, but we have not decided on it yet.

Mr. WRIGHT. What size of boat will the locks accommodate?

Mr. GRAHAM. Six feet in depth and 122 feet in length. All the details are in the report.

Mr. J. A. CURRIE. How many acres of land have been taken for this Newmarket canal?

Mr. GRAHAM. The amount paid so far is about $27,000. I cannot tell the number of acres. That is worked out elsewhere. The hon. gentleman will find it in the report page 97—134 x 33 x 5.

Mr. J. A. CURRIE. Have you settled all the land damages at Newmarket down to Cook's bay?

Mr. GRAHAM. Nearly all settled. There may be two or three cases yet to be settled.

Mr. SAM. HUGHES. The lock-master at Fenelon Falls has for a number of years been in the habit of raising and lowering the waters. Sometimes there would be a difference of two feet between the extreme high and the extreme low water caused by the eccentricities of this young gentleman. Consequently for weeks at a time, the water will be up on the shore and when winds come along those who own lands on the shore occasionally see portions of them floating down the lake. In other words considerable damage is done along the shores of that lake owing to the high waters. Is the minister paying damages caused by that class of irregularity? There are a number of gentlemen there who have claims of that nature. Has he paid similar damages elsewhere? I understand damages have been paid at Stony lake and also Rice lake.

Mr. GRAHAM. We have paid damages for raising the permanent level of the water on Stony and Rice lakes but not in any case such as my hon. friend mentions.

Mr. SAM. HUGHES. You should.

Mr. SEXSMITH. What amount is to be spent on the eastern end of the Trent Valley canal now under contract ?

Mr. GRAHAM. There will not be more than $200,000 spent on the Holland river and the balance will be spent on the main canal.

Mr. WRIGHT. I understood the minister to say that there were a couple of sections not under contract on the eastern portion of the canal. What amount will be required to build them, and how long will it take to provide an eastern outlet into Lake Ontario?

Mr. GRAHAM. I should imagine it would take four years. I could not tell what would be the cost of those sections as they are not let.

Mr. SEXSMITH. When do you expect to let the contract for the Healy Falls section and the one outlet at Rainy Falls ?

Mr. GRAHAM. It is difficult to say. I am not getting as large appropriations for the canal this year as I would like. I tried to have the amount doubled but was not able. The Healy Falls contract might possibly be let during the autumn, but no work will be done this year and I would not like to make a promise that it will be let. I want to go on as rapidly as the finances of the country will permit.

Mr. HUGHES. The finances of the country are all right. What is wanted is more energy. This thing has been dawdling on since 1833, and it is just wasting money to have it go on as it is. I had hoped that the minister, having come here full of vigour and energy, would have set an example and if he had not been given his way in getting this work completed, he would have resigned and brought on a crisis in the cabinet.

Mr. GRAHAM. That would not help it.

Mr. HUGHES. I am not so sure. We are told that the cabinet was brought to time by a minister threatening to resign and also by the Finance Minister in like manner.

Mr. GRAHAM. My resignation would not have that effect.

Mr. HUGHES. I would not take that line until all other means had been tried and failed. The minister should first try his persuasive power in order to get this thing completed. In its present condition it is an eyesore, having a long complete stretch in the centre but the two ends unfinished. I want to draw attention to two things—the lighting and the opening of the locks. The department has a very good system of lighting by acetylene gas buoys. Along this canal you could have a number of piers constructed on which these automatic buoys would be placed, and in that way the waterways could be lighted. There is a great deal of travel on these waters at night, and it is an immense advantage to have them well lighted. A part of the line around Lindsay and Fenelon Falls could be lighted by electricity. But between Lindsay and Sturgeon lake and above Lindsay to Port Perry, which could not be lighted by electricity, these piers could be readily constructed. There is another point to which I wish to draw attention. The locks are very burdensome to operate. You use the old winch system which came down from the time of Moses. I would suggest to the minister that he should bring that part of his department up to the 20th century and get a proper system of opening the locks along the line. All it requires is a little energy. The minister has a deputy who is willing, and if he will set his energy at work, he will not allow this old fashioned system to continue.

Mr. STRATTON. I think the hon. member for Victoria (Mr. Hughes) is quite right with regard to the improvements that might be made and on the modern locks that are being constructed. So far as I can observe, the department is dealing with that aspect of the case. I would like to point out that the lakes might be better buoyed and lighted. I was going to Lindsay one night last fall myself, and stayed out nearly all night, not being able to find the way. It would be much better for the passenger boats if the lake were buoyed, and there is no doubt that the passage into Lindsay and up the Scugog is dangerous, and should be better lighted. And, now that there is sufficient power to light by electricity, I would be willing to support the hon. member for Victoria in advocating the proper lighting of these channels.

Mr. SEXSMITH. Has it been decided what kind of locks are to be put in at Healy Falls? It is a great pity that the minister has not included in the estimates this year enough to complete the lower end of this canal. It is a very important work. The minister, when asked when we might expect it to be finished, said in about four years. He knows that the Healy Falls portion is a very difficult one. I think that, even if he lets the contract next year, it will be many years before it can be finished. The same is true of the portion just below the village of Campbellford at Raney's Falls. Had the money devoted to the work that was so long under discussion this afternoon been expended on these portions of the canal, it would have been of much greater benefit to the country. I do not pretend to be very well posted on this subject beyond the information we have gathered in the discussion to-day, but considering the defence made by the ministers

one can hardly come to any other conclusion than that the money spent on the Neymarket canal will be practically thrown away. There has been a good deal of speculation as to just where this canal is going to run. I would like to ask the minister to tell us if he has yet decided whether it is to follow the river at Raney's Falls, and what kind of locks they intend to place at Healy Falls?

Mr. GRAHAM. At Healy Falls, we will follow the river with the ordinary lift-lock. I think my hon. friend will see that it would not be wise, in the public interest, to announce what we are going to do at Campbellford at this time.

Mr. SEXSMITH. Some Campbellford people tell us the canal is going to follow the bed of the river, while others say it will go along the bank.

Mr. HUGHES. They will not follow the bed of the river at Campbellford. I desire to draw the attention of the minister to two branch canals, of one of which, the Haliburton branch, I have already spoken. The minister has never been up that route. In order to impress the officers of the department with the importance of keeping the water up to a certain level, I got two of the officers in a boat out in a lake and succeeded in running them aground. Fortunately, or unfortunately, a very violent storm arose. There was no chaplain aboard, so I had to officiate in receiving their final confession, because they thought they were going to kingdom come. If we could get the minister or deputy minister to come up there, I promise I will look after their safety. But I would like the privilege of showing them that the Haliburton canal is an absolute necessity and that it may be easily constructed. The waterway is there and the construction of six locks would open up sixty miles of navigation. It would assist in developing a very fine country and bringing out valuable hardwood timber, such as maple and birch now so largely used in the manufacture of furniture, and bringing it out in the only way possible, because no railway will be put in there. But I have already spoken on this subject, and will not detain the committee now. Another point to which my attention was drawn by the hon. member for Muskoka (Mr. Wright) was this: Muskoko lake and Lake Couchiching are on nearly the same level, and a little work would open up the connecting link between these waters, that is between the waters of Severn river and Muskoka lake, and so bring Bracebridge, Gravenhurst and a large area of country into water communication with the outer world, that is, if this canal is ever to be completed. Now, I would like to ask if the minister has looked into the Haliburton canal? I may say that we have ways and means of directing the attention of the government to these things. This is a new parliament, and I am giving the hon. gentleman a preliminary canter on this subject this session. But I promise him that next session, if something is not done meantime, we will make it considerably more interesting, and will continue in that way until we impress upon the minister, even better than a deputation of Grits and Tories could do it, that something ought to be done in this matter.

Mr. GRAHAM. I have not paid much attention to these branch lines that have been mentioned several times. To be frank with the committee, I do not feel inclined to undertake more branch lines than the present, nor until we get the main line through. When that is done, I think it will be reasonable to discuss some betterments to connect with other places.

Mr. SEXSMITH. Is it the intention of the department to dredge between Trent bridge and Hastings, or between Hastings and Rice lake this summer? I had the privilege of taking a little trip there last summer, and like my hon. friend from Victoria, we did not know whether we were going to get back the same night or not—ran on the rocks. That part of the river is used to a considerable extent during the summer, and it would not be a very difficult or expensive proposition to have the work done.

Mr. GRAHAM. I think it is under contract.

Mr. SEXSMITH. I am very glad to hear that.

Patent Record—further amount required, $9,000.

Mr. WRIGHT. Is there really any good purpose served by printing that large pamphlet called the 'Patent Record'? I think all the members receive it, and I was wondering whether there was any necessity for getting so many of them printed. Possibly it could be done away with.

Hon. SYDNEY FISHER (Minister of Agriculture). The expenditure is largely due to the cuts of the different patents. It is a book that inventors are anxious to have, as without it they would have no record of inventions, and they might be working on an invention which had been already recorded. It is sent to all the public libraries in the country. The total cost is $17,000 or $18,000 a year. This year we have to pay up a lot of arrears. It costs $1,800 or $1,900 a month. At the beginning of this year we were in arrears some nine months, now we are in arrears only three months.

Year-book—further amount required, $4,600.

Mr. URIAH WILSON. How many Year-books are printed and distributed every

year, and how many are the members allowed to have for the purpose of distribution?

Mr. FISHER. There are 11,000 printed each year, 7,000 in English and 4,000 in French. I am told that 5 or 6 are sent to each member.

Mr. URIAH WILSON. What proportion of them are bound in cloth and what proportion in paper? When bound in cloth they make a very nice book for a library.

Mr. FISHER. I am told there are about 4,000 bound in cloth, and these are chiefly sent out to libraries and places where we know they will be preserved. Those bound in paper are sent out for ordinary distribution.

Further amount required for the development of the dairy and fruit industries, and the improvement and transportation of, and the promotion of the sale and trade in food and other agricultural products, $13,000.

Mr. URIAH WILSON. What is the whole amount of which this is supplementary?

Mr. FISHER. The whole amount last year was $125,000. The reason for this vote is almost entirely due to some arrears of accounts with the railroads for the refrigerator cars.

Mr. URIAH WILSON. Will the amount be less another year?

Mr. FISHER. We will ask for the same amount as we ask for this year, without these arrears.

Mr. D. A. GORDON. I would like to ask the minister if he has considered the advisability of including in some such estimate as this, a sum sufficient to erect a cold storage warehouse to experiment in the handling of apples. I may point out that Kent county has the greatest number of apple trees I believe of any county in the Dominion, but, our orchards are going to waste seemingly because the farmers are not in a position to handle their crops to advantage. I believe it is largely owing to the fact that the cold storage warehouses are not in the vicinity of the orchards, and there has not been sufficient development along that line to induce people to invest in building them. I think an experimental warehouse for that purpose is absolutely essential, and I hope the minister will promise that a sufficient sum will be included to make a testing station, and let us see if we cannot handle the apple crop to better advantage. To-day, although there are so many apple trees in that vicinity, you cannot get an apple at any price, whereas in the city of Ottawa apples at $8 to $9 per barrel are coming in from the eastern end of the country where they are properly handled I presume largely owing to assistance offered by the Dominion and local governments.

Mr. FISHER. The proposition the hon. gentleman makes would more naturally come under the vote for cold storage warehouses. That vote is under a statute, and the statute does not provide for such an experiment as the hon. gentleman talks of. I have no doubt myself that one of the most important necessities for our apple trade is a means for cooling apples immediately, or very soon after, they are picked, and before they are shipped. The fruit, if cooled down as low as possible without being frozen, will keep much better afterwards than in ordinary storage, or in ordinary cars for shipment. No doubt one of the main improvements which the apple trade must look to is cold storage facilities close to the orchards, where the fruit can be cooled as soon as possible after it is picked. I have not in my vote for the coming fiscal year any provision for such an experiment as my hon. friend has outlined. I had hoped that the provision for cold storage warehouses under the Act would be sufficient to meet the necessities which my hon. friend has alluded to. It is possible that the circumstances and conditions in the fruit districts are not such that the people are able to fully take advantage of the provisions of the cold storage Act and if so perhaps it would be well to amend that Act or to provide other facilities which would meet the necessities of the case. But in the estimates for the coming fiscal year I must say there is no provision for such an experiment as my hon. friend outlined.

Mr. D. A. GORDON. I believe the sum required will not exceed $12,000 or $15,000 for one station of that character. I would not hesitate, realizing the importance of this work, to recommend in the strongest language possible that a movement be made to introduce an amendment at once for the purpose of this experiment. As I understand we have to be educated as to the methods that we must adopt in order to take care of the crop in a proper way, and the only way that we can ascertain the best method is by having an experimental warehouse. Personally I feel like adopting a much more comprehensive method but it may be well to go slowly under the circumstances and take up the matter in this way as suggested. I hope the minister will not allow the opportunity to go by, because I am satisfied our farmers are not getting 25 per cent of what they should for their apples. Last fall I know apples were marketed at prices ranging from 8 to 25 cents per hundred simply because there was no provision whereby they could care for the apples and market them as the country would be prepared to absorb them and pay the price. I believe the House is convinced

that if the apples can be kept in proper condition and be delivered in the fall, winter and spring in good condition that people will not only demand them but pay the price. Matters of this kind are so important that we should not neglect the opportunity to assist this industry. In one night we passed military estimates aggregating $6,000,000 and if we are satisfied that cold storage is the proper means for the handling of the apple crop, so that the greatest advantage shall accrue to the farmers, we should not hesitate to undertake the expenditure of a small sum for that purpose. I trust that the resources of the minister will not only provide the funds but will also indicate the best way in which to put this system into operation.

Mr. U. WILSON. A farmer in my county who has a large apple orchard has built a cold storage warehouse at his own expense to handle his own apples and those of his neighbours. If the suggestion of the hon. member is carried out, will that man receive fair treatment and have a fair proportion of the expenses to which he has been put refunded to him ? If he does not receive a refund, I think all should be treated alike. If one part of the country builds its own cold storage warehouses I do not see why we should help others. I have sometimes thought that these are things that should be left very largely to the people themselves. A great deal has been done in this work and I feel that anything that can be done to help our farmers—I do not mean the agriculturists, the men who work the farmers—will be liberally supported by this House.

Mr. BARR. I am very glad to hear the remarks of my hon. friend from Kent (Mr. D. A. Gordon). I consider this one of the most important questions that we could consider in this House. There is no question that the apple crop this year was good in most parts of the country, but owing to want of cold storage, the farmers have not received the remuneration they should have received. The result is that many orchards throughout Ontario are not cared for as they would be if it was a paying business. The agriculturists and fruit growers do not receive the consideration in matters of this kind to which they are entitled. We spend millions on the militia, we pass these items without consideration, whereas it is exceedingly difficult to obtain any substantial assistance for the farming community. I hope that the remarks which have been made will receive consideration and that next year the estimates will contain a substantial amount for the encouragement of farmers to build these cold storage warehouses. We may have enterprising men such as the gentleman mentioned by my hon. friend (Mr. U. Wilson) who will build such warehouses, but they are few, and I do not think the farmers are called upon to pay for cold storage warehouses. I think they should have assistance from the government.

Mr. SEXSMITH. I am pleased to learn that Lennox county contains men who have gone so extensively into the fruit growing that they are able to build cold storage warehouses for themselves. I agree with the hon. member for Kent (Mr. D. A. Gordon) that this is a very important question and that the very small amount spent in the interests of the farmers in the past might be doubled or trebled and still the farmers would not be getting anything like their fair share of public expenditure. If we had as the hon. member for Kent (Mr. Gordon) suggested, even one proper cold storage warehouse at some point where it could be utilized and where the farmers would be able to experiment with it, we would be in a position to know the full value of such assistance. Hundreds and thousands of dollars worth of fruit go to waste every year. At present we have a system of co-operation in many parts of the province where the farmers ship their own apples. Where that system is in vogue, if we had what the hon. member for Kent (Mr. D. A. Gordon) suggests, a cold storage plant to which the farmers could ship apples and keep them properly until the market developed, it would be a great advantage to the farmer and I think the minister might well consider this question. What amount did the government pay last year for refrigerator car service ?

Mr. FISHER. I have here accounts for 1908 amounting to over $9,600, and we paid something during the summer. I would think the total amount would be from $13,000 to $14,000, speaking from memory.

Mr. SEXSMITH. That is not a very great donation.

Mr. FISHER. That has served the purpose.

Mr. SEALEY. In Wentworth a co-operation plan has been organized and the details pretty well arranged to construct a cold storage warehouse for apples in particular, and while under the general Cold Storage Act this establishment would come in for some encouragement it seems to be the pretty general opinion that perhaps that encouragment could be increased in an experimental way and as no vote could do more in the general interest of the country than something to encourage an improvement along agricultural lines, the consensus of opinion seems to be that if this vote could be increased, it would be generally approved and result in great good not only in the counties of Wentworth

and Kent but in other places, particularly in two or three of the large fruit and apple growing centres.

Mr. BARR. It is a question of so much importance that the House should impress on the Minister of Agriculture to increase the grant in this respect.

Mr. FOWKE. It is impossible to overstate the influence that the Department of Agriculture under the present minister has had on the creation of wealth in this country. Any real addition to our national wealth must come from our natural resources, and I know from personal contact wth farmers that they appreciate very highly the Minister of Agriculture as their representative in this government. I am fully in accord with every proposition that has proceeded from the government so far in relation to the important matter of affording cold storage for the perishable products of the farm, and I should be glad if we may witness a large extension of that part of the work of the Department of Agriculture. The suggestion from the hon. member from Kent (Mr. Gordon) is well worthy the attention of the minister, and I sincerely hope that the gentlemen who have spoken on this question will have the satisfaction of learning that there will be a larger measure of cold storage in future than we have known of in past experience. In the one item of apples alone I find that in my own county there are more bushels of apples produced annually than the total quantity of barrels exported from this country, which would seem to indicate that large quantities of apples go to waste for want of proper attention. I trust that the Minister of Agriculture will see his way clear to devise some method by which in a good many localities in the province of Ontario, in the fruit season, the people may be able to avail themselves more fully of the advantages of cold storage.

Mr. FISHER. The Act under which bonuses are given to cold storage warehouses covers such as would be required for the apple trade. I know that some people have felt that another arrangement of the bonus than that provided in the Act would be more likely to encourage the building of cold storages for this particular trade. I confess that I have been considering somewhat whether the terms of the bonus may be modified to meet the particular necessities of this kind of cold storage. I shall be very glad to arive at a favourable conclusion because I am very anxious that ample cold storage facilities should be provided. The trouble with cold storage for apples alone is that while a building is very necessary during the short season of the apple crop, apples are bulky and take up much space, and the profit on the venture has to be made in a very short period of the year. That makes it a difficult problem. I shall be glad to further consider the question of changing in some degree the conditions of the cold storage bonus for such a cold storage warehouse, for I have closely at heart the providing of warehouses for the apple trade. The organization of the fruit growers' asociations was initiated by the officers of my department and I believe that sort of co-operation is one of the best means of handling our apple crop. These associations have done excellent work and have set a good model for the country at large.

Further amount required to pay for the construction of branch of the electric railway to the Central Experimental Farm, including cost of fence, $10,500.

Mr. BARR. Is this road on the farm or to the farm?

Mr .FISHER. The road is double-tracked, about a mile long within the farm and it is only the part within the farm that we had anything to do with.

Mr. BARR. What is it used for?

Mr. FISHER. Thousands and thousands of visitors come to the experimental farm every year, and before this arangement was made they had to drive in cabs or walk about a mile and a half. As a result of insistent demands from the public I made an arrangement with the electric railway company that if they would build to the boundary of the farm we would build the road within the farm.

Mr. WRIGHT. What is the total cost?

Mr. FISHER. $39,889. The estimate of cost was made and approved of by the chief engineer of the Railway Department who drew the plans. The electric railway company constructed it on that estimate.

Mr. WRIGHT. It seems to me that this is a very large amount for constructing a mile of railway and if there be such a large number of visitors to the farm the road ought to pay for itself. Should not the electric company have built this road themselves in view of the profits they would receive from it, or at least should they not have paid half the cost? Do they give a service in winter?

Mr. FISHER. Yes.

Mr. WRIGHT. Do they give a five cent fare to the general public and the servants of the farm?

Mr. FISHER. Yes, and they also carry the mails free to and from the farm. This has been under discussion for years; the service was very strongly demanded by the visitors to the farm and it was only when we agreed to this that the railway would build to the farm boundary. I venture to think that during the coming summer it

will repay for all the outlay and a good deal more.

Mr. BLAIN. Who did the work?

Mr. FISHER. It was done by the Ottawa Electric Railway Company on the estimates and under the supervision of our own Railway Department.

Mr. SEXSMITH. Does the government own the road?

Mr. FISHER. Yes.

Mr. BLAIN. What proportion of this item will be expended on the fencing?

Mr. FISHER. About $600. We have to fence both sides of the track, because it runs through the field where the cattle are and through the orchard. The only part of the road we are paying for is that which runs through the farm.

Mr. BARR. Does this complete the payment?

Mr. FISHER. Yes.

Quarantine — further amount required, $14,000.

Mr. BARR. What was the total amount expended this year?

Mr. FISHER. The amount voted in the main estimates was $100,000 and we ask for this in addition. In the year before about $125,000 was spent.

Some resolutions reported.

Mr. FIELDING moved the adjournment of the House.

Mr. LENNOX. What business will be taken up to-morrow?

Mr. FIELDING. We shall continue the work in Supply, and will be likely to take any of the items of the supplementary estimates for the current year. If we get into the main estimates, there are a few items of civil government to be dealt with, and after that the Public Works estimates.

Motion agreed to, and House adjourned at 11.40 p. m.

HOUSE OF COMMONS.

WEDNESDAY, March 24, 1909.

The SPEAKER took the Chair at Two o'clock.

QUESTIONS.

ALBERTA TIMBER LANDS.

Mr. HERRON asked:

What was the total revenue due and payable to the government from all sources, exclusive of bonuses, in respect of the timber lands in the province of Alberta under lease, permit, or limit, during the twelve months ending 31st March, 1908, and how much of the above has been collected?

Hon. FRANK OLIVER (Minister of the Interior). Amount due and payable, $34,634.24; amount collected, $34,300.61.

EAST POINT LIGHTHOUSE.

Mr. FRASER asked:

1. Has Lauchlin McDonald resigned his position as keeper of the East Point, P.E.I., lighthouse? If so, what is the date of his resignation?
2. Has any one been appointed in his place as lighthouse keeper of said light? If so, what is his name?
3. Upon whose recommendation was this last appointment made, and what is the date of the appointment?
4. Who are the securities of the new appointee?
5. Have any complaints been made to the department during the last year concerning this light?
6. Were there any other applicants for this position? If so, who were the applicants?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries):

1. Yes. June 4, 1908.
2. Yes. Ronald John McDonald.
3. On the instructions of the hon. the Minister of Marine and Fisheries. July 1, 1908.
4. No securities are required.
5. No.
6. No.

GEORGETOWN, P.E.I., MARINE AGENT.

Mr. FRASER asked:

1. Who is the marine agent at Georgetown, Prince Edward Island?
2. How much is he paid and what are his duties?
3. What position is held by Scoby Johnston?
4. How much is he paid, for what services, and what are his duties?
5. How are his duties distinguished from those of the agent?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries):

1. Mr. John A. McCormack is subagent at Georgetown, Prince Edward Island.
2. $100 a year. He is acting as subagent at Georgetown and looks after the freight, also winter mail service when government vessels are calling at Georgetown.
3. He is acting as timekeeper.
4. Thirty cents an hour while in the service of the government. He looks after local freight and keeps time when the men are loading and unloading the vessels.
5. His duties are limited to time keeping and looking after the freight while the duty of the agent is to look after the expenditure and revenue for that agency.

ONTARIO METEOROLOGICAL STATIONS.

Mr. THORNTON asked:

1. How many meteorological stations are there in Ontario, and where are they situated?
2. Which of these were erected in 1908?
3. At whose expense were they erected?
4. What is the object of these stations or towers, and what service do they render?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries):

1. Agincourt, Aurora, Birnam, Bruce Mines, Bancroft, Chatham, Clinton, Cockburn Island, Cowal (Dutton), Ennismore, Guelph, Georgetown, Haileybury, Huntsville, Kingston, London, Lindsay, Lansdowne, Meaford, Midland, Madoc, North Gower, Ottawa, Orillia, Oliver's Ferry, Port Hope, Point Clark, Port Dover, Port Burwell, Peterborough, Parma, Renfrew, Southampton (Saugeen). Stony Creek, Sarnia, Sydenham, Uplands, Ursa, Woodstock, Windsor, Wiarton, Wallaceburg, Collingwood, Port Colborne, Deseronto, Sault Ste. Marie, Kincardine, Cobourg, Alton, Beatrice, Brantford, Barrie, Coldwater, Cottam, Calvin, Croydon, Emsdale, Gravenhurst, Goderich (Lighthouse), Haliburton, Hamilton, Hubrey (Westminster), Kinmount, Lucknow, Lakefield, Listowel, Moose Factory, Montague, North Bruce, Owen Sound, Otonabee, Orangeville, Port Arthur, Parry Sound, Port Stanley, Pelee Island, Paris, Princeton, Rockliffe, Rat Portage (Kenora), Stratford, Sunnyside (Wooler), East Toronto, Toronto, Uxbridge, White River, Welland, Watford, Westport, Fort William, Bayfield, Oakville, Picton, Tobermory, Port Credit.

2. Barrie, Rouville (Fox Point P.O.), Lake Temagami, Wesley, Lake Side Home (Toronto Island), Judge, Kakabeka Falls, Lorne Park, Copper Cliff.

3. The cost of installation of these stations is defrayed by the Dominion government Department of Marine and Fisheries

4. The object of meteorological stations is to have observations taken of the temperature, barometric pressure, direction and velocity of wind and other atmospheric conditions. These observations are compiled at the Central office, Toronto, from whence are issued weather predictions for the use of mariners and the public generally.

GOVERNMENT SHIPS.

Mr. J. A. CURRIE asked:

1. Were representations made to the Customs Department by any person as agent for the Dominion Marine Association, urging the government not to impose a duty on repairs made to Canadian ships in certain cases? If so, what are the names of such persons?

Mr. BRODEUR.

2. What ships have been purchased by the Dominion government from British shipbuilders since 1896?

3. What are the names of the shipbuilders who built each ship, and the purchase price of each ship?

4. Were any tenders received for the building of these ships from Canadian shipbuilders? If so, what were the amounts of the Canadian tenders for each ship, and the names of the tenderers?

5. What amount of money was spent on each of these ships for changes, improvements, additional equipment and repairs since they were taken over by the government?

6. Who were the Canadian agents or persons representing each individual British shipbuilders of any ships for the government of Canada?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries):

2. The Department of Marine and Fisheries have purchased the following vessels: 'Druid,' 'Minto,' Lady Laurier,' 'Montcalm,' 'Champlain,' 'Canada,' 'Lady Grey.'

3. 'Druid,' Fleming & Ferguson, $110,960.00; 'Minto,' Gourley & Co., $185,317.14; 'Lady Laurier,' Fleming & Ferguson, $184,933.33; 'Montcalm,' Fleming & Ferguson, $265,233 33; 'Champlain,' Fleming & Ferguson, $90,033,33; 'Canada,' Vickers Sons & Maxim, $181,284.28; 'Lady Grey,' Vickers Sons & Maxim, $208,994.11.

4. 'Druid'—Tender of Collingwood Shipbuilding Co., $170,000; tender of Polsons, $173,000. 'Lady Laurier—Tender of Collingwood Shipbuilding Co., $235,000; tender of Polsons, $298,900.

5. 'Druid', $61,865.50; 'Minto,' $61,282.32; 'Montcalm,' $118,377.22; 'Lady Laurier,' $138,514.86; 'Champlain,' $68,304.09; 'Canada,' $43,436.79; 'Lady Grey,' $9,966.33.

6. The Department of Marine and Fisheries dealt directly with the builders in all these cases.

MAIL ROUTES TO AHMIC HARBOUR AND TROUT CREEK.

Mr. ARTHURS asked:

1 Who is the contractor on each of the following mail routes, (a) Burks Falls to Ahmic Harbour, summer and winter routes, and (b) Loring to Trout Creek?

2. Were tenders called for the above services?

3. What is the amount paid each of the contractors?

4. When do the contracts expire?

Hon. RODOLPHE LEMIEUX (Postmaster General). The services to Ahmic Harbour are, during the season of navigation, performed by the Magnatawan River and Lakes Steamboat Company who are paid $7 per trip for the regular summer service, and an additional $2.50 per trip for a special service during the months of July and August. Tenders were not invited for

this service, but only a temporary arrangement made with the above company. During the winter Ahmic Harbour is served in connection with the Burk's Falls and Dunchurch route, the contractor for the service being R. A. Creaser, who obtained his contract as the result of public tenders, and is paid at the rate of $4.50 per trip for the whole route. His contract expires on the opening of navigation, 1911.

The contractor for the service between Loring and Trout Creek is Mr. John Kyle. Previous to October, 1904, there were two services known as Loring and Stopping Place and Trout Creek and Stopping Place. The total cost for both services amounted to $625 per annum.

It being considered in the public interest to have both services performed under one contract, they were combined, and a contract entered into with Mr. Kyle at the rate of $600 per annum, which contract will expire on 30th September, 1912. Mr. Kyle was formerly the contractor for the Loring and Stopping Place section.

ST. JOSEPH'S HOSPITAL, BRITISH COLUMBIA.

Mr. BARNARD asked:

1. Has the government made any arrangement with the persons in charge of St. Joseph's Hospital at Victoria, B.C., whereby such hospital is in future to take charge of sick mariners?

2. Is it the intention of the government to close the present marine hospital?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries):

1. No.

2. There is no such intention for the present.

MONTREAL HARBOUR COMMISSIONERS.

Hon. W. S. FIELDING (Minister of Finance) moved that the House go into Committee of the Whole to-morrow to consider the following proposed resolution :

Resolved, that it is expedient to provide that the interest on the sums of money advanced to the Harbour Commissioners of Montreal for the construction of grain elevators and other terminal facilities, during the period of construction of the said facilities—such period to terminate as of such date as the Governor in Council shall fix and determine—should be charged to the capital account of the commissioners, and be paid out of the sum to be advanced to the commissioners under authority of chapter 30 of the Acts of 1907.

He said: His Excellency the Governor General recommends this resolution to the consideration of the House.

Motion agreed to.

LORD STRATHCONA— GIFT TO THE DOMINION.

Hon. Sir FREDERICK BORDEN (Minister of Militia and Defence). Before the orders of the day are called, I would like to bring before the House a matter of considerable importance. A few days ago, when the militia estimates were under discussion I had the honour of bringing to the attention of the Committee of the Whole a branch of the subject which I considered of great interest to this country. In doing so, I used the following words :

On several occasions in this House I have had the honour to bring up this matter, and to say I hope the time will come when, in all the schools of Canada, there will be undertaken by the respective provincial governments, which of course control education, a uniform system of physical training for younger children, of elementary drill for the older ones, and of rifle shooting for those still older. I am happy to say that this policy, if it may be dignified by that name, has been very generally discussed throughout the Dominion; and so far as I have observed, all the best newspapers which more correctly indicate the trend of public opinion, have favoured this idea almost without exception.

I went on to say that I had reason to believe that all the provinces throughout the Dominion would follow the example set by the province of Nova Scotia and enter into an arrangement with the Dominion government by which this system of physical training and elementary drill in the schools might be carried out by mutual co-operation between the Dominion government and the provinces. Yesterday I had the honour to receive from Lord Strathcona—an old friend of Canada, who delights to call Canada his home, and who has on frequent occasions shown his deep interest in the development of this country—a letter which I shall read to the House, as it expresses his own views better than any language of mine could do :

28 Grosvenor Square,
13th March, 1909.

My dear Sir Frederick Borden,—You will recollect that, when we met in London during your recent visit, I was greatly interested in the account you gave me of your efforts to get a system of physical training and military drill, including rifle practice, introduced into the public schools of the Dominion.

I have long entertained the opinion that such training as that you are striving for is of the highest value in developing the moral, physical and intellectual qualities of children, as well as that valuable quality known as patriotism, and I am anxious to take part in the good work which is being done in this direction.

I write, therefore, to inform you that I am prepared to place at your disposal, or that of

any competent body which you may be in a position to constitute, with the object of encouraging such training, the sum of $10,000 per annum. I would suggest that the fund which this sum would form might be designated as for 'The encouragement of Physical and Military Training in Public Schools,' and that it should be administered by a body of trustees appointed for the purpose. I should be glad to know what your own proposals as to the constitution of this body would be, but I think that the central committee might perhaps be composed somewhat as follows: Yourself or the Minister of Militia for the time being, as president; the ministers who deal with education in the various provinces of the Dominion as vice- presidents, but subject to the conditions that the province which each one represents has declared its adhesion to the principles agreed upon between the Department of Militia and the province of Nova Scotia, which were sanctioned and made applicable to the other provinces of the Dominion by the orders in council of 13th August, 1908; the executive council to be composed of (a) the members of the Militia Council; (b) representatives to be named by the ministers controlling education in the various provinces —two each for the provinces of Ontario and Quebec, and one each for the remaining provinces of the Dominion; (c) the military officers commanding the commands and independent districts of the Dominion. Should His Excellency the Governor General be disposed to become patron of the trust, I should feel especially honoured by such action on his part, which would conduce very greatly to the success of the object which we have in view.

I should also deem it an especial honour if the Prime Minister, as evincing his approval, would consent to be vice-patron of the trust.

While the fund as a whole should be administered and money grants allotted by the executive committee—in general, proportionately to the school population of the various provinces of the Dominion—it would, I think, be desirable that the administration of the grant within the several provinces should be made by local committees, appointed under the authority of the central committee. These local committees might be composed, for example, of the military officer commanding the district, as chairman; three civil members, nominated by the Minister of Education for the province, and three military members, nominated by the Minister of Militia.

While I attach the highest importance to the advantages of physical training and elementary drill for all children of both sexes, I am particularly anxious that the especial value of military drill, including rifle shooting for boys capable of using rifles, should be constantly borne in mind. My object is not only to help to improve the physical and intellectual capabilities of the children by inculcating habits of alertness, orderliness and prompt obedience, but also to bring up the boys to patriotism and to a realization that the first duty of a free citizen is to be prepared to defend his country. The Dominion at the present time, and for many years to come, can hardly hope to be able to give so long a period of training to her military forces as by itself would suffice to make them efficient soldiers, but, if all boys had acquired a fair acquaintance while at school with simple military drill and rifle shooting, the degree of efficiency which could be reached in the otherwise short period which can be devoted to the military training of the Dominion forces would, in my opinion, be enormously enhanced.

I will only add that I should prefer that, for the present at least, the whole of the money grant should be devoted to those educational establishments which are maintained entirely out of public funds. I think, further, that the administration of the fund should be such as to enable both sexes, whether teachers or pupils, to share in the rewards, and that the allotments of money should be so made as to afford an inducement both to the teachers to instruct and to the pupils to perfect themselves in the training desired.

Believe me to be,
My dear Sir Frederick,
Very truly yours,
STRATHCONA.

In reply to this letter, I at once caused the following telegram to be sent:

Ottawa, 23rd March, 1909.

Strathcona, London.

Your letter 13th received. Gratefully accept your most generous offer to create fund for the encouragement of physical and military training in public schools of Canada. Organization outlined in your letter appears admirably adapted to attain end in view. Am forwarding by mail detailed proposals based thereon for carrying out the scheme. Hope you will consent to fund being called the Strathcona Trust for the encouragement of physical and military training in public schools. His Excellency the Governor General accepts position of patron and the Premier consents to become vice-patron.

BORDEN.

I may say, in addition that I received from His Excellency his consent to notify Lord Strathcona that he would accept the position of patron. The Prime Minister (Sir Wilfrid Laurier) is here to speak for himself. He has already informed me that he will gladly accept the position of vice-patron.

In a private letter, Lord Strathcona informs me that, on hearing from me a cheque for $250,000 will be forwarded as the basis of the fund to provide the annual income of $10,000. I thought this matter to be of sufficient importance to justify me in bringing it up in this way.

Right Hon. Sir WILFRID LAURIER (Prime Minister). I believe I shall voice the sentiments of this House, if, without losing a moment, I move that we offer our thanks to Lord Strathcona for the letter which has just been communicated to the House by the Minister of Militia. Lord Strathcona has rendered many services to Canada, but, I believe, none of greater importance than the present one. Physical education is of the greatest possible importance, and its value has never, in the history of the world, been understood as it

is now. I hope and firmly believe, that the system now initiated by Lord Strathcona, the organization which he sets on foot, will provide that, in all parts of Canada, physical training will become part of the education of the boys and girls of this country. I beg leave to move, seconded by Mr. R. L. Borden:

That the thanks of the House of Commons and the people of Canada are hereby tendered to Lord Strathcona for his letter to the Minister of Militia just communicated to the House.

Mr. R. L. BORDEN (Halifax). I have the very greatest pleasure in seconding the motion which the Prime Minister (Sir Wilfrid Laurier) has just proposed to the House. Lord Strathcona's offer will be received with feelings of the deepest appreciation, not only by members of this House regardless of party, but by all patriotic citizens regardless of party. This act of Lord Strathcona's is entirely in harmony with the many patriotic actions which have distinguished his wonderful career. His encouragement of physical training and of elementary drill amongst the children of the country is a most worthy object. I have no doubt whatever that this most worthy object will be stimulated to a very great degree by the foundation of this fund. I am sure that all of us earnestly hope and sincerely believe that it will be productive of all the great benefits and advantages to the people of this country which are so eloquently set forth in this letter with which Lord Strathcona has accompanied his gift.

Motion agreed to.

PORT OF OSHAWA.

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). The hon. member for Victoria (Mr. Hughes), the other day, put a question, which, in part, concerned my department. I do not see the question on the paper to-day, probably because it was answered, so far as their departments were concerned, by the Minister of Public Works (Mr. Pugsley) and the Minister of Customs (Mr. Paterson). I am prepared to give the answers from my department. The questions were as follows:—

1. Since taking over Oshawa harbour what officers have been appointed and what are their salaries, for duty at that harbour or in connection therewith?
2. What products have been landed at the said harbour by water route since the date referred to?
3. What duties, fees or receipts of cash have been collected by each department of the government since that date?
4. What expenditure upon the harbour or any part of it have been made by each department of the government since the date of taking over?

The answers to these questions are as follows:—

1. Wharfinger, W. T. Henry, salary $400 per annum, paid from collections; harbour master, W. T. Henry, remunerated from fees collected, remuneration not to exceed $300 per annum.
2. Coal and general merchandise.
3. The Marine and Fisheries Department has received, through the wharfinger, the following net revenue:—

1904-5	$ 804 69
1905-6	2 00
1906-7	813 94
1907-8	16 99
	$1,637 62

4. The Marine and Fisheries Department has expended the following:—

1904-5, $6.34, for inspection of scales.

1906-7, $82.88, repairs to coal cars, tramway, use of telephone, &c.

No expenditure has been made by the Department of Marine and Fisheries on the harbour or wharf.

CANADA'S SELF-DEFENCE.

Hon. GEO. E. FOSTER (North Toronto). Before the orders of the day are called, I beg to give notice that on Monday next I will move the resolution which stands in my name, No. 2, under the heading of 'Notices of Motion,' as follows:—

That in the opinion of this House, in view of her great and varied resources, of her geographical position and national environments, and of that spirit of self help and self respect which alone befits a strong and growing people, Canada should no longer delay in assuming her proper share of the responsibility and financial burden incident to the suitable protection of her exposed coast line and great seaports.

The hon. member for Souris (Mr. Schaffner), in whose name stands the first notice of motion, has kindly given my notice precedence. I shall be very glad if the government do not interpose any unnecessary business in its way.

Sir WILFRID LAURIER (Prime Minister). I shall be glad to have it taken up as the first order.

INQUIRY FOR RETURN.

Mr. G. H. BRADBURY (Selkirk). I desire again to call the attention of the Minister of Marine and Fisheries to the fact that the return of correspondence between the department and Mr. F. W. Colcleugh, has not yet been brought down.

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). I understand that this return is almost ready. Yesterday, or the day before, I laid on the table a couple of returns in which the hon. member (Mr. Bradbury) was interested. I do not know whether they have reached him.

DAYLIGHT SAVING BILL.

Mr. E. N. LEWIS (West Huron). Mr. Speaker, before you go into Committee of Supply, Sir, I wish to ask the government a question with reference to Bill (No. 108) respecting the saving of daylight. I am aware it is out of order to discuss the Bill at this time, but in view of the feeling which has been aroused from Vancouver to Halifax, the resolutions of boards of trade, and letters I have in my pocket, and telegrams, I desire to ask that the government place this Bill on the government orders, or else appoint a small committee to investigate the matter.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). We never have too much daylight in this country, but we have not yet daylight enough to see whether we can comply with the hon. gentleman's request.

Mr. R. L. BORDEN. In one sense perhaps it might be regarded as somewhat inappropriate for a parliament which does three-quarters of its work after dark, to undertake to impose legislation of this kind upon the people of the country. I remember reading a good many years ago a very interesting article by Benjamin Franklin, in which he humorously pretended to describe his astonishment at waking up at 7 o'clock in the morning, opening his windows, and discovering that there was plenty of light out of doors, and that his own room became filled with light at once. He said he had mentioned the subject to some scientific friends of his, who thought that he must be mistaken, and that the darkness had gone out of his room instead of the light having come in. It is an important matter to the people of this country to utilize daylight as much as possible, and undoubtedly there is a great deal of interest aroused in the subject which has been brought before the House by my hon. friend. A similar Bill has passed the British House of Commons, I do not know what will happen to it in the House of Peers. I do not know what would happen to this Bill if we should pass it and let it reach our own House of Peers. But it would seem to me that the request which the hon. gentleman has made of the government is worthy of consideration, and I trust the Prime Minister will endeavour to secure daylight enough before the end of the present week to make some announcement to the House with regard to it.

Motion agreed to, and House went into Committee of Supply.

Mr. FOSTER. Before you go on, is it intended to take up the supplementaries?

Mr. FIELDING. We will take up the supplementaries, giving precedence to the Minister of Public Works, who happens to have the largest block.

Mr. BRODEUR.

Mr. FOSTER. Speaking generally, if it were not for some other considerations, I should object to the Minister of Public Works going on with any further estimates until he has filled the orders of the House. But I will not object to the supplementaries because of the understanding we have had with the Finance Minister. But I give the minister warning that when we come to the others, he will have difficulty in getting through any Public Works estimates until he fills the orders of the House. I have an idea that he is simply jollying the House.

Mr. PUGSLEY. I am very much surprised that my hon. friend should imagine that for a moment. I am much obliged to my hon. friend for not raising an objection now.

Public buildings—Ottawa parliament buildings—additions and alterations—further amount required, $40,000.

Mr. PUGSLEY. This is required to make provision for carrying on works under contract in connection with the parliament buildings, up to the 31st of the present month. These works are in connection with the additions and alterations which the committee are familiar with. It includes also the construction of a new upper story and a roof on the tower which forms a portion of the residence of the Speaker. The total amount paid is $244,366.66 upon the new addition, and the amount due is $126,-321.01. Then in connection with the old building there is still due $4,867.32; that makes a total of $131,188.33. This amount we are now asking for will be required to complete payments up to the 31st of March.

Mr. FOSTER. This is all for changes and additions to this building ?

Mr. PUGSLEY. Yes, including quite an amount in connection with the old building.

Mr. FOSTER. What will be the total expenditure?

Mr. PUGSLEY. The total amount is $447,732.94.

Mr. FOSTER. Of that, what is the amount for furnishings?

Mr. PUGSLEY. There has been paid for renewal of windows, lumber, hardware, painting, carpets and mattings, $40,555. For furniture, mantels, furnishings, painting, papering, dishes, silverware, &c., there has been paid $313.88 and there is due $9,-282.85.

Mr. FOSTER. The whole will amount to a little less than $10,000?

Mr. PUGSLEY. Yes.

Mr. FOSTER. That is above, below, around and about; that is all?

Mr. PUGSLEY. That includes everything.

Ottawa—Royal Mint—refinery, guardhouse gates, &c., $6,300.

Mr. MACDONELL. I think the committee is entitled to a little more information regarding the operation of this costly undertaking known as the Mint. The Mint has not been a success in the matter of paying its way or making any revenue to the government. It seems to me that the Mint should at least pay its way and do something better. It should actually earn money as it does in other countries. There are some curious facts in connection with the operation of this department of the government. I think the minister should explain just how it is that during the calendar year 1907, the year before the Mint commenced to operate, the government imported from the Royal Mint over $1,000,000 in silver.

Mr. PUGSLEY. I have sent for my hon. friend the Minister of Finance (Mr. Fielding) because my hon. friend's questions appertain to his department and he will be here in a few minutes. In the meantime I will explain the items of this vote of $6,300. It is to cover the balance due for materials provided for the Royal Mint, the guard-house gates, &c. This is for hardware, electrical supplies, weighing machinery and machinery for the Mint generally. The total amount required to complete the payment of the accounts rendered is $6,190.71. We are asking for $6,300. I have here a detailed statement of the accounts which I will read to the committee if desired.

Mr. FOSTER. For this amount?

Mr. PUGSLEY. Yes. There is due for hardware to Workman & Co., the McDougall Hardware Company, Charleson & Butterworth, $350.26; for electrical supplies there is due $1,392.80. There are quite a number of other accounts due for articles such as weighing machinery, amounting to $1,908.70, and then there are some ten or twelve small accounts altogether making $6,190.71.

Mr. MACDONELL. I understand that there is a return to be brought down in connection with this matter and that a motion will probably be made. Therefore, the matter may stand for further consideration.

Mr. PUGSLEY. All right.

Mr. FOSTER. What is the total cost of the Mint to date?

Mr. PUGSLEY. Up to the 31st December last the cost has been $530,233.88. That includes the site.

Mr. FOSTER. And the payments still to be made?

Mr. PUGSLEY. $6,190.71.

Public buildings, N.B., St. John quarantine station, Partridge island, water service, &c.—additional amount, $6,200.

Mr. FOSTER. What is this for?

Mr. PUGSLEY. This is to pay for work in connection with the water service. The work has been done under the direction of the resident engineer at St. John. Since the pipe was originally laid there have been several breaks in it and considerable work has been done. As my hon. friend is aware, Partridge island is some little distance from the mainland and this pipe is laid on the ground under the bay.

Mr. FOSTER. And connects with the water system in St. John?

Mr. PUGSLEY. Yes.

Mr. FOSTER. What has been the whole cost of the service?

Mr. PUGSLEY. The following amounts have been paid:

Prior to—		
1904	excavating..	$ 4,067 74
1904-5	"	8,299 73
1905-6	"	20,920 15
1906-7	"	13,000 29
1907-8	"	8,796 89
1908-9	to Jan. 31, excavating.	7,652 72

Then there was a payment to Harvey Ring for loss sustained by reason of his weir being interfered with by the laying of the pipe of $2,400. There was a reference and upon the finding and the evidence given it was decided to pay him that amount. That makes a total of $65,138.72.

Mr. FOSTER. Will the minister just briefly say what he has to show for that?

Mr. PUGSLEY. We have a fresh water supply.

Mr. FOSTER. Never mind the supply, but tell us what you have.

Mr. PUGSLEY. There was a trench excavated from the mainland to Partridge island and the pipe was laid in the trench. Then, upon the mainland, there would be a pipe laid to connect with the city service.

Mr. FOSTER. Where?

Mr. PUGSLEY. From St. John street in the parish of Lancaster adjoining the city.

Mr. CROCKET. Was this work done under contract?

Mr. PUGSLEY. No, it was done by day's labour. The water is carried to the island by a cast-iron main pipe from the main pipe of the city service at St. John street, Lancaster, down to Fort Dufferin, and from there across to Partridge island.

Mr. FOSTER. Then, on Partridge island what have you?

Mr. PUGSLEY. The water is distributed to the different buildings throughout the island.

Mr. FOSTER. In surface pipes?

Mr. PUGSLEY. Of course the main pipe would be laid underground to the different buildings. There are quite a number of buildings upon Partridge island and then there would be the ordinary services to the different houses.

Mr. CROCKET. Is this the end of the appropriations for this service?

Mr. PUGSLEY. It is unless some accident should happen, for instance by the bursting of pipes.

Mr. FOSTER. Has the minister the length and dimensions of the pipe?

Mr. PUGSLEY. No, I have not that information with me.

Mr. CROCKET. Was there a departmental estimate of the cost of this service before the work was undertaken?

Mr. PUGSLEY. The chief architect has no estimate; it was done under the direction of the engineer at St. John. He has no memorandum here of any estimate.

Mr. CROCKET. Was a work of that magnitude done by day's labour?

Mr. PUGSLEY. We have had a great deal of trouble with the pipe by reason of its bursting and leaks occurring from time to time and the work has been carried on from year to year by day's labour.

Mr. CROCKET. Who was in charge as foreman?

Mr. PUGSLEY. I have not the name of the foreman here. This was some years ago. I will get him the names of the different foremen during construction and repairs.

Mr. CROCKET. Yes.

Mr. BLAIN. When was this work commenced?

Mr. PUGSLEY. In 1903 or 1904.

Mr. BLAIN. I cannot see any justification for the minister proceeding with a work costing $65,000 without asking for tenders and without even an estimate to the department of the cost. Does not my hon. friend see that this afforded an opportunity for a good deal of political support to his party in a city like St. John?

Mr. PUGSLEY. My hon. friend misunderstood me. I said the chief engineer could not give any estimate and had no memorandum because it was engineering work done under direction of Mr. Shewan, the resident engineer at St. John; but I presume there was an estimate which would be in my department. As that estimate was made three or perhaps five years ago I would not have it with me, but I will have it looked up if my hon. friend desires.

Hon. JOHN HAGGART. How did the payment for a work costing $65,000 performed by day's labour in direct contravention of the statutes pass the Auditor General's Department? The statute says that work over a certain amount shall be let by contract and there has been great neglect by the Auditor General's Department if it has allowed a payment of this kind in direct violation of the statute.

Mr. PUGSLEY. I do not think my hon. friend is right in saying that this was a violation of the statute. I am free to say that if I had to do that work to-day and anticipated it would cost anything like what it has cost, I would feel that, if it were possible to anticipate the conditions, tenders should be called for and the work let by contract, but it was begun some five years ago and it was never anticipated that it would cost nearly as much as it has. It has been carried on from year to year and there have been breaks in the pipe.

Mr. J. HAGGART. If it was commenced five or six years ago the minister's responsibility is hereditary.

Mr. PUGSLEY. Yes, and of course the statute is not so imperative as my hon. friend intimates. There are cases in which the statute says work may be done by day's labour. I presume that at that time it was thought better to do it in that way.

Mr. J. HAGGART. Then we have a new interpretation of the Act by the minister that he is to decide whether work is to be done by tender or by day's labour. I never heard any doubt about the interpretation of the statute, unless the work is of such a character that it cannot be done by day's labour and then you get an order in council and state the emergency upon which the order was founded. There is no order in council in this case and no reason has been assigned here for doing it by day's labour.

Mr. FOSTER. This is a most suggestive item. This was simply a question of the laying of sufficient pipe from the water supply in the City of Carleton across to Partridge Island at no great distance. A certain quality and length of pipe was necessary and sufficient excavation was required to put it beneath the frost line so far as the mainland is concerned and a trench in which to lay it on the bottom of the harbour between the mainland and Partridge island. Once on Partridge is-

land and you have simply to distribute the water in small pipes to a number of buildings there.

Mr. PUGSLEY. All through rock of course.

Mr. FOSTER. For that service up to date $65,000 has been expended. There has been no tender, contract or estimate so far as this House has been made aware, there is no order in council authorizing the minister to pay out his money for construction by day's labour rather than by tender and contract, and yet very much more than $5,000 has been expended each year. The expenditures for the different years run $8,000, $21,000, $13,000, $8,000, $7,000 and now we have this vote of $6,200. Whether this is comprised in the $7,000 I do not know but it seems plain and clear that the minister has violated the law absolutely, that he and his predecessors have taken the matter absolutely into their own hands and have done just as they pleased directly in the face of a statute passed to regulate these matters. In each of these years they paid out more than $5,000 without order in council, the only way in which it could be legally done, even supposing the ground is sufficient to warrant that method. I think we must look further into this than we have. The minister incidentally remarked that they had a great deal of trouble with pipes bursting. Why, if reasonable care was taken, was it not possible to buy the proper kind of pipe and to lay it so that it would not burst the year it was laid down or the year after, or the first year it is put in operation? Ordinary care in the selection and laying of the pipe would surely prevent this kind of breakage. The work has been performed without tender or contract, absolutely in the teeth of the law.

Mr. PUGSLEY. My hon. friend will agree that the repairs would have to be done without tender as it was not possible to ascertain what the cost of the repairs would be.

Mr. FOSTER. No one would object to that.

Mr. PUGSLEY. I have no objection to any inquiry and I presume the Public Accounts Committee have had the past expenditures before them in different years.

Mr. CROCKET. From whom was the pipe purchased, and how much of this money was expended for labour and how much for material, and were tenders asked for the pipe and other materials?

Mr. PUGSLEY. I will have the information the next time we are in committee.

Mr. BLAIN. Is it a common practice for the departments to obtain orders in council from the government to construct public works, or is it rather a rare practice?

Mr. PUGSLEY. I do not know how it was under my predecessors. The present practice is as far as possible to call for tenders, but if there are cases in which, though the amount is over $5,000, it is considered by the engineer or the architect to be better in the public interest that the work should be done by day labour, a recommendation is made to council setting forth the peculiar circumstances, and if council approves, authority is obtained to proceed with the work. Those occasions are rare, because most of the work is tendered for.

Mr. BLAIN. Since the hon. gentleman has been in charge of the department, have any orders in council of that kind been obtained?

Mr. PUGSLEY. Yes, there have been some.

Mr. CROCKET. Does not the statute provide that in all cases, when the amount exceeds $5,000, tenders must be called for, except in cases of urgency?

Mr. PUGSLEY. No. It is not limited to cases of urgency. I think there are three provisions in the statute. If, in the opinion of the minister, and council concurs in that opinion, the work can be better done in the public interest by day labour than by contract, it may be so done.

St. John immigrant building—fitting up and furnishing Martello building for use as additional combined hospital and home, $2,000.

Mr. PUGSLEY. This is chiefly for hospital beds and other fittings adapted to hospitals.

Mr. CROCKET. Is this the first appropriation for that purpose?

Mr. PUGSLEY. This is the first special vote for it, but I am under the impression that there was something expended last year.

Mr. CROCKET. Will this pay the whole cost of furnishing, with what has been voted?

Mr. PUGSLEY. Yes.

Mr. CROCKET. What is the cost of the building itself?

Mr. PUGSLEY. We have not purchased the building. We rent it for $1,673.50 a year.

Mr. CROCKET. From whom was it rented?

Mr. PUGSLEY. The Messrs. Brannen. It used to be a large hotel, called the Martello hotel.

Grosse Isle quarantine station—disinfecting apparatus, including building, $1,800.

Mr. PUGSLEY. This is to complete the expenditure.

Mr. AMES. What system of disinfecting apparatus did you put in?

Mr. PUGSLEY. The French system called Dehâitre Laveuse Desinfecteuse.

Mr. AMES. Is it portable or stationary?

Mr. PUGSLEY. It is permanently installed. Then, we have a formaldehyde machine.

Mr. AMES. Is this imported?

Mr. PUGSLEY. It is a French machine, which we imported direct.

Mr. AMES. Were any commissions paid to any Canadian?

Mr. PUGSLEY. We imported it direct, without any payment to any intermediary.

Montreal—examining warehouse (old)—new roof, alterations to freight elevators, repairs, &c.—to provide for interest accrued at 5 per cent per annum on delayed payments of accounts rendered by Jos. Thibault for material supplied and work performed, $500.

Mr. AMES. Why was the account delayed?

Mr. PUGSLEY. A fire took place, and we had to make the repairs immediately, and we had not sufficient money available to pay the contractors.

Mr. AMES. Was not the government able to raise the necessary money to pay Jos. Thibault as he did the work?

Mr. PUGSLEY. Does not my hon. friend understand that I might have $10,000,000 available for different buildings, and if I owed $10 in respect to a particular building for which there was no appropriation, I could not pay it.

Mr. AMES. Then I understand that the minister ordered this work to be done when there was no money available?

Mr. PUGSLEY. The building was burned, and this work had to be done. We had some money available, but not enough.

Quebec citadel—Governer General's quarters — repairs, furniture, &c. — additional amount, $11,600.

Mr. PUGSLEY. This is the balance due for the alterations and additions which were made in view of the reception of His Royal Highness the Prince of Wales, during the Tercentenary celebration.

Mr. URIAH WILSON. How much did it cost altogether?

Mr. PUGSLEY. About $36,000.

Mr. SAM. HUGHES. Will the hon. minister give the items? I am not objecting to proper expenditure being made, but I do not see how $36,000 could have been expended. It looks as if this public function was taken advantage of, as such functions generally are, by a number of hangers-on for the purpose of spoils.

Mr. PUGSLEY. I think not in this case. I can give the items. Carpentering and plumbing, new extension next to the river for bath room and servant's quarters, $6,000; closing up opening between the governor's quarters and the officer's quarters, $75; repairing roof of His Excellency's bedroom, $50; new porch at front door, $300; new deck on the terrace, $850; changing location of wine cellar, $25; repairing windows and drawers, $100; bath room next to officers' quarters, $25; fitting room adjoining His Excellency's old room with bath, $275; drainage, $500. The question of drainage gave us a good deal of concern. We had to make it perfectly satisfactory in order to suit those who were looking after the arrangements for the reception of His Royal Highness. Painting windows and doors, $250; papering bedrooms, $100. I am reading the estimates of the chief architect, who went over every thing very carefully.

Mr. URIAH WILSON. Has the work not been done?

Mr. PUGSLEY. Yes.

Mr. URIAH WILSON. Why not give the actual accounts?

Mr. PUGSLEY. My hon. friend will see that where there was a contract let for a lot of different things, the contract will be for a lump sum, and I am giving the details so that the House may judge whether the amount was more than reasonable. Six bedrooms carpeted with 40 yards of carpet each, $660; carpeting front hall, $100; carpeting office, $100; carpeting drawing room, $300; curtaining six bedrooms, $300, and another six, $150; covering with chintz five sofas, one couch and six easy chairs, $225.

Mr. SAM HUGHES. What has become of all these couches and chairs?

Mr. PUGSLEY. They are all there. Furnishing four bedrooms with brass beds, new furniture, &c., at $500 each; writing table in His Excellency's study, $100; two writing tables in front office, $150; range and gas stove in still room, $120; chairs for dining room, $680; fitting up bathroom for His Royal Highness, and tiling it, $1,400; repairs to old furniture, $150; new windows, $150. Then we had to alter the stairs and the basement. Furnishing plate glass mirror, also some other plate glass, $1,275; graded plumbing, &c., $500; flooring under and over the latrines over the supper room, built in concrete, $350; hot

water heater, connections, &c., $200; cleaning stables, $100; fixing up the garage for automobiles, $500.

I explained that I was giving the estimates made by the chief architect, who went to Quebec and went over the ground as carefully as he could. The committee will bear in mind that the work had to be done somewhat hurriedly. We made contracts as far as we could, but some of the work could not be done by contract. The cost ran about $7,000 over what the chief architect had estimated—his estimate was $25,000 and it actually cost $32,000. There are other accounts in addition coming to $4,000, making the total expenditure about $36,000. I have not the data before me to show how much each of these items exceeded the estimate.

Mr. URIAH WILSON. I don't want any more.

Mr. FOSTER. Who had charge of the work ?

Mr. PUGSLEY. Mr. Hutchison, the clerk of works at Rideau Hall. He went down and devoted his personal attention to this work at Quebec.

Mr. EDWARDS. Did I understand that of this total $6,000 was for the extension of closets?

Mr. PUGSLEY. One of the items I gave was a new extension for bathrooms and servants quarters, $6,000. We called for tenders and the lowest tender received was $6,800 and the contract was let to the lowest tenderer.

Mr. BLAIN. How much of this $36,000 was spent under contract after public call for tenders.

Mr. PUGSLEY. My hon. friend will see that a large part of the expenditure was for furniture, and for that we did not publicly call for tenders. Mr. Hutchison was instructed to get prices from the different merchants and suppliers and to deal with those who gave the lowest prices.

Mr. J. D. REID. How is it that in all these cases of public works the cost exceeds the architect's estimates ? I have hardly ever heard of a public building, since I came into this House, but the cost exceeded by from 25 to 100 per cent the estimate of the architect. The effect of this kind of thing is to deceive the committee in the passing of these estimates. We are now voting money for buildings in different parts of the Dominion, and next year we shall find that the cost is greater than the architect's estimate. It seems to me that the architect of the department is liable to censure in having the minister state to us that a certain work can be done for a certain amount, and we find out, when it is too late, that the architect is wrong. I see it stated that the Minister of Public Works (Mr. Pugsley) himself is going to build an apartment building here. I am glad of it, for it is a necessary thing in Ottawa. But when the hon. gentleman gets an estimate from the architect, I think he will see to it that the work does not exceed that estimate, or somebody will be held responsible. There is something wrong in the department when an architect will thus underestimate expenditures. He should not be allowed to retain his position if he is going to make estimates which mislead the committee on every public work that is undertaken.

Mr. PUGSLEY. I hope the hon. gentleman (Mr. J. D. Reid) does not desire to do injustice to the chief architect, but certainly he has done him a grave injustice by the statement he has made. Does the hon. gentleman realize the force of what he has said? He says that in not a single instance has it been shown that the cost has not exceeded the estimate of the chief architect. He is entirely in error as to that.

Mr. J. D. REID. Name one case.

Mr. PUGSLEY. The hon. gentleman states that in this case the contract entered into exceeded the estimate by 25 per cent. The hon. gentleman is mistaken only to the extent of about 100 per cent. The estimate was $6,000; and had this been exceeded by 25 per cent, the cost would have been $7,500. As a matter of fact, it was $6,809.

Mr. J. D. REID. Did not I understand the minister to say that the total amount estimated for the work to be done was $25,000, and that the actual cost was $32,000?

Mr. PUGSLEY. That is taking everything.

Mr. J. D. REID. I take the whole contract.

Mr. PUGSLEY. Let me give another instance in which the hon. gentleman is astray. The chief architect's estimate of the cost of the Museum was $1,250,000. Tenders were publicly called for, and the lowest tender was $950,000, which was $300,000 less than the chief architect's estimate.

Mr. OSLER. That was as bad the other way.

Mr. PUGSLEY. The hon. gentleman (Mr. J. D. REID) says that the estimate is always lower than the cost; in this case it was $300,000 higher.

Mr. HUGHES. Is the Museum completed?

Mr. PUGSLEY. It is not completed, but the contractor is completing his contract under his tender of $950,000, and completing it, I may say, in a most satisfactory and creditable manner. Now during the past year I have had the curiosity to compare

the estimates of the chief architect with the lowest tenders which have been received from time to time, and I have been struck with the fact that in the majority of cases the estimate of the chief architect has been very close to the amount of the lowest tender, or it has been a little above the lowest tender. If my hon. friend is a member of the Public Accounts Committee, and if he will look at the contracts entered into during the past year, he will be surprised, and I think he will feel like withdrawing the imputation he has made upon the competency of the chief architect.

Mr. J. D. REID. I do not withdraw one word I have said. I have been here for a number of years, and I have never yet known an instance where the minister came down with an estimate of a certain amount for a public building, that it has not been exceeded. Take this museum. Will the minister state how much has been paid out on that contract? He states now that the contract was given for less than the amount estimated by the architect.

Mr. PUGSLEY. The amount paid out upon the contract has been on progress estimates, retaining 10 per cent, and when the work is finished it will be done for the $950,000.

Mr. J. D. REID. No extras?

Mr. PUGSLEY. No extras that I am aware of. Taking the work for which the chief architect made his estimate, and on which he called for tenders, the contract is being completed by Mr. Goodwin for $950,000. I do not say, mind you, that $950,000 is not very much less than the work is likely to cost, because the next tenderer was some $300,000 or $350,000 above Mr. Goodwin's, which was very close to the chief architect's estimate. But Mr. Goodwin is finishing his work under his contract.

Mr. J. D. REID. When a government building like this museum is to be erected, the architect should be able to give an estimate including everything that is to be done in connection with the building, so that when the contractor hands it over, it will be completed without any extras whatever. But in every single case, in order to let the contractor out, in order that there may be unfair profits, there are extras added, and although the estimate made by the architect is said to include every thing, in every single case the work costs more than the original estimate. This museum that the minister says will not cost more than $950,000——

Mr. PUGSLEY. For the building?

Mr. J. D. REID. Whatever was to be done to that museum. As I understand it, when the plans were made out the estimate thereon meant that it should complete the building, everything that would be required. Yet we will see when the whole work is completed whether the words of the minister will turn out to be correct. I venture to say that when the whole work is completed, and the final statement is in the Auditor General's Report, we will find it will cost very much more. It is stated there will be extras, and so on. Surely, when a man is making out an estimate for a public building it should include everything. Why should there be extras to the amount of 25 per cent or 50 per cent more on every building that is being erected for the government? Will the minister mention one single building erected for the government where there were not extras, and where the people had not to pay more than they should for the building? No private individual would think of giving a contract for any building, with the expectation of extras coming in such as come in here in every single instance I do not take back one word of what I said before. Not only in the Public Works Department, but in every other department, these enormous extras are added to the original estimate. I say it is deceiving the committee, it is deceiving the members of this House, for any minister to come here and state that a certain work is going to cost a certain amount, and then afterwards tell us that there are some unforeseen expenses, or some extras have to be added, by which the estimated cost has been exceeded 25, 50 or 100 per cent. I claim that a minister should compel his architect to state what that building is going to cost, and if he does not know his business well enough to make plans and specifications for everything that will be required in that building so that there will be no extras, he is not fit to occupy his position.

Mr. PUGSLEY. The hon. gentleman is now shifting his ground. The hon. gentleman was finding fault before with the chief architect because he was astray in his estimates, evidently implying that he was not capable of estimating what would be the cost of the building. Now what the hon. gentleman says is that all these things in addition to the building, such as heating, plumbing, electrical wiring and lighting, should be included in the chief architect's estimate.

Mr. J. D. REID. I never said that.

Mr. PUGSLEY. Yes, what the hon. gentleman now says is that we often find that when these things come in afterwards they add to the cost of the building as originally given. That would not reflect at all on the chief architect, that is a matter

that must depend on the judgment of the minister and the policy of the department. If the minister tells the chief architect to prepare his plans and specifications in the first instance in such a way that the tenders should include everything, should include the heating, should include the electrical wiring, should include the lighting, and all the fixtures of every kind and description, then the chief architect would follow out those directions and he would ask for tenders accordingly. I may say to my hon. friend that in my opinion, so far as possible, it is desirable that that should be done, and since I have been minister, after consulting with my deputy, I have decided that in future, as I have done already in a number of cases, everything shall be included, so far as possible ; the contract shall include all these various things in connection with the building, in order that when it is taken off the hands of the contractor, the heating, plumbing, wiring, fittings and so forth shall be completed as well. In the case of the museum, my hon. friend is entirely wrong in saying that the cost will be different from what was estimated by the chief architect. His estimate was that the building just as it is now being constructed by the contractor under his contract, would cost $1,250,000.

Mr. J. D. REID. Are there any extras?

Mr. PUGSLEY. What does my hon. friend mean? Does he mean heating, electrical wiring, fixtures?

Mr. J. D. REID. No, I mean the original contract for the building. Have there been any extras added to that?

Mr. PUGSLEY No, there have been no alterations in the original contract, no extras in that sense. There may be other work to be done, there will be other work to be done, there will be electrical wiring, perhaps some drains to be dug, plumbing work which must be included. But there will be no extras in the sense in which they are ordinarily understood as between the contractor and the owner, where the contract has been altered, or things have been forgotten and extra work has to be done. If the contract does not call for heating, electric wiring, electric fixtures or gas fixtures and they are to be provided afterwards I would not call those things extras. I would call an extra something that we are supposed to include and provide for in the contract but which has not been provided for in the contract and which it is afterwards found necessary to provided for. You should no more call electric wiring, heating and plumbing extras than to call furniture that you afterwards put into your house an extra. If you have not provided for it in the contract it is not an extra at all in the sense that my hon. friend has spoken of it.

Mr. J. D. REID. When we have had different estimates going through this House in the past we have been told that the amount that was estimated for included wiring, heating and so on, and in the end it turned out that it would not include these things.

Mr. PUGSLEY. My hon. friend is wrong in that.

Mr. J. D. REID. There are instances that I can turn up.

Mr. PUGSLEY. I do not think my hon. friend can.

Mr. J. D. REID. We will take this case of the museum. If it was not intended that wiring and heating should be included I would not consider them to be extras, but even with respect to an original contract we have had extras added and the cost has turned out to be twenty-five to fifty per cent more than the original estimate. Of course, we do not know anything about the museum just now, but next year we will have it up because then the building will be completed. I am glad to have had this discussion.

Mr. PUGSLEY. I am glad my hon. friend is not always unreasonable.

Mr. J. D. REID. I do not want to be unreasonable. My hon. friend states that this building will only cost the amount of the contract $900,000 odd.

Mr. PUGSLEY. That is what is contracted for.

Mr. J. D. REID. The minister states that there will be no extras beyond the contract. Next year we will see whether there have been any extras. There are usually some changes made, but in this case the minister states that there have been no changes whatever and that there will be no extras whatever on that building; in fact that there will be nothing to pay over and above the amount of the original contract, $900,000, except for the wiring and heating ?

Mr. PUGSLEY. I did not say that. I said there would be nothing extra to pay for the work that is provided for in the contract. There has been a change made in the tower but that had the effect of reducing the cost instead of increasing it. Do not let my hon. friend misunderstand me. In so far as the plan and specifications call for the work to be done I am not aware that there will be any addition to the cost.

Mr. J. D. REID. Have there been any changes in the original plans for the museum which will entail any extras when the work is finally completed?

Mr. PUGSLEY. None.

Mr. J. D. REID. Well, that bears out what I have stated. When the final statements are submitted and paid by the Auditor General there will not be anything more paid than what the contract calls for?

Mr. PUGSLEY. That is on the contract, but do not let my hon. friend say that the making of drains and the putting in of electric lighting are included in the contract.

Mr. J. D. REID. Drains and so on are outside of the contract, but what the minister states now is that there have been no changes made in the original plan or in the contract?

Mr. PUGSLEY. That will add to the cost.

Mr. J. D. REID. There have been no changes in the plan and no extras added to the museum; so that we will understand that when the final accounts are paid there will be no extras whatever charged against that building unless it be for wiring, heating, drains or something out of the building altogether.

Mr. PUGSLEY. Outside of the contract?

Mr. J. D. REID. No, outside of the building; never mind the contract.

Mr. PUGSLEY. Is the hon. gentleman making the statement or am I?

Mr. J. D. REID. You are.

Mr. PUGSLEY. The information I have from the chief architect is that there have been no changes made in the contract which will in any way add to the cost, but I do not consider that the work which has been done outside of the contract comes within the category of my hon. friend.

Mr. BARR. Is the original contractor doing the wiring and plumbing or is that work let to another?

Mr. PUGSLEY. The plumbing is in the contract.

Mr. BARR. But the electrical wiring is not?

Mr. PUGSLEY. No.

Mr. BARR. Would not that have to be done before the plastering is done?

Mr. PUGSLEY. Yes it will be.

Mr. BARR. Then the contract is not let yet?

Mr. PUGSLEY. No.

Mr. J. D. REID. As far as I understand it, the contract included the plastering, plumbing, and everything complete except the electrical wiring and heating. Am I right in that, or does it include the electrical wiring?

Mr. PUGSLEY.

Mr. DEPUTY SPEAKER. I am afraid I must interrupt the hon. member (Mr. J. D. Reid). The item before the committee is the item of the Quebec citadel The museum may be referred to as a matter of illustration but a long or detailed discussion about it would not be in order.

Mr. PUGSLEY. I would be glad to answer my hon. friend if you will allow me, Mr. Chairman. The contract includes the erection of the building, painting, plastering, plumbing and everything except electric wiring, heating, fitting and furniture. There may be decorations which would be in addition. Carving, if there is to be any, would be an addition.

Mr. J. D. REID. I think the chairman is right in his ruling as far as the discussing of this item is concerned, but when these estimates are going through at different times there is always an understanding that some item shall be left on which we can discuss other items. If we are to be held down to the rule so that we cannot discuss anything but the item that is submitted at the time I think we had better have an understanding and then the items can be allowed to stand. The minister was kind enough, when these items were going through the other night to state that we could discuss any item on another item that was reserved. I submit now that if you hold us down to this rule it will make it rather awkward if we allow the item to go through upon such an understanding.

Mr. PUGSLEY. I think perhaps that what took place was that my hon. friend wished to discuss the rents of the buildings in Ottawa and also the accounts for telephones. It was understood that he might discuss those. But my hon. friend will see that it would be somewhat inconvenient if, on a discussion of items in the supplementary estimates, my hon. friend should enter upon a general discussion of some other building in regard to which there is nothing in these estimates, and in respect to which I would not, of course, have any information to render to the committee. But, I will be very glad indeed to give any information on any building that my hon. friend wants if he will give me notice. I am prepared to give any information in regard to telephones and rents.

Mr. J. D. REID. I admit that the minister is right, but in this particular case I think the minister will admit that it was he who introduced this museum, that it was not I and that therefore I am not responsible for it.

Mr. PUGSLEY. I introduced it as an illustration.

Mr. J. D. REID. The Chairman was calling me to order because I was discussing the museum. The minister should

be called to order for introducing it and not me.

Mr. PUGSLEY. It is all right now.

Quebec immigration detention hospital in Savard Park, for patients suffering from trachoma and kindred diseases—to provide for balance due on contract for building sewers, fencing, sidewalks, &c., $2,400.

Mr. PUGSLEY. That is to pay the balance due on the work specified in the item. The work is being done by Jinchereau & Lamonde, the lowest tenderers.

Mr. AMES. What is the amount of the contract?

Mr. PUGSLEY. $55,850.

Mr. J. D. REID. How many tenders were received?

Mr. PUGSLEY. I have not a memorandum of the number of tenders.

Mr. AMES. What was to be done for the $55,850?

Mr. PUGSLEY. The building is two storeys high, of brick, with a stone basement, 147 feet long by 57 feet broad, exclusive of the verandahs, which are 10 feet in width, one extending the full length of the building in front, and the full length of one end. The verandahs are two storeys in height. There is a projection from the main verandah 19 feet by 10 feet. The basement extends under the verandah which is supported on stone foundations. The basement floor contains dining room, kitchen, laundry, fuel and furnace room and store room. The ground floor contains wards, living rooms, bathroom, &c., and on the first floor there are wards, living apartments, laboratories, operating room, &c. The materials throughout the building are mostly fireproof.

Mr. PERLEY. Will this complete the work?

Mr. PUGSLEY. Yes.

Mr. PERLEY. What will that make the total cost?

Mr. PUGSLEY. Including the site it would be about $87,000.

Mr. PERLEY. The minister said the contract was $55,850. What is the balance made up of?

Mr. PERLEY. The Savard property was bought for $14,000 and some additional land for $5,000. If you add the heating, &c., and some additional work in connection with operating room, &c., and some sewer pipes, costing $3,718, I think it will run up pretty well to the amount named.

Mr. AMES. Were there any extras in the contract for the $55,850.

Mr. PUGSLEY. The chief architect says not so far as he remembers.

Mr. AMES. What was the original estimate for this building?

Mr. PUGSLEY. I would naturally not have that information with me to-day as the building is completed, and this is to pay the balance. The estimate would appear in the memorandum of two or three years ago but I shall get the information.

Mr. J. D. REID. The item might stand until we learn what the original estimate of the architect was. This is a good illustration of the point I brought up.

Mr. PUGSLEY. It is a good illustration of my contention. The contract was for $55,850. That did not include the heating apparatus, hospital beds, certain sewer pipes that had to be provided, and certain work in connection with the fitting up of the operating room.

Mr. J. D. REID. The minister has not stated the original estimate.

Mr. PUGSLEY. No, because I have not that here. That, of course, would be presented on the first vote for an appropriation for the building.

Sherbrooke drill hall—amount due for contract and additional works, $42,000.

Mr. PUGSLEY. We did not anticipate last year that the contractors would proceed so rapidly with their work. They have got along much more rapidly than we anticipated and this amount is necessary if we are to pay them before the close of the present fiscal year. I anticipated last year, from the best information I could get from the chief architect, that we would not require this money until next year but they have gone on much more rapidly than we expected.

Mr. AMES. How much of this is due for the contract and how much for additional work.

Mr. PUGSLEY. This is all due the contractor. The reason it says in the item 'for additional works' is that the vote is taken in that way until the building is completed.

Mr. AMES. What additional work do you expect to have outside the contract?

Mr. PUGSLEY. There will be heating and boilers, electrical wiring and fittings, furniture, sidewalks and fencing.

Mr. AMES. How much of the $42,000 is required for the contract and how much for additional work?

Mr. PUGSLEY. The whole amount for the contract.

Mr. AMES. The contractor may do additional work.

Mr. PUGSLEY. He may, of course.

Mr. AMES. How much of this is required on the contract?

Mr. PUGSLEY. This is on the main contract, the $42,000.

Mr. AMES. The minister said it was due for the contract and additional works. How much is for the contract and how much for additional work?

Mr. PUGSLEY. I said this is the way we are taking the vote so the vote will appear that way until the building is finally completed, and out of that we could take an amount for heating but I do not intend to do that out of this vote; we intend to pay this entirely to the contractor on account of his contract for the building.

Mr. AMES. What is the amount of his contract?

Mr. PUGSLEY. $82,500.

Mr. AMES. How much has already been paid on it?

Mr. PUGSLEY. $18,960.

Mr. AMES. Then this $42,000 will not complete the contract?

Mr. PUGSLEY. No.

Mr. AMES. The minister expects that all this $42,000 will go to the contractor for the work he has already under contract?

Mr. PUGSLEY. Yes.

Mr. EDWARDS. The contract calls for $82,000 and the minister is asking for $87,000 this year, besides which he got $20,000 last year.

Mr. PUGSLEY. The total probable cost is $112,658.17.

Mr. FOSTER. That leaves about $30,000 to make up. What is that for?

Mr. PUGSLEY. The difference is for heating and boilers, electric wiring, fittings and furnishings, sidewalks and fences, contingencies and superintendence, the site, legal expenses, printing, advertising, &c.

Kingston artillery park — new gun-shed, $1,200.

Mr. PUGSLEY. This is to complete the work.

Mr. EDWARDS. What is the character of that building?

Mr. PUGSLEY. It is a one-story wooden building, 111 feet long by 32 feet wide, covered by galvanized iron shingles, and the front and end walls covered with galvanized iron clap-boards underlaid with resinous paper. The lowest tender was $3,475 and the contingencies were $225, making the total probable cost $3,700. We had an appropriation for the current year of $2,500, leaving a balance of $1,300.

Strathcona public building — additional amount, $5,600.

Mr. PUGSLEY. This is to complete the payment for the site.

Mr. AMES. What was the total cost of the site?

Mr. PUGSLEY. $10,500.

Mr. AMES. From whom was it purchased?

Mr. PUGSLEY. Dr. S. Archibald.

Mr. AMES. Was he the agent or the owner?

Mr. PUGSLEY. The owner.

Nanaimo public building—fittings, &c., $500.

Mr. PUGSLEY. This is for fittings, post office boxes and grills.

Mr. AMES. Are the fittings for these buildings in the west all bought from the Office Specialty Company in Ottawa? I notice that nearly all the post offices in the west are fitted up by this company. Has the government not a general contract with that company under which fittings are provided?

Mr. PUGSLEY. There are two concerns in the business in Canada and we ask for prices from both of them, and let the contract to the lowest tenderer.

Dawson—Yukon commissioner's residence, $4,200.

This is to complete the payments.

Mr. FOSTER. What is being done there?

Mr. PUGSLEY. My hon. friend will perhaps remember that the governor's residence was practically destroyed by fire and we have rebuilt it. The estimated cost of taking down the damaged portion of the building and rebuilding the same was $21,929; furnishings, $10,000; heating, plumbing and electric wiring, $8,000; contingencies $3,271; making a total of $43,200. We have had appropriations of $38,999.21, and require $4,200.79 to pay the balance.

Mr. FOSTER. What is the size of the house?

Mr. PUGSLEY. It was erected eight years ago. It is a two story building, 55 x 50, with an L to it. It is finished in British Columbia fir, heated with hot air and lighted with electricity.

Mr. FOSTER. How does the hon. minister manage to bestow $11,000 worth of furniture?

Mr. PUGSLEY. It may be cut down somewhat. It is bought in Victoria and

Vancouver, and the freight charges are very heavy. That is the estimate of Mr. Bertrand, who is our agent at Dawson.

Mr. FOSTER. $10,000 on furniture is a pretty big item for a moderate residence.

Mr. PUGSLEY. It is the official residence of the governor, and I am inclined to think that if my hon. friend were in Dawson, and began to get in furniture for a good sized dwelling, suitable for Government House, it would take him the greater part of $10,000.

Mr. SAM HUGHES. What is the population of the Yukon, including the Indians —about 3,500 is it not?

Mr. PUGSLEY. I do not know.

Ottawa public buildings—repairs, including ventilation and lighting, furniture, &c.—additional amount, $20,000.

Mr. PUGSLEY. This is to make additional provision for the wages of the clerk of works, mechanical engineers' staff engaged in remodelling the plumbing, improvement of ventilation, also for repairs and other supplies.

Mr. FOSTER. What is the total appropriation?

Mr. PUGSLEY. $175,000. The total expenditure up to the 24th March, was $163,412.18. Then there is additional expenditure for the balance of the month, clerk of works staff, $4,000; mechanical engineers, $2,000; outstanding accounts, $19,700; purchase of materials, lumber, paints, oil, glass, &c., and such ready-made furniture as cannot be constructed in government work shops, $5,879.36; probable requirements to end the fiscal year, $195,000.

Mr. FOSTER. What kind of staff has the hon. gentleman?

Mr. PUGSLEY. My information is that we could not get along very well with less. The chief architect is the head in charge of the work, but we have a superintendent of buildings, Mr. Shearer, who is a very competent and careful man. He is very careful with regard to applications for increases of salaries, and with regard to taking on additional men. I really think his staff is not larger than necessary, and the salaries are very moderate.

Mr. FOSTER. How many men?

Mr. PUGSLEY. About 230. This takes in not only these buildings but all the departments.

Ottawa public buildings, grounds—additional amount, $4,000.

Mr. FOSTER. What does this make for grounds altogether?

Mr. PUGSLEY. I am afraid I cannot give the details as fully as I would like because I got rather short notice to get ready the information as to these supplementaries. So far as the $4,000 is concerned, there are unpaid accounts, $1,086, of which I have the details, running from $1.45 up to $678. Wages for February and March, $450; tools, repairs, &c., $215.40 ; pay-lists which the accountant has already paid, $2,048.

Mr. FOSTER. How are the grounds taken care of—by contract?

Mr. PUGSLEY. By day's work under a foreman.

Mr. FOSTER. Who has the supervision of the men?

Mr. PUGSLEY. Mr. Shearer is in charge and there is a foreman under him.

Mr. FOSTER. Is it part of Mr. Shearer's work to go around occasionally and see that the men are doing their work?

Mr. PUGSLEY. Yes, he has the superintendence of all the men.

Mr. FOSTER. Has his attention been called to the artistic work being done in the vicinity of the front entrance to the pathway up to the buildings?

Mr. PUGSLEY. Does my hon. friend mean opening the ditches?

Ottawa public buildings—heating, including salaries of engineers, firemen and watchmen—additional amount, $10,000.

Mr. PUGSLEY. The vote required was $10,000. Probable estimated expenditure: wages, $5,100 per month, for two months, $10,200; gas for heating, &c., at $400 per month, for two months, $800; paid Heney & Co. for fuel, February and March, $17,-500.

Mr. FOSTER. Was that by contract?

Mr. PUGSLEY. Yes, after public tender. Making a total of $28,500, less the balance of February 10, of $18,400, leaving $10,-000 to be provided.

Ottawa public buildings—gas and electric light, including roads and bridges—additional amount, $17,000.

Mr. PUGSLEY. The total amount required is $53,000 to the end of the month. The vote was $36,000. The accounts of the Ottawa Electric Company on hand, $7,314. Then for the quarter ending March 31, $7,300; lighting the Imperial Realty Company building to 31st March, $2,500; lighting roads and bridges, balance of six months, $910. Total, $18,024.

Mr. FOSTER. Does that include rent?

Mr. PUGSLEY. No.

Mr. FOSTER. What are the arrangements for lighting?

Mr. PUGSLEY. We pay a flat rate of $2.25 per lamp up to three thousand lamps, and $2 over that.

Mr. FOSTER. What is a lamp?

Mr. PUGSLEY. Sixteen candle power.

Mr. FOSTER. How do you get at that basis?

Mr. PUGSLEY. After investigation of the charges ordinarily made by electric companies. I think the rate is a reasonable one. We have about 16,000 lights altogether.

Mr. FOSTER. Has the minister paid any personal attention to the distribution of lights? Is it possible we are uneconomical in the number used?

Mr. PUGSLEY. I had occasion to inquire into the considerations which led us to make the present arrangement, and satisfy myself that the arrangement was a reasonable one. The details, of course, we must leave to our electricians, who are faithful and responsible men.

Mr. FOSTER. Who is the head of the service?

Mr. PUGSLEY. Mr. Johnston is the chief electrician.

Mr. FOSTER. Does he see to it that useless lights are not used?

Mr. PUGSLEY. Yes, he reports on every application for lights.

Mr. FOSTER. How many lights are kept burning on the average?

Mr. PUGSLEY. It would be difficult to tell that; lights burned in an office to-day would not be burned to-morrow.

Mr. FOSTER. When the winter is over, I suppose that many lamps are not used all summer long. Is $2.25 paid for every lamp that swings?

Mr. PUGSLEY. Yes. Of course, the hon. gentleman (Mr. Foster) will understand that if a lamp were kept burning winter and summer on a meter rate, it would cost much more than $2 a year.

Mr. FOSTER. It would be interesting to know how many lamps are burned eight hours a day, how many six hours a day and so on. It must be that many of them do not cost much to the contractor. Possibly you may be paying a very high rate for the light you are consuming.

Mr. PUGSLEY. It is a matter for careful calculation by the electrician. I have no doubt that the matter was very carefully gone into when the arrangement was made.

Mr. FOSTER. It is possible that, having made your contract, the thing is considered done—you are going it blind, as it were. But it seems to me that a man, if this were his own business, would have somebody keep pretty sharp tab on it all to find out, as nearly as he could, the power he was using, and he would revise his contract if he thought he was paying too much. Of course, he might find that he was not paying too much, and so let it run. Is the minister taking any means of checking this business, so as to have information for his own guidance and for the use of this committee? If not, I would advise him to ask his officers—he has plenty of them; some are overworked, but some are not, and he could easily choose those who would not be overburdened with the duty— to make adequate investigation of this business and furnish him with information, which, I am sure, he would like to have and which, possibly, the House may ask for.

Mr. PUGSLEY. I am told that there is a report. There is no doubt that it would be an advantage to have the electrician go into the matter carefully from time to time and see how we are faring. I will have the report brought down and laid on the table at a convenient time.

Ottawa public buildings—elevators, attendants, additional amount, $3,800.

Mr. FOSTER. How many elevator attendants have we?

Mr. PUGSLEY. Thirty.

Mr. FOSTER. That is in all the buildings? And how many elevators?

Mr. PUGSLEY. Twenty.

Mr. FOSTER. What length of service do these attendants give each day?

Mr. PUGSLEY. In the departmental buildings, ordinarily, from 9 a.m. to 5 p.m. In the House of Commons, from 7.30 a.m. to all hours of the night.

Mr. FOSTER. Are they paid by the year?

Mr. PUGSLEY. They are paid a monthly wage.

Mr. FOSTER. What pay is given them during the recess when the elevators are not being used ?

Mr. PUGSLEY. We only keep one during the recess.

Mr. FOSTER. What do you pay them?

Mr. PUGSLEY. One is paid $65, one $60, and 27 of them $55 each per month.

Mr. FOSTER. Thirty days a month?

Mr. PUGSLEY. That is by the month.

Mr. FOSTER. It is prety monotonous work, pretty hard work. These elevator attendants ought to have a fair renumeration.

Mr. PUGSLEY. What does my hon. friend think would be about the rate?

Mr. FOSTER. I would not like to do it for any rate. There is nothing very interesting about it, going up and down a shaft.

Mr. PUGSLEY. I may say that in some cases the elevators work later than 5 o'clock. In the Privy Council building, when Council is meeting, the elevator man has to remain until 6 o'clock.

Mr. FOSTER. I think the government would not err if they paid their elevator men a fair wage.

Ottawa public buildings—telephone service —additional amount, $2,850.

Mr. FOSTER. I would like some information about the system on which telephones are furnished.

Mr. PUGSLEY. We had this subject under discusion when an item was up in the main estimates, and the hon. member for Grenville (Mr. Reid) thought that the charge for residences, $35, was too much. In consequence of that remark I have made inquiry, and I find that in Ottawa the charge for private residences is $25 and for business houses and offices, $45 per year. Some years ago an arrangement was made between the government and the telephone company under which there would be one rate of $35 for residences and offices both. Of course, in the case of residences as well as offices, if there is an extra telephone such as a desk telephone, or a wall extension, there is an extra charge. I took pains to make a calculation in respect to all the office and residence telephones, and to compare the total charge at $25 and $45 with what we are paying under a flat rate of $35 all round, and I find we are effecting a saving by the present arrangement of a litle over $1,600 a year. On the 13th February we had 282 office telephones and 120 residence telephones, or a total of 402. There were some extra phones in the House of Commons, costing $235. But the total cost at a flat rate of $35 for office and residence telephones, is $16,564.25. On the subject of telephones, I have a letter from the manager of the telephone company which I think it is only right to read to the committee, and which is written in consequence of the remarks made by the hon. member for Grenville when the item of telephone service was last before the committee:

Ottawa, Feb. 26, 1909.

D. H. Keeley, Esq.,
Gen. Supt. Govt. Telegraphs,
Dept. of Public Works, Ottawa.

Dear Sir,—I learned this morning that the question of the rates charged for government telephone service at Ottawa has been questioned in the House of Commons. While you, of course, have all the particulars, it may be that an explanation from the company would be convenient for the department.

The regular rates charged at Ottawa for ordinary telephones and service is $45 for business and $25 for residence inside the city limits, on one year contracts. By an arrangement dating from the time of the late Mr. Gisborne the government pays on the basis of $35 a year for all telephones whether business or residence, and reserves the right to cancel any individual telephone at any time, even within a few days of the date of installation. You will see that this rate is $10 lower on business telephones and $10 higher on residence telephones than the ordinary charge, and as the government has in use more office than residence telephones, the average charge is lower than would be the case if the regular city rates were paid. Any variation from this $35 rate is because of additional or desk equipment, or on account of extra mileage outside the city limits, which is charged for at the usual extra mileage rates.

I think this explanation should correct any misapprehension existing in the minds of hon. members of the House of Commons.

Yours truly,
J. MACPHERSON,
Local Manager.

Mr. FOSTER. When was the $35 arrangement entered into?

Mr. PUGSLEY. About 15 or 20 years ago.

Mr. FOSTER. What diminution in the price of the house and office phones has taken place in the city within that time?

Mr. PUGSLEY. I do not think there has been any diminution.

Mr. LENNOX. Does the minister know what the rate is with reference to a longer contract than one year? That letter mentions a yearly contract.

Mr. PUGSLEY. I think there is no difference in the rate.

Mr. LENNOX. He specifically mentions a contract for a year.

Mr. PUGSLEY. He says the government can terminate at any time, while an ordinary customer must pay by the year.

Mr. FOSTER. I have an impression that the rates for the city in the last 15 years have diminished—the minister can easily get the information. But if that be true, there ought to be an equitable and proportional diminution in the $35 rate. The company was doing business with an excellent customer, to whom they now furnish over 300 phones. If, 15 years ago, they gave that as a fair rate, and if at that time business and residence phones were higher in the city, it is only fair that they should make a proportional reduction in the present rate. The minister might look into that and see. Any way, the government is an excellent and very large cus-

tomer, there is no competition in the business, and I think the company should take the general rule of business into account that the larger the customer the greater the consideration they show in the wares they have to sell. On the other hand, what is the rule upon which these phones are distributed? There are a great many of them, and I have information which leads me to think that there are a good many which can hardly be justified. What class of officials get phones?

Mr. PUGSLEY. Answering my hon. friend's first remark, I will make inquiry as to whether there has been any change in the rates. But to-day, taking business phones at $45 and residence phones at $25, if we paid that rate, we would be paying $1,600 per year more than we do at present on the $35 rate all round.

Mr. FOSTER. My point was in regard to the proportional diminution if there has been any.

Mr. PUGSLEY. In regard to our getting a reduced rate because we are having a good many telephones, I doubt very much if we could get the telephone company to do that, because private individuals would at once complain. They would say: You are only charging the government a certain rate per year and you are charging us $5 or $10 per year more as the case might be.

Mr. FOSTER. They might say that now.

Mr. PUGSLEY. No, they cannot say that now because it is a flat rate that we pay for offices and residences.

Mr. FOSTER. You said that you got them for $1,600 less?

Mr. PUGSLEY. Yes, that may be.

Mr. BOYCE. You are getting a compromise rate between the residence and office rate?

Mr. PUGSLEY. Yes. I might say something as to the reasons for installing these telephones. It goes without saying that telephones will be put into the offices of the ministers, the deputy ministers and the various officials who would be required to be communicated with by telephone. I suppose that the hon. gentleman would rather have me say a word as to residence telephones?

Mr. FOSTER. Yes, as to whether the number is required.

Mr. PUGSLEY. We do not install a telephone in any office unless there is a requisition endorsed by the minister of the department. I am asking in all cases that a requisition from any department shall be in the form of a request from the minister for a telephone. I think that is only right. The minister would know whether it is reasonable that there should be a telephone placed in such and such an office, and he endorses his approval on the requisition. With regard to residences, it is the same way. We have telephones in the residences of the ministers, of the deputy ministers, of the chief officials of the departments, of the secretaries of the departments, and in some cases of one of the messengers of a department. We have thought it was not unreasonable to put a telephone in the residene of the chief messenger who might be called up from time to time by his minister or some one connected with the department. I think, in a general way, that is the principle upon which we have gone.

Mr. FOSTER. Is there only one messenger's telephone?

Mr. PUGSLEY. I do not know whether there is more than one messenger in the department who has a telephone in his residence.

Mr. FOSTER. You mean the chief messenger in each department?

Mr. PUGSLEY. Not the chief messenger, but the messenger who might be chosen by the minister.

Mr. FOSTER. One from each department?

Mr. PUGSLEY. They do not all have them. It is only in very rare cases that there are telephones in the messenger's residence. I have a list which I will send over to the hon. gentleman.

Mr. GEO. GORDON. It was claimed that the government pay as high as $50 for some telephones.

Mr. PUGSLEY. A desk extension is $15 additional.

Mr. FOSTER. Is the minister sure that in some of the rooms they do not have three telephones where one may do?

Mr. PUGSLEY. I cannot think that is the case. I have had no such case brought to my notice, and in looking over the list it would not appear that such is the case. I may say that I have had requests for telephones which I have refused.

Mr. FOSTER. I have no doubt of that.

Mr. BLAIN. I see a good many telephones in the Public Works Department down at $55 apiece.

Mr. PUGSLEY. There might be two extensions. There is a desk telephone in my own office and a desk telephone and an extension would make $55.

Rideau Hall, including grounds—improvements, furniture and maintenance—additional amount, $4,000.

Mr. PUGSLEY. In the estimates of last year there was $35,000. There are unpaid accounts, as per the list which I have here, running from $9 up to $469, amounting altogether to $1,397.60. Then there are for linen, $666.24, wages for February and March, $2,500, and contingencies $439.35. We have a balance on hand of $1,199. This leaves a balance of $3,801 which we require to close up the accounts to March 31.

Mr. FOSTER. What will be the total expenditure on Rideau Hall to March 31?

Mr. PUGSLEY. That will make the total nearly $39,000.

Mr. FOSTER. Any extraordinary improvements included in that?

Mr. PUGSLEY. No.

Mr. FOSTER. Any addition or improvements to Government house itself?

Mr. PUGSLEY. No, just the grounds.

Mr. FOSTER. No new furniture?

Mr. PUGSLEY. Yes, there would be some dry goods, linen, curtains and glassware, but the main part of it was for improvements and maintenance. The principal part of it is for salaries, $17,000; that would be for general work about the grounds. Then we paid a little over $7,500 for dry goods, linen, curtains, glassware, crockery and kitchen ware, $1,396 for lumber, $842 for furniture, flags, and cleaning carpets and $1,698 for plants, bulbs, trees, &c.

Mr. FOSTER. $17,000 for labour?

Mr. PUGSLEY. Yes.

Mr. FOSTER. For taking care of the grounds?

Mr. PUGSLEY. For taking care of the grounds, including the salary of clerk of works, the conservatories, &c.

Dominion public buildings—heating—additional amount, $23,000.

Mr. PUGSLEY. The expenditure from April 1 to December 15, 1908, was $79,500. There are contracts for coal not paid, amounting to $33,500, making a total of $113,000. There was a vote in the estimates last year of $90,000, leaving a balance of $23,000 which we are now asking for?

Arisaig harbour—repairs to wharf and breakwater, $500.

Mr. JAMESON. What is the nature of that item?

Mr. PUGSLEY. This is to complete the payments according to the pay-lists and accounts not covered in the vote of $1,500 in the main estimates. I had that reduced to $1,100, stating that we would make a payment out of supplementaries for the current year.

Bailey's Brook—harbour improvements, $700.

Mr. PUGSLEY. This is a balance. It is for reconstructing and extending the brushwork on the east side of the harbour.

Mr. JAMESON. Does that complete the contemplated improvements?

Mr. PUGSLEY. Yes, it will complete the present extension.

Glace Bay harbour—assistance towards harbour improvements, $900.

Mr. PUGSLEY. This is to pay the balance.

Grand Etang—partial reconstruction of channel protection works, $3,300.

Mr. PUGSLEY I gave the particulars of this the other night to the hon. member for St. Antoine Division.

Little River harbour wharf—additional amount, $200.

Mr. PUGSLEY. This is to close up the year.

Mr. JAMESON. Is this in Digby?

Mr. PUGSLEY. It is in Yarmouth.

Mr. JAMESON. There is a Little River in Digby for which $2,500 was in the estimate last year.

Mr. PUGSLEY. That is not here.

Mr. JAMESON. Was that omitted from the estimates because Digby returned a Conservative instead of a Liberal?

Mr. PUGSLEY. What does the hon. gentleman himself think?

Mr. JAMESON. I am not replying to but asking questions.

Mr. FOSTER. It is your thinker he wants to work.

Mr. PUGSLEY. I have not thought of that at all.

Mr. BOYCE. It is a question of extreme delicacy.

Portuguese Cove breakwater—strengthening structure, $2,000.

Mr. PUGSLEY. This is to cover overexpenditure, to finish up the payments.

Scotch Cove (White Point)—breakwater—to complete payments, $9,350.

Mr. FOSTER. What is the total expenditure on that?

Mr. PUGSLEY. The total expenditure up to the first of January was $20,274. This amount is due the contractor. The contract is for $28,935.

South Lake, Lakevale—opening channel from lake to St. George's bay—inclusive of protection work—additional amount, $4,500.

Mr. PUGSLEY. I gave the full particulars of that to Mr. Ames the other night.

Mr. JAMESON. This work was undertaken before the money was provided?

Mr. PUGSLEY. This is a case in which, owing to an error, the amount was reduced, but it was found to be absolutely necessary work in order to protect what had already been done. The engineer went on and finished it and this is the balance.

Upper Prospect—breakwater, $250.

Mr. JAMESON. Where is this?

Mr. PUGSLEY. This is in Halifax county.

Mr. JAMESON. Is this to complete the work?

Mr. PUGSLEY. This is to complete the payments, yes.

Sandy Cove breakwater—to provide for full and final settlement of outstanding accounts for labour and materials supplied in connection with construction of breakwater in 1903-4 by contractors Hayden & Oliver, $3,945.

Mr. PUGSLEY. This is a case which I think I should explain to the committee. The contractors took the contract to build this breakwater. The report of the engineer is that after they had proceeded a certain distance with the work it was discovered that the soil was entirely different from what the engineer and contractors had expected it would be. The result of placing the foundation of the breakwater there was to give a certain direction to the current which began to undermine the foundation. When this was discovered, the contractors saw that to go on with the work meant inevitable loss to them and they were of the opinion that they had better forfeit their deposit and abandon their contract. The engineer encouraged them to go ahead with the work and finish it up and stated to them that he would so report to the department and ask favourable consideration. The contractors say that they understood from the engineer that he would recommend that they should be paid the actual cost of the work. He does not recollect that that took place, but he does recollect that he encouraged them to proceed with the work and does not deny that he led them to expect that the department would be likely to take an equitable view of the case. They went on and built the breakwater, doing a thoroughly good job, which is very satisfactory to the department. The result of doing the work was to bankrupt the contractors. Then the men who had done work upon the breakwater and people who had supplied materials made a claim upon the department urging that as the government had got full value for what was represented by the actual labour and materials, the government ought not to allow these men to lose their wages or the value of the material supplied.

Mr. FOSTER. When did they make their claim?

Mr. PUGSLEY. At least two years ago. The department sent an accountant in November, 1906, down to the place where the work had been done to look into these bills for wages and materials, and the accountant certified that this amount was justly due. The engineer certified that there is no question whatever but that the actual cost of the work would be represented by this balance of $3,945.08, and we have the claims actually filed with us to that amount.

Mr. BLAIN. What was the total amount of the contract?

Mr. PUGSLEY. $12,900, but the actual cost of the work was that amount plus this $3,945. The matter came before me at the last session and I declined to recommend this claim because I felt it was establishing a precedent which might lead us into difficulties in the future, that the contractors had taken the work as being the lowest tenderers at the contract price of $12,900, that the men who did the work and supplied the materials trusted to the contractors, and that therefore, if the contractors were unable to pay, they would have to lose what they had put into the work. I declined to bring it before the House at the last session of parliament. Since that time the matter has been still further urged upon my attention, and I looked again into the report of the engineer, and I concluded that, in view of the fact that the work was honestly done and thoroughly done, if we do not pay, it means that these poor men who have worked on this public work will lose the fruit of their labour, and the men who supplied the materials will lose the price of them; and also, in view of the fact that the contractor was going to throw up his job when he encountered this unexpected condition of affairs, and was pursuaded by the engineer to go on and complete the contract with the expectation—not a very strong one, I admit—that the department would look on the matter equitably, I concluded that it was not unreasonable to ask parliament to vote this money, and I hope the committee will concur in that view.

Mr. JAMESON. To whom will the money be paid?

Mr. PUGSLEY. It will be paid to the men according to the claims filed in the department.

Dorchester wharf—addition, $5,500.

Mr. PUGSLEY. This is to build a very important extension of the wharf, some 200 feet long, 9½ feet high on the average, and 52 feet wide on the top. It is a very important work; it is under contract, and this is to complete the payments.

Mr. CROCKET. What is the total cost?

Mr. PUGSLEY. $17,724.83. There is a great deal of business being done there, and it is increasing. This work was necessitated by reason of the business being largely done by steamers instead of by sailing vessels.

Mr. CROCKET. Who was the contractor?

Mr. PUGSLEY. Downey & Downey, of Curryville, New Brunswick.

Richibucto harbour—to pay John Jardine, contractor, in full and final settlement of all claims in connection with his contract of November 16, 1905, for extension of breakwater-pier on the north side of harbour, $5,395.34.

Mr. PUGSLEY. This is an amount which, according to the report of the resident engineer, Mr. Stead, is due to the contractor. The amount of the contract was $17,000. In October, 1908, Mr. Jardine applied for a further sum of $6,333 on the ground that he had built the extension 8 feet deeper than was shown on the contract plan. In support of his application he stated that the depth of water where the extension was built was increased by at least eight feet from the time the survey was made by the government engineer, that consequently he was obliged to supply material for the construction and extension for the entire length of the extension eight feet deeper than the plan called for. He estimated the quantity of material thus used in excess of the survey as 300 feet long by 66 feet wide by 8 feet deep, making a total of 5,866⅔ cubic yards, at $1.25 per cubic yard, making $6,333. The matter was referred to the resident engineer, who reported that the contractor was entitled to $4,583.34, and on account of the extension being larger than was required at first, to a further sum of $812, making a total of $5,395.34. The resident engineer stated that he had taken soundings outside at the end of the breakwater, that the bottom on which it rested was sand, that as the work proceeded the scour of the current around the end deepened the site of the breakwater considerably, that at the end the depth had increased five feet along the range of the outside of the work 3 to 4 feet, and along the inside from 4 to 5 feet. He therefore recommended five feet as a fair average increase in depth, so that the total increase would be 3,666⅔ cubic yards, at $1.25, making $4,583.34. He further found that the extension had been built 326 feet on the top instead of 300 feet. The contractor, expecting that the work would be continued by an extension of his contract instead of by day labour, was not particular to end the work where the plan called for it. This extension increased the cubic contents by 464 cubic yards, which, at $1.75, the contract rate, amounted to $812. That makes the total amount of this vote.

Mr. CROCKET. Are these extra amounts based on the schedule prices?

Mr. PUGSLEY. Yes, but the larger portion is at $1.25 per cubic yard, all the resident engineer would allow.

Mr. CROCKET. Was Mr. Jardine authorized or directed by any officer of the department to build this addition or extension after the letting of the contract?

Mr. PUGSLEY. No, he was not authorized to build the extension, and that is the reason the department could not pay for it, and that is why we come to parliament. It is a useful public work, and it is only right that the contractor should be paid for it.

Mr. CROCKET. Does the minister state that Mr. Jardine did this additional work without communicating with the department and getting the authority of the department to do it?

Mr. PUGSLEY. That is correct.

Mr. CROCKET. And then he presents a claim to the minister and asks for this extra payment?

Mr. PUGSLEY. Yes, if parliament approves.

Mr. FOSTER. That is pretty dangerous work.

St. John river and tributaries—construction of wharfs in tidal waters—additional amount, $4,650.

Mr. CROCKET. I understand that this amount, added to the amount already voted in the main estimates, makes $19,650 for the construction of wharfs in the St. John river for the year ending the 31st March, 1909.

Mr. PUGSLEY. Yes.

Mr. CROCKET. I understand there were four or five wharfs ordered to be built by the department last summer in the counties of Queens and Sunbury, and that without tender or contract. Can the minister tell us what is the position with regard to these wharfs? I would like to know what the total cost of each of these is to be.

Mr. PUGSLEY. At Chase's Point, $4,110; Oromocto, $4,379; Majorville high water wharf, $4,996; Gowan's, $2,750; Rothesay, $1,964; Long Island, $869; Meaford, $543.

Total, $19,611, and the appropriation was $15,000, leaving a balance of $4,011, and we are asking for $4,075.

Mr. CROCKET. Will this appropriation complete all these wharfs?

Mr. PUGSLEY. These amounts are required to make the payments up to March 31, and I hope they will complete these works, but am not sure.

Mr. CROCKET. I would like additional information with regard to a number of wharfs for which tenders were called during October last. The minister gave a list some days ago of nine wharfs for which tenders were called on October 9. In the call for tenders, November 12 was fixed as the last day when tenders would be received. I put a question on the Order Paper the other day, and was rather surprised, in view of what had transpired in Committee of Supply when the item of $20,000 was going through, at the amount of the estimated cost of these wharfs, as reported by the minister in reply to that question. I find that the estimated cost of the nine wharfs ran all the way from $4,861 to $19,561, and that the total estimated cost of the nine wharfs was $97,587. Those tenders were called, as the minister has informed us, upon plans and specifications prepared by the department on October 9, and the tenders were to be received up to November 12. Tenders were received for several of these wharfs, and notwithstanding the fact that in all cases they were considerably below the estimated cost, none of them were accepted. I would like the minister to explain why it was that his department, on October 9, just in the middle of an election campaign, called for tenders for the construction of so many wharfs in that constituency, and as soon as the election was over decided not to go on with the work. I would like to know also if it is the intention of the department during this year to call for new tenders for any of these wharfs?

Mr. PUGSLEY. The reason why tenders were called for before the election was because there was not time to call for them earlier. They were called for last fall and there was no particular reason why we should wait till after the elections.

Mr. CROCKET. The necessity arose very suddenly.

Mr. PUGSLEY. No, my hon. friend must be aware that while the estimates were submitted early last year, for reasons which, I suppose, our hon. friends opposite thought good and sufficient, they did not seem quite willing, for some time at all events, that the estimates should go through without considerable discussion, and, may I say it without offence, some little opposition. The result was we did not get Supply until very shortly before prorogation. Parliament rose on July 20. I gave instructions immediately to have the plans and specifications prepared so that tenders could be invited. I did so because the information I had was that these wharfs were necessary in the public interest, and it would be desirable to have them put under way during the past winter. As soon as the plans were prepared by our engineer in St. John, Mr. Scammel, tenders were called for and in most cases they were somewhat below the estimates, but not very much below except in two instances. I had not myself gone carefully into the specifications, nor would I be supposed to do that, not being an engineer; but I did not anticipate that the plans would be very different from those which, when I was a member of the provincial government, we had prepared for wharfs constructed on the St. John river. When the tenders came in they struck me as very excessive. I could not conceive it possible that tenders would be called for wharfs that would cost so much beyond what the provincial government had succeeded in getting wharfs built for on the St. John river and its tributary lakes.

Mr. FOSTER. It arose from the condition of the political atmosphere at that particular time.

Mr. PUGSLEY. No, it arose by reason of the very different kind of plans which the engineer in my department at St. John had prepared, plans for a more substantial wharf—really a coast wharf instead of a river wharf.

Mr. FOSTER. Which showed good judgment on the part of the engineer.

Mr. PUGSLEY. I do not know. Some engineers are in favour of very substantial wharfs, and it may be good economy in the long run; but at all events, I assumed that we would get a class of wharf similar to what the provincial government had been in the habit of building. There were two cases in which the tenders were very much less than the engineer's estimate, and I had these parties seen by one in whom I had confidence to ascertain if they really understood the plans and were prepared to to enter on the work. They said they had misunderstood the plans and could not possibly do the work at the price they tendered, and I did not call on them to enter into contracts which would have ruined them. They were farmers from Queens and Sunbury. I decided to call for new tenders and ordered new plans to be prepared. I have communicated with the Chief Commissioner of Public Works in the New Brunswick government and have asked if he would allow me to have the benefit of the experience of his provincial engin-

eer who has had a great deal to do with the building of these wharfs, so that we might have plans prepared for wharfs of the same class as the provincial government is in the habit of building, and which run in cost from $1,000 to $2,000. He has consented, very kindly, to allow me to have the benefit of the experience and services of the engineer. I am going to have the engineer of my department in St. John, Mr. Cawmill, confer with him, and we expect to get up a series of plans for the wharfs which will enable us to build a large number of these wharfs at a cost not to exceed the appropriation asked for in the main estimates. With regard to the different wharfs to which the hon. member has referred, it is my intention to call for tenders for these, unless it is pointed out to me that some of them are not necessary in the public interest. It may be that some information will come to me that will lead me to alter my opinion, but, as at present advised, I think they are all necessary in the public interest; and it is my hope—and my expectation also—that, during the coming season, the plans will be completed and tenders will be called for, I have the hope and expectation that the cost will not exceed from $1,000 to $2,000 for each wharf. I think we can get wharfs suitable for the St. John river and tributary lakes which will answer every purpose at a cost not to exceed on the average $2,000.

Mr. CROCKET. And the $20,000 voted will completely cover the cost of these nine wharfs ?

Mr. PUGSLEY. I should hope to get plans which will enable us to give contracts for not exceeding $2,000 on the average for each wharf.

Mr. CROCKET. The Minister of Public Works (Mr. Pugsley) has given what, no doubt, may be considered a very plausible explanation of the department's refusal to accept the tenders for these wharfs. But I do not think he has very satisfactorily explained why it was that the department called for tenders for the construction of these wharfs upon such plans and specifications as were prepared. He, surely, must have authorized that call for tenders, and, before authorizing it, he must have been aware of the plans and specifications which had been prepared and of the estimated cost of each of these nine wharfs. I do not think the minister will deny that he was aware of these estimates, they having been made by the engineers of the department, no doubt at his direction. Those estimates for the several wharfs were as follows:— $19,561, $10,954, $18,733, $11,381, $8,067, $6,701, $9,072, $4,861. And now, the minister who authorized the calling for these tenders, and, no doubt, personally directed that this call should be issued at that par ticular time and with a full knowledge of these estimates of cost, comes before the House and states that the department was not warranted in contemplating the construction of wharfs of that character. This seems a most extraordinary proceeding on the part of the minister. The minister authorized that call for tenders for no other reason, I have no hesitation in saying, than that of influencing the electors of these constituencies as an election bluff. It seems to me that the minister now occupies rather an unenviable position before the public of the constituency affected, in view of the statement he has made that the department should not have thought of constructing wharfs in these waters which would exceed in cost $1,000 or $2,000 each. I am content to let the statement of the minister, as made, go before the electors of Queens and Sunbury; and I have no doubt that they will bear in mind in that connection the promises which were made by the minister and his candidate in that constituency with reference to these works. I only hope that the minister will do as he has stated—call for tenders for these wharfs during the present season, and I can say to him that the electors of that constituency——

Mr. PUGSLEY. The hon. gentleman (Mr. Crocket) thinks they are all necessary public works?

Mr. CROCKET. I have no hesitation in saying that some of them are.

Mr. PUGSLEY. 'Some of them.' Then, why does the hon. gentleman wish me to call for tenders for them all?

Mr. CROCKET. I am not in a position to state whether they are all necessary or not. But I do trust that, in view of the fact that they were promised in that way to the electors of that county, the minister will deem it his duty to do at least something towards implementing the promise which he has given to the electors of the constituency, even though it be to give a $1,000 or $2,000 wharf where an $18,000 or $19,000 wharf was promised.

Mr. PUGSLEY. At present we are considering the question whether these works are reasonably necessary and whether it is proper to vote this money for the purpose of completing them. So far as the opinion of the people of New Brunswick is concerned, I think they have not hesitated to express their opinion of my conduct, nor have they hesitated to express their opinion of the criticisms of my hon. friend (Mr. Crocket) and his associates. My hon. friend is not unaware of the fact that, during the election, his friends went up and down the counties of Queens and

Sunbury declaring that this was only an election dodge and that there was no intention of the building the wharfs. And they went further and declared that the provincial government would build these wharfs, that it was unnecessary to look to the Dominion government, and that the proper thing to do was to support Mr. Wilmot and strengthen Mr. Hazen's hands in Queens and Sunbury, because he would be the next representative from New Brunswick in the Dominion government, he would be Minister of Public Works, and between the two governments it would not be necessary to go to Mr. Pugsley for these wharfs. The hon. gentleman says that these tenders were called for by me with the knowledge that the prices would be excessive, because the estimates called for wharfs more expensive than it would be necessary to build. My directions, after this vote passed parliament were that proper plans and specifications should be prepared and tenders called for for the work. I did not see the estimates when prepared by the engineer in St. John. I do not think he sent them to Ottawa. He followed my directions to make plans and specifications and call for tenders. I supposed that the tenders would be at reasonable figures. When I found that they were much larger than I thought they ought to be, I gave direction that the cheques should be returned, new plans and specifications made and new tenders called for.

Mr. CROCKET. Then, the minister called for tenders without regard to the estimated cost of the works if I understand his statement?

Mr. PUGSLEY. I think my statement was clear.

Public works—chargeable to income—Quebec—harbours, rivers and bridges—general repairs and improvements, $20,000.

Mr. PUGSLEY. This is a general vote. The additional amount is required.

Mr. GERVAIS. For the last two or three years, the city of Montreal has been requesting this government to build a wharf at St. Helen's island, opposite the city. Honourable members are aware that very large numbers of people visit St. Helen's island every summer. I understand that Mr. Michaud, the local engineer in charge of the Montreal works, has been making a report to the Department of Public Works about the necessity and the cost of building a wharf and a shelter on St. Helen's island, opposite the city of Montreal. I think that should be done this year. Over half a million of people visit the island yearly, most of them working people belonging to the poorer classes, and something should be done to make proper landing facilities on the island. I think that about $2,000 should be given for this purpose, out of the large aggregate sum now being asked for to improve the harbours and rivers generally. For instance, I notice that we are asked to vote $4,000 to repair a jetty at Nicolet. Then, I think we might take a portion of the money that we are asked to vote to build ice piers at Rivière St. Jacques in the county of Laprairie. The Minister of Public Works should give us some explanation why he has not proceeded before now with the work of building a wharf and shelter at St. Helen's island for the benefit of over half a million people.

Mr. PUGSLEY. I think the question is deserving of an answer from me, and I will endeavour to explain why I have not been able to accede to my hon. friend's request. He has pressed the consideration of the matter upon my department. What my hon. friend desires is that the government should build a wharf at St. Helen's island. Now I have not felt that I could justify this expenditure, particularly when there are so many pressing needs for public works in other directions. This wharf at St. Helen's island would be for the accommodation of the people of Montreal who wish to visit the island as a summer resort; it would be rather for the accommodation of the ferry between the city and the island. I have not felt that I could regard this wharf as a work so much in the general interest of navigation as to justify me in asking parliament to make an appropriation for it. However, I have not closed my mind entirely against it; I can say to my hon. friend that I will give the matter careful consideration.

Mr. GERVAIS. As a matter of fact, the corporation of the city of Montreal has been asking for that improvement for a number of years, I know that they have been sending report after report to the government asking a sum of money sufficient to do some work blasting and build such a wharf and shelter. It seems to me that this work on St. Helen's island is just as much needed as are a great many of the improvements along the river St. Lawrence which the government has decided to make, for instance, the improvements at the Rivière St. Jacques, at St. Louis, at Ste. Anne des Monts and so on. The people of Montreal are contributing a large portion of the revenue of this country, and some consideration should be given to the request of the city council of Montreal. I do not know why the request, the demands, the requirements, of the city of Montreal should be ignored for the benefit of all these little villages along the St. Lawrence river. The city of Montreal is contributing, not only largely to the national exchequer, but in every department of industry it is con-

tributing to the prosperity of this country, and deserves far more consideration than it has received. We are asking this wharf for the benefit of the workingmen of the great commercial metropolis of Canada, and the Minister of Public Works is not doing justice to them in ignoring their request made through the city council. I would like to know why the representations of the city council of Montreal should be disregarded to the advantage of the farmers of Laprairie, to the advantage of the farmers and traders of the Rivière St. François, for example. I call upon the hon. members here representing the other divisions of Montreal to support my request. In Montreal we have built up for the benefit of the whole of Canada a port and a channel which are worth to-day $50,000,000, to which the general government has not contributed one farthing. We have been deprived of this asset of the city, which has now been taken over by the general government, and when we are asking for the expenditure of a small sum of $15,000 or $20,000 for the benefit of the workingmen of Montreal, we are told that we cannot get it. For the last three years the representations of the corporation of Montreal have been disregarded, have been unheeded, I do not know why, and I would like to know why. I think that some better explanation should be given to the House, and one more satisfactory to the people of Montreal than the one we have heard.

Mr. J. D. REID. I would like to hear from the Postmaster General on that.

Mr. FOSTER. There is an easy reason why my hon. friend from St. James division, Montreal (Mr. Gervais) has not had his request granted. He looks so good natured and he smiles so pleasantly when he is making his demands, that the minister thinks he is not in earnest.

Mr. J. D. REID. I would ask the Postmaster General if he is in favour of this request of the hon. member for St. James division, Montreal (Mr. Gervais).

Mr. PUGSLEY. The hon. gentleman has no right to demand that a member speak.

Mr. J. D. REID. I think he should express an opinion upon that.

Mr. PUGSLEY. Let us get through with the Quebec items.

Mr. J. D. REID. The Postmaster General knows about Montreal.

Mr. PUGSLEY. He does not feel like making a speech just now.

Mr. J. D. REID. He is trying to avoid this question.

Mr. GERVAIS. I would like an explanation from the Minister of Public Works why this work has been delayed for the last three years. We are surely entitled to some consideration. There are some other members from the island of Montreal present and I will allow them to express their own opinion about the matter.

Mr. PUGSLEY. I told my hon. friend that I would consider his request still further. The reason the appropriation has not been made is that this being a ferry wharf to accommodate the tourist travel or the people who go in the summer season from the city of Montreal to St. Helen's island, I had not felt that it had the same merits or the same claims upon the federal treasury as a wharf which might be more in the interest of general navigation. However I will give very careful consideration to the strong representations that my hon. friend has made.

Mr. J. D. REID. I think the Postmaster General should express an opinion upon this question himself. I really feel that the Postmaster General should tell us his idea so that we would be able to judge as to whether the request made by the hon. member for Montreal, St. James (Mr. Gervais) is justified or not. Otherwise, we would take it for granted that what the hon. member for St. James is asking is not a fair request.

Nicolet harbour—repairs to jetty at mouth of river, shelter, shed and dredging, $4,600.

Mr. FOSTER. Let us see what that is about.

Mr. PUGSLEY. This is chiefly for dredging at Nicolet.

Mr. AMES. Who has the contract?

Mr. PUGSLEY. The contract for dredging has been awarded to the Canada Improvement Company, the price being, for rock, $4, and for other materials 22 cents per cubic yard and $3 for rock and 20 cents for other materials when cast over.

Mr. J. D. REID. Who is at the head of the Canada Improvement Company?

Mr. PUGSLEY. I do not know, but I think it is Mr. Moore of Montreal.

Mr. AMES. Is that the same as T. F. Moore & Company?

Mr. PUGSLEY. I do not know whether it is Mr. Moore or Mr. Cohen; I think it is one or the other.

Mr. J. D. REID. Are they in the dredging business?

Mr. PUGSLEY. Yes, they are dredging contractors.

Mr. J. D. REID. Do they own dredges?

Mr. PUGSLEY. Yes, they have a large fleet of dredges.

Mr. J. D. REID. I have heard of Mr. Cohen, but I have never heard of the Canada Improvement Company.

Mr. PUGSLEY. They have been in existence for three or four years.

Mr. J. D. REID. Had they been doing work for the Public Works Department before?

Mr. PUGSLEY. Yes.

Mr. J. D. REID. Under the name of the Canada Improvement Company?

Mr. PUGSLEY. Yes.

River Yamaska—landing pier at St. Michel d'Yamaska, $4,000.

Mr. J. D. REID. We want some explanaion of that.

Mr. PUGSLEY. The total cost of the work is $10,500, there was an appropriation last year of $2,000, there was voted in the main estimates for the coming year $4,500, and we require a supplementary vote, to pay for the work to be done up to the close of this year, of $4,000.

Mr. AMES. Is that work being done by day's labour?

Mr. PUGSLEY. Yes. The cost of the site was $500.

Mr. AMES. I understand the minister to say that $2,000 was voted for this work at the last session of parliament?

Mr. PUGSLEY. Yes.

Mr. AMES. You have spent $6,000 when you had $2,000 voted?

Mr. PUGSLEY. Yes. The estimate of the probable expenditure is $7,200.

Mr. AMES. Is the $4,000 you are asking for to pay accounts already incurred?

Mr. PUGSLEY. Yes.

Mr. AMES. Does it not seem strange to the minister that he should ask for $2,000 to build a wharf and that he should deliberately spend $6,000, not by contract but by day's work? Is it not a rule of the department to stop the day's work when the appropriation is exhausted?

Mr. PUGSLEY. Yes.

Mr. AMES. And has the government spent $6,000 with an appropriation of $2,000? Have the men been paid out of this $4,000 that we have now before us?

Mr. PUGSLEY. No, this is for the purpose of paying them.

Mr. AMES. When was the work done?

Mr. PUGSLEY. They are still working at it.

Mr. AMES. But was not the bulk of the work done before the frost came last fall?

Mr. PUGSLEY. A good deal of it is done.

Mr. AMES. Then this money was spent in September, October and November during the election time after the appropriation had been entirely exhausted. The men were kept at work in the expectation that parliament would ratify it six months later. Is it not the rule of the department that work being done by day's labour stops when the appropriation is exhausted? Surely that is what is stated in the instructions which the chief engineer sends to the assistant engineers throughout the country. They are distinctly cautioned to on no account exceed the estimate. If it were a contract I could understand it, but when it is done by day's work why did the minister keep the men at work until an expenditure three times the amount of the original vote of this parliament was incurred? Why did the work not cease when the vote was exhausted?

Mr. PUGSLEY. I may say to my hon. friend that he is quite right in his statement that the instructions of the chief engineer to the resident engineers are to stop the work when the appropriations are exhausted, but in this particular case the opinion of the resident engineer, and it was so reported, was that it was necessary to continue the work in order to save that which had already been done. I was surprised and somewhat annoyed when it came to my notice that the work had been continued, but it was the opinion of the resident engineer that it was necessary in order to save from waste and destruction the work which had already been done. I am asking for this appropriation to pay for the labour which has been done under the direction of the resident engineer, and with the approval, of course, of the chief engineer.

Mr. AMES. Will the minister give the items making up the $4,500. How much represents overdue wages and since how long these wages have been overdue?

Mr. PUGSLEY. I do not believe I could give that just now, I have not the details of it.

Mr. AMES. Then I think the item should stand in the meantime because that is a case where, although the amount is small, the principle involved is serious. Parliament votes a certain sum and when it is an election year workmen are kept on long after the money voted has been expended.

Mr. PUGSLEY. I am willing to allow it to stand.

Mr. J. D. REID. The minister came before the House last year and said that $2,000 was required to complete this wharf. Now he says that they spent not only the $2,000 but $4,500 more last year.

Mr. PUGSLEY. Does he say that I came down and asked $2,000 to complete it? The hon. gentleman should not make these statements unless he is sure. If my hon. friend looks up 'Hansard,' he will not find that I made any such statement to the committee. What does my hon. friend say about that?

Mr. J. D. REID. Did he not say that $2,000 was all that would be required during last year.

Mr. PUGSLEY. The hon. member said that last year I stated I wanted $2,000 to complete this work. I venture to say he will find no such statement in 'Hansard.'

Mr. J. D. REID. Perhaps I was wrong in that. I want to state that the minister came down and stated that $2,000 was all that would be required to be spent last year.

Mr. PUGSLEY. The minister made no statement about it. As a matter of fact, if I remember rightly, all these items went through in about five minutes without comment or question.

Item allowed to stand.

Some resolutions reported.

ADJOURNMENT—BUSINESS OF THE HOUSE.

Mr. R. L. BORDEN. Before the House adjourns, I would like to inform the Prime Minister that if the House is to be moved into Committee of Supply to-morrow, we propose to discuss the report of Mr. Justice Cassels and the investigation before him, if that would meet the convenience of the government.

Sir WILFRID LAURIER. I had expected that my hon. friends would wait until we brought down our policy upon that report. I had hoped to be able to give the information to my hon. friend before this, but owing to my illness I have not been able to do so. I undertake that we will have it early next week.

Mr. R. L. BORDEN. The right hon. gentleman would prefer that we should postpone the discussion?

Sir WILFRID LAURIER. Yes, until we have announced our policy.

Mr. R. L. BORDEN. The only thing is, of course, that we are going to have a good deal of work crowded into the latter part of the session, and I would like to have as early a date fixed as would be convenient. Next week we are to take up the Grand Trunk Pacific loan, I think on Tuesday.

Sir WILFRID LAURIER. I will undertake to lay our policy on the table not later than Tuesday.

Mr. R. L. BORDEN. Would it be possible to arrange for a week from to-morrow?

Sir WILFRID LAURIER. Yes.

Mr. R. L. BORDEN. We will take up Supply to-morrow?

Mr. FIELDING. Yes.

Mr. R. L. BORDEN. What department?

Mr. FIELDING. We will continue with the estimates of the Minister of Public Works.

At six o'clock, the House adjourned.

HOUSE OF COMMONS.

THURSDAY, March 25, 1909.

The SPEAKER took the Chair at Three o'clock.

QUESTIONS.

FRUIT IMPORTS TO BRITISH COLUMBIA FROM UNITED STATES.

Mr. BURRELL asked:

1. What quantities, with values, and amount of duty collected, of apples, pears, plums, prunes, peaches and berries, respectively, were imported into British Columbia during 1908, from the United States points?

2. Similarly, what into Alberta, Saskatchewan, Manitoba and the rest of Canada?

Hon. WM. PATERSON (Minister of Customs):

1 and 2. The imports for consumption during the fiscal year 1908, were as follows:

	Quantity.	Value.	Duty.
	Lbs.	$	$ cts.
Prunes and plums unpitted—			
Manitoba	1,743,980	72,855	17,439 80
B. Columbia	789,522	35,610	7,895 22
Alberta	387,567	16,355	3,875 67
Saskatchewan	95,545	4,959	955 45
Rest of Canada	3,796,766	172,492	37,967 66
Green apples—	Brls.		
Manitoba	8,626	44,574	3,450 40
B. Columbia	13,862	63,777	5,544 80
Alberta	9,386	46,815	3,754 40
Saskatchewan	1,118	4,647	447 20
Rest of Canada	4,107	22,335	1,642 80
Blackberries, gooseberries, raspberries and strawberries—	Lbs.		
Manitoba	357,077	48,380	7,141 54
B. Columbia	81,792	9,957	1,635 84
Alberta	8,516	1,224	170 32
Saskatchewan	1,055	234	21 10

ONTARIO POLLING BOOTHS.

Mr. ELSON asked:

Have all the persons in the province of Ontario from whom polling booths were rented for the purposes of the last federal election been paid their dues? If not, why not?

Hon. CHARLES MURPHY (Secretary of State). There are several polling booths in Ontario for the rental of which funds have not yet been sent to the returning officers; in some cases because the accounts of the owners have not yet been supplied and in others because accounts in hand have not yet been finally disposed of.

MAIL CARRIAGE IN MIDDLESEX COUNTY.

Mr. ELSON asked:

1. Does the present contract for carrying the mails between Hyde Park post office, Ferguson, Lobo, Ivan, Coldstream, Poplar Hill and Komoka, in the county of Middlesex, expire on or before April 1, 1909?
2. If so, has the contract been relet, commencing from April 1, and who is the contractor?
3. How long does the contract run, and what is the price per year?
4. Was it let to the lowest tenderer?

Hon. RODOLPHE LEMIEUX (Postmaster General):

1. Expires 31st March, 1909.
2. Yes. Robert E. Morris.
3. Four years from 1st April, 1909 at $745 per annum.
4. Yes.

HOMESTEADS WEST OF LAKE WINNIPEG.

Mr. BRADBURY asked:

1. Is the government aware that a large percentage of the land homesteaded by Ruthenians, Polanders and Germans, west of Lake Winnipeg, is said to be poor land and not suitable for farming?
2. Has the government inspectors or others reported these lands unfit for settlement? If so, when?
3. Is it the intention of the government to allow these people who are located on reported bad lands to change for good lands in some other district? If so, when?

Mr. PATERSON

Hon. FRANK OLIVER (Minister of the Interior):

1. No.
2. No.
3. See answers to numbers 1 and 2. Without further information it is not possible for the government to arrive at a conclusion as to action to be taken.

MR. M. W. PLANK.

Mr. SAM. SHARPE asked:

1. Was M. W. Plank, V.S., of Uxbridge, in the employ of the government as special officer detailed to prevent the spread of the foot and mouth disease?
2. If so, when did his engagement commence and when did it end?
3. What salary did he receive, and what allowance for expenses?

Hon. SYDNEY FISHER (Minister of Agriculture):

1. Yes.
2. Engagement commenced November 26, 1908. Engagement ended January 8, 1909—33 days.
3. Salary, $5 per day—$165.00; expenses, $202.70.

MR. BUELL.

Mr. SAM. SHARPE asked:

1. Is Mr. Buell, of Brockville, barrister, in the employ of the government?
2. If so, how long has he been employed, what are the terms of his engagement, and what is his salary?
3. Is part of his duties to present the claims of those having grievances to prefer before the Railway Commission?
4. On whose suggestion or recommendation was he employed?

Hon. A. B. AYLESWORTH (Minister of Justice):

1. Mr. Shepley, K.C., and Mr. Buell have been instructed by the Minister of Justice to appear in the public interest before the Board of Railway Commissioners upon the applications of telephone companies and express companies for approval by the board of the companies' schedules of tolls and rates.
2. Upon different occasions during the last two years. Mr. Buell is not paid a salary, but receives a fee of $30 per day for such work as he may do, and in addition his expenses out of pocket.
3. His instructions from the Minister of Justice did not contemplate such duties, but under direction of the chairman of the board, the presentation of some of such complaints in connection with business of telephone or express companies has been undertaken by Mr. Buell.
4. By the Minister of Justice, of his own motion, after a recommendation from the late chairman of the board that some counsel should be instructed in the matter.

MR. ACHILE LEBEL, CLAIM VS. INTERCOLONIAL RAILWAY.

Mr. GAUVREAU asked:

1. Has the Department of Justice received a request for a petition of right from Mr. Achile LeBel, of Fraserville, or from his solicitor, for damage done to a valuable horse, then being carried in one of the cars of the Intercolonial Railway, at the Rivière du Loup station?
2. If so, is it the intention of the department to grant it, and when? If not, on what grounds does the department refuse it?

Hon. A. B. AYLESWORTH (Minister of Justice):

1. Yes.
2. The matter is under consideration.

RAILWAY MAIL CLERKS.

Mr. GAUVREAU asked:

On what date did Messrs. Furois and Dorais, railway mail clerks on the Quebec postal division, and Mr. Henry Wathen, mail clerk, on the postal division of St. John, New Brunswick, pass their promotive examinations, respectively?

Hon. A. B. AYLESWORTH (for Postmaster General). In 1897 the Civil Service promotion examinations for railway mail clerks were abolished, and a Case examination substituted therefor, which Case examination Railway Mail Clerk Furois passed on March 23, 1898, and Railway Mail Clerk Dorais on December 22, 1899. Railway Mail Clerk Wathen passed the Civil Service promotion examination in 1889.

HOLLAND RIVER AND NEWMARKET CANAL.

Mr. LENNOX asked:

1. When were tenders first called for the construction of section 1 of the canal from Holland river and Newmarket?
2. From whom were tenders received, what were the schedule rates in each and what was the amount in each case as moneyed out?
3. To whom was the contract awarded, and when?
4. Has the work been regularly proceeded with by these contractors during the working seasons since the contract was awarded?
5. What amount has been paid these contractors under these contracts, and when was the last payment made?
6. Is this contract still a subsisting contract, have the contractors thrown up the work or refused to complete their contract, and has the government agreed to rescind this contract?
7. Did the government call for tenders for this section a second time? If so, when?
8. What tenders were received upon this occasion, what were the schedule rates in each case, and what was the amount in each case moneyed out?
9. To whom was the contract awarded in this case?
10. If not awarded, what is the cause of delay?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). The information to answer this question will be found in a return moved for on January 26, 1909, and laid on the table of the House on 4th March, instant.

INQUIRIES FOR RETURNS.

Mr. R. L. BORDEN. Before the orders of the day are called, I would like to bring to the attention of the Minister of Marine and Fisheries the fact that the return called for by me on the 25th of January last in conection with the dogfish reduction plant, has not yet been brought down.

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). I have just brought it down.

Mr. R. L. BORDEN. On the same day I moved for a return setting forth the rules in connection with the reclassification of the Civil Service. I do not know whether that information has been brought down. I asked also for a return of certain documents in connection with the French Treaty.

Hon. W. S. FIELDING (Minister of Finance). I think the correspondence was laid on the table, all there is in relation to that matter. If there be anything further, and the hon. gentleman will call my attention to it, I will supplement it.

Mr. STAPLES. On the 17th of February I asked for certain information in reference to work done on the Assiniboine river. The government undertook to do a certain piece of work, and left it in such a condition that unless it is completed it is going to flood a great portion of country. I would like to have that order brought down as quickly as possible in order that we may see what is taking place.

Hon. WM. PUGSLEY (Minister of Public Works). I will have enquiries made at once.

Mr. STANFIELD. I would ask the Minister of Marine and Fisheries when we may expect Prof. Prince's report on the shad fisheries in Nova Scotia?

Mr. BRODEUR. The report was received a few days ago. I will lay it on the table as soon as it is printed.

Mr. CROCKET. I would call the attention of the Minister of Public Works to an order of the House which was passed on the 12th day of February for a return of all the papers, vouchers, &c., with reference to the survey of the St. John river between

Fredericton and Woodstock, and ask when we may expect the return.

Mr. PUGSLEY. I will make enquiry. I am informed by my deputy that in the course of a few days a large number of returns which have been moved for will be brought down.

Mr. BRADBURY I desire to call the attention of the Secretary of State to the fact that a return ordered by this House in the early part of the session, regarding the amount of money paid to the Logberg Printing Company of Winnipeg, has not been brought down.

Hon. CHARLES MURPHY (Secretary of State). I will have enquiry made about that this afternoon.

Mr. BARNARD. On the 17th of February an order of the House was made for a return of certain revenues received, and particulars of those receipts, from the Kingston penitentiary. The matter was under discussion when the Solicitor General was passing the estimates of that department, and he stated that if a return was moved for it would be brought down at once. The return was moved, and it has not been received.

Hon. JACQUES BUREAU (Solicitor General). I find on referring to the Votes and Proceedings that the return alluded to by my hon. friend was brought down the day before yesterday.

MANITOBA FISHERIES.

Mr. BRADBURY. I wish to call the attention of the minister to a matter of importance. This House created a select committee to investigate the fisheries of Canada. I expected to have had the matter of our Manitoba fisheries referred to this committee, but the minister informed me as a commission had been appointed this could not be done . I wrote the hon. minister on the 19th urging him to add to his commission an Icelander, one of the settlers who had suffered most by the depletion of Lake Winnipeg, as anything short of this would not be satisfactory.

Mr. BRODEUR. I have not seen the letter myself. I suppose it has been handed over to the department.

Mr. BRADBURY. The letter was addressed to the hon. gentleman himself.

POST OFFICE ACCOMMODATION AT DARTMOUTH.

Mr. R. L. BORDEN. I desire to bring to the attention of the Postmaster General, or of the Minister of Public Works, the fact that the accommodation in the post office in the town of Dartmouth, Nova Scotia, is very insufficient. The postmaster and his assistants are said to be unable properly to perform their duties owing to lack of accommodation. I think the matter has been brought already to the attention of the Postmaster General. I have been asked to urge and I now urge upon him the necesity of immediate action.

Hon. RODOLPHE LEMIEUX (Postmaster General). I will refer the matter immediately to the superintendent and see what can be done.

GRAND TRUNK PACIFIC—COST OF PRAIRIE AND MOUNTAIN SECTIONS.

Mr. R. L. BORDEN. I desire to ask the attention of the Minister of Finance to the information which has been brought down in response to my request on Wednesday of last week. I observe that the amounts actually expended on the prairie section and the mountain section are given in the answer A-1 as follows: Prairie section, $27,314,053.51; mountain section, $3,015,623.74. I would be glad if the Minister of Finance would furnish the committee, when we come to consider the resolution, with detailed statements of these expenditures. I ask that because I consider it is only reasonable, having regard to the very excessive amount of the total expenditures upon the prairie and mountain sections as compared with all the estimates that were presented to the House three or four years ago. The principal part of that information I think would be in possession of the government. I am informed it has been before the Committee on Public Accounts, but there is some distinction made which I confess I do not clearly understand, as to the expenditure which is made out of the proceeds of bonds guaranteed by the government, and the expenditure which is made out of the proceeds of bonds guaranteed by the Grand Trunk Railway Company. I do not understand how that distinction can be made; apparently it has been raised in some way. But if it were a perfectly valid distinction before the Committee of Public Acounts, it does not seem to me to be a valid distinction so far as the particular proposal now submitted to the House is concerned, inasmuch as the question of expenditure is a very important one for the purpose of considering the proposed assistance.

I may say I am not criticising these answers as not being in accordance with what was requested, but I desire to point out that, perhaps, they do not exactly fulfil what was in my mind when I asked some of these questions nor furnish just the information I would like to have.

Question 15, page 3. That question related to the total fixed charges. If it be possible to get an estimate of the actual

amount of the fixed charges upon the road, I shall be glad to have it. There may be some difficulty in making an estimate that would be of value, but it will be desirable from our standpoint to have it, if the government can conveniently give it.

Question 16. Actual amount invested by the promoters of the undertaking. The amount stated, as to December 31, 1908, is $9,597,149.19. I do not know whether or not that includes the sum of $7,094,-044.30 stated in answer to question 2 on page 1 to be an advance of the Grand Trunk Railway Company. I would like to know exactly what this is and who has advanced it, and in what way it appears in the expenditure set forth in answer to question 2.

Question 20, page 5. That relates to the matter I have already mentioned—the total amounts of the expenditure by the Grand Trunk Pacific Railway Company. I should like to know whether or not the books and vouchers of the company have been examined by Mr. Bell in respect of the expenditure of moneys derived from the bonds guaranteed by the Grand Trunk Railway Company, as well as the expenditure of moneys derived from bonds guaranteed by the government. And I would like to have the result of his examinations which, according to this answer, have been transmitted by the Department of Railways and Canals to Collingwood Schreiber, C.M.G., government chief engineer of the western division of the Transcontinental Railway. I do not observe any other note, but later on I may mention one or two other matters to the Minister of Finance.

Hon. W. S. FIELDING (Minister of Finance). I do not happen to have a copy of the paper before me, and so I have not been able to follow very closely the points that the hon. gentleman (Mr. R. L. Borden) has raised. When his request was made some days ago I gave direction that the officials should at once go into the matter and make every effort to cover every inquiry on his memo. I think we have been fairly successful. I will see that 'Hansard' with the report of his remarks is taken up by the officials, so that any information in our possession in answer to his inquires may be produced.

Mr. R. L. BORDEN. One matter I forgot to mention: It appears from the agreement, a copy of which is to be found at pages 12 to 15 of the printed information, that a certain sum of money, $793,600, has been credited to a certain stock issue amounting to 9,920 shares, and that the balance, between $793,600 and the par value of the shares mentioned, has been paid in in cash. I do not know that the disposal of that sum of money appears anywhere in the information brought down. I should be glad if the Minister of Finance would ask that this information also should be provided. I do not know that I make myself clear.

Mr. FIELDING. I will place the 'Hansard' report of the hon. gentleman's remarks in the hands of the officials, with instructions to get everything that he refers to that is in our possession or under our control.

Mr. H. B. AMES (Montreal, St. Antoine). I desire to ask for information to be supplied in connection with this debate. I would like to know where the guarantee of the Grand Trunk which is to be given in respect of this $10,000,000 loan ranks in relation to the other obligations which the Grand Trunk Railway has undertaken? Does it come after their loan capital and after other guarantees they have given? Will the minister please ascertain the facts as to this point?

Mr. FIELDING. I will have a precise statement prepared. It becomes an inferior security; the other guarantees to which the hon. member (Mr. Ames) has referred have priority.

Mr. AMES. Will the hon. minister make a list so that we may know exactly where it ranks——

Mr. FIELDING. Surely.

Mr. AMES. —showing what other obligations would have to be satisfied before this will have any value?

Mr. FIELDING. I will see that the information is furnished.

INQUIRY FOR RETURN.

Mr. A. N. WORTHINGTON (Sherbrooke). I desire to remind the Minister of Militia (Sir Frederick Borden) that several returns that have been asked for from his department have not yet been laid on the table. When may we expect this information?

Sir FREDERICK BORDEN (Minister of Militia). I think at once.

SUPPLY—INTERCOLONIAL RAILWAY FREIGHT CLERKS, HALIFAX AND ST. JOHN.

Mr. FIELDING moved that the House go into Committee of Supply.

Mr. R. L. BORDEN (Halifax). Before you leave the Chair, Mr. Speaker, I would like to ask the Minister of Railways and Canals whether or not he has taken into consideration the report of the committee which investigated some matters in dispute between the management of the Intercolonial Railway and the freight clerks at Halifax and St. John. I observe some rather important statements in the report of the

committee which have, no doubt, been drawn to the minister's attention and which perhaps he has considered. I quote from the report as brought down in a return to this House, page 4:—

Accordingly, and after full discussion, the following matters were agreed upon by all parties in the form as under:

Your committee are of opinion that it would make for greater harmony and better efficiency if a system of classification of clerks were introduced. Not only would the above results accrue, but there would then be an available scheme for promotion, which at the present time seems to be lacking, and which omission breeds discontent owing to the uncertainty of upward progress for efficient clerks who have by length of service and attention to the duties of their office earned the right to consideration in this regard. Just what system of classification should be introduced must neessarily be evolved by the offiials of the railway who are more intimately familiar with the details of the business of the Intercolonial than your committee can possibly be. The men involved must necessarily accept the classification determined upon, subject, of course, to the right which they possess of bringing to the attention of their superiors in office any improvement in such classification which to them may seem desirable in the best interests of the service.

Further on, at page 5, dealing with promotion, the report says:

Your committee are further strongly of the opinion that, outside of the rare cases that arise where an exceptionally able outsider is brought into the service to fill some particular position requiring special knowledge and training, the principle of promotion of those already in the service should obtain, having due regard, of course, to efficiency and the requirements of the service.

And further on, at page 7:

The committee further considered the question involved and now submit the following additional recommendations: The committee after its investigation, is of opinion that, in the matter of wages, the system that obtains of appointing from time to time, new men at higher pay over the heads of men long in the service and probably more capable of doing the work, is injurious to the service and unjust to the men. The remedy for this lies in reorganization, and the abolition of the existing system of appointment influenced by political patronage, which from the point of efficient working we find ample evidence to condemn as applied to the Intercolonial Railway.

I do not bring this up to-day for the purpose of making any animadversions upon or indulging in any criticism of the department, but merely for the purpose of inquiring whether the attention of the minister has been fully directed to this report, whether he has the recommendations under consideration, as I have no doubt he has, whether he has arrived at any conclusion as to what can be done and, if he is not able to give us his conclusions to-day, whether or not we may expect to hear them at a reasonably early date.

Hon. G. P. GRAHAM (Minister of Railways and Canals). I may not be orthodox, but I cannot agree with any suggestion that makes length of service an absolute qualification for promotion.

Mr. FOSTER. Not the only one.

Mr. GRAHAM. To my mind ability to perform the duties is the supreme test. That, coupled with length of service ought to bring about the promotion of the individual. This report of the board was brought to my attention the other day by the hon. member for Halifax (Mr. Crosby) on going into Committee of Supply, I think, and if I remember correctly my reply was that action had not been taken as yet, one of the reasons being that the report implies the dismissal of several employees. In order to ascertain just how that report should be carried out, without doing injustice to an employee, I am having an investigation made into the whole situation as to length of service, ability and all that kind of necessary information with regard to each clerk in so far as I can get it. When that is done I intend to proceed along the lines of the report.

Mr. DANIEL. With regard to the report just referred to, I would like to call the attention of the hon. Minister of Railways and Canals (Mr. Graham) to the fact, that the other day, in speaking about the Intercolonial Railway, he stated that so far from the Intercolonial being overmanned it was not manned to the same extent as some other railways in Canada. If that is the case it would appear that the clerks in the employ of the Intercolonial Railway at Halifax and St. John are not too numerous and consequently this report can hardly be correct in that respect. Either the minister is wrong or the report is wrong, so that it would appear to me that the course of the minister is absolutely clear; that is he has to put those men in these two cities, working for the Intercolonial Railway, on a proper basis as regards pay, and I think, judging from the report that has been read, it was quite allowed by the reporters that the men there are not paid sufficiently. The statement was also made that the road was overmanned, that there were more than sufficient to do the work and that the salaries paid in excess of the requirements should be divided amongst those who are retained. But, taking into consideration the statement that the minister himself made the other day with regard to the manning of the Intercolonial Railway that it was not manned to

the same extent as some other railways were, I would think that the case was rather plain for the granting of an increase in pay to the clerks at the railway terminal at Halifax and St. John.

Mr. CROSBY. I would like to have had an opportunity of seeing this report but it has just come to my hand at this moment, I do not understand that this board of conciliation were appointed to deal with the question as to whether there were too many men on the Intercolonial Railway or whether there were not enough. I understand that this board were commissioned to ascertain whether the men on the Intercolonial Railway were properly paid or not. Therefore, I do not see what right they had to come and tell the Minister of Railways and Canals that his department was overmanned. I believe they overstepped the bounds in doing that, particularly as we had the Minister of Railways the other day stating distinctly that the Intercolonial was not manned to the extent of any other railway in the Dominion of Canada, a statement which was corroborated by statistics. Therefore, I think that settles the question and I do not think that this commision will be in a position to make a report that would be as definite as the statement of the Minister of Railways and Canals himself. I think we can set aside altogether the question as to whether the Intercolonial Railway at St. John and Halifax is overmanned but, upon the question as to whether the men were in receipt of sufficient pay or not, the board reported distinctly that the men were not paid enough and recommended an increase to them. I am not going to deal with the matter of qualification and other questions touched upon in the report as I suppose we will have an opportunity of taking those questions up on some future occasion, but I really do think that whatever may be done in connection with this report the clerks who were willing to come under the conciliation clause of the Act known as the Lemieux Act and who have been willing to allow that board to be appointed, feeling that they would get fair play are entitled to be fairly dealt with in that respect. Whatever may be done with regard to the manning of the railway, if the minister should find upon investigation that such has occurred, I really think he should take this matter up himself because it is not a matter for the board to deal with. I am convinced from the statistics quoted here the other day, from the very exhaustive discussion that we had and from the elaborate references to the whole matter of railways in the Dominion of Canada that the Intercolonial is not overmanned as compared with other railways. The clerks have made an appeal, in fact, I think they went out on strike almost, or threatened to go out, they have accepted this board and they should have that which is due to them by the authority and report of the board.

Motion agreed to and the House went into Committee of Supply.

Landing pier—St. Michel, Yamaska, $4,000.

Mr. AMES. In this case the sum of $2,000 was voted and after the vote was exhausted the men were continued at work and further obligations incurred. What is the explanation of that?

Hon. WM. PUGSLEY (Minister of Public Works). The engineer carried on the work up to a recent date because his opinion was that to leave the work as it was would lead to the danger of it being destroyed.

Mr. AMES. After the $2,000 had been exhausted and expenditure to the extent of $4,000 more incurred before it was voted, were the men paid their wages?

Mr. PUGSLEY. No, they were not paid and this vote is to pay them.

Mr. AMES. Does the government owe $4,000 for wages and materials during September, October, November and December? Have the men been waiting all this time to get their pay?

Mr. PUGSLEY. That is quite correct but the men understood that if they continued work they would have to wait until parliament made an appropriation.

Mr. AMES. Does the minister commend such a practice as that?

Mr. PUGSLEY. I do not and I would not justify it except in the most exceptional case. In this case the engineer in charge reported to the chief engineer on January 6, 1909.

The landing pier under construction at St. François du Lac in Yamaska is in danger of being damaged during winter or spring freshets unless the work is continued and completed this winter.

Mr. FOSTER. When was the appropriation exhausted?

Mr. PUGSLEY. Some time in the fall. He continues:

The urgent work yet to be done this winter is stone ballast, stringers, flooring, &c., requiring an additional use of $1,900, and for labour to complete the work, $2,300; total amount, $4,200. If work is continued persons working or supplying materials are willing to await payment until new appropriation is available.

The people understood that, but I quite agree with my hon. friend (Mr. Ames) that if possible this should never be done. In this case there were exceptional circumstances and the chief engineer allowed the resident engineer to proceed with the work.

Mr. AMES. In case of extreme urgency cannot the minister get an additional credit in a legal way?

Mr. PUGSLEY. In cases of unforseen emergencies a Governor General's warrant could be obtained and probably this might come within that.

Mr. AMES. Is it not a fact that the system of issuing Governor General's warrants is to meet cases of emergency and that the law contemplated, in sanctioning Governor General's warrants, that the system would remove all possible excuse for such an irregularity as this. If this were a case of real urgency why did not the minister ask for a Governor General's warrant? It is entirely infra dig, for Canada to ask people to work and wait for payment. We hear from all parts of the country that people have been asked to do work by the Dominion of Canada and its officials and then have not been paid. We had such a case in Lakevale, Nova Scotia, in which the workmen have not been paid and have been writing beseeching letters to the department and to their members for a considerable time.

Mr. PUGSLEY. In this particular case the chief engineer, perhaps because he was not fully impressed with the importance of it, did not call my attention to the matter until some time in February; he took the responsibility upon himself by reason of the peculiar circumstances of this case. I find that on the 15th of December he wrote to the resident engineer as follows:

Sir,—With regard to your stoppage of work at St. François du Lac and St. Michel, Yamaska, the department is informed that unless these works are continued and completed during this winter they are in danger of being damaged or carried away in the spring.

The appropriations for these works are, of course, exhausted, in fact are over expended, but it is stated that labourers and parties supplying materials would be willing to await payment until the new appropriation required for completion is available.

Would you therefore give this matter your immediate attention and let me have a report stating whether it is urgent or not that these works should be continued until completed to prevent all chance of their being damaged, as above mentioned. You will also please let me know what amount is required to complete each of these works. As this is urgent, I would like to have a report without delay.

Mr. Belanger replied on the 6th of January by the letter I have quoted. In this particular case the explanation of the engineer is that the foreman allowed the work to go on for a short time after he had received notice not to exceed the appropriation, and then the chief engineer, having learned that it was necessary to proceed in order to prevent the works from being destroyed, wrote the resident engineer and received this reply.

Mr. AMES. When did he get the notice that the appropriation was exhausted?

Mr. PUGSLEY. I cannot tell exactly, but I presume some little time before December 15. My hon. friend speaks of this as if there were a number of cases. I venture to say my hon. friend has learned of every case there is. There have been only a very few cases, we do not allow this as a matter of practice.

Mr. FOSTER. How many?

Mr. PUGSLEY. Some two or three cases have come to my notice where there are comparatively small amounts, and two of these were cases in which the engineer had acted upon the printed estimates which were sent out and apparently the chief engineer had overlooked the making of a correction after the amount was reduced here in committee upon my motion. Those are two of the cases and this is the third case. I do not know of any other case. We are very particular, I am particular in giving directions, and so is my chief engineer, that the resident engineers and the foremen all clearly understand what amount is available and that they must not exceed the appropriation. In this particular case there has been no hardship, because the men did this work which was apparently necessary in order to prevent the work that had been done from being destroyed, and it was clearly understood that they would have to wait for their pay until parliament made the appropriation.

Mr. FOSTER. I do not think the minister quite understands the gravity of the matter which has been disclosed in this one instance accidentally. The minister says that this sort of thing has not occurred more than three times, so far as he knows. We have to take the minister's word that so far as it has come to him there have not been more than three cases, but I invite the attention of the minister to what is involved in this. There is no other way under which appropriations of money belonging to the treasury of Canada can be expended except either by vote of this House or by the authority of a Governor General's warrant. The Governor General's warrant is an expedient which the ministers on urgent occasion may avail themselves of while the House is not in session and where there is no appropriation, in order to complete or do some work which is unexpected, unforeseen and absolutely urgent. When once parliament, by its legislation, makes no provision for the unexpected, the unforeseen and the urgent, that is the course that must be pursued by the minister; he is sworn to take that course. In this case what happened? Your vote was given, it was overexpended, your accommodating foreman did

not stop the men from working when he should have—and I would be glad if the minister would bring the exact date on which the foreman exceeded his instructions. The $2,000 was expended and a little more and then the minister, because he is responsible, drew a cheque on the treasury of the Dominion for $4,000.

Mr. PUGSLEY. No, my hon. friend is entirely wrong; that is just what we didn't do These men are not paid yet, and will never be paid unless this appropriation passes.

Mr. FOSTER. I know exactly what I am saying, if the minister will allow me. I say the minister, having no vote, choosing not to go to council for a Governor General's warrant, drew a cheque on the treasury of the Dominion.

Mr. PUGSLEY. That is just what the minister did not do; no cheque was drawn for this sum.

Mr. FOSTER. If the minister will allow me I will show him what he has done. There is no means of getting this clearly into the head of the ministry unless you use language which is strong.

Mr. PUGSLEY. But it is important it should be correct.

Mr. FOSTER. The minister drew a cheque on the treasury which he had no right to draw. He did not sign it on a piece of paper but he authorized his men to employ the workmen and promised them their pay. That is what I mean by saying that what he did was equivalent to drawing a cheque on the treasury of the Dominion, promising these men that at a certain date they would get their money. Had the minister any right to do that? He acknowledges himself that he had not. My language was figurative.

Mr. PUGSLEY. Extremely figurative.

Mr. FOSTER. I used it to make the minister understand the enormity of what he did. Would the minister, for instance, go into the bank and for a claim which was not due or for a work which was not authorized, authorize that bank to issue to him money payable on a certain date? Has he any right to do it? He knows he would not do it, he knows he could not rightfully do it and if he did attempt to do it, he would attempt to do what there was no law or reason for, and yet this is equivalent to that very same thing. My hon. friend behind me said that this was infra dig of the gov ernment. That is the smallest part of it, it is a system which is absolutely equivalent to drawing in advance from the treasury of the Dominion when you have no legal right or warrant. That is a very bad method of carrying on the business of the department. The minister gets out of these things easily. Yesterday we had a case in which the minister and his predecessor expended $65,000 without any authority and against the express provision of the law by day's labour doing a work from year to year and never availing himself of the simple formality of going to the Governor in Council and getting an order in council to make his action legal. There is a statute specifying the course to be pursued by a minister in such a case and implicitly forbidding any other course. The minister has violated that statute over and over again. The St. John pipe line was not the first case in which it occurred, we had other cases a few days ago. How far are we going. how far is this parliament going to allow the minister to go in this arbitrary, illegal and unauthorized fashion? We pass a law in which we lay down the principle that these expenditures shall be made by tender and contract, but as a too rigid adherence to that principle would sometimes lead to trouble, we make an exception and provide that if, in the case of an expenditure up to $5,000, the minister has reason to believe the work could be better or more quickly done by day labour, he makes his request and gives his reasons to council, and if the council consents, the work is done in that way. But my hon. friend the Minister of Public Works and his predecessor have spent $65,000 upon that Carleton and Partridge island work and had the work done by day labour.

Mr. PUGSLEY. I thought we had passed that item.

Mr. FOSTER. I am using it as an illustration. I know that it bears heavily on the hon. minister.

Mr. PUGSLEY. Not at all.

Mr. FOSTER. If he has a conscience which is not disturbed at all by such glaring violations of the law, and I take his word for it, I can understand how this does not affect him. But when there are violations after violations of the law, the question is whether parliament will give up its rights and leave such matters wholly to the discretion of an irresponsible minister. I do not think parliament wants to do that. It has few enough rights, and when it enacts a law, the minister should carry that law out; and a law regarding public expenditure is one of the most important we can pass. I place these matters before the minister as strongly as I can because they evidently do not disturb his conscience.

Mr. PUGSLEY. I do not think my hon. friend took advantage of the right item on which to base his complaint. If he had condemned as forcibly yesterday the expenditure on the work at Partridge island as he has done to-day, his protest might have had some effect.

Mr. FOSTER. I did deal with it.

Mr. PUGSLEY. But the item under consideration now is not such an item as affords my hon. friend reason to dwell upon it so forcibly, and for this reason. Parliament last session authorized this work to be proceeded with.

Mr. FOSTER. Authorized the minister to do the work for $2,000.

Mr. PUGSLEY. After expending $2,000, it was found that unless the work was continued and this additional money expended, what had been done would be in danger of being washed away. That was brought to the attention of my chief engineer and he brought it to my notice, and the resident engineer was authorized to go on with the work so far as was necessary to prevent its being destroyed during the coming spring. All the chief engineer did was to tell the resident engineer that the men who did this work and supplied the material had to take their chances of the money being voted by parliament. Let me call attention to what took place over and over again when my hon. friend was Minister of Finance, just as it is taking place to-day and has taken place under all administrations. Suppose a public building has to be erected, and is estimated to cost $100,000. Parliament usually votes one-third of the amount as being the sum which is likely to be spent during the coming year, and the contractor goes ahead. It is provided in the contract that if he goes beyond the amount appropriated by parliament, he must do so at his own risk. He is supposed to stop when that appropriation is exhausted. By the 1st of October the contractor has done work on the building to the value of one-third its estimated cost and the parliamentary appropriation is exhausted. Does he stop? Did he stop when my hon. friend was minister? No, he goes on with the work. He may do work to the extent of $75,000. In such a case what did my hon. friend do? He put in the supplementaries an amount sufficient to pay the contractor for all the work done during the current year exceeding the appropriation. He did that over and over again. What is the difference between such a case and the present instance? My hon. friends say that in the present instance, the putting in of the supplementary vote is equivalent to drawing a cheque on the treasury for $4,000. But when my hon. friend gave his contractor to understand that an amount would be put in the supplementaries to cover what he did during the current year in excess of the parliamentary appropriation, was he drawing a cheque on the treasury to that amount? If his contention be right, then every time you put an item in the supplementaries, you are drawing a cheque on the treasury, and pledging the public credit, and all these votes in the supplementary estimates, amounting to $2,000,000 or $3,000,000, should not be there. Why are they there? They represent wages due, amounts due for rents and supplies, amounts due to contractors on public buildings and wharfs all over this country, and which were not wholly provided for in the main estimates of last year. That is why we ask to-day for these supplementary votes. My hon. friend may, with his keen intellect and his keen discernment of right and wrong, be able to see the distinction between the two cases, but I am not. No doubt it is the duty of the foreman to stop the work when he gets notice that the appropriation is exhausted, and his permitting it to go on can only be justified under very exceptional circumstances. In the opinion of the engineer, the case in question was one in which it was justifiable to go ahead and make the necessary expenditure to save the work from destruction.

Mr. GERMAN. The matter under discussion is one regarding which I have very particular knowledge. I know that all contractors are in the habit of doing work ahead of the appropriations. If the Department of Public Works or the Department of Railways and Canals, when they give out contracts, would notify the contractors that there was a certain amount to be appropriated and that after that appropriation was exhausted, the work for that year must stop, the contractors would tender on very different lines from those on which they do now. But under the late government, when my hon. friend from North Lanark was Minister of Railways, things were done in exactly the same way as at present. My hon. friend shakes his head, but I know they were. If the contractors were told that after the appropriation was spent, they must cease their work, they would put in their tenders accordingly but the difficulty is that they put in their tenders expecting to go on and complete their work, after the appropriation is exhausted. They spend their money and they find they cannot get paid, and that is what causes the whole difficulty. I have called the attention of the present Minister of Public Works (Mr. Pugsley) and the Minister of Railways (Mr. Graham) to this very matter. I believe the contractors who have spent their money under those conditions, should be paid interest, because they have to pay interest to the banks which are carrying them. I think it only fair that a contractor should be paid interest on the money due him from the date it is due until the date it is paid. If the department would notify them that they must work under certain conditions, then the contractors would put in higher prices, but they are not notified. I know sufficient about the whole situation to know that the proper thing to do is for the two

large spending departments of Public Works and Railways to inform the contractors that there's a certain amount to be expended, and when that is spent, they must stop the work. Or else tell them: Complete your work, and if we have not the money, we will pay interest on what you expend.

Mr. J. HAGGART. Let me show the distinction between the instance given by the hon. member for Welland (Mr. German) and the present instance. I will explain how we did it when we were running the government. Suppose we had a contract on the Canadian Pacific Railway the estimated expenditure on which was $5,000,000, but the amount to be expended during the year was $500,000, and that amount was asked for and voted. We entered into a contract for the $5,000,000, or for the $500,000, as the case might be. But the contractor knew, as every contractor for the government knows, that the only amount available during the year was the appropriation of parliament. He was notified when the appropriation ran out. But he relied upon the government to have a sum voted next year to carry on the work.

Mr. PUGSLEY. May I ask the hon. member a question?

Mr. J. HAGGART. Yes.

Mr. PUGSLEY. When he was in office did not he have supplementary estimates for the current year?

Mr. J. HAGGART. Yes.

Mr. PUGSLEY. For what purpose?

Mr. J. HAGGART. For the purpose of covering the work, just as the hon. gentle- (Mr. Pugsley) has done.

Mr. PUGSLEY. Just so,—where parliament had not already supplied it.

Mr. J. HAGGART. But, look at the difference between the two cases. Here is a vote for $2,000 to complete a work——

Mr. PUGSLEY. No, the hon. member is entirely in error; it was towards the work, not to complete it.

Mr. LENNOX. Was there any intimation that more would be required?

Mr. J. HAGGART. It must have been the full amount.

Mr. PUGSLEY. No, no.

Mr. J. HAGGART. If it was a work estimated to cost over $5,000, the minister had no right to do it by day's labour, but ought to have given it out by tender and contract. He did not do this. Why? For the simple reason that he thought $2,000 would complete the work. The House votes $2,000, and the minister goes on by day's work. After the appropriation runs out, the engineer, who is the judge of the emergency of this case, orders the work continued, and tells the men that they will be paid. So, the cases are entirely different. A contractor may have a contract for $5,000,000, the year's appropriation towards which may be only $150,000. If the contractor does $200,000 worth of work, it is quite legitimate to ask for $50,000 in the supplementary estimates to make up the difference.

Mr. PUGSLEY. Will the hon. member allow me to ask him this question?: Does not that show that the minister approved of the contractor doing work to the extent of $50,000 beyond the amount voted?

Mr. J. HAGGART. I am sure the minister understands the distinction. This work was to be completed for $2,000——

Mr. PUGSLEY. No, no.

Mr. J. HAGGART. The fact that the minister violated the law in going on by day's labour, if the estimated cost was $6,000, shows that he did not expect to spend that amount. If it were a work of emergency, the minister's duty, when the $2,000 appropriation was expended, was to have an order in council passed in favour of going on with the work as an emergency work. But look at the position in which the great Dominion of Canada is placed—owing its men for days' wages for six or seven months, awaiting supplementary estimates in order to get the money to pay them. There is a silent contract between the minister and these men that they are simply to be allowed to go on with the work and will wait for their pay until the minister gets a supplementary estimate. That is not an enviable position in which to place the country, and, if I understand him aright, the minister knows it. He tries to excuse it all, but in a very lame fashion, —it is wrong to do it, and hopes that the same thing will not occur again.

Mr. FOSTER. As the minister does not seem to understand it yet, I would like to add a word. The minister takes as one example a large contract. Let us take a concrete case: We will say work going on for dredging in the city and harbour of St. John. The estimates are laid on the table and when they come up in committee the minister is asked how much it will take to complete the work, and he gives the estimate.

Mr. PUGSLEY. Suppose that the minister is not asked, and makes no statement?

Mr. FOSTER. I can hardly conceive——

Mr. PUGSLEY. Does not the hon. member know that these Quebec items went

through and no one asked a single question?

Mr FOSTER. But it is not the duty of the minister to slip through votes, even in hurried moments, without giving to the House at least the elementary information with regard to them. And if the minister had a vote for $2,000 for work which he knew could not be completed for that amount, he was not treating the House fairly if he did not tell the House, in all frankness, that it would cost more to complete the work. The minister's duty is clear, and I am sure no one sees it more clearly than he does. Here is a public work, the quantities and estimated cost of which are known. An appropriation is made for it. The minister makes a contract for the construction, which contract binds him to pay for the work so much on progress estimates as the work is done. Nobody can tell just how much will be done in one year. It will depend very much upon the circumstances that meet the contractor as he proceeds. But the contract is plain, if the contractor finishes that work he is to receive so much money. The contract is plain, because parliament has agreed to the expenditure of that large amount of money for that work, and it proposes to pay for it, and authorizes its minister to enter into a contract to get the work done. This case is entirely different. Here is a piece of work which is done by day's labour. The minister does not tell the House when he brings down his estimates and gets his $2,000, that it is to cost more. If he had told the House that it was to cost $6,000, he would then have been obliged to let it by tender and contract, or to have got the authority of council in order to allow the work to be done by day's work. But he did not tell the House that, it is $2,000, and that is all the minister has, and it is all he has a right to pledge. The cases are as different as they can be, and the minister sees it as clearly as any man in this House.

Mr. PUGSLEY. I wish I had the ability of my hon. friend to make black appear white and white appear black, but I am not able to do that. If I understand my hon. friend, this would have been all right if, at the last session of parliament when I asked for the $2,000, I had stated that the work was likely to cost some $10,000; and then, if I had entered into a contract to have the work done, and the contractor had gone on and finished the work just as it is now being done, in that case I would have been quite right in coming to parliament and saying: Although I have only $2,000 of an appropriation, yet I have given the contract for $10,000, the contractor has gone on faster than we anticipated, he has finished up his work, and I must ask parliament for a vote of an additional $4,000, or all that is required, to pay him. That would have been all right, according to my hon. friend, would it not?

Mr. FOSTER. Go on and make your argument.

Mr. PUGSLEY. I thought my hon. friend would not agree to that. The only difference is that here the country has got good value. These poor labouring men have gone ahead and have done this work under the direction of the engineer, done work which was absolutely necessary in order to save from destruction what they had already done, and for which they were paid out of the $2,000, and now we are asking parliament to give us the money to pay these men for their labour, and pay for the materials which have been put into the work. I can see a technical difference between the two.

Mr. FOSTER. Can you not see a legal difference?

Mr. PUGSLEY. No, I am not able to see a legal difference, because in the case of a contractor he has to go on and take the risk of parliament voting his money. The contractor had no business legally to spend one dollar under his contract beyond the appropriation of parliament. What does the contractor do? The contract expressly provides that the minister is not bound to make a payment until and unless parliament makes a further appropriation. If parliament does not make the appropriation, the minister is under no obligation and the government is under no obligation. The contractor could not go into the Exchequer Court and recover a single dollar. It is entirely a voluntary matter on the part of parliament to vote in the supplementary estimates the requisite amount to cover the over-expenditure which the contractor has made during the current year. While I say this, I am also free to say that this is something which the engineer should not permit except under the most exceptional circumstances. I do not attempt to justify it as a practice which ought to be generally pursued. The engineer thought in this case that he was doing what was in the public interest, he thought the work he was doing was necessary to save from destruction that which had been already done. He fully explained to these men that they would have to wait, he explained that they could not expect the money until parliament voted it. As I understand it, the distinction is merely a technical one. In each case the work has been done; in the one case the contractor, and in the other case the men, simply look to parliament to do what it is not bound to do, and it is for this committee now to consider whether this work having been done, it being a useful public work, and having been done in the public interest, it should provide money for

the purpose of paying these men for their labour and to pay for the material.

Mr. FOSTER. My hon. friend is an eminent lawyer, stands high in his profession; I am not a lawyer, but I am willing to put my common sense against the minister's law, and submit it to this committee. The minister came down to parliament, he proposed this work, he told parliament it would cost $10,000. Parliament gave an appropriation of $2,000 towards the completion of that work. That authorized the minister to enter into a contract for the work, he called for tenders and let the contract. With that authorization he entered into a contract with a man to perform that work, and upon the work being properly performed and certified to, that man would have a claim for $10,000. That is the one case fair and square.

Mr. PUGSLEY. Would he have a claim until parliament voted the money ?

Mr. FOSTER. It makes no difference. The very moment you make a contract with a man by which he is to carry out that work, he is to receive on the completion of that work, $10,000. That is a hard and fast contract. My hon. friend said that if he went on and built it, it was a mere matter of grace, or favour, or good will for parliament to make an appropriation to pay him. Now I will put my common sense against his law, and I will say this: If the minister entered in that way into a contract with a man to perform a work upon the completion of which he should be paid by this country $10,000, if the man went on and performed the work, advanced his own money when the appropriation was run out, paid his own men, bought his own material and performed the work himself, and said, there is your work, put on your inspector, and the inspector goes on and says it is all right, that man can collect from this country his $10,000, unless the country is mean enough not to give him the fiat to go to court.

Mr. PUGSLEY. My hon. friend omitted to state that in all these contracts it is expressly provided that if the contractor goes beyond the appropriation he does it at his own risk.

Mr. FOSTER. Exactly, he does so at his own risk, and he pays his men, if he wanted to pay before the six months are over. You are not then in the deplorable condition of having John Smith, and Tom Brown, and a dozen others owed by the government six months for work, and the government not able to pay them, and this country held up in that sort of fashion. He can go on and say, 'I will complete this work, I have got the men and material here, I will provide my own money and complete it, and when it is completed I will get my money from the government.' There is no government in the world that could withhold that money from him. He takes his own risk, but the risk amounts to nothing. This is the difference. The minister in this case came for a $2,000 expenditure, if he had come for a $6,000 expenditure, he would have had to let it by tender and contract. He dit not do it, and he came for his $2,000 and got it, that is all he should have expended. His engineer did wrong, and he himself did wrong, in allowing his engineer to enter into any kind of an understanding with these men to go on and complete this work for $4,000 more, and promising that in four or five, or six months afterward this parliament would pay it. But there is no use in my hon. friend and myself showing our comparative excellence in law over these items, so I think we will stop.

Batiscan—dredging channel at mouth of river, $4,000.

Mr. PUGSLEY. This is under contract to Randolph Macdonald, and is to finish up the payments to him.

Mr. FOSTER. How much has it cost?

Mr. PUGSLEY. It has cost somewhere in the vicinity of $70,000.

Mr. FOSTER. What is being done?

Mr. PUGSLEY. This is for dredging at the mouth of the channel and improving the navigable river to a depth of six feet at low water, a distance of five miles up the river.

Mr. FOSTER. What is the business on the Batiscan river?

Mr. PUGSLEY. There is considerable local traffic. Market boats call there. The Richelieu & Ontario Navigation Company's boats call, and it is a great convenience to farmers to have steamers come in and give them a cheap means of getting their produce to market. The mail boats call there.

Mr. FOSTER. The Batiscan flows into what river?

Mr. PUGSLEY. Into the St. Lawrence. It is 21 miles below Three Rivers.

Mr. FOSTER. What point are you dredging up to?

Mr. PUGSLEY. Ste. Geneviève, five miles from the mouth.

Mr. FOSTER. What is the population of Ste. Geneviève?

Mr. LAVERGNE. 3,000, including the parish and town.

Mr. FOSTER. If you take in a whole county you can easily get 3,000 and more. You might go right up to the height of land.

Mr. LAVERGNE. The census will show you that my statement is correct.

Mr. PUGSLEY. This work is being done at the very reasonable charge of 17 cents per cubic yard.

Mr. FOSTER. If, in our time, we had undertaken to spend $70,000 in every little village and in every little river I think there would have been ructions in this parliament and in the country as well. Seventy thousand dollars is a tremendous amount of money to spend. What is the commercial equivalent that is to come from the expenditure of $70,000?

Mr. PUGSLEY. First of all I want to correct a statement I made as to the contractor. It is not Mr. Randolph Macdonald, but the contractors are Messrs. Dufresne, Turcotte & Marchildon. My hon. friend says there would have been ructions. When—years ago?

Mr. FOSTER. Yes, at any time when we had good sentiment in the House and in the country.

Mr. PUGSLEY. There was not as much revenue as we have now.

Mr. FOSTER. And there was not as much call for revenue.

Mr. PUGSLEY. That is probably because the country has about doubled in growth and importance and everything that contributes to the development of the nation.

Mr. FOSTER. There were not as many taxes then as now.

Mr. PUGSLEY. And not as much ability to pay them as now.

Mr. FOSTER. I do not know about that.

Mr. PUGSLEY. I think we had better discuss the item.

Mr. FOSTER. Well, go on.

Mr. PUGSLEY. Besides the town of Ste. Geneviève there are on the river, Batiscan, St. Prospère, St. Stanislas and St. Narcisse.

Mr. FOSTER. Are these places below Ste. Geneviève?

Mr. PUGSLEY. They are all accommodated by this steamship service.

Mr. FOSTER. Is that so? The minister says they will be; will they be?

Mr. PUGSLEY. That is my information. Apparently there was a petition presented in favour of this work. I have not the petition with me now because this was entered upon some few years ago, but the people of Batiscan, St. Prospere, St. Stanislas and St. Narcisse represented that it would be a great advantage to them to have steamers calling and to be thus enabled to send their products by water, it being much cheaper than by railway. I think we ought not to take too strong a stand against improving the waterways of the country. A reasonable expenditure in dredging out these rivers to enable the steamers to get to the various settlements of the country to enable the people to get their produce to market by water is a matter of a good deal of importance. Water transportation is very cheap as compared with railway transportation.

Mr. FOSTER. I do not know about it being any cheaper when you have to do it at a cost of $70,000.

Mr. PUGSLEY. It is cheaper for the people and while the initial cost may be larger when it is once done it is done for all time.

Mr. BLAIN. What amount was voted last year for this work?

Mr. PUGSLEY. There was an appropriation of $15,000.

Mr. BLAIN. Was it all expended?

Mr. PUGSLEY. Yes.

Mr. BLAIN. And how much more?

Mr. PUGSLEY. It takes $4,000 to finish the expenditure of the current year.

Mr. GEO. TAYLOR. They spent everything last year.

Mr. PUGSLEY. This $66,000 has been running for a number of years. All we spent last year was $18,867 and we had $15,000 of an appropriation.

Mr. AMES. What will it cost to finish it up to the railway bridge?

Mr. PUGSLEY. I have not the memorandum.

Mr. R. L. BORDEN. What depth of water will it give?

Mr. PUGSLEY. Six feet at low tide.

Mr. FOSTER. Do the Richelieu steamers run up there?

Mr. PUGSLEY. Yes.

Mr. FOSTER. Flat bottom boats?

Mr. PUGSLEY. A number of boats of the Richelieu and Ontario Navigation Company; I do not say their biggest boats.

Mr. FOSTER. Will the minister explain how the Richelieu steamers are going to get up with six feet of water?

Mr. PUGSLEY. Their big steamers do not go there, but they have a boat which makes close connection with the mail steamers on the river.

Mr. FOSTER. Oh, I was buoying myself up with the idea that these magnificent steamers went up there.

Mr. PUGSLEY. The mail steamers do not go up the different rivers, I think the mail steamers connect with the boat which runs up the river.

Mr. R. L. BORDEN. Perhaps it is a row boat.

Mr. FOSTER. We would like to know what it will cost.

Mr. PUGSLEY. It all depends on how much dredging we will do.

Mr. LAVERGNE. This is in the county of Champlain. I am sorry the hon. member for Champlain (Mr. Blondin) is not here because I know he would defend the work if he were present. There are large saw-mills located upon the river and boats go into the river to get lumber.

Mr. FOSTER. Saw-mills at Ste. Geneviève?

Mr. LAVERGNE. Yes there is one at Ste. Geneviève and one at the mouth of the river Batiscan.

Rivière Bonaventure—training pier, $4,500.

Mr. PUGSLEY. This is to make payment on a contract for work done during the year.

Mr. AMES. We have already made our protest against that.

Mr. FOSTER. What is the meaning of a 'training' pier?

Mr. PUGSLEY. It is to train the current so that it scours out the channel and directs the flow of the silt.

Mr. FOSTER. Does it prove itself fairly amenable to training?

Mr. PUGSLEY. It does as a rule.

Mr. FOSTER. I thought that a current was rather obstinate, uncertain and difficult to train?

Mr. PUGSLEY. No, it is wonderful how you can direct it.

Mr. R. L. BORDEN. How much will it take to put this current into a good condition of training?

Mr. FOSTER. How much has been expended altogether?

Mr. PUGSLEY. It will be about $27,000.

Mr. FOSTER. When that amount is spent what will the minister have?

Mr. PUGSLEY. We will have a training pier 1,200 feet long, 22 feet wide on top, 14 feet high at the outer end and 5 feet above high water spring tides.

Mr. FOSTER. The design is to keep the current out of the river.

Mr. PUGSLEY. It is rather to concentrate the current into a narrower channel so that it will carry away the silt.

Mr. FOSTER. And allow of better navigation?

Mr. PUGSLEY. Yes.

Mr. FOSTER. What is the size of the city to which the navigation goes?

Mr. PUGSLEY. It is one of the largest shipping points upon all that coast.

Mr. FOSTER. Does the lumber go out by water?

Mr. PUGSLEY. Yes.

Mr. FOSTER. Is the minister sure of that?

Mr. PUGSLEY. I think so.

Mr. FOSTER. Is the lumber loaded on this pier?

Mr. PUGSLEY. I do not know but I should think not.

Mr. SPEAKER (Hon. C. Marcil). May I be allowed to say that the Bonaventure river is the largest river in the county of Bonaventure and probably the largest in the Gaspesian peninsula.

Mr. FOSTER. What does that mean?

Mr. SPEAKER. It is the outlet for the famous Robitaille timber limits which are known as the best timber limits in the province of Quebec. They were held by the late Lieutenant-Governor Robitaille and his family for 25 years and three years ago they were purchased by a syndicate headed by Senator Edwards of Ottawa, called the Cascapedia Trading Lumber Company. It was said at the time that $400,000 was paid for the limits which are now worked by this Canadian Company which has an agency in Buffalo. There is a large mill situated at the mouth of the river which formerly belonged to Mr. LeBlanc and which was purchased by this company. There are men living in Bonaventure county to-day who remember that 40 years ago three masted schooners used to enter the Bonaventure river and proceed to the basin in rear of the barrachois where there is a depth of 25 feet of water. When these limits commenced to be worked logs and stumps floated down the river and becoming embedded in the sand they completely blocked up the channel. The parish of Bonaventure River, has a population of about 1,800 and is about the largest parish in the county. This lumber company has gone very extensively into the operation of these mills and means have to be found to enable them to carry on their business. I think there was a statement made to the department last year showing that from 60 to 75 steamers and sailing craft of all kinds had been loaded with lumber and railway ties at that point. Mr. Crocket, my former opponent, who is the largest dealer in railway ties in the province of

Quebec, sent several hundred thousand from that point. These ties came down the Bonaventure river and were shipped to different parts of the United States, and even to Mexico and South America. These steamers and sailing vessels which took this freight had to anchor a mile or a mile and a half out in the open without any shelter from storms. The lumber and the ties had to be conveyed in scows and some of these were lost last year with their cargoes, and the lives of the crews endangered. Mr. LeBlanc, who was a large lumber operator there, made several requests on the government for facilities to carry on his industry. Mr. Breen, who was engineer of the district for twenty-five years, and who is still the engineer in charge of the district of Quebec, sent in one or two interesting reports showing that it was out of the question to build a wharf at Bonaventure river because it is flat land extending out into the bay, and the only way in which assistance could be given was to build a training pier which would serve to scour the channel of the river. This pier has been built at a cost of $27,000, and the idea is to dredge out the channel, the training pier being intended to prevent the south and west winds from filling up the river with sand and other accumulations. When some dredging is done, the vessels which now have to lie out in the bay will be able to enter the basin and load there under all conditions of weather. Anyone who has visited the locality will admit that this is a very useful work. The village of Bonaventure River itself is growing very rapidly. The Cascapedia Lumber Company has erected a large departmental store which is a new feature in the Gaspé country, and I think they employ 400 men during this winter. More lumbering is done at that one point than probably at any other point on the Gaspé peninsula.

Mr. J. A. CURRIE. Are there mills there?

Mr. SPEAKER. Yes. Mr. LeBlanc's mill was purchased by the Edwards syndicate and it employs 150 men. It is a sawmill with all modern appliances and has been working day and night. It is one of the attractions of the place to see it. The Bonaventure river has three mouths emptying into the Baie des Chaleurs, and it runs for 60 or 70 miles into the Gaspé peninsula. There is a peculiarity caused by the development of the lumber operations in that, while in all the rest of that country the settlements are on the front, there is on the Bonaventure river the parish of St. Alphonse de Caplan located some distance from the bay. I think there are settlements now up to the 12th range from the Baie des Chaleurs into the back country as a consequence of these lumbering operations.

Mr. SPEAKER.

Mr. FOSTER. The river itself is not navigable, I suppose?

Mr. SPEAKER. Not navigable. The fishermen go there, the salmon fishermen; it is navigable for that purpose.

Mr. FOSTER. And do they still load outside?

Mr. SPEAKER. They have to load out in the open, perhaps a mile and a-half out. Mr. Leblanc, the manager of the firm, informed me last year that the vessels have to anchor a mile or a mile and a-half out and the lumber is taken out to them in scows. Sometimes a change in the wind over night will delay operations or toss a scow over. They have no protection from the south and west, although they have protection from the east.

Mr. FOSTER. The training pier, costing $27,000, has not benefited them so as to allow them to bring the vessels up and load inside.

Mr. SPEAKER. The last report of the resident engineer is that the pier does not go far enough, it will have to go 150 feet further to reach the low water mark.

Mr. FOSTER. Is it proposed to do that?

Mr. SPEAKER. An application has been made, but it has not been granted yet.

Mr. FOSTER. It is no good.

Mr. PUGSLEY. Please do not tell Mr. Speaker it is no good, he has been urging an extension of the pier, but it has not been agreed on.

Mr. SPEAKER. Dredging will have to be done to give a proper channel to the mouth of the river.

Mr. AMES. Is there not a wide mud flat for a mile or so out from the Bonaventure river?

Mr. SPEAKER. The bay all over is very shallow.

Mr. AMES. The vessel could not get within a mile or a mile and a-half of the river?

Mr. SPEAKER. I could not say that it is a mile; I am not a judge of distances on the water, but it is a long distance out.

Mr. AMES. The pier would not be of use until a mile of dredging is done.

Mr. SPEAKER. Dredging would have to be done.

Mr. AMES. I can see where several millions could be spent before you can get a three-masted schooner to the mouth of the Bonaventure river.

Mr. SPEAKER. I do not think so; my hon. friend frequently visits the Gaspé peninsula, he is a sportsman—

Mr. PUGSLEY. I suppose he goes fishing there when he is not photographing?

Mr. SPEAKER. We have the finest salmon fishing in the world there. A large amount of business is done at the Bonaventure river and it is only fair that some assistance should be given to it.

Mr. AMES. If there is a chance of making a protected harbour and getting the requisite depth with a reasonable expense, it might properly be made, but as I understand, this river, like the little Pasbebiac, spreads out as soon as it reaches tide water and makes a wide mud flat. If this training pier is only a preliminary which must be followed by dredging operations, to form a channel for three-quarters of a mile or a mile from the mouth of the river out to deep water, it would seem that we are making a useless expenditure now or else this expense can only be made useful by an additional expenditure of many hundreds of thousands.

Mr. FOSTER. We have secured some valuable information and it whets our appetite for more. We find, in the first place, that a training pier 1,200 feet in length, and costing $27,000, has already been built, and, in the second place, that the training pier has actually proved of no benefit at all to navigation, and the representative of the county says that the pier will never prove of any benefit to navigation unless it is made longer, at an added expense. How much longer must it be?

Mr. SPEAKER. 150 feet.

Mr. FOSTkER. 150 feet has to be added before it will have a chance to be of any service towards deepening the channel. Even then it will be of no advantage until you dredge out a mud flat for a mile or a mile and a-half.

Mr. SPEAKER. Sailing vessels always stay out a long distance in case of squalls.

Mr. FOSTER. So we will have to lengthen the pier and then dredge out this mud flat forming a channel which, in a river like that, with its silt is likely to fill up within a year. $70,000 has already been spent in getting a six-foot channel at Batiscan for less than three miles. For the ocean vessels that will come here you must have a depth of much more than six feet, I suppose from 20 to 30 feet, and I would like to know what the estimate of the amount of dredging required here is.

Mr. PUGSLEY. My hon. friend is greatly exaggerating and magnifying the probable cost even of doing the dredging.

Mr. FOSTER. I have not named a sum.

Mr. PUGSLEY. The report is that there will be 23,000 yards of dredging, mostly sand and mud. The Batiscan dredging cost 17 cents, and if you put this at 25 cents the cost would be only $5,000.

Mr. GEO. TAYLOR. What depth will that give?

Mr. PUGSLEY. Eight feet at low tide. The tide rises 8 feet so that will be 16 feet but when you get into the inner harbour or basin there will be 20 feet.

Mr. FOSTER. But you have to get in there.

Mr. PUGSLEY. You can get in at high tide. My hon. friend knows that in Nova Scotia and New Brunswick there are many places which are dry at low tide, where a large lumber shipping business has been carried on.

Mr. FOSTER. The channel is the vital thing.

Mr. PUGSLEY. The vessels would go in and out at high tide. Many quite large vessels do not draw over 16 feet.

Mr. FOSTER. How much do the vessels draw that do load there?

Mr. PUGSLEY. Those that lay out in the St. Lawrence would draw more, but those that go into the inner harbour would be adapted for that trade.

Mr. GEO. TAYLOR. Tranship outside?

Mr. PUGSLEY. No.

Mr. FOSTER. This is to provide for transhipment. Consequently you must have ocean vessels coming up.

Mr. PUGSLEY. Many do not draw over 16 feet, and the larger number of vessels carrying lumber do not draw over 14 feet. Sailing vessels only draw 14 feet and many only 12, which take away very large cargoes of lumber.

Mr. DANIEL. Are these steamers to which the minister refers?

Mr. SPEAKER. Some are steamers. Two years ago, Messrs. Thos Crocket & Co., a well known lumbering firm, loaded the largest steamer that ever left the province of Quebec with railway ties for Mexico. It was a record shipment.

Mr. FOSTER. How much would that vessel draw?

Mr. SPEAKER. From 16 to 18 feet. The town of Campbellton is at the head of the bay and the most prosperous town on the northern shore of New Brunswick, and the steamers which go there now cannot take on full cargoes. They take until they draw about 12 feet of water and then drop down the river and finish there. If steamers could go into the natural basin and take on one-half or three-quarters of their cargo, the remainder could be taken on further down.

Mr. FOSTER. I have no objection to doing anything reasonable for the country-

side, because the country districts have claims as well as the cities, but when we boil this down, we find that the $27,000 which has been spent and the balance that will be spent is all absolutely for the advantage of a rich syndicate which has very valuable limits and which is working these limits for its own profit. It would have been a small thing for a rich syndicate, in which Senator Edwards is represented, to have done something themselves towards this expenditure instead of loading it on to the country. All the more so because the Dominion government gets no revenue at all from it. The work no doubt helps the parish and the parish above, but it is very doubtful whether we should unduly load the revenues of this country in our hurry to do a work which a large and rich lumber company should do for themselves.

Mr. GEO. GORDON. I am very glad to learn that the lumber trade have enlisted the sympathies of the Minister of Public Works, and I presume this expenditure is intended to compensate that trade somewhat for the competition they have to meet through the free admission of American lumber. But I have been endeavouring, ever since I came here, to ascertain what is the policy of the government with regard to where they should place these wharfs and where they should not build them. I am led to believe from the discussion this afternoon that this $27,000 has been expended at this place because a lumber company, which bought the limits for about $400,000 and employs some 400 men, and a village of 1,800 population and a parish with a total population of some 3,000 are benefited by it. I would remind the Minister of Public Works that last year there was an appropriation of $2,000 for a wharf at a place somewhat similar but that wharf has never been gone on with. And at that particular point, limits were purchased by a company to the value of over a million dollars.

Mr. PUGSLEY. What place is that?

Mr. GEO. GORDON. It is a small place called Cache Bay on Lake Nipissing. This $2,000 was in the estimates last year but does not appear there this year. The limits purchased at that place are three or four times the value of those in connection with the particular item under discussion, and the men employed are three times more numerous than in this case.

Mr. GEO. TAYLOR. That was in Ontario.

Mr. GEO. GORDON. What I would like to find out is on what basis the government decides these things. In business the test would be what we were going to get back in dollars and cents and what business was going on in the locality. If the government had any such policy, I would like to know why that particular vote of $2,000 is not in the estimates this year?

Mr. PUGSLEY. The work at Cache bay stands over, as do a great many others, in pursuance of the policy of retrenchment during the coming year.

Mr. GEO. TAYLOR. They voted wrong the last election.

Mr. PUGSLEY. That cannot be the reason because I have kept in a large vote for a dam at Latchford which is in that constituency. But this particular work did not seem urgent, and we thought it might stand over.

Rivière du Loup (en haut)—dredging and other improvements at mouth, $6,100.

Mr. BLAIN. Who has the contract?

Mr. PUGSLEY. W. J. Poupore and Company. It was given after public advertisement and tender.

Mr. BLAIN. What amount will complete?

Mr. PUGSLEY. The expenditure was $31,219, and the appropriation $25,200. This is to pay the balance. This will not complete. It depends on how far along we may go. We have got to make a complete survey before we can tell the total cost of the work that may be required.

Mr. FOSTER. How much has been spent so far altogether?

Mr. PUGSLEY. Since confederation $83,000.

Mr. FOSTER. How much by this government?

Mr. PUGSLEY. I have not the figures here.

Mr. FOSTER. How much more will be spent?

Mr. PUGSLEY. We have not undertaken to let any new contracts next year.

Mr. FOSTER. Was there no plan made?

Mr. PUGSLEY. This is very necessary work. We could stop right now and have done good work in the way of improving the harbour, but there is other work to be done if we choose to do it. We have not decided yet to do any further work.

Rivière Saguenay—wharf on northeast side of Rivière aux Vases, $800.

Mr. AMES. Is the hon. minister sure this is not for a municipal bridge?

Mr. PUGSLEY. I have no information that it is intended for a bridge. The proposed wharf will be 180 by 20, the outer block 30 by 30. Depth of water at low tide, seven feet. Total length, 210 feet. That does not sound much like a bridge, and I am sure my hon. friend need have no fears on the subject.

Mr. FOSTER. What is there there?

Mr. PUGSLEY. This is a small village, with two cheese factories and two stores. The only market is Chicoutimi, and the only communication is by water.

Mr. FOSTER. How much will the wharf cost?

Mr. PUGSLEY. About $7,000.

Mr. FOSTER. Is it a navigable stream?

Mr. PUGSLEY. The Saguenay?

Mr. FOSTER. This is not on the Saguenay. This is on the Rivière aux Vases.

Mr. PUGSLEY. No, this is on the Saguenay.

Mr. FOSTER. Is a depth of seven feet sufficient for the Saguenay boats?

Mr. PUGSLEY. It is enough for the boats that ply on that part of the river, but not for the big boats.

Mr. FOSTER. Is it above or below Chicoutimi?

Mr. PUGSLEY. It is six miles above Ste. Anne village, and above Chicoutimi.

Mr. DANIEL. Are these wharfs built on piles?

Mr. PUGSLEY. No.

Mr. DANIEL. What are they made of?

Mr. PUGSLEY. Cribwork.

Rivière St. François—landing pier at St. François du Lac, on the west side of river, $8,000.

Mr. AMES. How much was voted for this last parliament?

Mr. PUGSLEY. $3,000.

Mr. AMES. The work was done by day's labour, was it not?

Mr. PUGSLEY. Yes. This, I think, is in almost exactly the same position as the other we were discussing.

Mr. AMES. Twice as bad, for it cost double the amount.

Mr. PUGSLEY. I was in hopes it was not half as bad.

Mr. AMES. When did the appropriation run out?

Mr. PUGSLEY. I will get that information and bring it down with the other.

Mr. AMES. Strange, is it not, that all these cases occur in the county of Yamaska? It is a very close constituency, and the majority to the credit of the Liberal candidate is small.

Mr. PUGSLEY. Still, it is enough.

Mr. AMES. These two wharfs may have had something to do with making it enough—just enough.

Mr. FOSTER. Here is another case of the minister spending $5,000 by day's work. Did he get an order in council to authorize it?

Mr. PUGSLEY. No. I did not think the expenditure would reach $5,000.

Mr. FOSTER. But he knows it now; does he propose to get an order in council for the prosecution of the work?

Mr. PUGSLEY. The work is about completed.

Mr. GEO. TAYLOR. What made it so expensive? What was the estimate?

Mr. PUGSLEY. It cost for wharf and right of way $10,000.

Mr. AMES. From whom was the right of way purchased?

Mr. PUGSLEY. A gentleman by the name of Cocher.

Mr. AMES. When was it bought?

Mr. PUGSLEY. August 26, 1908.

Mr. AMES. When was Mr Cocher paid?

Mr. PUGSLEY. I presume, about that time. The order in council was passed on the date I have given. The payment would be made through the Justice Department, and I have no memorandum of it.

Mr. FOSTER. What is the law that guides the minister in this matter?

Mr. PUGSLEY. I will send for the statutes.

Mr. FOSTER. Let me put the question: When the expense is not over $5,000, the minister can have it done by day's labour, but, in order to do that, must have an order in council? And if it is over $5,000, does the law provide that he has no option but to do the work by tender and contract?

Mr. PUGSLEY. I think the hon. member is in error.

Mr. FOSTER. The minister should have direct knowledge on that point to aid that conscience of his.

Mr. GEO. TAYLOR. What is the penalty if the minister violates the law?

Mr. PUGSLEY. One penalty is to get raked over the coals by hon. gentlemen opposite. And there is nothing much worse than that; it hurts me so much.

Mr. AMES. This seems to be an aggravated case. The minister asks $2,000 for a public work, and spends the $2,000, and then spends $8,000 illegally after the other is exhausted. There seems to be something about public works in Yamaska which causes the minister to drop the usual precautions.

Mr. PUGSLEY. While I am waiting for the statutes to be brought, perhaps we could go on with other items.

Rivière St. Jacques (Laprairie)—ice piers near mouth on River St. Lawrence, $260.

Mr. FOSTER. Is that the price of the pier?

Mr. PUGSLEY. This is a balance due. The contract was for $7,023.

Mr. FOSTER. Is this the same kind of ice pier as Annapolis is to have to chain its ice down?

Mr. PUGSLEY. Not exactly the same.

Mr. BLAIN. No suggestion of a bridge in this item?

Mr. PUGSLEY. No.

Ste. Anne des Monts—harbour improvements at mouth of Grand Rivière Ste. Anne, $1,100.

Mr. FOSTER. What has been done there?

Mr. PUGSLEY. This is for a combined dam, training pier and brush and stonework protection extending from one side of the river to a small rocky islet. Then there will be some new dredging to keep the channel open to a depth of about five feet at low water.

Mr. DANIEL. Is that for the purpose of directing the movement of the ice ?

Mr. PUGSLEY. No, this is not an ice pier, this is to keep the channel open for the entrance and departure of small vessels. The total cost is $17,750.

Mr. BLAIN. Why was this done by day labour instead of by contract ?

Mr. FOSTER. Give us the law now.

Mr. PUGSLEY. This was a class of work that could be better done by day labour, in the opinion of the engineer. The law will be found in the first Revised Statutes of Canada, chapter 39:

36. Whenever any works are to be executed under the direction of any department of the government, the minister having charge of such department should invite tenders by public advertisement for the execution of such works, except in cases,—

(a) of pressing emergency in which delay would be injurious to the public interest; or,

(b) in which from the nature of the work it can be more expeditiously and economically executed by the officers and servants of the department; or,

(c) where the estimated cost of the work is less than five thousand dollars and it appears to the minister, in view of the nature of the work, that it is not advisable to invite tenders.

Mr. JOHN HAGGART. I think there is a provision defining the emergency, is there not ?

Mr. AMES.

Mr. PUGSLEY. I am not aware of anything else in the statute bearing on that question. I may say to my hon. friend that my view has been that in cases where the work is important and likely to involve an expenditure of over $5,000, I have felt it my duty to go to council. But except in cases where, in the opinion of the engineer, the work is not likely to cost a great deal of money, and it can be done more expeditiously and more economically by day's work, in some cases I have not gone to council. In some cases we are not bound to go to council, but I have usually done so.

Mr. AMES. How much of this $17,000 has gone into the construction of the approach to this wharf ?

Mr. PUGSLEY. I have not got that separate from the rest.

Mr. AMES. I would like to know how much is being spent on land and building roads ?

Mr. PUGSLEY. I trust my hon. friend does not understand that this total of $17,000 has been expended. That is the estimate of the total cost. I do not see any special expenditure for an approach, I do not think there will be any approach in this case.

Mr. AMES. Last year the minister told us that the total expenditure from the start, including the approach, would be $17,750. What we would like to know is how much of that is for the approach ?

Mr. PUGSLEY. I may have had in my memorandum last year a reference to the approach, I have none with me at present. I do not see why I would have used the expression including the approach, because I do not see what approach there would be.

Mr. AMES. Evidently the minister thought he had good reason for using that term last year. Would the minister make further inquiries ?—because I would like to know what proportion has been expended in the approach that will be required for this work?

Mr. PUGSLEY. I think I must have been misreported last year, or else I used the expression without warrant.

Mr. AMES (reading) :

Ste. Anne des Monts—harbour improvements at mouth of Grande Rivière St. Anne, $3,500.

Mr. BENNETT. What is the nature of the improvements?

Mr. PUGSLEY. It is for the purpose of completing the improvements in course of construction. The works are a combined dam and training pier. Day labour. Total expenditure from the start, including the approach, $17,750.

This is from the 'Hansard' of July 4, 1908, page 12042.

Mr. PUGSLEY. That must have meant including protection work. There must have been some error on the part of the reporter, because I do not see why I should have mentioned an approach. I may have said protection work.

Sorel—deepwater wharf, $34,000.

Mr. PUGSLEY. This is the new work which I explained a short time ago. It is to replace the wharf that collapsed.

Mr. AMES. How much property has actually been lost through the collapse? I think there were two collapses.

Mr. PUGSLEY. I do not know what the old wharf cost, but a considerable portion was destroyed some three years ago, and recently another part was destroyed.

Mr. AMES. What is the estimated cost of replacing the old portion destroyed three years ago and the portion destroyed last year?

Mr. PUGSLEY. This $125,000 is to replace what was destroyed three years ago and also what was destroyed last year. The engineer was anticipating that that would probably be destroyed also, and it is intended to replace it under the new contract.

Mr. AMES. I understand that the slipping away of the old wharf is equivalent to a loss of $125,000, inasmuch as it costs that amount to put it back in a good condition again. What did the minister discover to be the reason for the loss of the wharf at Sorel?

Mr. PUGSLEY. The reason was the peculiarity of the soil in the river bed. There is a good deal of quicksand, and the wharf as originally constructed was not designed apparently to withstand the shifting of the quicksand. I think the first wharf was built upon piles and evidently the soil slipped from the bank. There was a landslide and it carried the pile wharf into the river. We have changed the design. We have excavated a foundation for the wharf and put in a large quantity of stone as a lower foundation and upon that we are building crib work. The engineers believe that the present design, which has been studied very carefully, will do for a wharf which will be permanent in character.

Mr. AMES. How long had the wharf which slipped away been constructed?

Mr. PUGSLEY. About two years before the first accident happened.

Mr. AMES. Who was the contractor?

Mr. PUGSLEY. It was the McAuliffe Company, either McAuliffe, Poupore and Company or Poupore, McAuliffe and Company—I do not remember which.

Mr. AMES. Had the plans been approved by the departmental engineer?

Mr. PUGSLEY. Yes.

Mr. AMES. How does the minister account for the total collapse of the wharf?

Mr. PUGSLEY. Because of the nature of the soil which is down under the water, conditions which were not foreseen occurred.

Mr. AMES. Is it a fact that there was considerable dredging undertaken near the site of the wharf?

Mr. PUGSLEY. I do not think that the dredging would account for that. It is just one of those extraordinary things that you find along the banks of these rivers, such as the landslide that occurred upon the Lievre.

Mr. J. A. CURRIE. I understand that the plans for this wharf were incubated in the office up here without any consideration——

Mr. PUGSLEY. What dreadful thing happened to the plans?

Mr. J. A. CURRIE. The plans were incubated up here by men who had never seen that part of the country at all and did not know where the wharf was to be built. It is just the same as those cottages at Kingston; they were designed to have cellars because it was thought that it would only be necessary to excavate in soft soil and they did not know that it would be necessary to quarry out limestone. But, they had to dig out the limestone and that is what increased the cost so greatly. These wharfs were designed by engineers who had no knowledge of the situation. I understand that there is a great loss to the government every year by reason of these wharfs being swept away along the St. Lawrence. Has it occurred to the department that it would be better and cheaper to carve slips into the river bank than to extend the docks out where they will be caught and carried away by the ice? In other countries, I understand, they cut slips in the banks of the rivers instead of sticking wharfs out into the water where in the spring they are carried away by the ice. I may say that I have that statement from an engineer.

Mr. PUGSLEY. I think the hon. gentleman has been misinformed. The plans for the work were designed by the resident engineer.

Mr. J. A. CURRIE. Who was the resident engineer?

Mr. PUGSLEY. I do not now recall to mind who was in charge. Mr. Michaud is now in charge.

Mr. J. A. CURRIE. Who is the resident engineer, because I understand from some

engineering authorities that it was bad engineering that cost this country $125,000. It would be well to put the blame where it belongs.

Mr. PUGSLEY. There are always plenty of people to criticise engineers after an accident occurs. I remember that in St. John it was proposed to build a wharf on the western side of the harbour at the Sand Point slip; it was constructed after plans drawn by an engineer of the Canadian Pacific Railway, the work was started by the city, and when it was pretty well along, all at once, there occurred a landslide and the whole of the piling slid into the Sand Point slip. They had to change the design entirely and build on crib work. I would assume, until I had some evidence to the contrary beyond mere hearsay, that the resident engineer who was responsible for the designing of the plan, was familiar with the local conditions, and that circumstances arose which were not anticipated.

Mr. J. A. CURRIE. We would like to have the name of the engineer who drew the plan. It would not take the hon. gentleman more than two minutes to get it.

Mr. PUGSLEY. I could not tell without going to the office. I will get the information.

Mr. CROSBY. The Minister of Public Works must know the name of the engineer who made the plan which brought about an expenditure of $127,000.

Mr. PUGSLEY. These plans were made and this work was done quite a number of years ago. Of course, I would hold the chief engineer responsible. I presume these plans were drawn six years ago. I cannot recall who the resident engineer was, but I would be glad to get the information.

Mr. CROSBY. Would not the deputy minister know?

Mr. PUGSLEY. No.

Mr. CROSBY. How long has he been in the department?

Mr. PUGSLEY. Several years. I can get the name of the engineer.

Mr. CROSBY. It seems very strange that you should not have the name.

Yamaska River—dredging, $8,100.

Mr. AMES. Here is another over-expenditure on the Yamaska river. Would the minister kindly give an explanation of this item?

Mr. PUGSLEY. There has been dredging done during the year as follows: From July 15 to the end of October, 147,118 cubic yards of clay and sand were dredged, the channel having been cleared 3,354 feet down stream. From the outlet of the Cheval D'Or the dredging amounted to 26,732·82 cubic yards. There was also the removal of 11,907 cubic yards by the department's dredge 'St. Louis.' The appropriation was $20,000, and it requires $8,878.81.

Mr. AMES. Was it let by contract?

Mr. PUGSLEY. Yes, so much per cubic yard.

Mr. AMES. When the appropriation was exhausted the dredge was kept right on?

Mr. PUGSLEY. For a short time.

Mr. AMES. Until it incurred an expenditure of $8,000?

Mr. PUGSLEY. Yes.

Mr. AMES. When was the expropriation exhausted in connection with that dredge?

Mr. PUGSLEY. I have not the exact date.

Mr. AMES. You told us a moment ago that it was about the end of October, some time after the 26th.

Mr. PUGSLEY. It must have been a slip if I said that.

Mr. AMES. There were a great many urgent and illegal expenditures in the county of Yamaska at that time.

Mr. PUGSLEY. You know the weather gets bad early in November and the dredges stop work.

Blind River wharf dredging, $13,000.

Mr. PUGSLEY. This is under contract.

Mr. BLAIN. What good purpose does it serve?

Mr. PUGSLEY. There is a government wharf there.

Mr. BLAIN. Will this complete it?

Mr. PUGSLEY. I do not think so; it is all we intend to do at present.

Mr. ARMSTRONG. Is the Minister of Public Works considering the question of dredging the mouth of the Au Sable river? Ten years ago the government expended about $17,000 in building a wharf at the mouth of that river and since then they have made an added expenditure to the extent of about $25,000. Vessels of a reasonable size are not able to approach the wharf and in summer time the mouth of the river is completely closed. The wharf is of very little use owing to the fact that the aproaches are not owned by the government and people going there are continually being warned off. I trust the minister will investigate and see if it is not possible to arrange that dredging be done there this summer and that the approaches be put in first-class order so that the wharf can be used. This is a thickly settled district;

there is no railway within 12 or 14 miles, and in the summer time there are 2,000 people in the town of Grand Bend.

Mr. PUGSLEY. I quite appreciate the importance of the town of Grand Bend, and it was with a view to accommodating the increasing business that the wharf was built. There was some trouble about the right of way to the approaches and we are taking steps to expropriate. I can tell my hon. friend that there will be as little delay as possible in completing the approaches. In view of the large reduction in the vote for dredging this year I cannot hold out any hope to my hon. friend that dredging will be done at present.

Mr. ARMSTRONG. The wharf is of very little use unless the dredging is done and when the wharf was built it was promised it should be done.

Mr. PUGSLEY. I will keep the matter in mind.

Mr. SMYTH. I had the honour to present to the minister a short time ago a petition asking that certain repairs should be done on the wharf at Blind river. Is it the intention of the minister to have these repairs made?

Mr. PUGSLEY. I have no appropriation for the purpose at present, but I have directed that a report be made as to the repairs, if they are needed. When I get the report I will decide whether they can be attended to during the present year. The wharf is quite new and can hardly need any extensive repairs.

Mr. SMYTH. The petition asks for the re-flooring of the wharf.

Mr. PUGSLEY. I will have the matter looked into.

Mr. BLAIN. What qualification is required on the part of foremen who have charge of works of that kind?

Mr. PUGSLEY. The policy of the department is to employ only those who are thoroughly reliable and believed to be thoroughly honest and competent to perform their duties.

Mr. BLAIN. On whose recommendation are they appointed?

Mr. PUGSLEY. The member for the county is asked to recommend a competent man whose name is then submitted to the resident engineer who is instructed not to employ the man unless he is thoroughly competent and experienced.

Mr. BLAIN. Is it the member or the engineer who is the highest court of appeal?

Mr. PUGSLEY. The engineer.

At six o'clock committee took recess.

After Recess.

Committee resumed at eight o'clock.

Collingwood harbour—to pay Contractor Joseph Battle interest accrued at the rate of 5 per cent per annum, on delayed payments for works performed by him in connection with his contract of August 25, 1905, for the construction of an addition to the town wharf, $474.02.

Mr. PUGSLEY. This is interest on an amount due to Mr. Battle. The payment was delayed ever since the contract was made on August 25, 1905. A dispute arose as to a claim rendered for additional work which the contractor claimed was not included in the original contract. After investigation it was finally decided by the minister to allow interest from October 25, 1906, on the final estimate of $15,240 at 5 per cent for 192 days and on several smaller amounts for different periods.

Mr. BLAIN. Is this a final settlement?

Mr. PUGSLEY. Yes.

Mr. J. A. CURRIE. The minister knows the circumstances in connection with this wharf. Shortly after its construction the concrete split and the face of the wharf was ready to fall into the water. Have the department taken precautions to make the contractor responsible in case it should collapse?

Mr. PUGSLEY. After an investigation the engineering department concluded that the splitting was not the fault of the contractor. I think the diver found that a dredge had interfered with the under-pinning.

Collingwood harbour—improvements, $10,800.

Mr. PUGSLEY. This is to complete the payments on the contract work done during the past year.

Mr. GEO. TAYLOR. An over-expenditure?

Mr. PUGSLEY. Yes. He exceeded the appropriation a little.

Mr. J. A. CURRIE. The work there is hardly completed yet. There is supposed to be 20 feet of water coming into the harbour, yet last August a vessel drawing 17 feet stuck in the middle of the channel. That channel ought to be swept and there are several corners where the 500 foot vessels cannot manoeuvre into the wharf. In order to make the channel thoroughly satisfactory some work should be done. I know that this committee has not the power to increase an appropriation but I would suggest that the minister, in allotting his general vote for dredging, should consider the advisability of making these improvements in the Collingwood channel.

Mr. PUGSLEY. I recognize the importance of Collingwood harbour. The business there has increased rapidly and there is no doubt that further improvements are very much needed; but it must be borne in mind that we have already expended in a comparatively few years pretty close to $1,000,000 in Collingwood and we have made it a good harbour. But at the same time we must recognize that the business is congested and that there is necessity for further improvements. The channel needs straightening, there are some edges of rock to be taken off and some deepening to be done. The matter is engaging my careful attention. I do not know just what we can do this year, we have many demands from a great many sections of the country and my general dredging vote is very small, I am sorry to say.

Mr. J. A. CURRIE. In this connection I would point out the importance of the question of lake transportation. I notice that in the estimates the knife has been put very deeply into the works appertaining to transportation, especially on the great lakes. I mentioned to the House once before this session that the works at Fort William and Port Arthur were being carried out in accordance with the recommendation of the Royal Commission on Transportation. There is one weak link in the chain, the points on the lower end of the lakes. I do not think the government recognize that the increase in the number of steamers and barges in our lake fleet will necessitate the construction of fully half a mile of new dock accommodation at the lower end of the lakes every year. Each of these ships is from 300 to 500 feet long, and they must have discharging accommodation. We should consider the advisability of making ample provision at the various ports on the lakes, for their accommodation. It will be only ten or fifteen years until we will not have enough harbours for that traffic. I find in the statistical report of lake commerce given by Col. Davis of the corps of engineers of the United States navy and also in the report by the American section of the International Waterways Commission, that the number of Canadian steel steamers in that trade in 1907 was 108. The number has now increased by about 8 or 10, making 115. The registered tonnage in 1907 was 92,224 tons and the value of this tonnage was $7,648,000. The average cost of carriage from the head of the lakes per ton mile to the lower end was ·08 cents. I am giving these figures with a view to showing just what advantage the public are deriving from the work carried on by this government and the necessity for these improvements. The total tonnage carried, according to the American statistics, was 2,747,750 tons. About an equal amount is carried from Port Arthur and Fort William in American bottoms, making a tonnage of nearly 5,000,000 tons a year from the head of the lakes to American and Canadian ports. The average trip to the American ports would be about 827 miles, but many of the Canadian ships go as far as Montreal, and the average trip will be about 1,000 miles, and at an average cost of transportation of ·06 cents per ton mile. The saving on the thousand mile trip over rail transportation will be 31½ cents per ton.

Take that saving on 5,000,000 tons a year, and you will find that the farmers of our Northwest actually save $1,775,000 per annum on the cost of transport of their products to Montreal by water, as compared with what they would have to pay for haulage by rail. Within the last two or three years Montreal has been getting the bulk of the grain traffic for Europe, which is due to our good harbours and deep waterways. Taking up to-day's newspaper I find that the Americans are endeavouring to take the grain trade away from Canada through American ports and are taking steps to cut the through rates on the American trunk lines. With this end in view they have cut about a cent a bushel on grain to the sea-board all around. It is up to us to see that we do not lose the advantage we have gained after many years of struggle and the expenditure of enormous amounts of public money. The fact that on the other side of the line they are endeavouring to take the trade away from us should make us all the more determined to keep it and if necessary spend a little more money for that purpose. Such money will be well spent because the expenditure will accrue to the benefit of the Northwest, not only as regards the people there now but the mililons who will be there ten or fifteen years hence. It is estimated that the canals at Sault Ste. Marie will not be able inside of ten years to accommodate the amount of traffic requiring to go through them. I know that many hon. members really cannot realize the enormous amount of traffic which comes down through that country, and by which the ports of Montreal, St. John and Halifax are benefited. But if that tonnage goes through Buffalo and Erie, the earnings on the lower end of the tonnage, which now benefits the people of eastern Canada, will be lost to Canada. What that means can be realized when the saving of 3½ cents a ton amounts to nearly $2,000,000. I feel satisfied that the minister recognizes the importance of this, but I wish to impress it upon the House, and more especially on his colleagues, who are not in touch with the transportation problems of this country. The hon. Minister of Railways and Canals knows the tremendous growth of this trade. I can remember when you could count all the ships en-

gaged in it in Canada on the fingers of your hands, but to-day we have over 100 steel vessels carrying that traffic. I trust the government will see fit to increase the expenditure this year on those lower lake terminals. I know that the question of expenditure on the port of Montreal will come up, but as a Canadian, living far from Montreal, I would be satisfied to vote in favour of making Montreal and St. John free harbours. That is the only way in which we can keep our supremacy. This year the estimates for the province of Ontario on the upper lakes has been cut down over $1,000,000 in the case of harbours and other improvements to navigation. I know that the government left the door possibly a little too wide open in its policy last year on account of the elections, but after all the cut, I think, is a little too deep, especially in view of the fact that other departments of the government have not been quite so economical. We all recognize that the Minister of Public Works has great difficulties to meet, we all know that he has to try and disarm with his pleasant, sunny smile those who are urging expenditures on him, but I think he should rather exercise his diplomatic arts on his colleagues and make them give a little more money in order that these works may be carried out and that the spout be not too small at any particular end. The port of Montreal should be looked after, the whole chain of transportation should be looked after. It is that chain which has given us the supremacy. Instead of spending money on visionary projects for diverting the traffic from Montreal and these other ports to Hudson bay and elsewhere, we should rather spend our means on practical objects, and then, if we have anything more to spend, use it on these future possibilities.

Mr. D. A. GORDON (East Kent). The hon. gentleman apparently has fallen into the impression that our harbours in the Georgian Bay district are insufficient to take care of the traffic. I would remind him that one dock, 500 feet in length, capable of accommodating an ordinary steamer, can handle at least 10,000 tons a day. In fact boats carrying ten thousand tons are frequently unloaded in less than seven hours time.

Mr. J. A. CURRIE. What kind of freight?

Mr. D. A. GORDON. Ore.

Mr. J. A. CURRIE. There is no ore coming from the west.

Mr. D. A. GORDON. It will unload ten thousand tons of grain in six or seven hours, and on that basis twenty docks would handle 50,000,000 tons during the eight months of navigation.

Mr. J. A. CURRIE. My hon. friend should take a trip and find out whether he could handle 10,000 tons of package freight in seven hours at any of these ports. If he can do that, he ought to take out a patent, and he would make a fortune. That freight is all handled by hand, and to handle ten thousand tons by hand is slow work.

Mr. D. A. GORDON. I was not aware that package freight comes from the west. I was referring to the grain trade.

Mr. SPROULE. There happens to be an immense quantity of package freight for the west and from the west. I would endorse every word of my hon. friend from Simcoe (Mr. Currie). I have lived on the Georgian bay for some fifty years, and watching the development from year to year, I know the growing importance of these works and the urgent need for the expenditure of money. No doubt in the future all these ports will be overtaxed. Although the accommodation there is moderately fair to-day, in the future it will not be sufficient for the needs. With the increasing number of railways reaching the Georgian bay, it becomes absolutely necessary to have these harbours made suitable for handling freight. You may unload a boat very rapidly with grain, but there are times when it is a very slow process. At Owen Sound frequently you will see the place crowded, and I presume it is the same in Collingwood and Midland and in all these ports on the Georgian bay.

Mr. PUGSLEY. I do not object to my hon. friends pointing out what they think ought to be done in the future, but it would be a graceful thing if they would recognize what we have done in the very recent past.

Mr. J. A. CURRIE. We do.

Mr. PUGSLEY. I am very glad to hear it. I think that this government is entitled to the greatest possible credit for its recognition of the transportation needs of the country and more especially of the great opportunities which exist for the development of trade between the western shores of Lake Superior and the ports of eastern Canada by way of the great lakes. We have done a great deal in the past. We have done all that the government could be expected to do. Just consider what has been done at Port Arthur. We are engaged in deepening the harbour, we have already deepened it to 22 feet, and our plan provides for 25 feet so as to give accommodation to the largest lake steamers, which can go to any port on the western shores of Lake Superior, whether American or Canadian ports.

We are building a great breakwater, which, ultimately, will be made two or three miles in extent, so as to afford not only a

safe harbour but one in which the shipping will be moved with the greatest economy and convenience. At Fort William, in addition to the terminals of the Canadian Pacific, we are engaged in a large scheme of deepening and widening the Mission and Kaministiquia rivers. Here also we are providing a depth of twenty-five feet. We are making a turning basin with an area of thirty-two acres, with a view to giving every possible facility for the handling of vessels. We are also building a long revetment wall which will be of great benefit to the shipping in the harbour. Of course the Canadian Pacific Railway, the Grand Trunk Railway, and the Canadian Northern are doing their part, but the government is co-operating with these railways to the utmost extent. I think my hon. friend (Mr. J. A. Currie) ought to realize that the government and the country is dealing in a broad spirit with these harbours when it is providing, notwithstanding the present conditon of the revenues, $600,000 for improvements at these ports on the western shore of Lake Superior during the coming season. That is a large sum to spend and it will be spent to the best advantage. The result will be that, before long, there will be terminal facilities at the western end of Lake Superior which will not be surpassed by any port in the world. I have seen the plans of these railway companies, and I know what our plans are. The terminals are being made on a broad and comprehensive scale. We are working to a definite plan and with the determination to make these ports all they ought to be. Our aim is to provide that any lake vessel which can enter the harbour of Duluth or Chicago shall be able to enters the harbours of Fort William and Port Arthur. What we want is that our harbours shall be equal if not superior to those on the United States side of the line. We realize that for many years, the grain traffic of the west has been going to the port of Buffalo and the Atlantic ports of the United States. It is much to be regretted that as much as 18,000,000 bushels of Canadian grain passed through the port of Buffalo last year and was lost to the eastern Canadian ports. We are seeking to remedy that. That is our aim, and we hope that, before long, the whole grain trade of the west, as well as the other trade of that country, will pass through Canadian channels and through Canadian seaports to the markets of the old country. I believe we shall succeed. Now come to the eastern shores of the Georgian bay. The hon. member says that we ought to pay more attention to the development there than we have done. We have spent money in the improvement of the harbours of Parry Sound, Collingwood—and I may say right here that, at Collingwood, we have spent about $1,000,000. The gentleman who represented that riding before my hon. friend (Mr. J. A. Currie) was persistent in putting forward the claims of Collingwood and he got great recognition of those claims.

Mr. HENDERSON. He made a lot of sacrifices to get it.

Mr. PUGSLEY. I am not prepared to say that the country made any sacrifice. I am not prepared to say that the expenditure was not a wise one. It has greatly increased the facilities for carrying the trade on the great lakes.

Mr. J. A. CURRIE. I suppose the hon. gentleman (Mr. Pugsley) is aware that the work was undertaken virtually in partnership with the town—the town paid its share ?

Mr. PUGSLEY. It is always well when the municipal authorities show their faith in the future sufficiently to put their money in it—it is good evidence that they have faith in the town. And, no doubt, it made it easier for the gentleman who represented the constituency to win the recognition he did of Collingwood's claims. We have improved the harbours of Owen Sound, Midland, Southampton, Goderich, Sarnia, Meaford, Penetanguishene and Depot Harbour —all ports on Georgian Bay and Lake Huron, and all giving signs of being capable of doing large business with our Canadian west. Take Goderich, for example: it is perfectly wonderful how the trade of that port has increased. From only two or three millions of bushels of grain which came there a few years ago, the trade increased so that, last season, 10,000,000 bushels of Canadian grain were brought into Goderich harbour. Goderich bids fair to become a great distributing point for the grain trade of the west. We have spent a good deal of money there and are asked to spend more. We hope we shall be able to spend more. Our attention was called to what seemed to open up a greater possibility than ever before of developing trade through Canadian ports by means of the railways, and these new harbours of Tiffin and Victoria. What will it mean when these railways are constructed? It will mean that one locomotive will haul forty cars of grain in a trainload, instead of fifteen or twenty cars as at present, thus reducing the cost of hauling grain by fifty per cent. I mention these things to show that we have not been dealing in a niggardly way in the expenditures we have made in the development of transportation between the east and west.

Mr. J. A. CURRIE. I know that a very strong effort is being made by the two transportation companies to have all the money spent at Tiffin and Victoria harbour. But I want to point out that fully forty per cent of the grain that comes from the northwest

is ground in mills in Ontario and through this adjacent country. I will warrant that fully fifty per cent of the grain that came through the elevator at Goderich was absorbed before it reached Montreal, or, at the very least, before it reached the maritime provinces. When we consider the enormous quantity of grain coming down from the west, it is evident that the portion that goes into local consumption will afford business for other harbours than Tiffin and Victoria. For that reason, I do not see why making terminals at these two points for the through traffic should prevent a little money being spent at other places that have given evidences of their good faith and their belief in themselves and in their public works. And, after all said and done, after the work at Tiffin and Victoria harbour is all finished, the same trouble will exist as before—there will not be sufficient dockage. The hon. gentleman who quoted figures about the vast quantity of tonnage that can be got from the hold of a vessel in a short time, had in mind the work at the docks of Cleveland and Lorraine, where they will run fourteen buckets holding ten tons each into the hold of a vessel to be loaded at once with iron ore. These vessels that traverse the lakes spend fully fifty per cent of their time loading and unloading. Sometimes they have to wait three days for their cargo at the head of the lakes, and sometimes four or five days at the south end of the lake to have their cargo discharged. The minister has told us how $600,000 is to be spent by the government in the development of Fort William and Port Arthur. But the railway companies and elevator companies, I understand, are spending $2,000,000 in improving their grain handling facilities there. The only reason why I dwell on the importance of Georgian bay ports in this: If you turn to the minister's own report you will find an extract from an American authority showing that the vessels the Americans are employing are vessels 500 and 600 feet long and carrying 10,000 to 12,000 tons at a load. It is important for us to keep our seaports going in the winter time, and for that reason we should have large storage elevators at this side of the lake as well as large terminals at the other, so that grain can be hurried down in the winter months through the natural channels, for instance, to St. John. A large quantity now goes to Portland that should go to St. John, or Halifax, or other ports on the eastern shores of Canada. There is no reason why one pound of this tonnage should go out of this country except through Canadian ports.

Mr. SPROULE. The minister thought he was doing a good deal at the head of Lake Superior in making these harbours suitable for ingress and egress of the largest boats from the east or from the west. But I want to draw his attention to the fact that the same boats go to the south shore of the Georgian bay. Boats carrying 250,000 bushels of grain, and that is about the ordinary cargoes, come down the Georgian bay, and the harbours must be equally as deep and as good on the Georgian bay as they are at Port Arthur and Fort William. though they may not require as much space. They want just as great a depth of water and equally good facilities for loading and unloading. The minister says he thinks they have done very well in providing and spending $600,000 on these harbours at Fort William, Port Arthur and other harbours. But does he think, when they are spending over a million dollars on that Newmarket ditch, what that sum of money would do for these very harbours we are speaking of, and that whereas, in the one instance, the money is absolutely thrown away, in the other instance it is very much needed. If there is a shrinkage in the revenue and it becomes necessary to curtail expenditure, we would expect a wise government to curtail expenditure on useless proposals, and use all the money available in places where it is very much needed, like these harbours on the Georgian bay. The money is very much needed at Port Arthur and Fort William. A large share of that grain, as my hon. friend from Simcoe (Mr. J. A. Currie) says, is hoisted into elevators on the south shore of the Georgian bay, and in the winter it is distributed to the mills that grind all the time. Consequently these improvements are required in these harbours. Meaford is a fairly good harbour, but it is not equal to the needs. There is only room for one boat to go in at a time. Owen Sound is a better harbour than Meaford, but in neither is there anything like the depth of water that is sometimes needed. Then Collingwood has a fairly good harbour compared with what it was years ago; but the grain growing trade of the country will outstrip its conveniences in the near future. So all these harbours call for constantly increasing expenditure to keep them up to the development of the trade that is going on from year to year.

Little Current—improvements of Northern channel in Georgian bay, $82,000.

Mr. PUGSLEY. That is to pay the balance due on the contract for the current year. The work is being done on what is called the inside channel of Little Current, between Manitoulin island and the mainland. It is dredging and blasting rock.

Harbours, rivers and bridges—general repairs and improvements, $5,500.

Mr. EDWARDS. I desire to call attention to a matter which I think I may properly mention under this item. Some days ago I put a question on the Order Paper in reference to the Wolfe Island canal, and I was informed that the Department of

Public Works could not get any information in reference to that matter. Now Mr. Chairman, this Wolfe Island canal was constructed over 50 years ago, and therefore there may be an excuse for the department not being able to find information in reference to it. It was in use up to about 20 years ago, since which time it has not been in use. I want to draw the minister's attention to the following circumstances. There is a bridge across that canal which is necessary to the people living on Wolfe island. That bridge has got to be reconstructed or repaired, I think a new bridge will have to be built, and naturally the people of Wolfe island would like to get assistance in rebuilding it. They have applied to the department for assistance, and have been refused. They have also asked to be allowed to shorten the spans of that bridge, and have been told that they must not fill in on either side of the canal. Now, it does seem to me, and I think it must seem to this committee, that it is a hardship that those people can neither shorten the span of the bridge, nor can they get any assistance to rebuild it, nor can they make any use whatever of the canal, which, as I said, has not been used for over 20 years. I want to ask the Minister of Public Works if he will either grant some assistance to the people of Wolfe island in rebuilding that bridge, if he desires that the span of the bridge shall not be shortened, or that he will leave it to the council of that municipality to exercise their own judgment in filling in and shortening the span as they think proper. I am only asking what is reasonable, namely, that he will either permit the council of Wolfe island to exercise their option in shortening up the span and construct a shorter bridge, or if he desires that the bridge be not shortened, that he will grant some assistance to the people of that municipality in building a bridge of the same length as the old one.

Mr. PUGSLEY. Who constructed the bridge in the first place ?

Mr. EDWARDS. That is a question I asked the Minister of Public Works some time ago, and he was unable to answer me. I am sure that the municipalities through which it runs contributed by way of bonus to the construction of that canal, but I cannot say how much. I am also under the impression that the Dominion government, or the provincial government, gave some assistance, although I am not sure as to that. I have been told by residents of the island that the Dominion government claims jurisdiction over the canal, claims authority to say that the islanders shall not shorten the span of the bridge. If they do claim that jurisdiction, it seems to me they ought to help in constructing a new bridge across the canal.

Mr. EDWARDS.

Mr. PUGSLEY. I am sure my hon. friend would not ask me to build a bridge at Wolfe island, which is wholly within the province of Ontario; I do not see upon what ground I could ask parliament for authority to do that. But, with regard to giving permission to the municipality to shorten the span, as at present advised, I do not see any objection to doing that. If the public have not been using it for the purpose of navigation for a number of years past I do not see any objection to making the span narrower. I think I am quite safe in saying that if the municipality will send the plans to my department, showing the span which they would like to have shortened, their request will receive favourable consideration. The matter has not come before me, but I shall certainly give to any such request my most favourable consideration because I recognize that anything that can be done, without interfering with navigation or interfering with the public interest, which would reduce to the municipality the cost of repairing the bridge, ought to be done.

Mr. EDWARDS. Of course, the hon. gentleman says that this canal is entirely within the province of Ontario. I do not know that it differs very materially in that respect from the Rideau canal or the Newmarket canal. If this canal was constructed by the government originally and if the government of to-day claim jurisdiction over it, I do not see any reason why the government should not construct the bridge across that canal as well as construct a bridge across the Rideau canal.

Mr. PUGSLEY. The government, as far as I am aware, does not claim any jurisdiction over the canal. If it were used for the purpose of navigation we would have the same control as we do over any navigable water. It would only be in that respect that we would have jurisdiction over it. But we have never claimed any jurisdiction or ownership over it. As far as I can learn the canal was built long before confederation, but concerning the question as to who built it there seems to be no definite information.

Mr. HARTY. It was built by private parties.

Mr. GEO. TAYLOR. The Dominion government sent a dredge there to deepen it not many years ago.

Mr. PUGSLEY. Perhaps so.

Mr. GEO. TAYLOR. When we were discussing wharfs in Quebec last night or the night before, I referred to the fact that in the townships of Wolfe Island and Howe Island they have several wharfs there that have been built by private parties and that they have no other means of getting a market than by steamer. I know that the people of Wolfe island can only get to King-

ston or Gananoque by steamer and that the wharfs were constructed on Wolfe island and Howe island by private parties. I think that when the government is building wharfs all over the country the townships of Howe Island and Wolfe Island should also have some assistance from the government.

Mr. J. D. REID. The Public Works Department build wharfs on the property of private parties.

Mr. PUGSLEY. No.

Mr. J. D. REID. I think I can give an instance to the minister.

Mr. PUGSLEY. No.

Mr. J. D. REID. On the St. Lawrence river below Cornwall.

Mr PUGSLEY. I know the island you mean.

Mr. J. D. REID. There is an island owned entirely by a private party.

Mr. PUGSLEY. The hon. gentleman says that the government had built a wharf there on private property. It is not the case. Adjoining the government property there is private property, but the wharf is built on government property.

Mr. J. D. REID. The wharf is built on property there that belongs to a private individual.

Mr. PUGSLEY. The land adjoining the wharf belongs to a private individual.

Mr. J. D. REID. But the whole island belongs to a private party. I do not suppose that the government bought the land upon which the wharf is.

Mr. PUGSLEY. Yes, they did. Would the hon. gentleman expect the government to buy the whole island?

Mr. J. D. REID. No, but I want to say to the minister that they simply built that wharf there for the convenience of a private individual. It was built entirely for his purposes.

Mr. PUGSLEY. No, it was built as a harbour of refuge for the boats plying on the river.

Mr. J. D. REID. It is simply a pleasure resort owned by a private individual.

Mr. PUGSLEY. Another case of misinformation.

Mr. J. D. REID. The minister knows well enough that that was an island owned by a private individual who had a wharf there before and the government rebuilt it for him. In this case that my hon. friend from Frontenac (Mr. Edwards) is speaking about, I remember that last year or the year before a deputation came down and wanted assistance of the kind to which my hon. friend has referred. I know the place well. The government practically took possession of the canal, and the fact that they had been dredging and improving it made it necessary to provide a more expensive bridge. It also made it necessary to have a swing bridge that will cost much more than would be required if it were simply a stationary bridge. If the canal were dredged out there is no doubt that the route would be a great deal shorter between Kingston and Cape Vincent than going around by the upper part of the island as they have to do at present.

Mr. EDWARDS. The hon. member for Kingston (Mr. Harty), if I understood him correctly a minute ago, interjected a remark that this canal was built entirely by private parties.

Mr. HARTY. I always understood so.

Mr. EDWARDS. My information is not the same as that of the hon. member for Kingston. He may be right but I do not think he is. While a company constructed the canal I think I am quite correct in saying that the municipality of Wolfe Island contributed by way of a bonus to the building of the canal.

Mr. HARTY. They may have.

Mr. EDWARDS. And I think the county of Frontenac also contributed something. Here was a canal which was constructed, we will say, by a private company which the municipality of Wolfe Island contributed to and which has been out of use for something like twenty years, a canal from which the municipality is getting no benefit whatever, has not for a great many years, and I think it is most unfair that this useless canal should be the means of imposing extra expense on that municipality. I think I am quite within my rights and that the people there are quite within their rights in asking a contribution from the government towards the construction of that bridge or that it may be left to them to shorten the span as they may see fit. I think the facts are that this company failed to carry on the canal and that the canal passed into the hands of the government. I am rather confirmed in that idea because of the fact that the government within the last twenty-five years, at all events, expended money in dredging that canal. I maintain that if the government claim ownership over this canal they should construct the bridge entirely.

Mr. PUGSLEY. My department does not claim any ownership over it.

Mr. EDWARDS. Whether you claim ownership or not I think the government is the owner of the canal.

Mr. PUGSLEY. I do not see how this government can be the owner of it.

Mr. EDWARDS. If you were not the owner why did you spend money on it? Why was dredging done upon it?

Mr. PUGSLEY. We spend money on many rivers simply because we are requested by the people to do so to improve navigation. We do not own the bed of the river; we have no title and no jurisdiction over the foreshore so far as I know. If anything was done by the provincial government before confederation which gave us title to this canal, the bed of it and the soil of it would all be owned by the Ontario government because it would not pass at confederation to the control of the federal government All that the Federal government has is control of navigation on navigable waters.

Mr. EDWARDS. I presume that in exercising that right over navigable waters the federal government would not allow the municipalities of Wolfe Island to shorten the span of the bridge?

Mr. PUGSLEY. That would be the reason; if it is not useful for navigation that reason would not exist.

Mr. EDWARDS. The claims of the municipalities there should receive the consideration of the government. There is a large amount of trade passing to and from these islands to Kingston and across the line, and as it seems to be the policy of the government to build wharfs and dredge harbours, the older settled parts of the country should receive consideration as well as the newly settled districts.

Mr. GERALD WHITE. Two sessions ago I brought to the notice of the government the urgent necessity for some improvements being made to the dock at Petewawa, and an item was put in last year's estimates to provide for that work. I regret to say that the appropriation has disappeared from the estimates this year, and I cannot too strongly urge on the Minister of Public Works the great necessity for these improvements. At a meeting of the Pembroke Navigation Company held recently, and at which I was present, the directors of that company asked me to bring to the attention of the government the present state of that dock. The minister knows that when that dock was constructed a few years ago, there was some defect in the plans and at low water it is almost impossible to get to the dock, there being a reef at one side which is very dangerous to navigation. Although there was an item in the estimates last year no work was done on the dock. We are not particular as to whether the government will improve the existing dock or build a new one in front of the military camp. Petewawa, since the establishment of the military camp there, has become a very important place, and it is absolutely necessary that some means should be provided to reach it by water. I would strongly impress on the minister the advisability of taking this matter into consideration and putting an item in the estimates for this work.

Mr. PUGSLEY. I will give it consideration.

Lake Nipissing—improvement of navigation through Narrows between upper and lower reaches of West bay and up to Monetteville, $2,000.

Mr. ARTHURS. What is this item for?

Mr. PUGSLEY. The object of this is to give communication between the upper and lower reaches of West bay to Monetteville, which is quite a new settlement, but a very important one. There are a large number of farmers in there who produce a good deal of produce, chiefly hay. By doing this work, which will not cost more than $6,300, it will give them eighteen or twenty miles of navigation and enable them to get their produce to market at less expense than if they had to haul it by road. A delegation of farmers from that district waited on me some time ago and made out such an exceedingly strong case that I thought an appropriation should be provided.

Mr. ARTHURS. Is it not a fact that $5,000 has been already expended on this work and that its object simply is to provide a small canal to connect a small inland lake with Monetteville and Lake Nipissing?

Mr. PUGSLEY. The hon. gentleman is nearly right; $4,800 has been expended and this is to pay for the work. The work had to be done this winter if it is to be of use next summer.

Mr. ARTHURS. I call the attention of the House to the fact that this is a small inland lake three miles in extent, and that it has no connection, or very little connection with Lake Nipissing except during high water. The fact is that a man friendly to the government erected a small sawmill with a capacity of 8,000 or 10,000 feet a day at the wrong end of the lake and unfortunately for him and he had to scow his lumber to the end of the lake so as to get it across to Lake Nipissing. In order to facilitate him in getting out his lumber the government undertook this work, which I am informed was commenced shortly before the election and carried on for a short time. It will be of no use to anybody except to the man who owns the sawmill. This is a long way from Monetteville and I hardly think there is any danger of it ever getting to that village.

Mr. PUGSLEY. My hon. friend certainly is misinformed. My information is that there is a population of over 1,000 within the settlement that will be to a very considerable extent benefited by this improvement. It will give navigation for about 18 miles. The three gentlemen who waited on me did not come before the election. Mr. Monet was one of the gentlemen but I do not remember the others. So interested were they that they came all the way to Ottawa to urge this work. They made out a very strong case indeed. They showed there was a very large settlement in there, that vast quantities of hay were raised in that vicinity and that this would give navigation of about 15 miles. Mr. Corriveau the engineer of my department in charge of work in that locality confirmed their statement as to the necessity for this work.

Mr. ARTHURS. Is this work under contract or not, and was it commenced before the election ?

Mr. PUGSLEY. Almost everything dates from the election. It is like the burning of Rome, the great fire in St. John and many other things that are important. My hon. friend has the date of the election as the one burning subject which he thinks of by day and dreams of by night. There was a report on October 8, 1908, from Mr. Corriveau making a recommendation as to opening this channel 275 feet long and 30 feet wide and also doing some rock cutting, and the work was authorized. There was an appropriation of $3,000 for it made at the last session of parliament and it was quite proper that the work should be gone on with.

Mr. S. SHARPE. When was the work started ?

Mr. PUGSLEY. In October. Then the delegation I referred to came down after the election. The work had been gone on with as far as the appropriation allowed and the deputation said to me that it was very important to finish the work this winter. A gentleman named Levesque who is doing quite a large business up there said that if these men were permitted to finish the work under the direction of the engineer he would pay the men and if parliament made the appropriation well and good, he would take the risk of that. That shows how anxious they were to have the work done. I said: 'If you do so I shall bring the matter before my colleagues and if they agree I will put a sum in the estimates to complete the work.' That is why we are asking this additional amount.

Mr. GEO. TAYLOR. I understand that this channel, in place of opening 15 miles of navigation, will open three miles; the lake is three or four miles long.

Mr. PUGSLEY. No, about 15 miles long.

Mr. GEO. TAYLOR. The lake is about three miles long and they would have to go around it three or four times to measure 15 miles.

Mr. PUGSLEY. Oh, no. There is a short distance that has to be dredged and it is 15 miles from there to the head of navigation.

Mr. GEO. TAYLOR. People acquainted with the country say not, and that there will be only two or three months in the year during which you will have water to get into the ditch.

Mr. PUGSLEY. I believe Mr. Monet is an intelligent man, a man of high reputation and he said it would be about 15 miles of navigation.

Mr. GEO. TAYLOR. What is the length of the lake ?

Mr. ARTHURS. About three miles.

Mr. PUGSLEY. How far is it from the channel to the head of the lake?

Mr. ARTHURS. The channel is between Lake Nipissing and the small lake.

Mr. PUGSLEY. What is the distance between Lake Nipissing and Shanty lake?

Mr. ARTHURS. Some few hundred yards only.

Mr. PUGSLEY. I am sure the hon. gentleman is mistaken.

Mr. GEO. GORDON. That happens to be in the district that I have the honour to represent and I think that perhaps I would not be doing my duty if I did not say that, although I have not actually been over the ground, if Mr. Monet and the other people from that locality gave that information to the minister they were abusing his confidence. I have been in past there and while I do not actually know whether the lake is three or four miles long, I think I am safe in saying it is not more than four, and I think this has been a case I am sorry to say, of misplaced confidence. I am sorry to have to say it, because I like to see improvements going on in my own district where they are needed.

Mr. PUGSLEY. Does the hon. gentleman disapprove of this expenditure?

Some hon. MEMBERS. Yes, yes.

Mr. PUGSLEY. Wait a moment and allow the hon. member to answer.

Mr. G. TAYLOR. You cannot undo it now because the money is spent.

Mr. GEO. GORDON. I will tell you. A gentleman named McKee had a small mill at that lake as the hon. member (Mr. Arthurs) has said. He built the mill in the wrong place, at the head of this little lake

and he found he had to place his lumber upon scows, bring them down to the little portage, draw the lumber over the portage and then put it on boats again to bring it to Sturgeon Falls. Just when the election was approaching, men were set to work to do a little digging in anticipation, I suppose, of having to handle a good deal of lumber over there this year, but unfortunately the little mill has not been running this year, not a log has been taken out, so there will be no lumber to be transported there. There are a few farmers there but not a great many. They have misinformed the minister when they say there are 1,000 people, there is nothing like that at all. It will be a little benefit to these people because small craft can go in and out and it will help them to bring out a little hay, but at the same time there is a road parallel to this and for my part I would much prefer seeing that expenditure made in several other places I might point out where it is more required, as at Latchford or New Liskeard. If you investigate this I think you will find I have represented the case to you exactly as it is.

Mr. G. TAYLOR. Does it open up 15 miles of navigation?

Mr. GEO. GORDON. No.

Mr. PUGSLEY. Would this be possible? I was told certainly it would save fifteen miles of haul over the road for the farmers' produce. What does the hon. gentleman say with regard to the distance saved as compared with the water route?

Mr. GEO. GORDON. About four miles.

Mr. PUGSLEY. Fifteen was stated to me and I will make inquiries.

Mr. BLAIN. Are we to understand that the minister told the deputation to go home and spend the money and he would see that it would be returned?

Mr. PUGSLEY. I think we will let this item stand.

Mr. BLAIN. Has the money been expended?

Mr. PUGSLEY. Under this assurance.

Mr. BLAIN. Are we to understand that the minister told the deputation to spend the money and he would recommend a repayment by the government?

Mr. PUGSLEY. What took place was this. They were very anxious that the matter should be proceeded with.

Mr. GEO. TAYLOR. That was during the election.

Mr. PUGSLEY. No, it was after the election. There was a gentleman with the deputation, who was a man of considerable means, and he said the matter was so important he would advance the money to these people. I said that I did not know whether parliament would vote it or not.

Mr. BLAIN. How much?

Mr. PUGSLEY. We are asking $2,000. I have put in the item upon the representation that the work would open up this extent of navigation which I stated. If I have been deceived, I would not ask the committee to pass the item.

Mr. GEO. TAYLOR. The hon. minister should pay it out of his own pocket if he has put this in on false representations.

Mr. PUGSLEY. I would sooner do that than ask parliament to vote it, after what the hon. member for Nipissing has said.

Mr. BLAIN. Did the hon. minister allow these gentlemen to go on and spend the money and then put an item in the estimates for parliament to vote, without sending an engineer there?

Mr. PUGSLEY. There was an engineer there.

Mr. BLAIN. Did he get a report from an engineer on which he based this estimate?

Mr. PUGSLEY. An engineer made a report, Mr. Corriveau. He is not here now. But upon the statement made by the hon. member from Nipissing (Mr. Gordon) I will allow the item to stand.

Mr. GEO. TAYLOR. I understood the minister to say that the engineer stated it would give fifteen miles navigation?

Mr. PUGSLEY. No, these gentlemen said that.

Mr. GEO. TAYLOR. What was the gentleman's name who offered to disburse this large amount himself?

Mr. PUGSLEY. Mr. Levesque.

Mr. GEO. GORDON. There has been some $2,300 spent on this, and I hope that the government will go on with the work and finish it as otherwise that money would be absolutely lost. I stated awhile ago that this would be of some little use to those few farmers, but the statement made by those men who came here that there would be a saving of fifteen miles was not correct. I do not think there would be that saving. It would be absolutely wrong to spend the money if the work had not been begun, but now that part of it is done we ought to complete it.

Mr. PUGSLEY. Upon that admission, we had better carry the item.

Mr. EDWARDS. I am informed there is a bridge down near Cardinal for which the Minister of Railways has no particular

use. It has been lying there for four or five years. Would he take into his serious consideration the sending of that bridge down to Wolfe Island and putting it across the canal?

Mr. GRAHAM. The council of Edwardsburg want to buy it.

Mr. EDWARDS. Have you placed a price on it?

Mr. GRAHAM. I am not sure.

Mr. EDWARDS. I suppose you will consider an offer from Wolfe Island?

Mr. GRAHAM. We will be glad to get the most we can for it.

Mr. J. D. REID. The township of Edwardsburg do not require the bridge, they have built another one.

Mr. PUGSLEY. This discussion must be out of order when we are considering Public Works estimates.

Mr. DEPUTY SPEAKER. I hope hon. gentlemen will not too long keep away from the item under consideration.

Meaford—harbour improvements, $400.

Mr. MIDDLEBRO. What is this item for?

Mr. PUGSLEY. This will complete. The contract was for $34,742.87. Then there was dredging in addition. The total expenditure to 15th February was $44,086.64, and the appropriation for the same year was $43,700, leaving $386.64 due.

Mr. MIDDLEBRO. Has there been any plan adopted for the improvement of this harbour—any definite permanent plan?

Mr. PUGSLEY. Yes, but I do not know whether I can say that it is unalterable, like the laws of the Medes and Persians. There was a good deal of discussion as to the best plan, and we adopted one on which we are proceeding. I have here the particulars of the work done during the past year. The contract was, first for an extension 50 feet in an easterly direction at the inner end of the breakwater, which was then 430 feet long and 30 feet wide, with a view of affording additional protection from the northerly gales to vessels lying loading at the elevators in the harbour and those wintering there. Then to build a revetment wall of pile work and concrete, 300 feet in length. Also put down close sheet piling 135 feet in length and dredging to 30 feet below the low water level.

Mr. MIDDLEBRO. We had a severe storm there last fall, and it was a great disappointment to the people to find that after spending all that money, the harbour was still in such a state that the boats were torn from their moorings and a number driven against the bridge and their upper works destroyed, and quite a number had to be brought to Owen Sound to make them reasonably safe for the winter. My object is not to criticise but to see if I cannot impress on the minister the advisability of changing the plan he has adopted. When, after spending $43,000, we find that the harbour does not afford sufficient protection to vessels, some change should be made. That is why the other day I impressed on the hon. minister the advisability of putting something in the supplementaries. Unless something be done now, there will be further injuries this year. This is a case which would justify the minister in placing in the estimates an amount for the purpose of remedying as far as possible the defects proven to exist in that harbour. Meaford is one of the harbours on the south shore of Georgian bay, which it is the policy of the hon. gentleman to deepen and improve, for the accommodation of large vessels unloading grain, and I would urge on him to do something this year to preserve the work already done.

Mr. PUGSLEY. I shall be very glad to have the matter looked into in view of what my hon. friend has said. He speaks of putting an amount in the supplementaries, but I have not yet been advised by the Minister of Finance that we are going to have any, so that I am unable to say whether or not it will be possible to make any provision this year.

Mr. MIDDLEBRO. The hon. gentleman (Mr. Pugsley) got a memorial sent to him by the town of Meaford?

Mr. PUGSLEY. Yes.

Mr. MIDDLEBRO. Does he remember what it recited?

Mr. PUGSLEY. No, but it will be looked into very carefully.

Mr. OWEN. When does the minister expect to begin building the wharf at Brighton village? I hope that soon he will be asking for tenders.

Mr. PUGSLEY. No.

Mr. OWEN. Did not the minister promise a wharf last election?

Mr. PUGSLEY. I do not think so.

Mr. OWEN. That was the understanding in the riding.

Mr. PUGSLEY. Did the hon. gentleman (Mr. Owen) convey that message to the electors?

Mr. OWEN. No, not I. It came from Ottawa headquarters, and the minister did not send it through me. Somebody else delivered it.

Mr. PUGSLEY. I will have to make inquiries.

Mr. OWEN. There was a post office promised for Campbellford, too. It was promised right from the platform on nomination day.

Mr. PUGSLEY. I am glad the hon. gentleman has mentioned Campbellford, for it gives me an opportunity to say that I have seen a letter from the gentleman to whom he refers, and that gentleman denies, in the most positive terms, that he made any promise of a public building for the town of Campbellford.

Mr. OWEN. When did he deny that?

Mr. PUGSLEY. In a letter I have seen.

Mr. OWEN. I never said he made the promise.

Mr. PUGSLEY. The statement was made in this House.

Mr. OWEN. Not by me. What is the name of the gentleman charged with making that promise?

Mr. PUGSLEY. Some hon. member of the House made the charge. I will look up the letter from the gentleman who was the candidate.

Mr. OWEN. I did not say that the candidate made the promise.

Mr. PUGSLEY. If my memory serves me right, some hon. member of the House made that statement.

Mr. OWEN. I am more convinced than ever now that the promise was made from Ottawa.

Mr. GEO. TAYLOR. Will the minister bring down the report of the engineer with reference to the item of $2,000 for Lake Nipissing before concurrence takes place?

Mr. PUGSLEY. I shall be very glad to.

Owen Sound harbour—dredging and pile protection work, $15,700.

Mr. MIDDLEBRO. Who has the contract? Is this money to finish the work?

Mr. PUGSLEY. This money has been expended, or will be before the close of the fiscal year.

Mr. MIDDLEBRO. Who has the contract, and how is the work being done?

Mr. PUGSLEY. A. F. Bowman, Southampton.

Mr. MIDDLEBRO. What was the total contract?

Mr. PUGSLEY. This is dredge work, and is paid for by the yard, $2.75 for rock and 25 cents for other material.

Mr. MIDDLEBRO. How much rock has he excavated?

Mr. PUGSLEY. No rock.

Mr. MIDDLEBRO. Was this let by tender?

Mr. PUGSLEY. Yes, Mr. Bowman was the lowest tenderer.

Mr. MIDDLEBRO. Who were the tenderers?

Mr. PUGSLEY. I have not that information before me. I think it has all been submitted to the House and will be found in the returns or in 'Hansard' of last session.

Mr. MIDDLEBRO. I was not here and I would like to have that information.

Mr. PUGSLEY. I will be glad to get it for my hon. friend (Mr. Middlebro).

Mr. MIDDLEBRO. Were there disputes between the contractors and the department as to the work done in the harbour?

Mr. PUGSLEY. There was some slight dispute as to the work done in a dredging slip. The matter was not brought to my attention. There was some question as to whether the contractor was to be paid for certain work.

Mr. MIDDLEBRO. Can the minister give a statement as to the amount in dispute? Was there any dispute as to the work on the revetment?

Mr. PUGSLEY. I will find out.

Mr. MIDDLEBRO. What amount has been expended on the harbour of Owen Sound to date?

Mr. PUGSLEY. I think $453,000, since 1874.

Mr. MIDDLEBRO. Who is the inspector who certifies to the quantity of earth removed ?

Mr. PUGSLEY. I could not say, but I will get that information also.

Mr. MIDDLEBRO. I will postpone further discussion until we have the facts. I suppose the item stands ?

Mr. PUGSLEY. I hope the hon. gentleman (Mr. Middlebro) will not ask to have the item stand. These are our supplementary estimates for the current year and these votes are to close up business. When we come for the full amount in the estimates of 1909-1910, the matter can be discussed. Will this be satisfactory?

Mr. MIDDLEBRO. Yes, especially as the money is expended.

Mr. J. A. CURRIE. I would like the minister when he comes to the general vote for harbours to let me have the number of cubic yards of material excavated at Collingwood for each year for the last fifteen years, showing whether it is rock, hard pan or clay. I think the department has the facts.

Mr. PUGSLEY. Yes, we have the returns year by year.

Sault Ste. Marie wharf—dredging approaches, $57,700.

Mr. SAMUEL SHARPE. Is this by contract ?

Mr. PUGSLEY. Yes.

Mr. SAMUEL SHARPE. Is the work finished ?

Mr. PUGSLEY. Not quite.

Mr. SAMUEL SHARPE. Who has the contract ?

Mr. PUGSLEY. The Great Lakes Dredging Company.

Mr. SAMUEL SHARPE. What rates do they get ?

Mr. PUGSLEY. For rock and boulders they get $2.45 a yard.

Mr. SAMUEL SHARPE. What about clay ?

Mr. PUGSLEY. There is none; it is all rock and boulders.

Silver Centre—wharf on west side of Lake Temiskaming—further amount, $500.

Mr. SAMUEL SHARPE. What is the original amount?

Mr. PUGSLEY. Last year, the House voted $4,000.

Mr. SAMUEL SHARPE. Does this complete it ?

Mr. PUGSLEY. This will complete the block, but not a substantial approach to the land. Something further will have to be done later on.

Southampton—extension of and repairs to town dock, $16,000.

Mr. PUGSLEY. This is under contract, and the vote is to complete payments for the current year.

Mr. GEO. TAYLOR. How about the town dock ?

Mr. PUGSLEY. It is called the town dock, but it is a public dock.

Mr. GEO. TAYLOR. What was the revenue from it last year ?

Mr. PUGSLEY. That would be in the Department of Marine, and I would not have that information.

Toronto harbour—improvements, $75,000.

Mr. PUGSLEY. This is to complete payments for the present year under contract.

Mr. MACDONELL. What work is this ?

Mr. PUGSLEY. The western channel.

Mr. MACDONELL. What is the total amount of the contract ?

Mr. PUGSLEY. The total amount of the contract is $495,000. Then there is other work going on at Toronto. There is a concrete superstructure on the northern part of the substructure of the western pier of the eastern entrance. That is costing something over $50,000.

Mr. MACDONELL. Who are the contractors for that?

Mr. PUGSLEY. Miller & Cumming. Then there is other work being done for the protection of the island.

Mr. MACDONELL. I want to get the details of that contract, when it will be completed, and the amount appropriated for it.

Mr. PUGSLEY. What we want this vote for is shown by the following figures: There was an appropriation in 1908-9 of $120,000. To the 1st of January of the present year, we expended $126,969.49.

Mr. MACDONELL. Can you give us the details?

Mr. PUGSLEY. It was paid to the contractors. Messrs. Weddell have one contract, and Miller & Cumming have the other, namely, for the island breakwater extension. That made an overdraft of $6,969.49. There is now due to the Messrs. Weddell on that contract for the new western entrance, to the 1st of March, $40,120.

Mr. MACDONELL. Would the minister kindly give us the particulars of these three contracts so far as he has them?

Mr. PUGSLEY. I could give some of them. The most important contract is the one for the western channel, that is the Weddell contract, and is $495,000. That is to be completed on the 15th of May, 1912.

Mr. MACDONELL. What work has been done?

Mr. PUGSLEY. Somewhere in the vicinity of $100,000.

Mr. MACDONELL. Can the minister give information about the breakwater?

Mr. PUGSLEY. That contract was given to Miller & Cumming on the 8th of June, 1908, for $39,000, and is to be completed on the 8th of June, 1909. That is the construction of the extension of the Toronto island breakwater according to the amended design. There are to be six groins of crib work and concrete, 60 by 12 feet, and 163 feet of tongued and grooved 10-inch sheet piling with stone protection.

Mr. MACDONELL. I understand there are three separate contracts?

Mr. PUGSLEY. There are only two contracts, we are doing the other work ourselves. We are repairing the eastern breakwater by day's work, that is, putting in stone and protection work.

Mr. MACDONELL. What is being done by day's work?

Mr. PUGSLEY. Repairing the breakwater at the eastern gap. That consists of the restoration of the stone talus, protection of the slope with large blocks of stone.

That is under the direction of Mr. Sing, the resident engineer of Toronto.

Mr. MACDONELL. Is there any work being done to deepen the eastern entrance?

Mr. PUGSLEY. There was some dredging done last year. There is no contract for dredging work there.

Mr. MACDONELL. What is the intention of the government with regard to it?

Mr. PUGSLEY. There is no present intention one way or the other. My information is that there is sufficient water now for the purpose of navigation, and it does not seem to be necessary to do any more dredging at the eastern entrance at present.

Mr. MACDONELL. Is there any appropriation for that? That entrance fills up every season, every season it becomes almost blocked, and requires dredging in order to make it navigable in the spring.

Mr. PUGSLEY. There is no special appropriation for that. We took one vote for it, improvements at Toronto harbour, quite a large vote. Of course we can do any work out of that which might be regarded as necessary for the improvement of the harbour. But with regard to the eastern entrance, I may say that until quite recently the dredging has never been properly done. We think we have now done it thoroughly, we have deepened it to give sufficient depth, and we do not expect it will fill in in the very near future.

Mr. MACDONELL. What appropriation has the minister made for the protection of the island breakwater?

Mr. PUGSLEY. We have no separate appropriation for that, it is a general vote. The contract is for $39,000. Out of this general vote we pay on progress estimates, and also for the work which is being done by the day. That work is to be completed in June of this year.

Mr. MACDONELL. When is the work on the piers to the eastern entrance to be completed?

Mr. PUGSLEY. That is being done by day's work. There is no contract. I stated at least three times, but perhaps there is such a noise that my hon. friend could not hear me, there is no time fixed for the completion of it.

Mr. MACDONELL. What appropriation is there for the present year in addition to this $75,000?

Mr. PUGSLEY. $120,000.

Mr. MACDONELL. And this $75,000?

Mr. PUGSLEY. Yes. This $75,000 is to close up the accounts of the current year.

Mr. MACDONELL. That has been spent?

Mr. PUGSLEY. It has not been spent, but the work has been done for which this is to pay.

Mr. MACDONELL. Then there is $120,000 for the approaching year?

Mr. PUGSLEY. No, the $120,000 is for this year. Then, we have a vote in the main estimates for the next year to continue the work.

Mr. MACDONELL. What is that?

Mr. PUGSLEY. I do not remember at this moment. My hon. friend will see it in his copy of the estimates if he will look it up.

Mr. J. D. REID. What is the policy of the minister for the coming year as to these estimates which are now being voted for dredging in different places in Ontario and Quebec? Is it the intention to advertise for tenders for the contracts or just to give the work out to those who had the contracts last year without calling for tenders?

Mr. PUGSLEY. I have not quite decided yet. Last year I was over-persuaded to call for new tenders and it cost the country about $200,000. I do not want to repeat that. If my chief engineer reports that the work of last season has been satisfactorily performed and that the prices are fair and reasonable and I am satisfied of it I would be rather inclined to continue the contracts for the work which is necessary during the coming year.

Mr. GEO. GORDON. Referring to the matter of the Latchford dam and the correspondence which the minister has just handed to me, I would just like to say that in looking through this correspondence it appears to me that the gentleman who has been negotiating with the Temiskaming and Northern Ontario Railway Commission has not been treating the minister exactly fairly, nor has he been treating fairly the chairman of the commission. I find in the correspondence here from Mr. Davis to the minister the following :

> Mr. Davis endeavoured to ascertain what 'upset price' meant, but states in his report to the minister: 'The terms upon which these lots will be turned over to the government is not made clear.' Thus far my inquiry for further particulars has not been answered by the commission. I am to-day supplying information with the hope of getting further particulars in this respect.

I have here a letter written by the commission, dated Toronto, August 28, 1908.

Mr. PUGSLEY. Addressed to whom ?

Mr. GEO. GORDON. Addressed to Mr. Davis, and Mr. Davis has evidently not sent a copy to you. I am told by Mr.

Englehart that this is the last letter written by him to Mr. Davis.

Mr. PUGSLEY. Will the hon. gentleman kindly state whether this forms part of the papers on file that we have ?

Mr. GEO. GORDON. No, Mr. Davis does not give you copies of any letters from the commission to himself.

Mr. PUGSLEY. That will be a copy that the hon. gentleman has received from the commissioners, I suppose ?

Mr. GEO. GORDON. Yes, I got a copy from Mr. Englehart. That is why I think that Mr. Davis was not treating you quite fairly. I will read this letter which Mr. Englehart states is his last letter and to which he has not received any reply from Mr. Davis:

Toronto, Aug. 28, 1908.

J. S. Davis, Esq.,
Barrister, &c.,
Latchford, Ont.

Dear Sir,—

Re Latchford Dam.

I am duly in receipt of yours of the 20th in reply to mine of the 19th with which you enclose copies of letters of the 30th July to the chairman. I assure you this is the first we have seen of these.

As you are aware, there were some thirty lots on which building requirements had not been made, but for which purchase money had been received. Under date June 1, I wrote to each of the owners as follows:—

I am instructed by the Temiskaming and Northern Ontario Commission to notify you that on account of your failure to construct building, as required by your agreement of day of for purchase by you of lots in townsite of Latchford, said agreement is liable to cancellation, and unless you take steps forthwith to comply with the agreement we shall cancel same and refund to you the amount that has been paid for said lots. We register this letter and require your acknowledgement on or before the 10th day of June, 1908.

They have notified these people that unless they build forthwith their claims will be cancelled and they will refund them the money. That would place an exact price on the value of these lots.

We have refunded purchase price to——

Three different names are given here.

The following say they have given options to you.

That is to Mr. Davis.

Mr. R. L. BORDEN. There were more than three lots sold?

Mr. GEO. GORDON. Yes, several lots.

The following letters have been returned by the post office authorities—parties not having been located.

Five names and seven lots are included in the list.

Mr. W. J. Holmes, owner of lot 171 writes me that he sold the above lot to Mr. Wm. O'Brien, of Sault Ste. Marie. The above will leave eight lots about which we have not heard. The owners of the lots and the numbers are as follows:—

It gives the numbers and names, which I need not read.

With regard to the unsold Latchford lots, average price of which is $165 each; before these lots were put on the market the upset price was arranged on each lot.

Mr. PUGSLEY. The upset price on better situated lots was $70 and $80 and they wanted this government to pay $160.

Mr. GEO. GORDON. I see that Mr. Davis states that here, but these prices were the prices put upon the lots before the sale was made.

So that if these lots had been sold, above prices would have been the least that would have been accepted, and I regret to say that we cannot accept the prices of $70 and $100, which were not the prices that you claim were set out in the first offer to the public.

The above is a complete resume of the matter, so far as we have it.

If there is any way in which we can be of assistance to you to expedite the matter, we shall be only too happy to do so.

Yours truly,

.....
Secretary-Treasurer.

That letter is dated on the 28th August and while Mr. Englehart informs me that it has not even been replied to by Mr. Davis, Mr. Davis writes here on February 27 and the hon. gentleman gives me quotations from his letters up to June.

Mr. PUGSLEY. I think August 13 is Mr. Davis' last letter to the department. Is it not there?

Mr. GEO. GORDON. No, there is a letter addressed to Mr. Hunter and signed by M. Davis under date of February 14.

Mr. PUGSLEY. What year?

Mr. GEO. GORDON. 1908.

Mr. PUGSLEY. You will find a letter in August on the file, or rather an extract from a letter.

Mr. GEO. GORDON. No, it is not on the file.

Mr. PUGSLEY. I think so.

Mr. GEO. GORDON. It would appear from looking over the file that you did not have any letter such as this before you.

Mr. PUGSLEY. I would like to see it.

Mr. GEO. GORDON. I hope the minister will pardon me for being so persistent, but I do not think he realizes that there are thousands of people at the head of the Montreal river who will be unable to get

in a sufficient quantity of supplies to carry them over the summer if this work is not done, and may therefore be exposed to great suffering. Mr. Englehart has assured me he will do everything in his power to have this trifling question about the land adjusted, and I hope the minister will go on with the work.

Mr. PUGSLEY. The commissioners own this land and if they choose to put an exorbitant price on the lots it is their own business.

Mr. GEO. GORDON. There are only ten lots owned by the Ontario government.

Mr. PUGSLEY. They asked us to pay $160 each for lots which during the boom at Latchford they were unable to sell, while they sold lots far superior to these at an upset price of $70 or $80 each. It is not that the $1,600 is so very large but if we pay $160 each for the very worst lots on the town site it would mean that this government would be mulcted in very heavy damages if we had to pay a relatively high price to the private owners of better lots. What I complain of is, that when this government proposes to do a thing for the benefit of that section of the country, and for the benefit of the people there, and for developing property which is owned by the Ontario government, and out of which the Ontario government will get large sums for royalties, they should hold us up for the very last dollar and even double the value of these lots on us. I do not propose to engage upon the construction of this dam unless I can see where we stand with regard to the land damages. If we are going to me mulcted in thousands of dollars of damages for flooding lands I must stay my hand and not proceed with this work. Mr. Englehart in this letter says that if there is any way in which he can be of assistance to expedite the matter he would only be too happy, and I can tell my hon. friend (Mr. Gordon) that if he wants to be of assistance he can get the Ontario government to give us a quit claim deed of the land. If that were done, I can assure my hon. friend that it would go a long way to help us forward towards the construction of this very necessary public work.

Mr. GEO. GORDON. At the time of the sale at Latchford there were no buildings erected, but now it is quite a little town and the lots are more valuable than they were then.

Mr. PUGSLEY. But they have not been able to sell them.

Mr. GEO. GORDON. They have been treating with the government here and they would not want to sell them to any one else in the meantime. I would ask the Minister of Public Works to consider that the Ontario government has built that railway without one cent of subsidy being received from the Dominion government, and I think it is the only railway in Canada which stands in that position.

Mr. PUGSLEY. And they say it is paying very handsome returns.

Mr. GEO. GORDON. I think it is doing very well, but at the same time the majority of the people of Ontario hold that the Dominion government owes to the people of Ontario $6,400 per mile for every mile of that railroad. In view of that, and of the great urgency of this undertaking, I hope the Minister of Public Works will not let a few paltry dollars stand in the way, particularly when the money will go into the hands of people who will take good care of it.

Mr. PUGSLEY. It is not a question of the amount of money we might pay for these lots, but if we pay $160 for each of these worthless lots for which they have been unable to obtain purchasers it will become the basis for the claims of private owners who have much better lots. I can tell my hon. friend (Mr. Gordon) that if the Ontario government will cut the amount in two I will close with them to-morrow.

Mr. GEO. GORDON. On these ten lots ?

Mr. PUGSLEY. Yes, and then they can give us a quit claim deed on the other lots and let us deal with the purchasers.

Mr. GEO. GORDON. That is, if they give you these ten lots for $80 each ?

Mr. PUGSLEY. Yes, and then let them convey to us the other lots upon which other people have claims and upon which they apparently have no claim except the right to receive some purchase money.

Mr. GEO. GORDON. That is the other 30 lots ?

Mr. PUGSLEY. Yes, so that we will be able to deal with the purchasers and take up the whole thing and bring it to a head and get it settled and go on with the work at once.

Mr. GEO. GORDON. I will see about that.

River Sydenham—clearing east branch of sunken logs, snags, &c., $300.

Mr. SAMUEL SHARPE. Is there any navigation here ?

Mr. PUGSLEY. Oh, yes.

Mr. D. A. GORDON. Just 36 feet of water to Wallaceburg.

Mr. S. SHARPE. What kind of craft ply on that river?

Mr. D. A. GORDON. Anything that floats.

Spanish River improvement, $12,700.

Mr. PUGSLEY. This is dredging work?

Mr. W. R. SMYTH. Why is there $12,700 in the supplementaries? The appropriation was $6,000. You have exceeded that by $12,700. When was the work commenced and was it done by contract?

Mr. PUGSLEY. It was done by contract let on September 5, 1905. We were pressed very strongly to do this work at the mouth of the Spanish river, in fact we had been pressed for it for some time. The outlay during the year just closing was for the removal of 66,738 cubic yards of quicksand and clay sand by the dredge 'Meade' from September 21 to November 14, from two long sand bars, 6,000 yards up stream from the mouth of the Spanish river to secure a depth of 12 feet at low water. The expenditure for that was $16,708. In addition there was material and labour for the building of a pile and concrete pier at Massey 15 miles above the mouth of the river, which cost $1,861.

Mr. W. R. SMYTH. Who had the contract for the dredging and was it let by tender?

Mr. PUGSLEY. The C. S. Boone Dredging & Construction Company of Toronto. The contract was let on September 5, and the price was 25 cents per cubic yard.

Mr. W. R. SMYTH. What was the necessity for the work and why was it so urgent?

Mr. PUGSLEY. There is a company there called, I think, the Spanish River Navigation Company. They are navigating the Spanish river and they urged this work very strongly. The hon. gentleman who formerly represented the constituency also urged it. We had very strong requests for this work.

Mr. W. R. SMYTH. The minister perhaps is aware that an appropriation has been made for this work several times. As far back as 10 or 12 years ago there was an appropriation of $10,000 in the estimates for this particular work. That did beautifully during the election of that year. Then it was dropped out of sight. Four years afterwards, an item appears in large type in the local newspapers favourable to my late opponent stating that the government had revoted $10,000 for the Spanish river improvements. That was lost sight of immediately after the elections. This last time there was $6,000 of an appropriation for this work.

Mr. PUGSLEY. The hon. gentleman sees I did not lose sight of it.

Mr. W. R. SMYTH. It became very urgent indeed last fall that this work should be done for reasons of which the hon. minister is no doubt aware. Why was $12,700 more than the appropriation for this work expended? Was it not as necessary ten, eight, six or four years ago as it was last fall? Why the urgency for doing the work at the particular period at which it was done?

Mr. PUGSLEY. That is a very proper question.

Mr. W. R. SMYTH. And a question I am afraid the minister would have a hard time answering to the satisfaction of the people of the district of Algoma.

Mr. PUGSLEY. You just try me now.

Mr. W. R. SMYTH. I know he is an expert, but notwithstanding all that the people of the district of Algoma know full well why the work was done when it was done, and during a period of the year when dredges are usually being laid up in winter quarters.

Mr. PUGSLEY. Does not my hon. friend think the expenditure was absolutely necessary in the interests of navigation?

Mr. W. R. SMYTH. If it was really necessary, it was necessary 10 or 8 years ago.

Mr. PUGSLEY. Is it necessary?

Mr. W. R. SMYTH. It is no more necessary now than it was then.

Mr. PUGSLEY. Was it not necessary last fall?

Mr. W. R. SMITH. It was done purely and simply for political purposes.

Mr. PUGSLEY. I am interested to hear my hon. friend say that.

Mr. W. R. SMYTH. I am never afraid to tell the truth.

Mr. PUGSLEY. I am sure my hon. friend would not be, because I have great respect for him.

Mr. W. R. SMYTH. And I have great respect for my word.

Mr. PUGSLEY. I cannot see how, if the dredging was necessary and it has now been done and some 66,000 cubic yards removed from these two large sand bars, the expense has been wasted. This dredging is to give a depth of 12 feet.

Mr. W. R. SMYTH. Does it give it?

Mr. PUGSLEY. You have to dredge out from time to time to keep down to the 12 feet. We have now taken out 66,000 cubic yards, but if it is not deep enough we will have to dredge deeper.

Mr. W. R. SMYTH. Has the minister anything in the main estimates for the continuation of that work?

Mr. PUGSLEY. Not that I am aware of.

Mr. W. R. SMYTH. The work the minister has done is absolutely wasted unless he continues to dredge the river much further up than he has done.

Mr. PUGSLEY. That is a different thing. What my hon. friend means now is that we must go further and spend more money.

Mr. W. R. SMYTH. If it is necessary to do it at all it is necessary to do it right.

Mr. PUGSLEY. With regard to the work not being done some years ago my hon. friend is quite right in calling attention to it; the difficulty was to get a dredge. It happened that last fall it was possible to get a dredge. The dredge of the C. S. Boone Company had got through with its work on the Blind river, and we were able to have it moved down to do this work at the mouth of the Spanish river.

Mr. W. R. SMYTH. That dredge almost got there by lightning.

Mr. PUGSLEY. Of course, because it got through with the other work and the sooner it would get to work on the Spanish river the sooner the owners would make some money, but in the busy spring or summer this year it might have been impossible to get a dredge there as has happened in other years. I may say frankly that Mr. Dyment found a great deal of fault with me and my department because we had not put the dredge to work before. I explained that there was no dredge available, but just as soon as this dredge was available she was put to work on the Spanish river. We have done the amount of dredging I have mentioned, and if it is necessary to go to a greater depth I would hope that before very long we would be able to continue the work so as to effect what I think my hon. friend would say is a very much needed public improvement.

Mr. SMYTH. It may be needed, but the money expended was simply thrown away, in the way the work was done and during the season in which it was done.

Mr. PUGSLEY. I cannot see that. It was done at so much a cubic yard.

Mr. SMYTH. Yes, but the same number of cubic yards is in that same channel today. You cannot take a boat through the channel you dredged last fall. I am doubtful if the money was spent which we are asked to vote. The dredge was there only a very short time. During the election campaign, my opponent made the boast on the public platform that he had ordered the department to send that dredge to the mouth of the Spanish river, and that it would be there in a few days and sure enough it was. But it took ten years to get that dredge there, according to the minister, because there was an appropriation made ten years ago for that purpose and also four years ago. Yet he now says that the work was so urgent last fall, the dredge had to be sent there during the election. But if the work was so urgent last fall, why is there not this year a sum in the estimates to complete it and make that channel navigable for the coming summer? If the work is to be of any benefit and if the boats are to be enabled to reach that dock which the government built up the Spanish river some twelve or fourteen miles, the minister will have to do a good deal more dredging. They built the dock before there was water enough for a boat to get there.

Mr. PUGSLEY. My hon. friend is mistaken. The vessels of the Spanish River Navigation Company were running up to the place where this dock was built. I recognize that it may be desirable to do further dredging. My hon. friend has asked why there is not an amount in the main estimates for this purpose.

Mr. GEO. TAYLOR. Because there is no election.

Mr. PUGSLEY. No, but it is in accordance with the policy of economy which we have been obliged to adopt.

Mr. GEO. TAYLOR. There is no economy when you spent $12,700 more than was appropriated last year.

Mr. PUGSLEY. That is done and my hon. friend is asking about next year. I cannot say whether we shall be able to do further dredging next year or not. I shall have to give the matter further consideration.

Mr. SMYTH. Is the hon. minister aware that the dredge in question employed 23 American citizens doing the work?

Mr. PUGSLEY. I was not aware of that.

Mr. SMYTH. I am informed on reliable authority that there were 23 American citizens on the dredge at the mouth of the Spanish river doing that work.

Mr. BLAIN. How much was in the estimates last year for harbours and rivers in Ontario and how much this year?

Mr. PUGSLEY. I have not got the main estimates here. The hon. gentleman will find the amount in those estimates.

Mr. BLAIN. I want to see how far the policy of economy is applied to Ontario in respect of these items.

Mr. PUGSLEY. It is applied to Ontario to no greater extent than to any other province in Canada.

Mr. GEO. TAYLOR. The estimates were $1,619,780 last year and $795,250 this year.

Mr. SMYTH. When did that dredge stop doing work on the Spanish river ?

Mr. PUGSLEY. On the 14th of November.

Mr. J. D. REID. When did it begin ?

Mr. PUGSLEY. The contract was let the 5th of September and it began the 21st.

Mr. J. D. REID. Was there anything in the estimates last year for that work ?

Mr. PUGSLEY. Yes.

Mr. J. D. REID. What was the price paid?

Mr. PUGSLEY. Twenty-five cents per cubic yard, scow measurement.

Mr. BLAIN. I would like to ask the hon. minister if he proposes to do any dredging at Port Credit this year. For several years his predecessors promised that a certain amount of dredging would be done there. The excuse always given for not doing it was that no dredge was available, but that excuse can hardly be advanced now since the appropriations are somewhat smaller for Ontario than in former years, and consequently the dredges will not be so busy. There is always some work going on at Hamilton and Toronto, and Port Credit harbour lies between the two and is very close to either of them. In the appropriation we have this year, may we expect the government to carry out the promise that some work would be done at this important point?

Mr. PUGSLEY. I am not aware of any promise by my predecessors and none was certainly made by me. I am not in a position to say whether any dredging will be done there the coming season or not. We have no sum in the estimates for it, and I do not see how it is possible for me to do all the absolutely urgent work the coming year out of the general dredging vote. With regard to Port Credit, there is another difficulty, and that is that it is owned by a company. Many years ago, before confederation, the Ontario government was in the habit of handing over certain harbours to private corporations, and Port Credit unfortunately is in that position. I do not know if that would be an effectual bar to our dredging there, but the most I can say is that I will think the matter over, but I cannot hold out any strong hope.

Mr. BLAIN. My hon. friend has never expended any money at that point but there was some expended there some years ago. My hon. friend has not given any promise, but two of his predecessors gave promises on the floor of the House which I quoted in a discussion two years ago. If my hon. friend will look over the history of his department, he will find that two of his predecesors promised they would spend some money at that important point. I never could understand why they did not do it. My hon. friend is very careful of course in not promising, but I hope he will look into the matter and see that some money is expended there. It is a very important centre and should be kept open in the public interest. There is a good deal of traffic on Lake Ontario between Hamilton and Toronto. Indeed, it is a harbour of refuge in many times of storm. I think the minister should send his engineer to examine and should give this matter rather serious consideration. I may expect that from the minister, I suppose, this year ?

Mr. PUGSLEY. I will make a note of it and think it over.

Mr. DANIEL. The minister can hardly give as a reason for not spending money on the Port Credit harbour the fact that it is owned by a private corporation, because the Dominion has expended money on harbours similarly owned.

Mr. PUGSLEY. Where?

Mr. DANIEL. In Nova Scotia, Glace bay—I think that is the harbour—is owned by a coal company, and the Dominion has spent a great deal of money there; it practically made the harbour.

Mr. PUGSLEY. I think the hon. gentleman is mistaken. There is no parallel in Canada with this harbour of Port Credit. I am sure Glace bay is not a parallel. The foreshore may be owned, but not the harbour, not the water.

Mr. DANIEL. I do not insist on the name, but certainly one of these harbours is owned by the coal company.

Mr. BLAIN. Does the minister say that the government does not spend money on harbours owned by private parties in any part of Canada?

Mr. PUGSLEY. I do not say that, because I think there has been some such expenditure, but I say it creates a difficulty, as, I am sure, the hon. gentleman will recognize.

Mr. SMYTH. As the minister has expended $18,000 on the Spanish river, I would urge upon him the necessity of continuing the work. For two reasons: the first is that the work has been done improperly, I say advisedly, but with all due respect to the engineers and those who did the work. There is a great deal of shifting sand, and I do not think it was dredged wide enough to prevent the sand going back into the same ground. That is one reason—the minister ought to try to save the work that has been done by doing more. Another is that, as he is dredging at one end of the river and has a dock at the other with no means of getting to his dock with any satisfaction with any steamboat of any size, he might better continue improving the river all the way between

the dock and where the improvements have been already made. No doubt, he is aware that there is a good deal of contention between the steamboat company and the lumbermen. Money could well be spent by assisting both the lumbermen and steamboat company in connection with the channel. But as the minister was so anxious to spend the money last fall, and spend it lavishly, I hope he will find reason to continue the work this year and save the work already done. We will see what can be done.

Mr. MARSHALL. Has the minister given Port Bruce any more thought?

Mr. PUGSLEY. I have been thinking Port Bruce over.

Mr. MARSHALL. May I ask if the minister has been thinking favourably of it?

Mr. PUGSLEY. Well, I hear very good reports of Port Bruce.

Mr. MARSHALL. The minister would not like to make me a promise to-night?

Mr. PUGSLEY. Not to-night.

Mr. MARSHALL. I do not want very much.

Mr. PUGSLEY. The hon. gentleman is modest, I know; and I really will think it over. But I would sooner give the hon. gentleman the dredging than give him the promise.

Mr. WRIGHT. I desire to draw attention to the condition of affairs with regard to minor wharfs that are being built on inland waters. I find that an agent is being appointed by the government in some instances and in others not. In these latter cases, apparently nobody is in charge of the wharf after it is built. Instances come to my mind of wharfs being simply appropriated, sometimes to the detriment of the public. But, if an accident happens, a plank gets out of place, there is nobody to look after it. I made inquiry last year and was told that the wharfs where I live were under control of an engineer at Toronto, 145 miles away. How are these matters managed after the wharfs are built?

Mr. PUGSLEY. The proper, the regular course, would be to transfer the wharf to the Department of Marine and Fisheries. The Minister of Marine and Fisheries appoints a wharfinger and gives him a percentage of the wharfage tolls received. In that way, there is somebody to take care of the wharf and see to it that the necessary repairs are made. But sometimes, as the collection of tolls would be quite burdensome, especially to the farmers who are using the wharf in a small way, my department has been asked not to make the transfer to the Marine and Fisheries Department. In the majority of cases, I am sorry to say, both under the old government and under this government, that request has been acceded to, and the transfer has not been made, no wharfinger has been appointed and no tolls collected. An arrangement may be made with a steamship company so that they may use the wharf, but that is unsatisfactory. I recognize the importance of the question that the hon. gentleman (Mr. Wright) raises. The Minister of Marine and Fisheries has been considering the question how to deal with these small wharfs, and he thought it might not be inadvisable to lease them to the steamboat companies, or charge them so much for the right to come to the wharf, or, perhaps, to lease the wharf to the municipal council and so do away with the necessity of charging a farmer a toll for getting a barrel of flour or ten pounds of sugar delivered on the wharf. That is a very obnoxious tax to impose upon the people, and we are endeavouring to do away with it.

Mr. McCALL. While the minister seems to be in a generous mood in granting wharfs and harbour improvements, I would like to ask if his attention has been called to the necessity of a landing pier at St. Williams, in the county of Norfolk, on the north shore of Lake Erie. Would he say whether he has received an application, or some representation as to the necessity of such a work?

Mr. PUGSLEY. My attention has not been called to St. Williams, or to the necessity of a wharf there. If I were to accede to all the requests made from the other side my estimates would roll up tremendously.

Mr. SEXSMITH. Work was commenced last year to rebuild a wharf at the village of Lakefield. The work is not yet completed, and I think the department has been requested to increase the appropriation by a few thousand dollars, in order to extend that work properly. It is a good time now to do this, seeing that the work is still incomplete. Is it the intention of the government to grant further aid?

Mr. PUGSLEY. The hon. gentleman who represents West Peterboro (Mr. Stratton) has brought that matter forcibly to my attention. Although my department obtained the appropriation for the money, we transferred the work to the Department of Railways, and it is being done under that department. The question of providing for an extension during the coming year is now under consideration.

Manitoba—River Assiniboine—improvements near Portage la Prairie, $250.

Mr. STAPLES. I desire this item to stand until the return which I moved for on the 17th of February, is brought down. The minister knows that I called his attention to it before the orders of the day

were called this afternoon, and told him that this return had not been brought down. It is in reference to this particular piece of work, and we wish to get some facts before we can intelligently dispose of this item.

Mr. PUGSLEY. I want to appeal to the good judgment of my hon. friend and ask him not to press that request, for the reason that these are the supplementary estimates for the current year, and it is important that they should be got through so as to close up the accounts before the 31st of March. But I will say to my hon. friend that the return will be brought down right away, and when we are considering the main estimates he shall have an opportunity of discussing it.

Mr. STAPLES. That is the reason why I do not want this item to go through, because the information I am seeking is in reference to the current year.

Mr. PUGSLEY. My hon. friend can discuss that on the main estimates.

Mr. J. D. REID. I do not see why this item should go through to-night; we have another week before us to the end of the month.

Mr. PUGSLEY. When we come to the main estimates my hon. friend will have the same opportunity of discussing it—I will undertake that—as if we were to discuss it to-night.

Mr. GEO. TAYLOR. I think the main estimates for Manitoba have gone through. Perhaps the minister will bring down the information before concurrence.

Mr. PUGSLEY. Yes, I will do that.

Mr. GEO. TAYLOR. There has been an arrangement made between the hon. member for North Toronto (Mr. Foster) and the Minister of Finance that these supplementaries shall be disposed of before the end of the month.

Mr. J. D. REID. Possibly the information we get in these returns will be such that we shall want to strike out the item.

Mr. PUGSLEY. I will make another suggestioon to my hon. friend for Macdonald (Mr. Staples). If he will be good enough to call over to the office of the deputy minister to-morrow morning, we will show him all the papers, and then this can be discussed on concurrence.

Mr. STAPLES. I would be glad to accede to the hon. gentleman's wishes, but I am not the only member from the province of Manitoba. The member for Portage la Prairie (Mr. Meighen) has been following this matter up as well as myself. I would like a little time to investigate. There has been a large expenditure there, a very foolish expenditure, in my opinion, which was made for the purpose of securing votes at that particular time. There are many things in connection with that expenditure that we want to unearth and bring to light; then we will be in a position to take up this item intelligently.

Mr. PUGSLEY. I will have my messenger bring the papers here to-morrow to the hon. gentleman.

Mr. STAPLES. Can we have an opportunity of discussing this to-morrow?

Mr. PUGSLEY. On concurrence.

Mr. STAPLES. I have had some experience in the last four years, and I know how difficult it is to discuss an item on concurrence. Not much attention is paid to items of this nature on concurrence.

Mr. PUGSLEY. Yes, there will be.

Mr. STAPLES. I do not think I am asking too much. It is very necessary that the work which has been done there should be completed. Take it also further down the Assinaboine river; there was public money expended on lot 160 and, according to the advice that I have had from the council of St. François Xavier, a large part of this country is going to be flooded if the work is going to be left in the condition in which it is to-day. I could go to the office and look over the papers, but my hon. friend from Portage La Prairie (Mr. Meighen), who is not here to-night, wants to get this information also, as well as other members from that province.

Mr. PUGSLEY. The work for which this item is asked is to close up the balance due on the channel at Portage La Prairie for the purpose of relieving the flooding, and we do intend to do some more work next year with respect to these improvements which we believe will have the effect of preventing the flooding of the country. We are approaching very closely to the 31st March; it is desirable to have the supplementaries through and it is understood that this can be discussed upon concurrence. If my hon. friend will telephone my deputy where he will be in the morning, I will have a clerk in my office bring over all the papers and show them to my hon. friend, and to any other hon. gentlemen from Manitoba who desire to see them, and I can assure my hon. friend that he will have the fullest opportunity of discussing this matter upon concurrence. I should think that would be very much better, if he wishes to get his views before his constituents, than to discuss the question to-night. Let us get through with the items.

Mr. STAPLES. On that understanding we can let the item go. I will take the op

portunity of bringing it up some day upon the orders of the day.

Mr. PUGSLEY. Quite right; that is a good idea.

Mr. STAPLES. I have a letter from a councillor who represents a ward in the municipality of St. François Xavier and he tells me that certain work that has been done by this government on lot 160 has been left in such a condition that unless steps are taken to secure it in some way the country will be flooded.

Mr. PUGSLEY. What description of work is that?

Mr. STAPLES. I believe the banks are subsiding and that it is necessary to do some piling. The information I get from there is that the government promised to do the piling last fall. It has not been done. I am not clear as to what the nature of the work is, I must confess, and I would like to get some information as to that myself.

Mr. PUGSLEY. That would have nothing to do with this item.

Mr. STAPLES. No, it is further down the river. Now that we are on the supply estimates, I consider that I am quite in order in asking if it is the intention of the government to do anything at St. Laurent? Four years ago there was great activity at that place. A dredge was bought a few days before the election, it was put to work, a number of men were employed, and it was said that they were going to build a wharf for the convenience of the people of that particular constituency of Macdonald. But, on the day following the election the dredge was taken away and we have not heard anything of it since. Last October they promised to bring the dredge back. They were very sorry that they could not get the dredge at that particular time but the assurance was given to the people there that if they would vote for the Liberal candidate there would be no doubt but that this work would be completed. The people of that portion of the municipality of Macdonald accepted the promise of the government candidate to a certain extent, or at least, an adverse majority was given against me there. I hope the Minister will not deceive them but that he will go on and make good the promise which was presented to these people by my opponent. The work is practically useless as it stands. It is about half done, the people cannot get near it, and it is necessary to do certain work down across the lagoon before it is of any value whatever. I hope the minister will take the trouble to inquire into this matter and make good the promise presented to the people on the public platform last October.

Mr. PUGSLEY. I will have the matter looked into.

Mr. HERRON. If I may be permitted to speak on the item I would like to mention a question which affects my own riding. In some way or other I missed the discussion of the public works items dealing with wharfs and bridges in the province of Alberta. I have been informed by the deputy clerk that these items are through although I do not understand how they could have got through without my knowledge. There was in the estimates of the last two years an appropriation of about $8,000 for protecting the banks of the Old Man river at the town of McLeod. I have already spoken to the minister on this subject privately and he gave me a good deal of encouragement to hope that there would probably be an item in the Supply estimates this year, but I am sorry to say that I do not find such an item. I think we have a very strong claim upon the government to undertake and carry out this work and it does seem to me like penalizing the people of that district because they sent a Conservative at the last election. That work was promised at the time by the department here and it was held up before the people of the constituency as one of the works that was going to be carried out. Immediately after the election is over I find that the item is withdrawn. I think we have an especially strong claim to have a small amount of work done for more reasons than one. I find that the minister is very generous in granting money for works of this description in other parts of the country, but that he has done very little work of this nature in the province of Alberta. I think that in the two provinces of Saskatchewan and Alberta there is only about $52,000 in this year's estimates, which I think is a very small amount compared with the appropriations for works in other parts of the country. I think that we have even a stronger claim than that which I have just mentioned and that is that the government own the land, the rivers and streams; in fact, they own things above and under the water. Another reason is that the town of McLeod, that I am asking this appropriation for, in order to protect the banks of the river, occupies what was a government townsite, a townsite that this government made a great deal of money out of in the past. Another is that there is a government building on the banks of the river which will be one of the first properties to be destroyed in the event of the banks falling away. There is very great danger that the banks might be undermined to such an extent that the government building might fall down. I

would like to know from the minister, if he is not going to have anything in the estimates this year, if he will pledge his word that the estimates for next year will contain a vote for this very necessary work.

Mr. PUGSLEY. It is quite true that my hon. friend did call to see me and that he pressed upon my attention the necessity of doing this work at Fort McLeod. The fact that it was regarded by the government as being a necessary work would be evidenced by its having been placed in the estimates last year.

Mr. HERRON. For two years.

Mr. PUGSLEY. For two years. But I have been obliged to leave it out of the main estimates this year for the reason I have already stated to the committee. We have been obliged to postpone a great many necessary public works. Probably owing to the decline of the revenue I have had occasion to consider very carefully this question among others of protecting the banks of rivers in the various provinces. We have done work of this character to a certain extent in the past when our revenues were more buoyant. On the Fraser river we divided the cost of such work between the British Columbia government and the federal government but in my judgment it is work that can hardly be regarded as federal work. It is not for the improvement of navigation; it is for the protection of property of private owners or property of municipalities and is purely local in its character. If we were to do work of this kind in the various provinces I do not know where the claims upon the federal treasury would end. Only the other day my hon. friend from Chicoutimi called my attention to the danger of a landslide on the St. Lawrence river which if it occurred would destroy property and possibly cause loss of life and he urged me to take steps to guard against it; last year the Minister of the Interior urged me to do similar work on the North Saskatchewan at Edmonton, but I felt that this was work for the provincial or municipal authorities. That is the difficulty with regard to this work at Fort Macleod. It is intended to protect the property of the people of that town. The only ground upon which I thought we might interfere was that if the bank slid away the Dominion public building would likely be the first property to be injured and that appealed to the selfish side of the department. If in order to protect government property it is necessary to do work of this character it might possibly be done, but all I can say to my hon. friend now is that it will receive careful consideration.

Mr. HERRON. If this is a work that should not be undertaken by the federal government why was a vote placed in the estimates for it two years in succession?

Mr. PUGSLEY. When we begin to get short of money we have to consider these things very carefully.

Mr. HERRON. It seems to me the elections had more to do with it than anything else.

Mr. PUGSLEY. Oh, no.

Mr. HERRON. The minister seems to forget that this was formerly a government townsite and although part of the unsold lots have recently been turned over to the town, yet the government made a great deal of money out of the sale of some of those town lots in days gone by.

Dredging vessels, repairs, further amount required, $100,000.

Mr. CROCKET. What will this make the total amount for repairs in the year?

Mr. PUGSLEY. $245,000.

Mr. DANIEL. Were these repairs all done in government yards?

Mr. PUGSLEY. Some in government yards and some in private yards all over the country.

Mr. ARTHURS. What is the average cost per annum of operating a dredge in Ontario?

Mr. PUGSLEY. It depends on the size of the dredge, its capacity, its crew, and other considerations. The cost to operate runs from $5,000 to $35,000.

Mr. ARTHURS. At Tiffin and other places, privately owned dredges earn from $40,000 to $60,000 per year. If the government can operate a dredge for from $5,000 to $35,000 then you ought to have more government dredges.

Mr. PUGSLEY. There is a great deal to be said in favour of that. On the other hand the private contractor seems to be able to get more out of their dredges than the government does.

Mr. ARTHURS. In money?

Mr. PUGSLEY. No, in work. They seem to be able to get their men to work more diligently. It has always been so, I am sorry to say, and possibly it may be so in the future. Of course there is interest on the first cost, and repairs, and so on and it is not all profit. I know a number of people who have been in the dredging business and have found it anything but profitable. Some of them have become bankrupt.

Mr. J. D. REID. I would like to know one.

Mr. PUGSLEY. Go to Montreal and you will find them.

Mr. ARTHURS. Is it the intention to keep that dredge working?

Mr. PUGSLEY. Yes.

Mr. PUGSLEY. If there is work to be done, we will try to keep it there.

Mr. ARTHURS. There is work to be done, but there is not much in the estimates for this year.

Mr. PUGSLEY. The vote is small, but we hope to be able to keep the government dredges working.

Dredging, maritime provinces, $225,000.

Mr. DANIEL. Would the minister give the names of the people to whom this money is to be paid?

Mr. PUGSLEY. The first item is to cover expenditures incurred in operating the department dredging plant in the maritime provinces from November, 1908, until March, 1909, according to the returns received by the chief accountant up to March 10, $72,598.

Mr. DANIEL. Why was the estimate $72,000 out?

Mr. PUGSLEY. The vote was not for as much as the work has cost. Some of the dredges have been kept going later than had been expected; for instance, the 'Fielding' at St. John has been working right up to a few days ago. Very often they are laid up in the fall.

Mr. DANIEL. Does the wharfage the 'Fielding' pays come out of this vote?

Mr. PUGSLEY. Certainly.

Mr. DANIEL. Why is it that the 'Fielding' is laid up at a private wharf when there is a government wharf available to lay her up at?

Mr. PUGSLEY. I do not know that. There is a government wharf there owned by the Intercolonial Railway which is required for the use of the Intercolonial Railway and I presume the Intercolonial Railway would not allow us to lay up a dredge there as it would interfere with the use of the Intercolonial Railway wharf by vessels coming there in the ordinary course of business.

Mr. DANIEL. Was application made for the use of the wharf?

Mr. PUGSLEY. It never occurred to me to make such a request, as it would interfere with the business of the wharf.

Mr. DANIEL. The minister will find there is nearly always a vacant place there where the 'Fielding' could lie.

Mr. PUGSLEY. The railway wharf is built for commercial purposes and it would seriously interfere with its operation to have a dredge lie there permanently.

Mr. DANIEL. There is generally a place on the northern face of the wharf where it could rest. You often see pilot boats there.

Mr. PUGSLEY. They can move out quickly. Then the Intercolonial Railway would charge wharfage too.

Mr. DANIEL. Not so much.

Mr. PUGSLEY. Proceeding with the items, the second is for contract dredging in Nova Scotia, as follows: At Moser river, Beazley Bros., $8,539. At Yarmouth, Dominion Dredging Company, $59,903, and at Mabou, Dominion Dredging Company, $13,-183, a total of $73,086. Then in Mahone bay there is a payment to the Poupore Company $31,052, and at McKinnon harbour payment to the same company, $4,095, a total of $35,147. In New Brunswick, at Grassy island, on the St. John river, there is a payment to S. James Gregory, $4,892, and at Gaspereau to the Maritime Dredging Company of $20,269. There is another payment for work at Miramichi bay to the Poupore Company of $3,549, and at Dalhousie a payment to A. & H. Loggie of $7,061. That makes a total supplementary requirement to be covered by this vote of $225,143.36.

Mr. DANIEL. What was the rate paid to the Maritime Dredging Company at Gaspereau ?

Mr. PUGSLEY. 90 cents.

Mr. DANIEL. Were tenders called by public advertisement ?

Mr. PUGSLEY. Yes.

Mr. DANIEL. What was the Grassy island rate ?

Mr. PUGSLEY. I am not quite sure, but I think it was 50 cents.

Mr. CROCKET. To what depth was the dredging done at Gaspereau ?

Mr. PUGSLEY. I do not know, the work was not finished there.

Mr. CROCKET. What did the specifications call for ?

Mr. PUGSLEY. I have not the particulars here, that would be given in connection with the main estimates. It is a very exposed and difficult place to dredge, it is up at Port Elgin.

Mr. CROCKET. Can the minister state what tenders were received in addition to that of the Maritime Dredging Company ?

Mr. PUGSLEY. Only the one tender.

Mr. DANIEL. What was the depth of the Gaspereau river dredging and what length of arm would the dredge require ?

Mr. PUGSLEY. I cannot tell that to-night. It was to give accommodation to quite large steamers that go there to carry away lumber.

Mr. DANIEL. Is there much rise and fall of the tide ?

Mr. PUGSLEY. There is some tide and it is a very exposed place for dredging. In fact I think they lost one scow right at the beginning.

Mr. DANIEL. How far have the scows to go out?

Mr. PUGSLEY. Out to deep water of course. I have not the exact distance.

Mr. CROCKET. Has the Maritime Dredging Company been fully paid for the dredging at Indian Point?

Mr. PUGSLEY. Yes they have been fully paid there.

Mr. CROCKET. In answer to a question which I asked the other day the minister said that the contract for dredging there was let to the Maritime Dredging Company at 50 cents, that the dredging was to be to a depth of 7 feet, and that before dredging the depth of water at that point was about three feet. What does the minister think about that as a price for dredging in such water? The other night it was stated that the department was having dredging done, I think at Port Arthur to a depth of 22 feet for 9 cents. It has been a matter of considerable comment in New Brunswick that the Maritime Dredging Company, in which the minister's friend John E. Moore is the moving spirit, has been able to get a contract at this point for 7 foot dredging at 50 cents a cubic yard, the same price as was paid to Mayes under his contract for dredging to a depth of 32 feet in the harbour of St. John at low water, and 41 cents more per yard than the department has been paying for dredging at Fort William to a depth of 22 feet. I do not know what the minister may think, but it must impress hon. members as a most extraordinary price to pay for the dredging in the St. John river, the easiest kind of dredging, to a depth of seven feet, where the depth before dredging was but three feet. I would like to know what was the purpose of this dredging.

Mr. PUGSLEY. My hon. friend says that this was the subject of a good deal of comment in New Brunswick. He is evidently under the impression that when he thinks about a matter the whole public are thinking about it. The comments no doubt were limited to the hon. gentleman and his immediate party friends. It is impossible to say off-hand whether a price is unreasonable or not. We cannot very well compare the cost of dredging in one place with that of dredging in another. If my hon. friend will take up the expense per cubic yard of dredging by government dredges, he will see remarkable differences in the cost per day, depending not so much on the depth of water as on the character of the soil. You may be able to do deep dredging in many places cheaper than shallow dredging in other places. You may dredge silt, sand or soft clay much more easily to a depth of 22 feet than harder material to a depth of seven feet.

Mr. CROCKET. What was the character of dredging at Indian point?

Mr. PUGSLEY. It would be clay. My hon. friend must bear in mind that public tenders were called for the work at Indian point. It was advertised in the daily papers at St. John, and the only tender received was that of the Maritime Dredging Company. There is another thing to be considered. If there is a large quantity of dredging to be done, extending over a period of years, such as at Fort William, you can get it done much cheaper than you can a comparatively small quantity. The dredges do not require to be moved and towed, and you can afford to invest a larger amount of capital and get more powerful dredges. At Fort William, the material is very much softer than at Indian Head. Unless you knew the exact character of the material in each place, you could not at all compare the prices. My hon. friend is in error with regard to the Maritime Dredging Company getting the same rate as Mr. Mayes. Mr. Mayes never get so low as 50 cents. The lowest he got was 55 cents per cubic yard, and for the greater part of the work he did at St. John he got 90 cents, and he got that after public tender. Up and down the St. Lawrence, in some cases 50, in some cases 60, and in others 70 and 75 where the dredging might not be any more difficult than at Indian point. It depends a good deal on the character of the soil. At all events, the work was let after public competition and advertisement to the Maritime Ddedgrng Company, which was the only tenderer, and on the certificate of the chief engineer that the price was very reasonable.

Mr. DANIEL. The minister spoke about Mr. Mayes not doing any dredging as low as 50 cents. But Mr. Mayes put in a tender to do dredging at 49 cents, and it was not accepted.

Mr. PUGSLEY. It was an irregular tender, not complying with the specifications.

Mr. DANIEL. It was irregular simply with regard to having registered or unregistered dredge, and not with regard to the price. Then with regard to the Dominion Dredging Company, that work was not put up to public tender.

Mr. PUGSLEY. Yes it was.

Mr. DANIEL. Not when the Dominion Dredging Company did it.

Mr. PUGSLEY. My hon. friend is mistaken. It was put up to public tender and Mr. Mayes tendered at 90 cents and was the

lowest. Then the Dominion Dredging Company were allowed to do part of the work at the same price.

Mr. DANIEL. They were put to work without offering any tender at all.

Mr. PUGSLEY. But at the same price as the other.

Mr. DANIEL. At the same time they had a very profitable contract, as the minister knows.

Mr. PUGSLEY. The minister does not know whether it was profitable or not. They got the same figure as the lowest tenderer.

Mr. DANIEL. They got the same figure for easy work as Mr. Mayes got for difficult work.

Mr. PUGSLEY. It was work exactly of the same character.

Mr. DANIEL. My information is that it was not. It was easier, softer and much more profitable. They did not put in a tender but simply were given the work at the figure put in before by Mr. Mayes.

Mr. PUGSLEY. What I said was this. Public tenders were called for the work upon the northern side of Sand Point slip. The notice was advertised in the various newspapers, tenders were received, and Mr. Mayes was the lowest, at 90 cents per cubic yard.

Mr. DANIEL. Was he the only tenderer?

Mr. PUGSLEY. I do not know. It was felt that he could not proceed as rapidly with the work as public interest required and there were strong demands from the port of St. John to hasten the work. Yielding to that request, the then acting Minister of Public Works (Mr. Fisher), gave part of the work to the Dominion Dredging Company and they went on. Mr. Mayes doing a part and they the other, and both were getting 90 cents per cubic yard. Then when I became minister, I divided the work of the extension of the 400 feet extension equally. I gave the Dominion Dredging Company the work on one side and Mr. Mayes the work on the other. The one was not any harder than the other.

Mr. DANIEL. I might remind the minister that Mr. Mayes found that he had to request a higher price than he was getting from his original tender because he struck a very difficult piece of dredging—a strip full of large, heavy boulders. But that strip did not extend up to the part that the Dominion Dredging Company did.

Mr. PUGSLEY. Boulders seem to breed there. After Mr. Mayes got through, we found a large number of boulders in the vicinity of the work he had carried on. I do not know whether they breed—like the gondolas in New York.

Mr. PUGSLEY.

Mr. DANIEL. I happened to see a plan of these boulders lying right up against the wharf, not only in the part Mr. Mayes had dredged, but where the Dominion Company had dredged as well.

Mr. PUGSLEY. He was allowed $18.60 per yard for these boulders, though I do not think he had harder work than the Dominion Dredging Company.

Mr. CROCKET. I have listened to the minister's interesting statement concerning the difficulties of dredging at Indian point, and I feel sure that that statement, when heard by the people of the community who know the facts, will be very amusing to them.

Mr. PUGSLEY. I said it was a clay soil.

Mr. CROCKET. The minister was endeavouring to justify these manifestly excessive prices paid to Mr. Moore for the dredging, on the ground that it was more difficult than at Fort William or St. John. The fact that the depth of water before dredging was three feet and that the dredging was done to a depth of seven feet will show how much reliance is to be placed in the minister's contention. As to the prices, the contract was awarded to the Dominion Dredging Company on the basis of $17 for rock or boulders exceeding two cubic yards. and 50 cents per cubic yard for all other material. The price to Mr. Mayes was $8.60 per yard for rock in the harbour of St. John, and 55 cents for other material, 5 cents of which went to the minister's friend, Mr. McAvity.

Mr. PUGSLEY. That was the first. What was the second?

Mr. CROCKET. That is the contract that was made with Mr. Mayes.

Mr. PUGSLEY. His second contract, let at public tender, gave $19.60.

Mr. CROCKET. The one in connection with which he made the agreement with the minister's friend, Mr. Geo. McAvity, whereby he agreed to pay 5 cents to Mr. McAvity for every cubic yard over 50 cents. He was willing to dredge at 50 cents a cubic yard, and entered into this agreement with Mr. McAvity to give him 5 cents a cubic yard for his influence with the government. That is all he received for doing the dredging for ordinary material in the harbour of St. John, and for rock, he was allowed $8.60. And this for dredging to a depth of 32 feet. At Indian point the minister's other friend, Mr. Moore, was to get $17 for solid rock, though it turns out there was no solid rock to be found.

Mr. PUGSLEY. Does the hon. gentleman (Mr. Crocket) say that he received anything for solid rock?

Mr. CROCKET. No. But it indicates pretty well that Mr. Moore did not know

anything about the character of dredging he had undertaken to do— or the department either.

Mr. PUGSLEY. How?

Mr. CROCKET. I assumed from what the minister said that when the department called for tenders, it was after an examination had been made and an estimate of cost.

Mr. PUGSLEY. There is a uniform classification, so that, if solid rock is encountered, it is to be done at the rate.

Mr. CROCKET. Of $17 a cubic yard in this case?

Mr. PUGSLEY. No, but at the rate tendered for.

Mr. CROCKET. But the other material was to be paid for at 50 cents, regardless of whether it is hard or soft clay, sand or silt. I suppose the classification was the same as in other contracts. The minister spoke of doing a large quantity of dredging at a lower rate per cubic yard than would be paid for a smaller quantity, but I observe that Mr. Moore got no less than $48,247 out of what dredging was done at Maquapit lake.

Mr. PUGSLEY. Compare that with dredging at Fort William, where it will go to two or three million dollars.

Mr. CROCKET. The minister says, with reference to any comment made upon this subject, that, of course, I would be speaking only from what I had heard from my political friends. I have been spoken to by many in New Brunswick within the last week, and asked if it could possibly be true that Mr. Moore had received $48,247 for the work done at Indian point or were the figures which were reported a mistake ? I have heard responsible citizens of St. John, some of them leading business men there who are familiar with the work, state that Mr. Moore was getting that price for dredging that was worth not more than ten cents.

Mr. PUGSLEY. Did the hon. gentleman tell these people that the work was let after public advertisement calling for tenders?

Mr. CROCKET. No. I did not think that made much difference in the circumstances. The fact is that the Maritime Dredging Company got this work without competition. There may have been tenders called for——

Mr. PUGSLEY. I say there were, and by public advertisement, with the widest reasonable circulation.

Mr. CROCKET. It is very singular if tenders were called for in such a way that Mr. Moore, or the Maritime Dredging Company were the only tenderers for the work in that locality and at such manifestly excessive figures.

Mr. PUGSLEY. Tenders were called for by advertisement in the usual way.

Mr. GEORGE TAYLOR. But the minister would not give a contract if he thought the tender was too high?

Mr. PUGSLEY. I thought it a reasonable price and the chief engineer so certified.

Mr. CROCKET. Was any examination of the work made by the engineers of the department before tenders were called for? And was an estimate made of the cost?

Mr. PUGSLEY. If the hon. member will look at 'Hansard' he will see that that information was given in answer to his own question.

Mr. CROCKET. Not concerning Indian Point?

Mr. PUGSLEY. Yes.

Mr. CROCKET. Does the hon. gentleman say that an examination was made and an estimate prepared?

Mr. PUGSLEY. I do not know. The information is in 'Hansard.'

Mr. CROCKET. I think the hon. minister is mistaken. I have the question here, and I do not remember framing any question in reference to an estimate of the cost. I think he has in mind the question relating to the wharfs.

Mr. PUGSLEY. No; perhaps in the hon. gentleman's (Mr. Crocket's) absence the question was asked. He will find it all in 'Hansard.'

Mr. DANIEL. The minister stated just now that tenders have been asked for this Maquapit Lake dredging. Is it not a fact that the Maritime Dredging Company were put to work there before tenders were asked and that tenders were only asked for after they commenced the work and had been at it for some time?

Mr. PUGSLEY. I do not think so.

Mr. DANIEL. Will the minister say that that is not the case?

Mr. PUGSLEY. I think it is not the case. But, if it were the case, it would be upon this agreement—that, if they were not the lowest tenderers, they would have to leave, and that for the work they did they would have to accept the price of the lowest tenderer.

Mr. DANIEL. I have been credibly informed that the Maritime Dredging Company were put to work on that dredging

some time before tenders were called for. Under these circumstances, it is altogether unnecessary to inform the minister there was good reason why there was only one tender.

Mr. CROCKET. When were the tenders called for?

Mr. PUGSLEY. We are not considering any item for that, and I would not have that information.

Mr. CROCKET. Would the minister bring down the information, to show when the tenders were called, and when the work was commenced?

Mr. PUGSLEY. I would be glad to do it. One word before we close, let me put this right. My hon. friend says, what is quite true, that Mr. Mayes did get one contract at 55 cents per cubic yard, and for rock for his contract was $8.60 per cubic yard. But when tenders were called for further work no more difficult than that, his tender was 90 cents per cubic yard for ordinary material, and $19.60 for rock. That was his tender, and it was in respect to that additional work on the north side of Sand point slip that the Dominion Dredging Company were allowed to do part of the work at the same price.

Mr. DANIEL. Was not $19.60 for solid rock and not for boulders.

Mr. PUGSLEY. For solid rock and boulders above two cubic yards in size. For anything above two cubic yards, he was to get $19.60 per cubic yard.

Mr. DANIEL. I daresay the deputy could inform the Minister, but my memory is that for ordinary soil the figure was 90 cents, and for solid rock it was $19.60, and then there was an intermediate price.

Mr. PUGSLEY. Boulders above two cubic yards were counted the same as solid rock. Then there was another class of boulders below two cubic yards and over half a cubic yard which was reckoned at another price.

Dredging in Ontario and Quebec, $140,000.

Mr. MIDDLEBRO. How much was expended on Wingfield basin?

Mr. PUGSLEY. It was done out of the general vote.

Mr. MIDDLEBRO. Is there no separate amount.

Mr. PUGSLEY. Out of this appropriation we are to use $13,521 to do the work at Wingfield basin.

Mr. MIDDLEBRO. Could the minister tell me if there is any town, any population at Wingfield basin?

Mr. DANIEL.

Mr. PUGSLEY. Wingfield basin is a harbour of refuge, and we were strongly requested by the shipping interests to do this dredging. They regard it as an important harbour of refuge.

Mr. MIDDLEBRO. To what depth has it been dredged?

Mr. PUGSLEY. I cannot say.

Mr. MIDDLEBRO. Who was the contractor for dredging?

Mr. PUGSLEY. The C. C. Boone Dredging Company. It was let by public tender.

Mr. MIDDLEBRO. How many tenders were there?

Mr. PUGSLEY. I cannot give that information to-night.

Mr. MIDDLEBRO. I am advised there was only one. What was the price?

Mr. PUGSLEY. Seventy cents per cubic yard. That would include all material except solid rock. It would include clay, hardpan, anything of that kind. There is some rock to be taken out.

Mr. MIDDLEBRO. Did the specifications state so much for all material except solid rock?

Mr. PUGSLEY. Yes.

Mr. MIDDLEBRO. When was the contract let?

Mr. PUGSLEY. On the 26th of June, 1908.

Mr. MIDDLEBRO. Were tenders called for in the public newspapers?

Mr. PUGSLEY. Yes, we gave very wide circulation to the advertisement calling for tenders.

Mr. MIDDLEBRO. How much does the minister think it will take to complete?

Mr. PUGSLEY. That would be in connection with the main estimates. This is simply to close up the business for the present year.

British Columbia — Kamloops — Okanagan telegraph system—additional amount, $1,650.

Mr. BURRELL. What is this for?

Mr. PUGSLEY. We had to provide additional wiring, and this would be the freight upon the wire.

Yukon Territory—Ashcroft—canal section of Yukon system of telegraph lines—part repoling—to complete payments, $1,200.

Mr. PUGSLEY. A portion of the line was found in bad condition, and we had to spend this money. It is a part of the Yukon system.

Mr. COWAN. I would like to ask the minister if this is the work that was begun two or three weeks before the election in that constituency and completed two or three minutes past the election.

Mr. PUGSLEY. I do not know what particular work that was. I suppose it is not important just now.

Public Works—miscellaneous—compensation to Wm. Julien in full of all demands for injuries sustained by him on government dredge 'Ontario' during the season of 1907, $1,000.

Mr. PUGSLEY. This is the case of a young man who had his arm torn off while working upon the government dredge 'Ontario.' After very careful consideration we thought it proper to provide for him.

Operating and maintenance expenses—telegraph lines—Yukon system—(Ashcroft-Dawson)—further amount required, $30,000.

Mr. GEO. TAYLOR. How did the minister come to be so far out in his main estimate for that line? What is the revenue from the line?

Mr. PUGSLEY. We have been greatly bothered in connection with the Yukon line during the past year owing to the construction of the Grand Trunk Pacific Railway. The railway follows our telegraph line for a long distance and in many cases wires are strung upon trees. In cutting trees wires are thrown down the sides of the mountains and we have to keep constantly at work to make repairs. We have protested to the company and the contractors and they say they have exercised all the care possible, but notwithstanding that we had to spend a great deal of money in making repairs.

Mr. GEO. TAYLOR. Was not this due to the mode of construction of that line in the first place? I understand that many of the poles were planted in the air and in snow banks?

Mr. PUGSLEY. I am not prepared to say that. It is a very difficult thing to build a telegraph line through the mountains of British Columbia away from highways.

Mr. GEO. TAYLOR. There was money enough provided not only to build one line but to build half a dozen if it had been properly spent.

Mr. PUGSLEY. That is some time ago and I cannot give any personal explanation about it.

Mr. BLAIN. Would the minister answer the question as to the revenue?

Mr. PUGSLEY. About $80,000 is the estimated revenue for the year. We have about $72,000 up to date.

Mr. COWAN. Would the minister kindly inform us where the supplies for this Yukon telegraph line are procured?

Mr. PUGSLEY. Principally in Vancouver. Then we have to pack them up to the different camps. We take them up by boat to Ashcroft and pack them to the north.

Mr. COWAN. Are tenders called for?

Mr. PUGSLEY. They are bought at market rates. They have to be packed specially.

Mr. COWAN. Are they got from a wholesale firm?

Mr. PUGSLEY. From a wholesale firm at wholesale rates.

Mr. GEO. TAYLOR. At retail prices.

Mr. PUGSLEY. I do not think so. They are specially put up to keep a good while. They have to be packed long distances.

Mr. COWAN. Is there a patronage list in British Columbia?

Mr. PUGSLEY. There used to be one, but I have given instructions to do away with it.

Mr. COWAN. It is still in existence?

Mr. PUGSLEY. I do not think it is. I gave directions to do away with it some time ago.

Mr. COWAN. Is it not the practice of the department to call for tenders when the quantity required is as considerable as it is here?

Mr. PUGSLEY. The department did some years ago call for tenders for supplies for this Yukon system and they got a tender from an eastern city, but the result was exceedingly unsatisfactory. A great deal of the stuff spoiled almost before it got up there and a good deal was spoiled after it reached its destination. If you get supplies into that remote country which are not perfect, if the canned meats, the cream, the milk, and butter, are not first-class and are not properly packed it is then too late to discover that they are not as they ought to be. It was found very unsatisfactory and it was decided to buy, under careful inspection, from those who could be relied upon to furnish the very best articles. This was found to give the best results.

Mr. COWAN. Then am I to understand from the minister that no inspection is made of these goods when they are purchased?

Mr. PUGSLEY. Yes, an inspection is made of them and we rely more upon buying from reputable firms at fair market prices.

Mr. COWAN. Am I to understand the minister to say that he cannot get tenders

from British Columbia firms and that is the reason why tenders are not called?

Mr. PUGSLEY. No, I did not say that, but some years ago tenders were called and the lowest tender was accepted. It proved to be very unsatisfactory and the view of the department has been that it is better to have our own superintendent make the purchase himself, get prices from reputable firms, buy from those firms. see that he only gets a good article and have the articles packed under his own supervision.

Mr. COWAN. Why was it unsatisfactory?

Mr. PUGSLEY. A good deal of the stuff spoiled.

Mr. COWAN. Does it affect the quality of the goods to advertise for tenders? Why should goods supplied by persons who put in tenders not be as good as those purchased from people who are not asked to submit tenders ?

Mr. PUGSLEY. If my hon. friend were going to northern British Columbia and were taking supplies for his personal use, would he call for tenders or would he go to reliable firms and get what he wanted at the lowest prices ?

Mr. COWAN. I would not make my purchases from one wholesale firm and pay them retail prices when I could buy from another wholesale firm at wholesale prices.

Mr. PUGSLEY. But the hon. gentleman would not call for tenders.

Mr. COWAN. You may rest assured I would get prices from more wholesale houses than one, and I would not accept goods at retail prices when I could go half a block to another wholesale house and get the same goods at wholesale prices. Will the minister tell me now whether he has purchased any goods for this telegraph system from any but one firm in British Columbia ?

Mr. PUGSLEY. I did go very carefully into the bills for goods supplied for this Yukon system and I got my deputy to get prices for similar goods in Ottawa, and I had explanations with regard to the different items, and I satisfied myself that the prices were fair and reasonable and were wholesale prices.

Mr. COWAN. Did you do that in the case of all the goods you purchased ?

Mr. PUGSLEY. I took the goods running over a certain number of months.

Mr. COWAN. Does the minister vouch for the fact that the prices charged were wholesale prices and were not retail prices or higher than retail prices ?

Mr. PUGSLEY. In the particular bills I examined I was satisfied they were fair wholesale prices.

Mr. COWAN. For what year were these bills ?

Mr. PUGSLEY. Last year or the year before.

Mr. COWAN. All the bills ?

Mr. PUGSLEY. No, the bills which came from one firm in Vancouver.

Mr. COWAN. What firm was that ?

Mr. PUGSLEY. Is there a firm called Kelly, Douglas & Company?

Mr. COWAN. Oh. yes, there isn't any other.

Mr. BURRELL. In what year did the minister call for tenders ?

Mr. PUGSLEY. It was when the late Mr. Tarte was Minister of Public Works.

Mr. BURRELL. The minister has admitted that the supplies for this telegraph line are purchased practically altogether from one firm in Vancouver and without calling for tenders.

Mr. PUGSLEY. There is no public call for tenders.

Mr. BURRELL. The minister admits that pratically all the business has been done with Kelly, Douglas & Company and I suppose he knows that this particular firm has an exceedingly strong affiliation with the Liberal party; in fact that it has been the mainspring of the Liberal party for many years. It is regarded as a very strong grievance throughout British Columbia that these rather important supplies for telegraph lines in the north all go to this particular firm and that other firms in British Columbia have not a chance of participating in that business. It has caused a great deal of adverse public criticism and it is looked upon as a reward for political services rendered from time to time. There are other firms outside of those in Vancouver who could furnish these supplies to the government and I might mention the Reid firm at Quesnel which does business at the very point from which these telegraph lines start. Whenever any other than the Kelly, Douglas firm, in British Columbia has endeavoured to get this business they have been told; you will have to see the member. I would like to have to-night some assurance from the minister that in future other firms in British Columbia will have an opportunity to compete for these telegraph supplies. It would be in the interest of the government itself if an end were put to the present system. I can assure the minister that the present system is almost in the nature of a scandal and were it unearthed to the bottom I quite believe there would be some startling disclosures.

Mr. PUGSLEY. I am very much in favour of giving different firms an opportunity

of tendering, because I realize that in that way we are apt to get goods at the lowest price. There is some difference between buying goods for use right in the city where the goods are used, and, purchasing supplies of butter and canned meats, and condensed milk, and desiccated apples to be sent to distant territory into the wilderness. I can understand how, if the department has been getting perfect satisfaction from this firm for a number of years there would be a disposition to continue trading with them, just as people continue for years dealing with the Hudson's Bay Company because they have the reputation of always carrying out their contracts to the letter. I have no doubt there are other firms in Vancouver who would do the business equally well, but I suppose there has been a disposition not to change when satisfaction has been given. I intend to look into this question in British Columbia as elsewhere, and my disposition is to have all the supplies for the department obtained as far as possible by public competition. I can assure my hon. friend that that matter will receive careful consideration.

Mr. COWAN. Then we can feel confident that the minister proposes to do away with the patronage system in British Columbia?

Mr. PUGSLEY. The patronage list has been done away with already.

Mr. COWAN. Well this firm—Kelly Douglas is it?—has been getting all the custom of the government in the Public Works Department since 1896. Is that correct?

Mr. PUGSLEY. I do not know as to that.

Mr. COWAN. Since the minister has been in charge of this department, Kelly, Douglas & Company have been getting all its custom?

Mr. PUGSLEY. I cannot say that; no.

Mr. COWAN. On this Yukon line, I believe I heard the minister say?

Mr. PUGSLEY. I said that the accounts I examined were accounts of Kelly, Douglas & Company.

Mr. COWAN. And you know of no other accounts?

Mr. PUGSLEY. These are the only accounts I examined. There are a good many and I wanted to go into the items very particularly.

Mr. COWAN. Would the minister not think it might possibly be in the public interest if an inquiry were made as to whether other firms are getting any part of the custom of his department and as to whether their prices may not be a shade better than Kelly-Douglas'?

Mr. PUGSLEY. If I thought their prices were a shade better and their goods of as high quality I would certainly buy from others.

Mr. COWAN. Will the minister give the committee an assurance that before he gives any further orders, he will ascertain from the other firms what their prices are ?

Mr. PUGSLEY. I will give that due consideration; yes.

Mr. COWAN. And give the committee the assurance that other firms will be given an opportunity of tendering on the next order?

Mr. PUGSLEY. I think I have given a very satisfactory assurance to my hon. friend.

Mr. COWAN. I have had a number of very satisfactory assurances, but I am speaking now of one particular assurance. I think the committee would be glad if the minister would assure them that the next order of his department will be open to tender from all the houses having the goods needed, and that a careful comparison of prices will be made and the best man get the order.

Mr. PUGSLEY. My hon. friend can rest assured that I will not make any purchases except at fair and reasonable prices.

Mr. COWAN. But always from Kelly-Douglas.

Mr. PUGSLEY. No, not always.

Mr. COWAN. Will the minister be good enough to assure this committee that some one else than Kelly-Douglas will have an opportunity of tendering on the next order?

Mr. PUGSLEY. I can assure my hon. friend that I will give no contract to any one that will not give us the goods at the very lowest market price. How does that strike the hon. gentleman?

Mr. COWAN. I regret that that assurance is scarcely what I consider to be in the public interest. I think it is a clever assurance, but I doubt if it is in the public interest, and I doubt if the public will take it as in their interest. I believe that the public want business done by the department of the minister as a sane, honest business man would do his own business.

Mr. PUGSLEY. Hear, hear, that is right.

Mr. COWAN. And I believe that a sane, honest business man would not give all his orders to one firm without calling for tenders and inquiring for prices or inspecting the goods before delivery. I do not think that is the act of a sane, honest business man in the conduct of his own business, and I believe that this committee has the right to the assurance I am asking from the minister that in future orders will be open to tender to other firms than that of Kelly-Douglas. We know who Kelly-Douglas are, we know who Kelly is, the minister knows, we all know. We know that he makes the political appointments through-

out the whole province of British Columbia for this government.

Mr. A. K. MACLEAN. Is he Irish?

Mr. COWAN. His name would indicate that. We all know that we are only trifling when we are calling him Kelly-Douglas; we know who Kelly-Douglas is and the people of British Columbia will say that I am perfectly right in asking in a polite way that the minister will give us some assurance that some one else than Kelly-Douglas will have a chance at the patronage of this department.

Mr. TEMPLEMAN. I do not particularly take exception to the request of my hon. friend from Vancouver (Mr. Cowan) that the Minister of Public Works should intimate to the House his decision to have public competition if that is his policy; but I do take exception to the implication rather than the direct assurance of my hon. friend from Vancouver (Mr. Cowan), that Kelly Douglas & Company have been in any way overcharging the department. Neither my hon. friend from Vancouver (Mr. Cowan) nor my hon. friend from Yale-Cariboo (Mr. Burrell) has stated this to be the case. If they know that Kelly Douglas & Company have been overcharging the department, they ought to say so. Kelly, Douglas & Company is one of the largest wholesale grocery firms in British Columbia, in fact, in Canada. The firm do a business of several million dollars a year.

Mr. COWAN. The hon. gentleman knows that before Kelly-Douglas got the account of the Dominion government, Bob Kelly was not worth $1,400. He knows that as well as I do.

Mr. TEMPLEMAN. I do not know anything of the kind. I am not here as an advocate of Mr. Robert Kelly, the principal partner of the firm of Kelly, Douglas & Company, who is certainly a thorn in the flesh of my hon. friend from Vancouver (Mr. Cowan). I do not know what prices he has charged the department. I do not know whether he has tendered or not. My hon. friend has not criticised the prices, he does not know himself whether the department has been overcharged for anything; there is simply the desire on the part of my hon. friend to attack a very prominent citizen of the city of Vancouver, who is at the same time a very prominent and active politician, Robert Kelly of the firm of Kelly Douglas & Company. If it is a fact that the firm is overcharging I am with my hon. friend and would request the Minister of Public Works to see that the public is not overcharged, whether he does it by public competition or not.

Mr. COWAN.

Mr. PUGSLEY. There is no pretence of anything of the kind.

Mr. TEMPLEMAN. My hon. friend has said that public appointments in British Columbia are now made by Robert Kelly. That is not true, that is not accurate to be strictly parliamentary, and my hon. friend knows that very well. Mr. Robert Kelly is an active politician, as everybody in Vancouver knows, he is a very prominent citizen, he is one of the most successful men, in a business way, in Vancouver.

Mr. COWAN. Since he got the government account.

Mr. TEMPLEMAN. The government accout is a mere bagatelle in his business. All he got is the grocery and provision supplies on the Yukon telegraph line. It is probably an extraordinary thing for one minister to suggest a matter of patronage to another minister. Here is the member for the city of Vancouver who is not satisfied that these goods, whether the amount be a thousand dollars or fifty thousand dollars, should be purchased in his city. Well, I wish to say to my hon. colleague, the Minister of Public Works, that I represent Comox-Atlin, the capital of which is Prince Rupert, that Prince Rupert is on the line of the Yukon Telegraph, and Vancouver is not, and therefore to please the member of Vancouver if the department transferred its orders to the city of Prince Rupert.

Mr. COWAN. I would be delighted to see that patronage go to wherever there would be a saving for the Dominion.

Mr. BURRELL. I want to emphasize again the point—and it not only affects Vancouver—that public tenders should be invited in all cases. The telegraph line starts in the lower portion of my constituency, and the minister should give an opportunity to the dealers in that portion to tender for these supplies.

Mr. GEO. TAYLOR. I would ask the Minister of Inland Revenue (Mr. Templeman) to take down the figures as I give them from the Auditor General's Report and he will see what they amount to. The firm of Kelly, Douglas & Company figure in every account, and they are the only firm that figure for provisions in connection with the Yukon telegraph line. We do not know the prices they charge because only the gross amounts are given.

Mr. PUGSLEY. The details are given in their bills.

Mr. GEO. TAYLOR. Here are the figures from the Auditor General's Report, paid Kelly, Douglas & Company for provisions:

Big Salmon	$396 83
Blackwater	399 69
Bobtail lake	633 83
Bulkley ranch	93 35
Burns' lake	242 49
Coffee creek	400 04
Dawson	370 00
Echo lake	406 00
Graveyard Point	385 62
Hazleton	374 68
Hazleton stores	310 97
Hootalinqua	234 42
Iskoot	374 46
Kitselas	308 03
Kitsumkalum	236 62
Lorne creek	224 61
Morricetown	94 86
Nahlin	413 28
Nakina	391 70
Ogilvie	236 25
Port Simpson	66 50
Prince Rupert	65 00
Quesnel	58 00
Quesnel Forks	66 78
Raspberry creek	288 98
Chesley	407 05

And in every place they charge about $25 for packing the supplies and putting them in crates.

Mr. PUGSLEY. How much should it be ?

Mr. GEO. TAYLOR. I do not know.

Mr. PUGSLEY. I thought not.

Mr. GEO. TAYLOR (reading):

Stewart river	$237 37
Stonev creek	412 11
Tagish	407 80
Telegraph creek	626 96
Telegraph creek (refuge cabins)	165 95

The government pay the operator $38 and feed him on $165 worth of provisions.

Telegraph Point	$389 43
Whitehorse	131 18
Yukon Crossing	398 15
First Cabin	81 90
Second Cabin	80 83
Third Cabin	51 39
Fourth Cabin	82 93
Fifth Cabin	105 51
Sixth Cabin	105 67
Seventh Cabin	108 59
Eighth Cabin	100 68
Ninth Cabin	150 14
25-mile Cabin	366 29
40-mile Cabin	327 59

That is the end of the bills from Kelly, Douglas & Company for the Yukon telegraph business.

Mr. COWAN. Who administers the patronage of the hon. minister's department at Vancouver ?

Mr. PUGSLEY. The purchases are made by the agent of the department in Vancouver. The superintendent of the Yukon Telegraph Line, Mr. Phelan, makes the purchases for the Yukon telegraph, and Mr. Keefer, the resident engineer, for the use of the dredges.

Mr. COWAN. Are they instructed to purchase from Kelly, Douglas & Company?

Mr. PUGSLEY. They are instructed to make their purchases at fair prices. I have given no directions to purchase from Kelly, Douglas & Company.

Mr. COWAN. In the interest of clean administration and in order to get rid of disagreeable suspicions, would it not be well for the minister to give some assurance that tenders will be called for and other firms given an opportunity to tender for the supplies of his department. There seems to be only one name on the patronage list.

Mr. PUGSLEY. Then it ought not to be difficult to destroy it.

Mr. COWAN. But the smaller the list, the more difficult it seems to be to destroy it. I think it would be very much in the interest of clean administration. It would have a very beneficial effect upon the public opinion of that country. It would lead them to think that Mr. Kelly had not the minister's department in his pocket.

Mr. PUGSLEY. I have already said, and it has been publicly announced, that we have done away with the patronage list in our department, and that purchasing agents have already had instructions to get prices from different dealers.

Mr. COWAN. And, in Vancouver, they are not confined to Kelly, Douglas & Company.

Mr. PUGSLEY. They are quite open to go to any dealer. Mr. Phelan has instructions to get prices from different people. These instructions went out a considerable time ago.

Mr. COWAN. That is, instructions with regard to these supplies—

Mr. PUGSLEY. These instructions apply to all supplies.

Mr. COWAN. The instructions that apply to these particular supplies—are they. or are they not, in writing?

Mr. PUGSLEY. This item applies to the current year before the patronage list was abolished.

Mr. COWAN. My question seemed to me to be rather plain. Are these instructions in writing?

Some hon. MEMBERS. Carried.

Mr. COWAN. Perhaps I have not made myself understood. Are the instructions to purchasing agents to get prices from other firms in Vancouver than Kelly, Douglas & Company in writing ?

Some hon. MEMBERS. Carried.

Mr. COWAN. I am waiting for an answer by the minister.

Mr. PUGSLEY. I must apologize—what was the question?

Mr. COWAN. I understood from the minister that instructions had been given to the purchasing agent, Mr. Taylor, to get prices from firms other than Kelly, Douglas & Company for the supplies needed for this line. I ask if the instructions are in writing?

Mr. PUGSLEY. I did not say that. I said that instructions of a general character had been issued, directing the purchasing agent to be careful to employ competent men, careful as to the prices at which they purchased goods, to get the goods at lowest market rates, and to inspect them—to do everything to make sure that value was got for the money.

Mr. COWAN. Have these instructions been given to Mr. Taylor?

Mr. PUGSLEY. To all the agents. There is no Mr. Taylor.

Mr. COWAN. Who is the purchasing agent?

Mr. PUGSLEY. Mr. Phelan.

Mr. COWAN. Has he received written instructions to get prices from other firms than Kelly, Douglas & Company?

Mr. PUGSLEY. His instructions are general—to get goods at the lowest market, prices irrespective of any particular firm.

Mr. COWAN. Are these instructions in writing?

Mr. PUGSLEY. A circular has gone out.

Mr. COWAN. To Mr. Phelan?

Mr. PUGSLEY. To all the agents.

Mr. COWAN. Can the minister bring down a copy of these written instructions?

Mr. PUGSLEY. I shall be glad to do so.

Mr. COWAN. When were these instructions given?

Mr. PUGSLEY. About three months ago.

Mr. COWAN. Then, we may hope that prices will be obtained from firms other, than Kelly, Douglas & Company.

Mr. PUGSLEY. We may hope that—yes.

Mr. COWAN. Will the minister assure the committee that prices will be got from other firms than Kelly, Douglas and Company?

Mr. PUGSLEY. Yes, no doubt.

Mr. COWAN. And that, before the order is given to Kelly, Douglas & Company, prices will be got from other firms?

Mr. PUGSLEY. That is the duty of Mr. Phelan.

Mr. COWAN. According to the written instructions, which the minister will bring down?

Mr. PUGSLEY. Yes.

Mr. BURRELL. I do not want to bore the committee, but if I am in order, I would like to refer for a moment to the carriage of these supplies. On March 3, I put the question on the paper in connection with the carrying of these supplies up on the telegraph lines. I would impress upon the minister that the same policy I am advocating now, which every hon. member ought to sympathize with, the policy of public tender, should be carried out in connection with the carriage of goods as well as the purchase of them. It is a very big contract. It was given in 1901, the minister stated, in answer to an advertisement for tender published in the town of Hazelton. Strong complaint is made throughout the north end of my riding that tenders were not asked for in the usual way. A small notice was given in Hazelton and none of those in the Cariboo country, where the supplies start, knew anything about it. The contract was let at 17½ cents per pound for carrying the supplies. They get that price, even if they do carry the goods eight miles. And this in the face of the fact that, years ago, contractors were taking supplies for the Hudson Bay Company all through that country under more difficult circumstances, at five cents and six cents a pound, and were making money. I do not wish to assume that the minister would wish to continue a state of things that is more or less a scandal in that north country. I hope that the minister will arrange to have contracts given after notice calling for tender. If he does so, he will get this work done at a lower figure than at present

Mr. PUGSLEY. It follows from the doing away with the patronage list that we must have competition for carying supplies, for that is part of the cost of the supplies to the country. I have already given directions to the officials of my department that tenders shall be called for packing of these goods into northern British Columbia.

Mr. TEMPLEMAN. I dispute the assertion of the hon. member for Yale-Cariboo (Mr. Burrell) that goods can be packed into the interior of that country for five cents a pound.

Mr. BURRELL. I was talking last summer to a gentleman who was discussing this question. and he told me that he stood on the shores of Stewart lake and saw a packer who had packed a heavy amount of freight from Ashcroft up to Stewart lake and delivered it at that point. at 8 cents a pound, and made money. It is known all through that country, and if there is one thing that is a particular reproach to the government it has been carrying these supplies year by year without a renewal of tender, at what is conceded, even by his own Liberal friends, to be an extravagant price.

Mr. TEMPLEMAN. I dispute the accuracy of my hon. friend's statements. To say that goods can be carried from Ashcroft to Barkerville and further, all through a wilderness, by trails and where there are no trails, for 8 cents a pound, is to my mind an absolute absurdity.

Montreal harbour (lower division)—improvements below St. Mary's current—to pay W. J. Poupore in full and final settlement of all claims for interest accrued on deferred payments on contract for construction of high level piers and bulkheads, dated July 25, 1900, $25,242.29.

Mr. PUGSLEY. This is a claim for interest, and arises in connection with the construction of that large pier at Montreal called Maisonneuve pier. When the work was built there was a dispute between the government and the contractors as to a certain claim, and it was finally left to a departmental board of referees, consisting of the chief engineer, the deputy minister, and the engineer of the Ottawa river works. After hearing the evidence they awarded to the contractors a considerable sum against the government. That amount was paid, and this is for interest at 5 per cent from the time when the work was done, as found by the referees, to the time of payment.

Mr. LENNOX. Was the claim reduced?

Mr. PUGSLEY. The claim was reduced. The amount of interest is about $25,000.

Some resolutions reported.

Mr. FIELDING moved the adjournment of the House.

Mr. GEO. TAYLOR. What business will be taken up to-morrow?

Mr. FIELDING. We will continue the supplementaries, beginning with the Minister of Railways and Canals. But we hope to clean up the whole of them to-morrow.

Motion agreed to, and House adjourned at 12.45 a.m. Friday.

HOUSE OF COMMONS.

FRIDAY, March 26, 1909.

The SPEAKER took the Chair at Three o'clock.

RAILWAY ACT AMENDMENT — SANITARY CONDITIONS.

Mr. E. N. LEWIS (West Huron) moved for leave to introduce Bill (No. 111) to amend the Railway Act. He said: The Bill I now feel it my duty to lay before the House has reference to a pernicious state of affairs which affects the people who travel in Canada, and the remedy which I propose will, I believe, be welcomed by the heads of the railways themselves, as well as by the Board of Railway Commissioners and by the general public. I have here an editorial article from a leading Ottawa paper dwelling upon the fact that the health as well as the comfort of the people who travel in Canada is affected by the sanitary state of the trains and the stations, especially the small stations throughout Canada. We have Acts of parliament which provide for the appointment of inspectors to look after the cattle, the fruit and other commodities carried on our trains, but we have no inspectors to look after the welfare of the people who travel. And now that the people of Canada are rising to the state of prosperity in which as I am glad to know the plain people like myself are getting the travelling habit, legislation of this kind is needed. The Railway Act provides that the Board of Railway Commissioners shall have power to look after the matter to which this Bill refers, but there is no machinery provided for that purpose. The Minister of Railways (Mr. Graham), whom I am glad to see in his place, may contend that the power of the Railway Commissioners in this matter is sufficient, but I do not so read the Railway Act. There are a number of clauses providing that certain officials may be appointed by the board with the approval of the Governor-in-Council, but there is no provision for the appointment of the officers referred to in this Bill. I am sure that no person within the sound of my voice, no person who travels in Canada, but will say that this Bill is needed. It is proposed by this Bill to add a subsection to section 284 of the Railway Act providing for five inspectors, to be appointed by the Board of Railway Commissioners subject to the approval of the Governor-in-Council. The duty of these inspectors shall be to see that trains, railway stations, and buildings in connection therewith, are in a sanitary state. One of these inspectors shall be for the province of Ontario, one for the province of Quebec, one for the maritime provinces, one for Manitoba and Saskatchewan and one for Alberta and British Columbia.

The second clause is in reference to complaints under the Railway Act of which the Railway Board has cognizance. It has always occurred to me that while a large corporation, a mercantile company, a city or municipality, have power to put in force the Railway Act and ask the Commissioners to remedy the evils which may be extant, the poor man, the man of moderate means, has no such power. Therefore I ask this House to empower the board to appoint a public official, subject to the approval of the Governor-in-Council, who shall act as a public prosecutor, to whom private persons may make their complaints, and who shall examine the same, and, if necessary, lay them before the board and prosecute them.

Mr. SPEAKER. I may remind the hon. gentleman that inasmuch as this Bill calls for the appointment of certain persons, implying thereby a charge on the revenue, it ought perhaps to be preceded by the usual formality. However, I suppose there is no objection to the introduction of the Bill.

Motion agreed to, and Bill read the first time.

APPOINTMENT OF SUCCESSOR TO MR. WM. FORAN.

Mr. R. L. BORDEN. Before the orders of the day are called, I would like to inquire of the Secretary of State whether any person has been appointed in place of Mr. Foran, who I understand has become secretary of the Civil Service Commission; and if so, whether the person so appointed was appointed upon the recommendation of the Civil Service Commision, or whether there was any departure from the Act in that regard.

Hon. CHAS. MURPHY (Secretary of State). I may say in answer to the hon. gentleman that an appointment has been made of a successor to Mr. Foran, and it was made by the Civil Service Commission.

CANADA EASTERN RAILWAY.

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). Before the orders of the day are called, I wish to make reference to an answer I gave the other day to the hon. member for St. Antoine, Montreal (Mr. Ames), as to the cost of the Canada Eastern. The answer, which will be found in 'Hansard,' page 2657, should not include the $25,000 which was spent on the Indiantown and Blackville Railway. The answer should be amended by striking out the words:

To put line between Indiantown and Blackville in condition for operation.

Ballast..	$10,000
Ties and rails..	10,000
Fences..	5,000
	$25,000

Mr. AMES. I would ask if the minister would be willing to make these corrections in the original statement, so that the original statement shall go into the 'Hansard' in the corrected form.

SUPPLY—THE FRUIT MARKS ACT.

Mr. FIELDING moved that the House go into Committee of Supply.

Mr. M. BURRELL (Yale-Cariboo). I desire to bring up a matter of sufficient importance to the government, and especially to the agricultural industry, to excuse me in taking up a little time of the House. I wish to deal with the question of the regulations in regard to the fruit industry. I have already, in this House, referred to the importance of this particular industry in my province of British Columbia, where we have now some 75,000 acres actually in orchard. We are practically only at the commencement of our orchard work, and of our output; and in connection with the building up of this industry, on account of the great expense in clearing land, in adopting the irrigation system, in providing fences and other things which are necessary to a successful horticultural development in our province, I need only say that the market question is for us particularly important, and that anything which tends to weaken the markets for the grower of fruit, must also weaken the whole industry. In 1905 the Minister of Agriculture took a step which I think was thoroughly commended by the industry throughout Canada, when he called together the Dominion fruit conference, a conference of gentlemen interested in this particular industry throughout Canada. That conference, I am glad to say, speaking I think for all western fruit growers, resulted in a great deal of good. It familiarized the various growers in the country with the methods and with the weaknesses of the industry which may have existed. It tended also to uniformity of method, and in one way and another, I think, strengthened the industry, and made it in a very real sense an industry recognized as national. Now, in connection with that conference the Fruit Marks Act was discussed and amended; and while we believe that the Act has operated for the development of the horticultural industry, it is perhaps natural that in the course of its operation for a series of years, some weak spots in it should have become manifest. To these I now desire to draw the minister's attention, to see whether it could be amended or interpreted in a way that would better the conditions of the industry. Now, section 319 defines what a close package is, and subsection (a) says:

(a) 'closed package' means a box or barrel of which the contents cannot be seen or inspected when such package is closed.

Now whether this is a question of law or interpretation I am not prepared to say, but I understand that the whole staff of inspectors throughout the country interpret 'closed package' to mean a package containing apples or pears only. We have a very strong feeling in the west that that clause should be interpreted and made to apply to all packages which are nailed up, and particularly to such fruits as peaches. I may mention that at the present time in British Columbia, and no doubt in Ontario, the growing of peaches has reached quite an extent, and I am informed that the inspectors do not apply the provisions of the Act in regard to closed packages to peaches, and especially to peaches which are in cases and nailed up, and this is practically allowing California, Washington and Oregon fruit to come in without thorough inspection. To give you some idea of the amount of this fruit imported into our western country, I may say that into Manitoba, Saskatchewan and Alberta last year there were 63,000 cases of peaches imported from the United States, or roughly about 50 car loads. Our position is this: We are trying to grow and to put up that particular fruit, of which we have about 5,000 acres, in first class shape, and we are sometimes brought into competition with certain classes of fruit, including peaches, which are not graded at all; so we are at considerable disadvantage. Therefore I would urge upon the minister that the Act should be interpreted so as to include that particular fruit. Now I will refer to section 325 of the Act which defines the size of the package. Subsection 3 reads :

When apples are packed in Canada for export for sale by the box, they shall be packed in good strong boxes of seasoned wood, the inside dimensions of which shall not be less than ten inches in depth, eleven inches in width and twenty inches in length, representing as nearly as possible two thousand two hundred cubic inches.

In that connection, whether there is any trade restriction, or whether the province would have the control of that I cannot say, but I think it would be extremely desirable that the Act be amended so as to eliminate that word 'export,' so that we could ensure a uniform package throughout the various provinces and so that, when a consumer bought a box of apples, he would know exactly what he was buying in so far as the size and contents are concerned. I also want to refer to sections 320 and 321 of the Canadian Fruit Marks Act. Section 320 defines the various ways in which fruit packages should be marked. At the conference held in 1905, to which I have already referred, I think a wise step was taken in abolishing the various systems of marking such as X, XX, XXX and so on and introducing the simpler system which consisted of a series of grades, such as 'fancy,' No. 1, No. 2, and defining these grades. I think that was a decided step in advance. The first clause of section 321, which defines these particular grades, is as follows :

Every person who, by himself or through the agency of another person packs fruit in a closed package intended for sale, shall cause the package to be marked in a plain and indelible manner not less than half an inch in length.

And it proceeds to give a description of the marking. That certainly implicitly and solely applies to the Canadian packer. The next clause of section 321 says:

No person shall sell or offer, expose or have in his possession for sale any fruit packed——

Then it defines these particular grades. It has been suggested and strongly felt throughout the whole western country that while section 320 simply confines its operations to the Canadian packer, section 321 should also be legally read and interpreted in conjunction with section 320, and therefore, when we come to infringements of this particular section which provides that

No person shall sell, or offer, expose or have in his possession for sale—&c.

I say that it does not apply as stringently as it should to the American competitor in our own market. It has been suggested that section 321 should be amended in some such way as to define how fruit has to be marked so that we can compel the United States competitor to enter our market at least on an even footing with ourselves and not have any advantage. This, of course, may be a question of law, and no doubt the minister has taken advice in regard to it from the Department of Justice. At all events, I would like to suggest that because a great many of our own people believe that it would be in the interest of the industry to alter the Act in that direction.

As this question opens up the whole subject of the kind of competition that we have to face and as I want to particularly and clearly state to the minister and the government our grievances wth regard to this matter, I shall take up the attention of the House for a few minutes in defining the position as it is to-day. We recognize, of course, that in building up this great industry in the west we have to face competition. We have to face very strong competition from the United States. There are only two ways in which the government can help those who have embarked a great deal of money, time and energy in this industry; one by means of a protective tariff and the other by means of the enforcement of the regulations. Of course, I thoroughly understand that it is not well to touch upon tariff matters now, although I hope upon a future occasion to deal with that question and to present our views to my hon. friend

the Minister of Finance (Mr. Fielding). I might mention, however, in passing, that there is one thing that I think operates a little injuriously with regard to our industry and that is that the customs officials interpret the word 'barrel' to mean four boxes. Although a barrel does not hold four boxes we find that the American competitor is only charged ten cents a case, where we think he should be charged more. It is usually reckoned that three boxes, instead of four, are the equivalent of a barrel. At a later time I think I will be able to advance reasons for greater protection being accorded to that one great staple, apples, which will secure for me the sympathy even of our northwest members, who, I know, do not want to increase the price of the articles that they consume there. But, with regard to this phase of the subject that I am dealing with now, that is the question of inspection, I am positive that I can get the sympathetic attention of every hon. member from the prairies because we are simply aiming to give the consumer on the prairies the right to expect that what he pays for he should get. In this connection we, of course, meet our strongest competition in the west from the great states of Washington, Oregon and California, which are building up an enormous industry and building it up under greater advantages in some ways—I will not go into that now—than we can expect ourselves. There are two unfair ways in which the product of the American competitor can come into contact with our own products upon the prairies. There are two dangers to meet connected with pests and diseases, and insufficient or poor grading. With regard to the question of the diseases and pests connected with fruit, I may say that in our own province the comparative immunity which we enjoy from all the serious pests and diseases which affect horticulture and inevitably affect the reputation of fruit products is simply the result of eternal vigilance along the line of our own provincial legislation. We enforce the most rigid system of inspection against the great states to the south of us which are infested with almost all the diseases and pests known to horticulture. We have something like twenty or thirty provincial inspectors who inspect, but only for diseases and pests. We found—and as this enforces the argument to some extent with regard to the grading of fruit I may mention it—some dealers and consumers taking a position of opposition to our method on the ground that it rendered the importation of fruit in large quantities a more difficult matter, but we have happily found that as year after year has gone by we have enlisted the sympathy both of the consumers and dealers. The net result has been that we have a fairly clean sample of fruit coming in from the United States, whereas, before that, British Columbia was made the dumping ground for infected fruit of all kinds. It is quite true that in achieving that end we had to reject, and are even now occasionally rejecting, thousands of consignments of all kinds of fruit, but we felt that we were justified in our position and the result has afforded us the most ample justification. We have come to the stage when we are not only supplying the wants of our own country but when we are exporting to our own northwest provinces and in a few years we will be an immense factor as regards fruit. We enter these markets in western Alberta and eastern Manitoba practically on the same terms as the United States with regard to freights. In the middle of the northwest provinces we have probably better terms than they have.

But what is the position of the United States fruit industry and the United States firms that enter our own markets? We have looked into the matter very carefully and we have found that there are a great many very large American firms that are operating in the United States and that are reaching out to control the great markets of the northwest, of Manitoba, Alberta, Saskatchewan and, in short, are endeavouring to practically control our trade. I might give the House some idea of this. I have a letter written to the general manager of the Coldstream ranch at Vernon, one of our biggest fruit growing concerns. This is a reliable and well known gentleman, and he gives us some idea in this letter with regard to what the American firms are doing:

> The Rogers Fruit Company of Winnipeg, Pioneer Fruit Company of Brandon, and Stockton & Mallinson of Regina, are practically the one firm; in other words the stock of these concerns is held practically by the same people. They have also houses at Saskatoon and Calgary, and have just opened up at Edmonton. The chief man in connection with these houses is Mr. H. B. Finch, of Grand Forks, North Dakota, who manages a similar group of fruit houses and wholesale groceries in the Dakotas. Their chief representative, however, is Mr. DeCamp, who is the manager of the Winnipeg house, but looks after their Canadian business generally. This is the combination you referred to in one of your previous letters as handling so much of the Washington fruit.
>
> I took occasion yesterday to interview Mr. DeCamp, with the object of finding through their means a more extended market for the product of the Okanagan and British Columbia orchards. I was somewhat astounded to see the large quantity they had brought in from Washington into the Winnipeg and Brandon markets, of small fruit such as plums, prunes, peaches, cherries, &c. Winnipeg had taken over 150 cars. They had also done an enormous business in Washington apples.

Although we would prefer that the men who handle the fruit in our Canadian Northwest were Canadians, yet we are not simply

complaining that they are Americans or that we have to face this competition. The position is this: These great firms operate on a tremendous scale and they control to a very considerable extent the great fruit centres in Washington and Oregon. This year, in Washington and Oregon they had a very heavy crop and a slack market as the people had not recovered from the financial depression which visited the United States two years ago. Somewhat similar conditions existed in our own country and the American operators naturally reached out to send their surplus to the Canadian market and so control our trade. The Canadian growers were of course vitally affected, and we have some reason to claim that the American fruit did not meet us on even terms in our own market. We have been told that amongst the causes which operate against the purchase of large and increasing quantities of British Columbia fruit is, that the American box weighs heavier than the Canadian box and that the purchaser of American apples gets more for his money. The American box averages from 51 to 53 pounds whereas the British Columbia box only gives 45 pounds. The Canadian Act defines the dimensions of our boxes to be 20 by 10 by 11 inches inside measurement or 2,200 cubic inches. The California box is exactly of the same size, but there are a great many different types of package in the states of Washington and Oregon, some of them being a little smaller than the Canadian box. I am not at all sure whether it would not be a wise provision for the protection of our own industry that when this American fruit is sent into our markets the packages should be made to conform in size to our packages. However that may be, I want to give some facts which I think will enable the House to see that the argument that the American package contains more fruit than does our package cannot be well sustained. Shortly before I came east to attend the session of parliament a carload of Washington apples came to our district and I sent a careful man to weigh these apples by the box and give me the weights. It is of course known to every fruit man that the weight of a box of apples is always variable from the fact that some varieties will weigh heavier than others, and that the method of packing and the size of the apple will cause a difference in the weight. I had about nine varieties of these American apples weighed and it was found that the American boxes ran all the way from 53 pounds (the highest) down to 43 pounds; the large majority of them weighing 45 pounds, 46 pounds, 47 pounds, and 48 pounds. Judging from this there is no good reason for the contention that the American boxes contain a greater weight of fruit than do the Canadian boxes.

Then another reason given why the American apple meets with success in our market is, that their system of packing is better and that the quality of their apple is superior to the quality of the Canadian apple. Well, I could give the House any quantity of testimony from dealers in Alberta, Saskatchewan and Manitoba, that other things being equal, as far as quality and freedom from disease is concerned they would prefer the British Columbia fruit to that grown in Washington and Oregon. I will admit that there is some excellent packing done by the American growers and handlers of fruit, but at the same time it is not a question of the size of the package or the excellence of the packing, because packing does not mean grading or freedom from disease, and to give the consumer what he has a right to expect we have got to have not only good packing so far as the appearance goes, but we have got to have honest grading and freedom from disease. It is in this that the British Columbia grower is at a grievous disadvantage. We have gone into this question very thoroughly and I would like to quote the opinion of one of our own inspectors who was sent from the Department of Agriculture of British Columbia into the Northwest to make a careful examination into this matter. The letter is written to our chief inspector, and he says:

Waneta, B.C., 21st Dec., 1908.

Thomas Cunningham, Esq.,
Provincial Fruit Pest Inspector,
Vancouver, B.C.

Dear sir,—I beg to submit the report of my recent visit to Alberta. There is no provincial law providing for the inspection of imported fruit in Alberta. The province therefore becomes the dumping ground for the culls and diseased fruit from the United States and from the eastern provinces of Canada.

Unfortunately the Dominion Fruit Marks Act in so far as Alberta is concerned is almost a dead letter, no effort being made by the resident inspector to enforce the requirements.

In jobbers' warehouses and retail stores throughout the province I found thousands of boxes of apples from the United States and from British Columbia which in no way complied with the requirements of the Fruit Marks Act, and which were distributed and sold without hindrance.

There are large quantities of eastern Canadian apples sold in Alberta, principally from Ontario and a few from Nova Scotia, which seemed to me to be culls and diseased fruit, unsaleable in the east. They were certainly not graded as marked, were full of worms, covered with apple scab, and in many instances with San José scale.

Large quantities of apples imported from the United States were poorly packed and graded and infested with codling moth, apple scab, bitter rot, and in a few instances with

San José scale. I may say that I also found a considerable quantity of apples from the United States splendidly packed and graded and entirely free from disease.

I would like also to quote the opinion of another inspector who went into the districts of Lethbridge and McLeod where he carefully examined the conditions. He says:

Lethbridge.—Here I found a few British Columbia apples of good quality, pack and grade, but the American article predominates; in some cases the packing and grading of the American fruit were excellent, but the fruit diseased, one box apples (Wolfe River), of fine appearance, well packed and graded, placed in a prominent place in the windows of the Hudson Bay store, was covered with spots (bitter rot). Other American apples and pears were of poor quality, and in many cases contained codling moth larvæ and apple scab in abundance.

The Dominion inspector had been at this place, but had taken no action, only instructed the importers to put their name on the box before sending them out of their warehouse.

Now, although I think we are learning fairly fast how best to pack our fruit, and while a large proportion of it is very well packed, unfortunately there is yet something to be learned. However that may be we have very good reason for the belief that a large proportion of the United States fruit is bad both as to disease and grading, and that owing to the inadequate number of inspectors under the Fruit Marks Act, a great deal of fruit has been sold as No 1 when in reality it was not of that quality, and yet, it came into competition with our really superior fruit, under that brand.

In this connection I might add that the general manager of the Coldstream ranch in Vernon, a very large concern indeed, sent a competent man out to Alberta to get a fair and clear idea of the conditions there, and I would like to read this extract from his letter. I might add that this man was in every respect absolutely reliable. He wrote as follows :

W. Crawley Ricardo, Esq.,
Pres. Coldstream Valley Fruit Packing Co., Ltd.,
Vernon.

Dear sir,—I beg to inform you that I have visited Calgary and Edmonton and during my visit to both these cities have seen a large amount of American fruit. All this fruit appears to me to be what would usually be graded as No. 2 and in some cases the writer would certainly not let it leave his packing house as anything but No. 3, if such a grade were packed by us. Though small and in a great many cases very mis-shaped, the colour was good and the pack very excellent—in fact from a casual look at a box of this fruit you could hardly see where one apple ended and another began; besides which, in no case that the writer noticed was an apple packed either at the top or bottom of the box which showed any deformity or flaw and it was only by moving one of the sides or taking out several apples that you found these. So far as colour was concerned, some of the Jonathan were excellent, their only fault being size. I am informed that these can be purchased in Washington, Wenatchee or Yakima at sixty to seventy cents there..

This gives a little idea of the state of things, but to make assurance doubly sure —because the point has been raised that very little of this fruit comes in and that in the main we simply have to face first-class fruit— I suggested to the general manager of the Coldstream ranch that he should send one of his good men to the National Apple Show at Spokane, where the leading fruit men in that country exhibit their products, and have him go to these men as if he were a land seeker interested in their valley and find out from them exactly what class of fruit they would ship into Canada. He did so, and these were his instructions:

Mr. Frank Rayburn,
Fruit Foreman, Coldstream Estate Co., Ltd.

Dear sir,—I shall be much obliged, when you go into Spokane, if you can get me definite information what the Americans are selling No. 1 stock for.

By the enclosed letters from Mr. Lanigan, assistant freight traffic manager, Winnipeg, you will see that dealers claim they are getting No. 1 at 65 cents and 75 cents per box f.o.b, Yakima.

I am anxious to get the following information:—

1. What the Americans are selling their No. 1 for?
2. Where their number ones are going to?
3. What class of fruit they are shipping into our territories; if it is their surplus stock, or their straight No. 1.

When you get this information, please get from the most reliable people that you know.

The answer this man procured was that they were getting for their No. 1 stock, not 65 cents or 70 cents, but $1.50 a case f.o.b.; that this fruit was going to Chicago and New York and Europe, and that they were shipping to our country their second-class and surplus. Mr. Ricardo wrote me as follows:

M. Burrell, Esq.,
Grand Forks, B.C.

Dear Mr. Burrell,—The following information is what I secured through our foreman, who went to Spokane show; he went down to the Hotel Spokane, the headquarters of the Yakima people, as a land seeker, and got the answers to my questions. He told them that he had been through the Northwest Territories and had seen their fruit; they were emphatic that it was their 2nd class stuff and surplus.

Yours sincerely,
W. CRAWLEY RICARDO.

I may say that all those statements can be corroborated from other sources. Let

me quote now from a paper published in the town of Kelowna, B.C., concerning the conference of fruit-growers and railway people over the question of markets and freights. Mr. Lanigan, of Winnipeg, freight manager of the Canadian Pacific Railway, was asked various questions about the condition of the market, and in answer to the question why British Columbia was not doing more business he said:

At first he thought it was because of the Ontario fruit, but afterwards he found that less and less Ontario fruit found its way to the Winnipeg market. Then he thought it was because too large prices were asked for British Columbia fruit. Finally, however, he satisfied himself that neither of these causes was the real reason. The real competition in Winnipeg was the Washington, not the Ontario fruit, and the American fruit was driving the others out of the market It was not because the foreign fruit was better, but because the growers of Yakima Valley and Wenatchee Valley were dumping their second grade fruit at prices which were too tempting for the dealers. Thus any reduction in freight rates would not help them, for it would be immediately met by the American roads. They already had the advantage in a less freight rate and in a ten cent duty This, however, was more than counterbalanced by the way the Canadian grower was handicapped by the law. He was obliged to pack and grade his fruit in a certain way, and the Fruit Marks Act, which was originally adopted to protect the Ontario growers, who did not suffer from American competition, did not apply to British Columbia fruit arriving here in closed packages. He read a lawyer's opinion in support of this view of the law.

Briefly, that is the case I wanted to put before the minister. I am positive that the hon. gentleman is desirous of building up this great industry and promoting the interests of fruit growers all over the country. We have felt this position so keenly that I have had petitions and requests re amendments to the Fruit Marks Act. Let me read one of these from the Okanagan Board of Trade :

Whereas, it is desirable in the interests of the consumer and the competing Canadian grower that United States fruit growers should grade and mark their fruit in conformity with the regulations of the present Canadian Fruit Marks Act;

And whereas, it is believed that the present Act does not apply to imported fruit:

Be it resolved, that the Okanagan Board of Trade urge upon the Dominion government the advisability of so amending the Act as to make it apply to fruit coming from the United States.

In closing I would like to say that whether we suggest an alteration of the Act, making it apply to the United States competitors and compelling them to live up to it, or whether this amendment is necessary or not, it is absolutely necessary to have a larger staff of inspectors to see that the grading and packing is properly done when the American fruit comes into competition with our own. At present the position is this: We have one inspector for the whole of Manitoba and one for Saskatchewan and Alberta. That is, we have two inspectors for these three great provinces and one in British Columbia. To show how absolutely ineffective this staff is, take the case of British Columbia alone. In that province we are having a large amount of fruit constantly coming from the United States, and owing to the geographical character of our country and the fact that the Great Northern is running branch lines into it, the American fruit can get into our market cheaper sometimes than can our own fruit. It is absolutely impossible for one inspector in the whole of British Columbia to begin to see one-fiftieth part of the fruit which comes from the great state of Washington alone. I myself have seen case after case of consignments imported in absolute violation of our own Fruit Marks Act—without any mark, without any of the names of the fruit, without anything to show where grown, very often carelessly packed, but they were sold in the open market without restriction, while we were held to the provisions of our own Act.

It is true that the Inspector of British Columbia has urged, when representations have been made to him on this subject, that anybody can enforce this Act; but we know that whilst this is perfectly true, it will not work out in practice, that in a small community no private individual will take on himself the onus of the objectionable work of laying information against people in the same town with whom he is perhaps on familiar social terms. People will not do it. Thus it is manifestly impossible for one inspector in British Columbia to begin to reach anything like all the importations entering that country to compete with our own fruit growers, and not fulfilling the conditions of the Act which we are forced to live up to. This does great harm to our own province. We had hoped to be able to solve this difficulty in the province. Our own provincial Board of Horticulture suggested to the minister that we would be glad, without expense, to allow our own provincial inspectors who are inspecting for disease and pests to carry out the inspection under the Fruit Marks Act, as well. The minister, I suppose as a matter of principle, did not see his way to accede to that suggestion and the matter remained in abeyance. One inspector for the whole of British Columbia is hopelessly unable to cope with the work. In Alberta and Saskatchewan we also feel that the present provision for inspection is hoplessly inadequate. Two inspectors simply cannot do more than occasionally

perhaps take samples from one or two consignments and very small samples at that. I personally know what it means to inspect a large shipment of fruit, a carload, for instance. If you take anything like reasonable time to inspect it so as to ensure having the whole cargo in accordance with the Act it is a slow process, but with 150 cars in Winnipeg from the United States alone, and perhaps immense quantities at Calgary, Regina, Portage la Prairie and other points, it is easy to see it would be impossible for two inspectors to nearly cover that territory, and they apparently leave it to the dealers themselves to mark this fruit in accordance with our regulations as they see fit. The temptation is, of course, tremendous, especially to the American dealers, to mark the fruit at the highest grade even if it does not justify such marking, trusting that the violations will not be discovered, as the fruit is scattered over an immense territory. The two inspectors have to inspect not only the fruit from the United States, but in addition all the fruit that comes from British Columbia, in order to see that we live up to that Act, and that the consumer on the prairie is getting what he is entitled to get, a No. 1 grade fruit all through the package. They have also to inspect the very large quantity that comes from Ontario. We know that although many aggressive men in Ontario are sending out an admirable quality of fruit and grading it truly, I do not think my Ontario friends will take offence when I say there are a number of men in Ontario who are constantly sending out very inferior fruit, not graded according to the provision of the Act. It is quite impossible for two inspectors to cope with the inspection of that immense quantity of fruit and extent of territory.

I am quite sure that the minister will give very careful consideration to the suggested amendments to the Act and to its interpretation. What we ask in regard to the inspection is that the government, now that the fruit industry has assumed such important dimensions should have at least two inspectors in Manitoba, one each for Alberta and Saskatchewan and two additional inspectors for British Columbia, that is seven in all. It would be desirable and in the interests of the industry if one of these was made chief inspector of this whole western section, and if possible it would be advisable that the man should have his residence in British Columbia because the greatest competition that we, as fruit growers meet in the Northwest is that of the box packages from California, Washington and Oregon, and a British Columbia inspector, thoroughly conversant with our method of box packing and inspection, would be more capable of dealing with the similar packages from the United States.

Mr. BURRELL.

We have now in British Columbia 75,000 acres under orchard. A fair valuation of these lands would be $15,000,000. I predict confidently that in ten years' time that great industry at the very least will be valued at $100,000,000, and it is growing with a rapidity not witnessed in any other portion of Canada. We are asking and obtaining the best class of settlers from eastern Canada, and from Great Britain, and a large number of our good friends from the prairies are going in there to take up their residence and practise horticulture. When we get these men into the province they have to realize as all others who have been in this business for years and years have realized, that it takes not only intelligence and perseverance but long years of waiting before you begin to reap the results of all your work and investment of capital, and therefore an industry of this kind is deserving of the greatest consideration on the part of the government. We have to surmount many difficulties and we are trying to do so, but I do not think we should have to surmount difficulties which could be wiped out of existence by acceding to the legitimate request we have made. Any difficulty in the market end would simply have the effect of discouraging the building up of this industry and the settlement, along the very best lines, of our British Columbia lands. We all deprecate as disastrous to the industry any competition of this kind, if we can prove as I think I have proved, that that competition is absolutely unfair to those of us who are building up the fruit industry of British Columbia. I sincerely trust that the minister will accede to these very moderate requests. They are made not in any political or party spirit but with the sole desire to build up what I believe can now be truly designated a national industry and I trust the minister will see that in meeting our wishes he will be carrying out the suggestions and aims set forth at the Dominion Fruit Conference of four years ago.

Mr. J. E. ARMSTRONG (Lambton E.). In supporting the position taken by the hon. member for Yale-Cariboo (Mr. Burrell) which I am sure the House appreciates. I would urge upon the minister the necessity of appointing more inspectors in the east as well as in the west. We appreciate the extent to which the British Columbia fruit growers have been pushing ahead in the last few years. In 1894 there were in British Columbia only 13,000 acres under fruit while to-day there are over 100,000 acres, and fruit trees were planted at the rate of 1,000,000 per annum in 1907 and 1908.. We must, however, remember that out of the 21,000,000 fruit trees in Can-

ada in 1906 the province of Ontario had 14,000,000, two-thirds of the total number. To impress on the House the importance of this subject, I shall quote a few statistics furnished by the provincial government of of Ontario with reference to the fruit industry of that province. In 1904, 55,000,000 bushels of apples were grown in Ontario At three bushels to the barrel, that would be about 18,000,000 barrels. Last year, according to the same authorities, only 13,000,000 barrels were produced.

However, my reason for calling the attention of the minister to this matter is that of all the fruit packed for consumption last year, out of possibly five million packages, only 43,000 packages were inspected, and in the year 1906 only 11,000 packages. I know that the number of inspectors has been increased by four. But this is an increase for the whole Dominion. I took the opportunity to go down to the fruit division to make some inquiries of Mr. McNeill, of that division, and I shall give the House the benefit of some of the facts which I elicited from him. In British Columbia, as the hon. member for Yale-Cariboo (Mr. Burrell) has stated, there is only one inspector, while there are twenty-six provincial inspectors in that province taking care of the fruit which comes in from the United States. There is one inspector for Alberta and Saskatchewan and one for Manitoba. As to Ontario, each inspector is given a district. Mr. McNeill marked off on the map the outlines of the several districts, for each of which there is an inspector. Huron district, for instance, covers part of Lambton, part of Middlesex, Huron and Bruce. This includes the important ports of Goderich and Sarnia. There are probably a hundred points in that district, in addition to these two important ports. I need not go further in order to show the impossibility of one man beginning to look after the fruit in that district. I am satisfied that the minister will see that in order to do justice to this work it will be necessary to have one man who, during the few months of the fall, would be able to give all his time to looking after the exports of fruit from Sarnia and another from Goderich, besides providing for adequate inspection of the rest of this district. The inspector in this Huron district is Mr. Bryan. Then, Mr. Furmigan has the counties of Essex, Kent, Elgin, Norfolk, Haldimand, part of Lambton and part of Middlesex, perhaps, as a whole, the most productive fruit district in the country. Yet, there is only one man to look after that extensive district. I am sure the minister will see that it is practically impossible for one man to begin to cover even a considerable portion of that district. There is another inspector who has his central office in Toronto. The city of Toronto itself must afford work enough for one man, but this inspector is to cover also the counties of Welland, Lincoln, Wentworth, Brant, Peel, Halton and several others. So, I might go through the list of those who have charge of the different districts in Ontario to show how impossible it is for them to cover even a reasonable proportion of their districts within the time at their disposal in the fall of the year. When the minister looks at this question from the business standpoint, I am sure he will find it necessary to greatly increase the inspectors in these districts. It ought to be possible not only to have these inspectors look after the fruit, but educate, or, at least advise, the packers, and assist them to send out a better class of fruit. I desire to read part of one of many letters that I have received from prominent shippers of fruit in different parts of the country. I am sure the minister has received many such communications from prominent shippers of fruit in Ontario and elsewhere, urging the necessity of increasing the number of inspectors. The writer of this letter represents one of the very largest fruit growers' associations in Western Ontario. He says:

> Last winter, I visited the Northwestern markets, such as Winnipeg, Brandon, Regina and Calgary. I saw large quantities of fruit, most of it marked No. 1, which we would not pack as No. 2; in fact, most of it was not better than we would use in the evaporater. I do not think I saw one single barrel packed as we would pack it or that was properly marked No. 1. You can easily see that this kind of packing is ruining the market for those who are packing right, causing suspicion to fall on all packers of Ontario apples. I have talked this matter over with nearly all of the reliable fruit shippers and co-operative associations of Ontario and find that practically every one of them condemns the present inspection under the Act and desires that we be given district packers who shall be responsible to the government for the reputation of the district assigned to them.

He then goes on to call attention to other matters in relation to the shipping of fruit. But, this subject that is now before us is the one that I hope the minister will deal with in the near future. The letters that I receive go to show that a large portion of the fruit shipped to the western provinces is very carelessly packed, and that the inspectors are not able to cover a reasonable portion of their several districts. Take the export trade, covering about 1,200,000 barrels, a small proportion of which are examined at the port of Montreal, and, in addition, the enormous number of barrels packed and distributed in the different districts of the Northwest and it is clear that it is not fair to place the honest packers, these men who have reputations at stake and who have been building up this business for many years, in the position in which they are placed as a result of this at-

tempted inspection. These men find that irresponsible packers, small packers who ship out by carload lots, are sending their goods into these different markets in competition with goods that are fairly and honestly packed. We must take either one position or the other—we must either increase the number of inspectors and compel the bulk of the shippers to live up to the Fruit Marks Act or abandon the Act altogether and allow matters to go back to where they were before, or, if you are going to discriminate in favour of the careless packer, you can depend upon it that you will find plenty of these men who are ready to take advantage of the Act to ship their goods under it. I am aware that the minister will say that he has increased the fine for infringement of the Fruit Marks Act. That is a step in the right direction. But the minister can understand that shippers, who have not a reputation at stake and whose standing is not lowered by being compelled to pay a fine, if there is money enough in it, will pay the fine and continue to do things in direct opposition to the Act. Let me call the attention of the minister to the fact that out of twenty-one inspectors in the whole Dominion there are ten who are almost entirely confined to the city districts, five at the ports of Montreal and Quebec, one at Port Arthur and Fort William, one at Toronto, one at Vancouver, one at Halifax and one at St. John.

I am satisfied that I have given sufficient grounds for urging upon the minister the necessity of investigating this question, and I am sure he will see the wisdom of appointing at once a number of extra inspectors, not only in the western provinces but in the eastern provinces, to compel shippers of fruit to live up to the Fruit Marks Act; otherwise he may depend upon it that the Act is going to do an injury to the honest packer who is endeavouring to acquire a reputation as a packer of fruit, while the man who is careless in packing, will receive an advantage over him, because he will enjoy the advantage of the reputation secured by the honest packer. I do not need to mention exports to the old country. I know the minister fully appreciates the fact that many shipments which went over last year were far from being up to the standard. His own report states that a number of those shipments were far below the standard; in fact you will find that one of his superintendents of division says that the fruit is not up to the average of the other years. This superintendent also puts in a number of letters from different districts in England showing that the fruit sent over to the old country has not been up to the standard, and if we do not have a better enforcement of the law we cannot expect to hold our present advantage in that market.

Mr. ARMSTRONG.

Hon. SYDNEY FISHER (Minister of Agriculture). I appreciate the spirit which has inspired the remarks of the two hon. gentlemen who have addressed the House. I recognize their criticisms as a perfectly fair and friendly effort to secure an advantage to the very important fruit trade of this country. I do not wish at all to take exception to the slight criticisms that have been levelled against the administration of the Fruit Marks Act. That Act and its administration are not probably perfect, and I court criticism and advice in respect to its administration. I must, however, point out—and I hope the House will pardon me for dwelling upon the subject, inasmuch as many of the members now in this House were not present when that Act was under discussion—I must point out that the Fruit Marks Act does not contemplate a complete inspection of our fruit. That Act defines certain grades and marks which must be put upon the fruit in closed packages, and certain requirements in regard to which the whole package must be equal to the showing face. It defines the law under which everybody who packs fruit must act, and everybody who packs fruit must live up to that law and carry out the exact definitions in the Act, or else they are committing an infraction of the law. Under the Fruit Marks Act anybody can take exception to the dealing of the packers, and it is especially open to anybody who buys fruit to see to it that he secures what he purchases, in accordance with the marks defined under this Act. At the time the discussion occurred in regard to that Act when it was put through parliament, it was clearly announced that there could be no effort on the part of the department to secure complete inspection of all fruit in our trade. The reason given was that we would have to have an army of inspectors, all competent men, and men who could only be employed for a small portion of the year. This, it was pointed out, involved an impossibility —I use the word advisedly—it would be an impossibility to secure a large number of inspectors during the rush of the fruit trade to inspect all our fruit, and then drop them off at the end of that trade, and let them seek employment elsewhere for the rest of the year. It would be impossible to obtain a sufficient number of thoroughly competent men under those conditions.

Mr. ARMSTRONG. I would ask the minister whether it would not be possible to obtain men like those who are in charge of packers for the different companies? They obtain competent men for a period of two or three months, for about $75 a month. Might it not be possible for the minister to obtain a similar class of men, who thoroughly understand the packing of fruit, to

take charge of a certain district, for say, $100 a month, for a couple of months?

Mr. FISHER. I do not believe they could properly inspect all the fruit. There is another reason, why it is impossible to inspect all the fruit. Such an inspection would so interfere with the trade, with the transport of the fruit, that the trade could not stand it. I do not say that the trade would not submit to it, but it could not stand it. I would point out that during about two months of the year, in an average season, there are anywhere from half a million to two million barrels of apples passing through the port of Montreal, and it would be impossible to inspect even specimens of the different lots, while they are loading, or to hold them until they have been inspected, without seriously interfering with the progress of that fruit to market. There are some other points where it would be almost equally difficult to make such an inspection, but Montreal is the chief port. These are practically impediments to adopting the idea of a complete inspection of all our fruit. The other objection is the difficulty of obtaining competent inspectors for that purpose. I would point out in answer to the suggestion of the hon. member for Lambton (Mr. Armstrong), that all the men who pack fruit, the dealers, who buy orchards and get men to go into those orchards and pack fruit, tell me that it is with the utmost difficulty they can get men at all competent for that work. The only excuse they give us for packing some of their fruit improperly is the difficulty of getting just such men as my hon. friend alludes to. If I were to try to engage from 200 to 300 such men for two or three months of the year, I would not be able to secure qualified men. When it comes to deciding upon the quality and character of the fruit packed we require first-class men, because lawsuits might arise in consequence of their proceeding against packers, and unless our inspectors were absolutely reliable, some of the packers might suffer unjustly. Therefore, I say it was distinctly understood when the Act was passed that we did not intend to make a complete inspection of all fruit. That being the case, why do we inspect at all? First of all, because the Act was intended for the purpose, chiefly of the export trade.

Our credit and reputation in the English market, to which nearly all our apples go, had become very bad. We were there denounced as sending forward apples with a good face in some instances but with wretched fruit in the middle of the barrel. We were also accused of sending forth apples which were marked with some designs indicating that they were of the best quality when, as a matter of fact, they were very inferior. We were also accused of sending forward fruit which was called by one name, but which really was of a different variety. All these things had brought Canadian fruit in the English market to such a low class that something had to be done. It was therefore specially for the purpose of guarding our export trade, and as being a matter of trade and commerce, that this parliament undertook to pass the Act. The Act was framed with that special design, and, incidentally, in the process of watching the fruit trade for that purpose, it was quite possible for the inspectors to also, to a certain extent, although in a lesser degree, help and watch the local fruit trade. It was understood that whenever the inspectors were able to do this I would be only too glad to allow them to do it and thus help to protect the home consumers as well as the export traffic. But there is this difference between the export market and the home consumer. The purchaser of our goods in a foreign country finds it very difficult to come back on the exporter here in Canada. The home consumer can do that easily. In Ontario, in Toronto, or in any of the smaller towns there, a man who buys a barrel of apples and does not find it up to the proper standard is generally within a few miles, or, at most, within a hundred miles, of the man who packed the barrel and he can easily protect himself, whereas, the purchaser in the foreign market could not, and as a matter of fact, would not try to protect himself against the individual packer in Canada. But the whole of the Canadian export trade would suffer by reason of the reputation which would come to it from the defects which he had found in the purchase that he had made. Therefore, for the sake of protecting our reputation and credit in the foreign market it is necessary for us to have this inspection as regards our foreign trade.

Since the inception of the Act some matters have come to my notice which have induced me to go a little further. There was a large trade between the prairie provinces and Ontario on the one hand and British Columbia on the other. This was a trade which it was almost difficult for the purchaser to deal with as the export trade and we therefore felt that it was our duty to assist in guarding that a little. We put an inspector first of all in Winnipeg and afterwards one in Calgary for the purpose of protecting the people in these markets against the sale of inferior fruit. We were urged to do this especially, because, having begun with the export trade, we were told that dealers in Ontario and British Columbia would deliver into these markets, which were very good markets indeed in view of the prices, fruit which they did not dare to send forward for export because it would be subject to our inspection. We, therefore, took it upon ourselves to appoint an inspector in Winnipeg and one in Calgary for that purpose. We have an inspector in British Columbia for dealing

with the export fruit trade of that province and officers in the maritime provinces, in Quebec and Ontario for dealing with the export trade there, these being the great fruit exporting provinces of the Dominion. I think it only right that this explanation should be given particularly as the general tone of the complaints of my hon. friends who have spoken would leave in the mind of those who do not understand the question the impression that it was the intention of the Act to inspect all of the trade, when, as a matter of fact, it was avowedly not the intention of the Act and it was a duty which the department has never undertaken and was never expected to undertake.

Having given this explanation I might say a word or two with regard to what we are doing. My hon. friend has spoken of the vast number of packages of fruit shipped. I have no doubt the figures he has given are correct. As a matter of fact the figures I have show that the number of individual packages inspected during last year is a little over 41,000 by all the inspectors. That is about 2,000 to each inspector in round figures. This inspection goes on for about three months in the year and then we employ the inspectors, except the temporary ones, for another three months. During that time they do not do nearly as much as they do in the three months in which the active packing of fruit takes place. But although that was the number of actual packages inspected, the shipments included nearly 700,000 packages; so that practically we had to inspect, with our staff of inspectors, what was equivalent to about 700,000 packages of fruit. The result was that we were obliged to take out a large number of prosecutions, and this year I have insisted upon those presecutions being put through to the utmost limit except where there was a first offence or where there seemed to be mitigating circumstances. All through in the administration of this Act I have been desirous of taking it for granted that the packers wished to live up to the Act and that if they did not do so it was usually due to ignorance or carelessness. Therefore, in the case of a first offence, we generally allowed the thing to go, giving the packer a warning, pointing out to him what the requirements of the law were and insisting upon his fulfilling those requirements. For a second offence, however, during the last season I do not think we have dropped any. My hon. friend asks for more inspectors. That, I think, is the burden of the request laid before us now. I would be quite willing to do this, and I think that perhaps the time has been reached when the necessities of the case are such that I will have to do it. Last year I did it to a certain extent. I added three inspectors to the province of Ontario in consequence of the representations which were made to me.

Mr. BLAIN. Who were they, may I ask?

Mr. FISHER. Mr. Furminger, Mr. Bryan, Mr. Smith and Mr. Moore. One of these, however, replaced an inspector who died. I did this partly because it was represented to me, which was true, that there was a considerable export of fruit from western Ontario across the United States boundary line, especially at Niagara. We have tried to keep the inspection for the export trade scattered through the country, partly on the railways converging at Montreal, but chiefly in the port of Montreal, which is the great export port for all the fruit of Ontario and Quebec. We also have had a good deal of this work to do at Halifax, St. John and some other places in the maritime provinces, where there is an export trade. In addition to the inspection of the ports, which is the most convenient for the administration of the department, we have had several men travelling about in Ontario dropping on to shipments of fruit anywhere and everywhere, and the reason we have been doing this is that, the law being what it is, any man who ships apples is open to attack and we wish to attack him in any way without warning and without letting him know that he was going to be caught. For that purpose I have had travelling inspectors going about in Ontario especially and the maritime provinces and an inspector in British Columbia doing the same kind of thing, for the purpose of catching people. That is a deterrent. It shows the shippers and packers that they are never safe, that they may at any time be caught, and if they are caught they will be prosecuted and fined. It was never intended or expected that we could inspect all the fruit; but the law being what it is, it fixes a standard, not only for our inspectors, but for purchasers from abroad. Therefore, it gives an opportunity for the purchaser to protect himself and an intimation to the packer what he must do, not only to comply with the law, but to do justice to the trade and the purchaser and himself. That is the object of the Act. I would be very sorry indeed to think for a moment of dropping the administration of this Act. Possibly more vigorous administration may be required, but that means more expenditure of money, more numerous appointments of inspectors, and I would remind some hon. gentlemen that when the Act was first introduced I was met with the taunt that the object was simply to provide places for government supporters. I explained that I was only appointing inspectors when absolutely necessary and was going to appoint none except efficient men. Since the Act has been in force, I have never had a complaint as to the efficiency and good character of

any man appointed under the Act. The only complaint I have had is that I have not made sufficient appointments. I may say that we have tributes to the efficiency of this Act from outside the country.

I shall not go back to the old reports from England on the first Inspection Act, or quote again what has been often stated by our American competitors, but I will say this, that at present, in a number of states in the Union, the fruit growers have asked for legislation similar to our Act, and the American Federal authorities have been petitioned by a large number of the state fruit growers and the Pomological Union of all the American states, to pass an Act modelled on the lines of the Canadian Fruit Marks Act. This, it seems to me, is a fair tribute to the good lines of this Act and its successful working. In a general way, that administration has accomplished much for the object intended. I know that its administration has been carried on with a single eye to the improvement of the fruit trade, and that the officers of the department, the chief inspectors and all the officers under them, have been working to the best of their ability for the proper enforcement of the Act and the benefit of the trade. I believe myself that it would be in the public interest if more inspections were made and I propose to stimulate more frequent inspections by one means or another. If we cannot overcome the insufficient number of inspections without additional inspectors, I shall not hesitate to appoint additional inspectors where they seem to be required, and ask parliament for the necessary money to enable me to do so. But I do not think that I could appoint any more with the money at my disposal, and I want to keep within the vote if I can. I appreciate the statements made to-day and the reports that have come to me from other sources, and I appreciate the fact that the matter is of sufficient importance to the fruit trade to warrant my taking the responsibility of spending a little more money than parliament has voted, if that be absolutely necessary for the proper accomplishment of the work. There are, however, one or two other demands for inspectors to which I shall allude. A considerable number are from people who want to be appointed inspectors themselves, no doubt a laudable object, but I do not propose to regard very seriously such applications because the desire to be inspectors probably influences their applications. There is another demand which also I do not feel called upon to grant. I have had representations from a large number of dealers asking me to appoint inspectors to go into their orchards and see that their packers comply with the law. To those people I say that it is just as much a part of their business arrangements and management to see that their packers comply with the law as to see that their book-keepers keep their books properly, and it is no part of the duty of the government to pay for that part of these people's business. I have therefore disregarded the applications of a good many men who have urged on me insistently that the government should appoint inspectors whose business it would be to go about in the orchards and see that the packers pack their fruit according to the Act. The law is there and the packers and their employers know it, and it is their business and not that of the department, to see that they fulfil the law.

There are one or two points brought up by my hon. friend from British Columbia, which I shall deal with for a few minutes. Regarding what he said about the Act itself, he gave an interpretation of the clauses 320 and 321 in which I do not quite agree with him. The Department of Justice has informed me that the Act does apply to imported fruit and we have always administered it in that view. I have the instructions here which we give to our inspectors, and this is what these instructions say:

To Fruit Importers and Commission Merchants.

Importers of fruit are warned that the Fruit Marks Act, referring to the grading and packing of fruit, and sections 4 and 5 of the Act 'Respecting the Packing and Sale of certain Staple Commodities,' referring to the size of fruit packages, will be strictly enforced. Importers of foreign fruit will be held responsible for the packing and marking of the fruit which they sell as well as for the size of the packages.

Copies of the Fruit Marks Act and the Act 'Respecting the Packing and Sale of certain Staple Commodities' may be had, free, on application to the Fruit Division, Ontario.

That was a circular sent to my inspectors on the 5th of April, 1906. It has never been rescinded or modified. The inspectors thoroughly understand it, and it is their duty to follow it. Last May, a year ago, there was a correspondence from Calgary, and in that correspondence one of the inspectors there wrote asking some questions and describing something that was going on there. This was the answer sent by Mr. Alexander McNeil, Chief of the fruit division:

I have your letter of May 21 with reference to the foreign fruit coming in. In such cases as this, the dealer is held responsible for the fruit. In the case of closed packages, he must put his name and address on the outside of the packages and will be held responsible for the grading and packing. In the case of berries and baskets, he will be held responsible for the proper marking of the packages.

As the cubic contents of this basket as you give the measurements will be 48 cubic inches, and as the legal standard requires 55½ cubic inches it will be necessary for the

McPherson Fruit Company to stamp all such boxes with the word 'short' as required by law. No doubt, they will recoup themselves for the extra labour from the shippers.

I presume you are supplied with copies of the Inspection and Sale Act, part IX.

The House will see therefore that the instructions of the department to their inspectors, and the action of the department generally has always contemplated that the Act applied to imported fruit just the same as the home packed fruit. We have asked our inspectors to always carry out that idea. My hon. friend (Mr. Burrell) spoke about a possible amendment to section 321. There is no doubt in our minds whatever that under section 321 the package has to be marked as required by the provisions of this part of the Act, and the imported package has to be marked exactly the same as the Canadian package. Section 320 is a direction for the packers in this country before they send out their fruit, and section 321 says:

No person shall sell, or offer, expose or have in his possession for sale, any fruit packed in a closed package and intended for sale unless such package is marked as required by the provisions of this part of the Act.

That means that whether the package be imported or packed at home, as long as a person has it in his possession or offers or exposes it for sale, it must be packed in accordance with the provisions of this Act, so that the Act applies to all packages no matter whence they come. In the administration of the Act we have held the person who is the agent or the purchaser from the importer the responsible person against whom to have recourse if there is any infraction of the Act because of course we cannot go to a foreign country to prosecute. My hon. friend (Mr. Burrell) speaks of the grievances of British Columbia. I have no doubt whatever that he can appeal fairly to the people of the prairie provinces just as he can to me for sympathy in the difficulties—I would not like to call them grievances—which the fruit men of British Columbia have experienced in their laudable and legitimate efforts (with which I have the greatest sympathy) to capture the market in the prairie provinces. The hon. gentleman (Mr. Burrell) speaks about the tariff, and I shall not enter into that question further than to say that I propose to represent to the Minister of Customs what I think is a fair thing, namely, that four boxes of apples contain a larger quantity than a barrel, and that if the duty is to be levied on boxes it would be much fairer to count three boxes to the barrel than to count four.

Some hon. MEMBERS. Hear, hear.

Mr. FISHER. I will make that representation to the Minister of Customs and ask that he shall issue an order that the duty should be levied in that way which I think is right and proper. If it is not done at the present time I have no doubt it is because of some misconception on the part of the officials. My hon. friend (Mr. Burrell) spoke about the provincial regulations, and here let me compliment the province of British Columbia on the regulations they have enacted for the purpose of shutting out and suppressing insect pests and disease in fruit. In that respect British Columbia has taken the lead of all parts of Canada. It is in the purview of the provincial legislatures to so enact and the province of British Columbia has gone very far in that direction and has I think administered its law wisely and well.

The Fruit Marks Act is not specially aimed at protecting us against fruit pests and it only incidentally does so by directing the condemnation of apples or other fruits which are rendered inferior in quality by reason of having in them these fruit pests. As to the enforcement of the Act, the local inspectors in British Columbia have a perfect right to prosecute under the Act if they so desire. If fruit is being sold anywhere in British Columbia which is not marked and packed in accordance with the provisions of the Fruit Marks Act, anybody and everybody whether he be an inspector or not can lay an information or take out a prosecution under the Act. We have received from our inspectors at Winnipeg and Calgary a good deal of information on the subject, and that information has led us to believe that as a rule the American fruit offered on these markets has been packed quite in accordance with the provisions of our Act. I do not mean to say that there is no bad American fruit put upon these markets, but at all events our inspectors have not reported any such. I do not suppose for a moment that they inspect all the fruit, but we certainly have had reports from them showing that in a general way the American fruit is well packed and fulfils all the conditions of our law. I took occasion a little while ago to send a circular to all the dealers in fruit in the three prairie provinces and with one exception they all reported that the American fruit arrives in good condition and is packed in strict accordance with the requirements of our law. It may be said that these dealers are prejudiced as they handle American fruit, but at all events that is the information they have sent us. One dealer did report that he had seen some American fruit which was not quite up to the standard.

Mr. BURRELL. Were they wholesale or retail dealers?

Mr. FISHER. They were mostly wholesale.

Mr. BURRELL. They are largely American firms.

Mr. FISHER. They may be prejudiced, but of course I cannot say as to that. Let me say to the hon. gentleman (Mr. Burrell) that as a general rule the British Columbia fruit, is, I believe, well packed and properly marked. I remember that some years ago I was in British Columbia and having seen a good deal of the fruit there I considered, and so stated it in the east, that the British Columbia fruit growers could give a lesson to the rest of Canada in the putting up of fruit. They had seen the example of California long before we in the east had; they profited by it and as a general rule they put up their fruit very well. The last time I was in the province of Alberta in the fall of the year I saw boxes of British Columbia fruit, and, when I saw it in competition with the American fruit I must say that personally I would have had no hesitation in buying the British Columbia fruit in preference to the other. My experience on that occasion led me to believe that British Columbia can successfully supply these markets with fruit just as soon as they are able to grow enough for the demand. I venture to think that the chief reason for such a large quantity of American fruit being sold in the prairie provinces, is, that British Columbia up to the present time could not supply the market. Although British Columbia has gone so far ahead, as my hon. friend (Mr. Burrell) has described, in planting trees and providing for a large production in the future, it is my belief that British Columbia does not now produce enough to supply the market of the prairie provinces.

As a matter of fact, according to some returns I have seen, a considerable quantity of American fruit is imported into British Columbia, and sold in that province, not because it is better fruit, not because the British Columbia consumers would prefer it, but because at certain times and seasons there is not enough British Columbia fruit of some kinds to supply the market of British Columbia, and certainly not enough to supply the prairie markets. A large quantity of fruit has been sent from Ontario into the prairie provinces especially of late years. To-day the Ontario fruit growers are making great strides in the prairie markets. During the last season I have had an Ontario man inspecting in Winnipeg. He has made reports upon the fruit trade in Winnipeg and the prairie markets generally. He found some fruit arriving from British Columbia in very bad condition, chiefly because the people there did not seem to understand how to pack it in the car and how to see to its transportation. I am of the opinion that when fruit is to be shipped by rail, even in refrigerator cars, it is essential that it should be cooled before it is placed in the car. I would also say that some carloads of small fruit arrived in Winnipeg last season from British Columbia in a state of mush. They had been seriously heated in the car, and had been packed in such a way that there was no circulation of air amongst the packages, while the American fruit coming into the Winnipeg market the same day was in perfect condition because there was provision to allow the circulation of air between every two layers of baskets, and because the fruit had been cooled down as low as it could be cooled with safety before being packed in the car. This hint may account for a great deal of the bad fruit that has arrived in the prairie provinces from both Ontario and British Columbia. I propose that that inspector shall go about in Ontario and give the fruit shippers and packers of Ontario the benefit of what he saw in the Winnipeg market last season. Before the next shipping season begins I hope he will be able to lay the information he has acquired in this way before the Ontario people so that they may learn what conditions have arisen in their fruit trade with the west in the last season, and by some means I hope to lay the same information before the British Columbia shippers.

I am glad of what has been said here to-day. I appreciate the spirit in which the remarks of hon. gentlemen have been made and sympathize with the views expressed, and I shall try during this coming season, as I did in the past season, to bring about a larger measure of close inspection of the fruit trade. I hope that we will be able to remove any difficulties that may exist in this respect.

Mr. F. LALOR (Haldimand). I would compliment the minister on his fair description of the administration of the Fruit Marks Act, and the manner in which he has approached the question before the House. Any remarks I shall make will be not in a spirit of fault-finding or hostile criticism, but with the object of remedying any grievances that may exist. I do not believe that the Fruit Marks Act is as rigidly enforced as it should be, because we have not enough inspectors to properly carry on the work. I am glad to hear the minister promise to try to increase the number and to give us more rigid inspection. I believe that an inspector should be appointed in each county during the packing season. This could be done as there are plenty of men in almost every county competent to inspect apples and these men may be selected and engaged only for the packing season. In that way a higher standard could be attained because I believe it to be of immense importance

that the buyers in the British market should feel sure that when buying Canadian apples he is getting inspected fruit packed according to the Canadian law. To create such a feeling in Britain will give us a great advantage in the British market over the American shipper. Therefore I am in sympathy with the Inspection Act and in favour of increasing the number of inspectors, if the minister can see his way clear to do so. I was surprised yesterday to learn, from an answer given in this House, that some 37,000 barrels of American apples were imported last year into the Canadian Northwest. I was sorry to learn that because the Canadian west should in the future be one of the best markets for the apples of Ontario, and it is unfortunate that we are losing all that great Northwest trade. I suppose we are labouring under great difficulties in the way of freight rates to that country as compared with the American shippers and it would be a great advantage to the Ontario apple producer if the duties upon apples going into the Northwest from the United States were made a little higher in order that we might gain that market.

I was surprised to hear the hon. member for Yale-Cariboo (Mr. Burrell) complaining of lax inspection of apples in British Columbia, because Ontario shippers are afraid to send apples into British Columbia owing to the inspection there.

Mr. BURRELL. That is provincial inspection.

Mr. LALOR. That may be. I wish to call attention to an industry which is of great importance to the farming community and which is growing more rapidly than almost any other industry, the evaporating of apples. In almost every part of every county in Ontario you will find that within the last few years an evaporator has sprung up. It is not the better class of apples that waste on the trees, they are packed and shipped. The apples that are allowed to waste are those that do not come up to the proper standard for shipment. The safeguard against that is the evaporator. These evaporators are being located all over Canada; the industry has grown faster than any other that I know of; and I do not know of anything of greater benefit to the farmers than the establishment of an evaporator within his reach, because it takes this class of apples, which would otherwise be wasted, at a fair price. These apples are evaporated, done up nicely and are sold partly in Canada and partly for export. This year, I am sorry to say, that industry is in a most unfortunate position. Unless some remedy can be found, I cannot see much hope for the extension of the evaporated apple business in Canada. The principal difficulty we labour under in this business is the German surtax. I am not saying this in a spirit of fault finding with the position of the government in the matter. For, I wish to say at once to the government that their position is the position that I take; it is a position in which I am prepared to support them. I believe their stand was a proper one and that in the interest of the country, we should retaliate and let them have surtax for surtax. But the German market, unfortunately is our chief market for the export of evaporated apples. The Germans have placed this surtax of one-half cent a pound on evaporated apples going into that country, and the result is that more apples are offered for sale in Canada than the country can take. There is to-day a great surplus of last year's crop, and one dealer is competing with another to see who will sell evaporated apples the cheapest, in order to get rid of them before next season's pack comes on. So far as I am concerned, I have ten carloads of evaporated apples today in New York that were shipped for export to Germany. They are held in bond. The surtax is almost prohibitory, and the result is that we cannot get rid of our surplus stock, and we do not know what to do with it. There is no way by which, at as little cost, the government could assist a Canadian industry as by helping the men in this business to pay this surtax on evaporated apples. The evaporated apple industry, I believe, is the one industry that is suffering on account of this surtax. Our manufacturers, I believe, are getting benefit from it, and it would be a pity on their account to remove it. Our farmers who export wheat and other products are not suffering as a result of it. But this growing evaporator industry, the immense importance of which to the farmers I have already pointed out, is placed in such a position by this surtax that it greatly needs assistance. I would like to see the government render that assistance by paying a certain portion of that surtax, in order that the surplus of evaporated apples may be got rid of. When you consider the enormous quantity of dried fruit brought into this country, you can see the effect it has upon the evaporated apple business. The growers of small fruits suffer to an enormous extent from the importation of American fruit. No less than 1,600,096 pounds of strawberries and blackberries were imported into this country last year. The duty is not heavy enough. This market should be secured to the Canadian fruit grower. We have ample facilities for growing fruit, especially small fruits, and I believe that the tariff should keep out the American fruit to as great an extent as possible, and give the market to our own people. It is a wonder to me that the growers of small fruits have not agitated before this for the increase of duty on this class of fruit. As to the evaporated apple trade, I speak from experience as one connected with it, when I say that it is suf-

fering greatly from the German surtax. It would not cost the government much to assist this industry in the way I have suggested.

Mr. SPROULE. What quantity is imported?

Mr. LALOR. I have not the figures at hand. But I know that a certain quantity is imported, particularly from California into British Columbia and the west. To-day, probably about 400 cars of evaporated apples are packed in Canada every year. They represent an enormous quantity of green apples. Probably 200 cars are used in the country and the rest are exported, largely to Germany. At a cost of about $25,000 a year, the government could pay the surtax imposed upon the evaporated apple products and relieve the Canadian industry. This would do almost more than anything else, as I have already suggested, to assist the farmer in getting rid of the apples that otherwise would be lost. I cannot speak too highly of the advantage of the evaporator to the farmer. I believe that advantage is as great as that afforded by the canneries. I believe the government would be wise in deciding to assist the people engaged in this business.

Mr. M. S. SCHELL (South Oxford). It is very pleasing to see the spirit in which this subject has been debated, for it is so seldom that we find both sides of the House agreeing so thoroughly on any matter as to-day. We know that the work of the fruit inspectors has been most helpful to the apple industry as well as to the industry of growing small fruit. I do not propose to quote, as I might quote at length from different sources, to show how the work that has been done by the inspectors since they were appointed in 1901 is regarded. The fact that our friends of the opposition are asking for an increase in the number of inspectors is the clearest proof that good work has been done. I have a very high appreciation of this trade, its growth and possibilities. I agree heartily with the hon. member for Yale-Cariboo concerning the possibilities of the apple industry—and I suppose the same applies to small fruits—in the province of British Columbia. We feel that there are as great possibilities in the province of Ontario. We know that the fruit of British Columbia is of very fine quality, very handsome, perhaps even more so than the Ontario fruit or that of Nova Scotia. But we know that it is not finer in quality. Ontario, I think, produces the best all round apples, perhaps not as fine in appearance, but for flavour, for texture, and for keeping quality, I do not think there is any part of the Dominion of Canada that produces finer apples, or possibly as good. The possibilities of development in Ontario are very great, yet I am sorry to say we have been making but very little progress of late years. The number of new orchards that are being set out is very small, comparatively speaking; the older orchards we have are not producing the quality of fruit that they should produce, and there is something lacking with this industry. Now, I do not blame the Dominion government, I do not blame the Ontario government, either one of them entirely; I think perhaps the fault lies primarily at the door of the producer, at the door of the grower.

Mr. OLIVER. The packer?

Mr. SCHELL. No, not the packer, you have to go far behind the packer to find the root of the trouble. If we are going to put this industry where it should be, and if we are going to have our inspectors do their work satisfactorily in the future, we have got to produce a better quality of fruit. The inspectors have done about all they can do, except as a deterrent in future. The educational work has demonstrated that our fruit has to be put up according to a certain standard, and packers, buyers and dealers understand that. But until we get a better quality of fruit, a more uniform quality, there will always be a difficulty in the enforcement of the Fruit Marks Act, and our growers will not obtain the value that they should obtain from their orchards.

I think that in the first place more educational work should be done. The farmers already know something of it from reading in the newspapers, and from the example of their neighbours in spraying their orchards and taking proper care of them. But as a rule, our farmers have not gone systematically into the work of spraying and caring for their orchards as they should do. I believe the provincial government of Ontario, assisted by the Dominion government, should take up this work more energetically in the way of imparting education, instruction, and making demonstrations with a view of putting this industry on a better footing. I understand that the provincial government of British Columbia have taken a very strong stand in relation to their fruit industries, and I think they are far in advance of us in the province of Ontario—and I am now speaking particularly for that province. It is the provincial government of Ontario that have primarily the charge of the educational institutions, and it is their duty to do more in the way of sending out inspectors and instructors. If the apple industry, the fruit industry, of that province were properly handled, instead of exporting one million barrels of apples, out of the ten million or fifteen million we produce in that prov-

ince each year, we should export seven or eight million barrels, or at least we should have that number fit for export. We know as a matter of fact that we have not more than 25 or 30 per cent of really No. 1 fruit and have not had for many years. With proper spraying, with proper cultivation, with proper pruning, instead of growing 25 or 30 per cent of No. 1 fruit, we should grow 75, 80 and 90 per cent, and we could do it, because it has been demonstrated in a number of cases. In my own county of Oxford I know a few orchards where spraying has been systematically conducted for a number of years, and it is a common thing for those orchards to produce 75, 80 or 90 per cent of No. 1 fruit. Instead of having a million barrels to export we should have four or five millions, and instead of receiving a revenue of a million dollars a year for our apples in Ontario, we should be receiving six, seven or eight million dollars a year, not saying anything about the possibilities of development, because the province of Ontario is especially adapted to the growth of apples on a paying basis. I have in my mind an orchard, in my riding, of eight acres, the product of which was sold for $1,300 on the trees, the owner did not put a hand to the picking, to the teaming, nor to the boarding of the help, but sold the fruit on the trees for $1,300 in cash. I know another orchard in the county of Norfolk for which I offered $4,500; the owner did not sell to me, but he realized over $5,000 for that orchard. It was a large orchard of some thirty acres, but only a small portion of it was in bearing, and I am satisfied that that man realized nearly $300 for every acre he had in bearing. I might mention other cases where spraying has been followed to great advantage.

I do not see why this industry should not be developed as our dairy industry has been developed. In the province of Ontario the provincial government took that matter up, they laid out the province into districts and appointed an inspector for each district. We have 65 or 70 dairy instructors in the province of Ontario, and to-day we occupy a foremost position among the nations of the world for the production of a high class quality of cheese and butter. Why should we not have the same thing done in connection with our apple industry? I am glad to see that the Minister of Agriculture has already arranged for two of the inspectors under his charge to go out next week into the county of Oxford, and deliver addresses, and give instruction and information bearing on this subject. I have had this matter under consideration for several years, and I have come to the conclusion that the provincial government has not been doing its duty in connection with the fruit industry in that province. I have also felt that, while perhaps the Dominion government is not primarily charged with educational work, still some of their inspectors, who are expert men, might be employed to a greater extent in educational work when they are not engaged in the work of inspection. Why should they not be sent out into various parts of the province and give instruction, give demonstrations, give information that would be advantageous to our farmers, and show them how they could improve the productiveness of their orchards, and obtain better financial results? I know from personal experience in spraying, and from observation, that it is possible to double the profit of an ordinary orchard. Take any orchard in the province of Ontario that has been neglected, that has not been properly sprayed and cared for, and in a couple of years you can double the crop of fruit, not only double the crop, but you can increase the value of the crop by at least 100 per cent. If this were generally done throughout the province, instead of producing ten million barrels a year, we would be producing twenty million barrels per year; and instead of so large a quantity going to the evaporator—and we have heard to-day about the wonderful development of the evaporating industry—these apples should go into the market, and be bringing 50 or 75 cents a hundred instead of 10, 15 or 25 cents. Instead of receiving a revenue of a million dollars a year, we should be receiving ten million dollars, and we could do this if the trees were properly sprayed, properly cultivated and handled. I do not wish to dwell further on this subject except to say that the transportation problem has been solved. We have the best transportation facilities that any people possess—I do not care where you go. We have the best line of steamships operating between the port of Montreal and European ports that is to be found operating between any ports in the world. These steamships are better than those sailing from New York and Boston. We have that clearly demonstrated by our shippers. We could have got a rate of from 10 to 12 cents less via New York or Boston than via Montreal any time for the last twenty years, and I know what I am speaking about because I have quotations and I have shipped from New York and Boston. Shipments by New York have involved a loss, while the carriage by way of Boston has sometimes been satisfactory, but not always so. They have some splendid boats operating between Boston and the European market, but, take the boats as a whole, we have better service from Montreal or Quebec than they have from either of these American ports. No finer boats for the carriage of fruit are to be found than the Empresses sailing from Quebec or than the boats sailing from Montreal.

Mr. LALOR. What do you think of the freight rates to the west?

Mr. SCHELL. I think they are too high and I think that the railway companies of this country should give us better rates. Especially is it unfair that when the fruit gets to Winnipeg local rates prevail from Winnipeg to western points. That is an absolutely unfair condition that I think our Board of Railway Commissioners should take up and deal with. We should have a through rate to Calgary, Edmonton, Brandon or Regina, as well as to Winnipeg, and I think it is an absolutely unfair condition that is maintained to the detriment of the shippers of Ontario fruit. The rate is high anyway, and I think we are entitled to a through rate just as much as we would be in shipping any other commodity. I hope that this government, operating in connection with the government of Ontario and, if necessary, with the government of Nova Scotia, if their system is not what it should be, as well as with the government of British Columbia, will take hold of this industry and spend money upon it. Every dollar they spend they will get back ten times over as the result of better educative work. I do not know of any industry in which there are greater possibilities of development. I do not know any way in which the government can spend money and receive a better return. Instead of having complaints about poor fruit and inspectors not always giving satisfaction either to the shippers or the buyers, if we get the fruit right there will be no difficulty about the inspection, and if we had the clean fruit they have in British Columbia and in some of the western states there would not be much difficulty about inspection. There the fruit is comparatively clean. They have not the scab and coddling moth to the same extent that we have in Ontario. By solving the question of the production of a good quality of fruit at home we will rid ourselves of the difficulty, annoyance and heart burnings in connection with poor fruit that we sometimes see put up and shipped to the markets that should never leave our own orchards except to go the evaporator or cider mill.

Mr. J. B. BLACK (Hants). Mr. Speaker, I have only a word to add to what has been said. I am more than pleased that this subject has come up to-day. This is the fruit grower's day. We have sometimes a lawyers' day, we have always a political partisans' day and during the last few years I believe we have had, once in each session, a doctors' day. I am very glad therefore that to-day we have a fruit growers' day. I think that much good will come of it. I am very glad that this question has come up. It is one in which I am personally deeply interested, coming from a country where fruit growing is one of our chief industries, where fruit growing is one of our most paying industries, where the apple tree is indigenous to the soil, where it will grow wild in the fence corners alongside of the morning glories and the wild roses, where you can scent the apple blossoms for a hundred miles in one direction without losing sight of the blooms all the way. It is one of our paying industries. Apple growing in Nova Scotia is as good as owning bank stock even if bank stock is good. My hon. friend (Mr. Schell) who has been telling us about the superior fruit, the unapproachable fruit of Ontario, I am sorry to say, wound up with a hard luck tale about bad fruit, miserable, scabby fruit, wormy fruit, unintelligently cultivated and unintelligently packed. I would advise our friend to send his fruit growers either to British Columbia or down to Nova Scotia to get some lessons in intelligent fruit growing and intelligent and honest packing. I am also glad that this question has come up because it has developed that the only fault which the Fruit Marks Act has is that there are not enough inspectors. I remember that not very long ago, at least one of the voices that was singing the praises of this Act to-day and finding no fault with it at all, was criticising this Act very energetically and very earnestly, and I also remember that it was attacked very bitterly. But the hon. gentleman who was then criticising the Act declares to-day that the only fault to be found with it is that there are not enough inspectors. The outfit of inspectors necessary to examine our apple crop would be something like the outfit of surgical instruments that a surgeon would need. It could not be complete. I presume the inspectors were appointed to look after four classes of the people in the fruit business—the ignorant grower, the ignorant packer, the careless packer and the dishonest packer. The want of education, I think, is one thing that has made the inspector necessary at all. If our people were sufficiently educated in the art and skill of growing apples properly, of growing them for their own profit, of growing them in a businesslike way, I think we would have very little trouble about the quantity of inspectors. In so far as Nova Scotia is concerned I have nothing but good words to say for the Fruit Marks Act. We have not many inspectors there, not as many as would like to be appointed, but I think possibly that at the present time we have about all that are necessary. We exported from the port of Halifax last year between 600,000 and 700,000 barrels of apples and so intelligently is the fruit grown and so honestly is it packed that the two or three inspectors that are employed in Nova Scotia, one of whom is at the port of Halifax, are all that are

necessary. I have it on the authority of the chief inspector that while in some cases fruit packers are being fined every year, the fact is that dishonest fruit packing is growing less and less all the time. As in other businesses, so in the fruit growing business, education and intelligence are necessary, and if my hon. friend from Ontario inquires into the sad situation he paints he will find that the trouble in Ontario is that while the soil is fit and the conditions favourable the people are not growing the fruit intelligently. The hon. gentleman told us that $300 per acre was paid for land, and he seems to consider that an enormous sum. Let me tell him that down where I come from you cannot buy an acre of orchard for $300.

Mr. SCHELL. The statement was that the fruit itself was sold at $300 per acre.

Mr. BLACK. I could mention an orchard in my district on which last year the fruit sold for $4,000. However, that makes very little difference, for what I was getting at was the importance of intelligence in growing fruit. The fruit growers in my section of the country are educated and intelligent men and we have B.A's. and M. A's., graduates of our colleges, engaged in the industry. The result is that fruit growing in Nova Scotia is not only a paying business now, but that year after year we find our export of fruit growing larger and the quality of the apples getting better. Perhaps in some sections of the country where fruit is not so intelligently grown and where perhaps it is a little more dishonestly packed there may be more inspectors required, but in Nova Scotia we have no fault whatever to find with the Act and indeed we think it has proved itself to be a very great benefit to the industry.

Mr. D. A. GORDON. I have listened with much interest to the statements made by hon. gentlemen as to the many evils that confront us in the fruit growing industry, but as they have offered no remedy I trust I may be pardoned for making a suggestion which I think will bring about a cure for these evils. We realize that all through Canada apples and oranges are of the same value. I had occasion to state in the House recently that last fall apples in my locality sold for from 8 cents to 25 cents per 100 pounds, and I have before me a report of the market in Great Britain from which it will be seen that at the same time apples sold there for as low as one shilling per barrel. In my belief the remedy that would enable the apple crop to be marketed in a manner so as to bring to the growers the greatest return would be to introduce proper cold storage facilities nearer the points where the apples are produced. Until that is done I do not think the apple crop can be made to bring to the growers that return which it ought to bring.

Mr. BLACK. That is what we do.

Mr. D. A. GORDON. I am very glad to hear it. We all know what a benefit the cold storage system has been to the cheese industry and my suggestion is that the Minister of Agriculture should adopt similar methods in relation to the apple growing industry, and that educational stations should be established so as to teach the growers how to produce the best crop and how to market it in the best condition when it is produced. I urge this view of the case upon the Minister of Agriculture and I trust he will take steps in that direction.

Mr. T. S. SPROULE (East Grey). I was somewhat amused at the speech of the hon. member for Oxford (Mr. Schell), because, while he told us in one breath that transportation had reached a high state of perfection, in the next breath he said that the facilities for transportation to Winnipeg and the west were wretched, that the freight rates were exorbitant and that the fruit was not well handled.

Mr. SCHELL. I did not say anything about the handling of the fruit; I only spoke about the question of rates.

Mr. SPROULE. The hon. gentleman (Mr. Schell) told us that we had the best system of cold storage in the world, but if that be so, how is it that so many shipments of fruit to England last year have been reported as being in bad condition when they arrived at their destination. I think that could be minimized greatly had we better cold storage and better care of the fruit on the voyage. The hon. gentleman blamed the Ontario government for not doing as much as he thought they ought to do in this direction, but I think that with him it depends a good deal on whose ox is gored. He thought the federal government was doing everything all right but of course he thought the Ontario government was doing everything all wrong. My belief is that both governments might do more than they have done, and, while we may provide cold storage and proper transportation we must also remember that proper culture of the fruit is a most important thing. There is something needed beyond all that, and that is the proper cultivation of the ground and its proper fertilization. Compare our orchards here with those in southern California. In the latter you would not see a blade of grass growing, they are practically cultivated all the time. The cultivation of the soil is not only looked after but the increase of moisture, and all that is needed as well as spraying and other devices. My hon. friend

from Oxford (Mr. Schell) gave as an instance of what might be accomplished in the fruit line, what has been done in the manufacture and export of cheese. No doubt that is the case, but was the excellent work done in the cheese line all done by government? Not at all. It was done by the united efforts of the governments and the cheese men themselves. For years back, in the county my hon. friend represents, the cheese manufacturers have had their own men in the field lecturing and instructing, and that, combined with the work done by the government, helped to accomplish what has been attained in that business. It was owing to the united efforts of the people belonging to the cheese associations and of both the federal and local governments that the trade in that commodity was so much improved. If we desire to accomplish something similar in the fruit business, we shall have to do it largely on the same lines. Last year we exported 1,600,000 barrels of apples, which must be only a small fraction of all that we grew and that we might have exported if the prices realized paid the expense. Besides we exported 6,000,000 pounds of evaporated apples. I do not know at what price these are sold elsewhere when picked, but in my county they sold at 25 cents a hundred during last year. That was a very small price, but the apples taken to the evaporator are not of a quality which would do for barrelling. They were practically the product of the orchard not fit for other markets, and although sold at inferior prices, if you add these prices to those obtained for the good exportable apples, you have a good average. To my mind what is required is a more rigid inspection and more inspections. I agree with the hon. minister that it would be altogether too much paternalism to send inspectors into every orchard to show the people how to pack their apples. That they ought to learn themselves, and it is something which their own innate honesty ought to dictate to them. But the apples should be examined periodically to see if packed and graded according to law, and to punish those individuals who violate the law and in that way destroy the reputation of Canadian goods. We want more inspectors and we require a better system of cold storage. We want cold storage places in which to keep the apples and then have cold storage transportation both in the cars and on the steamers. We also require men at every port to look after their loading and unloading, to see that they are not exposed, to see that they are kept in proper condition, and when they reach their port of destination to see that they are taken charge of and put into cold storage again until they are sold. In addition to that, we require better freight rates. Our freight rates are entirely too high, both ocean and railway. They take away a portion of the profit which otherwise would go to the exporters and the growers of the fruit. When these things are done, we shall have better results. We also ought to make greater efforts to find out markets abroad. In that way we could do something which would enure to the benefit of our fruit growers and exporters. In addition we should have an increase in the duty upon imported fruit so as to keep a lot of foreign fruit out of the Canadian market. We are entitled to have our own markets for our own people. Should the government operate along these lines, they will be doing something which cannot fail to benefit the trade generally.

Mr. W. O. SEALEY (Wentworth). I have been much interested in the discussion we have had on the Fruit Marks Act and its administration, and I am glad to find that the department has been endorsed all along the line for the good results accruing from the Fruit Marks Act and its administration. The only complaint apparently seems to be that there are scarcely enough inspectors, and scarcely enough work done along the line of inspection, that the packers are not watched quite close enough. The very satisfactory explanation of the work of the department given by the hon. Minister of Agriculture renders it entirely unnecessary on my part to supplement it, but I shall take the liberty of drawing attention to one phase of the case which has come to my notice in the way of local observation. The packers and shippers, as a rule, so far as one can judge at home, who complain most loudly of the lack of effort on the part of the department and of the infraction of the law by others are generally the greatest sinners themselves. The large shippers are constantly complaining in order to induce the inspectors to be exceedingly hard on the smaller packers and shippers and in that way draw attention away from the quality of their own work. But so far as I can observe, the greatest infractions of the Act are committed by the packers and buyers who purchase by the orchard rather than by the barrel. When they buy by the orchard, they get the whole product, and they consider it most profitable to take everything which they can have the slightest chance of selling. Whereas when they buy by the barrel, they are far more cautious, the inspection is far more rigid, and consequently the result is much better. If I could venture to offer a word of suggestion or caution, it would be that the department should impress on its inspectors the advisability of paying rather most of their attention to those localities where the practice is to buy the orchards outright. I am not suggesting that that is not a satisfactory and simple

way of adjusting between the grower and the packer and shipper, but, so far as my observation goes, that is where the greatest mischief results. Not that the other methods are entirely satisfactory by any means, but this method is open to a great deal of abuse. I am sure that we are all pleased to have the assurance of the hon. minister that if any more inspectors be required, even though the appropriation be exhausted, he will not hesitate to appoint them, and if he does the House will have still greater confidence in him and his administration of the department, even though there be an overdraft. While the remarks and suggestions in this House have been largely with reference to the watching of the transhipping of the fruit and of the operations of the packers, I think the idea of the large packers and shippers in each locality is to get the government inspectors to do the work of inspecting the small packers and shippers from whom they buy, an expense and duty which should fall on the large packers themselves as a business transaction. While I agree with and am glad to endorse the Department of Agriculture in going to the extra expense proposed, it is just a question how far the department, in the public interest, should be encouraged to devote its energies to looking after the small packers for the benefit of the large packers and shippers.

We can all endorse most heartily the proposition to provide increased cold storage accommodation, especially in the vicinity of fruit growing centres, and I am satisfied that this matter is, as we were assured, engaging the consideration of the department and that we may anticipate a further improvement at an early date. I would again suggest that the department have their inspectors watch more closely the packers who are in the habit of buying apples on the trees and to whose interest it is to pack as many apples as they can.

Motion agreed to, and House went into Committee of Supply.

At six o'clock House took recess.

After Recess.

House resumed at eight o'clock.

PRIVATE BILLS.

FORT ERIE AND BUFFALO BRIDGE COMPANY.

House in committee on Bill (No. 69) to incorporate the Fort Erie and Buffalo Bridge Company.—Mr. German.

On section 9—Union with another company.

Mr. SPROULE. The power given here is to unite with 'any other company incorporated for similar purposes, under the laws of Canada or the province of Ontario, or under the laws of the United States or the State of New York. In the case of railways, we usually compel the company to name the roads with which amalgamation is to be permitted. It prevents them negotiating with any others without coming to parliament. In this case, we give a free hand. There may be nothing in it, but I do not see why we should grant such wide powers.

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). This Bill provides for a bridge only for foot passengers and vehicles, I believe. It did not come before the Railway Committee, but was dealt with by the Committee on Private Bills.

Bill reported, read the third time and passed.

CEDAR RAPIDS MANUFACTURING AND POWER COMPANY.

House in committee on Bill (No. 94) respecting the Cedar Rapids Manufacturing & Power Company.—Mr. Boyer

On section 1—Expropriation powers—time extended.

Mr. PERLEY. It does not seem to me that we ought to pass this Bill in the shape in which it appears before us. A charter was granted to this company in 1904 as a power company in connection with the Cedar Rapids on the St. Lawrence river. They were given until this year to make use of certain expropriation powers that were given them. Now, they come back and ask us to extend these expropriation powers until 1914. Their charter gives them very large powers with regard to using the water at Cedar Rapids. If they wish to develop the water-power, they ought to do it, and should not come here to ask us to extend these rights for five years. That would mean that the development of this power might be tied up for that length of time, even though for merely speculative purposes. We ought not to grant expropriation powers extending over so many years unless the parties have shown their good faith, and have shown that they intend to go on with the work.

Hon. WM. PUGSLEY (Minister of Public Works). This matter came before me by reason of an application that the company made to have their plans approved of. It appeared that some time ago, before I became minister, there had been a partial approval of the undertaking, and the parties were of opinion that before they could actually expropriate land they would require, under the statutes, approval of the plan of their works. In view of the fact that we have an International Waterways Commission to whom all questions relating to waters which are wholly or for a part of

their course boundary waters between the United States and Canada, are usually referred, I thought it would be well to refer the matter to that commission. The matter was accordingly referred. If it had not been that I took that view, I think I should have felt it my duty, upon the report which I had from the engineers of my department, to approve of the plans, and the company could have proceeded to expropriate the property. Under these circumstances, I scarcely think it would be right to refuse to the company the extension of time. It may be, the time asked for is too long. It does seem to me that it is unreasonably long; but I think they might fairly be given a reasonable extension. I was informed, and I have no doubt it is the case, that the company already owns a very considerable part of the land rights necessary for the development of the water-power at the place where they propose to develop it, but that they desire to exercise their rights of expropriation in regard to additional property. Parliament having granted them the power by their Act of Incorporation, and there having been delay because of the reference by me to the International Waterways Commission, and and as their time expires early in the coming summer, so that it would have been difficult for them to exercise their powers of expropriation in the meantime, it does seem to me rather reasonable that an extension should be given.

Mr. PERLEY. Have they shown any evidence of ability to build the works necessary for this power? It is very easy for people to get plans,—it costs very little to do that, and then endeavour to get somebody to buy the rights they have.

Mr. PUGSLEY. The people who are interested in the property that is to be developed, and whose names I do not now recall, but who are very respectable people, gave me very positive assurances that they were ready to go ahead and were most anxious to have their plans approved, but I thought it was only courteous to the government of the United States that the plans should be submitted to the Waterways Commission. If I had not taken that ground I do not imagine that they would have been here asking for an extension of time. It seems to me though that the time asked for is longer than they need. If it were shortened by two years I should think it would be ample.

Mr. A. HAGGART. Does this give the promoters of this Bill anything in the nature of a blanket to the exclusion of others who might develop the property?

Mr. PUGSLEY. It would as to that particular property.

Mr. PERLEY. Does not the minister think it is time we stopped granting these charters giving rights to water-powers when we know that every day these water-powers are growing in value? They are one of the great assets of this country. The question came up not long ago in the House with reference to a western charter. Before long we will use these water-powers in place of coal, or at any rate, for heating purposes. Is it not time that we stopped granting these charters to private individuals which give them the practical ownership of large water-powers which at the present time are no doubt largely vested in the Dominion? The persons to whom we give these powers very likely do not propose to develop them at all, but they have sense enough to see that before long they will become of great value.

Mr. PARDEE. The company have already acquired, without expropriation, nearly all the land necessary and the only portions that are outstanding of the land required are portions which are owned by non-residents. These non-residents are holding out for an excessive price for the lands which are proposed to be purchased. It will be seen, therefore, that the company have done something to cary out the objects for which they are incorporated.

Mr. PERLEY. I would like to ask the hon. member who has this Bill in charge whether he knows that himself?

Mr. PARDEE. I only know that it was stated before the committee and I have a letter from the person who is acting as the advocate of the company in which he says that that is really the state of affairs at the present time. Of course, I could not say it from my own knowledge.

Mr. MADDIN. I do not think that what my hon. friend from Argenteuil (Mr. Perley) is contending against is so much the right to expropriate lands as the right to hold these waterways for a period of five years. In view of the fact that the government has taken steps at this session to preserve our natural resources, and has added to the standing committees of the House three committees having that object in view, I think it would not be a bad idea to submit this Bill to the committee on waterways and forestry to say whether, in their opinion, it is wise to allow a company to blanket a water-power for five years.

Mr. PUGSLEY. It seems to me that it would be scarcely fair to this company to do that. Parliament has already given it this charter and has clothed it with the power of developing this water-power and acquiring lands. In pursuance of that authority they have gone ahead, and they have, as I was informed, acquired practically all the land which is necessary for

the development of these powers. We ought to treat this company just as we treat other companies. We scarcely ever refuse to give a reasonable extension of time, parliament having once granted the charter. With regard to the question raised by my hon. friend from Argenteuil (Mr. Perley), I think it is one of a great deal of importance. I think it is a question that is worthy of a good deal of consideration as to whether steps should not be taken for the public control of the various water-powers, particularly the valuable water-powers of the country, but before we should refuse to private individuals the opportunity of developing these powers and rendering them available to industrial purposes which, of course, is a matter of very great public advantage, the government ought to be prepared to undertake the responsibility of their development. My hon. friend will see that if we were to refuse to private companies the authority to develop power without the government being prepared to move forward the result would be to prevent any development at all. We have granted a great many charters to private companies and it seems to me it would not be reasonable to stay our hand just at the present time whatever may be decided upon in future. Having once granted a charter to this company it seems to me that it would be only reasonable that parliament should grant an extension. But I would suggest to the promoter of the Bill, if he is present, that the time be made 1912 instead of 1914. I think that would be ample time to enable this company to exercise all the powers which they might reasonably exercise under the charter in so far as the expropriation of land is concerned.

Mr. PERLEY. I would like to ask the hon. gentleman who is in charge of this Bill whether there was any opposition to it in the committee?

Mr. PARDEE. An hon. gentleman who was present tells me there was no opposition at all.

Mr. SPROULE. The minister says that they got this power from parliament and that they should not now be refused an extension of it. They got their charter but they allowed it to lapse. They acquired it when there was very little attention directed to the water-powers of the country, but since then, the necessity has become more apparent of having some supervision over these very valuable assets belonging to the provinces, in most cases, although, I presume, in this case, this being on the St. Lawrence river, it would probably come under federal authority. But, I think that the provinces should have control over these water-powers. It seems to me that these properties belong to the provinces; therefore, I should think the provinces would have the right if they saw fit to lease them. I do not believe they should be given away for nothing. It is a mistake and is not good business. They should be leased so that they would yield a very considerable revenue, as time went on, to the province. The province of Ontario, at least, is considering the question of how far to go in taking charge of the water-powers which belong to the province and this, together with the interest which has developed lately in the federal parliament in regard to the question, as well as the public attention which has been directed to it, should cause us to be much more cautious now in dealing with the question than we have been hitherto. Since this charter has run out and they have done nothing, I do not think it would be any very great hardship if we allowed it to die and allowed the property to revert to the province or to the Dominion as the case may be.

Mr. PUGSLEY. My hon. friend is in error as to the charter running out. If it had run out there might be some force in what he has said, but the charter has not run out. They came here some time ago asking for the approval of their plans, and they had still quite a number of months within which to exercise the rights contained in the charter. The charter will not expire until some time in June next.

Mr. SPROULE. This is the last session and it is practically an expiration of the charter.

Mr. PUGSLEY. If I had approved of the plan when they came to me, they would have had ample time to expropriate the land before the charter expired. But I thought it proper, as a courtesy to the government of the United States, to refer the whole matter to the International Waterways Commission. What they feel is that there will not be a report from the commission in time to enable them to expropriate the land before the charter expires, and that is why they come here. But I think the extension they ask for is too long, I think it should be made not longer than 1911 or 1912.

Mr. SPROULE. The minister seems to have only one anxiety, that is, to give them a renewal so that they may expropriate the land. What strikes me is that we are giving them forever, practically, control over the water-power, and if we did not renew the charter at this session of parliament it would die. Since they have kept, practically, the whole limit of the time without taking advantage of it, except doing some preliminary work, I do not think it would be any great hardship, in view of the fact that we are on the eve of starting a new policy with regard to these waterways, if we kept the waterway in the hands of the authorities that own it.

Mr. PERLEY. I raised this question merely on general principles. I have nothing to say against this particular project, I do not know who the gentlemen are that are interested in it. But I agree with what the minister has said. We want to get our powers developed as fast as we can; if the government do not do it, we must find some private corporations to do it. But we ought to consider carefully whether, in the future, we ought not to insist that before we grant any such charters, some evidence of good faith should be given, and some evidence of the ability of the parties to put the work through. We ought to take the stand that no charters of this kind should be granted giving valuable water-powers, when the promoters wish to get them simply for the purposes of speculation, because we all know that these water-powers are going to be of immense value. However, in this case there seems to be no opposition to the Bill in committee, and I think we might agree with the minister's suggestion that the date to which the expropriation powers are extended should be changed from 1914 to 1911. That would give them ample time. If they really mean business, two years are lots of time for them to do all they want to do.

Mr. PUGSLEY. I move in amendment, in section 1, line 4, to strike out the word '1914' and substitute therefore the word '1911.'

Mr. DEPUTY SPEAKER. I am afraid the motion cannot be accepted without notice, and so far as I know there has been no notice. In the case of a private Bill in Committee of the Whole, there must be notice of any amendment of any serious importance.

Mr. PUGSLEY. Might it not be done by unanimous consent?

Mr. SPROULE. If not, then move that the committee rise and report progress.

Mr. DEPUTY SPEAKER. I would prefer that the committee rise, rather than make a precedent by which possibly I should find myself bound.

Mr. PUGSLEY. I give notice then that I will move this amendment at the next meeting of the committee.

Progress reported.

THE CANADIAN NORTHERN ONTARIO RAILWAY.

House in committee on Bill (No. 75) respecting the Canadian Northern Ontario Railway Company.—Mr. Pardee.

On section 1,

Mr. GRAHAM. There was a question raised in the committee with respect to this Bill. And the Railway Committee was unanimous, that the only possible way to deal with the Bill along the line suggested by that committee was to report the fact to the House and let the Committee of the Whole House deal with it.

Mr. DEPUTY SPEAKER. The proper course would be the one indicated in the previous Bill, and that is that the committee should report the Bill to the House and the House should deal with the change on the ordinary procedure.

Mr. SPROULE. Was this amendment made in the Railway Committee?

Mr. GRAHAM. It was unanimously adopted by the Railway Committee.

Mr. SPROULE. That covers it all. The Railway Committee recommended the Bill.

Mr. GRAHAM. The Railway Committee was unanimous. but they thought they could not take that course without reporting to the House. If the Committee of the Whole House approve of the change and was unanimous, but they thought they would be perfectly in order.

Mr. PERLEY. What section?

Mr. GRAHAM. Subsection E.

Mr. DEPUTY SPEAKER. For the particular understanding of the situation I think I should read what appears in the the report of the Railway Committee.

In accordance with the requirements of rule 105, your committee call the attention of the House to an amendment which they have inserted in the last mentioned Bill authorizing the Canadian Northern Railway Company to construct a line of railway from a point on its constructed line at or near Sudbury, southwesterly to a point at or near Little Current, as such provision does not appear to have been contemplated in the notice or petition for the Bill as reported upon by the examiner of petitions for private Bills.

Mr. HENDERSON. Is it a question whether proper notice was given?

Mr. GRAHAM. No notice was given.

Mr. HENDERSON. I have no objection to the Bill going through. I was not in the Railway Committee and do not know what was said there, but I do not think we should exercise some extraordinary powers here to-night with respect to a case where there is no notice, if our action is to be cited as a precedent on some other Bill. That is all the objection I have. If it be distinctly understood that it should not be quoted as an authority hereafter, I have no objection.

Mr. FIELDING. How can my hon. friend bind all the members not to quote it?

Mr. GRAHAM. This course would not be taken were it not that some of the older members on the Railway Committee said it was perfectly legitimate and had often

been taken. If the committee thinks proper, we can refer the Bill to the Standing Orders Committee.

Mr. SPROULE. What advantage would that be when we already know there was no notice. The only proper thing would be to cut out the clause of which there was no notice, because otherwise we shall be establishing a bad precedent which undoubtedly will be quoted in the future.

Mr. PARDEE. Rather than have the clause cut out we would hold the Bill over and give the notice.

Mr. GRAHAM. Possibly it is just as well to let the clause stand in order that we may see if it has not been the practice of the House to take this course in cases where the Railway Committee have been unanimous. We can look into it a little further at the next meeting of the committee.

Progress reported.

THE CANADA LIFE INSURANCE COMPANY.

On the order:

House in committee on Bill (No. 56) respecting the Canada Life Insurance Company.

Mr. FIELDING. That Bill should stand. The committee have reported that the notice is insufficient, and I understand the promoters contemplate giving the necessary notice. At all events the Bill cannot be proceeded with at present.

Mr. HENDERSON. Will it be proceeded with on Monday?

Mr. FIELDING. The Bill should stand until the promoters have given such substantial notice as will satisfy the House.

Progress reported.

THE KOOTENAY AND ARROWHEAD RAILWAY COMPANY.

House in committee on Bill (No. 80) respecting the Kootenay and Arrowhead Railway Company.—Mr. George Taylor.

Mr. GEO. TAYLOR. On section 1.

Mr. GOODEVE. I propose to move the amendment of which I have given notice:

The Kootenay and Arrowhead Railway Company shall within two years after the passing of this Act construct fifteen per cent of the mileage of the unconstructed portion of the railways which it was authorized by section 7, of chapter 70, of the statutes of 1901, to construct and shall complete said railways and put them in operation within five years, and if the said fifteen per cent of mileage is not so constructed, and if the said railways are not so completed and put in operation within the said periods respectively, the powers of construction conferred upon the said company by parliament shall cease and be null and void as respects so much of the said railways as then remains uncompleted.

The day on which this Bill was considered before the Railway Committee there was at the same hour a meeting of the Banking and Commerce Committee which was dealing with the Insurance Bill, and a meeting of the Standing Orders Committee which was dealing with the Canada Life Bill, and as a large number of the members were present at these other important committees there were few at the Railway Committee and my amendment was defeated by the very narrow majority of only two votes. Hence I consider I am amply justified in asking the House to now reconsider this Bill. Then again, by an amendment passed in the Railway Committee they were granted five years to build the railway from Lardo via Duncan up to Arrowhead, which is really the uncompleted portion of the original charter, and by that amendment they say to the House that they are commencing to construct a short line of railway which will be a connecting link between two portions of the railway already connected. There is the further reason in support of my amendment that in 1906 they obtained from parliament an extension of three years for the construction of this portion of the railway, and in that three years they have done absolutely nothing. There is the further reason, that in addition to the privilege of bonding the road for $25,000 a mile there was granted a large cash subsidy per mile which has been paid over to them for that portion of the railway which has already been built. There is a still more important reason and it is that when this charter was first asked for in 1901, there was an influx of prospectors and capitalists into that district in the Kootenay country in anticipation of the road being immediately constructed. This is a very mountainous district having a large number of very beautiful lakes, and minerals being discovered there the prospectors felt that the word of a great corporation like the Canadian Pacific Railway could be relied upon, and so they brought in a large amount of machinery at great cost to develop these mines, only to find that they had been deceived and that the railway would not be built. In addition to that a large number of agricultural settlers have gone into that district on the same understanding and these men have been there for nine years deprived of the fruits of their capital and their labour. I would call the attention of the House further to the fact that there appears in the daily press an article in large type, said to be authorized from headquarters, stating that the company were about to rush this railroad to completion, and with the permission of the committee I shall read that article:

We have news from a reliable source that one of the objects of the Canadian Pacific Railway in stopping work on the Kootenay Central is to rush the construction of the Arrowhead and Kootenay Railway, connecting Revelstoke with the Crow's Nest road, and making Revelstoke the most important railway junction in the province of British Columbia. It is stated the Canadian Pacific Railway now recognize this road must be built without delay if the road is to be in a position to handle the big grain business which is now being developed between the western prairies and the Pacific coast.

There is something very sinister in this article with reference to the reason why the Canadian Pacific Railway did not build the Kootenay Central. Let me say that just a few weeks ago we had before the Railway Committee a Bill applying for an extension of time for the completion of the Kootenay Central Railway and I objected to the extension being granted without a provision being inserted that the road should be commenced within a certain time. Would you believe it, sir, that at that time the Canadian Pacific Railway actually put men to work and announced in the press of the district that they were about to rush the Kootenay road to completion, but just as soon as the Bill passed the House without any provision of the kind I wanted there was a telegram sent out there and the men who were working on the road were withdrawn. In this very same press which announced that the Kootenay Central Railroad would be constructed, we find the statement now made that the reason for the withdrawal of theses men was that th Canadian Pacific Railway Company were about to construct the Arrowhead and Kootenay railroad. We are peculiarly situated in this part of British Columbia in that the railroads have to follow the easiest lines to get through the great mountain ranges and make connection with the outside world, and although these pieces of road are short in themselves it is necessary that they should be constructed in order to develop that part of the province. The amendment which I offer is a fair and reasonable one, inasmuch as it simply asks that they shall construct only 15 per cent of the total mileage covered by this charter, and no doubt some of the members of the committee will be surprised to learn that 15 per cent amounts to only six or seven miles. That does not seem much of an enterprise for a great corporation like the Canadian Pacific Railway to undertake in view of the fact that in their notices in the daily papers and in this very Bill itself they say they will commence the construction of this railroad within two years, and complete and put it in operation within five years. When the Bill was before the Railway Committee the Minister of Railways very justly told us that he had received resolutions from boards of trade urging him to make provision that the company should construct this line immediately. There has been discussion in the Railway Committee over the formation of some definite scheme to compel companies applying for charters to demonstrate their bona fides by constructing within a reasonable time the railways covered by the charters they ask for, and to my mind there is no simpler way of meeting the difficulty than to provide that a small percentage of the total mileage shall be constructed within a specified time. Surely there can be no hardship in the amendment I offer when it allows this company two years to construct 15 per cent of a road which they themselves declare they will have completed and running in five years. My amendment should appeal to the sense of fairness and justness of every man in this committee. It is not very much of a penalty, indeed it is no penalty at all to ask this company to show their bona fides by constructing within two years 15 per cent of the mileage included in the charter. If I had a map I could show the committee that this line runs from Lardo to Arrowhead. The Arrowhead branch has already been constructed under another charter and runs from the main line of the Canadian Pacific Railway to Revelstoke to a point on the Arrow lakes, a portion of the Columbia river. By completing this small link of 40 miles they will have a line giving access to that rich tract of country, opening up mines and agricultural lands. The settlers who have gone in there and the capitalists who have invested money there will be enabled to reap some reward for their labour and investment. I appeal to the committee for support of this amendment as a business proposition.

Mr. MILLER. How many miles will the 15 per cent make?

Mr. GOODEVE. Between six and seven. I understood from Mr. Thompson, representing the Canadian Pacific Railway, that there were 40 miles to construct, so the 15 per cent would make about that distance.

Mr. MILLER. What particular benefit would it be to the people there to have these six miles constructed?

Mr. GOODEVE. It would be an absolute guarantee that the company would complete the 40 miles from the head of one lake to the foot of the other. The amendment would be no hardship on the company as they say they will complete the entire 40 miles within this five years.

Mr. PARDEE. How many miles of the road is built now?

Mr. GOODEVE. About 33 miles from the head of the lake up to Larder. As a

result of the building of that road they have erected an immense sawmill at the foot of that lake and are doing an enormous trade. The road is paying well and the mill employs some 200 men. That suggests another and a reasonable argument for the construction of the road; the border of the lake is surrounded by some of the finest timber in Canada and there would be other sawmills as well as the one to which I have referred.

Progress reported.

CONSIDERED IN COMMITTEE—THIRD READING.

Bill (No. 30) respecting the subsidy from the Ontario government to the Lake Superior Branch of the Grand Trunk Pacific Railway.—Mr. Turriff.

SUPPLY.

House in Committee of Supply.

To provide 100-ton track scale at Aston junction, $2,500.

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). There has never been a scale at this point. Hon. gentlemen have seen some discussions on weights of lumber and it was decided to install this scale.

Mr. BARKER. Does the minister think it proper to charge a scale of this kind to capital account on a road that has been running for 50 years? It seems extraordinary that you cannot get a new chair for an office on the Intercolonial Railway without charging it to capital account. This practice I think is contrary to the rule upon railways and should be stopped.

Mr. GRAHAM. Absolutely the same thing is done on other railways, it is an addition, it is not even a renewal.

Mr. BARKER. You might charge to capital account a new handle on a door. It is one of the ordinary articles required on a railway. No company ever thinks of charging any of these things to capital. It is a monstrous thing, and would not be thought of in any institution except one that is trying to produce a political effect by showing a surplus.

Mr. FIELDING. The amount involved does not affect the principle. The question is not whether the amount is large or small but whether an amount of this kind is a proper charge to capital. If it is a betterment of the road, it is a legitimate capital charge.

Mr. BARKER. The principle is well understood, that every institution of this kind should endeavour, as far as possible, to close its capital account. The principle is not, as the hon. minister seems to think, to charge every new thing to capital. When a railway is fairly on its feet, fairly in operation—I wont say after it has been running for fifty years, but after it has been running for ten years—it is never thought right to charge every little thing of this kind—a $2,500 scale—to capital. There would be no end of it. On that principle, if you put a new wheelbarrow on the platform at a station, you would charge the amount to capital.

Mr. FIELDING. And that would be perfectly right. If you have an addition to the stock of the railway, anything that adds to the permanent value of the property it is a proper charge to capital. From the hon. member's (Mr. Barker) large knowledge of railway affairs, I am sure that he will see, on consideration, that this is a matter of principle, not a matter of amount, and that his contention is not well founded.

Mr. BARKER. I have given the thing consideration, and I speak of my own knowledge when I say that large concerns of this kind that are fairly in operation, going concerns, when they want some little thing for the service—a few more trucks around the station or anything of that kind costing a few thousand dollars—never think of charging the amount to capital. What would be the result if they did? Take a concern like the Grand Trunk Pacific Railway or the Canadian Pacific Railway, which, perhaps, has no capital account; they could not provide these things that are necessary. These concerns spend thousands and thousands in this way, and the amounts are charged up to maintenance or revenue. It is not necessarily maintenance in a going concern, such expenditures are a proper charge to revenue. I venture to say I can produce to this committee—not at the moment, of course—quotations from authorities on railway operations to establish what I say.

Mr. FIELDING. If the hon. member will look at the Intercolonial accounts, he will find many expenditures of a similar character charged to capital. And, if they be betterments, I do not think the point admits of any doubt. Sometimes there may be a question as to whether the amount represents a betterment or not. Where a renewal is charged to capital, of course, that is open to criticism. But, if you add a mile to your road, a new station, or anything that will make the property more valuable than before, that is, I submit, a legitimate charge to capital. Of course, no company would want to open a capital account for these trifling things, but if it had an open capital account, these items would be properly chargeable to it.

Mr. BARKER. That is just the point. An ordinary railway has no open capital account, and no company should have an open capital account that has used its capital in establishing a railway system; it

should make the business bear itself and carry itself along. Of course, if they are going to add a new branch, that is a different thing, but to say that every petty appliance, or every petty accommodation along fifteen hundred miles of railway makes it necessary to keep an open capital account is wholly unreasonable; it would never be thought of. If a company were converting their whole bridge system from wood to steel, or replacing a sixty pound rail with an eighty pound rail, they would charge the difference to capital. But hon. gentlemen opposite a few years ago, charged the whole eighty pounds to capital.

Mr. FIELDING. No.

Mr. BARKER. Yes, they charged the whole eighty pounds to capital, and credited the concern with the scrap rails.

Mr. FIELDING. That is not what the hon. member said a moment ago.

Mr. BARKER. They threw the old rails in the scrap and credited them. That is not the principle on which the accounts should be run.

Mr. FIELDING. I cannot see the difference, as a matter of principle, between an additional rail to the road and an additional scale to the road. The mere fact that the amount is small does not alter the principle. As I have said no company would open an account for these small amounts, but, when there is an open account, you must choose whether you will charge the amount to one account or to the other. In this case, which account should be chosen? Surely, capital account, for this is clearly a betterment. But the hon. gentleman (Mr. Barker) says there should be no open capital account. Well, we have to differ from him on that point. The hon. gentleman asks what would a railway company do in this case? The Canadian Pacific Railway, for instance, have regularly charged to capital items that the hon. gentleman says, in the case of the Intercolonial, should not be charged to capital.

Mr. BARKER. I do not think the hon. minister can find a single instance of that kind. Say, after ten years, the Canadian Pacific Railway comes here to get authority to issue new capital, does the hon. gentleman suppose that, in the meantime, they have not been buying trucks and other things necessary for the road?

Mr. GRAHAM. And they are adding to capital account every year.

Mr. BARKER. When an extremely large expenditure is to be made, one that would put the companies into difficulties, it will be made with a capital expenditure. But this is like a manufacturing establishment putting in a glass window in its office and charging it to capital.

Mr. FIELDING. If it was an original window, it certainly should be charged to capital. Or, even if there was a window, and the company improved its property by putting in a plate-glass front, it ought to charge it to capital.

Mr. BARKER. No manufacturing company in the country would think of keeping open a capital account for such charges—taking down an old front door and putting in a new one.

Mr. FIELDING. That is a renewal.

Mr. BARKER. In precisely the same way, an old railway company takes it for granted that, in the carrying on of its business, there are many articles that are to be added new and that they will buy, but they never think of keeping such things in a capital account. And the sooner this railway gets down to that principle, the sooner we shall be able to compare earnings or losses upon this road with the earnings or losses on privately-owned railways.

Mr. SPROULE. The Minister of Finance (Mr. Fielding) does not see the difference between adding a rail or a scale. The road cannot run without rails, but it can run without scales.

Mr. FIELDING. No, it must weigh its freight.

Mr. SPROULE. It can use the scales it already has in other places. It may be a convenience for the traffic at this particular place to have a new scale, but the work was done without it before. A scale I would not regard as a betterment of the road at all, but merely an improvement for the handling of freight. The additions to the roadbed, stations, and so on, I take it would be betterments of the road, but I do not think that an added scale here or there should be regarded as a betterment of the road.

To provide siding for passenger cars at Gibson, $4,000.

Mr. CROCKET. Is this the whole cost?

Mr. GRAHAM. Yes. The work is done by ourselves.

Prince Edward Island Railway—extension to wharf at Souris—further amount required, $23,000.

Mr. GRAHAM. This is the Souris wharf for which a contract was let in 1907, and there is a balance of $23,000 due on it. The entire cost will be about $71,000.

Mr. FRASER. Would the minister say if this work has been let by tender, and if so, who were the tenderers, and what were the amounts?

Mr. GRAHAM. The contract was let on a lump sum and schedule. The tenderers were Hugh Macdonald, of North Sydney, $71,000, and E. A. Walberg, $55,830, but under the schedule it amounts to $71,000. But the entire amount, with the schedule added, was less than the next tender.

Mr. FRASER. This work, then, was let to E. A. Walberg at $55,000?

Mr. GRAHAM. No, it was a lump sum with the schedule prices. That is an approximate amount.

Mr. FRASER. Can the minister tell us exactly what the work did cost?

Mr. GRAHAM. The final estimate has not come in, but it is about $71,000, perhaps a few dollars under that.

Mr. PERLEY. What is the original estimate of the cost of this wharf?

Mr. GRAHAM. Our own engineer estimated it at $75,000. The work is now finished.

Mr. FRASER. Is the department aware that the concrete work of this wharf has cracked during the last five or six months, and that the wharf is practically useless for any purpose at the present time, and was useless during navigation last fall.

Mr. GRAHAM. Some little time ago the crack my hon. friend refers to was caused by a vessel striking the pier. It is not at all serious.

Mr. FRASER. Is the department aware that this wharf is not fit to be used in its present condition, and was not last fall.

Mr. GRAHAM. That is not the report we have from our engineers. The chief engineer himself visited the wharf last summer, and says it is in good shape.

Mr. FRASER. I am speaking of the crack and the condition the wharf was in at the close of navigation. When the wharf was said to be finished, it was left very much unfinished. The top of the wharf is not finished, it will require two feet of clay or earth to make it fit for teams. The crack was here last fall, and the wharf was practically useless for shipping purposes at the close of navigation, and for some time previous.

Mr. GRAHAM. Putting a little earth on top is not part of the contract at all. It is a matter of opinion as to the wharf not being useful, my hon. friend is the first who has raised that. Of course, he understands that it is not part of the contract.

Mr. PERLEY. If there is something that is not in the contract, we want to know what the completed wharf will cost.

Mr. GRAHAM. The wharf has been used, it is a question perhaps of putting some gravel on it, or something of that kind.

Mr. FRASER. Is it the intention of the department to leave the wharf in the condition it was in last fall?

Mr. GRAHAM. We will ask our engineer to give us a report after seeing what my hon. friend says, and if there is anything else to be done, we will do it.

Montague branch—land claims, $6,851.51.

Mr. GRAHAM. This claim and the Murray Harbour branch land claim, and the Vernon River branch land claim, are Exchequer Court judgments. This Montague branch is a small branch six miles long which was opened in 1906. There were certain land claims taken to the Exchequer Court.

Mr. FRASER. How long have these judgments been standing against the government?

Mr. GRAHAM. Since April and May of last year.

Lachine canal—further amount required to rebuild slope walls, $78,000.

Mr. GRAHAM. This matter was thoroughly gone into on our main estimates for the canal, and there is in the main estimates already passed an amount to finish this work. That contract was let some years ago for rebuilding these slope walls with concrete, making them practically new walls. After the Cornwall accident last summer our engineer made a thorough examination of these walls, and I asked him to rush the work, because I became alarmed that there might be some other accidents to our canals.

Rideau canal—improvements, $16,000.

Mr. GRAHAM. This amount is to cover the following expenditure which was rendered necessary by damage caused by ice and water during the spring freshets in April last:

To partially rebuild the retaining dam at Black Rapids lock station.. ..	$12,500
To repair the bulkhead at Manotick.	1,500
To rebuild the apron below the waste weir at Edmond's lock station.. ..	500
To repair the submerged portion of the bulkhead at the head of Newboro' cut..	500
To repair the embankments at Burritt's Rapids and Kingston Mills lock stations..	1,000
Total..	$16,000

Carillon and Grenville canals—repairs to gap in Carillon dam—further amount required, $25,000.

Mr. GRAHAM. Those who were here the other evening probably will remember my explanation that I would take $25,000 out of the main estimates and make the amount in the main estimates $15,000, explaining to the committee that I would put $25,000 in these supplementary estimates because I could use it this year, we having advanced that much with this work.

Railways and canals—income—miscellaneous—to provide for expenses preparing plans for the reconstruction of the Quebec bridge—further amount required, $10,500.

Mr. GRAHAM. We had $25,000 voted last year. This is intended for the work of the board.

Mr. BARKER. Who are preparing these plans? Have you a staff of experts preparing them?

Mr. GRAHAM. The Board of Engineers, Messrs. Vautelet, Modjeska and Maurice FitzMaurice, and they employ their own staff. We do not even make a recommendation to their staff. I want to let them accept the full responsibility. They have asked us for $10,500 more than they have expended this year up to date.

Intercolonial Railway expenses — further amount required, $500,000.

Mr. GRAHAM. This estimate was made some time ago. We have got to a period at which we can reduce that by $150,000.

Mr. BARKER. This is for working expenses?

Mr. GRAHAM. Working expenses. There will be a considerable discussion no doubt on the main estimates on the item for working expenses. This will make the item $350,000.

Mr. TAYLOR. How did you underestimate so much last year for working expenses? Was that due to the election?

Mr. GRAHAM. No, that was the estimate they gave me. But we had a supplementary vote last year to make the amount up to $9,000,000. They underestimated the year before about $1,500,000.

Windsor Branch Railway—maintenance—further amount required, $7,000.

Mr. GRAHAM. We are relaying the Windsor branch with a heavier rail out of revenue account.

Mr. SPROULE. What weight of rail are you putting down there?

Mr. GRAHAM. It has been a 56-pound rail and we are replacing it with 67-pound rails that we have at the present time.

Mr. BLAIN. Where are the rails manufactured that are put down on the Intercolonial Railway?

Mr. GRAHAM. They are all manufactured in Canada, either at Sydney or the Soo.

Mr. BLAIN. What is the price now?

Mr. GRAHAM. $32.50.

Militia and defence—chargeable to income—pay and allowances—further amount required, $170,000.

Sir FREDERICK BORDEN (Minister of Militia and Defence). This is simply a readjustment of the vote. We are not increasing the vote of the current year a single dollar, but some votes were larger than were required and others were smaller. It is proposed to take these votes, amounting altogether to $300,000, and not to use certain votes which I will read which were voted for the current year and are not required.

Engineers' services.	$ 90,000
Militia stores..	65,000
Dominion arsenal..	60,000
Customs dues..	85,000
Total..	$300,000

This vote is required for the permanent force.

Mr. CROSBY. What has been done with regard to the money which is now due to the men at Halifax? Has any arrangement been made by which they will get paid within a short time?

Sir FREDERICK BORDEN. The moment this vote passes the House, I understand from the Minister of Finance, the Auditor General will be ready to issue a cheque.

Mr. CROSBY. They will be able to get their money to-morrow if we pass it to-night?

Sir FREDERICK BORDEN. Yes.

Mr. CROSBY. Then I will be very glad to see it passed.

Annual drill — further amount required, $105,000.

Mr. ROCHE. I would like to ask the minister if the annual training school for students in the city of Winnipeg has been held at the usual time this spring?

Sir FREDERICK BORDEN. I am not absolutely certain, but I think it has. At any rate if it has not it will be held now.

Mr. ROCHE. I understood when I was home that the school had not been held at the usual time, but that it had been postponed until April or thereabouts.

Sir FREDERICK BORDEN. It is possible.

Mr. ROCHE. There was a great deal of dissatisfaction among the young men who reside in the country and who will be busy

with their farming operations at that time of the year. They will be debarred from attending the school by reason of the postponement.

Sir FREDERICK BORDEN. I hope that will not be the case, but when this vote has been taken the school will be called at once.

Transport — further amount required, $12,500.

Mr. DANIEL. What transport is this—material or persons?

Sir FREDERICK BORDEN. This is the ordinary transport connected with the camps and schools.

Royal military college—further amount required, $12,500.

Mr. BARKER. Why is there more money required for the Military College?

Sir FREDERICK BORDEN. There is not a vacant place in the college and one or two instructors have had to be added.

Post Office Department, $240,000.

Hon. RODOLPHE LEMIEUX (Postmaster General). This is required to meet the expenditure for rural mail delivery, the opening of new post offices and new postal routes, particularly in the western provinces, and the increased frequency of existing services on existing routes.

Mr. BARKER. How much for each of these services?

Mr. LEMIEUX. Between $80,000 and $85,000 is estimated for rural mail delivery; the balance is for the other purposes. Demands are pouring in every day for the opening of new post offices, particularly in the western provinces, which affords an excellent barometer of the progress of the west.

Mr. CROSBY. Is the Postmaster General providing for additional accommodation in the Dartmouth post office where it is so badly needed?

Mr. LEMIEUX. The leader of the opposition (Mr. Borden) called my attention to this matter yesterday and pointed out that the Dartmouth office is quite too small for the business done there. This morning I asked the deputy minister to get a report from our inspector at Halifax and I will try to convince my colleagues that something should be done this year.

Mr. BLAIN. I would remind the Postmaster General that there is a request before his department for the opening of a post office at Mount Pleasant in Peel county. I would also ask the hon. gentleman to have his inspector examine into the mail routes in that county. These routes were established a great many years ago; since that time some new railways have been constructed necessitating a rearrangement of the mail service, to which I think with benefit to the public the other mail routes might be made to conform. The committee will be surprised to know that in some parts of that old county of Peel the people have not yet a daily mail service. It would be in the public interest if the Postmaster General would have his inspector make an adjustment of the mail routes, and while it would not increase the general expenditure much it would be a great convenience to the people.

Mr. LEMIEUX. My hon. friend (Mr. Blain) has already written to me on the subject, and I will certainly ask the inspector to make a report.

Mr. SEXSMITH. In October last there was considerable talk about the erection of a new post office in the village of Lakefield where the postal accommodation is very inadequate, but I fail to see any appropriation in the estimates for that building although the Postmaster General is providing post office buildings in many places with not half the population of Lakefield. I trust that in the near future he will erect a post office there.

Mr. LEMIEUX. The erection of a post office comes under the Department of Public Works, but of course on the recommendation of the postal authorities. I will make a note of the request of my hon. friend.

Mr. BURRELL. I wish to direct the attention of the Postmaster General to the mail contract up the Cariboo road in British Columbia.

Mr. LEMIEUX. Is that the old trail?

Mr. BURRELL. Yes. In reply to questions which I asked in the House I was informed that the present contractors receive $24,750 per year and that the contract had not been let by tender since 1897. This is probably the most important mail contract in the west.

Mr. LEMIEUX. What is the mileage?

Mr. BURRELL. The mileage with the side routes must be 400 or 500 miles. In 1862 or 1863 the first contract was let going up to Barkerville, about 280 miles north of the main line at Ashcroft. This is the country built up by the great mining rush in 1858 and 1859. From 1862 until 1896, this very important mail contract had always been let by open tender and for periods of four years. Prior to 1896, from Ashcroft to Lillooet, which is a separate line, about 36 miles, was let with the same contract; but as the country got developed, the policy was adopted—I think a wise policy—of letting these 36 miles by four year contracts separately and letting them direct by the government. In 1897 this big

contract of $24,750 was let to an eastern firm and since that time, probably the minister hardly realizes the fact that there have been absolutely no calls for tenders at all, and in addition the branch lines, of which there are quite a number, have not been let separately, as they should have been, by four years contract, but were merged in this main contract. There are four of these branch lines—one from Clinton via Big Bar and Dog Creek to Alkali lake, 112 miles and return; another one from the 150 mile house to Harper's camp; another one from the 150 mile house to Quesnel Forks; another to Alexis creek, Chilcotin. I want to speak of what I regard as an evil, and that is having these side lines merged in the main contract. The past practice has been for the company which has the main contract to sublet these lines by yearly contract. Take No. 4 from the 150 mile house to Alexis creek as an example; this line is 172 miles return trip, and it takes the contractor five days to do it. That contract has been sublet for $1,100. The passengers and express matter are so small that they add very little to the contractor's profits, and we think it rather absurd that a man, only equipped with four horses, should be doing 172 miles round trip in a country such as that Cariboo district. It is practically impossible, under the circumstances, for him to give a satisfactory service. It is bad enough in ordinary times, but in bad roads and bad weather it is impossible. The question may be put, why did this man take the contract at so small a sum? The answer he gave to this question was that he had learned his lesson and would never do it again. Next year of course, the company will again let out that contract at as small a figure as they can.

Mr. LEMIEUX. What is the starting point of the main contract?

Mr. BURRELL. From Ashcroft. The letting of these side contracts is on an entirely wrong principle. They should not be sublet by the year. The result of this practice is that a number of people will tender who do not realize that they are tendering at absurdly low figures, and they get stuck and lose money, and at the end of the year they throw up the contract. In the meantime the public is badly served and there is profound dissatisfaction through the country. The proper practice would be that which was always pursued prior to 1896, namely, to let each of the side contracts directly by the department for four years after calling for tenders. The contractor has then time to equip himself in good shape for doing the work and will give better satisfaction. I wish now to say a word about the mail contractors. I am not putting it too strongly when I say there is throughout the whole of that country very strong resentment regarding the methods followed. I am not saying whether this company is getting too much or too little; but I would point out that a large and important company of that kind, with ramifications of one kind or another, can exert a very strong political influence, and very naturally will exert it on behalf of this government which gives it this $24,000 per year contract without any call for tenders. The district of Cariboo is really worse off to-day than in former days because this company while having a monopoly, though not perhaps giving a worse service than the people formerly had, is charging higher fares. Formerly return fares were given at reduced rates but there are none such to-day. If that contract were thrown open to tender, there should be some fixed rate of fares in the public interest because the only possible way the people have of transportation over that 280 miles is by this means. I remember that when this matter was up before, the minister said that the policy of his department was to let all the contracts by tender, but no public tender has ever been invited for this important work since early in 1897. And a peculiar thing is that it is a Toronto firm which has the contract. What would my hon. friends from Ontario think if there was a contract north of Toronto for a 280 mile mail route to be let and if that contract had been let by tender 12 years ago to a British Columbia firm, and instead of new tenders being invited every four years, that contract were renewed from year to year without tenders and without any opportunity being given any Ontario firm to bid for it? I am sure the minister will see that the Toronto people would, under the circumstances, feel that they had a very strong grievance. The contract was renewed early last summer. I do not know whether it is possible to cancel that contract, but at all events I hope that when the time comes to renew it, the minister will see his way clear to deal with it in that spirit in which he promised to deal with all those matters and throw it open to public competition. I am expressing the opinion, not only of my own friends, but of the minister's all through that country, when I say that he would give profound satisfaction to the people of that part of British Columbia,—a part which is not served by railways—if he would throw open that important contract to public tender and also adopt the policy of letting all those side lines directly by four years' contracts in the same manner.

Mr. LEMIEUX. The hon. gentleman has made what I call a very fair criticism of this contract. In 1897 my predecessor, Sir

William Mulock, advertised for tenders and this company, the British Columbia Express Company, which is a Toronto firm, were the lowest tenderers and the department awarded the contract to them. This is a peculiar section of the country and the contractors have to make quite an outlay in order to cover that immense territory. It is a very difficult country to travel over. The contract has been renewed twice since 1897, because this is a four year contract. The last time it was renewed, I think on representations made to the postal authorities at Ottawa—for I do not know enough of the country to decide such a contract myself—that if we advertised for tenders we would receive tenders but not from any one who would be in a position to cover that immense territory as well as the present contractors do it. I must say that we have not received any complaint as to the manner in which the contract is carried out. The government decided to renew the contract with this firm. However the hon. gentleman (Mr. Burrell) comes from that section of the country and the grievance which he ventilates is in reference not to the main contract but to the side lines which are sublet by the British Columbia Express Company. His representations have been noted and I will see that the company carries out the contract, not only according to the letter but in the spirit in which it was given. I think my hon. friend will agree that this company gives a very good service. The proper way, I know, is to call for tenders, the law is clear on that; but the law also says that when a contract has been faithfully carried out the Postmaster General is at liberty to renew it at the same figure. I cannot increase the amount involved in a contrcat, but I can renew a contract at the same figure, provided the public interest is safeguarded. I can give a similar instance in the Yukon. We have two large contracts there, one with the railway company. Of course we have always renewed the contract with the railway company, and we are practically at their mercy. They are equipped with mail cars and are in a position to carry the mails over their railway to the best advantage; but the mail has to be carried part way to Dawson city by the lakes and the river. We have tried to cut the contract in two, calling for tenders for the lake and river section and allowing the railway the usual mileage allowance, but we cannot succeed because the railway company is the only one sufficiently equipped for the carrying out of the balance of the contract; so, although the amount is large, it has to be paid, and we make no profit out of that district. That is to say, the expenditure exceeds the revenue, but, of course, we have to give postal facilities to the Yukon Territory. There is another somewhat similar case in the Yukon. If it is true that the British Columbia Express Company farms out the side service at a much lower rate than the one paid to the company by the department, then undoubtedly there is room for improvement.

Mr. BURRELL. I hope the minister does not think I am impugning his bona fides in the matter?

Mr. LEMIEUX. On the whole the hon gentleman admits the service is good.

Mr. BURRELL. If his line of argument was good in this present case, it was equally good in 1896, when other men had the contract, for not changing then, but the department then took the ground that it would be advisable in the interests of the country to throw this contract open to tender. They then threw down a company with a large equipment.

Mr. LEMIEUX. Was not the route changed and extended?

Mr. BURRELL. The former company had only the main contract, but the department included the branch lines instead of letting them separately. I think there is no doubt there would be bona fide tenders if the minister called for them from men who would be able to carry on that work. It might happen that they would find it necessary to purchase a large portion of the present contractor's outfit, as happened when the contract was changed before; but I am positive it would be in the interests of the country and of the government to pursue the usual method of throwing the whole matter open to tender.

I would call attention to another small contract from Lytton up to Lillooet, a distance of 40 miles, which was also renewed without tender. I knew, of course, that the minister was not familiar with the country. I am familiar with every foot of it and appreciate the sentiment of the people there, and I have no axe to grind, political or otherwise. I simply desire to satisfy the general feeling of that whole country, and I assure the minister that his general policy is just as applicable to that country as to any other part of the Dominion.

Mr. CROTHERS. I may be a little out of order and a little late in the appeal that I desire to make to the Postmaster General, but I was not present when the main estimates were up and possibly I may be allowed to speak now. I desire to make an appeal on behalf of the letter carriers of the city of St. Thomas. I have been observing the Postmaster General for a couple of months, and am inclined to think that he is disposed to be fair, and kind, and even generous. In fact, I had formed that opinion of the Postmaster General before I had the pleasure of seeing him, because he was kind enough to appoint these letter carriers in the city of St. Thomas just two or three

weeks before the elections, and they assisted me materially in distributing campaign literature. They all voted against me, but they are good fellows and they are doing good work and working long hours. I am sincere about this. These men are living in the city of St. Thomas, where the cost of living is about as high as in Ottawa. I do not think there is another place of its size in Ontario where the cost of living is as high as it is in St. Thomas. There are reasons for that which I could mention. These letter carriers are receiving $1.50 per day. Now, does the Postmaster General think that a man with a wife and family can live, and live decently in a city like St. Thomas, on $1.50 a day? I believe that the servants in the Postmaster General's Department, are the only class of public servants of Canada who, as a class, are under paid. The people of this country ought to be ashamed of themselves to take the services of postmasters and letter carriers for the paltry pittances they pay them. I know the case of one man who travels twenty miles a day each way—forty miles a day—carrying the mail, and he gets $230.

Mr. LEMIEUX. By tender?

Mr. CROTHERS. Possibly. I have heard a good deal about tenders since I have had the honour of a seat in this House. In many cases, the answer seems to be regarded as complete when it is to the effect that tenders were advertised for and the lowest tender was accepted. I do not know that that is a conclusive argument in a great many cases. I think the officers of one of these public departments ought to be in a position to instruct the head of the department what is a fair price to pay for the fair services they render, and, if the tender is very much more than a fair price, the department ought to refuse to accept it. On the other hand, in these other matters, I do not believe in the people of this country taking the services of public servants for a great deal less than they are actually worth. If the Postmaster General will excuse me for repeating. I would appeal to him as a man on behalf of these men—not political friends of mine, but decent men, putting in long hours and not adequately paid. Men breaking stone on the street get more than do these people who are working long hours delivering mail matter to the people of St. Thomas.

Mr. LEMIEUX. There is an old English dictum 'Fine words butter no parsnips.' I intend to act, not say much about the letter carriers. I will ask the hon. member to wait until next week, when something will probably be done for the letter carriers.

Mr. MARSHALL. I desire to speak also with reference to the postmasters. I have been looking into the matter, and I find that in East Elgin there are eight post offices, the keepers of which receive eleven cents a day, and no rent allowance. That is too bad. These offices are open from eight to ten hours a day. I am pleased to say that the Postmaster General has changed the mail routes so that people are able to get the daily papers. There are nine places in which the rent allowance is $6 a year. But I draw particular attention to these eight places where the postmasters receive eleven cents a day and no rent allowance. The hon. minister the Postmaster General has a surplus. I know what he will say—that the revenues from these post offices do not warrant raising the salary. But I do not see how they can afford to keep the places open for the length of time they do and give the public good service, unless their salaries are increased. I have no political object in advocating this, these people are not supporters of mine, but they speak to me about this frequently. I have mentioned the matter to the minister privately, but I feel it my duty to take advantage of the discussion on this item to bring the matter before the minister in this way. I do not know whether he will feel like making a promise to raise the salaries, particularly of those who get no rent allowance. I would like to hear from him on the subject.

Mr. LEMIEUX. I could not give an answer at once; I should need to look into each case. If the hon. member will send me the names, I will investigate. Sometimes it happens that, in our 14,000 offices a mistake may be made as regards the rental and fuel allowance. And, as my hon. friend (Mr. Marshall) knows, the salary allowances are based on the revenue of each office. So, it varies. Some years, an office will receive the allowance, but if, next year, it is below a certain figure, it is deprived of the allowance. We must have a rule that applies automatically to every office. But, as I have said, mistakes are sometimes made. If the hon. member will send me the names, I will look into the matter.

Mr. J. D. TAYLOR. I would like to make a similar plea on behalf of the postmasters and mail carriers of New Westminster. I would ask the Minister of Labour (Mr. Lemieux) whether it is not possible for him to use his influence with his colleague the Postmaster General (Mr. Lemieux) to have the fair wage clause, of which we hear a good deal in connection with the Department of Labour, applied to the transactions of the Post Office Department, so that the department might have the experience that private employers all over the country have when they are working on contracts for the government. It is quite proper that private employers should have the experience to which they

are treated by the Minister of Labour. When the government lets a contract to a private employer, it puts him in a situation that the employees shall be paid a fair wage, which is stated so that there may be no mistake. I would suggest that the Minister of Labour have the Postmaster General do something of the same kind, and, that when contracts are awarded, particularly for the carriage of the mails, he should not ask that it be done at the lowest price, but fix the rate, so that the mail carriers may be paid a fair price for their services, which we can well afford to pay for. I am quite aware that the Postmaster General is one of the most progressive of ministers, and that he has made many improvements in his department. I do not want to appear as crowding him too much, but I think it would be a good idea to act on the lines suggested and to increase the pay of this staff.

Mr. LEMIEUX. I will bring the Postmaster General and the Minister of Labour together, and if they do not agree, I will take them before a conciliation board.

Further amount required (including compensation to the following railway mail clerks for medical and other expenses and loss of personal effects: E. A. Hartling, $118.50; C. E. O'Reilly, $468; W. W. Frost, $20; J. H. Kelly, $76, and A. Chabot, $20, $80,000.

Mr. LEMIEUX. This amount is to complete payment for the current year, $1,000; travelling charges and expenses of inspectors and other officials, $39,297; stationery, printing, advertisements, special postage stamps, $10,000; various items of miscellaneous expenditure, such as letter carriers' uniforms, wages of labourers, charwomen, telephone and telegraph messengers, $20,000. The balance is to pay certain of our mail clerks who have been injured during their service on board trains. Mr. Hartling was employed as a railway mail clerk since September, 1895, and in an accident on the Intercolonial in April 1903, and again in 1907, he lost his clothing and other personal effects. Mr. O'Reilly also met with an accident on the Intercolonial on the 26th of February, and he asks for this amount to pay medical and other attendance, lost clothing, and mileage allowance. Mr. Frost was employed as a railway mail clerk, and met with an accident on the Intercolonial, as did also Mr. Kelly and Mr. Chabot. These various items make up the amount of $80,000. The accounts have all been verified by the Auditor General. The committee will notice that some of these accidents took place some years ago, but we did not know whether the amount should be paid by the Post Office Department or by the Railway Department. We had to get the opinion of the Minister of Justice, who decides that they should be paid by the Post Office Department.

Mr. GOODEVE. This item furnishes another argument in favour of increasing the salaries of railway mail clerks. These men are subject to railway accidents more than the ordinary citizen, because they are nearly all the time on railway trains. I have received a circular and letters from mail clerks asking for the consideration of the department. They have to make very long runs, and suffer many hardships, as well as being exposed to danger. I would ask the minister, when he is dealing with other employees in his department, if he will kindly consider the railway mail clerks.

Mr. LEMIEUX. I received a delegation the other day, and I have a memorandum of the Railway Mail Clerks' Association, which is being considered.

Mr. PERLEY. Is the minister able to form any estimate of the profits from the special issue of stamps?

Mr. LEMIEUX. I would not venture to give a figure. If the hon. gentleman will put a question on the Order Paper, I will procure the information.

Mr. PERLEY. Last session when these estimates were up, the Postmaster General said a few words with regard to the possibility of providing a special stamp to be used at Christmas time for the benefit of the movement against tuberculosis. At that time, when I asked him a question, I thought the Postmaster General gave an answer which was fairly favourable, and that he was really thinking of doing something of the kind last Christmas; but as he did not do so, I suppose he must have changed his mind.

Mr. LEMIEUX. I have not changed my mind on the subject. I think I informed my hon. friend privately last year when the question came up, that the reason why I thought it unadvisable to issue a special stamp for the benefit of the tuberculosis hospital, was that we had just issued a series of stamps in connection with the Quebec Tercentenary. Besides, it is not considered advisable for any country to multiply special stamps; in fact, it is considered infra dignitatem by the Postal Union to issue special stamps unless it is for such purposes as that of last summer. But I can assure my hon. friend, and all the friends of the hospital fund, and of the movement against tuberculosis, that it is my desire and my aim to help as much as possible that deserving movement. If it is clearly demonstrated that the issuing of such a special stamp, as is issued in Denmark, and I believe in one or two

other countries in Europe, would yield an amount which will substantially aid that fund, then I am open to conviction. In fact I have been reading many papers on the subject, and I hope that the time may come when I shall be able to realize the hon. gentleman's wishes.

Mr. PERLEY. I would call the attention of the hon. member for South Grey (Mr. Miller) to these remarks of the Postmaster General. I hope he has been listening to them.

Mr. JAMESON. I have received a petition from the railway mail clerks, and while I do not desire to take up the time of the committee at this stage, I find another feature is presented by the correspondence susequently received, and that is in respect to a class of clerks who have not passed the examination and are not on the regular staff, but are nevertheless performing the services of those officials. It appears they are receiving very meagre remuneration, although they are obliged to travel long distances, and are subject to the same chances of accident as the others. They respectfully request that the minister will consider their petition for an increase of salary when he deals with the permanent clerks.

Further amount required for miscellaneous expenditure, 1908-9, Department of Labour, including printing and stationery, allowance to correspondents, travelling expenses, &c., $6,500.

Mr. LEMIEUX. This amount is required to meet the estimated expenditures to the end of the financial year. The expenditure is due to the heavy travelling expenses of the various officers of the department and to the increased charges for printing, &c.

Amount required to provide for the expenses of W. L. Mackenzie King, M.P., as a representative of Canada at the Joint Opium Conference at Shanghai, China, $5,500.

Mr. LEMIEUX. This amount is required to provide for the expenses of Mr. Mackenzie King as the representative of Canada at the joint Opium Conference at Shanghai, China. The committee knows the object of the conference. For some years there has been a desire to suppress the use of opium and morphine in China, and the great powers, especially Great Britain and the United States of America, have decided, with the consent of China, to call a conference in order to study the question as to what are the best means of suppressing that evil. Canada was invited by the foreign office in London to join that conference. Mr. Mackenzie King was especially well equipped to take part in it. He had studied this question of the opium traffic and last year we introduced a Bill into this House to suppress it in Canada. Mr. Mackenzie King is now in China; he has taken part in the conference, as usual, to his credit and to the credit of the country to which he belongs. I have not yet his report, but from what I have seen of the cables that appeared in the London 'Times' Mr. Mackenzie King has been one of the leading men in the conference.

Mr. DANIEL. Who are taking part in the conference?

Mr. LEMIEUX. The conference is between the different nations, Great Britain, the United States, Germany, France, China and Japan, and perhaps others, but I name the large powers which have interests in the far east. The object of the conference is to suppress gradually the use of opium and morphine.

Mr. DANIEL. What is the official language ?

Mr. LEMIEUX. The official language is English.

Mr. BARKER. I suppose we shall have details of this expenditure later on?

Mr. LEMIEUX. Yes; Mr. King is accompanied by a secretary.

Civil governnemt—Governor General's secretary's office—contingencies—further amount required, $6,000.

Hon. W. S. FIELDING (Minister of Finance). This is an additional sum required for the contingencies of the Governor General's office chiefly due to the increase in the cost of telegrams. There has been a very large amount of cable business.

Office of the Auditor General—contingencies —clerical and other assistance—to pay the following extra clerks from the 28th June, 1909, notwithstanding anything in the Civil Service Act:—C. M. Low, M. A. Reid, D. M. Gibson, W. M. Greenshields, E. M. Stitt, E. M. Fraser, Bertha McCuaig, M. Macdonald, Isabella MIntosh, L. Chartrand and H. R. Washington, $500.

Mr. FIELDING. Under the Civil Service Act the Auditor General had employed a number of temporary clerks who could only be employed, according to the strict wording of the Act, for four months. When the four months expired, to comply strictly with the Act, he would be obliged to dismiss these clerks and bring in others. As they were engaged in work that was rather urgent, checking the election officers' accounts, the Auditor General came to me and said that he thought it was undesirable that these officers should go. I agreed with him that he should continue them for a short time, although I pointed out that it would necessitate a special vote as they are not employed in strict accordance with the Civil Service Act.

Mr. BLAIN. This is an item in regard to which my hon. friend from North Toronto (Mr. Foster) wished to make some remarks.

Mr. FIELDING. I would suggest that the item pass and an opportunity will be given to the hon. gentleman to discuss it at a future time. I would like to get this through this evening. It is only $500.

Mr. BLAIN. My hon. friend from North Toronto mentioned this particularly to me and said that if it came up he would like to have it stand over.

Mr. FIELDING. It will delay the Supply Bill. If my hon. friend presses it I cannot insist upon it going through, but I will give my hon. friend the assurance that there will be abundant opportunity for discussing it and I hope he will allow it to pass under these conditions.

Mr. BARKER. Of course we ought to get rid of those words 'notwithstanding anything in the Civil Service Act.' I thought we had got rid of them.

Mr. FIELDING. I think we have got rid of them pretty well.

Mr. BARKER. Is there any need of having them there ?

Mr. FIELDING. It is the old form. If my hon. friend thinks it will help to leave them out I will not object.

Mr. BARKER. Who appointed these clerks ?

Mr. FIELDING. The Auditor General.

Mr. BARKER. Appointed by himself ?

Mr. FIELDING. Yes, I think so. The practice in past years was for the Minister of Finance to appoint them. I was away at the time and I think the Auditor General appointed them himself. I know nothing to the contrary.

Mr. BARKER. There would be every objection, from my point of view, to the government appointing any clerks in the audit office.

Mr. FIELDING. They have always been appointed by the government.

Mr. BARKER. I think that is a mistake. The commission that has been created should appoint the staff in the Auditor General's office.

Mr. FIELDING. The Civil Service Act makes no distinction between the Auditor General's office and any other office.

Mr. R. L. BORDEN. It is not intended that these clerks shall continue to be employed beyond a certain period?

Mr. FIELDING. No, the vote is only $500 for the whole of them.

Mr. FIELDING.

Mr. R. L. BORDEN. I thought that possibly that was for the reason that the fiscal year terminates on the 31st of March and you only require to make provision for five weeks.

Mr. FIELDING. They are only there for a short time and only for the special purpose of dealing with the accounts of the election officers.

Mr. R. L. BORDEN. Assuming that the circumstances are such as the hon. Minister of Finance has disclosed, the case is not as grave as I thought it was. But I think it is extremely desirable that we should not see this memorandum appearing in the estimates. It has been of frequent occurrence in the past although, I am glad to say, it has been of rather infrequent occurrence this session. It seems to me that it should disappear altogether. My attention was directed to this item by my hon. friend from North Toronto who desired to make some inquiries in regard to it.

Mr. FIELDING. I do not see that the words are very important and they can be stricken out. We have to get authority to pay the money.

Department of Finance and Treasury Board—contingencies—further amount required, $2,000.

Mr. FIELDING. The sum required for the year was under-estimated and we need an additional vote.

Marine and Fisheries Department—amount required to pay salary of Mr. Oswald L. McLeod at the rate of $800 per annum, $363.41.

Mr. BRODEUR. Mr. McLeod was appointed on the 18th of October, 1898, and owing to his special qualifications in the hardware trade he was to receive a salary of $800, but only $500, the usual salary of a temporary clerk was allowed, the Department of Justice being of the opinion that he should rank as a temporary officer. Considering the nature of Mr. McLeod's work it was thought he should have a salary of $800 and this vote is to give him that salary. It was impossible for him to present himself for competitive examination because no examination was held, but he will do so at the next examination.

To complete voters' lists for general election, 1908, $22,000.

Mr. BARKER. Is this to pay the King's Printer?

Mr. SPEAKER. Yes.

To provide for promotion of W. A. Lalonde from permanent messengers' staff to third-class clerk at $800, $166.66.

Mr. BARKER. Has this officer a certificate?

Mr. SPEAKER. He was the personal messenger of the late Speaker, and at the

close of last session he was placed in charge of the blue book-room.

Mr. BARKER. Did he require to pass an examination?

Mr. SPEAKER. He was appointed at the end of last session before the Civil Service Act came into force.

To provide increases in the salaries of the following officers and clerks of the House of Commons from April 1, 1908. J. B. R. Laplante, $700, R. R. Tremblay $200, E. Query $200, E. Naubert $100, $1,200.

Mr. BARKER. Are these increases in accordance with the statute?

Mr. SPEAKER. These increases were granted by the Board of Internal Economy before the Civil Service Act came into force.

Debates, $25,000.

Mr. SPEAKER. Last session was the longest session in the history of this parliament and the cost of publishing the debates was greater than usual.

Mr. BARKER. Does this include salaries?

Mr. SPEAKER. Yes.

Additional amount required for steamship subsidies between Canada and Great Britain, $15,000.

Mr. FIELDING. This subsidy is payable in proportion to the number of passengers and according to the class of vessel, so that it is not a fixed sum, and this additional amount is required to close up the accounts for the year. It is the ordinary Allan and Canadian Pacific Railway subsidy.

Further amount required for the construction of an ice-breaking steamer for the Northumberland straits, $215,000.

Mr. BRODEUR. We have passed a contract for the construction of this icebreaker for the sum of $500,000, and this amount of $215,000 is to pay the progress estimate due before March 31.

Mr. GEO. TAYLOR. There is an item in the main estimates?

Mr. BRODEUR. Yes. Next year we will pay the balance of the contract.

Mr. GEO. TAYLOR. We can have any discussion we like on the main estimates?

Mr. BRODEUR. Yes.

Amount required to pay the pension of the pilot, F. X. Lamarre, from October 1, 1908, to March 31, 1909, at the rate of $300 a year, $150.

Mr. BRODEUR. This is a sum which has to be paid this pilot for his superannuation.

Lime Kiln crossing—further amount required to pay the outstanding account in connection with the chartering of tug for Lime Kiln crossing, $2,000.

Mr. BRODEUR. The sum of $10,000 has been put in the estimates to provide for this expenditure. It was expected that the service would expire October 1, but it extended to December 8.

Mr. BARKER. Is that also in the main estimates?

Mr. BRODEUR. Yes.

Further amount required for the care of sick seamen in marine hospitals and the building and repairs to marine hospitals, $5,000.

Mr. BRODEUR. Owing to an epidemic of smallpox and scarlet fever, it has been necessary to have added $5,000 to the vote provided for this year.

Mr. JAMESON. What building is the hon. gentleman doing?

Mr. BRODEUR. We are not doing any building. This is a general vote put yearly in the estimates for the care of sick seamen and the building and repairs to marine hospitals. That is the way it is always worded.

Marine biological stations—to provide for unforeseen expenses in connection with the construction of biological stations at St. Andrews, New Brunswick, and Vancouver island, $5,000.

Mr. BRODEUR. We have built two stations, one at St. Andrews and the other in British Columbia, and this amount is to pay the balance due.

Mr. J. D. TAYLOR. What will be the nature of the work carried on at this station in British Columbia?

Mr. BRODEUR. These stations are for the purpose of studying the habits of the fish. The expenditure is under the control of scientific men, who are good enough to devote a part of their time to those researches. The board is composed of Prof. Prince, chairman, and a number of other university professors.

Mr. J. D. TAYLOR. There is one line in which a station of this kind could do very useful service. The most important of the fishing industries in British Columbia is that of the sockeye salmon. We have been making large expenditures during a number of years in the effort to construct enough hatcheries to increase the supply of the sock eye, but notwithstanding all these efforts, and although proper attention has been paid to preserving the sockeye from depredation by fishermen or otherwise, we find that the supply of the salmon is not increasing, but remains about stationary. The conclusion seems inevitable that there must be some cause for this which has not yet been recognized. There must be some cause, apart from any suggestion of failure of the hatcheries to secure to us an abundant supply of salmon. So far as we can

see, the hatcheries are doing good work, and if there were no cause operating against them, we should have a yearly increasing supply instead of the supply retrograding or remaining stationary. Would it be part of the purpose of a station of this kind to pursue investigations to ascertain whether there are other fish preying on these salmon in their haunts between the time they leave their hatching grounds on the Fraser river and their return four years later? If we could find out what fish prey on the salmon and devise means of dealing with them, and guard against the efforts of the hatcheries being made nugatory, this station would be worth many times the money proposed to be spent on it.

Mr. BRODEUR. I am very glad that my hon. friend has brought this to my attention. I shall take care to communicate his observations to the professor in charge. So far as regards the work done, we have obtained very useful information regarding the life and habits of the fish and no doubt the matter my hon. friend has brought to our attention might be properly investigated by the board. I shall bring it to the attention of Professor Prince and the other members of the Board.

To provide for expenses in connection with the International Fisheries Commission, including an amount equivalent to the difference between $2,800 and $4,000, being an increase to be granted to Prof. E. E. Prince since December 1, 1908, $5,400.

Mr. BRODEUR. This is for the purpose of paying the expenses in connection with the International Fisheries Commission, and also to provide for the salary of Professor Prince. He was formerly paid a salary of $2,800, but in view of the fact that he has been appointed International Commissioner, it was thought advisable to increase his salary to $4,000.

Mr. J. D. TAYLOR. Will the hon. minister state the general scope of this commission?

Mr. BRODEUR. The commission was appointed in virtue of a treaty signed in the spring of 1908. That treaty provided for the appointment of two commissioners, one by the American government and the other by the Canadian, for the purpose of drafting regulations covering what are called the boundary waters, that is to say, the waters which divide Canada from the United States, waters like the southern part of the Strait of Georgia and the Strait of San Juan de Fuca. Then there are the great lakes of Ontario with their connecting rivers and a part of the St. Lawrence which is boundary water. There are also some lakes in the province of Quebec and in the States of Vermont, New Hampshire and Maine, the River St. John, the River St. Croix and Passamaquoddy bay. The two commissioners were formally appointed, Mr. Bastedo on behalf of Canada and Dr. Jordan, of Stanford University, California, on behalf of the American government. Mr. Bastedo later accepted a position in the Department of Trade and Commerce and resigned his position on the International Commission. Professor Prince has been appointed to represent Canada. The two commmissioners have held some meetings and Professor Prince is leaving in a few days for the west to meet Professor Jordan. Professor Prince has been instructed to confer while in the west with the provincial authorities of British Columbia.

Mr. DANIEL. Why is the whole of the St. John river included in that treaty? Only a small portion of the St. John river forms part of the boundary between the two countries and the greater part of it is far away from the boundary. I have never heard any reason why the whole river should be included in the treaty. The minister knows that Grand Falls creates a perfect block to any sea fish going any further up the river and yet the boundary portion of the St. John river is away above Grand Falls.

Mr. BRODEUR. The part of the St. John river which is in the state of Maine is, I understand, of great importance to the fisheries, and at the same time some works are being carried on on that river and its tributaries which were detrimental to the interests of the fisheries. It was considered advisable on that account that we should have an opportunity of seeing that proper regulations were made in that part of the river for the purpose of protecting not only our own fisheries, but also the fisheries in that part of the river which is in the state of Maine. Of course if we were going to make regulations with regard to the part of the river in the state of Maine, it was also advisable that the commission should have the same authority on that part of the river which is in Canada. That was why the St. John river was included and the probability is that it is more in the interests of Canadians than of Americans to have that river placed under the control of the commission's regulations.

Mr. DANIEL. That is merely with regard to the control of lumber mills and sawdust.

Mr. BRODEUR. Sawdust particularly. My hon. friend is aware that the sawdust thrown in that part of the St. John river which is in the United States is detrimental to the fisheries, and of course this would give the commissioners an opportunity to deal with that important question, which affects most seriously the interest of our fishermen.

Mr. CROCKET. Is it a fact that there can be no regulation now with respect to

the fisheries of the St. John river without the consent of the commissioner of the United States government and that that would extend even down to the harbour of St. John?

Mr. BRODEUR. Not necessarily. If the commissioners make no regulations with regard to the part of the river which is in Canada, or make regulations with regard to certain things, such as the size of mesh, it would not prevent our making regulations also with regard to close seasons or otherwise. It will of course give jurisdiction to the two commissioners, if they find it advisable to make regulations.

Mr. CROCKET. As I understand, any regulations promulgated by this International Commission become effective without the consent of this parliament.

Mr. BRODEUR. If I remember rightly the treaty provides that the federal governments of the two countries will have to pass legislation to make the regulations of the commissioners effective. The regulations will have to be submitted to parliament to become effective.

Mr. CROCKET. And have the approval of parliament before becoming effective?

Mr. BRODEUR. I do not know that they would have to receive the approval of parliament. Of course it would come to about the same thing, but I think a clause of the treaty provides that in order to put those regulations in force, parliament will have to enact the necessary laws.

Mr. CROCKET. But we cannot have a regulation without the consent of a citizen of a foreign country. Even the regulations prohibiting and fixing the time for fishing in the St. John river must have the consent of a citizen of a foreign country.

Mr. BRODEUR. Not necessarily, because if the Commissioners do not agree upon the regulations which ought to be put in force, each country will be absolutely free to make the regulations which it considers advisable in the territory which is within its country.

Mr. J. D. TAYLOR. On what points would Professor Prince consult the provincial government of British Columbia?

Mr. BRODEUR. On the general question of fisheries there, on the nature of the regulations which they would consider best designed to protect our fisheries.

Mr. J. D. TAYLOR. Have they authority in the matter of regulations?

Mr. BRODEUR. No. The provincial authorities have nothing to do with the drafting of regulations, but the government thought that it would be advisable to have a conference with the provincial governments before these regulations should be formally drafted. My hon. friend knows that by the British North America Act and by the judgment of the Privy Council of 1898 it was formally decided that the regulation of fisheries was entirely under the control of the federal government; no regulations can be legal except those passed by the federal authorities and as a consequence the provincial authorities have nothing to do with the drafting of regulations. And, as they have some proprietary rights in the fisheries, I thought that, before the regulations were formally adopted, we should have a conference with the provincial authorities. My hon. friend, perhaps, is aware that, some time ago, I had a conference, along with Professor Prince, with the representatives of New Brunswick, Quebec, and Ontario, and discussed the questions which might be raised when these regulations came to be drafted. Our intention was also to call representatives of the British Columbia government, but as British Columbia was far away from the seat of the Dominion government, I thought it would be more advisable that Professor Prince should see the provincial authorities when going to California to meet Professor Jordan to discuss with him the question of regulations. It is simply a matter of courtesy, which, I think, has been appreciated by the provincial governments in having these conferences before framing the regulations.

Mr. J. D. TAYLOR. The reason I asked was because, last summer, there was a very deplorable condition of affairs on the Fraser river. Both the Dominion and provincial governments were attempting to enforce regulations, which regulations were conflicting in their terms, so that the Dominion government inserted in their licenses certain conditions for complying with which the provincial government carried the licenses into court, and vice versa.

Mr. PUGSLEY. And what was the result?

Mr. J. D. TAYLOR. The matter is under appeal, I believe, and is expected to be argued in London in June.

Mr. PUGSLEY. What did the Supreme Court decide?

Mr. J. D. TAYLOR. I am not a lawyer, and it is a very difficult thing for a layman to attempt to give a synopsis of a judicial decision.

Mr. BRODEUR. I may tell the hon. gentleman what was done: We did pass regulations as a result of the British Columbia Commission, which were to be enforced last year. At the same time, I was surprised to hear that the provincial authorities thought

it advisable to issue licenses, to which they attached some regulations. The result was, as my hon. friend has stated, a conflict of jurisdiction which, I believe, must have created a great deal of dissatisfaction. But we were not to blame in that respect, because we acted within our rights and jurisdictions in providing those regulations. The matter was submitted to the courts, first a stipendiary magistrate, who upheld the action of the provincial authorities, and condemned the fishermen under the provincial regulations. This conviction was appealed to the county court which reserved the decision, declaring the regulations ultra vires, and that the licenses themselves, as a consequence, were illegal. An appeal was made by the provincial government to the High Court or Supreme Court of British Columbia, and I was glad to hear that the judgment of the magistrate of the county court was confirmed and the licenses were declared null and void. I am not aware that the case is appealed to the Privy Council. I am not surprised, however, because, when negotiations were entered into with the provincial government authorities and we tried to settle the conflict of jurisdiction, we were told that they intended to bring this question before the highest court in the realm. But I was not aware that the appeal had been made to the Privy Council.

Mr. J. D. TAYLOR. That is my impression. I am speaking from newspaper report, but it has every appearance of correctness. I should have thought that the minister would try to reach a modus vivendi, so that there would not be a continuation of this state of things another year. Has any agreement been reached?

Mr. BRODEUR. Unfortunately, we have not been able to reach such a conclusion. The provincial authorities claim that they have the absolute right to make regulations and issue licenses, and there was some talk that the matter should be submitted to the courts.

Mr. R. L. BORDEN. What is the condition of the law? Have the provincial government the right to issue licenses but not make regulations?

Mr. BRODEUR. Yes.

Mr. R. L. BORDEN. And the Dominion government has power both to issue licenses and make regulations?

Mr. BRODEUR. My reading of the judgment of the Privy Council is that the provincial governments have the right to issue licenses. It was formally enunciated in the judgment that the right to issue licenses existed also with the federal government. At the same time, we maintain that we are the only authority having the power to make regulations, and the judgment rendered by the court in British Columbia confirmed the position that we took on the question.

Mr. R. L. BORDEN. Do both governments have the right to insist on the payment of a fee in connection with the licenses?

Mr. BRODEUR. Yes.

Mr. R. L. BORDEN. Have both governments, or rather both legislatures, the right to impose certain penalties if these licenses are not taken out?

Mr. BRODEUR. Yes.

Mr. R. L. BORDEN. The hon. gentleman will understand that that is a point likely to lead to confusion.

Mr. BRODEUR. Yes.

Mr. R. L. BORDEN. I have heard in this parliament for the last four years, or ever since that decision was rendered, that some other question was to be submitted to the courts in order that the whole subject might be cleared up, and I have understood that negotiations have been going on from time to time to bring that about. But it seems to be very slow of consummation. It seems extremely desirable that so confusing a condition of affairs should be remedied at the earliest possible moment.

Mr. BRODEUR. It is very unfortunate that this conflict of jurisdiction exists with regard to the fisheries, because I am quite ready to believe that it will have a bad effect upon our fisheries that we do not know exactly where we stand. The governments cannot act with the same interest as they would otherwise. Negotiations were held some years ago to submit to the court one of the questions raised, namely, whether the proprietary rights in the fisheries within the three-mile limit should be under the jurisdiction of the federal authority as maintained by this government. The question, however, was never submitted to the court. Another question was raised, also, whether the provincial authorities had the right to make regulations or the right to issue licenses and attach to those licenses conditions. In British Columbia, for example, there were conditions as to the fishing on Sunday. This was one of the questions submitted to the court, and the result was that the regulations made by the provincial authorities as to the fishing on Sunday were held to be illegal. A license should simply issue for the purpose of collecting fees, but it should not undertake in any way to regulate the manner in which the fisheries are carried on.

Mr. R. L. BORDEN. Was the subject taken up at the conference between this government and the provincial government some three years ago?

Mr. BRODEUR. I do not know, I was not there at the time.

Mr. PUGSLEY. I was there, and the reason was this, that all the provinces were not interested in the question. The provinces of Saskatchewan and Alberta were in no way interested, and as the interests of Ontario were different from those of the other provinces, it was thought better that the question should be left over for a further conference between the Dominion government and the provincial governments which were directly interested. I may be allowed further to say that the ground upon which it was held that the provinces could issue licenses was that they had a proprietary interest in the fisheries, and that therefore they had a right to say that no one should take fish except under license from the provincial government. But having a proprietary right was one thing, and the power to make regulations as to the mode and time of fishing was quite another; and the judicial committee held that, as a result, both governments can issue licenses, the provincial authorities simply giving the right to take property which belongs to the province, and the Dominion government having the right to regulate the fisheries under the provisions of the British North America Act, which expressly gives that power to the federal authority.

Mr. R. L. BORDEN. If that is the only result, it must be conceded that the fathers of confederation exercised a remarkable ingenuity in getting the whole subject into an extraordinary muddle.

Mr. J. D. TAYLOR. For the information of the committee I may say that the fishermen did not suffer financial loss last year on account of the double licenses, because it happened that the Dominion fee of $10 prevailing before last year was then reduced to $5, and the provincial fee then first in force, was also $5, so they only paid $10 the same as before. I referred just now to newspaper reports about taking this case to London, and I think the minister will be glad to learn of another newspaper report which is to the effect that for this season the provincial government proposes to accept the Dominion regulations and to issue licenses as a matter of collecting revenue only, and to make the licenses state on their face that they are subject to the Dominion regulations. I would ask the minister whether Professor Prince, when he goes west to meet Professor Starr Jordan at San Francisco, will go with carte blanche to make any arrangements he may think wise, or is he limited by instructions from the government?

Mr. BRODEUR. I do not think it would be advisable to state what Professor Prince's instructions are.

Mr. J. D. TAYLOR. Not the nature of the instructions, but whether there are any limitations.

Mr. BRODEUR. I would not like to make any statement with regard to that. It is a matter of negotiation with the American commissioners, and I hope my hon. friend will not press for an answer.

Mr. LENNOX. I do not think we need to fight shadows. It is right the minister should not divulge what the instructions are, but there can be no harm in the minister telling us whether he has allowed this gentleman to go down there without instructions, or whether he has taken the precaution of giving him instructions; whether he has given him a line of conduct to pursue, or is letting him act of his own will. There is no state secret there. Parliament has a right to know whether the government has taken reasonable precautions that the rights of Canada shall not be sacrificed.

Mr. BRODEUR. I would not like to make any statement with regard to that. Every hon. member who knows Professor Prince must feel confident that he would not sacrifice unduly the interests of Canada. If the government can give him instructions in the matter—because that is a point under the treaty,—I do not know whether it would be advisable for us to give him formal instructions. But I may assure my hon. friend that having due regard to the experience of Professor Prince, of his vast knowledge of the fisheries, and having regard also to his character, he will do nothing which will at all jeopardize the interests of our Canadian fisheries.

Mr. MIDDLEBRO. Could the minister tell us whether it is the federal or state authority that has the right to fix regulations on the inland lakes, as to size of nets, amount of fee, and territory to be covered by the license?

Mr. BRODEUR. We are informed by the American authorities that the regulations with regard to fisheries on the boundary waters which are mentioned in the treaty, fall entirely under the control of the commissioners and of the federal authority. Formerly, all the regulations concerning fisheries were under the control of the state authorities, that was part of their jurisdiction under the constitution. But in virtue of another provision in the constitution, it is stated that the federal authority have the right to make treaties, and when those treaties are ratified by the Senate, they come into force and fall entirely under the control of the federal authority.

Mr. MIDDLEBRO. Could the minister say that by virtue of this treaty the right is taken away from the local authorities?

Mr. BRODEUR. It is a very serious question my hon. friend is putting to me

when he asks me to interpret the constitution of the United States. If he will read the correspondence which is brought down he will find some letters from the Secretary of State for the United States to the effect that the federal authority has full power to regulate the fisheries under the treaty.

Mr. MIDDLEBRO. Is the minister relying entirely on the information given by the Attoney General of the United States; is he acting on the assumption that the local legislatures have no jurisdiction with reference to fixing the amount of the fee, the size of the net, the close season, and all matters pertaining to the fisheries? Is he accepting the opinion of the Attorney General of the United States as absolute with regard to those matters?

Mr. BRODEUR. Well, I suppose we should not accept an opinion given by the Attorney General of the United States, but that we should accept the opinion which would be given here by our Department of Justice. If Mr. Root affirms the American central authorities have power to deal with that question we must assume that he is correct.

Mr. MIDDLEBRO. Has any intimation come from the local legislatures that they have agreed to that view of the law?

Mr. BRODEUR. I do not know exactly what communications have been exchanged between the federal authorities and the state authorities.

Mr. MIDDLEBRO. Does the minister say now that these powers are being exercised by the local legislatures?

Mr. BRODEUR. Formerly.

Mr. MIDDLEBRO. And now?

Mr. BRODEUR. Not now.

Mr. MIDDLEBRO. They will until the regulations come into force?

Mr. BRODEUR. Yes, of course.

Mr. MIDDLEBRO. Does the minister admit that the local legislatures in the Dominion have the power to fix the amount of the fee and require license for fishing?

Mr. BRODEUR. We have always had the power to issue licenses. That power has not been taken from us but the provincial authorities have the same power too. That is the result of the judgment of the Privy Council.

Mr. MIDDLEBRO. Is it a fact that the provincial authorities now do fix the amount of the license fee in the Dominion?

Mr. BRODEUR. No, not in all provinces because there are some provinces where they do not issue licenses. In New Brunswick, Nova Scotia, and Prince Edward Island they do not issue licenses. The licenses are issued there entirely by ourselves. In Ontario and in some parts of Quebec they issue licenses and in some other parts of Quebec we issue them. In Ontario the provincial authorities have taken upon themselves to issue licenses. I am informed also that in some cases they have practically undertaken to regulate the fisheries by inserting conditions in their licenses, but as to that I have no formal information.

Mr. MIDDLEBRO. Has the Dominion government the power to enforce a license and to fix a uniform amount as the license fee throughout the whole of the Dominion, or has each province the exclusive right to fix the amount of the fee?

Mr. BRODEUR. In Ontario the local government issue licenses and fix the fees. While we have not formally exercised that power the federal authorities have the same power to issue licenses and to fix the fee for a license issued by the federal authorities.

Mr. MIDDLEBRO. Will it be possible for each state bordering on the Dominion of Canada to fix the amount of its license and likewise will it be possible for each province in the Dominion to fix the amount of its license?

Mr. BRODEUR. As to the power of the states I am not familiar enough with their laws to say whether they will have a right to levy a fee upon their own fishermen. That is a matter, however, that does not concern us a great deal because each country preserves its absolute right to issue licenses on its own side of the water. If the state legislatures find it advisable to issue licenses and to levy taxes upon their own people that is a matter which does not concern us.

Mr. MIDDLEBRO. Will the minister advise me on this? Supposing that Professor Prince and the American Commissioner, while they are out in British Columbia, decide themselves upon these regulations, would this parliament then have any control over the matter or is the treaty not practically consummated ?

Mr. BRODEUR. The treaty provides for that.

Mr. MIDDLEBRO. The treaty provides that if they come to an agreement this parliament has nothing to do at all with making the regulations ?

Mr. BRODEUR. I am under the impression that there is a clause in the treaty providing that if any regulations are made the congress of the United States and the parliament of Canada will have authority

to take the necessary powers to carry out these regulations.

Mr. MIDDLEBRO. Then the minister can give us the assurance that we will have an opportunity of discussing these regulations later on ?

Mr. BRODEUR. Yes, because they will have to be submitted to parliament to give the government or the commission the executive power which is required.

Mr. LENNOX. I understood the minister sometime ago to say, that, as he understood the treaty, once these representatives came to an agreement there was nothing for the congress of the United States or the Dominion parliament to do but accept the terms they had agreed to. He did not think we had the right to reject or revise it.

Mr. BRODEUR. I suppose that if parliament should refuse to pass the necessary laws to carry out these regulations it would put an end to them ?

Mr. A. K. MACLEAN. I asked my hon. friend the Minister of Marine and Fisheries some time ago if negotiations were on foot with the provincial governments with the view of adopting a modus vivendi respecting this conflict of jurisdiction but I do not think the minister understood my question. I was under the impression that some commission was appointed by the government to carry on negotiations. I would like to know what is being done.

Mr. BRODEUR. We appointed, last year, a commissioner for the purpose of negotiating with the provincial authorities. Mr. Bastedo was the man who was selected for that purpose. The matter which was the most pressing at the time was the situation which arose in British Columbia and Mr. Bastedo communicated with the provincial authorities, made a visit or two and carried on negotiations with them. I must say that these negotiations were almost fruitless because immediately the provincial authorities decided to issue licenses themselves and in issuing their licenses they took it upon themselves to regulate to a certain extent, even to a very large extent, the fisheries. That, of course, made the question of jurisdiction more acute than it had been before. The matter was submitted to the courts and it was decided that the licenses issued under these conditions by the provincial authorities were null and void. I am informed by my hon. friend from New Westminster (Mr. J. D. Taylor) that the question, though decided against the contention of the British Columbia government, is now being submitted to the Privy Council.

Marine and fisheries investigation—further amount required, $40,000.

Mr. BRODEUR. This is to pay the expenses in connection with the investigation of the Marine and Fisheries Department. On the recommendation of Mr. Justice Cassels, $1,000 is to be paid Dr. Morse for his services in connection with the investigation, and upon the recommendation of counsel $300 is to be paid to Mr. H Thomas.

Mr. R. L. BORDEN. What is the total amount?

Mr. BRODEUR. It is estimated at $55,000, but we have not received all the accounts. There was a vote of $15,000 last year.

Mr. LENNOX. Does Dr. Morse only get $1,000?

Mr. BRODEUR. He is an officer of the Exchequer Court and this is additional to his salary?

Mr. CROCKET. Will this vote pay all the expenses?

Mr. BRODEUR. Yes.

Mr. CAMPBELL. I would like to ask the minister if he thinks this investigation was necessary?

Mr. BRODEUR. I have no doubt it was.

Mr. LENNOX. What fees were paid counsel?

Mr. BRODEUR. In a letter dated April 18, 1908, from the Minister of Justice to Mr. Watson, it is stated:—

> With regard to your remuneration upon the inquiry before Mr. Justice Cassels, I have to confirm the understanding arrived at yesterday, that you would receive $100 per day and necessary expenses out of pocket, and in addition at the end of the investigation you would receive some further fee to be agreed upon having in view the responsibility involved in the inquiry and the magnitude it may assume.

Mr. CROCKET. Has that further fee been fixed?

Mr. BRODEUR. The Minister of Justice informs me it has not.

To repay Cushing & Company amount deposited as security in connection with the seizure of the schooner 'Evolution' in the year 1893 for alleged violation of shipping laws in Canada, $800.

Mr. BRODEUR. In 1893 the schooner 'Evolution' was seized for alleged violation of the deck-load law and the owners deposited $800 for her release. In 1896 it was decided by the government to withdraw the case which had been three years in court without prosecution, the department having been advised that there was doubt the suit would succeed. Instructions were given to the collector of customs at St. John to reimburse the $800, but he had

deposited it to the credit of the Receiver General and the matter remained in abeyance. It is only fair that these people should be reimbursed the $800.

Mr. LENNOX. They don't ask any interest?

Mr. PUGSLEY. They do, but they don't get it.

Mr. DANIEL. What was the violation of the shipping law?

Mr. BRODEUR. It was alleged that having taken out a clearance for South America the schooner crossed the Atlantic in violation of the law.

Mr. DANIEL. Not South America, but Vineyard Haven, Massachusetts.

Mr. BRODEUR. The defence was that during the voyage the schooner was forced to the other side of the Atlantic and that at most it was only a technical violation. Some years afterwards this law was repealed and the schooner would then not be liable to a penalty. The case was submitted to Mr. Barker, then agent of the Department of Justice at St. John and now Chief Justice of New Brunswick, and he expressed the opinion that it would be difficult to prove an intentional violation of the Act. Later on it was stated that Sir Charles Hibbert Tupper, then Minister of Marine and Fisheries, was willing to settle the matter and the minister directed the owner should be informed that he merely expressed his willingness to arrange a settlement if the department of Justice so advised. In March, 1896, a return of the money was under consideration but was evidently not approved as a letter was written by Deputy Minister Smith to Mr. Wood, controller of customs, informing him that the matter had been discussed in council and that if he wished to return the $800 the Marine and Fisheries Department would not object. In reply Mr. Wood pointed out that the money had been deposited in January, 1894, to the credit of the Receiver General, and the Department of Customs did not have it to refund. The order in council recommends it therefore as necessary, and a report recommending a refund of the deposit was actually before council when the late government resigned. The report was never approved and the matter has never been settled. At the request of my hon. colleague the Minister of Public Works, I looked through the papers and found that it was simply a matter of justice that this sum should be refunded, and as it was in the hands of the Receiver General in the consolidated fund, a special vote was required.

Mr. DANIEL. When was the minister requested to refund this money?

Mr. BRODEUR. I suppose a month ago.

Mr. PUGSLEY. Some considerable time ago, Mr. Cushing wrote me and saw me about the matter. His information was that some ten or twelve years ago an order had been made by the department for a return of the money, but for some reason or other the money had not been returned. He also said that he had insisted on the case being disposed of in the courts, and that accounted for its dragging along some few years. Afterwards an order was made to refund the money, but it was found that the money had been handed by the collector of customs to the Receiver General. The matter dragged on a number of years and finally was overlooked in the mass of business in which Mr. Cushing is concerned. He wanted the $800 with interest, but my hon. colleague has not been able to see his way clear to recommend a refund of anything more than the actual amount deposited. Whether Mr. Cushing will be after him later for the interest, I do not know.

Mr. DANIEL. When did Mr. Cushing broach the subject with the hon. minister regarding a return of the money?

Mr. PUGSLEY. Some time during the Christmas holidays when I was in St. John.

Mr. DANIEL. He did not make any reference to it before the election?

Mr. PUGSLEY. The elections seem to be the one great event in my hon. friend's mind.

Mr. DANIEL. It appears to me that this Mr. George Cushing was a very strong and active supporter of my hon. friend the Minister of Public Works.

Mr. PUGSLEY. True, a most valuable supporter.

Mr. DANIEL. He worked very hard to get the minister returned. Taking that into consideration, coupled with the fact that this fine, which was imposed in 1893——

Mr. PUGSLEY. It was not a fine but simply a deposit.

Mr. DANIEL. I am quite aware that the hon. minister is extremely particular in the use of the English language at times.

Mr. PUGSLEY. It is well to be so.

Mr. DANIEL. I quite agree that he should be accurate when he has the opportunity. But it looks rather peculiar that this deposit made in 1893 should be only now returned to a gentleman who took such an active part in promoting the election of the hon. minister. Of course it may be a mere coincidence, and the minister rather intimates it is, and I have no objection to Mr. Cushing getting back his money.

Mr. BRODEUR. There can be no doubt about his being entitled to it, so much so that the late government had decided—on

the eve of the elections, it is true—to give him back the money.

Mr. DANIEL. What is astonishing is that when Mr. Cushing was really entitled to this money, he did not try to get it before. Certainly he was very patient for a man to whom the government owes $800. However, I am quite aware that the Minister of Public Works is good hearted, especially towards his friends, and I have great pleasure in assisting him.

Mr. PUGSLEY. It is not a question of good heartedness but of justice. My hon. friend knows that Mr. Cushing is not the man to ask me or anybody else to get him one cent to which he is not entitled. What I wonder at is that this amount was not paid to him before. It seems to me one of the clearest cases.

Mr. DANIEL. It is just an evidence of how slow justice often travels.

Mr. PUGSLEY. It travelled very slowly from 1893 to 1896.

Mr. DANIEL. And from 1896 to 1908.

Mr. CROCKET. Will it cover the full amount of Mr. Cushing's last campaign contributions?

Mr. PUGSLEY. I am not aware that Mr. Cushing made any campaign contributions.

Mr. CROSBY. I did not intend taking any part in this discussion, but when I heard the Minister of Public Works say that this was a mater of justice, and when I heard the Minister of Marine and Fisheries endorse that statement, I want to point out that we have a deck-load law on our statutes for many years. If I understand this transaction, Mr. Cushing's vessel loaded at St. John for Europe, but cleared for a port in the United States in order to avoid the deck-load law. His vessel was seized. The Minister of Public Works said this money deposited was not a fine. But what is a man to do when his ship is seized, but to put up the money to have it released. In order to get his ship released, Mr. Cushing had to deposit $800. Why? Because he had violated the Customs Act by sailing for Europe when he had cleared his ship for an American port. If this committee decides to give that money back we might as well wipe off our statutes that deck-load law, because every ship that desires to evade that law can load and clear for the United States or some South American port, where the deck-load law does not apply, and then sail for Europe. Are you going to attach a vessel which has made false clearance papers and then return the deposit when the demand is made? Is that what you call justice? It is perfectly clear to me that this is a very unfair thing, and that under the law the money should not be returned at all. I do not care whether the man is Cushing or who he is, there could have been no doubt that this ship had loaded for Europe and then had cleared for the United States, thereby committing a breach of the law, that she was seized and had to put up this money in order to be released. Mr. Cushing has been in shipping all his life, and like every man in St. John. he knew the law; yet we are told to-night that as a matter of justice we must hand the money back. There is no justice about it and in handing back his money you break your own law. I do not understand gentlemen saying it is justice, it is an injustice and a serious breach of the law.

Mr. BRODEUR. Who committed the injustice?

Mr. CROSBY. The man who loaded his ship for Europe and cleared for the United States.

Mr. PUGSLEY. He did not happen to do that.

Mr. CROSBY. Then what did he do?

Mr. PUGSLEY. He did not load for Europe at all; he cleared for a certain port in the United States and then by reason of some unforeseen circumstances, perhaps from being carried out of his course in a storm, he was carried towards the old country and went there. At all events, without going into the facts of the case of which I am not fully aware, Mr. Cushing contended that there was no violation of the law and did what every British subject has a right to do, put in his defence and demanded trial. Neither the Minister of Marine nor the Minister of Customs, nor any one else, can take a man's property without giving him an opportunity to state his case. Mr. Cushing did that and demanded trial. It was then that the Marine Department referred the matter to the agent of the Department of Justice at St. John for an opinion and Mr. Barker, now Chief Justice of New Brunswick, than whom there is no more able lawyer in Canada, advised that in his opinion it was not a violation of the law and that the Crown would fail in securing a conviction against Cushing. The department acted upon that advice and abandoned the suit. Surely Cushing was entitled to the return of his deposit if the Crown did not wish to proceed with the suit against him. Therefore I say it was a matter of justice to return the money to Cushing. If the Crown did not intend to return it, they should have gone on with the suit, given him an opportunity to try his case in a court of law, and see what a jury would give him. But as, under the advice of the legal representative of the Department of Justice, the Crown had no case and abandoned the suit, was any other course open than to return to Cushing the money he had deposited as

security that he would make good whatever penalty the Crown might get against him?

Mr. R. L. BORDEN. How did the Crown abandon the suit?

Mr. PUGSLEY. By not proceeding.

Mr. R. L. BORDEN. The suit must come to some formal termination in the court.

Mr. PUGSLEY. It just remained in that way.

Mr. R. L. BORDEN. It stands in the court yet, nothing has been done about it? It seems clear that the papers should be brought down. I hope the minister will bring them down and that the Minister of Public Works will place upon the table of the House the application which has been made to him.

I was surprised, after he had stated so strongly the justice of Mr. Cushing's claim that he should have said he did not know much about the facts, because the justice or injustice of the claim seems to depend altogether on the facts. It seems to me to be largely a question of the facts of the case and if we do not know the facts we cannot say whether the claim is just or unjust.

Mr. PUGSLEY. What I meant was that all the facts which were material were these: Cushing's vessel was seized. Cushing claimed the seizure was wrong and that he should be allowed to put in his defence pleading a wrongful seizure. The Crown allowed the matter to drag on until 1894 or 1895 and then referred it to its legal representative at St. John for an opinion as to whether the Crown could recover. Mr. Barker advised against proceeding and Cushing was communicated with, was informed of the decision of the department and was advised that the Collector of Customs had been instructed in writing to return him the money. I cannot imagine any clearer abandonment of the suit than that because the defendant was advised that the Crown had decided not to go on with the suit and to return the money. For all these years the matter was not proceeded with, and I say now it is clearly a case of justice to return the money to him.

Mr. R. L. BORDEN. If the case is so clear it is peculiar that the money was not returned long ago. If the Crown did not choose to proceed with the case, Mr. Cushing could have brought the case to trial or had it dismissed, one or the other. It does not appear to me that Mr. Cushing availed himself of his privilege in this respect.

Mr. PUGSLEY. Because he was informed by the Crown that they had decided to abandon the suit and give him the money.

Mr. R. L. BORDEN. I do not propose to argue on facts with which I am not acquainted, but I propose to argue that the papers should be brought down, including those alluded to by the Minister of Marine and Fisheries (Mr. Brodeur), and the application referred to by the Minister of Public Works. It is an application respecting a public matter which I think should be brought down.

Mr. BRODEUR. I will be glad to bring down the papers in my department referring to this case. I may explain from the memorandum placed in my hand the facts of this case. In 1893 an action was taken against Mr. Cushing. The action dragged for three years, and on the 21st of March, 1896, Mr. Smith, who was then deputy Minister of Marine wrote to Mr. Wood, then Controller of Customs, as follows:

I am to inform you that this matter has been informally discussed in council, and to state that you are at liberty to return the amount referred to to the parties who deposited it, namely $800, and so far as this department is concerned, it will make no objection to your doing so.

This letter was initialed by the then Minister of Marine, Hon. Mr. Costigan, and Mr. Wood replied under date 27th March, 1896:

On inquiry I am advised that this sum of money was not received or dealt with by the customs, and the Department of Customs has no control over the amount in question. The collector at St. John, I find, as in duty bound under the circumstances, acted entirely on instructions from your department. The Department of Customs, therefore, has no interest in the matter nor jurisdiction.

Then a recommendation to council was prepared by the then minister to refund the money and the order in council based on this was one of those numerous orders in council which were not approved by the Governor when the old government ceased to be in power. If the government take the responsibility of asking an appropriation to refund, they can do so. The only thing I ask is that the papers, including the application for the refund, be brought down so that we can discuss it if we think discussion advisable or necessary.

Mr. CROSBY. I am not satisfied with this matter. While I have listened to the very plausible manner in which the Minister of Public Works (Mr. Pugsley) has dealt with this case—as he always can do when he wants things put through this committee—I am more convinced than ever that the money should not be voted at this time. I am not a lawyer or a sailor. The Minister of Public Works pretends to be both. But I want to say that if this ship cleared from St. John for the United States and found herself in Europe, how did she

get there if there was not somebody who had an intention of going there? It would be a difficult thing to do.

Mr. PUGSLEY. She was driven by stress of weather. She did not go to Europe, but to Santa Cruz in the Canary islands.

Mr. CROSBY. Where are they ?

Mr. PUGSLEY. In one of the oceans.

Mr. CROSBY. How far was she away from Europe when she was in the Canary islands ? The hon. minister has begun to show how much he knows about law and sailorizing. If she went to Santa Cruz, she was governed by the deck-load law. The hon. minister would not know that, would he ? If the Minister of Customs were here, or if anybody were here who knew about customs, he would know that, going to Santa Cruz, she would deposit $400 or $800, as the case may be, and that money would go into the customs and be handed over to the Receiver General. The government would not worry them about it, because the government would have the money, and if the owner wanted it back, he could make a demand for it.

Mr. PUGSLEY. He did make his demand; he made it fifteen years ago, and the matter was taken into the court.

Mr. CROSBY. If the hon. minister will wait until I get through, he will understand better——

Mr. PUGSLEY. It will take some time.

Mr. CROSBY. It may take the minister some time, but it will not take other people so long. And perhaps a few people in the country will understand. Any one who knows anything about the customs law knows that there are dozens of cases every year of ships being seized for infractions of the customs law and depositing $400 or $800 as the case may be, which money goes to the Receiver General, and even if they are guilty, the government does not worry themselves, because they have got the money, and, so far as the government is concerned, the question is settled. If the Minister of Customs were here, he could tell the Minister of Public Works that that takes place every month in the year.

Mr. BRODEUR. But the old government decided to give back the money.

Mr. CROSBY. The old government did many things that hon. gentlemen opposite said were wrong. Now, we want this government to do right. I have not had the honour of being here before, but now that I am here I want things to go right. I do not want to go back too far. But the papers in this case have been asked for by the leader of the opposition (Mr. R. L. Borden). I ask that the log book also shall be brought down which will show what took place every day from the time the ship cleared from St. John until she arrived in Europe. After she arrived in Europe, if she was there as a result of stress of weather, she would have to protest there and show the cause. When Mr. Cushing, or the owners of this vessel, can bring before parliament these papers and show that an injustice was done then, I shall be prepared to vote for this item but not before. I have heard enough to convince me that it is not fair to grant this money. Besides, in voting it, we should establish a precedent for every man who wanted to evade the customs law to clear his ship for a port where the law did not apply and to sail where he pleased. It will be unfair to the House and the country to pass this vote for various reasons which I do not wish to discuss at length. But I ask that the item shall be allowed to stand until we can get the papers before us to convince us that the circumstances were as these parties contend. If that is made clear, there will be nobody more ready than I to give Mr. Cushing all that is due him.

Mr. BRODEUR. The hon. gentleman (Mr. Crosby) is asking something that I cannot supply when he asks for the log-book.

Mr. CROSBY. I will put the hon minister in the way of getting that—if he does not know how, I can tell him.

Mr. BRODEUR. These things happened fifteen years ago.

Mr. CROSBY. That does not matter.

Mr. BRODEUR. For my part, I would be willing to receive the opinion of Mr. Justice Parker.

Mr. CROSBY. I do not know Mr. Justice Parker.

Mr. BRODEUR. He was in charge of the case. He had to investigate the facts, and he reported that he was not able to reach a conclusion against the owners of the vessel. And, on the advice of the Department of Justice, and Mr. Justice Parker— Mr. Parker then, a lawyer—it was decided by the old government in 1896 to refund the money.

Mr. CROSBY. We have heard all that.

Mr. BRODEUR. But my hon. friend (Mr. Crosby) is charging me with trying to do something which is unfair, so I desire to state the facts that have come to my knowledge. It was decided by the old government to reimburse these parties. Formal instructions were given by the Department of Marine to the Department of Customs to give back the money. The Department of Customs said that the money was not in their hands, and so it was found that an order in council was required. A recommendation to council, was prepared, but the elections came on and the orders in council were not

passed. After the case had been withdrawn, and after the formal undertaking of the government of Canada, I think we are bound to carry out the obligations of the former government, whether we disagree with them or not. I have been through these papers, and I shall be glad to bring them down, and the hon. member can satisfy himself that the case that was proceeded with for three years by the former government, when they decided to repay the money, was gone on with in good faith, except that the formalities were not completed. It seems to me that it is only rendering justice to pay the claim under the circumstances. Whether the old government was right or wrong in prosecuting or not prosecuting that case is not the question. They decided not to prosecute but to abandon the case and pay the money. But the money was not paid, for the reasons I have given. To pay it under the circumstances would only be in accordance with justice.

Mr. CROSBY. The only argument the Minister of Marine and Fisheries puts up is that the old government recommended a lot of appointments when they went out of power. If he was going to do all that the old government did when they went out of power, I could understand his argument. But I say that the log-book is available in every British ship, it is returned to the Trade Association in Great Britain, and the minister, or his department, is the collecting agency in Canada for that association. He can see the log-book or can if he wants to. He acts as the collection agency for the Board of Trade in London, and he can write and get that log-book any time he wants to. When he brings these papers here and shows what the Minister of Public Works indicates, then I will be satisfied. But we have no proof. It is no use for the Minister of Public Works to tell me that because this deposit was made, and because the government did not bring an action, this man had a right to go and ask for his deposit. There never was a case of that kind.

Mr. PUGSLEY. There is a regular proceeding for bringing the matter to court, and that was done in this case.

Mr. CROSBY. I beg the minister's pardon. I venture the assertion that when the Minister of Customs is here I will prove by him that that is not the case.

Mr. PUGSLEY. I have had dozens of cases in that way.

Mr. CROSBY. You may have had dozens of cases trying to get the money back for the man who put it in; but there has never been any case where the customs brought suit against a man after he had deposited his money; there was never a case where, after the money was deposited, the Minister of Customs or his officers brought suit against the man.

Mr. BRODEUR.

Mr. PUGSLEY. The proceeding is this: The notice is given by the Minister of Customs before the seizure. The owner is notified within so many days to put in a claim. He puts in a claim, and then the matter goes regularly to the Exchequer Court. The Crown is the plaintiff and the claimant is the defendant.

Mr. CROSBY. When the ship is seized and the sum is stated, it cannot be less than $400, the owner of the ship deposits his money. But there is no case on record, where after the money was deposited, the customs brought action against the man who deposited the money.

Mr. BRODEUR. In this case, action had been taken by the government because it was for the payment of the penalty under the deck-load law.

Mr. CROSBY. What action did the government take?

Mr. BRODEUR. An action for the penalty.

Mr. CROSBY. Did they take any action after they got the $800?

Mr. BRODEUR. Yes, they took action for the recovery of the penalty provided under the deck-load law.

Mr. CROSBY. Didn't they have the penalty already?

Mr. BRODEUR. No.

Mr. CROSBY. Then what are you going to get back if you have not got the penalty?

Mr. BRODEUR. When there is a violation of a provision of the Shipping Act, and action has to be taken for the penalty provided by law, they immediately seize the vessel. Of course the vessel can be released, and it is done very often, on the deposit of a certain amount of money. That was done in this case, and then the action instituted by the Crown goes on, and has to be adjudicated. We often take action in my department against infractions of some of the provisions of the Shipping Act. In this case the government, after the case had been standing on the docket for three years, decided to withdraw the case and refund the money.

Mr. CROSBY. The minister says that he brought a case. Of course he did, he seized the ship. His case was good and he got the money. Now what more do you want? The other poor fellow is the one who has got a case. He had a hard case, and he couldn't get his money back for twelve years, and no wonder he is willing to get it back without interest.

Mr. A. K. MACLEAN. I am acquainted with several cases of infractions of the customs law where a ship is seized; the own-

ers want to obtain a release and put up a bond or a sum of money in order to obtain the release of the ship. Subsequently an action is taken, probably in the magistrate's court, to fix the penalty.

Mr. CROSBY. I would ask any man in this parliament if he ever knew a case in connection with the customs where an amount of money was deposited and action was brought, and the customs have got more than was deposited.

Mr. BRODEUR. It is not a question of the violation of the customs laws, it is a question of the violation of the Shipping Act. The boat is seized, an action is taken by the Crown for the recovery of the penalty provided by the law, then the action goes on. In this case the action was withdrawn.

Mr. CROSBY. Who withdrew the action?

Mr. BRODEUR. The government decided not to proceed with this case, and the Department of Marine and Fisheries gave instructions to the collector of customs to reimburse the money.

Mr. CROSBY. Bring these papers down and if they prove that the case is as the hon. minister has described it we will give the money, but until then I will vote against it.

The CHAIRMAN (Mr. Sinclair). Carried.

Mr. CROSBY. The item is not carried. You cannot carry an item without taking a vote.

The CHAIRMAN (Mr. Sinclair). The hon. gentleman must have heard me declare the item carried.

Mr. CROSBY. You cannot carry it without taking a vote. I demand that you take a vote.

Indians — Quebec — to provide a further amount for relief, medical attendance and medicines, $6,000.

Mr. R. L. BORDEN. Why is that necessary?

Mr. OLIVER. A very large and unexpected expenditure has been necessary in connection with epidemics of typhoid fever at Oka and Escoumaine, and scarlet fever and measles at Caughnawaga and at the present time some twenty-five cases of small-pox amongst the Indians of Restigouche. In order to stamp out the epidemics at Oka and Caughnawaga it became necessary to establish tent hospitals and to place doctors in charge. Dr. Ouimet at Oka and Dr. Patton at Caughnawaga. The unavoidable expenditure in connection with the epidemics at Oka and Caughnawaga amounted to $2,874.58. At Restigouche there is a quarantine of 25 patients ill with small-pox, who have to be fed and in every way supplied with the necessaries of life, and reclothed after the epidemic has ceased. No accounts have yet come forward from this locality. The expense of the typhoid fever outbreak at Escoumaine is as yet unknown, but it will amount to a considerable sum. In addition to these causes for the usual estimate for this service being insufficient there remains the fact that unusual applications for relief have been received during the present winter, and there yet remains to be paid accounts for the three most severe months, January, February, and March.

Indians—Nova Scotia—to provide a further amount for relief, medical attendance and medicines, $6,000.

Mr. R. L. BORDEN. Is that for any special reason?

Mr. OLIVER. The appropriations for medical attendance and relief have been altogether inadequate, chiefly due to the outbreaks of small-pox at Bedford, Halifax county, at Indian Book Reserve, Hants county, and at Pictou Landing, Pictou county. At the latter place some thirty Indians are reported as having the disease. In Hants county five families are affected. In all cases provisions have not only to be supplied to the sick but to all the other Indians in quarantine. The necessary expenditure to combat these epidemics will be between $4,000 and $5,000. Unusual applications for relief of distress have also been received during the present winter, and there yet remains to be paid accounts for the three most severe months, January, February and March. The accounts received and unpaid amount to about $3,500. The probable expenditure for the last three months, including medical attendance and provisions for Indians for small-pox, and in quarantine in Hants and Pictou counties will be $2,500.

Indians—New Brunswick—to provide a further amount for relief, medical attendance and medicines, $1,200.

Mr. CROCKET. Was there a superintendent of schools appointed for the Indians of New Brunswick as proposed last session?

Mr. OLIVER. There was a superintendent of schools appointed—Rev. Father Ryan.

Indians—Manitoba, Saskatchewan, Alberta and the Northwest Territories—to provide for removal of St. Peter's Indians to Fisher river, $8,975.

Mr. LENNOX. How many Indians were removed?

Mr. OLIVER. The total number of Indians on the reserve is about 1,100, and it is expected that all or almost all will remove

to Fisher river. The work has been going on during the past summer, but the accounts are not in and we cannot say how many have actually gone. Thirty houses have been erected and there has been a great deal of material freighted over and preparation made for the accommodation of the Indians.

Mr. PERLEY. Why were these Indians removed?

Mr. OLIVER. It was part of the agreement necessary to secure the surrender of St. Peter's Reserve, a large reserve on the Red river quite close to the town of Selkirk, and in such a position as to be a considerable detriment to that part of the country. Under the arrangement it was necessary to get another reserve and make provision for removing the Indians to it.

Mr. LENNOX. I see that the next item is:

To provide further amount for surveys, $6,561.

Is that in connection with the same matter?

Mr. OLIVER. It was in connection with the adjustment of the right to the land in the reserve. In the reserve there were claims held by others than Indians, and it was necessary to have a survey to decide these claims, and also to dispose of the Indian lands. The Indian lands were to be sold when the surrender was secured.

Dominion lands—chargeable to capital—further amount required for surveys, examination of survey returns, printing of plans, &c., $93,256.06.

Mr. MIDDLEBRO. I would like to ask the minister is the expense of surveying these lands paid out of the proceeds of their sale? Do you charge the account for surveying the land to capital account and use the proceeds of the sale for current expenditure?

Mr. OLIVER. The cost of surveying Dominion lands is charged to capital account and the revenue from the lands is credited to current revenue.

Mr. MIDDLEBRO. I would like to know upon what principle the minister considers the survey of land which is sold as a capital charge against the country and when the land has been disposed of why it should be considered as an asset of the country.

Mr. OLIVER. The land is given away. It is not treated as a source of revenue.

Mr. MIDDLEBRO. We have received some $18,000,000 from Dominion lands and the surveys have been charged to capital. Would it not be better to charge to the proceeds of the land the cost of surveying?

Mr. OLIVER.

Mr. FIELDING. There is something in that criticism, but the practice was established years ago, and it is convenient to follow it for the purpose of comparison.

Mr. MIDDLEBRO. Are these abuses to continue for ever?

Mr. FIELDING. It does not hurt any one.

Mr. MIDDLEBRO. It gives a wrong impression as to our assets.

Mr. FIELDING. The cost of surveying is not treated as an asset.

Mr. MIDDLEBRO. It gives an erroneous impression as showing a surplus which the country has not got.

Mr. FIELDING. I don't think it conveys any erroneous impression.

Mr. OLIVER. For instance, it would not be fair to charge the surveys of lands given to railways, and free homesteads, to the revenue from lands.

Mr. MIDDLEBRO. Every time you charge to capital account the country is supposed to have a corresponding asset.

Mr. FIELDING. Oh, no. A railway subsidy is charged to capital, but there is no asset to represent it. If we were starting out afresh it might be well to charge the surveys to the revenue account, but there is convenience in following established methods.

Mr. MIDDLEBRO. If the expenses were paid out of current expenditure, would not your alleged surplus be so much less?

Mr. FIELDING. No, because the surplus is not established by reference to assets. We have lots of valuable property in Canada which we do not set down in our assets.

Mr. R. L. BORDEN. The minister is correct in what he says about assets, but my hon. friend (Mr. Middlebro) is perfectly right in his contention that if you charge this to capital account, which does not enter into your consideration of your surplus under your present method of bookkeeping it is obvious it would increase your surplus by that amount.

Mr. FIELDING. I admit that.

Seed grain, $40,000.

Mr. OLIVER. While the crop generally speaking was a very good one last year, the House will be sorry to hear that in the prairie area westward from Moosejaw and running along the main line of the Canadian Pacific Railway to west of Medicine Hat, there was a dry season and the crops were very light. In other localities there was a loss of crop by frost and it is desirable that the homesteaders should not be short of seed this year. The cases in which there was a light crop last year were not

the cases of individual settlers, but applied to a section of country.

Mr. ROCHE. How will this be distributed?

Mr. OLIVER. By the immigration branch.

Mr. ROCHE. Not through the provincial governments?

Mr. OLIVER. No, this deals with homesteaders, and last year it included those who held patents. These the provincial governments are looking after this year.

Mr. ROCHE. What is the security ?

Mr. OLIVER. We take liens on their homesteads, being the only people who can take liens on their lands. The money is being expended now and it is particularly necessary to get the grain out in time.

Mr. MIDDLEBRO. Is the grain for use this year ?

Mr. OLIVER. It is being distributed now.

Mr. ROCHE. Has the government any of last year's grain on hand ?

Mr. OLIVER. No. It was all disposed of last year.

Mr. MIDDLEBRO. When did the government decide on this extra appropriation ?

Mr. OLIVER. About three weeks ago I received word from our immigration commissioner at Winnipeg that this amount would be required.

Mr. GLEN CAMPBELL. How much of this will be spent on salaries and how much on grain ?

Mr. OLIVER. None will be spent on salaries, as this work will be handled by the immigration staff. Last year the work was so very extensive, we had to employ additional assistance, but that is not the case this year.

Mr. ROCHE. How did the government decide what parties should receive this ?

Mr. OLIVER. When we have information as to the requirements in any particular locality, an officer of the Immigration Department is sent there to investigate, and we act on his report.

Mr. MIDDLEBRO. Did the suggestion originate with the commissioner ?

Mr. OLIVER. No, during the latter part of the winter we were receiving communications at the head office here from different parts of the west, stating there was need for some assistance, and at the same time the commissioner was receiving applications in Winnipeg.

Mr. R. L. BORDEN. Does the district extend to both provinces ?

Mr. OLIVER. Yes, but more largely in Saskatchewan than in Alberta.

Further amount required for engraving, lithographing and printing maps of the Dominion and Northwest Territories, $9,600.

Mr. BLAIN. Are those maps still purchased in the United States ?

Mr. OLIVER. No, they are the homestead maps which are drafted in the offices here and printed in Toronto.

Legal and other expenses incurred in connection with the arrest of certain Chinese in Sydney, Nova Scotia, $880.62.

Mr. FIELDING. This is for the payment of legal and other expenses connected with the arrest of 17 Chinamen alleged to have been smuggled into Canada from Newfoundland. They were fined $100 each, but through a flaw in the Act which has since been corrected, they could not be deported.

To cover unprovided items, 1907-8, as per Auditor General's Report, page C—4, $238,876.

Mr. PERLEY. I want to protest against an item of this kind. It is very strange that we should have an item now with regard to the year ending March 31, 1908. The government brings down its estimates and then its supplementaries for the same year before the session is closed, and then further supplementary estimates in the the following session at the end of the year. The supplementary estimates to March 31, 1908, were not passed until long after that date, because business did not proceed with as much expedition then as this year. It is very extraordinary that the government should expend over $300,000 for the year ending March 31, 1908, in certain items in excess of the amount provided for in the previous estimates they brought down. The various departments ought to be able to get more closely to what they require.

Mr. FIELDING. For very many years an item of this character has been brought forward. It is a bookkeeping entry which the Auditor General desires for the closing up of his accounts. In some branches of the departments, it will be found that the grants have been greater than the expenditure, but in some other branches the expenditure is somewhat greater than the grant. In most instances the items are quite small, but occasionally they are quite considerable. The Auditor General desires to have this as bookkeeping entry. When we consider the vast current expenditure of the Dominion, this over expenditure of $200,000 or $300,000, scattered over all the departments, cannot be considered very large. With the best we can do, there will be occasionally some over expenditure.

When an expenditure is current, you cannot always tell what it will amount to. If the excess is large, the Auditor General will refuse to pass it, but if small he lets it pass and asks that an indemnity be given in this way. $300,000 may seem very large, but distributed over the total business of Canada in a year, it is not excessive.

Mr. PERLEY. I understand very well that it is impossible for the government to get the amounts exactly right at first. As I remember, the supplementary estimates for the year ending March 31, 1908, were not passed until last May or June. How can there be any possible reason why these items, at least for last year, should not have been passed in the supplementaries for last year?

Mr. FIELDING. Of course the government are responsible for everything, but as a matter of fact this is a book-keeping matter which the Auditor General sends in. The Auditor General asks for this whenever his accounts are finally adjusted. The current year is practically at an end and yet you cannot adjust these accounts for some weeks. Before they are adjusted it will be discovered that here and there are some large over-expenditures, but the amount in this case is not unusually large.

Mr. R. L. BORDEN. I see $162,000 in one department.

Mr. FIELDING. There is difficulty there; in the working of the Intercolonial Railway there may be quite large over-expenditures, but when you take a large service like the Intercolonial Railway the amount is not excessive.

Mr. R. L. BORDEN. This must have been known last year.

Mr. FIELDING. It is the Auditor General who makes it known when he balances his accounts. It is his item particularly.

Mr. PERLEY. The first item is $29,000 for charges of management.

Mr. FIELDING. That is a large item, I have not the details here. My officials are not present.

Mr. PERLEY. That item was brought to the attention of the Auditor General later on when the accounts were being closed, but when the supplementaries were up the officers of the department must have known that this amount was going to be required to pay the Civil Service up to the 31st of March, last; but the estimates were not passed until May or June. Does the minister not think they should have had this in the supplementaries for last year?

Mr. FIELDING. That is that the departmental estimates should have been made more closely ?

Mr. FIELDING.

Mr. PERLEY. Yes.

Mr. FIELDING. In the Finance Department this is not an over-expenditure, the law has provided for it by a permanent statute.

Mr. R. L. BORDEN. It seems to me the whole proceeding is illegal.

Mr. FIELDING. Yes, I suppose so.

Some resolutions reported.

On motion of Mr. Fielding House adjourned at 1 o'clock a.m. Saturday.

HOUSE OF COMMONS.

MONDAY, March 29, 1909.

The SPEAKER took the Chair at Three o'clock.

DAYLIGHT SAVING BILL.

Mr. LEWIS. With the permission of the House and the consent of the government I move that Bill (No. 108) of the Public Bills and Orders be now called.

Motion agreed to.

Mr. LEWIS moved the second reading of Bill (No. 108) respecting the Saving of Daylight.

Motion agreed to.

Mr. LEWIS moved that Bill (No. 108) be referred to a select committee of three members to consider and report upon the same, the said committee to consist of Mr. McLean (Sunbury and Queens), Mr. Monk (Jacques Cartier), and Mr. McLean (South Huron), with power to send for persons, papers and records, and report from time to time.

Sir WILFRID LAURIER. I am happy to agree with the motion, but I would amend it by adding the names of Mr. Lewis and Mr. Talbot to the committee.

Motion as amended agreed to.

ELECTION ACT AMENDMENT—RAILWAY EMPLOYEES.

Mr. J. CONMEE (Thunder Bay) moved for leave to introduce Bill (No. 112) to amend the Election Act. He said: I may say in respect to this Bill that it is not my intention to press it with a view of its becoming law during the present session. The object of the Bill is to afford an opportunity to a class of citizens to exercise their franchise who could not otherwise exercise it because of the nature of their employment; I refer to railway employees. I am told that there are about 15,000 disfranchised because the duties of their service require them to be absent from the riding in which they reside, and in which they are on the list and entitled to vote;

the object of the Bill is to provide machinery by which this class of men can poll their votes. I am aware that it may be said this opens a wide door, that if this privilege be extended to this particular class of citizens it should be extended to others. I do not hold that view; I do not know of any other class of citizens in a similar position, at least if there are any their number is very small. These gentlemen are fulfilling what is really a public service. The mails must be carried, passenger traffic must be conducted, the train service on the great railways must go on, notwithstanding that it is election day, and these gentlemen are called upon in the performance of their duties to be absent from the riding in which they are entitled to vote, and in which they are on the list. The object of the Bill therefore is to provide machinery to give them the right to vote wherever they may be on election day. These gentlemen are entitled to vote, they have all the qualifications of voters, they are residents of the country, they have homes and interests in this country as well as any other class of citizens, and I think that parliament should provide the machinery by which they may cast their vote, notwithstanding that their calling requires them to be absent from the riding in which they could cast their votes under the Election Act as it stands.

The Bill provides that, at the request of any candidate, elector or electors, the returning officer shall provide such number of polls as are necessary to poll the vote of that class of electors in any riding in which they may be during election day, either in the province in which they are resident or in an adjoining province. It provides that such deputy returning officers shall be appointed by the Clerk of the Crown in Chancery, as may be necessary, and as polls will be held throughout the country on that day. There will be in the majority of cases polls held in sufficient proximity to railway points to enable the train service men to cast their vote in the ordinary polling booths which the Clerk of the Crown in Chancery may select for that particular day, but the deputy returning officer would require additional authority to that which he now possesses, namely, the authority to receive the votes of this class of electors and deposit them in a separate ballot box. It will be an easy matter for the Clerk of the Crown in Chancery to keep in touch with the election in such a way as to be able to nominate a very large number of deputy returning officers without incurring any additional cost, or at all events, very trifling additional cost. It may be that at some divisional points in some of the ridings a special officer would have to be appointed, but even so, the expense would not be very great. The Bill provides that the Governor in Council shall fix the polling places at divisional or other suitable points along the line of any railway; it provides that the Clerk of the Crown in Chancery shall instruct the returning officer for the particular riding in respect of which a request is made for the holding of such poll, to forward to the deputy returning officers appointed for the purpose, all the necessary ballots, papers, stamps and forms to enable him to hold the poll, and to forward to him a ballot box which shall be labelled in these words: 'Ballot box in which the ballots of voters being railway employees for the riding of shall be deposited.' Provision is also made as to the procedure under which the elector is to be entitled to vote. He may obtain a certificate from the returning officer which will entitle him to vote at the polling booth named in the certificate. Upon presenting that certificate he may be required by the deputy returning officer holding the poll to sign a declaration to the effect that he is the person named in the certificate. The object of these provisions is to prevent manipulation and fraud at elections. The Act provides for the counting of the votes by the deputy returning officer, and the sending of the ballot box, locked and sealed, the same as in all other cases, to the returning officer of the riding affected, who is, under the machinery of this Bill, required to include the votes cast in the respective polling divisions in which the electors are resident and entitled to vote. The effect of this would be that the vote would be counted just in the same manner as if the elector were able to cast his vote in his own riding upon the day of the election. I noticed that when I mentioned that some of the provisions of this Bill were intended to prevent fraud at elections it caused a smile to appear upon the countenances of some of my hon. friends opposite.

Some hon. MEMBERS. Hear, hear.

Mr. CONMEE. I am rather inclined to think that, notwithstanding that, they do understand what the word means. There is, I believe, in every election, and hon. gentlemen, I am quite sure, are aware of it, a considerable amount of manipulation. You can call it intimidation, you can call it fraud, or you can call it what you please, it is manipulation by which the voter is either compelled to lose his franchise or to vote perhaps in a different manner from that in which he would desire to vote. It is within the power of a railway company. I do not wish to convey the idea that any railway company in this country would so manipulate those in its service as to deprive them of their franchise, but I do wish to say that officials and subordinates of

these companies do act in that manner, and that men are sent out who, they know, will vote for a certain candidate or a certain party purposely to deprive them of the opportunity, while others are brought to the polling booth where it is possible for them to vote simply because there is a knowledge of their political leanings or of the candidate for which they may vote. This, I think, will do away with that class of manipulation. I do not believe there will be very much room for that if this Bill is worked out properly. I do not say it is a perfect measure. It is a tentative measure, and I propose to ask the House to refer it to the privileges and elections committee. I do not think that committee is very much overworked. I think it might very well take up this subject and that after the Bill has been dealt with a certain number of copies of it might be printed and distributed so that at the next session of parliament we would have a better idea than we have now as to the wisdom of passing such a law. They have adopted a similar law in some other countries. In western Australia they have a law which goes a little farther than this one. It gives to all absentee voters the right to vote by mail. The machinery provides for the voter obtaining a certificate, according to the form laid down in the Elections Act, and presenting that to an officer or magistrate during the seven days preceding the day of polling. He is allowed to vote according to the regulations laid down in the Act, have his vote mailed to the returning officer of the riding to which he belongs and have it counted in the same manner as other votes. The returning officer, under a clause of the law, opens these envelopes and counts the votes in the same manner as the ordinary votes placed in the ballot boxes are counted. I am not able to speak with any degree of knowledge or from experience as to the working of the law but it seems to me that it opens a very wide door for manipulation. It seems to me that the plan proposed by the Bill which I have introduced would be a safer measure and would leave less room for manipulation in the casting of the vote. Then, as to extending the vote to other classes of absentee voters; I know of no other class in the same position unless it be the mail clerks. There is quite a number of them. Their duties and service require them, in many instances, to be absent from the polling booth at which they are entitled to vote. If it is thought well to include that class of voters I see no objection. So far I have confined the Bill merely to railway employees. The absentee voter, if the measure were wider, would have less incentive to exercise his franchise in accordance with the interest of the country, or in accordance with the interest of the riding in which he might cast that vote. In this case the voter is a resident of the riding to which his vote is to apply, his family lives there, he has all the interest that any other voter would have in the election, and it seems to me that under these circumstances there is not much room for doubt that this class of voters, who are a very intelligent class of our citizens, would cast their votes with due regard to the best interests of the country. I would ask that the Bill be referred to the committee on privileges and elections.

Mr. STAPLES. I followed the hon. gentleman (Mr. Conmee) very closely all through his remarks. He covered all the ground as far as I can see with the exception of one point and that is that I do not think he made any provision for special trains.

Motion agreed to, and Bill read the first time.

CEDARS RAPIDS MANUFACTURING COMPANY.

House again in committee on Bill (No. 94) respecting the Cedars Rapids Manufacturing Company.—Mr. Boyer.

Mr. PUGSLEY. When this Bill was last before the committee I suggested that the extension of time should be reduced from 1914 to 1912. That seemed to meet the views of the committee. A short time ago, however, my hon. friend the Minister of Marine and Fisheries spoke to me, and he would like the Bill to stand over for a short time, if the promoter of it is willing, as he wishes to make some inquiry with regard to it.

Mr. PERLEY. I wish to call the minister's attention to the fact that on Friday evening it was suggested that the date be changed from 1914 to 1911, and thereupon the minister gave notice that he would move that amendment to-day.

Progress reported.

KOOTENAY AND ARROWHEAD RAILWAY COMPANY.

House in committee on Bill (No. 80), respecting the Kootenay and Arrowhead Railway Company.—Mr. Geo. Taylor (Leeds).

Mr. LENNOX. I desire to say something in reference to this Bill, but as the promoter is absent, I move that we report progress on the Bill.

Motion agreed to, and progress reported.

QUESTIONS.

MARINE AND FISHERIES DEPARTMENT.

Mr. SAM. SHARPE asked:

1. Have the following persons had contracts for supplies, &c., with the Department of Marine and Fisheries since the date

of Hon. Judge Cassels' report, viz.: James Murphy, W. R. Blakiston, James Holliday, Allison Davie, J. B. Coté, Jos. Samson, Terreau & Racine, Jean Drolet, E. Amyot, Charles A. Parent, A. N. Melvin, Howell & Co.?

Hon. L. P. BRODEUR (Minister Marine and Fisheries):

No contracts have been entered into with the following persons by the Department of Marine and Fisheries since the date of Hon. Judge Cassels' report: James Murphy, W. R. Blackiston, James Holliday, Allison Davie, J. B. Cote, Jean Drolet, Elie Amyot, A. N. Melvin, Howell and Company, Jos. Samson.

Orders have been given to the following persons by the Department of Marine and Fisheries since the date of Hon. Judge Cassels' report:

Terreau and Racine, $164.04. This purchase consisted of grate bars, patterns for which are the property of the above-mentioned firm.

Chas. A. Parent, $22.00.

BROCKVILLE, WESTPORT AND NORTH-WESTERN RAILWAY.

Mr. GEO. TAYLOR—by Mr. Blain—asked:

1. Who are the present stockholders of the Brockville, Westport and Northwestern Railway, and what are their post office addresses?
2. What are the present ordinary passenger rates to intermediate stations between Brockville and Westport?
3. What are the present freight rates per cwt. in small lots to intermediate stations between Brockville and Westport?
4. What are the present freight rates per cwt. on carloads to different intermediate stations between Lyn Junction and Westport, and to Westport?
5. What are the rates during the season of navigation in competition with the Rideau canal to the various stations west of Delta?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. The department has no information as to stockholders; but the following is a list of directors:

Name of Director and Post Office Address.
Edward R. Thomas, New York City.
John Gerkin "
Orlando F. Thomas "
Carster Heilshorn "
F. T. Lewis "
W. S. Buell, Brockville, Ont.
W. G. Curle "
Robert Bawk "
Wm. H. Comstock "
Jas. Cumming, Lyn, Ont.
W. C. Fredenburg, Westport, Ont.

2. The present ordinary passenger fares from Brockville to points on the Brockville, Westport and Northwestern Railway are as follows:

Lyn	$0 15
Seeleys	0 25
Forthton	0 40
Elbe	0 45
Athens	0 60
Soperton	0 80
Lyndhurst	0 85
Delta	0 90
Elgin	1 10
Forfar	1 15
Crosby	1 20
Newboro'	1 35
Westport	1 50

3. The present freight rates are covered by the company's standard mileage tariff, governed by Canadian classification, and are as follows:

FROM BROCKVILLE.

Classes in cents per 100 lbs..

To	1	2	3	4	5	6	7	8	9	10
Seeleys	10	8	7	6	5	5	4	4	4	4
Forthton & Elbe	12	11	9	8	6	6	5	5	5	4
Athens	14	12	11	9	7	6	6	6	6	4
Soperton	16	14	12	10	8	7	6	7	7	5
Lyndhurst & Delta	18	16	14	11	9	8	7	8	7	6
Elgin and Forfar	20	18	15	13	10	8	7	8	8	6
Crosby and Newboro	22	19	17	14	11	10	8	9	8	7
Westport	24	21	18	15	12	11	8	9	8	7

Less than carload shipments are covered by classes 1 to 4 inclusive, minimum charge for one consignment 35 cents.

The company have a special tariff on oil in barrels, L.C.L., as follows:

Brockville to Lyn	5 cts.	per 100 lbs.
" Seeleys	6	"
" Forthton and Elbe	7	"
" Athens	9	"
" Lyndhurst & Delta	10	"
" Elgin and Forfar	11	"
" Crosby and Newboro	12	"
" Westport	13	"

4. Carload rates are generally covered by classes 5 to 10 inclusive, although 4th class applies on carloads of high grade goods. In addition to the class tariff, the company have filed special carload commodity tariffs as follows:

Coke and coal, minimum 30,000 lbs.—Brockville to Athens, Delta and Elgin, 80 cents per net ton; Brockville to Newboro and Westport, 85 cents per net ton.

Brick, minimum 40,000 lbs.—Brockville to Westport, 4 cents per 100 lbs.

Under freight classification above referred to, 10th class would apply on heavy commodities, such as lumber and forest products, sand, stone, lime, cement, &c.; 9th class rates apply on live stock; 8th class on grain and grain products; 7th class on pitch, grindstones, mica, and certain ores; 6th class on machinery, agricultural implements, cream separators, &c; 5th class on

sugars and heavy groceries, also the majority of manufactured goods; 4th class on cotton goods, carpets, furniture, tea, spices, and other high class groceries.

5. During the season of navigation the following class rates governed by Canadian freight classification are in effect from Brockville to points west of Delta:

Classes in cents per 100 pounds.

To	1	2	3	4	5	6	7	8	9	10
Elgin and Forfar	15	13	11	10	8	7	6	5	..	4
Crosby and Newboro	16	14	12	10	8	7	6	5	..	4
Westport	17	15	13	11	9	8	7	5	..	4

INTERCOLONIAL RAILWAY—THE WALLBERG CONTRACT.

Mr. CROCKET—by Mr. Daniel—asked:

1. Has Mr. E. A. Wallberg completed his contract for the construction of the new Intercolonial Railway passenger car repair shop, passenger car paint shop, stores and office building, freight car repair and machine shops, at Moncton, New Brunswick?

2. What was the contract price under each contract?

3. What has been the total cost under each contract?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. Yes. The works in question are completed; but final payments have not been made.

2. The passenger car repair and paint shops and the stores and office building was, lump sum, $146,445, with a schedule for additions or deductions. The freight car repair shop was, bulk sum, $56,630, with a similar schedule. Locomotive shops, bulk sum, was $430,000, with a similar schedule.

3. The amount paid to date for passenger car and paint repair shop and stores and office buildings, was $147,736.08. Voucher has been prepared for final estimate; but not paid, amounting to $72,304.75. Freight car shop, amount paid final estimate, $75,213.32. Locomotive shops, amount paid to date, $403,171.29. Voucher has been prepared for final estimate, but not paid, amounting to $81,740.

RAILWAYS IN SASKATCHEWAN.

Mr. LAKE asked:

How many miles of railway were under operation in the territory now comprised within the boundaries of the province of Saskatchewan on December 31, 1896, and December 31, 1908, respectively?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). Number of miles of railway in territory now comprised within the boundaries of the province of Saskatchewan on June 30, 1896, 1,185·96; and on June 30. 1908, 2,081·30.

Mr. GRAHAM.

RAILWAY MAIL CLERKS.

Mr. PORTER asked:

How many railway mail clerks have been killed or injured while on duty in Canada during the past two years?

Hon. SYDNEY FISHER (for Postmaster General). One killed, and thirty-six injured.

PILOTAGE RATES.

Mr. BARNARD asked:

1. Has any new scale of charges for pilotage services levied against vessels entering the port of Victoria, British Columbia, been made since the 26th February, 1908?

2. If so, what is the new tariff and what was the tariff prior to 26th February, 1908?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries):

1. Yes.

2. The orders in council are published on page 557 of the 'Canada Gazette' of August 29, 1908. If the information contained therein is not sufficient for the hon. member's purpose, will he be good enough to move for a return, as the details of the pilotage rates in the district of Victoria and Esquimalt are too lengthy to be satisfactorily given in a reply to a request in this form?

PROPRIETARY MEDICINES ACT.

Mr. SEGUIN—by Mr. Lavergne—asked:

1. Has the government appointed officers or analysts to carry out the provisions of the law respecting proprietary or patent medicines, passed at the last session?

2. If so, what are the names of the officers or analysts appointed and the amount of their remuneration?

3. If not yet appointed is it the intention of the government to make these appointments soon?

Hon. WM. TEMPLEMAN (Minister of Inland Revenue):

1. No appointments have been made.

2. No appointments have been made.

3. It is not the intention to make any appointments for the purpose mentioned.

INTERCOLONIAL RAILWAY—ST. IGNACE WORKS.

Mr. C. ROY asked:

1. Were some works done at the St. Ignace station, on the Intercolonial Railway during the autum of 1908? If so, by whom were they ordered, and on whose recommendation?

2. If the said works were done, was it not at the request of other persons than those interested, the inhabitants of the said parish of St. Ignace, who requested the construction of a new station, or the enlargement of the present one for the convenience of the public?

3. If the said works are done, what kind are they, and what was the cost?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. Yes. On the authority of the Department.

2. See number one.

3. For the erection and completion of an addition to the old station at Cap St. Ignace, for which tenders were invited by poster advertisement, and the tender of Messrs. Cloutier & Gaudreau, for $750, being the only one, was accepted, by order in council, and a contract awarded them at their tender price. The work has been satisfactorily completed, and the amount of their contract, viz., $750, paid them.

EAST HURON PUBLIC WORKS.

Mr. CHISHOLM (Huron) asked:

How much public money has the Dominion government expended on the construction of public works in the constituency of East Huron during the last 20 years?

Hon. WM. PUGSLEY (Minister of Public Works) :

$31,910.09.

FRUIT MARKS ACT.

Mr. ARMSTRONG asked:

How many inspectors are employed under the Fruit Marks Act in each province, and the district each covers?

Hon. SYDNEY FISHER (Minister of Agriculture):

Nine permanent and twelve temporary inspectors were employed under the Inspection and Sale Act for the season of 1908-9. The Dominion fruit inspectors are not as a rule assigned to any particular district or province, but are sent from place to place according to the movement of apples or other fruit. They have been distributed during the past season as follows:—In British Columbia, 1 permanent inspector; in Alberta and Saskatchewan, 1 permanent inspector; in Manitoba and Saskatchewan, 1 permanent inspector: at Port Arthur and Fort William, 1 temporary inspector; in Western Ontario, 1 permanent and 3 temporary inspectors: in Eastern Ontario and Quebec (including the ports of Montreal and Quebec), 4 permanent and 3 temporary inspectors; in New Brunswick, 1 temporary inspector assisted by a permanent inspector from Montreal; in Nova Scotia, 1 permanent and 3 temporary inspectors; in Prince Edward Island, 1 temporary inspector.

ANNUITIES ACT.

Mr. J. HAGGART asked:

1. What is the number and amount of life and yearly annuities respectively applied and paid for up to March 1, 1909?

Hon. W. S. FIELDING (Minister of Finance). The number and amount of life or yearly annuities applied and paid for (or which have been applied for and are being paid for on various plans, immediate last survivor; immediate, single; immediate, guaranteed for a number of years certain; deferred, single payment; deferred, lump sum and annual payments; deferred, by periodical payments), and the amount of purchase money received up to and inclusive of the 28th February, 1909, are and is as follow :

Number of Annuitants.	Amount of annuities applied for.	Amount of purchase money received.
42	$7,047 78	$35,859 56

Since that date up to and including March 27, 1909, the additional figures are as follows:

Number of Annuitants.	Amount of annuities applied for.	Amount of purchase money received.
39	$6,109 54	$14,503 10

Making a total of:

Number of Annuitants.	Amount of annuities applied for.	Amount of purchase money received.
81	$13,157 32	$50,362 66

FENIAN RAID VETERANS.

Mr. MIDDLEBRO asked:

Does the government intend during the present session to introduce any legislation granting any bounty or assistance to the veterans of 1866 and 1867? If not, why not?

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). It is not the intention to introduce this session such legislation for the reason that after consideration it is not found advisable to disturb the decision arrived at many years ago.

SHERBROOKE DRILL HALL.

Mr. EDWARDS asked:

1. When and to whom was the contract given for the Sherbrooke drill hall?

2. From whom were tenders received, and what was the amount of each?

3. What part of the work was covered by the original contract?

4. Has any of the work been let without tender? If so, what, to whom and the amount in each case?

5. What is the total estimated cost of the said drill hall complete and ready for use?

Hon. WM. PUGSLEY (Minister of Public Works):

1. (a) Date of contract, November 7, 1907.
(b) Simoneau & Dion.

2.

Simoneau & Dion, Sherbrooke.. ..$ 82,000
Paquet & Godbout, St. Hyacinthe. 86,000
A. Joncas, Sherbrooke.. 117,000

3. Excavation, mason work, brickwork and tiling, carpenter work, plastering, iron and steel, felt and gravel roofing, sheet metal work, plumbing, painting and glazing.

4.

Subsequent tender asked for name stone in French from Simoneau & Dion	$ 98 50
Subsequent tender for heating from Simoneau & Dion	3,550 00
Boilers, Star Iron Co	617 24
Printing, advertising and translating	640 72
Travelling expenses	44 15
Supervising architect, J. W. Gregoire	931 40
Professional services, E. B. Worthington	43 95
Survey, J. Tremblay	70 00
Survey, J. Migneault	150 00
Work on grounds, test pits, &c. (pay-list)	195 05
Lumber, Fortier	5 21
Hardware, Bourque	25 41

5. $107,000, exclusive of site.

FISH HATCHERIES.

Mr. EDWARDS asked:

1. How many fish hatcheries are there in Canada?

2. Where are those in Ontario situated, what was the cost of constructing and maintaining each last year, respectively, including salaries?

3. How many applications for fry were received at the Ontario hatcheries last year, and how many were granted?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries) :

1. Thirty-five.

2. Sandwich, Newcastle, Ottawa, Wiarton and Sarnia. Sandwich, $14,354.55 maintenance; Newcastle, $3,934.30 maintenance; Ottawa, $2,825.59 maintenance; Wiarton, construction, $4,660; maintenance, $5,031.63; Sarnia, construction, $4,136.

3. Seventy-seven received; sixty-four granted.

CAMPBELLTON AND BRIGHTON MAIL

Mr. OWEN asked:

1. When was the contract for carrying the mails between Campbellford and Brighton relet for the year 1909, to whom was it given, and at what amount for the year?

2. What was the contract price last year?

Hon. SYDNEY FISHER (for the Postmaster General):

1. Lowest tender that of E. R. Cryderman at $600 per annum accepted on the 17th March, 1909.

2. $365.

BOUNDARIES OF MANITOBA.

Mr. ROCHE asked:

1. Is it the intention of the government, in view of the conference held with the provincial ministers of Manitoba, to introduce a Bill at this session of parliament to provide for the extension of the boundaries of the province of Manitoba?

2. If not, what is the intention of the government in reference to this question?

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). I have to remind my hon. friend that by a resolution adopted last session, this House authorized the extension of the boundaries of the province of Manitoba, out of the Northwest Territories, to an extent therein specified.

Until the legislature of Manitoba has signified its acceptance of these boundaries, and until the Dominion government and the provincial government have come to an understanding as to the financial conditions consequent thereon, the government has no authority to introduce any legislation on this matter.

RURAL MAIL EAST NORTHUMBERLAND.

Mr. OWEN asked:

To what extent has a rural mail delivery been established in the county of East Northumberland?

Hon. SYDNEY FISHER (for the Postmaster General):

A contract has been awarded providing for rural mail delivery between Brighton and Campbellford.

An application is now in the hands of the post office inspector for a rural mail delivery service on the route between Brighton and Lovett.

MAIL AT ST. JUSTINE STATION.

Mr. BOYER asked:

1. Has the Post Office Department already received complaints about the postal delivery service at the St. Justine station by the Grand Trunk Company?

2. On what dates and by whom were these complaints brought to the knowledge of the department?

3. Has the department made an inquiry into these complaints and adopted any preventive measures?

4. Has the government been informed by another person than the member asking this question that another accident of the same kind as those referred to happened on Friday, March 19, at St. Justine station, that is to say, that a mail bag fell under the wheels of the train and would have been damaged and its contents spilled on the track?

5. Does the department intend to compel the Grand Trunk Company to make a better delivery and by what means?

Hon. SYDNEY FISHER (for the Postmaster General):

1. Yes.

2. 16th February, 1908; 19th March, 1908; 7th November, 1908. By the postmaster, Gustave Boyer, M.P., and J. A. Lortie, M.P.

3. Yes, and measures taken, which it was thought would prevent future accidents.

4. It is understood that on 19th March when the mail bag was thrown off at St. Justine station it was through suction drawn under the wheels of the train and the con-

tents of the bag containing unregistered mail matter badly mutilated.

5. The Post Office Department has no power to compel railway companies to stop trains for the exchange of mails. If the people of the locality consider that trains should stop, the matter should be brought to the attention of the Railway Commission.

FORT CUMBERLAND.

Mr. RHODES asked:

1. How much land, if any, is owned by the government embracing the site of Fort Cumberland, Westmoreland county, N.B.?

2. If owned by the government, is it under lease? If so, to whom and on what terms?

3. If not owned by the government, when was it sold, to whom was it sold and for what price?

4. When was the armament of this fort sold, to whom, and on what terms?

5. Has the government in contemplation any arrangement for preservation of this or any other ancient fortification?

Hon. Sir FREDERICK BORDEN (Minister of Militia and Defence). The Department of the Interior has given the answers to questions 1, 2 and 3.

1, 2 and 3. This property was transferred to the Department of the Interior by order in council dated October 20, 1879.

4. Nothing is known in this department of the sale of any of the armament of the fort.

5. The only ancient fort which the government is at present engaged in preserving is Annapolis Royal in Nova Scotia.

1. Seventy-two (72) acres.

2. Yes. James Lowerison from year to year at an annual rental of $64, payable half yearly. Mr. William Miner, agent for Lowerison, is the present occupant.

3. Answered by Nos. 1 and 2.

PORT OF VANCOUVER—SHANGHAIING.

Mr. COWAN asked:

1. Did the commissioners appointed about two years ago to inquire into 'shanghaiing' at the port of Vancouver make a report?

2. If so, when and what action was taken by the government thereon?

3. Is the government aware that captains of vessels leaving British Columbia ports are still obliged when getting their crews to pay $35 per man to Sims, Levi & Evans, who in return guarantee that the seaman's wages shall not exceed $20 per month?

4. Is the government aware that there are about 70 sailing ships leaving British Columbia ports annually whose owners are still obliged to pay to this firm about $45,000 per year for crews, and that these crews are obliged to advance to the above firm about $32,000 annually, being at the rate of $25 per man?

5. What action, if any, does the government propose to take to abate this evil?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries):

1. Yes.

2. No action was taken as the commissioner gathered from the evidence adduced that the conditions at the port of Vancouver do not differ materially from those obtaining in other seaport towns throughout the empire.

3. The Department of Marine and Fisheries has only recently been informed that this firm is operating in Victoria, and the matter is receiving attention. Some of the contracts to supply men are made with this firm by the owners of the ships in Great Britain before the ships leave there.

4. No.

5. The facts will be ascertained, and whatever action is possible to meet the difficulty will be taken.

SAULT STE. MARIE CHANNELS.

Mr. BOYCE asked:

1. Who were the contractors for placing buoys in the old channel from Sault Ste. Marie, Ont., to the head of St. Joseph's island, and from Point aux Pins to Batchewana, during the season of 1908?

2. Was the work let by contract? If not, who had charge of it, upon what terms, and why were tenders not invited?

3. What was the amount paid for the placing of buoys in these waters, during the preceding five years, and to whom were such moneys paid respectively?

4. If the work was let by contract, was it open to public competition?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries):

1. Roderick A. McLean, of Sault Ste. Marie.

2. Work was let by contract to Roderick A. McLean, of Sault Ste. Marie, Ont.; the service from Sault Ste. Marie to the head of St. Joseph's island at $215 per annum, and the service from Point anx Pins to Batchewana at $400 per annum. Tenders were invited for the service between Sault Ste. Marie and the head of St. Joseph's island in 1899, and the contract was awarded to Mr. McLean, who has performed the service under contract since that date. Tenders were invited for the service between Point aux Pins and Batchewana in 1904, and the contract was awarded to Mr. McLean, who has performed the service under contract since that date.

3. The price paid for maintaining the service from Sault Ste. Marie to the head of St. Joseph's island, was $215 per annum, and for the service from Point aux Pins to Batchewana $400 per annum. The contract prices were paid each year to Mr. Roderick A. McLean.

4. Yes.

PACIFIC COAST FISHING LICENSES.

Mr. COWAN asked:

1. How many seining licenses for fishing on Pacific coast waters are now current?

2. To whom have they been granted?

3. What is the area covered by each license?
4. How many of these licenses are being operated by the original licensees, and how many by aliens?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). The answers to questions 2 and 3 are so voluminous that I would ask the hon. gentleman to let them stand as notice of motion. I will procure the information immediately.

Stands as notice of motion.

DREDGING AT STE. ANNE DE BELLEVUE LOCKS.

Mr. BOYER asked:

1. Has the government received a petition signed by several navigation companies on the Ottawa river, asking for certain dredging works in the river of that name below the locks of Ste. Anne de Bellevue, which would have the effect of shortening the course of the canal?
2. If so, what are the names of these companies?
3. Has an engineer been sent to this place to ascertain the possibility and utility, of these works?
4. Does the report admit the justification for these works?
5. What does the government intend to do in the exigency?

Hon. WM. PUGSLEY (Minister of Public Works):

1. Yes.
2. The Sincennes-McNaughton line, the Montreal Sand and Gravel Company, Quinlan and Robertson, the Ottawa Forwarding Company, and the Ottawa Transportation Company.
3. Yes.
4. Yes.
5. Matter under consideration.

MR. BREWSTER.

Mr. WORTHINGTON asked:

1. Is Mr. Brewster still in the employ of the government as immigration agent for the eastern townships?
2. If not, when were his services dispensed with, for what purpose and on what date?
3. Has any one assumed the duties of immigration agent for the eastern townships since the date of Mr. Brewster's retirement?
4. Is it the intention of the government to appoint an immigration agent for the eastern townships? If so, will the appointment be of a temporary or permanent nature?
5. Is the government aware that there is a great dearth of farm labour in the various counties of the eastern townships, and that an active immigration agent is urgently needed in that locality?

Hon. FRANK OLIVER (Minister of Interior):

1. No.
2. First of November, 1908, on termination of engagement.
3. No.

Mr. COWAN.

4. An appointment will be made for the season.
5. The government is aware that there is a need of farm labour in the eastern townships.

DEFENCE FOR OUR SEA COAST.

Hon. GEO. E. FOSTER (North Toronto) moved:

That in the opinion of this House, in view of her great and varied resources, of her geographical position and national environments, and of that spirit of self-help and self-respect which alone befits a strong and growing people, Canada should no longer delay in assuming her proper share of the responsibility and financial burden incident to the suitable protection of her exposed coast line and great seaports.

He said: I desire to state in the first place, that this resolution, which I have the honour of introducing, was handed in to the clerk by me before the session opened, and appeared on the first Order Paper. It is therefore not one which has arisen out of the later events and circumstances which are in the minds of all present. I also wish to state that it was not conceived, and is not introduced to-day, in any party spirit. In making that statement, I am absolutely candid and open. Party spirit in Great Britain, has not generally intruded itself upon great questions of international interest, and in our country, though we have many subjects which produce keen contests between the parties, I may be permitted to express the wish that those questions that concern national defence and Imperial obligations may be kept as far outside of party politics and party contention as they are in Great Britain. It is in that spirit and with that intent that I move this motion. For a good many years I have been more and more impressed with the necessity of our facing the question involved in this resolution. Nothing particular has been done with it so far in parliament. I do not think that we mitigate any difficulties by avoiding them, or get rid of any of our responsibilities by evading them, and it seemed to me that the time had now come when the parliament and people of Canada should sit down together and take stock of the position and come to some conclusion as to whether they have duties, and what thes duties are, regarding the great question of the defence of our common heritage.

Now we have, I myself have, all sympathy with that class of good and estimable men who declare that war is horrible, that its burdens are almost intolerable, and that its effects are wide reaching and in the main injurious, and who, in our country as in others, declare that we want no armaments no militarism, no defences, that ours is an

era of peace, and that we should strive, as best we can, to make good this in principle and in action, without arbitrament of war. But whilst I have sympathy with this view, I have taken into account the history of the world and the lesson it teaches. And whether I be right or wrong, I draw from the history and experience of the world this one great fact that force, absolute physical force, lies at the foundation of all our progress and civilization. In the primeval times, physical force expressed itself and exposed itself in bare and brutal form. To-day it is surrounded with, and disguised by the trappings and refinements of civilization; but in the last resort, it is there. Just as underneath the varied soils, beautiful in varied growth, there yet lies the solid granite-base, the foundation and guarantee of permanence, so under all the civilization and refinement of to-day, there is to be found, in the last analysis, the appeal to physical force. A man meets his neighbour, as individual against individual. If he can persuade him by argument, if he can prevent and restrain him by quoting the law and the conventions of society, well and good; but if none of these prevail, it is his right and duty to defend himself by sheer physical force. In the family, the school, the city, the province, the country, the situation, in the last analysis, is similar. If there are mischevious members of society, who are not amenable to christian teachings or to moral ethics, then the force of the law has to deal with them, and the constable, the policeman, the militia and the standing army, if need be, are resorted to as the personification of a physical force that is conclusive. If this is true of society and the individual, it is equally true with reference to nations. From the earliest times to the present, there have been mischievous, unscrupulous and ambitious peoples, which has compelled resort in the end to physical force. We deduce therefore this fact that to defend and to preserve is the right and the duty of the individual of society, and of the nation, and that if it is necessary to do this by force, then force must be invoked. The right and duty of the individual is the right and the duty of the aggregation of individuals, that is of the nation itself. As we find the selfish and the unscrupulous and the strong preying upon society, so among nations it has always been, so it is now and so, as far as I can see, it will be for our own lives and very probably for many generations thereafter. In fact the more inviting the situation that a country possesses, if it is combined with weakness and lack of preparation, the more that country becomes the prey and the mark of the ambitious, of the unscrupulous, of the strong. There are considerations which act as restraints, the jealousies of surrounding nations, the ententes cordiales, the pacts, the agreements, the commercial ties, the world's conscience—all these restrain and retard and moderate. But some day all these become storm swept and the naked sword flashes out in defence of altar and hearth-fires. All history teaches the lesson of this insecurity and that the nation which is forewarned and forearmed, which makes its preparation with proper care, is the only nation that has reasonable security and guarantee of existence.

Take, if you will, the last 50 years of the greatest and most civilized century of the world. Take the last 50 years, and what are the examples! The fire that was kindled on the Crimea, the blood-red streams that ran in India, the long struggle in the United States between the South and North, the Anglo-Italian war, the Franco-Prussian campaign, the Spanish-American battles, the British-Boer war, and the Japan-Russian war,—all these are outstanding, large examples of the fact that all the restraints of Christian morals and of ethics are impotent to curb the ambitions and the passions of nations, examples of the sad disappointments of those who have believed that the era of peace, and enduring peace, had been at last ushered into existence. To-day we must come to the conclusion that neither Christian teaching nor peace conventions, nor strong commercial liens, nor Hague conferences nor Triple alliances, nor Berlin Treaties, can guarantee peace. In a single night, within the last few weeks, a great nationality tore in tatters the Treaty of Berlin, and the lurid war cloud hovered over the Balkans and shot its lightnings into every chancellory in Europe and even to-day the unrest is not stilled.

Sir, into this world of trouble, of uncertainty, amongst this world of nations, Canada has pushed forward to her place. She has taken a position which is important now, which will become more and more important as the years advance. Her ship of state is launched on the world's waters, it is open to every storm, it is exposed to every danger. She cannot escape the common burden, she cannot neglect the common duty, she cannot ignore the common responsibility. I do not believe that she wishes to. Having entered the game, I believe that it is the disposition of the Canadian people to play it valiantly, to play it honourably, and to play it successfully. If her sons have the pride of manhood, as I believe they have, if they know what the stern joy of contest means, if they have proper faith in their high destiny, if they visualize any adequate picture of the future, it seems to me it is up to the people of Canada and to the manhood of Canada to

prove their faith and their worth by their works, to grasp the full meaning of their heritage and its responsibilities and to prepare to defend it as well as to develop it. And what has Canada to defend? Her vast national resources, ever unfolding, inestimable in quantity and of excellent quality, but more significant in one sense, in the particular time at which in God's good providence she has commenced to enter into their development, the time in the history of the world's advancement in which she has commenced to exploit, in this last great west, what is to be of such worth, of such value and of such resource to the whole world. Her extended coast line, her ports, her harbours, with coal supplies at the pit's mouth almost open to the bunkers of the vessels, with immense resources of food supply, with her rivers and her lakes stretching through the centre of her vast country, face to face, east and west, with two vast oceans just across which two immense masses of human activity—on one side, in the Orient, 350,000,000 people waking up into a new life, an activity the outcome of which no man at present living can define; on the other side, face to face with the activities of the old and well-known nations of Europe; on the south, face to face with the most compact and powerful people on the globe, and in the background, the wide cool reaches of the north, silent and mysterious. Was there ever a national stage set and equipped as this one? The actor has taken her place on that stage; the play must proceed. How shall she interpret her parts to this, the greatest auditory of the greatest century the world has seen.

Then observe her lines of communication and transport, built by her own people, aided with money from foreign countries and mainly from Britain. Look at the development of her transportation system—whether directed by policy, whether it was providence, whether it was what we may call the compulsion of circumstances, there it lies. All the great lines of railway transport east and west, moving from the central zones towards the ocean on the west, or to the ocean on the east; watch her rivers flowing east and west and the great lakes which empty therein, river and lake passing close to the homes of the farmer and the marts of our people, stopping by the side of her wharfs and her docks, and saying: Here I am ready to work, load me up with your treasures, and I will bear them to the sea. And so along the lines of railway transport and the great lines of natural transport by lake or river, we are everywhere seeking the seaport for embarkation, everywhere bound outward on the pathway of the sea to foreign ports and foreign markets; and the one absolute condition of prosperity and permanency is

that the ports of embarkation and the sea path to the ports of ultimate destination, must be secure. That is the essential thing.

Well Sir, suppose that to-day whilst we are living in fancied peace and security—which is not real peace and security—suppose that to-day a third-class cruiser should show her face in Victoria and Vancouver, or in Halifax and Sydney, or in St. John, or Quebec or Montreal, would not a great deal of this fancied peace and security into which we have lulled ourselves, in which we expect an abiding and never to be interrupted repose, quickly pass away, to be succeeded by deep anxiety? Sir, the question forces itself on us. Six and a half millions of people with their mighty heritage, and yet to-day no adequate defence in her great seaports from a third-class cruiser which might suddenly appear within her gates! It makes us think. We can excuse it, we can palliate it, we can laugh it off, we can say it is fanciful to put the question to ourselves just that way; but it ought to make us think, and ought to make this parliament think, and every good citizen of his country think. But, says some one, oh, that is fanciful. We have safe embarkation, and we have a safe convoy across the ocean east and west and south. Yes, Mr. Speaker, but by whom is this safe embarkation and the safe convoy provided? Negatively it is not provided by Canada. Hitherto we have been busy in Canada in fighting the wilderness, in subduing the soil, in spending our labour and our money in developing the vast resources of a virgin half continent. We have not done it badly; in my opinion we have done it well, on the whole. We have laid at least the firm foundations of a nation in the present and the future prosperity of which we ourselves feel confident.

But, Mr. Speaker, development is not defence. Sometimes we hear it argued that it is a contribution to Imperial defence. We have developed our country for whom. For ourselves, for the settlement of our immense lands. We have opened them for ourselves, and for the strangers whom we welcome and make part of our own people. We have built great lines of railway, we have built them for the transport of our own commodities, the opening up of our own country, and for the development of our own wealth and our own resources. True, a great transcontinental railway affords a line of transport for Britain's troops, the empire's troops, from ocean to ocean. But every soldier that traverses it pays his passage money, and the British government finds the money with which to pay that passage. It is true that we have developed, and it is true that we have made this country great, and it is true that by

doing so we have materially enhanced the might and power of the empire in that sense; but in the sense that we have made any contribution to the burden of the defence of the empire, or of ourselves, I do not think it can be contended. It is a fact, is it not, Mr. Speaker, that this development may be even a source of weakness, external and internal! If we develop our great resources and make no provision for their defence, two effects follow. It weakens us in the outside world, because it displays our riches and shows them weakly held; and it weakens us with ourselves, because in the peace, and enjoyments, and business of development we grow careless, and less inclined to make proper provision for reasonable defence.

It is true that we have developed a militia system, and a militia force. It is not all it ought to be, it is not all we hope to make it. It has progressed, but it has a great deal of room in which still to progress and become better fitted to fulfil its work in the future. But we have developed a militia system, which personifies the physical force of the Dominion of Canada. That militia force has done excellent service for our country on several critical acsasions, and some units of that militia have gained imperishable glory on a foreign field, and though we doubt not it will do what it can, and do its duty bravely, yet if the great peril of war descended upon us, whilst our militia would stand to their colours, and march to their orders, the eyes of all Canada would be turned in wistful longing for the regular troops of the British army to come and help their children and their brethren. Our ultimate dependence would be in British power.

But as to naval defence, what have we done? I think we might just as well be frank with ourselves and say we have done nothing. From the earliest dawn of history, commerce and the protection of commerce have gone hand in hand. They have sailed the seas together, and worked out their beneficent purpose of development and protection side by side. You cannot point in history to a single commercial people that neglected to provide a protection more or less adequate for their commerce. We are a people nearly a century old with the mighty heritage of which I have spoken, a heritage which is not simply for our own enjoyment but which is to be transmitted to the generations—the far distant generations—that succeed us. We to-day sit in this parliament and live in this country and we have to acknowledge to each other, if we will be frank, that we have done no single effective thing in the way of naval defence. Ah, but one says: we have taken over Esquimalt and Halifax. Yes, we have, and we have undertaken to relieve the British government of a certain amount of expense. We have taken them over and we foot the bills for them, whatever they are, but we might as well be frank here and say that as to their effective force right here and now they do not bulk largely. You have to judge these things by the test of actual war and if actual war broke out and a cruiser appeared at Esquimalt or at Halifax of what avail would these be? Have we the guns, have we the torpedoes, have we the mines, have we the machinery, have we the trained men even if we had the machinery? Such statements serve to salve our conscience when it pricks us, they are nice to round out a sentence in a speech upon the hustings, but we must come down from all this, if we are frank with each other, and say that they cut a very pitiful figure in the line of actual, efficient naval defence. They are the bases around and upon which we may build but, it seems to me, that is about the best that can be said of them. Oh, but says another: we have bought and built fishery protection vesels. Yes we have, and what are the fishery protection vessels?—constables of the coast sent out to guide harmless fishing smacks in the line of duty, to keep them from coming within the magic boundary line and to control them in various and sundry ways according to national and international regulations. That is what they are, but as an offset against an attacking fleet, an attacking cruiser, or an attacking vessel of any kind, what are they? They are simply children's toys, only that and nothing more. A third-class cruiser showing her nose to any one of these fishery protection cruisers would cause her to get within a harbour as quickly as her heels could carry her there, or, if she refused to go into harbour, would quickly put her under water. We cannot bank much on the fishery protection vessels as a naval defence against imminent or future danger. Whilst this is the case and whilst we take off our hats and cheer as the magnificent first line of defence in Great Britain makes its procession before royalty in the North Sea we have to admit that in comparison with other dependencies and overseas possessions Canada stands silent and shamed. In the meantime, whilst we have been doing nothing, Cape Colony, a comparatively poor colony and sparsely populated, has made a contribution of £50,000 annually; Natal, a small and comparatively poor colony and of sparse population, has made its contribution of £35,000 annually; New Zealand has given £40,000 annually, now increased to £100,000, and Australia, £200,000, altogether a contribution of a million and three-quarters of dollars per year, whilst the British taxpayer goes down in his pocket for £34,000,000—

$3.60 per unit—to maintain the naval defence of the empire. But when we read these names, Natal, Cape Colony, New Zealand and Australia, the name of Canada does not appear, and as we look at that procession in the first line of defence we come to the conclusion, and it is not an exhilarating one, that not only have we not put a dollar into the naval defence of Canada for her own coasts, but that not a ship in the procession bears the name of Canada and that not a stiver or a sixpence of the mighty expense of that great battle line has been contributed out of the money of Canada. Well, I say that this grips attention. It gives us, at least, to press it no further, reason for thought. To some, and I confess to myself, it appears necessary for very shame's sake, that we did something and did something adequate. But says some objector, Great Britain is bound to protect the empire, her prestige demands it, her necessities demand it. Well, all I have to say of that argument at the present time is, that it is not the argument of the brave, or of the generous-hearted, or of the self-respecting, or of the properly independent man, and it is not the argument for a young and growing people which is a candidate for admission amongst the nations of the earth. The most sublime figure in all history, the one that grows upon one as he views it in the light of the history of 500 years, to go back no farther, is the figure of the old mother empire, the great-hearted mother who has given birth to the young nations that circle the globe, the great-hearted mother that has gone outside of her own kith and kin and has mothered nation after nation, people after people, continent after continent, brought them out of darkness and slavery and set them upon the path of a better civilization. That grand old mother nation, endued with great heart and more than Titanic force to sustain world burdens—behold her course. Watch her in India and see what she has done for its three hundred million people, follow her in Egypt and see what she has done for the physical, the moral and the national betterment of that country, everywhere we know that she has done more in beneficient, scientific, humanitarian, uplifting action than any country in any age of history. What has she done in Africa, what has she done in America, from those early times when her armaments, her soldiers and her navy began to carve out of this North American continent the great heritage which she once enjoyed upon this continent a large portion of which she has given over to us. To-day, Great Britain has her armed guards on the Pamirs, and in the passes of the Himalayas, her sentinels on every frontier line, her sailors and flag in every sea, her bodies of living scarlet and khaki here and there dispersed throughout the world and though she has done all that and bears the immense burden to-day, she has yet to exact the first penny of tribute from any country that she has liberated or any people that she has made free. Every dollar of the money, every drop of the blood worth more than money poured out so lavishly and so long in those great world efforts has been contributed by the people of the British Isles. For five centuries the patient, toiling British taxpayer has paid the bill and paid it with a cheerful countenance, and so far without grumbling. Can you find in the history of the world any more sublime figure and any more benificient instrumentality for good worked in so unselfish a way and borne so cheerfully and unstintingly by the few millions of people that live in the islands in the North Sea? What rank ingratitude in us, of all people, to shield our selfish indifference to the sacrifices of such a mother behind such an argument. Well, but, says some one: 'We are safe in Canada, the Monroe doctrine will be all that we need, the United States will not allow any foreign country to plant its flag on the soil of the North American continent, we are immune, because of the Monroe doctrine.' Mr. Speaker, the Monroe doctrine and the United States of America might guarantee our safety from foreign invasion but what would be the price that Canada would have to pay? The humiliation of it would be like the Cain's mark on the brow of every Canadian; the degredation of it would eat into the heart of every man until he grew servile and cringing. The price we would have to pay would be continual demand, continual concession, until at last absorption finished the craven course, covered up our name and blotted out our hope of a national future. Bad enough for us to hang on to the apron strings of a loving opulent mother, but when we have grown to manhood it is the negation of every principle of manhood and independence that we should live in our national home by the grace of the stranger, however well intentioned and kind he might be. I put away the Munroe doctrine as absolutely unthinkable for us as a shelter under which to grow up to national manhood. I come then to the conclusion, imperfectly argued out I know, first: That protection is necessary, absolutely necessary; that we cannot as a people owe our protection to the United States of America, or to any other foreign power; that that protection must either be borne by ourselves or by ourselves in conjunction with Great Britain and in co-operation with the mother country.

Allow me, Mr. Speaker, for a few moments then to take up the question of how this protection is to be given. In the first

place I recall the circumstances under which my motion was introduced and what has taken place in the way of more or less important events since. Recollect that my motion deals simply with a stated, regular, uniform, normal line of proceeding and policy. Let us argue that out first. It seems to me that when you boil down all the propositions that are made you get down to two propositions, one or the other of which must in the end be adopted, and I desire for a very few moments to canvass these two propositions not as an advocate who has dogmatically made up his mind and who admits of no reason on the part of one who takes the oposite thought and might wish the opposite course. But let us as far as we can, think around them and see what the two mean.

The first is the policy of a fixed annual contribution in money to the British government or the British admiralty. Now, that divides itself apparently into two branches but it is really the same thing. One man says: Send one million dollars or two million dollars a year; another man says: Send a Dreadnaught or two Dreadnaughts, and so far as Canada is concerned these two are absolutely one. We are not in a position to build and equip and send over Dreadnaughts. When we translate our contribution into Dreadnaughts it comes down in the end to money which would be sufficient to build and equip a Dreadnaught and therefore I say there are both parts of the one proposition, an annual fixed contribution of money to the British government for the purpose of national and imperial defence; or if you would rather have it, for the purpose of Canada's defence through imperial co-operation and imperial supreme command in war times. The first difficulty in that is as to fixing the amount of the contribution. The very moment that you sit down in council and say: Let us talk the matter over and fix the proportion that Canada ought to give, you come upon a pretty difficult question. The British taxpayer pays $3.60 per head and that translated in equal proportions to the Canadian taxpayer would mean an amount of money which would be something appalling. Then again; how long shall the sum which you fixed to-day remain the proper sum, and will it be subject to constant revision, constant negotiation, and may be occasional disagreement and consequent troubles. That is one difficulty that arises when you discuss a proposition of a fixed annual money contribution. Another objection raised is that it smacks too much of tribute, that we are a free people, and we do not want to be paying a contribution to the old country for this or for any other purpose. I do not take much stock in that objection. Not one atom of our autonomy, not one atom of our independence, not one atom of our power as a parliament is taken away from us because we decide and by vote do place a certain sum of money into the hands of the British government or the British admiralty to be applied to the purpose of our and the Empire's defence. It is not demanded of us; there is no tribute unless there is force, and unless there is a specific demand which brings the tribute. A fixed sum may be a most willing gift of the most liberty enjoying legislature in the world.

But one says: We pay, but we do not control. That is true; but what are we paying for? We are paying for a portion of the defence of the empire, including ourselves. If we believe that the British government and the British Admiralty have the widest experience, the greatest knowledge, the plans of war more thorough, the expert skill, every appliance and every accompaniment of the effective use of the money which we give, does it matter after all so very much whether we follow the course of the expenditure of that money or not? So that I do not take too great stock in that objection.

Another objection put forth is that it impinges on our autonomy. I have dealt with that in a few brief sentences. To me it does not seem that a free contribution interferes in the least with our autonomy, with our own full and free legislative liberty or in fact with any other kind of liberty which we possess.

Another objection that is made is that Britain may use our contribution in unjustifiable wars, and that we should guard ourselves carefully lest we make a contribution for the equipment and strengthening of a fleet which may be used in wars that we do not approve of. That might be with some countries an objection; but if you take the history of Great Britain for the last fifty years or more, you may pretty fairly come to the conclusion that, as she has not and is not now, so in the future Great Britain will not be liable to carry on unjustifiable wars of conquest. She has more territory than she needs. Her trouble now is to administer the wide territory which she has. Her business now is to defend the borders, already if anything too far enlarged, of her territory. The whole spirit of the old country and its history for the last half century, may make us pretty sure that wars of conquest, undertaken for aggressive purposes and for mere lust of battle, are not likely to take place so far as Great Britain is concerned.

While these objections have some force, though as I think not a force that is irresistible, there are some reasons which appear to me to have deeper force with reference to that method of taking our part in defence. I do not know whether I can make myself understood to the members of this House on this point, but I shall briefly try to do so.

The first and greatest objection which I have to a fixed money contribution is that it bears the aspect of hiring somebody else to do what we ourselves ought to do; as though a man, the father of a family, in lusty health and strength, should pay his neighbour something per month for looking after the welfare and safety of his home instead of doing that duty himself. That seems to me, when you work it out, to be a basic objection to this form of aid. It goes still further than that. Suppose you contribute this year your sum, and next year your equal sum, and thereafter year after year. After ten or twelve, or twenty, or thirty years, you will have paid out an immense amount of money. You will have been protected in the meantime ; but in Canada itself there will be no roots struck, there will be no residue left, there will be no preparation of the soil, or beginning of the growth of the product of defence. Yet some time or other, no one can doubt that with resources and with a population constantly increasing, we must and will have in this country a naval force of our own for our coast and home defence.

The interest that we take in a contribution spent by another is not the interest that I desire for Canada. I want to see something grafted on the soil of Canada's nationhood, which takes root and grows and develops until it incites the spirit of defence in this country, leads to a participation in the defence, leads to that quick interest in it, its glories, its duties and its accomplished work, which is after all the one great thing that compensates a people for great expenditures either on land or on sea in the way of defence and of the maintainance of the rights of the country.

Again, it disjoins what has been joined together from the earliest days of the world's existence—commerce and the protection of commerce. After all, the basic idea of a naval force is the protection of the commerce of a country. A commerce side by side with its protector, and its protector side by side with the growing commerce of a country, flourish best together, and are the surest helpers to each other. That is the idea which is in my mind—that when we make our contributions in the way of a fixed sum and it goes from us, and we are not responsible for it, we have none of the inspiration arising from the growth and development of a system of future defence in our own country. We are deprived of the larger benefit ourselves, and in the future we do no greater service to the empire of which we form a part, in this matter of defence.

Then, again, I think this method ignores the necessities and the aspirations and the prospects of a great people such as the Canadian people are destined to become. We must have beginnings; these must at first be small; but some time, or other, as I have said, our country will have its naval force for the defence of this country if for nothing else. The point with me is as to whether it is not the greater wisdom to sow the seed at once and cultivate its growth, as best we may, in our circumstances and with our resources, until at last we arrive at that stage of expansion which we have reached in other great lines of our country's progress. You will notice that while I have tried to discuss the pros and cons in connection with this method, while I have stated reasons in favour of and others against it, my own mind tends rather towards the employment of another form than that of an out and out money contribution.

The second policy to which I would refer is the assuming by ourselves of the defence of our own ports and coasts, in constant and free co-operation with the imperial forces of the mother country. Let us see what are the objections to and what may be urged in support of that second policy. It has its advocates and its opponents. In the first place we begin with no plant, no expert skill, no trained cadets, no trained sailors. In those respects, Canada is a blank sheet. Whatever may be necessary has to be collected and assembled and developed with such expedition and in such abundance as circumstances will allow. Under that system our first vessels would be British built, British equipped, British manned, British officered from stoker to captain. There is no other way in which we could proceed. We are absolutely bare of the skill, the experience, the training and the machinery necessary to put one single war vessel on a proper footing; but—and it is but the beginning of a circle—the first Canadian owned vessel, built and eqipped in Britain, and sent out to defend our coasts would become the nucleus and the training ground of Canadian stokers, Canadian sailors, and Canadian officers, and by and by perhaps, of a Canadian admiral on the Canadian coast. How much time would be taken in completing that circle none of us can say, but if we begin the tracing of it and follow it fairly and faithfully, the time must come when we get a complete circle and have an imperial adjunct to the British navy for the defence of Canada and the defence of the empire, in which Canada has some of her body, her bones, her blood, and her mental power, her national pride. Then would come the dockyard, which would be of sufficient size to enable us to repair the smaller vessels and in time build the smaller class of vessels that we need at first, to be implemented by co-operation between Canada and Great Britain in the shape of a dockyard sufficient to dock any lame vessel of the Bitish navy that might happen to limp to our coast

and require refitting and repairs. And so, in that progressive, gradual way working up to the fullfilment of this idea, a defensive force in Canada which would be an auxiliary in the case of an outbreak of actual hostilities, which would be sufficient for the ordinary surveillance of our coasts and which would be, in time of war, sufficient to work in conjunction with the main portion of the fleet that would be sent to the part of our country that was menaced.

I have spoken of commerce and the protection of commerce as falling side by side. I believe that Canada has, on the line of water development, as great a future as on the line of land development. We have fallen victims to our imaginations. Struck at once and forcibly by our vast landed estate, we suffer ourselves to think that the land is the sole theatre of the triumphs and the development of Canada. But look at what nature has given us. View the immense oceans on our east and west and the waters that lie between. Note the conjunc- of coal and iron and of lime stone and all building material. Look at our ports and harbours, dotting every portion of our coast, the most of them yet unused and a large number of them serviceable to a degree. Look at the 40,000 or 60,000 fishermen and boatmen on our coasts, our rivers and great lakes, born and bred within the sight of, and largely upon, the water, making themselves fit candidates for the career of commerce and all that pertains to it in the development and progress of this country. It seems to me that with the immense grain producing and meat producting resources of Canada, with our immense productive power in other respects, with our sea and water privileges, the imagination can scarcely grasp the commerce that waits for Canadian vessels, manned by Canadien crews, and a mighty instrument of expansion and wealth to be held almost completely in our own hands. But to accomplish that purpose we must build steel vessels. Take Great Britain and go around its coasts where shipbuilding is carried on from Newcastle to the Clyde, what are the great forces at work? The building of warships is the strong encouragement of the steel and iron commercial shipbuilding in Great Britain to-day. The two are joined. The one works into and out from the other. I say that steel shipbuilding inaugurated in this country developed tc the capacity of turning out war vessels would not only benefit Canada, but Great Britain as well. For the old empire has not passed it zenith.

Though it has had its course of so many hundred years, there is no reason to believe that a still longer course is not before it. I do believe that irrevocable fate decrees the death of nations. I believe that, comparatively, they may have eternal life if they will seek for it in the right direction; and the old blood that some sneer at in the effete veins of the old country may easily be reinvigorated in the overseas possessions by the young flood of life and development and enterprise flowing back into the heart at home rejuvenating and revivifying the race. It is no stretch of the imagination to believe that the empire, with its component parts in full accord may have at some time immense dockyards in the Dominion of Canada, on the Pacific coast and on the Atlantic coast in which will be built not only our own vessels, distinctively Canadian, but a part of the navy of Great Britain itself. In Australia the foundations of such a course are laid. That country to-day has taken this line of policy: within seven years her programme calls for an expenditure of $11,000,000 on torpedo vessels and that kind of coast defence, and $2,000,000 annually thereafter to keep up and forward in an equal line of progression. After having tried the contributory method, Australia has adopted this policy with the best of concert between the mother country and herself, the coast defence in times of peace, the auxiliary body to the fleet in times of war, both carried on with the cooperation and good will, which perfect trust in each other engenders and keeps strong. Cannot we trust the mother country? She has done enough for us in the past and showed her good will. Are we afraid of losing our autonomy? Every move of Great Britain has been to shift responsibility upon us rather than to take it from us. What has she denied to us? If she has erred in any way it has been in the sentiment now wholly extinct that the colonies had better go and fend for themselves; but to-day no man can point a finger to a policy or a solid weighty utterance of Great Britain in which there is the least shadow of a menace that she evens harbours the faintest idea of depriving one of the overseas dominions of her perfect autonomy.

An objection to this method is found in its greater cost. I doubt if the cost would be greater. As I said, our first vessels would actually have to be built, equipped and manned in Great Britain. The cost of these is no greater. It is said it would be ineffective. Ineffective how? As the last line of defence. Certainly it would. If all the battleships of the empire were swept from the sea, the torpedoes and coast defence that any of the colonies might have would make no headway against the combined fleets of the conquerors. But we do not believe that that disaster will occur, and we do not believe it because we have faith that prevision and provision will be made sufficient to obviate any such calamity, the prevision and the provision made by the mutual component parts of the empire, trusting each other with a generous trust, believing that in every time of stress

and difficulty the best councils will prevail and the best course will be taken.

It is said also that there are physical and mechanical difficulties to be overcome. I have mentioned these—they can be overcome. Time and the application of a reasonable amount of resource will overcome those difficulties and place us where we have had to place ourselves with reference to every other great line of development; we must begin at the beginning and work up gradually until we gain the skill, the plant, the machinery and the power to make for ourselves what at first it was physically impossible for us to make. I do not know which of these forms our aid will take after due care and consideration but whichever form is chosen, one thing is certain, that something ought to be done—and done now. Our circumstances, our manhood, our sense of gratitude and our sense of right all demand that something should be done, something adequate and something now. What boots it to drift from year to year? Are we proper stewards of this heritage if we allow it to go one moment longer without some proper care and provision for its defence? Are we doing our duty as men unless we put our own hand in our own pocket and share the burden of the defence of the heritage which is ours?

For what have we had from Great Britain? Our heritage, we are proud of it and we boast of it, has been conquered and held against all comers by Great Britain. Go back over a few centuries, watch the wars with European nations, the wars with the Indians, the first possessors of this continent, the struggles in 1776 and 1812, with the American Republic, Take your pencil and add up the treasure that Great Britain has expended during all that long series of years in order that this heritage might be free to those who now possess it—and the wonderful thing about it, which stirs our hearts and which calls for our concurrent action of gratitude, is that after all that expenditure of treasure and of blood, she handed it over to the Canadian people without encumbrance of any kind—no mortgage upon it, no balance to be paid, the patient British tax-payer footed all expenses and gave it to the colony that he loved and to the people for whom he had prepared it. Thereafter she has guaranteed by her army and navy our security. Our eastern gateway stands open ,our western gateways are unblocked, the ocean path is as secure as the streets of a city. Why? Because of the guarantee of Britain's navy and of Britain's prestige. For all of that she has not asked one penny of tribute from these people, she has placed no contribution upon them. Our borders have been preserved. When the Fenian Raids of 1866 took place, what was the power that stood upon our frontier? The British regulars joined with our own volunteers stood as the defence of Canada. The British government paid all the bills; and the British government afterwards paid the indemnity for the damages which were caused by the invaders. When the Red River rebellion took place, and our western heritage was in doubt, it was Wolsley with the British regulars that, joined with our own volunteers, made the long and tedious journey to that far distant section, and stood for the protection of our nascent nationality. Great Britain paid all the bills. In the Riel rebellion our volunteers and our resources were sufficient to quell the rising; but just outside the ring stood the might and power of Britain, ready to interfere if any one had lifted hand against the nationality and the integrity of this country. Our rights have been upheld, our rights of fishery and navigation in the Atlantic and on the Pacific. When the threat was made that if Canadian vessels were found within the prescribed sealing area they would be confiscated, and our men imprisoned, it was the might of Britain which intervened and saved Canadians arrest and indignity. When Cleveland's message went out in 1888, it was Britain's prestige and power which robbed it of its sting, and which made us rest in peace because that power and that prestige were behind us. Our liberties have been guarded. What have we asked that has not been given to us? Much that we have not asked has been freely bestowed. The rivals in long years of war, when once the war was ended, became equals in peace, guaranteed in their language, their creed, their rights and their privileges; and from that day to this we have lived together in more or less perfect peace, joined as Canadian citizens in common love for our common country, and a desire to develop it and to make it, if we can, the greatest in the world.

Our commerce has been protected. Wherever a Canadian vessel goes, wherever a Canadian trader travels there he finds in every city, in every port, the ubiquitous protection of the fleet, and he finds there a representative of the best consular and diplomatic service in the world. All of these things cost money, all these are maintained there by Britain. The expense of every diplomatic establishment and of every consular agency is paid for by the British government and is at our free service. When we go to Madrid to negotiate a treaty, or to Paris to negotiate a treaty, or to Tokio to have some difficulties arranged, what do we find? The prestige and good will of Britain, and the embassy, the diplomatic service, all at the free use and for the free advantage of the

people of Canada, all without money and without price to ourselves. All these we have accepted, on all these we have relied, by all these we have profited, and the only thing we have given in return is now and then some cheap criticism, and more or less scant gratitude—not a very worthy return for the services that have been given to us. If we had been dependent on ourselves, what harassing, overshadowing fears would have been ours? What perils would we have incurred by sea and by land? What tremendous expenses would we have incurred with insufficient national insurance? What probable fire disaster extending even to loss of home, of name, of distinctive national existnce. That for a century our farmers have tilled their acres in perfect peace, that in peace our fishermen have gathered their waterbred harvests, the merchant handled his wares, the doors of external commerce been kept continually open and the ocean passageways secured from molestation is due to the fact we have been safely insured in the greatest guarantee company of the ages, John Bull & Company, who has charged us no annual premiums, who has given us an incontestible policy, an unquestionable security, as much as anything can be unquestioned in this variable world of ours. But she has also been our banker. Her money has built or partly built, our great railways, our canals, many even of our public buildings. Her money has furnished the life blood for our municipalities, for our great corporations, for great industrial concerns and development companies. To what nation amongst all the nations could we have gone with such assets, and assurances of good will, of ready resources and low rates of interest? If we were to wake up to-morrow and read that the British fleet had been swept from the ocean, that an irretrievable disaster had come upon her, what a feeling of insecurity, of absolute and utter loss, what a deprivation of power would take place in this country? Is there any doubt? I do not believe it will take place, because as I said before, my faith is strong that the good sense and cooperation of the various component parts of the British empire will make such reasonable provision that such a disaster will not come within the category of possibilities. But if it were to happen, can we picture to ourselves what would be the result?

Well, in the end some one will snarl and grow cross at this long harangue, and say, 'Oh well, let Great Britain fight her own battles, she is able to do it.' Yes she is. But suppose her battles are our battles, how then would we look at it? Her battles have been our battles, her battles of the future will be battles for her defence, and the defence of those that belong to her as dependent and oversea dominions. I cannot conceive, as I said before, of Britain fighting an aggressive war. To-day she is not an aggressor, she has not been for half a century. Her wars are our wars, her battles are our battles. One sees plainly, if a fleet were to invade this country and the British fleet were to range itself against our enemies, off our own coasts that it would be our battle waged in our defence. But suppose the battle is fought off the coasts of the threatening enemy; suppose, better yet, it is fought in the emergent pass ways when the vessels of the enemy are issuing from their ports one by one in straggling order before their full fighting power is possible and their full deployments made? Is not that our battle just the same as it would be if it were fought within sight of our own coasts? It seems to me that the best place to fight a battle for the defence of Canada, for the defence of Australia, is to fight it in the very ports and passageways of the enemy. That is the first, the primal, the effective line of defence. We must not think that because we are not in sound of the artillery or in sight of the vessels that are engaged therein, it is therefore not our battle.

Now, all this refers particularly to my resolution. Let me say two things; first, that my resolution explains itself. My suggestions, or thoughts, are the crude thoughts of a man who has no expert knowledge but who reads, observes and forms an opinion. They are worth what they are worth and no more. Their inadequacy does not militate against the spirit and principle of the resolution. They are the contributions, for what they are worth, of my own thought and my own ideas towards the discussion of this question. Let not opposition that may frame itself against my particular details consider that it is necessary to frame itself as against the resolution which is broad, comprehensive and gives complete freedom of detail even to the slightest and most distinct particular. So far I have been dealing with what may be called the stated, normal policy that I think Canada ought to adopt; home defence, by a coast line and harbour protection of torpedo vessels at first which would make the attack of the rambling, raiding cruiser a doubtful and a dangerous one, which would ward off the first attack until more sufficient aid could be brought if the invading force were superior to the defence. But when once we settle upon this policy —and I hope we will soon settle upon it— there is another feature of the case, and it is this. Outside of any settled action, outside of the normal condition of things in society, in the world, in nationhood, occurrences arise, special emergencies, that are unexpected, suddenly loom in view, a great crisis, a great danger. That is absolutely outside of the normal policy

to be carried on year after year with settled purpose and upon a settled plan. Every one of these emergencies must be met as it comes and met according to the gravity and importance of the occurrence. Since my resolution was introduced into this House occurrences have taken place. I am not so sure of my knowledge as to dogmatically declare that this is all an overnight panic and that there is nothing in it. When weighty men, the foremost statesmen in the British world and, may I say, in the world itself to-day, on both sides of party politics, utter their weighty warnings, which to me, are a sign of graver thoughts yet unexpressed that peril stands at the gateway, that an emergency of great gravity has arisen, then we are face to face with a condition which is to be met outside of the normal rule. When, in 1899, Kruger attempted to drive the British into the sea and take away the great outposts of South Africa from the British dominion, that was an emergency. That emergency impressed itself upon the people of Canada and aroused to white heat the loyalty and devotion, to Canada first, because an attack upon that outpost was an atack on Canada, and to Great Britain in the second place, because of her sacrifices in behalf of Canada for centuries, which would not be denied, which sought for immediate action and followed it up heroically on the plains of southern Africa, with glory to every participant, with honour to Canada and with a great addition of prestige and power to the old land herself. For every threatening rival nation, which, up to that time, had not been sure and was querying thus: 'Will the colonies stand by the mother country?'—queried no longer and knew that if they unjustifiedly made war against Great Britain they must count on the opposition of every colony and overseas possession that Great Britain cradled with her empire. Was that of no force, no weight, with the councils of Europe and of the world ? I believe it was. To-day, peril stands at the gateway. It is not for me to say how great it is, but I cannot brush it aside. To-day it impresses itself upon the gravest statesmen of the old country; to-day it appeals to Australia until public subscriptions are taken and the government is being importuned to do even more than its settled policy to meet the emergency; to-day little New Zealand gives one Dreadnaught and offers a second and to-dav Canada faces that position of peril, that imperial emergency. Let me say to my right hon. friend that if, after careful consideration, he proposes to this parliament a means for meeting that emergency adequately, by the gift of Dreadnaughts or the gift of money, this side of the House will stand beside him in thus vindicating Canada's honour and strengthening the empire's defence.

Mr. FOSTER.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). Mr. Speaker, to the eloquent and able observations with which the House has just been favoured by my hon. friend from North Toronto (Mr. Foster) very little exception, if any, can be taken by any one and certainly not by myself. If my hon. friend will permit me, and if he will accept it from me, I will offer him, in all sincerity, my hearty congratulation, for the temperate and moderate manner in which he has approached a difficult and very important subject. Let me say at once to my hon. friend that the only exception which I have to take to the observations that he has offered to the House and to the policy that he has, to some extent, outlined for us, is simply that his conclusions have been too indefinite and that they should have been presented in a more concrete form. I was anxious to hear from my hon. friend what would be the argument which he intended to apply in support of the resolution which he has placed in your hands, Mr. Speaker, and which has been upon the Order Paper for the last two months. I am sure I will not offend my hon. friend when I tell him that in my estimation his resolution was not perhaps as clear as the crystal water of the mountain brook. My hon. friend did not define what was the policy that he would like us to adopt as explicitly as I would have desired. The gist of his proposition is to be found in these words :

> Canada should no longer delay in assuming her proper share of the responsibility and financial burden incident to the suitable protection of her exposed coast line and great seaports.

The only interpretation I could give these words was that in the opinion of my hon. friend (Mr. Foster) Canada had been remiss in the duty she owes to herself of providing for her own defence. This seemed to me somewhat surprising in view of the fact that Canada has no quarrel with any one, that she does not desire any territorial aggrandizement, that she occupies geographically an issolated position, and that she has only one neighbour, with whom she has been at peace for nearly 100 years. But, now that we have had the pleasure and the advantage of listening to my hon. friend, we have learned that his opinion is not that Canada has been remiss in the duty she owes to herself, but that in his estimation Canada has been remiss in the duty which she owes to the empire. Well, let me say to my hon. friend, and I say it in all sincerity, because I hope that if we differ in details we shall be able to agree on the main issue, let me say that in my estimation, if Canada has been remiss to the duty she owes to the empire we are not conscious of it.

Sir, we will not for a moment admit that impeachment. We are British subjects; Canada is one of the daughter nations of the empire and we realize to the full the rights and obligations which are involved in that proud title. It has been, it is, it shall be our unalterable determination to meet and to carry out every duty which is implied by the title of 'British subject.' Nay, more—not only will Canada fulfil every obligation which is implied by that title, but I think I make bold to say that we will rise to every sacrifice that may be needed in order to maintain unimpaired the rank and status which is occupied by Canada in the British empire and the rank and status which is occupied by the British empire throughout the world. But, Sir, I may say—and I do not say it in reference to the speech which we have just listened to —I may say that we are not to be carried away, we are not to be stampeded from what has been the settled policy and deliberate course which we have laid down, by any hasty, feverish action, however spectacular such action may be. It behooves us as freemen to look at our position calmly and deliberately, to review the situation as it is, to ascertain where we are, and to determine whether we should alter or whether we should persist in the course we have adopted long ago. My hon. friend (Mr. Foster) has told us, and I agree with him, that this question should be approached not only from the point of view of Canada, but from the point of view of the British empire at large. I agree with everything my hon. friend has said, and eloquently said, with regard to the admiration and devotion which every British subject, every Canadian, should have in his heart for the British empire. I agree with my hon. friend that the greatest phenomenon recorded in the pages of history is the existence of the British empire as it is at this moment. In its origin perhaps it may not have differed widely from the origin of other empires, but in its continuance and permanency is the phenomenon. The empire of Rome, the empire of Alexander, the empire of Charlemagne, the empire of Napoleon, were all built up and maintained by force and the moment force gave way these empires crumbled. The empire of Britain has been founded less on war than on discovery and colonization, and wherever founded in any part of the world, whether by war or colonization or discovery, it has been maintained only by the free will and consent of the peoples who now acknowledge British supremacy. To-day the British empire is composed of a galaxy of young nations proud of their allegiance to the British Crown and proud also of their own local independence. And though they may have a common aim, each has reserved to itself the duty and the right to develop its own resources and to attain its aim according to its own views, and by its own methods as may be best suited to the peculiar cimcumstances of each.

Now, it may be said that defence which is the duty of all nations is a matter as to which there should be a common aspiration. Yes, I agree in that, but at the same time the young daughter nations of England have insisted that even in the matter of defence they should preserve in its entirety local autonomy, and that each should approach this subject according to its own lights. Let us not disguise the fact from ourselves that at present there is a passing wave in which we can trace anger, enthusiasm and fear, and which directed and pushed us to depart from our policy and to contribute at once to the British navy. Well, Sir, let us view this question as it is, let us not blink at it, let us realize that it is not the way in which in the past we have understood our duty. This question is not new; we are familiar with it, it is not of to-day or of yesterday. I will not say it is as old as the hills, but it is as old as confederation itself and it comes to the front periodically. It presented itself in a concrete form in the Imperial Conference of 1902 to those who were there assembled from all parts of the British empire conferring with the government of the mother country. The proposition was placed before us that all the self-governing dominions of the British Empire should contribue to the army and to the navy. The Canadian ministers who were present attending that conference did not view that project with any favour. They received it with respect but they declined to accept it and thev presented their views in a state paper wherein they stated what they were prepared to do so far as Canada is concerned. Their views thus stated have often been quoted in this House, but I think it is opportune that I should quote them again. This is the statement:

> At present Canadian expenditures for defence services are confined to the military side. The Canadian government are prepared to consider the naval side of defence as well. On the sea coasts of Canada there is a large number of men admirably qualified to form a naval reserve, and it is hoped that at an early day a system may be devised which will lead to the training of these men and to the making of their services available for defence in time of need.
>
> In conclusion, the ministers repeat that, while the Canadian government are obliged to dissent from the measures proposed, they fully appreciate the obligation of the Dominion to make expenditures for the purpose of defence in proportion to the increasing population and wealth of the country. They are willing that these expenditures shall be so directed as to relieve the taxpayer of the mother country from some of the burdens which he now bears; and they have the strongest desire to carry out their defence schemes in co-operation with the imperial authorities, and under the advice of experi-

enced imperial officers, so far as this is consistent with the principle of local self-government, which has proved so great a factor in the promotion of imperial unity.

Now, Sir, this paper has been sometimes criticised, but it has never been seriously challenged so far as I know. At all events it has never yet been challenged on the floor of this House, and if I understood the observations of my hon. friend (Mr. Foster) aright, he does not now dissent from the proposition which is therein made.

Nay, more, the policy which we there laid down has been adopted by some of the dominions which had not accepted it before. The Commonwealth of Australia had for many years made a contribution of $1,000,000 a year out of its treasury to the imperial exchequer for the purposes of the navy. This policy has been reversed by the Australian government, and Mr. Deakin, the late Premier of Australia, one of the ablest men of the British empire, a man of lofty ideals, has himself introduced a resolution on the line of the Canadian policy, if I may so call it, providing for the local defence of Australia. Under the old arrangement Australia contributed £200,000 to the British squadron. Under the new arrangement, that of a flotilla, there will be no money contribution. Instead, it is proposed to build and equip six destroyers, nine submarine, and two depot or parent ships, which the Admiralty estimates will cost £1,277,500. In making his proposition, Mr. Deakin spoke as follows:

> The real question is one of control. The problem before us is the association of our small naval strength with the great organization of fleets of the mother country, so as to secure the highest efficiency and unity without sacrificing our right to the constitutional control of our own funds, and of any flotilla built and maintained at our own cost.

Yet there is more than this. If there is a man in the British empire who has given his thought, his heart and his soul to the great problem of the defence of the British empire, a man who has made it the study of his life, I think I am justified in saying that that man is Lord Milner. He was in this country a few months ago, and discussed this question at various places, and everywhere he took the position we are now taking. At Toronto, where he discussed the question perhaps more fully than anywhere else, he spoke thus:

> I have never been a great advocate of contributions from the self-governing states to the army and of the United Kingdom. I am sure that the form which imperial co-operation in this field will ultimately take, and ought to take, the form at once most consistent with the dignity of the individual states and most conducive to their collective strength and organic union is the development of their several defensive resources in material and manhood.

Sir WILFRID LAURIER.

Therefore, I think I am justified in saying that our policy is the one which commends itself to all the thinkers who have given any attention to this subject. I might also quote the opinion of a veteran Canadian statesman, Sir Charles Tupper, who, in a famous article which I am sure no one has forgotten, wrote these very pregnant words:

> The policy of levying a large tax was a policy unheard of, mistaken and fraught with danger.

Well, Sir, this is the position we have taken; this is the position we maintain to-day, and, as I understood my hon. friend from North Toronto, while he was not very emphatic for it, he was not against it either. If I understood him aright, he insisted that something should be done; but in what particular form it should be done, whether by a contribution to the imperial treasury or by the development of our own naval resources, he left an open question. Well, to us it is an open question, and we see no reason in anything that has taken place recently, to depart from the policy that we laid down in 1902.

It may be said—and my hon. friend approached this subject, I must say, in a very moderate and fair way—that though this was our policy, we have not lived up to it. I deny the impeachment. We have done a great deal for defence, though not perhaps as much as we might have done. At the conference in London in 1902 we stated that we undertook to develop our own defences by land and by sea. With respect to our defences by land, we have done more than our duty; we have done what I think we have reason to be proud of. In 1902 we spent in round numbers two and a half millions on our militia, and last year we spent more than six and a half millions. So that in five or six years we have just trebled our expenditure on the militia. What have we done for that increased expenditure? We have taken over the garrisons of Esquimalt and Halifax; we have relieved the British treasury to that extent. We have organized a small permanent force. We have established instruction camps. We have provided arms and ammunition, and have drilled more than 50,000 men; and, Sir, those who were at Quebec at the time of the Tercentenary celebration and saw the review of the Canadian forces to the number of some 12,000 men by the Prince of Wales, could not but feel a sense of pride in their hearts at the appearance of those men, looking as they did like veterans, and receiving the praise of that veteran of many battlefields, Lord Roberts. In the development of naval defences, I admit we are altogether behind the times. Engaged as we have been in works of peace, we have delayed and put

off the development of our navy. But, Sir, I agree with my hon. friend that we shall undertake this work also, and undertake it immediately; but upon what lines should we do it? Upon the lines, I repeat, of our own action—of undertaking to do with respect to a navy what we have done with respect to the militia. I think we should commence to establish the nucleus of a navy. But I call the attention of my hon. friend to this, and I am sure he will agree with me. Is he sure where we should begin and end in naval matters? In this age of invention naval construction has varied almost from year to year. Is it not a fact that the armaments of to-morrow may be so improved as to render the armaments of to-day obsolete? When we were in London in 1902, what we had in our minds was training ships; they were of great importance. When we were again in London at the conference of 1907, training ships were altogether forgotten; then it was the defence of our seaports that was the important question before us. Lord Tweedmouth, of the Admiralty, speaking on the question of what should be done by the self-governing dominions, ignored the question of training ships altogether, and insisted that we should at once make provision for the defence of our sea harbours. This is the language he made use of on that occasion:

I understand that, in Australia particularly, and in South Africa, it is desired to start some naval service of your own. Perhaps I might suggest that if the provision of the smaller craft which are necessarily incident to the work of a great fleet of modern battleships could be made locally, it would be a very great help to the general work of the navy. You cannot take the small craft such as torpedo boats and submarine across the ocean, and for warships to arrive in South Africa or in Australia or in New Zealand or in Canada, and find ready to their hand well-trained men in good vessels of this kind, would be an enormous advantage to them. It would be an enormous advantage to find ready to their hand men well trained, ready to take a part in the work of the fleet. There is, I think, the further advantage in these small flotillas, that they will be an admirable means of coast defence; that you will be able by the use of them to avoid practically all danger from any sudden raid which might be made by a cruising squadron. What I should like to point out is that, above all things in this work, the submarine is probably the most important and the most effective weapon. It is the weapon with which you can meet a fleet attacking during the day, or individual ships attacking by day. I am assured by my advisers at the Admiralty that it is a most important weapon, that it has already reached very considerable development, and it is one on which we may rely with great confidence.

In another part of his observations he spoke as follows:

Then I should like to say a single word on the further point of the provision of docks and coaling facilities in the colonies. The enormous development of the modern warship entails important consequences. These great modern warships require large docks to contain them. I think we are getting on well with the provision of docks. At this moment in our own country and abroad we have, I think, 13 government docks which will take in our largest ship, the 'Dreadnaught.' I think in the course of the next two years we shall have four more, which will make about 17 altogether. But it is very desirable that we should have in all parts of the world docks which could take such great ships, supposing they were to meet with an accident or were to receive damage in war.

This was only two years ago, and the chief Lord of the Admiralty then accepted in the fullest sense the policy of the Canadian government that we should ourselves maintain our own navy and not contribute to the Imperial Exchequer. He accepted to the fullest extent the proposition that we should invest in and build submarine torpedo boats and tugs. Two years have elapsed and to-day, if we were to listen to a certain press and give attention to the wave which is passing, we would send a Dreadnaught to Great Britain. But all these spasmodic efforts would not, to my mind, furnish a proper defence of the British empire. How should that be done? We should proceed as we have done with our militia. We should consult with the naval authorities of the British government, as my hon. colleague the Minister of Militia (Sir Frederick Borden) has done with the council of defence in London; and after having organized a plan, we should carry it out in Canada with our own resources and out of our own money. This is the policy which commends itself to the government.

My hon. friend concluded his remarks by saying that if it were decided to offer a Dreadnought to Great Britain, that decision would be acceptable to the opposition. This brings us to something which is in the air at present and which no British subject can ignore. For a hundred years and more the naval supremacy of Great Britain has been unquestioned—nay more, British supremacy on the seas has been so absolute that no one supposed it could ever be disputed. But this is an age when events happen very fast. We have learned lately that the foremost military power of the world at present is contemplating perhaps to cope with Great Britain on the high seas. We have, perhaps, reason to believe, as we have just been told that Germany is building more ships than Great Britain and building them more rapidly. Possibly there is a conclusion to be drawn from this, and the only conclusion is that Germany intends sometime to do with Great Britain on the high seas what she has done with France on land. Everybody knows, it is a matter of

history that Prussia had for years been silently preparing to cope with France which, up to that time, had been the greatest military nation in the world, that Prussia waited its opportunity, and when that opportunity came, delivered a mortal blow. If it be true then that Germany is organizing on the seas, no British subject can afford to be indifferent to the prospect. For my part I do not think that the danger is imminent. Germany is a great nation, she has made greater progress in peace and war during the last 60 years than any other nation; she has increased her population from 40,000,000 to 62,000,000; she has developed her industries and commerce in a marvellous manner; she has increased her wealth prodigiously. But to bring the German navy up to the standard of the British, to accomplish in a few years what has been the result of centuries, may be a task which is even beyond the ability of Germany, with all her great ability and resources. At all events, we know that the British nation is not unduly alarmed. We have the testimony of the great organs of English public opinion that Britain can cope with Germany alone, without the assistance of the British colonies. We know that the British government has, in response to the generous offer made by New Zealand of a Dreadnaught, postponed its acceptance. There is something else not to be lost sight of. I appeal to every student of history whether it be not the case that although England has been of all nations of Europe the one which has given more attention to trade than to war, she has generally come out victoriously in all the wars in which she has been engaged. This, she owes, in the first place, to the courage, the endurance, and dogged pertinacity of her sailors and soldiers, but surely in no smaller degree also to the fact that while other nations were wasting their energies in war, she was attending to the arts of peace and amassing wealth, and consequently had an abundance at her hand to make use of when other nations were deficient in that greatest essential to success. But although I do not believe that the danger is imminent, I have no hesitation in saying it would be folly to sleep in a sense of the fullest security. Vigilance, and eternal vigilance, must be the watchword to-day, not only in England but in Canada and every other part of the British empire. On more than one occasion I have said that I would deprecate Canada being drawn into the vortex of militarism existing in Europe. The situation of Europe to-day is one which cannot be characterized as other than madness. Europe is an armed camp. Every nation there is living in a condition of armed peace almost as intolerable as war itself.

Sir WILFRID LAURIER.

England is the one nation which has not lost her head, which has resisted militarism as much as she could, which has refused to adopt the conscription and sacrifice her children on the altar of this insatiable moloch. I hope the day shall never come when we will be drawn into the conflicts of Europe. But I have no hesitation in saying that the supremacy of the British empire is absolutely essential, not only to the maintenance of that empire but to the civilization of the world. I have no hesitation in saying that the supremacy of the British empire on the seas must be maintained in the highest degree of efficiency it has occupied the last hundred years. I have no hesitation in saying also that if the day should come when the supremacy of Britain on the high seas will be challenged, it will be the duty of all the daughters of the nation to close around the old mother land and make a rampart about her to ward off any attack. I hope that day will never come, but should it come, I would deem it my duty to devote what might be left of my life and energy to stump the country and endeavour to impress upon my fellow-countrymen, especially my compatriots in the province of Quebec, the conviction that the salvation of England is the salvation of our own country that therein lies the guaranty of our civil and religious freedom and everything we value in this life. These are the sentiments which animate the government on this occasion. As I said a moment ago to my hon. friend, the resolution he has offered is not sufficiently explicit in my estimation, and if he will permit, I will substitute for it —and hope with his concurrence—the following resolution:

This House fully recognizes the duty of the people of Canada, as they increase in numbers and wealth, to assume in larger measure the responsibilities of national defence.

The House reaffirms the opinion, repeatedly expressed by representatives of Canada, that under the present constitutional relations between the mother country and the self-governing dominions the payment of any stated contribution to the imperial treasury for naval and military purposes would not, so far as Canada is conecrned, be a satisfactory solution of the question of defence.

The House has observed with satisfaction the relief afforded in recent years to the taxpayers of the United Kingdom through the assumption by the Canadian people of considerable military expenditure formerly charged upon the imperial treasury.

The House will cordially approve of any necessary expenditure designed to promote the organization of a Canadian naval service in co-operation with and in close relation to the imperial navy, along the lines suggested by the admiralty at the last Imperial Conference, and in full sympathy with the view that the naval supremacy of Great Britain

is essential to the security of commerce, the safety of the empire and the peace of the world.

The House expresses its firm conviction that whenever the need arises the Canadian people will be found ready and willing to make any sacrifice that is required to give to the imperial authorities the most loyal and hearty co-operation in every movement for the maintenance of the integrity and the honour of the empire.

At six o'clock House took recess.

After Recess.

House resumed at eight o'clock.

Mr. R. L. BORDEN (Halifax). Mr. Speaker, I am sure that the House listened with a great deal of pleasure to the very eloquent speech of the Prime Minister, and I was glad to learn that he did not take any exception to the remarks of my hon. friend from North Toronto (Mr. Foster) except perhaps in one unimportant particular; I was pleased also to observe that he did not find any fault with the resolution proposed by my hon. friend except that it was not sufficiently definite. I was rather led to believe from that remark that the resolution which the Prime Minister himself would propose would be of a definite character, but I am bound to say that I found his resolution even less definite than that which was proposed by my hon. friend. Now the right hon. gentleman has spoken of the relations of Canada to the empire, and I for one am prepared to go as far as he, as far as any hon. gentleman in this House, in absolutely maintaining in this country of ours the full control of our own affairs, which we have enjoyed for many years in the past. I do not think there is any difference of opinion between the two political parties in Canada in that respect. It might be wise to refer for a moment to the circumstance that Great Britain, by giving to Canada and the other great dependencies of the empire, absolutely full control of their own affairs, an absolutely autonomy in respect of self-government, has, I believe, increased and strengthened the ties which bind these great dependencies to the empire as a whole, in a measure which would not have been practicable by any other policy. I believe also that the ties which bind Canada to the empire to-day are firmer and surer and more enduring than they have been at any time in the past.

It might be well to refer for a moment to the curious evolution by which this has been brought about, and to point out to the House that it has been accomplished by exactly the same means as the system of parliamentary government, both in Great Britain and in Canada, has been evolved. It has been accomplished by the circumstance that the constitutional law of Great Britain is to-day for the most part an unwritten law, and that which determines the relations between the great dependencies of the empire and the empire as a whole, is to a great extent a matter of unwritten law. I am not unmindful that we have a written constitution, I am not unmindful of the fact that there is, both in Great Britain and Canada, a great body of written law setting forth constitutional provisions; but the British system of parliamentary government chiefly depends upon that which a great French writer, M. E. Boutmy, in his work upon the constitutions of Great Britain, the United States and France, has called the customary law of the constitution; and the development of this customary law has had more influence in bringing about the evolution of parliamentary government, both in Great Britain and in Canada, than any other means of which I am aware. It seems to me that the relations between Great Britain and her dependencies are being moulded and developed to-day, as they have been during the past 50 years, by the same influence of unwritten law and custom; and that makes it all the more important to us to-day to understand clearly what we propose to do, to see clearly the path on which we are entering, and to understand thoroughly what the consequences will be to Canada and to the empire as a whole of the action which we propose in this regard. I understand that we have a witten constitution in Canada, a constitution which is a statute of the imperial parliament. I understand also that in Great Britain the King has, as a matter of formal law, of strict legal, but not of constitutional right, the power to impose his veto upon any statute enacted by the parliament of the United Kingdom. But I also understand that by reason of that which Mr. Lowell, the new president of Harvard, has called custom superimposed upon law, and which Mr. Anson another great constitutional writer, has called law overgrown by custom, the parliament of Great Britain to-day, although it has the legal power, has not the constitutional right to alter the British North America Act without the consent of the people of Canada. So we understand that we have in this country full powers of self government, and that those powers of self-government depend, not only upon the written but upon the unwritten law, which has so largely moulded British institutions and the relations of the great dependencies to the empire in the past.

Coming now to the consideration of the matter which is immediately at our hand,

it has been said, we are all in the habit of saying it, my right hon. friend has uttered the boast, if it be a boast, some eight or ten years ago, that Canada to-day is a nation, and we are all proud to recognize and to hail Canada as one of the great nations in the greatest empire that the earth beholds. But Mr. Speaker, let us not forget also that a national status implies national responsibility. It is of no use for us in Canada to speak of this country as a nation, and to shrink in any manner from the discharge of our national responsibilities. What are those responsibilities? Acknowledged in every civilized community, recognized among all the great nations of the earth, a primal responsibility is the defence of their territories and the protection of their commerce. I do not gather, Mr. Speaker, that my right hon. friend dissents in any way whatever from the enunciation of that principle which was laid down this afternoon in such eloquent terms by my hon. friend the member for North Toronto.

Now I am prepared to recognize also, as the Prime Minister has very properly observed, that the people of this country, so far as military defence is concerned, have done a great deal, and have done a great deal more in recent years than they ever did before. As a matter of fact, if we look at the expenditure for military and naval defence of the whole empire and of the great dominions of the empire, we find that in 1905-6 Great Britain and her colonies paid respectively the following sums per head of the population:

	£	s.	d.	f.
United Kingdom	1	9	3	..
Canada		4	6	1
Newfoundand		..	3	1
Australia		5	..	2
New Zealand		5	2	1
Cape of Good Hope		5	1	..
Natal		2	11	2
Transvaal		2	..	1

So that if you look at the amount expended on both military and naval defence, you find Canada pretty well up to the standard of all the great self-governing dominions of the empire. But, I would venture to submit that our expenditure has, to some extent, been appropriated to the wrong purpose. What is the object of our military expenditure? I know that my hon. friend the Minister of Militia and Defence (Sir Frederick Borden) has stated in the House that the military expenditure of this country is not larger than is necessary for the aid of the civil power. I would hardly think that an expenditure of $6,000,000 annually would be necessary for that purpose, and, while I am not prepared at the present moment to lay down any figure which would be a proper amount for the people of Canada to set apart for the purpose of defence, I do most unhesitatingly say that of the portion which the people of Canada should set aside for that purpose out of their public revenues, a very substantial portion, and, in my opinion, not less than one half of the amount appropriated for defence should be devoted for naval instead of to military defence. I would like to point out to the country and to the House some considerations which lead me to that conclusion. Where is the great market of the people of Canada to-day? We know that it is across the Atlantic ocean, and we believe that in years to come it will also be across the Pacific ocean. The great market of Canada to-day is not the market which would be especially safeguarded and preserved to us by the expenditure of a large amount of money for military purposes, but it is a market which may be preserved to us by expenditure for naval purposes. Let me point that out to you, Mr. Speaker, and the hon. gentlemen of this House by this illustration. Take the total agricultural exports in the last year for which we have any statistics, and you will find the following:

	Value of exports.
Cereals	$62,548,153
Live animals	10,897,232
Dead meats	11,494,665
Dairy products	22,995,860
Total	$107,935,910

You will also find, and this I desire to emphasize, that the ocean-borne exports amount to no less a sum than $104,740,000 and land-borne exports to $2,198,000. Therefore, as far as our commerce is concerned, I venture to submit to you, Mr. Speaker, and to the members of this House, that the expenditure in defence of our seaports, in defence of our coasts and in defence of the waters of the ocean, which are immediately adjacent to our coasts, is of immensely greater advantage and of immensely greater importance than the expenditure which, year after year, we are disbursing in connection with the military forces of this country. Against whom could the military forces of this country protect us? Under the law of the land they cannot be taken out of the Dominion of Canada without the consent of parliament. I do not desire in the least to minimize the importance of some expenditure for military purposes, and I am prepared to acknowledge the very great advance that this country has made in that regard in many respects. I am aware that my hon. friend the Minister of Militia and Defence has been invited to a seat upon the Imperial Defence Committee. I am aware that there has been some movement made within the

past three or four weeks for the co-ordination of the general staff of Canada with the imperial staff of Britain. I am not prepared to minimize these things. I do not desire to minimize them but I do desire to emphasize, as far as may be in my power, the importance to Canada of some attempt at naval defence, of the defence of our seaports and the protection of our commerce.

Let us look at the question from another aspect. How many cities and towns are there in Canada which would be open to the raids of a second or third-class cruiser, as pointed out by my hon. friend from North Toronto? I suppose there are not less than forty or fifty cities and towns in Canada of 2,000 population or upwards which would be open to the raid of an enemy coming against our coast. Let us not forget that the danger pointed out to the Commonwealth of Australia by the admiralty itself was the imminence of a movement of that kind in Australian waters and against the Australian coasts in case the empire should unfortunately become involved in any great naval war. We are all aware to-day that the policy of the British Admiralty is a policy of concentration, and we are all aware that the Australian naval programme which has recently been entered into with the full approval and consent of the mother country, is altogether designed to guard the coasts of Australia against a danger of that kind.

In so far as my right hon. friend the Prime Minister to-day outlined the lines of naval defence of this country I am entirely at one with him. I am entirely of opinion, in the first place, that the proper line upon which we should proceed in that regard is the line of having a Canadian naval force of our own. I entirely believe in that. The other experiment has been tried as between Australia and the mother country and it has not worked satisfactorily in any respect. In Great Britain the contribution has perhaps been regarded as rather unsatisfactory. In Australia it failed, in the end, to meet with the approval of the people for the reason that Great Britain felt constrained to ask Australia that the field of operations of the squadron should be extended to the China and Indian seas; and when the operation of that squadron was so extended, the Australians felt that the contribution which they had been making for some years past was not really being used to give that protection to Australia which her interests demanded. So that, the policy of Australia at the present time is to build up a flotilla of submarines and torpedo boats which, in case of war, would co-operate with the armed cruisers and battleships of the British navy. It was pointed out in discussing this question that Australia in providing a force of that kind would provide a force which it would be very difficult if not impossible for Great Britain to send across the seas, and that in thus protecting themselves they were providing the best possible force for the protection of the empire. So, I am at one with the Prime Minister as far as this is concerned. I am at one with him in this respect also that I think that an expenditure of money designed for that purpose ought, in the main at least, to be under the control of our own parliament and that by making an appropriation of that kind and attending to the defence of our own coasts, by co-operation and co-ordination with the imperial naval forces, we would be rendering a real service in the defence of the empire and we would be doing our duty not only to Canada but to the empire as a whole.

My right hon. friend has spoken in very eloquent terms of the necessity of maintaining the integrity of the empire. We are all at one with him there, and there are just one or two observations that I desire to make in that regard. The first is that the loss of the control of the seas by the British fleet means the dismemberment of this great empire. Great Britain having once lost control of the seas it is impossible to conceive that this empire would longer survive. A world-wide empire such as ours; an empire which reaches out on every continent and spreads over every ocean can only be maintained by absolute naval supremacy. The moment a naval power arises which can effectively challenge the supremacy of Britain's navy that moment may the British empire be dismembered and that moment Canada may cease to be among the nations of that great empire. I am not one of those who look to see the integrity of the British empire menaced by the future independence of Canada. Like Sir John Macdonald, I was born a British subject, I shall remain a British subject, I hope to die a British subject. I trust the day will never come when the British flag will cease to float over this Canada of ours. But as has been eloquently said, Britain staggers under the too vast orb of her fate, and so it behooves us her children to decide how we can best assist the motherland to maintain control of the seas. It is not for us to-night to lay down the details of a scheme by which we can best co-operate towards that end, and I agree with the Prime Minister that we should act in conjunction with and by the advice of the British Admiralty. They have experts at their command, they have the experience of the past to direct them, and these we have not. While I venture to think that a system of torpedo boats and submarines such as has been adopted by the Commonwealth of Australia would be perhaps the most effective way in which we could assist Great Britain in a stated policy of naval defence, yet I agree that the Canadian government ought to have the advice of the British Admiralty and lend it-

self to such co-operation and co-ordination as will be best for the whole empire. We are either of the British empire or not of it; we are either in the empire for weal or woe or we are out of it. The unanimous voice of the people of Canada demands that we shall be in the empire and of the empire, and being in the empire and of the empire we must take our fair share of the burden of the naval defence of that empire and particularly of our sea coasts.

I come now to a consideration of the resolution which has been moved by the right hon. the Prime Minister, and I will say that with many portions of it I am in entire sympathy. But, I would like to make one or two suggestions to the right hon. gentleman, and I do not make them in any party spirit or in any carping spirit, because if there is one thing more than another that I would desire it is that the policy of Canada on this great question, and the resolution announcing it should meet with the absolute and unanimous approval of this parliament and of the country. What suggestions I have to make, I make with the sincere desire that we may shape a resolution of which we can all approve and which shall go forth to the world as a ringing declaration that if the mother of nations has to fight the battle of her life, the people of Canada without distinction of party or of creed will stand by her side in that fight. This is too great a question for the introduction of party strategy; it is a question in respect to which we should all rise superior to all party motives, and so I purpose making to my right hon. friend one or two suggestions which I know he will receive in the spirit in which I make them. I do not find any fault at all with the first paragraph which reads:

> That this House fully recognizes the duty of the people of Canada as they increase in numbers and wealth to assume in larger measure the responsibilities of national defence.

The next paragraph of the resolution reads:

> The House re-affirms the opinion repeatedly expressed by representatives of Canada that under the present constitutional relations between the mother country and the self-governing dominions the payment of any stated contributions to the imperial treasury for naval and military purposes would not so far as Canada is concerned be a satisfactory solution of the question of defence.

I would respectfully and very sincerely suggest to my right hon. friend that perhaps that paragraph had better be omitted, and I will tell him why. In the first place because it tells Great Britain and the world what we are not prepared to do when it seems to me that this is an occasion when we should declare to all men what we are prepared to do. My right hon. friend will not misunderstand me; I am as strong as he is in the assertion of the rights of self-government which Canada enjoys. I believe that we enjoy our privileges not by grace but of right, and we enjoy them in the carrying out of the wisest statesmanship on the part of the mother country. But, it does not seem to me that there is any need of asserting now a mere negative proposition such as is embodied in this paragraph. Again, it seems to me that this is a little inconsistent with the last paragraph of the resolution. The day might come—I do not know that it will come—the day might come; it might come to-morrow, it might come next week, it might come next month, when the only thing we could do in the absence of preparation in this country would be to make some kind of contribution. I do not know, and the right hon. the Prime Minister does not know what events may point to. Probably he knows more than I do, and I am not asking him to disclose anything to this House which ought not to be disclosed, but would it not be wise to omit that paragraph altogether? I tell him that I and every man on this side of the House stand firmly for the principle that the rights of self-government which we now hold shall not in any way be detracted from in the slightest degree. But is there any need of inserting this somewhat negative proposition in a resolution which ought to go forth as a message not only to the people of the empire but to the people of the world?

There is another paragraph in the resolution which—and I say it with all deference to my right hon. friend and to any hon. gentlemen whose opinion may not coicide with mine—there is another paragraph in the resolution which does not commend itself to my judgment. It is this:

> The House has observed with satisfaction the relief afforded in recent years to the taxpayers of the United Kingdom through the assumption by the Canadian people of considerable military expenditure formerly charged upon the imperial treasury.

It does seem to me that the occasion is not very opportune for impressing that fact upon the mind of the British tax-payer. It no doubt seems a considerable sum to the people of Canada; I am not disposed to minimize it in any way; but after all, when you compare it with the enormous contributions which have been made for the defence of the whole empire by the British taxpayers for many years past, is it desirable at the present moment that we should put it forward in a resolution of this kind, designed to go out not only to the people of the British empire, but to the people of the whole world? It seems to me, if I may use the word, as I do without offence, to be too trivial a matter to introduce into a resolution of this kind. Therefore I would most earnestly suggest to the right hon. gentleman that it would

be better, in the interest of this country, and undoubtedly in the interest of the empire, that it should be omitted. To omit it would be to emulate something of that generous spirit, that remarkably generous spirit, which is to be found in the utterance of a British naval authority—the First Lord of the Admiralty, I think it was—in 1907. I do not suppose that a more magnanimous utterance ever fell from the mouth of an imperial statesman. He said: 'We are prepared to defend this empire through its entire length, and we do not ask you to contribute one dollar to it; but we shall be glad, so far as your good will and your loyalty will impel you to do it, that you should come to our aid if it pleases you to do so.' But mark, he said: 'We do not even ask it; we will do it ourselves whether you do it or not; but if it pleases you to come to our aid, then the British nation will recognize with appreciation and with gratitude your action in that regard.' Well, Sir, when we are face to face with utterances of imperial statesmanship of that greatness and magnanimity, is it worth while, in a resolution framed for so great a purpose, to refer to that expenditure by Canada, which after all, in comparison with the enormous expenditures of the mother country, must seem extremely trivial, and is indeed trivial compared with what the resources even of this country might accomplish?

Just one word as to a further amendment which I would like to suggest to my right hon. friend. In paragraph 4, he proceeds:

> The House will cordially approve of any necessary expenditure designed to promote the organization of a Canadian naval service in co-operation with and in close relation to the imperial navy, along the lines suggested by the Admiralty at the last Imperial Conference, and in full sympathy with the view that the naval supremacy of Great Britain is essential to the security of commerce, the safety of the empire and the peace of the world.

I would be glad if my right hon. friend could accept the suggestion of inserting in that paragraph some word which would indicate an intention to act promptly. If my right hon. friend would insert before the word 'organization' some such word as 'immediate' or even 'early,' I think it would greatly improve the paragraph, it would meet with my approval, and I do not think it would be disapproved of by any hon. member of this House.

Now, I understand what the right hon. gentlemen contemplated in 1902. At that time he looked to the establishment of a Canadian naval force. At page 18 of the proceedings of the Imperial Conference of 1902 the First Lord of the Admiralty announced this:

> Sir Wilfrid Laurier informed me that His Majesty's government of the Dominion of Canada are contemplating the establishment of a local naval force in the waters of Canada, but that they were not able to make any offer of assistance analogous to those enumerated above.

Then, further on, in a written statement from which the right hon. gentleman has quoted, the following statement of policy is to be found:

> At present Canadian expenditures for defence services are confined to the military side. The Canadian government are prepared to consider the naval side of defence as well. On the sea coasts of Canada there is a large number of men admirably qualified to form a naval reserve, and it is hoped that at an early day a system may be devised which will lead to the training of these men and to the making of their services available for defence in time of need.

That was the statement, but up to the present time, as my right hon. friend is well aware, that has not materialized in anything of value. I know that my hon. friend the Minister of Marine and Fisheries, in a speech at the Colonial Conference, dwelt somewhat on the expenditure of this country on the fisheries protection service; but after all it does not seem to me that that should be taken greatly into account. If you leave that out of the account, you find the record of naval expenditure for 1905-6 to be as follows:

United Kingdom..	£33,389,500
Canada..	Nil.
Newfoundland..	3,000
Commonwealth of Australia.	255,651
New Zealand.. .. ..,	40,592
Cape of Good Hope..	50,000
Natal..	35,000
Transvaal..	Nil.

I do not think that I am making any statement in breach of confidence when I say that I am thoroughly aware that the late Raymond Prefontaine thoroughly intended to establish a Canadian naval militia or naval force of some kind. He told me so about a year before his death. Mr. Prefontaine was a man of large views and of great courage, and it may be—I am not intending to cast any reflection upon my hon. friend the present Minister of Marine and Fisheries—that a policy which would have been carried out otherwise has not been carried out owing to the present head of that department finding it necessary to devote his attention to other matters. I suggest to my right hon. friend that we should put something in this resolution which would point to prompt action. In 1902 we told the imperial government that we intended to do something; but up to the present time, seven years afterwards, we have done nothing. If the resolution of my right hon. friend were so amended, I think it would commend itself to the unanimous approval of the members of this House.

I do not desire to say anything more on this subject. I believe that the defence of our own shores and the protection of our own commerce is due to the self-respect which should fill the heart of every man in this country. You say that we may rest contented to depend for our naval defence on Great Britain. Well, if we have assumed the status of a nation in one respect, shall we adhere to the status of a Crown colony in other and still more important respects? You speak of a Monroe doctrine, but that doctrine would not defend our coasts, our cities and our commerce from the attacks of any foe; and it is idle to suggest that we could, in the case of a great naval war, obtain any measure of comfort from the Monroe doctrine. But if we should depend on the Monroe doctrine, would it not, as the hon. member for North Toronto (Mr. Foster) well said this afternoon, reduce us to a position of vassalage as regards the great republic. That is not a condition or a policy in harmony with our self respect or with our ideals and status as a nation. We desire that this resolution should go out as the unanimous resolution of the parliament of Canada to the whole world, and I believe it may go out as a message which will do much to keep the peace of the world in these days of uncertainty. It should go in such terms as would entitle the Canadian people to the gratitude of the empire and do much to restore to the people of this country that self respect in which, it seems to me, we have been somewhat lacking in these days when others have done so much, and we so little, for naval defence so absolutely essential to the integrity and the maintenance of our great empire.

Mr. F. T. CONGDON (Yukon). I am sure, Mr. Speaker, there will be no word of complaint from any portion of the British empire at the tone in which this discussion has been carried out. It is recognized on both sides that the question is too important, not only to Canada but to the British empire, to be discussed in any party spirit. It certainly is one which must be discussed from the broadest national point of view and a solution of which must be sought, not merely acceptable to the government of the day, but to future governments, as governments change from time to time. There is very little difference in the opinions expressed regarding general conditions. There can be no doubt that great dangers always have, and always must, attend great empires; some of these dangers come from without, but the majority from within; and it is one of the pleasing features in the history of the British empire in modern times, that whenever her foreign relations have been covered with gloom, that gloom has been dispelled by the brightness of the loyalty of her daughters. That loyalty has burst forth amid the deepest gloom as when a sable cloud turns forth her silver lining on the night. There can be no doubt as to the loyalty of Canada and of every other dominion of Great Britain to the empire, and the question resolves itself into this: What shall the various portions of the empire do in order to put themselves in such a position as to be able, at the critical moment and at the proper time, to render the greatest assistance to the mother country. In Canada it is generally recognized that there is no military spirit dominant in the country and very little in favour of military establishments, unless such military and naval establishments as are absolutely essential for our welfare and the defence of the empire. There are better investments we can make in behalf of the empire and of Canada than expenditure upon navies or greater military organizations in the immediate present. If Canada desires to become a great nation, a nation that shall be a tower of strength to the mother country, as well as a sure bulwark of defence to herself, I do not see what better policy she can pursue than that of husbanding her strength and resources and thus enabling herself to become a powerful factor in the British empire. Were we at present to engage in a naval programme what would we require to do? It would be necessary to take the money of our people and go outside the boundaries of the Dominion to spend it. It seems to me that it would be better for the government and parliament of the Dominion to sanction such aid to our steel and iron industries in the east and west as will make it possible to us in a few years to build our own navy. You can never induce the people of Canada to make contributions for expenditure of that kind outside her own limits. I venture to say that no greater danger could arise to the empire than would follow if we agreed annually to contribute to the British authorities either a battleship or sufficient money to build one. That would create friction and controversy between the mother country and Canada; and any arrangement whereby the control of the money contributed by us would be under the authority of British statesmen, and not shared in any way by Canada, would lead to such conflicts and difficulties between the mother country and the Dominion as would be a source of danger to the empire. I believe that the best policy for us to pursue is the one we are now following and from which I see no reason for departing. That is the policy of being ready, as the people of Canada are always ready, to furnish whatever they have that may be necessary for the defence

of the empire in times of need. But if we start at present into any vast naval or military outlay we shall so impede our growth that in the course of a very short time we will be of much less assistance to the empire than if we permitted our country to advance and prosper as she is doing now. I do not think that there is at present anything so critical in British relations as to cause us to get excited. One of our greatest publicists has said that of all the nations in the world, there is none so governed by their humour as the English. He said that two hundred years ago, and it is not less true to-day, and it is pleasant and consoling to find that the Scotchmen who are to-day in the cabinet of Great Britain do not share the excitement of some of the music halls of London regarding the danger hovering over the empire at present. I listened with some regret to the exordium of the hon. member for Toronto (Mr. Foster), I could not but think that if some heathen had been listening to that address he would have thought that the hon. gentleman was a great high priest of pessimism performing the funeral rites of Christianity. It may be that wars will come, it may be that we cannot prevent the recurrence of warfare, but the people of Canada are inclined to peace, and the efforts of our public men should be directed not to inflaming passions among nations, not to arousing hostility but to endeavour to bring about that time when war will cease and be looked upon as a vanity out of date and battleships as a superannuated piece of folly.

To-day there is talk of danger of war between the two great nations of Germany and Great Britain—Great Britain, the greatest contributor to the liberty of mankind in a political sense; Germany, the greatest contributor to the liberty of mankind in an intellectual and philosophical sense. These are the two most advanced nations of the world and why to-day is there any danger of hostilities between these nations? Is the fault entirely on the part of Germany? Is it not due to a large extent to the fact that each of these two nations is abusing the other, that their papers are full of abuse and ridicule, the English making fun of German awkwardness and the German of English awkwardness, saying all sorts of witty and offensive things, instead of treating each other with courtesy and attempting to conduct themselves in such a way as to render impossible a war between the two nations. Richter said that Providence had given to the French the empire of the land, to the English the empire of the seas and to the Germans the empire—of the air. I do not think any one could expect that Germany would be satisfied with the empire of the air. It must be remembered that Germany is a vast and important and a great people, one of the greatest peoples of the world to-day and there is no instance in the history of the world of a great nation such as the German nation tying itself up within the narrow confines of an empire like Germany of to-day and not seeking and succeeding in obtaining some outlet for its population. Great Britain to-day has an outlet in all its vast empire for its surplus population, and I do not believe that anything could be better than that Germany should obtain some such outlet for hers. I believe the object in the creation of the German navy is to obtain an outlet of that kind, but I am satisfied that that aim could be best obtained by negotiations with other nations. It is customary to condemn the Emperor of Germany. We all remember when he ascended the throne 21 years ago the prognostications of what was to occur; he was to be the troubler of Europe, he was to create war here, there and everywhere, and we all know that the very contrary has been the case. He has undoubtedly made, as he doubtless would admit, a few mistakes. I do not know if he had the chance again, whether he would write the Kruger telegram, but that has long passed by and surely there should be a statutory limitation in regard to faults of that kind. No one can view his career without recognizing that he is one of the greatest rulers of modern times. Naturally enough he seeks to build up and to advance the interests of his own empire. It is only a few weeks since the King of England visited Germany and was received with great enthusiasm not only by the Emperor but by the people of Germany. The English were so delighted to find the people of Berlin naming streets after His Majesty that they almost became German in their sentiments. Yet to-day the Emperor of Germany is going to conquer the British empire !

I do not think the people of Canada will cease to be patriotic, but I am sure they will never become hysterical in their patriotism. I hope they will continue to keep erected above them in regard to this, as in regard to other matters, the banner of sound common sense, and in the discussion of this and every other question they will not overlook homely self-interest, coupled with a due regard to and a due sense of what is reasonable and what is right. It seems to me you might as well have asked the old settler cutting down hardwood trees in Ontario in the days of tomahawk and scalping knife, to buy a uniform and enroll himself in a regiment of soldiers to protect those hardwood trees as to expect Canada to give up the development of this country, its settlement and the working of its vast resources and to turn her energies to developping a great military and naval strength. If that is ever done, if that is immediately

done in Canada, you will divert from Canada her greatest attraction for increased population.

I venture to assert that if Great Britain would adopt the policy of the old tribes, when migrations of natives began, of dividing up the population, and placing in each portion a number of the noble and ignoble, the rich and the poor and then drawing lots as to which should get out of the country, we would gladly take one of those portions, help to bring them to Canada and help to build up here a further bulwark of strength for the British empire. I believe that some such sane, sensible scheme as that would be a thousand times better for the British empire, would make Canada a stronger support of the British empire than spending money on Dreadnoughts and on the military fuss and feathers some people would like to see in this country. The people of Canada will not submit to the drums and tramplings of militarism. They are going to defend themselves, but they are prepared to take some risk. Every man has to take the risk of loss of life or property; any one of us may be assassinated, but still the authorities will not allow us to carry guns for our own protection, and why cannot a large nation like the British or the Canadian take a certain risk? I would sooner be conquered by any people than go along as some people in London would have us, frightened to death that some foreign nation will conquer us. Even if Great Britain should lose her navy, and be in such a position that the New Zealander could stand on London bridge and view the remains of this old Dreadnought grounded on the Thames, I do not believe that Canada would be in the slightest danger from any foreign aggression.

Some hon. MEMBERS. Oh, oh.

Mr. CONGDON. I hope that hon. gentlemen do not think I am prophesying any such disaster as that. If the hon. gentlemen in dissenting from my views thought that I was speaking of such a calamity as likely to occur to Great Britain, they misunderstood me. I was merely quoting Lord Macaulay's expression regarding the New Zealander standing upon the ruins of London bridge. Any reader of history knows that such disasters have occurred to the greatest empires. There are elements of strength and greatness in the British empire, but they do not relieve it from the possibility of the fate that has pursued all great nations of the world from the Hittites down to the present day. But even if that disaster should occur, there is no danger to Canada if the proper policy is pursued in Canada, the policy of training every young man in the country in physical exercise, the training to which Lord Strathcona has devoted his magnificent gift. If every young man is taught to use the rifle, if every young man is taught discipline, you can in this way build up a population of free men, ready to lay down their lives in defence of their country, and we need not fear the Dutchmen or any one endeavouring to invade or conquer our country. You might as well talk about raising fortifications as a protection against the great republic to the south. We all know there is no danger of invasion from the southern republic. The spirit of that people is too far advanced; the danger of collision between them and us has, I believe, absolutely passed away, and when you begin to talk about military matters at our present stage of a material development, it is exactly as though a young boy, a recruit, should shove into a lot of gladiators showing his biceps and declaring that they could not get on without fighting. It is not necessary for Canada to talk about fighting, it is necessary for her to pursue a policy that will avoid difficulties and entanglements for the British empire and relieve her from the horrors and dangers of warfare. The ideal I have of Canada is not a country with fortifications here and there, and people listening to the drums and trampling of soldiers, with horrid, hideous battleships around our coasts. The ideal I have of Canada is a Canada that, from the Atlantic to the Pacific, shall contain no city in which there is a single slum, no city in which there are any of those abominations which to-day exist in other countries, and I say that to-day Canada would be pursuing a noble aim and a noble object and an object which would make her a great country, if she pursued the policy of endeavouring in every city to create a civic spirit, determined to see that the labouring class in that city should not be in want, that there should be in it none of those disreputable quarters which seem to be an inseparable auxiliary of the cities of the old world. I do not know, Mr. Speaker, that there is the slightest danger of Canada going crazy over this question. I am quite convinced that we shall not build any Dreadnoughts in the near future, and send them over the water; but if we do I hope we will give her the usual bill of lading, 'God send the good ship safe to harbour,' and that no disasters will occur to Canada, in consequence, to force us hereafter to declare 'It was that fatal and perfidious bark built in the eclipse and rigged with curses dark that sunk so low that sacred head of thine.'

Mr. W. S. MIDDLEBRO (North Grey). I have listened with a great deal of pleasure, as I usually do, to the speech of the hon. member for North Toronto (Mr. Foster); I have also listened with a great deal of pleasure to the eloquent speech delivered

by the right hon. the Prime Minister, and to the very able speech delivered by the leader of the opposition, the hon. member for Halifax (Mr. Borden). I may also say that I have listened to the speech of the hon. member for the Yukon (Mr. Congdon) but I cannot say that I have listened to it with much pleasure. Judging from the hon. member's speech, we have a right to conclude that he is going to vote both against the resolution of the hon. member for North Toronto and against the amendment of the Prime Minister. He has totally ignored the conditions that exist in the empire to-day. He has totally disregarded the fact that the statesmen of Great Britain, in the speeches they have delivered in the British House of Parliament, have declared that the time has arrived when the supremacy of the British navy is being menaced, that Germany has shown by her haste in the construction of battleships that she intends to challenge the supremacy of the British navy. The hon. gentleman has totally ignored these facts, and has shown by his speech that he is not in favour of any immediate action by Canada to give assistance to the motherland.

A great deal has been said for and against any concrete action being taken to render assistance to the mother land. Let me say a few words on that question. We are here to-day to protect the Dominion of Canada a country that has a population of nearly seven millions, a country that is thirty-three times as large as Italy, eighteen times as large as Germany, eighteen times as large as France, nearly as large as the whole of Europe, and slightly larger than the United States. We are here to protect the commerce and the productiveness of the Dominion of Canada. We are here to protect 7,000 miles of coast line on the Pacific coast. We are here to protect the great industries of British Columbia with her total yearly production of $88,000,000 worth, her fisheries worth between six and seven millions, her mineral production amounting to twenty-three million dollars, her 13,000 men engaged in the fishing industry, and her 9,000 men engaged on the shore fisheries of that province. Then I pass over the Rocky mountains and come to the province of Alberta. We are here to protect the nineteen million bushels of grain that are raised in that province, valued at ten and a half million dollars, and her three million dollars' worth of cattle exported from that province last year. Then I pass on into the province of Saskatchewan. We are here to protect the 105 million bushels of grain raised in that province during the last year, and valued at sixty million dollars. I pass onward into the province of Manitoba, and we are here to protect the 113 million bushels of grain raised there, of a value of something like fifty million dollars. I come down into the old province of Ontario with its many agricultural products. We are here to protect the 185 million bushels of field crops grown in that province, to protect its butter, its cheese, its fruit, its cattle that are being exported to Great Britain. Then I come on to the province of Quebec, and we are here to protect its eighty-five million bushels of field crops, to protect its large exports of butter and cheese, to protect its 260 million dollars worth of foreign trade. I pass on to the maritime provinces, and we are here to protect the products of their farms, of their mines and of their fisheries. I pass on to the coast of Nova Scotia, with her unprotected sea coast of 5,600 miles, extending from the Bay of Fundy to the Straits of Belle Isle. It is said that the farmers of this country will not sanction any contribution towards the maintenance of a naval force, or in keeping up a navy. I come back again, and I collect the surplus agricultural products of these various provinces, and I carry them down to the sea, and what do I find? I find that out of the 120 million dollars worth of agricultural products exported from the Dominion of Canada, no less than 101 million dollars worth go to that grand old country beyond the seas. In other words, of our total agricultural production exported from the whole Dominion, five-sixths pass down through the great lakes and along the various lines of railways, and are transported across the sea. It follows as a consequence that unless we can protect these lines of communication by which our exports proceed, we are absolutely at the mercy of some foreign power.

Then I will touch upon another aspect of the question. Our total trade last year was $650,000,000, an enormous amount. It is true a great portion of that is trade with the United States, but the balance is trade which has to seek an outlet across the seas, and which must be protected by Britain's navy. Then I come to the question of our fisheries. I find that in the Dominion of Canada our total fishery output is valued at 25 million dollars, of which we export 14 millions. We employ 84,000 men, and the capital invested in that industry is 15 million dollars. Is there an hon. gentleman in this House who would say that it is not of some importance to us to protect these fisheries, a large proportion of which is carried on upon the sea coast of our country? Then I come to the matter of tonnage owned by the various countries, as shown below:

British	12,000,000
German	2,744,000
American	2,734,000
Norwegian	1,491,000
French	1,284,000
Russian	1,076,000
Italian	996,000
Japanese	847,000
Swedish	720,000
Canada	700,000

That is to say, Great Britain owns to-day a tonnage equal to that of all the other nations I have mentioned. To be linked to a country of wealth and commerce so enormous, must be an inestimable boon to the Dominion of Canada.

Then I come to the question of finances, and let us see how this country is bound up with the finances of the United Kingdom. It has been estimated by a great authority that the total British capital invested in the Dominion of Canada to-day is between $1,100,000,000 and $1,200,000,000. We know that in the last year we have borrowed from Great Britain $200,000,000. We know that the whole of our borrowings from that country amount to 85 per cent of our total loans, and that of all that has been borrowed 3 per cent comes from the United States and the balance from individual interests. Therefore, do we not see that with regard to the question of finance, our welfare is inseparably bound up with the mother land?

Let us see the position in which we stand with reference to the other colonies of the empire. What have the other colonies done as compared with what we have done? We will take the case of New Zealand. New Zealand has a population of less than a million souls. New Zealand gave a subsidy, first of all, of £40,000—$200,000 a year —and she is now giving a subsidy of $500,000, or half a million. She has come to the conclusion within the last two or three weeks that not only is $500,000 not sufficient as her share of the up-keep of the British navy, but she sent an offer of a Dreadnought which will cost $8,000,000 or $9,000,000. Surely if the loyalty of the little island of New Zealand with less than a million people, is such that she can contribute not only an annual subsidy of $500,000 but a Dreadnought as well, Canada can show her appreciation in some more tangible form than she has done in the past. Next, let us take Cape Colony with a population of 2,300,000, one-quarter only of which is white, makes contribution of $250,000 per annum, and surely if Cape Colony can do that the Dominion of Canada, with 7,000,000 of a population and with her vast natural resources, can do something more substantial than she has been doing in the past. Then take the little colony of Natal with a population of 1,200,000, only one-tenth of which is white, and we find that Natal gives $175,000 a year as her contribution to the national exchequer. Then we come to the Commonwealth of Australia with a population of 4,200,000, with a total vessel tonnage of 400,000, as compared with our vessel tonnage of 700,000, and with a total trade of $600,000,000, as compared with our total trade of $650,000,000, and we find that Australia has given $1,000,000 a year since 1902-3 or 1903 and has continued to give that contribution, but has now decided to change the form of it as pointed out by the right hon. First Minister.

Then I come to the question of the British navy. The British navy is composed to-day, as I understand, of about 485 ships, and the number of officers and men is 128,000. The capital invested in the British navy is almost incalculable. The estimates for the year 1908-9 for the British navy were $163,500,000. During the last ten years Great Britain has expended on her navy $1,600,000,000. One can scarcely conecive what an expenditure of $163,500,000 annually means. It means $448,000 per day, $18,666 per hour, or $311 every minute of every hour of every day of the 365 days of the year.

Then, I come to the question of the British army, and I refer to the British army for the reason that if we were threatened with an invasion of any kind Great Britain would send to our assistance her army; so that, for all practical purposes Great Britain is maintaining that army for herself but she is also maintaining it for the benefit of her colonies. We would get the benefit of the army just as fully and just as completely as would the people residing in Great Britain. The British army costs $154,185,000 every year, $422,422 every day, $17,600 every hour and $293 every minute. I will put the two together to show the House what Great Britain is paying for the army and navy, and as we get as much benefit as great Britain we will realize the debt of gratitude which we owe to the mother country for what she does in this respect. The total combined cost of the British army and navy is $317,695,120 every year, $870,422 every day, $36,266 every hour, and $604 every minute of every day in the year. You may say: Is it possible that we are getting our full pro rata share of the benefit of the army and navy of Great Britain? I want to point out to you that when the rights and privileges of a small portion of the British subjects in a distant part of the empire were attacked 350,000 men left the shores of Great Britain and her colonies, they were transported with the assistance and protection of the British navy three or four thousand miles across the sea and they went into the heart of British South Africa for the purpose of enforcing the rights of those few citizens. That is the best guarantee we have that if trouble arose in Canada today, if any unfriendly power dared to put her foot on our possessions, Great Britain would do in Canada just as she did in South Africa a a few years ago and there would be an army of 100,000 of her best soldiers transported across the Atlantic and landed in Canada to perform the very same service that they

performed in South Africa. What do you think that cost the mother country? It cost the mother country 18,000 souls who went to South Africa and never returned and it cost $1,030,000,000. That was the amount that was expended to enforce the rights of British subjects in South Africa and that is exactly what Great Britain would do to-day if our rights in this country were assailed. It costs Great Britain $30,000,000 to pay the interest at 3 per cent on the debt which she contracted to uphold the rights of the British subjects in South Africa. Then, I say what could Great Britain have done in South Africa if she had not had a sufficiently strong navy for the transportation of her army three or four thousand miles across the sea? I would like to point out also that in my humble opinion the best form of protection for the country is that which is provided by a navy. You may build a strong fort upon one portion of the sea coast and you may, to a certain extent, effectively protect the section of coast in which it is situated, but an adverse navy will come along and attack your coast a few miles away and you cannot move that fortification. Every Dreadnought of the British navy is a movable fortification. Every Dreadnought can transfer its power from one portion of the British empire to another. Every war vessel is nothing more or less than a species of fortification that can be transferred to any part of the empire in which it is required. That is the strongest kind of portable fortification that any country can have. It therefore behooves us to strengthen the hands of the British government and to give our contribution towards upholding the British navy.

The question is asked: Is the resolution before us specific enough? Does it go far enough? I am not going to discuss that question further than to say that personally I think the time has arrived for Canada to take a decided stand. It will not do for us simply to put resolutions at conferences; it will not do for us simply to say by resolution that we are willing to do so and so. That resolution has been practically before the country since 1902 or 1903 and nothing has been done in reference to the navy. It is true that something has been done in reference to taking over the two fortifications of Halifax and Esquimalt, but absolutely nothing has been done in reference to a contribution to the assistance of the navy as far as the Dominion of Canada is concerned. It is not enough to say to-day that we will stand absolutely in the position we took in 1902 at the Colonial conference; it is our duty to assert that while that is our principle yet the time has come to show the motherland that we are prepared to back up our sympathy by some actual effort.

Mr. ALEXANDER B. WARBURTON (Queens, P.E.I.). Mr. Speaker, the speeches delivered in the House to-day lead to the conclusion that the views held by hon. gentlemen on both sides of the House on this question are not so divergent as on the surface they would appear to be. It may be assumed as an axiom that every member in this House and probably every citizen of Canada is loyal and true to the empire and prepared to support it in case of need. The time has gone by when the charge can be laid against any section of our people that they have not the interests of the British empire deeply at heart. I listened with pleasure and profit to the patriotic speeches delivered by the right hon. the Prime Minister and by the member for North Toronto (Mr. Foster). In this my first session in the Dominion parliament it was an inspiration to me to find that a debate of this importance could be raised to such a lofty plane and be so worthy of the Canadian nation. But, if we were to accept the words of the hon. member (Mr. Middlebro) in their literal sense we might well wince at the contract which he offers to us. He told us that we had the wheat fields of Saskatchewan, Alberta and Manitoba, as well as the commerce of the other provinces of the Dominion to afford ample protection to. I would like to ask him how in the name of common sense there would be any chance of a hostile force reaching the interior of our country?

Mr. BEATTIE. He said we had to protect the products of these provinces in transit.

Mr. WARBURTON. Of course, when these products are in transit on the sea they might require protection, but so far as hostile invasion is concerned, with the exception of a narrow fringe on our Pacific and Atlantic coasts our country is impregnable. Even as to our coast line, it would seem to me that if we can protect our coal supplies a hostile fleet would be rendered powerless. It could not keep the sea. It has been asked during the debate what we are doing for the empire in comparison, for example, with New Zealand. I have seen it stated that New Zealand has given way to the panic which for a brief space spread over the empire and has offered one Dreadnought and expressed her readiness to supply another in case of need. Well, I have conversed with a good many persons from New Zealand in the last few years and the thought occurred to me that a country which has to borrow so largely might perhaps be accused of

being generous when she ought to be just. But let us see if we are not doing something for the mother land. Is it nothing that we are providing at great expense to ourselves homes for the people of Great Britain, and thus relieving the congestion of population there? Is it not a fact that every workingman who finds a home in Canada ceases to be an expense to the mother country and becomes a source of strength to her in this part of the empire? What happened during the Boer war? In some respects that war was a blessing in that it demonstrated that England was not alone, but that her kindred beyond the seas were enthusiastic to rush to her aid and defend her interests. It was an object lesson never to be forgotten that Canada and the other parts of the British empire sent their sons to the veldts of South Africa to fight for the common welfare of the British empire. The resolution of the hon. member for North Toronto (Mr. Foster) has been on the Order Paper since the first day of the session and hence the recent panic had nothing to do with its origin, but I think the House will agree with me that the existence of that panic had much to do with the interest taken in this discussion. The English are supposed to be the staidest people on earth, and yet it would almost seem that once in a decade or so they must get into some state of excitement, probably as a safety valve to keep them in their usually even frame of mind during the interval. There was a panic in England aroused by what was called the Battle of Dorking pamphlet, there was the Fashoda panic when some young French officer committed an indiscretion and the hot headed people and the excitable press of both nations were ready to fly at each other, but time has healed all that and to-day France and England live on terms of perfect amity. The present panic will, history repeating itself, be followed by others and so long as the instincts of the British people are as they are we may expect periods of excitement. To say anything detrimental of the British navy is a sore spot with every Englishman, and so whenever its supremacy is questioned there is likely to be excitement. Reading the history of the past we find there have been many scares of invasion in England. There was first the Armada, which miserably failed; then there was the Dutch invasion, but the Dutch navy, after a slight success and the British people found themselves, ceased to be a menace. Napoleon in the zenith of his power threatened to invade England, but it was but a threat, and so the present day scare of invasion will pass away and the British empire rise stronger and more glorious than ever. There is a matter which perhaps I am not competent to express an opinion on and it is this:

We have heard much of Dreadnoughts and of the offers of some of the Australian colonies to contribute Dreadnoughts to the British empire. In the light of recent inventions and discoveries, it is just possible that the Dreadnought type of ship may not continue to be favoured very long. In our own recollection—and none of us are very old men—we can remember more than one change in the type of ships of war. In the early sixties, at the time of the civil war in the United States, the 'Merrimac' attacked an American fleet, which was supposed to be very powerful, and sank one or two ships, thus rendering obsolete all the fleets of the world at that time. During the Russo-Japanese war a few years ago, the Russian Admiral Marakoff placed his faith in the type of large cruisers which failed him, and now we have the very heavy type such as the Dreadnought. But many of the members of this House had the pleasure on Saturday last of listening to one of the greatest inventors of the day describing his recent discoveries, and speaking particularly of the airship. In view of the discoveries and inventions of the last twenty or thirty years, we cannot scoff at or belittle any invention. A few years ago any man who talked about transmitting messages by means of wireless telegraphy would have been looked on as a lunatic; and no one to-day can say that the warships of the future will not be airships. We know that the German government is experimenting along this line. In Cape Breton Dr. Bell and his associates are conducting similar experiments. It would not be at all beyond comprehension to suppose that one of these little airships might destroy a great ship of the Dreadnought type. So that we do not really know whether or not the vessels of this type are going to be permanent or not. It has seemed to me, ever since I devoted any thought to this question, that while we should take measures to protect our harbours on the sea coast, the real arm that we ought to strengthen is the military arm. I remember reading, in one of the speeches of Lord Roberts in Quebec last summer—and other men whose opinions are entitled to respect have said the same thing—that the great need of Great Britain to-day is not so much contributions of ships as contributions of soldiers to help her to fight her battles on land. She is very well able to take care of herself on the sea. The military arm of Canada has been greatly improved of late years until now we seem to have a real force. Possibly it may be necessary to spend more money on that force and on the protection of our seaports, and when we do that we do about all that it is possible for us to do. The British navy has held command of the seas for a century, and British statesmen say that there is no immediate probability

of her losing that command. So long as she can command the seas, the best assistance the outlying parts of the empire can render her is in strengthening the military arm and in protecting their own coasts.

Mr. GEORGE H. BARNARD (Victoria, B.C.) Mr. Speaker, I am afraid that I can add very little to the merits of this discussion, after the very eloquent speeches which have been made by the hon. member for North Toronto (Mr. Foster) and other gentlemen. At the same time, I feel that I would be derelict in my duty to my constituents if I did not endeavour to place before this House what I believe to be the views of the people of the city of Victoria and of the province of British Columbit upon this question. When the Pacific squadron was in existence, it had its headquarters at the town of Esquimalt, at a short distance from the city of Victoria, and practically a suburb of that city; so that the people of Victoria were brought into daily contact with the officers and men, and had ample opportunity to judge of the ability and efficiency of the men composing His Majesty's navy. It was a sore blow to the people of British Columbia when the imperial authorities decided to withdraw the Pacific squadron from that port; but if that withdrawal should result in the Dominion of Canada using that point as a naval base for a navy of its own, it may prove to have been a blessing in disguise. Hitherto, the Dominion of Canada in this respect has occupied a humiliating position, because we find that practically every other self-governing colony of the empire contributes its proportion to the naval expenditure, while Canada contributes nothing. At the Colonial Conference of 1902 the Colonial Secretary declared that he had had an opportunity to communicate with the representatives of the different colonies, and that all had agreed to make certain contributions except the Dominion of Canada, which he was assured was going to establish a naval force of its own. Yet at the Imperial Conference of 1907 the Minister of Marine and Fisheries stated that Canada's contribution was the taking over of the Halifax dockyard, the negotiation for the taking over of the Esquimalt dockyard, and the maintenance of a fisheries protection service. With regard to the Halifax dockyard, we find by a statement of the ministers' own officials, that although it has been taken over, it is now being used only as a kind of glorified junk shop. I quote from the report of the Department of Marine and Fisheries for 1908 page 31, a statement regarding the dockyard and grounds at Halifax:

Dockyards and Grounds at Halifax.

The appearance of the naval dockyard and grounds was improved during the season. The dockyard is now used for departmental purposes in storing lighthouse material, buoy anchors, chain and lighthouse repairs and equipment.

That is one sample of Canada's contribution to naval defence. Taking up the other branch of the question, the fishery cruiser protection, what do we find? I cannot speak of those cruisers on the Atlantic, but we were assured to-day — and there was no contradiction of the statement—by the hon. member for North Toronto (Mr. Foster), that if any kind of a second or third-class cruiser of a foreign power should come to Canada with hostile intent our Canadian cruiser would show her heels and get into dock as fast as she could. As regards fishery protection on the Pacific coast, I shall not give you any words of mine, but quote again from the report of the Department of Marine and Fisheries for 1907-8, page 302. We have one boat out there, but I never heard her called a cruiser until I came down here. Regarding the steamer I find this stated in the report:

On the 28th, we visited Rock Fish bay. At 0.17 p.m., of this date we sighted a steamer fishing well inshore at the mouth of the Cumshewa inlet. I immediately gave chase, but as they saw us at the same time as we sighted them, she at once ran in and picked up her dories and escaped before we could reach her; thus another valuable prize of $75,000 was lost for the want of a fast cruiser. This steamer proved to be the 'Manhattan,' owned by the New England Fish Company.

Again, in that same report, I find this statement:

I have the honour to submit the following prepared statement of the number of pounds of halibut caught in the waters of the coast of British Columbia by Canadian and United States fishing vessels, from January 1, 1907, up to and including the month of October, with comparative statement for the months of November and December, thus giving a statement of the total halibut catch in the above stated waters for the year 1907.

	Total catch for year.	Value.
Canadian	4,730,000 lbs.	$ 236,500
United States.	30,854,164 "	1,542,820
Total	35,584,164 "	1,779,320

The fish above referred to were all practically caught in Canadian waters, or in other words, if there were cruisers enough to protect and keep foreign fishing vessels out of our harbours, and outside the 3-mile limit, said foreign vessels could not possibly have caught in the same time more than one-third of the above stated catch.

So that when the hon. Minister of Marine and Fisheries (Mr. Brodeur) or any other representative of the Canadian government says to the Colonial conference that Canada is doing her share of naval defence, by the maintenance of fisheries

cruiser protection and taking over dock yards, he puts the people of Canada in a most humiliating position. With regard to the dock yard at Esquimalt, that is not yet taken over. We were told on the first of February of this year by the Minister of Marine and Fisheries that negotiations were still pending. They were pending in 1907 and are still in the same condition, and that is another sample of Canada's contribution towards naval defence. So that we have, as an offset against the amount voted by New Zealand and other colonies, this condition in Canada which I have just pointed out. The statement has been made that the contribution of New Zealand was only £40,000, but after the Colonial conference of 1907, New Zealand voluntarily increased her contribution to £100,000, and gave that contribution without any condition. New Zealand waived the condition of the previous grant and left the matter altogether in the hands of the imperial government.

So far as the people of British Columbia are concerned, I can assure the right hon the Prime Minister that they are practically unanimous in the desire that some suitable contribution, in some shape or other, should be raised towards imperial defence. I am satisfied that what would be best for the country would be some such system as the Australian Commonwealth has outlined. Personally I would be prepared to go further. I do not see why the Dominion government should not if necessary build Dreadnoughts, put two on the Atlantic and two on the Pacific coast. They could be manned by men from the imperial service and be available at any time for that service, and I am satisfied that we would then not be in the humiliating position we now occupy.

Another question raised at the colonial conference, was that of dry-docks On this Lord Tweedmouth laid great stress. He said it was of the utmost importance to the imperial authorities that they should have dry-docks in every portion of the world capable of taking in a Dreadnought. Such a vessel would be 490 feet long and 75 feet beam. I do not know the conditions on the Atlantic coast, but on the Pacific there is no dry-dock capable of taking in a ship of anything like that size. I should suggest that if any such policy be adopted, one of the first things to be done would be to construct a dry-dock which would be under the guns of the fortifications at Esquimalt and thus protected from the inroads of an enemy. A suggestion which was met with a good deal of approval from the English press is one that was made by a gentleman residing in Victoria, Mr. C. A. Gregg. He wrote the London 'Times' suggesting that Great Britain should dispose of some of her cruisers, which are not sufficiently up-to-date to be in the front firing line, to the Dominion. That suggestion has been favourably commented on by some of the English press, and I would like to cite a few words from the London 'Times':

> Our correspondent makes the sensible suggestion that, as the Admiralty is constantly discarding vessels which would admirably discharge the duties contemplated, these vessels should be assigned to Canadian marine police work. Canada would thus save the expense of constructing new ships which could never form part of a fighting fleet, and would be encouraged to invest money to much better purpose in ships fit to take their place in the imperial navy. It is important that there should be as little overlapping and waste as possible, and for the avoiding of these there ought to be the most complete and intelligent utilization of resources from an imperial standpoint. The idea we are discussing appears to further that aim. No doubt there will be technical and official objections, but if the idea were developed on broad lines and with a due sense of the solidarity of the empire, the results might be found both morally and financially satisfactory.

I do not know that I have anything much further to say except that I am satisfied it is high time the people of Canada woke up to a sense of their responsibility in connection with this matter. I believe that if a firm and able stand were taken it would be found that there are very few dissenting voices in the Dominion and that the people of this country would be prepared to make sacrifices, if sacrifices were necessary, in order to carry into effect the resolution which has been proposed this afternoon.

Mr. G. A. TURCOTTE (Nicolet). Mr. Speaker, I rise to make a few remarks on this resolution and to give my views on its intrinsic value and importance. The resolution brought before the House by the hon. member for North Toronto (Mr. Foster) is drawn in a very able and insidious manner. It appeals to our national pride and sets forth the fact that our resources are diversified and abundant. This is a broad admission that the country is in a far better financial situation than it was when the hon. member for North Toronto (Mr. Foster) had the management of the Finance Department, and I am led to presume that this is the reason why such a resolution as the present one was never brought to the attention of parliament during the Conservative regime.

I am thankful to the sub-leader of the opposition for this disinterested and sincere acknowledgement, which bears testimony to the prosperity of Canada under Liberal administration.

I fully recognize the immense progress which has been achieved in all branches of public service, under the wise and able rule of our Liberal administration. I realize with pride and admiration the great success with which the hon. Minister of Finance (Mr. Fielding) has administered the public money of this country, and I glory in the fact that with judicious economy he has had a considerable surplus over expenditure. I have no hesitation in saying that Canada has made a great step towards manhood and that the relations between our motherland and her greatest colony, are such as to let us anticipate, sooner or later, some change in the alliance between the two countries. I sincerely hope that a broad discussion of the most needed political changes will attract public attention to them and lend strength and importance to the movement in their favour because the political as well as the economical future of Canada must occupy a foremost place in the thoughts of those who have at heart the prosperity and greatness of our country.

What is the aim of the resolution now under consideration? Does it imply solely and directly the best interests of Canada or does it seek to afford military and naval help to England without any compensation? We have worked out, up to the present time, our own destiny and have enjoyed for many years past the utmost liberty, protected as we are by the British flag, I am happy to say. We have built up a great country and the energy and intelligence of the Canadian people have brought to completion gigantic enterprises which have evoked universal admiration. Our constitution, which derives its vitality from the fact that it is a shoot of British institutions grafted upon the federative form of the American constitution, gives us the utmost confidence in the final evolution of Canada into a great and prosperous country. I am an enthusiastic believer in the prophetic assertion of the right hon. leader of the Liberal party (Sir Wilfrid Laurier) who, in a patriotic utterance, exclaimed that the twentieth century would be the century of Canada, as the nineteenth has been that of the United States. But in the face of all this, are we prepared to affirm that our country has attained such a state of development, growth and wealth as to justify the hazardous policy which the present resolution calls for? No, I do not think so and I venture to say that Canada has now reached that period of evolution in which the whirling and acute activity of her citizens, the demands of her industries and commerce, the requirements of a more perfect state of civilization, ought to impress on the mind of the leaders that it is their duty to direct all their attention and all the power at their disposal to obtaining for the people of Canada a moral, intellectual and material bettering.

The immense area of our land, the vast resources which it contains and the diversity of wants demanding help and redress are so many reasons calling for the action of parliament and the influence of our capital. Canada's wants, at present, Sir, are too pressing to allow of the idea that we can afford to expend millions by assuming the responsibilities involved in the present resolution. Have we not our great northwest, to which every year thousands of immigrants are flocking, willing to add by their labour and their intelligence to the wealth of the country, if their products can easily and economically reach the great markets of the world? It is true that immense sums of money have already been spent in the direction of securing a sure and direct transportation, in building our two transcontinental railways, but is this sufficient, is that all that is to be done towards giving to our northwestern population the facilities and accommodations to which they are entitled?

We know that hundreds of thousands of bushels of grain are left in storage in the west each year owing to the lack of proper transportation capacity. This state of things cannot last and has to be remedied in the near future by the construction of the Georgian Bay canal. The northwestern settlers are clamouring for an adequate and economical transportation route and it is but fair to listen to their demands and to put them on an equal footing with their American northwestern competitors. The construction of the Georgian Bay Canal has occupied and occupies yet, I am proud to say, a prominent place in the Liberal programme, and I have such confidence and faith in the judgment and foresight of our leaders as to be firmly impressed with the idea that, instead of sacrificing millions in the construction of battleships and arming our coasts to flatter the imperialistic propensities of those whose erroneous patriotic ideas have misled them, provision will be made to ensure the construction of this great waterway. Millions will have to be spent for that purpose, it is true, but this expenditure is fully justified by the extraordinary results it will have in developing a vast area where flourishing cities will rise, giving life, comfort and happiness to millions of people.

Sir, Canada, it seems to me, has done something towards uniting the empire and in favour of imperialism, by the construction of our two transcontinental railways. The shortening of distances between England and her colonies beyond the seas, the great facilities offered to the mother land in giving her the benefit of using our railways to transport her troops and war material across America, on Canadian territory, in case of need, ought to be considered a generous contribution, on our part, to the building of the imperialistic edifice.

Sir, it is not, I humbly submit, by military strength alone that the English empire is to maintain its integrity, its high standing, its influence in the world and is to continue its glorious course, but it is also and mainly by giving to the people of the colonies that which is dearest to all, freer institutions and help in the great struggle for the general prosperity and comfort. Thus, England will be sure to find in a happy and contented population a true and strongly anchored loyalty. These are the stoutest links in the creation of a sound and high spirited imperialistic union. Have we not the experience of history to prove the truth of this? One of the most apparent causes of the downfall of the great Roman empire and others was the inauspicious influence and hard ruling of militarism.

Sir, there are other battles to be fought than those carried on over land and sea by armed forces. The pacific war now going on amongst all civilized nations, or in other words the competition existing in commercial, industrial and educational matters is warning us to fully prepare ourselves by prompting public opinion with a proper policy if we wish to keep our place and rank in the present tremendous stress of human activity. 'The nation which is not progressing is retrograding' says Lord Rosebery. If, sanguine in our adolescent capacity or erecting a false and tyrannical patriotism, we allow our national resources to be squandered, or our energy to be misused, we will have to bow down before the wisdom of really progressing nations, less endowed, may be, than we are, and confess our great error.

I am in favour, Sir, of having a sufficient fleet for protecting our fisheries, and nothing more, and I am sure in saying this that I substantially reflect the opinion of my constituents.

We of the province of Quebec love the mother land and our loyalty cannot be questioned, I am sure, except perhaps by those who delight in high sounding formulas of patriotism and believe loyalty to consist merely in extravagant theories and unfair exigencies. We are, Sir, proud to be British subjects, always ready to fulfil our duties as such, but we are before all true and staunch Canadians.

Mr. J. A. CURRIE. At this late hour I do not wish to prolong the debate by any lengthy remarks. It appears to me, however, that several important questions have developed during the course of the discussion, and that whilst the original motion was couched in the mildest form possible, and calculated to bring before the attention of the House the question of naval defence and the urgency of matters imperial, with the condition of our forces as they are at present, still developments in Europe have brought about a new condition of affairs, and it is necessary for this House, if possible, to give a stated opinion at an early opportunity as to its position, not only with regard to its own defence, but with regard to imperial defence. Let me point out that the lines of argument diverge. While the question of our own defence, is necessarily a portion of the imperial defence, the matter of imperial defence alone affects the situation particularly at the present moment. Several hon. members have laid out a plan as to what we should do in the future in the way of imperial defence and they have commended to us the plan of local defence such as they have adopted in Australia, which is a programme that requires a number of years to carry it out. I think there is no one in this House who will dispute the advisability of carrying out some such programme. But we find that peculiar conditions have arisen in the world's situation at the present moment, and that the mother country is threatened. While we are talking here, I am reminded of that old saying of Cicero: 'Gentlemen we deliberate, and Catiline is at the gate.' We are deliberating a great deal to-night as to what we should do six or seven years hence, but what the whole world is waiting to hear from us is a definite statement of what we are going to do in the present circumstances which have arisen in Europe.

Now, carrying out the idea first involved in naval defence for Canada, I do not see any reasons why we should not immediately institute some system of naval defence along the lines of torpedo boats, or torpedo destroyers, and destroyer cruisers, which would be invaluable to us in case of war. A great many members suggest or imply that it would be impossible for us to build these at home. Now I do not wish to be considered local in any way, I have always taken a national or Canadian view of every subject; nevertheless, I may be permitted to say that within the riding which I have the honour to represent there is a shipyard wherein they have launched ships over 500 feet in length, which is said to be the length of the Dreadnought. They have built ships, and they laid down the keel of one ship on the 26th of June last and launched her on the 1st of November, all complete, 375 feet long, 7,000 horse power, a 22 knot ship, with complete equipment, in that short time. If it was necessary for this government to ask them to supply four speedy cruisers 250 feet long, which could go through the canal, with a speed of 26 knots, I can assure you that I have it on the word of the men who designed these ships, and have built 22 steel ships in the last four years, that it would be only a small matter for them to as-

semble the material, provide four ships and have them in the water by the 1st of October. The dock they use is 550 feet long, and would accommodate the Dreadnought.

I regret very much that as Canadians we have not fostered more this spirit of shipbuilding on the Atlantic and the Pacific coasts. We are now manufacturing steel, the best steel in the world. We have two large steel plants. The steel plant at Sydney is a greater plant than any they have in Great Britain with larger and better furnaces, and in every respect a greater and larger steel plant. They have had there, for four or five years, a plate rolling plant to roll plates for ships, which they have housed away and never placed on the foundation, because nothing has been done to encourage this most important industry. I feel that we should seriously, as a House of Commons, consider the advisability of adopting some system whereby shipbuilding would be encouraged in the maritime provinces, and also on the St. Lawrence and on the Pacific coast. We find that Germany, whom we have heard mentioned to-night, up till seven or eight years ago when she began to build her own ships, purchased her ships in England. Now there are in Germany eight ship yards where ships are built, and we are assured by a no less naval authority than the 'Naval Annual,' that they can lay the keels for 12 Dreadnoughts at once and complete them inside of 24 months if necessary. We find that Japan at one time purchased her warships from Great Britain, but she realized the importance of carrying on this industry in her own land and she has established shipbuilding yards in Japan where she builds her own cruisers and her own commercial ships. Shipbuilding is a splendid enterprise, an enterprise that gives employment to a great number of men and it is the greatest national enterprise that a country can have; greater than the manufacture of guns and weapons of defence. We should undertake the work of building carriers because the money that is paid to foreign carriers to convey our products from Canada to Great Britain and other countries is a large sum which we should retain in our own country. As I pointed out we should immediately assume the position of establishing a local defence of our own. Our local defence should consist of torpedo boats and destroyers, and they could convoy our merchant ships, in case of war, to England and save them from the attacks of cruisers. I think we are all presumed to be at one upon that question. Now, let us come down to a more urgent matter, and that is the question of what we should do in the present situation to assist the motherland. We find that Great Britain at the present moment is undergoing what some hon. gentlemen are pleased to call a music hall scare. I can assure hon. gentleman, from my knowledge of the facts and from the correspondence of business men in England who have a knowledge of the situation, that it is not a music hall scare. The fact is that the supremacy of Great Britain on the sea is challenged. Another nation has laid down within the last year, and will have laid down by April of this year, the keels of twelve Dreadnaughts. These Dreadnaughts will all be in commission by 1912 and Great Britain's supremacy as a world power will at that moment cease unless she can not only keep up with the naval programme of this rival nation but go farther. The burden of such an extensive enterprise as the building of so many warships at such an enormous cost has achieved such vast proportions that the English people, looking at it from purely a business standpoint, have said: 'It is cheaper for us to carry on a war now.' That is the position they have assumed. They have at the present time a naval preponderance over any other nation in Europe which they will lose in four or five years, and it is necessary for the national safety if they are going to have war that they shall have it now. They will have to spend a great deal of money in carrying on a war at a future date because war will be just as expensive then, if not more so, than it is now. They reason that if there is war now they will wipe the fleet of any nation that dares to challenge their supremacy off the sea and have peace again for the next twenty-five years. Those are sound logical reasons. We find that, following any great question of this kind we certainly have the music-hall element, but we have now the colonies making a response to the cry of war and offering aid to the empire. We know that this is an occasion for offering assistance to the empire. It is true that we offered the motherland the assistance of our men, and our rifles, and when we offered the services of our young men to the mother country we offered her a greater sacrifice, something that was even greater in monetary worth, if you like to put it in that way, than even the building of a Dreadnaught. We gave that freely at that time. We did not say that it was something that we would do only once or that we would continue from year to year, but we recognized the necessity of the situation and we rose to the occasion and offered our young men. They proved to the whole world that they were able to hold their own with the best troops in the world.

I was very much surprised to hear the hon. member for the Yukon (Mr. Congdon) express the sentiments that he did. I have had the opportunity of reading books about the Yukon, although I have never been there, and I had thought that

the men of the Yukon were men with red blood in their veins, men who were prepared to defend their country and to protect her soil. Instead of that the sentiments expressed by the hon. gentleman sounded very much as if the men in the Yukon, who sent him here, would be prepared, when war raised its horrid front to dash under the barn or take to the tall timbers. Now, we have discussed this question and a resolution has been presented by the right hon. leader of the government (Sir Wilfrid Laurier). I trust that he will see his way clear to amend that resolution and I would ask if there is any self-respecting member of this House who is prepared to assert that we should only do a certain thing and go no farther. I feel satisfied that if war were declared the people of this country would be prepared to go to almost any length to maintain the integrity of the empire. Some of us realize that war is a terrible thing and my hon. friend from North Toronto (Mr. Foster) has told us today that peace is almost impossible if England is in danger. If that great mother of nations, the cradle of liberty, were threatened what would happen to us? Where would Canada be if England lost the command of the sea, if England's liberty were lost and if England became the colony of another nation? What would happen to Canada? Would not we also be penalized? If England lost the command of the sea and an indemnity were demanded would it not be the most natural thing in the world that the conquering nation would demand an indemnity in the shape of a colony? If, in the bargaining that goes on in the chancelleries of Europe—and history tells us of many such bargains in the past in which colonies have been turned over to foreign nations—how would we look, having contributed nothing to the common defence, if we found ourselves the colony of a European country? Whilst I agree with the right hon. First Minister that it is not necessary for us to enter into any obligations to contribute an annual sum, it is necessary for us to realize our duty to the country to which we belong and be prepared to offer not only men but money if necessary.

Mr. ERNEST ROY (Dorchester). (Translation). Mr. Speaker, I have listened with much interest to the speeches delivered this afternoon and evening on the important subject matter of the resolution submitted by the hon. member for North Toronto. I should also say, as a new member of this House, that the manner in which the debate has been conducted, has exalted in my eyes the action of parliament, and that I am happy to form part of a body in which subjects of such high importance are so treated.

I find that all the members who have spoken on the question have come to the identical conclusion that Canada should contribute to the defence of the Empire.

The latter portion of the resolution submitted by the hon. member for North Toronto reads as follows:

> Canada should no longer delay in assuming her proper share of the responsibility and financial burden incident to the suitable protection of her exposed coast line and great seaports.

The hon. member's speech differs somewhat from his motion. He declared that not only should Canada have a navy to protect her shores and her large seaports, but that she should also help the empire in her wars with other countries. Should we, Sir, endorse such an expression of opinion?

I love my country, Canada, and I know all she owes to Great Britain, but in such matters sentimental considerations may not be without danger. Before acting it is necessary to take into consideration the situation of Canada and all the special circumstances which surround the question.

It is said that Canada owes much to England. In what does the obligation consist? Especially in this, that England has granted us liberties which have enabled us to attain among the nations a position which is now beginning to be recognized as of importance.

It is also said that Canada owes much to England because the latter opens to us a very important market. True, but in this respect other considerations besides those of gratitude should be taken into account. When England first cast her eyes towards Canada it was not in a spirit of sacrifice but in a spirit of conquest, the object being to extend her commerce, her power, and her influence. It must not be forgotten that if the English market is open to Canada it is because England finds an advantage in purchasing Canadian goods. The advantage in this respect, being mutual there is cause for gratitude on both sides and the sentiment should be reciprocal.

It is said again that England has furnished us with millions which have helped to build our railways, to develop our territory, to excavate our canals and extend navigation to the interior of the continent. That is also true, but on the other hand Canada has proved a good field for the investment of English capital seeking dividends, and in this also we should be mutually grateful.

It is further contended that Canada should be grateful to England because of that military strength which has enabled us to develop in peace our natural wealth.

True again. But let us remember for what purpose England has sought to extend her influence to every part of the world. From east to west; it was because she desired to open to her sons—whose energy and gifts as a colonizing people cannot be denied—new fields in which those talents might be freely exercised and their rights undisputed. They have given to several countries of the world a progressive civilization and ideas of practical liberty, together with the advantages resulting from skilful administration and active trade. India, the Australian continent, New Zealand and several other countries are the living proofs of this. Thousands of England's sons come to Canada every year. We generously give them a peaceful home on the fertile western plains: they become sharers in our happiness and our wealth. And if on one hand we owe gratitude to England for the protection which has enabled us to develop our wealth, does not England also owe us some gratitude for the prosperity which her sons are to-day invited to share with us. It is right to place on each side of the balance that which pertains to each; doing that it will then be found that if England has done much for Canada, Canada, on the other hand, has done something for England.

All this leads me to say that it is not right to contend that Canada in the past has not done enough for Great Britain from a military point of view. The soldier who leaves his home and marches against the enemy offering his life for for his country, is a patriot whose heroism is highly praised. But what of the tiller of the soil whose corn feeds the armies and whose money supports them: is not his work at least as patriotic and as useful to his country? When we expended millions for the purpose of opening to agriculture the western fertile plains now becoming the granaries of the universe, were we doing nothing for the empire?

It has also been said that the amendment offered by the hon. the Prime Minister of Canada to the motion of the member for North Toronto, does not enunciate a well-defined policy nor entail prompt action in the creation of a navy. It is necessary in such a matter to act with great prudence and deliberation and to carefully consider all the circumstances surrounding us, before giving any exact and detailed statement of the policy which Canada should adopt.

We belong to the American continent over which prevails a principle called the Monroe doctrine. If I am not mistaken, that doctrine, much modified since its first enunciation, proclaims that no foreign power shall establish any new state nor make any new conquest on the American continent. Pre-existing colonies are allowed to remain in the statu quo. Now, if we undertake to-day the creation of a navy in Canada and assume the risk of forcing this country into the militarist movement, it is to be feared that complications will naturally ensue. Our population is now seven millions, in twenty or forty years it may reach thirty or forty millions if the present rate of immigration is maintained. In a few years we will be a nation of some importance. Before entering into the military movement, we should weigh the inherent risks. Will other nations view our armaments with equanimity or indifference? Will the United States, for instance, witness without anxiety the growth, beside the vast power of England, of the military and naval establishments of Canada? Will Germany behold without emotion the military organization of Canada upon the lines of an old time European power? I do not think so, for whenever a European state increases its means of attack or defence, the diplomatic body becomes visibly perturbed, and cabinets study that important event which is invariably regarded as an act of aggression towards other countries.

What I have said does not imply that Canada should not adopt military measures for the defence of her coast and of her territory. I may, with the hon. member for North Toronto, deplore that in the 20th century, and in our advanced stage of civilization, we should still be face to face with the military problem and obliged to expend such large sums of money for warlike purposes. It is true that for two thousand years Europe has accepted the Christian rule and that the Decalogue proclaims to the nations 'Thou shalt not kill,' 'Thou shalt not covet thy neighbour's goods.' Yet it cannot be denied that Christian nations who confess that creed still spend the greater part of their revenues and of their time in preparing for wars of defence or of aggression, for among them the idea of conquest still obtains. Defence naturally implies the idea of conquest on the part of the enemy. We must no doubt regret that in spite of civilization, nations cannot live in a manner more perfect and practice without fear of violence those principles of justice and equity which the Decalogue teaches, but Canada being a nation surrounded by other nations whose interests may conflict with her own, is bound to provide means of defence.

How should this be done? I say that the matter should be very carefully considered. The pretext of defence should not induce us to exhaust the sources of our energy. The expenditures must not be so great as to place us in the dilemma on the horns of which the European nations now find themselves. We must not for that purpose so

deplete our budget that nothing will remain to favour the emigration from Europe of those who might find here bread that is difficult to come by in their own over-populated fatherlands. We must, therefore, act with prudence.

I question whether it would be wise to declare that Canada is ready to commence the immediate organization of a navy and to enter at one into the military movement.

Should Canada assert her intention to take immediate action on this matter, is it not to be feared that certain European consular bodies might take umbrage at this move of ours and should deem it advisable to rush conclusions in order to thwart this new element of contract ? Much could be said on this point. Let Canada organize a naval force to protect her coast line and her sea ports both on the Atlantic and on the Pacific; no one objects. But there is more to be be considered. If we say, in addition to the policy already laid down, that this force not only shall defend Canada, but must also take a part in Britain's wars, even those wars in which we are not concerned at all, then I say, Sir, that we are assuming much of a risk. My words are here nothing but the expression of many another one's opinion. When the day comes that we shall undertake all of Britain's wars, we shall incur the hostilities of other nations and open ourselves to their attacks. Their first care will be of course to neutralize our means of action by destroying our fleet, which we will be unable for many years to come to put on a sufficiently powerful footing to meet their attacks.

The attention of certain European countries might also be drawn upon us by this policy, and they might find it advantageous to set all possible means at play in order to keep our country from enlarging the scope of her influence, or to seize her, or to parcel her up in some way, before she has become too strong. Mr. Speaker, the bearing of the decision which we are called upon to take on the resolution of my hon. friend from North Toronto (Mr. Foster) is all the more apparent that Canada is not at present threatened with war and in fact has none to fear, because, as I said before, we are protected by the Munroe doctrine. I admit, however, that this is not sufficient to allow us to sit down quietly. We are compelled by self-respect to do something to protect ourselves. Nevertheless, the Munroe doctrine imposes upon the United States the obligation of protecting us against the attacks of conquering spirit either from the east or from the west. Is it in the interest of the United States to seize Canada ? I hardly believe it. Why should it ? Is it not getting along on friendly terms with Great Britain ? Does not the occupation of Canada by Great Britain make it sure for them that she would defend her colony against any foe from the east ?

I will not keep up this debate any longer by my observations. I say in short that I don't believe it is necessary that we should state in the resolution that such action must be immediate. The important point to assert is that everything which will be attempted in that way will be undertaken only after formal understanding with the British military authorities, in order that means of defence will be designed, which at the critical moment will offer adequate co-operation to the mother country. I do not think it is fair either to say that Canada has done nothing so far to help the mother country. If she did not contribute directly by her money, she did it in another way by the wonderful development she gave to her territory.

There is no immediate danger of hostilities. It is true that in the past few years, the leading nations of Europe have made what may be termed extraordinary expenditure towards the defence of their respective possessions. It is true that Britain who has so far held the undisputed supremacy of the seas, might be led to think at times, owing to the stand taken by other nations, that this supremacy is attempted to be wrested from her, but it must not be forgotten that Britain's superiority is acknowledged not only in her military force, but also in the strength of her diplomatic corps. She has been seen for a great many years to have nothing but internal wars to fight, such as that for instance, which she fought lately in South Africa. She has rather acted as a charming mediator between nations which did not always agree and which have waged war against each other. After all why be more pessimist than Britain herself, when she does not foresee any immediate danger. What she wishes us to do, is to get up a naval force, which will be in a position to defend Canada when attacked.

Britain sticks to the policy which she formerly laid down towards her colonies. She says : I give you full power of governing yourselves ; now that you are a nation, do as a free nation would.

This House is no doubt unanimous in its opinion that Canada should get up a naval force which will enable her to rank first among the nations, and thus command that respect which otherwise she would not command from those nations having hostile intentions against her. This unanimous feeling is the best evidence of the enlightened patriotism with which we are actuated.

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). Before this debate closes it is perhaps my duty to say a few words. I congratulate hon. gentlemen who have spoken upon the patriotic tone which has characterized their remarks, and on

the dignity which has characterized the debate. The loyalty of Canada to Britain is beyond all question, and it is also undeniable that under the British flag Canada has prospered beyond compare. The question which we are discussing to-day is an important one in that it concerns the relations which this great Dominion bears to the empire; it is a question which in the past has attracted and is well worthy the consideration of a patriotic people. In view of the high position which Canada has taken in recent years amongst the nations of the world and her great development in population and wealth it is to be expected that with the dawn of this new era Canadians should more and more devote themselves to the study of a subject so momentous to the national weal. There is no doubt that our new status brings with it new responsibilities, which, if we are to judge from the discussion to-day, Canada is ready to assume. The times have changed and conditions have changed with them. It is not so many years ago in the life of this country when even commerical treaties involving the interests of Canada were conducted by the home government without conference with the Canadian government and concluded without their consent. But to-day no commercial treaty affecting the interests of Canada can be made without Canada being represented at the negotiations. In some instances the negotiators for His Majesty were exclusively Canadians, and in the past year we have seen that even what might be called political treaties, which were of concern to Canada, were submitted for approval and assent to this government before they were signed by the representative of His Majesty. One of the responsibilities which the new era has brought upon us is that we must provide for our country adequate naval protection. Certain remarks which I made at the Imperial Conference in 1907 have been quoted during the debate, and one of the hon. gentlemen who did me that honour seems to have misconstrued my statements on that occasion. When we met in the Imperial Conference the document which has been read by the leader of the opposition was submitted, and in that document the assertion was made that Canada had done nothing in the way of naval expenditure. It was pointed out that the naval expenditure of the United Kingdom amounted to £33,389,500, that of Newfoundland to £3,000, that of Australia £255,651, that of New Zealand to £40,592, that of the Cape of Good Hope to £50,000, that of Natal to £35,000, and the document then asserted that the Transvaal and Canada had not contributed anything for this purpose. I thought it my duty to state at this juncture the exact position of Canada in that respect. Not only did this document contain the statement referred to but important publications both in Great Britain and Canada had made the same assertion. I pointed out that this allegation was erroneous and that Canada had relieved England of certain naval expenditures which England formerly bore. By the treaty of 1818 it was stipulated that the Americans would have the right to take fish within the three mile limit in Newfoundland and the Canadian Labrador. This was a treaty which had been made by the mother country without the consent of Canada, because in those days the consent of Canada was not asked to such a treaty. From 1818 to 1873, except during the years the reciprocity treaty was in force, the duty of the protection of our fisheries and the enforcement of the regulations was assumed entirely by the British fleet. That was a duty which would have entailed on the British treasury the expenditure of a large sum of money. At one time not simply one vessel but several were assigned to the protection of our fisheries. In 1870 we established a marine police as an auxiliary to the British vessels engaged in that service. But after the denunciation of the treaty of Washington, from 1886 until to-day Canada has assumed alone all the responsibility of protecting her fisheries, not only on the Atlantic coast, but also on the Pacific coast; and since that time we have spent for the protection of our fisheries, on our hydrographic survey, which also was formerly carried on entirely by the British fleet, and for our wireless telegraphy service, which of course did not exist before, no less a sum than $5,186,701.16.

Mr. R. L. BORDEN. May I ask the hon. gentleman, for information, whether expenditures of this character, if there be such expenditures in Great Britain, are included in the sum mentioned as the total naval expenditure of Great Britain?

Mr. BRODEUR. Yes. I may say that when this question was being discussed before the imperial conference, I asked Lord Tweedmouth whether the £33,000,000 mentioned as the naval expenditure of Great Britain included the cost of the hydrographic surveys, the fisheries protection service and the wireless telegraphic service, and he told me that the cost of the fisheries protection service was included.

Mr. COWAN. Is it not a fact that since then these items have been excluded from the naval expenditure?

Mr. BRODEUR. I could not say whether these items have been excluded or not from the naval expenditure of Great Britain. I am speaking of what happened at the imperial conference. It was stated that Canada was not expending anything on the fisheries protection service, and I thought it my duty to call the attention of the members of the conference to the fact that that

statement did not represent the situation exactly as it was. I do not know whether any change has been made since, but I am convinced that the naval expenditure of Great Britain to-day includes not only the construction of ships, but also the fisheries protection service, the hydrographic survey and the establishment of wireless telegraphic stations.

There are some other services which have been taken over by Canada. Reference has been made to the stations of Esquimalt and Halifax. It is true that the transfer of Esquimalt has not yet been completed; but I expect to be able to report in a very few days that the matter has been entirely closed up, and that the expenditure on that port will in future be carried on by the Canadian government. The Halifax station has been handed over to us temporarily for a special purpose. The understanding or contract between the imperial government and the Canadian government with reference to that station has not yet been signed, as it will require legislation by the imperial parliament; but I understand that this legislation will probably be passed at the present session of that parliament. Lord Tweedmouth stated on the 30th of July, 1907, that the cost of the establishment at Halifax had been £31,600 and that at Esquimalt £27,300, or a total of £58,900, or about $300,000. Provided the Canadians kept up those two docks and harbours in proper condition, he said, they would be doing a very great service to the empire at large.

Mr. SPROULE. Was that the ground on which we were to take them over—simply that we were to keep the docks and shipyards in an efficient condition?

Mr. BRODEUR. No, we shall be obliged to maintain those stations in the same state of efficiency that they are in to-day in order that they may be used as coaling stations and for other purposes. At the present moment we are using the Halifax dockyard, with its magnificent equipment, for our buoy service. All our buoys and ships are being repaired at that station.

Since I am on this question of Canada's contribution to the navy, I might quote some remarks made in the same discussion by the First Lord of the Admiralty upon the contributions of the other self-governing dominions. My hon. friend from North Toronto quoted to-day the contributions which had been made by Australia, New Zealand, the Cape and Natal. We must not forget for one moment that those contributions are made under certain conditions. Take the case of Australia, which has handed over £200,000 to the British treasury without anything in return. There are some obligations stipulated in the contract between the Australian and the imperial governments which render that contribution of £200,000 and even the contributions made by the other colonies somewhat onerous on the British treasury. The amounts subscribed by the different colonies are as follows:

Newfoundland..	£ 3,000
Australia..	255,000
New Zealand..	40,000
Cape of Good Hope..	50,000
Natal..	35,000
Total..	£383,000

Taking simply the case of Australia and New Zealand, I find that the total sum of £383,000 is more than offset by the burden which the contract between Great Britain and the governments of Australia and New Zealand imposes on the imperial treasury. I find, by a speech made by Lord Tweedmouth on the 30th of July 1907 in the House of Lords,that the obligations imposed by this contract have cost Great Britain £581,954, or £200,000 more than the amount subscribed by those different self-governing dominions. Here is the statement of Lord Tweedmouth, which I will take the liberty of reading, taken from the 'Times' of the 31st of July, 1907:

> Having reference to the way in which the colonial contribution was initiated, I mention that under the outstanding agreement with Australia that colony was obliged to give £200,000 a year to this country and New Zealand was similarly pledged to give £40,000 a year, on condition that a certain squadron should be kept in Australian waters. That agreement was still in effect, and could not be broken without the vote of the Australian and New Zealand parliaments as well as of our own. The annual cost of that squadron was £581,954.

So that this contribution given by those self-governing dominions instead of being a monetary benefit to the British Treasury, has entailed upon that Treasury an expenditure of £200,000 more than the whole amount contributed.

Mr. BARNARD. As a matter of fact, had not the government of New Zealand, since the date of that quotation, increased its subscription to £100,000, and made it unconditional?

Mr. BRODEUR. I understood that the contract made in 1902 was made by the imperial government with the Australian and the New Zealand governments and that, as stated by Lord Tweedmouth, it cannot be cancelled except with the consent of the three interested parties. At present I think there is an offer on the part of New

Zealand to make her contribution £100,000. I do not know whether that offer is conditional or not, but I simply take the facts as I find them.

Mr. BARNARD. If my hon. friend will look at the imperial Blue-book of a much later date, he will find that in December, 1907, New Zealand increased her subsidy from £40,000 to £100,000 and, in reply to a question from the imperial government made it unconditional.

Mr. BRODEUR. There may have been such an offer, and I am not questioning my hon. friend's statement, but suppose there was, that would still leave a difference of £140,000 against the British government. I am not disparaging, in any shape or form, what the different self-governing dominions have done, but I say that the conditions imposed by some of them are such that the British treasury is out a sum of £200,000 or at least of £140,000. And Canada, which is represented as not doing anything, has been undertaking the defence of her own coast, as far as fishery protection service is concerned. Canada has been spending $5,100,000 on this service since 1886, and we are spending also a very large sum for the aid of navigation, if not of a navy proper. My hon. friend thinks that our fishery protection service is not what is desired. Possibly it is not absolutely perfect, but it must be borne in mind that new vessels are coming out every day which were not in use some years ago, and we are taking steps to build cruisers to cope with new conditions and protect our fisheries more effectively. I was alluding to the fact that we in Canada, have made other expenditures which show that we are improving our navigation. Take the expenditure of last year in connection with lighthouses, ship channels, and wireless stations. We have spent in this connection $3,048,386. That expenditure, I admit, does not turn absolutely to the benefit of naval defence, but at the same time it shows that Canada is doing something for the development of our means of transportation. And if we consider the situation of Australia and other self-governing dominions, we do not see that they are obliged to make such expenditures as those regarding the maintenance of lights and the development of the improvements of means of transportation. On this question of defence, there are two means of contributing. The one is what I might call the national defence; the other one is a contribution which might be made directly in the shape of a sum of money or it might be made indirectly by the construction of some big ships. The imperial authorities did not ask us at the Imperial Conference to contribute any sum of money. No, what they were most anxious for was that we should do something for the protection of our sea coast and, as was well illustrated in a discussion I had on this matter with a naval authority when I was in England, the construction of torpedo boats and destroyers and small craft of that kind will render perhaps more service to the British navy than the construction of great warships. Suppose a war should be declared, suppose the coast of Canada should be attacked and that we have only one or two warships, what would these warships be able to do? Nothing, or almost nothing. On the other hand, if we had some of these small boats in order to protect our coasts, it is to be presumed that in a short time large warships could come to our rescue and in the meantime our coasts could be defended by these destroyers and torpedo boats. It has been stated in the debate to-day that there is only one opinion in Canada on the question of local defence. I was very glad to hear my hon. friend from North Toronto (Mr. Foster) express that view which has been concurred in to a very large extent by the leader of the opposition (Mr. R. L. Borden). I shall quote an authority showing that in Canada there is only one view irrespective of party upon the question of local defence. I beg to quote from an article by Sir Charles Tupper, published in the 'Nineteenth Century,' of April, 1907. Sir Charles said:

> It is known that from the outset I have felt the interests of Canada and the true interests of the empire to be opposed to the demand for colonial contributions to the imperial navy. Those loudest in that demand admit that a voice in administration by the colony contributing is essential, and all the naval experts concur in the opinion that any diversion of authority would be fatal. But this is not for one moment to say that each colony should not contribute to the extent of its ability to the defence of the empire. I hold strongly that it should, and I maintain that Canada has discharged that duty in the manner most conducive to imperial interests. Canada protects her fisheries by her own cruisers, and when the imperial government expressed a wish to be relieved of the expense of maintaining the strategic points at the harbours at Halifax and Esquimalt, the Canadian government at once relieved them of that large expense. The empire can be best defended by strengthening its weakest part.

At this late hour I need not dwell on the question of contribution to the British navy with such an opinion as has been expressed by Sir Charles Tupper. There is no doubt that the supremacy of Great Britain on the sea is absolutely essential for the protection of our commerce, for the advancement of civilization and in the interests of the world. I maintain that as long as this supremacy exists we in Canada may safely continue to develop our natural resources, to extend our commerce, and to make this country a great and powerful nation which, in case of need, will be there ready with

vast resources and vast wealth to co-operate with the empire in order to maintain forever the supremacy of Great Britain at sea.

Mr. A. M. BEAUPARLANT (St. Hyacinthe). (Translation.) Mr. Speaker, in introducing his resolution, the member for North Toronto (Mr. Foster) laid down the principle that the physical or material power of a nation is the basic principle and the means by which it secures its development and its civilization, while preserving thereby its acquired wealth.

I agree with the hon. gentleman that such a principle will prevail so long as the present method of settling international disputes obtains.

But he will agree, I hope, that such is not the rule of equity applicable to conflicts arising between private individuals, between groups of population, or between cities and provinces.

He will agree that, because a man is endowed with greater physical strength than his neighbour, he is not entitled to claim larger rights before the courts of the country, or under the laws which govern the home administration in all civilized countries at least, and to the framing of which the hon. gentleman has himself contributed, in his capacity of an old parliamentarian, inspired no doubt by that premordial and true feeling of wisdom and equity which governs all right-minded men.

I shall revert later on to this aspect of the question. Let us for a moment review the question, from the standpoint of the existing relations between the various nations.

Now, from that latter standpoint, I see no more immediate danger than opportunity, which should induce us to subordinate to that principle the national undertakings now under way.

Without stating it in explicit terms, the mover of the resolution before the House wishes to make a direct offer to the British Admiralty. His position in this regard coincides with that taken by a good Toronto paper, the 'News.'

That newspaper recently published two articles, one of which relating to the Grand Trunk Pacific and the other bearing on the question which is before us.

As a heading to the first of these two articles, there was a cartoon representing our Finance Minister extracting from the pocket of another individual representing Canada, certain sums of money intended for a third individual personifying the Grand Trunk Pacific. The conclusion of that article as also that of the cartoon used as a heading was a blame directed to the Canadian government, on account of the expenditure incurred for an undertaking which, however, is of a national character. The second article had as a heading a cartoon representing New Zealand and Australia eager to bring to Great Britain those pretty boats called 'Dreadnoughts.' Then, in the background stood an individual representing Canada, viewing that spectacle, motionless and impassive.

The conclusion of that second article and the accompanying cartoon was a blame inflicted to Canada for hesitating to incur the necessary expenditure so gratifying to Great Britain.

Now, without applying too strictly the principle that 'well-ordained charity begins at home,' which savours of egotism, I disapprove of this newspaper who shares in the opinion of the member from North Toronto trying to subordinate our own national undertakings to an undertaking which is to be carried on a territory altogether different from our own.

And should some overzealous minds be scandalized at my statement, let me remind them that the first Lord of the British Admiralty, Sir Reginald McKenna, has himself recently stated that the British navy was so far ahead of its rivals that there was no immediate danger. Closer to us, one of the leading minds in this House, the member for South York, made from his seat in this House, on the 11th of February, 1907, the following statement: 'I am one of those who believe in Canada first and empire next.' With the exception of the member for the Yukon, no member of this House has made a more categorical statement.

The 'Saturday Review,' of London, stated at the same date, that it was high time for Canada to think of using her own treaty-making power.

Therefore, I do not stand alone here in protesting against imperialism and militarism. As to us, French Canadians, our adherence to British interests is grounded on reason, which is more lasting than mere sentiment, as may be gathered from the history of the American colonies. Those who would rather make a gift to Great Britain than coming to her assistance in time of need, evidently abdicate the faculty of discussing certain events which have arisen in the past history of other nations and may arise here in the future, and I for one do not wish to divest myself of that privilege.

Our sympathies are grounded on the proverbial British fair play, evidences of which Great Britain has given us in the parliamentary system granted to us under the successive Acts passed in 1774, 1791, 1840, and 1867.

Perhaps the most regrettable event which has ever marred our relations with Great Britain was the violent character of the means resorted to in order to quell the insurrection of 1837, at a time when Great Britain had in her power and at her mercy a few powerless insurgents. Even from the standpoint of British diplomacy, toleration

and humanity would have been the wiser course to follow; and one would have first to eradicate from the hearts of the Canadian people an inborn feeling, should one expect these events to be mentioned without stirring up some painful recollections.

But between Great Britain and us there has been laid the foundation of generous compensations. We have learned how to forget, in view of the liberal treatment above alluded to.

Such adhesion on my part, however, restricted it may be, but resting on the above stated grounds, may perhaps carry more weight with and be more acceptable to those who hear me, than a sweeping and unqualified approval, the grounds of which would be likely to breed suspicion or could not be accounted for.

With the above qualifications thus frankly stated, I may now examine the question before the House.

One of the first points that call our attention in the resolution before us is the financial liability involved in the application of the principle extolled therein.

The combined cost of the British Army and Navy is in round numbers $400,000,000 every year.

Is Canada prepared and willing to contribute her proportionate share to such an expenditure to be incurred every year?

The surpluses accumulated within the last few years are no longer sufficient to meet our national undertakings. While in England, recently, our Minister of Finance had to negotiate a loan for the purposes of the construction of the Grand Trunk Pacific. The Georgian Bay Canal, a scheme which is perfectly practicable in a near future, may probably call for further loans.

I am far from posing as a financial expert, but I may state here that I do not see any other means of meeting the foreshadowed expenditures than by adding to our Customs Tariff, at least the 3:07 per cent taken off, within the last twelve years, a reduction which I think has benefited the whole people of Canada, or else by raising some special taxation.

Is the contribution to the Imperial Navy of such an opportunity that the Liberal Government of Canada should believe themselves justified in changing their fiscal policy, approved of by the electors of this country at the polls at four general elections, and on grounds which have not been submitted to the consideration of the Canadian electorate?

On the other hand, are the citizens of Toronto, Hamilton, London or Sarnia more willing than the citizens of Montreal, St. Hyacinthe, Three Rivers or Quebec to submit to that special taxation or to borrow from Great Britain in order to make a gift to Great Britain.

Still, I for one am willing to make all those sacrifices, but only for the purposes of the creation of a navy to remain under our own exclusive control and for us alone, and by means of which we may, when opportunity offers, lend our help to Great Britain whose prestige is for us a guarantee of security.

Coming in such a way to the assistance of England would be more useful and more satisfactory to us, the more so as we should then avoid pledging our future.

Although in principle I am disinclined to give my support to any expenditure of a military character, still one must take into consideration the conditions of equilibrium between the different nations, and so long as those conditions are not settled in a more desirable way I am willing to give my consent to any necessary sacrifices for the protection of the country.

Without entering here into the question of universal peace, a system which is by no means impracticable, but which may for a long time remain a speculative question, one may at least express the opinion that, should the different nations devote to that purpose one half of the sacrifices made and efforts put forth to secure the triumph of their respective claims without always inquiring as to the proportion of equity they contain, they would secure greater advantages and more wealth than are reaped by the victorious nations themselves from present conditions. I am far from pretending to be familiar with universal history, but I am free to confess that should anyone be able to single out even among the most powerful nations one solitary example of a people for which war has not proved the worst of evils, he would reveal to me a fact, the existence of which, as a modest student of history, I have never had the least suspicion. Victory and even conquest which is sometimes the sequel of victory, constitute but a partial compensation for losses resulting from the clashing of navies and armies.

England and France are the two countries which have played the most prominent part during our era. Stupendous as has been the work of England, as we all readily admit, I do not think that a single decade has elapsed in her history without her having had a war to sustain.

As to France, after so many quarrels and struggles, she does not own to-day a single square meter of territory more than she possessed 1,400 years ago, under her fourth king.

But such is not the question we have to examine now, at a time when some feverish individuals seem to hear rumours of conflicts, which is always an opportunity for starting a movement of a similar nature to the one which is now in full swing. One must take into consideration the pre-

sent conditions of settling conflicts between nations.

So long as powerful nations shall not take a serious and effective lead in compulsory national arbitration; so long as it shall be considered proper to submit to a disinterested third party and to no other the dispute arising between two private individuals, while refusing to apply the same measure of justice to the quarrels between nations; so long as governments whether democratic or autocratic, shall bind their subjects by laws to which they themselves refuse to submit; so long as it is conceded that there is more of right and justice in a fourteen-inch gun than in an eight-inch gun; so long as right shall be might in international matters, we are bound to make the sacrifices necessary for our own protection, but let the fruits of those sacrifices remain under our own control. That is the most rational method we can adopt of helping Great Britain and it is in the interest of both parties that we, a nation in course of formation, should avoid the less reasonable method of offering sums of money to the British nation whose energetic efforts have been accumulating for centuries such colossal wealth.

My conception of patriotism may differ from that of several members of this House. There enters a good deal of narrow egotism in the ordinary feeling called by that name. It consists in a sort of nepotism of family preference applying to the nation and which, it seems to me, should make way for the far more attractive humanitarian concept. After such a declaration on my part, which, I hope, will be considered sincere, I will not, I suppose be accused of national prejudice.

On the contrary, I am desirous, in all loyalty and with the assurance that my action will not be misconstrued, to offer friendly co-operation to the sons of that British race who in two leading events of their history and in the evolution of their nation, have secured political and civil liberty at less heavy a price than another great nation in an identical attempt made later on.

The Anglo-Saxon in Canada is the equal of those of his race, both in England and in the United States; he is proud of his past and desirous of casting aside all that may impede his progress; there is nothing to prevent our working together, our interests and aims being in the main identical.

It has often been pointed out that there are between us differences of language, creed and tradition, but with similar differences of race, small countries such as Switzerland and Belgium, who have neither our great rivers or extensive plains, have secured the respect of the world at large and a prominent position in industrial, mental and moral development.

The present question has no reference to matters of language, creed or tradition, it refers exclusively to the nature, conditions and advantages of our political relations, and to the control to be exercised over any given portion of the empire. In this I feel sure that my opinion will be shared by the majority of English-speaking members in this House. A people numbering among its leaders such men as Gladstone and Sir H. Campbell-Bannerman, who so ably advocated the cause of home rule for others, cannot object to the principle of home rule when applied to ourselves.

Sir WILFRID LAURIER. The suggestions which have been made by my hon. friend the leader of the opposition are such as can be accepted by this side of the House, and I have no objection to adding the words, so that the resolution will read as follows:

The House will cordially approve of any necessary expenditure designed to promote the speedy organization of a Canadian naval service.

With regard to the paragraph stating what we have already done in alleviating the burden of the British taxpayer, there is no objection at all to striking that out. I therefore move the amendment in the following form:

That all the words after 'that' be struck out and the following substituted thereto:

This House fully recognizes the duty of the people of Canada, as they increase in numbers and wealth, to assume in larger measure the responsibilities of national defence.

The House is of opinion that under the present constitutional relations between the mother country and the self-governing dominions, the payment of regular and periodical contributions to the imperial treasury for naval and military purposes would not, so far as Canada is concerned, be the most satisfactory solution of the question of defence.

The House will cordially approve of any necessary expenditure designed to promote the speedy organization of a Canadian naval service in co-operation with and in close relation to the imperial navy, along the lines suggested by the admiralty at the last imperial conference, and in full sympathy with the view that the naval supremacy of Britain is essential to the security of commerce, the safety of the empire and the peace of the world.

The House expresses its firm conviction that whenever the need arises the Canadian people will be found ready and willing to make any sacrifice that is required to give to the imperial authorities the most loyal and hearty co-operation in every movement for the maintenance of the integrity and honour of the empire.

Amendment agreed to, and motion as amended agreed to.

Sir WILFRID LAURIER moved the adjournment of the House.

Mr. R. L. BORDEN. I suppose to-morrow we take up the Grand Trunk Pacific proposals?

Sir WILFRID LAURIER. Yes.

Motion agreed to, and House adjourned at 11.45 p.m.

HOUSE OF COMMONS.

TUESDAY, March 30, 1909.

The SPEAKER took the Chair at Three o'clock.

INDUSTRIAL DISPUTES INVESTIGATION ACT AMENDMENT.

Mr. A. C. MACDONELL (South Toronto) moved for leave to introduce Bill (No. 113) to amend the Industrial Disputes Investigation Act, 1907.

Some hon. MEMBERS. Explain.

Mr. MACDONELL. The Bill which I have the honour to introduce is a short one. It seeks to remove some of the imperfections and inaccuracies of the Industrial Disputes Act, 1907, which have been revealed during the two years in which the Act has been in operation. The amendments are, very shortly as follows: The Bill seeks to amend section 15 of the Act which is a section dealing with the procedure for the reference of disputes to boards and the manner in which the application to the board must be made. The amendment seeks to put the men in the same position in regard to the notice as the employers are under the Act as at present. The Act as at present requires, in the case of the men making a demand for a board, that they shall have convened meetings and obtained authority to enable their officers to say that a strike has been decided upon in the absence of their demands being acceded to. This amendment seeks to make it unnecessary to hold these meetings for the purpose of authorizing the officers to make the necessary declaration. It is reported that a very great deal of time is wasted and that in certain cases thousands of dollars are unnecessarily expended by the men being convened and holding these meetings at which the required authority is obtained. The amendment seeks to put the men on the same basis as the employers in that regard. The second amendment is simply desired to increase the compensation awarded to the members of a board of conciliation. It has been manifest during the reference of disputes to boards which have taken place under the Act that the board sits sometimes almost day and night continuously. It sits well into the night in order to accomplish a settlement, and the amendment proposes to increase the compensation from $15 to $25 a day and to put all the members of the board on an equality with regard to compensation. The chairman now receives $5 more than the other members. As all the members of the board perform practically equal service and as they all sit the same length of time it is believed that the compensation shall be identical. Then, the Bill seeks to amend section 57 of the Act in some important respects.

That section is the section requiring the condition of the parties to remain unchanged pending proceedings before the board, and it also requires that employers and employees shall give at least 30 days notice of an intended change respecting conditions of employment in the matter of wages or hours. It is confined to disputes arising in connection with wages or hours, but the Bill extends so as to make it include any intended change with respect to any condition of employment. If this amendment carries, the notice will not only require to be given with respect to changes desired by either party with respect to wages or hours, but also as to any other condition of employment; it being felt that many others of the conditions of employment are just as important to the parties concerned. Section 57 is also sought to be amended by compelling the party who gives the notice to apply for a board of conciliation in the event of the other party not accepting the contemplated change, so that whether either employer or employee seeks to alter existing conditions of labour by making some change and gives notice to that effect, if the other party does not acquiesce then the onus of obtaining the board is on the party who seeks to make the change and has given notice. As the law at present stands it permits either party to do that and it has not been found that it works altogether equitably. I think myself that the onus, as in the case of every other dispute, should be cast upon the party who gives notice of the change. Then again section 57 says that where a dispute has been referred to a board, until the dispute has been finally dealt with by the board neither the employers nor the employees affected shall alter the conditions existing with respect to wages and so forth. The change contemplated by the Bill is intended to prevent a change in the conditions of labour taking place at any time after the giving of the notice. At present the section permits the employer or employee to change the conditions after the notice has been given and before the board has been appointed. The parties are practically at issue when the notice has

been given and it is felt by many that after notice has been given and when the parties are practically at issue, no change in the conditions should be permitted until the dispute is dealt with and disposed of by the board. At present changes can take place at any time before the board is constituted, but this amendment will cover the whole period of time and prevent any change in the conditions of labour taking place between the initiation of the notice and the final disposition by the board.

Mr. FIELDING. As the hon. gentleman read his Bill I would be inclined to think it comes within the prohibition respecting money Bills. I understood the hon. gentleman to say it would increase certain allowances and expenditures. We can see as to that before the Bill reaches a further stage and I do not wish to press the point now.

Mr. MACDONELL. The minister is quite right with regard to one section of the Bill.

Motion agreed to, and Bill read the first time.

COLD STORAGE IN HALIFAX.

Mr. A. B. CROSBY (Halifax). Before the orders of the day are called I desire to ask the Minister of Agriculture if he has received any communication from the commercial committee of Halifax, a body composed of members of the city council and of the board of trade, with regard to the establishment of a cold storage in that city. I understand that a communication has been addressed to the minister inclosing a resolution which asks the government not to take up the question of cold storage with any company until the commercial bodies of the city of Halifax have approved of a charter which they consider will be in the best interests of the city.

Hon. SYDNEY FISHER (Minister of Agriculture). I have received a communication from the board of trade of Halifax as well as other communications from that city and from various persons in Nova Scotia in regard to this matter. The communication from the board of trade requested me not to come to any conclusion unless the board of trade of Halifax approved the company. I replied that I could not pledge myself to that, but that any recommendation from such an influential body as the Halifax board of trade would receive every consideration from me before I arrived at a decision.

Mr. CROSBY. My understanding is that they desire to have an opportunity of approving of the charter, not of the company.

Mr. FISHER. I did not understand it so.

RAILWAY CROSSINGS IN THE WEST.

Mr. WILBERT McINTYRE (Strathcona). I wish to ask the Minister of Railways whether he has received any representations regarding the width of the openings at private railway crossings? As the minister is well aware there will come into being hundreds of such crossings in the west this year. The Act provides that the maximum width of such openings shall be 16 feet but the fact is that a great deal of the farm machinery now used in the west cannot pass through such an opening. It is contended that the maximum width should be 18 feet. In view of such representations I would ask if the minister intends to bring in legislation to remedy this defect in the law?

Hon. GEO. P. GRAHAM (Minister of Railways). I have just received a communication from the chief of the Board of Railway Commissioners with reference to this matter but I have only had time to glance over it. I should judge however from the communication that legislation in this respect is not necessary. With his usual practical turn of mind the chief commissioner has already prepared a draft order with reference to the width of openings at crossings, and fences, and gates, and other matters in connection with the railways in the west in particular. This draft order he is sending out to the different railways and he will give those interested an opportunity to be heard at a meeting of the board in Ottawa in May next. I think it is quite safe to say that the order will provide that the openings shall be at least 18 feet wide.

DEPARTMENT OF MARINE AND FISHERIES INVESTIGATION.

Mr. R. L. BORDEN. I would ask the Prime Minister whether he will be able to carry out what was understood on Wednesday last when he said that he would place his policy in connection with the report of Mr. Justice Cassels before the House not later than to-day.

Sir WILFRID LAURIER. The order in council has just been placed upon the table.

DISMISSAL OF INTERCOLONIAL EMPLOYEES.

Mr. A. B. CROSBY. I wish to ask the Minister of Railways whether he has heard anything about the dismissal of a number of freight handlers in the city of Halifax and if so would he state why they have been dismissed. I am credibly informed that after the dismissal of these men some of whom have been engaged on the Intercolonial Railway for the last five or six years, others were taken on in their places.

Mr. GRAHAM. I have heard nothing of it except what appeared in the newspapers.

GRAND TRUNK PACIFIC LOAN.

Hon. W. S. FIELDING (Minister of Finance) moved that the House go into committee to consider the following proposed resolutions:

Resolved, that it is expedient to authorize the Governor in Council to advance by way of loan to the Grand Trunk Pacific Railway Company a sum not exceeding ten million dollars for the purpose of aiding the company in the completion of the construction of the prairie section of the western division of the National Transcontinental Railway, the sum so advanced to bear interest at the rate of four per centum per annum, payable half yearly, and to be repayable in ten years from the time the loan is made, or if advanced in instalments, then in ten years from the time the first of such instalments is so advanced; and to provide,

That such sum, whether advanced in one or several instalments, shall be advanced upon the pledge of an issue of bonds, bearing interest at the rate of four per centum per annum, payable half yearly, to be made by the company as collateral security for the payment of such sum and interest, the principal amount of the bonds received in pledge to equal the sum advanced, such bonds to be secured, subject to any prior lien or charge, by a mortgage, or deed of trust by way of mortgage, of the prairie section, and of the undertaking, equipment and property, tolls, rights and franchises of the company in respect of said section, and to be guaranteed as to the payment of the principal and interest thereof by the Grand Trunk Railway Company of Canada; the form and provisions of such mortgage and of the bonds to be secured thereby, and of the guaranty thereof by the Grand Trunk Railway Company, to be substantially as set forth in the schedule of the Act to be founded on these resolutions;

That His Majesty, in the event of default in the payment of half-yearly interest, or in default in the payment of the principal sum advanced under the provisions of such enactment, in addition to and without prejudice to any right or remedy against the company in respect of such default, and in addition to and without prejudice to any right or remedy His Majesty may have as pledgee of the whole or any part of such bond issue, shall, for the purpose of remedy, be deemed to be the holder of such bonds and entitled to all the rights and remedies available to bondholders arising according to the terms of such mortgage when default is made in payment of interest or principal of such bonds; and that default in payment of interest on, or principal of, any advances made under the provisions of such Act, shall be deemed to be default in payment of the interest on or principal of such bonds to the amount accrued thereon according to the tenor thereof;

That the Governor in Council may, in addition to the sums now remaining unborrowed and negotiable of the loans authorized by any Act of parliament heretofore passed, raise by way of loan, in accordance with and under the provisions of that portion of chapter 24 of the Revised Statutes of Canada, 1906, relating to the public debt, and the raising of loans authorized by parliament, such sum or sums of money not exceeding ten million dollars, as may be required for making the advances contemplated by these resolutions.

He said: Mr. Speaker, the object of this resolution is to authorize the government of Canada to loan to the Grand Trunk Pacific Railway Company, upon what is deemed to be adequate security, a sum not exceeding $10,000,000 to assist the company in meeting the unexpectedly large increase in the cost of the prairie section of the railway. It should be clearly understood that this resolution does not contemplate any change whatever in the contract between the Grand Trunk Pacific Railway Company and the government. It is rather in the nature of a banking transaction. It is proposed that the government shall become the bankers of the company, to lend it this sum of money, which no doubt the company could raise, largely if not wholly, in the ordinary way in the money market, but which in present conditions it would probably be obliged to raise under circumstances involving a considerable sacrifice, which would not be to the advantage of the company, the enterprise or the Dominion at large.

The Transcontinental Railway, beginning at Moncton in New Brunswick, at a point of convenient connection with our Atlantic ports, runs westward to the Pacific at Prince Rupert in British Columbia, a distance approximately of 3,560 miles. The eastern division of this line, extending from Moncton to Winnipeg, is a fraction over 1,804 miles. That division is being constructed by the government through the instrumentality of the Transcontinental Railway Commissioners, and is ultimately to be leased to the Grand Trunk Pacific Railway Company. The resolution which I have the honour to present to the House does not in any way relate to the construction of that eastern division. The western division, extending from Winnipeg to Prince Rupert, a distance of 1,755 miles approximately, is being constructed by the Grand Trunk Pacific Railway Company with the assistance of the government in the way of certain guarantees. This division is divided into two sections, known respectively as the prairie section and the mountain section. The financial arrangements respecting these two sections are somewhat different, and therefore it is of importance to note the point of division between the two. As respects the prairie section, the government guarantee the funds for the company to the extent of three-fourths of the cost, provided, however, that the amount shall not exceed $13,000 per mile. In the case of the mountain section, the government guarantee the bonds of the company to the extent of three-fourths of the cost, whatever it may be. In view of this difference in the financial arrangements as to the two sections of the western division,

it was important that the point of division should be accurately determined. That matter was dealt with in section 4 of the agreement of the 29th July, 1903, which reads as follows:

The said western division is further, for convenient reference, considered as being divided into two sections, one extending from the eastern terminus thereof westerly to the eastern limit of the Rocky mountains (herein designated as the 'prairie section'), and the other extending westerly from the said eastern limit of the Rocky mountains to the western terminus of the said division (herein designated as the 'mountain section'). The said eastern limit of the Rocky mountains shall be established after the location of the line, and after actual surveys have determined the profile thereof upon such location, and shall be fixed and agreed upon by the chief engineer of the company and the chief engineer of the government as the result of such surveys, having regard to the physical features of the country, and to the cost of construction, and endeavouring as fairly as possible to determine where the more easy and less expensive work characteristic of prairie construction comes to an end, and the more difficult and expensive work characteristic of mountain construction begins, and, in case the said engineers shall differ, the question shall be determined by the said engineers and a third arbitrator, to be chosen by them, and, in the event of their inability to agree on a third arbitrator, the Chief Justice of the Supreme Court of Canada may appoint the said third arbitrator, and the decision of the majority shall be final.

As the work progressed, in accordance with the provision which I have just read, the chief engineer of the Grand Trunk Pacific Company and the chief engineer of the government took this matter up, and happily were able to agree upon the point of division between the two sections. On the 21st of November, 1907, they reached an agreement, which reads as follows:

Under clause 4 of the agreement between the government and the Grand Trunk Pacific Railway Company, which forms part of the Act 3, Edward VII., chapter 71, the eastern limit of the Rocky mountain section has to be established after the location of the line and after actual surveys have determined the profile thereof upon such location. It has, therefore, been agreed upon by us, the chief engineer of the company and the chief engineer of the government, as the result of such surveys, having regard to the physical features of the country, to the cost of construction and having as fairly as possible determined where the more easy and less expensive work characteristic of prairie construction comes to an end and the more difficult and expensive work characteristic of mountain construction begins, that the 'prairie section' ends and the 'mountain section' begins on the east bank of the Wolf river at station 6280, as shown on plan and profile of revised location submitted by the Grand Trunk Pacific Railway Company for approval on the 10th September, 1907, signed by William Wainwright, 2nd vice-president, and H. A. Woods, assistant chief engineer, of the said company, and dated August 29, 1907.

(Sgd.)
BARTHOLOMEW BROSNAN KELLIHER,
Chief Engineer,
Canadian Pacific Railway Company.
(Sgd.) COLLINGWOOD SCHREIBER,
Chief Engineer of the Government.

Ottawa, Ont., November 21, 1907.

Therefore, in accordance with the Act, the point of division between these two sections was fixed at Wolf river, a point about 120 miles west of Edmonton. The prairie section, then comprises a line from Winnipeg to Wolf river, the distance being 916 miles, and the mountain section a line from Wolf river to Prince Rupert, an estimated distance of 839 miles. If we apply $13,000 per mile, the contemplated government guarantee, to the 916 miles of prairie section, we find that it would provide the sum of $11,908,000. The balance required, under the terms of the contract, is to be raised by the Grand Trunk Pacific Railway Company with the guarantee of the parent company, the Grand Trunk Railway Company of Canada. The company estimated this balance would be £2,100,000 stirling, or $10,220,000, and this sum is fixed in the second mortgage. The mortgage applies to the whole western division, but provision is made that the amount to be raised under it, for the purposes of the prairie section, shall be £2,100,000, or about $10,220,000.

Mr. R. L. BORDEN. When was that estimate made?

Mr. FIELDING. At the time the mortgage was prepared—July, 1905. It was estimated for the purposes of the mortgage. There were thus available for the road the proceeds of the government guarantee, $11,908,000, and the proceeds of the Grand Trunk Railway guarantee, which realized $9,601,926.30. There was thus available for the prairie section from the two sources $21,509,926.30. This provision was equal to $23,482 per mile for the 916 miles of prairie section as ultimately defined. If the road had cost no more than $23,482 per mile there would have been no need for any further assistance.

Mr. FOSTER. What is the par value of what produced that $21,500,000?

Mr. FIELDING. In the case of the government guarantee, it is not a question of par value. We are bound to give a guarantee which will produce $13,000 per mile; but in the case of the Grand Trunk Railway guaranty, they had to issue bonds and sell them for what they would bring on the market.

Mr. FOSTER. What I wanted was the amount of bonds which realized those proceeds.

Mr. FIELDING. The par value of the Grand Trunk Company's guarantee would be the £2,100,000 which produced the amount I have mentioned. The precise rate of issue I have not at hand, but will give it later. So that the reason why it is necessary to provide some further assistance for this prairie section is because the road has cost very much more than the earlier estimate. The reasons for this increased cost can best be given by the letter of Mr. Hays, which has already been submitted in some papers laid before the House, but which for convenience I will now read:

Montreal, Nov. 16, 1908.

Hon. W. S. Fielding,
Minister of Finance,
Ottawa, Ont.

Dear Sir,—In compliance with the undertaking of this company set forth in clause thirty-four of the agreement with the government of the 29th July, 1903, that the Grand Trunk Railway Company of Canada should guarantee Grand Trunk Pacific bonds for the balance required for the complete construction of the western division, we issued and the Grand Trunk Company guaranteed Grand Trunk Pacific four per cent mortgage sterling bonds, which by the mortgage deed of trust securing them, were limited in amount to £2,100,000 for the prairie section. At the time these bonds were issued it was assumed that the amount fixed would be ample for the balance required for the completion of that section, but by reason of the high standard of construction made necessary by the terms of the agreement, increased cost of labour, rail and all other material and the extension of the prairie section one hundred and thirty miles further west than was contemplated, it is found that an additional sum of $10,000,000 will be needed to complete the section to Wolf creek, which is the dividing line between the prairie and mountain sections. To raise this additional sum it will be necessary to make a further issue of bonds as contemplated by section 34 of the agreement of the 29th July, 1903, between the government and the Grand Trunk Pacific Railway Company, and by the agreement of June 8, 1905, between the government and the Grand Trunk Railway Company of Canada, that is to say, bonds to be issued by the Grand Trunk Pacific Railway Company and to be guaranteed as to principal and interest by the Grand Trunk Railway Company of Canada. Further legislation will be required to enable the companies to fully carry out what was contemplated by these agreements respecting the issue of bonds to provide the balance required (above the proceeds of the government guarantee) for the completion of the prairie section of the western division, and we desire to have an assurance that your government will, at the forthcoming session of parliament, introduce and support such legislation at the earliest date practicable.

Owing to the depression in the money markets of both Europe and America as respects this class of bonds, it is unlikely that we can sell these securities immediately or in the early future upon favourable terms. If thrown upon the money market under unfavourable conditions they would probably have to be sold at a sacrifice price, which would materially diminish the amount to be realized from them and might injuriously affect the credit of the two companies concerned. Under such circumstances and in view of the urgent desire of the government that the enterprise shall be prosecuted without any delay, we ask the government to assist us in the utilizing of these bonds by taking them at their par value as a security for a loan not exceeding $10,000,000 to be made to the company by the government for a period of ten years. As to the rate of interest, the bonds should bear 4 per cent, and, no doubt, the government would be able to borrow at that rate or something less. Consequently, so far as interest is concerned, the government could suffer no loss. As to security the government would not only have the obligation of the Grand Trunk Pacific Railway Company, but also the guarantee of the Grand Trunk Railway Company of Canada. Therefore, there could be no question as to the security of the government for a loan to be so made. It is a case in which the government could, by the use of its credit, aid the company materially without incurring any financial loss whatever.

Our view is that the whole scheme shows an intention on the part of the government to aid the company with its credit to the extent of three-quarters of the cost of the undertaking.

In the case of the prairie section a limitation of $13,000 per mile was put upon the amount because it was supposed that that would be a sufficient sum. Experience has shown that this was a mistake and that the cost of the section is, for reasons already stated, much greater than was at first estimated. What we are now asking is in effect that the original intention as to assistance to the extent of three-fourths of the cost shall be carried out. The loan which we now ask, together with the proceeds of the three per cent first mortgage bonds guaranteed by the government for the prairie section, will barely equal three-fourths of the cost of that section. Statement of account showing amounts expended on construction to September 30, 1908, and balance required for the completion of the prairie section is enclosed herewith.

As the Grand Trunk Railway Company of Canada has to date guaranteed bonds of the Grand Trunk Pacific to the extent of more than $30,000,000, the proceeds of which have been used in connection with the construction of the railway and equipment, and in addition has also advanced a very large amount from its own funds in order to keep the construction work going, it is essential we should receive the further assistance asked from the government in order to enable us to proceed with and complete the work. I would therefore urge that such measures of immediate relief be given as will enable us to do this and avoid the disastrous effect on the credit of both the railways and the country which would necessarily result from a stoppage of the work.

Very truly yours,
(Sgd.) CHAS. M. HAYS,
President.

Attached to this is a statement showing the expenditure on the section and the bal-

ance required to complete it. The company's statement as to the cost of the road was referred to the government engineer, Mr. Collingwood Schreiber, and his report was obtained. His estimate of the cost of the prairie section was somewhat larger than that of the company. The company's estimate, allowing for value of construction equipment, gives the cost per mile at $34,059. Mr. Schreiber's estimate, making the same allowance, gives $34,943 per mile. There is thus but a slight difference per mile between the two. The balance required, according to the company's estimate, is a total of $9,688,425. The balance required, according to Mr. Schreiber's estimate, is $10,497,522. We take the loan of $10,000,000 as being substantially in accordance with what these figures show as the amount required to enable the company to finish the prairie section. The Grand Trunk Pacific Railway Company, of course, is bound to produce the balance required over and above the guarantee of the government. While it is correct, as stated in Mr. Hays' letter, that reference is made to three-quarter's of the cost of the road, it is also a fact that there is a distinct limitation put upon that cost to the government, as respects the prairie section, because it is stated that the amount to be raised from the guarantee should not be more than $13,000 per mile, and, whatever may be required in excess of that, the Grand Trunk Pacific Railway Company is bound to obtain and the Grand Trunk Railway Company of Canada, the parent company, is bound to assist in raising.

Mr. R. L. BORDEN. Before the hon. gentleman (Mr. Fielding) leaves that point, I would like to ask a question, as I have not followed with complete understanding the figures which he has just given. If he will refer to page 1 of the information brought down, he will observe that the prairie section has been financed up to the present time in this way:—

$10,335,482.91, proceeds of 3 per cent bonds guaranteed by government on account of $13,000 per mile;
$9,601,926.30, proceeds of prairie section Railway Company;
'A' bonds guaranteed by Grand Trunk $7,094,044.30, advanced by Grand Trunk Railway Company;
Total, $27,031,453.51.

As well as I can understand, about $5,000,000 is required to finish the prairie section.

Mr. FIELDING. No.

Mr. R. L. BORDEN. The prairie section will cost $32,000,000, of which $27,000,000 has been provided including the advance by the Grand Trunk Railway Company.

Mr. FIELDING. It is contemplated that the Grand Trunk shall take out of this the amount which it has temporarily advanced. It is the Grand Trunk's money and not the money of the Grand Trunk Pacific. I think he will find that, according to the estimates of Mr. Hays and Mr. Schreiber, which are substantially the same, the latter being a little the higher, there is need of $10,000,000 to enable the Grand Trunk Pacific to finish the prairie section. But, of course, that includes the repayment to the Grand Trunk of the amount temporarily advanced.

As I have stated, it is clear that the Grand Trunk Railway Company of Canada, the parent company, is bound to provide this money by its guarantee; the government's obligation is distinctly limited to the $13,000 a mile, and the Grand Trunk Pacific Railway Company and its parent company the Grand Trunk Railway Company, took upon themselves the risk of the increased cost of the road. That is the letter of the contract, and, if we wish to insist upon that, we can say to the Grand Trunk Pacific Company and to the Grand Trunk Railway Company of Canada: This is your obligation, you must raise the money as you find best. But while that is the letter of the law, we think it would be unfortunate if the company were forced to issue securities to raise the money at a time when, in all probability, the securities would have to be sold at a sacrifice. The Grand Trunk Pacific Railway is a new enterprise, and, like all new railway enterprises, its own particular credit is limited. The expectation is that, as in the case of other great enterprises, as time goes on and traffic develops, it will have a credit of its own. But every such enterprise has but little credit at the beginning and must rely upon other assistance. It is felt that, if the Grand Trunk undertake to issue these bonds themselves, they will be obliged to sell them at a considerable sacrifice. It is undoubtedly true, as stated in the letter of Mr. Hays, that, as respects securities of this character, the money market is not in a favourable condition; and if we insist that the company shall float these securities themselves, they will undoubtedly have to issue them at a price very much below par. Securities of a similar character—that is, Grand Trunk Pacific securities guaranteed by the Grand Trunk Railway Company of Canada—have recently been issued in London at a price of 90, and, if you take the charges for financing off that, I presume the result to the company was somewhat below 90. We think it would be a pity if the company should be forced to issue such securities at that price. We have faith enough in the enterprise to believe that, if the company is helped, at no distant day these securities will be worth par. And so, though the money market in England may

not give that value now, we propose to become the company's banker, to receive these bonds which they propose to issue at par value and lend them that amount at four per cent. We do not disguise from ourselves the fact that, in doing this, we are giving the company substantial help. Not, we believe, a money loss, but we are lending them the credit of the government in a manner useful to them. The securities will ultimately have to be repaid at par, but at present they would not realize par. The company will pay us four per cent. We have, in a recent transaction, paid a shade above four per cent for money, so, the statement of Mr. Hays that we might lend them our credit and not suffer loss may be open to criticism. Therefore, we admit that, in giving the company the benefit of this loan, we are taking at par a security which they could not float at par and giving them the benefit of four per cent though they themselves could not borrow at that rate, and the government has recently had to pay a little over four per cent.

Mr. HUGHES. In the estimate of $34,000 per mile by the company and the chief engineer, does that include rolling stock and other equipment?

Mr. FIELDING. No, there is a special issue of bonds for equipment.

It will be remembered that, in the early days of the Canadian Pacific Railway Company, somewhat similar conditions arose. There were periods when, great as seemed to be the prospect of that enterprise, the money market did not view it with great favour; and application was made to the government and the government granted assistance. That assistance helped to tide over a difficulty that the company had, but, after a period of years, the result showed that parliament had acted wisely in granting the aid. There were differences of opinion at that time, but, no doubt, looking back over it to-day the men who did not approve of the loan at the time would be free to admit that the loan had justified itself. The Canadian Pacific Railway Company were helped over a difficulty, the road was completed, and as soon as it was in a position to establish its traffic, its credit began to improve, and, as a matter of fact, the company repaid the loan to the government before the money came due. We have every reason to hope that that will be the experience of this new enterprise. The prairie section has been generally recognized as a profitable section. The more expensive part, the mountain section, and the more difficult sections of the eastern division, are, with all their merits, not so profitable or so promising as an investment as the prairie section. We are lending this money with a special security on the prairie section and for the purposes of the prairie section entirely. We have every reason to believe that that section will, at a very early date, prove a profitable section, and we have an abiding faith that we will not risk seriously the credit or the money of Canada in lending this company $10,000,000 under such conditions. We get for it, first the promise to pay of the Grand Trunk Pacific Railway Company. I frankly admit that that in itself, at this moment, is not of the utmost commercial value. As I have already stated, any new railway company, in the early stages of its enterprise, would not find that its credit of that character ranked very high. We take a mortgage from the Grand Trunk Pacific upon the property. That mortgage is not one of high rank; there are several other mortgages before it and I do not attach the greatest importance to the mortgage itself as a security, although it has some value.

Mr. FOSTER. What does that mortgage cover ?

Mr. FIELDING. It covers the prairie section. The whole transaction applies to the prairie section. The first mortgage on the prairie section, as on the mountain section, represents the government guarantee, so that the government already holds the first mortgage on the prairie section. There is then a second mortgage which represents the aid already given by the Grand Trunk Railway Company through its guarantee, and then there is the lien created by the statute to make provision for the equipment. All these will have priority over the new mortgage we are to take under this Act. A question was asked in the House as to the standing of this mortgage and I said at once that so far as the mortgage was concerned, it would necessarily be an inferior security.

Mr. FOSTER. Does this mortgage include the Grand Trunk Pacific road, its equipment and everything ?

Mr. FIELDING. Yes as respects the prairie section and also the equipment of the whole western division. The first mortgage is practically held by the government through a trust company for the government guarantee. The second is held through a trust company by the Grand Trunk Railway of Canada for its own guarantee. Then follows the equipment lien and then will come the mortgage which we propose to take to secure this loan. Therefore so far as the mortgage is concerned, I do not regard the security as, at present of very great value.

Mr. AMES. This mortgage is on exactly the same things as the first two, on the property of the whole undertaking.

Mr. FIELDING. The equipment lien is on exactly the same property as the two

prior mortgages. It is not secured by special mortgages but by a lien created by statute.

Mr. FOSTER. Does our mortgage have the remaining equity in everything?

Mr. FIELDING. Yes as respects the prairie section. As I said I do not personally attach much present value to the mortgage security. There will come a time in the development of that property when the mortgage will become of value. For the present there are other mortgages ahead.

Mr. AMES. Is the amount of money raised, say on the second mortgage, differentiated as between the prairie and the mountain section or does the entire amount rest on the whole road?

Mr. FIELDING. It is one common mortgage on the western division, but a portion of it is specially assigned to the prairie section, so that only that much can be applied to the prairie section, but the mortgage is on the entire western division.

Mr. AMES. Would not the entire mortgage on the western division have to be paid off before the third mortgage would rank on the prairie section?

Mr. FIELDING. I think so, but the mortgage says that only this specified, limited sum of the proceeds of the mortgage can be applied to the construction of the prairie section. But it is a common mortgage over the whole western division and the hon. gentleman's view is, I think, correct.

Mr. JOHN HAGGART. Does the undertaking of the Grand Trunk Pacific cover that section of the road built to Lake Superior, or is that separate?

Mr. FIELDING. The Lake Superior branch is quite a separate transaction; the guarantee does not apply to that and it in no way relates to that transaction.

Mr. NORTHRUP. Do I understand that the government, in making this advance, is under the belief that the Dominion of Canada has the first mortgage under the transaction of 1903-4?

Mr. FIELDING. First mortgage on what?

Mr. NORTHRUP. On the prairie section of the road.

Mr. FIELDING. Surely they have.

Mr. NORTHRUP. Surely not.

Mr. FIELDING. The government-guaranteed bonds are certainly the first mortgage on the whole western division.

Mr. NORTHRUP. So my hon. friend understands.

Mr. FIELDING. My hon. friend understands differently?

Mr. NORTHRUP. I do not think there is the slightest doubt about it.

Mr. FIELDING. The hon. gentleman may be more wise than the rest, but I have not heard attention called to this question. If it is a new discovery I would be pleased to have his information with reference to it. We have advice that the trust company hold a first mortgage for the government guaranteed bonds on the whole western division.

Now we come to the guarantee to be given to us by the Grand Trunk Railway Company of Canada. They are obligated to provide this money and instead of providing it by selling their bonds on the money market they come to us and offer us the bonds; but these bonds are to bear the same guarantee as they would bear if they were issued on the money market, that is the guarantee of the Grand Trunk Railway itself. Now the guarantee of the Grand Trunk Railway Company of Canada on any enterprise is a substantial security. An hon. gentleman asked the other day what claims there would be ahead of this, what liens there would be ahead of this guarantee which the Grand Trunk Railway Company of Canada proposes to give us. I have had the matter looked into and I am advised that bonds to the value of £1,488,500 and Grand Trunk Railway Consolidated Debenture stock to the amount of £22,825,297, making a total of £24,413,797 are unquestionably a first lien and would come ahead of our guarantee. Next to that, as we claim, comes the guarantee that is proposed to be given here and the other guarantees of like character; the Grand Trunk Railway Company has several guarantees which would probably stand in exactly the same position. Then the question has been suggested by the company itself that the rentals of certain leased lines, amounting half yearly to £77,603 would probably be regarded as working expenses and hence would be a prior charge to this guarantee. While the company have suggested that, they have not stated it very strongly, and I am advised it is by no means clear that these rentals would be regarded as working expenses. On the contrary, it is probable they would not and would therefore not have priority over this guarantee.

Mr. AMES. How many partners will we have in this second lien and what would be their interest therein?

Mr. FIELDING. I have not the list here; the Canada Atlantic guarantee, I think, is the chief one, but there are one or two others. If the debate should be continued I would endeavour to ascertain more precisely. This mortgage does not rank above these, it merely ranks with them.

Mr. FOSTER. That is to say that the settlement between the government and the company is based on these rentals?

Mr. FIELDING. The company have not strongly contended that. They have so stated in conversation to one of our officers, but I am advised that it is a matter of doubt and I do not wish to be positive. The amount is not very large.

Mr. MIDDLEBRO. I noticed in the statute of 1892 that the borrowed capital of the Grand Trunk Railway Company is put at $91,862,737, and that this capital is described as follows:

Four per cent guaranteed stock....	$25,402,996
First preference stock..	16,644,000
Second preference stock..	12,312,666
Third preference stock..	34,884,535
Ordinary stock..	99,913,000

I had a question on the Order Paper the other day with the view of ascertaining which, if any, of these classes of stock would have preference over this guarantee. Would the minister inform me which, if any, have preference?

Mr. FIELDING. I think that, except such stocks as I have already mentioned, these would not have priority over the present guarantee. I have mentioned those which, I understand, have priority over the proposed guarantee: bonds amounting to £1,488,500 and Grand Trunk consolidated debenture stock amounting to £22,825,297, making a total of £24,413,797 which becomes a first lien with an annual charge of £1,064 19s. 10d. Several of those stocks that my hon. friend has mentioned unquestionably have not priority over the proposed guarantee. We have a statement of the Grand Trunk Company's affairs showing what amounts have been available for the payment of any obligations which might arise under a guarantee of this kind. The Grand Trunk Company's published statement shows what is the surplus available after paying all the charges that would come ahead of this guarantee. In other words this statement will show what amount would be available for the payment if need be of the interest upon these bonds. The surplus, after payment of the net revenue charges of the company, including the rentals above referred to, for each half of the following years, compiled from and as stated in the accounts of the half yearly meetings of the company as reported in the 'Economist' was as follows:

1904, 1st half, surplus...	£124,610		
1904, 2nd "	432,103		
			£556,713
1905, 1st "	£285,033		
1905, 2nd "	428,778		
			713,811
1906, 1st "	£309,861		
1906, 2nd "	523,465		
			833,326
1907, 1st "	£315,319		
1907, 2nd "	527,175		
			842,494
1908, 1st "	£180,494		
			180,494

We have the statement only for the first half of 1908, and the balance for the remaining half year would unquestionably be much larger. But, as we all know, the year 1908 was not a very good one in railway affairs, and so I anticipate that if we had the full figures for 1908 they would certainly be very much less favourable than those of the previous year.

Mr. AMES. Do I understand that this sum will be available to divide up between ourselves and all the other guarantors on the same basis if it were necessary to secure the interest on these guarantees?

Mr. FIELDING. No, I am advised that the situation is better than that; that all the other guarantees were provided for and that this amount would have been available to pay our guarantee if this proposed legislation had been in operation in any of the years which I have mentioned.

Mr. AMES. Together with the others?

Mr. FIELDING. The others had been provided for before this surplus was declared. If these statements are correct, and I am giving them on the faith of the London 'Economist,' and I accept them as being correct, if this guarantee that we now propose to accept from the Grand Trunk Railway Company had been in operation in any one of those years, and if it had become necessary to provide the interest, these sums of money would have been available for the payment of such interest. That is to say that while the interest charge would have been $400,000 or a little more than £80,000 there would have been, in one of the earlier years £556,713 available, in another year £713,811, in another year £833,326, in 1907, £842,494, and in the half of the year that we have of 1908 there would have been £180,494 to respond to the claim which might have arisen for this £80,000 annual interest.

If these figures are correct, as I believe them to be and I accept them in good faith, then it seems that there would be the most ample security for the government of Canada in advancing this money to the Grand Trunk Railway and to the Grand Trunk Pacific Company. So, Sir, I think the proper view is this, that the Grand Trunk is one of the great companies of Canada, and although some classes of its stocks do

not rank high, its general credit does stand high. Though, like other railways, it has had a bad year there is every reason to believe that, with the revival of prosperity that we all feel is close at hand, our railway companies, as well as others, will share in that prosperity and that the various securities of the Grand Trunk will occupy a better position. I feel the utmost confidence that in lending our credit to the Grand Trunk and the Grand Trunk Pacific at this moment, we are helping them in a time of need, we are taking an exceedingly small risk and it is much better in the interest of the country, in the interest of the National Transcontinental Railway, and in the interest of the credit of Canada, that the government should show their faith in this enterprise and lend them this money, taking their bonds at par, rather than that we should allow these bonds to be thrown on the market and sold at a sacrifice price. Holding these views, the government ask the House to accept this resolution and the Bill which will be founded upon at a later stage.

Mr. R. L. BORDEN (Halifax). Mr. Speaker, I thoroughly understand that parliament and the country are committed to this enterprise by the action of parliament in 1903 and 1904 and by the verdict of the people in 1904 when this contract, or the proposition to build this great railway, was submitted to the people of this country. Therefore, I agree that the enterprise must be carried out. Enormous sums have already been expended and it seems to me that the only question to-day before parliament is as to the terms and conditions upon which this enterprise shall be brought to completion, if those who undertook it in the first instance are not prepared to carry it out upon the conditions which were then entered into and which were embodied in two separate agreements and two separate Acts of this parliament.

Before considering that a little I think it would not be amiss that I should refer very briefly indeed to what has transpired since my right hon. friend the Prime Minister (Sir Wilfrid Laurier) came down to this parliament on August 30, 1903, and told us that time would not wait. The enterprise of building a transcontinental railway across this continent is a great enterprise and an enterprise worthy of the people of Canada if conceived in wisdom and carried out with integrity and business ability. But this enterprise seems to have been conceived in haste, moulded for political purposes and conducted with the wildest extravagance and folly. I would not say to-day that every representation made to parliament and to the country by the government in the initiation of this enterprise has been falsified by the events; I could not say that, because in a great many instances the event has not yet happened and thus the promise could not yet be falsified, but to the extent that the event has transpired it would be very difficult for any member supporting the Liberal government to put his finger upon one representation made to parliament and to the people that has been borne out by any event which has so far come about. What was the great burden of the song that the Prime Minister sang to this parliament on the 30th day of August, 1903. He said: There was great haste; time would not wait; pray heaven it be not too late already. And why all this? Because he saw fit to represent—and I do not think he was patriotic in that—that the people of this great Dominion were absolutely at the mercy of the United States in respect to the bonding privilege. Page after page of 'Hansard' is taken up by the right hon. gentleman in picturing the woes and the evils and the disasters that would fall upon the people of Canada if that bonding privilege were repealed, and he declared that in his opinion at least we might any day expect its repeal. Six years have passed and in the interim, as the right hon. gentleman well knows, we have not heard the slightest whisper or word about the repeal of the bonding privilege, and so it is that two-thirds of the speech which the right hon. gentleman then made before this parliament in reference to this matter stands as mere idle wind, designed as an excuse for undertaking this enterprise in such haste and with such want of consideration.

There was another statement which the right hon. gentleman made in parliament and out of parliament, and that statement was that this railway was designed to open up and develop the great northern regions of Canada. Let me quote from the recital of the agreement embodied as a schedule to the statute of 1903 and bears date July 29, 1903: 'I will omit the immaterial words:

> Whereas it is in the interest of Canada that a line of railway designed to secure the most direct and economical interchange of traffic between Eastern Canada and the provinces and territories west of the great lakes, to open up and develop the northern zone of the Dominion, to promote the internal and foreign trade of Canada and to develop commerce through Canadian ports, should be constructed and operated as a common railway highway across the Dominion from ocean to ocean.

Observe the expression 'to open up and develop the northern zone of the Dominion.' That idea was developed by the right hon. gentleman all through his speech. He said it was a railway to be built by way of the Pine river or Peace River Pass to open up the rich prairies in that country. Well, if you look at the maps placed before us you will see that that railway has been built from 100 to 150

or 200 miles south of the location which was pointed out by the right hon. gentleman in his speech to this House. It is not 100 miles or 200 miles south of that location all the way, because of course it was to touch at Winnipeg and at Edmonton; but how far does it go south of the Peace River Pass and the Pine River Pass, and to what extent does it open up any northern zone of Canada which at that date was not supplied with a railway. I understand of course that it runs through the northern portions of Ontario and Quebec, but that was not what the right hon. gentleman had in mind because he explicitly mentioned the rich prairies of the west which would be found in that northern zone through which the railway was to run. On many occasions did he use expressions both in this House and out of the House which are exactly in line with my contention. He told us that the railway was to touch Winnipeg and once more plunge into new territory; he told us that the railway from its commencement to its end in addition to being a trunk line would open up millions of acres of productive land; he told us that the railway would run north of the Canadian Pacific Railway in Manitoba and the Northwest Territories and the mineral regions of British Columbia; that it would go over the route suggested by the Halifax Board of Trade, (which as I understand was north of Lake Winnipeg); that it would open up our hinterland and give breadth as well as length to Canada, and, that except at the terminal points it would be at least 30 miles away from any existing railway. As reported in 'Hansard' 1903, page 10415, he told us that the Grand Trunk Pacific must be at least 30 miles from any existing railway or from any railways that had been located. But, Mr. Speaker, look at the map of this railway and the maps of the other railways laid upon the table of the House, and you find that for miles and miles the Grand Trunk Pacific runs within a stone's throw of two other great transcontinental railways which were amply assisted by this parliament before this railway was ever thought of or spoken of.

The right hon. gentleman told us there were mountains of information with respect to every matter connected with this National Transcontinental Railway; and, inter alia, he stated that the mountain section would be 600 miles long and would cost $18,000,000. The result is that the mountain section is 836 miles long and his own engineer to-day estimates that it will cost $67,056,000 or nearly $50,000,000 more than the right hon. gentleman told us it would cost. The mountains of information in that respect seem to have been singularly deficient, and I think my right hon. friend will himself be the first to admit it.

Then again the right hon. gentleman told us:

> The surplus for this year (1903) will provide for the construction of this road from Moncton to the Pacific.

Well, the end of this financial year now approaching sees the debt of this country increased nearly $50,000,000 and the railroad is not one-third completed.

But there were further mountains of information. The right hon. gentleman said:

> We can abridge the distance between Moncton and Levis by from 120 to 140 miles.

What is the result? The distance from Moncton to Levis by the Intercolonial Railway is 488 miles and the distance by the Grand Trunk Pacific is now estimated to be 459 miles, or a net saving of 29 miles between Moncton and Levis and the estimated cost is $29,176,420, so that the saving in that distance over the Intercolonial Railway has cost us exactly one million dollars per mile.

Then, my hon. friend the Minister of Finance availed himself of these mountains of information and he said:

> The road from Moncton to Quebec would cost $12,500,000, the road from Quebec to Winnipeg would cost $51,625,000; the interest during construction would amount to $7,031,975, making a total of $71,156,975.

My estimate of $75,000,000, without interest, he declared to be excessive by $10,875,000. The result to-day is that the government admits that the railway from Moncton to Winnipeg, including interest, will cost not less than $124,403,000. It must be apparent to the right hon. gentleman, in view of these results as compared with his predictions, how exceedingly valuable were his mountains of information, and how true a prophet he was as to the cost of this railway to the people of Canada. There were some other predictions heard and some other criticisms put forward with regard to this road to which I may allude a little later on. For the present I will only say that one need not be surprised in the future if those predictions shall be fulfilled in as great a measure as the predictions to which I have already alluded and certain others to which I propose now to allude.

My hon. friend the Finance Minister the great financial authority of the government, was not quite content to estimate the cost of the mountain section at the sum of $18,000,000, at which it had been fixed by his leader, but he did fix it in 1904, a year after the Prime Minister's estimate of $18,000,000. He had the experience of nearly a year to guide him to an accurate estimate, and he gave us on this side of the House, as he said, the benefit of the doubt. My hon.

friend from Hamilton (Mr. Barker) had estimated the cost of the mountain section, including interest, at $56,000 per mile. The Finance Minister assured the House that was excessive. He said he was prepared to accept it under protest, but only under protest. At that estimate he said that the mountain section, 480 miles in length, would cost $26,880,000, or $40,000,000 less than that announced by the government to-day as the present estimate of the government engineers. And that was a pretty relevant statement, because he was basing upon it the amount of money which the people of this country would have to guarantee in respect of that mountain section, and he was also basing upon it his estimate of the amount of money, as interest on that guarantee for seven years, which would be paid by the people of this country without recourse. He estimated at less than $27,000,000 that which he now tells us will cost more than $67,000,000, upon three-fourths of which we shall pay interest for seven years without recourse. And so he assured the parliament and the people of this country that our guarantee on the mountain section would not exceed $21,000,000, yet according to the estimate brought down to-day, the guarantee which must be given by the people of this country in connection with the mountain section will be at least 150 per cent more than the amount which he named.

In 1903 he told us the same story about the surplus. He said, as reported in 'Hansard' of that year, at page 8589:

> If you had a surplus of $13,725,706, . . . if you take that sum and give it to a trust company . . . to invest at 3 per cent per annum, payable half-yearly.. .. they could pay every cent of obligation.

He will not say that to-day; he will not say to-day that double that sum would do it. Mr. Paterson said:

> The cost to this country would be about $13,000,000 or $14,000,000. The Finance Minister made a careful actuarial calculation and showed that $13,000,000 or $14,000,000 paid out in instalments for twelve years would pay all the cost.

My hon. friend the member for Brandon (Mr. Sifton) went further than any of them in this regard. He said that the Finance Minister had absolutely proved it, provided the Grand Trunk Pacific Railway Company and the Grand Trunk Railway Company carried out their agreement. These are his words:

> My hon. friend the Finance Minister—and I may perhaps ask that particular attention be given to this phase of the question, because I think it is the most important in the whole discussion—my hon. friend the Minister of Finance took the provisions of this contract in so far as they relate to the financial features and he went over it from end to end. He made a close, and a careful and an exact calculation as to the amount of money which we should have to pay if the Grand Trunk Pacific carries out its contract.

Hon. gentlemen have already observed how close and careful and exact the conclusion of my hon. friend the Finance Minister has proven to be. The hon. member for Brandon, who was then speaking as a member of this government, who was put forward in support of this agreement on every available occasion, and who perhaps made as strong and powerful a defence of the terms of the contract as was made by any hon. gentleman on the treasury benches, continued as follows:

> That was the nature of the calculation which was made by the Finance Minister. If the Grand Trunk Company carries out its contract, then there is no escape from the conclusion which was placed before this House by my hon. friend. You cannot get over it by laughing, you cannot meet the argument by jeering at it. There is only one way of meeting the argument that he presented to this House, and that is by showing that that Grand Trunk will not be able to carry out this contract. That is the only way you can meet it. If the Grand Trunk Company carries out its contract then we will have to pay just what the Finance Minister said, not one dollar more and not one dollar less.

My hon. friend the Minister of Railways and Canals (Hon. G. P. Graham) spoke on this subject in 1908. I am quoting from his remarks as found in 'Hansard,' at pages 12673 and 12674; and listen to the difference between the story of 1903 and 1904 and that of 1908. The Minister of Railways and Canals was trying to use the same argument about the net amount of cash which the country would have to pay out. This is the way that hon. gentleman expressed himself in 1908:

> The only burden that lies upon this country for this railway from Moncton to Winnipeg is a total of $26,850,676 of interest that will accumulate during the first seven years of the lease to the Grand Trunk Pacific.

He was speaking, you will observe, not with the whole railway enterprise at all, but simply with that portion which lies between Moncton and Winnipeg. My hon. friend the Minister of Railways and Canals (Mr. Graham) made this further comment and statement:

> The increased cost is due chiefly to two reasons: first the greater cost of material and labour, and second the improved standard of the road.

I have heard a good deal about the improved standard of this road and have been at a little pains to ascertain what the Minister of Finance was speaking about when he made this calculation in 1904. I asked him. as will be found on page 3630 of 'Hansard':

Mr. R. L. BORDEN. Are these estimates for a four-tenth per cent grade?

Mr. FIELDING. They are estimated upon the larger sum of $35,000 per mile for the section from Quebec westward and $31,250 per mile for the section from Quebec to Moncton. ton.

Mr. R. L. BORDEN. Has the hon. gentleman any report of any engineer which says that the line can be built for that sum with a four-tenth grade?

Mr. FIELDING. No, but I have the statement of a very eminent engineer that the allowance made of 25 per cent above the first figure was a fair and reasonable allowance for that purpose.

Mr. R. L. BORDEN. Was that the Deputy Minister of Railways?

Mr. FIELDING. Yes, Mr. Schreiber.

It appears that the estimate of $35,000 per mile, the Finance Minister arrived at by adding 25 per cent to $28,000 per mile, and the estimate of $31,125 per mile he arrived at by adding 25 per cent to his estimate of $25,000 per mile. I find that these, according to the view of the hon. gentleman at that time, were sufficient to provide for a four-tenth per cent grade. Therefore, my hon. friend the Minister of Railways, in assuming there is any change, so far as grade is concerned, does not seem to have very carefully examined the statements of his colleague made in 1903-4, and that reason cannot be put forward as a legitimate one for the enormous cost entailed on the people of this country.

We had another representation to the people. The government would not allow the Grand Trunk Railway to part with their title to the $25,000,000 of common stock according to the agreement of 1903.

They said that to do so would be dangerous and that the interests of the country were being safeguarded by a position which made it necessary for the Grand Trunk Railway to hold that stock during the whole term of the lease. It would be absolutely unsafe and dangerous to permit the company to part with that stock because there might be speculation in it. Well, what transpired? The following year the government modified the contract at the request—I might say at the dictation—of the Grand Trunk Railway, and did in 1904 what it had declared to be fatal in 1903.

We were told in 1903 that the bargain was an excellent one for both parties. The Grand Trunk Pacific was behind it and would certainly carry it out. I shall not weary the House with many quotations in that regard but I shall give a few. My hon. friend the Minister of Finance was particularly emphatic. He said, referring to the Grand Trunk Railway:

> We have not been content that they shall stand behind it. We have required, and they have readily consented, that they shall be in it and of it and form the whole thing.

But to-day we are met with the modest request that we shall furnish $10,000,000 for the construction of the prairie section, $7,000,000 of which is to go to repay the Grand Trunk Railway for their advances, although that same company is in it and of it and forms the whole thing. Well, one is not startled by the modesty of the request, to say the least. I do not imagine that any hon. gentleman in this House will be startled by the modesty of a request such as that, but it is exactly the request which my hon. friend the Minister of Finance is placing before the House in the motion he has submitted to us to-day. Further on I find him saying:

> However, without reviving a previous discussion, I may say that this is what the Act requires, and that they have assured us that they are prepared to do what the Act requires.

The hon. member for Brandon (Mr. Sifton) then Minister of the Interior, said:

> It was a clear, distinct and unambiguous contract with a responsible company.

The Minister of Agriculture said:

> Sir, we make a clear cut proposition embodied in a contract, signed and sealed with a reputable corporation of great resources which is going ahead with this project as rapidly as possible.

And the then hon. member for North Norfolk (Mr. Charlton) who was put forward to answer the ex-Minister of Railways, Mr. Blair, who had recently resigned his portfolio because he differed with the government regarding its policy in this connection, said:

> We have the entire strength, resources and character of the Grant Trunk Railway behind the Grand Trunk Pacific. The two are united together.

And last, but not least, my right hon. friend the Prime Minister, said:

> I do not deny that the Grand Trunk Railway is at the bottom of this enterprise. It cannot default on the eastern part, because if it does, it defaults on the western part. It cannot default on one part without defaulting on the whole. Therefore we hold them tight to their bargain, and they cannot deviate from it.

My hon. friend the Minister of Finance (Mr. Fielding) was good enough to tell us to-day that this proposal of his does not in any way alter or interfere with the contract made in 1903, as modified by that of 1904. Does it not? Let us look at it. If the contract of 1903, as modified by that of 1904, were carried out, the Grand Trunk Railway would be obliged to guarantee bonds for the prairie section to an amount which would realize between $20,000,000 and $21,000,000; but after this resolution passes the House, will there be any necessity for the Grand Trunk Railway to guarantee bonds to that amount? My hon. friend the Minister of Finance knows very well they will not then be under the necessity of carrying out that

part of their contract. Therefore, while it does not formally or technically alter the terms of the contract, it does, in fact, and in substance, modify it exactly in the way I have pointed out.

We were told by the Minister of Trade and Commerce (Sir Richard Cartwright), who was in the House at that time, that it was really a good bargain. He said:

I believe a really good bargain may be one which is to the advantages of both parties. I think that this is notably an instance of this sort.

It was a bargain to the advantage of both parties—that was in 1903. It was still more a bargain to the advantage of the Grand Trunk Pacific and the Grand Trunk Railway after the modification made in 1904. Let us look at those modifications. I shall not refer to those of a minor character but only to the more important. In 1904, the government came back for further amendments, which, among other things, provided for an increase of guarantee on the mounain division so that we should guarantee three-fourths of the cost, no matter what it might be. Our guarantee up to that time had been limited to a cost of $30,000 per mile. They gave to the Grand Trunk Railway, as I have already mentioned, the power to dispose of the common stock, notwithstanding the declared policy of the government in the previous year against any provision of that character; and they extended the time for the building of the road by three years. No very formidable reasons were advanced why these modifications should be made. My right hon. friend did mention, and he devoted a very considerable portion of his speech to matters of this kind—that on June 15, 1671, wild roses had been found blooming at a point 200 miles distant from the location of the road as now fixed. It was also very frankly stated in the House at that time that the Grand Trunk Railway Company would not accept the first agreement and we were therefore obliged to modify it; the Grand Trunk shareholders would not approve the agreement as it was and therefore concessions had to be made. So we ratified the modifications by a vote of the majority of this House and the contract went into effect some time in 1904. We on this side characterized the terms of this agreement as absolutely insufficient to prevent the Grand Trunk Railway Company from carrying its traffic to Portland as it had done in the past. The Prime Minister had said during the debate, I think in 1904:

We cannot undo the past altogether; Portland has been made the winter terminus of the Grand Trunk Railway Company. I do not expect that they are going to abandon what they have.

Later on in the same debate he said:

I have read his (Mr. Borden's) speech carefully, and I must say—it may be my fault, and I shall be glad to be illuminated—if he will explain how, having brought the freight from the west of North Bay, he can send it on to St. John and Halifax, over the Grand Trunk, I will be glad to hear him.

I should think there would be about as much prospect of sending it to St. John and Halifax as there would be after the Grand Trunk Pacific had brought it to Quebec, within striking distance of Portland where all their great interests lay. But I am not so much concerned with arguing out that old matter. I want to emphasize certain remarks delivered by my hon. friend the Minister of Railways and Canals (Mr. Graham) in this House during this very session. He said:

We have, it is true, an understanding and agreement with the Grand Trunk. But the Grand Trunk has its own connections to Portland, and will shortly have connections further east. And while it will live up to its agreement with us, it does not give the Intercolonial Railway a pound of freight that it can get out of giving to that road; it gives as much as it can to its own line and carries it to Portland.

It must not be forgotten that the Grand Trunk Railway took good care that it should not be bound by a single one of those provisions which are contained in the agreements of 1903 and 1904. It did not become a party to these contracts. We pointed out then that without infringing one line or one syllable of either of those contracts the Grand Trunk Railway Company could send out, and we believed it would send out, an army of canvassers all through the great west of this country who would take good care that the very great majority of the orders routing freight over this railway would route it so that it would go to Portland and not to St. John and Halifax; and this parliament cannot lay its finger upon the Grand Trunk Railway Company or the Grand Trunk Pacific Company if that is done. When a minister of the Crown, the hon. Minister of Railways and Canals (Mr Graham) has told us very frankly that it is not only the interest but the absolute intention and determination of the Grand Trunk Railway Company to send its traffic to Portland in the future as it has done in the past, can we plume ourselves upon the assurance that in the contracts of 1903 and 1904 we have, after all, any guarantee of that which was placed before parliament as the crux and essence of this enterprise, that the great trade of western Canada should be gathered up and sent to our own maritime ports in eastern Canada. Well, Sir, time will tell who is right and who is wrong; whether hon. gentlemen on the

other side of the House, now sitting on the treasury benches, to the great misfortune of the country, were correct in their predictions or whether we were correct in our criticisms. Time will tell ; no one of us can determine that with absolute accuracy to-day.

Let me refer to the action which this government has taken in carrying out this contract along general lines. The statute of 1903 provided that this road should be built under the management and direction of a commission to be appointed by this government. The government of the United States then or not long afterwards proposed to engage in a great enterprise of its own, the building of the Panama canal. That government took the same course in one respect that this government took, it decided that the Panama canal should be built under the management and control of a commission appointed by the executive of the United States government. Every one knows that the value of a commission. the value of the work it can do, the value of the services it can render to the people of a country, depends almost entirely upon the experience, the character and the ability of the men who constitute that commission. I desire to utter no word against any member of the commission appointed by the government as a citizen of this country, but I am perfectly within my rights as a member of this parliament, in pointing out to the House and to the people of Canada, as I do point out, that not one of those men had the slightest iota or atom of experience in respect to the important work in which they were to engage as a commission. If I desired any work to be performed in the respective spheres in which these gentlemen had been engaged up to the time of their appointment, I might very probably go to one of them. If I had desired advice in respect of a matter of law of the great province of Quebec, I very likely would have gone to the firm of which the chairman of that committee, Mr. Parent, was at one time a member. I am not here for the purpose of casting any discredit upon Mr. Parent, either in his public or professional career; I am here to point out that, so far as railway construction is concerned, Mr. Parent had absolutely no experience whatever, and the government ought not to have appointed him to be chairman of that commission. If I desired information as to the law of Nova Scotia, or desired a suit to be taken on my behalf by some member of the bar of that province, I might go to my friend Mr. McIsaac, who is a lawyer and who has had a public career. But every one knows that he had no experience in railway construction, and therefore ought not to have been appointed to the position to which the government appointed him. If I desired to be instructed in the manufacture of stationery and corsets, I might go to Mr. Reid, who was appointed a member of this commission, but I would not think myself constrained to go to that gentleman for advice in connection with the construction of a railway. And, if I desired information as to the purchase of grain, or in connection with agricultural pursuits, I should, no doubt, get valuable advice and counsel from Mr. Young, who was also appointed a member of that commission, but I have yet to learn that Mr. Young had any important advantages in the way of experience which should have qualified him in the eyes of this government to be a member of that commission.

Well, Mr. Speaker, we all know why these men were appointed. We know that they were not appointed by reason of their experience, but by reason of the partisan service or supposed partisan service that they had rendered to the Liberal party. That goes without saying.

Now, what course did the government of the United States take in a similar matter? My right hon. friend (Sir Wilfrid Laurier), before 1896, was wont to point out the errors and evils of administration in the United States, and the defects of their system of government, and to bewail the fact—he stated it to be a fact—that the methods which had prevailed in the United States were becoming prevalent in this great Dominion of Canada under the wicked rule of a notorious Conservative administration. That was the song the ringht hon. gentleman sang in those days. Well, let us look at the record in the United States as contrasted with the record in Canada, and then let any hon. gentleman in this House, follower of the Liberal party though he be, stand up in his place and say that he is proud of the comparison between what the government of the United States did and what the government of Canada did in this regard. On February 29, 1904, the President of the United States appointed an Isthmian Canal Commission of seven members, who were duly confirmed by the Senate on March 3. The commissioners were John G. Walker, a rear-admiral of the United States navy, on the retired list, who had been at the head of former canal commissions for the purpose of investigation and report; George W. Davis, a major-general of the United States army, on the retired list; William B. Parsons, an eminent civil engineer, of New York; William H. Burr, Professor of Civil Engineering in Columbia University, N.Y.; Benjamin M. Harrod, formerly city and state civil engineer, of New Orleans, Louisiana; Carl E. Grunsky, civil engineer,

of San Francisco, California, and Frank T. Hecker, a civil engineer, of Detroit, Michigan. Rear-Admiral Walker was made chairman of the commission, and General Davis was appointed governor of the canal zone. Dominic I. Murphy, of Washington, D.C., was engaged as secretary to the commission, and Charles E. Magoon, an eminent jurist, of Lincoln, Nebraska, as general counsel. Later, the government of the United States, through causes into which I need not enter, found it necessary to reorganize that commission. And they did reorganize it. A new commission was appointed, consisting of Theodore P. Shonts, of Illinois, a civil engineer and railroad president; Charles E. Magoon, of Nebraska, a distinguished jurist, who had been legal counsel to the old commission and, before that, law officer of the Bureau of Insular Affairs of the War Department; John F. Wallace, a civil engineer, who had been chief engineer under the old commission, and who had had much experience in railroad and canal work; Mordecai T. Endicott, a rear-admiral of the United States navy on the retired list, who had been chief of the Bureau of Yards and Docks in the Navy Department, and had been a civil engineer before entering the navy; Peter C. Hains, a brigadier-general of the United States army on the retired list, who had been educated at West Point, had served with distinction in the civil war, and had been identified with many important harbour works and other engineering undertakings of the government; Oswald H. Ernst, a colonel in the United States army, who had been educated at West Point and had served with distinction in the Engineering Corps, and Benjamin M. Harrod, of Louisiana, an accomplished civil engineer, who had been a member of the former Canal Commission.

Well, there are the two methods. In the sober judgment of this House, which is the best method in the interest of the people of this country? Can there be any doubt about it? Can any hon. member say, upon his conscience, that the course which this government carried out in the constitution of this commission was really a course in the best interest of the people?

Now, the Grand Trunk Railway Company is here for better terms. That is what it amounts to. It is here practically for a modification of the contract of 1903, which has already been modified, in 1904. We are asked to provide a very large proportion of the financial support necessary for the construction of this western division. I will send across the floor to my hon. friend the Minister of Finance (Hon. Mr. Fielding), a statement that embodies a rough calculation—I do not pretend that it is accurate in every respect—of what the country is contributing and what the Grand Trunk is contributing to the western division.

The country contracts to guarantee the interest upon the prairie section, 916 miles long, at $13,000 a mile, or a total guarantee of $11,908,000. The mountain section, roughly speaking, is estimated to cost $67,000,000. Now, if you should issue bonds bearing 3½ per cent, interest at 90, sufficient to afford a sum of $67,000,000, you would find that the total bond issue would amount to $73,000,000. Seventy-five per cent of that which we have undertaken to guarantee would amount to $54,750,000, or a total amount to be guaranteed by the people of this country of $66,658,000. My hon. friend the Minister of Finance will observe that in making an estimate of $13,000 a mile, I have not taken into consideration that the contract provides, as he stated this afternoon, that an amount must be guaranteed which will actually provide $13,000 per mile. I have not taken that into consideration, nor have I taken it into consideration in estimating the amount of the guarantee by the Grand Trunk Railway Company; so that my calculation may require some little modification in that regard, but nothing very material. Well, then, the proposed loan which the Finance Minister now asks the House to sanction amounts to $10,000,000 and our liability with respect to that is, of course, as great as our liability with respect to any of these guarantees. As a matter of fact, we have less security for it than we would have for the guarantees which have been alluded to. The total therefore in the shape of loans and guarantees would, roughly speaking, be about $76,658,000. Then, in addition to that, we are bound to pay interest without recourse for seven years upon the bonds which we guarantee with respect to the mountain section. The interest on $54,750,000 at 3½ per cent for one year amounts to $1,916,250, which amount, multiplied by seven, makes $13,413,750 as our actual cash contribution towards the building of the western division.

Mr. FOSTER. At what interest rate?

Mr. R. L. BORDEN. I am estimating it at 3½ per cent, and I am putting the bonds at 90. That is a matter of conjecture and it may be that my hon. friend the Minister of Finance may find some fault with my calculation in that regard. I do not know as much about the probable figures as he would know, and I would be ready to defer to his superior judgment in case he thinks the calculation I have made is not upon a fair basis.

Now, the Grand Trunk Company would, in the ordinary course, contribute a guarantee of about $20,500,000 towards the prairie section, but I would assume that their guarantee in that regard would be cut down by the proposed loan of $10,000,000, which would diminish it to $10,500,000. If our guarantee upon the mountain section amounts to $54,750,000 the guarantee of the Grand Trunk Railway Company will amount to one-third of that, or one-fourth of the whole, which would be $18,250,000. So that the total amount contributed by the Grand Trunk Railway Company for the western division would amount, as I estimate it, roughly speaking, to a guarantee of bonds of $28,750,000. The figures are as follows :

WESTERN DIVISION.

Country contributes.

Prairie section, 916 miles at $13,000=	$11,908,000
Mountain section, $67,000,000	
Bonds at 90 p.c.,$73,000,000..75 p.c.=	54,750,000
	$66,658,000
Proposed loan..	10,000,000
	$76,658,000
Cash payment interest for 7 years...	13,413,750
One year = $1,916,250	
	$90,091,750

Grand Trunk contributes.

Prairie section..	$10,000,000
Prairie section..	$10,500,000
	$28,750,000

Now, I estimated last year that the eastern division would cost the people of this country not less than $180,000,000. If I were to make an estimate to-day I would be inclined to increase rather than diminish it. The western division, roughly speaking, will cost $100,000,000. So you have altogether an expenditure of $280,000,000 upon this road in one way and another. This does not include the seven years' interest which we are to pay without recourse in respect of the mountain section. In the first place you have, on the western division, the government of this country contributing a bond guarantee and a loan amounting in all to $76,658,000, and making an actual cash contribution of $13,413,750, and you have the Grand Trunk Railway Company contributing a bond guarantee, roughly speaking of $28,750,000.

Now, take the whole road. As far as the whole road is concerned its probable cost will be about $280,000,000. Of that this country provides in cash contributions or by bond guarantees about nine-tenths, as I estimated in 1903-4, and the Grand Trunk Railway Company contributes about one-tenth and that in the shape of a bond guarantee with no cash contribution. That, then, is the proposition which the government makes to us to-day.

Let us now look for a moment at one item in connection with the information that the hon. Minister of Finance has brought down. When the Prime Minister asked us in 1904 to depart from the terms of this contract as it had been agreed upon in 1903 by those representing the Grand Trunk Railway Company with respect to the stock issue, and when he asked us to permit the Grand Trunk Railway Company to dispose of the stock, what was the reason assigned? In case my right hon. friend has forgotten I will remind him of the view which he took at that time. I will read from his remarks at page 2483 of 'Hansard.' He said:

> The reason for inserting this condition of the contract last year was that we wished to prevent speculation in the stock. Well, Mr. Chairman, the Grand Trunk Railway Company must raise money to carry out this enterprise. They cannot build the section from Winnipeg to the Pacific coast simply upon the guarantee of the government, for that will cover only three-quarters of the cost of constructing this part of the road. And then the equipment of the road is also to be raised from the public, and there are only two manners in which that can be done, either by the issue of bonds, or raising money on their stock. The methods we have adopted will enable them to go into the money market and obtain some money with which to carry on the work.

To the same effect was the language which is to be found at page 3037 and 3038 of 'Hansard,' and which emanated from the then Minister of Justice, now Sir Charles Fitzpatrick. Speaking of the bond issues which the Grand Trunk Railway Company must guarantee he said:

> Can it be expected that it will realize more than 80? Where is the amount required to make it up to 100 to come from? It can come out of nothing but the company's capital. Where are they to obtain money to provide, for instance, for terminal facilities, and to provide the thousands of miles of branch lines which they have to construct? Where is that money to come from except from the $45,000,000 of capital ?

The Minister of Finance, although not in such explicit terms, presented the same view to this House, namely, that the Transcontinental Grand Trunk Railway Company must be permitted to depart from the contract of 1903 and be empowered to dispose of its stock in order that it might, by means of the sale of its stock, obtain the money to carry out its enterprise. The position to-day is exactly what we predicted in 1904, and every dollar of that $25,000,000 of common stock has been handed over to the Grand Trunk Railway Company for a purely nominal consideration. By the agreement submitted to us to-day the Grand Trunk Railway Company have become possessed as absolute holders of $25,000,000 of the common stock of the Grand Trunk Pa-

cific, and so far as cash is concerned they have given as consideration for it just about $200,000. And that is sought to be justified by the printed information which the Minister of Finance has brought down, and which at pages 14 and 15 recites the aid given by the Grand Trunk Railway Company to this enterprise, and provides as follows :

2. The Pacific company will forthwith issue, as paid up stock, shares of the common stock of the Pacific company of the par value of $23,908,000, making with the shares described in the schedule hereto a total of 249,000 shares of the par value of $24,900,000, and will allot and hand over the same to the Grand Trunk Company or their nominees, and that such issue and allotment of stock shall be binding upon the Pacific company and that such stock shall not be assessable for calls.

The position therefore is that the Grand Trunk Railway Company, providing $28,000,000 of the bond guarantee out of a total cost and expenditure of $280,000,000 which this road will entail, are to receive for that assistance so given $25,000,000 or thereabouts of the common stock of the Grand Trunk Pacific, and, the people of Canada providing the balance, or nine-tenths of the whole expenditure and guarantees are to receive absolutely no share whatever in the future profits which may result from this enterprise, when, the mere influx of population and the progress of the country shall have made this $25,000,000 of common stock worth 100 cents or perhaps 150 cents on the dollar.

Under these circumstances I conclude by saying to the Prime Minister and to his Minister of Finance: You have stated in considerable detail and with the utmost frankness what you propose to do for the Grand Trunk Railway Company which has assisted this enterprise to the extent I mentioned ; but will you tell us, having regard to the $250,000,000 or the $260,000,000, which the people of this country are putting into this enterprise either in cash or bond guarantee, what are you going to do for the people of Canada? Surely it is reasonable that we should know that. I say to the right hon. gentleman and to his Finance Minister: You have told us what you are going to do for the Grand Trunk Railway Company, will you please tell the House and the country what you propose to do for Canada?

Mr. FRED. F. PARDEE (West Lambton). Mr. Speaker, I have listened with attention to the pessimistic remarks of the leader of the opposition, but I am bound to say that I have not been able to discover whether he is in favour of the Grand Trunk Pacific enterprise or against it. I should rather think he is not in favour of it, although when in 1903 this project was first proposed to parliament the unanimous opinion was that another transcontinental line was necessary, the only difference being as to the question of the route, the government proposing one route and the opposition another. In view of the very vigorous policy of immigration which had been carried on, settlers were flocking into the western country at a rate greater than ever before, and in the year 1903 became an absolute necessity, as all conceded, that there should be another transcontinental railway. If such a railway was necessary in 1903, how much more necessary is it not in 1909, irrespective altogether of any question of cost. We hold out inducements in all parts of the world for immigrants to settle in the west, and we have rich and fertile lands to offer them. It is a mere axiom to say, that no country can be great without population, and having population it follows that you must give them ingress and egress to and from the country and that you must provide facilities for the transportation of their products to the market. What was the position in the Northwest in 1903? By reason of the insufficiency of the transportation facilities the crops were lying rotting in the fields.

Some hon. MEMBERS. Oh.

Mr. PARDEE. That is a positive fact. The crops were there, they could not be moved to the market and as a corollary the stores of the merchants were empty because the crops being unsold they could get no money from the farmers to enable them to purchase goods.

Some hon. MEMBERS. Oh.

Mr. PARDEE. Hon. gentlemen opposite may laugh, but the figures are at hand to prove my statement, and later on I will prove to hon. gentlemen opposite that even down to February of the year 1909, notwithstanding the increased facilities afforded in the interim, many million bushels of grain were not yet transported out of that country. That being the condition of affairs it was the bounden duty of a wise and progressive government to propose to parliament a transcontinental railway project, even if it were to do nothing more than to afford relief under these unfortunate conditions. In 1904 the government of Canada appealed to the country absolutely on the plank of the Grand Trunk Pacific Railway. Were they or were they not upheld by the people of the country? They were upheld by a tremendous majority, and the building of the Grand Trunk Pacific proceeded. In 1908 another general election took place, and the slogan of the Liberal party throughout the length and breadth of this land, under which the Premier appealed to the country, was: 'Let Laurier finish his work,' namely, the construction of the Grand Trunk Pacific

Railway. The hon. leader of the opposition has given us an array of figures which undoubtedly, in his own mind, and in the minds of his followers, are condemnatory of the whole proposition. I can only say that these same figures were given prior to the 26th of October, and so far as the people of this country are concerned, their one mandate then, as before, was: You have undertaken this great work, it is an absolute necessity to the well-being of the Dominion of Canada, and we wish you to complete it irrespective of cost. That is the position we find ourselves in to-day. So far as I am personally concerned were the loan twice or thrice the size it is, the purposes for which it is required, the objects which it is intended to carry out, are so immeasurably great, that the consideration of the mere sum of money that is lent, provided you have a fair security and a fair chance of repayment, is to be absolutely brushed aside, and the work carried to completion irrespective of cost. I have sufficient faith in this country to say that, and I sincerely hope that every man in this House has the same faith. If the conditions surrounding the building of the Grand Trunk Pacific Railway in 1903 warranted this government in going to the country with that as the main plank of their platform—in saying, we as a party are committed to this project, and we ask your endorsation because it is an absolute necessity—I wish to show by a few statistics that it is much more necessary in 1908. Since 1902-3 the Department of the Interior has expended on immigration $6,823,744. We know that as a result there has been a great influx of people into the country. Nearly 200,000 homesteads have been granted since 1903; the population of Canada has increased by over 1,000,000 since 1903; the total trade of Canada is $178,000,000 greater than it was in 1903; the revenue of Canada is $30,000,000 greater than it was in 1903, the receipts from sales of Dominion lands are nearly $500,000 greater than they were in 1903; the receipts from the sale of school lands are nearly $500,000 greater than they were in 1903; the Hudson Bay Company has sold nearly 1,000,000 acres of land for the sum of $6,500,000 since 1903; and Canadian railways have sold nearly 10,000,000 acres of land for the sum of $45,800,000 since 1903. These are a few of the evidences of growth which are submitted as sufficient justification for this resolution. Then, let me give the House the following figures of the production of crops in 1903 and 1908, respectively:

Manitoba.

		1903.	1908.
Wheat	Bush.	40,116,878	50,269,000
Oats	"	33,035,774	44,711,000
Barley	"	8,707,252	17,093,000
Totals	"	81,859,904	112,073,000

Saskatchewan.

Wheat	Bush.	15,121,015	34,742,000
Oats	"	9,164,007	29,205,000
Barley	"	665,593	1,952,000
Totals	"	24,950,615	65,899,000

Alberta.

Wheat	Bush.	1,200,259	6,842,000
Oats	"	5,187,511	22,802,000
Barley	"	1,077,274	3,881,000
Totals	"	7,465,383	33,525,000

The total production of these crops for the three provinces amounted to 114,275,902 bushels in 1903 and 211,497,000 bushels in 1908, an increase of 97,221,098 bushels. Then, let us take what to my mind is an extremely important consideration. I do not attempt to put forth the argument that because our population has increased since 1903 all the increase must necessarily have gone to the west; but I wish to show the number of homesteads that have been taken up in the west since 1903:

1902-3	31,383
1903-4	26,073
1904-5	30,819
1905-6	41,869
1906-7	21,647
1907-8	30,424
Total homesteads since 1903.	182,215

As indicating the increase in population, the following have arrived in the country since 1902-3:

1902-3	128,364
1903-4	130,331
1904-5	146,266
1905-6	124,667
1906-7 (9 months)	124,667
1907-8	262,469
1908-9 (11 months)	130,444
Total since 1903	1,111,605

That only goes to show that even supposing they all did not go to the west, those people have come to this country and the majority of them have stayed here, and it is absolutely necessary that easy methods of transportation, of moving to and fro, must be supplied or these new comers will not remain in the country. As regards our total trade in 1903, it was as follows:

Imports	$241,214,961
Exports	233,790,516
Total	$475,005,477

Our total trade in 1908 was as follows:

Imports	$370,786,525
Exports	280,006,606
Total	$650,793,131

Or our total trade in 1908 exceeded that of 1903 by $175,787,650. Our revenue for 1908 was $96,000,000, as against $66,000,000 in 1903, and I wish to point this out that in 1903 the crops, although cut, could not be

harvested, and consequently lay on the ground and came to no good. But at the end of February, 1909, the crops in the hands of the farmers of Manitoba, Saskatchewan and Alberta were as follows:

Wheat, 17,391,000 bush., or a percentage of 18·93
Oats, 44,425,016 bush., or a percentage of 45·93
Barley, 7,722,000 bush., or a percentage of 33·68

Could anything more than that set of figures emphasize the fact, that in so far as this country is concerned, transportation is an absolute necessity?

Mr. SCHAFFNER. Does the hon. gentleman mean to say that grain was in the hands of the western farmers on that date in February, because there were not transportation facilities to get it out?

Mr. PARDEE. Very largely.

Mr. SCHAFFNER. The hon. gentleman is absolutely mistaken.

Mr. PARDEE. Well, I am not in accord with my hon. friend. A very great portion of that amount would have been marketed had there been transportation facilities to carry it out. There is just one more set of figures I desire to give the House, and that is the acres under cultivation in the prairie provinces in 1903 as compared with 1908. In 1903 there were under cultivation 4,576,200 acres and in 1908, 10,000,000, or more than double. These figures show that although hon. gentlemen opposite argue, as the hon. the leader of the opposition has done, that this great national work was conceived in haste and carried out for political purposes, there is not one iota of evidence to substantiate that argument. Instead of being conceived in haste this enterprise was fully considered by the government and its pros and cons gone into on every side. How hon. gentlemen opposite can claim it has been made a political factor, is something I cannot understand. Why should it be a political factor, except in this sense that the people are willing to give credit to any government which will show sufficient courage to carry out a great national undertaking irrespective of the carping of a few? The people appreciate what the National Transcontinental Railway may accomplish, provided it be given a fair chance and not be hampered at the outset. Take that section which runs through the northern portion of Quebec and Ontario. Has any one so absolutely little faith, after what we know that northern country has produced, as to say that when the northern portion of the province of Quebec has been exploited, when it has a population which can develop its minerals and forests, when it has populous centres this railway will not be a benefit to the whole community? We can only test these matters by comparison. We know that a few years ago the little province of Ontario projected the railway known as the Temiskaming and Northern Ontario Railway. What was the stand taken by the doubting Thomases of the opposition party in the Ontario House at that time? Did they approve of the work? Did they say go and develop this unknown country? Were they satisfied with the surveys? No, they said that the railway ought not to be built. But the government of that day, under the hon. Geo. W. Ross, had the courage and patriotism to build it. That railway, built for 250 miles, has cost the people of Ontario $15,000,000. But just consider what it has done for that northern country. It has opened up a mineral country the greatest in the known world. Is there any one who will say that the people of Ontario made an unwise expenditure when they built this road? Or will hon. gentlemen opposite be strong enough to say that they were wrong and that we were right? Probably the same coniditions prevail with regard to our National Transcontinental line. Take that line from Lake Abitibi right across to the eastern boundary of Manitoba, and what do you find?

We know, from the surveys that were made for the purpose of affording information to the Ontario government, that practically along the whole line that railway skirts a mineral ridge. Who can tell what that may contain? That great north country was not put there for nothing. It is found that, in so far as men have exploited it, it has yielded us more riches than any other portion of the country has yielded in the same time. Why should not the same thing take place here? This railway skirts the sixteen million acre belt of clay that is as good land as lies out of doors. And, if you take this land even as worth only $1 an acre, in its raw state and without any of the advantages of civilization, are you not well repaid? But there is one thing we have not taken into consideration in regard to this line and in regard to that portion of the country through which it runs from Abitibi to the eastern boundary of Manitoba, and that is that along that line there are pulpwood forests estimated to contain 300,000,000 cords of wood. Take that even at the low rate of $2 a cord, and how much have you done to open up a vast field of profit for the whole Dominion and especially for the province of Ontario? So, I submit, as I said in starting, you must not consider one portion of this line alone, but must remember that every portion is indissolubly linked with the others, that the work is in every sense a national undertaking and benefits one portion of Canada as much as another. Even if you take the line in the older portions of Ontario and Quebec, you find that it opens up trade, that is

bound to go to manufacturing centres and must inure to the great benefit of the manufacturers of the whole Dominion. So, with the figures we have showing the tremendous increase in every way that has taken place in the Dominion of Canada, the government of the Dominion was absolutely justified in projecting the National Transcontinental Railway; they are justified in every possible way in giving it such aid as is necessary for its completion. They are not only justified on the figures, but they have received two absolute mandates from the people of Canada, which they are bound to carry out.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

PRIVATE BILLS.

CEDARS RAPIDS MANUFACTURING COMPANY.

House in committee on Bill (No. 94) respecting the Cedars Rapids Manufacturing Company.—Mr. Boyer.

On section 1:

Mr. PUGSLEY moved that the word 'fourteen' be struck out and the word 'eleven' substituted, so as to make the extension to 1911 instead of to 1914.

Motion agreed to.

Section as amended agreed to.

Bill reported, read the third time and passed.

KOOTENAY AND ARROWHEAD RAILWAY COMPANY

House in committee on Bill (No. 80) respecting the Kootenay and Arrowhead Railway Company.—Mr. Geo. Taylor.

Mr. GOODEVE moved that section 1 be omitted and the following be substituted therefor:

The Kootenay and Arrowhead Railway Company shall, within two years after the passing of this Act, construct 15 per cent of the mileage of the unconstructed portion of the railways which it was authorized by section 7, of chapter 70, of the statutes of 1901, to construct and shall complete the said railways and put them in operation within five years, and if the said fifteen per cent of mileage is not so constructed, and if the said railways are not so completed and put in operation within the said periods respectively, the powers of construction conferred upon the said company by parliament shall cease and be null and void as respects so much of the said railways as then remain uncompleted.

Mr. PUGSLEY. What is the difference between the amendment and the section in the Bill?

Mr. GOODEVE. This amendment is the usual clause adopted by the Railway Committee, but instead of putting 15 per cent of the capital it inserts 15 per cent of the mileage. The reason for that in this particular Bill is that a portion of the road has already been constructed.

Section as amended agreed to.

Bill reported, read the third time and passed.

GRAND TRUNK PACIFIC LOAN.

House resumed consideration of the proposed resolution of Mr. Fielding with respect to a certain loan to the Grand Trunk Pacific Railway Company.

Mr. PARDEE. When the House rose I was endeavouring to point out the great resources of the northern portions of Ontario and Quebec and to show by figures that there were such resources there as would warrant any railway company being projected through that portion of the country and I pointed out further that owing to the fact of the Temiskaming & Northern Ontario Railway having been built great mineral resources had been opened up and that it was impossible to predict whether that with the construction of the National Transcontinental Railway through the northern portions of these two provinces many Cobalts and many Gowgandas would not be discovered.

If this should be so, and no one can deny the fact, surely this country could not have been placed there for no possible good whatever, surely there must be mineral resources hidden in other portions of it, and if these mineral resources are hidden they ought to come out. They will only come out when a railway is put through there, because, as we know, civilization follows the railway and we have to-day, as hon. members of this House are aware, in the Railway Committee, a Bill in which a charter is asked for a railway from a place called Ville Marie, on the border between Ontario and Quebec, northward to connect with the Grand Trunk Pacific. It is only an evidence that people of these northern portions are opening up that country and are willing to go on and invest their capital to build railways and there is no reason why, if that portion of the country turns out to be as highly mineralized as other portions have been found to be there should not be as many railways as there are in the older portions of Ontario and Quebec. These are things that we have to look at. We have to take into consideration the resources of the country and we have to take into consideration the opening up and laying bare of these resources. I just wish
