OFFICIAL REPORT

OF THE

DEBATES

OF THE

HOUSE OF COMMONS

OF THE

DOMINION OF CANADA

FIRST SESSION—ELEVENTH PARLIAMENT

---

9 EDWARD VII., 1909

VOL. XC

COMPRISING THE PERIOD FROM THE FIFTH DAY OF MARCH TO THE FIFTH DAY OF APRIL, INCLUSIVE.

OTTAWA
PRINTED BY C. H. PARMELEE, PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1909

House of Commons Debates

FIRST SESSION—ELEVENTH PARLIAMENT

HOUSE OF COMMONS.

FRIDAY, March 5, 1909.

The SPEAKER took the Chair at Three o'clock.

BUSINESS OF THE HOUSE.

The Rt. Hon. Sir WILFRID LAURIER (Prime Minister) moved:

That from this date to the end of the session, on Wednesdays, government orders have precedence immediately after questions to be put by members.

Mr. MONK. I suppose this will apply to Wednesday next and I thought I had understood from the right hon. the Prime Minister that the motion standing in my name on the Order Paper might be gone on with on Wednesday next, Monday being allotted to the motion of my hon. friend from Westmoreland (Mr. Emmerson), I would ask that the order take effect only after next Wednesday.

Sir WILFRID LAURIER. If the motion of my hon. friend (Mr. Monk) is not reached on Monday next, it will no doubt be reached the following Monday and that ought to be satisfactory.

Motion agreed to.

STEAMSHIP SERVICE WITH FRANCE.

Rt. Hon. Sir WILFRID LAURIER. I beg to move for the hon. the Minister of Marine and Fisheries: that on Tuesday next the House go into Committee of the Whole to consider the following proposed resolution. I beg to inform the House that His Excellency the Governor General assents to the resolution:

Resolved, That it is expedient to authorize the Governor in Council to enter into a contract or contracts for a term not exceeding ten years with any individual or company, for the performance of a steamship service between a port or ports in Canada and a French port or ports, on such terms and conditions as the Governor in Council deems expedient, and to grant therefor a subsidy not exceeding two hundred thousand dollars a year, based upon a minimum service of fifteen round voyages a year, and a subsidy therefor not exceeding one hundred thousand dollars, and so in proportion for a more frequent service.

Motion agreed to.

JURISDICTION OVER THE FISHERIES.

Mr. R. L. BORDEN. I would ask the Prime Minister, in the absence of the Minister of Marine and Fisheries, whether any and what progress has been made in the negotiations which at one time were being carried on between the government of Canada and the provincial governments with regard to the respective jurisdictions of this government and the provincial governments over the fisheries. The Prime Minister will recollect that we had an intimation from the government last session that a certain officer was named to us as having been commissioned for the purpose of visiting the various provinces and consulting with the Ministers so as to arrange, if possible, some effective plan by which the work would be carried on by the several provincial governments or the federal government without let or hindrance and without any doubt as to jurisdiction. I made inquiry early in the session in regard to it and did not receive much information. If the Prime Minister is not able to answer to-day would he be good enough to communicate with the Minister of Marine and Fisheries and let me know as soon as possible?

Sir WILFRID LAURIER. I am afraid I cannot give as full information as the Minister would be able to give were he present. I understand that Mr. Bastedo was appointed last year to confer with the provincial governments with a view of obtaining, if possible, a basis for a settlement. Mr. Bastedo was engaged in that work when he was called upon to serve in the Trade and Commerce Department in connection with the annuities law. Some few weeks ago several of the provincial governments were represented in Ottawa on a matter which was not directly concerned with this question, but I understand that at the conference it was to some extent discussed. It is the intention of the minister to resume the discussion, but further than this I cannot say.

Mr. R. L. BORDEN. I notice that the Minister of Marine and Fisheries has now entered the House; would he be good enough to look in 'Hansard' at the question I have put to-day so that he may be able to answer it on Monday?

WATERWAYS TREATY.

Mr. R. L. BORDEN. Is there any information available as to when the waterways treaty will be laid upon the table of the House?

Sir WILFRID LAURIER. We have just received a despatch on this subject which I will be glad to lay on the table of the House on Monday or Tuesday next.

FIRST READINGS.

Bill (No. 91) an Act to incorporate the Prudential Trust Company, Limited—Mr. Macdonell.

Bill (No. 92) an Act respecting patents of the Hart Otis Car Company, Limited—Mr. Geoffrion.

STANDING ORDERS COMMITTEE.

Mr. A. H. CLARKE moved the adoption of the first report of the select standing committee on standing orders, as follows:

Your committee have considered that portion of the petition of the Kettle River Valley Railway Company which asks for an extension of time for the completion of their authorized lines of railway, reported by the examiner of petitions for private Bills as not being covered by the notice. Your committee, in view of the fact that proof having been received to the effect that the required notice is now being published and will have sufficiently matured before the Bill can be considered by the Railway Committee, they therefore recommend that the same be deemed sufficient.

All of which is rspectfully submitted.

A. H. CLARKE,
Chairman.

He said: I have been asked to move this report in the absence of the chairman of the committee.

Mr. R. L. BORDEN. What precaution will be taken to assure the House or some committee that the required notice shall have been given at the time mentioned. This motion is based on the expectation that something will be done, but what guarantee is there that that particular thing will be done. Who will take cognizance of it to see that it is done before the Bill goes on?

Mr. A. H. CLARKE. I am scarcely able to answer the question. The chairman of the committee is not here and the report was placed in my hands as a matter of form.

Mr. R. L. BORDEN. If some assurance could be given for example, that the chairman of the Railway Committee would take cognizance of the matter and exact proof that the provisions of the rules had been complied with before the Bill came under the consideration of the committee it would be satisfactory, but in the absence of that assurance the motion does not seem to me to be satisfactory.

Sir WILFRID LAURIER. The motion had better stand.

Mr. SPEAKER. Stands.

SUPPLY—FRENCH TRANSLATION OF LAWS.

Hon. W. S. FIELDING (Minister of Finance) moved that the House go into committee of supply.

Mr. E. PAQUET (L'Islet). (Translation.) Mr. Speaker, I wish to call your attention to the French edition of our statutes. In perusing the series of volumes from 1867 to 1903 inclusively, that is up to the time of the retirement of the late Mr. Coursolles, the then chief French translator, one cannot help noticing that the designations of railway companies and others, even of those outside of the province of Quebec are, except in a very few cases, given in French.

It will be noticed on the other hand, that in the French edition of the statutes for 1904 and the years following, the English designations are seldom translated. Moreover, in the French edition of statutes relating to the amalgamation of two companies of two lines of railway, the contract entered into by the two corporations, and included as a schedule to the Amalgamation Act used to be translated into French, so that we had a French edition that was complete, a homogeneous work. Why has this rational system which remained in force during so many years been abandoned?

Let me point out a few striking discrepancies. In the first place we have Bill (No. 8), session of 1908, the French version of which refers to 'The Tobique Manufacturing Company ;' that company was incorporated in 1898, 61 Vict., chap. 116, under the name of 'La compagnie manufacturière de Tobique.' Here then is a company designated in the French edition of our statutes, at times under an English name, and at times under a French name.

In the second place we have Bill (No. 13) for 1908 the French copy of which relates to 'The British Columbia Southern Railway Company ;' while in the statute-book for 1899, the company is designated as 'La ccmpagnie du chemin de fer du Sud de la Colombie Britannique.' That is, we have the same discrepancy as in the previous instance.

In the third place, we have Bill (No. 15) for 1908, the French version of which refers to 'The Esquimalt and Nanaimo Railway Company ;' while in the statute-books, for 1886, chap. 15, 1888, chap. 89, in 1905, chap. 90 and 1906, chap. 92, the company is designated as: 'La compagnie du chemin de fer

d'Esquimalt à Nanaimo.' Even as far back as 1884 section 3, chap. 6, in the French edition of the statutes, the name of the company is given in French. So that in the statutes for five years we have the designation of a company given in French and then in 1908, after a lapse of 24 years from the date of the first mention of the name of the company in 1884, the English designation is substituted for the French in the French edition of the statutes.

Then again, let us take Bill (No. 16) for 1908, an Act concerning 'The South Ontario Pacific Company;' in the statutes for the four years, 1887, 1891, 1896 and 1906, the designation of the company is given in French in the French edition. Bill (No. 19) for 1908, an Act incorporating 'The Bank of Winnipeg;' in all acts previous to 1903 the designation of the bank was given in French in the French edition of the Act. Bill (No. 21) for 1908, an Act concerning 'The British Yukon Railway Company;' in the French edition of the statutes for 1897, incorporating the company, it is designated as 'La compagnie de mines, de commerce et de transport du Yukon britannique.' In the French edition of the statutes for 1900, 63-64 Vict., chap 55, the name is changed to that of 'Compagnie du chemin de fer du Yukon britannique.' The same designation is to be found in the French edition of the statutes for 1901.

Bill (No. 20) for 1908, the French version refers to 'The Belleville Prince Edward Bridge Company;' in the French edition of the statutes for 1899, chap. 95, the designation is given thus: 'La compagnie du pont de Belleville-Prince-Edouard.' Bill (No. 24), the French version refers to 'The West Ontario Pacific Railway Company;' but in the French edition of the statutes for 1885 chap. 87, for 1886, chap. 70, for 1887, chap. 62, for 1906 chap. 178 the designation is in every case, 'La compagnie du chemin de fer du Pacific de l'Ouest d'Ontario.'

Here then are several companies whose designations are given in the French edition of the statutes, at times in English and at times in French. It will be found that in Bills (Nos 25, 28 and 30) introduced at this session and having contracts attached, no translation has been made of such contracts, the original English text having been merely inserted in the French edition, against all reason. The hon. member for Chicoutimi and Saguenay has introduced a Bill (No. 42) incorporating 'The Canadian Liverpool and Western Railway Company.' It deals with the building of a railway in the province of Quebec; nevertheless, the designation in the French edition of the Bill is given in English.

What reason is there for such irrelevancies in the French edition of the statutes? I respectfully submit, Mr. Speaker, that in the fulfilment of your high duties, it would be proper on your part to take measures towards preventing the turning of the French edition of our laws into a perfect muddle.

Hon. L. P. BRODEUR (Minister of Marine). (Translation.) Mr. Speaker, the matter brought up by the hon. member who has just taken his seat, is not one under the control of the government, the translation of the laws being effected by officers of the House appointed by the House, and therefore outside the control of the government. However, the House has a perfect right to discuss this question, and I am not objecting in any way to my hon. friend having thought fit to bring up the matter.

I understand that formerly not only the text of any act incorporating a company was translated into French, but the name of the company as well. For instance the English edition referred to the 'Bank of Montreal,' and the French edition to the 'banque de Montreal.' So that the same institution was known under two different names. The same rule applied in the case of the 'banque Nationale de Québec,' which in the English version was designated as the 'National Bank of Quebec.'

At the time of Mr. Frechette's appointment as chief translator, he, I think, effected the change referred to by the hon. member, which consists in designating companies under the name given by the petitioners themselves in the petition addressed to parliament. I remember perfectly well that when the 'Banque Provinciale' came up for incorporation, the designation that was given was purely and simply 'La Banque Provinciale.'

To my mind, a great deal may be said in support of the change effected by Mr. Fréchette. I for one am not ready to say it was a mistake on his part. As the hon. member is aware, the designation of a company is in fact the name of a person in the moral sense, and that being the case, should a company be known under two different names?

Mr. PAQUET (L'Islet). (Translation.) If the hon. member will allow me, I have shown a moment ago, that in the French edition, at times, English designations were translated and at others were not. What I am anxious to obtain is uniformity.

Hon. Mr. BRODEUR. (Translation.) The whole question comes to this: is it desirable, as my hon. friend seems to think, that the designations of companies be put in both languages, that is to say that they should appear in French in the French edition, and in English in the English edition? There may be some well-founded objection to this practice. For instance a company might be sued before the courts under two different designations, although constituting a single person in the moral sense. Is it not better that each company should be

known under one designation only? I never had occasion to discuss the matter with Mr. Fréchette, but I think that is what he had in mind.

I have pointed out the case of the 'Banque Provinciale.' If my hon. friend will peruse the statute-books, he will find that in the English edition, that bank is designated as the 'Banque Provinciale.' However, my hon. friend has referred to a rather serious case, that of a company having obtained its charter under a name which has been translated in the French edition of the Act granting the charter, and which subsequently causes its charter to be amended, while its original designation is not translated in the French edition of the Amending Act, in such a way that the company, in so far as the French edition is concerned, appears to have a double designation. Mr. Fréchette may come to the conclusion, after looking into this debate, that it would be better to retain the same designation throughout the French edition, as long as the company exists.

As to the general principle governing the translation of such designations, I am not of opinion as before stated, that Mr. Fréchette is wrong.

Mr. F. D. MONK (Jacques-Cartier). (Translation.) Mr. Speaker, it seems to me that the general principle laid down by the hon. minister is fraught with great danger. If I understood him aright, he contends that in the translation of our statutes, English designations of companies should not be translated for the French edition. And why? Because petitions having for their object the incorporation of a company are, as a rule, written out in English, and accordingly the designation is given in that same language. He bases himself on a ruling made by the chief translator, Mr. Fréchette, a good many years ago. Does the hon. minister know as a fact that such is the interpretation Mr. Fréchette puts on his duties as translator? It would be a matter of surprise to me. I have known Mr. Fréchette for some time, and it does not seem likely to me that he would endorse such a proposal.

Whenever we adopt a Bill incorporating a bank or any other kind of company, that Bill is supposed to have been passed in French as well as in English. The firm which we are incorporating receives its designation in both languages. If we were to dispense with translating such designations, where would that lead us to? If the principle laid down by the hon. minister were to prevail, as most petitions seeking incorporation are sent to parliament in one language only, all expressions of a sacramentl nature—if I may be allowed to use the expression—used in these petitions, might be considered untranslatable for legal purposes. That is a dangerous principle to lay down, and I doubt that a man of Mr. Fréchette's ability has ever dreamt of establishing it.

Hon. Mr. BRODEUR. (Translation.) To say the truth, I mentioned Mr. Fréchette's name, for the reason that the member for L'Islet had stated that this change in the way of effecting the translation became noticeable only after Mr. Coursolles' retirement; I inferred that the change had been effected by Mr. Fréchette but I am not positive about it.

Mr. PAQUET. (Translation.) It dates back to 1903, inclusive.

Mr. MONK. (Translation.) That does not appear to me very likely, for the rule has not always been adhered to, as stated by the member for L'Islet. If Mr. Fréchette had laid down such a rule, I think he would have adhered invariably to it.

I insist that this is a dangerous principle, for if it were to prevail in the end, its effect would be to render illusory our right to have all legal enactments expressed in both languages.

As regards the work of translation, true the House has control over it to a certain extent; but, as we are aware, the translators are paid by the government, and accordingly are under their control. To contend, as the hon. minister has done, that the government have nothing to do with the question because these officers are not under their control, does not seem to me to be a reasonable excuse.

Mr. DOHERTY. I do not see any difficulty in a corporation having both a French and an English name. With regard to La Banque Provinciale having been incorporated originally under the French name, and having only the one name, I do not know that it is very material; but I would like to call the attention of the Minister of Marine and Fisheries to the fact that by an amendment to the Act incorporating La Banque Provinciale, passed if my memory serves me rightly, about three years ago, it was specially enacted that the bank should be known as La Banque Provinciale du Canada and not the Provincial Bank of Canada. So that in that particular instance at least, parliament seems to have considered that there was not any difficulty involved in the corporation having a name in each of the languages.

WORK OF THE COMMITTEES.

Mr. R. L. BORDEN. I would like to inquire of the Prime Minister whether it would not be advisable to make a reference of the report of the Department of Marine and Fisheries to the new committee which has been constituted. I observe that a portion of the report was referred to the committee upon the motion of the chairman on the 3rd inst., namely, that portion

relating to the lobster and the oyster fishery. It seems to me to be rather an unusual procedure. If the committee is to do any service, the whole report should be referred to the committee, in order that the members of the committee could take into consideration what inquiries they might desire to make or in what way they could be of assistance to the minister and the department. I would regard it as singularly inexpedient to require a motion every two or three days in this House that some portion of the report be picked out and referred to the committee. The committee was appointed for the purpose of dealing generally with the subject of the fisheries, and I would be inclined to think that the whole report of the department ought to be referred to it. I do not know how it is with the Committee on Agriculture. Is the report of the Minister of Agriculture referred to that committee?

Mr. BRODEUR. I do not think so.

Mr. R. L. BORDEN. The position is this: When a committee is constituted, that committee can only deal with matters referred to it by the House. In the case of the Public Accounts Committee there is a reference to it of the public accounts for the year; that is the basis of its jurisdiction. In the case of the Committee on Agriculture, I understood that there was a reference of the report of the Minister of Agriculture, and that that was the basis of its jurisdiction; if it is not, I do not see where it finds any basis at all. It cannot deal with matters that are not referred to it by the House. And so the Committee on Fisheries is but a name; it has no power whatever until something has been referred to it with respect to which it can take action. I would suggest to the Prime Minister and the Minister of Marine and Fisheries that the whole report of the department had better be referred to the committee. It seems to me that there should be consideration also as to whether all reports of any department relative to the mines and minerals, waterways and water-powers, should not be referred to the committees dealing with those subjects, in order that they may have some basis on which they can commence their work.

Mr. BRODEUR. I may say that the reason why this particular part of the report has been referred to the committee is that the other day there was a meeting of the committee, at which the consensus of opinion was that we should inquire into the subject of lobsters and oysters; and in order that the committee might have some jurisdiction over the matter, it was decided to refer to the committee that part of the report. With regard to the Committee on Agriculture, I fully agree with the hon. leader of the opposition that the proceedings of that committee must have been more or less irregular, because the committees of the House have no power to deal with anything that has not been referred to them by the House. I think that point was dealt with by the Prime Minister when the motion of my hon. friend, the leader of the opposition, was discussed, and I think that principle is embodied in the resolution which is passed immediately after the committees are formed at the opening of the session.

Mr. SPROULE. I think the hon. minister is astray, except in the case of the Public Accounts Committee.

Mr. BRODEUR. In the case of the Public Accounts Committee the report of the Auditor General is referred, and that is the matter for investigation by the committee. In the case of the Department of Agriculture, I do not know exactly what has been the practice in the past, but I am under the impression, having looked into the question when it was discussed some time ago, that no formal reference has been made to that committee. However, the practice of that committee for perhaps twenty years has been to take evidence from officers of the Department of Agriculture on the administration of the department. We have a Committee on Railways and Canals, but the report of the Department of Railways and Canals has never been referred to that committee.

Mr. FOSTER. The House is constantly referring matters to the committees.

Mr. BRODEUR. We refer Bills to them.

Mr. FOSTER. Not to the Committee on Agriculture.

Mr. BRODEUR. No, I think no Bill has been referred to the Committee on Agriculture.

Mr. FOSTER. That is what puzzles me in the discussion. The Committee on Agriculture is at work. But what is its basis? Can it take up an astronomical question and pursue that? Is the basis to be found in resolutions, or in daily or occasional references from this House?

Mr. BRODEUR. I think that most of the procedure of the Committee of Agriculture is entirely irregular, because it is not upon any reference from this House. The House has never referred the report of the Department of Railways to Committee on Railways, nor has it referred the report of the Department of Finance to the Committee on Banking and Commerce.

Mr. FOSTER. Then, why make the reference in this case?

Mr. BRODEUR. We desire to have these matters taken up by the Committee on Ma-

rine and Fisheries. We have some Bills now before the House dealing with the question of marine. It is natural to expect that these Bills will be referred to this committee. I repeat, the committees have no jurisdiction except upon matters formally referred to them by the House. That is the reason why we propose this resolution—because we wish to investigate in Committee on Marine and Fisheries the whole question of lobsters and oysters, and so we wish the House to refer to the committee that part of the report of the department relating to the subject, so that the committee may have authority to deal with the question.

Mr. R. L. BORDEN. What would be the objection to referring the whole report?

Mr BRODEUR. I do not see any objection, except that it might lead to dealnig with all the matters mentioned in the report.

Mr. FOSTER. But that is what the committee is for.

Mr. SPROULE. I think the Minister of Marine and Fisheries (Mr. Brodeur) is hardly correct in what he says concerning the Committee on Agriculture. The present procedure had its origin in the work of the Committee on Colonization, appointed many years ago, to which were referred questions on agriculture, with the authority to send for persons, papers and records and to report to the House. This they did. On that basis, the committee was afterwards known as the Committee on Agriculture and Colonization, and the order of reference instructs that committee to send for persons, papers and records, and to take evidence on any of the subjects in which the committee is charged with the duty of inquiry. I think the report of the Minister of Agriculture is submitted to the committee by the House. Whether rightly or wrongly, this is the procedure followed by the committee. But all the committees except the Public Accounts Committee, if I understand aright, can do the same thing. Of course, the Public Accounts and the Auditor General's Report are referred to that committee every year. The Committee on Agriculture, by virture of their order of reference, inquire into everything relating to the subject matter over which they have jurisdiction and report their observations to the House. I think these are nearly the words of the order of reference.

Mr. BRODEUR. Perhaps I may be permitted to read the motion to which I have referred. It is the motion usually made immediately after the committees are formed:—

On motion of Sir Wilfrid Laurier, it was resolved, That the Select Standing Committees of this House shall severally be empowered to examine and inquire into all such matters and things as may be referred to them by the House; and to report from time to time their observations and opinions thereon; with power to send for persons, papers and records, with the exception of the Committee on Debates and that on the Library of Parliament.

That is the source of the jurisdiction of the committee.

Mr. FOSTER. That is in accordance with what I said in the first place, when I asked whether the whole report might not be referred to the committee. The committee will have control of it when it gets there, and, of course, they cannot investigate everything at once.

Mr. A. K. MACLEAN. They will have to take up one matter at a time. This motion is in accordance with the view expressed in the committee.

Mr. R. L. BORDEN. All I suggest is that, instead of making it necessary to come here fifteen or twenty times with applications, it might be more expedient to refer the whole report to the committee. Of course, the committee will not embark upon any investigation if it is not desirable to do so. As a matter of organization, it would seem advisable to refer the whole report. I think the minister should take the matter into his consideration.

Mr. BRODEUR. It is not done in the case of the other committees. I do not say whether it would have been advisable to adopt that plan or not.

Mr. R. L. BORDEN. So far as the Committee on Agriculture is concerned, I think that, if this practice is not followed, the committee has proceeded as though that had been the case. In order to keep matters strictly regular in the future, I think this reference will have to be made, for the Committee on Agriculture is appointed under the same procedure as the others, and no special reference is made to it. It is true that, as my hon. friend from East Grey (Mr. Sproule) has pointed out, each committee has authority to send for persons, papers and records and to examine witnesses on oath. But that power is only ancillary to the jurisdiction of the committee, and an inquiry must be founded upon a reference to the committee of some matter by this House. It may be that the long practice of the Committee on Agriculture will be considered as authority to the committee, for it has reported for many years upon matters that do not seem to have been strictly referred to. Therefore, it may be held that a practice has grown up which will justify the committee in continuing as in the past.

Motion agreed to, and House went into Committee of Supply.

Carillon and Grenville canals—completing repairs to gap in Carillon dam, $40,000.

Mr. GRAHAM. I move that that item be reduced by $25,000. The reason of that is that we are going through with the work more rapidly than we anticipated when this estimate was made. When this estimate was made I did not expect to be able to do as much work as we have done. I am asking in the supplementaries, a few days hence, for $25,000 for the year we are now in.

Motion agreed to.

Macadamizing public road along old canal, $7,500.

Mr. WRIGHT. What is the length of that road?

Mr. GRAHAM. Between a mile and a half and two miles. It runs parallel with the canal, and we are obliged to keep it up.

St. Anne's lock — renewing old wooden bridges over road slips, $2,500.

Mr. WRIGHT. Are you still making wooden bridges?

Mr. GRAHAM. We are putting in steel bridges. The work is done by our own staff.

Cornwall canal—to repair washout, $55,000.

Mr. GRAHAM. This is the unfortunate washout that occurred last season. The work altogether will cost $162,000, and this amount will finish it. We had some expensive temporary work. The work was let by contract, except the rush part we had in order to get ready for navigation in a few weeks. A good deal of it was done by our own engineers, and by day's work. But the permanent work is done by contract.

To repair north bank between locks 18 and 19, $5,000.

Mr. GRAHAM. For a distance of some 3,000 feet the bank was not up to grade, was not properly protected, and the water is eating into the bank. We are trying to build the bank up by rip-rap; it is done by our own staff.

Galops canal — to build concrete superstructure and bridges for piers at upper entrance, $40,000.

Mr. GRAHAM. I move that that item be reduced by $20,000. We will not be able to expend more than $20,000 this year, but it will eventually cost $40,000.

Mr. JOHN HAGGART. What is the necessity for these bridges? How is it they were not in the original design of the canal?

Mr. GRAHAM. In the olden time the policy was to build wooden bridges and wooden piers. Now the piers at lock 27 are decaying, and we propose to renew the bridges with concrete. It is a concrete superstructure.

Rideau canal—rebuilding bridge at locks—Jones' Falls and Washburn, $3,000; to rebuild long bridge at Kingston Mills, $7,500.

Mr. GRAHAM. The two bridges at Jones' Falls and Washburn are rotten and unsafe. They are wooden bridges, and we are rebuilding with our own staff. The bridge at Kingston Mills is 220 feet long. It is proposed to do away with the old wooden superstructure and replace it with a steel span on concrete piers.

Trent canal—improvements, $50,000.

Mr. GRAHAM. This is for dredging improvements. I have the details here, and I will read them to the committee, so that they may understand what we want to do:

Dredging Otonabee river below Peterborough	$ 3,000
" entrance to Bobcaygeon	2,500
" entrance to Fenelon Falls lock and Cameron lake.	3,000
" Balsam lake—Lake Simcoe division	2,000
" Lindsay river	2,000
" Lakefield — Peterborough division	1,500
Cleaning drowned lands, lake Simcoe —Balsam lake division	5,000
Rip-rapping Balsam lake division	2,500
Two new dump scows	5,000
To complete new dredge	5,000
New dams on Cull river, Burnt river and Eel's creek	6,500
Landing piers	2,000
Duplicate lock gates	10,000
	$50,000

Mr. JOHN HAGGART. Why do you take this vote separate from the vote for the Trent canal?

Mr. GRAHAM. These are repairs out of income, the others we were discussing come under capital account for building the Trent canal. These repairs we are doing by our regular staff on income.

Welland canal—chargeable to income—to renew entrance piers—Port Maitland, $65,000.

Mr. FOSTER. Will the minister explain this?

Mr. GRAHAM. This item is required for the purpose of renewing the west pier at Port Maitland. Last year there was an appropriation for it, but by a mistake there was a supplementary vote for the work on the east pier amounting to $22,000 which was included in the main estimates. The work is under contract, the contract having been awarded to Mr. Hogan on September 29, 1908. There were seven tenders received. The amount expended up to January is $903.25. We are practically just starting the work.

Mr. FOSTER. What will be the total cost of these piers?

Mr. GRAHAM. The contract price is $60,600, approximately. It is done on schedule rates. It is expected that it will cost about $65,000.

Mr. JOHN HAGGART. That will finish the whole work?

Mr. GRAHAM. That is supposed to finish the whole entrance at Port Maitland.

Mr. WRIGHT. I understand that the department have under consideration the digging of a new canal to parallel the Welland canal. Have the department come to any decision in regard to that? It seems to me that this is a lot of money to be putting into the old canal. If we are going to dig a new canal I think as little as possible ought to be spent on the old canal.

Mr. GRAHAM. This really has nothing to do with the question to which my hon. friend refers. This is in connection with the old feeder up at Port Maitland. We have always had charge of this work. We will have to do this whether we dig a new canal or not. It is really for the protection of the harbour. Similar work was done on the east side of the harbour. It has been reported for several years very strongly that in a heavy storm this work is necessary for the protection of the town.

Mr. JOHN HAGGART. Why should the government do this work when it is not used for the canal? The new canal gets its water directly from Lake Erie and this feeder is of no use at all.

Mr. GRAHAM. My hon. friend is right in a way. It may be that this is a work properly for the Department of Public Works but it has always been ours, the work must be done and there seems to be no other department to do it.

Mr. FOSTER. It is really a harbour upon the canal?

Mr. GRAHAM. It is on Lake Erie at the entrance of what is known as the old feeder near the mouth of the Grand river.

Mr. WRIGHT. If this is not now used as a feeder why do you need a dock or any improvement at its mouth? It does not seem to serve any useful purpose at all.

Mr. GRAHAM. We have always had charge of that work.

Mr. WRIGHT. Where is the necessity for the work?

Mr. GRAHAM. It is strictly speaking a harbour work for Port Maitland. Personally, I think it should be carried on by the Department of Public Works, but it has been ours ever since it was the entrance to the old feeder and therefore we think that we must do it.

Mr. WRIGHT. Is Port Maitland a port of sufficient importance and possessing sufficient business to warrant the government spending this large amount of money? There is no business worth speaking about at Port Maitland.

Mr. LALOR. This happens to be in my constituency and I know something about it. I can easily understand any one not familiar with the circumstances saying that it should be abandoned and that no more money should be spent upon it. The Welland canal formerly was fed from the Grand river and this was a most useful and necessary part of the canal system. There have been very large amounts of money spent on the Welland canal and on the feeder between Dunnville, Port Maitland and Port Colborne and it is pretty hard for the government to abandon that work although the value to the country is not now so great as it formerly was. But, if anything went wrong with the feeder of the canal from Lake Erie this old feeder could be used for a certain length of time. As to Port Maitland harbour, it is the best harbour on the whole of Lake Erie. It is the safest harbour of refuge for boats coming down the lake. In case of a storm they make into Port Maitland harbour and they go on up the river and into the Welland canal feeder which affords them safe refuge. The adoption of Port Maitland as the entrance of the Welland canal has been advocated in this House by several hon. members representing my part of the country and particularly by the late Senator McCallum who was at one time a member of this House. There is not the slightest doubt that Port Maitland should be the entrance to the Welland canal and not Port Colborne. You can go on spending money on Port Colborne as long as you like. This and other governments have spent millions of dollars but you will never have a satisfactory harbour at Port Colborne. The harbour entrance to the Welland canal should be Port Maitland without the slightest doubt. You are talking about building a new canal; you can get a route by way of Port Maitland without encountering any rock whatever. You can go down eighty feet and you can build your canal with a much less expenditure of money than if you continue to spend millions of money, as you have been spending money every year, on the old Welland canal system. A proper survey for the new canal would begin with Port Maitland as the Lake Erie port and not Port Colborne.

Mr. WRIGHT. How far apart are Port Maitland and Port Colborne?

Mr. LALOR. They are about fifteen miles apart. To build the canal from Port Maitland would not lengthen it to any great extent. It would make it a little longer but there would be great compensating advantages. We can go on spending just as much money as we like and just as long as we

like, as has been done ever since the canal was first built on the present route from Port Colborne, but if we do we will never have a canal that can compete with the waterways through New York state to the sea-board. My hon. friend (Mr. Haggart) reminds me that even the imperial authorities have reported that Port Maitland and not Port Colborne is the proper port for Lake Erie.

Mr. GRAHAM. I think that a few years ago the commissioners recommended Port Colborne, but however that may be I shall call the attention of the engineer in charge to what my hon. friend (Mr. Lalor) has said. When the time comes, as I think it will come, for enlarging the Welland canal or for building a new one, whoever is Minister of Railways then will want to have the fullest information as to the best possible route.

Mr. LALOR. I appreciate the reply of the minister and all I ask is that the matter be looked into from the standpoint of what is best for the country. If that is done I have no doubt it will be the route accepted by the government.

Mr. SPROULE. Suppose a change should be made what will become of the heavy expenditures we have made for a number of years past in improving Port Colborne and building large elevators. It seems to me this question should have been considered years ago and that it is too late to talk about making a change now.

Mr. GRAHAM. If we are going to undertake a very vast improvement, I suppose we may be like the railway people who, when they want to reduce grades and lessen curves, sometimes deem it wise to abandon the old route altogether notwithstanding that it may have cost millions. I do not say that the old route will be abandoned; all I say is that the remarks of my hon. friend (Mr. Lalor) make it necessary that the engineer should take the matter into consideration.

Mr. J. HAGGART. There is no doubt a good deal in what has been said by my hon. friend (Mr. Lalor). The imperial authorities adopted Port Maitland as the depot for armed vessels on Lake Erie. Time and again it has been advocated in this House that Port Maitland would be more advantageous than Port Colborne. It is a natural harbour and there need be no money spent on it as is the case at Port Colborne. Of course when Port Colborne was adopted as the terminus of the Welland canal it was not contemplated that that canal would ever be deepened to the extent now contemplated. They find a great deal of difficulty on the Welland canal in getting over what is called the height of land section, which is liable to sink and which requires to be excavated now and again. There is probably as great a depth there now as can be maintained. If it becomes necessary to deepen the Welland canal to 21½ feet it would be a question for the consideration of the government whether it would not be cheaper and better to adopt a new route.

Welland canal—heavy repairs, $10,000.

Mr. FOSTER. Has the minister carefully compared this estimate with the pronunciamento of the Liberal candidate in Welland who set out in his pre-election address what he had done for the county of Welland, all that he had got, all that was promised, and all that he hoped to get. Has the minister carefully gone over that statement of the member for Welland and is he sure he has it all in this item?

Mr. GRAHAM. I have not seen that compilation yet.

Mr. LENNOX. I can show it to you printed alongside of Mr. German's photograph.

Mr. FOSTER. Would the minister wish me to read him that statement to refresh his memory?

Mr. GRAHAM. Not at all.

Mr. FOSTER. I do not know whether it ought to be put on Hansard or not.

Mr. GRAHAM. You can't put the photograph on Hansard.

Mr. FOSTER. Probably the Prime Minister remembers it; I think he was there at the time.

Sir WILFRID LAURIER. What was that?

Mr. FOSTER. That was the celebrated statement of what had been got in the shape of money by the member for Welland; all that he had been promised, and all that he hoped in the course of five years if he were given the suffrages of the independent electors to get from the government. I think he read it at the same meeting that my right hon. friend made his statement to the people.

Sir WILFRID LAURIER. My memory is not equal to all that.

Mr. FOSTER. Very likely the Prime Minister revised and authorized it as he did the $347,000 extra to the Civil Servants in Ottawa for the benefit of himself and his junior colleague.

Mr. J. HAGGART. We should have a statement from the government in reference to their policy on the transportation question re the Welland canal. The Prime Minister, speaking at Welland, is said to have favoured both the deepening of the Welland canal and the construction of the Georgian Bay canal. The Minister of Railways has said that he preferred deepening of the

Welland canal to the construction of the Georgian Bay canal. Then we have the authoritative statement of the Minister of Railways through the report of his department that it is necessary to deepen the Welland canal. I would be glad to have an authoritative statement of the policy the government intend to pursue in this matter.

Mr. GRAHAM. I made a statement on a similar request the other night, but I admit it was not very elaborate. I said then and I have said many times and I now repeat, that I believe Canada could compete for the carrying trade not only of our own products but of a portion of the products of the United States from the west to the sea-board, if the Welland canal were deepened or a new Welland canal were constructed giving a depth of 22 feet, probably 25 feet. I have never expressed an opinion adverse to the Georgian Bay canal scheme. There are a great many conflicting opinions concerning it, but it strikes me, from the natural contour of the country, its geographical and physical conditions that the time will come when the great carrying trade of the west will have an artery of outlet through the Georgian Bay canal. The Welland canal, of course, is of the cheaper construction and I have faith enough in Canada to believe that with the Welland canal enlarged or a new Welland canal, a great impetus will be given to our carrying trade; but that the trade of Canada will be sufficient in the years to come to require both the Georgian bay and the St Lawrence routes. For the present the policy of the government, owing to temporary conditions which exist, is to undertake no works which would demand very large expenditures of money. When conditions change, I will be prepared, if I occupy the position I do now, to take a more aggressive stand as to the water routes of Canada.

Mr. T. CHISHOLM. Is it correct that the surveying party who have been examining the route for the Hudson Bay Railway have reported that the Nelson river could be made navigable up nearly to Winnipeg?

Mr. GRAHAM. I laid the report referred to on the table yesterday. Its contents would imply that the navigation of the Nelson river is perhaps more practicable than I myself have hitherto thought it was, and suggestions are made which almost stagger one, for they would lead one to believe that large ocean vessels could be brought from the Hudson bay clear through to Winnipeg. It is a large proposition, but I believe the engineer in his progress report has in one paragraph intimated that this is the case.

To renew foundations of junction locks, $8,000.

Mr. J. G. HAGGART. The foundations of the locks are leaking badly; we do this work with our own staff.

To build new steel gate-lifter, $12,000.

Mr. GRAHAM. This new lifter is required to take the various gates out for repairs.

Mr. FOSTER. Where do you procure that?

Mr. GRAHAM. This is a new work, we ask for tenders for it. I think Polson's got the contract for the last gate some years ago, but we ask Canadian builders for tenders and award the work to the lowest tenderer.

To renew three feeder bridges, $3,000.

Mr. GRAHAM. That work will be done by our own staff; there are three old wooden swing bridges.

Before leaving this canal, I wish to furnish some information asked for the other night. The first question was with reference to the price paid by the Cataract Power Company to the government for their water-power. The information is as follows:

	Per year.
First lease dated December 6, 1902, for 700 cubic feet per second at $30 per cubic ft.	$21,000
Supplemental agreement of March 31, 1906, provided for 300 cubic feet per second additional at $30..	9,000
Or in all per year, 1,000 cubic ft. per second..	$30,000

Mr. J. HAGGART. What is that per horse-power?

Mr. GRAHAM. My deputy informs me that it is difficult to give this information on the basis of horse-power. The company have constructed a pond and do not use the flow of water steadily. It is easier to check it by the cubic foot than by the horse-power.

Mr. J. HAGGART. With the cubic feet per second and the amount of fall the department should be able to calculate that in five minutes.

Mr. GRAHAM. It will be about 30,000 horse-power, or about a dollar per horse-power.

Mr. SPROULE. Is the contract perpetual or what length of time has it to run, and must you absolutely supply the company with at least that amount of power?

Mr. GRAHAM. The lease terminates in 1923. This is the surplus water of the canal. We make the navigation paramount, as in all these contracts. We can close down their supply at any time it is necessary in the interests of navigation

Mr. JOHN HAGGART. Is it true that the works of the Power Company cause such a current that it interferes seriously with the operation of the canal?

Mr. GRAHAM. We are informed by the engineer-in-charge that that is not the case.

Mr. WRIGHT. When was this lease entered into?

Mr. GRAHAM. In 1902.

Mr. J. HAGGART. That is a renewal of the contract.

Mr. GRAHAM. That is the time they gave me, the lease will expire in 1923.

Mr. SPROULE. Was this contract let by tender or by private agreement?

Mr. GRAHAM. I shall have to look up the files of the department to find that out. The last renewal was made seven years ago, but the first contract was made many years ago. The contracts are for twenty-one year terms, renewable, and at the end of each term the rates are subject to revision. My hon. friend from Grenville (Mr. Reid) asked for certain information in regard to the cost of electric power on the Welland canal. For light and power on the canal itself, the Lincoln Electric Light and Power Company, Limited, agrees to supply electric current for the needs of the canal, dated June 27, 1903, to August 31, 1913, at $14 per horse-power per annum.

Cost of power for year 1906....	$9,826 59
Cost of power for the year ending December 31, 1907..	8,996 44
Cost of power for the year ending December, 31, 1908..	8,713 20

During the year 1907 the current was used for lighting purposes only; during the year 1908, for light and operating gate mechanism. The reduction in cost is due to improvements made by the electrical engineer of the department installing a synchronous condenser.

Mr. FOSTER. Has the department a record of all the water-powers it has leased, the dates of the contracts and the reasons for them?

Mr. GRAHAM. I think I can find that for my hon. friend.

Mr. FOSTER. To-day a great deal of interest is taken in the conservation of water-powers, and we have along our canals a large amount of surplus power. We have gone to all the initial expense of constructing canals and making the water-powers available, and the question that occurred to me was whether we were getting our fair share out of them or not. Here is a concrete instance where you are letting thirty thousand horse-power for a dollar per horse-power, while throughout the province of Ontario this water-power ultimately sells for $25 or $30 per horse-power when converted. When you deduct the cost of the original plant for converting the power and the cost of the up-keep, you have the whole margin over that between one dollar and $25 or $30 per horse-power. The people who have contracts of that kind must be making money hand over fist. If they are, does the minister believe that the country is getting its fair share? From the canals you are getting nothing, while you have to bear the cost of capital repairs and current account repairs. Under these circumstances, what justification is there for allowing corporations or individuals to make such immense amounts of money out of the people? In old times these things were winked at, they were not thought much of; but people are getting awake nowadays. Is the department getting awake? Is it attempting to establish a proper basis for the revision when the time for revision comes? I think we ought to be alive to that sort of thing. If a man were a trustee of an estate, and were as much asleep as the department seems to be, he ought to be hauled over. It seems to me that the government is in that position with regard to the people's franchises. It would be instructive if in the book of Railway and Canal statistics you made a tabulated statement of all the water-powers which are utilized and the rates which are paid for them.

Mr. GRAHAM. I think that is a good idea. As the hon. gentleman says, a few years ago the question of water-powers was not considered of as much importance as it is at the present time. But recently, just before my time, a commission was appointed to go over all the leases we have on the Welland and Lachine canals, particularly on the Lachine canal, and they brought in a report as to the proper rentals for these, and we are carrying out the recommendations of that commission as far as possible. Wherever we have had a lease that was not for a stated term, we have cancelled it, and asked the lessee for the increased rental recommended by the commission. In some cases the rentals have been doubled, in some quadrupled, in the last year and a half.

Mr. R. L. BORDEN. Are these leases perpetually renewable?

Mr. GRAHAM. Some of the old ones are, I think; but the general form is for twenty-one years, renewable for two other terms of twenty-one years each, subject at each renewal to a revision of the rental paid.

Mr. R. L. BORDEN. How is the revision accomplished?

Mr. GRAHAM. By the Governor in Council. My idea would be to have it done by the Board of Railway Commissioners; I have not worked that out. But in new

leases along the Trent canal, I am wherever possible giving the board power to control the rates the leesees shall charge the public.

Mr. FOSTER. How about the rates they are to pay to the government?

Mr. GRAHAM. There are a variety of conditions.

Mr. CONMEE. I think that the explanation of the management of these water-powers and the value that should accrue to the government for the use of them, has been hardly fully stated. The government leases the right to take the water from the canal channel. The parties who obtain the lease, as stated by the hon. member for North Toronto (Mr. Foster), expend further moneys in making the development. But that is not all the expenditure, in fact it is not half. They must not only make the entrance channel, the tail-race, and all the developments necessary to put the wheels in motion, including the installation of machinery, plant, buildings and every thing necessary for such work, but they must find a market for the power. To do this, they must either establish works in the immediate vicinity of the power, or convert the power into electrical energy and transmit it to points where it can be used for commercial purposes. All this expenditure will exceed considerably that of the actual water-power development, and, I assume, would have to be considered in determining what the value of the rental will be.

Mr. FOSTER. The establishment of power at a place draws manufactures, does it not ?

Mr. CONMEE. That will depend on conditions. If there are transportation facilities, or if the point is one where raw materials can be advantageously assembled for manufacturing purposes, no doubt it has a tendency to draw manufactures. But this particular water-power is not so fortunately situated; a market has to be found thirty or forty miles distant from the point of development.

Mr. R. L. BORDEN. Has the government the power to fix the rate for the rental after twenty-one years ?

Mr. GRAHAM. That is the usual lease—the terms to be fixed by agreement subject to the Governor in Council.

Mr. SPROULE. The information given suggests how improvident was the contract made with Mr. M. P. Davis for the power on the Beauharnois canal. If I remember well, that was renewable for eighty-four years, and I am not very sure that provision was made for readjusting the rentals—

I do not speak positively, for it is some time since I looked into the matter. It seemed to me that there must have been either absolute carelessness of the public interest or something much worse in making this bargain, because the whole power was sold for $1,000 a year, and then the government bought back the power at $63 per horse-power. It was about the most extravagant bargain of that nature that I ever knew, and, not content with making it for twenty-one years, the government made it for eighty-four years.

There is another question that I brought up some years ago, and I would like to know if the minister has looked into it: What authority have we for taking water from streams that are under provincial control and that might be utilized by the province, running it into a canal, and selling the power so created to individuals ? We are taking over more and more of these streams. I asked this question some years ago. Has the minister had any report upon it, or any conference with the provincial representatives ?

Mr. GRAHAM. I am informed that the Justice Department did make a report on that matter so far as the Trent navigation is concerned. So far as I know, no question has ever been raised by the provincial government. The principle is, I believe, that navigation and navigable streams come under the jurisdiction of the Dominion government.

Mr. SPROULE. These streams are not navigable.

Mr. GRAHAM. The Trent, part river and part canal, is navigable. I understand that the Ontario government turned over to the Dominion government certain wharfs and other works and property that they had in connection with this system. This was done, I think, under order in council.

Mr. SPROULE. That may apply to the Trent, but certainly not to all the streams that are feeders of the canal. It would seem to me, in view of the policy of the provincial government in the power scheme, that it would be unwise to take any other of these streams under federal control, or to make unlimited grafts on the streams of the province to build up power in the canals and then sell that power to individuals.

Mr. GRAHAM. I think that my hon. friend (Mr. Sproule) will find that the order in council included all the streams tributary to the system that would help in the development of navigation. The up-keep of these various works on the Trent canal was a source of expense to the provincial government, and I think they were not averse to getting rid of them. We have taken over these works and spent large sums of money

in dams and others constructions which expenditures would have had to be undertaken by the provincial government to develop the waterways. As to the question of the water-powers along the Trent, they are largely developed by the work done by the federal authority in the construction of these dams and creation of reservoirs. And the provincial government, whatever might otherwise be their claims in law, have handed over to us their rights in the present canal.

Mr. GEORGE GORDON. What does the minister consider a 'navigable stream'?

Mr. GRAHAM. That is a large question, and I would refer it to my hon. friend from the Sault, who is a legal man. It is a question that might be discussed in connection with certain treaties. I would not care to express an opinion.

Mr. GEORGE GORDON. The reason I ask is because at the present time, in the constituency which I have the honour to represent, there is a very small stream known as the Veuve river, which is not navigable in the proper sense of the word, that is, no boats can go up there of any capacity at all. It is said to come within the meaning of the Act. Just now a party wants to build a small bridge over it; it seems he has got to get permission from the department to build that bridge.

Mr. GRAHAM. Of course, if it be considered a navigable stream they could not construct a bridge over it except by consent and approval of the Department of Public Works. If it is navigable up to a certain distance, I suppose it is a navigable stream; but I would not like to express an opinion.

Mr. GEORGE GORDON. It is navigable for canoes, or small boats drawing three or four feet of water.

Mr. CONMEE. Certain streams have been held by our courts to be navigable. For instance, the Winnipeg river is one, though it has a great many rapids and falls. But the river is navigable in certain sections. In an action that arose, the courts held that though certain portions of the river were composed of rapids and falls, it was nevertheless a navigable stream. A question arose in connection with the diversion of certain waters in the State of Minnesota. The waterway of Birch lake is entirely within the state of Minnesota, but the waters discharge into the Rainy river, which is a boundary stream. It was held by the Waterways Commission, both by the American and Canadian sections, and confirmed by the Secretary of War at Washington, who is charged with navigable waters in the United States, that their ruling was correct, that it was a navigable water, though navigable only for floating timber, ties or logs. Certain portions of it, such as Maline lake, Basswood and Birch lakes, are swells of the river, so to speak, though the water channel is comparatively shallow outside the lakes. There were some tugs on these lakes. Any stream of that character, it would appear from these decisions, would be regarded, and perhaps properly, as a navigable water, although not entirely navigable in a state of nature.

Remuneration to A. Brunet, government director, Grand Trunk Pacific Railway, $2,000.

Mr. FOSTER. I would like to know what Mr. Brunet's duties are.

Mr. GRAHAM. As I understand, he has to represent the government on this board

Mr. FOSTER. That is so many English words, but what does he do?

Mr. GRAHAM. He has a place on the board, as any other man; he has a voice, and attends meetings. I asked him this year to make me a report concerning his work. He has given me such a report, and I will be glad to lay it on the table.

Mr. FOSTER. How long has he been commissioner?

Mr. GRAHAM. He was appointed in July, 1906.

Mr. FOSTER. Has the government given him any instructions at all as to what he has to do? Is he a restraining force, and in what way? Does he follow his own sweet will and do as he likes, or has he any instructions given him by the government, or does he go whichever way the tide runs, or does he simply look after his salary? All these are pertinent inquiries when a man is getting $2,000 a year of the people's money. He may earn it, he may earn a good deal more; but we want to know what the man is doing.

Mr. GRAHAM. My hon. friend will remember that last year when this item was up some questions were asked, and the hon. member for Jacques Cartier (Mr. Monk) made some extended remarks, very eulogistic, of Mr. Brunet. I had several conversations with him during the past year. I really had not met him last year. I discussed with him unofficially his duties on the board at various meetings, and asked him to give us a report as to his work on that board, and he did so. I have that report, and I will lay it on the table early next week.

Mr. JOHN HAGGART. Is he still in the employ of the government?

Mr. GRAHAM. Yes, in this capacity, a director of the Grand Trunk Pacific representing the government.

Mr. JOHN HAGGART. When will it end?

Mr. GRAHAM. I suppose the government will be represented by some person on that board until the Grand Trunk Pacific is completed. I do not know whether his functions extend to the operation or not.

Mr. JOHN HAGGART. This gentleman was on that board as director or commissioner. Is this the commissioner who resigned?

Mr. GRAHAM. That is the same gentleman that resigned from the Transcontinental Commission. Section 43 of the National Transcontinental Act provides that during the term of said lease, and so long as the government remains liable for any portion of the bonds issued, the government shall have the right to appoint one director, and shall pay him a salary not to exceed $2,000 per annum. That is the clause of the Act by which he was appointed.

Mr. FOSTER. The Act is plain enough. It would seem as though the government felt that when it was guaranteeing the bonds it ought to have a man on the spot. I do not know why that should have been done because I think in the final analysis the whole thing comes before the Finance Minister, who has got to be satisfied that there is sufficient ground for issuing bonds, and afterwards for payment over of the proceeds of those bonds. Has Mr. Brunet anything to do with that? Is he the government director who keeps the Finance Minister informed?

Mr. GRAHAM. I think not. His report is made to the Department of Railways and Canals. The Auditing Department audits the entire expenditure of the Grand Trunk Pacific.

Mr. JOHN HAGGART. We had a return brought down showing that the whole amount of the government guarantee for the construction of the work from Winnipeg to Edmonton had been paid out to the Grand Trunk Pacific although the road has not been accepted and passed by the government. I suppose Mr. Brunet is looking after that.

Mr. GRAHAM. That matter will come up a little later in the discussion upon the Transcontinental Railway. I am not prepared to go into it just now. Our department audits all these accounts and I think that on our certificate the money is paid.

Mr. FOSTER. As I understand it, Mr. Brunet has no instructions from the government or the Minister of Railways and Canals as to what particular stand he is to take or what particular function he is to perform on the board of directors. None such have been issued to him?

Mr. GRAHAM. I understand not.

Mr. J. G. HAGGART.

Mr. FOSTER. It would seem, as he had been appointed by the government and for prudential reasons, that there should be an understanding as to what line he is to take on the board of directors. He would not seem to be of any use there at all, unless he were assigned to some particular oversight or duty. How often do these directors meet?

Mr. GRAHAM. I think they meet on the second Tuesday in the month.

Mr. FOSTER. Is Mr. Brunet's time all devoted to that?

Mr. GRAHAM. I think not.

Mr. JOHN HAGGART. You have laid his report on the table, have you?

Mr. GRAHAM. No, I will lay it on the table the first of the week.

Maintenance and operation of the Board of Railway Commissioners for Canada, $107,000.

Mr. FOSTER. How is that distributed?

Mr. GRAHAM. Here are the items which are not covered by statute, the items covered by statute being the salaries:

Chief engineer, 2 assistants, electrician and clerk	$ 15,000
Traffic officer and staff	16,000
Law clerk	2,500
Registrar and accountant	2,500
Inspectors and staff	12,000
Assistant to secretary and staff	7,000
Private secretary to chief commissioner	1,600
Stenographers	3,400
Messengers	2,500
Official reporting	9,000
Official car	3,000
Printing	2,000
Stationery	5,000
Board's and staff's travelling expenses	12,000
Telephone company, telegrams, postage	1,500
Outside service	1,800
Contingencies	10,200
	$107,000

Then there are authorized by statute salaries as follows:

Chief commissioner, Hon. J. P. Mabee.	$10,000
Assistant chief commissioner, D'Arcy Scott	9,000
Commissioner, Hon. M. E. Bernier	8,000
Commissioner, James Mills	8,000
Commissioner, S. McLean	8,000
Commissioner (vacant)	8,000
Secretary, A. D. Cartwright	3,500
	$54,500

That makes $54,500, and the total vote is $55,000.

Mr. FOSTER. How many commissioners are there now ?

Mr. GRAHAM. Five and one vacancy.

Mr. MARSHALL. How many inspectors?

Mr. GRAHAM. I will get that for the hon. gentleman in a minute.

Mr. FOSTER. Does this commission find plenty of work to do ?

Mr. GRAHAM. Yes.

Mr. FOSTER. It is over burdened with work ?

Mr. GRAHAM. I would not say that it is overburdened. I would like to say a word as to the selection of Mr. Justice Mabee as the head of the commission. I think the public will bear me out in saying that this is as happy a selection as has been made in several years.

Mr. FOSTER. You do not limit that to the selections made by this government ?

Mr. GRAHAM. I would like to extend to all governments the same courtesy. He is a man who is fitted for the position possibly better than any other who could have been chosen.

Mr. FOSTER. Now, let us hear the minister's opinion of the next one ?

Mr. GRAHAM. Of the whole board ?

Mr. FOSTER. No, of the next one.

Mr. GRAHAM. I am speaking of the chairman. I think they are all efficient. The board is doing excellent work. One portion is in the west and the other is in the city of Ottawa. The decisions during the past year have been democratic, to say the least, but they have been approved by the public very largely. I expect the chief commissioner here in a few days to discuss with him the filling of the vacancy.

Mr. FOSTER. How long has that position been vacant ?

Mr. GRAHAM. Since the death of Mr. Greenway.

Mr. FOSTER. I suppose the work of this commission is always ahead of it ?

Mr. GRAHAM. Yes, the commissioners have all plenty to do, but the chief commissioner is a man who cleans up his work with a rapidity unknown to many people. He is an inveterate worker and he often decides cases that under other circumstances it might take months to dispose of. He decides them before the parties have left the room. I expect him in the city in a few days, and I want to consult him with regard to the new appointment to be made. If the vacancy is to be filled my own opinion is that it should be filled by a competent western man who knows the conditions there, and, the chief commissioner, having been through the west and having dealt with many cases there, may possibly have in his mind some one who will fit into the niche.

Mr. FOSTER. I judge that the minister will depend mainly on the recommendation of the chief commissioner as to who shall fill the vacancy.

Mr. GRAHAM. I would not like to nominate a man to the commission who would not be satisfactory to the chairman. I would feel that I ought to consult with him in a matter of that kind. He will have some information as to western conditions, and I will postpone making the appointment until I consult with him.

Mr. FOSTER. Has the minister ever thought of adopting the principle, which was adopted by the old Romans in filling a vacancy, of allowing the members of the commission at the time to select the man to fill a vacancy that happened by death or otherwise?

Mr. GRAHAM. I am afraid that might perhaps be something like the system followed in selecting municipal councillors under which the man having the next highest vote may get the situation. We want some one who will be worthy of a seat on the board. My hon. friend from East Elgin (Mr. Marshall) asked me a question as to the number of inspectors. There is an inspector and three assistant inspectors of accidents and an inspector of equipment.

Mr. LANCASTER. I am told that the commissioners are handicapped by having only one special car. The effect of what I am saying is to advise the government to provide such facilities as are necessary to the proper carrying on of the business of the board. I am told that when some of the commissioners were going through Ontario lately they were handicapped by not having a car in which to carry their equipment, their clerks, stenographers and so on, as the other branch of the board were out in the west and they had the only official car belonging by the commission to carry their equipment and staff. They have to have engineers, stenographers and other officials to help them, and one can readily understand that when they are travelling they can save a lot of time if they have their own car and are able to do work, which they cannot do if they have to travel in the ordinary trains and in the ordinary way. I think it would be a saving to the country if this official car were supplied, and it is perhaps right that I on this side of the House should say that it would be a reasonable expenditure in the interest of the speedy transaction of the public business. If they had this car they could carry their officials and have the work done while they were travelling which would be a very good thing for the country. Does the min-

ister contemplate making provision for a car for the other branch of the commission? The question as to whether another official car should be provided for them is worthy of consideration.

Mr. GRAHAM. I was going to say I am surprised, but I shall not, because my hon. friend (Mr. Lancaster) has good sense, however, it amuses me a little to hear some person suggesting that we should have any more official cars.

Mr. LANCASTER. But this is in the interest of the public service.

Mr. SPROULE. You have an army of them now.

Mr. GRAHAM. I was criticised pretty strongly last year for giving the commission a car at all, but I may say that I agree with my hon. friend (Mr. Lancaster) that it would save a great deal of time and the commissioners would be able to do more work if they had a car on which the staff could be accommodated when travelling. However, it did not suggest itself to me and they themselves have not asked for it in their estimates this year. When the work increases it will be worthy of serious consideration that they should be fully equipped so that they can do their work with the least possible loss of time.

Mr. LANCASTER. We have the chief commissioner presiding over a branch of the board which is in the west with an official car and we have a co-ordinate branch presided over by the assistant chief commissioner which has not an official car when it is travelling on the public business. It seems to me it is consistent that if you give a car to one branch of the commission you should give a car to the other. I think it is a reasonable proposition and that the furnishing of this facility will enable the work to be done more expeditiously and the public served better.

Mr. FOSTER. I suppose no haulage is charged for the Railway Commission car?

Mr. LANCASTER. The railways have to haul it free.

Mr. FOSTER. On what principle are the officials of the Railway Commission appointed?

Mr. GRAHAM. The secretary is appointed by the Governor in Council direct, and the other officials upon the recommendation of the chairman—perhaps I should say on the recommendation of the board—approved by the Governor in Council.

Mr. FOSTER. Is it on the request of the board that appointments are made?

Mr. GRAHAM. Yes; they make a recommendation that such assistance is necessary.

Mr. LANCASTER.

Mr. FOSTER. As a matter of fact their recommendation is carried out?

Mr. GRAHAM. Yes, I think it has never been varied that I know of.

Mr. FOSTER. With reference to the vacancy on the board; I have been informed that this is a hard work commission and that its work is ahead of it. There does not seem to have been any excuse given for so long delay in filling the vacancy on the board. If so many commissioners are necessary to do the work they should all be there. Why this interregnum; is there any trouble within the Cabinet itself?

Mr. GRAHAM. If there were a man to be appointed from this vicinity I think I have my eyes on the one I want. We did not make the appointment right away after the death of Mr. Greenway, and some few months elapsed during which we were engaged in other matters and finding recently that the chief commissioner was going to the west himself I suggested we should not make any appointment until at least he would come back and give us his views. As I have said, if the selection were to be made from Ontario where I know most of the men, I would not have hesitated so long, but I want to consult the chief commissioner before the appointment is made and that is my reason for waiting.

Inspection—Grand Trunk Pacific Railway, $28,000.

Mr. GRAHAM. We guarantee a certain percentage of the cost of the mountain section and of the prairie section, and Mr. Collingwood Schreiber has a staff under him all the time inspecting this work.

Mr. J. HAGGART. Have you a report from Mr. Schreiber?

Mr. GRAHAM. His report was placed on the table. In a few days I will include his interim report in the statement I shall make to the House before we take up the large item for the Transcontinental railway.

Mr. J. HAGGART. I would like to have that report before you make your statement.

Mr. GRAHAM. I will get a copy.

Mr. FOSTER. Months ago a statement was made that about 600 miles of the Grand Trunk Pacific west of Winnipeg had been finished and was in operation. Does that mean that the Grand Trunk Pacific is now in full possession of that 600 miles and is operating it?

Mr. GRAHAM. I believe it is still running as a construction road; we have not taken it over yet.

Mr. FOSTER. Is it being operated by the Grand Trunk Pacific or by the contractors?

Mr. GRAHAM. I think probably there is an arrangement between the company and the contractors.

Mr. FOSTER. What kind of a service is being given on it?

Mr. GRAHAM. I am informed there has been a time table issued for this 660 miles but I have not seen it.

Mr. J. HAGGART. How is it that you have paid the whole amount of the government guarantee if you have not taken over the road?

Mr. GRAHAM. We have not done that.

Mr. J. HAGGART. Your report placed on the table says so.

Mr. GRAHAM. I think my hon. friend will find that is an error.

Mr. SPROULE. Has not that portion of the road been carrying grain during the winter? I saw a report that they were prepared to handle grain and freight.

Mr. GRAHAM. They have been carrying grain as all these roads carry anything that is given them. They have also carried passengers. But they are not under our control or that of the Railway Commission. There is a little work, ballasting, etc., yet to be done before it is taken over. In the meantime they are accommodating the public by carrying freight and passengers.

Mr. SPROULE. Who authorized any tariff being put in operation?

Mr. GRAHAM. I am told the Board of Railway Commissioners have given them permissive authority to run as they are now doing, and has approved of a certain tariff they are charging the people.

Mr. SPROULE. Have they been carrying much grain?

Mr. GRAHAM. I am informed they have carried quite a large quantity, but I have only newspaper information, we have no report.

Mr. J. HAGGART. The minister says the full amount has not been paid out on the Grand Trunk Pacific from Winnipeg to Edmonton? Who pays them for what they do? There is an issue of a certified quantity of stock or securities to some one and the money received from that I think goes into the treasury, and is moneyed out in some way to the railway as they earn it. Is that done by the railway or the Finance Department?

Mr. GRAHAM. On a certificate from my department the Finance Department releases a certain amount of money on this guarantee. I believe that about $10,000,000 has been released on the prairie section, the 660 miles.

Mr. J. HAGGART. How much more is there still to release?

Mr. GRAHAM. I cannot tell that offhand. That is more a question for the Finance Department than for mine.

Mr. SPROULE. Do the inspectors have to pass upon that portion of the road to be built by the government or only that portion to be built by the Grand Trunk Pacific themselves ?

Mr. GRAHAM. That applies only to the western division, the Grand Trunk Pacific, to see that they live up to their contract with us because we guarantee a certain amount of bonds.

Mr. SPROULE. On the result of that inspection and the reports I presume you pay out your money?

Mr. GRAHAM. Yes.

To provide for expenses, preparing plans for the reconstruction of the Quebec bridge, $150,000.

Mr. GRAHAM. As the committee are aware we selected three of the most prominent engineers we could find in the world to take charge of this work. They were appointed by order in council and given authority not only to prepare adequate plans but to examine all former plans and to pronounce upon the possibility or advisability of using any material already prepared under former plans. After they make their own plans they are to be responsible for the construction of a bridge upon those plans that will stand up. Mr. H. E. Vautelet is chief engineer and chairman of the board. He receives $1,000 a month. I asked Sir Thomas Shaughnessy as to his ability and Sir Thomas told me that he believed Mr. Vautelet had the ability and if he were building the bridge he would feel safe in giving to Mr. Vautelet the entire work that we are giving to these three engineers, he had such confidence in his ability.

Mr. J. HAGGART. Is he a Canadian?

Mr. GRAHAM. I think that he was originally from France, but he is now a naturalized citizen of Canada. He was educated in France, and is a very prominent engineer. With the Canadian Pacific Railway he has done splendidly.

Mr. FOSTER. Is all his time devoted to this work?

Mr. GRAHAM. Yes, since he was engaged. Mr. Maurice Fitzmaurice, C.M.G., is the chief engineer of the London County Council. He is the English representative on this board. We pay him $1,000 a month.

Mr. FOSTER. Does he devote all his time to this?

Mr. GRAHAM. No, not all his time.

Mr. LANCASTER. How many months is this supposed to spread over?

Mr. GRAHAM. The present idea is that after the plans are completed we will probably retain only Mr. Vautelet at full salary, but the preparation of these plans will take a year at least. For consultation purposes after the plans are completed the arrangement is to retain Mr. Fitzmaurice and Mr. Modjeski at half the salary they now receive. Mr. Mojeski is the American member on the board. He receives the same salary on the same terms.

Mr. FOSTER. Does he give all his time to the work?

Mr. GRAHAM. No, he is in the same position as Mr. Fitzmaurice. Mr. Modjeski has been here a great deal. These men are really to my mind making this a question of reputation as much as of salary. They are taking an interest in their work that is really gratifying to the department and the government and they have no doubt but they will make it a success, although it will take some time. We want them to be successful in the building of the bridge even if it takes a little longer and costs more.

Mr. LANCASTER. Should not their reputations have been made before they got that remuneration?

Mr. GRAHAM. This is the largest undertaking of the kind that has been attempted, and to be connected with the successful construction of a bridge of this size means a great deal even to an engineer of eminence. They have a staff of 16.

Mr. FOSTER. Are they employees of any of the departments here?

Mr. GRAHAM. No, and the commissioners are not hampered in the least in the employment of their staff. I laid down this principle to them when we engaged them: you are a board and I shall not even recommend a man to you, I want you on your own responsibility, if you need assistants, to select men irrespective of who they are or where they are, or anything except their ability, as we hold you responsible for everything. The staff are appointed by order in council on the recommendation of this board. We do not interfere with them.

Mr. FOSTER. Would the minister please give their salaries?

Mr. GRAHAM. The staff is as follows:

	Per month.
Joseph Mayer, principal assistant.. ..	$500 00
John D. Wilkins, asst. engineer, draughting room..	333 33
Geo. F. Porter, chief draughtsman.. ..	250 00
A. P. S. Glasco, asst. calculator and draughtsman..	150 00
Hans Grether, calculator..	150 00
A. J. Mayers, asst. calculator..	$150 00
Paul Guillimard, draughtsman	125 00
Ove Hein, draughtsman..	100 00
J. A. Brunet, clerk..	75 00
P. E. Coté, stenographer..	75 00
Olaf Evanson, asst. calculator..	75 00
H. E. Bates, tracer..	75 00
T. P. Borden, asst. engineer and secretary..	225 00

That is the position as I left it. If we were allowed any interference I would ask for some explanation; but these men take the responsibility of saying that they are needed and that they are all technical men. My chief engineer says that for designing and carrying on the tests and experiments for this work it is a small staff.

Mr. FOSTER. Is their responsibility measured by a guarantee company or not?

Mr. GRAHAM. Their responsibility is not a financial one, of course, but a professional responsibility, and from what I hear, I think we have got three of the best men in the world.

Mr. FOSTER. Then, the minister does not expect to have this matter in a position to be really considered by council for a year or two?

Mr. GRAHAM. I am told that they hope to have the plans ready next autumn. For the real construction work of the bridge there cannot be a vote asked for until next session. The present vote is to cover all their other expenses.

Mr. SAM SHARPE. Have any overtures been made by the Grand Trunk Pacific Company with regard to the building of this bridge

Mr. GRAHAM. None whatever.

Mr. SAM HUGHES. Have any been made to the company?

Mr. GRAHAM. No.

Mr. LANCASTER. Does not the minister think that he would get these plans at an earlier date if he paid these men a good honorarium or fee instead of by the month?

Mr. GRAHAM. No. The terms have to be acceptable to them, or we could not get their services. In view of past experience, I want to be careful to give the men whom we have practically selected their own way as far as the preparation of the plans is concerned. They are proceeding with all possible speed; I do not think they are wasting a moment. They are proceeding to make their tests and experiments separately, and when they get together, they will compare them and decide on the plans, and I think the country may feel confident that it will be secure.

Mr. HAGGART. Next year the rails will be laid on the Grand Trunk Pacific from

Levis to Moncton. How is the minister going to utilize that part of the railway in view of the fact that the bridge will not be completed for seven or eight years? Does he intend to use ferry boats?

Mr. GRAHAM. That matter has been taken up with the Grand Trunk Pacific Company within the last few weeks, and we are considering what ought to be done. I am not prepared to give any further information at present.

Mr. CROSBY. The people of the maritime provinces are much interested in this work, and I wish to ask the minister if it would not be possible to have these plans completed earlier.

Mr. GRAHAM. I was told that they could not be hurried, and that it would not be safe to hurry them. I feel like keeping my hands off these men. I simply told them that I wanted the plans as soon as they could be given.

Mr. HUGHES. Is there a Canadian engineer in the lot?

Mr. GRAHAM. Mr. Vautelet is a Canadian.

Mr. HUGHES. Is he an experienced engineer?

Mr. GRAHAM. I believe one of the best in the world, if not the best.

Mr. LANCASTER. I do not understand how paying these gentlemen a large sum per month is going to hurry up these plans. I cannot help thinking that if they were paid a certain sum for the plans, they would complete them more quickly, as they would have an incentive to hurry them up.

Mr. GEO. GORDON. I believe that the way the minister has taken is the proper way. He wants the best men available, and in order to get them he must pay them as they wish to be paid. I believe that is the proper and businesslike way of dealing with them.

Mr. HUGHES. Were any of these engineers pretty well paid?

Mr. GRAHAM. The pay will not make a bad engineer a good one, if it is a question of pay.

Mr. HUGHES. Were not the last engineers any good?

Mr. GRAHAM. I am not saying anything about that. Our bridge is in the river; something was wrong, but I am not saying who was wrong. The main thing now is to get a bridge. After a great deal of care, I have got the three men who I believe are the most competent men in the world.

Mr. HUGHES. Were any of these men on the Forth bridge?

Mr. GRAHAM. Mr. Maurice Fitzmaurice was assistant on the Forth bridge.

Mr. FOSTER. Has any investigation been made as to whether the material that lies in the river is utilizable in any way?

Mr. GRAHAM. The engineers have decided that they cannot use any part of the material prepared for the former bridge.

Mr. FOSTER. Is there any use that can be made of it?

Mr. GRAHAM. Nothing but scrap.

Mr. FOSTER. Has there been any consideration of the idea of making a tubular construction through the water near the surface?

Mr. GRAHAM. The water at that point is about two hundred feet deep. I saw something of that suggestion in the newspapers, but I would think it would be utterly impracticable. The engineers think so. The current is very rapid there.

Miscellaneous works not provided for, $5,000.

Mr. GRAHAM. This is a vote that is asked for every year. Sometimes some of the money is used, and sometimes none of it is used. For the current year, we did not use any of it.

Mr. FOSTER. You never use it on works.

Mr. GRAHAM. On faith, perhaps.

Mr. WRIGHT. Why is this money asked for when you have not spent that already voted?

Mr. GRAHAM. The vote lapses at the end of the year.

Mr. WRIGHT. Then, this should appear as a re-vote.

Mr. GRAHAM. We could hardly enter it that way. Suppose that, after these estimates were made up, we used some of this year's appropriation. We cannot tell in advance how much of the money will be spent.

Arbitration and awards, $4,000.

Mr. GRAHAM. This is to provide for law costs in connection with arbitrations. We have not spent any of this money for the current year.

Mr. LANCASTER. What is the nature of these arbitrations?

Mr. GRAHAM. Well, we had an arbitration last year on the claim of a contractor, but, in that case, we made the contractor pay all the costs. In such cases we might have to pay an arbitrator.

Mr. LANCASTER. These are not land owners' arbitrations?

Mr. GRAHAM. No.

Mr. FOSTER. There was an arbitration between the government on behalf of the Intercolonial with the Grand Trunk in reference to matters in and around Montreal, and in connection with the lease made some years ago. Has that ever been finished ?

Mr. GRAHAM. No.

Mr. FOSTER. Why has this dragged along ? You have arbitrators appointed, have you not ?

Mr. GRAHAM. I imagine that, if the late Judge Killam had lived, he probably would have had the matter cleared up by this time. We shall have to appoint another arbitrator to take his place.

Mr. FOSTER. Was there more than one arbitrator ?

Mr. GRAHAM. One for each side, and a third.

Surveys and inspections—canals, $3,000.
" " —railways, $28,000.

Mr. GRAHAM. We are constantly making surveys along our canals in order to exactly locate our own properties, when we wish to make improvements and that sort of thing. The inspection of railways is largely in connection with lines to which we grant subsidies. Before the payment of the subsidy there must be a certificate that the line has been constructed according to the terms of the subsidy contract. Up to January 31, 1909, the expenditure under this head for the current year was $15,809.04.

Costs of litigation in connection with railways and canals, $6,000.

Mr. FOSTER. How much of this vote has been spent for the current year ?

Mr. GRAHAM. Up to January 31, last, $2,733.67.

Mr. FOSTER. One large item of last year's expense under this head is noted in the Auditor General's Report as follows :

Quebec Southern Railway—Perron, J. L. & A. Geoffrion, legal services re Beique, $1,684.78.

Mr. GRAHAM. I am informed that that road was in litigation, that it owed us a certain amount, and that we interposed—if that is the legal term—to protect our own interest.

Mr. FOSTER. Did you get the money they owed ?

Mr. GRAHAM. A portion of it, not all.

Mr. FOSTER. Are you still carrying on the litigation ?

Mr. BRODEUR. I think it is still before the court. I know of a bank which was interested in the suit, and, unless I am mistaken, the question is now before the Supreme Court.

Mr. FOSTER. Is this Mr. Perron the same who was engaged in the Cassels' Commission ? And is J. L. and A. Geoffrion the name of the firm ?

Mr. BRODEUR. I think so. There is only one lawyer of that name known to me.

To pay expenses in connection with cases before the Railway Commission, $10,000.

Mr. FOSTER. How does that come up ?

Mr. GRAHAM. The case we had last year was this: There was a provision in the Lord's Day Act which implied that the Railway Department was interested to the extent that it ought to be represented in any case under that Act before the Railway Commission. That view was pressed very strongly on the department, and after consulting with the Department of Justice, it seemed to me that, to carry out the intentions of the Act, we would have to appear to see that the interest of the public at large was protected. We were not there to advocate the Lord's Day side of the question or to combat it, but as being interested in transportation, to see that the public interest was protected.

Mr. FOSTER. Who was your representative ?

Mr. GRAHAM. Mr. W. Buell, of Buell and Botsford. That cost some thing over $220. He was engaged some time before that in connection with the investigation of the express companies' charges, and that is how we came to engage him in this other work. In connection with the express case, he was paid $867.74 up to last December. That was all the expenditure we had out of this item last year.

Mr. FOSTER. Why do you ask for so much ?

Mr. GRAHAM. My deputy says that the opinion has been expressed in the House at times that we ought to be prepared to appear before the Railway Commission.

Mr. LANCASTER. On behalf of whom?

Mr. GRAHAM. On behalf of the public.

Mr. LANCASTER. It would be well if the shippers by these express companies knew that, because they are employing counsel, in these cases.

Mr. GRAHAM. We do not take the part of any particular man, we do not go there as an applicant.

Mr. LANCASTER. Does this man appear in the interest of the shippers? We see that the questions that arise before the commission are generally questions of

shippers against railways. If this gentleman was appearing in the interest of the shippers and arguing against the railways, I would not object, but if he is not appearing in that capacity, I think it is a waste of public money. The shippers have always to employ counsel to contend with the most eminent counsel the railways can procure, and to argue before the commissioners for the rights of the shippers. If this is going to develop into the government paying for counsel in the interest of the shippers as against the railways, of the people as distinguished from the corporations, then I would be in favour of it. But I am pointing out that the public does not so understand it. It seems as if the people were paying out of their own pockets to the shippers to get protection before the commission, and at the same time paying some other counsel to go there who may not be directly looking after their interest.

Mr. SAMUEL SHARPE. Why not provide counsel as part of the machinery of the commission on behalf of the public, something in the nature of a Crown Attorney to look after the public interest? As I understand the purpose of the Railway Commission, it is to protect the interests and adjust the grievances of the public as between the railways on the one hand, and individuals, municipalities and the public generally on the other. Now, why not make trained counsel part of the machinery of the Railway Commission, and pay him a substantial salary, to take up the people's end of the disputes? It would save expense to the country, because the commission would not have to lose so much time in listening to inexperienced solicitors, the cases would be better presented by trained council on behalf of the public. I think this item should not be allowed to go through until the minister has considered that question.

Mr. GRAHAM. We have never gone so far as to employ counsel for diversified individual interests. The government cannot take the position of appearing before the commission by counsel as against the railway companies.

Mr. LANCASTER. Then why should this man appear at all?

Mr. GRAHAM. This man appeared, not for the Lord's Day Alliance or against the Lord's Day Alliance. This is our own Act.

Mr. LANCASTER. The hon. gentleman said that the same gentleman, before that, had been employed in regard to express rates. I cannot understand why, if he was not there in the interest of the people against the railways.

Mr. GRAHAM. He was there assisting the commission in investigating the conditions and the rates of the express companies. He was not there as soliictor before the Board of Railway Commissioners, combatting the express companies.

Mr. LANCASTER. But he was appointed and paid by the government. Was he not doing that in the interest of the people?

Mr. GRAHAM. My hon. friend does not draw the distinction. As to the matter which the hon. member for North Ontario (Mr. Sharpe) has mentioned, I have discussed with the chairman of the commission the advisability of having standing counsel. But we have already given protection to the people by appointing as chairman of the board an ex-judge, and his assistant is a lawyer as well. For my part, I want to keep this board from becoming a real court; I want to keep it as a body before whom I may go myself without any lawyer, and say to the chairman, This is my case, I want a judgment upon it. If we were to engage counsel to appear against the counsel of the railways, then we would simply have to sit back and listen to them as we do in any court.

At six o'clock, committee took recess.

After Recess.

House resumed at eight o'clock.

CANADIAN, LIVERPOOL AND WESTERN RAILWAY.

House in committee on Bill (No. 44) to incorporate the Canadian, Liverpool and Western Railway Company.—Mr. Girard.

On section 2:

Mr. S. SHARPE. Mr. Chairman, as a young member I listened with a great deal of interest to the discussion on this Bill when it was before the Railway Committee and also to the discussions that have taken place in this House. It involves important interests and very contentious matters. The interests of the province as distinguished from the interests, powers and rights of the Dominion are certainly very important. My short experience in this House has shown me that promoters of Bills frequently insert two objects; one is an important object, it is the main object and it is properly within the purview of the province and then, they insert a minor or subsidiary object that is properly within the jurisdiction of the Dominion. The whole purpose and intent of doing that is to oust the jurisdiction of the various provinces. The hon. member for Westmoreland (Mr. Emmerson), when this Bill was being discussed in the Railway Committee, stated that one reason why he wanted the charter granted by this parliament was because the rates of this company could be regulated by the Railway Commission, practically ignoring the fact that the provinces have the right to regu-

late a railway company having a provincial charter and practically ignoring the fact that most of the provinces have machinery for the regulation of railway companies incorporated by themselves. I do not know if the province of Quebec has a railway commission, but it has a tribunal that regulates railway companies analogous to the commission appointed by the Dominion government. Consequently, the reason which was given by the hon. member for Westmoreland, why a Dominion charter should be granted to this company, was certainly not a strong one, because, if it were only to give the Railway Commission of the Dominion jurisdiction to regulate its rates, that is not a sufficient reason why it should come to this House for its charter.

The question of provincial rights has been raised many times during this session. The absurd lengths to which this House has gone in declaring railways to be for the general advantage of Canada is instanced by the fact that in the county of Ontario it has declared an electric railway, only two miles in length, running from Oshawa to the lake shore, to connect the town with the steam railway company's road, to be for the general advantage of Canada. That shows to us the absurd lengths to which this House has gone in declaring railways that are purely provincial to be for the general advantage of Canada.

I think it is only right that great deference should be paid to the representations made by the representatives of the province of Quebec. Before the Railway Committee a representative from the province of Quebec appeared and made strong representations that the Dominion should not grant this charter. I think this House should pay great deference to those representations and as a young member of the House I was struck very much by the spectacle of most of the hon. gentlemen representing Quebec constituencies ignoring the representations of the Quebec representative and voting in favour of granting the charter. My own opinion is that when a province protests great deference should be paid to that protest and when there is a contention between the Dominion and the province with reference to their respective jurisdictions, that a reference should be made of the Bill to the law department of the government for an opinion. I think that what the House should do with a contentious Bill of this nature is to refer it to the law department in order to get an opinion as to whether the province has sufficient powers to grant this company a charter. Wherever a company can have its rights and privileges granted by a provincial charter we should not encroach upon the jurisdiction of the provinces and grant Dominion charters. One argument alone is sufficient 'to show' the wisdom of adopting that course and that is that the provincial control is closer, more intense, and would tend to a cessation of the friction that exists between the province and the Dominion. Under these circumstances, while I am not speaking as to the merits of the Bill or as to whether it should receive a provincial or Dominion charter, I say that where there is contention, and there certainly is contention in reference to this Bill, it should be referred to the law department for an opinion as to whether the power of the province is sufficient to grant a charter adequate to the purposes of this company. If the province has sufficient power to grant all necessary rights and privileges to this company then the law department's opinion should prevail and we should refuse to grant that charter and let them go to the province and get the rights that they desire.

Mr. E. ROY. I will not dispute the reasons that have been given by the hon. member, but when we look at the constitution I think there is no question but that we have jurisdiction to deal with this Bill. I am for provincial rights, but when I look at section 91 of the British North America Act I see that the powers of this parliament 'extend to all matters coming within the classes of subjects next hereinafter enumerated.' When we come to section 92 we see that it says:

> In each province the legislature may exclusively make laws in relation to matters coming within the classes of subjects next hereinafter enumerated, that is to say:

Then follows the enumeration. By paragraph 10 we see that there is included in this list,

> Local works and undertakings, other than such as are of the following classes,—
> (a) Lines of steam or other ships, railways, canals, telegraphs, and other works and undertakings connecting the province with any other or others of the provinces, or extending beyond the limits of the province.

Those are excepted. Then we come to paragraph (c):

> Such works as, although wholly situate within the province, are before or after their execution declared by the parliament of Canada to be for the general advantage of Canada or for the advantage of two or more of the provinces.

That is to say that the parliament of Canada has the right to declare immediately that the works to be undertaken under this Bill are for the general advantage of Canada. Therefore, I think we have the jurisdiction. Whether the work to be done under this Bill is for the general advantage of Canada is another question. The argument has been presented before the

Railway Committee that clause 10, to give to the company the right to construct, acquire and navigate steam and other vessels, docks, wharfs, &c., is for the general advantage of Canada. We must not lose sight of the fact that the St. Lawrence river runs through the province of Quebec and that there are many good harbours on that river awaiting development to become the seaports of the future. Every hon. gentleman who has looked at the map in the railway committee room knows that this railway starts at a point on the Grand Trunk Pacific and goes to a point near Tadousac, which, without the least doubt will sooner or later become a winter seaport. It is therefore undoubtedly for the general advantage of Canada to have these seaports on the St. Lawrence developed into ocean-going ports whence the products of Canada may be sent to the markets of Europe. It is quite plain that the intention of this company is to develop seaports on the St. Lawrence, and as the parliament of Canada has power under section 92 of the British North America Act to declare such a work for the general advantage of Canada I do not see how it becomes necessary to refer this Bill to the Department of Justice to know whether or not we have such jurisdiction.

Mr. SAMUEL SHARPE. It was not my contention that this Bill should be referred to the law department to ascertain whether this parliament had power to grant the necessary incorporation, but on the contrary to ascertain whether the province has that power, and if it properly comes within the purview of the province this charter should not be granted here.

Mr. ERNEST ROY. It is my opinion that the province of Quebec has jurisdiction in the matter. I do not approve of the Bill as it is drafted at present, but I do certainly say that this parliament has jurisdiction also.

Mr. SAMUEL SHARPE. There is no doubt about that.

Mr. ERNEST ROY. And the province of Quebec also has jurisdiction.

Mr. SAMUEL SHARPE. Then let them get a charter from the province.

Mr. GIRARD. With the consent of the committee I will ask that the Quebec and Montmorency Railway which runs from Quebec to Ste. Anne de Baupré be added to this clause. I received a petition to that effect to-day.

Mr. GRAHAM. That gives power to amalgamate with the Quebec and Montmorency railway?

Mr. GIRARD. Yes.

Mr. GRAHAM. There is no objection to that.

Mr. LENNOX. It seems to me that is rather an important amendment to offer here without consideration.

Mr. W. B. NANTEL (Terrebonne). (Translation.) Mr. Chairman, I move in amendment to add the following clause :

14. The company will be obliged to print its bills of lading in the two languages, English and French.

Mr. DEPUTY SPEAKER. The amendment has reference to the printing of the Bills of lading and time tables in the two languages. I am afraid the importance of the amendment would make it impossible to deal with it without notice.

Mr. MONK. The amendment is in order, is it not ?

Mr. DEPUTY SPEAKER. Amendments of importance on the third reading of a private Bill must have notice.

Mr. J. GIRARD (Chicoutimi and Saguenay). (Translation.) Mr. Chairman, I have no objection to the amendment if the House wishes to adopt it. I must say that this is already done on all railways, such as the Canadian Pacific Railway, the Canadian Northern, the Lake St. John Railway and others.

Mr. NANTEL. (Translation.) Then, let us have it on the statute.

Mr. MONK. The amendment does not affect the substance of the Bill, the route, the capital or anything of that kind. What is the rule of the House relating to it ?

Mr. DEPUTY SPEAKER. Rule 111 :

No important amendment may be proposed to any private Bill in the Committee of the Whole House or at the third reading of the Bill unless one day's notice of the same has been given.

Mr. MONK. I would submit that this is not an amendment such as is contemplated by the rule you have just quoted. It does not alter in any respect the powers of the company or the route or any of the essentials of the law incorporating the company. It merely places on the company the obligation to conform to the needs of the company, inasmuch as the road is intended to be operated entirely in a district where they do not understand the English language.

Mr. A. K. MACLEAN. Would not the company do that any way ?

Mr. MONK. I understand the promoter has no objection to the amendment. If in your judgment you consider it of sufficient importance to require notice I would ask to have the committee rise, report progress and ask leave to sit again.

Mr. GIRARD. (Translation.) I have no objection to the amendment and the Min-

ister of Railways says that he does not object either, provided it is not contrary to the rules of the House.

Mr. LENNOX. I would support the suggestion that the committee rise and report progress. A good many members would regard it as an important amendment and it could stand as a notice of motion.

Mr. DEPUTY SPEAKER. I think the amendment proposed is of so much importance that I would not be justified in accepting it without notice. It will not interfere with the progress of the Bill to have it stand over.

Progress reported.

TORONTO, NIAGARA AND WESTERN RAILWAY.

House in committee on Bill (No. 42) respecting the Toronto, Niagara and Western Railway Company.—Mr. Calvert.

On section 1,

Mr. LENNOX. I wish for a minute or two to urge again the unwisdom of this kind of legislation. This is one of several Bills we have had before us this session with respect to companies which have allowed the time fixed in their Bills for the expenditure of a certain proportion of their capital to elapse. These companies have come here and have secured better terms than they got on the last renewal. I do not think this point was brought to the attention of the Railway Committee when the Bill was before them. We renewed this charter in 1906 and it is to be noted that when we renewed it the last time we inserted the ordinary clause that the company should within two years after renewal expend fifteen per cent of the capital stock and complete the undertaking within five years after the date of the renewal. If the minister will really consider this matter he will see that we are going very far wrong in these renewals. When we passed this Act on July 13, 1906, we provided that the company should within two years after the passing of the Act commence the construction of the railways it had been authorized to construct and expend fifteen per cent of the amount of the capital stock thereon, and should within three years thereafter, complete the undertaking. They have not done anything. Our condition two years ago was fifteen per cent or you cannot have a renewal. Nothing has been done since and they come to us and to-day, and without any explanaion or any reason, we reverse the policy of two years ago and say that they can go on and construct without any condition as to the fifteen per cent. That is the first point I want to impress on the minister. They are given five years for completion, and in that five years were not required to turn a sod. Two years ago we said that fifteen per cent had to be expended within two years; they have done nothing since; and now they come and ask us to relieve them from that obligation. The objections I have to this Bill are twofold. The first is that we impose no necessity on this company to do anything whatever for five years.

Mr. A. K. MACLEAN. The railway must be completed within five years.

Mr. LENNOX. But we do not know whether they will complete it or not. We make no provision for beginning the work, and whereas under the terms of two years ago they would have to expend 85 per cent within the next three years, we say by this Bill that they need not do a tap for five years. I submit that the only sound principle on which we can go in renewing these charters is this, that whenever a company calls for a renewal, we will give it five years within which to complete the work, and will require it within the first two of those years to expend at least 15 per cent. We would be renewing the charter on as good terms as we gave it before. We say, we want you to do as well within the two years from the renewal as you were to do within two years from the incorporation; therefore you must spend 15 per cent of the capital within two years of the renewal, and must complete the railway within five years. I argued this point in the Railway Committee, but was not then fortified with the Act. When I look at the Act, it appears to me that it would be an absolute absurdity to renew this charter upon the terms set forth in this Bill. Consider how inconsistent we would be in other respects. Turn to the next Bill on the Order Paper, Bill (No. 47). In that we have not the 15 per cent clause, but we have the other about commencing within two years and completing in five. In the next Bill after that we have the same thing. What I submit is that in every instance in which a company comes to us for a renewal of its charter, we should say: Dating from the time of the renewal you must expend 15 per cent of your capital within the next two years and complete the railway within five years. If the answer is, we have already expended 15 per cent, I say that is no answer at all; it does not matter what you have expended; you may have expended 40 per cent, but if you want five years from this time for the work, you must expend at the same rate as you were required to do from the first incorporation.

Mr. TURRIFF. I agree entirely with the hon. member who has just taken his seat. What I would prefer would be the insertion of a clause in the general Railway Act that would cover all cases of renewal, whether 15 per cent had been expended or not. If the company has not

expended 15 per cent, there is no reason why, if it gets another extension of time, it should not expend another 15 per cent within two years. Until the general Act is amended in this direction, I think that a clause to this effect should be put in all these Acts.

Mr. GRAHAM. It is difficult to lay down any hard and fast rule, particularly in a country where we are so anxious to get railway construction. In some instances it is perfectly proper to impose cast-iron conditions, but cases have arisen in the Railway Committee in thirty minutes in which conditions had to be put in one Bill and not in another, owing to the differences in the conditions of construction. I am surprised at what I find in this Bill. I understood in the committee, and the Bill was allowed to go through on the assurance, that they had expended 15 per cent since the last extension of the charter. But I find that this Act was passed in 1906, changing the name of this road, extending the time, and containing the two years and 15 per cent clause, and since that Act was passed no circumstance could have arisen to justify us in relieving the company of the conditions imposed by that Act. The only reason the 15 per cent clause was left out of this Act was that the committee understood that since the last extension the company had expended 15 per cent, and the same condition would not be imposed in the renewal; but they would be required to complete in the five years. I agree with the hon. member from South Simcoe that in this Bill we ought to insert the two years and 15 per cent clause.

Mr. HENDERSON. I have no information whether any money has been expended on this road since the time of the last renewal in 1906. I have no information that no money has been expended. For anything I know, there may have been considerable. We had the assurance in the Railway Committee that about $250,000, if I remember rightly, had been expended, and we were told where this money was spent. A portion of the road has been constructed at Mimico, abutments for a bridge over Twelve Mile creek at Bronte have been built, and I think other works have been constructed. At any rate, we had the assurance that, so far as the 15 per cent was concerned, that had been expended on the road. I do not think the promoter of the Bill made the statement that this work had been done since the last renewal was given.

Mr. GRAHAM. I do not know that he did.

Mr. HENDERSON. If a blunder has been made, I think it was made when the last renewal was given. There was no reason then for putting in the provision respecting 15 per cent, because that had been spent. All that they should have asked for and obtained was the extension for five years to build the road. It seems to me it was an oversight to put in the regular clause instead of a special clause. The hon. member for South Simcoe (Mr. Lennox) smiles, but I know that in the Railway Committee it is not unusual for the chairman to say: 'Shall we insert the usual clause?' and it is immediately agreed to, the committee losing sight of the fact, perhaps, that the case is a special one and the usual clause is not called for. The blunder, if there was one, is unfortunate, because it may have an undesirable effect on this charter. This is an important road, commencing at Toronto, passing through York, Peel and Halton counties, and so on around to Niagara. I am disposed to regard the legislation of three years ago as something done in error, and the 15 per cent as an expenditure made prior to that time. All we have to do now is to extend the time for the completion of the road. Parliament has the power to do that—it has the power to do almost anything in these matters. I admit that there is a point in what is said by the hon. member for South Simcoe, if he is right in his allegation that no money has been spent since the last renewal was obtained. On that point I am not informed. I realize that there is a difficulty, but I hope the Minister of Railways will find a way out of it. If necessary I would ask that the Bill be not disposed of now, unless he sees fit to allow the clause to go through as passed in the Railway Committee. The hon. member for Victoria and Haliburton (Mr. Hughes) asks: What is the objection? It is that nothing has been done since the last renewal was granted. Certainly I have no evidence—I do not say that the hon. member for South Simcoe (Mr. Lennox) has no evidence—that such is the case. I think that, in the absence of evidence, we must presume that the Railway Committee understood that the necessary 15 per cent had been expended since the last renewal, though I do not know that as a matter of fact.

Mr. LENNOX. I will say for the benefit of my hon. friend (Mr. Henderson) that I do not profess to have evidence on the matter; I only argue on the facts as they appear in the documents before us. I suppose the hon. gentleman knows much more about the facts than I do. I understood the hon. member to say that he knew there was a very considerable expenditure at one time.

Mr. HENDERSON. I am simply following the statement made in the Railway Committee by the solicitor representing the promoter, who mentioned the work that had been done near Mimico, and especially the abutments built at the village of Bronte. There was also the right of way that had

been secured all through. My recollection is that it was said that $250,000 had been spent—an hon. member near me says $280,000. I do not see that any harm will be done to any body by this extension, while we may do harm by any action of ours that will cause the charter to lapse. The country wants the road built. I believe we should take the risk and put the Bill through in the ordinary way.

Bill reported, and read the third time and passed.

WINNIPEG AND NORTHWESTERN RAILWAY.

House in Committee on Bill (No. 29) respecting the Winnipeg and Northwestern Railway Company.

On section 1,

Mr. J. A. CURRIE. I would ask you to let that Bill stand over, as the hon. member for Dauphin (Mr. Campbell) wishes to speak upon it. I move that the committee rise, report progress and ask leave to sit again.

Motion agreed to.

HUDSON BAY AND PACIFIC RAILWAY.

House in Committee on Bill (No. 43) respecting the Hudson Bay and Pacific Railway Company.

On the preamble,

Mr. HERRON. There appears to be no definite route selected or laid out for the road proposed from British Columbia to the Hudson bay. I think we should have some assurance from the Minister of Railways that, before he will accept the plans of this railway chartered for construction purposes, the people in the different localities should be heard. The charter probably extends for a thousand miles, and we cannot tell what part of the country it is going to traverse.

Mr. CASH. I think the hon. gentleman has got this road mixed up with another. This road has been laid out, and extends from Grand Rapids almost in a direct line to Prince Albert, and from Prince Albert almost in a direct line to Calgary.

Mr. HERRON. I agree with the hon. member for Saskatchewan. I think I am mistaken, I had reference to another Bill.

Bill reported, read the third time, and passed.

CONSIDERED IN COMMITTEE—THIRD READINGS.

Bill (No. 36) respecting the Southern Central Pacific Railway Company.—Mr. Wilbert McIntyre.

Bill (No. 47) respecting the Guelph and Goderich Railway Company.—Mr. Lewis.

Bill (No. 53) respecting the Walkerton and Lucknow Railway Company.—Mr. Donnelly.

SUPPLY.

House again in Committee of Supply.

To pay expenses in connection with cases before the Railway Commission, $10,000.

Mr. SAMUEL SHARPE. Before six o'clock I was suggesting to the minister that he should appoint permanent counsel as part of the machinery of the Railway Commission. We all admit that the Railway Commission is performing a great work. We are told that the Railway Commission is composed of capable men; yet, the interests of the general public are not safeguarded as well as they would be if there were a regular counsel connected with the machinery of the board. The minister stated that he wanted to make it a layman's court, but any person who has been present at the sittings of the Railway Commission knows that it cannot possibly be a layman's court because the railway companies have skilled lawyers there. A timid layman would not go in there to present his own case and even if he did it could not be presented with the ability with which it should be presented in order to ensure success. I am speaking on behalf of the poor men, of the agriculturists, the shippers, the manufacturers, the men who are not accustomed to present their cases before the courts. You cannot get away from the fact that this is a court and that a layman cannot present his case against the skilled counsel who are there on behalf of the railway companies. There are thousands of dollars paid out every year by the public to counsel to attend before the Railway Commission and present their cases. That is a big expense that the individual has to bear. If the minister would appoint counsel to take up that work, become a part of the machinery of the board and present the cases of the public before the Railway Commission he would adopt a measure that would meet with general acceptance and one by which the country in the long run could be benefited. The time of the board would be economized and they would be able to dispose of ten cases where they can now dispose of but one. The evidence would be sent to counsel in advance and he would have the case prepared. A layman cannot prepare his case. Any person who has seen the Railway Commission at work must commend the minister for the appointment of the gentlemen who compose this board because they have been exceptionally good appointments. Generally they discard all the formality and procedure of a court but even the Chairman of the Railway Commission cannot possibly protect the interests of a poor layman because he has not studied the case. He

knows nothing about it until it is presented by the applicant who seeks to redress a grievance. I have given this matter some attention and I purpose bringing it up in another way, but it was interjected into the discussion by my hon. friend from Lincoln and Niagara (Mr. Lancaster) and I thought it might very well be taken up in connection with the item which was up for discussion this afternoon. Even though the layman employs a skilful lawyer he cannot possibly contend with the lawyers who make a specialty of railway cases. It would be in the interests of the country generally and of applicants particularly to have a counsel appointed as part of the machinery of the Railway Commission to appear on behalf of the agriculturist, the shipper, the manufacturer, paid out of the funds of the country and to be known as the public council. Not only could he appear on behalf of shippers, manufacturers, and agriculturists, but he could also represent the municipalities. A lot of the rural municipalties have no solicitors. The large cities have their counsel and solicitors and they are protected. The appointment of a public prosecutor would not preclude the right of a man to employ his own counsel if he saw fit. He could still have his own council to assist the public counsel, but I think it would not only be in the interests of the country but in the interests of the commission to have a public counsel who would be skilled and learned in the work of the court and who would protect the interests of the public generally. I therefore make an appeal to the minister to consider that question and I think he would earn the gratitude of the people from the Atlantic to the Pacific if he would agree to the appointment of a public counsel.

Mr. MARSHALL. I cannot agree with my hon. friend (Mr. S. Sharpe) who has just taken his seat. I think we would have too much machinery attached at the court. The practical man, the man who understands his business, is the man to meet the commission. I have had some little experience as a manufacturer in meeting with this commission. While I do not profess to know every thing, still I think that I put my case quite as well as a lawyer for the reason that I was familiar with it. I think that applies also to the farmer. It strikes me that there is no person who can put his case as well as the practical man. I have met the commission at different times. We have not got all we asked, but we have had no trouble in putting our cases in such a way as to make the commission understand it. I think we have all the machinery we want and that the practical man is in a better position to put his case than the man who is not acquainted with business.

Mr. J. A. CURRIE. I heartily endorse the remarks of my hon. friend from East Elgin (Mr. Marshall) and I do so as a business man. I think that instead of putting more counsel on that commission there ought to be an amendment to the Act precluding counsel from appearing at all.

Mr. LANCASTER. That would keep the railway specialists out.

Mr. J. A. CURRIE. Yes. The Manufacturers Association have matters to submit to the Railway Commission as they have matters to submit to other courts. They did not select counsel at $10,000 a year to do their business for them. They took a man out of the Customs Department, one of the ablest men possibly in the service, and he knows every thing practically about their business. The great struggle in the Railway Commission has been to prevent it from becoming a court of record hedged in with so many rules of evidence that the ordinary individual cannot get his evidence in sideways. It should be open like a coroner's court and the less red tape there is in connection with it the better. It is said that the public do not get a fair show unless they are represented by counsel. From what I can understand the man who has the least to say, who is the most ignorant and the least qualified to present his case, has his case taken in hand by the chairman and as a general rule he gets what he wants much easier than if he were armed with a $10,000 counsel.

Mr. LANCASTER. And much cheaper.

Mr. J. A. CURRIE. Yes, and much cheaper. Small shippers, lumbermen, merchants and manufacturers cannot afford to go to great expense or to pay large counsel fees. All they want is a plain, ordinary everyday layman's court where they can go in, tell their tale of woe, and be sure that there is no rule or technicality in connection with the court that is going to bowl them out and prevent them from stating their case whether it is in accordance with the rules of evidence or not. The Minister of Railways and Canals should very seriously consider whether any person should be allowed to be represented by counsel before the Railway Commission.

Mr. LANCASTER. I think that my hon. friend from North Simcoe (Mr. Currie) has the right idea, but he is in error in supposing that that is the idea that is being carried out. Personally, I think this should be absolutely the layman's court, but the difficulty is that the railways—and I do not see that you can prevent them—employ the ablest, most expert railway lawyers, and any man, lawyer or layman, who goes there is up against the most astute and able counsel who are ready to resort to every technicality of the four

hundred sections of the Railway Act against him. If we could so arrange it that it would be nothing but a layman's court that would be the ideal condition. Although that is the ideal condition that is not the condition to-day, for no man can get his case properly presented unless he employs a lawyer who understands the Railway Act. I do not think that ought to be so. I suppose any party to a case can be deprived of the right to engage counsel, and as the railways will certainly employ skilled advocates the difficulty is that the other party must have counsel to contend against them:—

Contribution of the government railways to the faculty of McGill University towards the foundation of a school of railway engineering and transportation in general in connection with the faculty of applied science, $2,500.

Mr. J. A. CURRIE. Is the minister not afraid he is breaking his heart in giving such a huge contribution to a small organization like McGill University?

Mr. GRAHAM. The Canadian Pacific Railway gives $3,000, the Grand Trunk $3,000, the Canadian Northern $2,000, and we give $2,500.

Mr. J. A. CURRIE. Do they not test your oils and materials free of charge?

Mr. GRAHAM. We pay extra for that.

Mr. HUGHES. Is the college course a training in the running of trains and the handling of engines and so on?

Mr. GRAHAM. It is a course of general instruction in railway matters.

Mr. HUGHES. The building of roads and the operating of trains?

Mr. GRAHAM. It deals with the general theory of railroading.

Mr. LANCASTER. Is McGill the only university which gives this course?

Mr. GRAHAM. I understand so.

Mr. DANIEL. I suppose the students have to pay their regular fees?

Canal staff and repairs, $1,081,254.

Mr. GRAHAM. I have a lengthy detailed statement, but perhaps it will be sufficient to give the totals for the various canals.

Lachine	$143,760
Soulanges	78,975
Beauharnois	.....
Cornwall	125,000
Williamsburg	51,000
Welland	220,000
Sault Ste. Marie	44,057
Trent	80,000
Rideau	123,700
Carillon and Grenville	36,607
Ste. Anne	5,985
Chambly	51,300
St. Ours	5,845
Murray	9,000
St. Peter's	$ 4,700
Dredge vessels—Lachine	8,000
" Rideau	10,500
Miscellaneous	11,000
General	15,000
Quebec canals, salaries	20,625
Trent canal, salaries, grant	4,700

We have $31,000 for operating the canals on Sunday. Last year when the break in the Cornwall canal was repaired the canals were open on Sunday and we had to pay the men extra for that.

Mr. HUGHES. Is it allowable to go through the locks on Sundays if the boat owner mans the lock himself?

Mr. GRAHAM. No.

Mr. HUGHES. Why not?

Mr. GRAHAM. They cannot run through the canals on Sundays without first getting permission from the department, and in cases of emergency it has been found necessary to give that permission.

Mr. HUGHES. It is all right for the government boats to run through on Sundays?

Mr. GRAHAM. It is all wrong if they do not get permission.

Mr. HUGHES. They do it though.

Mr. GRAHAM. In one case in a thousand.

Mr. J. A. CURRIE. Without being in any way irreligiously inclined, I should think it is a serious thing to stop the canal traffic of the country on Sundays. The American canals, our competitors, are open on Sundays, and it is only a matter of a few years when they will have a better canal system than we have. The present system simply cuts off one-seventh of our traffic, and that is a serious matter. Considering the time that is taken to lock a ship through on Sunday and the conditions under which it is done I do not think any law of the Bible would be broken. All the lock-tender has to do is to touch a button and the machinery does the rest. I certainly would not advocate anything that would be irreligious, but it is pure hypocrisy to let street cars run on Sundays and close down the canals.

Mr. HARTY. And allow railways to run.

Mr. J. A. CURRIE. It simply adds one-seventh to the equipment of those engaged in the transportation business. No one can pretend for one minute that the canal gates are open by any servile labour, for the man has simply to sit in his chair and touch a button and if he likes he can read his Bible all the time he is doing it.

Mr. GRAHAM. It is a matter about which there is a divergence of opinion, and it is the law and not a regulation of the

department. In the autumn, when the season is drawing to a close and the produce of the country has to be forwarded to its destination, we give some leniency in allowing the canals to open on Sunday.

Mr. HUGHES. How does the Railway Department control that?

Mr. GRAHAM. They ask for permission and we give it.

Mr. HUGHES. If that is so why can't you give permission all the year round.

Mr. GRAHAM. The law is that there shall not be any traffic on the canals on Sunday as a general thing, but in an extreme emergency, such as the break in the Cornwall canal last year, we allowed the canals to be open on Sunday in order to get the traffic through.

Mr. LANCASTER. And you allow it for three weeks in the autumn?

Mr. GRAHAM. When the Cornwall canal was broken last year there was great congestion of traffic, and as soon as the repairs were finished we allowed the canals to be opened to get rid of the congestion.

Mr. LANCASTER. You allow the Welland canal to be open on Sunday from October to the end of navigation, and if you can do it then why can't you do it from April to October? If it is right in October, why should it not be right from April to October?

Mr. J. A. CURRIE. Under the present regulations for closing the canals on Sunday it simply means that the sailors never get on shore for a minute on Sunday. They load up and on Saturday night, a few minutes before 12 o'clock they get ready and clear and the men have to work all day Sunday on the lakes. If that law was not on the statute-book the vessel owners would endeavour to have the men on shore on Sunday and the men would have a chance to go to church. I do not believe in such a distortion of the law by reason of the agitation of people who do not understand the facts. There is not one sailor in a thousand who has a chance to put his foot on shore on Sunday. There is a Sabbath law providing that a boat shall not start out on Sunday.

Mr. HUGHES. Is it the intention of the minister to have the Sabbath Observance Act amended?

Mr. LANCASTER. So that he will not have to break it every fall.

Mr. MILLER. He does not have to break it every fall because the Sabbath law has a provision for that fall traffic.

Mr. LANCASTER. I would ask the assistant Minister of Railway if that law does not permit him to do it at any time in the year.

Mr. MILLER. I would tell the would-be Minister of Railways and Canals that it applies every fall.

Mr. LANCASTER. Is there a limitation in the statute to the fall?

Mr. MILLER. The Act makes a special provision for the fall when the grain is coming down.

Trent canal construction, $1,000,000.

Mr. S. SHARPE. The correspondence relating to this matter has just been brought down and we are not prepared to discuss it.

Mr. J. A. CURRIE. It would take a good sized man to carry the correspondence which came down yesterday, let alone read it and it would be an advantage to have it stand over.

Mr. GRAHAM. I do not want to be unreasonable as I realize that hon. gentlemen are reasonable in dealing with my estimates. This is the third time the item has been called, and I would be glad to know when they would be ready to discuss it; if they would be ready the next day we go into Supply, I would ask to have it stand again.

Mr. J. A. CURRIE. I do not wish in any way to dictate to the minister but I would be glad to have the discussion postponed until Thursday.

Mr. GRAHAM. I wish to have it borne in mind that the part of my supply that has gone through is a very small part of what has to go through for my department, but I am anxious to meet hon. gentlemen half way and we will allow it to stand.

Mr. HUGHES. In the meantime I would ask the minister to consider, since he is going on with the branch canals, an extension of the canal from Balsam lake to the lakes in Haliburton county by the construction of two or three dams. The matter is most important. For one-fifth of the expenditure the minister is wasting on the Newmarket ditch he would open up fifty miles of country with twenty times the population that would be served by the Newmarket ditch.

Mr. LENNOX. I wish to remind the minister that the people in the neighbourhood of Barrie and between there and Collingwood are depending upon coming to interview the minister before he determines upon the question whether he shall connect with the Georgian bay by the Severn river or by a direct canal from the head of Kempenfeldt bay through to the Georgian bay. That is whether the canal will follow the earlier survey or the recent survey. I have had some correspondence with the department in reference to it.

Mr. GRAHAM. The arrangement made with the hon. gentleman has not been forgotten. Before anything is done, and as soon as we have the plans completed so that we are in a position to discuss it thoroughly, we will notify him in order that he may bring his deputation down.

Mr. J. A. CURRIE. When the discussion opened I asked the minister if a report had been made of the survey on the Nottawasaga and Barrie route. He stated that the survey had been made but that the notes had not been extended and that a full report had not been made. It is nearly two months since that question was asked, and if there are any data available I would like to have a chance to examine them before the deputation comes down.

Mr. GRAHAM. What we have is not intelligible without the plan to follow it along. It will take some weeks to complete the plan and my hon. friend will be advised when the plan is completed.

Mr. J. A. CURRIE. Would it be possible to see the diary and field books of the engineer?

Mr. GRAHAM. My hon. friend is at liberty to come over and see the report if he desires.

Dominion buildings—rents, &c., $200,000.

Mr. PUGSLEY. I promised to give some particulars with regard to the rent of the Canadian building. It was stated that the building was assessed at a certain figure, and that the amount of the rental paid was a very large return upon its value.

Mr. LENNOX. Will the minister allow me to mention that the hon. member for Peel (Mr. Blain), who brought up that question the other night, is not here to-night. I do not like to ask the minister to let it stand, but I know that the hon. member for Peel would be glad if he would do so.

Mr. PUGSLEY. I am quite willing under the circumstances to let it stand.

Item allowed to stand.

Public buildings, British Columbia — renewals, improvements, repairs, &c., $8,000.

Mr. PUGSLEY. This is the usual vote.

Mr. BURRELL. In connection with the grant for public buildings in British Columbia, I would like to quote from Hansard, at page 1407, where the minister gave a list of those works for which tenders had been asked and which it was not proposed to proceed with this year. They were in the whole of Canada eleven in number, and were all wharfs, with the exception of one public building, that of Vernon in the province of British Columbia. On page 1347 of 'Hansard,' I find that the minister said :

Mr. LENNOX.

I decided to recommend to my colleagues in the first place to drop those public works for which tenders had not been called irrespective of their necessity. That rule was followed possibly with one or two exceptions. Then that left to be considered all those works in regard to which we had called for tenders. We went through the list again, applied the pruning knife and considered as to whether or not there might not be a few of these which we might drop. We also considered as to whether they were really of such urgent public necessity that they could not stand over for another year.

So that in that pruning process the public building of Vernon in British Columbia is the only one in the whole of Canada which has been placed in that position; and I assume, from the statement of the minister that he felt a solemn obligation—I think that was his phrase—in regard to fulfilling these contracts later on, that he will have no objection to assuring me that this building will be proceeded with next year.

Mr. PUGSLEY. I may say to my hon. friend that when the appropriation for the Vernon building was put in the estimates, it was put there in good faith, because I and my colleagues were satisfied that it would very soon be required to be constructed in the public interest. But we thought that it might be allowed to stand over for another year, along with a number of other public works. I think I gave a list of eight or ten works in the various portions of the Dominion which, although tenders had been called for them, we arrived at a decision to postpone. I may say to my hon. friend that the land has already been purchased for the building at Vernon, and that just as soon as we are able to take up the other works for which appropriations were made last session, the building at Vernon will be proceeded with.

Mr. BURRELL. I would like to run over a few things in connection with this matter of public buildings. In the various discussions which have taken place the minister has laid down certain principles as those which have guided him in the construction of public buildings throughout Canada. On page 1333 of Hansard, he said:

No rule has been laid down as to the exact number of people required in a place in order to justify the erection therein of a public building. Population does not always govern. Something may depend upon the trade that is done in a place, upon the customs receipts, upon the post office building, upon the possibility or otherwise of renting suitable buildings.

Then, on page 1347, in answer to a question as to what principle guided him in this matter, the minister said: 'the public necessities.' I think all of us are perfectly willing to grant that these are the two principles that should guide any government in

the construction of public buildings. I propose to give, as a basis for comparison, a couple of references in the east and two or three in the west. I have a definite object in quoting these figures, and I do it on the principle laid down by the minister. In the province of Quebec, at Knowlton, we have an estimated population of 800; a postal revenue of $2,156.83; money orders issued, $5,857.93; money orders paid, $6,427.27; postal notes paid, $1,026.81. Knowlton is not a customs port so there is no way of judging what the trade is in that respect. Yet this place has been given a post office costing $26,806, according to the statement of the minister.

Another case is that of Shelburne, N. S., which may be regarded as typical. The following are the figures in relation to this place: Shelburne has a population of 1,500; its postal revenue is $1,969.78; money orders issued, $29,439.81; money orders paid, $19,768.63; postal notes, $671.21. Shelburne is a port of entry, with three subports. The total duty collected was $1,471,67, or, in Shelburne itself, $1,245.61. The exports for the year ending March 31, 1908, were $33,177. Shelburne has a post office building which, according to the minister's estimate, cost, with the site $35,158.77.

These are two examples from the eastern part of Canada. Now, take two cities in my own constituency. The first of these is the city of Vernon, for which the figures are as follows:

Vernon, B.C.

Population	3,500
Postal revenue	$ 8,222 96
Money orders issued	67,543 41
Money orders paid	32,941 50
Postal notes	5,813 46

Vernon is an outport of the port of Revelstoke, and the actual duty collected at Vernon was $35,879.23. We have not only no post office building, but we have very poor postal accommodation for this growing community. My second example is the city of Grand Forks, in which I live. The following are the figures for Grand Forks:

Population	2,500
Postal revenue	$ 4,695 32
Money orders issued	89,802 84
Money orders paid	21,802 54
Postal notes paid	1,495 39

Grand Forks is a port of entry with eight sub-ports. The total duty collected was $51,794.61; the amount collected in Grand Forks City, $25,712.42. The total exports from this place amount to $2,981,688, a bigger export than that of any port in Nova Scotia, except Halifax, and bigger than any port in New Brunswick except St. John. Yet, so far, we have no post office building, though we have a site which, I have to tell the minister—he probably knows it already—was purchased six days before my election. Let me give a few figures concerning also the city of Greenwood, which is in my constituency, and in which my late opponent resides:

Greenwood, B.C.

Population	2,000
Postal revenue	$ 4,254 48
Custome duty collected in Greenwood	25,162 31
Customs duty collected in Greenwood and sub-ports	45,454 69

Several sites have been looked at for a public building, but none has been purchased.

I wish to briefly contrast these cases, for the whole country, apart from politics is interested in this matter. The Department of Public Works, as we know, is the great spending department of our government, and I think there should be some basis of comparison to show how the money should be expended. Let me give the figures to show the comparison between Shelburne and Grand Forks:

	Shelburne.		Grand Forks.
Population	1,500		a 2,500
Postal revenue	$ 1,969	b $	4,695
Money order business	48,879	b	113,100
Customs duties collected	1,471	c	51,794
Exports	33,177	d	2,981,688

a Nearly twice. b More than twice. c 35 times as much. d 90 times as much.

Yet we find that Shelburne has a post office costing $35,000, and the Grand Forks post office is carried on in a rented building.

Now, let me take the case of Vernon. I speak of this because it is one of those for which the tenders were called as late as October 20, to be opened as late as November 20—that is, eight days after my own election. If the money stringency, or decrease in the revenue, have anything to do with it, it must have been known some time before that. Let me compare the case of Vernon with that of Knowlton:

	Knowlton.		Vernon.
Population	800		3,500
Total postal revenue	$ 2,156	a $	8,222
Total money order business	13,312	b	106,298
Customs revenue	c		35,879
Public building	26,866		d

a 4 times as much. b 8 times as much. Not a custom port. d Pruned out of existence.

Now, a word or two about these figures which I have brought forward for purposes of illustration. I trust I may be allowed to emphasize this contrast before the Minister of Public Works, because it is I who am called upon to explain to my constituency the tremendous disparity in the distribution of the public moneys of this country, and, in spite of the assistance the minister has given, and the explanations he has made, I am afraid I have not been helped very much toward the explanations

I shall be called upon to make. The people in the west will want to know what principle is followed in these matters. The minister has told us that he has drawn the line sharply between those for which tenders had been called and those for which tenders had not been called. But, in the case of Vernon, he departed from that position. In my humble opinion—and I suppose I should speak with some diffidence as a new member—this part of our public affairs seems to be in great confusion. I must say I sympathize with the Minister of Public Works. It seems to me that, in a case of post office construction the Postmaster General should accept the responsibility, and the Minister of Public Works should not be constantly badgered and criticised and asked for information which he is not always in a position to give. The same is true in relation to the Minister of Militia. A short time ago a question came up concerning the construction of a public building, which, in the ordinary course of procedure was referred to the Minister of Public Works. But that hon. gentleman was not able to answer many of the questions, because the matter related to the Militia Department. It seems to me that, while the book-keeping could be arranged between the departments, the responsible minister of the department for which the building is to be constructed should answer the objections and meet the criticism arising in connection with the matter. The minister, when he was meeting the objections raised about enormous sums being expended in small constituencies, made the remark that sometimes a member representing that constituency would come up and urge very vigorously that this public work should be given, and so he got it.

Mr. PUGSLEY. Would my hon. friend pardon me? I think he is mistaken. When I used that expression it was in reference to some of the plans being prepared at an earlier stage than others, and sometimes the minister urged that those plans should be prepared somewhat more speedily.

Mr. BURRELL. I am glad to accept the minister's assurance. At all events, we know as a matter of fact that these things are very often done under our present political system. We know that the urgency of a member who has the ear of the government bears direct results by the construction of certain works in his constituency that he would not get otherwise. I submit that that principle is fundamentally vicious. If other things are equal, or nearly so, we can understand that under our present political system a government is naturally inclined to favour its political friends, I presume all governments would do that. But the indiscriminate—because there is no other word to be used—the indiscriminate expenditure for public buildings in small towns simply amounts to a waste of money, it is certainly a subversion of the public interest, it is a deplorable extravagance and absolutely destructive of good government. I think I appreciate as well as any one else the position of the minister, that is, I appreciate the fact that we have a stringency in our finances at the present time. I am aware that in the whole of the debate that took place a week or two ago there was a lot of thrust and parry, and sometimes the minister came out on top, and sometimes he came out second best. But what the people of this country want, I think, is that their legitimate needs should be attended to, whether in respect of the Post Office Department or of any other department, They want the legitimate needs of the country attended to. They want post offices where they are necessary, and then they chiefly want better mail facilities all over the scattered portions of the country, where, although the people are isolated, they are engaged in adding to the prosperity of the country. In my own riding there are districts where the people actually only get a mail four times a year, and they are pleading hard with the government to get at least a monthly mail. I think when these things can be said, when these things exist, there should be a recognition of legitimate needs before there is such a tremendous expenditure of money in places where the needs are very much less. Now take the case of my own town. I am making no clamour for a post office, because I am willing to admit this, that if the country is in straightened financial circumstances, the fact should be recognized, and I think Canadians as a whole are willing to recognize it. They may disagree as to the causes thereof, but they are willing to recognize the fact, and at all events are not disposed to urge upon the government the expenditure of money unnecessarily, we ought all to agree with that. But we do feel this, and feel it very strongly, I know the people feel it throughout my own constituency, they will feel a just resentment when they find that these large sums of money are spent in small places absolutely without necessity, and they have the mortification of seeing their own crying needs utterly neglected. I want to give an illustration. How can I explain to my constituents that their legitimate needs are turned down when I have at the same time to tell them that the government has spent $7,000 on each one of a number of houses at Kingston for drill instructors and gunners, while the servants are getting about $460 a year; and when I find that a million dollars is being expended on a canal which, if I am to believe some of my hon. friends, has not sufficient water to operate it. We had a little while ago a resolution proposed by the hon. member for Lincoln

(Mr. Lancaster) for the abolition of that ancient body, the Senate, and in the course of his address I noticed he said that the Senate cost this country $318,000 a year. Now whether we would be justified in abolishing the Senate or not, how can we satisfy the people who are crying out for a recognition of their just needs, when we have to point out to them that the senators are taken care of to the tune of $6,000 worth of rubber tiling, for their chamber and are robed in purple and fine linen, while at the same time places which afford very considerable revenues to the government are not given the consideration which they deserve. I would like to suggest to the minister that if this sort of thing goes on to any great extent, and much longer, the people will be disposed to agree with that biting cynicism of Max Nordau, when writing of the non-success of democracy, particularly in the larger sense of that word when he said:

The cabinet not only rules the country but the parliament as well. Instead of their following a policy prescribed to them, they dictate the policy of parliament and nation. They manage all the powers and resources of the nation according to their own discretion, bestow favours and presents, support innumerable hangers on in luxury at the expense of the community, and never hear a word of reproof if they but remember to send to the majority in parliament occasional tit-bits from the royal feast spread for them by the state.

Now, Mr. Chairman, I may say that it would be a horrible thing if it had to be said in our country that that language was absolutely true. That it is partly true, we have got to admit, right in this country of ours, of which we are all so proud. I want to say to the Minister of Public Works and to other ministers who are here, that they will get a generous recognition of any efforts they may put forth to try and wipe out this system, and make at least some attempt, before they spread out this tremendous distribution of money in needless ways, to attend to the legitimate needs of the country, whether it be a post office or anything else.

Prince Rupert quarantine station, $25,000.

Mr. BARNARD. I would like some explanation of this item.

Mr. PUGSLEY. It is well known that a good many people are now going to Prince Rupert, and in the coming summer a large number, probably many thousands, will be going to that city. We have felt that it would be very desirable, in fact absolutely essential to the public health, to have a quarantine station established there. My hon. friend the Minister of Agriculture made a very strong appeal to me to have an amount for that purpose put in the estimates.

Mr. HUGHES. Will tenders be called for?

Mr. PUGSLEY. Tenders will be called for just as soon as possible, and it is hoped that a suitable building will be erected for the purpose of taking care of sick persons who may go there during the coming season.

Mr. HUGHES. Will Canadians have a chance to work on that building?

Mr. PUGSLEY. Yes.

Mr. BARNARD. Have the government provided for any other expenditures in connection with the city of Prince Rupert?

Mr. PUGSLEY. No.

Mr. BARNARD. Any post office or public building?

Mr. PUGSLEY. No.

Mr. BARNARD. Has it occurred to the minister that there will possibly be something a good deal more necessary than a quarantine station?

Mr. PUGSLEY. A quarantine station is essential to the public health.

Vancouver public buildings, $60,000.

Mr. PUGSLEY. That is to complete the public building at Vancouver.

Mr. HUGHES. What building is that?

Mr. PUGSLEY. The new post office—a very fine building.

Mr. HUGHES. From whom was the site purchased?

Mr. PUGSLEY. It was purchased from Mr. Robertson.

Mr. HUGHES. And the adjoining property?

Mr. PUGSLEY. We purchased that for an examining warehouse.

Mr. HUGHES. From whom was that purchased and at what price?

Mr. PUGSLEY. From Mr. Robertson also, I think, at about $80,000.

Mr. HUGHES. Are you sure?

Mr. PUGSLEY. Yes.

Victoria immigration building, $43,000.

Mr. PUGSLEY. That is to finish the building.

Mr. BARNARD. Could the minister tell us what the immigration into Victoria was last year?

Mr. PUGSLEY. No, I have not the figures. That would be in the Interior Department.

Mr. BARNARD. Could the minister give us an idea of what this building is intended for?

Mr. PUGSLEY. It is an immigration building of the ordinary character. The building is two-stories, fireproof, built of brick with stone foundation, and the object is to prove facilities for medical inspection, hospital accommodation and for the other services connected with the handling of immigrants. There are a good many people coming to Victoria. They come from the Orient, they come from the cities along the United States coast and they require care.

Mr. BARR. I thought the Orientals were all shut out?

Mr. PUGSLEY. There are always some coming, and in the future there will be some coming, but there are a good many people coming from the coast cities. The information we had before this building was undertaken was that there was a necessity in Victoria for an immigration building.

Mr. BARNARD. Who made the request for this building?

Mr. PUGSLEY. The Department of Immigration.

Mr. BARNARD. Cannot the minister state what the necessity is in view of the fact that the government tells us that Oriental immigration is shut off?

Mr. PUGSLEY. As I have said, there are a good many in addition to oriental immigration, which has undoubtedly fallen now to small proportions, but which was larger when this building was undertaken. There is a very considerable immigration from United States ports.

Mr. BARNARD. Can the minister give us any idea as to the number of those during the past year?

Mr. PUGSLEY. I am sorry to say I cannot, because this is not a new work. It was undertaken and a vote was given last parliament for it.

Mr. BARNARD. Could the minister tell us what volume of immigration this building is to cover?

Mr. PUGSLEY. The most I can do is to give my hon. friend the size of the building. It has a frontage of 98 feet on Ontario street by a depth of 35 feet, and it extends along Dallas street 91 feet with a depth of 45 feet. It is a two-story building with basement, and there are in the building a waiting room, large dining room, detention room, two rooms for guards, two rooms for medical officers, two rooms for United States officers, two rooms for clerks and also some other rooms such as closets, lavatories, &c. There are a surgery and six hospital wards in the building.

Mr. HUGHES. Where were the plans drawn?

Mr. BARNARD.

Mr. PUGSLEY. They were prepared by the department.

Mr. HUGHES. As skilfully as the plans for the extension of this building?

Mr. PUGSLEY. I presume so.

Mr. HUGHES. They could not be any worse.

Mr. BARNARD. I must confess to a certain amount of ignorance as to what a building of that kind is designed to cover, and, if possible, I should like to know where my hon. friend expects his immigrants from who are to use this building apart from Asiatic immigration, and what number of immigrants he is erecting the building to accommodate?

Mr. PUGSLEY. My hon. friend must see that it would be quite impossible to tell how many immigrants are coming to Victoria. One week there may be 500 and another week there may be 50.

Mr. BARNARD. That, of course, is not an answer to the question I asked. I assume that the Department of Public Works, when they authorized the expenditure for this building, had in view some certain capacity, or a building that would accommodate a certain volume of immigration during the year, and that is what I would like the hon. minister to let us know.

Mr. HERRON. I understood my hon friend the Minister of the Interior a year ago to say that there were no immigrants coming from that direction except Asiatics.

Mr. PUGSLEY. My information is that in addition to the immigrants coming in from Asiatic countries there is a considerable number coming in from United States ports. There are daily steamers arriving from Seattle, Tacoma, and other United States Sound ports. With regard to the accommodation, as far as the hospital part is concerned, there is provision for 134 beds in the various wards.

Mr. BARNARD. That would mean that you could put up 134 people per day?

Mr. PUGSLEY. 134 people, if they were ill.

Mr. BARNARD. And, in addition to that, I suppose a large number of others?

Mr. PUGSLEY. I suppose so.

Mr. BARNARD. This question cut a very considerable figure in the discussion which preceded the election in October last. While the Minister of Public Works tells the House that this building was asked for by the Immigration Department, and while in this House last year the asking for this building was repudiated by the then member for Victoria (Mr. Templeman) I might tell the House that the hon. gentleman (Mr. Templeman) publish-

ed a very fine campaign pamphlet which contained numerous beautifully etched illustrations of the different works he had obtained for the constituency, and amongst these illustrations was one of the immigration building which, during the campaign, was described as the Japanese Hotel. It is true that in the pamphlet the hon. gentleman (Mr. Templeman) did not say he asked for the building, but the inference was that he regarded it as one of his achievements for the constituency, and we are told that it contained all modern comforts and separate apartments for Chinese, Japanese and Hindus. Whether or not that statement so put in print assisted the hon. gentleman (Mr. Templeman) in the campaign or not is open to question. But the fact that he made that statement and the fact that in the report of the Minister of the Interior I find that out of a total of 6,024 immigrants who came to the province of British Columbia in the year 1908, there were only 190 who were not Chinese, Japanese, or Hindus, point to the further fact that when the government authorized the expense on this building it had in mind that it was for the accommodation of the Asiatic immigrants. The Minister of Public Works tells us that he has beds for 124 people in the hospital, and that he can accommodate a large number in addition, but, considering that the immigration to British Columbia via Victoria other than Oriental immigration is so small, how in the name of common sense could the government have decided to erect such a large building? I may say that the people of Victoria, whom I represent, do not want and never did want this immigration building and it certainly is not necessary unless the government are preparing to take care of Oriental immigration, which it is needless for me to say the people of British Columbia are utterly and absolutely opposed to. Like my hon. friend from Yale-Cariboo (Mr. Burrell) I realize the responsibilities of government; I realize that the finances of the country are depleted and that we who criticise the government for its extravagance have no right to ask for extraordinary expenditure, but I do say that we are bound to criticise them for the useless expense of $93,000 on this immigration building, when, if it were applied to improving the harbour of Victoria the money would have been beneficial to that city and to the country at large.

Mr. CROCKET. What is the cost of this building?

Mr. PUGSLEY. The total estimated cost is $85,000.

Mr. PRICE. If this building were erected for the accommodation of Chinese, Japanese, and Hindu immigrants I could quite understand it, but if it is simply for the accommodation of white immigrants, who are so few in British Columbia, how can the government excuse such a waste of money? For instance, in the hospital of this institution there are 134 beds, while only 193 white immigrants landed in Victoria last year. How can the government justify the erection of such a building under the circumstances?

Mr. CROCKET. Is it a brick building?

Mr. BARNARD. I can assure the House it is a very fine building on a very fine site.

Mr. PUGSLEY I do not think I can say more than I have said.

Mr. PRICE. I am not at all satisfied with that answer. We have a right to know why this building was put up and why this large expense was incurred.

Mr. PUGSLEY. I have already said it was at the request of the Minister of the Interior.

Mr. CROSBY. The minister did not know how many immigrants came to British Columbia last year and now that he has been told what is he going to say about it?

Mr. PUGSLEY. It was represented by the Department of the Interior that in a port like Victoria, to which a large number of people were coming from Asiatic countries, as well as from United States Pacific ports, it was desirable to have a suitable immigration building. An important port like Victoria would not be equipped as it should be unless it had a building where immigrants could be properly taken care of, and where those who might be considered undesirable could be humanely treated pending deportation. The money was voted by parliament, the contract was let, and this vote was to pay the contractor the balance due him. There is always a likelihood of a very large number of immigrants arriving in a great seaport like Victoria.

Mr. BARNARD. I understood the minister to describe Victoria as a great seaport.

Mr. PUGSLEY. A very important seaport.

Mr. BARNARD. I shall have something to say on that question later on.

Mr. PUGSLEY. I shall be glad to hear you.

Mr. PRICE. It would appear from the explanation given by the Minister of Public Works that there can be no doubt that this building was erected because the government expected a large immigration of Japanese, Chinese and Hindus.

Mr. J. D. TAYLOR. We should have some statement of the policy of the government

with respect to the immigrants who were expected to use this immigration building, but who owing to the efforts of those of us in British Columbia who would not stand this class of immigration have been prevented from entering the province for the time being. Since the government are determined to go ahead with this building the only inference is that they have some idea of putting it at some time to the use for which it was originally intended. If the government still have in mind to bring into British Columbia Oriental immigration on such a scale that they need at Victoria a building of this kind, I think it is the duty of the minister to ascertain from his colleagues if the information is not in the possession of his department and let us know what we have to expect in that respect. While I agree with all the minister has said as to the importance of Victoria as a seaport and as to the large number of persons who travel to it from Seattle, Tacoma, San Francisco, and other points in the United States, it must be remembered that these persons are not of the class commonly known as immigrants, that they are not the class of people who would use an immigrant shed, and that the class of travel to Victoria, other than Oriental immigration, consists of the highest type of passengers who under no circumstances whatever would be likely to require accommodation in an immigration building except half dozens at a time, in cases of exceptional poverty or misfortune which the government could attend to without this building. So far as sickness is concerned, the immigration building is not needed to take care of the sick pasengers who come on plague boats because this building will be within sight of the William Head quarantine station which is only three quarters of an hour's sail from it. Is there any probability that in the near future the Oriental immigration, now suspended, is likely to be renewed?

Mr. PUGSLEY. The government has no reason to suppose that the arrangement which I am happy to say was arrived at between the representative of this government and the imperial government of Japan will be departed from. The expectation is that the restriction of immigration will continue as at present, and that comparatively few Orientals will arrive in future. So far as this government can secure the carrying out in the future of the agreement which is now being rigidly adhered to, it will be done.

Mr. HUGHES. Then we are to understand from the minister that the plan was this: The gentleman who has made such a success of the North Atlantic Trading Company in bringing European immigrants to Canada, at so much a head, was translated to the shores of Asia and the plan was that he was to send in these Oriental immigrants, Japanese, and Chinese, in large numbers, and it was then decided to construct this public building. Then the action of the people of British Columbia caused a change in the programme, but the building had gone on so far that the government decided to continue it to completion and have it ready so that in a year or two, when Japan chooses to send in her emigrants the building will be ready for use.

Mr. PUGSLEY. I hope my hon. friend did not assume that I said anything of the kind.

Mr. DANIEL. Would the minister give a comparative statement showing the cost of the immigration buildings at Victoria, Halifax, Quebec, and St. John, especially with regard to the number of hospital beds in each building. At the Atlantic ports thousands of immigrants come in every year and one would naturally expect that as much accommodation will be required at these ports as at Victoria. The buildings in St. John, Quebec, and Halifax are of wood, while the Victoria building is evidently of a much superior class.

Mr. PUGSLEY. I shall be glad to obtain that information and present it on a subsequent occasion. The building in St. John is quite a fine building and cost quite a sum of money. Plans have been prepared for the erection of an immigration building at Quebec which will be much more costly than the one proposed at Victoria.

Mr. DANIEL. The minister is not referring to the Martello hotel building?

Mr. PUGSLEY. That is a detention hospital.

Mr. BARNARD. I understand the minister to say that one reason for the erection of this building was that many immigrants were detained in Victoria. How many immigrants were detained in Victoria during the current year?

Mr. PUGSLEY. My statement was that undesirable immigrants might be detained under the law, and deported. In the meantime it is proper that they should be cared for. Although an immigration building or the hospital part of it might not be constantly required, a time might come when the hospital accommodation particularly might be required. I do not think any one would say that in a seaport of the importance of Victoria an immigration building is not desirable. It may be that when the requisition was made by the Department of the Interior a large number of Asiatic immigrants were coming in and that the plans were prepared more liberally than they would be to-day with the restricted immi-

gration. I was not minister when the building was undertaken, and I do not know the arguments which were urged by the minister for its construction, but, as I said, the Department of the Interior was of the opinion that Victoria should have a suitable immigration building. I am not prepared to say how many were deported, that will be in the report of the Interior Department.

Mr. BARNARD. I do not know that the conditions may not have changed in the last year since the preparation of the last published report. I observe that as a rule ministers are careful, in asking for appropriations, to point to statistics to show the necessity of the appropriation asked, and we must give the minister credit in this case for basing his request upon the actual needs of the immigration as revealed in the statistics for that port. I find in the report of the Immigration Department that the total number of immigrants detained in 1898 was 79. With only 79 detained in the course of a whole year, surely it is unreasonable to erect a hospital with a capacity for 134 beds, just as it is unreasonable, if you cut out the question of Oriental immigration, to say that you require a $95,000 building for the purpose of putting up 190 immigrants during the year. I would like to ask the minister when the construction of this building was first requisitioned for and when it was first authorized.

Mr. PUGSLEY. The order in council for its erection was passed on the 19th of February, 1907. At that time the acting Minister of Public Works was authorized to purchase the land. The contract for the erection of the building was entered into on the 23rd of January, 1908.

Mr. BARNARD. Can the minister give me the date when the treaty with Japan was entered into?

Mr. PUGSLEY. I cannot give the exact date.

Mr. BARNARD. Perhaps the Minister of Agriculture could give that information.

Mr. FISHER. I think that was in 1905.

Mr. BARNARD. Can the minister tell us the date when the Minister of Labour departed on his visit to Japan?

Mr. FIELDING. In the latter part of 1907.

Mr. BARNARD. I do not like to make insinuations, but it would almost appear that the building was authorized to be constructed and was requisitioned for shortly after the treaty was made with Japan, and that it was done in expectation of a large influx of Japanese immigration as a consequence of that treaty.

Mr. CROSBY. In view of the fact which has been brought out to-night, and the fact that we have not money sufficient to construct the buildings which are necessary, it would seem strange that we should continue to construct this building.

Mr. PUGSLEY. It is to pay the contractor to finish the work.

Mr. CROSBY. In view of the fact that less than 200 white immigrants came into that port last year, and in view of the fact that no Oriental immigration is anticipated in the opinion of the Minister of Public Works, should the money be spent in that direction?

Mr. PUGSLEY. In my opinion we should vote the money to pay the contractor the balance.

Mr. CROSBY. In view of all that has been brought out to-night, will the minister say that we should continue to spend that money on that building?

Mr. PUGSLEY. Yes.

Williams Head quarantine station—improvements and repairs to buildings, and fittings, furniture, &c., $5,000.

Mr. J. D. TAYLOR. As this is the last item under this appropriation, I would like to ask the minister whether he has received any communication from Chilliwack in respect to a public building there.

Mr. PUGSLEY. I have had several communications, and quite lately I received a telegram from certain residents of Chilliwack.

Mr. J. D. TAYLOR. Might I ask the minister if any results have followed from that telegram?

Mr. PUGSLEY. Not as yet.

Mr. J. D. TAYLOR. Because I have had urgent requests from Chilliwack to press upon the government the desirability, I might almost say the necessity, of proceeding with a public building at that point. I might remind the minister again that so late as October last the Minister of Inland Revenue who, I am sorry to say, is not present to-night, because he could bear me out in what I say, and would add his protestations to mine, since as an hon. gentleman he would no doubt want to see his promise carried out—promised the people of Chilliwack that they would have this building, and was in so generous a mood that he intimated to them that since the site just then chosen for this building was not the most suitable, he might have a drill hall put up on the lot and erect a post office on another site. I may say that there was $5,000 voted last session towards this building, of which only $3,000 has been expended on the purchase of the site, that

the accommodation of the post office there is entirely inadequate, and that the public interests are suffering because the postmaster has not room for the disposition of his mail; and I would like to suggest, if we must wait another year for the vote for the building and still another year for its erection, whether it would not be advisable to build a temporary addition to the present post office, so that during the two years that we shall have to wait for the public building, the public will have accommodation for the post office; that is, if it is possible to use the money already voted to relieve the necessities of the case.

Mr. PUGSLEY. The claims of Chilliwack were earnestly pressed upon me by the hon. gentleman's (Mr. Taylor) predecessor. I do not think the hon. gentleman can press them more strongly. And I was impressed with those claims, and steps were taken in the direction——

Mr. HUGHES. How?

Mr. PUGSLEY. By the purchase of a site. I trust we may be able to arrange to go on with the building. As to making an addition to the present building, if the accommodation is not sufficient and the Postmaster General requests it, it might be possible to make an arrangement to have an addition made to the building by the owner and an additional rent paid that would compensate them. But, as the building is a rented one, my department could hardly undertake to make additions.

Mr. J. D. TAYLOR. The building is owned by the postmaster. There is a vacant lot at the side of the post office. It would be perfectly feasible to make an addition to the building at no great cost. In the thirty-seven years we have been in confederation the revenues of this government from Chilliwack have been very large. It is not fair to a city of such importance that after thirty-seven years there should be no public building when the government is able to lavish such large appropriations in public buildings elsewhere.

Mr. HUGHES. I notice there is $28,000 for 1908-9 and $5,000 for 1909-10. Was that $28,000 expended?

Mr. PUGSLEY. It will be by the end of the present fiscal year.

Mr. HUGHES. And is the same true of the $150,000 for the public building in Vancouver?

Mr. PUGSLEY. Yes, the amount is to finish it up.

Public Works—chargeable to capital—harbours and rivers—Port Arthur and Fort William—harbour and river improvements, $600,000.

Mr. J. D. TAYLOR.

Mr. PUGSLEY. This is to continue these works. The work at Port Arthur consists of the extension of a scheme of breakwaters, essential for the protection of shipping in the harbour, and also a good deal of dredging.

Mr. HUGHES. Is there any room for dredging there after all that has been done?

Mr. PUGSLEY. The demand is coming from the people of Port Arthur and Fort William, as well as from Winnipeg and the west, for the deepening of these harbours to 25 feet. It was originally supposed that 22 feet would be sufficient.

Mr. HUGHES. What is being done to the old breakwater?

Mr. PUGSLEY. It remains and we are building the new work outside so as to give more room in the harbour. Later on part of the old breakwater will be torn away with the same view of affording more room. In Fort William the work is being done on a large scale. The Mission river is being deepened and widened and a turning basin is being made covering about thirty acres. This work is being done in connection with the terminus of the Grand Trunk Pacific. I am glad to say that that company is laying out its terminals on a very comprehensive scale, involving an expenditure of several millions of dollars. They are building an elevator of very large capacity, and their plans involve providing storage capacity for over 20,000,000 bushels. The contract for dredging is let, providing for a depth of 25 feet.

Mr. HUGHES. What is the depth of the Sault canal?

Mr. PUGSLEY. Only 21 feet.

Mr. HUGHES. What is the depth of the American canal at the Sault?

Mr. PUGSLEY. The new canal, it is contemplated, will have a depth of 24 feet. But the report that comes to us from the railway companies and the boards of trade of the west is that the vessels upon the lakes are constantly growing larger and that if we are to hold the trade for these ports of Fort William and Port Arthur we must afford a depth of 25 feet.

Mr. HUGHES. It would be better to provide the waterway to the eastward first; would it not?

Mr. PUGSLEY. Not necessarily. Vessels in these harbours may not load entirely at one dock. Consequently, at some times the stern may be deeper in the water than it will be when the cargo is complete and the vessel on a level. With a depth of 22 feet these vessels are likely to ground. These are the reports that come to us, and I think they can be relied upon.

Mr. HUGHES. Official reports or verbal statements?

Mr. PUGSLEY. The resident engineer has so reported and I have been informed to the same effect by a number of people. The policy of the department is to dredge the harbours on the eastern shore of Georgian bay, Victoria harbour and Tiffin to the same depth.

Mr. HUGHES. How about Key harbour?

Mr. PUGSLEY. We are giving attention to it, and, if dredged, no doubt it will be dredged to 25 feet.

Mr. HUGHES. And Midland the same?

Mr. PUGSLEY. Yes.

Mr. CROCKET. What price is being paid for dredging at Port Arthur?

Mr. PUGSLEY. Different prices. In the Kaministiquia and Mission rivers, under the present contract, the price is nine cents per cubic yard, that is to a depth of 22 feet. For a depth of 25 feet no doubt it will be something more.

Mr. CROCKET. What does the minister think of that in contrast with 50 cents a yard at Indian Point to his friend John E. Moore?

Mr. PUGSLEY. Both may be quite reasonable; it depends on the conditions.

Mr. URIAH WILSON. I would call attention to the fact that no provision is made in these estimates for the dredging of the Napanee river, concerning which I had an interview with the minister. A petition has been sent to the Governor General. There is a great need of a little money being spent at this point. No dredging has been done there since 1893, and several shallows have formed by the deposit of sand, preventing any but the smallest craft coming in—craft drawing no more than six or seven feet. As every one knows, and as the minister has just said, every year vessels on the lakes are growing larger. It is most difficult to get crafts to come into this harbour and carry anything like a heavy burden in the way of coal.

Now I am informed by the coal merchants of our town that unless there is some dredging done there to take out the shoals, the chances are that the people, not only in the town, but in the vicinity, will have to pay from 50 cents to $1 a ton more for their coal. That is most unfair to the people of that locality, inasmuch as we have had no public money spent, so far as I know, in that riding since 1893. This is a matter of urgent necessity. The council of the town of Napanee has passed a very strong resolution asking that this work be done, which resolution I have left with the deputy minister of the Public Works Department. I hope that the minister will give me some assurance to-night that this matter will get his careful consideration, and that we may have good reason to expect that during the coming season this dredging will be done. It will not be an extensive job, perhaps $3,000 or $4,000. As a matter of fact, to make a really good job would require considerably more money. But if these shoals were taken out we might be able to get along for a few years until the government feel richer. I believe this year they intend to practise rigid economy, and I endorse that principle, because we all know that the revenues have fallen off to a great extent. But works that are of actual and absolute necessity like these I think should be attended to, more especially when they only require a small outlay. I would strongly urge the minister to take this matter into his serious consideration, and if possible have that dredging done this year.

Mr. PUGSLEY. I may say to my hon. friend that I think there is no more important work in the interests of the country than dredging, and I am inclined to think that will be the opinion of every member of this committee. With regard to dredging the Napanee river, I have looked into it, and I am impressed with the public necessity of dredging out the river for five or six miles between a certain mill and the mouth of the river. If I can find it at all possible to arrange for a dredge early in the coming year, this very necessary work will be proceeded with.

Mr. DANIEL. In regard to this dredging at Port Arthur, can the minister say how far the material that is taken out has to be carried before it is dumped?

Mr. PUGSLEY. About three miles.

Quebec harbour—deep water wharf at Lévis. $400,000.

Mr. PRICE. I would like to ask the minister if this deep water wharf at Levis is to be built on what is known as the Carrier Lainé property, and if so, what is the price?

Mr. PUGSLEY. Yes.

Mr. PRICE. Does this $400,000 include the price of the Carrier Lainé property, and if so, what is the price?

Mr. PUGSLEY. It includes about all of it except $50,000. There was $50,000 voted last year, which was paid on account, and the balance will be taken out of this $400,000.

Mr. PRICE. What is the deep water wharf to cost?

Mr. PUGSLEY. I have not the plan sufficiently prepared to tell with accuracy. Something will depend on how far out we go, and what depth of water we get. My

own view would be that we should go out far enough to get a depth of 32 feet at low tide. That is what we should aim to get at all our ocean ports. Every year steamers of greater tonnage are arriving. I believe the time will come before long when we will have steamers crossing the Atlantic 1,000 feet in length; within ten years that may take place. Some of that size are already planned.

Mr. PRICE. What price was paid to the Bank of Montreal—as I believe the Bank of Montreal bought the property from Carrier, Lainé & Company.

Mr. PUGSLEY. The Carrier Lainé property was expropriated, and we expect to pay $380,000 for it.

Mr. PRICE. I find in a Quebec paper that some one has sent me, a report that a syndicate has leased a part of this property, or the old shops that were there, and it mentions that the syndicate was composed of the Hon. S. N. Parent, Sir Charles Ross. M. P. Davis and others. May I ask if that is the case.

Mr. PUGSLEY. No, it is not so.

Quebec harbour—improvements at mouth of River St. Charles estuary, $280,000.

Mr. PRICE. I presume this item is to finish the extension from the embankment where the steamers now land?

Mr. PUGSLEY. Not to finish it, but to continue it during the present year. The work is a very large one, if the whole plan is carried out to completion.

Mr. PRICE. There is a great deal of complaint in Quebec because we have not got the proper harbour improvements. I would like to ask the Minister of Public Works when the government proposes to do more harbour improvements in Quebec. I do not know whether the minister is aware that, owing to lack of harbour facilities, no heavy pieces of iron can be landed at our wharf because there is no derrick sufficiently strong. Besides that, the wharf accommodation is altogether too limited. Up to the end of last year only two steamers could land their passengers at the same time. Several times this year, when two steamers desired to land their passengers, one had to anchor out in the stream and wait till the other one alongside the wharf was able to get away. I would like to know if the extension that will be carried out this year will give us room for three steamers to lie alongside each other at the same time.

Mr. PUGSLEY. We recognize the fact that the accommodation for ocean steamers at Quebec is limited, and that is why this extensive work is being undertaken. My hon. friend asks when more accommodation will be given. We expect it will be given during the coming season, and that is what the appropriation of $280,000 is for. As the hon. gentleman is aware, there has already been constructed a concrete pier extending for a considerable distance into the St. Lawrence. Now we are building another pier around on the Charles river and dredging out a channel there—it is the return to the wharf. That will give considerable accommodation. The assistant deputy minister tells me that by July there will be accommodation there for three large ocean steamers at this new pier.

Mr. PRICE. I understand that the Grand Trunk Pacific will be finished within the next two or three years and if it carries the amount of grain that it is supposed to carry to Quebec I do not see that we have proper accommodation there to handle that trade. It will be necessary to continue the harbour improvements. I would like to know from the Minister of Public Works if the government will continue the policy of improving the harbour from Quebec up to Sillery and also what the policy is with regard to the terminal facilities; that is the railway line from the present site of the bridge to Quebec itself.

Mr. PUGSLEY. The question which my hon. friend is now asking is one which appertains to the Minister of Railways and Canals.

Mr. PRICE. Will the minister answer the first part?

Mr. PUGSLEY. The whole of it belongs to the Department of Railways and Canals for the reason that the terminals of the Grand Trunk Pacific Railway at Quebec will be a part of the Transcontinental Railway system. Therefore, it would not appertain to the Department of Public Works.

Mr. PRICE. How about the docks ?

Mr. PUGSLEY. They would form part of the Transcontinental Railway system. I think that is the expectation; I am not prepared to say positively.

Mr. PRICE. That must be an enormous work.

Mr. PUGSLEY. It will be a very large work. I may say to my hon. friend that the question of terminal facilities at Quebec has not been lost sight of by the government. We recognize that terminal facilities must be provided at the ocean ports and that it is desirable, if possible, to have them ready by the time the Transcontinental Railway is finished. The matter of terminals at Quebec is receiving, at the present time, very careful consideration, but just what will be done I am not prepared to say. If my hon. friend will repeat his question when the estimate respecting the Transcontinental Railway is under discussion I have no doubt my hon.

friend the Minister of Railways and Canals will be prepared to give him a satisfactory answer.

Mr. PRICE. In case the Minister of Railways and Canals finds that it does not come under the Transcontinental Railway, I suppose I will have an opportunity of asking the Minister of Public Works a question?

Mr. PUGSLEY. Yes.

Red river improvements—St. Andrew's rapids, $600,000.

Mr. PUGSLEY. This amount is to continue the work of building the locks on the Red river. St. Andrew's Rapids on the Red river are about thirty miles north of Winnipeg. The expectation is that this will give lake navigation from this very extensive lake which is 300 miles in length, right to the city of Winnipeg. It is expected that $600,000 will be expended during the present year on locks and gates and that this will complete the work.

Mr. BRADBURY. Would the minister inform me whether that includes the bridge or not?

Mr. PUGSLEY. Yes.

Mr. BRADBURY. I would like to know whether there has been any arrangement made for the completion of the connection between the bridge and the highways? There are very important settlements on both sides of the river and I have a communication from the municipality of St. Andrew's calling my attention to the fact that the present contract does not provide for connection with the highways on both sides of the river. Consequently, the bridge would be useless as far as traffic is concerned. This is a very important matter to these people. During the late campaign a great deal was made of the fact all along the river that the government had provided the people there with a bridge that will cost $600,000 and which will be used for traffic purposes. The municipalities inform me that it has come out lately that the present contract does not provide for approaches to the bridge. Does the minister intend to carry out the wishes of the people in that respect?

Mr. PUGSLEY. In connection with the lock it will be necessary to have a service bridge. But, for the accommodation of the municipality the department decided to widen that bridge so that it could be used as a public highway. The view is held in the department that as the bridge is being provided for the accommodation of the municipality by way of widening our service bridge the very least we could ask the municipality to do would be to provide the approaches. There is no bridge at the present time, and there was no bridge there before this work was undertaken. It seems to me that if the government is willing to allow the people to use the bridge in connection with the lock and is going to the expense of widening it, the municipality, at the very least, ought to be prepared to bear the expense of the necessary approaches to the bridge. I have never been asked to provide the approaches, but I would suppose that the view which I now present is one which would commend itself to my hon. friend and to the people of the municipality and that they would not hesitate, where they are saving the cost of the building of a bridge which is ordinarily borne by the municipalities in Manitoba as well as in Ontario, although it is different in the province of New Brunswick where the provincial government builds all the bridges without any expense to the municipalities, to provide the approaches. My hon. friend says that the Liberal candidate promised that the government would build the approaches. I am not aware that any such promise has been made. There is in my department no record that any such promise was given to anybody.

Mr. BRADBURY. I am to understand then that the late candidate had no authority for promising that the bridge would be completed at both ends?

Mr. HUGHES. What candidate?

Mr. BRADBURY. Mr. S. J. Jackson, my opponent.

Mr. PUGSLEY. I am not aware that he made any such promise.

Mr. BRADBURY. That promise was made by my opponent and during the campaign that was held out as an inducement all along the river why the electors should vote for Mr. Jackson. It was stated that the government had generously voted $600,000 to give them a bridge. There is a large settlement on the east side of the river.

Mr. PUGSLEY. $600,000 is not simply for the bridge; it is to complete the lock and dam.

Mr. BRADBURY. I think that the fact that they built the bridge increased the cost to $600,000 and it was represented that they would provide approaches for the accommodation of the people of St. Andrew's. This matter has been before the people for the last two years, the people expect that bridge and if the minister takes the position that they are not going to build it I want to know it.

Mr. BARNARD. May I ask the minister what this work is and what is contemplated as a result of it?

Mr. PUGSLEY. This work consists of the building of a lock with a movable dam

and all the necessary appliances. It is to overcome the St. Andrew's rapids, to give them navigation between Lake Winnipeg and the city of Winnipeg and is expected that it will enable vessels to navigate from Lake Winnipeg right up to the city of Winnipeg.

Mr. BARNARD. Are there any towns or cities of importance on Lake Winnipeg?

Mr. PUGSLEY. There are some settlements but the information which is in the department is that Lake Winnipeg has, upon its shores, enormous quantities of wood which is useful for firewood, that there are minerals, that there are vast deposits of building stone and that Lake Winnipeg is teeming with fish. The business that is done there is enormous.

Mr. BRADBURY. It was teeming with fish at one time.

Mr. PUGSLEY. I am informed that there are large quantities there yet. There are also valuable deposits of minerals and of building stone on Lake Winnipeg.

Mr. BARNARD. Am I right in assuming from the minister's statement that this expenditure is intended to open up an undeveloped trade?

Mr. PUGSLEY. It would be to a large extent that.

Mr. BARNARD. Can the minister tell us the number and tonnage of vessels plying on Lake Winnipeg?

Mr. PUGSLEY. I have not that information with me. This is a matter that has been going on for a number of years. It is a matter of history that it was shown clearly to the government on behalf of the city of Winnipeg that the result of building this lock would given to the people firewood at a dollar per cord less than to-day, and as coal is very costly in Winnipeg they burn a good deal of wood for fuel. The timber on the shores of Lake Winnipeg suitable for fuel is almost illimitable so that to a city of 100,000 people this is a very important thing. I am sure that my hon. friend who represents that district will be able to testify to the great benefit that will result from the building of this lock.

Mr. BARNARD. The statement of the minister reminds me of a railway we have running into the city of Victoria which was subsidized by the city and the provincial government to the extent of $300,000. It runs two trains a day, the principal freight being cordwood and the express train on that line is known as the 'cordwood, limited.' It would almost appear that this expenditure of $600,000 is going to be for another cordwood, limited.

Mr. PUGSLEY. The fuel question in Winnipeg is too important to be laughed at.

Mr. BARNARD. I find that there is no appropriation in the estimates this year for harbour improvements in Victoria, British Columbia. I did notice in the estimates that there was an appropriation of $150,000 for 'Victoria Harbour,' and in the innocency of my guileless youth, and being a new member of parliament and being unaccustomed to the wiles of political life, I jumped to the conclusion that the government was going to continue the appropriation for the harbour of Victoria, British Columbia, last year when a sum of $60,000 for harbour improvements was voted. Not taking everything quite as a matter of course I made it my business to make inquiries from the Department of Public Works. I had representations from the city of Victoria asking me to see that if there was such an appropriation a certain portion of the money should be expended in a new rock drilling plant. I went to the department of Public Works and finding the deputy minister engaged I saw the assistant deputy minister, and we turned up this particular item in the estimates and I told him what constituency I represented, and through a misunderstanding, altogether bona fide both on his part and mine, I came away with the idea that the appropriation was for the city of Victoria, British Columbia.

Mr. PUGSLEY. And when you saw it three times as much as last year you were pleased?

Mr. BARNARD. Exactly.

Mr. PUGSLEY. You thought your own city was the only city of that name in Canada?

Mr. BARNARD. I did not at first suspect it was for Victoria Harbour on the Georgian bay which I understand is a new port that is being opened. I would submit that it would be advisable in the interests both of Victoria, British Columbia, and also of a port called Victoria harbour in the county of Kings, New Brunswick, that this particular port in Ontario should take some other name so as to avoid confusion. The assistant deputy minister treated me with every courtesy and without any intention of misleading me he suggested that if the Harbour Association of Victoria, British Columbia, considered that a new dredging plant was necessary the best way to accomplish that would be to address a letter to the Minister of Public Works asking him to have the matter referred to the resident engineer for a report. I accordingly did so, and notwitstanding being a guileless politician and still having a shred of doubt in my mind I wrote to the Minister of Public Works and stated in the letter that I ob-

served that in the estimates there was an appropriation for Victoria of $150,000 for harbour improvements. I received a reply from the minister in which he clearly showed that he had no misrepresentation as to what particular city I was referring to because he wrote as follows:

I am in receipt of your letter of the 16th inst. having reference to the need of a new dredging plant in the harbour of Victoria, British Columbia, and will give your representations careful consideration.

On receipt of that letter all my doubts were set at rest. In the city of Victoria, British Columbia we have an association composed of the most prominent merchants of all shades of political opinion who are interested in the development of the harbour, called the Inner Harbour Association, and I informed the secretary of that association that there was an appropriation of $150,000 for Victoria Harbour. I have since, of course, explained how the error arose. Now, I wish to say a few words with regard to the justice of an appropriation for the harbour of Victoria, British Columbia. In the first place I may say that the secretary of this harbour association is a gentleman who up to the present time has worked for the improvement of that harbour practically without any remuneration whatever. Some years ago, he, at the request of the Department of Public Works furnished that department with a complete set of his plans as to the full development of that harbour, but unfortunately those plans were destroyed in the fire which burned the western block. However from time to time appropriations were made, very small appropriations it is true, in connection with the dredging work in the city of Victoria, but last year—I would not like to insinuate that the proximity of the election had anything to do with it—the city of Victoria was voted an appropriation of $60,000 for the dredging of its harbour. That was the first time in the history of that port, I think I am safe in saying, that it had received more than $10,000. That appropriation has not all been spent, $30,000 out of the $60,000 still remains unspent. The people of Victoria were allowed to suppose, I do not say it was distinctly stated but at any rate the people of Victoria had come to the conclusion that the scheme of development that had been outlined by the gentleman I mentioned and to whom the city of Victoria is so greatly indebted owing to his efforts on her behalf, had been adopted, and that the government were commencing on a scheme whereby they would, by the appropriation of a certain amount each year, in time complete the work in connection with that harbour. However, I find that this year there is no special appropriation for the city of Victoria.

Mr. PUGSLEY. The hon. gentleman is quite in error as to that.

Mr. BARNARD. I would like the hon. gentleman to correct me if I am wrong.

Mr. PUGSLEY. The hon. gentleman will find in the dredging vote an item for dredging for British Columbia, out of which the work will be carried on.

Mr. BARNARD. I said that there was no special vote.

Mr. PUGSLEY. And there being no special vote we can use the general vote.

Mr. BARNARD. There is a general vote for British Columbia. There is also a deputation from Vancouver asking for a very considerable appropriation in connection with dredging of the Narrows at the entrance to that harbour. Then a large amount of money is required for dredging in the Fraser river. A government dredge is coming from Germany and the impression is that the appropriation of $125,000 will not be sufficient to keep the government dredges in operation during the year, because in that province we are so favoured by climatic conditions that work can be continued for twelve months. In addition to that there is a large amount of work to be done in the Arrow lakes, at least the government have a dredge there, and I assume that they would not have it there unless it was necessary. The Minister of Public Works says there is an appropriation of $125,000 for general dredging in British Columbia. I am very glad to see that, but as compared with other provinces, particularly with the minister's province of New Brunswick, that the appropriation is insignificant. I notice that the minister's appropriation for dredging in St. John is $475,000, that is a special vote for St. John.

An hon. MEMBER. And that is not enough.

Mr. BARNARD. Possibly it is not enough, but if we are in times of financial stringency, as the Minister of Public Works tells us, then it is only fair that everybody should get a fair share, and the minister himself has stated to me this afternoon that he considers Victoria a most important port.

Mr. PUGSLEY. Hear, hear.

Mr. BARNARD. I wish to quote a few figures to show the importance of Victoria in comparison, not with St. John alone, but with the other great ports of Canada. In the summary of the report of the Department of Trade and Commerce, in the statement showing the number of tonnage of sea-going vessels, both steam and sail, entered and cleared from the following principal ports during the year, 1906-7 and 1908, it is stated that the sea-going tonnage of the various ports for 1908 was as follows:

Port.	Sea-going tonnage.
Victoria	2,695,987
Montreal	2,689,171
Halifax	2,054,406
Vancouver	2,045,243
St. John	1,859,157
Quebec	1,788,872

Thus Victoria has a tonnage 7,000 tons greater than that of Montreal and 800,000 tons greater than that of St. John.

Mr. PUGSLEY. Is that the tonnage of vessels or the tonnage of merchandise?

Mr. BARNARD. That is the tonnage of vessels.

Mr. PUGSLEY. That includes the daily passenger steamers.

Mr. BARNARD. I wish to be quite fair with the committee. I do not mean to contend that the city of Victoria compares with Montreal or Quebec or Halifax, in the amount of freight it handles, but I do say that the figures I have quoted are sufficient to show that both Victoria and Vancouver are cities of such importance in commerce that the Dominion government has no longer any right to ignore them in questions of national expenditure.

The tonnage I have quoted deals altogether with sea-going vessels. The figures in connection with the coasting trade are somewhat different. These figures are:

Port.	No. of Vessels.	Tonnage.
Montreal	8,111	3,901,000
Quebec	1,654	2,628,136
Victoria	4,953	1,525,445
Vancouver	8,522	1,324,714
Halifax	2,362	1,147,367
St. John	1,866	980,173

I am prepared to admit that St. John ships much more freight than either Victoria or Vancouver, but these figures are sufficient to show to any reasonable person that the ports of Victoria and Vancouver are just as deserving of consideration, notwithstanding the fact that they are in the little province of British Columbia—little in point of votes but big in area and importance—as are some of the ports in the maritime and other eastern provinces.

Again I would like to contrast, for the benefit of the committee, some of the expenditures in these ports for harbour works. The figures I am about to quote I have taken not from the blue-books, but from the Vancouver 'Province,' which quotes them as coming from the Ottawa 'Free Press,' a newspaper not unfavourable to the administration. This paper gives the figures from 1899 to 1908. I shall not weary the committee with the details but shall give the totals as follows: In the ports of Montreal and Quebec, Port Arthur, Fort William, Depot Harbour, Midland, Port Colborne, Kingston, Sydney, N.S., St. John harbour only and Halifax, there has been since 1899 an expenditure of $7,396,446. In the ports of Victoria and Vancouver, in the same length of time, there has been expended the magnificent sum of $256,178. I say that in all fairness, political affinities altogether on one side, the administration should make some appropriation not only for Victoria but also for Vancouver. Ocean steamship lines ply between there and Mexico, Australia, China, and California. In addition to these we have the China Mutual steamers coming in from Great Britain, we have tramp freight ships and we have also all the trade north to the Yukon and the northern ports of British Columbia. I plead for justice for the people of British Columbia. When you see $7,000,000 spent in ten years on the eastern ports and $250,000 in British Columbia, it is not surprising that such contrasts make the people of that province think that their position, so far as federal expenditure goes, is almost intolerable. When one sees an expenditure of $600,000 deliberately voted by this committee for the improvement of some rapids to connect a lake with the city of Winnipeg, where there is no shipping except an occasional prairie schooner, I submit that it is a most unreasonable expenditure. Unless the government can better regulate their expenditure they had better put the matter into the hands of somebody else.

Mr. BRADBURY. I am a little surprised at the remarks of my hon. friend from Victoria regarding the improvements at St. Andrew's rapids. I concur in what the minister says about the necessity of that work. It is of great necessity and is going to accomplish great good, not only for the city of Winnipeg, but for the town of Selkirk and the lake trade. I commend the expense, but I plead with the minister to complete the bridge. That bridge is in a locality where the municipalities are very poor and are absolutely unable to complete it. If the government does not complete it, it will lie there, and the money the government has expended on it will be wasted. I have been advised that it will take $75,000 to put in these two approaches. That is a sum away beyond the ability of these municipalities to contribute. During the campaign all the people along that river were led to believe that they were going to get that bridge, and I would ask the minister to try to arrange to complete it.

Mr. PUGSLEY. Would the hon. gentleman allow me to give him a hint that may be useful? In the province of New Brunswick the provincial government has built scores of steel bridges without calling on the federal government to contribute a cent. In Manitoba the provincial govern-

ment, I understand, does not aid the municipalities very much. Here is a case in which the federal government is widening this service bridge at some considerable expense to aid the municipalities, and it is not at all impossible, I suppose, if the attention of the provincial government of Manitoba were called to that fact, that it might be willing to co-operate with the federal government in the building of the bridge. I might also point to the fact that the government of Quebec and the government of New Brunswick are joining with this government in building a bridge across the Restigouche river at Metapedia, and that the Quebec government is also joining us in building a bridge across the Ottawa River at Chapeau. It is true, these are interprovincial bridges; but there is all the more reason why the government of Manitoba should contribute to this bridge which is wholly within the province of Manitoba. I do not say that there has been any determination arrived at by this government with regard to the approaches. The matter has not come before me in a formal way. When the hon. gentleman mentioned it I was rather surprised that the municipalities should expect us to build the approaches. At all events, the matter will be considered, but at the present moment I am not able to hold out very strong expectations to my hon. friend on that subject.

Mr. HUGHES. Are there not large areas of splendid land to the east of Lake Winnipeg ?

Mr. PUGSLEY. I understand that there are valuable forests and therefore the soil must be good. Just a word with regard to the complaint which my hon. friend from Victoria (Mr. Barnard) has set up on behalf of that city. If my hon. friend had looked into what we are doing for British Columbia, I do not think that he would feel that he had ground for making that complaint. I recognize as strongly as he can the importance of the ports of Vancouver and Victoria and their claims upon the public treasury. At the last session of parliament, at the instance of the Hon. Mr. Templeman, who was then as now the representative of that province in the government, provision was made for improving the harbour. Considerable dredging work was done and at this very moment we have actively at work in the harbour of Victoria the dredge 'Mudlark' and the very powerful dredge recently constructed by the government, and a considerable part, if not all, of the appropriation which was made last session, will be expended before the close of the present fiscal year in doing the very work which my hon. friend thinks ought to be done in the harbour of Victoria.

Mr. BARNARD. The information I have received from the department was that only one half of the sum voted last year had been expended, and that the balance would lapse.

Mr. PUGSLEY. My hon. friend was no doubt informed that that was the expense up to the 31st of December last. Since that time both dredges have been kept at work and will continue to work, and the appropriation will be used to pay for the work done to the end of the present month.

Mr. BARNARD. Will that exhaust the appropriation for last year?

Mr. PUGSLEY. Probably not entirely. If my hon. friend will turn to the item for dredging, he will find that we have put in $125,000 for dredging in British Columbia. With the new dredge brought from Germany, we shall have four at work in that province, the ' Fruhling,' the ' King Edward,' the 'Ajax' and the 'Mudlark.' These are all very important harbours. My hon. friend must not forget that the purchasing of these dredges by the government involves a very large expense. Of course, the operating expenses day by day will be very much less than the contract dredging in the eastern waters of Canada. You must not forget that we have brought from Germany—and I am glad to know that she has arrived safely in British Columbia after a voyage of 15,000 miles—a dredge which will be the best in Canada, with a capacity of 1,000 cubic yards per hour.

Mr. HUGHES. Of what nature?

Mr. PUGSLEY. A suction dredge.

Mr. CROCKET. What did she cost?

Mr. PUGSLEY. The price was $250,000, delivered in British Columbia. We do not pay a dollar until she is delivered and tested and found perfect. I think it is a splendid investement for Canada and will be of special advantage to British Columbia. We have also the ' Ajax,' which was built in Toronto. In these we have two of the finest dredges that the government has yet obtained, and both will operate in British Columbia.

Mr. HUGHES. Is the ' Ajax ' a suction dredge?

Mr. PUGSLEY. No, a dipper dredge.

Mr. CROCKET. What is the cost?

Mr. PUGSLEY. About $125,000. She has an eight-yard dipper, but, of course, her capacity is much less than the other.

Mr. HUGHES. How deep will the 'Ajax' dredge?

Mr. PUGSLEY. I think 35 or 40 feet. We shall continue dredging Victoria harbour. My attention has been called by a gentleman from Victoria, as well as by the Minister of Inland Revenue to the ne-

cessity of doing rock blasting. Certain blasting was done last year, and by means of the 'Ajax,' we have carried away the material so blasted. We propose to improve the entrance to a depth sufficient to accommodate the steamers that come in to the inner harbour. So far as Vancouver is concerned, the government is pleased, as I am sure the members of this House are, to know that Vancouver is growing with amazing rapidity. I was glad to learn from the Vancouver delegation who waited upon me that in False creek alone, during the last year, there entered 600,000 tons of merchandise. This indicates marvellous progress. Vancouver is evidently destined to be one of the largest cities in Canada, equalling before many years, in all human probability, the city of Montreal. We feel it our duty to make the harbour of Vancouver safe. Until recently it was regarded as safe—a splendid harbour. But ships are growing larger, the number of vessels entering Burrard inlet and going through the narrows is increasing, and the traffic is becoming congested and therefore dangerous. I have ordered a complete survey of the narrows, of Parthia shoal and another shoal there in order to learn what is necessary for the improvement of the harbour. When that survey is made we hope there will be little delay in the dredging to widen the narrows and remove the shoals and make Vancouver perfectly safe for the largest steamships. We must accommodate the traffic in False creek, and I have given directions that, as early as possible—and I trust the delay will not be very great—one of the dredges we have now in British Columbia waters should be put to work to deepen the entrance to False creek and make perfectly safe that part of the harbour of Vancouver. We expect to keep our dredges going during the present season, and the interest of Vancouver and Victoria will be well looked after. The necessity for these works has been strongly pressed upon us by my hon. colleague the Minister of Inland Revenue (Mr. Templeman, and attention will be given to his representations. We have another great work in British Columbia, the improvement of the Fraser river. It was especially for this that the 'Fruhling' dredge has been purchased . At New Westminster there are very large lumber mills, and up the Fraser river are vast areas of splendid forest growth. The quantity of timber coming down the Fraser is enormous, but it is but little compared with what will come down in the almost immediate future. We plan to make the Fraser river from New Westminster to the sea a ship channel for the very largest ocean steamers which come to British Columbia. We shall proceed with these works as rapidly as finances will permit—of course we must have regard to the revenue. But hon. members who represent British Columbia and the people of that province can rely upon the government as being alive to the necessity of improving the Fraser and the harbours of Victoria and Vancouver as well as Nanaimo and other harbours along the coast.

Mr. BRADBURY. I do not think the minister (Mr. Pugsley) has any intention of giving a false impression, but he expressed regret that the Manitoba government is doing so little for the municipalities. I wish to tell him that the Manitoba government is doing all it can for the municipalities. And the fact that this government has seen fit to send into that country a large settlement along Lake Winnipeg, placing the people on land utterly unfit for them to live on, has entailed a large expenditure upon the Manitoba government. Last year the government spent $10,000 or $15,000 in grading the land west of Lake Winnipeg. I have always found the Manitoba government willing to do anything that could help the people. The revenue of the province is not large, and if this government would give the province of Manitoba what belongs to it I do not think there would be any trouble. I do not feel that I have any case to go to the provincial government with for they could not afford at the present time the expenditures necessary to make the approaches at the ends of the bridge. I would urge this government to take up this matter and implement the pledges made during last election by the candidate.

Mr. J. D. TAYLOR. What will be the total cost of this bridge?

Mr. PUGSLEY. I have not the cost of the bridge separate from that of the rest of the work. For the electrical machinery, the bridge and other steel work, machine shops, repair shops and movable dam, the total cost was something like $540,000. That was the contract price.

Mr. ROCHE. How much was the cost of this work at the St. Andrew's rapids increased by reason of the changes in the specifications? I understand there was a change of contractors, and a change in the specifications. Can the minister say why the original contractor was released, the amount of money he received, and the increased cost by reason of the change in specifications?

Mr. PUGSLEY. That took place some four years ago or more. I think I gave that information last session, and the hon. gentleman will find it in 'Hansard', I think the contract was given to Kelly Bros., they were unable to carry on the work, and it was decided to make some changes. My information is that after the contract was let to Kelly Bros., in July, 1900, in

view of the slow progress made, also of the abnormally high prices specified, and the chief engineer being unwilling to apply to additional works those schedule prices, authority was granted to the Minister of Public Works to proceed no further with the construction as originally designed, but to close the contract, return the security deposited by the contractors, and pay for the work done. They made a claim for $246,000 for work done, which was cut down considerably. I think there was an arbitration, and an award was made to the contractors for $137,911.

Mr. BRADBURY. What was the entire cost of the improvements at the Rapids?

Mr. PUGSLEY. They will cost probably a million and a quarter dollars before they are entirely completed.

St. John harbour improvements, $475,000.

Mr. DANIEL. Would the minister state how he proposes to expend this money?

Mr. PUGSLEY. The amount will be expended in building the wharf extension on the western side of the harbour, also in dredging work.

Mr. DANIEL. Will any of this be expended in Courtenay bay?

Mr. PUGSLEY. I am not sure as to that, that will depend upon certain action which might be taken by the Grand Trunk Pacific in fixing their terminals in the maritime provinces, and the exact location of their terminal at St. John. The Grand Trunk Pacific have told me that Courtenay bay is the only place where they can establish a terminal at St. John.

Mr. DANIEL. What will the minister do with these contracts which he has already let, or said he let last fall, for dredging in Courtenay bay?

Mr. PUGSLEY. The minister did not state he had let any contracts for dredging in Courtenay bay. The hon. gentleman is drawing upon his imagination.

Mr. DANIEL. I will quote from the minister himself. On the 21st of October last there is a report in the 'Daily Telegraph' of a speech he made at Little River, in the course of which he said:

As a result of the operations carried on——

He is refering to borings and other things done at Courtenay bay.

—it will be possible to dredge out a channel 800 feet wide so that large steamers can dock there and carry away the produce that will be brought there by the Transcontinental Railway. This is one of the most splendid discoveries ever made in the city of St. John. It is better than a diamond mine, because a diamond mine gives out in time, but this will be more valuable to the city from year to year, and will provide work for hundreds of people. I have asked for tenders for carrying on this great work, and it will be commenced shortly.

Further on he says:

In view of that vote——

He is referring to the vote that was given here twelve months ago.

—I am authorized by law to call for tenders and to let the contract and ask parliament for appropriations.

Mr. PUGSLEY. The hon. gentleman said I had stated that I had let contracts for the work. The hon. gentleman has not shown it yet.

Mr. DANIEL. This is in the hon. gentleman's own paper, called the 'County News,' and in it is published a plan of Courtenay bay, the works which are said to have been planned, the projected new wharfs, and dredging to the west side of Courtenay bay, as prepared by his own engineer, Louis Coste, of the Public Works Department, and it says:

This is the plan of the harbour works proposed by the Department of Public Works at Ottawa. A contract for dredging ten million cubic yards of material in the harbour of St. John has just been awarded by Hon. William Pugsley, and work will be commenced at once.

Mr. PUGSLEY. Whose statement is that?

Mr. DANIEL. I presume the minister is responsible. It is spread out in his own paper. Not content with the five daily papers which were supporting him in St. John he had to go to work and issue another. I think it was issued weekly. But here is the statement, and it is in thick, heavily leaded lettering. That was spread abroad through the constituency. I think it was never denied by the Minister of Public Works. He took every advantage of it.

Mr. PUGSLEY. The minister stated exactly what had taken place.

Mr. DANIEL. Is that statement I read just now a true statement or not?

Mr. PUGSLEY. If the hon. gentleman will ask me what took place I will be very glad to inform him.

Mr. DANIEL. I will read it again to the hon. gentleman and ask him if it is true:

This is the plan of the harbour works proposed by the Department of Public Works at Ottawa. A contract for dredging 10,000,000 cubic yards of material in the harbour of St. John has just been awarded by the Hon. William Pugsley and work will be commenced at once.

I will ask the minister if that is a true statement?

Mr. PUGSLEY. When the hon. gentleman is through I will make a statement.

Mr. DANIEL. I will allow the minister to interrupt me to the extent of saying whether that is a true statement.

Mr. PUGSLEY. I stated in St. John exactly what was the case. My hon. friend will remember that he was very sceptical about the possibility of dredging Courtenay bay?

Mr. DANIEL. Never.

Mr. PUGSLEY. I think the hon. gentleman informed the electors that it would take fifty years to do it.

Mr. DANIEL. No.

Mr. PUGSLEY. Does not the hon. gentleman remember that I was calling attention to the fact that he was counting time at the rate of progress in the old days of Conservative rule when 100 years was about equal to ten years at the present time, and when 50 years was about equal to five years of progress under the present administration. For the information of my hon. friend, who has apparently been misinformed, very grievously, I would say that what I told the electors was that at the last session of parliament there was a vote for harbour improvements at St. John, and that Courtenay bay, being part of the harbour of St. John, it gave me authority for calling for tenders for dredging at Courtenay bay as well as on the western side of the harbour. I stated that I had called for tenders for dredging.

Mr. CROCKET. And had you called for tenders?

Mr. PUGSLEY. I had. I stated that I had received tenders for the work and I also stated that I had recommended to my colleagues the acceptance of the lowest tenders and that the matter was then before council.

Mr. DANIEL. The minister stated just now that I had made quite a number of statements during the election in regard to the great length of time that it would take to dredge Courtenay bay. I am quite aware that the minister made these statements and that his press repeated them, and I am also aware that I never made the statements. That is one of the many statements made in the interest of and possibly by my hon. friend that were not accompanied with that amount of virile veracity which we expect to find in a minister of the Crown.

Mr. PUGSLEY. What particular description of veracity is virile veracity?

Mr. DANIEL. Except possibly during election time. We always allow a little leeway at that time. I have no doubt that if I could get through this speech I would find the statement that tenders had been accepted for this work. At all events they are in the minister's own paper, the 'County News.'

Mr. PUGSLEY. That is not the minister's own paper.

Mr. DANIEL (reading).

We are doing a lot of work on the Mission river, we are spending millions on dredging and we intend asking the government to carry out this work here.

That is the Courtenay Bay work. Perhaps the minister will tell us if he has asked the government to do that and whether it is the intention of the government, through the department of Public Works, to go on with this Courtenay Bay work and carry it to completion.

Mr. PUGSLEY. I shall be very glad. I have myself represented to my colleagues in the government the desirability of going on with this work subject to the proviso that an arrangement is come to with the Grand Trunk Pacific Railway Company for the use of Courtenay Bay for their terminals. Of course, without a perfect understanding with regard to that, I could not expect my colleagues to go on with that work, but I may say for the information of my hon. friend, and I am sure that he will be gratified to learn it, that the Grand Trunk Pacific have assured me that they regard Courtenay bay as being well adapted for terminal facilities.

Mr. HUGHES. In writing?

Mr. PUGSLEY. Yes.

Mr. CROCKET. When did the minister get that assurance?

Mr. PUGSLEY. Last fall. They were extremely gratified to find that the result of the borings which were instituted by my department jointly with the city of St. John and the provincial government showed that Courtenay bay, which most people supposed rested upon solid rock, simply consisted of a great deposit of silt and sand, so that we could get by easy dredging a depth of 32 feet of water at low tide. They were extremely gratified to find that that was the case, and they have given to me the assurance that they regard Courtenay bay as most eminently suitable for laying out their terminals on a broad and comprehensive scale. My hon. friend can well understand that a matter of this great importance will take time to mature. All I can say is that the matter is before council, but what conclusion council will arrive at I am unable to say.

Mr. DANIEL. That is the stand that I rather took during the election and that is the stand which the minister rather poked fun at me for taking. It was not a question of wait then; he said that it was absolutely necessary to do the work at once, that it

would not do to wait till the Grand Trunk Pacific was right at hand in coming to St. John. Am I correct in understanding that the minister gives the information to us to-night that he does not propose to go on with the Courtenay bay work this summer ?

Mr. PUGSLEY. Not immediately—no.

Mr. CROCKET. I understand the minister to state that he had asked for tenders for the dredging in Courtenay bay ?

Mr. PUGSLEY. Yes.

Mr. CROCKET. And that none of the tenders had been accepted. Would the minister explain why the tenders were not accepted?

Mr. PUGSLEY. The tenders were not accepted as far as the Courtenay bay is concerned. They were accepted as to the other part of the harbour. They were not accepted as far as Courtenay bay is concerned because the government are not prepared at this moment to proceed with the work.

Mr. CROCKET. But notwithstanding that the minister felt justified in asking for tenders for that work while the election was going on?

Mr. PUGSLEY. Yes, at the time he did.

Mr. CROCKET. For a work that the government now admit they are not justified in proceeding with. I would like to know what the tenders amounted to.

Mr. PUGSLEY. The lowest tender for dredging in Courtenay bay and also for a part of the western side of the harbour was 35 cents per cubic yard, and if the dredging in Courtenay bay were done by hydraulic dredge and the materials were deposited behind the revetment wall it would be 25 cents per cubic yard; for a portion of the dredging in the western side of the harbour at the bar the price is 50 cents per cubic yard and 35 cents for the other portion. The whole dredging work has been fixed at 39½ cents per cubic yard. The next tender was the same, 39½ cents, so that so far as Courtenay bay is concerned and so far as a portion of the western side is concerned the tender was somewhat higher. The next tender was some 74 cents or 75 cents per cubic yard.

Mr. CROCKET. What was the value of the tender moneyed out on the quantity of dredging in Courtenay bay?

Mr. PUGSLEY. It would be $2,000,000 by hydraulic work at 25 cents. If it were by the ordinary dredging it would be more.

Mr. CROCKET. Do I understand the minister to state that he asked for tenders for $2,000,000 worth of work which the government now says they are not justified in proceeding with?

Mr. PUGSLEY. I used no such expression as not justified ; I said the government did not intend to proceed immediately with that work.

Mr. CROCKET. I understood the minister to state that the government now felt they were not justified in proceeding with a work of that magnitude.

Mr. PUGSLEY. I don't think I used such an expression.

Mr. CROCKET. Well the fact is that the government is not proceeding with it; notwithstanding that the minister called for tenders for work that will involve an expense of $2,000,000 on the basis of the lowest tenders. Had he the authority of an order in council to do that or did he do that upon his own responsibility as minister?

Mr. PUGSLEY. On his own responsibility and under the authority of the Appropriation Act of last session.

Mr. CROCKET. When were these tenders asked for?

Mr. PUGSLEY. It was some time last September.

Mr. CROCKET. Is that the nearest the minister can go to it? I would like to know the exact date.

Mr. PUGSLEY. I will get it for you later.

Mr. EMMERSON. Assuming that this work was to cost $2,000,000 was it intended that it should be done within this year or would it cover a number of years?

Mr. PUGSLEY. That work would be extended over some six or seven years.

Mr. CROCKET. Then it ought to be good for another election.

Mr. DANIEL. The minister must be mistaken with regard to that because last year he stated that the Grand Trunk Pacific trains would be in St. John in September, 1912, and he was urging this work along so that there might be accommodation for the grain when the Grand Trunk Pacific trains arrive there. In view of that must we not look askance at some of the promises which the minister may make before the next election comes round?

Mr. PUGSLEY. The hon. gentleman does not realize that a great deal of accommodation can be given before the scheme is finally completed, just the same as on the west side.

Mr. CROCKET. Can the minister say what was the latest date for the reception of these tenders

Mr. PUGSLEY. It was some time in October.

Mr. HUGHES. Before the 26th?

Mr. PUGSLEY. Yes.

Mr. RHODES. Were these tenders accompanied by a certified cheque?

Mr. PUGSLEY. Yes.

Mr. RHODES. I suppose the cheque was returned?

Mr. PUGSLEY. No, because the contract was let for a part of the work.

Mr. CROCKET. Has the minister the advertisement there?

Mr. PUGSLEY. I have not.

Mr. DANIEL. What is paid to the dredging company for the work they are doing now below the Beacon bar?

Mr. PUGSLEY. 39½ cents per cubic yard; it is the lowest that work has ever been done for in the port of St. John.

Mr. DANIEL. I believe it is. Have you inspectors on that dredging?

Mr. PUGSLEY. Yes, not only the resident engineer, but inspectors as well.

Mr. DANIEL. Who compose this dredging company?

Mr. PUGSLEY. I do not know; Mr. Moore is the president of it.

Mr. DANIEL. Is that 'Mr. John E. Moore?'

Mr. PUGSLEY. Yes.

Mr. CROCKET. Is that the man that was associated with the minister in the purchase of the 'Telegraph' newspaper?

Mr. PUGSLEY. That's a poser.

Mr. CROCKET. You have no answer to give to that?

Tiffin harbour—improvements, $125,000.

Mr. WRIGHT. How much has been spent at Tiffin to date and what is the total cost of the dredging there?

Mr. PUGSLEY. We had last year an appropriation of $125,000 and we expended up to the 1st of December $119,080.

Mr. WRIGHT. What will be the total cost of the dredging there?

Mr. PUGSLEY. It is pretty difficult to say what the total will be, but it will probably run up in the vicinity of half a million dollars when completed. We intend if possible by the 1st of October next to have the dredging done so that the lake steamers can go right up to the Grand Trunk Pacific elevator. There will be other work to do for a number of years afterwards. The Grand Trunk Pacific is laying out its terminals there and they propose accommodating about 10,000,000 bushels of grain.

Mr. HUGHES.

Mr. WRIGHT. I want to draw the attention of the minister to the fact that while the Trent valley canal is not being carried out by his department, yet I presume that the work at the west end lying almost at this place which is necessary to accommodate the large vessels which will come there will be undertaken by the Public Works Department. Is he making any provision to be ready for that when the work is completed? Large vessels will have to come there to the mouth of that canal. Is the minister making any provision in order to be ready for them when the canal is completed?

Mr. PUGSLEY. The matter has been under consideration.

Mr. LENNOX. The Minister of Railways assured me to-day that the point at which the canal shall enter the Georgian bay has not yet been determined. Surveys were made by both the Severn and Nottawasaga rivers and the minister has undertaken to notify me before any decision is come to in order that I may have a deputation wait on him.

Mr. PUGSLEY. Notwithstanding that it may be wise for us to think the matter over.

Mr. LENNOX. I hope the minister is not taking it over in any very definite way until we know which is to be the outlet.

Mr. PUGSLEY. It has been suggested that the canal boats would be taken care of in the two harbours of Midland and Tiffin.

Mr. LENNOX. That would be on the assumption, which I hope is not justified yet, that the Severn route is adopted.

Mr. HUGHES. The elevator at Tiffin is being built not by the government, but by the Grand Trunk Railway. They are doubling their track from Midland and Tiffin to meet the main line. This elevator is not for canal barges, but for the purposes of the Grand Trunk Railway, and the government are doing this work at Victoria harbour where the Canadian Pacific Railway are putting in their works and at Tiffin to meet the wishes of the railway company by giving good accommodation for vessels.

Mr. PUGSLEY. That is right.

Mr. BRADBURY. Has the minister any complaint from the settlers around Lac du Bonnet in reference to a bridge built by the city of Winnipeg which is said to be much too low so that at high water there is only about three feet between the water and the bridge.

Mr. PUGSLEY. A report has been asked for by the resident engineer.

Victoria harbour improvements, $150,000.

Mr. BARNARD. Can the government make some change in the name of that harbour?

Mr. PUGSLEY. Victoria harbour has been selected by the Canadian Pacific Railway and I do not know whether there would be any objection to changing the name or not. The matter may be worth considering.

Mr. HUGHES. It is an old Ontario post office.

Mr. BARNARD. Would the minister give some assurance that he will endeavour to use his influence with the Canadian Pacific Railway or the post office authorities to have some change made, as it will lead to confusion.

Mr. PUGSLEY. It is said that a rose by any other name will smell as sweet.

Mr. BARNARD. Then why not Victoria harbour.

Mr. PUGSLEY. Possibly; I will think it over.

Mr. LENNOX. Would the minister think of changing the name of Victoria, B.C.?

Mr. BARNARD. If my hon. friend wishes to discuss that I am prepared to go on. Victoria is the capital of British Columbia; it is the oldest city there.

Mr. PUGSLEY. I would not seek to disturb the name of Victoria, British Columbia.

Mr. HUGHES. The town of Victoria Harbour is a very old one and I doubt if they would consent to have it changed.

Mr. WRIGHT. It is where Champlain landed when he went up there 300 years ago. It is possibly one of the oldest places in Canada, much older than Victoria, British Columbia. How much has been spent in Victoria Harbour and what does the minister estimate the total cost to be?

Mr. PUGSLEY. We estimate the total cost at between $300,000 and $400,000.

Mr. HUGHES. You will spend a million there.

Mr. PUGSLEY. Possibly so, but not immediately. Let us proceed with the Nova Scotia items.

Mr. HUGHES. A number of Nova Scotia members understood that these items would not be reached to-night and I ask the minister to adjourn the committee.

Mr. A. K. MACLEAN. The Nova Scotia items are very small, only about $270,000. We have passed about $2,500,000 in the last 15 or 20 minutes, and some of the Nova Scotia members like myself would like to finish this to-night.

Mr. HUGHES. I would ask the minister to reconsider his decision and not go on with these items to-night.

Harbours and rivers, Nova Scotia, $279,310.

Mr. HUGHES. I would again ask the Minister of Public Works to adjourn. I think we have done very well to-day.

Mr. PUGSLEY. We might as well go on for an hour.

Mr. J. D. TAYLOR. I would like to suggest that we have done enough work for to-night. I do not think it is fair that we should be asked to vote large sums of money, or anything, at this time of night. We are here to do business in a business-like way.

Mr. PUGSLEY. There is not a single new item in this book.

Mr. HUGHES. If we had dreamed that the minister was going on and was not going to conclude with the items we have just passed, a number of them would have been criticised very much more closely.

Mr. PUGSLEY. I am sure that I gave no such information.

Mr. RHODES. The hon minister has intimated that because there are no new items in the estimates for Nova Scotia, they should go through quickly. With deference I would say that to my mind at least that is one reason why it will take some time to get these items through. So far as the county of Cumberland is concerned, there are two items which look very lonely—one for $2,000 and one for $1,000; whereas in the estimates of last year there were seventeen items for that county, aggregating $40,000, and it will be my duty to inquire why and wherefore the difference between the items of this year and those of last year.

Mr. PUGSLEY. I shall be happy to give all the information to-night.

Mr. PRICE. This is very unfair. We have done our best to pass the estimates to-day, and I think it is very unfair to ask us to go on at this hour of the night.

Mr. LENNOX. The hon. member for Lunenburg has stated that within a few minutes we have passed upwards of $2,000,000. The minister says that there was no understanding that we should rise when these items were through. Although there was no actual understanding, the idea was, I believe, in the minds of all of us, that the minister would act reasonably with us if we acted fairly with him. It is now twenty minutes to one o'clock, and it has recently been impressed upon the minds of all of us that we have been sitting altogether too late. There is not only the item to be considered, but members who would like to take part in the discussion

of these items are absent, and therefore I think the minister should not insist on our going on at this time. We have done a good day's work, we have been reasonable in passing as many items as we have done, and I hope the minister will agree to let the committee rise.

Mr. PUGSLEY. I have nothing to complain of in regard to my hon. friends on the other side. I told some gentlemen that the estimates for Nova Scotia would be up to-night.

Mr. HUGHES. Suppose we pass the first, the second and the fourth items, and then adjourn.

Mr. PUGSLEY. Very well.

Some resolutions reported.

Hon. W. S. FIELDING (Minister of Finance) moved the adjournment of the House.

Mr. HUGHES. Any government business on Monday?

Mr. FIELDING. Monday is a private members' day

Motion agreed to, and House adjourned at 12.50 a.m. (Saturday).

HOUSE OF COMMONS.

MONDAY, March 8, 1909.

The SPEAKER took the Chair at Three o'clock.

COMMITTEE ON STANDING ORDERS.

Mr. G. E. McCRANEY (Saskatoon) moved:

That the first report of the Select Standing Committee on Standing Orders, presented on the 5th inst., be now concurred in.

He said: On Friday last when this report was presented, the hon. leader of the opposition made some inquiry as to whether any undertaking would be required from the promoters of the Bill. I have received from the clerk of the Committee on Standing Orders the following memorandum:

The House might be informed that the clerk of the Railway Committee, in the case of special reports being made by the Select Standing Committee on Standing Orders in connection with notices found defective, usually directs the attention of the chairman of the former committee, and I presume the same course will be followed in the present case when the Bill comes up for consideration.

Mr. R. L. BORDEN. The memorandum contains some information which is of value, but I would not be inclined to regard it as wholly satisfactory. It is merely a statement of the clerk's view as to the observance of the usual practice, which I do not think is sufficient. The chairman of the Railway Committee should inform the House that when this matter comes before that committee, he will see that the notice is in order. That is all we require.

Mr. McCRANEY. I may say that since receiving that memorandum from the clerk of the Committee on Standing Orders, I saw Mr. Hartney, and he tells me that he takes note of all matters that come before the Standing Orders Committee, which have to receive special attention, and he satisfies himself that all the requirements have been complied with before they are taken up by the Railway Committee.

Mr. R. L. BORDEN. If the chairman of the Railway Committee will give me an assurance that will be satisfactory.

Mr. GUTHRIE. The practice, I may say, is that the clerk of the Railway Committee notes any objections or omissions that have been made in compliance with the standing orders or rules, and before any Bill is presented the irregularities have to be waived or the formalities complied with. Otherwise the Bill is not proceeded with.

Mr. R. L. BORDEN. These are brought to the attention of the committee?

Mr. GUTHRIE. To the attention, not of the committee, but of myself as chairman, and the Bill is not presented to the committee unless the formalities are complied with.

Motion agreed to.

NEW MEMBER.

Mr. SPEAKER. I have the honour to inform the House that the Clerk of the House has received from the Clerk of the Crown in Chancery a certificate of the election and return of Frederick Tennyson Congdon, Esq., for the electoral district of the Yukon territory.

FIRST READINGS.

Bill (No. 93) representing patents of Ammonal Explosives (1908), Limited.—Mr. Macdonell.

Bill (No. 94), respecting the Cedar Rapids Manufacturing and Power Company.—Mr. Boyer.

Bill (No. 95) to incorporate the Royal Guardians.—Mr. Lachance.

Bill (No. 96), respecting the Kettle River Valley Railway Company.—Mr. Burrell.

Bill (No. 98), to amend the Exchequer Court Act.—Mr. Aylesworth.

Bill (No. 99), to amend the Railway Act.—Mr. Conmee.

THE INSURANCE ACT.

Hon. W. S. FIELDING (Minister of Finance) moved for leave to introduce Bill (No. 97) respecting Insurance. He said: Mr. Speaker: This Bill is to a very large extent the Bill which was presented to the House last session and held over for further consideration. It is not, however, the same in all respects. The Bill of last year was the subject of a protracted hearing and inquiry before the committee on Banking and Commerce, during which many suggestions were offered by way of amendment. We have had the benefit of that inquiry, and the benefit of the further study which has been had of the Bill in consequence of the delay; and with the better light which has come to us we have endeavoured to make some improvements in the Bill. I shall call the attention of the House to the points in which the Bill differs materially from that of last year. We do not make any change in the existing law with respect to the assessment insurance companies. A proposal in relation to these institutions was made in the Bill of last year; but even if we had gone on with that Bill, that proposal, as was stated at the time, would have been withdrawn.

The principal companies engaged in that line of business represented to us that they recognized the necessity for strengthening their position, that they were going about it in their own way and desired to be left to themselves for that purpose. We are aware that efforts are being made in that direction and so we do not propose in this Bill to make any change in the existing law with respect to these organizations. Probably the question of investments is the one which engaged the most attention before the committee last year. We have made some changes with respect to the provisions on that subject to which I shall invite the attention of the House. Section 60 of the new Bill will read:

> Any life insurance company which derives its corporate powers, or any of them, from an Act of the parliament of Canada, or which is within the legislative power of the parliament of Canada, may invest its funds, or any portion thereof, in the purchase of—
>
> (a) The debentures, bonds, stocks, or other securities of or guaranteed by the government of the Dominion of Canada, or of or guaranteed by the government of the United Kingdom, or of any colony or dependency thereof, or of or guaranteed by the government of any foreign country, or state forming a portion of such foreign country, wherein the company carries on or is about to carry on business, provided the Treasury Board has signified its approval of such securities, or of any municipal or school corporation in Canada, or elsewhere where the company is carrying on business.

That is substantially the same as in the Bill of last year.

Subsection (b) 1 includes among the securities in which a company may invest

> The bonds of any company which bonds are secured by a mortgage to trustees or a trust corporation, or otherwise, upon real estate or other assets of such company.

The former Bill required that these bonds should be outstanding for at least five years. In the present Bill we have dropped the time condition; if the bonds are secured by mortgage they are deemed to be good and may be used as a field for investment. The former Bill restricted these bonds to the bonds of a corporation incorporated in a country in which the insurance company was carrying on business. We have, after the discussion which has taken place, removed that restriction. Subsection 2 of subsection (b) reads:

> The debentures or other evidences of indebtedness of any Company, which has been doing business for a term of not less than five years prior to the date of such investments, provided default shall not have been made by such company in the interest payments upon its debentures or other evidences of indebtedness within the said period of five years prior to such investment.

In the former Bill it was required that such debentures should be of seven years' standing. In the present Bill we apply the time limit not to the debentures but to the standing of the company which issues the debentures. If a company is of five years' standing and has made no default it is presumed that its debentures may be treated as good.

Subsection 3 of subsection (b) reads:

> The preferred or guaranteed stocks of any company which has paid regular dividends upon such stocks or upon its common stocks for not less than five years preceding the purchase of such preferred or guaranteed stocks.

Last year's Bill provided that such stocks should have paid 4 per cent for seven years. The present year drops the 4 per cent condition and provides that the company shall have paid regular dividends for five years on this class of stock but does not specify the rate. The argument is that this is a high class of stock which may in some instances not pay as much as 4 per cent, and that it is not wise to insist upon the 4 per cent rate.

Subsection 4 of subsection (b) reads:

> The common stocks of any such company upon which regular dividends of at least 4 per cent have been paid for the seven years next preceding the purchase of such stocks: Provided that not more than 20 per cent of the common stocks and not more than 20 per cent of the total issue of the stocks of any company shall be purchased by any such life insurance company, and that no company shall be permitted to invest in its own shares

or in the shares of another life insurance company.

Last year's Bill provided that the common stock should have paid at least five per cent dividends for ten years. The present Bill recognizes the stock as good if it has paid four per cent for seven years.

There is a proviso here as to the percentage of money which may be invested in the securities of any one company. The object of that was to provide that the company should not create a subsidiary company and obtain a controlling interest in it. It was found, however, that the words of the clause seemed to be too broad, and we have now amended it. Last year's Bill limited the investment to twenty per cent of all the stocks or securities of the company. In the present Bill we are distinguishing between the stocks and bonds and our proviso is that the investment may not exceed twenty per cent of the stocks of any company, but we leave the company free to invest in the bonds if they are deemed to be good security.

Subsections (c) and (d) of this clause recognize ground rents or mortgages on real estate, and life and endowment policies as proper subjects for investment, but these are not changes and it is not necessary to say anything concerning them.

A question arose as to what action should be taken respecting any investments of a company in securities which might not come within the new law. Provision was made that in the case of securities not recognized by the new Bill the securities should be disposed of within a certain time. We have changed that to provide that where the investments were made in securities which at the time of their purchase were legal and proper the company shall be free to dispose of them at such time as it may find most convenient. In the case of securities which, at the time of their purchase were not strictly within the terms of the old Insurance Act—this applies in one or two instances—provision is made that such securities shall be disposed of within a period of five years.

A question which has received great attention in the discussion of insurance matters is the expenses of management. In the last Bill provision was made for a limitation of the expense on new business, and at one stage it seemed that such a provision was called for, if not by what had occurred in Canada by the developments in other countries. In the investigations abroad great importance was attached to this question but when it came to be discussed with insurance men here before the committee it was urged that it would be exceedingly difficult to apply a limitation of that kind without interfering with the volume of insurance. It was held that the proposed limitation would so hamper the insurance agents that they would not be able to make a respectable income and would not enter the field, so that there would be a falling off in the amount of insurance, which is not desirable, because we all feel that the encouragement of life insurance is a good thing. We have inserted a provision in the present Bill not to put any limitation on the expense of new business particularly but to provide a limitation upon the expenses generally. If this proviso were not qualified, it might prove a great handicap to new companies. The expenses of management of a new company are necessarily greater in proportion than the expenses of an old company with a large volume of business, so we propose that the limitation of expenses shall apply to old companies which have a standing of fifteen years, or to any company so soon as it comes to the age of fifteen years, and that in the case of new companies to be incorporated hereafter, this limitation shall begin when they have had ten years of existence. Last year's Bill required that the returns should show the expense of new business separate from ordinary business. Such a division has been found difficult and we have dropped this provision and substituted one providing for a return of what is technically called a gain and loss exhibit which it is thought might to some extent serve the same purpose. Last year's Bill proposed that each class of insurance should be dealt with in a separate policy.

This year's Bill continues that provision, with, however, this qualification,—that accident and sickness insurance may be deemed as practically one, and these two may be included in one policy.

There is a provision with regard to what I may call the exchange of securities; that is to say where a company is required by the terms of the proposed legislation to dispose of securities within a given time, it may be found convenient that they should exchange these securities for some others which, while not coming within the class approved by the Bill, would still be desirable securities and of a better class than those now held by the company. The conditions are somewhat exceptional, and we think it well to make a provision which will meet those conditions.

There is a provision that no life insurance company shall loan any of its funds to any director, shareholder, officer or clerk thereof. That should not be held to interfere with the ordinary loan to any policy-holder who is entitled to receive it, merely because he is an officer of the company. Possibly this clause needs to be made a little clearer on that point.

With regard to the election of directors by the shareholders and the policy-holders. some of the companies now provide for policy-holders' directors. It is proposed that there shall be a general law in that

respect, and that all life insurance companies, shall provide for their policy-holders, as well as for their shareholders, having directors. It was represented to us before the committee that a few people might possibly acquire the power of directors and bring about hasty, radical changes in the management, a thing that certainly would not be desirable. To guard against this, it is proposed to provide that a certain number shall retire annually, so that there shall not be, at any time, a radical change in the directorate.

Mr. R. L. BORDEN. What is the proportion of policy-holders' directors?

Mr. FIELDING. The same number of each; policy-holders and shareholders have an equal number of directors, and two of each class retire every year. In the Bill of last year it was provided that proxies should be recognized. This is continued, with the proviso that proxies shall not be good for more than three months.

Mr. HENDERSON. Will a shareholder be eligible as a policy-holders' director?

Mr. FIELDING. No, every director must be chosen from his own class.

Mr. HENDERSON. But a shareholder may be also a policy-holder. What I desire to ask is whether a shareholder will be eligible as a policy-holders' director? No shareholder should be eligible for that position.

Mr. FIELDING. That is the provision of the Bill. Provision is made that a company may withdraw itself from Dominion jurisdiction. A case has arisen recently of a company that has a Dominion license, but wishes to confine its business to one province only, and so desires to withdraw its Dominion deposit and have it transferred to the Insurance Department of the province. There seems to be no objection to such a procedure, but we have no machinery in the Insurance Act to deal with it, and we propose to insert a clause granting that power.

Now, a question that was brought to the notice of the committee last year is that of publicity. It was urged by the representatives of the companies that some of the restrictions proposed to be placed upon them were not necessary, but that the best guarantee the public could have was adequate publicity. One of the features we inserted in the Bill was that the returns should show the sums received by any officer or agent of the company in excess of a moderate amount—that is, in excess of $4,000. It was presumed that the ordinary life insurance agent, the great bulk of them, would receive less than that amount, and that, though a limited number might receive a larger sum, there would not be any trouble in providing a return of that character. It is but fair to say that we were not aware of any serious difficulty having occurred in Canada in relation to that point, though it is well known that one of the abuses shown up in the investigation in the United States was that very large sums were paid to officers of the company. Our contention is that if any such large sum be paid for good and sufficient reason, the public should be made aware of the fact through the return. It was, however, pointed out to us that such a return, when made public, might be misleading, inasmuch as many of the insurance agents have to pay their subagents, and therefore the amounts that might be placed opposite their names would not represent their own earnings, but only money that had passed through their hands. We continue the clause in the Bill, with the proviso, however, that, wherever the agent referred to us in receipt of money which he has in part to pay to subagents, that shall be indicated by a remark in the return, so that those who read will be made aware that the amount received by the agent is not entirely for himself.

A change is made in the tables used for the valuation of policies. The table in use for many years was what is known as the Hm. table of the Institute of Actuaries of Great Britain. A more modern table is the British Offices Life Table which has come into more general use. It is proposed to adopt this table.

We have added another part to the Bill, part 5, for the purpose of including in the Act a number of the clauses which are to be found in the Companies' Clauses Act, which, as hon. members who have had experience in the Banking and Commerce Committee know, are frequently referred to, a common provision in a private Bill being that such and such clauses of the Companies' Clauses Act shall apply and others shall not apply. That is often confusing. We propose to import into this Bill all the clauses of the Companies' Clauses Act that are useful for the purposes of insurance companies. We have added a form of model Bill, which it is hoped will be adopted, and will facilitiate the insurance legislation of the future. So many things have been carried into the charters of companies that sometimes they become embarrassing. We have thought it best that everything should be gathered into one Bill, and then a company's charter should be, as bank charters are, a simple measure.

The Bill is a somewhat lengthy one, comprising, including the schedule, 94 pages. It is to be remembered, however, that it is not quite so ponderous as it seems, for the bulk of it is merely a consolidation of the existing law.

I propose, at an early day, after the Bill is in the hands of hon. members—as it will

be immediately—to move the second reading and ask that the Bill be referred to the Committee on Banking and Commerce. It has been suggested by an hon. member who is much interested in this measure, that we could effectively deal with it by appointing a small sub-committee of the Banking and Commerce Committee to consider it. That commends itself to my judgment, but the motion for that purpose would have to be made in the Committee on Banking and Commerce itself.

Motion agreed to, and Bill read the first time.

EXCHEQUER COURT ACT AMENDMENT.

Hon. A. B. AYLESWORTH (Minister of Justice) moved for leave to introduce Bill (No. 98) to amend the Exchequer Court Act. He said: The purpose of this Bill is simply to make the Civil Service Amendment Act, which was passed last session, apply to the registrar of the Exchequer Court. It is probable that such was the intention when the Act of last session was passed. The status and the salary of the registrar are fixed by special Act, and his position not being mentioned specially in the Act amending the Civil Service Act the special Act would still continue to apply to him, unless we pass legislation of the character I am introducing.

Motion agreed to, and Bill read the first time.

RAILWAY ACT AMENDMENT.

Mr. J. CONMEE (Thunder Bay) moved for leave to introduce Bill (No. 99) to amend the Railway Act. He said: The object is to amend the Act in respect of the maintenance of fences and cattle guards in certain sections where, under the present law, the onus is thrown entirely upon the settler. If his land is inclosed and an accident occurs he may recover damages, but if his land is not inclosed, damages cannot be recovered. Parliament must have intended the law to work a little differently, but that seems to be the effect, and my information is that the courts have held that such is the case. That is a matter which ought to be remedied.

Motion agreed to, and Bill read the first time.

INTERCOLONIAL FREIGHT CLERKS.

Mr. A. B. CROSBY (Halifax). About a year ago the freight clerks in Halifax and St. Johns had some difficulty with the Intercolonial Railway management. After some little time, it was decided to refer the matter to arbitration under the conciliation clause of the Act known as the Lemieux Act. There was a board of arbitration which sat in Halifax and in Ottawa during the summer, and whose finding, I understood, was in favour of the clerks. But nothing has since been heard of it and no settlement has been made. I would like to know why the finding of that arbitration has not been carried out.

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). It is very doubtful whether the finding is in favour of the clerks or not. It is the finding to which my hon. friend from North Toronto (Mr. Foster) referred previously, and it has been referred to in questions and answers several times since. That finding in brief was to the effect that the number of the clerks could be diminished and the salary of the remainder increased without increasing the expenditure of the railway in that connection. If it had been simply a question of increasing the salaries, there would have been no difficulty, but there is also question of depriving several men of their employment, and the department had to ascertain all the information possible, as to the dates of the appointments of these men, their salaries and ability as clerks. That work is not yet completed. As soon as we can get the full information, we shall make up our minds.

INQUIRIES FOR RETURNS.

Mr. BRADBURY. The return brought down regarding the quantity of summer caught fish is not complete. It only gives the amount of fish shipped during the summer, but there is a large amount caught during the summer and shipped during the winter.

Hon. WM. PATERSON (Minister of Customs). It was the intention to give exactly what the hon. gentleman wanted and I will talk the matter over with him.

Mr. BRADBURY. I would draw the attention of the Minister of the Interior to the fact that the return brought down regarding a survey made by Mr. Vaughan is not complete. I have not his plans or his correspondence.

Hon. FRANK OLIVER (Minister of the Interior). It should be stated in the return that up to the time of bringing it down we were not able to find the files concerning that part of the answer to the question. Search is still being made.

Mr. FOSTER. I want to call attention to the fact that a number of returns ordered are still missing. On January 25, a return was ordered showing the armouries built, also with reference to certain publications, also with reference to Transcontinental Railway employees on January 26, and permanent loans and temporary loans. Also

with reference to lands sold along the route of the Grand Trunk Pacific for terminals on February 1, also with reference to dredging in New Brunswick on February 10.

Hon. WM. S. FIELDING (Minister of Finance). As to the loans, I hope to bring them down to-morrow.

Sir FREDERICK BORDEN. With regard to the armouries, I spoke the other day to my deputy and he said that as far as my department was concerned it would be ready almost immediately.

Mr. DANIEL. I would like to call the attention of the hon. Minister of Public Works (Mr. Pugsley) to a motion with regard to some returns which passed the House on the 10th or 11th of February and which are not down.

Mr. PUGSLEY. Regarding what subject?

Mr. DANIEL. Relating to dredging, tenders and things of that kind.

Mr. PUGSLEY. I will have it looked into.

PRIVATE BILLS—CANADIAN, LIVERPOOL AND WESTERN RAILWAYS

House in committee on Bill (No. 44) to incorporate the Canadian Liverpool and Western Railway Company.—Mr. Girard.

Mr. NANTEL moved that the following be inserted as section 14:

The company shall print in both the English and French languages the time tables and bills of lading which are to be used for its line within the limits of the province of Quebec.

Motion agreed to.

On the question: shall the Bill be reported?

Mr. FOSTER. May be I am a little late but there is a little unsatisfied curiosity in my own mind yet. I have not had the pleasure of listening to the explanation. It may have been given but I would like the promoter of the Bill to give me a satisfactory reason for the inclusion of the word 'Liverpool' I want to know what the meaning of it is.

Mr. GIRARD. That question has been discussed in the Railway Committee and before this House and the House has been informed with regard to it. However, I have no objection to repeating the explanation. The word 'Liverpool' is in the Bill on account of the intention of the company to have a steamship line between St. Catharine's bay and Liverpool.

Motion agreed to, Bill reported, read the third time and passed.

WINNIPEG AND NORTH WESTERN RAILWAY COMPANY.

House in committee on Bill (No. 29) respecting the Winnipeg and North Western Railway Company.—Mr. McCraney.

On section 1:

Mr. GLEN CAMPBELL. Mr. Chairman, I have just a word to say in regard to this Bill. If you will permit me to digress just for the space of one minute I will give you the reason why I was not here when the Bill was before the House on Friday last. I was at that time in what is called room 89, the room set aside for the Conservative members, in committee considering a proper change of name for that room and on which the committee came to the decision that perhaps it would be well to call it the Saragossa Sea. The reason of that was because, like the Sea of Saragossa, all the relics, wreckage, debris, flotsam and jetsam are gathered there. I would point out to the minister who is in charge of the furnishing of that room that it would be well that he should send these ancient relics of the time of Alexander Mackenzie to a museum instead of leaving them there for the use of members. There are fourteen kinds of chairs hardly a table with four legs and I think this is very unfair treatment to be accorded to the loyal opposition in this House.

With regard to this Bill, I will say a few words which will not only be my words but which will voice the opinions of the people whom I have the honour to represent. This charter has been objected to by every municipality through which this proposed railway is projected to run. The objections were taken in the proper way, through the municipal officers and by petition to the government, copies of which petitions were sent to me. I will read you, sir, because I want in 'Hansard,' what one of these petitions sets forth:

Whereas, the Winnipeg and North Western Railway Company have given notice of intention to apply at the next session of the parliament of Canada for an Act extending the time for the construction and completion of this railway;

And whereas the municipality of Ste. Rose is interested in the matter;

(This happens to be the petition of Ste. Rose in Ochre river, Dauphin, Gilbert Plains, Grand View and Shell River; all the municipalities concerned, are associated with this petition).

And whereas the speedy construction and completion of a railway along the proposed route will be a great benefit to the people of this district;

And whereas the speedy construction and completion of such a railway is desirable;

And whereas, the privilege that has from time to time been granted to railways through-

out western Canada in general, extending the time for construction and completion of various lines of railways, for which certain corporations hold charters, has been greatly abused in the past;

Now, therefore be it resolved that we, the council of the said municipality of Sainte Rose, do hereby petition the government and parliament of Canada to refuse an extension of time to the Winnipeg and North Western Railway Company for construction and completion of this railway, unless upon such conditions as will effectually provide for the speedy construction of the same.

Before the Railway Committee, I proposed that caluse 2 of the Bill be amended to read as follows:

The company may commence within one year after the passing of this Act, the railways as authorized by chap. 141 of the statutes of 1907 by this Act, and if the said railways are not so commenced and at least 25 miles thereof completed within one year after the passing of this Act, and the remainder of the said railways completed and put in operation within five years after the passing of this Act the power of construction granted to the company by the said Acts shall cease and be null and void, with respect to so much of the said railways as then remains uncompleted.

That clause was a guarantee to the people of that country who petitioned this government that there should be steps taken by this government to show the bona fides of the applicants for this charter. That is what the people want and it is in the power of this parliament to grant them what they want. But, Sir, to my surprise it was asked that this matter should be reconsidered in the committee, and the vote given on that question was not a vote on the merits of the case. On the contrary, it was on the part of the Liberals in that committee a party vote and a party vote entirely. I stated here and no one can contradict me that every Liberal in that committee voted on party lines.

Mr. A. K. MACLEAN. How did the other men vote; on party lines too?

Mr. CAMPBELL. I beg your pardon, Sir, you were not there and you are not in a position to know. Unfortunately for my presentation of the case before the committee some of my Conservative friends voted against me, but all the Liberals voted solid also against me. It is a great mistake that partyism should be allowed to enter into the affairs of that committee. Later on, when I saw that this amendment which I had the committee insert for the benefit of the people and at their request, was to be cut out, I did not want to waste the time of the committee and I had to accept my defeat as gracefully as I could, but that does not prevent me from saying a few words here. I had put in this amendment that the company be compelled to

build 25 miles in the first year in order to show its bona fides. The promoters of the road had said through their solicitor that they had the money and that they were willing to complete the road in five years and considering that they were chartered to build from 1,500 to 2,000 miles and that they undertook to complete that in five years, surely it was not a hardship on them to ask that they should build at least 25 miles in the first year.

An hon. MEMBER. How long had they the charter?

Mr. CAMPBELL. For two years. I wish now to enter my protest. There is hardly a member from the west who does not express the opinion in private conversation that something ought to be done to compel these hot air lines to either get out of business and let some one get into business or compel them to show their bona fides right away. The only argument put up by gentlemen on the other side is that it has been customary to allow this, but if in the past we have done wrong is it not time to make a change and let us do right now?

Mr. GUTHRIE. At the first meeting of the Railway Committee at which this Bill was discussed it was stated that certain petitions had been sent to the government, and it was intimated that the government had taken no action in the matter. The deputy minister who was present, stated that no petitions had been received, and subsequently it turned out that the petitions referred to my hon. friend from Dauphin (Mr. Campbell) did not go to the Department of Railways and Canals, but to the Board of Railway Commissioners, so that these petitions had never been before the Department of Railways and Canals. They were, however, before the committee when the Bill was finally considered and passed upon.

Mr. LENNOX. That is rather important. The hon. member for Dauphin stated in the committee that petitions had been sent in and that it was the duty of the Minister of Railways to acquaint the committee of any petitions that had been received against the passage of the Act. It now appears that the Railway Board received these petitions instead of the minister, and I venture to say it was the duty of the Railway Board to forward these petitions to the proper authorities. No one could be in any doubt as to what the proper distinction is for petitions of that kind and no one could doubt the importance of the committee being acquainted with such petitions before we proceed to deal with a Bill of this kind. Of course, in this particular instance, no hardship has occurred, because the hon. member for Dauphin reminds me that he read a copy of the peti-

tion at the time; but it is well to have impressed upon whoever is responsible for the matter in the Railway Board that it would be regarded as their duty to forward these petitions promptly when they come in.

Mr. BRADBURY. As one who took an interest in this matter before the committee, I agree with the remarks of the hon. member for Dauphin with regard to the desirability of having some clause to protect the people of that district. When this Bill was before the committee, I supported that clause, but I am surprised to find that the Bill was brought back for consideration. I agreed to the compromise that was made on the strength of the statement by the gentleman promoting the Bill, and I think by the chairman of the committee, that a charter over the same route would be granted to any other person applying for it. As a member from the west, I do not feel that I ought to say one word that would make it hard for a promoter to obtain a charter if he means to build the road; but knowing what has occurred in the past, I feel that we have had too many charters that have tied up the district for years and prevented the people getting a much needed road. I notice in the railway committee that a great many gentlemen voted for the reconsideration of the Bill who practically knew nothing at all about it or about the district through which the road was to run or the hardships of the people. If what my hon. friend from Dauphin has said is correct, and it is admitted by the chairman of the Railway Committee that petitions have come in from every municipality of that district asking the government and their representatives to protect their interests, then I feel that the committee has been a little hasty in dealing with the Bill as they have. With the understanding of the committee that the promoters were prepared to complete the road in five years, it is not too much to ask that the people of the district should have some guarantee that they mean business, and I confess frankly that I was a little surprised that there were not more members of the committee who felt as I did. I feel that we have been too liberal in the past in granting railway charters—that we have not tried in any way to restrict the promoters and to make them go on with the work of construction. I think a clause should be put in every charter requiring the promoters to build a certain number of miles each year or to put up fifteen or twenty-five per cent of the cost of the railway as a guarantee. A Bill of that kind is proposed by one of the members from the west, and when it comes before the House, I shall have much pleasure in supporting it. But I think the committee were hasty in rushing this Bill through in the manner they did without taking into consideration all these petitions from the people directly interested.

Mr. McCRANEY. The speeches which have been made by my hon. friend from Dauphin (Mr. Campbell) and my hon. friend from Selkirk (Mr. Bradbury) indicate a point of view which we hear discussed very much at meetings of the Railway Committee. What the people of Dauphin are after is to have railways constructed. How are we to get that done? Is it by stopping railways, or is it by helping them? I know that there is a very prevalent opinion throughout this country that a railway charter is a special privilege, giving an exclusive right to a corporation to build a railway from one point to another. I think that parliament can do a great deal to disabuse the minds of the public on that point. When I first came here I largely shared that view; but from my experience in this House, I have come to the conclusion that parliament does not give exclusive rights. The only right it gives is the right to go on and build, and anybody else who comes to this parliament can acquire the same right, and the right is only vested when the plans are approved of by the Minister of Railways.

Mr. FOSTER. Would they get the right over the same route?

Mr. McCRANEY. I should say that there is no reason why any company should not be given the right to build a railway from any one point to any other point.

Mr. BRADBURY. Does the hon. gentleman mean that if anybody else asked for a charter for a railway running over the same route that this railway runs over, he would be able to obtain such a charter?

Mr. McCRANEY. I can only speak as a member of this House; but my own attitude would be to support such a measure.

Mr. SCHAFFNER. What does the minister say?

Mr. McCRANEY. There is also a prevalent idea that when a company is given a charter which permits it to build a railway from one point to another point, it is entering into a contract with the government to build; that it is in the position of contractors with the government for any other public work, and that when it comes here asking for an extension of time, it should be treated as any other government contractor. The point is altogether left out of consideration that the government is not supplying the money for the work, and therefore parliament cannot force the company to build where it does not want to build.

Mr. CAMPBELL. The hon. gentleman states that a franchise of this kind is not a special privilege. I want to ask him if it is not often a very valuable privilege, and one that is sold.

Mr. McCRANEY. It is a special privilege. but not an exclusive privilege. It is not a privilege which is refused to any person who comes here and asks for similar legislation. My hon. friend asks: Is this not a right which is sometimes sold—is there not speculation in charters? Perhaps there has been in the past. I would like to see the policy laid down by this parliament of granting charters so freely that there would not be any value in a railway charter except perhaps the value that any railway might have because a certain amount of money has been expended to solicitors and others in getting the legislation through parliament. It is only by having parliament grant unrestricted charters that we can deprive charters of their value. The only way in which the government or parliament can compel the building of railways is to supply the money, but that means government ownership, and I do not think that is a subject for discussion upon this occasion. We have had discussion in this House with reference to paper charters. There is talk of the country being blanketed with charters, talk that one hears perhaps with regard to claims on coal areas or something of that kind, as though when a certain territory is shown as having a railway chartered to go into it, no one else could enter it. If this discussion has only one result, to disabuse the public mind of that idea, it will be justified.

Mr. R. L. BORDEN. Could the hon. member state just what the practice in reference to that is, I think it is just as well we should understand it. Suppose a charter is given to certain promoters for a railway between two given points. They are allowed by the terms of their charter a certain period within which to commence and a certain other period within which to complete the construction of their line. Every one understands, of course, that there is no technical reason why parliament should not give exactly the same kind of charter to another set of promoters, but in actual practice does the Railway Committee do that ?

Mr. LENNOX. No, never.

Mr. McCRANEY. I am not an old enough member of this House to say what the practice has been.

Mr. CAMPBELL. Nor any one else.

Mr. McCRANEY. My hon. friend is hardly in a position to say that. Since I have been a member, for the last four years, I am not aware of any charter having been refused for a line which has already been granted by Act of parliament.

Mr. LENNOX. Have any been granted ?

Mr. CONMEE. Yes.

Mr. LENNOX. Does the hon. member say that any charter has been granted to a second company for exactly the same line for which charter has been granted to the first company ?

Mr. CONMEE. Generally, practically the same ground.

Mr. LENNOX. I would like the hon. member to mention any. It has never been done.

Mr. McCRANEY. It has also been said that because a railway is chartered from one point to another, maps are got out by speculators and settlers are induced to go into the district and establish their homesteads along the proposed line of railway. I must say that in my own riding I have never had to deal with any case of that kind. The only case I know of is that of the Canadian Pacific Railway which in 1907 got a charter for a line from Moosejaw to Lacombe. They advertised for tenders and on the strength of what they had undertaken to do settlers did go out into the country and did settle, then they abandoned what work they had done, they did not go on with their tendering and there certainly was a great protest from my own portion of the country and from the Moosejaw district. Many farmers felt that if they had to go to the next winter without the facilities of a railway and the means of bringing in fuel there might be a great deal of distress.

But it is a different case altogether when a railway like the Canadian Pacific Railway, the Canadian Northern or the Grand Trunk Pacific, all of which are railways of standing in this country and all of which have had assistance from parliament, give assurances and undertake a work, because people expect that that work will be done. I must say that in my own part of the country we have never been misguided because some body obtained a charter for a railway from one part of the country to another. If we in this parliament should make the restriction proposed, we would make it possible only for those who can meet the conditions placed upon the corporations to build railways, and that would prevent any new corporation from going into the railway business in this country. I think there is a very general impression throughout the country that it is the common stockholders who build roads and perhaps this parliament may disabuse the public mind of that idea also; we will learn that it is not the common stockholders that build railroads but

the bondholders who negotiate for the construction on terms favourable not to the government or to the population to be served by the railroad but to themselves. That is the only way in which money for these undertakings can be raised. This particular case is one of the best cases to bring before this House because it is an extreme case and because the principle can best be discussed in view of the fact that this company has been incorporated for less than two years. I think my hon. friend stated too strongly what the promoters of the Bill said in the Railway Committee. My recollection was not that the promoter of the Bill who appeared before the Railway Committee said that they have the means in hand to go on with this; what he did say was that they were doing their very best to get the money.

Mr. LENNOX. I think he said it was in sight

Mr. McCRANEY. He said they expected to get it, but he gave no assurance that the money had been secured. What would be the position of affairs if the restriction desired by the hon. member for Dauphin (Mr. Campbell) were imposed? If the bonds were floated and if less than twenty-five miles were built in one year what would happen? I am sure the bondholders would feel very insecure, and with that prospect in sight would be very unwilling indeed to invest their money in this enterprise.

I have been discussing the case of my hon. friend's constituency. I have a paper before me now which I received this morning and which gives a case in my own constituency which well illustrates the point. I have here the minutes of the Fertile Valley Liberal Association. I shall read one resolution:

Mr. F. R. Stephens moved and was seconded by Mr. G. H. McKague, that the Association place before the government an objection to an extension of time to the Canadian Pacific Railway for the completion of their Moosejaw-Lacombe line; that they recommend the government to refuse to grant such extensions and that W. Kennedy and the secretary draft a protest and ask Mr. Knowles and Mr. McCraney to take up the matter with the government and the Railway Commission. Carried unanimously.

The Liberal Association of Fertile Valley want to accomplish the same result as do the friends of the hon. member for Dauphin, they want to get the railway and they want me to do what my hon. friend's friends want him to do, to secure a refusal of the extension of time except on conditions. A year ago the Canadian Pacific Railway declined to go on with this very road and at the last session this House voted $3,200 a mile for this extension to a distance of 123 miles. That was the reason the road was built, it was not because they had a charter. As a matter of fact I think that the Canadian Pacific Railway did not want to build the road, that they had concluded that, for some time at least, the traffic in that particular part of the country would not warrant its construction. The reason the road was built was because this parliament voted $3,200 per mile. To my mind the way to get this road built is not to refuse an extension of time but to help the railway company. That is to be my answer to my own constituents who want me, in this and other cases, to refuse the extension of time. If there is anything this government can do to help the railways by assisting them financially, that is what I would support, and I would support it with reference to my hon. friend's constituency as well as with reference to my own. I think that is the only way in which this question can be dealt with, and that we should accomplish nothing by putting restrictions upon the applications for charters which come before this House.

Mr. LENNOX. The hon. member (Mr. McCraney) has not met the question quite squarely. Nobody has proposed to refuse this company an extension of time. The hon. member for Dauphin (Mr. Campbell) was as urgent in desiring that this company should have an extension of time as any other member of the committee. But he desired that the people should be served by a railway, and so he proposed that conditions should be provided which he thought reasonable and in the public interest to bring about the construction of the road. He succeeded in convincing the committee at its first sitting that he was right, and his amendment was carried. But a majority of the committee saw fit to reconsider the question and proposed the modification which, as I recollect, was not proposed at the first meeting but which is in harmony with our general practice. I hope the hon. gentleman (Mr. McCraney) does not wish it to go abroad, or to be suggested in this House, that the hon. member for Dauphin, or any other member of the committee, refused this company a reasonable extension of time. What the hon. member for Dauphin and those who supported him voted for was that the company should have a reasonable time to carry out their undertaking, having regard to the statement made that they had money ready to carry on their work. The hon. member for Saskatchewan (Mr. McCraney) spoke as if he was going to tell something of the inner life of the Railway Committee, which, I think, it might be well to have told in this House. But as to this question of paralleling lines, we need hardly discuss it, because it is not the policy of this parliament. When the Transcontinental line was under discussion, we were emphatic in saying that we did not want parallel lines, and ought to

keep every railway a certain distance from another. In fact, I should not be surprised if, in the statute-book, we had a provision that lines should not approach each other closer than within certain limits.

Mr. EMMERSON. Was not that in reference to construction lines?

Mr. LENNOX. We would not grant a charter to parallel an existing line except at a certain distance.

Mr. CONMEE. That is a line already built.

Mr. LENNOX. Yes, but the policy of parliament is that it is better to have one line of railway with large traffic than two struggling for existence, each with a small traffic. For that reason it would be unwise for us to grant a charter to parallel a line for which a charter had already been granted. It would be absurd to expect the Minister of Railways or any other responsible adviser of the Crown to sanction the granting of a charter to a new company to build over practically the same ground the right to build over which had already been granted to an existing company. We do not do it, and we would not do it. In spite of what the hon. member for Thunder Bay and Rainy River (Mr. Conmee) says, I venture to say he cannot find an instance where we have granted a charter to cover ground already covered to a company that is not in default. The people have to pay the freight rates, and the Board of Railway Commissioners will fix those rates according to the traffic. If you divide the traffic by two, and then divide it by two again, making four lines where there is traffic for only one, you increase the burdens of the people, and it is folly to say that when we grant a charter to such a company as this with three or four alternative routes we do not cover that country and prevent other companies coming in to build so long as that charter exists. The consequence is that the company that has obtained a charter has a franchise which can be sold in the market. The proof is that it has been done over and over again and is being done all the time. We have no objection to a renewal of the charter, but we do object to their obtaining it on terms not in the interests of the public.

Mr. TURRIFF. If there is any impression that the Railway Committee refuses to grant charters because charters have been granted over the same ground, I can only say that it is a very erroneous impression. In the past five years I have never known a charter to be refused by a railway company because a charter had already been issued. But I may point out to my hon. friend from South Simcoe (Mr. Lennox) that not only does the Railway Committee and this House, grant such charters, but the Railway Department has, in several cases, approved the plans and allowed the railways to build, paralleling each other over the same ground. You have only to look at the map of the country west of Winnipeg—I do not at this moment speak of the eastern portion of Canada—and you will find railway after railway running parallel to another for miles. West of Saskatoon, the Grand Trunk Pacific and the Canadian Pacific parallel each other within a stone's throw. West of Edmonton, the Canadian Northern and the Grand Trunk Pacific run parallel to each other for over a hundred miles, practically on the same territory. In my own constituency the Canadian Pacific Railway branch lines parallel each other for nearly 80 miles. I voted against the amendment of the hon. member for Dauphin, and did so because this is the first time that this company has come before parliament asking for an extension of time. And it is not altogether asking an extension of time, because in its application it asks for a charter covering two or three other branch lines that it had not before ; so that, to some extent, it is a new application altogether. And we were assured by the representatives of the company that they were in a fair way to get the money to build the road next year, but if that clause was put in this year, it would prevent them getting the money, and so prevent their going on. This road is chartered among a number of existing branches of the Canadian Northern. I do not know how it is in this case, but I know that in other cases, railway companies have engineered just such petitions as have come in here, and if we had knocked this charter out, the effect would have been to leave that company with absolute control of all the roads in that part of the country. I agree with my hon. friend from Dauphin that a railway company should be made to build each year, but I claim that this should apply to every railway company and not to one in particular—not to pick out and penalize one company. I trust that when I get my Bill, now on the Order Paper, to the right point, I should receive the general support of both sides. The Bill would make it incumbent on all these railway companies to build at least twenty-five miles in the first two years—that is if the road chartered is less than 250 miles long—then in the third and fourth years an additional twenty-five miles each, and complete in five years, and, if they do not do this, they will be compelled to come back to this House and get an extension of time.

Mr. WRIGHT. The hon. gentleman made the statement that it has not been the practise of the Railway Committee to duplicate charters from one given point to another,

and he gave us an illustration in the Grand Trunk Pacific. But every one knows that the Grand Trunk Pacific was given a special charter with special conditions and with a distinct promise to the country that it would not parallel any existing line but be a great colonization road. We learn now, however, that it is simply a parallel line to two or three others and is not serving the purpose for which it was intended.

Mr. BARKER. I want to say a few words on this matter because I have given a good deal of attention to what goes on in the Railway Committee. If the right hon. gentleman who leads the House could occasionally give enough time to visit that committee, he would see that there is an absolute need for reform. Every hon. gentleman who is on that committee knows that every day a considerable percentage of its members sit at the far end of the room swap stories with one another and pay no attention whatever to the subject before the committee. Then when the gentleman who has charge of the Bill—especially if he happens to be a government whip—stands up, they vote straight every time. I do not think there is an hon. gentleman on either side who will contradict me.

Mr. LENNOX. Do you say they vote straight?

Mr. BARKER. They vote according to the wishes of the promoter of the Bill without considering anything else. The hon. gentleman who introduced this Bill seems to think that there can be no harm even if you do give several charters in the same district. He would advocate free trade in railways and let every company be incorporated and build if it pleases. But anybody, who has any practical knowledge of the methods of getting money to construct such works, will know that there could be no more effective way to prevent capital being invested in railway construction in the northwest. What the hon. member for Dauphin (Mr. Glen Campbell) said in the committee is perfectly right. He said he had no desire to obstruct the particular company referred to in the Bill and he wanted to see the railway built, but he wanted to get rid of hot air companies, and he argued that if the company in question professes to be able to construct 1,500 miles of railway in five years, it surely will be able to construct 25 miles in one, and he proposed to put that in the Bill.

The counsel who was there representing the directors said they had been endeavouring to get the companies floated in Paris or London but had not been able owing to the financial crisis. Now, however, they thought they were in the way of getting it placed and were confident they could do so. Any one who saw the project laid out on the map like a great spider, with its arms projecting in all directions over some 1,500 miles of railway, would see that instead of that company assisting in a construction of railways in that district, it would have the opposite effect. If any other people wanted to take any section of that territory and build 500 or 200 miles of railway, they would be met at once by the fact that these people had mapped out the whole district and covered it with projected branches in all directions, so that no one would advance a cent for other lines. That is just where hot air companies, by holding up their territory from year to year, can delay the construction of a railway in every inch of the territory thus covered. For that reason and not because he wanted to do so struct or delay—he wants just the opposite —the hon. member for Dauphin objected to these charters being renewed as a matter of course. One gentleman will say, what is the harm ? They have only applied once or twice. Their charter perhaps was given some ten years ago, and not a dollar has since been expended, yet they remain quite confident they can build the road. Any one who sees what is going on knows that as long as such charters are renewed, so long will they cherish the hope of making something out of it, and while there is the remotest chance of their doing so, they will apply for a renewal.

Mr. CONMEE. I do not think the hon. member for Hamilton (Mr. Barker) is quite fair in the reference he made to the committee. It is true that many of the members of the committee do not take a very active part in its work, but that is the case with all committees. The same may be said of this House. A great many members do not take part in any of the debates and a very limited number only take part in the debates upon general subjects, but I do not think that would warrant any one saying that the members of one political party merely followed their leader. I do not think that is more true of the Liberals than of the Conservatives, because I know of several Bills in regard to which the members of the Conservative party in the Railway Committee were lined up on certain occasions and followed their leaders very closely. But I am not prepared to say that the Conservatives voted for party purposes. I do not think that the hon. member for Dauphin really meant that the Liberals who voted against his view did so for party purposes, because if that were true his own Conservative friends were removed by similar motives. I wish to say that we canot build railways by legislation. If by an Act of parliament we could cause a railway to be constructed in this or that direction, but that we cannot do. There are occasions, when, if restrictions are put on railway charters which are promoted by individuals, you hamper these individuals and defeat the very purpose you have in view.

The hon. member for Dauphin expressed the opinion that if a company were compelled to build a certain number of miles during a certain number of years, that would bring about more rapid construction of railways.

I am quite satisfied that the reverse would be the case. I know of more than one railway undertaking that has been wrecked by premature expenditure. Take this case. I do not know the local conditions; therefore I am not going to speak as if I did, but I will ask my hon. friend to assume this condition of things: Suppose they build twenty-five miles and there is no traffic there would be perhaps nearly a million of money expended. If there is no traffic, the undertaking is not successful, there is no good purpose served by the expenditure of the money that is invested. What good is that going to do anybody? That does not do the country any good and it embarrasses the company because they are not in the same position to go into the money market and obtain capital. The hon. member for Hamilton (Mr. Barker) stated that nothing would embarrass a company more than the granting of a charter in the vicinity of this line. I cannot agree with him. Nothing will help the company more. It will give the investing public knowledge that that section of the country is important when some other company wants to build a line of railway. It is just a case of the survival of the fittest. Let those build who can build. If you put restrictions upon the charter, if you take away the opportunity from one set of men who have perhaps spent a great deal of money and devoted a great deal of energy and time to the undertaking to proceed with the work you are not advancing the construction of the railway. The reasonable thing would be to give to any others who wish it the opportunity to build the road. If they have the capital, or if they can procure it more quickly then, they will build the road. There will not be two lines built. Our country has not yet got into that condition where our railways are injured by competing lines. I can remember—and I will not admit that I am very old yet—when the Grand Trunk thought they were the objects of a severe attack because it was proposed to build another line between Montreal and Toronto. The line was built and it did the Grand Trunk good. The prosperity of the country was increased. These railways bring traffic; they do not take traffic away from each other, except at competitive points. It is just so in other sections of the country. The hon. member for South Simcoe (Mr. Lennox) says that we do not grant charters to lines paralleling other lines. We are doing it every day. There has been hardly a year in the last four or five years but what, for fifty miles or a hundred miles, or in some cases, for the entire length of the line, charters have been given practically in the same territory as that occupied by previous charters and no evil has resulted from it that I know of. There is no danger of getting too many lines constructed in this country. We need railway lines paralleling each other at a distance of twenty miles even in prairie country, and we need them worse than in mining sections in even closer contact. We need transportation in all parts of Canada. There is nothing that we need so much. I would approve of a law that would be very much more liberal with regard to the construction of railways than our present Act is. I approve of the law in the state of Minnesota because there any four or five gentlemen can organize themselves into a railway company and they can obtain a charter from the Secretary of State and start to build the railway in three days. I had occasion to go there to get an extension of the Port Arthur, Duluth and Western Railway charter in the state of Minnesota and I found that we would have to organize a new company. I went to Minneapolis and left there in five days with the charter in my possession. This system has worked well in that state. The law protects private property. People obtaining charters only get the right to build a railway in a certain section of country. They cannot take the property of any company or individual and they cannot injure the property of any company or individual unless they pay for it. There is no grievance, but there is a free invitation to capitalists to build railways wherever they are wanted, wherever the railways would pay and wherever the people need the services of railways. In my judgment it would be a mistake to act upon the suggestion which some hon. gentlemen have made in this case. I want to tell hon. gentlemen who are now advocating the imposition of conditions with regard to the building of this railway that they will find, if that principle is adopted, that they have given a monopoly that they little dreamed of to the big lines and to the big corporations who will build this road whenever they please and as they please. Hon. gentlemen in this House know—in fact I need not hesitate to state it—that a great many important lines that we have to-day in operation are not the work of great corporations or of great capitalists. They are the work of the local community who agitated for them, who organized them, who went before the public and who besieged parliament with deputations until they obtained their charters and the necessary aid, and until they got their enterprises into a position to attract capital and the larger operator into whose hands the roads finally passed. If it were not for that class of promotion we would

not have to-day many of the railways that are serving the people of the country and we would not have had them at such an early stage as we did. I say to the gentlemen who are advocating this restriction that they will be making a mistake in the interest of the community that they are seeking, honestly, I have no doubt, to help. Now, our Railway Act is not altogether without conditions. A company which obtains a charter must expend fifteen per cent of its capital within a limited time or it must give back the charter. The Act provides for forfeiture if it does not carry out its provisions, and that is all that would happen in the case of the condition as to a specific number of miles, only it would, in my judgment, destroy the opportunity of securing capital for carrying on the enterprise.

Mr. MAGRATH. I do not know if the hon. gentleman who has just taken his seat had me in his mind, but he was looking over here and I therefore desire to say a word or two upon this question. I endorse a very great deal of what he said. He warned us in the west to be cautious about limiting these railway corporations. We have no desire to do that at all. If a man is running a corner grocery and an individual comes in and makes some statement in an effort to do business with him, as a business man he wants some evidence of the man's bona fides. My time is, I think, valuable to me, and I hope it is valuable to the people who have sent me here. I do not want to go up to the Railway Committee room and have gentlemen get up there and say: We have two millions of dollars and we are going to commence work to-morrow. If the chairman of the Railway Committee or the Minister of Railways and Canals will get up and say that these gentlemen have satisfied me that they mean business and that they have the capacity to carry out the undertaking, then I will support it. I am desirous of advancing any scheme which will result in the building of railways in this country, but I do not want any gentlemen to come into the Railway Committee room with a set of plans saying that they are willing to run through the Rocky mountains where they can never build a railway. I have in mind two instances in which plans have been exhibited for railways that they could never attempt to build, and this fact is evidence to me that these men have not investigated the situation at all. I am not opposed to charters. I have talked long upon this matter in the Railway Committee and talked hard upon it. There is a principle involved. Are we going to give charters to everybody who wants them, and such is really the contention of the hon. gentleman (Mr. Conmee). If so I will have to be satisfied, but I do not want to go back to my constituents and have to say that I have been voting blindly for railway charters through my own district without having made some effort to discover the standing of the men who promote these charters and their capacity to carry out the railways they undertake. One hon. gentleman has stated that this omnibus chartering of railways is misleading to the people in the west. There is no doubt about that. I have said so before, and I say again that the settlers are deceived by this chartering of railways which may never be constructed. Since this Bill came before the railway committee a gentleman in my district wrote me asking my advice about going into a certain section of country and in his letter he says:

> The great drawback seems to be the great distance from a railway. I should like your opinion very much indeed as to railway building through this district. If one can believe all that the papers say and what the various plans show it would seem that it would soon be a network of railways and very little room left to grow grain.

This gentleman seems to have hit off the situation pretty accurately. We get some very valuable settlers into that country from the United States; they meet the land man who sends them out 30 or 40, or 50 miles from a railway; he shows them the plans of railways running through their location and the fact of the matter is that these people are simply humbugged. As their representative I object to that kind of thing. If those who ask for charters satisfy the Minister of Railways or some other competent authority of their ability and their intention to proceed with the construction of these railways, then they should have a charter and I shall do all that I can to help them along; but if a certain number of men apply to this parliament for a charter simply for the purpose of exploiting it then I am most determinedly opposed to any such proceedings.

Bill reported; read the third time and passed.

LONDON AND LANCASHIRE PLATE GLASS COMPANY.

House in committee on Bill (No. 27) to incorporate the London and Lancashire Plate Glass and Indemnity Company of Canada.—Mr. Macdonell.

Mr. EMMERSON. As we all know there is a great English company known as the London and Lancashire Insurance Company and I notice that the incorporators of this Bill reside in the city of Toronto which would lead to the inference that the company we are now chartering is not a subsidiary company to the London and Lancashire of England. Was the question of the similarity of name discussed in the Banking and Commerce Committee? Of course,

the objects sought are different, but there very readily arises in the minds of people a misapprehension as to the character of the company, and it seems to me that those who are promoting this Bill should come with a different name from the one proposed. Of course, if that was discussed in committee and fully decided upon, it is not for me at this moment to raise any objection; but I simply ask that question.

Mr. FIELDING. This question of the similarity of names very often comes before the Banking and Commerce Committee, and sometimes it is exceedingly difficult to decide on the proper view. However, there is no difficulty in the present case, because the incorporators are in Toronto, the company is practically a subsidiary company to the English company. It is promoted by that company, and the first gentleman named among the incorporators is the manager of that company in the province of Ontario. So I think we may safely assume that in this case at all events there will be no objection.

Bill reported, read the third time and passed.

BANK OF VANCOUVER.

House in Committee on Bill (No. 52) respecting the Bank of Vancouver.—Mr. Cowan.

On section 1,

Mr. LENNOX. This Bill seems in effect to be a repeal pro tanto of the General Banking Act. Sections 14 and 16 of the Banking Act, which are referred to in this renewal, are express in saying that if the certificate is not obtained within a year, all the power ceases. I want to ask the Minister of Finance if this is the way renewals are granted, by a partial repeal of the general Act.

Mr. FIELDING. It would be a repeal of the general Act so far as this bank is concerned. I believe this is the usual form in which extensions are granted.

On section 1a,

Mr. LENNOX. Is not this a very substantial amendment to make in a Bill—to add to the board of directors names that were not in the original Bill? What about advertising in a case of this kind?

Mr. FIELDING. I would think that it was a matter that concerned only the gentlemen engaged in the promotion of the Bill. If they wished to add to the list of provisional directors, I do not see how any public interest could be served by preventing them from doing so.

Bill reported, read the third time and passed.

Mr. EMMERSON.

CONSIDERED IN COMMITTEE—THIRD READING.

Bill (No. 58) respecting the Vancouver, Westminster and Yukon Railway Company.—Mr. Ralph Smith.

SECOND READINGS.

Bill (No. 75) respecting the Canadian Northern Ontario Railway Company.—Mr. Pardee.

Bill (No. 77) respecting a Patent of the Submarine Company.—Mr. Proulx.

Bill (No. 79) respecting the Canadian Pacific Railway Company.—Mr. W. McIntyre.

Bill (No. 80) respecting the Kootenay and Arrowhead Railway Company.—Mr. Geo. Taylor.

Bill (No. 81) respecting the Manitoba and Northwestern Railway Company of Canada.—Mr. Cash.

Bill (No. 82) respecting the Monarch Fire Insurance Company.—Mr. Beattie.

Bill (No. 84) respecting the Athabaska Northern Railway Company.—Mr. Turriff.

Bill (No. 85) respecting the British Columbia Southern Railway Company.—Mr. Geo. Taylor.

Bill (No. 86) respecting the Cobalt Range Railway Company.—Mr. Hodgins.

Bill (No. 87) to incorporate the Arnprior and Pontiac Railway Company.—Mr. Hodgins.

SUPPLEMENTARY TREATY WITH FRANCE.

Hon. W. S. FIELDING (Minister of Finance) delivered a message from the Governor General.

Mr. SPEAKER read the message as follows:

GREY:

The Governor General transmits to the House of Commons a copy of a supplementary convention respecting the commercial relations between France and Canada entered into at Paris on the 23rd day of Jan., 1909, Between His Majesty and the President of the French Republic.

Mr. FOSTER. Has the minister the correspondence ready?

Mr. FIELDING. I thought I would be able to bring the correspondence with the convention, but I shall have it ready tomorrow.

QUESTIONS.

CIVIL SERVICE PAYMENTS, 1896 AND 1909-10.

Mr. FOSTER asked:

What was the total payment in 1896 to the permanent Civil Service employees of the in-

side service at Ottawa, and of those employees in the then Inside Civil Service, who were paid out of lump votes and Civil Goverment Contingencies, respectively in the branches and departments added to the Inside Civil Service by the Act of 1908, and what is the sum estimated for the similar divisions for the year 1909-10?

Hon. CHARLES MURPHY (Secretary of State):

	1895-96	Estimated for 1909-10.
Civil government salaries..	$ 967,771 72	$2,732,504 25
Civil government contingencies	48,153 78	18,550 00
Outside salaries and lump votes	284,598 57	703,335 77
	$1,300,524 07	$3,454,390 02

CANADA EASTERN RAILWAY.

Mr. AMES asked:

1. What was the price originally paid by the government for the Canada Eastern Railway?
2. Since the acquisition of the line between Fredericton and Chatham, what has been spent each year for betterment, and what does the government expect to spend under this head during 1909-1910?
3. What is the approximate value of the rolling stock that has been added to that previously in service on this branch?
4. What has been each year, since its acquisition by the government, the approximate expenditure for running expenses and the approximate revenue in connection with this branch?

He said: I was in hopes the information asked for in this question would be down in time for the debate which I expected to take place this afternoon.

Hon. G. P. GRAHAM (Minister of Railways and Canals). I was also, but the accounts are kept in such a way that it is difficult to get the particulars for any one section of road. I find it is the same on all railways.

PARLIAMENT BUILDINGS—NEW WING.

Mr. FOSTER asked:

What amount of the total expenditure made upon the new wing of the parliament building and consequent alterations was paid to the department staff for (a) labour, (b) supervision?

Hon. WM. PUGSLEY (Minister of Public Works):

(a) $16,161.43.
(b) $990.00.

VETERINARY HOSPITAL, KINGSTON.

Mr. EDWARDS asked:

1. What are the dimensions of the veterinary hospital at Kingston, and how many horses is it intended to accommodate?
2. From whom were tenders received for construction of same and the amount of each?
3. When was the contract awarded, to whom, at what price and covering how much?
4. What is the cost of the building to date, what is the estimated total cost of the building, fittings and furnishings complete and ready for use?
5. Has any of the work been let without tender? If so, to whom and to what amount in each case?

Hon. WM. PUGSLEY (Minister of Public Works). The answer to all these questions would be in the negative. While upon my feet I should explain that there is an item in the main estimates this year which no doubt led my hon. friend to ask the question. The item is an error. An amount of $1,500 was asked for at the last session for a veterinary hospital but I had made up my mind, after consultation with the Minister of Militia, to drop that item. By a mistake of the printer, an item of $15,000 was carried out opposite the $1,500 vote of last year, the mistake being made by reason of the item immediately above, for barrack accommodation I think, being $15,000. It is a mistake and upon concurrence I am going to move that the item will be struck out so the whole answer will be in the negative. Nothing has been done in regard to a veterinary hospital.

THE ST. LAWRENCE CHANNEL.

Mr. ECREMENT—by Mr. Devlin—asked:

1. What is the width and depth of the St. Lawrence channel between Montreal and Quebec?
2. What amount was expended last year in dredging it?
3. What was the number of dredges and workmen employed during the past year?
4. Does the government intend to continue these works next spring, especially to have the River St. Lawrence dredged in front of Berthierville, for the purpose of making its waters navigable at this place through the whole season of navigation?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries):

1. There is now a complete channel to a depth of 30 feet at extreme low water from Montreal to Cap Levrard, four miles below Batiscan, a distance of 105½ miles below Montreal. Below this advantage is taken of the tide during low water season to obtain this depth to pass Cap à la Roche and Cap Charles. The completed channel has a minimum width in the straight portions of 450 feet and on the curves 500 to 800 feet. The widening has all been completed except for a distance of five miles in the straight portion of Lake St. Peter, between The White Buoy and No. 3 curves, the present width there being 300 feet. In the incompleted channel

now being widened and deepened to 30 feet at extreme low water (Cap à la Roche and Cap Charles) the present available depth is 27½ feet at low water, with a minimum width of 300 feet in the straight portions and 450 feet at the curves. The work below Quebec has in view a 30-foot channel at low tide at the St. Thomas flats and at Beaujeu bank, the width everywhere to be 1,000 feet. The Beaujeu bank channel was officially opened on July 29, 1908, to 30 feet depth at extreme low tide and 600 feet in width, where formerly there was only 21 feet at low tide.

2. The total expenditure on dredging operations and construction of new plant on the River St. Lawrence ship canal between Montreal and Father Point, for the fiscal year ending March 31, 1908, was $895,599.88.

3. The dredging plant working on the River St. Lawrence ship channel, between Montreal and Father Point, consisted of six elevator dredges, one hydraulic dredge and two hydraulic hopper sea-going dredges. 4 staff steamers and 9 tugs, with their attending plant. The number of men employed on the dredging fleet equals 526. The number of men employed in the government shipyard at Sorel, Que., equals 800. Total, 1,326.

4. Yes, the government intends continuing the deepening of the River St. Lawrence ship channel between Montreal and Father Point next spring. The channel at Berthierville belongs to the Public Works Department.

Hon. WM. PUGSLEY (Minister of Public Works). The answer to section 4 of this question is partly in my department.

4. Dredging was performed at Berthierville during season of 1907, making a channel to a depth of from 9 to 12 feet at low water, which was considered sufficient for navigation at the time. If further dredging is required, the matter will have due consideration.

LIQUIDATION OF CENTRAL BANK OF CANADA.

Mr. DONNELLY asked :

1. Has the Receiver General received from the liquidator of the Central Bank of Canada, through the registrar of the court the balance left in the hands of said liquidator?

2. If so, what is the amount of said balance, and what is it charged with?

Hon. W. S. FIELDING (Minister of Finance):

1. Yes.

2. $3,668.15, of which $776.17 was to meet amount of dividends declared by the liquidators of the bank unclaimed; and $2,891.98, representing the balance in the hands of the liquidators at the time of their discharge for distribution pro rata to claimants showing themselves entitled thereto.

Mr. BRODEUR.

INTERCOLONIAL RAILWAY—CALVIN McKENZIE.

Mr. RHODES—by Mr. Jameson—asked :

1. Is Calvin McKenzie, of Eureka, Pictou county, an employee of the Intercolonial Railway, or of any other department of the government?

2. If not at present such an employee, was he at any time during 1908?

3. If so, how long was he employed and what was his employment?

4. If he is at present employed what are his duties?

5. What rate of pay did he receive, and what is the total amount paid him?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. Calvin McKenzie is employed on the Intercolonial Railway.

2. Employed on the Intercolonial Railway, since January, 1905, as boiler maker's helper.

3. Answered by number two.

4. Answered by number two.

5. His rate of pay is sixteen cents per hour and the total amount paid him up to 31st January last, was $2,407.39.

TREATY BETWEEN GREAT BRITAIN AND JAPAN, 1894.

Mr. BORDEN asked:

1. At what date did the treaty of July 16, 1894, between the United Kingdom of Great Britain and Ireland and the Empire of Japan first take effect?

2. At what date will the period of twelve years mentioned in article 21 of the treaty expire?

3. At what date will either of the high contracting parties have the right under article 21 to give notice to the other of its intention to terminate the said treaty?

Rt. Hon. Sir WILFRID LAURIER (Prime Minister):

1. On July 17, 1899.

2. On July 17, 1911.

3. Either high contracting party shall have the right, at any time after eleven years shall have elapsed from the date the treaty took effect, to give notice to the other of its intention to terminate the same, and at the expiration of twelve months after such notice is given the treaty shall wholly cease and determine.

CAUSEWAY BETWEEN CARIBOO AND CARIBOO ISLAND.

Mr. CROSBY asked:

1. What is the amount expended in each year since 1896 on the breakwater or causeway, between Cariboo and Cariboo island Pictou county, Nova Scotia?

2. What is the total amount expended since 1896?

3. Is the work completed? If not in what condition is it at the present time?

4. When is it intended to complete the work, and what is the estimated expenditure required to do so?

Hon. WM. PUGSLEY (Minister of Public Works):

1. 1896-97 no expenditure.
1897-98 "
1898-99 "
1899-1900 "
1900-01 .. .. $1,305 60
1901-02 .. .. 256 25
1902-03 .. .. 650 06
1903-04 .. .. 1,552 07
1904-05 .. .. 1,224 44
1905-06 no expenditure.
1906-07 "
1907-08 "
1908-09 (to date) 5,107 99

2. $10,096.41.

3. (a) No. (b) Up to the end of December last, the causeway had been raised to a proposed height of three feet above extreme high water, over a distance of 700 feet from the mainland and to about two feet above high water for the remaining 630 feet; piles had also been driven in a proposed pile and brush work, 555 feet in length, to protect the middle third of the causeway.

4. (a) So soon as the appropriation is obtained. (b) $3,000.

HOLLAND RIVER CANAL.

Mr. SHARPE asked:

1. Did a deputation from North York wait upon the government to advocate the construction of the Holland river or Newmarket canal? If so what was the date of the meeting of such deputation with the government?

2. Did the engineer report? If so, on what date?

3. How many engineers reported at what dates and what was the substance of such reports?

4. How much money has been expended each year since the work began, how many men were employed on the works during the months of August, September, October November and December 1908?

5. When is it expected the works will be completed?

6. Does the government contemplate making any further extensions beyond Newmarket or from the main direction of the present canal?

7. How high is Newmarket above the level of Lake Simcoe?

8. Is Newmarket the highest point between Lake Simcoe and Toronto? If not, where is the highest point situated and how high is this point above the level of Lake Simcoe?

9. What is the population of Newmarket, what are the chief industries and what is the postal revenue from the post office?

10. What is the nature and quantity of the traffic expected to be served by this canal?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). For questions 1, 2, and 3, see return brought down, No. 2, House of Commons, which gives all information.

4. See answer given in reply to question asked by Mr. Wallace, page 1980, Unrevised 'Hansard,' March 3, 1909, for money expended:

Average number of men employed during last week in August, 280.

Average number of men employed during last week in September, 259.

Average number of men employed during during last week in October, 250.

Average number of men employed during last week in November, 210.

Average number of men employed during last week in December, 110.

5. No date fixed.

6. It is not under consideration.

7. The water level in the canal at Newmarket will be 43·09 feet above the low water level of Lake Simcoe.

8. No. The department has no information other than that shown in the returns to the House.

9. The census of 1901, gives population as 2,125. The postal revenue for year ending March 31, 1908, was $5,297.22. The industries: office furniture, flouring mills, wooden ware, printing, foundry, brick and tile works, aerated waters, canning plant and monuments.

10. The usual business that seeks water transportation.

EMPLOYEE THOMAS FAGIN.

Mr. MONK asked:

1. Is Thomas Fagin in the employ of the Department of Marine and Fisheries or of any other department of the government?

2. If so employed, is Thomas Fagin a temporary or permanent employee, and what is his salary and what are his duties?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries):

1. T. A. Fagan is employed by the Department of Marine and Fisheries.

2. Salary, $1,000 a year. His duties are to act as assistant to the superintendent of works for the district between Montreal and Quebec.

Mr. MONK. The hon. minister (Mr. Brodeur) has not stated whether this officer is a temporary or a permanent employee.

Mr. BRODEUR. His salary is by the year, $1,000.

WELLAND CANAL—COST OF TRAFFIC.

Mr. McCALL asked:

1. What is the total cost to date of the Welland canal and feeder, and other work used therewith?

2. What has been the amount of tonnage or quantity of freight carried through the Welland canal in the last five years, from 1903 to 1908, and what amount thereof was

Canadian produce, and what amount from the United States?

3. What was the total amount of tonnage or quantity of freight carried through the said canal during the five years immediately following the enlargement of the said canal, and what amount thereof was Canadian produce and what amount from the United States?

4. What has been the cost of maintenance and operation of the said canal for the five years now last passed?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. Capital expenditure to 31st of March, 1908	$28,082,629 82
Capital total expenditure 1st of April to 31st of January, 1909	214,944 13
Total	$28,297,573 99
Income renewals total expenditure to 31st of March 1908	$ 1,153,560 56
Income renewals total expenditure 1st of April to 31st of January, 1909	104,565 76
	$1,258,126 32
Grand total	$29,555,700 31

	Canadian.	U. S.	Total.
2. 1904			$ 811,371
1905			1,092,050
1906			1,201,917
1907			1,614,132
1908	$776,245	$927,208	1,703,453

Note.—No information can be given as to the quantity of Canadian and American produce passing through the canal from 1903 to 1907.

	Total.
3. 1888	878,800
1889	1,085,273
1890	1,016,165
1891	975,013
1892	955,554

4. Maintenance staff and repairs—expenditure for the past five years ending fiscal year 31st of March, 1908, $881,659.36.

Note.—Only nine months included in fiscal year 1906-7

Information given above will be found in the annual report issued by the Department of Railways and Canals, and canal statistics.

FISHERIES CRUISER FOR PACIFIC COAST.

Mr. RALPH SMITH asked:

1. When was the appropriation made for the building of a fisheries cruiser for the Pacific coast?

2. Have tenders been called for the building of the same?

3. If so, how many tenders were presented, from whom, and what were the amounts?

4. Has the government accepted any of the tenders yet? If so, what is the firm?

5. When are the builders supposed to have the vessel completed?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries):

1. In 1907-8.

2. Yes.

3. Seven. Swan, Hunter and Wigham Richardson, Wallsend-on-Tyne, Eng. Collingwood Shipbuilding Company, Collingwood, Ont. Fleming and Ferguson, Paisley. Vickers Sons and Maxim, Barrow-in-Furness. Clydebank Engineering and Shipbuilding Works, Clydebank. London and Glasgow Engineering and Iron Shipbuilding Company, Glasgow. Polson Iron Works, Limited, Toronto.

4. No. The tenders are still under consideration.

5. Answered by No. 4.

IMPORTS OF NAILS, 1907-8.

Mr. LALOR—by Mr. Blain—asked:

1. How many pounds of nails were imported into Canada during the years 1907 and 1908?

2. By whom were they imported and at what ports of entry?

3. Where were they shipped from, and what is the name of the shippers?

4. What was the price per pound?

5. Are nails free of duty?

Hon. WM. PATERSON (Minister of Customs):

1. The trade and navigation tables show the principal imports of nails for the year ended March 31, 1908, as follows:

	Lbs.	Value.	Average value per lb. Cents.
Iron or steel cut nails and spikes	412,400	$10,359	2½
Wire nails of all kinds, n.o.p.	787,400	27,035	3 4-10th
Nails, brads, spikes, and tacks, n.o.p.	271,631	16,443	6
Composition and sheathing nails and spikes	16,595	2,632	15⅞

2, 3 and 4. It is not usual to publish the details asked for in questions 2, 3 and 4, and the information cannot be furnished at present. I fancy the hon. member (Mr. Lalor) will not press for it. I do not know whether I could get the information, and, even if it could be collected, it would be a long time.

5. Nails are not free of duty.

INTERCOLONIAL RAILWAY EMPLOYEES BY CLASSES.

Mr. STANFIELD—by Mr. Herron—asked:

1. How many clerks are employed on the Intercolonial and what is their average pay per day?

2. How many class employees are there on the Intercolonial Railway, what is the name of each class?

3. Where do the clerks stand as compared with the other employees in regard to pay?

Hon. G. P. GRAHAM (Minister of Railways and Canals):

1. Four hundred and sixty at $1.85 per day, average pay.

2.

Class	Number.
General officers	7
Other officers	82
Station agents	236
Other station men	681
Engine men	356
Firemen	435
Conductors	265
Other trainmen	998
Machinists	473
Carpenters	493
Other shop men	875
Section foremen	263
Other trackmen	1,028
Switch tenders etc	86
Telegraph operators and despatchers	273
Employees, floating equipment	44
All other employees	1,868
Total	8,923

3. They stand thirteen on the list of the others shown.

INTERCOLONIAL RAILWAY—CLAIMS FOR DAMAGES.

Mr. RHODES asked:

1. Were the claims of any person or persons in Nova Scotia against the government, by reason of personal damages or losses of animals or damages to property on account of the Intercolonial, settled or paid between June 1 and December 31, 1908?

2. If so, what are the names and addresses of such persons, the nature of their claims, how was settlement effected, and on what date was settlement effected in each case?

Mr. SPEAKER. Stands as motion for return.

SOUTH AFRICAN PATRIOTIC FUND.

Mr. WALLACE asked:

1. Has the government any knowledge of the existence of the South African patriotic fund? If so, how much of this fund is left in the treasurer's hands, and who is the treasurer?

2. Who have benefited by this fund, and to what amount?

3. What is the intention of the government with regard to this fund?

4. Are any salaries paid to any person out of this fund?

Hon. WM. PUGSLEY (Minister of Public Works). At the request of the Minister of Militia, I beg to say that as the government have not control over this fund, they are unable to answer any of these questions. The Canadian Patriotic Fund Association was incorporated by chapter 92 of the Act of 1901 and the Act of incorporation was amended in 1908.

MR. R. J. WATSON.

Mr. SEXSMITH asked:

1. Has Mr. R. J. Watson, ex-M.P., been appointed to an office under this government?

2. If so, what is the work he will have in charge, when does he commence, what are his particular duties, and what salary?

Hon. FRANK OLIVER (Minister of the Interior). Mr. Watson is being employed to make an inspection of certain timber berths in the railway belt of British Columbia, with a view of deciding what portions of these berths may be withdrawn as being suitable for settlement. He has already left for the west and his salary during employment will be at the rate of $2,500 a year.

OPPORTUNITIES IN CANADA, 1909.

Mr. McCARTHY—by Mr. Herron—asked:

Who are the publishers of the book intituled: 'Opportunities in Canada, 1909'?

Hon. FRANK OLIVER (Minister of the Interior). The publisher is Mr. Ernest Heaton, of Toronto.

DREDGING ST. JOHN HARBOUR.

Mr. FOSTER asked:

1. On what date was dredging work begun by Mr. Gregory at Ballast wharf, St. John harbour?

2. On what date was dredging work begun by the Maritime Dredging and Construction Company at Beacon Bar, St. John harbour?

3. Have any contracts been made for dredging in St. John harbour since August, 1908, other than mentioned by the minister on page 1983, revised 'Hansard'? If so, what, with whom, at what rates, what tenders, if any, were invited and received therefor, and what are the names and prices of the tenderers?

Hon. WM. PUGSLEY (Minister of Public Works):

1. February 17, 1909.
2. February 26, 1909.
3. (a) Yes.
   (b) Dredging at York Point.
   (c) Maritime Dredging and Construction Company.
   (d) Prices per cubic yard:

Towed to dumping grounds.

Rock.	Other materials.
$6 00.	$0 90.

Cast over.

Rock.	Other materials.
$6 00.	$0 90.

(e) Tenders called for by public advertisement and only one received, that of the Maritime Dredging and Construction Company with the above mentioned prices.

BRIDGE AT ST. ANDREWS LOCKS, MANITOBA.

Mr. BRADBURY asked:

1. Does the present contract for the bridge over the dam at St. Andrews locks, Manitoba, provide for a proper connection being made with the highways on both sides of the river so as to make the bridge practical for traffic?

2. If not, is it the intention of the government to have this work done at once, so as to connect the highway with the bridge by a practical road for general traffic?

Hon. WM. PUGSLEY (Minister of Public Works):

1. No.

2. It is considered that this is a work which should be undertaken by local government and municipality.

RAILWAY CROSSING AT PEMBROKE.

Mr. LENNOX asked:

Referring to a return brought down on the 4th instant on motion of Mr. Lennox, sessional papers No. 99, and to a list of cases decided by the Railway Board, marked 'A,' in this return, and it appearing by the return that in 68 of the total of 69 railway crossings cases decided, the railway companies paid all or a great part of the cost, what are the special circumstances in connection with the only case in which the government was interested, namely, the crossing at Pembroke, order 192, which made it proper that the railway company in this case should be exonerated and that the total cost of protection should be borne by the country, represented by the Department of Public Works?

Hon. GEO. P. GRAHAM (Minister of Railways). In reply the board begs to state that an error has occurred in the memorandum submitted by the board marked 'A' and referred to in the above inquiry in citing the order as No. 192. The order in question is order No. 3,244, and is dated July 4, 1907. Order No. 192, dated October 18, 1904 was signed by the late Chief Commissioner, the Hon. A. G. Blair, but was not in fact issued. The order was not issued until subsequently, but in substance the two orders are identical. Referring, therefore, to the inquiry, the application was made to the board on October 4, 1904. Subsequently, on May 5, 1905, the application was heard at a public sitting of the board in Ottawa, Mr. White, K.C., and Mr. J. E. McMullen appearing on behalf of the Canadian Pacific Railway Company and Mr. U. Valiquet, engineer of the Department of Public Works, appearing for the Department of Public Works. The board, after hearing what was alleged, as set forth in the notes of proceedings. volume 16, pages 1684 to 1696, reached the following decision, namely, that the applicants (that is, the Department of Public Works of Canada) be granted leave to cross, at rail level, with the proposed wharf the Canadian Pacific Railway Company's tracks, opposite the town of Pembroke, as shown on the plan filed, and that the crossing be protected by an automatic bell, the cost of the installation and maintenance to be borne by the applicants, that is, the Department of Public Works. It appears from the evidence that the contention of the Canadian Pacific Railway Company was that the streets of the town of Pembroke did not extend beyond the water line of the Ottawa river; that the Canadian Pacific Railway Company had constructed their line on a trestle in the water; that the wharf, having been constructed outside the Canadian Pacific Railway Company's trestle, the approach to it from the town side and the crossing of the Canadian Pacific Railway Company's tracks was something the company should not be held liable for the cost of the protection of. It would appear that the issuance of the order was delayed to enable the Department of Public Works to decide whether they would take the order subject to the condition that they paid for the protection, or to endeavour to arrange with the town to pay for the cost of protection. Finally, however, at the request of the Canadian Pacific Railway Company, under date of a letter of April 3, 1907, an order was issued.

MOTIONS AGREED TO WITHOUT DISCUSSION.

For a return showing:

1. How many licenses to fish and pack lobsters in the coast waters of Prince Edward Island have been issued by the Dominion government since January 1, 1904, to this date, and to whom same were issued.

2. A copy of any petitions, requests, or correspondence received by the government from any person or persons, or corporations since January 1, 1904, asking for licenses to fish and pack lobsters in said province.

3. The number of new licenses likely to be issued by the government during the present year.—Mr. Fraser.

For a return showing the names and addresses of the several immigration agents in Canada whose duty it is to locate or settle immigrants upon their arrival in Canada; what salary or remuneration has been paid to each such agent for the fiscal year 1908 and up to the first of February, 1909; and on what basis they are paid.—Mr. Macdonell.

For a return showing the names and addresses of the several inspectors of immigrants employed by the government; what salary or remuneration has been paid to each

such inspector during the fiscal year 1908 and up to the 1st of February, 1909; and on what basis they were paid.—Mr. Herron.

For a copy of all correspondence, communications in writting and documents from the grand secretary, or any officials of the Fisherman's Union of Nova Scotia, or any branch or station of the said union, to the Minister of Marine and Fisheries or to any official of the department, and the replies or communications from the minister or any official of the department since the 1st of January, 1907?—Mr. R. L. Borden.

For a return showing what expenses under the following heads: (a) bank commission, (b) underwriting charges, (c) brokerage, and (d) advertising, were incurred by the government on each of the following loans, and to whom the several amounts were paid, viz.:—

	£	s.	d.
1874 loan extended to 1911, 4 per cent..	1,753,830	4	10
1875-8 public works guaranteed loan, 4 per cent..	3,200,000	0	0
Loan of 1884, 3½ per cent..	5,000,000	0	0
Canada reduced 1885, 4 per cent.	6,443,136	2	9
Loan of 1885, 4 per cent..	4,000,000	0	0
C.P.R. land grant loan 1888, 3½ per cent..	3,093,700	0	0
4 per cent loan of 1908-12, 4 per cent..	1,379,600	0	0
3½ per cent loan 1908 (February issue) 3½ per cent..	3,000,000	0	0
3¾ per cent loan 1908, 3¾ per cent..	5,000,000	0	0
3½ per cent loan 1908 (October issue) 3½ per cent..	5,000,000	0	0
3¾ per cent loan 1909, 3¾ per cent..	6,000,000	0	0

Payable in Canada.

Reduced loan of 1883, extended 3½ per cent..	$1,425,800 00

Dominion stock issue.

A reduced in 1897, 3½ per cent.. ..	58,899 67
B reduced in 1897, 3½ per cent.. ..	325,900 00
C reduced in 1897, 3½ per cent..	49,066 34
E extended for 10 years, from 1st July, 1906, 3¾ per cent..	2,500,000 00
Dominion stock issue 1891, 3½ per cent..	404,202 00

$5,000,000 for one month; Bank of Montreal, Ottawa; March 2, 1909; 4 per cent.—Mr. S. Sharpe.

For a copy of all reports, specifications, offers, tenders, contracts, alterations of contract, correspondence and documents of every description relating to or in connection with the contract of Thadee Desbiens for an extension to the Chicoutimi pier; and the same in connection with the contract of the General Construction Company, for work done by the dredge 'Algonquin' at or near said pier.—Mr. Ames.

For a copy of all petitions, reports, specifications, offers, tenders, contracts or papers of any description in connection with the protection pier at Rivière du Moulin, near Chicoutimi, Saguenay county, P.Q.—Mr. Ames.

For a copy of all reports, correspondence, statements, receipts, vouchers and documents of every description with respect to the granting and payment of the railway subsidy authorized under 6-7 Edward VII., chapter 40, section 1, subsection 16.—Mr. Ames.

For a copy of all applications, advertisements, tenders, leases, correspondence and papers of every description, with respect to timber berths Nos. 1316, 1317, 1318, 1330, 1331, 1332, 1333, 1334, 1335, 1336, 1360, 1361, 1362, 1363, 1564 and 1365.—Mr. Bradbury.

For a copy of all applications, correspondence, reports, documents and papers relating to the establishment and service of a post office at Hand Hills, Alberta.—Mr. Magrath.

INTERCOLONIAL RAILWAY BRANCH LINES.

Mr. DANIEL. With regard to the motion of the hon. member for Westmoreland (Mr. Emmerson) relating to the leasing of branch lines, I might say that it would appear to me rather inadvisable for him to bring it up just now, because the House is awaiting the return of several documents that have been ordered to be printed directly bearing upon this subject, being the report of the Intercolonial Railway Commission, and also of the commission appointed by the New Brunswick government, and other information relating to the question. It appears to me, therefore, that the House is hardly in a position to discuss it intelligently without that information before it. I do not think it would interefere at all with the hon. gentleman, or do his motion any harm, if he would postpone it for a week, or until that information is laid before the House.

Mr. EMMERSON. The report alluded to has been printed and is before the House.

Mr. HUGHES. It was presented only ten minutes ago.

Mr. EMMERSON. Well, this afternoon, and it is now in the hands of members. I desire to go on with the motion this evening.

At six o'clock the House took recess.

After Recess.

House resumed at eight o'clock.

INTERCOLONIAL RAILWAY—BRANCH LINES.

Hon. H. R. EMMERSON (Westmoreland) moved :

That in the opinion of this House it is desirable in furtherance of the transportation interests of this Dominion, that the sphere of influence of the Intercolonial Railway as a government operated railway should be widened and extended by securing by lease or otherwise such of the branch lines of railway now connecting the Intercolonial as will serve as direct and profitable feeders to the traffic of said railway.

He said : Mr. Speaker, I trust I take no exaggerated view of the subject involved

in this motion which I have the honour to present to the House when I state that I consider it of the very greatest importance not only to eastern Canada but to the whole Dominion. It is a question which has a direct bearing on that very great problem of affording the best means of transportation for the commerce of our country. I regret Sir, that I am unable to approach the subject with that ability and comprehensive knowledge which it undoubtedly demands. I feel that I cannot deal with this particular subject of the branch lines connecting with the Intercolonial Railway without in some way reviewing the transportation history of the past, and for convenience sake I shall divide that history into four periods. First of all, at the very dawn of confederation the problem which confronted the people of that day was the construction of the Intercolonial Railway to connect the eastern and western provinces which then constituted Canada, and allied with that was the question of the extension and completion of our canal system. It is not mere tradition to say that in the confederation compact the construction of the Intercolonial Railway was placed as a set off against the extension of the canal system. Rightly or wrongly it was viewed that the canal system of Canada appertained more directly to the transportation interests of what was known as Upper and Lower Canada and that the Intercolonial Railway was conceived as a means of solving the transportation problem for Nova Scotia and New Brunswick, which were then the other two provinces in the confederation. The second period in our transportation history commenced with the construction of the Canadian Pacific Railway. The third period was that in which the government of the day dealt with the transportation question by aiding the building of railways throughout Canada by the granting of money and land subsidies and co-related to that same period was the governmental guarantee of bonds (in addition to the subsidies granted) of railways that were deemed to be in the general interest of the country.

The fourth period may well be referred to as the period of the National Transcontinental Railway or Grand Trunk Pacific period. That great work was dealt with by the last parliament, with a view to meeting the larger transportation questions that have arisen by reason of the additions to our territory and the expansion and development of our commerce. I shall, as briefly as I can, deal with these four periods before I come to discuss the immediate question submitted to the House by my resolution.

The Grand Trunk Pacific period involved not merely a direct expenditure on the part of the Dominion, but also aid towards the construction of a railway owned by a private corporation by the guaranteeing of its bonds, a policy which had previously been carried out with respect to other railways, particularly in western Canada. It will be interesting to note just how much money the people of Canada have been obliged to spend in connection with each of these periods. We recognize the Intercolonial Railway as a great work, the undertaking of which was discussed prior to the days of confederation. Beginning with the late forties and extending down to the consummation of confederation the construction of the Intercolonial Railway was deemed a question of importance to British North America as a whole and particularly to Nova Scotia, New Brunswick, Ontario and Quebec. I need not recount the number of conferences that were held; I need not refer to the great work performed by the revered Joseph Howe ; I need not name the men who in those upper provinces took such a great interest in the carrying out of this project, destined to bind together the provinces which then constituted Canada. It will be borne in mind that at the time of the conference at Charlottetown the very first question that had to be settled was the question of the proposed construction of the Intercolonial Railway—how it was to be done and the purpose which it would serve; and it was undoubtedly held out as an inducement to the eastern provinces to form a part of the Dominion that had been conceived in the minds of the statesmen of that day.

I need not say that in the selection of a route for the railway there were great differences of opinion. There was a discussion as to whether the construction of the railway would not be beyond the powers of the new Dominion. There were strong objections on the part of the people of Ontario in particular to so great an undertaking. Ontario at that period was, as she is to-day, one of the first provinces of the Dominion—her population far in excess of the combined populations of the maritime provinces, her natural wealth far beyond that of any other province. In population, in wealth, in area, in every thing which goes to make a country great, Ontario was far ahead of any of the other provinces; and naturally her people thought that the burden of the construction of the railway would fall very largely upon their shoulders, and they did not think it was a matter of prime importance to them even that there should be such a railway. In the selection of a route many interests were involved. There was first the political consideration that could not be ignored; there were the sectional interests that are ever with us, and there was the imperial interest, the military interest of the motherland, in the colonies of British America. When it was determined to se-

lect what was known as the Robinson route, the northern route, the route along the southern shores of the St. Lawrence river, and thence crossing the divide to the northern shores of New Brunswick, it was asserted on all sides that such a railway could not be made a commercial success. It was described as traversing large areas sparsely if at all populated, as passing through a section that was bleak and barren. But the railway was thus routed and it was thus constructed; and the fathers of confederation said: Even though it does not prove to be a commercial success, we would rather build one, two, three, four—and one hon. member said even six—such railways if their construction would bring about the confederation of Her Majesty's colonies in British North America under the government of one great Dominion. And that was the general opinion; it was the opinion of every shade of political thought; and it was decided that the railway should be thus constructed by the Dominion of Canada as an off-set to the construction of new canals and the improvement of old ones, so that there could be facilities of transportation for the people of both eastern and western Canada.

The Intercolonial Railway was constructed. I need not go further into its history. I shall not further elaborate the objections that were raised. I will simply invite your attention to the cost of that railway as it stands to-day to the people of Canada:

The Original Intercolonial Railway..	$73,013,210 01
The Cape Breton Railway..	3,860,679 14
The Oxford and New Glasgow Railway..	1,949,063 21
The Eastern Extension Railway	1,324,042 81
The Montreal and European Short Line Railway..	333,942 72
The Drummond Counties Railway	1,464,000 00
The Canada Eastern Railway..	800,000 00
Total..	$82,744,937 89

This is the total amount invested by the people of Canada up to this time in the Intercolonial Railway. Now, I am not going to discuss in detail the question of the dollars and cents of advantage that has accrued to the people of this Dominion from the expenditure of that very large sum of money. It will undoubtedly be admitted by every hon. member of this House, and by every man outside of this House, that the Intercolonial has been of immense advantage to the people of this country, even though its annual credit balances have not shown large in its book-keeping, by reason of the very low rates of freight that have prevailed and the encouragement which those low rates have given to the trade and navigation of the country. I think it will be admitted on all sides that the advantages that have been derived by the people of Canada directly from the construction of the railway are beyond calculation in dollars and cents. It has cemented the provinces together; it has brought the people in closer touch with each other. I need not say that at the time of confederation the people of Ontario and the people of New Brunswick and Nova Scotia were aliens and foreigners to each other; there was no communication between them; they were as wide apart as were the Jews and Samaritans in days of old—indeed, farther apart; while at that time the people of eastern Canada were in close touch with the people of the New England states, both as to trade and as to social intercourse. They knew each other and that is one of the reasons why there are so many Canadians to-day in the eastern cities of the United States and in the western cities as well. The construction of the Intercolonial Railway led to an interchange of ideas between Canadians. The traffic was diverted this way partly by the low freight rates on that railway, and the fact that the people in the maritime provinces to-day are familiar with the people in Ontario and the west is due very largely, in my judgment, to the construction of the Intercolonial Railway.

But during that period we made other expenditures. Starting out as the twin sister of the Intercolonial Railway was the canal system of Canada. Up to the time of confederation there had been expended in the construction of canals something in the vicinity of $20,000,000. These canals, which were situated in Ontario and Quebec, were designed to carry on an interprovincial traffic between Upper and Lower Canada as well as to contribute to the export traffic of the ports of Montreal and Quebec, and I am bound to say that the people of the east rejoice in the fact that these canals have been an immense success in the accomplishment of that object, although it cannot be denied that the traffic thus created and carried by those canals in no sense reached the maritime provinces nor did it benefit their trade in any respect. The Intercolonial Railway has been the medium of practically all the traffic between eastern and western Canada; it certainly was up to the time of the construction of the Canadian Pacific short line from Montreal to Metawamkeag and the city of St. John. The canals have done a great work for Canada. They have contributed to its export trade; they have made its traffic rates lower and they have made possible the great export and commercial trade of Montreal and Quebec with the ports beyond the seas.

How much have we contributed in that direction? Canada has invested $91,734,718.21 during the period between the 1st of July, 1867 and the close of our last fiscal year.

That was exclusive of all imperial expenditure in connection with the canal system of Ontario and Quebec, so it may fairly be said that the people of Canada contributed between 1867 and the present year in aid of the Intercolonial Railway the sum of $82,744,000, particularly in the interests and because of the solicitations of the people of eastern Canada. Let me admit that. But at the same time there was contributed to the aid of the other partners in confederation and for their benefit towards the construction of these canals the sum of nearly $92,000,000.

This first period in our transportation history was perhaps the hardest period of them all. It required a greater courage than any of the succeeding periods; but Canada grappled with the difficulties of that day as she can and will grapple with the difficulties of to-day. The next great question that invited the consideration of the people of Canada was the construction of a railway designed not merely to connect Ontario with Nova Scotia but to bind together the eastern and western provinces, to span the continent from the Atlantic to the shores of the Pacific. The Canadian Pacific Railway was commenced about 1874, during the days of Alexander Mackenzie. Surveys of the road were then taken, and portions of it were constructed as a government built road. During that period, as we all know, and since, there has been a great deal of discussion with respect to the magnitude of the problem which Canada faced in the construction of a transcontinental railway and the manner in which she grappled with that problem. I need not speak of the importance of that railway, it has been discussed so often, and we are all so familiar with it, that it would be but a waste of time to discuss it now. But we must also ask ourselves what that railway cost to the people of Canada, what we have paid out during that great period to meet the problems that confronted us at that time. When I turn to the public accounts to enquire as to the cost of that railway I am confronted with figures that seem large indeed, and I have to stop and realize that the moneys expended on the Intercolonial Railway are represented by a railway that is owned by Canada to-day, a great national asset of Canada. When I think of the canals and review what they have cost Canada I realize that we have the canals, that they are ours and that they represent the money thus expended; they are a national asset But when I view the expenditure with respect to the Canadian Pacific Railway, I realize, and every member of the House must realize, that we have expended large sums of money, that we do not own the railway, it is not ours. The very questions that have been discussed during this session of parliament, involving the capital stock of that railway and the interest incident to the largeness of that capital account, indicate that Canada, as a nation, does not own any portion of that railway; that while we have spent our dollars and contributed our lands towards its construction, it is not ours to-day. It is not even owned by Canadians individually; its shareholders are to be found in every civilized country. As a Canadian nation, we cannot point to it as a national asset. I find that we have expended on this system, in subsidies and in constructed lines, $87,425,000.60.

Some hon. MEMBERS. Oh, oh.

Mr. EMMERSON. I am not going to knock off even the sixty cents, as I desire to be accurate. First, there were surveys made by the government in the early seventies, and portions of the line were constructed west of Lake Superior and down the Fraser canyon. We have contributed to the Canadian Pacific Railway and its branches 27,924,190 acres of our best lands. It is simply a question of arithmetic what this shall be held to represent. If you consider the land worth $1 an acre, you simply have the number of acres representing the same number of dollars. But if you value these lands at what I conceive to be a fair valuation—certainly not an extravagant one—$5 an acre, you have as a contribution on this account by the people of this Dominion to the Canadian Pacific, $139,620,950. This makes a grand total cost of the Canadian Pacific Railway and its branches to this country of $227,045,950.60. You can lessen that, if you will, by depreciating the value of the lands. I venture to say these lands are being sold by the company at a very much higher price per acre to-day. Figure the amount what you please, and it makes no difference with respect to the argument which I am making—we have contributed an immense sum of money to the construction of this railway, and as a Canadian people we do not own the road. I admit that the railway has done a great work for Canada; in calling attention to these figures, I am in no sense minimizing the importance of that great railway, nor am I calling in question the wisdom of those who saw fit to take the action they did during the parliaments that have sat since confederation. I simply want to invite your attention to the figures, so that the people of Canada may realize just what the railway has cost them to perfect our transportation facilities down to the period ending with what I have described, for convenience, as the Canadian Pacific period of our transportation history.

So, we have invested in the Intercolonial $82,000,000, we have invested in the canal

system of Canada, $92,000,000; we have invested in the Canadian Pacific Railway upwards of $225,000,000. Each of these great systems has played an important part in our history and has contributed and will contribute to our growth as a nation.

Mr. S. BARKER (East Hamilton). With the hon. gentleman's permission, I would like to ask him a question. His figures are very interesting. He is comparing the cost of various great national undertakings. He has given us the capital expenditure—made originally, made many years ago—he has given us the Canadian Pacific Railway grants multiplied by the present value, and so on. But he has not given us what the cost of the Intercolonial would be, capitalized up to date. If he will give that, we should be better able to judge its comparative value.

Mr. EMMERSON. I gave the capital invested. My hon. friend (Mr. Barker) would seek now to incorporate into this another question entirely.

Mr. BARKER. The hon. gentleman (Mr. Emmerson) has multiplied the grant to the Canadian Pacific Railway by five.

Mr. EMMERSON. I quite see the diversion my hon. friend seeks to make. I have not taken into consideration the question of annual deficits on the Intercolonial, nor have I taken into consideration the deficits on the canal system of Canada.

Mr. BARKER. I am not asking that.

Mr. EMMERSON. No, the hon. gentleman does not wish to know anything about that, nor would it be a matter of importance from his standpoint.

Mr. BARKER. Nor from yours.

Mr. EMMERSON. One offsets the other, so far as the discussion of this question is concerned.

Mr. BARKER. I do not wish to interrupt the hon. gentleman (Mr. Emmerson) in his argument. I am not going into the question of losses. But he is dealing with the original expenditure. He has given us the original expenditure on the Intercolonial and the original expenditure, including lands, on the Canadian Pacific Railway. But he multiplies the grant to the Canadian Pacific Railway by the present value, which is about five times the original estimate, and leaves the other at the original cost.

Mr. EMMERSON. That was self-evident. I did not hide the facts; I presented them. I simply said that we had expended on the Canadian Pacific in cash $87,425,000, and, in addition, we had given nearly 28,000,000 acres of land, and I mentioned that it was simply a question of arithmetic what value you should put on those lands—whether one dollar, two dollars, three dollars, four dollars or five dollars an acre. Just for the purposes of calculation, I put the valuation at $5 an acre, but I did not take into consideration some other things. I have not in the past taken into consideration the fact that after we had constructed the Intercolonial Railway, we aided in the construction of a competing line, a short line, to St. John, and that we have been paying annually for twenty years the sum of $186,000 towards the operation of the Canadian Pacific Railway from Montreal to St. John. And I have not invited attention to the cash subsidies which we have given, and properly given. But I want it distinctly understood that when you give any attention to the Intercolonial Railway and its results, particularly its financial results, you must bear in mind that when we constructed the Intercolonial Railway, we aided, but a very few years afterwards, the construction of a competing line to take away from the Intercolonial Railway a large portion of its traffic and make it operate at a disadvantage. Nor did I refer to the fact that the Intercolonial Railway was constructed along a route where it was brought at every point in competition with water carriage. I have not referred to these facts because time calls on me to shorten this preface to the resolution which I have the honour to move.

There is a third period, that of subsidies and the guarantee of bonds in aid of railways. I find that after the government of Canada has invested its money in the Intercolonial Railway, in its canal system and in the construction of the Canadian Pacific Railway, there was inaugurated a new policy—wisely no doubt in the interests of the country—the policy of aiding the construction of railway lines throughout Canada by means of subsidies granted at the rate of so much per mile. This policy adopted by the Dominion, was followed by the provinces, and followed, I think, very unwisely. If there was one defect in the British North America Act, it was in giving the provinces the power to aid the construction of railways; and I think I can fairly make this argument, that the fathers of confederation never contemplated that the provinces themselves would aid the construction of railways. The terms of the British North America Act would seem to bear out that view. The financial arrangements made for the carrying on of the provinces certainly could never have contemplated their going into the railway business. We know what the discussion was at the time of confederation with respect to the amount of money which would be required to carry on the ordinary affairs of government in the respective provinces; and when the cry went forth in 1865, particularly throughout the eastern provinces, that the people were being purchased by the upper Canadians at eighty cents per head, it car-

ried with it the idea that the people of the respective provinces were simply to have eighty cents per head for the maintenance of provincial government. But that is a digression. The important fact is that the policy was inaugurated by the Dominion. Railways were promoted in every section, their construction was commenced and that construction has from time to time been continued down to the present. We have expended, apart from the $25,000,000 given as a cash bonus to the Canadian Pacific Railway, upwards of $36,000,000 in subsidies in aid of the construction of railways, and that $36,000,000 does not include $2,294,000 which was placed to the credit of the province of Quebec in our debt account with that province, and upon which we have been paying interest every year since at the rate of five per cent per annum, making an annual expenditure of $119,700 per year. We not merely give this amount in cash to these respective railways, but we gave in lands about 4,000,000 acres as subsidies to aid in the construction of railways which have not been since absorbed by the Canadian Pacific Railway. I find that we have given to all railways, inclusive of the Canadian Pacific Railway and its branch lines, 31,864,074 acres. Deducting the Canadian Pacific Railway land, 27,924,190 acres, that leaves to the Canadian Northern and other railways 3,989,884 acres. You can figure out those lands at any price you please, but whether at one dollar, two dollars, or five dollars per acre, the amount is very considerable; and I think it might fairly be said that we have invested in all other railways, of which we do not own a single fragment, an amount equal to our investment in the canals, greater than our investment in the Intercolonial Railway, and very considerably reaching the larger figure which we gave to the Canadian Pacific Railway. I make this statement, sir, that if you figure the amount that we have paid towards the construction of railways, other than the Intercolonial Railway, either in cash or in lands, we have invested in these privately owned railways throughout Canada, an amount exceeding $457,000,000. Now, that $457,000,000 is represented by our indebtedness, it is represented by the earnings of the people of Canada thus expended, but the people of Canada have had the benefit, and I do not ask your consideration of the figures with any idea that I am condemning the course that was adopted, but I wish the facts placed before us so that we can make a comparison when we come to consider perhaps the smaller question—the question involved in the resolution now under consideration.

Now, Sir, I come to the fourth period, a period so recent in our history that we are all at once familiar with it, and I need not take up any of the time of the House in considering this period, which I have been pleased to term as the Grand Trunk Pacific period in the transportation history of Canada. We know what was done in this parliament in 1903 and 1904. We know the agitation that has been created through the country, and we know that on every hustings throughout Canada this question has been discussed. It is fresh in the minds of the people at this moment, and the questions to what that railway has cost up to this moment and as to what it may cost when it is a completed work, are questions which I will not now undertake to solve, but they are questions worthy of consideration.

Mr. BARKER. Hear, hear.

Mr. EMMERSON. My hon. friend (Mr. Barker says, 'hear, hear.' Is it because he thinks that was not a solution of the problem that confronted the people of Canada? Is it because he thinks we are to pay too dearly for the solution of such a problem, or is it merely the hon. gentleman's partisan colour that leads him to say 'hear, hear' in respect to that? I am endeavouring to deal with this question in the cold light of facts. I do not wish to incorporate into it one iota of partisan feeling. I do not wish it to be coloured by any political bias or any partisan thought. If it is incorporated into it, it will be by persons other than myself. I am dealing, in this resolution, with a business problem, one that I conceive, rightly or wrongly, to be in the interest of all Canada, one that is of paramount importance, in my judgment, to the people of eastern Canada, and I cannot refrain, and if I did refrain, I would be recreant to what I conceive to be my duty, from inviting the attention of the House and of the country to just what has occurred with respect to our transportation expenditures since the dawn of confederation.

Now, Mr. Speaker, I cannot very well take into consideration the declaration of this resolution without assuming one fact, which fact, if you take it from under this resolution, permits the resolution to be so absolutely futile and nugatory that its consideration even would be a waste of time by this House, and I would be but wasting your time and my own time and energy if I were to continue without the basis of that fact. I have declared in this resolution:

That in the opinion of this House it is desirable in furtherance of the transportation interests of this Dominion, that the sphere of influence of the Intercolonial Railway as a government operated railway should be widened and extended by securing, by lease or otherwise, such of the branch lines of railway now connecting with the Intercolonial Railway, as will serve as direct and profitable feeders to the traffic of said railway.

It must be taken as an assumed fact, and it is not and should not be a violent

assumption that the Intercolonial Railway is to continue as a government-owned and government-operated railway, that that is to be the policy of this parliament and of this government, as it has been the policy of past parliaments and past governments. I have the right to assume that. I need only refer to the political history of this country, the history of this parliament and the history of all governments, to lead me to the conclusion that it is a fair assumption that the Intercolonial Railway is to be continued as it was conceived—a government road, operated by the government and the people of Canada. If it is not to be, if the assumption is too violent, then, Sir, my remarks are of no avail, they have no point and they are without foundation either in fact or fiction. Let me, therefore, invite your attention to what has occurred since confederation. Take the history of the Conservative party, the attitude of all Conservative administrations down to 1896, and I am bound to say that on its face it was not an attitude of hostility, but an attitude of friendliness. If you turn to the debates of parliament in 1883, when Sir Charles Tupper was Minister of Railways, and refer to the votes and estimates of that period you will there recognize that in all of the works proposed, connected in any way with the Intercolonial Railway, whether it was the subsidizing of a branch line, whether it was the construction of terminals, whether it was the building of breakwaters or wharfs, the basis of the application to parliament for these money votes was the extension of the Intercolonial Railway and the improvement of its traffic that its earnings might be benefited. Sir Charles Tupper, in proposing to parliament line after line to be subsidized, said: It is a feeder to the Intercolonial Railway, part of the government system. Even that railway, known now as the Atlantic and Lake Superior, more generally known as the Baie des Chaleurs, when it was first brought to the notice of this House, was brought forward in the form of a resolution providing money for the construction of that railway by the government as a branch line of the Intercolonial Railway. Later the aid was changed to a subsidy to a railway company.

The branches thus constructed, the wharfs and breakwaters and harbours and terminals built and improved were all for the purpose of enabling the Intercolonial railway to continue its work. There were additions to the road; a short line was built from Oxford Junction to Stellarton, other lines were built in Cape Breton and Nova Scotia, the St. Charles branch from St. Charles to Lévis was constructed and other extensions and improvements were made. It is true that about 1896 there were rumours that it was the intention of the Conservative government of that day to transfer the Intercolonial Railway to a private corporation. I know not if these rumours were well or ill founded, but I do know that if there was any truth in them, the Liberal party of Canada gained advantage to the extent that these rumours were believed in. However, so far as the proceedings of this House will demonstrate the Conservative party was committed to the continuance of the Intercolonial as a government railroad. At all events, from the year 1896 when the Liberal government assumed power down to the present moment, every Act of that government was such as to impress the people of Canada with the idea that the Liberal party as a party is a friend of the Intercolonial and bent on its continuance as a government operated railway. Every act of the Liberal government: the construction of lines, the improvement of the Intercolonial itself, its extension into Montreal, the leasing for a long period of years of part of the Grand Trunk line and access to its Montreal terminals, the purchase of the Canada Eastern Railway; a thousand and one acts of the Liberal government demonstrate that it was in favour of maintaining the present status of the Intercolonial. Read over the acts of 1903 and 1904 in connection with the Grand Trunk Pacific Railway; read them over carefully and there is hardly a clause or a line which does not indicate that provision is made by the government and by the parliament of Canada for the future of the Intercolonial as a government road. The possibility of forfeiture, the possibility of failure on the part of the Grand Trunk Pacific, are safeguarded in every direction by provisions that the government shall be in a position to nullify any disaster that may accrue by the absorption of the portion of the line that may be forfeited as a part of the Intercolonial railway system. There can be no question but that down to this period the attitude of the Liberal government, and the attitude of all parliaments in which I have sat indicate no other thought than that the Intercolonial should be continued as a railroad owned and operated by the government of Canada. I think therefore that I have the right to assume that there is no other intention on the part of the government or the parliament of Canada. I remember, when I had the honour to preside over the Department of Railways and Canals, there were similar rumours with respect to the Intercolonial Railway. There are always rumours set afloat for this purpose or for that and generally because of some ulterior purpose to be served. I remember that on one occasion a rumour was circulated (for what purpose I know not) that the Intercolonial Railway was to cease as a government operated road and to become the property of a private corporation. I remember,

speaking for the government—and I do not think I have ever exceeded my authority —I remember making the statement that the government of Canada as then constituted had no intention of disposing of the Intercolonial Railway, that on the contrary that they were determined to maintain it in its entirety and in its present status as a portion of the transportation system of Canada, and that in so doing they were also determined that it should be made a paying asset.

Now, Sir, before discussing the direct question of the acquisition of the branch lines, I must ssume that this railway is to continue as a government railway to be operated by the government. If I were not able to assume that then there would be no point to my resolution and no object to be served by it. Taking that assumption as correct I would therefore bring to the notice of this House the question of the absorption of the branch lines connected within the Intercolonial Railway as a part of the Intercolonial Railway system. I shall bring it to the notice of the House purely as a business proposition; a proposition designed to be of advantage to the Intercolonial itself of advantage to the people served by the Intercolonial, of advantage to Canada, and incidentally of advantage to the communities served by these branch lines. Let me analyse the meaning of this resolution. It does not involve the purchase of a single line of railway unless the parliament of Canada so authorizes. It does not declare that the government shall purchase all the branch lines, or even one of them. It does not involve any addition to the public debt. It simply declares that power should be taken by the government of Canada to extend the Intercolonial railway by acquiring by lease or otherwise such of the branch lines as would be deemed to be of advantage as feeders to the Intercolonial.

Now, we have the benefit of a declaration by the right hon. leader of this House with respect to this question. It will be borne in mind that I had the honour to move at the last session of the last parliament a resolution which covered the resolution which I am moving to-night, but which went further and involved the extension westward of the Intercolonial, with a view to facilitating the import and export trade of the Dominion through Canadian channels. There was some discussion in this House on that resolution and incidentally we had the benefit of a declaration by the Prime Minister on the question of the absorption of the branch lines. He stated that if the Intercolonial were owned and operated by a company, unquestionably it would be a part of its business to absorb the branch lines, and that any well-managed railway company would so do. He did raise the question as to whether government operation was elastic enough. That was simply raised as a doubt; but we had this declaration, that if the Intercolonial were to be run as a business proposition the branch lines would be so absorbed. We had also a declaration from the Minister of Railways; but he went much further and was much stronger in his declaration of policy, stating that during the interim between the last session of the last parliament and this first session of this parliament he would cause to be had an inquiry with respect to the advantages of these branch lines to the Intercolonial, the possibilities of their traffic, and the extent to which they would contribute to the traffic of the Intercolonial. It seems that such an inquiry has been had, and although we have not had the benefit of having laid before this House a copy of the report of the commission appointed for that purpose, we know the nature of their report—a report which was deemed to be of such importance by the government of Canada that mention was made of it by His Excellency in the speech from the Throne, with a view undoubtedly of its being laid before parliament so that it might receive the consideration of parliament.

Now, Sir, does the resolution propose any new thing in the history of railways either in this country or in any other country? We find that everywhere in Canada where the Grand Trunk Railway has been brought into contact with a branch line it has absorbed that line if it could. We find that throughout Canada, both in the east and in the west, wherever the Canadian Pacific Railway has had an opportunity of securing a branch line of railway, it has secured it. The history of all countries demonstrates the same thing. The railways in Great Britain were originally many. A few of the larger ones absorbed the smaller ones and the branches, and they became systems. In the United States we find great railway systems which have become so by means of absorption. The New York Central started out as a very puny railway, but by extending its influence and absorbing its branches it has become one of the great railway systems of the world. The same is true with respect to the Pennsylvania system. The Grand Trunk has absorbed the Buffalo and Lake Huron, the Midland with eight branches, the Great Western with five branches, the Northern, and Pacific Junction, the Hamilton and Northwestern, the Lake Erie and Georgian Bay, the Hamilton and Lake Erie, the Canada Atlantic and Parry Sound, and others. The number of branch lines absorbed by the Canadian Pacific is innumerable; I shall not attempt to recite them. If you go into the United States, you will find the same conditions prevailing there, in the Vanderbilt system, the Gould system, the Harriman system. It is true, in many instances these are con-

solidations of other railways, but they are as well the gathering in of the shorter branches, the more insignificant railways. In Great Britain the history of railways points to the same result. The Midland railway, originally a small railway in the neighbourhood of Derby and Nottingham, is now one of the great railways of the world. It absorbed several other railways, and numerous branches and feeders. I need not attempt to give the details. I simply point to the fact that in all countries the history has been that the trunk lines secure the feeders—for what purpose?

For the benefit of the trunk lines as well as of the feeders themselves. No argument is needed to convince any one that it is to the advantage of the people resident in the districts traversed by these branch lines that there shall be a consolidation, so that they will have to deal with but one system. It would be an advantage pecuniarily in respect of freight rates to the patrons of those railways, it would be an immense advantage in the assembling of the product and the traffic within the zone of influence of these trunk lines. In the province of New Brunswick, wherever the Canadian Pacific Railway was brought in contact with branch lines of railway, the Canadian Pacific Railway at once seized upon the branch lines to the advantage of these lines and, as I submit, to the greater advantage of the Canadian Pacific Railway itself. This is submitted to this House as a business proposition in the interests of the Intercolonial Railway, in the interests of the people of all Canada, in the interests of the people in the eastern sections of Canada, and particularly in the interests of the people served by these branch lines. I hold no brief on the part of any branch lines in Canada, I have no interest direct or indirect, near or remote in any branch line in Canada connected with the Intercolonial Railway, but I have an interest in the people of that section of Canada who are served by these branch lines. I recognize the disadvantage they are under, the discrimination against them with respect to freight rates. I recognize that they are practically shut off from the investment of capital, I realize that in my own province of New Brunswick you cannot get a dollar of capital invested in industries to be established on branch lines. Why? Because of want of permanency, because of insecurity, because of the existing double freight rates, because of the inability to get through traffic rates for the benefit of any branch of industry. The natural resources of the counties of Albert, Kings, Gloucester and Kent, of all the counties of New Brunswick, are at a great disadvantage and their values are discounted to-day. Why? Because of the lack of transportation in some cases and of imperfect transportation in others. There are latent resources in some of those counties that would be brought to life, and would form the basis of important industries if these branch lines were so consolidated as to afford an efficient system of transportation. Why should not the government of Canada take this matter into their seirous consideration? In the earlier years of Canada's history, it was thought wise to aid in the construction of railways for the benefit of these communities. We have these immense sums of money invested there, and surely if we recognized the values of those communities then we should not forget their values to-day or the advantages that would accrue to them from the absorption by the Intercolonial Railway of such of these branch lines as are of value and there are a number of them that have a great value.

Some hon. members of this House may not know that a great proportion of the traffic that originates on some of these branch lines of railway finds its outlet from the maritime provinces via the Canadian Pacific Railway, although the branch lines connect with the Intercolonial Railway. and in a measure are a part of the Intercolonial Railway system because of that point of contact. Even on the Kent Northern Railway, which runs from Kent Junction. north of Moncton, to Rexton, in Kent, a large proportion of the express traffic, the passenger traffic and even the freight traffic destined to Montreal and other western points is brought down to Moncton, carried to St. John and there transferred to the Canadian Pacific Railway, the Intercolonial Railway losing the long haul because it has not control of that road, as it would have if the objects which I have in view in this resolution were carried out. The same thing is true with respect to lines in Nova Scotia. Take what is known as the Joggins Mines Railway running from Maccan Junction down to Joggins mine, traversing a very rich district and furnishing transportation facilities to no less than four or five coal mines. There are situated along that railway the mines of the Canada Coal and Railway Company, which owns what is known as the Joggins mine, the Menudie mine, the Fundy mine, the Strathcona mine, the Jubilee mine and one or two others. These mines all have to look to this railway, owned by another competing company for transportation facilities, and a great proportion of the traffic that finds an outlet to the Intercolonial Railway at Maccan, destined for western points, goes to St. John, travels over the short line through Maine and is not hauled by the Intercolonial Railway up to Lévis and Montreal, although the rates are supposed to be the same and although the Intercolonial Railway has every advantage. Take, for instance, the Cumberland Coal and Railway

Company, known as the Springhill Railway and Springhill Coal Mine. I am informed on the highest authority that almost all the traffic that originates on that railway goes over the Canadian Pacific Railway and not over the long haul of the Intercolonial Railway. What I have stated as true with respect to these railways is true with respect to nearly every one of the branch lines through Nova Scotia and New Brunswick. Should this be? Would it be if the Intercolonial Railway were owned by a private corporation? If the government of Canada confessed their impotence, their inability to operate the Intercolonial Railway as a business proposition, then I could quite understand that it would be futile to attempt to carry out the objects of this resolution. But I cannot believe that, and my personal knowledge of the operating of the Intercolonial Railway convinces me that that railway can be as well operated with respect to its branch lines by the government of Canada as it can be by a company. I would be very sorry to have the Minister of Railways obliged to confess that it would be an impossibility and that the Department of Railways could not do this. The absorption of these branch lines means the gathering up of the traffic that is within the sphere of influence of the Intercolonial Railway, the traffic that of right belongs to the Intercolonial Railway and a traffic that if it were within the sphere of influence of the Canadian Pacific Railway would be jealously guarded, would be watched, would be taken hold of, and I hold that it is the duty of the government controlling and operating the Intercolonial, to so act that it can get for the advantage of the Intercolonial all the traffic that of right belongs to her, all the traffic which would be destined to go over that route, and, I am sure, was destined to so go when we aided in the construction of these railways. The Intercolonial, in my judgment, has been made the packhorse. I do not think it has received fair treatment. It seems to me that efforts have been made in every direction to discredit it at every time in its history. Go back to the days when it was controlled by a Conservative government, and you will find that ulterior purposes led many to discredit that road and do everything to its disadvantage. To-day, history is repeating itself: The Intercolonial is being operated by a Liberal government, and—though I do not say it rises from party antagonism or from any political bias—to-day, for purposes ulterior to the main purpose, in my judgment, the Intercolonial is being discredited.

I have adverted to the fact that this route was, perhaps, not the correct one from a commercial standpoint. But there are so many elements that have contributed to the disadvantage of the Intercolonial, that I am at a loss to point them out within the time I can fairly claim the attention of the House. The Deputy Minister of Railways has called the attention of parliament to the fact that annually the Intercolonial loses $100,000 merely in the transportation of the English mail, that sum not appearing to the credit of the Intercolonial. In former years. I have referred to the fact that rates on the Canadian Pacific Railway and Grand Trunk Railway in eastern Canada were from 25 per cent to 100 per cent higher than those on the Intercolonial. I repeat that statement, and if any one asks for proof, I refer him to the tariff sheets of these respective railways which I presented to this House in March, 1907, and had placed on record. They show that discrepancies between the rates charged by the Intercolonial on the one side and by the Canadian Pacific and Grand Trunk on the other, to range, as I have stated, from 25 per cent to 80 per cent, and, I think, in one or two instances, to 100 per cent.

Now, the only answer I have heard made to the carrying out of this policy of absorption of branch lines is that Canada has invested a very large amount in the Intercolonial to place it in its present position and has received no adequate financial return. I could readily answer that by pointing out that Canada has received a full return for every dollar invested. I admit that it would be no answer to say that the canals of Canada stand in precisely the same position. But when you consider the Intercolonial was built as an offset to the canals, I say it is an answer. And I go further and say that not only the national life of Canada has been advantaged by the Intercolonial, but that individual life has been advantaged also.

The people who do not run railways know all about running them——

Mr. GRAHAM. Hear, hear.

Mr. EMMERSON. My hon. friend the Minister of Railways and Canals says 'Hear. hear' with gusto. I suppose he has received more advice within the last six months than would satisfy a young nation. I have read with considerable interest the discussion that has taken place in connection with the Intercolonial, particularly the newspaper discussion. I think there has been more editorials on the Intercolonial than could be described in one short evening. One independent journal, (?) published in Toronto, says that there are 1,500 too many men employed on the Intercolonial, and that all the ills of the system are due to its being overmanned. It declares that over $1,000,000 could be saved by dispensing with the services of these men and so stopping this leak. Statistics show that the number of

employees on the Intercolonial is far less per mile than on the American railways, and less than on any other Canadian railway, except the Canadian Pacific Railway which runs for a large part of its length through an unsettled territory with stations at long distances apart. The following are the figures:

Average number of men employed per mile of railway.	
Intercolonial..	4.65 men per mile.
Grand Trunk Railway.. ..	6.5 "
Canadian Pacific Railway.	4.29 "
American railways...	6.11 "

I hear some body whisper 'double track.' Well, in the first place, there is not very much double track in Canada, but in the figures the double track mileage is taken into consideration, for each roadbed requires so many men to look after it, and these cannot be reduced in number because the necessities of the railway demand a certain proportion of men per mile. The cost of operating the Intercolonial Railway is less, according to its traffic and mileage, than that of any other Canadian railway. In view of the attacks upon the existing system and conditions and the senseless barking against the Intercolonial railway, this may seem to be an incredible and an astounding statement, but it is incontrovertibly true. The unit of calculation, in discussing the cost of railway transportation, is the cost of hauling an average train over a mile of road. A railway hauls so many trains a year over so many miles of road and its total operating expenses are so much. You divide the one into the other, and you have the operating cost per train mile. In 1907 the operating cost per train mile on the Canadian Pacific Railway was $1.45, the Grand Trunk Railway $1.77 and the Intercolonial Railway $1.21, and the average in Canada of all railways was $1·249 or say $1.25. I have also mentioned the fact that the rates on the Intercolonial Railway were much less than on any other Canadian or American railway. I indeed go so far as to say that the freight rates of the Intercolonial Railway are the lowest of any known railway in the civilized world. and I have taken pains to verify this statement. We hear much about the Australian system and the French and German railways and European railways generally, but the Intercolonial Railway stands ahead of them all with respect to the rates it imposes on traffic. The average gross earning per train per mile is an index for comparison. In 1907 the average on railways generally was $1·953. On the Intercolonial Railway it was $1.02. On the United States railways, the average is $1.88; and as I observe by a return in connection with the Australian railways, the rates charged by them are three times as great as those charged on American or Canadian railways generally and three and a half times greater than those charged on the Intercolonial Railway

We hear very much about the great success of the operation of government railways in Australia. How could it be otherwise? They have a monopoly of the traffic. The government own all the railways and they charge a freight rate three and a half times as large as the rate charged on our Intercolonial Railway system. Including the terminal charges, the freight receipts per ton mile in New South Wales in 1907-1908 were 2.4; in the United States, .75; and on the Intercolonial Railway the rate was less than in the United States, so that any comparison is entirely in favour of the Intercolonial Railway.

The railways of Canada are a very important factor as they are in the life of any nation. The United States railways are in magnitude almost staggering. When we realize that they have in mileage approximately 225,000 and employ 1,675,000 men, and their gross earnings are $2,585,913,000 or more than $7,000,000 per day. Figures of this magnitude can be better comprehended by comparison, and it may be said that the number of employees on the pay rolls of the American railways in 1907 was only about 80,000 less than the standing army of the United States, Great Britain, Germany, France and Japan combined. Their gross earnings were three times the total revenue of the United States government, twenty-nine times the total gold production, and six times the total gold production of the world.

The mileage of Canadian railways was approximately 23,000, and the men employed was 124,000. The gross earnings were $147,000,000, or for each day of the 365 days about $403,000, and they employ more men than the total population of Prince Edward Island with that of Halifax added.

The business of the railways practically equals our total money circulation; and out of each one hundred dollars earned in Canada by the railways, over $41, are directly and immediately paid out to employees. About $12 is paid for fuel, waste, oil, and water, and $10 of these $12 go for labour to produce these supplies. About $18 for rails, ties, cars, engines, structural steel, and a few other things required for the operation of the line; and of these $18, approximately $16 go for labour. Five go for permanent improvements, such as additions to yards, terminals, tracks, extensions of shops, round houses and the like. And $4 of these $5 are paid for labour, so that approximately in Canada $71 out of every $100 earned by the railways are distributed in payment for labour, or equipment and material in which labour forms by far the largest component part. The railways receive more and keep less almost than any depart-

ment of business activity in Canada. I only mention this as incidental to the importance of the subject involved, even in the matter of branch lines of railways of eastern Canada. This proposition does not involve a dollar of burden or addition to the public debt. It does not add in any respect a future burden on the people. If hon. members had an opportunity of referring to the reports with respect to these branch lines, they would learn that many of them are self-sustaining even to-day, and most of them have great possibilities as to their future and the development of the country. The traffic is there only to be developed and cultivated, and the mere act of attempting to operate involves no great additional expense, even in the matter of bridges. I hold there is material enough along side the Intercolonial Railway in the shape of old rails and bridges to have every branch line connected with the Intercolonial Railway that could be thought of as proper to be absorbed, improved and bettered, and have bridges placed where required.

Why is this so? Because, during the past fifteen years, the Intercolonial has been undergoing a very great change. There has been a new class of rails used, there have been new bridges, a new type of locomotive, larger and heavier rolling stock, the whole character of the railway has been changed and the material that was removed and replaced by larger and more modern material is there lying in the yards and along the line. It is not saleable, it is of no advantage to the government to-day and it can be made of advantage to these lines if they were operated as a part of the Intercolonial. In that direction alone, it would be money saved to the people of Canada, because money that has been prevented from being wasted is money saved. The cost of the betterments that would be necessary would be infinitesimal. We are starting out in Canada with the idea that we are going to be a success as a nation. It is wise to be prudent and cautious. It is wise to be economical and to study economy, but it is not wise economy to have the Intercolonial kept in the position in which it is now and without giving it the advantages that would accrue to it as a great railway system if there were connected with it these various branch lines in the several provinces. I hold that the Intercolonial should control every coal road along its line, I hold that it should control every railway that connects with the remote sections, I hold furthermore that there is not one of these lines to which I have just now presently referred but what would be a paying proposition. The question was asked with respect to the Canadian Eastern, how much it cost. The cost of it was a little over $6,000 per mile, and I venture to say that the purchase of that railway was of immense advantage to the Intercolonial as a traffic line, that it preserved to the Intercolonial the traffic that long ere this would have been seized by the Canadian Pacific Railway, and that as a money proposition the absorption of the Canada Eastern has in no sense been a loss either to the Intercolonial or to the people of Canada.

There are many other matters to which I might refer. I hold that the government of Canada must, if it is true to the interests of the people, true to the pledges of the past, continue the Intercolonial as a government operated road. I go further, Sir, and I say that this parliament has no mandate to dispose of the Intercolonial to a private corporation. I go farther even than that, and I say that it would be beyond the powers of this parliament to so transfer or dispose of the Intercolonial. I do not pretend to be a very great constitutional lawyer, but if I understand that 147th clause in the British North America Act wherein provision is made for the construction of the Intercolonial, I say that there is to be read within that section the obligation not merely to construct by the government of Canada but to operate by the government of Canada. The great constitutional authorities in the United States and in other countries, in so far as I have been able to read them, convince me that that is clearly constitutional. I do not profess to be able to anlyse the great Dartmouth College case in the United States, but if I can gather anything from it and from the argument in that case, it clearly points to this fact that the government of Canada or this parliament cannot dispose of the Intercolonial unless indeed the pact of confederation and the British North America Act are amended to enable them to do it. Therefore, I assume, in the first instance, that the government will retain the Intercolonial; I assume, further, that it has no mandate from the people of Canada to dispose of it, that it would not dispose of it until it first submitted such a question to the people and that if it did it would be committing a breach of faith with the people of Canada. I know this and I want to speak candidly with respect to the matter when I say that at every election from 1878 inclusive down to the present moment in eastern Canada, on every platform, Liberal speakers have put forth, in the interests of their party, the idea and the fact that the Liberal party were the friends of government ownership as far as the Intercolonial was concerned. It has been my privilege during that period of time, commencing with 1878, to take part in every general and in almost every by-election that has been held in the east, and from every platform and on every occasion and in every election one of the grave issues always was as between the Conservatives, on the one hand,

and the Liberals, on the other, that the Liberal party would be true to the Intercolonial, that they would support its retention and that they would continue it as a government operated road. It has been pointed out, time and again with respect to this railway, that it was a part of the compact of confederation. Reference was always made to the government system. I do not dwell so much upon that but these are facts that you cannot get over. If there be any point in the idea that the Intercolonial cannot be disposed of, if I am to gather an inference that cannot be ignored by reason of the attitude of all parties and governments in the past, I would conclude that there is no intention, that no such idea would grow up, of disposing of the Intercolonial and that we will hold that which we have regardless of what may be done in other directions with respect to public utilities. Taking it to be an accepted fact that the railway is to continue a government-owned road, I shall not discuss now, because I do not think it quite germane, the question as to how it shall be conducted or by what form of management. I may have an opportunity of saying a few words later on during this session with respect to that, but if there is to be a continuance of that railway there surely must, from a business standpoint, be an absorption of these branch lines. I am sure, if you listen to the voice of the people, that these branch lines will be absorbed. Take the last general elections in New Brunswick, and if there was one issue pre-eminent before the people in almost every county of that province, and especially in the northern and eastern counties, it was the question of the acquisition of the branch lines.

Mr. BLACK. And the same in Hants county.

Mr. EMMERSON. I believe the same to be true of the maritime provinces generally. The people of the province of New Brunswick particularly, pronounced with no uncertain sound in favour of that policy. I cannot conceive that my hon. friend the Minister of Public Works (Mr. Pugsley) could possibly have any other idea in his mind than that the branch lines should and will be absorbed, for, was it not my hon. friend who when Prime Minister of his province carried through the legislature a resolution unanimously pronouncing in favour of the absorption of these branch lines by the Intercolonial Railway. The legislature of Nova Scotia also pronounced in favour of the proposition. Every board of trade in the province of New Brunswick, and most of the boards of trade in the province of Nova Scotia have pronounced in favour of this policy ; almost every municipal council in New Brunswick and every Liberal organization in the eastern counties of that province have forwarded to me resolutions in favour of it. The people demand it, the interests of the country require it, and the interests of the Intercolonial Railway proclaim it to be a necessity. My idea about the future of the Intercolonial Railway is that it shall be enlarged, that it shall grow, that it shall expand, that it shall be worthy of the people whom it serves, that it shall be commensurate with the needs of the country which it traverses. The very moment it is expanded, the very moment that business principles are applied with respect to that expansion, that very moment, new life and new energy will be given to the Intercolonial Railway. That it is a great national asset to-day no man can deny. The very fact that private corporations are looking with anxious eyes towards securing the Intercolonial convinces me that the railway magnates of Canada attach a great money value to it. We hear rumours of what may occur; I have heard it said that the northern division of the Intercolonial is sought by the Canadian Northern Railway Company. Well, I would not blame the Canadian Northern Company for seeking to secure that portion of the road. Side by side with that rumour goes the further rumour that the Intercolonial south and east of Moncton is to be the common property of the three great railway systems: The Canadian Northern, the Grand Trunk Pacific and the Canadian Pacific Railway, to be operated by the Canadian Northern for the benefit of the three. I say, Sir, that I do not blame the Canadian Northern for looking anxiously at the possession of the Intercolonial. The Canadian Northern is a system which controls and operates and owns railways in the west and in the east, they are seeking for a connecting line between Port Arthur and Sudbury and soon the benefit of the three. I say sir, that I from Sudbury to Quebec. And, when they get to Quebec they will be in the winter time cut off from an open seaport; they will so to speak be in a cul de sac. I do not blame them for seeking to acquire the Intercolonial Railway. But, Sir, if the government of Canada were in any way to attempt to hand over to that great corporation, either by means of operating rights which would take from the Intercolonial Railway the intermediate traffic or by any other means, I would condemn this government or any government that would adopt such a policy as that. Of course, if the Canadian Northern had the Intercolonial Railway they would connect it with the railway system which they own in Nova Scotia and thus be enabled to have a transcontinental line of railway. Small blame then to the Canadian Northern Company for coveting the Intercolonial Railway if they can get it. But the very fact that this corpora-

tion wants the Intercolonial; the very fact that other great corporations are trying to acquire portions of that railway, confirms the statement I have made to this House in times past, that the Intercolonial Railway is the greatest national asset we have to-day. I have heard it said, Sir, that there are men who are willing to come forward and offer practically all that we have invested on capital expenditure in the Intercolonial—a further proof of the fact that railway experts recognize that the Intercolonial is worth the money and that we have good value to show for the $82,000,000 we have expended on it.

I have taken up more of the time of the House than I had intended to, but my apology is that my heart and my soul are in this subject. I want to see the Intercolonial Railway made a success, I want to see it expanded. I know that the people whom I have the honour to represent; I know that the people of other constituencies in New Brunswick and Nova Scotia deem this issue of paramount importance to them for the present and in the future. I would, therefore, urge upon the government to reach a decision with respect to the matter. It is true we are passing through a period of financial stress, but that does not prevent the government from announcing the policy of deepening and widening the present Welland canal, or building a new one. True, the government have said they cannot undertake such a work this year, but they have announced their intention to do it. That announcement has been made in parliament; it has been reported in the press, it has gone broadcast throughout the country. Let the same announcement be made with respect to the enlargement and expansion of the Intercolonial Railway, and why should it not. I do not ask that under existing financial conditions the government of the country should rush forward with this project which I advocate, but if the government is to continue to operate the railway, then, from time to time as the conditions will permit, let them do what the Canadian Pacific Railway would do; let them absorb these branch lines or such of them as will be of value. If they do not, while the storehouse of my regrets is pretty full, yet I think I could find room for one more very great regret. And, I think the regret I would have at their want of action in this respect, and of their lack of progress, would be shared in by the very great majority of the people of eastern Canada. And, Sir, let me say that I am not speaking from a sectional standpoint; let me say that I believe there are as many hearty and warm supporters of this idea in Ontario and the western provinces as there are to be found in the east. I believe, Sir, that while there are a great many in the west who would not go so far as to declare that we should have a great expansion of government ownership, yet, a very great proportion of the people in the west would declare: what we have we'll hold. I take it that the great organs of public opinion in western Canada and in Ontario know whereof they speak when they pronounce in favour of the retention of the Intercolonial Railway by the government and of its operation from a business standpoint. And, if the railroad in obedience to the demand of public opinion east, and west, and north, and south, be retained by the government, it follows that if there is to be an application of business principles the railway must be carried on in the manner and after the methods adopted by the great privately-owned railway systems of Canada. I want as a last word to ask to be excused by the House for having taken up so much of their time. I have presented my case from no partisan standpoint, but from the standpoint of the whole people, and I trust that there will be, as I know there will be, given to the consideration of this question, all that its merits demand.

GEO. W. KYTE (Richmond, Nova Scotia). Mr. Speaker, I recognize the obligation that rests on new members to refrain from frequent participation in the debates of this House, and I regard this obligation as particularly binding upon myself, inasmuch as I cannot hope to add one single jot or tittle, in respect of either thought or language, to the common fund of knowledge of public questions that is now enjoyed by hon. gentlemen who are good enough to listen to me. I desire, however, Mr. Speaker, to trespass on your time for a few moments while I submit one or two considerations which appeal to me as being in support of the principles enunciated by the hon. gentleman (Mr. Emmerson), who has moved this resolution. It is entirely fitting and to be expected that this resolution should be moved by one final voice in the hon. member for Westmoreland. We in the maritime provinces remember with appreciation and admiration his splendid efforts on behalf of the Intercolonial while he presided over the department having charge of that important public utility. He looked to the general good of the whole country, so far as the influence of the Intercolonial extended and he showed a heroic disregard at all times of petty, local and sectional desires. I do not approach this question from the standpoint of one who is familiar with the conditions which existed at the time the Intercolonial Railway was first conceived and carried through by those responsible for the great constitutional movement that resulted in the confederation of the Dominion of Canada. I am rather disposed to rivet my eyes

upon the future than to turn them towards the past. Looking to the future with that hopefulness which I trust is characteristic of all the youth of Canada, I sincerely hope that the government will take this question into its consideration and give effect at the earliest possible moment to the resolution which has been moved by my hon. friend from Westmoreland. The chief objection which I understand is urged against the absorption of these branch railways has reference to the cost which it will entail on the people of Canada. The hon. gentleman who moved this resolution went very fully into that question. He pointed out the immense amount of money which has been expended by the people of Canada for the purpose of constructing the canals as auxiliaries to the great transportation business of this country. He did not, however, refer to the fact that when the canals were built there were tolls levied on every person who used them, on every ton of freight and every vessel that passed through them; but it is conceded that the full benefit of these great arteries of commerce did not accrue to the people of Canada while their use was restricted by the tolls which were levied, and some ten years ago this government, with the unanimous consent of parliament, abrogated the tolls on all the canals, and made them free to every person in Canada. It was not then considered necessary or desirable that the canals of Canada should afford a revenue to this country, or considered undesirable that they should be made free, notwithstanding the fact that their operation entailed large deficits on the country: and I am at a loss to understand why the deficits on the Intercolonial Railway should appeal so strongly to some people when we consider its vast importance and usefulness. I intimated a moment ago that I was looking to the future. I have no very strong or well considered ideas at the present moment as to what ought to be the future of the Intercolonial Railway. To my mind, the government should continue to own and operate it, with this one condition, that it should be operated with the same spirit of improvement as characterizes the operation of the large railway systems throughout western Canada. If the government of Canada are to continue in the railway business, I think it is only right and fair that they should adopt such a progressive policy in respect to railway transportation as makes the large railway systems of Canada profitable as well as advantageous to the country at large. If the government of Canada are going to continue in the railway business, I do not think they should be content to stop where they are at the present moment, but should extend the Intercolonial into those sections of the country which are now debarred from the advantages enjoyed by other sections.

The hon. gentleman who moved the resolution has pointed out that the Intercolonial Railway has been carrying freight at a very much lower rate than that charged by the other railway systems of Canada. If the government of Canada are to operate railways I cannot understand why they should adopt different business methods from those which have made a success of the other railways of this country. I do not think there is any justification in the government of Canada carrying freight and passengers at lower rates than are recognized as a proper remuneration for carrying freight and passengers by the other railways of Canada. I am well aware that I am not enunciating a proposition that will find favour with hon. gentlemen who live along the line of the Intercolonial Railway; but I desire to speak from the point of view of those who are not so fortunately circumstanced. It would be most unfortunate if we who do not live along the line of the Intercolonial Railway should have to suffer for all time to come because forsooth the further extension of the Intercolonial Railway might add to the deficits of the railway. If there are deficits existing at the present time, it is due to the fact that the government, in their railway business, have not adopted the principles pursued with respect to the railways operated by the large railway corporations of Canada. It would be most unfortunate if the mere circumstance of the selection of the route for the Intercolonial Railway forty years ago should deprive all other sections of the maritime provinces of those advantages enjoyed by the people living along that route. It may be said that the branch lines of railways suggested to be taken over by my hon. friend are not such profitable railways as would justify the government in taking them over. My reply is that if they are not, that is due to the unfortunate circumstance that they are at the present time in competition with the Intercolonial Railway. Having a short mileage, they are unable to carry on a general business in through traffic, because the moment a ton of freight carried by them reaches its terminus, it is held up for an additional rate. There is another circumstance that appeals to me as having some bearing on this question, that is that the Intercolonial Railway in the maritime provinces finds itself in competition with water carriage, which does not redound to its advantage, so far as its profits are concerned. This is a situation that must be grappled with, and that should not be permitted for all time to operate to the detriment of those districts which have branch railways. I was very much struck in reading one of the reports of the Canadian Pacific Railway

Company, in which was set forth a proposal that the company should enter upon the construction of a branch railway in the western part of Canada. We are all delighted that the conditions in the west justify our great railways in engaging in further enterprises. But these railways do not wait for business before they build the road, they build the road first and depend upon traffic coming afterwards. I notice in a report of the Canadian Pacific Railway for the year ending July 30, 1907.

That authority was given for the continuation of a branch line from a point on the main line in Saskatchewan extending for a distance of 50 miles, but it is not unlikely that in the near future circumstances will make it desirable that this branch line should be continued 100 miles further.

That is the policy that has made for the success of the great railway corporations; whenever they see a prospect of traffic being developed they pre-empt the territory and depend upon the settlers coming in to create business for the road. I admit that while the Intercolonial Railway is operated by the government of Canada they cannot enter into all the different phases of the development of their system to be found in the operations of these great corporations but it would be a most unfortunate circumstance if the mere accident of the Intercolonial Railway being owned by the government of Canada should debar the people of the maritime provinces for all time from any hope or expectation of further railway advantages. I have in mind the conditions existing in eastern Nova Scotia, which illustrate the point I desire to make. When the Intercolonial Railway was built through the island of Cape Breton 26 years ago, it was built along the northern side of Bras d'Or lake, leaving the great expanse of fertile and mineral producing country in the southern part of that island without railway accommodation .Some seven or eight years ago a company was formed to build from Port Tupper on the Intercolonial Railway through the southern section of the island to tap the important mining areas lying in that section of the island. Unfortunately adverse circumstances arose, as they sometimes do with respect to the operations of private companies, and after that road was built for thirty miles from Port Tupper to the town of St. Peters, the company were for some reason unable to carry out their financial obligations and the road has not been extended further. They are operating a very excellent system of railway for that 31 miles, but as already intimated, the haul is so short that they are unable to get any through traffic, because every ton of freight they would get would be held up at Port Tupper for additional freight tolls and the consequence is that all that freight is carried by water transportation in competition with the existing road. But all the country east from St. Peters through the richest part of the island of Cape Breton along to Louisburg, and the large and important mining and industrial centres of Glace Bay, Bridgeport and Dominion No. 4, is at present without a vestige of railway accommodation, so far as the government of Canada is concerned. The only railway in that part of the country is a road owned by the Dominion Coal Compnay, built to carry coal from their mines to the winter port of Louisburg. That company will not undertake to perform the functions of a common carrier, and no other coal company operating there is permitted to have the products of its mine carried to Louisburg or Sydney; the consequence is that these mines, which are of immense value are still undeveloped and will continue undeveloped until the government of Canada adopt the policy enunciated by the hon. member for Westmoreland (Mr. Emmerson) and acquire the Cape Breton railway and extend it into these centres of population. Glace Bay has a population of 20,000, and it is almost incredible that that large town is to-day practically without any railway communication except the accommodation permitted to them by the coal company operating the coal mines. The same thing is true of all the other centres of population in the southern part of Cape Breton, and I am sure hon. gentlemen listening to me will not say that the prospect of building a railway through the southern part of Cape Breton into these mining centres offers no prospect of remuneration. Hon. gentlemen who are familiar with the conditions existing in that part of the country will admit that there is no part of eastern Canada that offers greater prospects of remuneration to a railway than these mining centres in southern Cape Breton, but not for fifty years can it be hoped that any new mines will be opened in southern Cape Breton for the reason that the Intercolonial Railway has pre-empted the most profitable part of the carrying trade at one end and the Dominion Coal Company at the other. It is not to be expected that another company would go in there to build a railway to operate in that limited territory. The solution of the difficulty, so far as that section of the country is concerned, would be in the policy enunciated by the hon. member for Westmoreland (Mr. Emmerson), the acquisition of the Cape Breton Railway and its extension into southern Cape Breton, giving easy access to the centres of Canada which would afford a ready market for the products of that particular district. I must apologize for giving my argument a sectional illustration but I think the illustration is so pointed and so well calculated to give effect to the argument I am endeavoring to make that I could not resist the temptation to use it.

There are other aspects of this question which have been dealt with by the hon. member for Westmoreland (Mr. Emmerson), and I do not desire to trespass further on the time of the House than to exhort the members of the government, so far as I am able, to take into their serious consideration the questions brought up by the hon. gentleman and enunciated in his resolution. As I said, I believe that if the future of the Intercolonial Railway is to continue as a road owned and operated by the government of Canada, it is only right and proper that the people of eastern Canada should expect that the government will perform their functions in respect to the operation of that road and the carrying on of the railway business as it is carried on by the other railway corporations of Canada. If, on the other hand, the government of Canada are content with existing conditions, I do fear that a very strong and intense movement will take place among the people of eastern Canada to hand over the Intercolonial Railway to a company that will afford them some prospect of better communication with the trunk systems operating in this country.

Mr. J. H. SINCLAIR (Guysborough). Mr. Speaker, I regard this discussion as the most important from the standpoint of the maritime provinces that has taken place during this session. It is of such importance to the constituency that I have the honour to represent and to the province from which I come that I feel I would not be doing my duty if I did not express my views in regard to it. I am in accord, in the main, with the resolution moved by the hon. member for Westmoreland (Mr. Emmerson) and his remarks in support of it. I would not indiscriminately take over all the branch lines that exist along the Intercolonial Railway. I would select such branches as show apparent prospects of paying the expenses of operation. No doubt that there are some branches along the Intercolonial Railway that would not pay running expenses. I can well understand that a branch railway, weighted down with a head office staff and all the other adjuncts of a railway, might not pay expenses and might be a losing venture, whereas, when it is run as a part of a great system like the Intercolonial Railway, it might be a profitable railway. But I would go further than my hon. friend has gone in his resolution and I would amend it by providing that we should not only take over such branch lines as already exist along the line of the Intercolonial Railway but that we should build branch lines where they do not now exist. In fact, Sir, it appears to me that this is our first duty in regard to the question that comes before us in this resolution. The people who live along these branches that are now being operated by a company have some kind of accommodation, they have a railway service. But I had in mind certain parts of the province of Nova Scotia that had not these disadvantages at all. I submit, Sir, that it will be the first duty of the government, not to take over the branh lines and weigh the Intercolonial down with them, but to provide for those sections of the maritime provinces that have not yet been given the advantages of railway communication.

A great many proposals have been made during the last few months in the newspapers as to what should be done with the Intercolonial Railway. My hon. friend from Westmoreland referred to the resolution passed by the various boards of trade throughout the country. One of the proposals made by the board of trade of Halifax was that the Intercolonial between Moncton and Halifax should be double-tracked, to provide for the increased traffic that will seek an outlet in that direction on the completion of the Grand Trunk Pacific. It was found, however, that there were objections to the proposal to double-track the main line of the Intercolonial, partly, chiefly, on account of the fact that the grades on the Intercolonial are very heavy. Another proposal was made that the road should be diverted around by Parrsboro in an endeavour to find grades suitable as a continuation of the Grand Trunk Pacific. We have not yet the report of the surveys made by way of Parrsboro, but it is reported that engineering difficulties were found in that direction. No doubt the grades on the Intercolonial are very heavy at certain places. Any person familiar with the topography of Nova Scotia, will know that the Intercolonial crosses a mountain range known as the Cobequid mountains. This mountain range extends across the counties of Cumberland and Colchester. Amherst is almost at sea level, and so is Truro, but, in order to get across the range of mountains from Amherst even the best engineering skill available when the Intercolonial was built was compelled to rise 618 feet to the summit before the descent to Truro could be begun. This rise involves grades, in some cases, I understand, 1½ per cent. It would not be a business proposal to spend the enormous sums we are spending in building the line from the Pacific ocean to Moncton with grades of four tenths of one per cent, and then continue that railway along a road with grades of 1-5 per cent. I have a proposal to make to the Minister of Railways, and through him to the government, by which this road could reach the Atlantic sea-board with grades similar to those by which it crosses the rest of Canada. Besides the grades of the Cobequid mountains, there is another heavy grade near Dorchester, New Brunswick. My proposal is to divert the Intercolonial at some

point west of Dorchester, and run it across the flat country north of Amherst, continuing it easterly until it strikes the Intercolonial at a point east of Oxford, using the short line of the Intercolonial as far as Brown's Point, thence up the valley of the East river through the coal fields of Pictou, using the Sunny Brae branch to Country Harbour on the Atlantic. This part of Nova Soctia, as everybody who knows the country is aware, is a flat country. There is no range of mountains to cross in the counties of Pictou and Guysborough, as there is in the present route between Amherst and Truro. There are some other advantages that the port of Country Harbour has over the port of Halifax. In the first place, as I have stated the grade is the most important feature of a railway. Every railway engineer will tell you that nothing is so important in building a great railway as the grades. We cannot find the desired grades on the road across the Cobequid mountains, but we can find them on the route I have indicated between Moncton and the port of Country Harbour. There are certain other advantages that the port of Country Harbour has over Halifax. The distance from Moncton, as compared with the present route, is not an important element, because the two lines are of about equal length. The route to Country Harbour compared with the route around by Parrsboro has an advantage of 17 or 18 miles. I might also point out that the proposed line would pass through the valuable coal fields of Pictou, probably the most valuable on the mainland of Nova Scotia. This would be a great advantage to the traffic of the road and also to the coaling of the engines. Another point is that Country Harbour is 100 miles nearer England than Halifax. Passengers and mails landing at Country Harbour and forwarded by a fast express train would be as far west as Moncton on the way to Montreal before a vessel crossing at the same time could be moored at Halifax. I have nothing to say against the Harbour of Halifax. It is, perhaps, the greatest and best of all the ports of Canada; it is equal to any port in the world, so far as natural facilities are concerned. But the port of Country Harbour is equally as good as the port of Halifax, and I am pointing out that, by the plan I propose, we could get grades similar to those of the Grand Trunk Pacific across the prairies, and could have a port 100 miles nearer Europe than the port of Halifax, and these, I consider, would be very great advantages. If this question is to be settled on its merits, I have no fears as to the result.

I am free to say that the proposal to build new branch lines will involve the expenditure of a great deal of money. It will involve increasing the capital account of the Intercolonial. But why should not we continue the general policy we embarked upon many years ago of endeavouring to keep Canadian trade in Canadian channels and carry it through Canadian seaports? This is only a part of that great policy. And why should we not spend money in developing the provinces of eastern Canada as well as the provinces of western Canada? I have no sympathy with the doctrine as laid down by the hon. member for South Lanark (Mr. J. Haggart) a couple of years ago, that capital expenditure on the Intercolonial should cease, that we should have no more branch lines, no more new equipment for improvements, that we should have no more capital expenditure on that great avenue of commerce. If I have mistated the position of my hon. friend (Mr. J. Haggart) he is here and he can correct me. But I understood that was the policy laid down for himself and his party—that there should be no further expenditure on capital account on the Intercolonial Railway.

Mr. J. HAGGART I never said that or anything pointing in that direction. What I was referring at the time was the charging of expenditure to capital instead of to income.

Mr. SINCLAIR. If I have misrepresented my hon. friend, I have been led astray by the language he himself used. Here is what he said:

> What do the people of this country care about investing their money in capital expenditure on the Intercolonial Railway? What they want to know is how the money which is taken out of their pockets is expended. They believe that capital expenditure on the Intercolonial Railway should cease. Yet there has been a drain on the resources of the country on that account of over $3,000,000 a year since these hon. gentlemen went into power. What possible asset to the people has been the expenditure on capital account on the Intercolonial Railway for the last ten years? When I was managing the Intercolonial Railway in 1896 and the years preceding, I insisted that the expenditure on capital account should cease, as a capital expenditure, and that it should be charged to the revenue of that road.

Now what does that language mean? The hon. gentleman asks 'what do the people care about investing their money in capital expenditure on the Intercolonial Railway.' Evidently, if these words mean anything, they mean that in investing their money in capital expenditure on the Intercolonial Railway, the people were making a bad bargain and throwing away their money.

Mr. J. HAGGART. Not at all. Surely the hon. gentleman knows better.

Mr. SINCLAIR. My hon. friend asks 'what do the people care about investing their money in the Intercolonial?' Does that mean that they are in favour of it?

Mr. J. HAGGART. What I meant was that it made no difference to the people whether the expenditure was charged to capital or to income. The money was spent on the road and what I was contending was that it ought properly to be charged to income and the capital account closed. I never made any such absurd statement as that no money should be spent on the Intercolonial Railway, nor is there anything in the context which will give that meaning.

Mr. SINCLAIR. I am taking the hon. gentleman's own words.

Mr. J. HAGGART. You can read them over half a dozen times, but perhaps you do not understand them.

Mr. SINCLAIR. The hon. gentleman says that the people of Canada believe the capital expenditure on the Intercolonial Railway should cease.

Mr. J. HAGGART. So it should, and that is what the late Alexander Mackenzie himself said in this House. He said that the capital account ought to be closed on the Intercolonial Railway and that the expenditure on that account should be charged to income. But to conclude from that, that I argued, or that Mr. Mackenzie argued, there should be no more capital expenditure on the road is absurd.

Mr. SINCLAIR. I would like my hon. friend to tell me how he is going to charge the capital expenditure to income when there is no income?

Mr. BARKER. He will then show the actual deficit. That is all.

Mr. SINCLAIR. When this policy of my hon. friend was announced, we from the maritime provinces knew very well it would be very unpopular among our people. We must have additional capital expenditure on the Intercolonial from time to time. I have no sympathy either with the statement we so often hear that the Intercolonial Railway is a burden to this country, that we have to meet parliament every year with a deficit, and certain of our hon. friends make a great deal of political capital out of the small deficit which exists from year to year on the Intercolonial Railway.

Mr. FOSTER. A small deficit? $1,750,000 in one year.

Mr. SINCLAIR. The hon. gentleman (Mr. Foster) forgets that in other years there were surpluses. It was never intended that the Intercolonial Railway should pay dividends. When it was built it was well known by the people of Quebec and Ontario that it would be a losing speculation from a monetary point of view. In the discussions in parliament and in the press of that day it was stated over and over again that these provinces went into this venture with their eyes open, knowing there would be a loss of money from year to year, but expecting other advantages to counter-balance that loss, which advantages they have since realised. As my hon. friend from Westmoreland has said, the Intercolonial Railway was built as a part of compact of confederation, and if the House will permit me, I will read the clause in the British North America Act which authorizes the building of the Intercolonial Railway:

> Inasmuch as the provinces of Canada, Nova Scotia and New Brunswick have joined in a declaration that the construction of the Intercolonial Railway is essential to the consolidation of the union of British North America and to the assent thereto of Nova Scotia and New Brunswick, and have consequently agreed that provision should be made for its immediate construction by the government of Canada: therefore, in order to give effect to that agreement, it shall be the duty of the government and parliament of Canada to provide for the commencement, within six months after the union, of a railway connecting the river St. Lawrence with the city of Halifax in Nova Scotia, and for the construction thereof without intermission, and the completion thereof with all practicable speed.

There is nothing there about dividends. And there is nothing in the discussions which took place at the time to show that the opinion was then entertained that the Intercolonial Railway would be a paying venture. On the contrary, they show just the opposite. Permit me also to read an extract from the Toronto 'Globe' of that date to show what that great organ of public opinion then thought of the Intercolonial Railway. The date of this editorial is the 26th of September, 1865, after the date when the conference was held but prior to the date when confederation was consummated:

> The scheme of the government for the construction of the Intercolonial Railway opens an account that never will be closed. Every storm of snow in the inhospitable regions below Rivière du Loup will lay a new burden on the people of Upper Canada. The tax payers will watch the passenger travel and freight traffic with the liveliest interest as indicating the extent of the demands upon them for the year. It is a dream of many persons in Nova Scotia that this Halifax and Quebec Railway will draw to their harbour the trade of the west, but it is a dream and nothing more. No passenger, no shipper of freight will ever think of going to Halifax when he can find shipping at Quebec or Portland.
>
> With Upper Canada decidedly opposed to the scheme, and Lower Canada divided, we are happy to say that we do not see any great danger of hasty action. We are only astonished that the ministry should have committed themselves to a scheme which finds

so little support in any part of the province. The lower province delegates humbugged them beautifully. It is evident that the Bluenose is a sharp fellow. He is rubbed bright on his rocks. We shall have to be careful in our dealings with him. If Lower Canada is afraid of him because he is British, we must learn to watch him because he is not very rich, but is very keen and shrewd. —Toronto 'Globe,' Sept. 26, 1865.

That was the opinion of the Toronto 'Globe' of that day.

Mr. BARKER. Does the hon. gentleman agree with that?

Mr. SINCLAIR. The 'Globe' itself will not make that statement to-day. As a matter of fact, every one knows that the poor blue nose was victimized in the bargain. This was acknowledged later by the fact that the maritime provinces were given afterwards much better terms than they were accorded in the original bargain of 1867. In looking over the debates in parliament at the same time I find that the opinion prevailed that the Intercolonial Railway would not be a paying venture. The Hon. Geo. Brown, in the legislature of Canada, in 1865, made the following statement:

As a commercial enterprise the Intercolonial has not, I apprehend, any considerable merit. As a work of defence it has however many advocates, but if the union of the provinces is to go on, it is an absolute necessity and as the price of the union, were there no other arguments in its favour, I heartily go for it.

That was the opinion of the Hon. Geo. Brown prior to the time the road was built. Allow me also to give you an expression of opinion from the Hon. Alexander Mackenzie in his speech on supply in parliament in 1870, when the question of the construction of the Intercolonial was up. Mr. Mackenzie said:

Everybody knows that the Intercolonial Railway would be utterly valueless in a commercial point of view, it was to be built because they had bargained to build it and they should keep to their bargain.

I also find in a speech by the late Walter Shanly, M.P., in 1870, in this House, a gentleman who was, at that time, I believe, the member for Grenville, that the following language was used:

The railway project by itself was not popular in Upper Canada. But when the greater question assumed shape and form after the conference at Quebec, and when it became apparent that in order to bring about the Confederation of the British North American provinces each of the parties to the compact would be called upon to make some sacrifice of local prejudice or local interest, then Upper Canada accepted of the Railway part of the project as a political and social necessity. A leading politician of Upper Canada, generally recognized as an exponent of the public opinion of the day and said 'Rather than not have confederation he would agree to build ten Intercolonial Railways.' That very fairly expressed the sentiment of Upper Canada.

At confederation there were two courses open to the people of the maritime provinces. Prior to that time the trade of the maritime provinces was with the United States. The provinces were prosperous. They had had the advantages of reciprocal trade with the United States, and they were enjoying a large degree of prosperity. They had their choice of continuing their trade with the United States, having little or no trade with the upper provinces, or building the Intercolonial and changing the course of their trade altogether. They embarked upon this project of building the Intercolonial. Everybody knows that the flour that fed the 800,000 people who were then living in the maritime provinces came from Boston, or some other port in the United States, that it was ground at American mills, from wheat that was probably raised on the western prairies of the United States, and that they received very little from the upper provinces at that time. The agricultural implements used on the farms of the maritime provinces were made in the factories of the United States. Yankee mowing machines, rakes, pitchforks, axes and buckets were to be found on every farm in the maritime provinces, and the question was whether we were going to continue that condition of affairs or try to find means of carrying on a trade with the other provinces of Canada. We embarked on the construction of the Intercolonial with these ideas. We knew very well that it would cost us money. The people of the upper provinces were quite well aware that it would be a long time before it would be a prosperous venture and I submit that the price is not a heavy price that we have paid. There have been deficits in connection with the Intercolonial Railway, but they have not been large deficits. Some of my hon. friends on the other side of the House look surprised at that statement, but if they will add up all the deficits that have occurred on the Intercolonial Railway since it was constructed about thirty-one years ago, and strike an average, they will find that the average annual deficit was $245,434—not a very large sum of money each year when we consider what we have received from this great national asset. Take the population of Canada at six and a-half millions, it is the price of two postage stamps for every man, woman and child in the Dominion of Canada. Four cents apiece each year will give us more than the amount of the average annual deficit on the Intercolonial Railway.

Mr. JOHN HAGGART. What would be the amount, adding in the capital expenditure?

Mr. SINCLAIR. I do not regard the capital expenditure as a deficit, I have not made that a calculation. Of course, that would be much larger, but my hon. friend must remember, which he always seems to forget, that while we have spent $80,000,000 in the construction of the Intercolonial Railway we have a slendid investment for our money. When this road was built there were certain things expected of it. It was not expected that it would make money, but there were certain other things that were more valuable than money that were expected to result from the construction of the Intercolonial Railway. It was expected that it would bind the provinces of Canada more closely together, that it would unite the provinces into one great Dominion. It was also expected that the maritime provinces would become a profitable market for the manufactures of Ontario and Quebec. It was expected that the New England manufacturer would be driven from the field and that he would be replaced by the manufacturer of Ontario and Quebec. We also thought in the maritime provinces at that time that we might be able to sell our goods, our coal, our iron and our fish to the people of the upper provinces. That was looked forward to by the people of the maritime provinces. We expected that the ports of the maritime provinces would be used, instead of the ports of the United States, in the shipment of goods from the western provinces. All these things have come about to a certain extent. These provinces have been united together, they have been cemented as we expected they would be, and I suppose there is not a man within the hearing of my voice that would not stand up for a united Canada from the Atlantic to the Pacific and you could not have had a united Canada without the construction of the Intercolonial. Is not that worth the price of two postage stamps each year to the people of Canada? I think everybody will agree that the deficit is a mere bagatelle compared with the great results that have come from the construction of the road.

Mr. EMMERSON. How much did the deficit on the canals amount to ?

Mr. SINCLAIR. I am not talking about the canals now. I am talking about the Intercolonial Railway on its merits. The provinces have been united and the maritime provinces have become a profitable market for the goods of the western provinces. In this connection, I had the honour, a few days ago, to move in the House for a return showing the amount of trade we had east bound and the amount of trade west bound on the Intercolonial and I got certain figures. I was not able to get them as complete as I would like to have had them, but I find that in the year 1902, 54·03 of the traffic on the Intercolonial was east bound; in 1903, 51·36 per cent of the traffic was east bound; in 1904, 48·83 per cent; in 1905, 51·20 per cent; in 1906, 44·32 per cent; in 1907, 44·44 per cent; in 1908, 44·55 per cent. A small increase has taken place within the last few years in west bound traffic, I think, owing to the shipment of large quantities of steel from Cape Breton to the west.

Mr. FOSTER. Does my hon. friend mean through traffic by west bound and east bound ?

Mr. SINCLAIR. I mean the total traffic going east and the total traffic going west. It will be found on pursuing this inquiry further that the Intercolonial has done even more for the provinces of Ontario and Quebec than it has done for the maritime provinces. It has done more to develop the trade of the western provinces than it has done for the east.

Mr. J. HAGGART. Unless you can quote the through traffic, that does not prove that a single ton went to Ontario.

Mr. SINCLAIR. My argument is that goods come from Ontario to the maritime provinces in very much greater quantity than we have been able to send goods to Ontario, and hence I contend that the representatives of Ontario ought to have a more friendly feeling towards the Intercolonial Railway if they truly represented the interests of their province. The New England manufacturer has been driven from the maritime provinces; all the implements, all the machinery used on the farms of the maritime provinces to-day are of Canadian manufacture and the Yankee product has disappeared. I repeat that all the goods we use in the maritime provinces of nearly every class are manufactured in Canada, and largely in Ontario and Quebec. We are somewhat disappointed in the maritime provinces that our trade with the west has not expanded in a greater degree; we are disappointed somewhat that the markets of Ontario and Quebec have not taken as much of our fish, of our coal, and of our iron as we had hoped, but nevertheless a good trade is being worked up. On the whole, all that it was expected the Intercolonial would achieve for the people of Canada has come about, and I believe we have made a good investment even though we have to pay four cents a head every year to meet the bagatelle of a deficit which accrues. Now, why is it that the Intercolonial Railway during the thirty years of its existence has not developed more traffic and made more money. There must be some good reason for it, and were I to be frank I would express the opinion that the Intercolonial Railway has not been run with that energy and enterprise which ought to have marked its management. Of course,

this remark applies with more force to the government that existed prior to 1896 than it does to the present administration. The present administration has done much to build up the Intercolonial; they have extended it into Montreal and brought it into the heart of the commercial capital of Canada so as to enable it to get a share of the traffic which comes through that great city. They have improved the Intercolonial, they have given it heavier rails, modern rolling stock, and better trains and in other ways have enabled it to become the great national asset it is. But, at the same time I fear that that energy which characterises the management of the Grand Trunk and the Canadian Pacific Railway is not to be found in the management of the Intercolonial. That of course may be an incident of government ownership but whatever the reason it seems to be the case. For example, the Intercolonial touches the sea at only a few points: at St. John, at Halifax, at Mulgrave, and at the Sydneys.

Mr. EMMERSON. And Shediac and Chatham.

Mr. SINCLAIR. I might mention some other places.

Mr. EMMERSON. A good many.

Mr. SINCLAIR. The illustrations I have taken will suffice for my argument. The population of that part of the maritime provinces is chiefly found along the coast and a vigorous administration of the Intercolonial would have had steamers plying on the adjacent waters and collecting traffic at these ports. I have in my mind the town of Mulgrave, in my own constituency, where for many years there was no attempt made to collect traffic from the adjacent shores east and west of the point where the railway strikes the sea and where the people are located. After a while private enterprise assisted by small subsidies from the government placed boats on these waters and as a result a splendid business for the Intercolonial Railway has grown up. But, the point I make is that the Intercolonial management itself did not think of putting the steamers there and collecting the traffic. I am told that when the Reid Railway was built in Newfoundland the Reid Company put on quite a number of steamers to connect with the railway and to deliver to it the traffic from the fishing villages along the coast, without which the railway could not have been made a financial success. No attempt of that kind was made by the management of the Intercolonial to concentrate traffic at these points where the railway touches the sea. This is only one illustration among others that might be given to show that the road has not been managed with that same business ability which might be applied to it and which would probably be applied to it were it conducted as a private venture. Let me point out as an illustration of what I mean, that last year the small boats which run into Mulgrave called 'The Cann' boats carried 7,898 passengers, most of whom took the Intercolonial Railway to points of destination, and 5,708 tons of freight which constituted a very profitable business for the railway that it otherwise would not get. Then again, there has not been the energy displayed that should have been displayed in the building of branch lines. Like my hon. friend from Richmond (Mr. Kyte) I can point to a special instance to prove my case. I have in mind a territory between the city of Halifax and the Strait of Canso, comprising about 150 miles in my own constituency, and possessing great resources in lumber, and mines, and fish, and agriculture, and although the Intercolonial has skirted the northern side of that territory for 30 years, not even an engineer has been sent into that district to survey it, nor has an agent of the Intercolonial gone there to discover its resources. Were the Intercolonial owned by a great private corporation I feel certain that long ere this something would have been done to give railway accommodation to the 40,000 people who inhabit that territory. As did my hon. friend from Richmond (Mr. Kyte) I ask: Is this to go on for ever? That country has been inhabited for over 100 years; the people living there have contributed their full share of the $400,000,000 that we have paid out for transportation facilities of various kinds in this country, but they have been shut off from participation in any share of that expenditure. In view of these facts the House will not be surprised when I urge that the government should not only consider the question of securing the railways already built but that they should deal first with the question of constructing railways in those parts of the maritime provinces which have never had railway communication. I think myself that this question is more important even than the securing of the branch lines, because while the people living on the branch lines have some kind of railroad service, the people I speak of are absolutely without any. We have been paying out millions of dollars for building canals; we have been spending millions more in deepening the St. Lawrence; we are now investing millions in building another great railway across the continent, and what I am advocating tonight is but a part of the great transportation system of Canada which has been made a part of the policy of this government, as it has of previous governments. Let us not deal with this question in any narrow spirit; let us not hesitate to embark on any

expenditure that may be necessary to perfect the Intercolonial system by building tributary lines which will develop the country through which they pass and by acquiring such branch lines as may prove to be feeders to the traffic of that system. If we do this, we will be developing the Intercolonial and making it what it is destined to be, a great national asset; we will be carrying out the policy that the people of this country endorsed with so much enthusiasm on the 26th of October last: the policy of keeping Canadian trade in Canadian channels and providing transportation facilities by which that trade can find an outlet to the sea by way of Canadian ports.

Mr. JUDSON BURPEE BLACK (Hants). It is getting late, it is nearly midnight, but I have hopes that the House will listen to a word or two from me all the more readily because I speak rarely, and that I do not speak at all unless I think I have something to say. This question of taking over branch lines is a very important question in the constituency which I represent. It is a question that is affecting almost every man in the county of Hants. I may say that it is a very important question all through western Nova Scotia. I do not propose to attempt to make a speech upon this question. I rose more for the purpose of making an appendix to this report which has been handed to me to-day, although I have no mandate from the Minister of Railways to make an appendix. I may say that I agree with a great deal that has been said by the hon. member for Westmoreland (Mr. Emmerson). I endorse his policy of taking over all these branch lines. I would endorse what he probably would not endorse—the policy of giving running powers over the Intercolonial from Moncton to Halifax to the Canadian Pacific, the Canadian Northern Railway, and the Grand Trunk Pacific Railway and any other railway that will bring traffic into Nova Scotia. Before the dissolution of parliament last year, I understood that the government were in sympathy with the proposal to take over the branch lines of the Intercolonial, and a commission was appointed to examine those lines and to report upon them. I found, after the report had been made, that the commission had not examined the Dominion Atlantic Railway. I may say that I live in the ancient town of Windsor on that line of railway, I found that the commission had not reported on it, although they had been ordered to do so, I learned that when they went to the manager of the railway and he demanded a sum of money—I do not think it was an unreasonable sum—for transporting them over his railway, a dispute arose, and the commission declined to examine his road at all. I was afterwards told, although I do not think it was said in earnest, that the Dominion Atlantic Railway was not a branch of the Intercolonial. Now, if a branch means a shorter road going into a larger one, the Dominion Atlantic is not only a branch in the true sense, but it is more than an ordinary branch, because it empties its traffic into the Intercolonial by two mouths—first, by what is known as the Windsor branch of the Intercolonial, which is leased, I may say under the most unbusinesslike contract that any government ever gave to a private company. I am glad to say that it was not the work of this government, but the work of the Conservative government, and I only hope that this government in 1914 will cancel that lease as promptly as it matures.

I was saying that the Dominion Atlantic empties its traffic into the Intercolonial by two mouths: the Windsor branch extending from Windsor to Windsor Junction, and the Midland Branch extending from Windsor to Truro. Would it be of advantage to the Intercolonial to purchase this road? I will reply in the language of the report of the engineer of maintenance, who says: 'The more branch lines the Intercolonial can gather, the better it will be for the Intercolonial; the more grist it will bring to their mill'—that is the expression. I know of no branch line from Montreal to Halifax that will bring more grist to the mill of the Intercolonial than the Dominion Atlantic. It runs through one of the most magnificent countries in Canada, and one of the richest agricultural districts, populated by an intelligent people, and the road, even managed as it is, is doing a most thriving business. This road I may say, is owned by a private company, a foreign company. I hope nobody will misunderstand me: when I say foreign I mean out of Canada. It is owned by a company in London who care nothing for Nova Scotia or the country it runs through except to get all the money possible out of everybody who uses the railway. That is patent to every one who knows the management of the railway, and I have known it ever since it was built. This road is 298 miles long by all its tracks. It runs from the town of Yarmouth in the west end of Nova Scotia to Halifax. It originally ran from the town of Annapolis to the town of Windsor. It afterwards became possessed of a branch line running from Windsor to the Intercolonial, a distance of forty-six miles. It also became possessed of the Western Counties Railway running from Digby to Yarmouth, and also of what was called the missing link between Digby and Annapolis, twenty miles in length, built I believe wholly by the government of Canada. The capital invested in the Dominion Atlantic Railway is nearly $8,000,000. According to the report of 1907, its passenger

earnings for that year were $341,981. Its passenger and miscellaneous earnings amounted to $380,157; its freight earnings amounted to $398,413. Its total earnings were $778,571, and its total operating expenses $569,985, showing net earnings of $208,586. It carried 334,805 passengers and 362,497 tons of freight. This is a railway already doing a most profitable business, and it would be one of the most important feeders of the Intercolonial. It would be of great advantage to the Intercolonial to have that road, and it would be of very great advantage to the people of the country through which the road runs. It might be assumed that at the present time all the traffic over that road goes to the Intercolonial, but that is not the case. No traffic, either freight or passenger, that it can divert from the Intercolonial is given to it. The timetables are so arranged that passengers can be accommodated off the Dominion Atlantic Railway on the Canadian Pacific Railway, and so that it is very inconvenient for them to get from the Dominion Atlantic to the Intercolonial Railway. Trouble arises between the two roads over the freight; there is friction between them constantly, the Dominion Atlantic working all the time in the interests of the Canadian Pacific Railway. The great disadvantages under which the people in the counties of Yarmouth, Digby, Kings, Annapolis and Hants are resting in connection with this road are that they are obliged to pay two freights or two express charges on everything that goes out of Nova Scotia to New Brunswick or to Ontario. Our merchants and manufacturers are handicapped and discouraged. We have all the advantages there necessary for a manufacturing country. We have magnificent water-powers along the line of that railway, we have coal near at hand, we have everything that would go to establish and to make profitable manufacturers if we were not handicapped and discouraged as we are by this privately owned railway. As it is we are operating along that road, cotton mills, duck mills, foundries, and furniture factories, and we are sending our manufactures up through Ontario into the prairie provinces; we have sent our cotton clear out to China. But the manufacturers are discouraged and are not prospering as they should. Our agriculturists are not prospering as they should. Every farmer and every fruit grower is handicapped and as I said before we have one of the best agricultural counties in Canada.

I may surprise some people who think we are a people exclusively engaged in fishing off the rocks when I say that along the line of the Dominion Atlantic Railway we have river bottoms that have raised their annual crop of hay without one pound of fertilizer for over 200 years since the early days when the French threw up their dykes and reclaimed those river bottoms from the encroaching tide. We have everything there requisite to make a prosperous and happy country if we were not so badly handicapped in matters of transportation. Our factories would grow, our agricultural products would increase if there were not such a discouragement every day to the farmer and to the manufacturer, by that privately owned railway. We exported last year over that railway to London and Liverpool $1,000,000 worth of apples alone, and there are new orchards growing there that in ten years will be sending $2,000,000 or $3,000,000 worth of apples to the foreign markets. All I ask of the government, all I ask of the Minister of Railways, is that the Dominion Atlantic Railway shall be placed in the same category as the other branch lines. It ought to be treated with superior consideration, but I shall only ask that it shall have the same examination and consideration and receive as much support as its length, as its business and as the people of the country traversed by it deserve.

Mr. D. H. McALISTER (Kings and Albert). Mr. Speaker, I do not think it would be good judgment for me at this late hour to attempt to say many words on this subject. It would be unfortunate for the other members of the House, physically and mentally, if this debate should be continued longer to-night; but I feel it my duty, I do not think I could go home and sleep well if I did not rise in my place even if I should say nothing more than 'Amen.' I feel that I particularly am justified in speaking to-night as I have in my constituency four branch lines. There is probably not another member who can say that. I declare from the bottom of my heart and not in any partisan spirit that I believe it would be a benefit to the Intercolonial Railway if it should take over the branch lines in Kings and Albert. I know that the branch line from Salisbury to Harvey runs through one of the most progressive agricultural district in New Brunswick, and if taken over by the Intercolonial Railway would be a paying proposition and would not bring a yearly deficit to the Intercolonial Railway. Another branch, the Elgin & Havelock, would certainly not produce a deficit. We have another branch called the St. Martin's and Hampton branch, which terminates in one of the most elegant summer resorts, the village of St. Martins. I would not be so sure about the old Central or the New Brunswick Coal and Railway Company. I am ready and willing to do all in my power to secure the adoption of the principle of this resolution. I am satisfied that if this resolution had not been talked of in my constituency and if my constituents did not feel that I would support it enthusiastically, they would not

have returned me to this House. I am safe in saying that it was the means of my securing the majority which I did in Albert county.

Mr. O. TURGEON (Gloucester). Mr. Speaker, I would not undertake at this late hour to follow the notes I intended to use this evening, but I believe I would be recreant to my duty if I did not rise before the conclusion of the debate to express my sentiment of admiration for the really excellent speech delivered this evening by the hon. member for Westmoreland (Mr. Emmerson). He has spoken with eloquence of facts relating to the history of the Intercolonial Railway since its inception before confederation. He has shown by facts and figures which he has laid before the House that he was speaking on a subject on which he was well informed and the information he has given to the House and to the people through this House, will be of great value. I have admired especially the broad Canadian tone of his speech; he dealt with this great question of the Intercolonial Railway from the broad standpoint of Canadian interests. He reminded me of the speech delivered in this House last session by the Minister of Railways and Canals (Mr. Graham), when he said he would deal with the Intercolonial Railway not from a sectional standpoint, not from the point of view of the maritime provinces, but from the point of view of Canada at large; and I am sure that the words of the Minister of Railways and Canals, coming as he does from the province of Ontario, have contributed largely to create or at least to strengthen the more favourable current of opinion which seems to permeate the public mind of that province.

It has been to the disadvantage of the Intercolonial, no doubt, that, owing to circumstances beyond the control of ministers or governments, the country could not expect great financial returns from the operations of the Intercolonial up to this time. As has been established by my predecessors in this debate, the fathers of confederation, and the great engineers who located the Intercolonial, saw that the advantage of this railway was, not in its possibilities of commercial returns, but in the fact that it would join together the eastern and the western provinces and would assist in building up Canada as a great nation. And to-day we find a realization of what Joseph Howe said years ago, that the great Atlantic ports of the maritime provinces were not there for the benefit of these provinces alone but to assist in the future greatness of all the British possessions in North America. We have the testimony of Sir Sandford Fleming, the great British engineer, who himself located the Intercolonial, recommending the line which was afterwards adopted by the parliament of Canada, that for many years we could not expect the Intercolonial to earn even its operating expenses, that the population of the eastern provinces was not dense enough to command financial returns, that it is not to be regarded from the commercial point of view but from the patriotic point of view, in its effect in building up the nation of which we are so proud and which we expect to see one of the greatest nations in the world before the end of the twentieth century. Though for years deficits have been accumulating, we should not lose sight of the national advantage of the railway and its important effect in the development of the country. Had the people and parliament of Canada early taken the stand taken by my hon. friend from Westmoreland to-night in this House, no doubt the deficits on the Intercolonial would have been a thing of the past, surpluses would be the rule and the road would extend into many parts of the country which now it does not serve. But the parliament of Canada has not always taken a fair view of these deficits.

Now, undoubtedly, the time has come when the financial aspect of the Intercolonial is about to change. The railway magnates who are looking into the matter see that in the Intercolonial there is an estate which will undoubtedly bring in good financial returns in a very short time. I do not think that the deficits are due to any failure of administration on the part of the government—and in saying that I refer to former governments as well as to the present. These deficits necessarily followed from the condition of things. But better conditions will come with the time of greater expansion. Conditions have changed. The maritime provinces are part of a great nation. They are on the threshold of an agricultural, commercial and industrial revival which will bring them to the prominent position which they are destined to occupy in this Dominion. The maritime provinces have now reached the threshold of an agricultural revival which will keep on the soil every child born under their blest heavens. Greater production will mean more wealth for the average individual, and greater comfort on the part of the people will mean more general travel and greater activity of commerce in every direction. Within five or six years, you will have the Intercolonial in a paying position, like any other great railway, whether managed by a government or by a corporation. We hear talk of a commission What does a commission mean? It is the combined wisdom of four or five men. I wonder why the Minister of Railways and Canals, the Deputy Minister of Railways, and three other men cannot form as good a body of management as any other that could be created. I have faith in the future of the Intercolonial, and I say it will be suicide for any government, whether Liberal or Conserva-

tive, to allow the people of Canada to think that they would entertain the idea of giving over to a private corporation this Intercolonial Railway for which we have sacrificed so much and which has made such good returns to the people of Canada.

I said that the maritime provinces are experiencing a new movement in commerce, industry and agriculture. Had we followed, in the first year of confederation, the advice of that great engineer, Sir Sanford Fleming, and developed at once the great advantages of the localities through which the Intercolonial Railway was built, we might from the very first have avoided these deficits which have confronted us from year to year. Every foot of our land contains resources bound to be developed at some time or other. Those resources, which for years have been appealing to human intelligence and activity, are at last being developed, and we are finding out that every section of country through which the Intercolonial passes is one which will amply repay its exploitation. I do not wish to detain the House by reading quotations, especially as a couple of years ago I had occasion to express my views on this very question and urged on the government the taking over of those branches, which were not in the hands of people owning sufficient capital to operate them in a profitable manner and as they could be operated as parts of the trunk line. Had we listened to the advice given by Sir Sanford Fleming and established a fast mail and passenger service from the coast of Ireland to St. John's, Newfoundland, and thence to the north shore of New Brunswick over the Intercolonial Railway, where the seaports are open until the 15th of January, I have no doubt that we would have been spared all these deficits which have been accumulating from year to year. But I am not without hope that this great engineer, although now very old, will still live long enough to see the realization of his projects of forty years ago.

It has been said that a bad choice was made in selecting the route of the Intercolonial Railway. No doubt had it not been for the unfortunate Ashburton Treaty, which deprived us of a portion of our territory, another route would have been chosen. However, that was out of the question. In selecting the north shore the fathers of confederation wanted to favour the development of the Matapedia valley and the Gaspesia district. Had the government in 1882 or 1883, instead of paying a large subsidy to a company to build a railway from Matapedia station to Gaspé basin, built the railway themselves, they would have saved the people of that district all the trouble and losses they have had to suffer at the hands of a company unable to meet its engagements, and to-day that district would be in a flourishing condition.

I say to you, Mr. Speaker, and to the Postmaster General that if, instead of giving bonuses to the railway from Matapedia to Gaspé Basin, the government had built the road themselves the people of that district, represented by the Postmaster General, would have been spared all the misfortunes which they have had to suffer owing to the inability of the companies to meet their engagements. The same condition applies to the north shore of New Brunswick. Notwithstanding all the mistakes of the past I claim that to-day the best policy is one of expansion and progress. Such a policy has been extended by the government to the whole country except in so far as the Intercolonial Railway is concerned, and I hope that the government will adopt that policy and display the same activity and energy with respect to the districts traversed by the Intercolonial Railway and give them the service they require. Such a policy would stimulate the creation of industries large and small and create a trade for the Intercolonial Railway which will place it in a magnificent position, commercially, financially and patriotically. We have, on this portion of the north shore of New Brunswick, unknown perhaps to many of the Canadian people, certainly unknown to the people of the west, not sufficiently known yet by a great many hon. members coming from the province of Ontario and even by some of my good neighbours from the province of Quebec, resources of the most valuable character, the development of which will, in a few years, compare favourably with that which has taken place in any portion of this country. In addition to the activity of the people in that region resulting in bringing from the bottom of the sea millions of dollars worth of fish products we have immense resources in iron ore, the very best, I will not say in Canada, but on the continent of America. We have at Bathurst to-day an English syndicate joined with a Canadian syndicate, who are in possession of the greatest iron ore deposit on the continent of America, who, in a few weeks, perhaps in a few days, will commence the building of a railway from the mines to the Intercolonial at Bathurst, who will make a complete investigation of the mine and who will ship their product to different points along the Intercolonial Railway system which will not only be of immense benefit to the Intercolonial Railway but which will afford our population the means of living in comfort, as they should live in a great country like this. We should have comfort, sir, we should have a population which can find employment at home instead of going away every year to seek work. The enterprise of the people will be stimulated

because immense industries will be established in connection with these ore deposits which will certainly be the equal of any other similar industries in Canada.

I claim, therefore, that the time has come when the government of Canada must devote its best thought and energy to the benefit of the people along the Intercolonial Railway, keeping in mind always that the Intercolonial is not operated for the benefit of the maritime provinces alone, but that it is operated for the direct benefit of the province of Ontario. While the construction of that road has brought comfort and a large measure of prosperity to the people of eastern Canada it has also brought riches and wealth to the farmers and manufacturers of Ontario. Therefore, I claim that the government must give its best thought to the question of improving the service of this great railway and we should expect from western Canada and from the province of Ontario that favourable consideration to which I think this project is entitled. The Intercolonial Railway has been looked upon more favourably recently than in years gone by. As my hon. friend from Westmoreland (Mr. Emmerson) has said, we do not expect the government to rush into the acquisition of these branch lines, but as soon as the financial conditions permit we say that it would be a wise policy to undertake. But first of all the government must look into the conditions with respect to these branches. I am prepared to admit that perhaps some of them would not appeal at first sight to the judgment of a railway expert. If I remember aright the hon. Minister of Railways and Canals, at the last session of parliament, said that if he were the president of a corporation having control of the Intercolonial Railway, he would first of all try to take in such branches as, in his judgment, it would be to the advantage of the Intercolonial to secure. Let him adopt this policy to-day or as soon as the financial condition of the country will permit. I have in my county not four branches, as my good friend from Kings and Albert (Mr. McAlister) has; I have only one branch, but permit me to say that it is certainly the very best branch of any connected with the Intercolonial—

Some hon. MEMBERS. Hear, hear.

Mr. TURGEON. I am serious when I say so, Mr. Speaker, because it is well known that we have from Bathurst to Caraquet, Shippegan and Tracadie, a population of over 20,000 souls and it is among that population that we find the Gloucester fishermen who annually bring, upon the coast of that district, traffic to the Intercolonial Railway in the form of $1,500,000 worth of fish, taken from the bottom of the sea to be added to the other sources of the lumber industry, of the grindstone quarries and of the iron mining industry which is bound to be one of the greatest industries in the Dominion of Canada.

Mr. W. S. LOGGIE (Northumberland, N.B.). At this late hour I shall not intrude for long on the patience of the House. Let me first of all extend my very hearty congratulations to the mover of this resolution (Mr. Emmerson) who supported his proposition by such a very logical and very eloquent speech. It gives me very great pleasure to endorse everything the hon. gentleman has said on this subject with which he is so familiar. In his opening remarks he carried us back to the days when the people of the maritime provinces were dealing with the New England states, and I can recollect very well that when I started housekeeping myself in the town of Chatham my furniture was bought in the city of Boston and brought around by schooner. Compare the conditions of trade in those days with the conditions of to-day and what a vast difference you will find. Instead of the merchandise which we use coming from the New England states it comes from Ontario and Quebec, to the great advantages of the industries in these manufacturing provinces. I agree also with what the hon. gentleman (Mr. Emmerson) said, that if there be low rates on the Intercolonial Railway, it is not only the consuming population of the maritime provinces that enjoys the benefit, but that benefit is shared in by the producers of Ontario, so that there is a mutual advantage. I wish to place myself on record as being in favour of this resolution, and I endorse very strongly the sentiments expressed by the hon. member for Guysborough (Mr. Sinclair) who was not only in favour of taking over and operating the branch lines but who was in favour of developing those parts of the maritime provinces which have no railways and which if they had would contribute greatly to the traffic on the Intercolonial. I want specially to point out that there are two sections in my county which have been settled for 100 years and which would be splendid freight producing sections but which are still without any railway facilities whatever. I ask the Minister of Railways to bear in mind the petition that has been in his department for some time asking the government to favourably consider the extending of a branch line from a point near the town of Newcastle to Tabusintac. It is well known to every one who is acquainted with the Miramichi river that this is a very rich part of the country and that a very valuable catch of fish is taken at the lower end of the river, which is at present from 15 to 20 miles from any railway point. I wish also to draw the attention of the minister to another petition which has been in his

department for a long time, asking for the extension of the Intercolonial Railway from Indiantown to Red Bank, a distance of 8 miles across the peninsula, between the two branches of the main river where there is at present a large saw-mill and that portion of my county is a rich agricultural district. That district has also been settled for the last 100 years and they are still without railway facilities. I would point out that when you have these branch lines operated by the Intercolonial you can get the long haul on the freight. I might mention that there are 200 carloads of fish originating at the stations of Chatham and Loggieville, and when the Canada Eastern was owned by a private corporation this freight was hauled to Fredericton and then delivered to the Canadian Pacific Railway. But now, the Intercolonial Railway instead of carrying that freight at 10 cents per 100 pounds from Chatham to Fredericton, as was the case with the private corporation, they charge 13 cents per 100 for the same mileage and they have such control over the freight that if you do not give them the long haul they charge practically a local rate for the short haul. The consequence is that the freight originating at Chatham and Loggieville now goes round the long haul on the Intercolonial Railway instead of going to Fredericton and thence over the Canadian Pacific Railway. This simply illustrates that every branch railway has a great deal to do with the routing of the freight that originates on it. For example, on the Kent Northern Railway the freight that originates at Rexton and Richibucto will go to Kent Junction and thence to St. John whence it is handed over to the Canadian Pacific Railway, whereas if that branch was owned by the Intercolonial Railway and they could route the traffic originating on it they could divert it by way of Montreal and get the long haul. I heartily endorse what has been said by the mover of the resolution and I hope the day is not far distant when the financial conditions of the country will enable us to absorb and properly equip and maintain the branch lines as a portion of the Intercolonial, and to build such other branch lines not now in existence as will develop the traffic of that country and encourage industry and enterprise there.

Mr. WM. CHISHOLM (Antigonish). As the hour is late I rise simply for the purpose of putting myself on record as approving of the statement contained in the resolution. As I understand that resolution it does not commit the government in any way to the purchase of these branch lines; it simply means that where it is good business policy, where it is in the best interests of the country and the Intercolonial Railway to acquire these lines, the government should have the endorsation of parliament in pursuing such a course. And while I endorse the policy of acquiring the branch lines I think the more important policy is to extend the Intercolonial Railway to districts where the conditions will justify such extension. I have in my mind a case in point; I have photographs which I intend to show the Minister of Railways when the opportunity arises, and I think I can convince him that if we have not a Cobalt we have something nearly approaching it. I will, when the opportunity comes, press on the minister the advisability of building a branch line from Merigomish to Antigonish via Arisaig and thence to Country Harbour. Possibly I shall take the opportunity of bringing this matter up when the House is in committee of supply.

Hon. G. P. GRAHAM (Minister of Railways and Canals). Mr. Speaker, I am sure that the very valuable discussion that has taken place to-night has been of interest to every member of the House, not only to those who come from the maritime provinces, but equally so to us who live in other parts of the Dominion. I would feel a little diffidence, even if I had the time, about discussing this question after the very eloquent and able address which has been delivered by my hon. friend from Westmoreland. He has given to this question a great deal of study. Indeed, sir, he has given to the greater question of transportation a study perhaps not equalled by that of any other man in this House; and the grasp of the situation which he has shown to-night proves that he has not rushed to his conclusions but has reached them after the most careful and I believe honest and candid consideration. Such discussions in this House must be of interest to all Canada. Possibly sometimes they do not accomplish the object which we are seeking at the moment; but they do diffuse a large amount of information which leads the people to take a broader view of the questions which interest us all. I was particularly struck with the broad view my hon. friend took of the situation. While he did point out what conclusions could be drawn if we took the sectional view, he discouraged this, and spoke from the broader view of carrying all the products of the country from the point where they are produced to the point where they are consumed, which is of general interest to all Canada, and does not pertain to any particular section of the country. I did not rise to go into this question to-night. It is not a question that can be brushed aside lightly, but is one of great interest to the west as well as to the east. With the permission of my hon. friend, I will not make a statement on behalf of the government to-night, but when I make the speech on the Intercolonial which is customary on going into Supply,

I will make a statement as to the position of the government on this question and on all other questions relating to the Intercolonial Railway, I will therefore move the adjournment of the debate.

Motion agreed to, and debate adjourned.

Mr. FIELDING moved the adjournment of the House.

Mr. HAGGART. What business will the government take up to-morrow?

Mr. FIELDING. The House will go into Supply, and the Minister of Militia will make a statement in connection with his estimates.

Motion agreed to, and House adjourned at 12.20 a.m. Tuesday.

HOUSE OF COMMONS.

TUESDAY, March 9, 1909.

The SPEAKER took the Chair at Three o'clock.

STANDING COMMITTEES.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister) moved that the name of Mr. Boyce be taken off the Committee on Mines and Minerals and added to the Committee on Forests, Waterways and Watercourses, and that the name of Mr. George Gordon be taken off the Committee on Forests, Waterways and Watercourses and added to the Committee on Mines and Minerals.

Motion agreed to.

ADULTERATION ACT—AMENDMENT.

Mr. J. A. SEXSMITH (East Peterboro) moved for leave to introduce Bill (No. 100) to amend the Adulteration Act. He said: The object is to protect the farmers and others against the sale of comparatively worthless foods which are put on the markets. They have no means of detecting the difference between these foods and others of excellent value. When the Bill comes up for second reading, I shall explain the details and hope to make it clear that it is very essential.

Motion agreed to, and Bill read the first time.

CRIMINAL CODE—AMENDMENT.

Mr. T. J. STEWART (West Hamilton) moved for leave to introduce Bill (No. 101) to amend the Criminal Code. He said: The object of the Bill is to reach an undesirable class who are travelling through our country and are a source of great danger and annoyance. It is against the law for a man to carry undesirable weapons of any kind, but no means are provided to ascertain whether he is doing so or not. The amendment I ask is to provide that a person suspected of carrying concealed weapons may be searched.

Motion agreed to, and Bill read the first time.

INQUIRY FOR RETURNS.

Mr. H. LENNOX (South Simcoe). Before the orders of the day are called I desire to ask the Minister of Public Works again when we may expect the return with reference to the riding of Bonaventure. The order was made on February 1, and on one or two occasions since I have had more or less promising assurances, but nothing has come of them. We want these returns for use during the session; and when hon. gentlemen talk of prolonging the session, I think there is no more effective way of prolonging it than by this extreme delay in bringing down important returns. We are hampered and delayed in the work of the House. There must be a great deal of matter to be returned if it requires six or seven weeks to prepare it. It is quite time that this return was made. I can do without it if necessary but I must say I think it is time this return was ready.

Mr. PUGSLEY. I have spoken to my deputy several times, asking why the returns have not been brought down. He informs me they are being attended to as rapidly as possible. I regret that in my department we have to use the ordinary staff, as we have no room to get in temporary clerks during the session, and under the law we cannot pay clerks for working after hours. We have to do the best we can. I spoke yesterday about the returns and I will see they are brought down as soon as possible. This remark applies to other returns as well.

Mr. FOSTER. I hope that remark includes returns which were ordered on my own motion.

Mr. PUGSLEY. Yes.

Mr. FOSTER. There are some of those that should not take much time.

Mr. PUGSLEY. Except that they have to take their turn.

Mr. FOSTER. That means the turn of the House and there are 220 members here.

MARINE DEPARTMENTAL INVESTIGATION.

Mr. R. L. BORDEN. Before the orders of the day are called I beg to ask the Prime Minister when he expects to be able

to announce to the House what action, if any, the government propose to take upon the report of Mr. Justice Cassels. The Prime Minister will remember that up to the present time there has been no information whatever given to the House upon this subject. I am not pressing for an answer to-day, but am merely suggesting the expedience of giving early information to the House.

Sir WILFRID LAURIER. The matter has been engaging the attention of council and I think some time next week we will be able to announce the final conclusion.

LEGISLATION RE GRAND TRUNK PACIFIC.

Mr. R. L. BORDEN. In consequence of a paragraph in the press yesterday, I beg to ask whether it is the intention of the government to bring down any legislation with regard to the Grand Trunk Pacific at this session, and, if so, at what time we may expect the announcement of that legislation?

Hon. W. S. FIELDING (Minister of Finance). Any legislation of that nature that may be contemplated will be put upon the Order Paper almost immediately.

SUPPLY—SOUTH AFRICAN BOUNTY ACT.

Mr. FIELDING moved that the House go into Committee of Supply.

Mr. H. LENNOX (South Simcoe). Mr. Speaker, before the House goes into Committee of Supply I wish to direct the attention of the Minister of the Interior to one feature of the South African Bounty Act. The Act provides that a land grant shall be made to the volunteer or in the event of his death between the date of his enlistment and a certain other date, to his legal representative. I have been inquiring in the department as to the issue of certain land warrants and there seems to be some confusion in the matter. I think that probably the regulations could be improved. The first intimation sent out to the parties making the application, as I understand it, is that there must be either probate or administration in the case of deceased persons. In the majority of instances these persons have no estate, they are generally young men and have absolutely no estate and in many instances they have made no will. In Ontario there is a provision of course for administration, but in the province of Quebec I am told there is no provision, no law by which there can be, in the ordinary sense, administration of the estate. In the case of a vacant possession, where there are no heirs at all, I am told a person called a curator may be appointed who will take charge of the estate. In the case of ordinary heirs who are of age, they take charge of the estate themselves, and in the case of infants a tutor is appointed, but there is no such thing as administration in the ordinary way. I was speaking of a case that comes from Montreal the other day, and I was informed by an officer in the department that that condition arises in reference to administration in the province of Quebec. He had informed the party there would have to be administration but found in the meantime there could be no administration.

The point to which I wish to call the minister's attention is that where a person under twenty-one years of age who was killed in South Africa, had no will and no estate, it seems to be an unnecessary expense to put the parties to that they should have to apply, say in Ontario, for administration in a case of that kind. In fact there is a good deal of difficulty about getting administration, because as a matter of fact there could only be administration of an estate and there is no estate to be administered. Of course we can get around it by saying he had his clothing or something of that kind, but practically there is no estate. My suggestion is that in cases of that kind, where a person who would be entitled to a grant died before the Act was passed and so the land that he was to get did not even tentatively devolve upon him, the grant ought to be administered from first to last in the department. That an affidavit should be filed as to the parties entitled to that estate and the grant should be made to those parties or as would happen in the majority of cases that they would all transfer their rights to one person, four or five brothers would release their rights to another brother, or a father or mother and let the grant be made to that person. It seems to me to be absolutely unnecessary to put the parties to the expense of getting administration where they could administer the grant themselves. I was told by a gentleman in charge that in one instance a mother and son came in to the department and represented that they were the only parties entitled to participate in the grant, but it afterwards transpired that there was a son, another brother, living in the United States. That, however, would be easily liable to occur if administration was demanded, they would just as easily deceive the Surrogate Court judge as the departmental officer. What I urge upon the minister for the purpose of getting directly at the matter and avoiding expense, is that where the person dies before the passage of the Act and the Act therefore gives it not to him but to his legal representatives, where these legal representatives are of the full age of twenty-

one years the matter should be dealt with without their being called on to obtain administration. I have no doubt the minister has been endeavouring to get it into the best shape possible and doubtless he has had some difficulty in working it out. I thought it desirable to bring it up in the House so that if anything should arise by which there might be a case of making a false affidavit or anything of that kind the department could not be blamed if they adopted a suggestion of that kind made in the House.

Mr. OLIVER. I am very glad the hon. member has brought this matter to the attention of the House. Although the instances to which he alludes are not numerous still they exist and have to be dealt with. It is true that for the protection of the department it is our rule to require that the responsibility of deciding who are the heirs shall rest upon the local courts or the legal authorities rather than upon ourselves. I think it is well for all parties concerned that, within reasonable limits, we should continue to take that view. At the same time, no doubt, there are some cases such as my hon. friend has mentioned, where to insist upon that view is really a hardship. I would not wish my hon. friend or the House to think that it is the desire of the government to impose any hardship, or to allow anything that can be avoided to stand in the way of those who are entitled getting the fullest possible benefit. I am glad the hon. member has seen fit to mention this matter in the House, so that the House may be aware of the difficulties that have to be met; and that when we think it is in the best interest of those who are entitled that we should administer directly, we may have the support of the House in doing so, or in doing the best we can under the circumstances.

Mr. D. HENDERSON (Halton). I am glad my hon. friend from South Simcoe (Mr. Lennox) has referred to this matter. I had occasion a short tim ago to present an application to the Department of the Interior of a somewhat similar character to that which the hon. gentleman has referred. A young man went away from my county and joined the forces to go to South Africa. Unfortunately he was taken ill and died there, and is buried in South Africa. He left a father and mother, and five brothers and sisters. On making application I was informed that letters of administration would have to be taken out. The father has since died and the remaining relatives are living, all of age. It seems to me that if the brothers, sisters and mother should all assign to one member of the family and that member of the family should be the one to make application, the department would have no difficulty, no trouble, and no risk in dealing with him. If necessary, a statutory declaration could be made by some one to the effect that these were all the members of the family. I think it a pity that the department should insist upon putting the relatives of these veterans to the cost and trouble of procuring letters of administration. It all costs money, and the indemnity that is granted to the veterans is not so very great after all, and if you reduce the value of it by insisting on letters of administration, you are doing what, to say the least of it, is absolutely unnecessary. If the government chooses to make a gift to the relatives of a veteran who has sacrificed his life in the interest of the empire, I say give it to him, but don't make it any more expensive for his relatives to get it than is necessary. I hope the minister will revise what I understand is a rule of the department to insist upon letters of administration in every instance, and that where matters are made clear and the evidence can be furnished without doubt, he will not insist upon letters of administration where there is no will. Sometimes it is difficult. A young man goes out perhaps and leaves no estate behind him, nothing on which to base an application for letters of administration. The grant of land coming to the heirs cannot be used as a basis of application for letters of administration, consequently there are difficulties in the way. I think the minister should make the rule flexible, and deal with each case on its merits, instead of laying down an absolute rule to govern all cases.

Mr. J. W. DANIEL (St. John City.) I would like to support the remarks of the hon. member for Simcoe who brought this matter up. It has been my fortune during the last week or so to take six or seven cases to the Department of the Minister of the Interior, where the legal representatives were called upon to take certain action in order to obtain the warrants. One of the worst features about the cases to which I refer was the fact that the parties who were endeavouring to get these applications put through, were left from the month of October last I think until within eight or ten days ago without any knowledge coming to them as to what the department required them to do in order to establish their claims. After I saw the deputy minister, I may say, there was no further trouble and word was sent to these people that letters of administration would have to be taken out. As has been stated this afternoon, many of these men are not in a position to take out letters of administration. I understand that in the city of St. John it costs at least $40 to take out letters of administration, and that applicants have to pay

that amount in order to fulfil the requirements of the Department of the Interior. I am not a lawyer, and therefore I cannot make any suggestion as to what course should be adopted. But the minister has a legal staff in his department, and I think he would be doing only right and dealing justly by these men, if he would make such regulations as would relieve them from the expense of $40 in order to go through a probate court and get out letters of administration. I think he would be doing justice in that way, and make it much easier for a deserving class to get what they are entitled to.

Mr. H. GUTHRIE (South Wellington). There is another thing I would like to draw the attention of the minister to in regard to the regulations which have been isued under the Volunteer Bounty Act. I do not refer to a deceased volunteer, but to volunteers who were so seriously wounded in the South African war that they are unable to comply with the homestead requirements which are necessary under the present Act and the present regulations. I have in mind the case of two volunteers who reside in the constituency I have the honour to represent, both of whom were seriously injured in Hart's river, one, Sergeant Wilkinson, losing his right arm and his left eye, and the other, Corporal Minchin, having been shot through the lung and otherwise seriously injured. Both of these men are to-day physically incapable of performing homestead duties. Now, of course, it may be said that they have the option of selling their warrant, or of taking scrip. No doubt they have, but if it becomes known that these two men, or men similarly situated cannot perform their homestead duties, they are bound to sell, and to sell at a great sacrifice. What I would suggest is that volunteers who have been physically incapacitated through wounds or disease in South Africa should be entitled to get their land without performing homestead duties upon it. I think that it would be a very laudable and very proper thing to do, and I trust the regulations or the Act may be so amended as to permit its being done.

Mr. T. W. CROTHERS (West Elgin). There is another matter to which I think the attention of the minister should be directed. It seems to be the practice of his department in the case of a homesteader, that probate of his will or letters of administration should be issued from the judical district in which the land is situated. I have a case in point where a homesteader had fulfilled all the requirements to obtain his homestead, but he died in the province of Ontario, where he left an estate, and where he made his will.

Mr. DANIEL.

The will was probated in one of the surrogate courts in Ontario. He was notified by the department that it would be necessary to file an exemplification of the probate or the original probate itself. I think that was a mistake according to the practice of the department . However, he was notified later that it would be necessary for him to engage a solicitor at Saskatoon to prove, in the district where the land is, a will that has already been proved in the court of the province of Ontario. I cannot see any good reason why that should be required. It seems to me that the evidence of a court in the province of Ontario that a man has made a will, which will has been proved devising the land to his son, ought to be sufficient to warrant the department in issuing the patent to his son, assuming that all the settlement duties have been performed and I believe that satisfactory evidence has been submitted as to that. I do not understand why it is necessary to put the man to the expense of re-proving the will in the district where the land is. There might be some justification for it if the government of the province were issuing the title, but it is the government of the Dominion that gives him the title, and the evidence of the court in one of the provinces ought to be sufficient that the will was made and the proof of that fact ought to be sufficient to entitle the devisee to the patent for the land.

Mr. J. HERRON (Macleod). I do not wish to repeat the statements that have been so well made by the hon. member for South Wellington (Mr. Guthrie) with reference to the South African volunteers, but I wish to acquiesce in the statements that he has made. I have one or two cases in mind where men have been totally incapacitated from doing homestead duties on their land and I believe that this government would be adopting a proper course and one which would commend itself to the people generally if they would grant these men their patents without requiring them to perform their homestead duties. I believe the people of Canada would uphold the hands of the minister and the government in doing that. I would like to see a regulation adopted which would enable men incapacitated as a result of their service in South Africa to secure their homesteads without being compelled to comply with the homestead regulations of the departments.

Mr. G. H. COWAN (Vancouver City). I wish to direct the attention of the minister to the fact that the restrictions of the Volunteer Bounty Act are so numerous and so onerous that, taken alone, the name of the Act is almost a misnomer. I wish to draw the attention of the House and the

minister to the fact that the department has added to these restrictions. Take, for example, section 2 of the Volunteer Bounty Act which provides that the grant may be of Dominion lands available for entry. Turning to the Dominion Lands Act, section 3, you will find that the lands available for entry are lands in the provinces of Manitoba, Saskatchewan and Alberta, together with three and a half million acres in the Peace river district in the province of British Columbia as well as the land in the territories. But we find, on turning to the regulation of the department, that volunteers otherwise entitled to the benefit of the Act are not permitted to enter for lands in the Peace river district in the province of British Columbia, notwithstanding the fact that section 3 of the Dominion Lands Act, taken along with section 2 of the Volunteer Bounty Act, gives them that right. I think that the restrictions of the Volunteer Bounty Act are sufficient without the department adding further restrictions. The effect of that departmental regulation is that a volunteer a resident in British Columbia is bound to expatriate himself from British Columbia before he can get the benefit of the Act. It was surely never intended that that should be the case. It was surely intended that volunteers resident in British Columbia should be permitted to enter for Dominion lands in British Columbia. It is true that by a section of the Dominion Lands Act the forty-mile belt is not included as land available for homestead entry. It seems to me desirable that this too should be included and, at any rate, it is exceedingly undesirable that volunteers, resident in British Columbia and having their occupations there, should be obliged to give up these occupations and go beyond the bounds of their own province to get the benefit of the Act, especially when the Dominion has a large tract of three and a half million acres in the Peace district and the forty-mile belt on either side of the Canadian Pacific Railway. Again, by section 4 of the Volunteer Bounty Act, it is provided that:

> The volunteer, or his substitute, may select or enter for the land on or before the 31st December, 1910, and shall perfect his entry within six months after the 31st December, 1910.

But along come the regulations of the department and say that he shall be obliged to perfect his entry, not six months after the 31st December, 1910, but six months after entry. I think again that the department is imposing unnecessary restrictions upon the volunteer, especially in view of the fact that the intention apparently of the Act was that it should grant him a bounty. Away back in 1871 we know that the volunteers of the provinces of Ontario and Quebec who had served at that time were given a grant of land each without actual residence being required. Here the homestead duties of the volunteers are almost exactly the same as those of an entrant under the Dominion Lands Act and they are more onerous in many respects. I cannot help thinking that in view of the way this Act is being administered by the department the name of the Volunteer Bounty Act is a misnomer. It would be better for volunteers resident in British Columbia to abandon their rights under the Act and enter for homesteads under the Dominion Lands Act.

Mr. SPROULE. Am I correct in understanding that in all cases where a volunteer entitled to this land grant dies, his heirs will be obliged to take out letters of administration before they can take advantage of the bounty ?

Mr. OLIVER. That is the way we are administering the Act at the present time.

Mr. SPROULE. Then, I should be inclined to agree with the suggestion of the hon. member for South Simcoe (Mr. Lennox) that the department should, by regulation or otherwise, provide for the acceptance of proof without putting the heirs to the trouble of taking out letters of administration.

Mr. S. HUGHES (Victoria). Now that this matter is up, I think it well to bring before the House a matter which has been engaging the attention of some people for a considerable time. Under the present regulations, each volunteer, in order to settle upon his land, must personally visit the land office in the locality in which he purposes selecting his location. But certain persons have purchased large numbers of these land warrants, and, as I understand it, under these same regulations, these persons can locate these lands without this formality. The purchaser of land warrants has no intention of becoming a settler himself—he is a mere speculator. But the volunteer who proposes to settle on his land himself must personally locate his land. Many of these intending settlers, in order to get in early, are going up already, and others will go within the next few weeks. Each of them will have to incur an expense of $200 or $300 in selecting the land, making the location and paying the necessary travelling expenses. I appeal to the Minister of the Interior (Mr. Oliver) and the Minister of Militia (Sir Frederick Borden) if it would not be better and fairer to allow the warrant to locate the land instead of the man. The Minister of the Interior, some years ago, abolished—and very properly—the old blanketing system which had worked such injury to the northwest, the system under which any person, through

an agent, could locate a homestead. That system was greatly abused. But the minister, in his desire to prevent the recurrence of that abuse, went to the other extreme and made every applicant personally go to the land office. Thus, a father who wanted to locate land for himself and his sons was unable to locate except for himself. Every one of the sons had to go to the west personally and locate his homestead. The minister did change the regulations so as to provide for such cases as this. In the case of these land grants to volunteers, a regulation should be passed, or, if necessary, an amendment to the Act should be made, so that the volunteer who holds a land warrant might be put down for his chosen location, or, if this were found to be located, he could be notified and be given an opportunity to select another. Many of these men have friends in the west, who would pick out land for them. I think the hon. ministers to whom I have referred will see the justice of the claim that the warrant should be the identification and not the person. Those familiar with affairs in the northwest know that the location of half-breed scrip was not attended with these restrictions. The speculators who held the warrant were not going to try to bring to the land office the particular half-breed in whose name the warrant was issued, and who might be living somewhere up near the Arctic circle. Any half-breed would do——

Mr. KNOWLES. Does the hon. gentleman say that that system of locating half-breed script has existed within the last two years?

Mr. S. HUGHES. I did not say so. But it did exist in previous years. If the hon. gentleman wants them, I can give him particulars.

Mr. KNOWLES. No, I merely asked a courteous question and thought I should get an answer of the same kind.

Mr. S. HUGHES. Since the present Minister of Justice has come into office, he has done his best to stamp out the iniquities that were rampant throughout the northwest—I give him every credit for that. I am glad to see that hundreds of volunteers are going upon their own lands, and I point out that it would save these men a great deal of expense if the change that I suggest were made, and would leave them with more money to buy their outfit when within the next four or five months, they go to reside on their land.

Mr. ADAM B. CROSBY (Halifax). I am glad this matter has been brought up, for I have a case in my constituency, which, perhaps, is different from any of the others. There is a widow of a South African volunteer who lost his life in South Africa. This lady has made application for a land grant. The warrant was about to issue, and the deputy Minister of the Interior—whom I had the honour of calling upon, and who was very kind in giving all the information he could—had sent out the letter containing the questions to be asked of the applicant and on the answering of which the warrant was to issue. But, between the time that letter was sent to Halifax and the time of its return, as I understand it, some new rule had been issued by which the applicant would have to administer before she could receive the warrant. When she communicated with me, I asked her to call at the probate office in Halifax. As she is without means I thought she might be able to administer there at small cost. But they told her there that, in view of the fact that her husband had left no estate in Halifax, she could not administer there, but must administer where the land was granted. As the land was not granted as a matter of fact, this would be difficult to do. I trust the Minister of the Interior (Mr. Oliver) will be able to make some provision by which this poor woman will be able to get the land due to her. I think the widow is in a much different position from any other relative, and there should be special consideration for her. I do not know whether other warrants had been previously granted in similar cases, but I understand that this new rule, as I have said, issued between the time when the communication was sent to Halifax, and the time the answer was sent back.

Mr. WM. M. MARTIN (Regina). As one of the members from the west, I have listened with a good deal of interest to the objections which have been raised by hon. members on the other side to the methods of administration of the Land Department. I was particularly interested in the point raised by the hon. member for South Simcoe (Mr Lennox) with regard to certain cases of hardship in connection with the administration of the land grants of deceased volunteers. Any person who is familiar with the conditions of the practice of law in the western provinces or with the conditions attending the administration of estates, would not wish to place on the government the responsibility of deciding in any particular case whether a man dies leaving heirs or not. Only a short time ago there came under my own notice the case of a man, recently married, who died in the province of Saskatchewan. Affidavits were sworn to by his widow to the effect that he died leaving her and three or four small children. Before the estate was administered, we learned by the merest chance that the man had been married in Germany previous to coming to this country, and had a grown-up family there. Similar cases must arise from time to time. The administration of estates in the western provinces is a simple matter, it does

not cost much; and why should not a man who is getting land from the government have his estate administered in the same way as he would have if he actually had the patent for the land? The hon. member for South Wellington (Mr. Guthrie) spoke of the hardships attending certain men who were injured in the South African war. With those men I have every sympathy, as I believe has every member of the House; but I may call attention to the fact that the Act to authorize a bounty to the South African volunteers, passed in the last session of the last parliament, provides for the appointing of a substitute, and I believe the scrip at the present time is worth about $1,000.

Mr. HUGHES. It will soon be worth $2,000.

Mr. W. M. MARTIN. I believe that it soon will be worth $2,000. Each of these volunteers has the right to take not only a half-section under this Act, but a half-section under the Homestead and Pre-emptions Act as amended in the last parliament; so that the South African volunteer, if he wants to become an actual settler in the west, has an opportunity to acquire a whole section of land, and in three or four years, when he gets his patent, he will be a wealthy man. I know personally some South African volunteers who have taken up their land and are at present on the highway to wealth as a result of the bounty given to them by this government. The hon. member for Vancouver also raised the question of the time given for entry to the volunteers. I believe that western sentiment is that ample time has been given to them. They are allowed up to the 31st of December, 1910. The hon. member for Vancouver would allow them to have until the middle of 1911 to complete the entry. The effect of that would be to have the land tied up for two or three years. What we want in the western provinces is men to go on the land and cultivate it, and increase the out put of wheat and thereby increase the wealth of the country.

Mr. COWAN. That is the wording of the Act.

Mr. W. M. MARTIN. If that is the correct interpretation of the Act, it should not be worded in that way, for I believe the South African volunteers have been given ample time to go on the land and perform the cultivation duties.

Mr. GOODEVE. May I ask the Minister of the Interior to give the reasons for exempting the lands of the Peace River district from free entry under this Act? In the Bounty Act those lands are mentioned as being eligible, but in the regulations of the 1st of February they are exempt.

Hon. FRANK OLIVER (Minister of the Interior). As this question has been brought up without notice, I am not able to give all the particulars that I would otherwise be able and very glad to give. However, as far as the Peace River tract in question is concerned, the rights of the volunteers are not affected, as up to the present time there is no land surveyed in that tract upon which entry could be made. In view of the number of points that have been raised, I might be permitted to go over the ground from the point of view of the department. In regard to requiring letters of administration to be taken out, I do not wish to be understood, as I seem to have been understood, as being willing or anxious to forego that requirement. What I want to be understood as saying is that it is only in entirely exceptional cases that I would think we would be warranted in foregoing that requirement. It is not a burden that should be assumed by a department of this government, unless that burden were laid upon it expressly by order of the House, to decide whether there are heirs or not, and if so, who are and who are not heirs. That is a most serious responsibility in regard to the rights of property, which is laid upon the courts and judges of our land. The administration of estates differs in every province of the Dominion, and it would be a very serious presumption on the part of the Department of the Interior to usurp the functions of the courts in the various provinces of the Dominion in regard to the administration of estates. This grant is property; it is practically real estate, and the heirs to that real estate are entitled to all the protection that the laws of the several provinces give them.

Mr. McKENZIE. What right does the administration give over it?

Mr. R. L. BORDEN. The hon. gentleman's point is that administration is concerned with personal property.

Mr. OLIVER. I am not learned in the law, but I understand that there is the administration of real estate as well as the administration of personal property. The distribution of the real estate of a deceased person is one of the most delicate, difficult and expensive proceedings under the jurisdiction of our courts, but there are still cases where it would be too serious a hardship to insist on all the formalities of the law; and in such, we may be prepared to take the responsibility of deciding to issue the grant to the one entitled to it in our best judgment. But that is done only as a last resort in extreme cases; and should we make a mistake in such cases, we ask for the best consideration of parliament. But we do not want to be understood as lightly undertaking a responsibility which has not been

laid on us by Act of parliament and which it would be the height of presumption for us to assume.

With regard to the question raised by the hon. member for South Wellington (Mr. Guthrie) as to the remission of residential duties in the case of volunteers who had suffered serious physical disabilities, I only wish to point out that, in administering this law, the Department of the Interior is bound by the terms of the Act. The Act was only passed last session, and after a great deal of consideration, parliament did not see fit to provide for the contingency suggested by my hon. friend except in the way in which it is provided as suggested by the hon. member for Regina. That is to say, provision is made for the transfer of the right of a volunteer who for reasons, whatever they may be, sees fit not to go on his land. The Act is framed so that the man who does not want to go on his land will be able to get the utmost value for his right to the scrip. That was the view of parliament last session, and in administering the Act the Department of the Interior must be bound by the authority of parliament. Parliament was moved to take the ground it did believing that while it was desirable to give reasonable consideration for the services of the men who went to South Africa, it was also desirable that settlement in the west should be thereby encouraged. The grant was essentially a bounty for the promotion of settlement in the west just as much as a recognition of services to the empire. And until parliament sees fit to reverse that policy, the Department of the Interior will have to continue as it is doing.

Regarding the point raised by the hon. member for Vancouver, while the Act gives the volunteer at least six months after a certain date in 1910 to go upon the land, there was certainly no intention that there should be any such privilege as that of tieing up the land and holding it over from settlement until 1911. That, I take the responsibility of saying, was not the intention of parliament. The intention of parliament was that the settlement conditions should be such as are required by the Dominion Lands Act; and the Dominion Lands Act requires that within six months after the date of entry settlement shall take place. We are administering the Act in that light, and I believe that we are carrying out the will of parliament in so doing. Were the Act to be administered as the hon. member for Vancouver has suggested, it would cause scandal and abuse in land speculation to which the western country would certainly not submit.

As regards the inability of volunteers to take up lands in British Columbia, it was not contemplated that there should be any land placed at their disposal except those in the prairie provinces; but if the people of British Columbia feel slighted, I do not know but that their views may be met in due time, and I can say without hesitation that if it were possible to transfer the privilege from the prairie provinces to the railway belt of British Columbia, I am quite satisfied every representative of the prairie provinces would be quite willing to have that done.

There is this to be said in connection with this volunteer scrip, and that is that taking advantage of the provisions framed for the express purpose of protecting the interests of those volunteers who, for one reason or another, were either unable or unwilling to go on the land, a very large portion of the issue has fallen into the hands of speculators. We hope that the volunteers who were entitled to all the rights and benefits to be derived under the Act have reaped due advantage from that transaction. We did our best for them in framing the Act, and if they have not reaped due advantage from it the fault is theirs and not ours. The condition is that the scrip is, as a matter of fact, very largely in the hands of men who have bought it not with the intention of settling on the land but for the purpose of speculation, and therefore the Department of the Interior being charged with the administration of this area of some two million acres of land, largely in the hands of speculators, is compelled, if the public interest in the settlement of the country is to be protected, to hold the lines very, very tight. We cannot allow the privileges in respect to the land held or taken under scrip that we have been used to allow in the case of land taken by homesteaders. I think the members from the west will bear me out when I say that it is absolutely necessary that having made the law as it is, we must insist upon the letter of the law being fulfilled, not wishing to do any injury to the men who served the empire, but desiring to protect the public interest in the settlement of the west, which is if not of paramount of equal importance to parliament and the country.

Mr. WORTHINGTON. How did it become possible for the various land agents throughout Canada to become possessed of either the nominal roll of every regiment serving in South Africa, or a list of some sort giving the name and address of each of these men? It is unfortunate that this has occurred because in a great many instances the first the volunteer knew of his being entitled to a South African grant was a letter from a land agent offering him at first $200 or $300 for his rights. That was often the first intimation received by the volunteer that he was entitled to any remuneration for his services in South Africa. It would have been much better if either the Militia or the Interior Department had

notified each veteran that he was entitled to such a grant, and to have withheld the information from the land grabbers until such time as the soldier himself had a chance to consider the proposition.

Mr. OLIVER. I am not able to say how the rolls of which my hon. friend speaks came into the hands of the real estate agent. I would say that in my estimation once we permitted, as we did permit and as we intended to permit, the volunteer to sell his scrip, the greater publicity given to the fact that the scrip was issued, the better for the man who had scrip to sell and wanted to sell it. There seems to me to be no disadvantage to the beneficiary of the Act in the fact the man who wanted to buy from him knew that he had scrip to sell or which he could sell. The greater the demand for the scrip the better the price the man was going to get for it. It is to be regretted that in many cases the volunteer has disposed of the scrip at much below its actual value, but I think that those who are to blame for that are rather the men who have belittled the commercial value of the scrip, as it was belittled, very definitely and specifically and persistently belittled, in the columns of many newspapers not many months ago.

I take the opportunity of saying that the South African volunteers have suffered the loss of many thousands of dollars and the scrip sharks have benefited to a corresponding degree because of the misunderstanding that was persistently and deliberately caused throughout the country as to the commercial value of this volunteer scrip. The effort was made in the terms of the Act to prevent that by providing that no transfer of right was valid until after the scrip was issued. In every point we have done our best to guard the interests of the volunteers. It is still to be regretted that in many cases they have suffered very heavy financial loss, but it is not because of any action or lack of action on the part of this government.

Mr. S. HUGHES. My experience is that a great many of the volunteers still hold their scrip, but perhaps the minister has data which would warrant him in stating that the great majority of them have sold their warrants. The great majority of my friends are still holding their warrants and I am pleased to say that a majority of that majority are going to settle on the land.

Mr. OLIVER. When I said a large proportion, I was speaking without the book. I have taken for granted from remarks I have heard that a large proportion had been sold. I hope it is not so, and would be pleased to know it is not. But there has been a great deal of talk about purchase of scrip, and a low price at which it was being disposed of made me feel very strongly that a great many volunteers were not getting the benefit we hoped they would get from the Act.

Mr. S. SHARPE. I would ask the attention of the Minister of Militia (Sir F. Borden) to a case in my constituency. A young Canadian medical officer went to London, England, enlisted in the British forces and served during his term about one year in South Africa. Part of the time he was on hospital duty and part of the time he was at the front, for about eight months treking the veldt and enduring all the hardships and dangers of the campaign in South Africa. It seems to me remarkable that nurses who never saw a bullet fired and many men who never saw South Africa are entitled to a warrant, a gift of this land, and this officer, a young Canadian officer in the medical corps, is deprived of his rights. I would strongly press on the favourable consideration of the minister the case of those who are commonly called civil surgeons. This young man was really subject and liable to all the orders of the ordinary volunteer and he was exposed to all the hardships of the campaign. If there was ever a man who deserved the scrip it is surely a man of this description. I understand the Law Department have decided against the claim of men of this class, and hold that they are not entitled to grants of land. I think this is rather a harsh ruling, and the minister might amend the law and regulations in respect to such cases, and allow this young man, who is certainly very deserving, a grant of land.

Sir FREDERICK BORDEN. If my hon. friend will bring the particular case to my notice, I will have it looked into. I do not remember the case.

Mr. WORTHINGTON. As I understand it, the South African civil surgeons were under military rule the same as regimental and army medical corps men, and in many instances were attached to regiments as regimental surgeons, though ranking simply as civil surgeons. I think it is right that a man who has lived in Canada and was domiciled here before the war, and serves the empire, either in England or South Africa, should be entitled to the grant, and more especially if he has returned to Canada.

Mr. HUGHES. Every civil surgeon in any column with which I had anything to do in South Africa, was on the roll. I do not see how the case presented by the hon. member for North Ontario can have arisen.

Mr. CROTHERS. The Minister of the Interior, in answering the multitude of questions submitted to him on this matter ,overlooked one that I raised. It seems that in the

case of a South African veteran, the minister accepts the finding of a court in any province as to the person entitled to the certificate. Why should that not be the case with a homesteader? If the minister accepts the finding of a court in any province as to the person entitled to the patent in the case of a veteran, why should that not be the case when the duties have been performed by the homesteader, or by his successor ?

Mr. OLIVER. In the one case, as I understand it—of course my hon. friend knows that I am skating on rather thin ice in undertaking to deal with the question without reference—in the case of South African script, it is not land, it is only a right to land, a right which has not yet been translated into land. But the right exists and accrues wherever the domicile was of the person who holds that right. In the case of land, the right accrues where the land is situated, that is to say, in the case of a homestead the right must necessarily exist where the homestead is, and therefore must be subject to the laws of that province.

Mr. SAMUEL SHARPE. Where will the probate be taken out? Does the minister require the probate to be issued in the province where the land is subsequently found to be situated? How can you tell in what province the probate should be taken?

Mr. OLIVER. We ask the probate to be taken out in the province in which the volunteer was domiciled, in the case of scrip ; but in the case of homestead, the probate must be taken out in the province in which the land is situated.

EXTENSION OF BOUNDARIES OF MANITOBA.

Mr. W. J. ROCHE (Marquette). I desire, Mr. Speaker, to draw your attention to a memorial that I had the honour to present to this House last Friday from the legislature of the province of Manitoba in regard to an extension of its boundaries. That memorial was rejected by yourself yesterday on the ground that it contained a paragraph referring to financial conditions, which, under the procedure of parliament, cannot be received by this House unless it is accompanied by the consent of His Excellency the Governor General. On this occasion I desire to draw the attention of the House to another memorial I had the honour to present on the same subject during the last session of parliament. I will refer to the latter part of that memorial, which concludes as follows:

Your memorialists therefore consent, agree and pray that the boundaries of the province of Manitoba be enlarged or extended so as to embrace and include the following territory, that is to say:

Then follows a description of the area of land which the province is desirous of securing. In addition, the memorial of last year proceeds as follows, regarding the financial considerations and the specific terms:

That supplementary and in addition to the prevailing provisions as to the annual allowance of the province by the Dominion for cost of government, and a per capita allowance of eighty cents per head of population, there be inserted in any Act of the parliament of Canada extending the boundaries of the province as above set forth, the following provisions respecting capital account and in lieu of lands, such provisions being in every respect similar to and identical with those respecting said matters as are contained in certain Acts of the parliament of Canada passed in the year 1905, creating the new provinces of Saskatchewan and Alberta; and this House declares its willingness to agree to and approve of and does hereby and herein agree and approve of an extension by the parliament of Canada of the boundaries of the province in the manner and to the extent aforesaid, upon the said following terms and financial conditions (which terms and financial conditions are similar in all respects, as to the matters herein referred to, as were extended to each of the provinces of Saskatchewan and Alberta, and agreed upon between those provinces and the government of Canada, and as are contained in the said Acts creating those provinces as aforesaid), being, to wit, as follows, that is to say:

Inasmuch as the province of Manitoba is not in debt, it shall be entitled to be paid and to receive from the government of Canada by half-yearly payments in advance an annual sum of four hundred and five thousand three hundred and seventy-five dollars, being the equivalent of interest at the rate of five per cent per annum on the sum of eight million one hundred and seven thousand five hundred dollars.

Inasmuch as the said province will not have the public land as a source of revenue, there shall be paid by Canada to the province, by half-yearly payments in advance, an annual sum based upon the population of the province as from time to time ascertained by the quinquennial census thereof, as follows:—

The population of the said province being assumed to be at present two hundred and fifty thousand, the sum payable until such population reaches four hundred thousand shall be three hundred and seventy-five thousand dollars;

Thereafter, until such population reaches eight hundred thousand, the sum payable shall be five hundred and sixty-two thousand five hundred dollars;

Thereafter, until such population reaches one million two hundred thousand, the sum payable shall be seven hundred and fifty thousand dollars;

And thereafter the sum payable shall be one million one hundred and twenty-five thousand dollars.

As an additional allowance in lieu of the public lands, there shall be paid by Canada

to the province, annually by half-yearly payments in advance, for five years from the time this Act comes into force, to provide for the construction of necessary public buildings, the sum of ninety-three thousand seven hundred and fifty dollars.

For all the purposes aforesaid and such other or others as shall be warranted upon the statement of facts herein presented, this House prays for substantial relief and justice from the parliament of Canada, and desires to observe that any less arrangement than above set forth respecting said matters would be considered by your memorialists inequitable and unjust and firmly rests its claims upon an equality of treatment, in so far as area and financial conditions are concerned, with our sister provinces of Saskatchewan and Alberta.

And your memorialists will ever pray.

This was the memorial I presented last year on behalf of the legislature of the province of Manitoba. I find on looking up the votes and proceedings last session, a petition of the legislature of the province of Manitoba praying that the boundaries of the province be extended, was read and received on the 3rd day of February, 1908. No exception was taken to that memorial on the ground that it was unconstitutional, although it went specificially into details concerning the financial conditions of the province. That being a precedent, and having that in view, the legislislature of the province of Manitoba, by a joint committee constituted of members of both sides of politics, a few weeks ago formulated a memorial and sent it down here through the clerk of the legislative assembly to myself, to be presented, and I did present it last Friday. That committee was a joint committee of the House, and the memorial passed the legislature unanimously. I hold in my hand the memorial which I presented, and the concluding paragraph is the one which was taken exception to yesterday when this petition was thrown out. It reads as follows:

Wherefore your memorialists respectfully request that further consideration be given to their contention as regards the territory above mentioned——

This enumerates certain territory not included in the resolution that the right hon. Prime Minister introduced into this House last session.

—and pray that your hon. House may be pleased to grant to the province of Manitoba, financial terms at least equal to those allowed to the provinces of Saskatchewan and Alberta.

You will see that the terms are very general in that they refer to no financial consideration in detail in the memorial which was rejected yesterday; whereas the memorial presented last session entered specifically in detail into all the financial conditions and notwithstanding that fact it was not rejected. I understand that the rule which was invoked was a rule which has been well recognized in this House that no resolution can be introduced unless it has received the assent of His Excellency the Governor General. Bourinot says:

By the 54th sec. of the British North America Act, 1867, which is copied from the clause in the Act of 1840, it is expressly declared:

It shall not be lawful for the House of Commons to adopt or pass any vote, resolution, address, or Bill for the appropriation of any part of the public revenue, or of any tax or impost, to any purpose that has not been first recommended by a message of the Governor General in the session in which such vote, resolution, address or Bill is proposed.

I quite recognize that even after the receiving of this petition it is absolutely necessary, before it can be acted upon, or before a Bill shall be introduced, that a resolution shall be presented in accordance with the terms of the clause that I have just read, and that it shall receive the assent of the Governor General. I fully expected that procedure would be followed. But, with regard to accepting a petition, Bourinot, at page 349, states what the practice has been since confederation, as follows:

In the first session of the parliament of Canada the House of Commons initiated the practice of refusing to receive any petition for a grant of money out of the public revenues unless it has been first recommended by the Crown.

That refers, of course, to the petitions that are presented to this House. Bourinot further states:

But whilst petitions that directly ask for any public aid or for any measures directly involving an appropriation of public money, are now never received, the House does not reject those which simply ask for legislation, or for such measures as the House may think it expedient to take.

As long as they are couched in general terms it has been the practice to receive such petitions, and I think that the memorial presented yesterday is couched in terms sufficiently general to come in under that rule. Certainly if this memorial is out of order by reason of the practice that has been in vogue since the first session after confederation then most assuredly the memorial which was presented here last year was not in order either. But what I particularly wish to draw the attention of the Prime Minister to is this: It is very important that this petition should be received inasmuch as the legislature of the province of Manitoba are about to prorogue their session. They have set forth their views in this petition. Before any Bill

can be assented to by this parliament with regard to the extension of the boundaries of Manitoba it must receive the assent of the legislature, but the legislature will have adjourned in a few days and the only way that they can formulate their views or let this parliament know what their views are is by petition. If they send their petition down here and if this petition is rejected there will be no other way unless by a conference between the executives of the Dominion and the province during the recess in order to find out the views and feelings of the executive of the province of Manitoba. If this petition is rejected we will only have the matter delayed another year unless a conference is held in the meantime. I would ask the Prime Minister if he thinks, in view of the general terms in which this memorial is drawn, in view of the rule laid down by Bourinot, it should now be rejected especially when we remember that the same exception was not taken to last year's memorial. Last year's memorial did enter into specific details as to the per capita payment, the debt of the province, land, and so on, while there are no such references at all in the memorial that I presented the other day. It simply states that they would be pleased to see Manitoba granted financial terms equal at least to those granted to Saskatchewan and Alberta. I would therefore ask you, Mr. Speaker, for a reconsideration of your decision of yesterday, and ask the Prime Minister if he does not think it a very moderate demand at the present time in view of the circumstances which I have just related.

Right Hon. Sir WILFRID LAURIER (Prime Minister). My hon. friend (Mr. Roche) and the House will be disposed, I am sure, to agree that it is better under all circumstances to adhere strictly to the rules of the House. The rules we have are the result of the experience of a great many centuries and it has been found that it is always better, as far as possible, to strictly adhere to what the rule is. The action, or non-action of last year cannot very well be held to be a precedent. The attention of the House was not called to the tenor of the provision or to its prayer, and therefore it passed unnoticed. I have no doubt that if the attention of the House had been called to that petition the ruling of the Speaker would have been exactly the same as your ruling, Mr. Speaker, this year. I do not think, however, Mr. Speaker, that any injury is to accrue to the province of Manitoba even if this petition is not accepted at this time. Last year the legislature of Manitoba sent a petition to the three branches of parliament, one to the House, one to the Senate, and one to His Excellency the Governor General. I presume that the same course will be followed this year, that His Excellency the Governor General will receive the petition and that it can then be brought to the attention of parliament as last year's petition was brought down, although a similar petition had been presented to parliament. Moreover, the petition of the legislature of Manitoba is in contradiction of the terms which were acceded to last year as a basis for the extension of the boundaries of Manitoba. The House of Commons laid down a certain basis upon which it would consent to treat with the legislature of Manitoba for the extension of the boundaries of the province. I regret to say that the legislature reconsidered the matter and did not see its way to accept the offer made by parliament. Though there is at this moment a clash between the will of parliament as it was expressed last year and of the legislature of Manitoba as expressed in this petition I am not without hope that it will be possible to reach a conclusion upon this matter. I may say that I have information that on Friday of this week a delegation representing the executive of the province of Manitoba will be in Ottawa to discuss this question with the advisers of His Excellency.

Mr. R. L. BORDEN. The rule to which attention has been called this afternoon and which is laid down in the British North America Act is designed for the purpose of preventing private members of parliament introducing Bills or resolutions favouring the expenditure of public moneys. A measure of that kind can only be introduced into this House with the assent of the Crown and for obvious reasons. That which is a part of the British North America Act and a part of our constitution, is, in Great Britain, merely a standing resolution of the House of Commons. The same principle which led to the introduction of that rule, led, I presume, to the similar rule with regard to petitions. I do not imagine that it makes any very great practical difference, so far as Manitoba is concerned, or so far as this parliament is concerned, whether this petition is formally received or not. But it does seem rather discourteous to the legislature of Manitoba that, after we had accepted, last year, a memorial from that legislature contravening to a greater extent than the present one the rule which has been referred to, we should reject the memorial of this year. That is the only observation I have to make on that particular feature of the case. So far as its practical importance is concerned, I do not think it has any great bearing on what would ensue. I would not be inclined to concur in the concluding observation of the Prime Minister (Sir Wilfrid Laurier) that this memorial should not be received because of a resolution which passed the

last parliament. That resolution is not binding on this parliament; in fact, it was not binding on the last parliament, because it would have been competent for the government of the day to introduce a measure differing from that resolution in many respects. It was a mere academic resolution looking forward to negotiations between the government at Ottawa and the government of Manitoba with a view to the settlement of this question. Therefore, I would not concur in the view expressed by the Prime Minister. I regard it as important, however, that the provision of the British North America Act to which I have alluded, and the other principle deduced from the same salutary regard for the public revenue should be observed in every respect.

CIVIL SERVICE COMMISSION REPORT.

Hon. GEO. E. FOSTER (North Toronto). I called attention, some time ago, to the fact that the Civil Service Commissioners had not, as provided by the law passed last year and brought into force on September 1, sent in any report. The first minister (Sir Wilfrid Laurier) promised to look into the matter, but I have not since heard from him on the subject. It seems to me that, as the law is imperative that the report to the end of the calendar year should be laid before parliament, the fact that the Civil Service Commissioners have been in office only part of a year does not make inapplicable the express provision of the law. But, and even if the amending law passed last year is not applicable, we still have section 107 of the Civil Service Act itself which was not repealed and still remains in force. This section provides:

> The Secretary of State shall lay before parliament within fifteen days after the commencement of each session, a report of the proceedings of the board under this Act during the preceding year, which report shall include a copy of the examination papers, a statement of all examinations held and of the number of candidates at each, and the names of the successful candidates, and the rules and regualtions made during the year under the provisions of this Act respecting appointments, promotions, examinations, and all other matters appertaining to the Civil Service.

But this report has not been laid on the table. I think that both these Acts look to the laying of a report on the table, and I do not see how we can get away from these express provisions.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). When my hon. friend (Mr. Foster) called my attention to this matter, I told him that I would consult with the Civil Service Commissioners. Both these gentlemen informed me that, according to their reading of this Act, they were not held to bring in a report this year. But when my hon. friend (Mr. Foster) called my attention to it, I thought I would consult the Minister of Agriculture (Mr. Fisher), who had charge of the Bill of last year. But that hon. gentleman was away, and the matter escaped my attention.

Mr. FOSTER. But in connection with the old Act?

Sir WILFRID LAURIER. I think there is something in that.

AMERICAN IMMIGRATION OFFICERS AND THEIR TREATMENT OF CANADIANS.

Mr. F. R. LALOR (Haldimand). I am sorry that the Secretary of State (Mr. Murphy) is not in his place, because I desire to call attention to a matter which, as I understand it, falls within his department. Yesterday, I was on the Grand Trunk train going to Buffalo. An American immigration officer passed through the train asking everybody—as he always does—whether they were Canadian or American citizens, where they were going and so on. He put these questions to a young lady on the train, a girl of fourteen or fifteen. She told him she was a Canadian and on her way to visit her married sister in Buffalo. The officer asked her how long she expected to remain, and she said perhaps a week, or possibly a month. He said, 'I think you had better come off with me.' So, he had the young lady take up her grip and wraps and took her off the train for the purpose of detaining her and deporting her back to Canada. A gentleman happened to be on the train from the town of Dunnville, in which this young lady resides and where her father is a prosperous merchant and a good citizen. He followed the officer and the young lady and interceded for her, telling the officer that he knew the young lady's father and knew that she was going to visit her sister just as she had said, and thus there was no reason for deporting her. After some persuasion, the officer allowed the young lady to continue on her journey. I call attention to this case and would ask the government to correspond with the American authorities so that incidents of this kind may not take place, as I believe they do take place almost daily on every line on which Canadians cross to the United States. I do not believe the American government want their officers to act in this way toward any Canadian citizen, and especially to a young lady. In the case I have referred to, the young lady told the simple truth—that she was going to pay a visit and did not know how long she would remain. I think the American government should be communicated with and should instruct

its officers not to act quite so harshly in the case of Canadians crossing to the United States.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). About twelve months ago and before that, complaints of this nature came to us very frequently. Representations were made to the American authorities, and these representations were received in a very courteous manner, and we agreed on both sides that if complaints of this nature were made they would be investigated by the officers of the two governments. Of late months, no such complaints have come to my notice. I should be glad if the hon. gentleman (Mr. Lalor) would give the name of the young lady or other particulars on which the Secretary of State can call attention to the case.

Mr. SAM. HUGHES (Victoria and Haliburton). While we are on this subject, I desire to ask a question. Are American officers allowed to come on the Canadian side and do the sort of business described by the hon. member for Haldimand (Mr. Lalor)? A few months ago, I was on the Niagara Falls train, and, while we were still on the Canadian side, these officers came through the train questioning the passengers. They spoke to one young man and were going to turn him back. I promptly interposed and said that if, on the strength of a Yankee badge, they interfered with any person on Canadian soil, we would have an inquiry about it. I told them they were quite within their right in doing this on the other side of the line, but I disputed their right to act in this manner on the Canadian side. I do not know whether my words had any effect, but the officers allowed the young man to pass. I would like to know if these officers are allowed to act in this way on the Canadian side of the line?

Sir WILFRID LAURIER. I know that there is a customs officer on the other side and a customs officer on this side—

Mr. S. HUGHES. These are not customs officers, the United States customs' officers are invariably very courteous and gentlemanly.

Mr. SCHAFFNER. I wish to mention a circumstance that occurs every day on the train going from Winnipeg west which passes through the town of Morden, some twelve or fifteen miles from the boundary. It has always occurred to me as singular that an American officer should go through a train which does not touch the boundary at any time, and ask the passengers, both male and female, where they are going. I have been many times asked the same question that the hon. gentleman has asked to-day, if American officers have a right to interfere with our people until they have reached the boundary and intend crossing the boundary.

Mr. FOSTER. I am afraid that the Prime Minister has not heard very much lately about this practice, because it is so common. Years ago, when it first commenced, it was so new and the outrage so apparent that much was said about it. Representations have been made from time to time, but nothing has really occurred in the way of amelioration. Just the other day I had a letter from a friend, who detailed a circumstance just like the one we have heard of to-day, that occurred on the border in the western portion of the province of Ontario, and he asked me if anything could be done. Outrages of this kind jar upon the self-respect of any people, and Canada is large enough, and has made its character sufficiently good on this continent, not to be subject to that kind of discrimination. What could be worse in a case of that kind than the action of a man in taking away from the train, a young and unprotected girl, a respected citizen of Canada, and taking her out from her journey, without any protector, and in the end, I suppose, deporting her. Surely a white man or woman who is a Canadian has a right to some privileges on this continent. I call that a kind of conduct outrageous, whether at the hands of the United States or any other country.

Motion agreed to, and the House went into Committee of Supply.

Department of Militia and Defence—salaries, $111,690.

Hon. Sir FREDERICK BORDEN (Minister of Militia and Defence). I think it would be convenient that the few observations of a general character, which I have to make, should be made on this item, rather than on each item separately. If the committee will agree in that view, I will proceed to make a statement with regard to the militia.

The reason for the existence of the militia in this country is well understood. The principal object is perhaps the upholding of the civil power in the different provinces of the Dominion. There is also the necessity for maintaining an armed force for repelling invasion, in case any attempt of that kind should unhappily be made. The problem in this country is somewhat difficult and exceedingly expensive, relatively to smaller countries, because of the very great extent of Canada and the wide separation of the different centres of population, of industry and of provincial authority from each other. Sometimes comparisons or contrasts have been made, in regard to military forces or organizations and expenditure, between Canada and Switzerland. We have been told that Switzerland supports a citizen army of some 200,000 men for a very small amount of

money; while Canada expends a large sum of money to maintain something less than 60,000. If we reflect that the greatest distance across Switzerland is 150 miles, while the distance from the extreme east to the extreme west of Canada is something like 4,000 miles, and the distance from the international boundary northward in our settled districts is over 500 miles, or if we include the Yukon, about 2,000 miles; we will see that the conditions in Canada are very different from those of Switzerland. I need not mention another reason which obviously affects the cost, namely, that in Switzerland there is compulsory service, while in Canada there is not. An armed force is necessarily an expensive thing, whether it be a regular standing army or a citizen army like our own; and unfortunately the balance is always on the wrong side. The credit side of the account does not appear in dollars and cents; at any rate. But if we reflect for a moment on what the Canadian militia have done, even since the time of confederation, to go no further back—the work done at the time of the Fenian raid, the work done in the two Northwest rebellions, the aid which has been given on many occasions to the civil power in putting down riots, and last but not least, the work which Canada did for the empire in South Africa—we shall all agree, I think, that the balance does not stand so far on the wrong side. In the work of aiding the civil power alone, I feel confident, from what I know, that during my administration, more actual cash has been saved to the Dominion twice over, than the whole expenditure upon the militia during the last ten years.

We are all agreed that the first duty of a young country is to take up the work—as has been done in Canada from the time of confederation down to the present—of developing its great resources, of which we have so many and are so proud. In my judgment this policy of developing the resources of a country, which was inaugurated many years ago, is one which may fairly be considered as of the greatest importance, not only to ourselves but to the empire. At the same time we must not forget our responsibilities; and the greater the benefits we have received from a kind Providence, the greater are our responsibilities in defending, as well as developing, them. We hear a good deal said on the question of imperial defence. It is not necessary that I should discuss that question now, but there is unquestionably a duty imposed upon every independent people, the duty of taking steps to defend their own homes and firesides. And in this connection, if we are to speak of imperial defence at all, the very best way in which each part of the empire can contribute towards the defence of the empire, is to make itself strong. That would make much easier the task of the mother country, the great centre of the empire, which is charged first with the duty of defending, and which task she has so patiently and efficiently accomplished for so many years. Local defence then is our first duty, and that is a duty with which all the successive governments of Canada have undertaken to deal. The country has grown and developed very much in the last few years, and of course the expense involved in carrying out any efficient plan of home defence is much greater than it was a few years ago.

In this connection, I would like to say a word as to a matter in which I am sure the members of the committee are interested and which has been discussed to some extent in the newspapers. I refer to the question of establishing an imperial general staff—a general staff for the whole of the empire, including this Dominion. The other day the papers were moved for in this connection, and despatches from the imperial government and the answers by this government were brought down, and I hope at an early date will be printed. The question of the establishment of an imperial general staff was under discussion at the imperial conference which took place in London in 1907, and I think I cannot do better, by way of introduction, than read the resolution which was passed unanimously at the conference of the premiers of the self-governing colonies, with the Colonial Secretary in the chair:

General Staff for the Service of the Empire.

That this conference welcomes and cordially approves the exposition of general principles embodied in the statement of the Secretary of State for War, and, without wishing to commit any of the governments represented, recognizes and affirms the need of developing for the service of the empire a general staff, selected from the forces of the empire as a whole, which shall study military science in all its branches, shall collect and disseminate to the various governments military information and intelligence, shall undertake the preparation of schemes of defence on a common principle, and, without in the least interfering in questions connected with command and administration, shall, at the request of the respective governments, advise as to the training, education, and war organization of the military forces of the Crown in every part of the empire.

I have in my hand a copy of a despatch sent to this government on this subject within the last few weeks, which I would like to read because I am sure its language is much clearer than any words of mine would be and more authoritative. I would ask, therefore, that the committee allow me to read some extracts from a despatch sent from the War Office, through the Colonial Secretary and the Governor General, to this government.

Mr. R. L. BORDEN. That is one of the papers laid on the table?

Sir FREDERICK BORDEN. Yes, this is a covering letter from Sir E. W. D. Ward. Permanent Under-Secretary of State for War, to the Secretary of State. He said:

The army council are well aware that the self-governing Dominions can give no guarantee that contingents of any given strength or composition will be forthcoming for service in any part of the empire in the event of a great war. At the same time, they fully realize that the feeling of loyalty and affection towards the mother country entertained by the oversea Dominions will operate as powerfully in the hour of trial as they did during the recent war in South Africa. But the lack of definite and timely provision for an emergency deprives military forces of much of their potential value, while adequate preparation has been proved in all recent campaigns to be a paramount factor in securing a rapid and successful decision. For these reasons, although the oversea Dominions may be unable to undertake definite responsibility for anything beyond local defence, it would still be well, in organizing for such defence, to consider the necessities incidental to a situation in which the Dominions beyond the seas desired to give effective military service in association with the troops of the mother country. Such a contingency has been kept in view in the accompanying paper.

In concluding the main portion of the resolution which I have read, the paper proceeds, speaking of the objects of the general staff:

To study military science in all its branches; to collect and disseminate to the various governments military information and intelligence; to undertake the preparation of schemes of defence on a common principle, and (without in the least interfering in questions connected with command and administration) at the request of the respective governments, to advise as to the training, education, and war organization of the military forces of the Crown in every part of the empire.

Again:

In the first place, it must be recognized that we are now practically only at the beginning of the creation of military forces, on an important scale, in the oversea Dominions. The empire has now reached a stage when its sons in the oversea Dominions have begun to feel themselves sufficiently strong to undertake more responsibility for the defence of their own homes, and to look on this not only as a duty which they are willing to perform, but as a right.

And again, in part II., under the heading:

'The most suitable and efficient organization for an imperial general staff.'

We find:

It follows that, in the first place, we require a central guiding body to consider and draw up plans for the defence of the empire as a whole, to study and formulate broad principles of general application, and to collect and disseminate general information. In the second place, we require local branches to study local needs and local possibilities, and to supervise the application of broad general principles under local conditions. But, as has already been said, the imperial general staff must be an entity; therefore, these local branches must form parts of one whole, springing from the central body.

Thus, both in peace and war the general staff must be regarded as a large organization, consisting of a central body, with branches stretching out to all the various units of an army. If it is to carry out the duties allotted to it efficiently and to act as the guiding and directing spirit—the 'brain'—of the whole army, it is evident not only that all its members must be highly educated and trained, but that its work must be carried out on common principles in all parts of the empire. It is, therefore, a necessity that the imperial general staff should have one recognized head to ensure uniformity of method and purpose. That head can only be the chief of the general staff in London, who must become the chief of the imperial general staff, if we are to have a really efficient organization.

Under the more or less direct supervision of the chief of the imperial general staff, the general staff organization for the empire should be built up gradually on the following lines:—

1. The central body having its headquarters in London, and working directly under the chief of the imperial staff.

2. Local sections in the United Kingdom, in each of our regular garrisons abroad, in each self-governing Dominion, and in India. These local sections, except in the case of the smaller foreign garrisons, might be subdivided into the local headquarters, and the staff with local troops. Each section should have a chief at its head; and it would deal with questions connected with (1) local defence, and (2) the training of troops on lines similar to those now followed for the United Kingdom by the training directorate at the War Office.

In this organization, as applied to the self-governing Dominions, each chief of a local section of the general staff would be the adviser of his own government as well as the head of all general staff officers in his section whether at his headquarters or with the troops. A possible difficulty to be solved, as regards this organization, is the establishment of the proper relationship between the chief of the imperial general staff and the chiefs of local sections of the general staff in the several Dominions. It has already been pointed out that in all purely military questions guidance should come from the former. But it may be held that such guidance is incompatible with full control of the local chief by his own government, and this full control must be accepted from the outset. The solution of this difficulty would appear to be that, while the chiefs of the local sections of the general staff keep in close communication with the chief of the imperial general staff, they cannot receive orders from him. He will keep them informed as to what are considered the correct general principles; and they will advise their governments as to the best method of applying these principles to local conditions, and as to the risk of departing from them. When their advice is not accepted, it will be their duty to carry out whatever their respective governments may order.

And so on. It will be observed that in that despatch one of the cardinal principles is local autonomy, the absolute, local control of the local sections; for instance. the local chief of the section in Canada will be absolutely under the control of the government and of the minister in Canada. That staff itself has no control, it has no power to command, it is purely and absolutely an advisory body. Before quoting from the reply to that despatch I wish to read a few words from the recommendation to council made by myself and the order in council based thereon. My memorandum reads:

The undersigned, after full and careful consideration of the important question referred to him, is of the opinion that Your Excellency's government may safely assent to the general principles proposed for adoption in the memorandum by the general staff, and recommends that, as requested in the above quoted colonial office letter, a cable message conveying that assent he addressed to the colonial office.

That cablegram was as follows:

Your despatch, Canada 30, of January 15th. My ministers fully accept the principles set forth in memorandum by general staff. Despatch will follow explaining precise position of the Dominion government.

My memorandum proceeds:

With regard to the despatch itself, the Minister of Militia recommends that it should state, that Your Excellency's government is prepared to give full assent to the general principles laid down, both in the letter of the War Office and in the memorandum prepared by the general staff, and they do it all the more cordially in that they observe that, in the body of the memorandum itself, the great principle of complete local control, by the responsible minister concerned, of the officers of the local section of the imperial general staff is fully safeguarded.

And again:

This important question appears to be adequately provided for in the latter portion of the penultimate paragraph of page 8 of the present memorandum, in which it is stated that the full control of the chief of the local section of the general staff by his own government must be accepted from the outset.

And again:

The undersigned is cordially in agreement with the proposal, but he is of opinion that, in order to avoid possible misunderstanding by the chief of the Canadian section, of the views or intentions of the Dominion government, and consequent misrepresentation of those views to the chief of the Imperial general staff, it would be advisable to lay down definitely that all communications passing between the chief of the Canadian section and the chief of the Imperial general staff, other than those on purely routine or ephemeral questions, must be submitted to the Minister of Militia for his concurrence before being despatched.

One more extract:

Finally, the memorandum lays stress upon the advantages to be gained by the free interchange of officers between the various branches of the Imperial general staff in the different parts of the empire, and especially upon the great benefit which would result from periodical conferences of the Imperial general staff, attended by representatives from all parts of the empire, and held under the presidency of the chief of the Imperial general staff in London. The advantages indeed are obvious. The following extract from the memorandum by the Canadian ministers concerning defence, of August, 1902, already referred to, states fully the policy which then commended itself, not only to the government of Canada, but to the Dominion at large:—

In conclusion—

These are the words of the memorial of 1902; that was a memorial which the ministers then in London placed in the hands of the Colonial Conference in 1902, just before its conclusion.

In conclusion the ministers repeat that, while the Canadian government are obliged to dissent from the measures proposed—

That was that a contribution in money should be granted by Canada, and that a certain force should be set apart and maintained in Canada for service abroad in the empire.

—they fully appreciate the obligation of the Dominion to make expenditures for the purposes of defence in proportion to the increasing population and wealth of the country. They are willing that these expenditures shall be so directed as to relieve the taxpayer of the mother country from some of the burdens which she now bears; and they have the strongest desire to carry out their defence schemes in co-operation with the Imperial authorities, and under the advice of experienced Imperial officers, so far as this is consistent with the principle of local self government, which has proved so great a factor in the promotion of Imperial unity.

So it will be seen, Mr. Chairman, and gentlemen of the committee, that the principle of local autonomy and local self government is not in any way interfered with by the organization of this general staff. The object in the organization of a general staff is that each portion of the Dominions beyond the seas, that all portions of the empire, should be in touch with the great central power at London. Applying to ourselves the operation of this provision for a general staff, we can easily see what an advantage it would be to us who have undertaken seriously, I think now, the task of home or local defence, in the event of there being any serious trouble, any serious attempt to attack Canada on her own soil—we can easily see, I repeat, what an immense advantage it would be for us to be in touch, in the way indicated, with the mother

country. Local defence schemes will be studied, and will be as well understood in the mother country as they are here; and what an immense advantage it would be, in the event of any serious trouble, for the armies of the mother country to co-operate with our own forces in Canada, on Canadian territory; what an immense advantage it would be to the officers who have studied all these conditions to have complete co-operation between the forces of Canada and the forces of the mother country. So much then for the imperial general staff.

There is one other general observation I would like to make before proceeding to the discussion of the estimates now before the House, and that is the question of physical training in the schools. On several occasions in this House I have had the honour to bring up this matter, and to say that I hope the time will come when, in all the schools of Canada, there will be undertaken by the respective provincial governments, which of course control education, a uniform system of physical training for younger children, of elementary drill for the older ones, and of rifle shooting for those still older. I am happy to say that this policy, if it may be dignified by that name, has been very generally discussed throughout the Dominion; and so far as I have observed, all the best newspapers which more correctly indicate the trend of public opinion, have favoured this idea almost without exception. I have on one or two occasions quoted from newspapers, but I will not detain the committee by such quotations at present. But there are one or two observations which have been made by no less an authority than Mr. Goldwin Smith, whom no one will charge with any particular fondness for militarism, and which I think I might properly give to the committee. Mr. Goldwin Smith, so late as February 2, 1907, writing a letter I think to the president of Cornell University, used the following language:

I cannot help expressing my pleasure on finding that military drill is not to be abolished at Cornell. Military training is and always is likely to be indispensable to those who are charged with the defence of public order and the defence of the commonwealth. I always advocated it at Oxford. In our case it was the sinister attitude of the French Emperor that produced a national call to arms. In your case, there is no special call, but there is a general and permanent necessity. You are receiving a vast inflow of alien immigration, some of them from questionable sources. Apparently you feel unable to close your gates. Your great cities will soon be hardly American. A large and increasing number of immigrants now bring with them from the scenes of political and social conflict in Europe, tendencies adverse to the principles of American civilization. At more than one point there have been disturbances arising from that source. It is surely to be desired that at a critical moment calling for military action in defence of the public order the republic should feel safe under the protection not only, of paid soldiery, but of her loyal citizens at large.

I also have here an article written by President Hadley, of Yale, a very noted man and educationalist, from which I will read just a few words:

The man who would fully prepare himself for public service must not only do his duty in time of peace, but must be ready for the possible exigencies of war. The fact that for forty years we have not had a war which has seriously strained the powers of the nation should not blind us to the need of preparing to meet the dangers of international conflict from without and the still greater dangers of anarchy and lawlessness from within. If in the places where you settle there is any militia organization really worthy of the name, identify yourselves with it.

This is an address to the young men of the college.

If there is not, try to establish one. It may be that you will not be called upon for anything heroic in the way of military service. I certainly hope you will not. But if you are ready to meet the danger in advance you will lessen the liability of its coming; and if it does come you will have prepared yourselves for the performance of the most vital of all public duties—the duty of protecting your country against imminent destruction.

Now, something has been done in this regard. An order in council, after correspondence had taken place with many of the premiers of the different provinces, and after I had seen, I think, all of them but two, was passed carrying into effect an agreement which had been entered into between the Militia Department, acting for this government, and the province of Nova Scotia. I will not detain the committee by reading that; but, in a general way the basis of the agreement is this: The Dominion government, through the Department of Militia and Defence, shall undertake from its permanent force to supply instructors who will go to the normal schools and to the different institutions in the various provinces where teachers are taught.

Mr. HUGHES. Why not take expert men from the ranks of the ordinary militia?

Sir FREDERICK BORDEN. There would be no objection to that except that we have a permanent force now. We are paying them and it seemed to me that the proper thing was to use that permanent force as instructors ; in fact, it would be a very useful thing for the men of the permanent force themselves. A special teaching body will be established. It will be something

for the men to look forward to, because, of course, they will receive, later on, a higher rate of pay and their position will be more important. On the other hand, the province will undertake to make it obligatory upon the teachers to receive this instruction, and, as a matter of fact, upon all teachers, to pass an examination and become qualified in physical training, which will apply to both sexes, and in elementary training in the use of the rifle which, of course, will only apply to the men.

Mr. FOSTER. Do you not think the women can shoot straight?

Sir FREDERICK BORDEN. Yes, there is no reason why not, but it is not so much in their line. The lady teachers will teach the physical training in the school, and it is just as important that the young girls in the schools should be taught physical training as the boys. If we are going to build up a strong nation, we want healthy and strong girls and women just as much as healthy boys and men.

Mr. HUGHES. Is it not the intention that the lady teachers shall teach the rudiments of military drill? They do it in England, even in the Quaker schools.

Sir FREDERICK BORDEN. Yes, under the age of 12. After the age of 12 or 13, of course, the boys will be advanced to the higher grades in the schools and will come under the control of the male teachers. As far as the male teachers are concerned, they are the men who teach the boys of 13 and upwards and they will be given commissions in the militia and a small bonus will be given to them according to the amount of work they do and the character of that work.

Mr. FOSTER. By proficiency they get that?

Sir FREDERICK BORDEN. Yes, and an inspection will be provided through the permanent force of the Militia Department. Inspectors will go through certain sections of the country set apart, visit these schools, see what is being done, make notes and report, and the bonus, such as it will be, and it will not be a very large amount, will be bestowed, as my hon. friend suggests, upon proof of efficiency and work done.

I do not know that I need detain the committee longer, because I have a good many other things to go into, but this is an extremely interesting branch of the subject, and it sems to me that there is a great opportunity herein to do important work for this country.

Private citizens are spending money in order to do something to try and remove or overcome the scourge of tuberculosis. I believe that this will afford a very excellent means of acting as a preventive measure. Tuberculosis, as we all know, can be prevented; we all know that it is very largely due to the want of proper exercise, and that if every boy and girl in the country is taught to stand and sit erect, take proper exercise, get the proper amount of fresh air, and the importance of all these things, it seems to me that the effect upon the next generation will be very advantageous indeed; to say nothing of the asset which will be built up in that way, and the means of defence, in the event of any trouble ever coming to this country which would make it necessary to resort to arms. Take the boys of 13 to-day; in five years time, under this system, every boy who is physically fit will come out of school more or less trained and, if his eyesight is good, a fairly good rifle shot. I hope that in the militia of the not very distant future, instead of having to hunt about for recruits to go to camp, of a rather undesirable character, we will be able to fill up the ranks of the active militia with the young men who have come out of school at the age of 18 or 20, allowing them to enlist for three years, have three years in camp and then go on the reserve and organize that reserve so that it may be turned out perhaps for one day each year. In the next ten years, if this scheme is taken up by the provinces, as I hope it will be, and as I have every reason to believe it will be, we will have a uniform system of physical training, of elementary drill and of rifle shooting in existence from one end of this country to the other, and we will have tens of thousands of young men who will form a tremendous asset in the matter of defence.

Mr. HUGHES. I understood the minister to speak of some of these young men being qualified as officers—

Sir FREDERICK BORDEN. I mean the teachers, that is, the teachers of the schools would be given commissions.

Mr. HUGHES. That's good.

Sir FREDERICK BORDEN. In fact, that is the only means by which they could be paid. And, before leaving this subject, perhaps I should say that it is intended, so far as there is any expense, that it shall be paid out of the vote for annual drill. The amount will be small and will not require a very great addition to that vote.

Now, the present estimates show a reduction as compared with those of last year. But I find that I have been criticised almost as much—I think even rather more—because these estimates have been reduced, than I ever was for any increase that I have proposed to the House. I do not refer to my hon. friend from Victoria (Mr. Hughes), though, from an observation I heard him make here not very long ago, I am some-

what in dread of the criticism he is going to make.

Mr. HUGHES. I shall not be able to stay and offer any criticism to-night.

Sir FREDERICK BORDEN. I speak rather of the newspaper press. It seems to be a case of being condemned no matter what you do.

Mr. FOSTER. Referring to the 'Globe' now, are you?

Sir FREDERICK BORDEN. My hon. friend (Mr. Foster) is somewhat interested in that organ. I suppose he watches it pretty closely. I had in mind the 'Globe' among other newspapers. I had not intended to mention it specially as I did not wish to advertise it. But it has referred, in a way that I think not very creditable to its intelligence, to the present vote. It seems to imply that it would be the easiest thing in the world to make a saving of half a million or so, by striking off that amount from the permanent force, or from the headquarters' staff or from the district staff, or from some other vote than that for annual drill; and goes on, apparently without the slightest notion that a staff and a permanent force are the vital part of our militia system, and that it would be absolutely impossible to carry on our plan without such a staff and such a permanent force. The scheme of the organization of the militia is not a haphazard matter, it is a matter that has been thought out patiently and carefully, and is the result of development during the last forty years. I have inaugurated no new system, but new things have been added to make the system which already existed more nearly perfect, and I think that much has been accomplished. Yet, critics who know absolutely nothing about the subject, and who appear to me to act as if they did not want to know anything about it, for fear they would not be able to make such absurd criticisms as they do, rush in and tell the Militia Department and the expert officers, who are men of the greatest ability and experience, that they should take half a million off here or there instead of some other place. Now, the scheme of the Militia Department, as I have stated over and over again in this House, is this: We should have as a first line of defence, if necessary, 100,000 men who would be able to take the field; and, some time in the future, we should have a second line of 100,000 men. But the wiseacres of the Civil Service Commission told us of a great discovery that they had made. Why, they said, the Militia Department has enough headquarters staff and district staff, and enough permanent force for an army of 100,000. Of course we have——

Sir FREDERICK BORDEN.

Mr. FOSTER. The Civil Service Commissioners were your own creation.

Sir FREDERICK BORDEN. Not mine. Of course, I am responsible. They made that discovery. But if they had taken the slightest trouble to read the reports laid on the table year after year, or to question any of the officers, they would have been told what the scheme of the militia was. To carry out this general plan, there is required a well defined scheme of organization. And do you suppose that it is possible to strike off half the headquarters staff one day and get it back in a year or so when there is a little more money in the treasury? Or do you think you can dismiss your permanent force, with whom you have made a solemn contract to pay, feed and clothe them for three years?—to tell them to go about their business because you want to save half a million dollars? No man who stops to inquire, or who knows what he is writing or talking about, would make such an absurd proposition. What you must do is to find out the thing that would be least injured by an economy of this kind and take the money from that. And that is precisely what has been done. I regret very much that it was necessary to make this reduction. I regret it not so much for my own estimates but because of the general business of the country and because of the check to the development of the country indicated by the falling revenue of the last year. I hope this state of affairs will not continue long, but that the normal condition of the revenue will soon be restored. But we had to face the fact that there was a falling revenue, that the revenue for next year would probably be twelve or fourteen millions—if that was the figure, I leave that to the Finance Minister—less than last year. I accept the Finance Minister as authority, and he said it was absolutely necessary that there should be an extensive pruning in our department.

Mr. HUGHES. Does the minister (Sir Frederick Borden) endorse the policy of the government in still further creating distress in the country by curtailing the government expenditure?

Sir FREDERICK BORDEN. I cannot discuss that question now. But the Militia Department is called upon to contribute its quota to the reduction. I felt sure that the active militia throughout the country, which is composed very largely of the bone and sinew of the country, would be willing for one year at least, to forego a portion at least of the annual drill, in order that our share of the economy which is necessary should be carried into effect. I do not think that there will be any very serious difficulty in carrying out the annual drill as we hope to do it. I believe that by training the men this year to some extent at local headquarters, which is desirable once

in a while, and which has not been done, at all events in the last thirteen years, and by restricting the annual drill to those regiments which have shown themselves zealous in the immediate past, and to which the instruction would be particularly useful, and allowing those which have not shown much interest in their annual drill in the past, to rest for another year, until the coffers are refilled, we shall save a considerable amount of the cost of transportation.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

PRIVATE BILLS—SECOND READINGS.

Bill (No. 78) to incorporate the Superior and Western Ontario Railway Company.—Mr. Conmee.

Bill (No. 92) respecting Patents of the Hart-Otis Car Company, Limited.—Mr. Geoffrion.

SUPPLY.

House resumed in Committee of Supply.

Sir FREDERICK BORDEN. Mr. Chairman, at six o'clock, I was referring to the reduction of the vote for annual drill and I only wish to add one word to what I said for fear I may have given the impression that there would be no annual camps. Such an impression would be entirely wrong, as there will probably be the same number of annual camps held this year as usual, but the number to be assembled in these camps will not be as large, and a certain number of the regiments will probably train at their own regimental headquarters. In order to save time and also in order that the present position of the militia may be placed in the clearest possible way before the committee and before the country I have had a memorandum prepared which has been distributed among hon. members and which deals with the whole question of the militia and its present status. As I proceed I propose dealing especially with a few of the points which are discussed at considerable length in this memorandum. The memorandum has been prepared by the very ablest man, perhaps, in this country, or living for that matter, who can deal with such a subject. It has been read over carefully by me, together with him, on five or six occasions, and somewhat revised and changed. I think it will be found to be very instructive and I sincerely hope it will be read and studied by every hon. member of this House and that the press throughout the country will consider it to be its duty to copy it very largely. In order to shorten the statement which I have to make, I would suggest, Mr. Chairman, that, with the permission of the committee, this memorandum may be published in 'Hansard' as a part of my statement. It will enable me to get on more rapidly and save time by referring to the several paragraphs to which I wish to refer without reading the whole of them:

Militia and Defence.

Memorandum Respecting Estimates for 1909-10 (Including Supplementary Estimates for 1908-09 to be brought down. See Paragraph 6).

1. Like all other branches of the public service, the Department of Militia and Defence has found itself forced by circumstances to frame its estimates for 1909-10 under the limitations imposed by falling national revenue.

2. While the present financial stringency will, it is hoped, prove to be only temporary, it is, nevertheless, wise to face the possibility of its continuance. It has, therefore, appeared to the Minister of Militia to be desirable to deal somewhat more fully with the Militia Estimates in this explanatory memorandum than has hitherto been usual.

3. A point which has, perhaps, escaped the notice of a not inconsiderable number of members of parliament, and which has certainly been ignored by the critics of the Militia Department in the Press, is the fact that, since the expenditure entailed by the assumption of responsibility for the defence of Halifax and Esquimalt has been fully provided for in estimates—that is, since and including the estimates for the financial year 1907-8—there has been no increase, but on the other hand, a decrease in militia expenditure.

4. That this is the case will be clear from the subjoined table, which shows the estimates in detail, under the various heads voted by parliament, beginning with the year 1904-5 and ending with the estimate for the present financial year 1909-10. It will be remembered that the year 1904-5 saw the beginning of the present system of militia organization. The militia council was constituted in November, 1904, and the re-organization entailed by the modelling of our staff and administrative system upon that of the imperial army was not fully inaugurated until June 30, 1905.

5. In the financial year 1905-6, the Dominion assumed the responsibility for the defence of Halifax and Esquimalt, and the taking over of the fortified places from the imperial government was commenced. The transfer was practically completed in the financial year (a year of nine months only) 1906-7, and the full financial effect of that measure upon revenue, including the discharge of all liabilities to the imperial government under the agreement for that transfer, was first shown and provided for in the estimates for 1907-8.

Head of Service.	1904-5.	1905-6.	Nine months, 1906-7.	1907-8.	Voted 1908-9.	Required 1909-10.

* Including $200,000 for pay of Imperial troops. † Including $250,000 stores transferred from Imperial troops.

NOTE.—The amounts shown in the last column but one as 'Voted in 1908-9,' give the totals of the several votes after amendment in accordance with the Supplementary Estimates for 1908-9 to be brought down.

These Supplementary Estimates will not increase the total estimate, but will reduce the votes for Customs dues by $85,000, Dominion Arsenal by $60,000, Engineer Services by $90,000, and Warlike Stores by $65,000, while they will increase the votes for Annual Drill by $105,000, Pay and Allowances by $170,000, Royal Military College by $12,500, and Transport by $12,500, the totals of reduction and increase balancing each other.

6. While the foregoing table gives, in detail, the estimates as voted year by year, and therefore shows the financial effect of the additional burden imposed by the transfer of Halifax and Esquimalt from Imperial to Canadian garrisons, the fact remains to be noted that the full effect of the change of administrative system commenced in 1904-5 is only now making itself felt. The system previously in force made it a matter of great difficulty to compute exactly, in the estimates for any financial year, the sum which would be required to meet the different militia expenditures for that period. The change of system has made a much closer measure of supervision and audit of expenditure possible. The effect of the change is seen in the fact that, whereas the supplementary estimates for 1906-7 amounted to $505,733.35 (9 months only) and those for 1907-8 to $1,614,404.11, the estimates for 1908-9 will only need readjustment to the extent of $300,000, which will be met,

Sir FREDERICK BORDEN.

not by asking for additional sums, but by readjustment of sums already voted. In the estimates for the year 1909-10, the only item in which it is thought possible that any supplementary estimates might prove unavoidable, is the item for annual drill. It is obvious that the sum required to pay for the annual drill of the active militia depends upon the precise number of men who turn out for drill. It is equally obvious that it must be the policy of the department to induce the full establishment, if possible, to train each year. It is, therefore, impracticable to calculate exactly the amount that will be required, until it is exactly seen how many men have attended drill and earned their drill pay. Hence, it is unavoidable that, on the vote for annual drill for any year, notwithstanding the adoption of every precaution against exceeding the estimate, and, although for 1909-10 certain measures are contemplated which ought to result in substan-

tial economies as compared with the system hitherto in force, yet some supplementary estimates may, after all, prove to be necessary.

7. Dealing with the estimates as shown in the table 'A' above, it will be seen that the main increases since 1904-5 have been in the following items—annual drill; clothing and necessaries; customs dues; Dominion arsenal; engineer services; military properties; headquarters and district staff; pay for the permanent force; active militia allowances; provisions and supplies; transport and freight, and warlike stores.

8. Taking these items in succession, the increase in the amount necessary for annual drill has been simply due, first, to the large increase in the numbers of the militia attending annual drill; secondly, to the grant of efficiency pay; thirdly, to the addition of four days' extra drill for the artillery. It should, however, be noted that, in the amount required to pay for annual drill for the current year (1908-9) viz:—$1,305,000—is included a charge of about $230,000 which was directly due to the bringing to Quebec, for the Tercentenary in 1908, of between 10,000 and 11,000 troops, who performed their ordinary annual drill elsewhere, and were additional to the 2,000 troops belonging to the Quebec Command which performed their annual drill at Quebec at the same time. If this $23,000 be deducted from the vote, as not really an annual drill charge, the amount chargeable for annual drill for 1908-9 will be seen to be $1,075,000.

The steady increase in the number of men trained each year is most gratifying. In 1895-6, only 19,000 men and 1,125 horses trained; in 1898, 25,296 men and 2,478 horses; in 1903-04, 32,500 men and 7,892 horses; while in 1908-09, no less than 47,500 officers and men, with 8,500 horses, were trained.

9. From the foregoing it will be seen that, supposing the same number of active militia should train in 1909-10 as trained in the present financial year, and at the same camps, there would, apparently, be a shortage on this vote of $215,000. With a view to economy, however, it is intended, in the coming drill season, to try the experiment of training certain corps of active militia, not at central camps, but at their local headquarters; more particularly those corps which have their headquarters furthest from the camp which they usually attend, and whose transport is, consequently, the most expensive. There can be no question as to the general advantage of the training of the troops which results from the assembly of the different corps in large camps. The men get the advantage of seeing other troops, of good rifle ranges and of better instruction as regards training and drill; a spirit of emulation is called forth, and more general improvement results. On the other hand, the display, from time to time, of the local regiment in its own neighbourhood tends to encourage recruiting and to develop local pride. The experiment will be tried this year of seeing how far local training may have this effect.

Certain corps, also which are, at present, in a somewhat disorganized condition, will not be allowed to train, until they have shown that they are in a condition to profit by it. And steps will, also be taken in all corps to ensure that only reliable men are taken to camp. These various measures, with other savings which are in contemplation, ought to bring the expenditure within the estimate.

10. As regards clothing and necessaries, it is obvious that, while the amount taken in this vote fluctuates to some extent from year to year, its total must be affected by the increase in the strength of the militia generally and the number of men trained.

11. The increase under the head of customs dues may be set aside, as it is merely a transfer of money from one pocket of the government to another.

12. The increase to the vote for the Dominion arsenal is due to the increased requirements for rifle ammunition, and to the fact that the arsenal now manufactures 12-pr. gun ammunition, which formerly had to be purchased in England.

13. The increase in engineer services and the maintenance of military properties is simply due to the steady increase in the number of those properties, especially rifle ranges and camp grounds, and the extra care and attention which is now bestowed upon military buildings, in carrying out repairs as soon as they become necessary, instead of the somewhat wasteful system which previously obtained, of deferring repairs until they could no longer be avoided—a system which was forced upon the department by the smallness of the number of engineer corps.

14. One of the increases in the militia estimates most criticised in certain quarters, is that for the headquarters and district staff—from about $92,000 in 1904-5 to $144,000 in the present financial year. The explanation of this fact is to be found by a reference to the conditions which obtained previous to 1905. The staff, founded on a system long since obsolete, had never been remodelled to conform to modern conditions, and was quite inadequate in numbers and training to deal with them. Successive general officers had pointed out the absolute necessity for a numerous trained staff, and over and over again had reported that, for militia troops which could only train for short periods, it was essential that the staff duties should be performed by trained officers. As the result of the weakness in numbers of the staff, regulations of all kinds had fallen into arrears, while wasteful expenditure was known to exist, but could not be controlled. It was practically impossible to deal promptly with correspondence at headquarters and in district offices, and there were numberless questions connected with training, with the equipment and the organization of the troops, which demanded settlement, but which could not even be considered.

15. The increase referred to in the headquarters and district staff has been consequent upon the need felt for reform in these respects. It was obvious that no force with such paucity of staff officers as existed before 1905 could ever take or which is far more difficult and important, be maintained in the field in the presence of an enemy, and when the removal of the imperial troops from Halifax and Esquimalt deprived us of that source of supply for staff officers on emergency, the case became urgent. The staff officers were too few to work staff duties upon any definite system, still less to work upon any system in accord with that which obtained in the Imperial army though it was evidently imperative that,

if Canadian troops were ever to serve side by side with imperial troops in a great national danger, such as one which might threaten the integrity of Canadian territory, they must be organized upon the same lines and with the same staff system. Hence, immediately upon the organization of the militia council and the staff at headquarters, the task was taken up of changing the system of staff work in commands and districts. The staff work is now performed upon a system almost identical with that pursued in the imperial army, the differences between the two systems being merely such as are due to the smallness of the Canadian force in comparison. There can be no possible question but that this extra expenditure in regard to the staff—which is maintained, be it remembered, almost entirely in the interests of the active militia as distinct from the permanent force—has been fully justified by the resulting capacity of that militia force to maintain itself in the field, if required. It is perhaps, desirable to note that, in the existing pay vote are included many charges which, in previous estimates, appeared under other votes. For example, many staff duties in camps were formerly allotted to active militia officers temporarily employed, whose pay was drawn under the head of anual drill, who did their best, but who knew little more than the troops they were supposed to instruct. Again, all pay duties and all clerical work in military district offices were performed by civilian clerks, who were paid for out of civil votes, and who have since been replaced by military men liable—as the others were not—to go into the field in case of war.

16. A point invariably forgotten by critics of the increase in the number of staff officers is that, on the occasion of any great emergency which might require the Dominion troops to take the field, the ranks of the various corps of the active militia would be at once filled up by fresh men and the units raised from the skeleton peace establishments to that required for active service.

17. Thus a battalion of infantry would be raised from about 400 to 1,000 of all ranks, a regiment of cavalry from about 320 to 600 all ranks, and so on with the other arms. The result of this is, that the existing militia cadres, instead of numbering some 57,000 only, as they do in ordinary times, would reach a total of about 100,000 men.

18. It is evident that a fairly numerous and well trained staff would be absolutely necessary if such a body of men was to be handled efficiently and that, to confine its numbers in peace-time to the bare minimum, just able to deal with the peace strengths, would be the best way to insure that everything should go wrong when the occasion arose for taking the field in full force. This is the reason that all general officers commanding in Canada for the last seventeen years have, without exception, urged the necessity of an increase to the staff.

19. The staff in 1904, exclusive of four staff lieutenants employed on survey work, numbered 39. The staff on January 1, 1909, exclusive again of 3 staff lieutenants employed on survey work, numbered 51, which included all headquarters, command and district staff officers. As the establishment of the militia, including the permanent force, rose in the interval from 47,423 to 57,718, and the assumption of the duty of maintaining Halifax and Esquimalt rendered at least three additional staff officers necessary, it will be seen that the increase of staff is very closely proportional to the increase in the militia as a whole, for whose administration it is maintained.

20. The next item of importance, in which an increase has taken place since 1904-5, is the 'pay of the permanent force,' which, from $477,571 in 1904-5, rose to $1,401,271 in 1907-8, is $1,378,000 in the current year (1908-9) and will be $1,350,000 for 1909-10.

21. This increase is entirely due to three causes—(a) The increased rates of pay granted to all warrant and non-commissioned officers and men of these corps in 1904-05, but only partly provided for in the estimates for that year. This increase had been proved by experience to be absolutely necessary if the ranks were to be kept filled. (b) The increase establishment of the permanent force, made necessary by the transfer of Halifax and Esquimalt to the Dominion and the need of providing garrisons for them.

The additional number of officers and men required for this purpose may be placed at about 1,500 with certain consequential additions to the numbers maintained at other places, in order to provide drafts, &c., which brings the total up to about 1,600 of all ranks. It may be noted that we maintain considerably smaller garrisons than did the imperial government, who expended about $1,750,000 a year on the two fortresses. (c) Increased establishments of engineers and the subsidiary corps, such as army service corps, medical corps, ordnance corps and pay corps, which are needed to meet the requirements of the increased strength of the active militia, both for instructional purposes and to promote its efficiency for war.

22. To carry out the duties imposed upon the permanent corps required a total establishment of 3,311 of all ranks for 1908-09, but it was not found possible to provide enough money in the estimates and the strength was, consequently, confined to about 3,000 of all ranks. For 1909-10, the provisional establishment is still further reduced to 2,905, showing a reduction in pay, &c., of $51,000 on 1907-08, and $28,000 on 1908-9.

23. The position of the permanent force in relation to the active militia has been much misunderstood in and outside parliament, and it is perhaps desirable, therefore, to refer somewhat more at length to its duties.

24. The permanent force exists for four purposes:—

(1) For the support of the civil power in case of internal disturbances.

(2) For the instruction of the active militia.

(3) For the garrisoning of the defended places in Canada—Halifax, Quebec, Esquimalt.

(4) For the equipment, supply, transport, &c. of the active militia when it takes the field.

25. As regards (1), this is a duty which it shares with the rest of the militia force to which it belongs, though of late, nearly the whole of this work has been thrown upon it.

26. As regards (2), the instruction of the active militia, it is evident that this duty is of the highest importance, and it is recognized to be so by the force itself. The real difficulty

is that, owing to the large area of the Dominion, the force has to be split up and sent to many separate stations, and, with the small total establishment hitherto possible, the several units have necessarily been so weak in numbers that it has been difficult for them to carry on their duties in the manner and to the extent expected of them.

27. For example, a company of infantry or a squadron of cavalry, of a total strength of less than 100 men is called upon not only to provide for the various details which make up the interior economy of, so to speak, a military household for the accommodation of officers and men of the active militia, but it is further expected so to train its members as to be able to afford to the attached militia efficient instruction in all the military duties of an infantry or cavalry regiment, respectively, including the command of such a corps—duties which that company or squadron itself has never been in a position to practise. It is perhaps hardly realized by the militia force generally, how difficult it is for an officer, who has never had command of as many as 100 men himself, to instruct another officer as to how he should command and handle, say, a regiment, which in war, would in the infantry, consist of 1,000 men, and, in the cavalry, of 600 men, and which, in peace, numbers from 300 to 400; but this is what the officer of the permanent corps is obliged to attempt.

28. The active militia has constantly been eager for additional military instruction and especially for more accessible instruction. This has been manifest from the frequent requests for provisional schools at local centres; and it is evident that it must often be difficult for a busy man, who would otherwise make an efficient officer, to spare time from his business to go to a distant centre for his military instruction. Every effort has been made by the permanent units to meet this requirement.

29. It is clear, therefore, that that portion of the permanent force which is maintained for purposes of instruction cannot be reduced if it is to fulfil its duty satisfactorily. It ought rather to be increased.

30. As regards (3), the garrisoning of the places named, it is to be remembered that, in 1905, Canada gave a pledge to the empire that she would be responsible for the defence of Halifax and Esquimalt in case of need. More than half of her whole permanent force, i.e., 1,600 out of about 3,000, is maintained for this purpose alone. The troops in these garrisons are, of course, also utilized for the instruction of the neighbouring corps of the active militia. There is no suggestion that the Dominion desires to recede from the position she then took up.

31. As regards (4), it is evident that, if the militia as a whole had to take the field, it would require a very large accession of strength to those services which equip, supply, transport and pay the troops and nurse them when sick and wounded. Of these services the Ordnance Corps, which deals with equipment, and the Army Pay Corps, which deals with pay, are not represented in the ranks of the active militia; and the active militia units of the remaining services, while they have shown themselves very efficient at their work, would be the first to admit that they are totally inadequate in numbers. To provide for this need alone, the Permanent Army Service Corps, Permanent Army Medical Corps, Canadian Ordnance Corps and Canadian Army Pay Corps ought to be maintained at full strength.

32. Besides all this, there are duties to be performed when an army takes the field, which are not required in peace, and which can only be performed by trained soldiers. Such are the military police, both mounted and foot, organization of depots and training of recruits, remount depots, batmen and so on.

33. Sufficient reasons have been adduced to show why it would be wrong to reduce the numbers of the permanent force. Outside of the additions to that force required to provide for the garrisoning of Halifax and Esquimalt, and to meet the service requirements of the active militia, no additions to it have in point of fact, been made for some years past.

34. Quite as much misapprehension exists upon the question of the actual cost of the permanent force as upon the subject of its duties. It is the habit of hostile critics, especially when writing in the public press, to quote the whole vote for pay and allowances as applicable solely to the permanent force, or to the permanent staff and permanent force, and not to the active militia at all.

35. If the vote as detailed in the table be referred to, it will be seen at once that, of the total amount of $1,646,000, no less than $152,000 is payable solely to the active militia, while an additional $144,000 represents the cost of the permanent staff, of which by far the greater part is, of course, maintained to meet the requirements of the active militia. Military districts 4, 5, 12 and 13 contain no permanent unit at all. Even where permanent units are also stationed in the same area, experienced staff officers report that at least four-fifths of the work which passes through their offices is the result of questions concerning the active militia as distinct from the permanent corps.

36. If the two sums above named be deducted from the total, it will be seen that $1,350,000 represents the total pay and allowances of the permanent corps.

37. But critics consistently ignore the fact that the permanent so-called 'departmental' services, i.e., the Permanent Army Service Corps, Permanent Army Medical Corps, Canadian Corps, Army Pay Corps, Military Staff Clerks, are maintained principally to meet the requirements of the active militia, and these corps together cost at least $350,000 per annum.

38. If these points be considered, it will be seen that, apart from the additions due to the necessity for garrisoning Halifax and Esquimalt, the increase to the permanent force has, if anything, not kept pace with that of the active militia which it has to instruct and otherwise to assist to maintain.

39. The next items of the estimate, are pay of officers and men of the active militia attached for instruction, and active militia allowances. These both show increases, in the latter case considerable ones, due to increases made two years ago in the allowances for the care of arms, drill instruction, &c.

40. The increase in the vote for provisions and supplies has been almost entirely due to, and in proportion to, the increase in the strength of the permanent force.

41. Salaries and wages show an increase due directly to the increased number of military properties, buildings and rifle ranges on charge.

42. The vote for transport and freight is one which, for many years past, has been frequently, and perhaps unavoidably, underestimated, with the result that many charges incurred during one financial year have had to be defrayed out of the vote for the next, though this has been partly due, no doubt to the fact that the great carrier companies often delay sending in their bills for services rendered until after the votes for the financial year concerned have lapsed.

43. It is now hoped that arrears have been cleared off and that the same difficulties will not seriously recur. At the same time, the increase in the vote has been due to increased transport, both for equipment, stores, &c., issued to active militia corps, and for the permanent garrisons.

44. The last increase in the votes chargeable to revenue is that for warlike stores, and this is practically entirely due to the transfer of Halifax and Esquimalt and the increase in the numbers of the active militia. It would obviously be absurd to maintain troops without providing for their equipment with proper arms and munitions of war.

45. Nor should it be forgotten, in considering the increases to which reference has been made, that nearly every case has been affected, in a greater or less degree, by the general rise in the wages paid to labour and in the cost of commodities throughout the Dominion.

46. A word may here profitably be said in regard to the vote on capital account. This vote is rendered necessary by the re-armament of the force with new and up-to-date guns and rifles—a re-armament which could not longer be deferred—by the purchase of rifles, ranges and grounds for camps, and by the necessity for providing a reserve of clothing, saddlery, equipment, &c., for the outfit of the additional troops which on an emergency would have to be mobilized.

47. Re-armament is costly, but absolutely necessary. It is now in progress and it should be completed and the transition stage passed as rapidly as possible, but it is not likely that this portion of the vote can be dispensed with for several years to come.

48. It is believed that it will be agreeable to the House if this memorandum concludes with a short summing up of our military position as it presents itself to the government.

49. It will be within the recollection of the House that it has been, on several occasions, stated that, in the opinion of the government, the standard of defence at which we should aim should be the power of placing in the field a force of 100,000 men, properly organized and equipped, in first line, while behind it we had the necessary equipment and machinery for raising an additional force of 100,000 men in second line. That standard has apparently met with the approval of the House, and has, at any rate, never been openly questioned.

50. It will probably be of interest to the House if a short explanation be given as to how this force of 100,000 men in first line is to be composed, how it is to be organized and how far it satisfies the conditions which an armed force should fulfil.

51. Deducting from the total those troops who would be required to garrison places like Quebec, Halifax and Esquimalt, to hold certain important points, and to perform other special duties, there remains for the active defence of the country in the field a total force of about 90,000 men, of whom at present some 80,000 belong to Canada east of the great lakes, and 10,000 belong to the west.

52. In accordance with the agreement accepted by the representatives of all the self-governing Dominions at the Imperial Conference of 1907—that all forces of the empire should be organized as far as possible upon the same system, these 90,000 troops have been organized into divisions and brigades, which, subject to the modifications imposed by Canadian conditions, resemble closely similar organizations in the imperial army.

53. It will be well perhaps to recall to mind the fact that the organization of an army has two main objects, first, to enable the whole body, equipped with the proper proportion of each arm, cavalry, artillery and infantry, to work in unison in carrying out the orders of the commander, and secondly, to enable it to be fed, moved where required, supplied with munitions of war, medically treated, and paid, in such manner as to maintain its efficiency as a fighting force at the highest point—this second object being, of the two, the more difficult to attain.

54. In the west, the development of the force has been so rapid that its organization has not yet been fully worked out.

55. But in the east, the 80,000 troops which compose the field force have been organized in six divisions and three cavalry brigades.

56. A force of about that strength thus organized ought to consist of some 60,000 infantry, 7,000 cavalry, 15,000 artilery, and 3,000 engineers, or in other words, it ought to have 64 battalions of infantry, 12 regiments of cavalry, 69 batteries of artillery, with 276 guns, and 18 companies of engineers—in addition to the requisite number of Army Service Corps and Army Medical Corps units. Unfortunately, though we have the proper number of infantry and cavalry units, we are only at present in possession of 31 batteries of artillery, with 124 guns, and we have only four companies of engineers, while we are somewhat deficient in the Army Service Corps and Army Medical Corps services.

57. Artillery is an arm so expensive to equip that its increase, though considerable in the last few years, has necessarily been slow and can only be carried further by degrees; yet a sufficient proportion of guns is specially needed for a force composed of citizen soldiers.

58. As regards engineers, Canada possesses, in her large telegraph, telephone and railway organizations, and her great lumber interests, an especially good supply of men admirably fitted for engineer duties. As she possesses, so to speak, a reserve in this arm, with her Royal Military College graduates also in reserve for engineer officers, more attention has been so far given to the raising and equipment of other units than of engineer corps.

59. It is, however, no doubt the case that the organization of additional units should proceed as opportunity offers.

60. As regards the supply of the forces with arms and munitions of war, it may be said that we possess sufficient guns for the existing number of batteries, and that, as the re-

armament with the new 18-pr. guns progresses, more guns will be made available wherewith to arm additional batteries.

61. And it must be added that, at present, we have not a sufficient number of small arms available, nor an adequate reserve of ammunition. But the situation in these respects is improving from day to day.

62. Another important point is the supply of munitions of war, which comprise, besides ammunition, military equipment of every kind. A great deal of this is required, and it would be a mistake to suppose that it can easily be obtained or improvised on mobilization. Further, to avoid the confusion and delay which would otherwise occur, this equipment must be decentralized so that every unit, on being called out for service, should find its equipment.

63. But mobilization equipment, even for the first line, is still far from complete; what there is cannot be properly decentralized owing to lack of storage accommodation; while, for the second line, the deficiencies are, of course, greater.

64. All that can be said is, that steady efforts are being made in the direction of its provision, and equipment for a considerable proportion of the force is already in store, though it must be some time yet before the Minister of Militia will be able to say that complete or nearly complete equipment for the first line of 100,000 men is on hand.

65. Mobilization, it is to be feared, would also be delayed by difficulties in connection with the supply of vehicles and horses, especially riding horses.

66. As regards transport vehicles, some good work has been done, and a certain amount of transport has been registered—especially in certain districts of Ontario where owners have patriotically come forward—but, so far, it has not been found possible to introduce any general or sufficient system of registration, either of transport or remounts. Owners in many parts are suspicious as to what registration may entail; registration costs money; and money is required, even more urgently, for other services.

67. As regards riding horses, the situation is particularly difficult, for there can be no doubt that the riding horse, as such, exists in Eastern Canada only in decreasing numbers. This matter will receive attention, but, meantime, the mounted troops would have, as hitherto, to make the best of the stamp of horse available.

68. Such is, in general terms, the present position in regard to our military forces. In view of the necessity for finding money for the development of the Dominion, it has not been possible to spare sufficient money for military purposes to enable progress in the development of our forces to be as rapid as might otherwise have been desired—and, indeed, it might be said that, until a body of officers had been trained, capable of efficiently organizing and training the military forces, it was not desirable to create those forces too rapidly.

69. Much remains still to be done towards the perfecting of our first line forces, more than at present is financially possible—and nothing has yet been attempted towards the organization of the reserve in second line. But the points of weakness are known; the direction in which effort should be applied is recognized; and, though perhaps it is not so rapid as would appear desirable from a purely military point of view, general progress is, nevertheless, being made, and there can be no doubt at all but that the size of the force which the Dominion could, in case of necessity, place in the field, and, what is even more to the point, feed and maintain when there is an efficient state, has largely increased of late years.

70. To sum up, the points to which it has been desired in this memorandum to draw attention may be recapitulated as follows:—

(a) That expenditure on militia services for 1908-9 shows a decrease of $46,813 as compared with that of 1907-8, in which year the financial effect of the transfer of Halifax and Esquimalt was first fully felt, while the estimates for 1909-10 show a still further decrease of $636,275.

(b) That, while the expenditure for annual drill of the active militia rose from $699,724 in 1904-5 to $1,075,000 (exclusive of the cost of the Quebec celebration) in 1908-9, and is, for the year 1909-10 estimated at $860,000, the increase in cost has been accompanied by a large increase in the number of both men and horses trained, viz.: from 32,000 men and 7,892 horses in 1903-4, to 47,500 men and 8,500 horses in 1908-9.

(c) That the increases in the votes for clothing and necessaries, provisions and supplies, transport and freight, and warlike stores are directly consequent upon the increase in the numbers of the active militia and of the permanent force, due in the latter case to the garrisoning of Halifax and Esquimalt, and to additional requirements of the active militia.

(d) That the increases in the votes for engineer services and maintenance of military properties, are directly due to the increased number of military rifle ranges, buildings and properties on the charge of the Militia Department.

(e) That the increase in the numbers of the permanent staff of the militia force, at headquarters and in the military districts and commands, has been in accord with the views of all the general officers who have served in Canada during the past seventeen years, has been largely forced upon us by the withdrawal of the imperial troops from Halifax and Esquimalt, is absolutely necessary if the militia force is to be able to take and maintain itself in the field, and, lastly, is closely proportionate to the increase which has taken place in the militia force.

(f) That the increase in cost of the permanent force is (outside the higher rates of pay granted in 1904) due to the additions to its establishment rendered necessary by its having to provide garrisons for Halifax and Esquimalt, when transferred to Dominion control; by having to provide instruction for largely increased establishments of active militia, and by having to provide for the organization of the subsidiary services required to enable the militia force as a whole to take the field.

That, further, no reduction is possible in the permanent force without either seriously weakening the garrisons of Halifax and Esquimalt (which would be contrary to Canada's undertaking to the empire), or rendering the force incapable of fulfilling its duty of in-

structing the active militia and organizing it so as to enable it to take the field in case of need.

That, further, the expenditure on the permanent force is $51,000 less for pay and allowances than it was in 1907-08.

(g) That the vote on capital account is indispensable if the militia is to be properly armed for war, and if rifle ranges are to continue to be provided, and that this vote is likely to be required for several years to come.

71. Lastly, a short resume of the present military situation has been given, from which it will be seen that the policy of the Militia Department has been directed steadily towards the attainment of a standard accepted by parliament, and with the single end in view of fitting the militia force as a whole to take the field in such a condition of efficiency that the people of Canada may feel safe in entrusting to its keeping the honour and security of the nation.

A good deal has been said during the last year or two about the increase in the total expenditure on militia account during the past three or four years, an increase amounting to in the neighbourhood of $3,000,000. I have stated on several occasions in this House in the last parliament the reasons which accounted for that increase. These reasons are set out very fully in this memorandum. The taking over of Halifax and Esquimalt which involved an addition of about 1,600 men to the permanent force of this country and very considerable additions to the expenditure for care of buildings and all expenses attendant on the keeping up of such a large force, has probably involved an expenditure of $1,250,000. The force which we are maintaining is not as large as the force which was maintained by the imperial authorities. Their expenditure in maintaining these two forts was about $1,750,000 a year. We voluntarily undertook to assume that responsibility. I do not suppose that any one in this House, or any one in Canada, would, for a moment, desire to recede from that position. We took the position that while we could not do certain things at the time it was suggested that we should do them in the way of a cash subscription to the navy, or the maintenance of a separate force for foreign service, we should relieve the exchequer of the mother country, the overburdened tax payer, at any rate, to the extent of paying for everything in the way of defence which might be required in Canada. So, that offer was made and gratefully accepted, and, as I say, nobody for a moment would think of receding from that position. We have increased the strength of the active militia within those years—

Mr. FOSTER. Have you increased the strength of the permanent force?

Sir FREDERICK BORDEN. Yes, I was just explaining; we increased the permanent force by a matter of 1,600 men for the purpose of taking over, equipping and maintaining the garrisons at Halifax and Esquimalt, the cost, together with the attendant expense connected therewith, amounting to between $1,000,000 and $1,500,000. Referring to paragraph 8, we have increased the numerical strength of the active militia, including the permanent force, which includes the garrisons at Halifax and Esquimalt, to about 57,000.

Mr. DANIEL. That is the number of men drilled annually?

Sir FREDERICK BORDEN. Yes, in cities, in camps, and in the permanent force. We have increased the pay of the militia. By an Act of this parliament of 1904, the pay of the active militia was practically doubled. That is to say the old pay of 50 cents remained but a further sum of 50 cents was given in the form of what is known as efficiency pay, so that the average pay of the men going into camp is from 75 cents to $1 instead of 50 cents as a fixed maximum. All the officers of the active militia agree in stating that the granting of that efficiency pay has been of the greatest possible advantage to the militia. It has promoted discipline and good order, and good rifle shooting, because that pay is not given to any soldier who is disorderly or who misbehaves during camp, nor is it given to any one who does not make a certain percentage of marks in firing at the target. Then the increased cost of living has added to the expenditure. It costs more to-day to feed a man in camp than it did 10 years ago. It costs rather more to clothe him, the blankets and camp equipment are more expensive, and the rations given in the camps are more liberal. The increased cost of living has of course rendered the cost of maintaining the permanent corps greater.

Mr. DANIEL. Referring to paragraph 9, will the regiments which are not brought to a central camp go into camp at their regimental headquarters, or will they be drilled at company headquarters?

Sir FREDERICK BORDEN. Oh, I think at regimental headquarters as regimental units.

Mr. FOSTER. The customs would not be $200,000. It was $115,000 last year.

Sir FREDERICK BORDEN. I am speaking of the estimates, not of the actual amount expended. I think it is more than that this year.

Thirteen years ago the annual output of the cartridge factory was less than three-quarters of a million rounds of ammunition cartridge; last year I think it was in the neighborhood of twelve or thirteen millions. So there has been an enormous increase, an increase in the cost

as well. We require to build up a reserve of ammunition. We have actually turned the corner, and we are making more ammunition to-day than we use, and are beginning to lay by a reserve. We should have by rights a reserve of at least 500 rounds for every man in the militia. Assuming there are 50,000—and according to our scheme suppose there are 100,000 or 90,000 using rifles—you will see what a large amount of reserve ammunition that involves, forty million or fifty million rounds.

Mr. FOSTER. How long does the stuff keep good.

Sir FREDERICK BORDEN. A long time. But we have a system by which we use the oldest manufactured and keep the newest, so there is none of it kept a very long time.

Then he refers to the increase in the engineering service and the maintenance of military property. Well, we are getting more rifle ranges, and military properties and camp grounds; and of course these have to be maintained. There was no engineering staff twelve years ago, there were no engineers.

Mr. FOSTER. Do your engineers take charge of the armouries?

Sir FREDERICK BORDEN. No. The armouries are in charge now of enlisted men, as a rule, of soldiers who have to pass a certain examination to qualify them for taking charge of rifles and equipment of all kinds, and in the case of artillery, men thoroughly conversant with guns and ordinance.

Mr. FOSTER. What buildings do your engineers have charge of?

Sir FREDERICK BORDEN. That refers to the engineering service which controls all the construction and repairs of buildings. When a building is completed, like an armoury, which is done by the Public Works Department, it is handed over to our department, and I think it is under the control of the Quarter-Master General.

Mr. FOSTER. For instance, the cottages you built at Kingston, were the plans prepared by your engineers?

Sir FREDERICK BORDEN. Yes. In that case of course the work is done by the Public Works Department. The engineering branch of the Militia Department prepares plans, and these plans are sent to the Public Works Department. I have endeavoured to establish a joint committee of the two departments, an inter-departmental committee, and thought I had succeeded; but unfortunately, I do not know whose fault it is, the officers committee was interrupted, and they are not meeting at present. I hope to be able to re-establish that committee. If that could be done, and a meeting held once a month or once a fortnight of two or three of the leading officers of the two departments, it seems to me a good many things which have happened—I am not referring to anything in particular—but the clashing of the two departments would be avoided. There has not been as good results from the working together of the two departments as there ought to have been, and as I would like to see.

Now one of the increases in the militia estimates most criticised in certain quarters is that for the headquarters and district staff. I will not detain the committee by reading the memorandum on these various points, because it is in the hands of the members of the committee, and they will have an opportunity of reading it at their leisure.

Mr. FOSTER. In connection with paragraph 52, does the hon. minister mean to say that if war actually took place, he is able now to call out 90,000 men and equip and feed them at a moment's notice?

Sir FREDERICK BORDEN. That subject is fully dealt with. It would not be possible perhaps to-morrow to do that, but it is expected to be able to do it within the very near future. For instance, we have not enough rifles in the country to-day. One does not care to make these admissions, but as a matter of fact there is not at the moment sufficient, but soon will be. The artillery is not anything like the strength it should be, but still is efficient as far as it goes, and steady improvement in all these respects is taking place. As I have already said, I would commend this memorandum to the careful consideration of every hon. member of this committee who is interested in this question.

Now, the question may be asked: Is this system that we are pursuing the wisest and the best? As I have already said, it is a system that has been evolved by experience. We have not changed suddenly—it has been against our policy to do so—the conditions which I found in existence in 1896. We have had the good fortune to have with us during several years of my regime one of the ablest officers in the British army. I refer to General Sir Percy Lake. I found him here when I came into office. He had been here, I think, two or three years under the late administration. He remained until his term of five years' service was completed, when he went back to his regiment and served in India, and then was brought to the War Office where he performed distinguished service during the war in South Africa. He came here again, four or five years ago, to take the position of chief of the general staff. He is absolutely familiar with the working and development of the militia in Canada for the last fifteen or six-

teen years, and, whatever credit is to be given for the position which the militia has attained to-day as a well organized and efficient force is more due to General Sir Percy Lake than to any one else. I cheerfully accord to him the justice of making that statement.

I was saying that we have not introduced any abrupt changes, that we have rather taken the course of building up that which existed, which, I think, is the sound course to pursue. I believe that the results have been good in the main. I believe that, in the main, the country has got the full value of the very considerable amount of money it has spent. When you come to think of it, after all, we are spending less than $1 per head of the population. In the United States they spend $3 or $4 per head of the population, even without taking account of the enormous pensions. If you go to Europe, you find that even the mother country spends $7 or $8 per head. I believe it is possible to carry on the development and maintenance of the militia with very little increase over the amount that is now being expended. If the estimates of the current year—there have been considerable reductions for the year 1909-10—could be maintained (and that is less than $1 per head of the population), I should be inclined to think that would be sufficient, at any rate for the present needs, and perhaps for a long time to come. And, when I speak of $1 per head of the population, I do not mean that the expenditure should increase as the population increases. I do not think that will be necessary. Some additional expenditure will be necessary of course. You cannot increase the strength of the militia without increasing the money you spend. If you send 60,000 men into camp it will cost you twice as much—or nearly so—as if you sent 30,000. You have to feed and clothe and transport these men. Then, we have the great northwest country in which the militia has scarcely been developed at all. A few years ago, the question of defending that great country was scarcely considered. The conditions have changed entirely in ten years, and whoever has to administer the militia of Canada during the next ten years will have to consider very carefully the question of putting the militia of the west on the same basis as the militia of the east.

Now, I would like to draw the attention of the committee to the financial side of this question. I do not mean the amount of money being expended, for I have discussed that to some extent and will not deal with it further until we come to the items of the estimates. I desire to discuss the question of how the money is dealt with, which is an extremely important question, and one which, very properly, has engaged the attention of public men and of the people for some time past.

Sir FREDERICK BORDEN.

Are due precautions taken and safeguards provided for the expenditure of this money? Is due forethought taken in framing estimates as a basis of this expense? I believe it is. At any rate, the course pursued is something like this: The officers in the districts and at headquarters who are responsible for carrying on the various services of the militia, are required at a certain period of the year, to send in to headquarters a statement of their requirements for the next year. These requirements are carefully scanned by the officer in charge of the particular branch interested. Eventually, these estimates are brought together and are considered by the deputy minister and by the minister, and usually they are considered in very considerable detail by the minister, with the assistance of the members of the Militia Council. We cannot know, of course, what the Finance Minister's position may be. It is difficult to get a statement in advance—perhaps six months before the estimates are made up—of how much money will be available. So, the estimates are made up and are sent to the Finance Minister, under the signature of the Minister of Militia, and, after due consideration—as the hon. member for North Toronto (Mr. Foster) would know—and after queries and so on, it is decided whether these estimates can go through as they have been sent in, or will have to be sent back. It is no breach of confidence to say, with regard to our present estimates, that the estimates which we sent in were not accepted, and that we had a good deal of difficulty in trying to reduce them at rather short notice. It may be that some of our estimates may not come out as we had hoped or expected, but there will not be any very great divergence. Well, what happens next? The money is voted to the different departments, and requisitions are made out, coming chiefly through the Quartermaster General, who has charge of all the stores, and the Master General of Ordnance, who is responsible for the arming of the militia, and these in turn are sent to the deputy minister, by whom they are brought to me, and then, if they are approved, they are handed over to the Director of Contracts; because we have in the Department of Militia, and have had for a considerable time, a purchasing branch under the control of that officer. The Director of Contracts then proceeds upon certain lines to ask for tenders. With regard to all the provisions and supplies for the camps and for the permanent force, including fuel and forage, tenders are invariably asked by public advertisement or by public notice posted up.

Mr. FOSTER. In your department do you make a discrimination in this advertising between Liberal and Liberal-Conservative newspapers ?

Sir FREDERICK BORDEN. The price is fixed by the Printing Bureau, and the name of the paper, I am told by the deputy—which shows how little notice I have taken of that—is supplied by the department. So far as we can possibly keep down the expense of advertising in the newspapers, we do it. When I came into the department, I found that for all the camps and for most of the depots, the supplies were asked for by posters posted up in post offices and other public places. A year ago or so some exception was taken to that. It was alleged that the posters were not put up; somebody who wanted to tender said that he had not seen the notice. Therefore we tried advertising in one or two newspapers in each town, in addition to the posters; and we have come to the conclusion that the money spent in advertising in the newspapers is wasted, as we get no more tenders, and that the old system of posters is really sufficient and probably the best. But I have not answered the question. I think it is more than probable that the ordinary course would be to advertise, for instance, in the city of Toronto, in the 'Globe,' and perhaps in the 'Star.' I do not think the advertisement would be sent either to the 'Mail and Empire' or to the 'News'; but I do not think I would go the length of sending an advertisement to an obscure newspaper because it happened to be on my own side of politics.

I have had the Director of Contracts supply me with a memorandum as to the course pursued by him. I have asked him to ascertain the course followed by the War Office and the Admiralty in England, and I will read a few extracts:

Here is an extract from the report of an investigation that took place in England into the letting of contracts during the South African war:

Q. When you receive those requisitions for the purchase of supplies you issued advertisements to the trade?—A. We issued tenders to the trade as a general rule. There is an annual advertisement issued to the trade in order to invite people to come in for competition, and certain requirements are specially advertised from time to time, but as a general rule we issue tenders only to those people who are on our list.

In that connection I want to say that I caused a very careful examination to be made of several English newspapers, including the London 'Times', for a great many years back, and I failed to find one advertisement for any stores, except this kind of an advertisement, which appeared in the London 'Times':

Annual notice of army contracts. Notice is hereby given that tenders for specified quantities of the undermentioned articles of manufacture are invited from time to time as required.

Then there is a long list beginning with 'A' and ending with 'W'.

Manufacturers who may wish to be invited to tender for army requirements should state the particular articles which they manufacture and the names of at least two well-known firms or public body who have purchased from them and are in a position to certify as to the quality of their production. The services of an intermediary are unnecessary in approaching the department for this purpose. No application is necessary from firms whose names are already on the War Office list. All applications should be in writing and addressed to the Secretary, War Office, London.

From which it appears that the invariable practice of the War Office and Admiralty is to issue forms of tenders to people selected who are on the list and not to ask in a general way for tenders for a specific thing.

Mr. MONK. That is done every year in England. They begin by inviting tenders for all the supplies and every one is given an opportunity to tender.

Sir FREDERICK BORDEN. Not at all, my hon. friend did not catch the point. An advertisement is put in the 'Times' informing those interested that contracts will be let and asking any one who wishes to be put on the list to make application, and he will be put on, provided he can show that he has ever done any work, and gives the names of people who can certify that he is fit to be put on. If he does this, his name will be put on the list, and then forms of tenders will be sent to him.

Mr. FOSTER. Is that what is done in your department?

Sir FREDERICK BORDEN. While that has not been done, I have been considering seriously the advisability of doing it. I have only been studying this branch of the subject within a short time and was not fully aware of the course pursued. But I think it is a very desirable course and would save the department an immense amount of trouble. We have a list in the department.

Mr. SPROULE. Will the hon. gentleman have any objections to giving us that list?

Sir FREDERICK BORDEN. I have not got it here but I do not think there would be any objection.

Mr. FOSTER. Would the minister lay that list on the table?

Sir FREDERICK BORDEN. I have not the list here.

Mr. FOSTER. You could bring it tomorrow.

Sir FREDERICK BORDEN. I would have to consider that. I am trying to make this statement absolutely free from any political or party bias whatever. I know that my hon. friend is greatly surprised and disappointed.

Mr. FOSTER. No, it does not cost anything to make a statement.

Sir FREDERICK BORDEN. I am not in the habit of making a statement unless it is correct. I was about to say that my instructions to the director of contracts are that whenever a name is put on our list, he shall take pains to consult the commercial agencies or banks or in other ways, to get information as to the character of that particular firm. And unless the evidence is sufficient to show that that firm is entitled to confidence, it will not remain on the list. These are the instructions given, and I think they are followed. As to the politics of the firm, which are on the list. I have not made special inquiries. I happen to know that some of the largest contracts given in my department are given to prominent members of the Conservative party. It suits our convenience to do so. They are the men best fitted to do the work and the fact that they are Conservatives has not prevented their getting it.

Further in the case of war, a good many of the purchases, especially of supplies like forage, were made by private bargain and arrangement.

Paragraph 4 in the 'Instructions for the Director of Navy Contracts,' says :

To insure the supply of articles of satisfactory quality, care must be taken to obtain them only from persons or firms of repute, not however excluding resort to persons and firms in a small way of business in suitable cases and for this purpose the system of limited tenders should be encouraged in preference to general invitation by advertisements.

That is the evidence of the assistant director of navy construction:

In such case, other matters being equal, the principle of excepting the lowest offer should prevail, i. e. that with regard to each particular class of articles you have a list of contractors from whom you invite tenders.

A. Yes. Almost invariably the lowest tender from any person on that limited list is accepted, because we put on one level all on the list.

Q. If you wanted an article at all urgently and the question of time was important, although the price was rather high, however, you might give it to a man who you were quite sure would be punctual.

A. Yes, it is occasionally done.

Tenders for construction work, fuel, provisions, food and forage, &c., and barrack services appear to be called for by public advertisement.

Just as is done in this country. Here is another important extract from the minutes of evidence of the Royal Commission on the South African war 1903—evidence of Mr. Alfred Major, Director of Army Contracts, page 267:

Q. Do you consider it necessary, in order that the trade should be in a position to supply stores, that they should have a share of the provision of those stores in times of peace?

A. Certainly; otherwise they are not prepared to meet our requirements. As regards quality and patterns, they vary in almost every instance from the ordinary trade pattern.

Just let me point out the full import of that answer. If you want to get supplies, you must make contracts with people who are in the habit of doing the work. In Canada where clothing, for instance, is not made by the government as it is in England, it is absolutely of the first importance that the government should deal with firms who are able to do the work and who will undertake to have the necessary plant and employees to do more work in the event of any emergency arising. This is a matter of the utmost importance and to which I do not think due consideration is given. So much for the system in England which is practically the same as that in Canada. Here is one other extract, in which perhaps my hon. friend from North Toronto (Mr. Foster) might be interested, as showing what is sometimes done in the mother country. I am quoting from page 6 of the minutes of evidence taken before the Commission on War Office Organization, 1901 :

Details of a case were given where the general officer commanding applied for the removal of the contractor's name from the list of those to whom tenders should be sent. The Secretary of State decided that the name should not be removed.

Whether that was political influence or otherwise I am not in a position to say. In that same evidence before the same commission, General Buller said:

We are not particular enough with our contractors. We let men on the list who are probably very doubtful.

Here is a bit of evidence which is interesting. Everybody knows who Mr. Fleetwood Wilson is. He makes the following statement:

I made up my mind I would require say 100,000 yards of tartan. I would then put up to the director of contracts my demand. He would ask me who I would suggest as likely to supply that cloth at a reasonable price, of good quality and punctually delivered. I would then suggest certain firms which I knew or which I had reason to believe would serve the department well; give my reasons, and send them up to the director of contracts. The director of contracts in some instances suggests an allotment to other firms or the allotment of different quantities to the same firms. Eventually the director of contracts put all the machinery of putting out tenders and signing forms, etc., into work.

That will indicate the system which has been adopted in England after 100 or 200 years of experience. I have already stated that so far as our system is concerned, contracts for food supplies for the permanent force and annual camps and for fuel are

made only after tenders have been called for by public advertisement.

Now as to stores generally. Competitive tenders are usually obtained by circular letter just as is done in England from firms well and favourably known to the department as reliable and competent for the work they undertake. A list of such firms is kept in the contracts branch and the order or contract goes to the lowest tenderer unless good reason appears to the contrary, a very rare occurrence. Then the goods are manufactured and they are sent in; there is a branch of the contract branch known as the inspection branch. The goods are there subjected to the most careful inspection before acceptance, they undergo careful inspection by trained men, experts in regard to the various articles purchased. Articles found not equal to the standard are rejected. The inspector, after checking quantities and quality, reports the number accepted; and these are sent into ordnance stores. The ordnance officer gives the director of contracts a receipt for them and enters them in his journal of receipts. A record of all receipts and issues from stores is kept; and every stage of every transaction of purchase from the delivery of the stores for inspection until they become unserviceable or are destroyed, is reviewed by an officer of the accounts branch whose business is the auditing of stores. All vouchers relative to the case are sent him.

Suggestions have been made that no care is taken of stores, that there is no tracing of the stores and that we never know what condition they are in or what quantity we have on hand. This is absolutely misleading and grossly unfair to the department. Two sets of ledgers are kept, one set locally at the points where the stores are, all over the country, and another set at Ottawa in the audit branch. Every six months those ledgers are exchanged and the most careful audit that could possibly be made is made constantly, and I believe it is perfectly effective.

Some years ago we had a discussion in this House with regard to contracts for stores. At that time there were present in this House two ex-Ministers of Militia, Sir Adolphe Caron and Mr. Tisdale. It so happened that when I came into office I had cancelled some contracts which had been entered into for a period of three years. In June, 1896, contracts had been made by Mr. Tisdale with certain contractors for considerable quantities of clothing for three years. One of those contracts was not to take effect until a year later, 1897. I submitted the question to the then Minister of Justice who said that such a contract was illegal because a contract could not be made for articles when the money to pay for them had not been voted by parliament. However that may be, the contracts were in due course cancelled. I inserted an advertisement in the public press in all the large cities in Canada asking for tenders for about $70,000 or $75,000 worth of clothing which we required by the middle of April following. The advertisement was inserted, I think, about October or November. What was the result? The result was that when the month of April arrived and the day arrived on which these goods should have been delivered, none of them had been manufactured. I sent a man to the factory of the contractor and there discovered that he had not taken a single stitch and not bought the first yard of cloth. What was my position? Men like the Sanfords, whose firm had been awarded the contract which I had cancelled, had tendered for this contract on the new advertisement but had failed to secure it. Why? Because the man who obtained the contract, whose name I shall not mention, was on the verge of insolvency and in order to keep his head above water for a little longer thought that to have a government contract would materially help him and he put in a tender so low that he himself could not do the work. Then I was forced into this position that I had to go to the Sanford Company and ask them as a favour to make the goods which I required for the then approaching camps at their own price. I am bound to say that their price was as reasonable as could be expected and I think it was at the price at which he tendered for this contract. There is the result of my experience. I have under my hand the speeches and the warnings which Sir Adolphe Caron and Mr. Tisdale gave me across the floor of the House at the time these contracts were terminated by me, and I must admit that what they said proved to be absolutely true, and I have not, with the exception, I think, of one occasion since then, ever asked for public tenders by public advertisement for goods of that kind. What is the distinction? There is no difficulty about food products because we all know about them, and the competition is so keen that we are quite sure that the quality will be good and it is easy to ascertain whether it is or not. But in the case of military supplies such as clothing and arms of various kinds, there is a technical side, and somebody has got to learn how to make those articles. As a rule, they learn at the public expense. But I prefer to deal with reliable men who have already learned, and about whose bona fides, and whose character and reputation as manufacturers, there is no doubt. We have on the list men of that kind. Then for some years past a very large part of our supplies of that kind have been purchased from the same people, and the Sanfords supply the principal amount.

Mr. TALBOT. Is it the intention of the hon. minister to continue giving contracts for military clothing in future without asking for tenders?

Sir FREDERICK BORDEN. We ask for tenders, but in the way I speak of. I hope we shall not be required to advertise in the public newspapers. I do not want to go through again what I went through once before to my sorrow, and which was disastrous to the country, and put us to great inconvenience. I think it would have been much more disastrous if that particular party had been able to make the clothing, because I am sure it would not have been satisfactory, because he had never had any experience in work of that kind. Now, we have, as I say, a competent corps of inspectors. The most careful inspection is carried on as to the colour of the clothing, as to the character of the work, and as to the cut. We have in that inspection room sealed patterns with which everything that comes in is compared, and frequently a garment is literally cut to pieces in order to see that at least one or two of each lot that comes in are all right, from which the rest can be fairly judged. In the case of boots and shoes, a boot is cut in two, cut crosswise and cut lengthwise. I have seen the work done myself, and it is most thoroughly done by experts. In the case of blankets, they are tested to see if they are shoddy. We won't buy anything that contains shoddy. But if, after coming to the department, it shows any shoddy, it is returned, or paid for at a lower price. Then we have another check in addition to the director of contracts who is himself a specialist in a business way, and is watching prices constantly. In addition to the inspectors who are certainly specialists as to the value of goods and clothing, and who have the proper means of making an inspection, we have the price list of the War Office, the vocabulary, with which we can compare our prices with the prices at the War Office in England, adding the duty whatever it may be, and by that means we can come within a fraction of what the article is worth. We have in our department samples of clothing and samples of goods which are furnished to the War Office, and upon which these prices in the vocabulary are based.

I have already spoken of the audit of stores, and of the work done by the pay branch. I would like to say a word as to where these supplies come from. I am sure the committee will be glad to know that perhaps seven-eighths, at least three-forths of all the supplies purchased by the Militia Department are manufactured or supplied in Canada. In fact, with the exception of the artillery, of the guns, which are supplied at present in England, practically everything is supplied in Canada. I would like to read here just a word or two from a memorandum which was laid before the

Mr. TALBOT.

Imperial Conference in 1907. It is a memorandum prepared by the then Quartermaster General, Sir Wm. Nicholson, who is now the chief of the General Staff, and practically the head next to the Minister of Army Council and by Mr. C. F. Madden, who was then Master General of the Ordnance:

It is most desirable that the area of supply of the warlike stores under reference——

That is rifles, cannon, ordnance, everything.

—should be as wide as possible, and, therefore, the colonial government should be urged to arrange for local manufacture and provision, rather than to rely on the resources of the United Kingdom.

Well, we are doing that, and I hope the day will come, and come soon, when cannon, and everything can be manufactured in this country. I may, however, say that at the present moment we are able to get all the limbers, ammunition waggons and carriages manufactured in Canada. They are being manufactured in this very city, and if any hon. member of the committee desires to spend an interesting half hour, I would advise him to go to the works of the Ottawa Car Company, and see the most creditable work that is being done there, and at a price as cheap, or nearly so, as the War Office pays; the price which we pay for those wagons is the War Office price with the duty added. I hope that in a few years we shall have not only a partially self-contained militia, as we have to-day to a very large extent, but that the militia, in so far at any rate as regards the supply of material of every kind, will be absolutely self-contained, and that everything can be manufactured in our own country. The importance of that I need not dwell upon, in the event of any trouble occurring. If any misfortune were to happen to the British fleet our position would be very serious indeed if we were dependent entirely for our supplies on the other side of the Atlantic.

Before concluding my remarks I would like to call attention to a comparison which was made by General Sir Percy Lake, in a memorandum which I laid on the table of the House a year ago, a comparison showing the establishments of the organized units of the Canadian militia in 1895-6, in 1903-4, and 1908-9 respectively. I have also a comparative table to show the armament and equipment of the militia, the cadet corps and the rifle associations for the years 1895-6, 1903-4, and 1908-9. I will not detain the committee by reading these tables but I think it would be desirable, in order to make my statement complete, that they should be published in 'Hansard.'

TABLE TO SHOW ESTABLISHMENTS OF ORGANIZED UNITS OF THE CANADIAN MILITIA IN 1895-6, 1903-4 AND 1908-9 RESPECTIVELY.

Corps.	Establishment, 1895-6.		Establishment, 1903-4.		Establishment, 1908-9.		Remarks.
	Number of Squadrons, Batteries, or Companies.	Total Numbers.	Number of Squadrons, Batteries, or Companies.	Total Numbers.	Number of Squadrons, Batteries or Companies.	Total Numbers.	
Permanent Force. (Note 1.)							
Royal Canadian Dragoons—Squadrons	2	132	2	109	2	200	Establishments provided for in the Estimates for 1908-9. (See Note 4).
Royal Canadian Mounted Rifles—Squadrons	Nil.	.....	1	60	1	120	
Royal Canadian Artillery—							
Horse or Field Batteries	1½	173	2	258	2	315	
Heavy Batteries	Nil.	.....	Nil.	.....	1	165	
Garrison Companies	2	171	2	225	4	629	
Royal Canadian Engineers—Garrison Companies	Nil.	.....	Detachments.	132	2	300	
Royal Canadian Regiment Companies	4	324	5	407	10	1,079	
Permanent Army Service Corps	Nil.	.....	Detachments.	6	Detachments	120	
Permanent Army Medical Corps	Nil.	.....	Nil.	36	Detachments	100	
Canadian Ordnance Corps	Nil.	.....	Detachments.	104	Detachments	214	
Canadian Army Pay Corps	Nil.	.....	Nil.	.....	Detachments	34	
Military Staff Clerks	Nil.	.....	Nil.	.....	Detachments	35	
		800		1,337		3,311	
Active Militia.							
Cavalry or Mounted Rifles—Squadrons	44	2,115	62	5,106	101	8,232	
Field Artillery—Batteries	17	1,345	17	2,013	25	2,712	
Heavy Artillery—Batteries	Nil.	.....	4	478	14	1,675	
Garrison Artillery—Companies	32	2,462	28	1,868	10	1,241

Canadian Army Medical Corps—Field Ambulances	Nil.	.....	8 F.Hos.,9 B.C	705	18	1,460	
Corps of Signallers	Nil.	.....	Detachments.	7	Detachments	88	
Totals	.....	35,835	.....	47,423	.....	57,718	
Number of horses	2,872		7,892		11,798		
Number of men trained (Note 2).	19,000		32,000		46,000*		*Estimated.

Note 1.—Authority was given by Parliament in 1905 to increase the establishment of the permanent corps up to a maximum of 5,000 men, as might be found necessary in order to provide for the garrisons of Halifax and Esquimalt, and to allow for organizing additional units for instructional purposes to keep pace with the growth of the Active Militia. Up to the present time only a total establishment of 3,311 all ranks has been authorized.

Note 2.—The permanent corps have been included in each case in the number of men trained.

Note 3.—All units of the Militia provided for in the authorized establishments for the financial year have been shown in each case. In each of the two earlier years, the formation of some units, though provided for, was not carried out in that year, and the same thing may possibly occur in the present year.

Note 4.—Of the difference in numbers between the establishments of the permanent force in 1903-4 and 1908-9, the assumption of responsibility for the defence of Halifax and Esquimalt accounts for 565 artillery, 150 engineers, 745 infantry and 150 departmental corps; total, 1,610.

COMPARATIVE TABLE TO SHOW THE ARMAMENT AND EQUIPMENT OF THE MILITIA, ALSO CADET CORPS AND RIFLE ASSOCIATIONS, IN THE YEARS 1895-6, 1903-4 AND 1908-09.

Subject.	1895-6.	1903-04.	1908-09.
Light field gun	80 9-Pounder muzzle loading 36 12-Pr. breech loading (under order)	90 12 Pounder breech loading 8 5″-Howitzer, B.L	90 12-Pr. B.L. 12 15-Pr. B.L. 36 18-Pr. Quick Firing. 8 5″.Howitzer, B.L.
Heavy Field guns	5 40-Pr. Armstrong	17 40-Pr. Armstrong (obsoletej 4 4 7″ Q.F	16 4-7″ Q.F. 12 60-Pr. Q.F. (for delivery in 1908).
Rifles and Carbines	40,000 Sniders (obsolete) 5,000 Martini-Henry 2,000 Lee and Martini-Metford 42,000 Lee-Enfield (under order)	39,000 Lee-Enfield and Lee-Metford 1,000 Martini-Metford	39,000 Lee-Enfield and Lee-Metford. 1,000 Martini-Metford. 42,000 Ross.
Maxim guns, ·303 calibre	15	18	20 and 8 Pompoms.
Ammunition for Field Artillery	About 300 rounds per 9 or 40-Pr. gun 400 per 12-Pr. gun (under order)	About 400 rounds per gun About 130 rounds per howitzer	About 500 rounds per gun for all guns.
Rifle Ammunition	About 200 rounds per Snider About 350 rounds per ·303″ rifle	About 350 rounds per rifle	Over 400 rounds per rifle.
Fortress Armament (Breech loading guns only.)	8 7″ R.B.L. (obsolete) 8 12-Pr. Q.F. (under odrer) 8 6-Pr. Q.F. (under order)	1 6″ B.L. (Drill purposes) 2 6″ Howitzer (Drill purposes) 4 12-Pr. Q.F 8 6-Pr. Q.F	Halifax and Esquimalt are completely armed. Quebec partly so. It is inadvisable to give details of these.
Ammunition for Fortress guns	About 250 rounds per 7″ gun. Complete to scale for smaller guns (under order) as above.	Practically complete for Q.F. guns above on Imperial scale.	Supply complete for above guns.
Camp Equipment	Enough for perhaps 15,000 men	Enough for about 30,000 men	Enough for about 45,000 men.
Personal equipment of men	Knapsack, obsolete, only partly distributed.	Oliver equipment	Oliver equipment complete for all authorized units.
Harness and Saddlery	Incomplete, some 30 years old	Practically complete	Complete for all authorized units.
Engineer Equipment	None	In progress	Complete for 4 Field Cos.
Army Service Corps Equipments	None	In progress for 8 companies	Complete for all existing units.
Medical Equipment	Practically none	For Bearer Cos. and Field Hospitals, making good progress.	Field Ambulances completely equipped.
Signalling Equipment	Practically none.	Commenced and some progress made.	Regimental medical equipment nearly complete.
Reserve Transport (registered)	None	A commencement made	Complete for all existing Sections.
Cadet Corps	Few—no reliable record	104—Members about 5,000	152—Members about 8,000.
Rifle Associations	42	93 Military, 257 Civilian, 28,000 members.	130 Military, 371 Civilian, 38,000 members.

It will be found from these statements that the situation is most satisfactory indeed. If you take the cadet corps as an example, in 1895-6 there were none; in 1903-4, 104, having about 5,000 members, and in 1908-9, 152 with 8,000 members. Of rifle associations there were, in 1895-6, 42; in 1903-4, 93 military, 257 civilian, with a membership of 28,000 and in 1908-9 130 military, 371 civilian, with a membership of 38,000. The number has considerably increased since that. I thank the committee for their very great patience and now will proceed with the discussion of the item.

Mr. WORTHINGTON. Before the item is discussed I would like to refer to one rather important matter that the minister has not mentioned in his remarks this afternoon. I think the changes which he proposes for the militia show a great deal of forethought and study and will no doubt eventually work out, in a great many instances, for the betterment of the permanent corps, of the militia, and to the advantage of the country at large, and of the empire in general. But, as regards the formation of the imperial general staff, with ultimately a first and second line of defence and the formation of a corps for service abroad, I think he is to be congratulated on two points; in the first instance on the fact that the chief of the imperial general staff does not issue orders to the colonial general staff. I do not say this because I think our colonial general staff are superior in any way, because I think possibly matters are reversed, but, from the fact that I think the leaders of the colonial general staff will, in this way, retain their own individuality and personality to a greater degree than if commanded by imperial officers. The other point of congratulation, I think, lies in the fact that the government has at last realized that Canada must be prepared to defend herself at home and not rely, as formerly, some members of the cabinet did, altogether on the Monroe doctrine. With the formation of an imperial general staff and with a first and second line of defence there will no doubt be some system of national defence with respect to our borders and seaports. I fully realize the fact that these are not matters for open discussion inside or outside the House, but there might be some method by which not all, but some members of the opposition, might be placed in touch with what is going on in that way. Several times this session and formerly, when the minister has been asked a question, he has given the answer that we are now doing business on imperial lines and that he is not making any statement in regard to the question under discussion. I do not know what the procedure is in the British House of Commons regarding matters of defence, but I think it is more than likely that some members of the opposition, or possibly the leader of the opposition, are taken into the confidence of the government with regard to the country's defence.

Sir FREDERICK BORDEN. Hear, hear.

Mr. WORTHINGTON. Such, I believe, is not the case in this House, because, looking over the estimates I do not see any provision for matters of that kind. I think possibly the leader of the opposition, or a select committee of the House, is entitled to know these things, and know under what estimates these expenditures are made. That is a matter that I would suggest to the minister. I think it would be a very good plan if the leader of the opposition were taken into the counsel of the Minister of Militia and of the government on the question of imperial defence. In that way there will be no prying into the secrets of the country and matters which it would not be proper to discuss would be left alone by the opposition.

Sir FREDERICK BORDEN. I might say that on several ocasions in the House in former times—I remember one in particular during the South African War—I was asked a question as to the quantity of ammunition that was stored in different parts of Canada. It was not a desirable question to answer, but I said openly in the House that if the hon. gentleman, or any one whom the leader of the opposition might select, or the leader of the opposition himself—it was in the days of Sir Charles Tupper—would come to me I would be very glad indeed to tell him all about it, that I had perfect confidence in him, but that I did not think it was in the interest of the country to publish the fact. That can be done again.

Mr. WORTHINGTON. I do not know that we ourselves are the only people who are cognizant of our defences. I presume that some foreign countries know as much about them as we do and I judge so from this fact: This afternoon the hon. gentleman quoted Prof. Goldwin Smith with regard to some statement that he made. Reference was made to the fact in the 'Sunday Sun' which, I believe, is Prof. Goldwin Smith's paper, last year this paper criticised the action of the government in this particular and said that we might in time have the St. Lawrence bristling with guns. Perhaps some statement to the leader of the opposition from the Minister of Militia would save any controversy of this kind. The formation of this imperial general staff, I think, is a very good scheme indeed. I think it will lead to something which we have never had

either in the British army or in the colonial forces previous to this time. I think it will lead to the handling of large bodies of men by our colonial officers and even by our imperial commanders. In the Boer war some of the ablest British generals were very deficient in the handling of large bodies of men. In the account in what is called the German Official History of the Boer war, written by a Boer officer, I believe, and a very estimable book it is, full of criticism, but fair criticism, reference is made on more than one occasion to this lack of education on the part of British generals in the handling of large bodies of men at manoeuvres. In this country they can be carried out perhaps on a far better scale than in England and with an interchange of officers I think that system will be of very great benefit to the militia. The minister spoke, not of an army corps, but of a body of militia which would be raised for service abroad. There is one thing in connection with the service of any of our troops abroad which, I trust, the minister will take into consideration, and that is the fact that Canada's arm of defence is not the same as that of troops of the United Kingdom and the other colonies. It will be a very serious drawback if Canadian troops, serving with other imperial troops, are armed with different rifles, particularly if there is no interchangeability of parts. It will cause inconvenience at all times and will result in a great deal of trouble.

As regards the Dominion Rifle Association, or the Dominion Artillery Association, I think it will be very wise if the annual meetings of these bodies are devoted more to the discussion of our national armament and national defences. This will be far better than the usual eulogistic remarks that are made and the votes of thanks that are passed—not but that the votes of thanks are richly deserved, but, as I have said, I think the time can be much better spent in good, strong criticism of our defences and armament.

The minister spoke of a method of training in the schools. That is a most valuable method and one that seems to be growing in favour and showing very good results. I think that, possibly, something might be done to facilitate the formation of these cadet corps in the schools. As I understand it, at present it is necessary to the formation of a cadet corps in a high school that certain forms should be made out, by one of which the school commissioners bind themselves, their heirs and assigns for ever, to be responsible for all the arms and accoutrements issued to that school. School commissioners, as a rule, are business men selected by the ratepayers, and, generally speaking, they are not ready to sign documents of this kind, binding themselves and their heirs and assigns to be for ever responsible for these things. This has prevented cadet corps in many of our large schools from being properly formed.

As to the reduction in the estimates, the minister explained that, perhaps, not so many men as formerly would assemble in the camps, but that they would perhaps drill at headquarters, and some of the city corps might have their annual training at night in the way of drill and so on. I think it would be a good thing for the minister, if he wishes to economize, instead of spending money in transportation, to issue a larger supply of ammunition and let the men devote more time to target practice and to perfecting themselves in the use of the rifle. I think more time should be given to rifle shooting. I have known such instances as this: The Eastern Townships Cavalry corps, one of the very best cavalry bodies in Canada, has been sent for two succeeding years into camp at Laprairie, a place unsuitable for cavalry formation and without targets. The men have been there for two years without firing a single round of ammunition. It is necessary, of course, for a cavalryman to ride—all the more necessary if he has no ammunition, for it would be only by riding that he could keep out of the hands of the enemy.

The minister says that he hopes to be able in time to manufacture all the large guns used in Canada.

Sir FREDERICK BORDEN. I had in mind more particularly the 18-pounders.

Mr. WORTHINGTON. Even the manufacture of 18-pounders is a matter to be undertaken, if at all, only after very careful consideration. The minister told us that, in purchasing clothing, he went to the people who were adepts in that manufacture. I think the same should apply to the manufacture of artillery—it should apply even more strongly than in ordinary cases. The firms in England who are engaged in this manufacture, in Woolwich, Birmingham and other places, have been carrying on the manufacture for generations. Far more skill is needed for the manufacture of these implements of war than we can hope to acquire at least for many years to come. The establishment of factories for the manufacture of these larger guns would entail a great expense, and the manufacturers could not look forward to any market outside of Canada. Not much artillery would be required in Canada, and when this was turned out the factory would have nothing else to do. I do not think we are going to sell artillery and rifles and ammunition abroad.

Sir FREDERICK BORDEN. May I explain on that point? The hon. gentleman is pursuing an unnecessary line of argu-

ment. The people who manufacture guns here, if this plan is ever carried out, will be people who will do the same kind of business that they do in England—build ships. In England, the manufacture of guns is invariably carried on, so far as I know, by men who build not only warships, but ships of commercial purposes as well. And the particular concern—or concerns, for there is more than one—that are considering this question at this moment are people who intend to go into the business of building steel ships in Canada, and who, of course, will not establish a factory to make guns unless they engage in shipbuilding also.

Mr. WORTHINGTON. Perhaps it is necessary to follow this discussion now more particularly than later on. There is no similarity between the position here in Canada and that in Great Britain. In Great Britain these large arsenals are turning out guns not only for themselves and the colonies, but for the world at large. If Japan wants artillery, she does not make it at home.

Sir FREDERICK BORDEN. They had to begin some time. Japan is making her own ships at this moment, and her own guns as well.

Mr. WORTHINGTON. I did not know that this government intended to adopt a naval policy. Of course, if the government has adopted such a policy and is bound to help the empire——

Sir FREDERICK BORDEN. I said commercial ships.

Mr. WORTHINGTON. I do not know that that would be in the same line as the manufacture of arms.

Sir FREDERICK BORDEN. It would cover the manufacture of steel canal boats——

Mr. WORTHINGTON. And snowploughs, I fancy. I do not think that anybody will buy these guns except Canada. We cannot look to Great Britain for a market, for she does not even buy her canned goods for her army from us. I do not propose to detain the House longer. I suppose that these estimates will go through in any case with comparatively little discussion.

Mr. HUGHES. Inasmuch as I am to take the train in a short time, I wish now to say only a few words concerning a couple of matters that were not touched upon by the minister (Sir Frederick Borden)—with the promise that I will entertain the hon. gentleman a little longer on another occasion and will call his attention to certain derelictions of duty on the part of this government in relation to the training of the force. Speaking generally of the staff, I would take the liberty of suggesting to the minister and to the country that in addition to providing a general scheme for the defence of the empire, this general staff should look to the training of the officers throughout each component part of the empire in actual field work, and I presume that is the intention.

Sir FREDERICK BORDEN. Yes.

Mr. HUGHES. Moreover, I do not think that the training of the general staff should be left simply in the hands of a few selected officers in each country. In fact, it has been found in Britain that very many of the officers of the general staff, when brought into actual practice in the field, have turned out to be utter failures. As Lord Roberts himself has said in days gone by—possibly not in the exact words that I use, but in the same spirit—he had never yet had the experience of a staff-college training, and it had never been his privilege to meet many officers with the training of the staff-college who were the equal of many officers who had never seen a staff college. After all, it is a question of the man. In the staff-college officers, just as in the officers of the regiment, the district staff and the headquarters staff, it is a question of the training of officers. If some of the regiments going to camp are deficient, the responsibility for that is in the system for the training of officers that has been enforced in this country for many years. What have we to-day under our present system? Some only of the company officers and the regimental officers are qualified, while the men in the ranks are rarely qualified for officers' positions. The result is that there is no enthusiasm whatever. But in the olden times, when we had the system of training officers on the cadet principle, we had in the ranks of almost every company, one, two, three, four, and sometimes ten young men who carried in their pockets commissions entitling them to command the company or the regiment; so that when the commanding officer wished to select an ensign, that is, a second or a first lieutenant, he could look up and down his list of trained men and select the officer he required. How is it to-day? The officer who wants a second lieutenant says to himself: 'There is farmer Jones' son; he seems to be a pretty capable young man; I will try him.' That is the way the officers are selected, and the captain cannot possibly get these men to qualify. I would again impress on the minister, as I have done for about twenty years, the necessity of returning to the old system of cadet schools, under which education would be the basis of selection, and not the number of titles or stars a man wears. Let the men be turned out with an educational qualification, entitling them to command a company or to be the major or

the colonel of a regiment, and when they attain that position, let them have some training, and you will have enthusiasm in the force where to-day you have none. I am not blaming the minister for this state of things. I fought for a better system for many years before he became minister, and I am afraid I shall have to fight for many years yet before we get back to the old system. With regard to the question of drill in the schools, I would point out that in the British islands the lady teachers drill the boys and girls in military movements, and it is great discipline in the handling of the young students in their classes. As one charming quakeress said, when the English teachers were visiting this country last year: 'Why, we train them in military drill.' 'What, I said: 'A quakeress teaching military drill ?' 'We do not call it military drill,' she said, 'but it is military drill all the same, and we want them to be trained so as to be prepared to defend their country.' I will not enter into the question of the defence of the country further than to remark that in speaking of the army of defence, our good friend the hon. member for Sherbrooke (Mr. Worthington) said that it was necessary to have one arm of defence throughout the Empire; but the British army in South Africa had eleven different types of rifles, so that there is really nothing in that argument. Our army used the standard arm of Great Britain.

Mr. DANIEL. What were the eleven different types or brands of rifles?

Mr. HUGHES. Speaking from memory, there was the Snider rifle, the Martini——

Mr. DANIEL. By the imperial troops ?

Mr. HUGHES. Yes, some of the British troops used the Martini. Then there were the Lee-Enfield, and the Lee-Metford, very few of the marks being interchangeable in these, the long Lee-Enfield, the short carbine, the Martini-Metford—

Mr. WORTHINGTON. Does my hon. friend think it is advisable that there should be a great variety of guns in an army?

Mr. HUGHES. No, I think it would be advisable that the army of the whole empire should be, as it will be in another year or two, armed with the Ross Rifle. With regard to the manufacture of material for war in Canada, I hold that in a very few years we shall have a full partnership union of Great Britain and her colonies, with our Right Hon. friend the Prime Minister of this country one of the shining lights in the full partnership council.

Mr. FOSTER. What kind of a gun will he have?

Mr. HUGHES. The musket he shouldered on the Saskatchewan.

Mr. FOSTER. He hadn't it then.

Mr. HUGHES. The musket he wanted to shoulder. But he has apologized for his misdeeds of that day by saying that every schoolboy in Canada should be trained to handle a rifle and to shoot. Why should not Canada have, at some point on the Atlantic and at some point on the Pacific, establishments where we could manufacture our own guns in case of trouble? At the time of the siege of Kimberley, the mere fact that the British in Kimberley had officers capable of turning out a big gun was of great advantage to the British in preventing the surrender of that place. I do not believe that the city of Quebec should be selected as a centre for manufacturing our ammunition and rifles. Some inland point should have been selected—some inland point on the Pacific and another on the Atlantic. At these points we should have establishments which could turn out good field guns, rifles, and ammunition in case we should be cut off by war from the mother land.

I intended speaking on the cadet corps and the training of the young throughout our country, but shall reserve my remarks for another occasion. But I would urge on the minister a reform in the training of officers. Just see the contrast between the civil training and military training. Two young men from the same family go down to the city of Toronto. One goes through the university, where he is treated as a responsible individual and comes out with a degree which fits him for any walk in life. The other is a private in some company and he goes into a barracks, where he is treated as a child and comes out with a sergeant's certificate. Later on he has to go back and qualify for a lieutenancy, and then go back again to qualify for a major, and then qualify again to take command. But his brother, who is a provisional officer, goes down and qualifies at once for a lieutenancy. But these young men, whether privates or officers, ought to don the cadet uniform and be put on an equal footing. They should go through the same training and let the best man in educational fitness come out ahead as in the old days, when all had to graduate as cadets.

Reference has been made by the minister and the hon. member for Sherbrooke to the sea coast defences of the nation. But to my mind, train the young men of the country in the use of the rifle and provide two quick firing guns for every company, and I care not how many millions across the border. If we have 100,000 young Canadians trained to hit a man 500 yards off with a rifle, we need not fear any

enemy. If the boys of Canada are trained to shoot with the rifle and the quick firing gun, we need fear no danger. The records show that scarcely any men are killed by artillery or big guns. The moral effect may be great, but there is scarcely a man hit by one of them. In all Africa but two hundred men at the outside were hit by shells on either side. Yet we find hundreds of thousands of dollars spent on these heavy armaments and very little spent on the smaller and more effective weapons. Even if you examine the records of the Russo-Japanese war, you will find that the greater majority of wounded and killed fell victims to the small arms and not to the shell-firing at all.

I shall reserve any further remarks for another occasion.

Mr. DANIEL. I listened with great interest to the remarks of the minister, who went over the whole subject pretty thoroughly. In my opinion the most important feature of his policy is that of assisting the boys and girls in our schools by giving them more physical drill in the first place, and afterwards by teaching the boys how to handle the rifle. If the minister will carry out that policy, he will in a few years have achieved the great desideratum which Lord Roberts is trying to obtain in England. He will have at his hand a trained body of young men ready to follow the standard if necessary and who have been trained in the use of the rifle and are able to shoot straight. And after all, in a country of such magnificent distances as Canada, and with such a sparse population, the most we can do is to have our young men so trained that if the call to arms is sounded they can take their places in the ranks and be something better than mere recruits. I think that is the very best thing the minister has offered us in his speech. Some very sensitive people make the objection that this would encourage militarism in the country and that our young people, who were drilled in the schools and taught to handle the rifle, would not feel content unless they went into active service, and if they could not find active service at home would find it elsewhere. I do not think there is anything in that objection. This matter of drilling in the schools is an old one on the other side of the Atlantic. When I was a boy, I was drilled twice a week for several years, and I do not think that inclined me to militarism to any great extent; and I am very glad there is a prospect of that system being taken up in all the provinces because it will furnish us a foundation for an army in the cheapest and most satisfactory way we can hope to get it.

As regards the question of rifles, I am inclined to believe it would be certainly a great advantage if all the imperial troops had the same rifle. Next to that is the advantage of having a rifle in all the parts of the empire which will at all events take the same size cartridge, so that the ammunition which serves for one will do for the other.

Sir FREDERICK BORDEN. Hear, hear.

Mr. CAMPBELL. As suggestions are filling the air, I shall not feel out of place in making a few remarks. In the west almost every young farmer and rancher has a horse, and a very inexpensive way to have a corps established would be to form one of scouts in every locality; and we know that scouts and mounted infantry have proved most useful on every occasion when fighting men were called for. The establishment of these corps would be a matter of very little expense as the farmers' sons would provide their own horses, and all the government need do would be to furnish the arms and equipment and perhaps a fortnight's drill every year. If that was done, year by year a certain esprit de corps would develop between the different companies and you would have at all times in the west a fighting force of the very best young blood in those provinces. Horses would be provided by the men, trained as all those western horses are to stand gun fire, to stand at command, not requiring to be tied. Such a force would be a very valuable asset to Canada in the case of any war or necessity for their use arising. If there is no vestige of necessity for the use of any kind of corps, why then this talk is idle, but if there is a possibility of necessity I would advocate strongly that the young men of the west should, in the way I suggest, be organized into corps of scouts or irregular cavalry or mounted infantry just as it thought best. They would provide their own clothes and horses and all that the government would have to find would be a couple of weeks' instruction each year and the arms and ammunition.

Mr. BARNARD. Perhaps the minister might on this occasion answer certain questions with reference to the garrison at Esquimalt, which I put upon the Order Paper some weeks ago the formal answers to which were, I was going to say, of a more than evasive character. I quite understand that there are certain questions in connection with militia matters to which it is not desirable to give too much publicity, but I do not think the questions I then asked were of that character. If they are I would have much preferred that the minister should have told me so straight out rather than have given me the evasive answers which he did. The first question at column 365 of 'Hansard' was :

1. Did the government use its influence, as provided for in article 9 of the terms of union with British Columbia, in any way to

secure the continued maintenance by the imperial government of the naval station at Esquimalt, either before, after, or at the time the said naval station was abandoned?

I suppose the minister is aware that article 9 of the terms of union expressly provides that the Dominion government will at all times endeavour and use its influence to the utmost to the end that the naval station at Esquimalt shall be maintained by the imperial authorities. If the hon. minister will tell me that the reply given is an answer to the question I shall try to see just what it means. The answer was:

Negotiations are in progress with the imperial government for the transfer of the naval station at Esquimalt to the Canadian government.

The question, it will be noted, is: Did the government use its influence to do a certain thing. The answer is: The government is now negotiating for something else altogether. I would like the minister to give an answer to that if he can.

Sir FREDERICK BORDEN. I certainly did not intend any discourtesy towards my hon. friend, and I must confess that I did not, until this moment, quite apprehend what his meaning was. Neither did I look up that particular provision of the Act of Confederation to which he refers. But I may tell him that having offered to take over Halifax and Esquimalt and having been informed in no doubtful way that the British authorities would be very glad indeed to accede to any offer, it would appear to be rather inconsistent if at the same time we should bring argument to bear upon the imperial authorities to continue that which we had offered to take over. That is so far as we are concerned. I suppose possibly my hon. friend may mean with reference to the ships and not to the garrison. I was answering really the part which pertains to the Militia Department and probably the hon. gentleman ought to have been answered by the Department of Marine and Fisheies.

Mr. BARNARD. It was answered by the Department of Marine and Fisheries.

Sir FREDERICK BORDEN. Oh. I misunderstood the question. I may say this much, that it has transpired since the government took over Halifax and Esquimalt that the British admiralty, before we made the offer, had deliberately adopted the policy, although we were not aware of the fact, of practically abandoning Esquimalt as a naval station. They may change their minds, but I am not aware that any effort was made to influence the judgment of the admiralty or the imperial government as to that matter and I do not know that it would have been a proper thing to do.

Mr. BARNARD. I may take it then, I understand, that the Dominion government did not use its influence in any way with the imperial government to get the imperial government to continue to maintain a naval station at Esquimalt?

Sir FREDERICK BORDEN. I am not aware that it did.

Mr. BARNARD. The hon. gentleman is the Minister of Militia and Defence, and I take it that this would be a matter of which he would be aware if there was any discussion on the subject.

Sir FREDERICK BORDEN. I probably would, but that particular matter is under the control of the Department of Marine and Fisheries.

Mr. BARNARD. It was not at that time, was it?

Sir FREDERICK BORDEN. Yes.

Mr. BARNARD. When Esquimalt was taken over?

Sir FREDERICK BORDEN. Yes, the garrisons were taken over by the Militia Department both at Halifax and Esquimalt. The Militia Department has nothing to do with the dockyards or anything pertaining to the ships.

Mr BARNARD. I may take it that so far as the minister is aware—and being Minister of Militia and Defence he would be aware—no attempt was made on the part of this government to in any way influence the imperial government in connection with the matter?

Sir FREDERICK BORDEN. I do not think the hon. gentleman should cross-question me; I have told him all I know about it.

Mr. BARNARD. I asked another question which is to be found at column 495 of 'Hansard.' It was answered by the Minister of Militia on the 3rd of February. I asked:

1. Has any expenditure in connection with the naval station at Esquimalt been authorized by the government of Canada, or to the knowledge of the government of Canada, by the imperial government? If so, to what amount, and for what purpose?

The hon. gentleman answered that question by saying it was confidential and could not be disclosed. I would be quite content to accept that answer, but curiously enough the Minister of Marine and Fisheries also answered that question and he said 'No.' It leaves the matter in a somewhat unsatisfatory state. I would like to know if the minister could throw some light on that situation?

Sir FREDERICK BORDEN. I will say to my hon. friend at once that I will look into the matter again, and I shall be glad

to tell him. I presume that question was furnished to me by some officer in my department; I did not write the answer myself, but I presume the answer was in accordance with the facts. However, I will look into the thing again and speak to my hon. friend privately about it. There is nothing to conceal from him.

Mr. BARNARD. I thank the hon. gentleman for his courtesy. But there was another question:

How many guns were left by the imperial authorities at Esquimalt when the imperial troops were withdrawn from British Columbia?

The answer the minister gave was:

The same number of guns as were left at Esquimalt by the British government are, however, still there.

That hardly strikes me as being an answer which conveys much information.

Sir FREDERICK BORDEN. No guns have been taken away, I am sure of that. I remember now that I discussed that question with an officer of the department, and he said that it was not desirable to tell how many guns there are at Esquimalt. But I will be ready to tell my hon. friend privately.

Mr. BARNARD. If the hon. gentleman had made that answer at the time, I would have had nothing further to say on the subject. But it looked so much like an evasive answer that I thought I was entitled either to a refusal or a little more information. Then I asked another question:

Is the government aware that one or more of said guns are said to have been left lying unprotected from the weather for months beside the public highway leading from Victoria to Esquimalt?

The answer of the minister was as follows:

The guns are where they were placed by the imperial troops. Their future disposition has been arranged with the full concurrence of the imperial war office.

Sir FREDERICK BORDEN. We know the gun was exactly where it was placed by the imperial authorities. It is true that this government has been in correspondence with the imperial authorities as to what should be done with the gun. I am willing to tell my hon. friend privately what is to be done. I know what is to be done with the gun, but I do not think I should state it here. The gun has received no injury whatever where it has been lying.

Mr. BARNARD. I do not profess to be an expert on gunnery; but I have heard some people who do know something about it, say that it was a gun that cost a good deal of money, and I should not think it would do the gun any good to lie there. I saw it myself lying beside the road without any covering, from some time in the summer until through the winter.

Sir FREDERICK BORDEN. We have guns in ships that are exposed to rain and bad weather. I understand these guns are covered with some preparation which protects them. I do not think the gun is suffering any damage.

Mr. BARNARD. I should not think it would do the gun any good to lie in the ditch nine or ten months during the winter season, without any protection whatever.

Mr. J. D. TAYLOR. Is it not a fact that two guns have been removed from where they were left by the imperial authorities to the drill hall at Victoria?

Sir FREDERICK BORDEN. Quite recently, for instructional purposes.

Mr. J. D. TAYLOR. That was about eighteen months ago. Could the minister tell us what was the cost of removing those guns?

Sir FREDERICK BORDEN. I am told $1,200.

Mr. J. D. TAYLOR. I desire to call the attention of the committee to this fact, that when two guns, one twelve inch and the other six inch, had to be removed a few miles from the Esquimalt fortifications to the drill hall at Victoria, although we maintain at those fortifications a regular corps of Canadian artillery, with all the men and all the equipment necessary to handle guns, except horses to draw them, when two of these guns are transferred to the Victoria drill hall for the purposes of instructing the local artillery, a bill of $1,200 is incurred for their removal. Now it seems to me that is an expense which should not have been incurred. I think if we have an efficient brigade or company of garrison artillery at Victoria, that brigade could be employed in moving a twelve-inch and a six-inch gun at a less cost than $1,200. In fact with what little knowledge I have of artillery, it seems to me that about two days' work of a few men and two teams of horses should be all that was required to transfer these guns from the point whence they were taken to the drill hall at Victoria. This battery at Esquimalt, if it is an efficient battery, must have men and material to handle those guns, and to sling them on to any carriage fit to convey them to the drill hall. We should have some explanation of so extraordinary a charge.

Sir FREDERICK BORDEN. The question is unexpected. On the supplementary estimates I will have a statement prepared, and

show exactly how the expense was incurred. and why it was not done in some other way.

Mr. TALBOT. Will the hon. member for New Westminster (Mr. Taylor) tell me if I understood him rightly to say that two teams of horses could have hauled those guns?

Mr. J. D. TAYLOR. When I said two teams of horses—a team is a very elastic expression—I meant the number of horses which in ordinary course you would attach to a gun carriage drawing these guns.

Mr. TALBOT. Does the hon. gentleman think that the two best teams of horses in Canada could haul a twelve inch gun?

Mr. J. D. TAYLOR. As I said, I meant the number of horses which one commonly attaches to a gun carriage.

Mr. TALBOT. Probably the hon. gentleman meant a locomotive.

Mr. J. D. TAYLOR. The hon. gentleman I think has some connection with the militia. I have been out of the militia for a few years, but when I was in the militia we did not depend on locomotives to haul our guns, but upon the good sturdy men we had in those days.

Mr. TALBOT. I do not believe you had any twelve-inch guns then.

Mr. J. D. TAYLOR. I would like to revert to what brought me up originally, and that was the statement of the minister made in answer to another hon. member, that none of those guns had been moved. Now, I do not live at Victoria or at Esquimalt, and have not seen those guns, yet it was known to me that two of them had been removed at considerable expense, and I want to know how it is that no officer of the Militia Department was aware that a single one of those guns had been moved. And if two have been moved, how many more have been moved? The question was asked as to how many guns are there to-day. We are entitled to know more about this and to find out what has become of the other guns.

Mr. FOSTER. This is another case of Bill Miner.

Mr. BARNARD. Could the minister tell us how long it was before these guns were moved that the officers of the 5th Regiment, Canadian Artillery, resigned in a body because they could not get proper appliances for drilling? It was so stated in the Victoria press at the time. It may only be gossip, but the story is that the command was offered down the line until the last subaltern was reached and even he would not continue in the regiment. Can the minister give us any light upon the subject?

Sir FREDERICK BORDEN. I am afraid not, but I can get the information.

Mr. BARNARD. Would the minister know if such were the case?

Sir FREDERICK BORDEN. I might have heard it, but I do not remember. I know there was a difficulty but I do not think it was anything so extreme as has been pointed out. As a matter of fact the commanding officer did not resign as far as I know.

Mr. BARNARD. No, he did not resign after the guns were sent. I should imagine that the matter would be present to the mind of the minister owing to the fact that protests from the officers of the regiment were coming into the department for two or three years before the matter was finally settled.

Mr. WORTHINGTON. I think I remember that a question was put on the Order Paper by myself at the time at the suggestion of some one in British Columbia, and I received the answer that nothing was known about the matter at all at headquarters. If that is the case, I think the minister has had ample time to look into it.

Sir FREDERICK BORDEN. I will look into it and give the answer. I know there was a difficulty, but I did not know it was so serious as my hon friend points out. Certainly the commanding officer did not resign.

Mr. BARNARD. Because these very guns that my hon. friend from New Westminster (Mr. Taylor) speaks of were sent to the drill shed for the purpose of drilling. Upon cursorily glancing through the report and the memorandum which have been distributed I find, in two or three places, a reference to the fact that the large increase in expenditure was necessitated by the garrisoning of Halifax and Esquimalt. I find that the total cost of the maintenance of the permanent corps at Halifax for the last fiscal year was $761,000 in round numbers, and at Esquimalt $103,000, making a total of $864,138. The total increase for the maintenance of the permanent corps for 1907-8 was $923,700—about $50,000 more than the total cost of the two stations of Halifax and Esquimalt combined. It is also stated in the memorandum accompanying the estimates that it was necessary to increase the officers and men of the permanent corps by about 1,500, and that to carry out the duties imposed by reason of the taking over of the two garrisons of Halifax and Esquimalt required a total of 3,311 men. I take it that it did not cost any more to keep the original 1,500 during the year 1907-8 than it previously did; that is to say that the taking over of the two garrisons of Esquimalt and Halifax would not make any difference as regards the first 1,500, so that if you cut

Sir FREDERICK BORDEN.

the total expenditure in two for the maintenance of Esquimalt and Halifax you will then find that you have about $432,000 of additional expenditure, while the increase for maintenance is $923,000, which makes a difference of something over $500,000. That is a subject on which the minister might give us some information.

Sir FREDERICK BORDEN. Would it not be better to proceed with the items? These are items of actual expenditure in regard to which comparisons can be made by reference to the Auditor General's Report. I shall endeavour to give all the information as far as I can.

Mr. BARNARD. It seems that this is the proper time to raise the question because the vote is a very general one, being for munitions of war.

Sir FREDERICK BORDEN. No, it is item 5, page 8—salaries.

Mr. DEPUTY SPEAKER. The minister, with the consent of the committee, made a general statement and the discussion was general without any item having been called. At the close of the discussion it was intended to call the first item.

Mr. ROBB. So far the debate seems to have been confined to hon. gentlemen on both sides of the House who are in favour of the expansion of the military system in Canada. I feel I would be an unworthy representative of my constituency if I did not take advantage of this occasion to say that the people in the county I represent look with considerable disfavour upon any system which will tend to create and encourage in Canada what may be known as a military aristocracy. Now sir, this view possibly has been encouraged by the fact that for some reason or other the battalions from that part of the country had not been completed, with the result that when they arrived in Montreal they recruited them very largely from the wharf rats there. The military drill has been looked on as a sort of a joke. Possibly this is very largely due to the prevalence at the annual camps of the canteen. I submit to the Minister of Militia that the first thing necessary to encourage young men and especially farmers' sons to identify themselves with the militia, is to abolish the canteen at the drills because no mother who has a respect for her son, will permit that boy to go to the annual drills when she knows that the most he will learn will be to smoke cigarettes, drink whisky and mingle with the worst elements in the community. I offer this suggestion in no spirit of criticism of the estimates because it seems that the committee is unanimous in adopting the military policy as outlined by the minister. But I feel it is my duty, as a representative of the people of that part of the country, to point out to the minister one of the great obstacles to the encouragement of the right class of young men, the bone and sinew of the country, to attend the annual camps.

Sir FREDERICK BORDEN. I agree with most of what my hon. friend (Mr. Robb) has said. I think that the fact that captains are not as careful as they should be in the selection of men to take into camp has done the militia a great deal of harm, and that very often the fact that notorious characters are known to be included in these companies has prevented the enlistment of more worthy young men, such as my hon. friend refers to, farmers' sons. I think a good deal of amendment has taken place in that regard, but there is room for more. With regard to the canteen, we have been doing what we can to prevent that nuisance. The regulations are of the strongest kind. In some of the camps, at any rate, the officers are honestly endeavouring to carry out these regulations, but my hon. friend knows how difficult it is to control the sale of liquor. Liquor is brought in though it is against the law to sell it in the canteen. It seems impossible to exclude it. I hope that in all, and I certainly know that in many, of the camps, all measures possible are being taken to prevent the sale of intoxicating liquors.

Salaries, $111,690.

Mr. FOSTER. I see that the minister has brought in 47 from the outside service. Will he give us the names of these, with their duties and salaries?

Sir FREDERICK BORDEN. The list I have shows that there were 47 in the temporary and 49 in the permanent list, making a total of 96.

Mr. FOSTER. You have, for instance, three in subdivision B of the first division. Who are these?

Sir FREDERICK BORDEN. Col. Hurdman is the first one I come to. He was in the outside service, an inspector of gun carriages, &c. He was paid out of capital account voted for supplies of that kind. His salary was $2,400, and he is now at $2,500.

Mr. FOSTER. Was his salary raised before he was taken into the inside service?

Sir FREDERICK BORDEN. No. The next is J. W. Caldwell, who was paid out of the vote for salaries and wages. He is an inspector. The sum required for his salary will be $2,350. He was for years paid $2,250. The next is James Robertson, who died recently, and whose salary was $2,250. That vacancy has not been filled.

Mr. FOSTER. You have twelve in the second division, subdivision B. Who are they?

Sir FREDERICK BORDEN. Lt.-Col. Brown, inspector of saddlery and leather goods, whose salary was $1,500 and who was paid out of the same vote as Col. Hurdman. He is now to receive $1,600.

Mr. WORTHINGTON. Are these two officers receiving a percentage in addition to their salaries?

Sir FREDERICK BORDEN. No.

Mr. FOSTER. Lt.-Col. Brown was not increased in salary before being brought in?

Sir FREDERICK BORDEN. No. The next is George F. Davidson, paid out of 'Salaries and Wages,' ledger keeper in the accountant's branch. His salary is $1,550—no increase. In the Military Surveys, there are four: J. E. Brown, $1,300, increased to $1,350, but no increase before coming in; M. F. Phelan, $1,250, statutory increase to $1,300; A. H. Cranston, $1,200, statutory increase to $1,250. These are R. M. C. graduates. L. H. Sitwell is the next—$1,100, no increase before coming in, but his salary next year will be $1,150; G. A. Blouin, engineer service, $1,200, no increase before coming in, but salary to be $1,250, a draughtsman; D. Barry, $1,200, no increase: W. L. McLaren, $1,200, no increase; E. P M. White, clerk in the deputy Adjutant General's branch, $1,200, no increase; Wm Moeser, $1,050, no increase; R. W. Kinsman. $1,050, no increase.

Mr. FOSTER. None of these received an increase within six months before?

Sir FREDERICK BORDEN. No .

Mr. FOSTER. And is that true with reference to the rest of these 47 who were brought in from outside?

Sir FREDERICK BORDEN. Yes.

Mr. FOSTER. What increases are there in the permanent force?

Sir FREDERICK BORDEN. There are none this year except the statutory increases.

Department of Militia and Defence—contingencies, $10,000.

Sir FREDERICK BORDEN. There is a reduction in this item of $2,000, due to the fact that we were formerly paying out of it some clerks, and are not doing so now.

Militia and Defence—chargeable to capital —for purchase of ordnance, arms, lands for military purposes, reserve stores of clothing, equipment, &c., and to pay for construction of new rifle ranges, $1,300,000.

Mr. DANIEL. Was the whole of last year's appropriation spent?

Sir FREDERICK BORDEN. Yes, within $2,000.

Mr. DANIEL. How much of this appropriation is expected to be spent in ordnance?

Sir FREDERICK BORDEN. We have been spending for ordnance about $350,000 or $400,000, and for rifles, if the 10,000 contracted for are delivered, $250,000. The rest of the vote is for clothing, saddlery and some other things, and for rifle ranges and some land for rifle ranges.

Mr. DANIEL. Is the ordnance field guns or stationary guns?

Sir FREDERICK BORDEN. Mostly 18-pounders.

Mr. WORTHINGTON. Is that the new gun being adopted for field artillery?

Sir FREDERICK BORDEN. Yes, that is the gun adopted in England—the best gun in the world.

Mr. R. L. BORDEN. Is that the gun that was in evidence at Quebec?

Sir FREDERICK BORDEN. No. That was the 4·7 gun. This is a much lighter gun, a quick-firing breech-loading gun. It is easily moved from place to place, while the 4·7 gun could not be so readily moved.

Mr. DANIEL. Are the horse artillery as well as the field artillery armed with the 18-pounder?

Sir FREDERICK BORDEN. I think they are here. I think that in England they are armed with a somewhat lighter gun.

Mr. FOSTER. What is the cost of the 18-pounder?

Sir FREDERICK BORDEN. Nearly $5,000, with the limbers and everything connected with it.

Mr. EDWARDS. I would like to ask the minister if he is prepared to say how much land he thinks the government will require in the neighbourhood of Kingston for the rifle ranges, in addition to what they have already acquired?

Sir FREDERICK BORDEN. The survey is being made at this moment, and I shall be able to tell the hon. gentleman in a few days.

Mr. EDWARDS. Has a value been placed on the land by any person appointed by the government for that purpose?

Sir FREDERICK BORDEN. Yes. I think I showed my hon. friend a valuation that had been made the other day. I think it was $40 an acre.

Mr. EDWARDS. I am aware that that offer was made, but it was made with these words inserted in the letter sent by the department: '$40, without prejudice.' I suppose that means that it is not a definite offer?

Sir FREDERICK BORDEN. It is a definite offer; but those words mean that if the gentleman who owns the land chooses to take $40 an acre, we are prepared to pay that, but if he does not, and we have to expropriate, then we will go into court and perhaps get it for $20.

Mr. EDWARDS. What is the name of the gentleman who put the valuation on this land for the government?

Sir FREDERICK BORDEN. Mr. Mihel of Toronto. He is a gentleman connected with one of the loan companies, whom we employ to value for us in different parts of Ontario.

Mr. EDWARDS. I want to call the attention of the minister to another matter. By expropriating the land in the vicinity of Kingston, the government have taken it away from the township, and have thereby thrown a greater burden on the farmers of that township. That land contributed its share of the taxes towards the maintenance of the road running through their property, a main road running into Kingston. The government now owns the land on each side of that road, and I think it is only fair and right that they should do something to help to maintain it. I am led to take that view because of the fact that in the case of other government property—for instance, the property owned by the government in connection with Kingston penitentiary—although it is only on one side of the road, that road is maintained entirely by the government. The people of the township of Pittsburg, which is adjacent to Barriefield, feel that it is a hardship to them to be asked to maintain that road entirely, as it is used greatly for military purposes, especially at the time of the annual camp. It is therefore an advantage to the department to have this road in good shape. I would also call attention to the fact that the board walk, to the repairing of which I believe the government did contribute at one time, is used a great deal by the soldiery, not only those at the fort, but those at the camp, and I would ask the government to contribute something towards maintaining that board walk if not maintaining it entirely. My own opinion is that the government should maintain it entirely.

Sir FREDERICK BORDEN. I agree with the reasonableness of the observations of my hon. friend. I cannot say to what extent we will go. I would require to have a report, but I entirely agree that we should contribute to the full extent of our share in using the road and our ownership on either side.

Mr. G. V. WHITE. I notice in the report of the Militia Council that, commenting on the Petewawa camp site, it refers to the fact that a few property-holders still require to be bought out, and in ten instances the department may be obliged to resort to expropriation as the owners refuse to come to reasonable terms although the department has tried in every way to meet their wishes.

The hon. minister will remember that a few weeks ago I brought to his attention the case of a resident of the township of Petewawa, Mr. Gustave Prange, who owns lots 5 and 6, consession 12. Mr. Prange informed me that the arbitrators, who were sent by the government some time ago to look into the valuation of these lands, had reported on this property and that the price set by them was in advance of that offered him by the government.

Sir FREDERICK BORDEN. I think he is mistaken.

Mr. G. V. WHITE. I would like to know in these ten instances what were the prices set by the arbitrators and those offered by the government.

Sir FREDERICK BORDEN. I will be glad to bring the whole case down to my hon. friend if he would like to read it. We have had a great deal of trouble and have done our best

Mr. J. D. TAYLOR. Does this item include the cost of the Ross rifles produced during the year?

Sir FREDERICK BORDEN. Yes.

Mr. J. D. TAYLOR. They are charged to capital account?

Sir FREDERICK BORDEN. Yes.

Mr. J. D. TAYLOR. What becomes of the rifles replaced by the Ross rifles—the Lee-Enfields? Is no value attached to them?

Sir FREDERICK BORDEN. They are still being used. Owing to the fact that the Ross rifle has not been fitted with a bayonet, the Lee-Enfield has been used very largely. But in the last camp the Ross rifle was used exclusively for target purposes.

Mr. J. D. TAYOR. The Lee-Enfields when called in will not then be so much junk but will be available for use?

Sir FREDERICK BORDEN. Certainly.

Mr. J. D. TAYLOR. We are heaping up a very large capital account for rifles. When the Snider rifles were retired, no doubt we charged to capital account what we spent on the Martinis. When these were retired, we charged the Lee-Enfields to capital account.

Sir FREDERICK BORDEN. There never was a dollar charged to capital account on account of the militia until 1895-6, when the first Lee-Enfield were purchased. Before

that the rifles were given us by the British government.

Mr. J. D. TAYLOR. When we replaced the Martinis, the cost of replacing them was charged to capital ?

Sir FREDERICK BORDEN. Yes.

Mr. J. D. TAYLOR. And now that we are replacing the Lee-Enfield with the Ross Rifle, we are charging that to capital?

Sir FREDERICK BORDEN. In the other case, the rifle which was displaced was obsolete, but the Lee-Enfield is not. It is fit for service and will be kept in store, and we require a great many more rifles than are in actual use. Suppose our militia numbers 57,000, we should have 57,000 rifles all told; but in the event of any trouble our idea has been to have a force on the first line of 100,000 and we must have the balance of those rifles and should have a great many more. It will be a good many years before we will have anything like the number of rifles we require, as we require them for the clubs and schools.

Annual drill, $860,000.

Mr. ARTHURS. Representing one of those countries in which the local militia are at a great distance from the annual camp, I would like the minister to explain how he proposes to have rifle practice carried on when we have no target or ranges. Or will there be a special appropriation for that purpose?

Sir FREDERICK BORDEN. In some communities, for instance, in the county in which I live, it is easy to extemporize a rifle range because there is a range of mountains running through the country and you can get a range withou difficulty free from danger. On the other hand we sometimes use gallery ammunition so that we can get a very good practice at a very short range.

Mr. ARTHURS. Is there any intention of having such arrangements made? For instance, if our battalion, the 23rd, were exercised or had their annual drill at the headquarters such a range might very easily be provided. I believe also it would be a good idea in these rural battalions to issue a certain amount of ammunition to each man irrespective of the annual drill at the camps. Sometimes at Niagara we find men who are known to be good shots but will have great difficulty in qualifying for the additional pay mentioned by the minister, largely owing to the fact that the rifle was inferior or incorrectly sighted, and these men had not a fair opportunity of testing the rifle before going into camp.

Sir FREDERICK BORDEN. These are all practical suggestions. I shall have this matter looked into, but I cannot say whether that regiment will train at regimental headquarters or not.

Mr. EDWARDS. Coming from Kingston, where it is customary to have an annual drill, I wish to express my appreciation of the minister's words of a few minutes ago in regard to controlling the sale of intoxicating liquors at the camps. I think his utterance should receive the approval of every member of the House and I am sure he will receive the endorsation of every person in this country if he takes the most rigorous means possible to put down drinking at these annual camps.

Sir FREDERICK BORDEN. I will do my best.

Mr. EDWARDS. I visited the camp at Kingston last year several times, and I say with regret that the exhibition there, even on Sunday afternoons, of drunkenness, fighting and brawling, was an absolute disgrace to the country. It seems to me that the soldiers, for we have thousands of soldiers there, ought to be able to control that situation.

Sir FREDERICK BORDEN. Hear, hear.

Mr. EDWARDS. If we call out to camp every year men or boys to make soldiers of them, and if they have not grit enough and stamina enough to control the camp grounds and get the upper hand of men who are disposing of liquor, I do not think they would be of much use if it came to actual service in time of war. What I and others saw there at the camp at Kingston last year was a reproach to this country, and I do not think we could do better than follow the example of that great soldier, Lord Roberts, who, I believe, is a cold water soldier. I am sure the people of Canada will back up the Minister of Militia in taking the most strenuous measures possible to put a stop to that sort of thing for all time to come, for I assure you again that the condition of things at Kingston last year was an absolute disgrace.

Sir FREDERICK BORDEN. I am very sorry to hear that but I am glad indeed that the hon. gentleman has made the statement, and I shall bring it to the notice of the Adjutant General, because I cannot help thinking that if the officers in charge of those camps are in earnest and mean business they can control this evil. I have been at the camp at Niagara on several occasions, and I never saw anything of the kind. Last year I attended several camps. At the camp in my own county I do not think there was anything of the kind, although years ago, at the Aldershot camp, there was a great deal

of it. I am more and more convinced that it depends on the officer in charge. If the officer winks at violations of the law there will be violations of the law. If he is sincere in his attempt to enforce the law, the law will, perhaps, not fully but very largely be enforced, certainly to the extent of preventing disgraceful scenes such as the hon. gentleman has referred to.

Mr. EDWARDS. I entirely agree with what the Minister of Militia has said, that the officers should be held responsible, and I believe he will be held responsible in this matter, and should be given to understand that those in authority over them expect them to exercise jurisdiction over the camp and keep these people within bounds.

Sir FREDERICK BORDEN. That has been done over and over again.

Mr. EDWARDS. Any amount of liquor was disposed of, not merely given away, but sold. Proof of that is to be found in the fact that several persons were called before the magistrate, convicted and fined and their fines were paid. I know from my own observation that it was carried on last year in Kingston to a greater extent than I had ever seen it in any camp held there.

Sir FREDERICK BORDEN. There is no excuse for that, for in this very matter of the efficiency pay nothing is given to any soldier who improperly conducts himself either by drinking or in any other way, and this provision has had a wonderful restraining influence. I would like very much to know how many men in camp at Kingston received their efficiency pay and how many cases of this kind were reported. I shall see that inquiry is made into the matter, because it is simply scandalous that such a condition of things should exist.

Contingencies, $25,000.

Mr. EDWARDS. I notice on page 52 of the estimates an item for contingencies, miscellaneous and unforeseen expenses, including entertaining allowances. What does that mean?

Sir FREDERICK BORDEN. For the entertainment of visiting officers. For instance, there are frequent visits of foreign naval officers at Halifax, and sometimes at Esquimalt and Ottawa, and it is not fair to ask the resident officer, whose pay is not very large, to bear the expense of entertaining the visitor out of his own pocket. In Halifax, as I know, this is a considerable tax upon officers.

Gratuities, $2,500.

Mr. J. D. REID. Has the minister ever taken the case of Private Molloy, who lost his eyes, into consideration?

Sir FREDERICK BORDEN. My hon. friend will be glad to know that the Patriotic Fund Association are taking that matter up now, and there will be a meeting next week in reference to it. The hon. gentleman will probably remember that the Act of incorporation of that Association was amended here a year ago in such a way that the members of the Association could vote by letter. The matter has been submitted to them, and I believe resulted in a tie. I think Sir Sanford Fleming is in hopes that at the meeting now coming on it will be decided to give a certain amount of the fund to Trooper Molloy.

Mr. J. D. REID. Is he likely to get a pension?

Sir FREDERICK BORDEN. That is my expectation.

Mr. J. D. REID. The minister knows that his case deserves the consideration of the government almost more than any other.

Sir FREDERICK BORDEN. So far as I am concerned, I voted for it, and will do so again, and I hope he will get it.

Maintenance of military properties, $75,000.

Mr. EDWARDS. I think this is the item under which would come the money paid each year for the use of the Cataraqui bridge. Am I right in saying that the annual amount paid by the government for the use of that bridge is $1,400?

Sir FREDERICK BORDEN. Yes.

Mr. EDWARDS. Now, I have it on pretty good authority that that bridge is at present of very little use. It is a wooden structure erected many years ago, and would be incapable of supporting the passage of heavy ordnance. I believe that no attempt will be made to take heavy cannon across that bridge, because it would not bear the strain; I think it would be liable to break down. Yet we are paying some $1,400 a year in rent for the use of that bridge. I want to suggest to the minister the construction of a new bridge from Barriefield across to Kingston.

Sir FREDERICK BORDEN. Now it is getting interesting.

Mr. EDWARDS. It is an interesting subject to many people in that locality. Suppose you were to capitalize the annual amount you pay in rent it would represent a sum of $40,000 or $50,000, with which you could build a bridge that you could use free of rent. That would be practically the same thing as paying $1,400 a year, and the bridge would be available at all times. If unfortunately war should occur—of course we do not expect it—and you wanted to move troops across that wooden struc-

ture from Barriefield to Kingston, you would be in danger of breaking through into the water. I think a new bridge could be constructed there at a comparatively small cost. The lake has a good, hard bottom, and the water is comparatively shallow. I would also like to say to the minister that great advantage could be gained there by improving the channel of the Rideau canal. That would be an advantage to vessels, and it would also increase the harbour accommodation at Kingston. Hon. gentlemen who have visited Barriefield will remember that after you cross the bridge from Kingston there is quite a hill; that is government property. A couple of temporary tracks could be laid from that hill down to the bridge, the rock and stone material could be filled into the trucks, the loaded truck coming down to the bridge would carry the empty one back and with comparatively little expense a great portion of the bridge site could be filled in. I know that the city of Kingston owns a portion of the stock in the bridge, and I believe the government could come to terms with the city, construct a new bridge there and save money by the operation. While I do not like to suggest that convict labour should compete with free labour. I would call attention to the fact that near Kingston we have a penitentiary with a great many convicts in it, and I do not see why these convicts cannot be taken down to the neighborhood of the bridge and their services utilized for the purpose of filling in and reconstructing. I think that something along that line might be done and that convict labour might be employed to a partial extent in the work of reconstructing that bridge without very much fault being found by the general public. I trust that the minister will give this some consideration and I think that if it is considered from the standpoint merely of dollars and cents the government can afford to reconstruct that bridge. One thing is absolutely certain and that is that a new bridge will have to be constructed there very soon if you are going to have a crossing that will be of any avail for military purposes at all. Lumber is getting more and more expensive and I think the time is opportune to deal with those owning stock in the present bridge. You could look at the matter from the standpoint of the capitalization of the amount that you annually pay for the rent of the bridge, and, looking at it from a business point of view, I believe that that amount of money would more than construct a new bridge at Barriefield and give you something that would last for all time to come.

Sir FREDERICK BORDEN. I do not know what the terms of the contract are. I suppose it is a very old contract. Is it a toll bridge?

Mr. EDWARDS. Yes.

Sir FREDERICK BORDEN. If the bridge is in the condition which the hon. gentleman states, certainly it ought to be examined at once, and I will direct that an examination shall be made. As to what will be done, I should think that the propcsal would be a very reasonable one that the government and the city of Kingston should take this matter up together and see upon what equitable terms a new bridge might be constructed. At any rate, I would be open to take the matter up at any time and I am glad the hon. gentleman has brought it to our notice. I would be glad if he would address a communication to me, elaborating his views on the subject.

Mr. G. V. WHITE. I would like again to advocate the desirability of the Department of Militia and Defence establishing armouries at the different headquarters of the rural regiments. I am sure that this would have a tendency to keep the rural regiments in line and make the men take an interest in the work of the regiments. We have never had an armoury in Pembroke, but during the recent disastrous fire which visited that town a few months ago, we had the misfortune of losing our entire equipment. We had a couple of rooms rented there and everything went. At the present time we have no equipment to put in an armoury, but I would like to endeavour to prevail upon the minister to look into this matter and if at all possible have an appropriation made for the establishment of armouries at such points as this. I am sure it would tend very materially to strengthen especially the rural regiments.

Sir FREDERICK BORDEN. I remember that my hon. friend and I discussed this matter across the floor of the House a year or two ago and I agree absolutely with every word he has uttered. It is a question of money. It should be done and it must be done. I am afraid that this is not a very good year to take the matter up, but I hope the revenue will be restored later on and that the matter may be taken up. In view of the fact of the great loss at Pembroke it would be a very convenient time to consider the erection of a building of that kind particularly as we have to issue a new equipment and I will be glad to look into the matter. I believe there is a small item of $50,000 in the estimates of the Minister of Public Works for the purpose of building armouries.

Mr. G. V. WHITE. I hope that the minister in view of the fact that we have had such a loss up there will put Pembroke among the first.

Sir FREDERICK BORDEN. I will do my best with the Minister of Public Works.

Militia and Defence—income—pay and allowances, $1,646,000.

Mr. J. D. REID. Let that stand.

Sir FREDERICK BORDEN. All right. You may let the others go through with the understanding that anything can be discussed on this particular item.

Mr. R. L. BORDEN. On which item?

Sir FREDERICK BORDEN. Pay and allowances. We will let that stand with the understanding that we can discuss the Royal Military College or anything else upon that item.

Item allowed to stand.

Warlike stores, $335,000.

Mr. J. D. REID. As to this item which is left standing, I would like the minister to give notice before he brings it up. Otherwise, he might come forward some night and say that, as only one item is to be voted, he would like to put it through.

Sir FREDERICK BORDEN. I will not take any advantage, whenever the hon. gentleman (Mr. J. D. Reid) objects.

Mr. J. D. REID. I do not speak for myself alone, but on behalf of others who might like to discuss these matters. I would like the minister to give notice.

Sir FREDERICK BORDEN. Quite so. I will remember that.

Mr. R. L. BORDEN. I have some inquiries and correspondence about tenders for the supply of breakfast bacon to the militia at Halifax. The matter has been discussed in the public press. The allegation has been made that the bacon supplied is not the article of bacon specified in the advertisement for tenders. I would like the minister to be prepared to discuss this matter when his estimates are again before the committee.

Sir FREDERICK BORDEN. I was prepared to discuss it to-night, but it is hardly worth while to go into it now.

Mr. R. L. BORDEN. The allegation is that tenderers are not on an equal footing, an article being accepted which was not called for. It is said that if the quality that has been accepted is to be accepted in in the future, every one should know it.

Sir FREDERICK BORDEN. I shall be prepared to discuss the matter.

Mr. CROSBY. Personally, I have no desire to interrupt the estimates for Militia and Defence, but I have every desire that we should put this matter beyond the gossip that has been going on in Halifax and that vicinity. I have many questions in regard to it which I wish to put to the minister and if he will be prepared to give that information, it will be satisfactory to us as well as to the people there.

Sir FREDERICK BORDEN. I will do my best.

Some resolutions reported.

Mr. FIELDING moved the adjournment of the House.

Mr. R. L. BORDEN. What business will be taken up to-morrow?

Mr. FIELDING. Continue in supply, taking up the estimates of the Minister of Public Works.

Motion agreed to, and House adjourned at 11.50 p. m.

HOUSE OF COMMONS.

WEDNESDAY, March 10, 1909.

The SPEAKER took the Chair at Two o'clock.

FIRST READINGS.

Bill (No. 102) to incorporate the London and Northwestern Railway Company.—Mr. Beattie.

Bill (No. 103) respecting the National Accident and Guarantee Company of Canada.—Mr. Pardee.

Bill (No. 104) respecting the Thessalon and Northern Railway Company.—Mr. Smyth.

QUESTIONS.

BOAT HARBOUR, PICTOU COUNTY, N.S.

Mr. RHODES—by Mr. George Taylor—asked:

1. When was the work at Boat Harbour, Toney river, Pictou county, Nova Scotia, commenced?
2. How much has been the expenditure in each year since the work commenced?
3. What is the total expenditure to date?
4. Is the work completed? If not, what further sum, if any, is to be expended to complete ?

Hon. WM. PUGSLEY (Minister of Public Works):

1. March 12, 1906.
2. 1905-06 . . . . . $ 4,727.55
   1906-07 . . . . . 2,103.11
   1907-08 . . . . . 758.05
   1908-09 . . . . . 1,793.02
3. $9,381.73.
4. Resident engineer reports that, in order to prevent the closing of the channel, it will be necessary to extend the piers, on each side, from time to time. Future expenditure will be according to length of protection work.

OROMOCTO WHARF.

Mr. CROCKET—by Mr. George Taylor—asked:

1. What was the total cost of the new high water wharf at Oromocto, N.B.?
2. Was the work done under contract?
3. When was it commenced, and when completed?

Hon. WM. PUGSLEY (Minister of Public Works):

1. $3,849.26.
2. No.
3. Commenced October 12, 1908; not quite completed.

ROYAL MILITARY COLLEGE—COST OF COTTAGES.

Mr. EDWARDS asked:

1. What is the present estimated total cost of the 16 cottages constructed for the civil subordinate staff at Kingston R.M.C., including fittings, furnishings, &c.?
2. How many hot water boilers were purchased from Cluff Brothers for the said cottages, and what was the price of each?
3. What amount of money has been expended to date for any work, fittings or furnishings for which tenders were not asked, to whom and for what was such money paid in each case?
4. What is the amount of any work, fittings and funishings contracted for since the awarding of the original contract to Mr. Sullivan, for which tenders were not asked, and to whom and for what is the money to be paid in each case?
5. From whom were tenders received, and the amount in each case, for (a) alterations to main drain and lowering basement and inside drain, (b) change to pressed brick, (c) electric wiring and fixtures, (d) outside connections, and (e) heating?
6. Will the sum of $57,000 voted this session complete the cottages ready for use, or will a further sum be required?

Hon. WM. PUGSLEY (Minister of Public Works):

1. $96,000.
2. (a) Four boilers with twin headers to each pair.

(b)	Four boilers	$ 950 00
	Two sets of twin headers	230 00
	Freight	50 40
		$1,230 40

3 and 4.

Boilers, Cluff Brothers	$1,230 00
Printing and advertising, Department of Printing and Stationery	423 46
Travelling expenses, T. W. Fuller	36 00
Architect's commission, H. F. Smith	1,331 14
Photographs, D. A. Weese	10 00
Cartage, Shedden Forwarding Company	3 60

5. (a) M. Sullivan .. 1,777 00
(b) M. Sullivan .. 1,700 00
(c) Haliday Electric Company 3,550 00
F. J. Birch .. 3,690 00
Newman & Spriggs .. 3,735 00
(d) Halliday Electric Company 145 00
(e) M. Sullivan .. 2,750 00
6. (a) Yes; (b) No.

GOVERNMENT-OWNED DREDGE AND CONTRACT WORK.

Mr. FOSTER—by Mr. George Taylor—asked:

1. Has a government-owned dredge been employed during the past year on any work in Nova Scotia which was under contract?
2. If so, with whom, under what arrangement as to terms, what was the date of the arrangement, and what has been the outcome to date?

Hon. WM. PUGSLEY (Minister of Public Works):

1 and 2. Dredge 'Canada' worked on excavation of site for spur pier at Digby, under contract dated 22nd May, 1908, with Messrs. J. E. and H. Bigelow, which did not provide for the dredging required. Material was found to be too hard for her machinery, so that work was given up on October 3 last.

TRADE COMMISSIONER AT SHANGHAI.

Mr. BARNARD asked:

1. Has the office of Trade Commissioner at Shanghai recently become vacant?
2. If so, has any new appointment been made to that office, and who has been appointed?

Rt. Hon. Sir WILFRID LAURIER (Prime Minister):

1. The office has become vacant.
2. No appointment has been made.

WHARFS IN QUEENS AND SUNBURY.

Mr. CROCKET—by Mr. George Taylor—asked:

1. What wharfs in the counties of Queens and Sunbury, N.B., did the Department of Public Works order the construction of in the month of September and October last?
2. Was there a departmental estimate of the cost? If so, what was it in each case, and what has been the expenditure to date on each?

Hon. WM. PUGSLEY (Minister of Public Works):

		Estimated cost.	Expenditure.
1 & 2.	Chase's Point	$4,110 00	$ 538 60
	Maugerville	4,996 00	1,944 17

MR. T. P. FOLEY.

Mr. LAKE asked:

1. Is T. P. Foley in the employ of the Interior Department? If so, in what capacity and at what salary?

2. Where does he live, and does he carry on any other business outside of his work for the government? If so, what is the nature of the business?

3. What is the nature of the work he has done during the last year, and has the department received regular reports from him?

Hon. FRANK OLIVER (Minister of the Interior). No such person is employed in the Department of the Interior.

QUEBEC BRIDGE—PROPOSED SUBMARINE VIADUCT.

Mr. LENNOX asked:

1. Referring to the action of the Quebec Board of Trade as embodied in the following resolution:—

Resolved that the apparent advantages of the scheme for a submarine viaduct to replace the fallen Quebec bridge, submitted by Mr. J. S. Armstrong, C.E., of St. John, N.B., are sufficient, in the opinion of this meeting, to warrant it receiving earnest consideration from the Dominion government, has the Dominion government any official communication from the board of trade in reference to this matter?

2. Or has the attention of the government been otherwise called to Mr. Armstrong's proposal to substitute a submarine viaduct for the Quebec bridge scheme; and in either case has the government decided to take any action in the matter?

3. Has the government considered the advisability or necessity of constructing the Quebec bridge at a greater height above the river than the old bridge, say a clear 190 feet, and are the instructions to the engineers now at work to plan and provide for an increased height?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. No.

2. No action is called for as the suggestion is utterly impracticable.

3. The whole question has been reported upon by the Board of Engineers. It has been decided to leave a clear height of 150 feet above high tide for a clear width of 600 feet in the centre.

N.T.R.—QUESTIONS OR DISPUTES WITH GRAND TRUNK PACIFIC.

Mr. LENNOX asked:

1. Have any questions or disputes arisen between the Grand Trunk Pacific Railway Company and the Transcontinental Railway Commission, or the engineers of the company and the commission, as to the classification or alleged over-classification upon the eastern division of the Transcontinental Railway since the 28th day of April, 1908?

2. If so, (a) what is the nature of these questions or disputes, (b) to what section of the road do they relate, (c) when did they arise, (d) have they been adjusted, (e) what steps have been taken for their adjustment, and (f) what is the result?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. Yes.

2. (a) Alleged over-classification. (b) Districts 'B' and 'F'. (c) From time to time since April 28 last. (d, e and f). Not as yet, but this and any prior disputes will be adjusted by the chief engineers of the commissioners and the Grand Trunk Pacific Railway Company, and the third arbitrator (Mr. Collingwood Schreiber), who has been agreed upon by them as such, as soon as the snow has sufficiently gone to permit of an examination of the work.

CITY OF BRANDON—EXCHANGE OF LANDS.

Mr. STAPLES—by Mr. Roche—asked:

Has a patent been issued for section No. 6, township 5, range 7, W. 1? If so, to whom has it been issued? If not, why has the patent not been issued?

Hon. FRANK OLIVER (Minister of the Interior): No, this section was granted by order in council of August 9, 1900, to the city of Brandon in exchange for certain lands conveyed to the Crown in connection with the Industrial School at Brandon, but at the request of the secretary-treasurer of the city of Brandon the issue of the patent was stayed.

AMOUNTS PAID TO PARTIES NAMED.

Mr. RALPH SMITH asked:

What amounts were paid during the years 1903-4, 1905-6 and 1907-8 by the following departments: (a) Marine and Fisheries, (b) Railways and Canals, (c) Customs, (d) Post Office, (e) Militia and Defence, and (f) Public Works, to the following persons, firms and companies, viz.:—The Wilson Gas Buoys Company, the Canadian Fog Signal Company, James Murphy, William R. Blakiston, James Holliday, Allison Davie, J. B. Cote, Adolphe Huot, Joseph Samson, Samson & Philion, E. Pelletier, Napoleon Mercier, Severin Martel, Michel Thibodeau, Edmond Belanger & Co., Marier & Tremblay, Terreau & Racine, Rock City Tobacco Company, J. N. Martineau, George Marchand, Jean Drolet, Elie Amyot, Charles A. Parent, A. N. Melvin, W. G. Robertson, Wm. Robertson & Co., Howell & Co., St. John Iron Works, Charles McDonald, John A. Moore, Wm. J. Vroom, John A. McAvity, McAvity Bros., George McAvity, Patrick J. Mooney, Polson Bros., or Polson Iron Works, Merwin & Company, F. L. Brooks & Company, F. S. Brooks, Safety Company, Submarine Company, Wm. J. Allen, Mr. Willard?

Right Hon. Sir WILFRID LAURIER (Prime Minister). This should stand as a notice of motion for return.

MR. CHARLES F. BELL.

Mr. FOSTER—by Mr. George Taylor—asked:

Under what conditions and for what reasons was Charles F. Bell dismissed from the

Department of the Interior in December, 1907?

Hon. FRANK OLIVER (Minister of the Interior). The services of Mr. Charles F. Bell, a clerk in the Department of the Interior, were dispensed with on December 31, 1907, because of discourtesy to his superior officers and a refusal to obey orders.

LEVEL RAILWAY CROSSINGS.

Hon. G. P. GRAHAM (Minister of Railways and Canals) moved that the House go into Committee of the Whole to-morrow to consider the following proposed resolution:

Resolved, That it is expedient to provide that the sum of $200,000 each year for five consecutive years from the first day of April, 1909, be appropriated and set apart for the consolidated revenue fund of Canada for the purpose of aiding in the providing of protection, safety and convenience for the public in respect of existing highway crossings of railways at rail level, and that the said sum be placed to the credit of a special account to be known as 'The Railway Grade Crossing Fund,' and be applied under the authority of the Board of Railway Commissioners for Canada.

He said: His Excellency the Governor General, having been apprised of the subject matter of this resolution, has given his consent thereto and has recommended it to the careful consideration of the House.

Motion agreed to.

SUPPLY—CO-OPERATIVE SOCIETIES.

Mr. FIELDING moved that the House go into Committee of Supply.

Mr. F. D. MONK (Jacques Cartier). Mr. Speaker, before you leave the Chair I desire to call the attention of the government and of the House to a matter of very general importance in order to elicit from the government some idea of what they intend doing in regard to this matter, the Co-operative Bill, which was adopted in this House last year and met with defeat in the Senate. Let me briefly explain the facts in connection with this very important measure. Some years ago I called the attention of the government to the advisability of giving effect in this country to some such legislation as has been adopted in most European countries and in other countries throughout the world in order to encourage co-operation, as a means of affording relief to the working classes, the agricultural classes and poor people generally who are not in a position to combine into joint stock companies, the organization of which demands the expenditure at the very beginning of a very considerable amount of money. I pointed out at that time to the government some of the remarkable successes that had been obtained in Europe by co-operative credit and loan societies, and at that time my hon. friend the Finance Minister promised that attention would be given to this subject. Subsequently in one of the following sessions I introduced a Bill providing for the organization of co-operation in this country among the working classes and the farming classes and generally upon the lines adopted for the legislation in England, combining with it, as far as possible advantageous provisions which are found in continental legislation. The Bill was explained when introduced, discussed on its second reading and the second reading was adopted by the House without dissent. The session was then advanced and acting under the advice of my hon. friend the Minister of Labour further progress in regard to the measure was deferred until the following session. At the beginning of the following session the Bill was again introduced. Its provisions were widely made known throughout the country and the introduction of that legislation received the general approval of the press and of all people who had given any attention whatever to the co-operative movement throughout the world. The Bill was again discussed as to its principles upon the second reading, it was favourably viewed by this House, the second reading was carried and it was referred for examination to a select Committee of this House composed of those members who had taken a particular interest in its introduction, including the Minister of Labour, the Minister of Justice, and the two members in the House who were more particularly supposed to represent the labouring classes. I believe that most of the older members of this House have read the report of that committee. Its sittings extended over a considerable period and we had occasion to go fully into the question of co-operation, its necessity in this country, its utility and the details of the Bill. We heard witnesses of all kinds, men of eminent merit in regard to sociological subjects. We had the advantage of the testimony of His Excellency the Governor General. We also had agriculturists, financiers, the Deputy Minister of Labour who had given this matter very careful consideration and who furnished valuable information, Professor Shortt, and most of the principal employees of the Agricultural Department, in fact all the witnesses who could throw any light upon the subject. Their testimony was uniformly favourable to the passage of the measure we had under consideration. After the unanimous report of the committee upon that Bill, the government declared its intention of adopting the measure. I do not believe that any parliamentary committee throughout the

world has ever gone as fully into the question of co-operation as that Select Committee did. A committee in India has studied the question of co-operation at perhaps greater length and made a fuller report, but this report was ample, it seems to me, to justify the position which the government took at that time, in making it a government measure. The Minister of Labour took charge of the Bill which afterwards came up in its regular turn for third reading. It was considered in Committee of the Whole and gone into at considerable length by that committee. It was then adopted unanimously by this House. It was then sent to the Senate and there the then Secretary of State, acting for the government, took up the Bill, and I must say that the Hon. Mr. Scott gave the subject matter of that legislation very considerable attention. He took communication evidently from cover to cover of the extensive report of the Select Committee of this House. The Bill was read the first time and explained by him in the Senate, read the second time and discussed and the principle of the Bill I believe was adopted without any dissentient voice. It was then sent to the Committee on Banking and Commerce of the Senate in order that certain representatives of the provinces and the secretaries of the Retail Merchants Association might be heard in regard to it.

The Bill remained in the committee of the Senate for four months. There were hearings of different parties; several of us who took great interest in the advancement of that legislation were heard and so were the representatives of the retail associations. I may say here that a very singular misapprehension as to the object of that legislation seems to have existed from the very beginning in the minds of those who were advancing the interests of the Retail Merchants Association. Very far from considering that measure as one to be enacted in the interests of the working classes, in the interest of the agricultural classes, and of poor people generally, they got it into their heads that the object of this legislation was to introduce into this country, in a disguised form, a vast aggregation of European capital in order to stifle the legitimate commerce of this country. How that idea happened to take possession of these people I do not know. I can only attribute it to the fact that there are in England two or more joint stock companies bearing the name of co-operative associations. I refer to the Civil Service Co-operative Stores and to the Army Stores, not co-operative in the sense in which we understand it, but joint stock companies properly so-called, declaring dividends, having a distribution of shares like all joint stock companies and never having been admitted, having, in fact, been refused admission to the co-operative union of England which gathers under its protection all the co-operative associations, properly so-called, of the British Isles. However, it may be that that opinion was entertained here, it found forcible expression by the representatives of the Retail Merchants Association before the committee of the Senate. We, who are anxious to establish the facts, sought vainly to persuade the members of the committee that this was an entire misapprehension and misunderstanding. There were also heard before the committee of the Senate, representatives from the province of Quebec and of the province of Ontario. Mr. Mulvey, assistant Provincial Secretary of Ontario, urged strongly at that time that there was legislation in Ontario providing fully for the organization of just such co-operative societies as we had in view, and which was then under consideration. The views expressed there by Mr. Mulvey seemed to have prevailed with the committee of the Senate, although he was undoubtedly mistaken, and since these events have transpired a co-operative society here in Ottawa that has sought to be organized under the laws of the province of Ontario has found that there is no legislation in Ontario providing for such an organization, and they have been promised, I believe, by the government of that province, that some relief would be afforded them by legislation to be introduced during the present session. The Bill, Mr. Speaker, came back to the Senate after this long delay and towards the close of the session. The committee reported that they recommended that the preamble of the Bill be not adopted. It was pointed out in the discussion which took place in the Senate and to which I will refer briefly——

Mr. SPEAKER. If the hon. gentleman (Mr. Monk) will allow me I would point out that it is irregular to refer to a debate in the Senate. Bourinot says:

It is a part of the unwritten law of parliament that no allusion should be made in one House to the debates of the other chamber, a rule always enforced by the Speaker with the utmost strictness.

He adds, however :

It is perfectly regular, however, to refer to the official printed records of the other branch of the legislature, even though the document may not have been formally asked for and communicated to the House.

Mr. MONK. What I was going to say applies to past debates as I have often heard past debates of the Senate quoted in this Chamber.

Mr. SPEAKER. The rule seems to make no distinction and I thought I would call the hon. gentleman's attention to it.

Mr. MONK. At any rate, by your ruling, I will be permitted to refer to the official decisions of the Senate.

Mr. R. L. BORDEN. I venture to suggest that the rule does not apply to debates of past sessions in the Senate any more than it applies to such debates in the House of Commons. As a mater of fact, it has been the constant practice in this House to refer to debates in the Senate and any enforcement of the rule would prevent a single reference to the many valuable opinions expressed by the members of the Senate from confederation down to the present time. That would seem to be an extreme view. For example, in the debate upon the Autonomy Bill in 1905, there were constant references to the debates which had taken place in the Senate in 1872 or 1873, and all these references took place without the slightest objection and without the slightest idea that any hon. gentleman so referring to them was out of order. I would venture to think that the rule has not the wide application which is sought to be given to it.

Mr. FIELDING. Perhaps the rule respecting past debates in the House of Commons and the rule respecting debates in the Senate have different objects. The rule respecting past debates in the House is designed to prevent the repetition of a matter which the House has already dealt with. The rule respecting debates in the Senate is on the higher ground of protecting the proper privileges of the Senate, but an evasive manner is sometimes adopted in order to discuss past debates of the Senate.

Mr. R. L. BORDEN. I would not be inclined so to regard it. The real object of the rule is to prevent members of the House of Commons answering arguments which have been addressed to the Senate in the same session, when matters of a similar nature might be under consideration in both Houses at the same time. It might be extremely inconvenient and probably undignified that any such course as that should be adopted. Any reference to a debate in the Senate must be respectful, must not lack in that proper respect which is due to a co-ordinate branch of the legislature. Subject to that I never knew that there could be any possible objection to referring to a debate which had taken place in the Senate in a former session.

Mr. FIELDING. It is raised by an evasion, by a reference to another place.

Mr. SPEAKER. Bourinot also says :

> Members sometimes attempt to evade this rule by resorting to ambiguous terms of expression—by referring, for instance, to what happened 'in another place.'

I have no intention of being more severe than is necessary, but I thought it was my duty to call the attention of the hon. gentleman to what seems to be the proper practice.

Mr. MONK. I will not attempt to evade your ruling, Mr. Speaker; in fact, I may say that it saves me the trouble of calling to the attention of this House some opinions expressed in the other Chamber that would cause a good deal of surprise to members of this House who have given some attention to constitutional questions. It appears from the very nature of the proceedings held in the Senate that a certain number of these hon. gentlemen took the trouble to study the report of the Select Committee in this House upon that important subject, whereas some others thought they could effectually dispose of this important measure without giving themselves the trouble to study the matter at all. The then Secretary of State gave the matter much attention in the Senate and supported the measure in pursuance of the policy adopted by the government, and Senator Beique, of Montreal, suggested some important amendments intended to remove all doubt as to the constitutionality of our legislating in the matter. There was placed before the Senate at that time an opinion which had been, shall I say attempted to be obtained, from the Minister of Justice, as to the constitutionality of this measure, and in that opinion, which forms part of the records of parliament, the Minister of Justice said:

> I recognize that it is my duty as official legal adviser of the Governor General and legal member of His Majesty's Privy Council for Canada to advise the Crown upon all matters of law referred to me by the Crown, and to advise the heads of the several departments of the government upon all matters of law connected with such departments, but it would seem to me presumption on my part to offer advice to either House of parliament or to a standing committee of the Senate, especially when among its members there are many honourable and learned gentlemen more competent than I to form an opinion upon any doubtful matter of law.
>
> Moreover the Bill referred to has been passed by the House of Commons and in that view it would ill become a member of that House to question the constitutional power of parliament to enact legislation of this character.

There is no doubt that a very strong lobby was resorted to in the upper House for the defeat of that measure, and I have heard since with much approval strong condemnation of that system of lobbying particularly as applied to the other Chamber. At any rate, the final result of the discussion upon the motion made in the Senate that this singular conclusion at which the Committee on Banking had arrived should not be adopted by the Senate, but that the Bill should be referred to the

Committee of the Whole for further examination was defeated by a vote of 19 to 18. The preamble of the Bill, as the Secretary of State had seen fit to alter it, simply declared that it was desirable in order to promote the interests of the working and agricultural classes of Canada to provide them with a legal method of organizing into co-operative societies. I may state for the information of the House, and it is well known to the government, that since the subject of co-operation has become a live issue in this country many people interested in the public welfare have endeavoured to promote legislation of this kind. The Labour Congress of Canada at its annual convention has been for some years passing resolutions in favour of this legislation. Similar resolutions have been adopted at meetings of clergymen of all denominations, and many other economic associations have taken a warm interest in the matter. It is not surprising then that the action of the Senate caused very great dissatisfaction among the members of the labour congress, and at the last annual meeting held in Halifax in September last the following resolution was unanimously adopted:

Moved by delegate Adam Anderson of the Amalgamated Society of Carpenters and Joiners of Montreal:

That this congress views with profound astonishment the colossal ignorance of the Dominion Senate of the modern conditions of economic progress, in opposing co-operation which has been established in Britain, France and Germany for fifty years with such distinguished success in cultivating the highest qualities and developing the highest ideas of citizenship.

Be it resolved that this congress demands that the Dominion government should incorporate in our laws the inalienable right of our people so to combine.

Concurred in unanimously.

I have only to add this: At the beginning of this session a pamphlet was circulated among the members of this House, which purports to emanate from the secretary of the Retail Merchants' Association, whose office is in the city of Toronto, and that pamphlet is entitled: 'The system adopted by co-operative societies exposed. How the people are deceived by so-called co-operative societies.' I shall not take up the time of the House by quoting at length from that pamphlet, but I must say that it displays a very extraordinary degree of ignorance in regard to the success of the co-operative movement on the continent of Europe. Everybody knows that that movement has been attended with marvellous success; that at the present moment the greatest efforts are being made in England to extend it; and that in Ireland the efforts of Sir Horace Plunkett in the direction of agricultural co-operation have changed the entire economic aspect of that country. I cannot qualify this pamphlet otherwise than as a scurrilous document. It casts very grave reflections on the attitude taken by this House with regard to that measure. It states that the measure had been surreptitiously forced through the House and that it did not receive from the House of Commons that treatment which I must say in my long experience as a member this House always accords to measures of this importance. Then, this pamphlet caps the climax by alleging that the object of the legislation was to advance my own interests and the interests of those who manifested some concern in the progress of this legislation. The pamphlet further states that my object as a member of this House in promoting the legislation was in order that I might become an officer of a joint-stock co-operative society organized in my own province. I have never thought it worth while until now to deny that statement. I deny it now. In the expectation that this measure would not meet with defeat in the Senate, numbers of working men in my own constituency in the city of Montreal were prepared to organize societies. In my own constituency one was actually organized and has since been legalized under the incomplete provincial legislation which we have upon this subject, and I consented to become the honorary president of that society. That is the extent of the financial interest which I have had in this great movement in connection with which not one of those who took any interest in it had any financial consideration in view, I am sure. The pamphlet goes on to allege that His Excellency the Governor General, who himself appeared as a witness before the committee of investigation in our House, had some financial motive, inasmuch as he had been president of the Co-operative Union of England, a union which, as everybody knows, has no financial operations in view at all, but merely the promotion of ideas favourable to the spread of co-operation.

There is much more I might insist upon, but I do not wish to take up the time of the House. The question is, what is the government going to do? I think the government, since the idea of this legislation was mooted, has taken a fair and prudent position in regard to it. Is it going to be said that a law desired by everybody who knows anything of co-operation throughout the Dominion of Canada, asked for by resolutions and deputations of all kinds, asked for by the congress of labour, approved of generally by the people throughout the Dominion—is it going to be said that a law of that kind is going to be defeated by the action of nineteen members of the Senate, who it is evident have not bestowed upon the question the attention which it deserves? I hope not. I think the govern-

ment should courageously persist in its course, re-introduce the measure, make it as perfect as possible, and place this country upon the same footing as other countries in regard to this important movement. It has been alleged that the provinces have jurisdiction in this matter. In regard to the formation of societies for certain objects purely local, the provinces might be considered to have jurisdiction; but the point insisted upon at all times when this legislation has been considered, has been that without the benefit of banking operations, we cannot have co-operation in its true and legitimate field of beneficent work. That feature can only be conferred on co-operation through the instrumentality of this legislation. It has been argued, I think very properly, that this being legislation essentially for the benefit of workingmen and the agricultural classes throughout the Dominion, we have jurisdiction to legislate in favour of these classes and to give them the benefit of a cheap and easy mode of organization in co-operative societies. I believe that view was shared at the time by the Minister of Justice, who was present in our committee, and suggested some improvements in the Bill as it was first received in the committee. That view was strongly pressed on the senators; and if hon. members will take the trouble to read the debate that took place in the Senate when the Bill was finally disposed of, they will find that no valid or real argument was put forth against that view. Under these circumstances, I hope the government will take the measure up once more, and I have confidence that the Upper House will not again in this important matter seek to defeat the will of the people.

Hon. RODOLPHE LEMIEUX. Mr. Speaker, I rise to say just a word or two on this very important question. The hon. gentleman has always been a very ardent apostle of the principle of co-operation in this House, and I must probably attribute to him the fact that the Bill which I introduced last year was so unanimously adopted by the House of Commons. The government has not wavered in its view of the usefulness of the co-operative movement. Last year the government decided to take up this measure and pass it. It was not at first a government measure, but it became a government measure after the report of the special committee appointed to deal with the question. When the Bill went to the other Chamber, it met with very persistent opposition at the hands of some senators belonging to both sides of politics. Views, and very strong views, were expressed against the jurisdiction of this parlament to deal with this question, and the senators who held those views were reinforced by the very active opposition which came from the retail merchants of the Dominion.

Let me say at once that favourable as I am to the principle of this Bill—and I recognize the very many advantages that can be derived from such a measure by the labouring classes—yet I have been impressed since last year with the very strong feeling —it may be a prejudiced feeling—which exists in some parts of our community against the passing of this measure by the federal parliament. I have not wavered from the position I took last year, and I shall be quite ready to support a Bill of the same nature in the House; but there is such a thing as provincial rights, and in my opinion, which I believe is the opinion of the majority of the members of this House, we must respect not only what we term provincial rights, but even provincial prejudices. It is my opinion that this parliament has complete jurisdiction in this matter; but we find that the largest and wealthiest province of the Dominion, the province of Ontario, with another large province, the province of Quebec, represented by their executive, strenuously opposed the passing of this measure when it reached its final stage in the Senate last year. Now, the two Attorney Generals of Ontario and Quebec may be wrong, and I do not discuss the opinion which they expressed last year through their respective representatives before the Senate; but I say it is the duty of this government to respect not only what they assert to be their rights, but even what we may think are only their prejudices. At all events that is my view on the broad question of provincial rights. It may be that within a few months, the provinces of Ontario and Quebec, represented by their respective governments, after careful study of this measure, may come to the conclusion that it is one which ought to become law. I may say to my hon. friend that my sympathies are with this movement, but we must admit that the sentiment in favour of co-operation is not yet very pronounced throughout the Dominion. I however am pleased to see that it is perhaps more developed in the province of Quebec than in any other. Although to a certain degree the principle of co-operation has been adopted in certain centres of the province of Ontario, it has not yet become accepted as a general principle in the country at large.

As Minister of Labour, I have received no petitions from the great provinces of the west or from the maritime provinces, but I have received a limited number from the province of Quebec and a few from the province of Ontario. I myself am in favour of the principle, but as the two large provinces are actually opposed to the passage of this measure, I think we can let the matter stand until some progress in education on the subject has been made. The discussions which took place before the select committee and those which took

place in this House last year and in the Senate will no doubt contribute towards the passing of this measure finally in a few months hence. I rose simply to say that my sympathies are still with the principle of co-operation, but that a little delay will not hurt this measure after all, and any legislation we may pass will not be only for a year or two, but will be for ever if once the principle of co-operation is admitted by both Houses.

Mr. RALPH SMITH. The history of this question of co-operation embodied in the legislation of last session has been thoroughly given by my hon. friend who introduced the measure. As a member of the select committee on that subject, and having had some considerable experience with the movement in the old country, I may say that I was very much disappointed at the attitude taken by the Senate last year. My hon. friend the Postmaster General (Mr. Lemieux) has suggested that the question of provincial rights may have entered into the consideration of this matter. I am not aware that any consideration of the rights of the provinces to enact legislation of this kind was seriously debated in the Senate at all. It is true that the representatives from Ontario and Quebec who met the select committee of the Senate questioned the right of the Dominion government to enact such legislation. No doubt the distributive principle of co-operation is a matter of provincial right and one which the provinces have exercised. In Nova Scotia they have an Act providing for co-operative societies in the distribution of goods to their members. In British Columbia they have the same law and also in Ontario. But the question of banking the profits of co-operative distribution was never supposed to be provided for by provincial legislation, and the object of this Bill is to provide for banking privileges by Dominion legislation. The object of the legislation is to make it possible for any association, in the distribution of goods to its members, to have the banking profits in the sale of these goods, and every authority consulted on this legislation has declared it was necessary to come to this House to get that kind of legislation. I just want to say that it is a surprise to me, after eighty years experience in Britain—for it is eighty years since similar legislation was passed in England by the voluntary associations co-operative movement—to find in this country objection to a principle enacted and put in operation eighty years ago in the old country. A lobby and agitation against the movement was organized by the retail dealers, particularly of Ontario, or it may be perhaps the Dominion organization. There was a similar agitation of England retail dealers some twenty-five years ago against the enactment of similar legislation. But the principle is plain and easy. If half a dozen men are entitled to have special legislation to co-operate their wealth for the purpose of carrying on a certain business and supplying the needs of the public in the operation of that business, has not the public the right to provide its own needs? Why should it not have legislation to supply its own needs as effectively as a limited liability company or other organization? It would be interesting, if I thought it reasonable to occupy the time of the House in so doing, to discuss the industrial and sociological benefits of the principle of co-operation in Great Britain. Every man has the right to study that for himself, but the right to have social organizations to carry on commerce of this kind and invest their own profits is a legitimate one. I do not know what the government will do. It would be unseemly to take the Senate by the throat and make them do what we think they ought to do, but in that connection I noticed a little hesitation on the part of the Postmaster General regarding the authority of this parliament, which I do not think he showed as a member of the select committee years ago. It looked as if he were on the down grade on this question.

Last year, as a member of the select committee, my hon. friend was present and supported the Bill enthusiastically, and, if I am not mistaken, combatted the contention that this parliament had no right to enact legislation of this kind. The question as to the right of this parliament to deal with legislation covered by the banking clauses of this Bill was never a serious question before that select committee, and, certainly, no doubt was expressed in that committee as to that right. I hope the Dominion government will realize the importance of this measure and take the responsibility of using every legitimate influence to secure its enactment. Even suppose for one moment that it is entirely, exclusively, within the jurisdiction of the provinces to legislate on the subject of co-operative societies established to distribute goods among their members, the fact remains that there can be no successful co-operative movement which has various forms in various provinces; the co-operative movement, in order to be successful, must be a national movement, it must be free to extend its operation to every part of the country. The history of the co-operative movement in England has demonstrated that fact. There, they have federal legislation and rights that cover the whole country. And, in my experience, it is utterly impossible for the co-operative movement to exist and be successful unless it has the necessary federal legislation whereby it can operate throughout the whole Dominion. I merely wish to say these few words in support of this Bill, and if this government can do

anything to promote and influence the Senate to pass it, I think they should use their influence to that end.

DESTITUTE IMMIGRANTS.

Mr. JOSEPH RUSSELL (East Toronto). I wish to bring to the notice of members of this House an article which appeared in the Toronto 'Evening Telegram' of March 8 in regard to immigration to this country:

Immigrant Tide Again — Three Hundred strike City—Pitiful disappointment at the Union Station — Some go on to Western Ontario, but many remain here.

About 300 immigrants from the old land arrived at the Union Station this morning. Two hundred and eleven arrived by special C.P.R., and 100 came through by the Grand Trunk. Many who arrived by the C.P.R. remained in Toronto, while the balance, with those of the G.T.R., will be distributed in the western towns of Ontario.

Have Little Money.

There was scarcely $100 in the party that remained in Toronto. One man had $50 of this. The British Welcome League took charge of about 15 families, and will provide for them until they are placed.

A few friends who have been in Canada for about a year met the party, and when they informed the strangers that there was no work here they appeared very much disappointed.

One man with a wife and six children, when told this, wept, because he had no money. He came out here, he said, because they told him in the old country that he would not be in Canada 24 hours before he would have lots of work. This man did not have a dollar.

A number of the men round the Union Station provided the children with breakfast.

I suppose there must be some government department that is responsible for this condition of things, and I think the House is entitled to an explanation.

Hon. FRANK OLIVER (Minister of Interior). Unfortunately, I was not able to hear what the hon. gentleman (Mr. Russell) said at the beginning of his remarks. I take it that there is complaint that a number of immigrants arrived who were not possessed of the amount of money required by the regulations. I can only say that the statement will be given full consideration and an inquiry will be made. I beg to assure my hon. friend and the House that it is our intention to see to it that the regulations are complied with.

INTERNATIONAL WATERWAYS TREATY.

Mr. A. C. BOYCE (West Algoma). I desire to call the attention of the Prime Minister to a despatch concerning an alleged conditional ratification of the International Waterways Treaty by the United States Senate. I do not know whether this despatch has been brought to the right hon. gentleman's attention or not.

Washington, D.C., Mar. 4.—Senator William Alden Smith of Michigan won another brilliant victory to-day when the Senate ratified the Canadian Boundary and Waterways Treaty with a resolution attached to meet his objections. This action is considered in Washington as insuring to Sault Ste. Marie, Mich., her rightful share of the available water-power in St. Mary's river.

The fight over the waterway question in regard to the Soo proposition has been the subject of bitter controversy at times, and the Michigan senator was pitted against some of the strongest debaters of the upper House, but he won his point after fighting stubbornly and bringing into play a diplomacy that even his best friends did not believe him capable. The victory has placed him without doubt in the ranks of the legislative leaders at the Capitol. He is a force to be reckoned with.

The first part of the despatch is the part to which I wish to call attention. I would ask the Right Hon. the Prime Minister if he is aware that, in the ratification of that treaty there was attached any resolution or limitation such as is stated in the despatch Naturally, we who are so much interested in the development of the water-power, and wish to conserve all that belongs to Canada. are very anxious to know exactly what has been done.

Right Hon. Sir WILFRID LAURIER (Prime Minister). I may inform my hon. friend (Mr. Boyce) that the information contained in the despatch is, I will not say in all particulars but in its essential points. accurate. The treaty has been ratified, but with a rider which materially interferes, as I understand it, with the disposition of the water in the St. Mary's river. The question rests there at the present time. I may say that the treaty, though passed by the Senate has not been ratified by the Sovereign of this country. We are this very day sending a despatch to England to have the treaty laid on the table of the House, so that parliament may know exactly what are its terms. I hope to have this before many days are over.

CIVIL SERVICE SALARIES.

Hon. GEO. E. FOSTER (North Toronto). Has the Minister of Agriculture the remaining schedules with regard to the flat increase of $150 to the civil servants?

Hon. SYDNEY FISHER (Minister of Agriculture). I believe that the schedule for the House of Commons is about ready to be laid on the table. The Senate schedule I have not yet received. Until I get both of these, I cannot go on. The schedules for

all the departments are prepared—have been for some time.

Mr. FOSTER. It appears that the legislative body itself is the one that is retarding legislation. What is the trouble?

Mr. FISHER. I do not know that I can lay the blame on anybody—if there is any blame. The Speaker and the clerk have been working on the schedule, and it was referred to the Committee on Internal Economy. That body has dealt with it, and I understand that it is now ready to be laid on the table.

Mr. FOSTER. I may state to my hon. friend that to-morrow, before we go into Supply, I propose to make a short statement with reference to what I consider certain irregularities and injustices in the administration of the new Civil Service Act. I shall not propose a motion, but simply make a statement.

HOUSE OF COMMONS—ELEVATORS.

Mr. GEORGE TAYLOR (Leeds). I desire to draw the attention of the Minister of Public Works to a matter relating to this House which should be remedied. This morning I came here to go to the restaurant for my breakfast at the usual hour, 8.30, and found the elevator to the restaurant out of business. After waiting some ten or fifteen minutes I went round to the other elevator at the main entrance but it was not running. I saw the chief messenger, Mr. Dubé, and he told me they did not start the elevator until nine o'clock, that the Public Works Department did not send the man here until that hour. I waited until about nine o'clock when the one at the dining room was put in operation. It seems a pity that these elevators should not be started before nine o'clock in the morning. The men in the Public Works Department should start work at seven o'clock as other labouring men do and the elevators should commence to operate at that hour. It was out of order this morning when the committee met and we had to use the Senate elevator. No one wishes to climb three flights of stairs to go to his breakfast. The Minister of Public Works should look into the matter and see that the service is improved.

Mr. J. D. REID. The elevator at the main entrance has been out of order a couple of times this session, and last year it fell several times so that a number of members narrowly escaped injury. An elevator that gets out of order every few days should be specially inspected in order to avoid accidents.

Mr. A. K. MACLEAN. I am not complaining about the elevator not running before eight o'clock, as it would be of little use to me, but I wish to emphasize what the hon. member for Grenville (Mr. J. D. Reid) has said. The elevator at the main entrance is hardly a safe one, it is out of commission almost every day. The engineer in charge is constantly attempting repairs to it but he does not seem to be successful. The Minister of Public Works should at once call in competent men and see that the elevator is made safe; it is not safe now.

Mr. PUGSLEY. I shall see that attention is given to the matter.

Motion agreed to and House went into Committee of Supply.

Annapolis harbour improvements, ice piers, $45,000.

Hon. WM. PUGSLEY (Minister of Public Works). Of this amount $25,000 is a revote. The object of this improvement is to arrest the flow of ice into the harbour and so permit shipments from Annapolis in the winter season. There are to be a number of piers with substructures of close-faced, stone-filled cribwork, and concrete superstructures in the Annapolis river.

Mr. FOSTER. Is this the winter port business?

Mr. PUGSLEY. The same matter that we discussed last year.

Mr. FOSTER. The port being some miles above Annapolis.

Mr. PUGSLEY. No, Annapolis is quite a shipping port.

Mr. FOSTER. What has been one so far? Last year we did not get any very definite information as to the utility of, and consequently the necessity for, this outlay.

Mr. PUGSLEY. I think my hon. friend is in error. At the last session of parliament I quoted from reports in the House showing what it was hoped to accomplish by this work, and I was of the opinion that I convinced the majority of the committee that the work was necessary. Since that time tenders were called for the work but nothing has been done and we have determined upon calling for new tenders. An advertisement is now in the newspapers calling for new tenders for the work, so that all we have actually done is to purchase the creosoted timber.

Mr. FOSTER. What was the trouble with the old tenders?

Mr. PUGSLEY. The contractors refused to sign the contract.

Mr. FOSTER. What were the figures?

Mr. PUGSLEY. The tender was $34,400. The lowest tenderers were Reid and Archibald, of Halifax, but when we called upon

them to sign the contract they declined to do so unless we would insert a clause binding the government to assume certain risks as to the work. We declined to alter the terms of our proposed contract, they declined to sign it, and it was necessary to call for new tenders.

Mr. FOSTER. It is unusual for a contractor to refuse to sign a contract unless the government would assume the risks. What reasons did they advance?

Mr. PUGSLEY. That would be the risk of the work being destroyed during construction. An ordinary contract requires that the work must be completed by the contractor and we declined to accede to the wishes of the contractor.

Mr. FOSTER. That again raises the question as to what are the particular difficulties there. If there is such a menace that the contractor wishes to ensure himself, is not that a very great menace to the works after they are completed? There must be some abnormal conditions which are different from those at most places. I should think it would tend to make the whole thing risky even after the contractor had got it off his hands.

Mr. PUGSLEY. The engineers do not think so. They think that the work when once completed will stand all right. There was a second tender, that of H. M. Putnam and F. W. Clark, who did not insist upon any such condition in the contract, and who would have been willing to have taken the contract without it.

Mr. FOSTER. What were their figures?

Mr. PUGSLEY. Their tender was on the basis of a force account with ten per cent added.

Mr. FOSTER. The minister objected to that form of tender?

Mr. PUGSLEY. Yes.

Mr. FOSTER. Has the minister any of the correspondence showing what the would-be contractors thought to be the extraordinary elements entering into this work and which they thought constituted the risk?

Mr. PUGSLEY. I have not, but my recollection is that they expressed the opinion that there might be difficulty in completing the work; that is to say, that during the progress of the work and before it had been completed, it might be destroyed by the action of the tides, and they wished a condition put in that the risk should be assumed by the government. With regard to the other question, the opinion of the engineers is that when the work is once completed it is as likely to stand as any ordinary harbour work.

Mr. FOSTER. Will the minister give us the particulars of the tender, showing just what the tenderer proposed to do? I have not in my mind a very clear idea of what this structure is and the terms of the tender would make that clear.

Mr. PUGSLEY. I will draw my hon. friend's attention to the contract, which provides for three piers just a little above the harbour of Annapolis.

Mr. FOSTER. In the river?

Mr. PUGSLEY. Yes, in the river. I suppose it can be called the harbour; it is just above Annapolis.

Mr. FOSTER. Do these three piers extend across the river the whole distance?

Mr. PUGSLEY. The whole scheme is to build either eight or ten piers—I am not quite sure—which are to extend all the way across the river. These three piers are to be built first at an estimated cost of $34,400. In addition to that there is the cost of creosoted timber, amounting to $12,619.24. That would make a total estimated cost of $47,019.24, besides which there are some other charges of superintendence, &c., amounting to about $3,400.

Mr. FOSTER. That would be about $50,000 for the three piers?

Mr. PUGSLEY. The total estimated cost is $50,000 for the three piers.

Mr. FOSTER. Then it is proposed that there shall be ten piers? That means that your total cost will be $160,000 or $170,000.

Mr. PUGSLEY. The estimated total cost of ten piers is $123,500.

Mr. FOSTER. Three of them cost about $50,000, but whether some of them are larger than others I do not know.

Mr. PUGSLEY. I think some of the others are somewhat smaller.

Mr. FOSTER. It may be that they are, but the minister has not determined that in his own mind.

Mr. PUGSLEY. I have the engineer's estimate of $123,500 for the ten piers.

Mr. FOSTER. To which we pay a certain amount of deference, but we always find in the end that it is exceeded. Does the minister feel justified in taking $160,000 of the people's money to construct ice piers above the harbour in the Annapolis river? What are the advantages set forth to the minister that has brought him to embark upon that expenditure of public money at this particular time?

Mr. PUGSLEY. I may say to the hon. gentleman that the understanding with regard to the building of this pier was arrived at before I became minister. That understanding was arrived at after very careful consideration, after very careful surveys and after it had been determined that

the work would be a useful one. What I had to do when I became minister was to endeavour to carry out the understanding which had been arrived at. I made inquiry with regard to the work and I was convinced that there would be a justification for it. Annapolis is an important shipping point. The shipments from there of lumber, apples, and other products, I believe, are quite large. It is believed that by the construction of these ice piers the river at Annapolis—what, perhaps, might not improperly be called the harbour of Annapolis—would be greatly improved, that these piers will form a barrier against the drift ice that comes down with the tide in the winter season and that the harbour will be kept open during the winter. I believe that from Annapolis down to the mouth the river is open in the winter time; so that it is expected that vessels will be able to come there with safety in the winter season.

Mr. FOSTER. The minister says that he feels convinced, but he has not said anything to the committee to convince it that we should vote the amount of money which we are asked to vote and which will involve an expenditure of $160,000 or $170,000. He speaks of winter navigation. What are the possibilities of winter shipment out of Annapolis? One other point and it is this: The minister said that he found that his predecessor had practically come to an agreement; therefore, he did not consider that he ought to revise it. An agreement with whom? It seems to me that the public interest is paramount and that a minister, coming in and finding that an arrangement is under way, is not bound to carry out that arrangement, unless it is interprovincial or international, or something of that kind. The main point is to find out what it is proposed to do. If there is the possibilities of making Annapolis a winter port we might expend $160,000 or $170,000 upon it. But at this particular juncture in our history does not the minister think that this is one of the things that might wait for a year, wait for two years, wait for a century for that matter?

Mr. E. M. MACDONALD. I have not the local knowledge with regard to this work that would probably satisfy the curiosity of my hon. friend, but I recall very clearly a delegation from the county of Annapolis visiting Ottawa some few years ago, and among the members of that delegation who were especially anxious that this work should be undertaken by the government and who canvassed the support of all of us from Nova Scotia was Mr. Geo. E. Corbett, Conservative candidate in Annapolis in the last election. I am quite sure that that gentleman was very earnest in his advocacy, and that he felt convinced that he was asking the government, through the Department of Public Works, to inaugurate something that would be of great public benefit to the county and to the province of Nova Scotia.

Mr. FOSTER. We were told with reference to that famous Aylesworth ditch that Liberals as well as Conservatives had asked for it and it was supposed that settled the whole question. Does it make one pin's difference whether the demand for a public work is made by Liberals or Conservatives? Is not the real question: Is this an expenditure absolutely necessary in the public interest and if not absolutely necessary is it such an advisable expenditure that in these hard times we should take $170,000 of the money of the people for it?

Mr. PUGSLEY. Only one-third of that at present.

Mr. FOSTER. The minister is enough of a business man to know that if he commences to build a house he has to keep in mind the total expenditure and not the cost of the cellar wall which he may begin with. There are hundreds of instances in which expenditures have been cut off this year because the debt is increasing, the interest charge jumping by the millions, and the treasury depleted. I venture to say that no solid interest will be affected to the extent of anything worth considering if this work is left over until we get so much money that we want to waste it as we have been doing for some years past. At this period it is an outrage to be called upon to spend that amount of money on the harbour of Annapolis in the way of ice piers, and probably provincial bridges afterwards.

Mr. PICKUP. I may say that about thirty miles from Annapolis the Drummond Company have a large iron proposition and they wish to bring their iron to Annapolis for shipment. They have represented to me and to the government that they would build the piers and pockets to accommodate this trade provided the harbour was improved. Otherwise they feared their piers would be destroyed. We are spending money on the harbours of St. John and Halifax and other harbours in the Dominion to make them available for the shipment of the produce of the country, and this harbour at Annapolis is just as valuable as any of them to the extent of the interests it will serve. The improvement will accord a safe winter harbour for shipping and it will protect the wharfs already built as well as other wharfs which will be necessitated by the growing trade of that part of the country. The matter was gone into very fully last year by the minister and by other members of the House and no very great objection was manifested towards this appropriation. I may say that about 140 coastwise vessels and 50 or 60 foreign going vessels load at Annapolis. It is essential to the interests of the district that this work should be done.

Mr. SPROULE. How many vessels load there in the winter ?

Mr. PICKUP. There is one loading there now and another loaded in January, but under present conditions it is not safe for them as the harbour is peculiarly situated and they are in danger from the ice.

Mr. FOSTER. Last year I asked if there were any statistics as to material damage being done to shipping from these ice floes and I did not get any information on the point. If there is any record of actual damage in that respect I would like to get it now, because if no great damage has been done in the past this is a pretty expensive way of going about remedying it. Are the vessels which ply to Annapolis ocean-going vessels ?

Mr. PICKUP. A few years ago there was a great deal of ice from one end of the river to the other and it froze over. Below the frozen part there was open water and a large steamer came in from Great Britain and discharged her load of coal on the ice and took a load of lumber and apples. That was in February and that was the only time the harbour was frozen over.

Mr. FOSTER. Is the apple crop of the Annapolis valley shipped to Europe via Annapolis ?

Mr. PICKUP. Some of it.

Mr. FOSTER. What proportion ?

Mr. PICKUP. I cannot say. If the harbour were available a larger part of the crop would find its way to Europe via Annapolis.

Mr. FOSTER. I was under the impression that the apple crop was exported from other ports.

Mr. PICKUP. That is so, but some of it is shipped from Annapolis and more would be shipped were the harbour improved.

Mr. CROSBY. When were tenders called for this work ?

Mr. PUGSLEY. I think in the early part of last summer.

Mr. CROSBY. Has the contract been let ?

Mr. PUGSLEY. No. As I stated, tenders were called and Reid and Archibald being the lowest the contract was sent to them for signature but they declined to sign unless we should make certain modifications which we refused to do. In consequence of their refusal we are asking for new tenders.

Mr. CROSBY. Did Reid and Archibald send a certified cheque?

Mr. PUGSLEY. They did.

Mr. CROSBY. Did you return their cheque?

Mr. PICKUP.

Mr. PUGSLEY. No.

Mr. CROSBY. You have it yet?

Mr. PUGSLEY. Yes.

Mr. CROSBY. You intend to hold it?

Mr. PUGSLEY. Yes, for the present.

Mr. CROSBY. They have done a great deal of public work?

Mr. PUGSLEY. Yes.

Mr. CROSBY. They are people you know very well?

Mr. PUGSLEY. Yes, very reliable contractors.

Mr. CROSBY. What is the reason you did not have them enter into the contract?

Mr. PUGSLEY. The reason was, as stated before, that they had some doubts apparently as to whether they would be able to complete the work. In all hydraulic work there is more or less danger, and they were not willing to take the risk of completion. They wanted the Crown to take the risk of the plans and of the work standing until it was completed. I refused to assume that risk; I wanted to hold the contractors to the performance of the contract and the completion of the work, and in consequence of our not being able to agree on a modification of the contract as they desired, we have now called for new tenders.

Mr. MADDIN. What was the amount of their tender?

Mr. PUGSLEY. $34,400.

Mr. AMES. If I am rightly informed, the principal reason for this appropriation has not yet been dwelt upon to any extent. As I understand, the principal reason for erecting these piers across the estuary of the Annapolis river is to enable a provincial bridge to be built upon them at some future date. If that is the case, it seems to me that the vote is being obtained more or less under false pretenses. I would like to know from the minister whether there have been any negotiations with the provincial government or any member of the provincial government or with any member of this House in regard to the use of these piers for the purposes of a bridge?

Mr. PUGSLEY. There have been no negotiations with me, and none with the government that I am aware of.

Mr. AMES. There have been cases in which parliament has been hoodwinked into the construction of piers which were to be used for the purposes of a bridge. In the county of Terrebonne back of the Island of Montreal, this government was induced to build, in a river, eight or ten concrete piers which could not possibly be

reached by any boat within four or five miles, and where all access was cut off by a railway half a mile below. There has never been a boat to these piers, nor is there any expectation that a boat will ever go there. That was a case where this government, under the guise of building piers as an aid to navigation, obtained a vote of money from parliament to aid the local authorities in building a bridge.

Mr. PUGSLEY. Perhaps it might not be out of place if I quoted from a report of the resident engineer at Halifax, Mr. Dodwell, who is an experienced engineer and has been in the department for a good many years, and who deals with the subject from the standpoint of harbour improvements.

Under the date of March 15, 1903, the resident engineer at Halifax reports that he had the opportunity of making a satisfactory inspection of runs of ice during the winter of 1903, and that he saw a representative one on the 25th of February of that year. The river as far as could be seen was full of ice from shore to shore, in cakes and sheets of all sizes, and in thickness from a few inches to six or seven feet. While he stood on the uppermost wharf on the Annapolis side, a large field came down in the last hour of the up-tide, caught on the wharf on which he stood, and lodging against the Granville foreshore, remained fixed and stationary until the flood-tide broke and took it up the river again. This he takes to be good evidence that a line of piers such as outlined in his plan and report of Jan. 18, 1902, and placed on the lower site, or about six hundred feet above the wharf above mentioned would serve to retain the ice in French Basin and the upper reaches of the river and keep the vessel berths in Annapolis free and safe.

Under date of Jan. 14, 1907, Mr. Dodwell, resident engineer at Halifax, reports that there is a probability that the Annapolis Iron Mining Company may at an early date either establish a smelter at Annapolis or may thence ship their ore by water; and if this project materializes, it will emphasize the need for such improvement of existing shipping facilities as will be afforded by the projected ice barrier. He therefore strongly recommends that an appropriation of $75,000 to $100,000 be made as soon as possible.

There is the report of an experienced engineer who has examined the harbour in the winter season and has seen the action of these ice floes, and who is of opinion that the building of these piers will operate as a barrier to retain the ice. It may be that when these piers are completed, it will be possible to place a superstructure of a steel bridge upon them. If that should be the case, I do not myself see that there would be any public objection to it being done; but of course I would not propose to parliament the construction of these piers for the purpose of utilizing them for a bridge. As I understand the report of the engineer, the reason parliament voted the money for this work some two or three years ago, before I became minister, was because it would be useful for the purposes of shipping, as making the Annapolis harbour safe. The Annapolis valley is perhaps the richest section of the whole province of Nova Scotia. It is rich in agricultural products, and is a great fruit district. Large shipments of apples are made from Annapolis to the old country; and if the harbour is made safe, vessels will resort there in a much larger number than at present, and it will become an important shipping point in the winter. I am told that there are also in the vicinity large deposits of valuable iron ore, which will probably be shipped at Annapolis if these improvements are made. We can all realize the enormous advantage of having a port open in the winter season as well as in the summer, and if for this comparatively small expense Annapolis harbour can be placed in that position, I feel that the money will be very well expended.

Mr. A. K. MACLEAN. I do not know whether I can make the matter any plainer than the minister has done, but I would like to offer an explanation. Annapolis Basin is an arm of the Bay of Fundy and is open during the winter season. Ice does not form on the basin or the harbour. The Annapolis river flows into this basin.

Mr. AMES. Is the port of Digby open all the year round?

Mr. A. K. MACLEAN. Yes. It is on another arm of the same basin. The Annapolis river flows from the basin into the bay some twenty miles. The fall of the tide on this river and in the basin is 28 feet. The ice forms during the winter, very heavily up this river to the town of Bridgetown, some 20 miles, and with a fall of 28 feet it will naturally float down during the fall of the tide and go into the Annapolis harbour. After it proceeds down a certain distance, it returns with the incoming tide again. While this ice flows in and out, it does immense damage to the wharfs and shipping, so that in the end the harbour is rendered useless for shipping purposes during the winter simply because of the floating in and out of the ice floes. The purpose of these piers is to prevent, not the formation of ice in the river, but its floating down at falling tide into the Annapolis harbour; and if that purpose be accomplished Annapolis would be made a winter shipping port.

Mr. AMES. Are these piers to be built all the way across the estuary of the Annapolis from the south to the north shore?

Mr. PUGSLEY. At present it is only proposed to build three piers; but later on, if the experiment proves successful, several more piers will be built, which will extend across the river.

Mr. AMES. Are they to be equidistant the one from the other?

Mr. PUGSLEY. No.

Mr. CROSBY. With regard to the firm of Reid and Archibald, how is it they were not made to carry out their contract? I presume they saw the specifications before tendering.

Mr. PUGSLEY. They refused to sign the contract, and you cannot compel a party who has tendered to sign a contract. All you can do is to make him forfeit his deposit, which was done in this case.

Mr. WM. CHISHOLM. There are times when it is a hardship to make a party tendering forfeit his deposit. I am not referring to this particular instance, but to another case which was one of great hardship. The party tendering acted in good faith, but found afterwards that the plans were so drawn up that the risk was greater than he anticipated. Of course, he saw the plans and specifications before putting in his tender, but the time was short and he had not the opportunity to make as careful an examination as he should have done. But when he found afterwards, after more careful investigation, that the work was more difficult than appeared at first sight, he declined to enter into a contract and his deposit was forfeited. It seems to me that when, owing to circumstances over which he can have no control, a party who tenders refuses to execute a contract, and has acted in good faith in tendering, his deposit should be returned. That may be a dangerous principle to act upon, but when there is absolute good faith and no suspicion of collusion, I think the deposit should be refunded. The government has no right to take a man's money for nothing.

Mr. MONK. What is the object of the piers across the Annapolis? Is it to prevent the ice going down into the harbour?

Mr. A. K. MACLEAN. Yes.

Mr. MONK. We have in the province of Quebec an old saying, always found to be true, and that is that you cannot possibly resist the movement of the ice. You may impede it to a certain extent by building piers, but nothing will prevent the ice making its way eventually.

Mr. A. K. MACLEAN. Would the flow of the tide be as great in the rivers you have in mind. In the Annapolis river there is no water left after a short time and the ice would go to the bottom.

Mr. MONK. The rivers I particularly refer to have no tide. But it is a saying with us that no strength of piers will keep the ice back from its course. If these piers are intended to stop the ice, the money will be wasted. We have had experience of that for years in the vicinity of Three Rivers. You can impede the ice to a certain extent but you cannot prevent its following its natural course. But to block the ice and prevent it flowing out seems an impossibility.

Mr. PICKUP. We have a practical demonstration of it. When the river was frozen over, the conditions happened to be very favourable, there was a wind from the west and it was snowing. The ice caught and froze clear across, and remained for about five weeks, no ice moving in the river at all. The harbour below was absolutely free, and, as I said, a vessel came in and loaded from the ice.

Mr. FOSTER. The idea of this is to delay the ice there at low tide?

Mr. PICKUP. Or at any time. If the ice is formed, it will remain there—a solid mass of ice.

Mr. BLAIN. I understand, the minister is now asking for new tenders. Will the contractors be required to supply all the material for the work?

Mr. PUGSLEY. All except the creosoted timber. That is furnished by the department.

Mr. SPROULE. I understand the hon. member (Mr. Pickup) to say that there are about 125 or 135 vessels at this harbour.

Mr. PUGSLEY. Upwards of 200.

Mr. SPROULE. Is this the place that is called 'Annapolis Royal'? For I do not see any other.

Mr. PUGSLEY. Yes.

Mr. SPROULE. I have here the trade and navigation returns, and I find that in the year ending March 31 last, the arrivals were 19 British vessels, with a tonnage of 5,462, and six foreign vessels with a tonnage of 1,160, or 25 in all, with a tonnage of 6,622, instead of 145 vessels as mentioned by the hon. member. The outgoing vessels numbered 36 British, with a tonnage of 8,906 and 10 foreign with a tonnage of 3,245 or 46 in all, with a tonnage of 12,151 tons—a wonderful difference between these returns and the statement that has been made. If, during the whole season of navigation, and that is the season—I assume, during which the greater share of the produce would be shipped, the apples for instance—there is only this number of vessels, the place is hardly of the importance one would be led to suppose from the figures that have been given. It may be that, if they could continue navigation winter and summer, more might be done, but the figures do not indicate that this is a port of very much importance. I do not know on what the hon. gentleman bases his statement of the number of vessels.

Mr. PICKUP. Last year on account of the lumber trade being bad, there were not so many vessels entering and clearing. I referred to two years previous. The coastwise vessels are not included in those returns, I am sure.

Mr. SPROULE. Though the coastwise vessels, no doubt, are small, I should think the returns would include them.

Mr. FOSTER. What is the width of the whole estuary or river along which these piers are to be built

Mr. PUGSLEY. About 1,800 feet.

Mr. FOSTER. Then, the piers will be 180 feet apart?

Mr. PUGSLEY. On the average.

Mr. FOSTER. Is it the intention to have chains from pier to pier to prevent the ice going down through the openings?

Mr. PUGSLEY. No.

Mr. FOSTER. You have a space of sixty yards between your piers, and you have a fall of twenty-eight feet of tide. When that tide is running out, it must have considerable force. Any ice in that tide must go out like the very mischief, and surely will be carried out through a space sixty yards wide.

Mr. PICKUP. The ice is in such large cakes that coming down it would block. That is proved by experience. The result would be an ice bridge behind the piers and a clear harbour below.

Mr. FOSTER. It may be that the ice will be in sufficiently large cakes to catch on the piers and prevent any going through. But when the tide is cavorting around and breaking up ice, it generally succeeds in getting into smaller pieces than that would indicate. And I should be very much afraid to bring up a small vessel at the moment when this pernickety ice might take it into its head to come down on that twenty-eight-foot tide and play the mischief with the boat. Now, in reference to the number of vessels in the harbour, there is a general statement made here of 245 vessels. But the customs officer, whose business it is to keep the records, finds—as has been shown by the hon. member for East Grey (Mr. Sproule)—only 46 vessels. That is a great disparity. If there is such an awful falling off within two or three years, does not the minister think he ought to be cautious and wait to see whether the rest of the shipping goes away also ? I would like the committee to notice that there is an expenditure of $160,000 or $170,000, made, apparently, on an airy saying that there are iron ores somewhat near, and that there is just a possibility that these may be exported. There is another bare possibility that a smelter may be built there. But is there any certainty of either ? Is it not the way of prudence to wait until there is something tangible in the way of development and business ? The thing would be different if you could show that a large iron deposit was being worked and a smelting business established. But you do not show that, but only a possibility. But there is one certainty, and that is that you are putting in your money, and that without any official indication of great present trade or strong possibility of trade for the future. After all, what goes out of Annapolis is largely a local traffic. The apples for export, I believe, largely go by another way. The apples for St. John and the provinces may cross the bay. But I think that most of this trade is done before this ice trouble commences. As I understand it, this ice trouble develops mainly in the spring.

Mr. BLACK. All winter.

Mr. FOSTER. There would not be any trouble with ice up to December, I suppose; that is, the summer and fall navigation is free of that difficulty. There is another point: I understand the minister to say that the engineer, Mr. Dodwell, had recommended the appropriation of the money for this purpose. It struck me at the time that it is not quite within the sphere of an engineer to recommend public appropriations. The engineer is the arm upon which the executive authority rests, the minister and his colleagues are to be the judges of appropriations. The appropriations are made presumably upon advisable or necessary grounds, but generally commercial grounds are those that weigh. When the minister or the government come to the conclusion that for commercial reasons an expenditure of money is advisable, then the engineer comes in with advice as to the best plan to adopt, what form of construction will be most suitable, &c. It does not seem to me that it is the duty of the engineer of a minister to advise appropriations here or there. If he finds a work in need of repair or something of that kind he may advise appropriations, but he should hardly advise for or against a work except on scientific grounds.

Mr. PUGSLEY. My hon. friend, I think, is hardly right. The engineer should not give advice as to the commercial advantage of any particular work unless he is asked for such advice, but in my own experience as minister I very often and properly rely upon the opinion of the resident engineer as to the necessity for any particular work. For instance, if I receive a petition asking for the construction of a wharf or urging that some dredging should be done, I very often send a memorandum to the chief engineer asking him to instruct the resident engineer to report as to the necessity for and the cost

of the proposed work. In that case it will be the duty of the engineer to look carefully into the business done at the particular place, to examine the proximity of the proposed wharf to some other wharf or to other harbours. In the case of a breakwater we may ask him to report how far it is from the next harbour of refuge or the next shipping port and generally to report as to the necessity for constructing the work at the particular place indicated. In this particular case, suppose that the petition was presented to the minister for this particular work supported by the member for the district and by Mr. Corbett, a gentleman engaged in business in Annapolis since the eighties, and by other business men, if the minister had referred this to the chief engineer and had asked him to have a careful inquiry made by the resident engineer as to the necessity for and the advantage of the proposed work, and its probable cost, I would think in that case it would be quite proper for the engineer to take into consideration all the circumstances connected with this proposed work; to consider its advisability, its practicability,—

Mr. FOSTER. Practicability, that is proper.

Mr. PUGSLEY. And the objects which would be obtained by it. If he were asked to report in that way, I would see no objection whatever to the resident engineer recommending that the work should be undertaken as being in the public interest and advising that an appropriation for the purpose should be obtained. Just how far the engineer should report would depend on the instructions given to him and the information which he was desired to impart to the department.

Mr. BLAIN. Comparing the explanations of the minister on this matter last year and to-day I think we have a right to be suspicious that this has something to do with a municinal bridge as mentioned by my hon. friend from Montreal. I am aware that the gentleman representing the county is well informed in connection with this case; he has so stated last vear and this afternoon as well. Is there any suggestion that these piers will ultimately be used for a municipal bridge or a provincial bridge?

Mr. PICKUP. Not that I have any knowledge of, no, sir.

Mr. BLAIN. Would it be possible to put a superstructure of steel or iron over these piers that would transform them into a provincial or municipal bridge?

Mr. PUGSLEY. That is a question which has not been looked into at all. It has not been brought to my notice directly or indirectly.

Mr. BLAIN. Will the minister say he will not allow the piers to be used in future as a municipal bridge without the consent of parliament?

Mr. PUGSLEY. I will say, that when that question comes up I will give it the most careful consideration.

Mr. BLAIN. We have seen a Minister of Public Works come to the committee with an item in the estimates asking for a public wharf, and we know as a matter of fact that when that statement was made in the House it was misleading. Future events proved that this so-called wharf was not a wharf, but that it was for a municipal bridge, and to-day it it a municipal bridge. As the government misled the committee and the country and expended money for purposes for which it was not intended and could not lawfully be appropriated, is it unfair for us now, at the very commencement of this work, to ask the minister to say that this money will not be expended for any municipal or provincial purposes ?

Mr. PUGSLEY. If my hon. friend means that I would not be a consenting party to contributing any moneys of my department for the purpose of erecting a superstructure upon these piers, I will certainly give him and the committee that assurance.

Mr. BLAIN. My hon. friend knows that that matter is not up for discussion and that this is an evasive answer to the committee. I am not talking about a superstructure that at some future day may be constructed. I am asking my hon. friend if, while he is minister of the department, he will allow a municipality, or the provincial government, to place a superstructure on the piers that are about to be constructed?

Mr. PUGSLEY. I have learned long since that is the time to bid a certain gentleman good morning when you meet him.

Mr. FOSTER. Especially when you meet him often.

Mr. BLAIN. I may say to my hon. friend that this will not hurry along his case.

Mr. PUGSLEY. I cannot help it.

Mr. BLAIN. I think this is a fair request I think we have every right to be suspicious that this is for a purpose that my hon. friend is unwilling to reveal to the committee and I think it is only fair that my hon. friend should pledge his word that he will not allow this work, either now or in the future, to be used for any municipal or provincial bridge. Every man knows that it is a strange procedure to build piers in the river to keep the ice back in order to prevent it from interfering with the harbour. Everybody knows that it must be experi-

mental in the main. It is rumoured—indeed the gentleman sitting beside me says it is current in that section of the province—that this is to be used for a municipal or provincial bridge. Before we consent to vote the item finally it is quite fair for the minister to promise the committee that he will not allow the provincial government or any municipality to put a superstructure upon these piers without the consent of parliament.

Mr. A. K. MACLEAN. The minister would have no authority to do it.

Mr. BLAIN. Will my hon. friend (Mr. A. K. Maclean) state that he is not aware that some such suggestion has been contemplated and discussed in that section of Nova Scotia?

Mr. A K. MACLEAN. I cannot say.

Mr. BLAIN. My hon. friend does not want to say.

Mr. A. K. MACLEAN. If the hon. gentleman wants an answer all I can say is that I have never heard of such a suggestion in my life. Of course, it may be true. I am not saying that it is not, but I live quite a distance from the locality and I do not know it. What I said was that the minister would have no authority to grant permission to the provincial government or to a municipality to put a superstructure upon these piers.

Mr. BLAIN. The government of which my hon. friend is a prominent supporter has done it before. I had the duty myself of bringing to the attention of this House a case down in the county of Richmond and Wolfe. We had an estimate placed before this House to build a wharf in the town of Disraeli and for two years in succession the item pased the House with the explanation from the minister that it was for a wharf. Evidence was produced on the floor of this House that no vessel carrying freight ever entered that harbour and at this moment upon these piers that were constructed for a wharf, there is a municipal bridge and the old municipal bridge has been removed. Yet the government will not say that they have no intention of doing any such thing again.

Mr. PUGSLEY. Does the hon. gentleman say that evidence has been produced that no vessel has stopped at that wharf?

Mr. BLAIN. Yes. I visited the town and produced on the floor of this House, in the presence of the minister's predecessor, a sworn statement from a gentleman who had lived there for twenty-five years, and was a former mayor, that at no time in the history of the town had there ever been a vessel of any description carrying produce into that wharf.

Mr. PUGSLEY. Was that before or after the wharf was built? How does the hon. gentleman expect a vessel to go to a wharf until after it is built?

Mr. GEO. TAYLOR. There was no vessel to go there.

Mr. PUGSLEY. My information is that vessels did go there before and that they have gone there since the wharf was built.

Mr BLAIN. I may say to my hon. friend that it is absolutely impossible for a vessel of any description to go underneath the bridge, to enter the wharf which public money has been expended to build. My hon. friend must know that if he knows anything about his department.

Mr. PUGSLEY. It happens in that case that vessels land and deliver their cargo on the lower side of the bridge and at the wharf which is at the lower side of the bridge.

Mr. BLAIN. My hon. friend has not been there.

Mr. PUGSLEY. That is my information.

Mr. BLAIN. I have been there. That is another impossibility because there is a superstructure of a railway along the other side of the bridge that makes it absolutely impossible for a vessel seven feet high to go into the wharf. I would ask my hon. friend to produce to the committee this afternoon a report showing how many vessels have entered there.

Mr. E. M. MACDONALD. We were discussing the question as to whether or not this vote to provide for the erection of ice piers should be passed. My hon. friend from Peel (Mr. Blain) did dilate upon some alleged or imaginary wrong that occurred somewhere in Quebec a couple of years ago in reference to the D'Israeli bridge, but my hon. friend need not harp back to ancient history or dig up from the archives anything that gave him satisfaction at that time in order to enable this committee to consider what they should do about this particular vote. My hon. friend's soul seems to have been somewhat vexed as to the question of the possibility of a municipal bridge being erected over these piers. As a matter of fact, in the province of Nova Scotia, the erection of bridges is entirely in the hands of the provincial government. There is therefore no possibility of a municipal bridge which he seems to regard as being a frightful iniquity that might be perpetrated upon somebody—I do not know whom. There is no danger of that occurring in Nova Scotia. With regard to the question as to whether or not the object of the erection of these piers is for the purpose of having a bridge ultimately built, I may say that in so far as hon. gentlemen

supporting the government from Nova Scotia are concerned, we have not heard of there being any such proposition involved in this vote. I may say further that I have learned of the case that was put forth in regard to this matter by Mr. Geo. E. Corbett, who was the Conseravtive candidate in the county of Annapolis in the election of last autumn. Mr. Corbett claimed in the county last year a great deal of credit from the people there because he had come to Ottawa and impressed upon the government the necessity of undertaking this work, and he said that he and not Mr. Pickup, the representative of the county, was the gentleman who ought to receive all the credit that the county could give on account of it. My hon. friend ought to be fair and frank about this thing. We are fair and frank about it. I may say that if as a result of the erection of these piers in the Annapolis harbour the provincial government should come to this government and say that this is a public work that can be utilized for two purposes I do not see any reason why the department should not consider it because I do not see who is going to be hurt by it. If we have the navigation of Annapolis harbour improved by the erection of these piers, is it going to hurt any body if the provincial government should say: We will be able to secure a highway here by making an arrangement satisfactory to both governments? That would be no great iniquity. There is no necessity of the hon. gentleman holding up his hands in holy horror at such a proposition.

Mr. W. F. MACLEAN. You have your hands up now.

Mr. E. M. MACDONALD. Well I am only suggesting that my hon. friend need not get into the same attitude. As far as I am concerned and as far as every other hon. gentleman supporting the government from Nova Scotia is concerned, we have not heard of this bridge project, and I see no reason why the two governments should not treat on the subject.

Mr. BLAIN. I am sure the committee is highly pleased with the lucid explanation given by my hon. friend (Mr. Macdonald) as to why this money should be voted. But did you notice that he let the cat out of the bag when he said that at some future time he would not object to see erected on these piers a superstructure for a municipal or provincial bridge.

Mr. E. M. MACDONALD. You might also notice that I said I had never heard of such a proposition.

Mr. BLAIN. But the hon. gentleman seemed to have it in his mind that such a thing is quite possible, and if it is not going to be done there is nothing to prevent the minister pledging his word now that the piers will not be used for such a purpose.

In Ontario, the municipalities construct their own bridges and it is a question of considerable importance to know whether it is the policy of this government to construct ice piers which may afterwards be used for municipal or provincial bridges. We all know very well that when the appropriation was made for the D'Israeli wharf it was pointed out that there was no water in the lake to enable boats to get to it and no boats in the lake engaged in commercial venture to use the wharf when built. It was pointed out that the D'Israeli wharf would simply be a municipal bridge and it is to-day a municipal bridge and the only one in the municipality. Will the minister pledge his word to the committee that these piers shall not in future be used for the purpose of a municipal bridge?

Mr. TOBIN. I thought the question of the D'Israeli wharf was settled some years ago. If my hon. friend from Peel thinks it is not settled I would ask him to consult with Mr. Champoux, the late Conservative candidate in Richmond and Wolfe at the last election and with whom my hon. friend (Mr. Blain) acted as a detective on one occasion.

Mr. BLAIN. I will ask the Chairman if it is in order to call a member of this House a detective?

Mr. TOBIN. I will withdraw that. At all events the member for Peel went down to Richmond and Wolfe some years ago to investigate the D'Israeli wharf and he met there Mr. Champoux a disappointed contractor who wanted to sell some lumber to the Public Works Department, and he got from Mr. Champoux certain information. Now, Mr. Champoux was the Conservative candidate in Richmond and Wolfe last election and he conducted his campaign in D'Israeli where this wharf was constructed but he did not mention the wharf and he did not make any charge against the government in connection therewith. True, the government built a wharf at the mouth of Black creek which empties into Lake Aylmer and later on the municipality filled up a part of that creek and they now cross on it, but it is not correct to say that the government ever built a bridge for that municipality.

Mr. TAYLOR. They built half of it.

Mr. TOBIN. If my hon. friend from Peel wants to go down on another picnic to Richmond and Wolfe he will find there is no obstruction from the railway bridge and that Mr. Champoux will tell him that he did not make any complaint about the D'Israeli wharf when he appealed to the electors last fall. I may tell the hon. gentleman (Mr. Blain) that Lake Aylmer is no small stream; it is 13 or 14 miles long and 4 or 5 miles broad and there are boats plying on the lake, and if they are not do-

ing a freight business, surely the people who live in Stratford, D'Israeli, Lake Weedon, Garthby and other towns on the lake have a right to have their share of public expenditure. I have a petition from the people of the township of Stratford asking for a wharf at Stratford, and these people know the needs of the locality. I have forwarded that petition to the Minister of Public Works and if he does not grant the prayer of the petition this year I trust he will place a vote in the estimates for it next year.

Mr. BLAIN. Does not the hon. gentleman (Mr. Tobin) regard the D'Israeli wharf as a municipal bridge?

Mr. TOBIN. I do not.

Mr. BLAIN. Part of D'Israeli is situated on one side of that water and part on the other, and the only way to get across is by that bridge or wharf on which this government spent $7,500.

Mr. TOBIN. The hon. gentleman knows very well that the government never appropriated any money to build a bridge at D'Israeli.

Mr. FOSTER. That's right enough; they called it a wharf.

Mr. AMES. May I suggest that we should take a business view of the situation. In this case, where the work is to be for the joint benefit of the Dominion and of the province it would seem as though both should mutually subscribe for that work. If I should build a house on a vacant lot and a neighbour comes later on and builds next to me he has to pay me for the use of my mitoyen wall as soon as he takes advantage of it. I do not know any reason, if these ice piers are needed to stop the ice and are constructed for that purpose and succeed in standing the pressure of the ice, and are properly located, why they should not eventually be used for a bridge; but the moment the provincial authorities ask for the right to use them for a bridge, they ought to contribute their fair share of the expense; and all we ask of the minister is that he will give us some assurance that in such a case an adequate compensation will be demanded.

Mr. PUGSLEY. A somewhat similar question came up not very long ago in regard to some ice piers which had been built for the protection of the banks of a river and also for the benefit of navigation in another province. The municipality in which they were constructed proposed to utilize them, with the consent of the government, for the placing upon them of a steel superstructure to be used in place of a bridge which had either been carried away by freshets or had decayed. I stated that in my opinion the local authorities should be permitted to utilize those piers for that purpose on condition that they would be willing to enter into an engagement with my department that they would keep those piers in repair for all time, free of expense to the federal government. I do not see what objection there could be from the standpoint of the public interest to an arrangement of that character. With regard to the wharf at D'Israeli, I am surprised that my hon. friend from Peel (Mr. Blain) should allow himself to be misled as to the facts of the case. When he went there on the occasion to which he has referred, he must have studiously avoided the side of the wharf which is frequented by vessels navigating the lake. The same rather unjustifiable and inconsiderate statement was made at the last session of parliament. A report has been made by the resident engineer to the effect that the vessels do go to that wharf and that it is a very useful structure for the purposes of navigation. It is true, the wharf having been built, the municipal authorities use one end of it for supporting a bridge, and their doing so does not interefere with the purposes for which it was built. I hope my hon. friend will get more reliable information before he again speaks on that subject in this House. With regard to the usefulness of these piers, I cannot say what the minister will do in the future, but if application should be made on the part of the provincial government for permission to use these piers to bear the superstructure of a bridge, all I can say is that if I happened to be the Minister of Public Works at that time, I would insist that before that permission should be given, an arrangement for adequate compensation should be entered into —it might take the form of a money payment or the form of an engagement on the part of the provincial authorities to keep the piers in repair, whichever would be best in the public interest. Whatever conclusion would be arrived at would depend on the circumstances. What I want to assure the House is that, so far as my information goes, these piers are being built for the purposes of navigation. These are the sole purposes put forward in the report of the engineer. The engineer is very strongly of opinion that the piers will prove beneficial, that they will form a solid ice bridge or jam at the head of the Annapolis harbour, and thus make the harbour reasonably free from ice and otherwise safe in the winter season.

Mr. BLAIN. As my hon. friend has introduced the subject of the Disraeli wharf, I suppose we shall be allowed to make an answer. In doing so, it will be necessary to take up a little of the time of the committee.

Mr. DEPUTY SPEAKER. The hon. gentleman is, I think, entitled to answer

under the circumstances, but not to make a prolonged statement.

Mr. PUGSLEY. It was the hon. gentleman who introduced it.

Mr. BLAIN. The hon. minister re-introduced it and read me a lecture as to the correctness of the statement, which I think ought to be answered before the committee rises. In the town of Disraeli there was a large wooden superstructure 710 feet long, which was built in the early days by a provincial appropriation aided by the municipality. That was the only way in which the people living on the one side of the river could reach the other side. The hon. gentleman who represents the county conceived the idea of making an application to the government for an appropriation to build a wharf, and such an appropriation was placed in the estimates. I had the honour, along with my hon. friend from South Simcoe (Mr. Lennox), to visit the town, and we walked across this wooden superstructure, which had been condemned by the inspector of bridges in the province of Quebec. The government, a few weeks before the general election in 1900, employed an army of farmers, more than fifty, to draw in stone for the construction of this wharf, and paid for the stone, not by the cord or toise, but by weight, and a scale was bought at the expense of the government and put alongside of the proposed wharf for the purpose of weighing the stone. The government constructed 310 feet of the bridge across the water, at a cost of $7,250. The municipality, when they realized that the wooden superstructure, over which they were crossing daily was condemned and must be replaced by a better structure, conceived the idea of continuing the work from the end of the government bridge, across the balance of the water, 400 feet: and they applied business methods to their section. They advertised for tenders, while my hon. friend's department did not advertise for any tenders; and with the very same specifications as were adopted by the government, the municipality built the 400 feet at a cost of less than $3,000. I make the statement now, and have no fear of contradiction, that the municipalities knew and that my hon. friend who represents the county knew full well, when they applied to the government for a wharf, that it was to be used for a municipal bridge. When that superstructure was placed, 710 feet long, the government having invested in it $7,250, and the municipality less than half that, the old wooden structure was removed and to-day there is but one passage from one section of the town to the other, and that is the so-called wharf constructed by this government; and I have no hesitation in saying that the gentleman who was then the Minister of Public Works misled the committee when he said the expense was for a public wharf because he knew full well it was for a municipal structure rather than a public improvement.

Mr. JAMESON. I wish to draw attention to a matter of great importance with regard to the Sissiboo or Weymouth river in the county of Digby. This river is crossed by a bridge of the Dominion Atlantic Railway Company some distance below the town of Weymouth. The Sissiboo river is one of the principal waterways of western Nova Scotia and of much importance the Dominion Atlantic Railway Company, as I am credibly informed, purposes during the coming summer to rebuild the bridge, and it is said that it will be constructed with a span of some 35 or 40 feet. I may be permitted to refer very briefly to the history of this bridge. In 1877-8 the Western Counties Railway was projected through Digby county designed to cross the river at this point. The business of the town of Weymouth was then chiefly done two and a half miles down the river below the location of the present business centre. The people of that neighbourhood were so anxious to secure railway connection that they purchased the right of way and practically built a new town two and a half miles more up the river where the railway crosses it. At that time the plans which were approved by the Department of Public Works required a draw or span of 40 feet in width. When the bridge was built however the railway company reduced this span giving only 35 feet in the clear. Ever since this bridge was constructed, the people have been under great disadvantage with regard to shipping facilities, owing to this narrow draw. The Dominion Atlantic Railway Company is as stated proposing to rebuild the bridge, and I am informed have a structure already prepared and on the ground—for the erection of a bridge giving no more than 35 feet in the clear. When the business interests of Weymouth and the outside shipping interests were advised of this, they entered a protest, and the building of the bridge was deferred until that protest was settled. I am informed that an application was made in 1907 to the Board of Railway Commissioners for the reconstruction of the bridge with a 35 feet draw, and that permission was given by the commission but that subsequently it was found the railway company had not submitted their plans to the Department of Public Works, and the wrok on the bridge was completely suspended owing to this agitation of the shipping and local interests. The trade of Weymouth is of considerable importance, a large lumber business is done there, a large pulp industry is carried on, and as time goes

on the port will become still more important from a commercial point of view than it is now. The people and the shipping interests of that district are extremely anxious that a draw or span of 60 feet in width should be placed in the neighbourhood. It is not only the interests of the town of Weymouth but the interests of shipping generally which would be benefited by that wider span. The railway company has, I understand, having been informed of this demand for a wider draw, considered it would be a hardship to impose on them the total cost of its construction. As regards the necessity for a wider draw, I am informed that the carrying of lumber to-day is done in vessels of greater beam than 15 or 25 years ago, and that consequently a vessel of practically the same tonnage would require to-day a wider passage than fifteen or twenty-five years ago. I am informed by shippers that they are now obliged to charter old vessels simply because the cannot get a modern vessel to go through the present draw, and that is one reason why they urge that a wider draw should be built. Further, they have to transport a large quantity of lumber down below this bridge in barges or scows or by teams, which imposes an additional cost amounting to fifty cents per 1,000 feet.

The railway company is suggesting, I believe, that the government should assist in the payment of the cost of construction of this wider draw. With reference to that feature, I would quote from 'Hansard,' volume IV., of 1906, page 7052, etc. Under the item of expenditure on harbours and rivers in British Columbia, I find this reference.

Mr. HYMAN. There is one new item there: Pitt river—substitution of a 230-foot through truss for original 132-foot truss of draw-span on C.P.R. bridge, inclusive of accessory works, $55,085.

He goes on to say :

The Canadian Pacific Railway built a bridge across the river there a number of years ago. They got the permission of the Department of Public Works to build this bridge. The Canadian Pacific Railway are renewing the bridge; they were building a new bridge last year, and it was then found necessary in the interests of navigation to widen the span. We asked them to do so, and they took the ground that having received permission to build according to their original plans, the government should pay for any widening of the spans the Justice Department gave its decision that under the circumstances the government should be liable. Therefore, we were in the position of having either to accept the old span or to pay our share of the cost. This is the amount found by the engineers to be due to the Canadian Pacific Railway by the government.

I ask and urge that what the government did in the case of the Pitt River bridge in British Columbia, in 1906; they should do at the present time in the case of the Sissiboo or Weymouth bridge, and in any case a span of sixty feet should be required to be built. Some time ago, I had the privilege of discussing this matter with the Minister of Public Works (Mr. Pugsley), and he told me that it would receive most careful consideration. I merely present these facts to-day in order that the claims of that district may be fully recognized and not overlooked. I trust the application of the people of Weymouth for a sixty foot draw may meet the favourable consideration of the Department of Public Works and the government, and that, if the government is going to pay any part of this and not require the railway to bear all the cost, provision will be made in the estimates during the present session.

Mr. PUGSLEY. The matter presented by my hon. friend (Mr. Jameson) is not new, either as to the bridge at Weymouth or the action taken by parliament in 1906. If my hon. friend read the papers which I placed at his disposal—as I have no doubt he did—he found the matter referred to there. The position is this: About a year ago, when the Dominion Atlantic Railway were about to rebuild their bridge at this point, my attention was called to the matter by the late hon. member for Digby, Mr. Copp. At his urgent solicitation, I notified the company that they must not proceed with the building of the bridge upon the proposed plan, for the reason that they had not followed the old order in council passed some thirty years ago, which provided that they should build a bridge with a span of not less than 40 feet, whereas they had built with a span of 34 feet, 8 inches. It is contended now, on behalf of the company, that they would have the right to rebuild the bridge according to the design approved of in 1878, and they argue that if the government, in the interests of navigation and for the benefit of the people of Weymouth, should require them to build a bridge with a span, say, 55 or 60 feet, the government should do as they did in the case of the Pitt River bridge, pay part of the cost. The matter is under consideration, but I am not prepared to say what action will be taken in regard to it.

Some hon. MEMBERS. Carried.

Mr. McKENZIE. I do not intend that any undue haste in calling votes ' Carried ' shall prevent me from saying a word on this subject. I have had experience here of being prevented from saying something by the extreme application of rules, but I do not propose at this time of my life to be so very easily turned down. I have no objection to the passing of this item. I wish to speak of the unnecessary alarm that

appears to be felt on the part of some hon. members on the opposition side concerning the use that may be made of these piers. If these hon. gentlemen understood the bridge law of the province of Nova Scotia, they would not have the notions about these piers that they have. I dare say it is thought that it would be popular in the county of Annapolis for a representative to be able to get this bridge out of the Dominion money. Let me tell these hon. gentlemen that such a thing is not thought of. He would not make one vote, and he would not detain a gentleman on the road for five minutes by trying to entertain him with such a story as that he was going to build this bridge. I think the mistake arises from our hon. friends from Ontario applying in the case of Nova Scotia the Ontario law respecting bridges and roads. I admire the public spirit of the people of Ontario and the way they have maintained their own roads and bridges direct out of their own pockets. Such is not the custom or law of Nova Scotia, nor has it ever been. Ever since Nova Scotia first became a province, its roads and bridges have been built and maintained out of public government money. There is no such thing as a tax upon the people for building bridges or maintaining roads. Up to 1883, the tax payers did not contribute a cent either directly or indirectly towards the maintenance of roads or bridges. In that year, there was passed what is known as the Bridge Act, under which the government of the province was empowered to borrow money to build large steel bridges wherever they were needed in the province, the interest on that money to be paid, not directly by the individuals who enjoyed the privilege of the bridge, but out of the road grant. That is: There is a road grant paid by the government to each county out of the revenue of the province—not out of direct taxation, and from this allowance, the government deducted enough to cover the interest on the sums spent in building bridges within the county. The only effect that the building of a bridge had upon the individual in the county would be that there would not be so large a road grant that year as if there had been no interest on the money invested in the bridge to be deducted. But, for the last two years, even this has been done away with, and the counties do not pay anything toward the interest on the bridges—the provincial government pays both principal and interest. Therefore, my hon. friends will understand that the people of Annapolis are not concerned about the building of these piers or that bridge. If a bridge is required at Annapolis, it will be built by the government of Nova Scotia. I submit to my hon. friends that from one end of the province of Nova Scotia to the other, they cannot point to any case in which the government of Nova Scotia ever called upon the Dominion government to contribute a single farthing toward the building or maintaining of a work that legitimately belonged to the provincial government. By no subterfuge, plan or scheme has the provincial government tried to cause the Dominion government to undertake any duty or face any expenditure that properly belonged to the local authority. They are well able to look after their own affairs and I assure hon. gentlemen they are not asking any favours from this government or asking this government to do anything which is the duty of the local government or themselves to perform. Some hon. gentlemen may not understand how these expenditures in our province bear upon the individual. The spending of this money by this government would not relieve the farmers or merchants of that district of any expense as this work would be done by the provincial government and not by the municipality. It is not felt at all by the individual. I do not understand the alarm of members of the opposition even if such an expenditure was to be made in Nova Scotia. Only last night it was suggested that the government should build a bridge and a piece of road in Kingston. That was considered a first rate proposition, at all events there was no opposition to it.

Mr. BLAIN. That was a proposition to construct and maintain a road in front of property purchased by the Minister of Militia.

Mr. McKENZIE. That does not make the slightest difference. We have in Halifax more government and imperial property than there is in Kingston, yet we never heard of either the imperial or Canadian government contributing one farthing towards the maintenance of anything municipal in connection with that city simply because that property was there. I think that rule should apply at Kingston as well as at Halifax. An hon. member from Manitoba had a bridge of this kind built in his country, but the opposition raised no objection to it and it was even suggested that this government should paint it and maintain the approaches. This was regarded by these gentlemen as all right because it came from one of themselves. I do not think it is right, I think that each government should confine its activity to the sphere allotted to it by the constitution.

I simply wanted to point out that there was no object in any Nova Scotia member urging this government to build a work of this kind for municipal purposes as it would not relieve the people of the neighbourhood. The farmers and the people generally of Nova Scotia are not concerned as to where the money comes from.

Mr. AMES. It is extremely interesting to have the hon. member for Victoria County, Cape Breton (Mr. McKenzie) tell

us that the people of Nova Scotia do not wish any money spent upon anything provincial, tell us that this sort of thing may be done in other provinces but in Nova Scotia it is never done. The hon. member's predecessor succeeded in persuading the minister to spend a considerable sum of money 11 miles up Middle river in his own county in order to build sheer dams to protect the land of farmers on that river, and also to spend a considerable sum on the Baddeck river to protect the farmers. These are small streams, they are absolutely unnavigable and could not possibly come under the head of harbours and rivers. It comes with a strange grace from the hon. member for Victoria county to tell us that the Dominion government is never asked or expected to spend money in Nova Scotia for provincial purposes, when in his own county we have some of the most glaring examples of the contrary that are to be found in the Dominion of Canada.

Mr. MADDIN. Whilst we gather from the hon. member for Cape Breton North and Victoria, that in 1883 the 'Greater Bridges Act' as it was called, was passed in Nova Scotia and that all bridges in that province are supposed to be built by the local government, it is not a new story, in the province of Nova Scotia at election time, that it is an excellent thing to have a good friend at court. We heard it in the local elections in 1901, in Nova Scotia when we were told that by supporting the local government in certain countries we would have a greater possibility than we had before of securing compensation for the building of the eastern extension of the Intercolonial Railway, and while it is a fact that the expense for bridges is to be borne by the government in that province, it must also be borne in mind that the revenue of that province is not great, being slightly more than $1,000,000 a year, so that it will not enable the provincial government to erect many $200,000 bridges in Nova Scotia. I submit that if the electors in Annapolis approached the local government at Halifax and asked them to erect a bridge across this stream at a cost of $200,000 or $250,000, the Nova Scotia government would take into consideration the amount of traffic to be catered to and they would hesitate to spend such a large sum of money.

But I do submit that if a candidate for the local House were to go to the government at Halifax and say: The estimated cost of a bridge across this river is $200,000, the estimated cost of the piers is $160,000 or $170,000 the superstructure will only cost $60,000 or $70,000, and then would add that the federal government at Ottawa had been good enough to undertake to furnish the foundations and piers and all that we would require to do would be to furnish the superstructure, that candidate would have a strong argument to submit to the government at Halifax and would be very likely to succeed in his application. The hon. member for Montreal, St. Antoine (Mr. Ames) has pointed out a couple of instances in the county of Victoria where money was spent twelve miles up the Middle river and on Baddeck river, for the protection of the lands of farmers there. In the county of Colchester, during the by-election of 1907, a sum of money was spent at Tatamagouche for the purpose of erecting a wharf and when the hon. member for Colchester put a question on the Order Paper in this House asking to know what the depth of water was at that wharf he was told that there was no water at low tide and that there were four feet of water at high tide. The hon. member for Colchester has been exhibiting a photograph in this House. I do not know whether he is here to-day or not, but he exhibited this photograph to a large number of members and it shows that this so-called wharf is nothing more or less than a bridge. It shows a horse and cart and some people on the bridge and if you look at the ordinary high water mark along the shore, as shown in the photograph, you will see that it would have to be a high spring or fall tide that would give four feet of water. It is a dangerous precedent to establish in this House that any of the municipalities or provinces can look to the federal government for assistance in constructing bridges. It is but entering the thin edge of the wedge, and if it becomes known that upon the pretense of having ice breakers erected in one constituency and if these ice breakers can afterwards be used for the purpose of erecting a bridge, I have no doubt that all kinds of suggestions and petitions will come to this government asking for ice piers, where, as a matter of fact, it is a bridge that is desired rather than ice breakers. It may be called a wharf in the petition or in the estimates, it may be called ice breakers in the petition or the estimates, but I submit that where it is a bridge that is really sought, that makes a great deal of difference. A rose by any other name would smell as sweet. There was a statement made by the Minister of Public Works with regard to the traffic to be served at this point. I take it to be correct as stated by the hon. member for Lunenburg (Mr. A. K. Maclean) that they have a rise and fall of the tide there of twenty-eight feet and having the rise and fall of the tide there, as in all other places, twice in twenty-four hours, and the temperature not being of such a character as to allow the formation of large bodies of ice, I would conclude that the interference with shipping caused by these conditions is unimportant. The public

reports indicate that there is a very small number of vessels entering or leaving that port. As far as the shipping of iron ore from that port is concerned, I would like to refer the Minister of Public Works to the fact that in the Mines report, which came to hand this session, the statement is made that the iron mines at Thorbrooke, in Annapolis, employ some 104 men. Their total output of ore is about 300 tons per day and this output is now sent to Londonderry. The report says:

> The output now sent to Londonderry is handled by the Dominion Atlantic Railway Company, whose branch line of 6 miles connects with the mines, and the Intercolonial Railway.
>
> | | Miles. |
> |---|---|
> | Length of haul, Dominion Atlantic Railway.. .. .. | 80 |
> | Length of haul, Intercolonial Railway.. | 64 |
> | Total rail haul.. .. .. | 144 |

That is where the output of the iron mines in Kings goes. It must of necessity go to one of four places to be smelted in the province; it must go to Londonderry, Trenton, Sydney Mines or Sydney. It is the purpose of this company, as outlined in the Mines report, to increase the output to 3,000 tons per day, and the report further states that arrangements are being made for shipping, and that a large pier will be built at Annapolis Royal from which these shipments will be made. For this purpose they will doubtless employ ore carrying boats which usually have a capacity of from 3,000 to 7,000 tons, and I submit that such boats at these will not be hindered by ice in a place that has a rise and fall of 28 feet of tide as they have in that harbour. If it is going to be a part of the policy of this government to grant assistance to municipalities and provincial governments in their road-making schemes we should know it. I do not know but that perhaps it might be a commendable policy. I am not committed one way or another with regard to it but I do submit that it might be more profitable to spend the money along such commendable lines rather than to squander it as has been done in the past. But if it is the policy of this government to grant assistance to provincial governments for the purpose of building municipal or provincial bridges it should come before this House clothed properly and bear on its face what it really is. If the purpose is to build a bridge across a river in Nova Scotia or in any other province the application should come before the government in the shape of a petition for a bridge across such river, and it should not come in the guise of an application for an ice pier or a wharf. These are all the observations that I have to make with regard to the estimate. I submit that it is bad policy to assist a provincial government in the building of bridges under the pretense of building ice breakers and wharfs; if that is what is contemplated by the politicians in the province of Nova Scotia.

Mr. SPROULE. What are the width and height of these piers and what material are they to be constructed of?

Mr. PUGSLEY. The average height will be about 75 feet. They are to be built of stone filled crib-work with a concrete superstructure and there will be creosoted square timber in large quantities used in them as well.

Mr. SPROULE. What is the width and what is the length

Mr. PUGSLEY. I have not the width. The inner pier is 35 feet high at low water.

Mr. PATERSON. A statement was made as to the number of vessels going there by the hon. member for East Grey (Mr. Sproule). I do not think he got them all because there are more vessels visiting that port in and out than he gave. The hon. gentleman only got one table. He will find the other at page 550.

Mr. SPROULE. What are the dimensions of these piers?

Mr. PUGSLEY. I do not happen to have the length here because the appropriation was made two years ago, and the details were then given. We are building three at present.

Mr. SPROULE I would like to have the height, the length, and the width of these piers. What is supposed to be the life of this creosoted timber?

Mr. PUGSLEY. So far it has given satisfaction and its use is becoming more general in recent years. I do not know that we have experience enough to say what the life of creosoted timber is.

Mr. SPROULE. It seems to me it would be worth while ascertaining whether it would not be the part of wisdom, depending of course on the relative cost and permanency of other materials, to use cement and stone where the teredo worm has to be guarded against.

Mr. PUGSLEY. In some cases we build entirely of concrete, but in this case we are building only the superstructure of concrete. The concrete costs considerably more.

Mr. SPROULE. I would like the minister to get me the dimensions of these piers, how much of this work is to be concrete and how much stone, what kind of timber is used, and the quantity for each pier. If we have these details we can estimate the cost.

Mr. PUGSLEY. I will get that information.

Mr. SPROULE. Formerly the experiment was tried of covering the piers with copper, and I think it was regarded as a greater preventative against the teredo worm than creosoted timber. When we are spending such large sums of money all these questions should be carefully considered by the minister.

Mr. PUGSLEY. We will give that consideration.

Mr. BLAIN. Last year the minister stated that $12,000 worth of timber had been purchased. Was the purchase made by public tender?

Mr. PUGSLEY. No. There are very few dealers in creosoted timber in Canada. The market price was paid.

Mr. BLAIN. Was that timber delivered last year?

Mr. PUGSLEY. Yes.

Mr. BLAIN. Does the minister think it is in the public interest to purchase $12,000 worth of timber without competition?

Mr. PUGSLEY. Not usually, but this is creosoted timber.

Mr. TAYLOR. Anybody can creosote.

Mr. PUGSLEY. It is creosoted in the Southern States and there are only two concerns which do that work.

Mr. BLAIN. What firm supplied this timber?

Mr. PUGSLEY. The Norfolk Creosoting works.

Mr. BLAIN. Is there any correspondence in the Public Works Department from the municipalities of Granville, or Annapolis, or from the local government with respect to this work?

Mr. PUGSLEY. Not since I became a minister, that I have seen.

Mr. BLAIN. Prior to that?

Mr. PUGSLEY. I do not know.

Mr. BLAIN. If there is, will the correspondence be brought down?

Mr. PUGSLEY. I shall be glad to lay it on the table.

Mr. SPROULE. According to the trade and navigation returns, there were in Annapolis Royal only eighteen vessels from the United States, one from the British West Indies and one from Norway, carrying an aggregate of 1,679 tons.

Mr. PATERSON. There is the coasting trade in addition.

Mr. A. K. MACLEAN. I regret to see that the estimates for harbours and rivers for Nova Scotia do not contain any sum for contract dredging. Last year contracts were awarded for dredging work in some of the harbours and rivers of Nova Scotia, and I trust that my hon. friend the Minister of Public Works may see his way to making provision for the carrying out of those contracts. In my own constituency dredging is most necessary in one or two cases, and I trust that the minister will be able to have an additional vote of $200,000 or $300,000 placed in the supplementary estimates to provide for such cases. I am quite willing that a great many of the usual items under the head of Harbours and Rivers should be abandoned this year; but the matter of dredging is very important, and I think the government and the House generally would agree to a supplementary vote for dredging in several of the provinces.

Mr. BLAIN. It has been abandoned in a great many sections in the western part of Canada.

Mr. A. K. MACLEAN. The necessity for dredging may not be so great on the great lakes as it is in the maritime provinces. Another remark I wish to make is that in the province of Nova Scotia at least we have not received from the government dredges the amount of work annually that we might fairly expect. I think that has been the case ever since confederation. The dredges do not get to work early enough in the spring and stop too early in the autumn, and the number of hours they work daily is altogether too small. There are a number of places in the province of Nova Scotia where the dredges could easily work all winter. The office in St. John appears to be altogether too inactive and too slow in its supervision of the work. In the province of Nova Scotia we have never obtained the amount of dredging which the necessities of our ports and harbours demand. Therefore my request is twofold—that we should get more work out of the government dredges than we have been doing from confederation down, and that a vote of $200,000 or $300,000 be placed in the supplementary estimates to carry on dredging in the province of Nova Scotia, for which contracts were entered into in 1908.

Mr. SPROULE. Would you get better results from dredging done by the government or by contractors?

Mr. A. K. MACLEAN. I would prefer the work to be done by contractors.

Mr. EMMERSON. I would like to emphasize the remarks of my hon. friend from Lunenburg. I quite appreciate the necessity of suspending, for a time at least, all

works that are not absolutely essential; but in the matter of dredging, in some instances where the work has been under contract and has been commenced, I do not observe in the estimates anything for its continuance this year. That may possibly be reasonable in some instances, but in one particular instance of which I am cognizant, the result will be, that if the work is not continued during this season, the work that was done last year will be practically lost to the department. There was some dredging required in Baie Verte, on the border line between Westmoreland and Cumberland. For very many years the municipalities have been asking to have this dredging done, and at the last session of parliament a vote was passed for the purpose, and a contract was entered into, and the work commenced. It was for the purpose of dredging a bar which blocked the entrance to the river and the harbour. For some reason this work was suspended in the early autumn, when the bar was only half cut through. If that work is proceeded with this year, and a cutting made through the channel, the work done last season will be available; but if it is allowed to stand and no money provided for the continuance of that contract, the work done last summer will fill in and be practically lost. It seems to me that the minister, in order to save the money already expended should make provision for the continuance of that work. I refer particularly to the dredging of the Port Elgin harbour on the Gaspereau river in the Baie Verte. I would ask the minister to bear this in mind, as it is coupled with the request of my hon. friend from Lunenburg (Mr. Maclean). The conditions at Port Elgin are certainly such that the case is much stronger, and I would like to emphasize what has already been said in that regard.

Mr. GAUVREAU. I want to join my voice with those of my hon. friends from Westmoreland (Mr. Emmerson) and Lunenburg (Mr. Maclean), but will apply their words to the province of Quebec and especially to the riding I have the honour to represent. Last year a contract was granted for the dredging at Fraserville wharf, but for one reason or another the dredging was not done. Riviere du Loup is a commercial town with a population of over 7,000, and for many years steamers have ceased calling there because of the lowness of the water. We require to extend our traffic down by the north coast to the Gaspé basin, and I hope that the minister in his next estimates will find his way clear to put in an amount just to carry out the contract for dredging which was granted last year. It is very important to River du Loup that this dredging should be done.

Some resolutions reported.

At six o'clock the House adjourned.

Mr. EMMERSON.

HOUSE OF COMMONS.

THURSDAY, March 11, 1909.

The SPEAKER took the Chair at Three o'clock.

QUESTIONS.

WHITBY HARBOUR.

Mr. HUGHES—by Mr. Geo. Taylor—asked:

1. Is the government contemplating taking over Whitby harbour from the present owners?
2. What representations are made to the government to induce it to take over the said harbour?
3. Who are the present owners of Whitby harbour?
4. What are the returns of Whitby harbour for the last five years?
5. Was the present member of parliament for South Ontario authorized by the government to promise before the recent elections that it would take over the harbour?
6. Has the government authorized the said member to negotiate with the owners of the harbour, or with others, in regard to the purchase of said harbour?

Hon. WM. PUGSLEY (Minister of Public Works):

1. Matter under consideration.
2. Resolutions passed by the town council of Whitby and the county council of the county of Ontario, petitions sent in by owners and captains of vessels trading on Lake Ontario and representations made by prominent individuals submitted as follows: That Whitby being the shortest railway route between Lakes Huron and Ontario, it may be an important unit in the moving of large quantities of the grain product of Manitoba and the Territories to the sea-board by an all Canadian route; that the comparatively central situation of this harbour and its position with regard to the outlet of the Welland canal make it a desirable one for a harbour of refuge on the north shore of Lake Ontario, and further, that, owing to its railway connections with Midland and the Ontario government Temiscaming Railway, Whitby Harbour would, if improved, serve as a natural outlet of the trade of Central and New Ontario.
3. Port Whitby Harbour Company.
4. No record in the department.
5 and 6. No.

PORT OF OSHAWA.

Mr. HUGHES—by Mr. Geo. Taylor—asked:

1. Who is the collector of customs at Oshawa harbour, and what is his salary?
2. What revenue has been collected at the port of Oshawa each year since it was taken over by the government, and from what source was the revenue derived?

3. In addition to the salary of the collector, what other expenses have been incurred by the government each year in connection therewith since taking over the port?

4. What representations were made to induce the government to invest in the harbour?

Hon. Wm. PATERSON (Minister of Customs):

1. George F. Blamey is collector of Customs at Oshawa; salary, $1,200 a year.

2. The customs revenue collected at the port of Oshawa is as follows:

During 1904-5	$ 40,684 66
During 1905-6	50,325 69
9 months during 1906-7	50,042 61
During 1907-8	73,729 69
11 months during 1908-9	71,691 07
	$286,473 72

3. The following expenses in addition to the collector's salary have been incurred in connection with the customs service at Oshawa from July 1, 1904, to March 1, 1909, viz: $556.65.

Hon. WM. PUGSLEY (Minister of Public Works):

4. The petition of the town council of Oshawa states: 'That the decrease in revenue of this port is largely due to the want of much needed improvements in the way of added dock and breakwater protection and dredging at the harbour which the Harbour Company is unable to supply; also that unless some action is taken to supply these needed harbour improvements, the harbour will become unsafe and unapproachable for vessels of ordinary capacity, such as are required for the heavy classes of freight, viz: iron and other raw material used by the numerous local factories and the coal required not only by them, but by all the people of the town and most of the farmers in the surrounding country. This has already seriously affected the grain trade and will continue to do so until remedied, and, if longer neglected, it will soon cut off the large passenger business now done at this port, and, what is of greater importance, the town shall lose the check upon the freight and passenger rates charged by the railway companies, which the competitive water route has always heretofore afforded; this would so hamper the manufacturing and commercial interests that its possibility must be regarded as a present serious menace to the prosperity of the town and of the surrounding farming country of which it forms the trade centre.'

The council therefore resolved that, in its belief: 'an urgent necessity exists for the prompt intervention of the Dominion parliament to prevent by timely aid at its present session (1898), this loss to this community which cannot longer be averted by private enterprise,' and requested the government 'to take such action as may be necessary to make the Oshawa harbour a harbour of refuge by providing for the undertaking of the improvements referred to in the government engineer's report.'

Further representations were made to the effect that 'the town needs a harbour of refuge for freight as well as passenger purposes, for the export of fruit and import of coal,' and that, if the harbour improvements were carried out, the local manufacturers would be placed on equal footing with any others in Canada.

LANDS UNDISPOSED OF IN NORTHWEST PROVINCES.

Mr. THOMAS CHISHOLM asked:

How many acres of land are still undisposed of by the government in each of the provinces of Manitoba, Saskatchewan and Alberta?

Hon. FRANK OLIVER (Minister of the Interior):

Undisposed of land in Manitoba at the 1st January, 1909, is 17,862,240 acres.

Undisposed of land in Saskatchewan at 1st January, 1909, is 104,878,159 acres.

Undisposed of land in Alberta at the 1st January, 1909, is 117,369,630 acres.

These figures are approximate.

INTERCOLONIAL RAILWAY—STATIONERY AND PRINTING.

Mr. STANFIELD asked:

What were the amounts paid by the Intercolonial Railway for stationery and printing for the year July 31, 1905, to June 30, 1906; from July 1, 1906, to March 31, 1907; and from April 1, 1907, to March 31, 1908.

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. Year ended June 30, 1906—	
Printing	$ 88,509 70
Stationery	18,428 43
Nine months ended March 31, 1907—	
Printing	$ 86,921 67
Stationery	13,325 16
Year ended March 31, 1908—	
Printing	$104,188 76
Stationery	34,330 46

WHARFS IN QUEENS AND SUNBURY.

Mr. CROCKET asked:

1. For what wharfs in the counties of Queens and Sunbury did the Department of Public Works call for tenders in October last?

2. What was the date of the call for tenders, and what was the date stated within which tenders would be received?

3. Was there a department estimate of the cost of these wharfs? If so, what was it in each case?

4. Were tenders received for all the wharfs for which they were called, and what was the lowest tender in each case?

5. What was the reason that none of the tenders were accepted?

6. Is it intended to call for new tenders for all these wharfs during the present year, or to build them without tender and contract?

Hon. WM. PUGSLEY (Minister of Public Works):

1, 2 and 3.

Names of Places.	Date of call.	Tenders due.	Estimated cost.
			$ cts.
Burton	October 9.	Nov. 12.	19,561 00
Lower Jemseg	" 9.	" 12.	10,954 00
Newcastle	" 9.	" 12.	8,257 00
Scotchtown	" 9.	" 12.	18,733 00
Young's Cove	" 9.	" 12.	11,381 00
Barker's	" 9.	" 12.	8,067 00
Trowbound Cove.	" 9.	" 12.	6,701 00
McAllister's	" 9.	" 12.	9,072 00
The Range	" 9.	" 12.	4,861 00

4. (a) No.

(b) Burton: D. C. Burpee, Gibson, N.B. $16,580
Lower Jemseg: C. B. & G. W. Colwell, Jemseg, N.B. 1,600
Newcastle: B. L. Simmons, Fredericton, N.B. 6,950
Scotchtown: C. J. B. Simmons, Fredericton, N.B. 13,658
Young's Cove: R. J. Kelly, White's Cove, N.B. 4,000

5 and 6. It was decided to change the style of construction and to call for new tenders.

DAILY MAIL SERVICE IN QUEENS AND SUNBURY.

Mr. CROCKET asked:

1. How many new daily mail services were established in the counties of Queens and Sunbury, N.B., in the months of September and October last, and how many new post offices?

2. Did the Post Office Department before ordering the establishment of these services and offices have a report from the post office inspector as to the cost of maintenance and probabe revenue? If so, what was it in the case of each office established?

3. Had any of these mail services or Post Offices been previously applied for and refused? If so, when and on what grounds were the applications refused?

Hon. R. LEMIEUX (Postmaster General):

Only one daily mail service was established in the counties of Queens and Sunbury during the months of September and October last, to serve a new post office at Washadamoak, the cost of such service being $25 per annum. The following is a list of new post offices established showing also estimated revenue and cost of service:

Elm Hill—
Estimated revenue $15
Cost of tri-weekly service 35
Established upon report of post office inspector.

Washadamoak—
Estimated revenue $15
Cost of daily service 25
Established upon report of post office inspector.

Central Maugerville—
Estimated revenue $20
No special cost for daily service, as office is situate on an existing mail route.
Established upon report of post office inspector.

Upper Welsford—
Estimated revenue $20
No special cost for tri-weekly service, as office is situate on an existing mail route.
Established upon report of post office inspector.

Canaan Rapids—
Estimated revenue $20
Cost of semi-weekly service 60
This office was refused during the year 1905 on the report of the inspector that it would accommodate only seven families; but the inspector having subsequently advised the department that a greater number of persons would now benefit by such an office authority was given for its establishment.

Snell—
Estimated revenue $10
Cost of tri-weekly service 60
This application was marked to stand during February, 1908, the report of the post office inspector showing that a limited number of families would be accommodated, and that the proposed office would be within a reasonable distance of two other offices, but from a subsequent report it appearing that the distance of neighbouring offices was greater, and the district much isolated, the office was then authorized.

PERMANENT CORPS AND ACTIVE MILITIA.

Mr. HUGHES—by Mr. Sproule—asked:

1. Have the batteries in Kingston or elsewhere in Canada sleighs for their guns for winter use? If not, why not?

2. Have the permanent corps suitable clothing, kit and equipment sufficient for a winter campaign?

3. Have the ordinary active militia the same?

4. Is there any sufficient reasons why these should or should not be supplied, and what are they?

5. Are the batteries manned up to full establishment?

6. Are the other permanent corps manned to full establishment?

7. Have the corps been up to full strength in camps during the last three years?

8. To what is the cause of shortage in members attributed?

9. Why do some officers bring out full members in corps and others be deficient?

10. Is the Kingston district rifle range open for rifle practice? If not, what is the cause of delay?

11. Is it the intention of the government to revert to the older plan of recognizing educational and other fitness as the basis of obtaining certificates and not mere rank?

Hon. Sir FREDERICK BORDEN (Minister of Militia and Defence):

1. The batteries have some old pattern sleighs, but these are not considered satisfactory, so a new pattern is under trial at the present time. As soon as the new pattern is perfected, it is the intention of the department to equip the batteries with it.

2. Yes; Consisting of great coat or cloak, fur cap, mitts or gloves, muffler, cardigan jacket and at certain stations moccasins and long stockings.

3. No: The only article of winter kit issued to non-permanent units, in addition to the regimental peace issue, is the great-coat or cloak. Other articles required to complete winter kit would be supplied upon mobilization.

4. The training of non-permanent units is mainly carried out in the spring or summer months. The cost of issuing winter kit to non-permanent units and of holding in reserve a sufficient quantity of such articles to equip the men required to raise such units to war establishment is prohibitive.

Moreover, it is considered that, if winter kit were issued and a reserve stock held, there would be a great loss to the country annually through the deterioration of the same.

5-6. Yes, to the full establishment as allowed by the estimates voted.

7. Not all corps.

8-9. To business conditions and the difference in energy and enthusiasm of commanding officers.

10. The range has not yet been opened for rifle practice, as it has only recently been handed over to the department by the contractor. Also, some additional land within the danger area in the rear of the butts has still to be acquired. It is, however, expected that everything will be in readiness for the ensuing shooting season.

11. It is not proposed to alter the present system of obtaining certificates of qualification. These certificates, however, are not granted for mere rank.

LATITUDE AND LONGITUDE OF CANADIAN CITIES.

Mr. PAQUET asked :

1. Has the Department of the Interior determined, with precision, the longitudes and latitudes of the following cities or any of them: Halifax, N.S., St. John, N.B., Rimouski, Que., Three Rivers, Montreal, Que., Ottawa, Toronto, Kingston, Hamilton, Owen Sound, Ont., Winnipeg, Man., Calgary, Alta., Vancouver and Victoria, B.C.?

2. If these longitudes and latitudes have not been determined by the officers of the Department of the Interior, what are they, according to the most authentic maps and the best information in the possession of the said department?

3. What is the difference, solar time, between Toronto and Ottawa, Toronto and Montreal, Ottawa and Montreal, Montreal and Quebec, Quebec and St. John, N.B., Quebec and Halifax, Victoria and Halfiax?

Hon FRANK OLIVER (Minister of the Interior).

1. Yes, as defined in answer to No. 2.

2. See answer to No. 1. The latitude and longitude of the cities mentioned are as follows:

Place.	Longitude.			Latitude.			Remarks.
	h.	m.	s.	°	′	″	
Halifax	4	14	25	44	40	08	Astronomically determined by Department of the Interior.
St. John, N.B.	4	24	13	45	16	35	Longitude scaled from map. Latitude determined by Department of the Interior.
Rimouski	4	34	11	48	27	10	Scaled from maps.
Three Rivers	4	50	09	46	20	37	Astronomically determined by Department of the Interior.
Montreal	4	54	19	45	30	22	Longitude by exchange with Greenwich. Latitude by McGill Observatory.
Ottawa	5	02	52	45	23	38	Astronomically determined by Department of the Interior.
Toronto	5	17	35	43	39	36	The Canadian Astronomical Hand Book, 1907.
Kingston	5	05	53	44	13	47	Astronomically determined by Department of Interior.
Hamilton	5	19	36	43	16	00	Scaled from maps.
Owen Sound	5	23	47	44	33	56	Astronomically determined by Department of Interior.
Winnipeg	6	28	34	49	53	52	" " "
Calgary	7	36	15	51	02	39	" " "
Vancouver	8	12	28	49	17	48	" " "
Victoria	8	13	27	48	25	31	" " "

3. The difference in solar time between the cities mentioned is as follows:

	H.	M.	S.
Toronto-Ottawa		14	43
Toronto-Montreal		23	16
Ottawa-Montreal		8	33
Montreal-Quebec		9	27
Quebec-St. John, N. B.		20	39
Quebec-Halifax		30	27
Victoria-Halifax	3	59	02

IMPORTATION OF REGISTERED STOCK.

Mr. J. D. TAYLOR asked:

1. Did this government at any time make arrangements with the government of the United States whereby registered stock would be imported for breeding purposes into either country from the other free of duty?

2. If so, at what date were such arrangements made, and are they effective now?

3. Were regulations under such arrangements promulgated for the information of those concerned? If so, how were they promulgated?

4. Have these regulations been amended at any time? If so, what is the effect of the amendment?

Hon. SYDNEY FISHER (Minister of Agriculture):

1, 2, 3, 4. No.

Such regulations have been in force in both countries for some years. They were made by each country acting independently of the other. The Canadian regulations have been amended from time to time. The effect of recent amendments is to require the importer to be a British subject or domiciled in Canada and to produce with his entry a certificate of record and pedigree issued by the office of the Canadian National Records and approved by the Department of Agriculture. In the case of Holstein-Friesian cattle the certificate is issued by the secretary of the Holstein-Friesian Breeders' Association of Canada. The amended regulations have been furnished by the Department of Agriculture to the principal newspapers in Canada and the live stock associations. They have been published in the Official 'Gazette' and mailed to all customs officers.

DISCARDED BRITISH SHIPS OF WAR.

Mr. BARNARD asked:

Has the imperial government made any offer or proposal to this government to allow them the use of any ships of war now out of commission or discarded as obsolete, to be used by the government of Canada for the purpose of fisheries protection or coast defence?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). No.

EXPENDITURE OF PUBLIC WORKS DEPARTMENT FOR MILITIA PURPOSES.

Mr. FOSTER asked:

What amount of money has been expended by the Public Works Department for militia purposes for each year since 1896 on capital and current account, respectively?

Hon. WM. PUGSLEY (Minister of Public Works):

	Capital.	Income.
1896-97		$ 84,845 76
1897-98		102,101 50
1898-99		52,211 67
1899-1900	$ 4,342 66	76,278 59
1900-01	40,481 55	111,815 07
1901-02	33,480 98	247,200 80
1902-03		148,080 71
1903-04	1,522 62	155,017 58
1904-05		419,407 51
1905-06		387,157 21
1906-07		256,106 48
1907-08		502,208 19
1908-09 (to date)		576,848 66
Totals	$79,827 81	$3,119,279 73

IRRIGATION OF CERTAIN LANDS.

Mr. CAMPBELL asked:

1. Has the government received any irrigation propositions for the lands or any part of them applied for by Percy Aylwin?

2. If so, what were these propositions?

3. Has the department any notice of Mr. Aylwin's application having been assigned, or otherwise disposed of?

Hon. FRANK OLIVER (Minister of the Interior):

1. Yes. An application to purchase these and other lands was received in May, 1908, from the Canadian International Colonization Company, of Winnipeg, Manitoba.

2. (a) To be permitted to purchase 350,000 acres of land at $3 per acre, and to be allowed a credit not exceeding $2 per acre for the cost of the irrigation works to be constructed; the said credit to be treated as part of the purchase price.

(b) To irrigate from one-fifth to one-fourth of the area purchased.

(c) To make a deposit of $400,000 as security for the construction of the irrigation works.

(d) To make a further deposit of $100,000 as a guarantee for the continuous supply of water to consumers, or to give such guarantee in such other form as might be acceptable.

3. No.

DISMISSALS FROM PUBLIC SERVICE.

Mr. BLAIN asked:

1. Were George A. Johnston, George P. Ward, H. W. Ross, Munroe Charlebois, James O. Cowan, James White and L. J. Kehoe dismissed from the public service in 1906?

2. If so, what was the reason for their dismissal?

3. What was their salary while in the service?

4. Are any of the above named persons now in the employ of the government? If so, who,

and what is the date of his last appointment or reinstatement?

5. Was any part of the money said to have been improperly received by these men, or any of them, refunded to the Department of Immigration as suggested by the Auditor General, Report 1906, L—91?

Hon. FRANK OLIVER (Minister of the Interior):

1. Yes.

2. Irregularity in their accounts.

3. Salaries while in the service.

Name.	1901-02.	1902-03.	1903-04.	1904-05.	1905-06.	1906-07.
	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.

Honoré Charlebois	.....	.....	268 00	728 00	626 00	412 00

4. Yes.

Geo. A. Johnston, 14th August, 1908.

Honore Charlebois, 9th July, 1907.

Note. The answer to No. 4 is only given as far as the Department of the Interior is concerned.

5. Yes.

IMMIGRATION—PRINTING AND ADVERTISING.

Mr. URIAH WILSON asked:

1. What amount of money has been expended by the government for printing in connection with immigration matters during the fiscal year 1908 and up to 1st of March, 1909?

2. What amount of money has been expended for advertising in newspapers for the same purpose?

3. What are the names of the said newspapers and the amount paid to each?

4. What pamphlets were issued, what are their names, from whom were they purchased, by whom published, and what prices were paid for each?

Hon. FRANK OLIVER (Minister of the Interior). Stands as motion for return.

FISHING—LAKE WINNIPEGOSIS.

Mr. CAMPBELL asked:

1. Has the Minister of Marine and Fisheries received a petition since January, 1909, from residents of Winnipegosis district, asking that the lake be reopened for summer fishing?

2. If so, is it the intention to comply with their request? If not, why not?

Hon. GEO. P. GRAHAM (for Minister of Marine and Fisheries):

1. Yes.

2. This question was answered on the 22nd February, 'Hansard' No. 24, page 1454.

IMPORTATION OF FOREIGN RIFLES.

Mr. WORTHINGTON asked:

1. Is the government aware that a large number of Swiss or other foreign rifles are said to be brought into Canada in wholesale lots, and retailed throughout the country at a small figure for sporting purposes, and that these rifles are small bore, long range arms, carrying more than a mile, selling for about $3 each, and are used indiscriminately in the vicinity of towns and villages, thereby causing a great source of danger to life and limb?

2. If so, under what customs law or regulation are these rifles brought into Canada?

3. Who are the importers, in what quantities, and under what class do they come in?

4. When the government discarded the Snider rifle for more modern arm, how were these rifles disposed of, to whom, at what price, and in what quantities?

Hon. WM. PATERSON (Minister of Customs):

1. The government is aware that a large number of foreign rifles of long range have been brought into Canada and distributed by the trade throughout the country. These rifles are advertised for sale by retail in some instances at about $5 each, but the government is not aware of their use indiscriminately in the vicinity of towns and villages.

2. These rifles have been admitted by collectors of customs the same as other arms which have been imported, without restriction, for many years. A circular was issued recently to collectors of customs, pointing out that permission from the Department of Customs is required for the importation of military rifles (repeating arm), except from the United Kingdom of Great Britain and Ireland. The department has not granted permission for importation of these rifles since January last.

3. One large importing firm is known to the government, but there are several smaller importers. All the importers, and the quantities of rifles imported, can, however, only be ascertained upon examination of a large number of documents, which would require time. Provision is

made in Tariff item No. 424 for a duty of 30 per cent (General Tariff) on rifles imported into Canada.

Hon. Sir FREDERICK BORDEN (Minister of Militia and Defence):

4. The Snider rifles were disposed of as follows:—

(1). By sale on tenders received after public advertisement dated 25th July, 1898.

To Lt. Col. F. Minden Cole, Montreal, 30,000 at 75 cents each—and 400 (damaged beyond any repair) at 25 cents each.

(2). Now in use by cadet corps and on ordnance charge 11,493.

AVIATION—EXPERIMENTS BY CANADIANS.

Mr. SAM. HUGHES (Victoria and Haliburton). I notice from the newspapers that very successful experiments have been made by certain Canadians in aerial navigation and especially at Baddeck, in N. S., in the case of the invention of Mr. Alexander Bell, the eminent Canadian. I wish to know whether the government has taken any steps to recognize the advance of this science in Canada, and if not, is it their intention to take measures to encourage the science as in the case of the Marconi wireless telegraph system?

Hon. W. S. FIELDING (Minister of Finance). We have the highest appreciation of the work that has been accomplished by Mr. Douglas McCurdy and also Mr. Baldwin of Toronto, who is associated with him in the work, with Dr. Graham Bell. We have not, shall I say fortunately or unfortunately, any branch of our public service in which we could conveniently utilize the discoveries of these scientific gentlemen. Nevertheless we felt that we should take some notice of their achievements and for the present we have taken steps to draw the attention of the imperial government to them in the hope that the officials of the War Office and the Admiralty, who are now directing their attention to aerial navigation, may be able to avail of the services of these young Canadians and thus retain them for the benefit of the empire.

Mr. HUGHES. Hear, hear.

GRAND TRUNK PACIFIC RAILWAY—COST OF N.B. SECTION.

Mr. C. L. OWEN (Northumberland). Last session the Minister of Railways and Canals stated in the House that the lowest estimate for the construction of that part of the Grand Trunk Pacific from Moncton to Winnipeg was $28,000 per mile. The minister afterwards stated that this estimate had been increased to $63,437 per mile. Has this last estimate been changed since last session, and if not, is the section of the Grand Trunk from Moncton to Winnipeg being constructed at that cost per mile. Does this estimate per mile include terminals and railway stations on that section between Moncton and Winnipeg, and will the minister state as nearly as possible the exact mileage including switches from Moncton to Winnipeg?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). Some time ago I answered the hon. member for Lanark (Mr. Haggart) that on inquiry, the Board of Transcontinental Railway Commissioners had assured me they had no reason to date to make any further revision of their estimate per mile. If my hon. friend will allow me until to-morrow I will try to get exact information from the engineers as to his other questions.

PAPER, PULP, &c.—NEGOTIATIONS WITH THE U. S.

Mr. R. L. BORDEN. Have there been any negotiations with the government of the United States respecting lower reciprocal duties or abolition of duties upon paper, pulp, logs and lumber, or, has the government declined to negotiate with regard to this matter.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). There has been no negotiation nor any attempt at negotiation on this matter.

LEVEL RAILWAY CROSSINGS.

Hon. G. P. GRAHAM (Minister of Railways and Canals) moved that the House go into committee to consider the following proposed resolution:—

Resolved, that it is expedient to provide that the sum of $200,000 each year for five consecutive years from the first day of April, 1909, be appropriated and set apart from the Consolidated Revenue Fund of Canada for the purpose of aiding in the providing of protection, safety and convenience for the public in respect of existing highway crossings of railways at rail level, and that the said sums be placed to the credit of a special account to be known as 'The Railway Grade Crossing Fund,' and be applied under authority of the Board of Railway Commissioners for Canada.

Motion agreed to, and House went into committee.

Mr. GRAHAM. It is due to the committee that I should make a short explanation of the details of the proposed Bill. As the general question was discussed at great length a few days ago, it is not necessary for me to add any argument to convince the members of the committee or the country that a situation does exist that needs some remedy. It is not a situation that can be remedied by any theories. To my mind it is a condition that requires a prac-

tical solution. The crux of the remedy, so far as this House is concerned, is the enlargement of the power of the Railway Commission and a contribution from parliament towards the purpose we have in view. Objection has been raised in one or two quarters to the federal authorities making any contribution for the elimination of the dangers of level crossings, it being contended that all the expense should be borne by the railways and the municipalities. There are conditions under which that might be proper, and the board will have full power to adopt that principle where in its judgment those conditions exist. But if we are to get rid of this great danger, even partially, I think we must at once be practical, and with that object I have followed to a certain extent, in the drafting of this measure, the policy adopted in every state of the union which has endeavoured to grapple with the problem. Were we beginning railway construction at the present time, it would not be difficult to frame legislation for giving the Board of Railway Commissioners power to protect level crossings hereafter to be constructed. But in a new country like ours we have been so anxious to have railways constructed that the federal authority has aided them, the provinces have aided them, and the municipalities have aided them, and until recent years we have allowed them to have pretty much their own way in regard to the protection of the crossings. As a result of our combined lack of scrutiny of the construction of railway crossings, and of the different conditions that have arisen owing to growth of population, increased speed of trains and development of the country, it has become necessary for us to take active steps to undo in a measure what we have done, or, in other words, to adapt our legislation to present conditions. It being a question that is practical, I believe the only practical way for this House to deal with it is to assent to a contribution to assist in the elimination of this evil, and in that view I have introduced the resolution. Now, in short, the Bill proposes that we shall contribute $200,000 a year for five years to a fund to be designated for the purpose I have indicated. We do not propose to give the board power to divide the $200,000 as it pleases, but we propose to restrict the contribution in this way. For no crossing shall there be contributed more than 20 per cent of the cost nor more than $5,000. The board may not draw on this fund at all, but we give it power to do so within these restrictions. The board will have power, as it has now, to apportion the cost between the railway, the municipality, other person or corporation and this fund. We say other corporation or person, to provide for the case of a toll road owned by a company or the case of a street railway company. It has been a little difficult to define the crossing, as it may have one track, two tracks, three tracks, or even four tracks.

Mr. LENNOX. Is there a limit as to the municipality as well ?

Mr. GRAHAM. Not in this Bill. In the United States Act there is a limit to the amount contributed by a municipality, but the conditons are different there from those existing in Canada. Conditnons have arisen in Ontario in connection with large viaduct schemes, to which the municipality contributes a larger portion than it does in other cases. The law is not changed in that respect. We are only passing restrictive legislation with reference to the amount we are to contribute ourselves. As to a crossing, we propose to describe that as a work not including more than from one to four tracks. The reason will be obvious. Some crossings might include at terminals fifteen or twenty tracks, and it would not be fair to have the word ' crossing ' mean more than a certain number of tracks. That number I have placed at four. In order that one municipality may not get all the benefit of this fund in one year by having a large number of crossings, we propose to enact that not more than three crossings in any one municipality in any one year shall be contributed to from this fund.

Another important point is that the contributions I have outlined are to be for crossings that now exist, but I am proposing to place a clause in the Act which will say that crossings, hereafter created by railways yet to be constructed crossing highways, shall be constructed at the expense of the company and without any charge on our fund or on the municipality, thus making a distinction between crossings which already exist and those which are to be brought into existence in the future. I am making some distinction in the case of railways not yet built, as to the priority between the railway and the highway. If the railway is run through a section where there is no highway practically, and it crosses no highway, and is built according to the directions of the Board of Railway Commissioners, it ought not to be in the future, if a highway is constructed across the track, in the same position as if the highway were constructed first. In such a case the board can apportion the cost as between the railways and the municipality.

Mr. LENNOX. Does the hon. minister mean a highway in law or in fact? Will the Act apply where a highway has been set apart by the survey, but not actually constructed?

Mr. GRAHAM. I have not given that a great deal of thought, though the other day, in discussing it, I drew attention to the fact that a street might be provided for and not be built. That can be discussed in committee and possibly we might

get over the difficulty, if it be a difficulty, by defining what is meant by a highway.

Another definition determines what we mean by a municipality. We describe it as a city, town, incorporated village, township or parish, in order to guard against the word 'municipality' being constructed as a county by some courts.

These are the main provisions, so far as level crossings are concerned, and it is but fair to say that in this Bill there are certain other items which it would not be out of place to explain for the moment. In our Act as now existing, some difficulty has arisen as to the issuing of bonds. The same difficulty arose under the old country Act, and the English Act provides for it. I think they provide for it in the Company's Act, but I propose to provide for it in this Act as it applies particularly to railway companies. It appears that by a judgment in the British courts, when bonds are pledged as security, say as collateral security, they are at that moment treated as having been issued but just deposited as security. In such a case, they could not be re-issued except as a new issue. In looking over the British Act I find they have remedied that. In several provinces they have done it in the Company's Act. In order to clear up the matter, I propose to introduce a clause to cover that point.

There is a question particularly affecting the people of the west and that is the protection along the lines of railway by means of fire guards. I have had representations made by members from the west and also by the railway companies themselves, regarding the power of the railways to plough furrows in lands not on their line for the purpose of protection against fire. I am providing that they may be allowed to do that under conditions to be prescribed by the Board of Railway Commissioners. There is this difficulty that the railway companies think they ought to have the right to go on other property and be exempt from all liabilities for damages. In some cases that might be proper and in others not, because they might in some cases injure more property than they would protect. I have thought it advisable not to release them from any liabilities under the Act. On the other hand we do not want to impose in perpetuity the liability, and we concluded that the fair way was to provide that the railway companies could, under conditions prescribed by the board, establish these fire guards.

There is another point I want to deal with, of great importance to the railway companies and the people, particularly in sections where railway construction is taking place. On all these points I am open to discussion and conviction. The law, as it now stands, provides that if plans are

Mr. GRAHAM.

filed for the location of a railway, no matter how long a time may elapse between the filing of these plans and the taking over of the property, the value of the property shall remain at the price it was when the plans were filed. Let me illustrate. In a section of country where a railway is to be constructed or a charter granted, the company may proceed to file plans. The companies have their charters renewed. They may have had their plans filed in a certain locality and ten years may elapse before they proceed to take possession of the land for the right of way. The law intended that the land should not increase in value owing to the expected building of railways. It was intended to protect the railways to that extent. But circumstances often arise in which the land increases in value very rapidly, independent of the railway going there, and it hardly seems fair that a company should have the privilege of tieing up the land or keeping it at this high value ten or twenty years before they intend building the road, while the property all around is increasing in value. I propose to say that two years will be allowed after filing of the plans for the railway to obtain a title. That two years corresponds with the time given the railway companies by this House for the expenditure of 15 per cent of their charter. After two years they have to come back and get their charters renewed. I thought it would be fair to make these periods concurrent. I would ask the committee to place a clause in the Bill saying that the price of property shall remain as at the time the plans were filed, provided the company obtains titles to these lands within two years of the filing of these plans. That situation has arisen in some parts of Canada, and I think it is but fair that we should apply the remedy. That is a clause I have inserted in the Bill, and at present I think it need interfere with no person.

Mr. MACDONELL. Will that clause be retroactive, or will the government take care that existing litigations—for there are such, as mentioned by the minister—are not included in this section?

Mr. GRAHAM. I have not made provision for that in the clause, but I think we would have to guard against interference with present litigation. I am opposed to interfering with any case now in dispute in the courts. These are the main points in the Bill, which I submit to the confidence of the House. I think I have gone further than the resolution would warrant me in going, but as they are in the Bill I thought it better to make a full explanation.

Mr. CONMEE. With regard to the filing of plans, the minister has pointed out very clearly what the object of his proposal is, and it is a very laudable object in my

opinion. But there is another defect in this connection, if I am rightly informed, in reference to the filing of plans along and adjacent to navigable waters and harbours. As I understand it, the railway company makes plans and submits them to the railway board, or the minister, as the case may be. The railway board, or minister, might refuse to ratify the plans. But that is not the practice; the plans, as a rule, are ratified. Because, there seems to be no other course. The law is not elastic enough, it seems to me. The railway board ought to have power to ratify such portions of the plans as they see fit, and, later, if the public interests and the business of the road require it, they could ratify further portions. In that way, some portion of the water fronts and harbours might be conserved to the public; under existing circumstances, the railway company usually manages to get it all. Will the minister please consider that point?

Mr. GRAHAM. I will.

Mr. LENNOX. Would the minister explain how he understands the jurisdiction of the railway board as regards municipalities? Does he understand that the board has power, without any Act on the part of the municipality, to order the municipality to contribute towards, let us say, providing means of protection; or is it only when the municipality initiates the proceedings and so submits itself to the jurisdiction of the board?

Mr. GRAHAM. I think it is comparatively clear that the board has jurisdiction to compel a municipality as well as an individual. The decision of the board may be made an order of the court by a very simple process. I do not wish to express a legal opinion, not being a lawyer, but I have discussed the matter with the Minister of Justice and several other gentlemen, and the opinion seems to be that, even if we did not, in the first instance, have ample powers, the passing of this portion of the Bill, being incident to the working out of the Act in detail, would give full authority.

Mr. LENNOX. I would like to ask another question. Has the minister conferred in any way with any of the provincial governments with a view to their co-operating in bringing about the desired improvement in our conditions?

Mr. GRAHAM. I may say that I have done so. It is only within the last few days that I have been able to work this Bill out into the shape in which I now have it. It is a very intricate matter, when you come to get it down on paper. I wrote a brief letter to each of the provincial premiers, outlining what I was doing, and asking for their co-operation. I suggested to them my own opinion that the provinces might care to contribute something, but that it would be out of place for me to urge that view. But I did suggest that it would help in the working out of the Bill if they would give the municipalities any powers they required in reference to raising money for the purposes indicated, as the provincial authorities control the municipalities. I suggested to them also that if the municipalities through themselves, or in some way through the legislature, would consider the advisability of passing certain by-laws as to the necessity of exercising care in crossing tracks, it might be a benefit. I received a reply from the premier of Ontario expressing sympathy with the movement. I shall hear from him again, as they have not had time to discuss the matter fuller. Other premiers have not had time to reply.

Mr. HAGGART. There seems to be a consensus of opinion in favour of legislation in the direction of that introduced by the Minister of Railways. There is one matter which the hon. gentleman has neglected to deal with in his speech: he did not tell the number of crossings to be provided for, nor whether the grant of the sum proposed each year for five years would be sufficient to wipe out the dangerous crossings altogether, or whether this would provide for only a moiety. In any case, this is a step in the right direction. The nice question arises, that has been suggested by the hon. member for South Simcoe (Mr. Lennox) as to the power of this House to compel municipalities to contribute to these crossings. In the past, we have dealt with this matter through the Railway Commisison. Municipalities have applied to the commission to have the railway crossings regulated. It may be said, as has been suggested, that, when the municipalities have been applicants, the commission may have jurisdiction by reason of that fact. But I think we have gone further than that; I think that the railway companies have applied to the Railway Commission asking that municipalities should be required to contribute towards highway crossings and that the commission has dealt with that matter. I have expressed myself pretty clearly as to the jurisdiction of this parliament to legislate on these matters. I believe it to be quite clear that, as this parliament has power to grant a railway charter, it has the right to legislate on everything incidental to the carrying on of the railway. Property and civil rights are handed over to the jurisdiction of the provinces. But we go so far as to say that a municipality shall contribute towards a railway crossing. We go so far as to say that the railway

company shall have the right to enter into private property adjacent to the railway and make a fire guard.

If we can do that, we can almost do anything in reference to assuming jurisdiction over civil rights and property. My memory is in the past, to a great extent. I have listened to the opinions of the ablest lawyers, and have consulted them with reference to that very subject. I had occasion to consult Sir John Thompson in reference to that matter, and he was clear that where the parliament of Canada had decided that any subject was incidental to something which they had jurisdiction over, parliament could exercise jurisdiction over that subject, and the highest court in Great Britain would not inquire whether it was incidental or not. According to that opinion, I think that our jurisdiction is certain. I think there is no doubt that the minister is proceeding in the right direction, because it is clear, from the debates in the House, and the opinions of the press, and of every one else, that the disgraceful state of affairs in this country regarding level crossings must be put an end to. It is but reasonable that the Dominion government should contribute something towards that end. It is a small amount that the Dominion government are contributing, and it could not be left to a fairer court than the Railway Commission to apportion the amount between the government, the railways and municipalities. I congratulate the minister on the resolution, and on the able advocacy of the legislation by the hon. member for Simcoe (Mr. Lennox) and others. I consider the legislation to be absolutely in the right direction.

Mr. BLAIN. When the minister was explaining his Bill, I notice he said that the limit of the tracks was four. I have in mind one or two very dangerous crossings where there are five tracks over the highway. Why should not the minister make provision for cases of that kind?

Mr. GRAHAM. My hon. friend will see that I am helping him. Where there are more than four tracks the federal fund could be drawn upon for practically two crossings instead of one. A situation of that kind could call for an appropriation for two crossings on the same highway. I was limiting the Bill to four tracks, because in some places there might be terminals, and I wanted to get away from the large viaduct schemes. In that case there would be nothing to preclude the commission from drawing on the federal fund an amount to equal two crossings.

Mr. EDWARDS. The same thought occurred to me when the Minister of Railways was limiting the crossings to only four tracks. I have in mind a particular crossing which has been declared dangerous by the Railway Committee of the Privy Council, by the Board of Railway Commissioners and by the Minister of Railways himself. There are six tracks. The Grand Trunk has made a shunting ground across the highway with six tracks, one running a distance of 25 or 30 feet beyond the highway, but it is sufficient to make six tracks across the highway. I understood the minister to say that he proposed not only to limit the purpose of this Bill to crossings where there were not more than four tracks, but also to limit the number of cases in each municipality.

Mr. GRAHAM. In any one year.

Mr. EDWARDS. I would like to understand from the minister whether, for instance, if the crossing I have referred to was taken in, and a portion of the money was given to that crossing—and I believe we could get a portion of it—would that be the same as three crossings in that particular year for that municipality?—because there are six tracks there.

Mr. GRAHAM. The idea of the Bill is that, for this purpose, you can call a crossing of four tracks or less one crossing; if you had eight tracks there would be two crossings.

Mr. BARR. Do we understand then that in case of five tracks, if there were one track more than four, the municipality would get double the amount? Would it be $5,000 for each track? It seems to me that would be an unfair proportion. If there were eight or ten tracks the municipality would only be paid for two crossings.

Mr. GRAHAM. My hon. friend has missed the point. I have confined the grant to not more than 20 per cent in any case, because they could not get over that restriction, if they did over the other. The Board of Railway Commissioners will have full power to restrict as they see fit. We are adding a limit over which they cannot go, both as to percentage and as to amount.

Mr. WRIGHT. There was a point I did not understand. If I understood the minister correctly, he confines the operations of this Act to incorporated municipalities. Now in the newer sections of the west, in northern Ontario, and doubtless in other parts of the country, there are settlements close to railways, but there is no municipal organization. I would like, if possible, that people in these circumstances should have the same privilege, and that the minister should extend the Act to places where the people have not organized municipally, but where the crossings are just as dangerous as in cities and towns.

Mr. GRAHAM. There is nothing in this Act to prevent the Board of Railway Commissioners from dealing with crossings in unorganized districts as with crossings any-

where else. If there is no municipality, there may be some other power upon which they could draw for a portion of the fund. The object of this Act is to eliminate the danger of any level crossing in Canada. So far as possible I have tried to outline the parties among whom the costs should be apportioned.

Mr. WRIGHT. Can they draw on this fund in the cases I have mentioned?

Mr. GRAHAM. I think there will be no question about that.

Mr. STANFIELD. I understand none of this fund will be used to protect level crossings on government railways. I would ask the minister if it is intended in the near future to take into consideration the level crossings on government railways. He must know that in Nova Scotia, for instance, there are numerous dangerous level crossings that should be protected.

Mr. GRAHAM. That is a matter which gave me a good deal of thought—how we should proceed in regard to government railways. But back of it all we have to remember that it is the same government and the same treasury, whether the money comes out of this fund or out of some other fund. As the government railways pay no taxes to either the municipalities or provinces, the municipalities, with reference to government railways, occupy a somewhat different position from that which they occupy with reference to private-owned railways. In the estimates of this year my hon. friend will find several amounts devoted to the elimination of level crossings. We propose to do at least as good work on the government railways as we are trying to make private-owned railways do throughout the Dominion of Canada.

Mr. CROCKET. I understand the minister to say that the word ' municipality ' as defined in this Bill, will apply to cities, towns and incorporated villages. In the province of New Brunswick we have no townships and we have very few villages that are incorporated. Would the municipality or the county be liable in a case of that kind where there was a crossing running through a village that was not incorporated?

Mr. GRAHAM. In my explanation I intended to use the word ' parish ' in addition to ' townships.'

Mr. JOHN HAGGART. You did use it.

Mr. GRAHAM. Would not that cover your case?

Mr. CROCKET. Of course, we have parishes.

Mr. LENNOX. I certainly am very much pleased that we are to have a defined policy as to part of this question. I maintain a reasonable respect for the Railway Board, but I have greater faith in the wisdom of 220 men than in the wisdon of five or six ; and what I have set out for particularly in this matter is that we shall have some kind of general principle upon which the question of the control of railway crossings shall be settled. I notice too with pleasure that the minister has a double limit to the liability which we will incur; first, that we shall not contribute more than 20 per cent and secondly that in any case we shall not go beyond $5,000 for the protection of any one crossing. I am inclined to think that it will be found that this is a valuable limitation, and that, as well, it will probably be found to be a reasonable amount. But, whilst I am very much pleased that we are to have, in part, a defined policy upon the question of railway crossings, I regret—and I hope it will not continue to be a regret, as I trust the minister will take into consideration the advisability of amending his judgment in that regard—I regret that we have not some limit to the contribution to be made by municipalities, if a contribution is to be made by the municipalities at all. If it is necessary that we should have a limit in the case of the country, with its comparatively large resources, I do submit that it is even more important and necessary that we should have a limit in the case of the country, with its comparatively large resources, I do submit that it is even more important and necessary that we should have a limit beyond which the municipalities shall not be called upon to contribute. The minister might answer me by saying that there is such a wide range to this question that it is hard to place the limit. I know it is, but the limit might be on a sliding scale of some kind.

Mr. GEO. TAYLOR. On a percentage basis.

Mr. LENNOX. On a percentage basis, as is suggested, and I think it will be found to work out very fairly. I would certainly urge that we have a limit as regards contributions by municipalities, a definite percentage beyond which they cannot be called upon to contribute unless they desire by consent of the council of the municipality to contribute a larger amount. I notice in the findings of the Railway Board that a good many of the cases are adjusted by agreement between the railway companies and the municipalities and it is probably a very fair and desirable way in some instances. I have in my mind, more particularly, the question of rural municipalities. All the same that there should be a limit as to all municipalities. Speak- for the moment as to rural municipalities, I want to say a word or two. I said the other day I was of opinion that rural municipalities should probably not be called upon to contribute at all. Some one was disposed to take me to task and ask: Why should city municipalities

pay and why should rural municipalities not pay? I did not exactly say that. In the first place, I thought, that with the able representatives we have here from the various cities of Canada they would be able to present their view of the matter better than I could as to what should be the measure of responsibility of the cities, but I do feel that there is a distinction to be drawn between rural municipalities and cities in this respect. Whilst a rural municipality is benefited by the railway, a city is practically made by the railway and therefore there should be a very sharp distinction drawn between what should be contributed by a city and what should be contributed by a rural municipality. In many cases, the great trunk lines are running through these municipalities and the majority of their trains contribute nothing to the advantage of the municipalities through which they merely run, but in the case of the large city, every train that passes into it is of advantage to it.

Enough as to that. I desire merely to emphasize the one phase of the matter that I do feel that we will not have this matter settled in a satisfactory way and the country will not accept it as being satisfactory unless we adopt the principle which is in operation in every state of the union. I believe that in every state of the union where they have laws similar to this there is a definite limit beyond which the municipalities cannot be called upon to contribute, and I think it is more essential to have a limit as regards the municipalities than that we should have a limit with regard to the government. The government have better means of presenting their views of the matter than any municipality can have in this country. I am not going into details of that. I congratulate the minister most earnestly and candidly upon having brought in this measure. There are a great many details, of course, that I am not sure are in the measure, but it would hardly be expected that the minister would, at one fell swoop, bring us down all the details that we might think desirable in a measure of this kind. I am not at all convinced of the minister's reasoning or of the advisability of his attitude as regards the limit of four tracks as constituting a crossing. The more tracks the more it is a crossing and the more deadly it is. I would not like the railway companies to be put in a position to hamper the people of the country, or in small towns, by putting in an extra switch and then, as a result of this saying: There is an unlimited liability on your part to contribute and if you initiate proceedings you will have to contribute at the rate of two crossings for these five tracks. That would hardly be an end to be desired. I do not think that probably a limit of four tracks is advisable although I am not going to absolutely condemn it at the moment. I recognize that whilst it may be said to be two crossings, it does not follow that we will pay two full contributions. I recognize that the Railway Board will endeavour to judge fairly between parties and will make the contribution proportionate to what the circumstances are.

Mr. BLAIN. The municipality would have to contribute towards two crossings, would it not ?

Mr. LENNOX. I do not think so. I am assuming that the Railway Board would exercise a sound discretion, and that they would not call upon a municipality to contribute double for five tracks of the contribution for four tracks. I think they would make it proportionate having regard to the total expense. Then, as to three crossings a year, I presume that some provision of that kind is necessary. That is three, I understand for one municipality. That is really necessary in order that some kind of equitable arrangement should be made. We want a good deal of information in reference to this question of new railways and new highways. I take it there can be no distinction drawn between a highway which has been put into actual use, and a highway which was set apart on the original survey and which was an existing highway in law, though not in fact, before the railway came into possession. Am I right in understanding the minister that this applies to providing money not only for protection by way of gates for example, but for separation of grades by overhead or underground crossings.

Mr. GRAHAM. The elimination of the danger whatever it is.

Mr. LENNOX. To read the resolution you would almost think it was confined to grade crossings; it is not happily worded in that regard. A railway grade crossing has come to mean a crossing at rail level but so long as the minister understands it in the way indicated, it is all right. Does the minister intend that this contribution shall apply indiscriminately, not only to the elimination of grade crossings, but to protection by other means such as gates and other safety devices short of separation of grades ?

Mr. GRAHAM. I think we are going a little too much into details at this stage. Although the Bill does not say so, I believe the board will take the view that there shall be no draft made on the federal fund for the protection of a crossing by a gate—that would be a matter between the railways and the municipalities—but for the elimination of the grade crossing itself where the expenditure is large.

Mr. LENNOX. I draw a sharp distinction between the elimination of a grade crossing and mere protection at that cross-

ing. While I am ready to admit the justice of the Dominion contributing something for the separation of railway and highway crossings where the expenditure is large, I do not think we should go to the extent of contributing to protection by gates or bells. If the Bill is confined to the separation of grades I am in harmony with the minister. I understand that if a railway is constructed after this date that railway shall be obliged at its own expense to provide the necessary protection, and the railway board and the Railway Department will have the duty of seeing that such crossings are properly protected either by separation of the grades or whatever is necessary. But, although it may seem to be perfectly unnecessary when the railway is built to provide protection, it may subsequently become necessary on account of the increase of population to order protection, and I presume the Bill will be so worded that notwithstanding permission should be given to the railway to build without protection at the time of its original construction, the board will still retain control so as to order the necessary protection at a subsequent date. I presume also that the Bill will apply to all the railways which we charter this session. Then it is a matter of considerable importance as to who shall initiate proceedings in the matter of protecting the public. Is it to be left to some individual or to a municipality or to the railway companies which sometimes do initiate proceedings for protection. Or, is it intended that the initiation of proceedings for the elimination of crossings upon existing railways shall be the duty of some body like the railway board on behalf of the public?

Mr. GRAHAM. The Bill provides for that.

Mr. LENNOX. We are to contribute $200,000 a year for the next five years. I do not suppose that is going to be the end of our contribution but that is not important now. Will the board have power to commit us beyond the limit of a year? For instance, take the subway in Toronto which will cost $250,000; will the board have power to make an order regulating how much is to be paid by Canada each year as the work progresses for several years in advance?

Mr. GRAHAM. No.

Mr. LENNOX. It would almost seem to be necessary to have some provision of that kind. Now, I shall refer to a matter which is not perhaps directly connected with the question before the House but which has some bearing on it. Mr. Hays said in his Stratford speech that it would cost $50,000,000 to carry out what has been suggested in parliament in this respect. He did not define exactly what had been suggested in parliament, but he is reported as saying they had 50,000 crossings on the Grand Trunk. Apparently that is a mistake. I inquired in the Railway Department how many crossings there were on the Grand Trunk and the minister suggested that there were probably 3,000. However, the people are determined to have protection at these crossings and the railways might just as well criticise what we are doing in parliament in a fair way. Nobody ever spoke of protecting all the crossings or even a large proportion of the crossings in Canada. We all recognize that a great many of them do not require protection, but there is a percentage which do require protection either by separation of grade or some other device, and it is idle for Mr. Hays or any one else however eminent to talk of it costing an average of $17,000 each for all the crossings in Canada. I apprehend that there is really a very small proportion of the railway crossings in Canada that require protection, and it will be in the interest of the railway companies, and of everybody who desires to avoid the nationalization of railways, to concur with the people's representatives in meeting the demands of the people fairly in this matter. I see that yesterday or the day before, in the discussion of the Lancaster Bill, one of the railway lawyers repeated the heresy of my hon. friend the Minister of Railways—I used the word heresy advisedly, because I get it from one of his own party papers.

Mr. GRAHAM. You do not generally take them as an authority.

Mr. LENNOX. In this case it is fairly good. To consider whether the people are careless or not is not the way to approach this matter. It is not a question whether an accident results from the people's carelessness or not. We know that people are careless, not only in the matter of railway crossings, but in all the various walks of life; in this and in many other respects we have to protect them against their own indiscretions. In reference to this matter the Toronto 'Star' says:

> One heresy that ought to be renounced forever is the notion that the public are bound to look out for the trains at crossings. It would be just as reasonable to say that a man has a right to dig a hole in a highway and demand that travellers shall drive carefully lest they fall into the hole. The highways should be made safe. Railway crossings where there is a great deal of traffic should be so guarded that travellers can drive past without thinking of the trains.

I certainly congratulate the minister on having made an advance in this very important matter, and I wish, as far as I am able, to facilitate the passage of this Act,

amended and improved as it passes through the House.

Mr. GRAHAM. Just a word in reference to the initiation of proceedings. We have given the Board of Railway Commissioners full power to initiate proceedings themselves. In fact, we expect the board to ascertain from the railways and from their own investigations where the most dangerous crossings are, and to deal with them first; but of course applications made by municipalities or others shall be dealt with as at present. With regard to the number of railways to a crossing, in view of the large terminals in the cities, we have to confine the application to a certain number. I hardly think my hon. friend's reference to my good journalistic friend's remark in the Toronto 'Star' quite works out. A railway is very necessary, while a hole in the road is not necessary, in the public interest.

Mr. R. L. BORDEN. I do not know that that is a fair way to put it. A hole in a road is not necessary; neither is a trap on a railway. The railway is necessary, so is the highway, but a hole in the one or a trap in the other, is not necessary. I am glad that the minister has taken some action in this matter, but I do not fully understand what the policy of the government is. There is a provision of $200,000 a year for five years. I would be inclined to think that under the conditions laid down by the minister, that would not bring about a very large measure of relief. Is it the intention that this grant shall be perpetual? In short, how are we to bring about in this country a condition of things that will secure a very much greater degree of safety of life and property at crossings than we have had in the past? The minister has not given us very much light. Of course, we realize that if the country is once committed to a policy of this kind by a sort of agreement with the railway companies, by an implied agreement with the municipalities. it may have to be carried out by any goverment that comes into power afterwards. That is the reason I am making a little inquiry as to whether the policy is supposed to continue after the next five years, because I feel a personal interest in that question.

Mr. GRAHAM. You do not want to commit the next government.

Mr. R. L. BORDEN. There is another point. I am not quite so clear as my hon. friend from South Lanark (Mr. Haggart) with regard to dealing with the municipalities. I realize fully the doctrine to which he has alluded, and which might be summed up in this way, that any jurisdiction that is necessarily incidental, for the proper exercise of jurisdiction conferred upon this parliament, may be assumed by this parliament, and indeed is possessed by this parliament; but there will be this curious complication in connection with these municipalities. Suppose that the parliament of Canada passes legislation which orders, or which authorizes the Board of Railway Commissioners to order, that any municipality in Canada shall pay a certain proportion in respect of protection at a crossing; you are imposing that order upon a body which has not been brought into existence by this parliament, which this parliament could not bring into existence. The powers of that municipal body are limited by its charter, by the Act which creates it; and you might find this parliament, or the Board of Railway Commissioners under the authority of this parliament, ordering a municipal council to do that which under the terms of the provincial Act creating it, it has no authority whatever to do. You would therefore be confronted with one of two dilemmas: you would order this municipal body to do that which it has no authority to do, which it could be restrained from attempting to do, or you would be obliged to go further and declare that the parliament of Canada could alter or deal with the constitution or charter of that body and give it powers which it had not possessed before. I would think that question would present very grave difficulty. I realize on the other hand that if any municipal body comes before the Board of Railway Commissioners for Canada and makes application for protection at a highway crossing, the board, inasmuch as it has the right under the authority conferred upon it by parliament to refuse that application, would also have the right to grant the application, subject to a condition, and that condition might go so far as to declare that the municipal body itself should bear part of the cost. It would be then for the municipality to obtain the requisite power if it saw fit to avail itself of the decision of the Board of Railway Commissioners in that regard. There is one other point upon which the minister has not been definite. Suppose the protection to be afforded, under order of the Board of Railway Commissioners, takes the shape of some permanent work, which will be subject to deterioration and need repair from time to time, what is the proposal of the minister in that regard? Is this parliament to continue for all time to come to bear its share in the maintenance of this work or are we to be done with it once for all, when we have paid our share in the first instance? That is a subject which ought to be taken into consideration before the Bill is finally passed.

Mr. ELSON. I desire to make a few remarks upon this very important question of level crossings to which a large part of

the Bill applies. I believe there are far more people killed on the level crossings in the country than on those of the cities or towns, and I do not think that there is any constituency in which there have been so many persons killed and injured upon level crossings as in the one I have the honour to represent. In my view it is certainly the duty of the government to take active measures to protect those crossings. In order to justify what I have just said, let me mention a few of the serious accidents which have taken place in my own riding. A few years ago, a farmer was going home from the city of London. He had his two daughters with him in the rig. When they came to a level crossing, he looked in one direction and could see no train, but he could not see very far in the other direction on account of the bank through which the railway was cut. He started to cross the track, and just when the horse had reached it, a flyer came along at the rate of sixty miles per hour and upon the down grade. He tried his best to get across in time but failed. The train struck him and killed him, and his two daughters were hurled some distance away and picked up dead. The engineer, in giving his evidence at the coroner's inquest, said that when he saw those people on the track a shudder came over him, and he did his best to slow down, but owing to the short distance—he was about twenty yards away —and the great speed of the train coming on the down grade, he could not accomplish much in the way of slowing down, so he closed his eyes in order to avoid the horrible sight of what he knew was bound to happen. The crash came and the three persons in the rig were killed immediately. That is not all. At the next three-quarters of a mile is the next crossing. There was a business man—and business men are as a rule pretty watchful—driving over the track. He was struck by a train and immediately killed. Only three-quarters of a mile further on there is another level crossing, where a farmer, who was going home in the broad daylight, was struck by a train and killed. We had yesterday in the Senate the argument made that everyone should stop just before coming to a level crossing, but the trouble is the horses get frightened, and the driver is afraid to go on or to stop. In the instance I last mentioned, had the man not stopped at all, he would have saved his life. But as the train came closer, his horse became frightened and ran away and got on the track just in time to kill the man. The next crossing is a bridge. How many do you think were killed there? I am glad to say that there were no lives lost there at all. But there are many other accidents to which I could allude did I not hesitate to take up the time of the House. It is about time that protection should be given at these crossings. In many cases a bridge would do, but in many others a subway would be required. In others a gate and a man would suffice, and in other places probably an electric bell would have the desired effect. Every place should be considered according to its local character and surroundings. But the great question is: all this costs a great deal of money and who is to meet it? Should the companies meet it themselves or should the country help them? When I take up the year-book of last year, I notice that the country has granted to railways $181,025,000, and in addition 52,000,000 acres of land. One would naturally think that when so much has been given by the people, the railways themselves ought to make their crossings safe. However, these railways have been asked for by the people, and as the hon. the Minister of Railways said the other evening, it would be only right that the people should contribute something to assist in curing this evil. My idea is that the government should withhold the bonuses which are being granted to new railways and apply them to a fund to assist in protecting these crossings.

Then, again, I think the municipalities ought to tax the railways a little more than they do. But the municipalities, in my opinion, ought not to be called upon to pay any portion of this expense. Having had some years experience in a large township council and county council, I know for a fact that the people have enough to do to meet their responsibilities in building bridges, making roads and providing public institutions. All this involves a heavy burden. If the municipalities have to pay any part of the expense in relation to these crossings, it will be like paying three times. They would make their direct contribution as municipalities, then their portion of that paid by the province, and also their portion of that paid by the Dominion. I hope that, in view of the large undertakings now before the country, the municipalities will be free. I am glad the government is taking this matter in hand. It is a great work, and one that the people want carried out. I hope it will be done through the government, not the municipalities, assisting the railways and let this great scheme of making our crossings safe be a national scheme, showing to the world that Canada is determined to protect the lives of her people at her railway crossings.

Resolution reported, read the second time and agreed to.

Mr. GRAHAM moved for leave to introduce Bill (No. 106) An Act to

amend the Railway Act. He said: This is the Bill based on the resolution. I may be allowed to say that I received word, late to-day, that the hon. member for Lincoln (Mr. Lancaster) was ill at home, and desired me to allow the resolution to stand over until the first of next week. It was then too late to accede to the request, but we will keep the measure at a stage that will afford the hon. member every opportunity to discuss it.

Motion agreed to, and Bill read the first time.

SUPPLY—MEN OF DREDGE 'NORTHUMBERLAND' AND THE VOTERS' LIST.

Sir WILFRID LAURIER moved that the House go into Committee of Supply.

Mr. E. N. RHODES (Cumberland). Mr. Speaker, I had a question placed on the Order Paper which appeared in the 'Votes and Proceedings' of February 23, but, as yet, I have had no reply, though questions that I have put on the paper in the meantime have been answered. I may say that this is rather important, because there is an endeavour in Pictou to place upon the voters' list there the officers and crew of the government dredge 'Northumberland.' I can understand why there has been some delay in answering, for the reason that the final meeting of the court of revision, which disposes of the voters' lists in Nova Scotia, was on March 5. Since that date has passed, I cannot see any reason for delay in replying to the question.

Hon. WM. PUGSLEY (Minister of Public Works). I do not see how any answer made to a question in this House could in any way affect the proceedings so far as the registration of voters is concerned. I can assure my hon. friend that I had no information as to the registration of voters, and no knowledge that a question of that kind was up in the county of Pictou. I have been endeavouring to get the information. The question was as to the residence of a number of working people, and it has taken some time to get that information. I trust to be able to answer the question to-morrow.

Mr. D. D. McKENZIE (Cape Breton North). It is an entirely erroneous impression that my hon. friend from Cumberland (Mr. Rhodes) seems to have that answering a question here would have any bearing on the question whether a name should or should not be placed on the voters' list. The reviser's court is a court in which a case must be proven, as in any other court. If there is evidence that any person who is making application in Pictou has no right to go on the list, that evidence can be put before the revisers. It is going rather far afield to say that an answer to a question in this House would have any effect upon such proceedings. Therefore, I do not think there is any point in the insinuation made by the hon. member.

CIVIL SERVICE SALARIES.

Hon. GEO. E. FOSTER (North Toronto). I would like to take up a short time in making a statement with reference to the Civil Service, in a somewhat general way, with the hope that, when we come to the consideration of the Bill which is to be founded on the resolution laid before the House and passed through the committee not long ago, the points that I desire to raise may be taken into consideration. Our Civil Service in Canada has been, heretofore, so divided and distributed, so hidden, as it were in numberless nooks and crannies, not only at Ottawa, but all through the country, that I doubt if any of us have had an adequate idea of its extent and work and, consequently, of its importance. If nothing else were to come out of the discussions we have had than the concentration of the attention of the House and country upon this most important factor of the public work of Canada, a great deal will have been gained. Of course a great deal more will be gained if after the attention of the House and country is directed to such an important part of the machinery of the country's administration, it results in a much improved system and a better operation of that great service branch. First, I would like to make a few preliminary remarks as to what has taken place within the last year in the way of the amalgamation of the Civil Service force. I do not think that any of us probably understood, when the Bill was introduced last year and discussed, how much it meant, what change it would make in the Civil Service as we had been accustomed to consider it and to view it.

Well, what has happened? On the 1st day of September, 1908, in pursuance of that legislation, there was a fusion of two large portions of the Civil Service. The old regular Civil Service amounts in its numbers to 1,228; the effect of the legislation of last year was to add to the regular Civil Service brought under statute and regulations, 1,577 who previously to that time had not belonged to it. That is, the legislation had as its first effect to more than double the regular Civil Service at Ottawa. Now I admit that was surprising to myself; and if at the time we were discussing this Bill we had all had an idea that it meant such a very large change in the stated service, probably we would have approached it with a still greater sense of responsibility and duty than we actually did. Those 1,577 persons added to the regular Civil Service make now 2,891, who will figure in 1909-10 on the pay-roll of Canada to the extent of $3,933,757; or, with the proposed flat increase

which was estimated by the Minister of Agriculture at $347,000, will raise that pay-roll to $4,280,757. That is a veritable standing army, whose pay-roll creeps pretty closely up to the pay-roll of the whole defensive force of Canada, including the militia and regular troops. Well, that does not end it. It is said that about 4,700 are engaged in the employment of the government of Canada outside and beyond the present inside service in Ottawa; and it is probable that the pay-roll of that 4,700 people very nearly equals the pay-roll of the inside Civil Service as it now exists. That makes an army of 7,600 people, with a pay-roll of something over $8,000,000, a civic army which far overtops in its expenses the pay-roll of the militia and regular troops of this country. Now, I think, as I said before, that after we have drawn the Civil Service out from these lump votes and these contingencies, and these service votes, from its nooks and crannies, and have displayed them in one solid mass under one regular vote to be taken every year, we will have a better idea and a more adequate view probably of our responsibilities in reference to this great force than we have had heretofore.

Well, what came to pass? At a certain time, owing to pressure from both the outside and the inside Civil Service, the government formed a commission, not the first that has been formed, but formed a commission in 1907 to look into the general conditions of this great service of the country. That commission performed its duties, it brought in its report, and it came to the following conclusions as its main recommendations. It found in that service that there was an increasing and rapidly ascending scale and cost of living; it found that there were very often stationary and almost always insufficient salaries paid; it found everywhere in that service, here and outside, the blight of party patronage; on the whole, it found a service the majority of whose members were fairly efficient, I think, and honest in the discharge of their duties, but which was, from the reasons given by the commission, dispirited, discontented, not to say somewhat hopeless, in reference to their conditions and their future. The commission, after viewing those conditions, made the following recommendations: That a system of appointment and promotion, based on merit and efficiency, be introduced; the elimination of party patronage; the enlargement of the scope, and a widening of the horizon of the Civil Service, so as to place within its reach the prizes of the service as well as the lesser positions of the same; an increased remuneration of from 12½ to 15 per cent to be given with just discrimination; and in the last place, a superannuation system having in view, not only the betterment of the service, but the cheapening of the ultimate cost of the service. These then were the recommendations that came from the Civil Service Commission, an echo of the recommendations of the previous Civil Service commissions, which, from the time they were first issued in this country, have mainly reported along those lines.

Now the government met that commission in a certain way. In the first place, they divided the service into two parts, and they said: We will take the recommendation of the commission with regard to the basis of the service, in reference to the force at Ottawa, but we will not take it in reference to that portion of the Civil Service which is outside Ottawa. Recollect that the recommendations of the commission, founded on their investigations, showed exactly the same generic conditions all through the service, as regards cost of living, as regards the patronage system, and as regards every other point upon which they touched. But the government were not able, at least at that time, to do anything with reference to adopting any of the recommendations of the commission outside the Civil Service at Ottawa, to include those which, up to that time, had belonged to the outside Civil Service here at Ottawa. So, having cut in two the service, and decided to do something with reference to one-half of it, they let the other half drift for the time being. I am not going to follow that now; probably some discussion will take place in the House with reference to that question before we get through with the legislation.

What was done with reference to the service at Ottawa now made into the inside civil service? The idea of basing the system of the service upon merit and the ascertainment of that merit by examination was approved by the government and embodied in the legislation relating to the Civil Service. So that, with reference to the service, from this time forward there should be, according to the spirit of the Act, both appointment and promotion based upon merit and experience, such merit and experience to be ascertained in the way that is constituted under the law. But, the government, after having laid down that basis, did not go as far in the matter of conforming to the principle that they had adopted for the law in the classification which they based upon their legislation. Instead of carrying out the commissioners' recommendation and the spirit of the law as regards its basis in having some discrimination and some distinction made with reference to the service as it stood when it came to the matter of classification, the government adopted what might be called the simple mechanical rule—the man was to be placed in the main according to the salary that he at the time happened to be in the enjoyment of. The ne-er do well, in the enjoyment of a certain salary and in a certain class, stood just as good a chance as the

man who had always done his work and done it well. So, in all the different grades, that was the one lack in carrying out the principle of the Bill with reference to classifications. Then, by a simple clause a certain class under the Act, in the outside service at Ottawa, was brought into the new system on the same mechanical classification. The salary that the outsider insider was in receipt of fixed his position when he came within the Act. No question as to quality, no question as to time of service, no question of any other sort or any other kind but simply, what is his salary. With that question answered he goes into his class. So that the 1,577 men and women who were added to the 1,228 already in the service came in and were distributed in the service on this one basis of the salary they at the time happened to enjoy. One might say just here that that was not the best condition upon which to start the new system. In that way there was injected into the system at the very start what the appointment of the commissioners on the basis of the Act was designed to prevent. It was desirable that there should be a distinction made between competence and incompetence, as to length of service and as to efficiency in the carrying out of the service. The question as to how to get at that may have been a difficult one, but it is a difficulty that has been met in other countries and it might have been met in ours. The point I wish to establish is that the government have simply taken the mechanical method of classification, and applied it to all classes of the service without regard to those distinctions and discriminations which the principle of the Act and the appointment of the commissioners are supposed to have in view.

Now, do not, Mr. Speaker, have me understood as saying that amongst the outside insiders who have come in there were not good, efficient men even though they had never passed a qualifying or preliminary examination. There were good men in the outside department, men of merit, men of sterling abilities in the way of carrying out their duties, men of great application and great industry. These have been brought into the service and they will not be a weakness to it but will, on the contrary, be a strength to it. All that I want to emphasize is that the government, for the sake of avoiding the care and labour of making a discriminating classification, chose rather not to have the bother placed upon them, and consequently they adopted the easier method of making it absolutely mechanical or nearly absolutely mechanical. Then, with reference to the outside service, that part which has been brought into the regular service, the 1,557 employees; how have they been brought into the service, and under what conditions? The system of mechanical classification, as it has been applied both to the outside and inside service by the government has had a bad effect on the service in this respect. I do not think I go too far in saying that this method which has been employed has strengthened the undignified and mischievous spirit of pull and haul in order that a relative advantage should be got under the new classification and under the new arrangement which has had the effect of rather setting back the more sensitive, the more able, the more high minded employee and of giving an advantage to the man who would assert himself and by political or party, or official favour, pull for a better position than he otherwise would have got. As a result of that there is in the service, from one end of it to the other, a feeling of discontent and injustice which it will take a long while to eradicate and which, if it exists in any service, is not for the better carrying out of that service, does not tend to make it more effective and better working. With reference to the outside-inside service, what was a fair interpretation, when we enacted in July last that the service was to consist of this outside portion and the regular service, and that the outside portion was to be brought in and distributed on the salaries they had? I appeal to every hon. member of this House if it does not strike him as fair play and square dealing to let these outsiders come in at the salaries they had as contemplated by the legislation, and if it would strike any fair man as being square dealing that just prior to the time that the new Act was to come into force, on September 1, a large number of such employees should be arbitrarily increased in their salaries and thus be given a more favoured position under the new Act after the first day of September?

It does not seem to me that it was playing fair with the Act and the spirit of the Act that ministers should take a certain number of their employees and, in view of the fact that they were to come under the classification of the Civil Service Act on the 1st day of September on the salaries they were then receiving, increase their salaries so that they would get a higher classification than under the Act they would be entitled to. I have not had time to go through the whole of the ministerial operations in this respect, but I have looked into some of the larger departments. When the estimates of the Militia Department were going through the Minister of Militia informed me that of the 47 employes who were transferred from the outside to the inside service on September the 1st, not one had had his salary raised within six months previous to September 1st. And, although in the Post Office Department a large number of officials were transferred from the outside to the inside service on

the first day of September, a return laid on the table by the Postmaster General shows that prior to that date none of these men had had their salaries increased in order to give them a more favoured basis in the classification. I have not been able to analyse very closely the return of the Railway Department, but it would appear that the outside employees of that department came to the inside service on the 1st of September with the same salaries they had been enjoying previously. But the same is not true with regard to other departments. Let us see about the Department of Public Works. There is an order in council from the Public Works Department passed on the 5th of May authorizing the continued employment for one year in the outside service, at the salaries specified of 111 non-professionals, thirty draftsmen, thirty-three engineers and architects, making in all 174 officials at an aggregate salary of $202,480. The order in council does not state whether the salaries of these men were increased, and one would think that when a minister brings in a report with reference to 174 officials of this class he should state not only their salaries but whether they were increased or not. However it is not stated in the order in council, and I take it for granted there was no increase. Starting from that ground, however, we find that as time came closer to the 1st of September the Minister of Public Works on the 6th of August by order in council made the following new appointments: three at $500, $700, and $900 respectively; three at $550, $1,250, and $1,900 respectively; two at $800 and $700 respectively, making 8 new appointees with an aggregate salary of $7,350 all dated back to the 1st of April though the order in council passed on the 6th of August. On that same day the same minister brought down 56 special increases to the outside men, running from $50 to $350 per man, all dated back to the 1st of April, and involving an increased charge of $4,300. Then on the 31st day of August, pretty close to the 1st of September, the same minister comes with an order in council increasing the salaries of 60 officials of the outside service to the amount of $9,150, and making 3 new appointments at $3,400 total salaries. That order in council does not state when it is to take effect or whether it is to be dated back to the 1st of April as the others, but I will assume it is to take effect on the date of the order in council. Now, in all the Minister of Public works made 16 new appointments to the outside service involving $15,827 and made 117 increases involving $13,750, a total of $24,500 added before the 1st day of September to the chosen ones of his outside force. It does not require any very skilful investigation to show how this was done with a view of getting these officials into the inside service on a higher classification than that intended by the Act. Let me give some instances. I shall not mention names at present, but I find here that on the 6th of August one man got an increase of $200 and on the 31st of August he got an increase of $300 making a total increase of $500.

Mr. HUGHES. In one year?

Mr. FOSTER. In less than one month. The evident purpose of that was to put this man up to a salary of $2,100 so that when the first day of September came he would get into the classification which had a salary attached to it running from $2,-100 to $2,800. Here is another man who is getting $1,750, an increase of $50, on August 6, and $300 on August 31; the result being to put him on a salary of $2,100, ranging up to $2,800. And so I could go through a long list of increases—$50 and $200, $150 and $100, $50 and $150, $300, $50 and $150, $300 and $100, $100 and $300, $150 and $50, $100 and $200, $100 and $200 repeated over and over again, $100 and $250; the object being to bring the man who was getting $1,250 up to $1,600, so that when September 1 dawned he would find himself at the minimum of a class in which his salary would run up to $2,100 by annual increases. That does not appear to me to be playing fair, in any of three particulars. It is not playing fair with the outside men themselves. They were within twenty-four hours of coming under a discriminating and able commission, who would see their merits, and under whose administration promotions and increases, if merited, were altogether likely; and yet that was not awaited, but the ministerial power was brought into exercise, and the minister and his deputy, out of the large force, made one hundred and seventeen increases and placed his selections by these different accretions of salary, in the new coach, in splendid running form, but left all the others, who did not get the ear of the minister, on the outside, to come in as they were and take their chances in the new organization. Neither do I think it was playing fair with the other departments and their outside services. Here is a minister who says: My view is that in spirit and in right I ought not to take advantage of the brief power which I have to increase as I please the salaries of my outside men, and in that way put them into the new service under improved conditions. These other ministers were pressed to do it, that I well know. They refused the pressure, and their outside men enter the new service handicapped as compared with those of the less discriminating and less conscientious ministers. Neither was it fair to the Civil Service itself; I need not labour that point, and it was not fair to the system itself. It was not fair to those in the

outside service where the discrimination was made; it was not fair to the members of the Cabinet who played fair with their outside men; it was not fair to the general service itself; and it was not fair to the general principle and spirit of the Act.

Let us come to another minister, and here I find that I have to make a retraction. On the ordinary classification which was handed in, I looked at the transfers that were made—John Smith, $800, transferred at $800; Timothy Brown, $1,500, transferred at $1,500. I ran my eye over the list of the Minister of Agriculture and I said: Here is a man who has played fair; every man who comes into the new is put at the same salary that he had in the old. And I complimented my hon. friend, and my hon. friend took the compliment—blushed under it somewhat, but took it, and swallowed it down; and then, choking a little, said that there might be one or two instances in which he had necessarily to reward merit, but he plumed himself on the compliment. Mr. Speaker, I beg to retract that, and I am going to state the reasons why I do so. According to a return brought down by the Minister of Agriculture himself, I find that he went out like a good shepherd among his outside force, and gathered in the particular sheep that he wanted, called them by name, herded up 146 of them. and drove them into the increase inclosure—81 with an increase of $50 each, 21 with an increase of $100, 15 with an increase of $150, 19 with an increase of $200, 2 with an increase of $250, five with an increase of $300, 2 with an increase of $350, 3 with an increase of $400, 1 with an increase of $450, 2 with an increase of $500, and 1 with an increase of $600; making increases to the 146 persons amounting to $15,310. And the skill with which these increases land the chosen one on the top of the slide when the toboggan is actually ready to go would be amazing if we had not known the Minister of Agriculture before. These were also made effective on the first day of April, many of them, some on the first day of August; but the increases dated back two months or one month, as is shown in the orders in council. Of these 146 a number were increased in May, but the most of them in two days—on the 28th and 31st of August respectively. The decisive hour was drawing nigh; there was little time left to make hay while the sun shone, and the Minister of Agriculture went to work and made it. Seven were raised so that they got on at the $2,100 up-going scale, 21 so they got on at the $800 to $1,600 scale, by additions of $50, $100, $150, $200 and $250; 7 were raised to the $2,100 to $2,800 scale by additions of $150, $200, $300, $350, $400 and $500; 7 were raised to the $1,600 to $2,100 scale by increases of $450 in one case, $250 in another, $500 in another, $150 in another, $50 in another, $100 in another, $400 in another.

Mr. FOSTER.

Another peculiarity which I just mentioned without giving it any further comment is that I find that of the seven raised to $2,100 two were appointed before 1896 and all the others were appointed in 1901, 1905 and 1907; and of the 21 who were raised to $1,600 all were appointed in 1900, 1901, 1902, 1903, 1904 and 1906. Of the seven who were raised to $1,600, all but one were appointed in 1902, 1899, 1898, 1900, 1901, 1907. Summing up the matter, the total transfers that the minister made was 194 at $207,150; the new appointments he made in 1908 were 14 at $13,100; the increases from April 1 were 146, $15,310. Just to show the patronage that this modest minister had, let me tell you what he has done, as the record shows. It was the fault of his position, of course, of the times and circumstances, and not done by design, but here are the facts. This hon. minister has 24 farm hands at $35,400, an average of about $1,200 or $1,300 per man; 10 live-stock men at $10,100, or an average salary of over $1,000; three exhibition clerks at $2,500, or $800 average; civil government contingencies, 21 men at $14,500, or $700 average; public health, 3 at $6,450, or $2,100 each. Seed branch, 21 at an average of $1,000 each; health of animals, 22 at an average of $1,400 each; 4 tobacco men at an average of $1,200 each; 29 dairy and cold storage men at an average of $1,000 each; 29 census men at an average of nearly $1,000 each; 28 archive men at an average of $1,000 each and a little over. And of all these men, numbering 194, 160 have been appointed since he took the reins of office.

Mr. FISHER. Hear, hear.

Mr. FOSTER. That shows the immense power of patronage which was handed by the old system into the hands of the minister. But if the Minister of Public Works did well and the Minister of Agriculture did better, what can be said of the Minister of the Interior. I shall now proceed to devote a little attention to him.

Sir WILFRID LAURIER. Six o'clock.

Mr. FOSTER. I think I can finish with the Minister of the Interior in a very few minutes.

Mr. OLIVER. It will not take five minutes to point out all that is wrong in the Interior Department.

Mr. FOSTER. It would not if the Minister of the Interior had power to keep all the lids down. But, if my right hon. friend will call it six o'clock, I shall put off these interesting disclosures until after recess.

At six o'clock House took recess.

After Recess.

House resumed at eight o'clock.

Mr. FOSTER. The Minister of the Interior (Mr. Oliver) took occasion to tell me,

just at the close of the afternoon sitting, that he would be unavoidably absent this evening but he was kind enough to say that I need not spare him because he was not here. Of course, it would go without saying that I would not. I said that the Minister of Public Works and the Minister of Agriculture had done well, but that words could hardly be found in the English language to adequately describe how much better the Minister of the Interior had done in this peculiar work. The Minister of the Interior transferred 504 from the outside-inside service to the regular department on the 1st of September. He had a larger field in which to work than either the Minister of Agriculture or the Minister of Public Works, and he showed that he was a very diligent husbandman. From the 1st of June to the 31st of August, the Minister of the Interior made increases to 270 of the 504 of his outside flock. On June 22, 23 and 30, he rounded up 43 and drove them into the inclosure. In July, he added to the chosen number 13. In early August he made an addition of 18. But the great pressure took place on the 26th, 27th and 31st of August, when he drove 196 into the fold—making altogether, as I have said, 270 increases in the outside service, at an expense to the country of $42,830 a year. These increases run from $50 to $550, and they date back in some cases from one to two months prior to the order in council, and they were arranged with the usual skill so as to place the persons who were increased at the top of the slide. There were 58 who were increased to $900, so as to bring them into the class running to a maximum of $1,600. These were increased by additions of $200, $300 and $350. Then, 32 were increased so as to bring them into the division commencing with $1,600 and running to $2,100, the additions being from $200 to $500. Nine were increased to $2,100 so as to enter the class running from $2,100 to $2,800, and the increases in these cases run as high as $550. But the Minister of the Interior did more: In the months of July and August, he made 45 appointments in all at a salary total of $30,080, and these 45, of course, were translated on the 1st of September into the regular service. So that, in new appointments and increases, 315 treatments took place, with an added cost to the country of $72,910. The Minister of the Interior also made a number of double increases. Without naming any of the parties at the present time—the analysis can take place when the Bill is before us—it may be said that one gentleman, who was in receipt of $850 was increased, on August 27, by $50 and also on August 27, (there must have been two council meetings that day) by $300, making a total of $350, and bringing his salary up to $1,200. Another gentleman, whose salary was $900, received two increases, on the same day, of $50 each, raising him to $1,000 and putting him in the 2B class. Another gentleman, on June 20, received $100 increase, and on August 27 another $100, the purpose of which was to bring him up to $1,600, from which he would advance to $2,100. Another gentleman was in receipt of $850; on July 2, he received an increase of $350, and on August 27, another increase of $400, making a total increase of $750, which accomplished the trick of placing him in the class running from $1,600 to $2,100. Now, I may mention here, for fear I do not get at it later, that this is a striking example. This gentleman received increases amounting to $750. He is eligible for the flat increase of $150. So, this officer who had a salary of $850 receives increases amounting to $900;—his increases are greater than his original salary. Another gentleman received $1,800, but on August 6, he got an increase of $100 and on August 27, an increase of $200, raising him to the class commencing with $2,100 and running to $2,800. Another gentleman, then in receipt of $1,280, was increased on June 30 by $50 and on August 27 by $270, raising him also into the class running from $1,600 to $2,100. Another received an increase of $50 on August 27, I suppose in the morning, and in the afternoon, after maturer consideration, another increase of $550, raising him to $2,100, whence he will sail to the $2,800 goal. Another gentleman, whose salary was $1,300, on June 30 was increased by $50, and on August 27 by $250, bringing him into the $1,600 to $2,100 class. Another gentleman, who was getting $600, received an increase on August 26 of $200, and on August 27—after a night's deliberation—another increase of $100, so that he was placed in the class running from $900 to $1,200. In this case, when this gentleman receives the flat increase of $150 there will be added $450 to a salary of $600, thus nearly doubling the salary and bringing him into the class that runs up to $1,200. Asother gentleman, receiving $950, on July 31, got an increase of $50, and on August 27 an increase of $200, which raised him to $1,200.

Now there is something peculiar with reference to this matter. When the Minister of Public Works and the Minister of Agriculture wanted to make these increases, they at least had the grace to go to council and get an order in council for it. With reference to the majority of these increases they were made without any reference to council at all, on ministerial authority and ministerial authority alone. I put the question to the Minister of the Interior, I asked him the total vote for 1908-9 of salaries of clerks, and he answered me $394,122. I asked him how many he had then, and what their salaries would amount to for the year, and he answered me 416, the salaries amounting to $381,292. On that basis he would have had a surplus of $12,830 But he

made a total increase amounting to $42,510, and dated some of them back. The question I have been trying to solve is by what right or authority did he make, after the votes in parliament had been given, increases to amount to $42,510 when he had only a surplus of $12,830 of the amount which was voted. But he went further, and I think it was a few days before the 1st of September he actually looked about him, in the outside world, and he made 45 new appointments. In the year 1908 he made 116 new appointments, involving salaries of $75,310, and the whole of those 116 appointees of 1908, on the 1st day of September, went into the regular Civil Service with the salaries at which he would have appointed them, ranging from $500 up to $1,200. Again I press the question—I would if the minister were here—as to whether he has contravened the spirit and letter of the Act? The old Act and the new Act are at one in this: The constitutional requirement, as well as the legal requirement, is that before the increase of the salary is voted the appropriation shall be had. Where were all these appointments and all these increases made from when there was no parliamentary appropriation for that special purpose? The minister tries to fortify himself in part by saying that the Act establishing the department gave the minister himself the right to make appointments out of the general service votes. That is, if he had a vote for lands, he could make as many employees as he liked, and do it by the ministerial fiat alone. That is not in the spirit of the law. That law, it seems to me, refers to temporary assistants, and to temporary assistants alone; and I do not think it gives the minister the right to make what are to all intents and purposes permanent appointments. If the minister knew when he was making these 45 appointments that they were not temporary, that on the 1st day of September every one of those men would be in the Civil Service of this country, and could not be got out of it, he was practically making permanent appointments, doing it without reference to parliament, doing it, as I contend, without a special vote. Now what right has a minister, on the 27th day of August, to vote an increase to an employee and to date it back to the 1st of April, 1908? There is no authority in the Act, either the old or the new Act, so far as I can find. That is not in accordance with the spirit of the Civil Service in its foundation, either in the old or in the new. Yet dating back has been done by the Minister of Public Works, and has been done by the Minister of the Interior; I am not so certain as to whether it was done by the Minister of Agriculture or not, but I think in some cases it was.

Now it is instructive to take page 536 of the Unrevised 'Hansard,' and look over these six pages and a half of increases and appointments. I want to read a few of them to show how it is done. Here is a clerk who is receiving $550, what you might call a first appointment, with a low salary, and probably in a low class, compared with other classes. This clerk receiving $550, is given an increase of $250 on the 27th August. What is the purpose? To bring the clerk up to $800 so that, on the 1st day of September, he may come into the class running from $800 to $1,600. Another clerk is receiving $550, on the same day a $250 addition is given, with the very same result, that the clerk is raised to the $800 minimum. Another and still another, receiving $500, and $300 of an increase is added on the 27th day of August, and the clerk is brought up into the $800 to $1,600 schedule. I do not want to weary the House by going through all of these. But here is a set of three, where a $400 increase is given on the 31st day of August in order to raise them to a higher class. Here is a clerk receiving $500, and on August 31 gets $228 added. Here is one who is receiving $550, and on the 27th of August $350 is added, and the clerk is raised to the class running from $900 to $1,-200. Another addition of $350, and another addition of $350, to bring a clerk up to $1,600 minimum, running into the class from $1,-600 up to $2,100. Here is a list of four all in a row, each of them receiving $700, each of them by $200 increases raised to the class, on the next day, running from $900 to $1,200 in the new schedules. I do not want to weary the House by reading the list, but this is the nature of it, from beginning to end. The purpose, in nine cases out of ten, is evident, it is to boost the recipient so that on the next day he may get into the new arrangement on a favoured basis.

Now let us make a summary of the work of these three gentlemen and see how it stands.

	Department of Public Works.		Department of Agriculture.		Department of the Interior.		Totals.	
	No.	Salaries.	No.	Salaries.	No.	Salaries.	No.	Salaries.
		$		$				$
New appointments, 1908...	16	15,827	14	13,100	116	75,310	146	104.237
Increases after June 1.....	117	13,750	146	15,310	270	42,830	503	71,890
Total	133	29,577	160	28,410	380	118,140	649	176,127
Flat increase at $150.....	.....	19,950	.....	24,000	.....	57,900	649	101,850

The Minister of Agriculture told us this year when he came back that all the legislation passed last year, which was to serve the inside permament force, had added to the salaries of the inside men was $37,000. Yet, all this time these three ministers were working for the outside people and they increased their salaries by $72,000 or thereabouts. Another peculiar thing is this. I have gone through these different schedules of the increases given to men from the outside service and what do I find? I find that in nearly every case this was so arranged that they are eligible for the $150 increase; so that added to all these increases I have spoken of, and which seem generous enough, probably every one of these men will get $150 from the 1st of April, 1908. I put again this question: How could these increases be dated back? Was it fair, was it in accordance with the spirit of the Act, was it in accordance with the letter of the Act? How could these increases be made, as they were made in many cases, without the sanction of council? Is that in accordance with the spirit of the Act? Is it in accordance with any kind of good government of the Civil Service? How could they be made without votes having been first passed by parliament as was done in the cases which I have cited? These questions require answers, but over and above it all is, to my mind, the most serious thing—the indisposition of these hon. gentlemen to play fair with the Civil Service and with civil servants. I tell you that if boys were playing marbles in the street for keeps and two or three of them were to try that game they would be sent to coventry if the boys were proper minded at all. If lacrosse or hockey players were to act with that lack of the spirit of fair play they would be sent to the wings by the umpire mighty quickly. I leave it to the good sense of hon. gentlemen on both sides of the House if that was playing fair with the interests that were at stake. Now, whilst all this was going on in that part of the service, 1,577 in number, that on the 1st day of September were to become part of the regular establishment, what was being done for the regular establishment itself? That is a pertinent question, Mr. Speaker. Outside of the boosting up of some of the higher class of officials, done before we went from this parliament last July, the rank and file of the Civil Service were held up and no increase was given to them at all. They were brothers in the service working side by side with the outsider. They were the permanents, they had to pass an examination, they had to toil on under the rules and regulations, they had to submit to all the restrictions, many of them had been long years in the service, and yet these brothers were entirely neglected and nothing done in their behalf. The other brothers outside and toiling alongside of them had ministers who were looking, through, in and amongst, and these had a large number of increases given to them whilst the regular, permanent employees received nothing, had no consideration. Oh, yes, they received something. They received the bitter penance of a right withheld unless they voted properly. They had to submit to the indignity of being canvassed by the men who told them that the premier would do so and so if he were elected; he is the boss of the job; you better look out how you vote! During a long period of turmoil and strife, the Civil Service, the members of the regular household, were kept there as the football of the politicians. Is there any doubt about it? When the Minister of Agriculture got time to work out the mighty uplift that would be given to the permanent Civil Service by the legislation they passed last year he arose one day in this House and told us what the mighty uplift was. It amounted to the royal sum of $37,800. Am I right in that? I think that is about the figure.

Mr. FISHER. I do not remember the figure.

Mr. FOSTER. With what incalculable care, with the expenditure of how many sleepless nights and days of toil had the ministers elaborated their scheme to give to the permanent service of this country from 12½ to 15½ per cent of an increase? When it was all done they got the magnificent sum, amongst 1,228 of them, of $37,000. What is the key to the matter? The ministers did not spend an hour working out the results of their plan before they proposed it and had it passed by this House. Now they come back to this House. They have had a little leisure after the elections to work out the enormous uplift, they find out what it is, then they spend more sleepless nights, they work long hours in the room and in the cabinet and at last they come to a determination as the result of grave logarithmic calculations. We will give $150 of a flat increase to every man, woman, youngster and oldster in the service! I wonder that the Minister of Agriculture looks so healthy as he does after all the toil involved in the process of getting at such a result.

Mr. FISHER. He has a good conscience.

Mr. FOSTER. A good conscience? Well, there are relative degrees of goodness.

Mr. FISHER. Hear, hear.

Mr. FOSTER. Hardness is sometimes the sign of goodness. I will not debate that with my hon. friend. Now, when we are at this point let us see what this $150 flat increase means. Why is it given? It is given in order to compensate the long

working, hard working civil servant who has been inadequately paid for a number of years while the cost of living has been high and yearly growing higher. Is there any basis for this grant unless that is it? How do the government attempt to do that? The basis of it is that which I have mentioned and no other basis can justify it. The man who has been the longest in the service and done the best work ought to get more than the man who has been the shortest time in the service and done the poorest work. Why? because he has been long in the service at an inadequate salary; he has received no increase and yet the cost of living has increased. By this method the flat increase is applied to everybody. The young lady or the young lad of a month's service who works by the side of a father of a family who has been in the service for fifteen, twenty or thirty years and has all the burdens and responsibilities of the family, in which the cost of living and inadequate salary tell, get the same increase as he does. They each get the same; is there justice in that?

Sir WILFRID LAURIER. That's according to Scripture.

Mr. FOSTER. Does the Prime Minister think there is justice in that? I don't wonder he does not get up and say he does, because I do not believe he does. Under that plan of compensation the yearling gets the same as the oldster; the man appointed on the 31st of August who has never done a turn for the government and who has never lived under the condition of inadequate salary and high living cost, gets his compensation of $150. Does the Prime Minister think that is fair? I have too much belief in his good judgment and good heart to think that he would say that is justice. The man who is outside of the service and who has been boosted by a $600 increase into this new schedule gets the $150, working alongside or may be ahead of the man who has been in the permanent service for many years and who has borne the burden and heat of the day under inadequate salary and increased cost of living. I am obliged to think that no business man, no just man, would think that was applying the scales of even justice on the ground upon which it is assumed that $150 is to be given. If it is to be given as compensation for inadequate wage and increased cost of living it must be given with discrimination so that the man in the service who has suffered most shall get the most and he who has suffered least shall get the least. If you take the number of those whose salaries have been increased in the outside service and on September the 1st came into the inside service you will find that 19 out of every 20 of them will get the $150 increase under this proposition, notwithstanding that many of them have got increases ranging from $200 up to $800 before the 1st of September, and in addition to that placed in a higher schedule. But when you come to the 1,228 Civil Servants, who were under the Civil Service Act before the 1st of September you will find that many of these are at the maximum of their class and cannot receive the benefit under this proposition, of the $150 flat increase, while those men who have been boosted by the minister to the tune of several hundred dollars will, in addition to that, receive this $150 flat increase. Does my right hon. friend think that is just? The rule is to be laid down that the Civil Servant of the old regime shall in no case get more than the difference between his present salary and the maximum of the class in which he is placed. and how does that work out? One of the old servants goes into the class with a salary running from $900 to $1,200; he was getting $1,100 last year, $50 would be his annual increase bringing him to within $50 of the maximum of his class, and so he can only get $50 out of the $150 flat increase Is there any spirit of fairness in that kind of thing? Look at the $1,100 men standing at the top of the Junior Second Class and you will find that a large proportion of them are men of long service. It so happens that a great number of them are appointees of the late government; many of them have been standing at $1,100 for years and being at the maximum of their class they have had no annual increase in the meantime, and these men are also deprived of the $150 flat increase. I do not think that can be considered fair by just men on either side of the House. Many of these men in the third class, and in the senior second class, and in the junior second class are old servants of the government who have borne the stress of inadequate salaries and increased cost of living, and most of them cannot participate to the full extent in the flat increase of $150. More than that, and I want the Prime Minister to think of this as an added reason, these men not only do not get the full amount of the flat increase, but they are at the maximum of their present class, they are up against a block in that respect, and they will have to wait for long weary years may be before they get a chance of promotion.

But these men of blessed inheritance who were outside the sheepfold, and have these ministers to look after them, get the big increases, get put into the higher schedules, wth years and years of increases at $50 and $100 ahead of them. These things do not appear to me to be fair. Take your first-class men. There is a good man, generally of many years of service, getting $1,900; he is put down at $1,950 for this year. He goes into the class from $1,600 to

$2,100. He has been standing at the top of his old class for years, doing the country's work, getting no $50 a year increase, and now $1,950 is his salary, and the maximum of the class into which he is put is $2,100. He gets his full increase, and then is blocked at the head of the class; he stands there probably for a long series of years before he can get promoted. I think these are glaring injustices, in this rough and ready way the government has taken of managing the increase to the Civil Service of the country. I am not going to elaborate more on that. I am simply going to lay this matter before the right hon. gentleman who leads the government, and before his ministers, and I am going to ask them just to consider if this is playing the game fair. I would like the late Speaker to invite the cabinet ministers, especially those three to whom I have devoted some attention, to a private room, and either sing or recite to them that which I have often heard him recite: 'Play up, play the game, and play it fair.' I think it would have some effect on those hon. gentlemen, especially considering the very excellent way in which the late Speaker used to render the good sentiment.

Now, Mr. Speaker, I have very little more to say. I cannot help, however, just in the end devoting a few words to how this thing might have been done. The Prime Minister may say to me: You have criticised, but you have not offered a solution. That is not my business. These gentlemen undertook to arrange the Civil Service on its proper basis, and to do the fair thing by the service. It is their business to do it, and it is our business as far as we possibly can to help them in doing it. It is our place to criticise the weakness and injustice of their plan, and to ask them to make it fair and just. But I can see a way in which it could have been fairly done and satisfactorily done. The Minister of Agriculture ought to have trusted his colleagues and his own Civil Service Commission. He ought to have waited, if he had a good case, three or four days, and then taken his good case to his colleagues and to the Civil Service Commission, and rested it upon its justice. If his case was good, would not his colleagues have recognized it? There is ample breadth within the new law to provide for such cases. The Civil Service Commission was the creation of the government itself. I think all this pitiful exhibition would have been avoided if these ministers had trusted their cases to the Commission and their own colleagues after the first of September, 1908. With regard to the classification, I can conceive a tribunal which would have done it, and done it fairly, and which would not have been open to the imputation of a minister seeing one of his own nephews boosted, or a deputy minister seeing that one of his own relatives was boosted. Such things destroy confidence in the department, every man and woman in which knows what is going on there. That would all have been avoided if you had taken a tribunal consisting of your deputy minister and your Civil Service Commission, and let them sit down together and make the classification. Then the men in the departments would have felt that they were getting a fair show. Then this pull-haul exhibition of party influence and official influence would not have taken place. Calmly, with deliberation, after full conference, having a uniform system in sight, with justice as the touchstone, such a tribunal would have gone into the matter of classification, and would have assigned the places and the classes in something like order and upon some basis like merit and efficiency. How much would have been avoided if that had been done. And with reference to those in the outside service, that tribunal could have done just the same. It does seem to me that what was done was a perfect outrage on the spirit of the Act and on the idea of fair play to every part of the service. There again, I think those ministers would have done better if they had submitted to their colleagues their case after the first day of September; and with that kind of an arrangement, that careful conference, that sifting of experience of deputies, and putting along with it the unprejudiced and unpartisan view of the two commissioners, who were gentlemen I believe approved by the country at large for their position, you would have had a classification and an adjustment of salaries without bitterness, without this feeling of unfair play, and much better comporting with the dignity of the service and the dignity of a government than has been exhibited in the operation that has taken place.

Now, I leave this with the Prime Minister. After all, he is the man. He knew that these increases were being made; for they went through his council; he knew that others of his colleagues played fair, and that, although they were pressed from behind by the outside men, who said, others there are getting increases by the dozen, the score, the hundred, and why are we not treated the same? These gentlemen said: It is not the spirit of the Act, and we do not feel disposed to do it. And the Prime Minister sat in the cabinet and allowed three ministers to do so and so, and the others to be left behind, but left behind in a noble spirit and in a good cause. That was not holding the scales evenly. Did not the Prime Minister know that this was being done, or is this revelation of to-day the first knowledge he got of it? Whether it is or not, we depend on the Prime Minister to play up, play the game and play it fair.

Hon. SYDNEY FISHER (Minister of Agriculture.) Mr. Speaker, my hon. friend the member for North Toronto (Mr. Foster) in the last sentence of his speech, quotes, he says, from the former speaker of the House of Commons the words, play up, the game and play it fair. My hon. friend went back to a few days ago when, he says, he paid me some little compliment which he had now to retract. I am afraid that I must go back a little further, to the last session of parliament, when I myself complimented the hon. gentleman on the fair way in which, as a whole, he had discussed the Civil Service Act of 1908, and on the manner in which he had brought his long parliamentary and administrative experience to the perfecting of that measure. I am afraid, however, that I must to-day follow my hon. friend's example and retract. My hon. friend has spent a good deal of his time to-day in trying to condemn that work in which he took a prominent part last session. At that time, he dealt as a rule, fairly and accurately with the propositions that were made from this side. We were able from both sides of the House, in many cases, to make improvements in the original Bill, and my hon. friend lent his assistance to that work, and in the main we were able to pretty fairly agree. I shall not take the usual stock course of saying that because he did not move amendments and put them to a vote, he therefore agreed with everything in the Act; but, as a matter of fact, last year's Hansard will show that specifically and in words he did agree to many of the changes and amendments to the Bill as brought down. I will go further and say that when sometimes we are not able to acquiesce in his suggestions, he accepted the reasons I advanced against them and ceased his opposition. My hon. friend now, however, has undertaken to scarify that Act. He has undertaken to point out how unjust and inadequate it is, how certain clauses have made it easy to commit great injustice to various individuals and classes in the Civil Service. He has pointed out that the outside service in the city of Ottawa was brought by that Act into the inside service and he complained that that was done in a mechanical way. I would refer my hon. friend to the original Bill. In that Bill the bringing of the outside service into the inside service was not to be done in the mechanical way in which it was afterwards provided to be acomplished. In the original Bill it was to be done by order in council in every instance, giving to the council the decision whether the individual was worthy to be brought in. But my hon. friend, then as now, and as always, eager to search out political motives and impute them to his adversaries, pointed out that that would be an unfortunate power to put into the hands of the government and that it was better that the government and the council should not have that opportunity to discriminate. To-day, however, he condemns the mechanical transfer of the old outside service into the inside service, forgetting that he and his friends on the other side of the House at that time, as well as those on this side, are equally responsible for the change. My hon. friend goes further, and condemns that mechanical transfer, with the men at the old salary which they had previously. He says that is wrong, and that we ought not to take everybody indiscriminately from the outside service and put him in at his old time salary. But when my colleagues and myself undertook to discriminate and pick out the men who ought to get a little better chance, and leave out the others who are not deserving of that better chance, my hon. friend accuses us of discriminating for political reasons and of everything else under the sun except the one thing which did actuate us, and that was to exercise a fair and just discrimination in favour of those deserving of promotion and increase and against those who were not so deserving.

Up to a certain extent my hon. friend praises the Act, but he praises it perhaps a little more by implication than by words. He says it is a good thing to have the whole service on the same footing. In that respect we agree with my hon. friend and that is why we introduced the Act last session and brought the outside service in the city of Ottawa into the inside service. My hon. friend does not point out what is true, that while we had the power for years of discriminating, had we desired to do it, in favour of our political or other friends in that outside service, we deliberately threw away that power and put the outside service out of our reach as regards discrimination. We came into parliament and deliberately threw away what my hon. friend says was to us a most cherished privilege, and we took this large number of employees in the outside service in Ottawa and transferred them into the inside service where they will enjoy the same rights and privileges as the inside service and the same immunity from discrimination on the part of the government and its ministers which the inside service has always enjoyed. If we were so wrapped up in our own desire to show political favouritism, we could have left things as they were and dealt with these gentlemen in the outside service as the hon. gentleman says we desired to deal with them. But, Sir, instead of being imbued with that spirit, instead of wanting to treat the Civil Service in that way, we took a large number of men—my hon. friend has given the figure as over 1,500—and put them into the inside service, so that, in the future, they would receive the statutory increases and the same treatment under the statute as others, thereby, of our own free will and by our own

spontaneous action, depriving ourselves of the opportunity of political favouritism which my hon. friend thinks we cherish so much. It would be better for him, I think, not to attribute these motives to his political opponents, but rather to look to the way he and his colleagues did in the old days in their administration of the country's affairs. He accuses us of having given increases to the members of the outside service before they were brought into the inside service. I would like to deal with that point a little in detail. I have not the figures for each of the departments to show what my colleagues have done, but I have a very intimate knowledge of my own department and I propose to analyse, as far as I can after merely hearing the figures read over and with only a few minutes to look up some of the facts,what was really done in my department and compare it with the picture drawn by the hon. member of what I am supposed to have done. He found in the return that I had laid on the table, and on which he complimented me—he has not yet withdrawn that part of the compliment—by saying that it had been drawn up so that it could be easily understood——

Mr. FOSTER. I will stick to that compliment. The work was done by one of the hon. gentleman's clerks.

Mr. FISHER. But under my direction and according to my arrangement. At all events, the hon. gentleman will acknowledge that I did not wish to hide what I was doing.

Mr. FOSTER. You could not; you had to tell the truth.

Mr. FISHER. Whether I could have hidden it or not, I did not want to do so, and I will show the reasons and will show my hon. friend that he has been hasty in his conclusions as he has been in his study of the facts. He found 146 increases which had been made during the calendar year 1908. That is correct. He went on to say —or, at any rate, to imply;- and I think he absolutely said it—that these increases were given for the purpose of putting these members of the outside service into the inside service in better positions than they would have enjoyed if these increases had not been made.

Mr. FOSTER. I said that in many cases that was done.

Mr. FISHER. I think the hon. gentleman did say that, but when he was harping on it, when he was enlarging, as he does in his elaborate word-painting, upon the sins I am supposed to have committed, he kept repeating over and over again the large number of increases made in the year, and the impression was certainly left in the minds of hon. members that I had given these increases quite recently—before September 1—and that that was the object in view. Now, there were 146 cases. Of these, 108 got their increases at the first of last fiscal year in the ordinary course of salary increases. Of these 108, there were 72 who got increases of $50 each. This is the amount of the statutory increase for the members of the inside service. I have been in the habit, for a number of years, of trying to treat my outside service in Ottawa the same as the inside service, and have given them increases on the same scale—that is, increases of $50 apiece unless there was some particular reason why any particular officer should receive more or should receive nothing. These increases, 108 in number, and given at the opening of the last fiscal year, were given at a time when I did not know what the provisions of the new Civil Service Act would be, when I had not in mind any provisions of that kind, and when I should have had to make an abstruse calculation to find out what the results would be to these outside servants when the Act was passed. These increases had no more reference to the new Civil Service Act and the bringing in of the outside service than had the increases given in a similar way for two, or five, or eight years before. The hon. member has entirely mistaken and misrepresented the facts of this return from which he has taken his information. Of these 108 officers, 36 received larger amounts than $50. There is nothing extraordinary about this; in other years I have given outside servants larger increases than $50, because their services seemed to require it and justify it. In addition to this, a certain number of these 108 officers received increases just before the coming into force of the new Act.

Mr. R. L. BORDEN. How many?

Mr. FISHER. There were 46 who received increases in August, but I think that some of these officers got no increases at the first of the year. I have not the exact figures. Speaking from memory, I should say that 15 or 16 of these 46 did not receive increases at the beginning of the fiscal year, but 46 altogether did receive increases in August. My hon. friend led me to believe, from the way in which he put it, that the whole 46 received increases in August or a little before.

Mr. FOSTER. I gave the exact dates. I will go out and get the return. Go slow until I come back.

Mr. FISHER. I will not promise to do that, but I will treat the hon. member (Mr. Foster) more carefully than he treated the Minister of the Interior (Mr. Oliver) in that gentleman's absence. I have gone over these figures a little hastily, and I may be astray in some of them. I have

had to add them very hurriedly since six o'clock, and one or two—

Mr. R. L. BORDEN. It is not a question of one or two.

Mr. FISHER. No, I take that for granted. So, if the hon. gentleman finds me astray a little, he will understand the reason. I desire to deal with those who received increases in August. There were 29 who received increases for the avowed purpose on my part of putting them into a class under the new Civil Service Act which they could not otherwise have got into. I say frankly that that was my object in giving the increases to these 29 officers. I will give a few instances to show the reasons which guided me, but I wish to speak first in general terms. When I came to classify my whole department, I did so under an entirely new classification from the old one that was in force before. We had that classification made up in certain divisions and subdivisions, clearly indicating the character of the work expected of the officers, and the salary of these subdivisions were fixed so that a given class of work, whether done by one individual or another, would be paid for on the same basis.

Now in my outside service, while I have done what I could to give fair treatment, and to arrange my men so that they would be adequately paid for the work they were doing, I had never gone into that matter in the different branches of my department as carefully as I did when we came to bring those people from the outside service into the inside service. And why? Because, when they were in the outside service, if at any time when they were paid out of what I may call lump votes, voted, not for the whole service, if at any time of the year I found that a certain man was not being adequately paid for the work he was doing, if I found that he was showing unusual aptitude, and was more valuable than I had supposed, I could go to my colleagues and ask them to pass an order in council to increase that man's salary. I was not restricted by any statute. The hon. member for North Toronto said on another occasion that I ought to have been restricted by the Auditor General's Report, and that I had no right in one year to increase a man's salary when, according to the Auditor General's Report, he had been paid a certain salary in another year. I take direct issue with my hon. friend. Lump votes were passed for the purpose of carrying on the service; lump votes did not carry with them details of the salaries, or of the officers who were doing that service; and I venture to assert that I was right in maintaining that I had a free hand to give those men such salaries as would best secure the efficient performance of the service they were engaged in. In that way I had a free hand, until the 1st of September, to pay those men more salary than they were getting, when I had evidence that they were worthy of a higher salary. But after the 1st of September, when these men came into the inside service, they were subject to the same restrictions, the same increases, and the same status in their classes, as the old inside service were, and I would no longer have a free hand. Therefore it was incumbent upon me, in justice to these men, to go over their cases more carefully, and to consult with the heads of my different branches and get their views as to the real qualifications of each individual and the salary that ought to be permanently paid to him, as he was formerly getting a temporary salary. Now let me say this, that of all the increases in this list of mine, some 46 in number—not 146 as the hon. gentleman seemed to imply——

Mr. FOSTER. I seemed to imply nothing. I gave the dates of the orders in council, and they will be found in the 'Hansard.'

Mr. FISHER. The hon. gentleman left the impression that all these increases were made for the purpose, the sole purpose, of raising the men to a higher place in the new classification. That is not a correct implication, it is not in accordance with the facts.

Mr. FOSTER. I am not responsible for the hon. gentleman's impression.

Mr. FISHER. In regard to these men who did get increases, I did it on the recommendation in every case of the heads of branches, who consulted with me and made recommendations. I did not pick out political friends, I did not pick out individuals. Why did I not pick out political friends, even if I had wished to do so? My hon. friend read lists of the men who were appointed to the service, and showed that they were appointed after 1896. That is right. It was after 1896, in nine cases out of ten, and the reason was that before 1896 the then Conservative government had not that care of the agricultural interests of this country which they deserved and required. The old Conservative government was starving the agricultural interests of this country, and were not paying enough to carry on the work which the farmers demanded at the hands of the government, and the hon. member for North Toronto, who was then Finance Minister, was the man chiefly responsible for it. The men employed in the Department of Agriculture were asking for more money, they wanted to expand the work of the department, they wanted to do more for the farmers, but they could not get the money from the then Finance Minister, and consequently the agriculture of Canada was starved, and the Department of Agriculture was a little one-horse affair, while to-day it is doing a work commensurate with the immense and grow-

ing interests of the agricultural industry of Canada.

Mr. FOSTER. If the Minister of Agriculture will exercise his memory and will go back to 1896, or a little anterior, he will find where vote after vote was brought down and supported by myself, on the recommendation of Prof. Robertson, for the purpose of establishing new avenues for that industry. He will find in 1896 that a large vote was brought down for one particular agricultural object, and we tried to get it through, and the men who prevented it going through were my hon. friend and his leader, Sir Richard Cartwright.

Mr. FISHER. I was not in the House at that time, but that doesn't matter.

Mr. FOSTER. Your friends did it.

Mr. FISHER. I assume full responsibility for what my friends did at that time. But my hon. friend is just as accurate in saying I was here and did that, as he is in a good many other of his statements. My hon. friend was then Finance Minister, he had brought down his estimates, he had tried to get his estimates through the House, and he knows just as well as I do that all the estimates were refused, because the parliament of that day had not confidence in the men who were bringing them down. The parliament of that day did not want these gentlemen to handle the money of Canada any longer, and they wanted to get a verdict of the people on the conduct of that administration. Therefore parliament held up the government of that day, and did not allow them to carry through their estimates, but forced them to appeal to the country, and the consequence was the great debâcle which swamped the Conservative party in the elections of 1896. It was not a refusal to give Prof. Robertson a few thousand dollars, but it was a refusal to let the hon. member for North Toronto handle the finances of Canada for the next five years. Let me tell him that while the farmers of Canada had the fullest confidence in Prof. Robertson, and would be glad to see him get tens of thousands of dollars more than he was able to wring out of the then Finance Minister, the farmers of Canada knew well what they were doing when, in the elections of 1896, they drove him from power, and prevented him from handling the finances of this country any longer. And if to-day the present government is still in power, if the hon. gentleman and his friends are still sitting on the left of the Speaker, it is largely because the people of Canada, last October, were afraid that if they allowed the leader of the Opposition to attain to power the hon. member for North Toronto would again handle the finances of Canada. Judging from what we know, most men, even among Conservatives in Canada, will say that Canada was right and they will continue to say that just as long as he is in the position which he now occupies in his party——

Some hon. MEMBERS. No.

Some hon. MEMBERS. Hear, hear.

Mr. FISHER—and is the future Minister of Finance of the Conservative party.

Mr. FOSTER. You will be better now.

Mr. FISHER. It is very much better now and Canada knows it, thinks it, and says it, whenever it gets a chance.

Mr. FOSTER. Now, suppose you come back to your mutton.

Mr. FISHER. I am quite willing to. My hon. friend has himself to thank for the digression. I have told my hon. friend that there were some of these men that I gave increases to in order to put them into their proper classes. I will take a few of the first instances. I cannot over the whole 29, but I will take fair instances. First on the list, there is Mr. W. W. Moore, chief of the market section, who got $200 so as to give him $2,100, thus placing him in the class which goes from $2,100 to $2,800. Mr. Moore is the head of an important subdivision in the Dairy and Cold Storage commissioners' branch. The natural place for a man occupying that position in the department is in that division. He had $1,900 last year. I gave him $200 to bring him up to $2,100 which would give him the position in the classification in which the office that he is exercising was placed. I thought that I was right in doing it. I am quite ready to discuss with anybody Mr. Moore's qualifications and I am going to tell my hon. friend from North Toronto that Mr. Moore was appointed by the Conservative party, was in the department before this government came into office, and was an officer of that Prof. Robertson that I have been talking about. The next is Mr. McNeill. Mr. McNeill is the chief of the fruit section of the Dairy and Cold Storage commissioners' branch. I also gave him $200 to put him in the same subdivision. Mr. Barr is chief of the dairy section or subdivision of my department, and I gave him $300 to put him in the same position. Now I just want to say that Mr. McNeill is so well known amongst the fruit men of this country and so much thought of that I had been asked to make a special branch of my department devoted to the fruit industries of the country, and to put him at the head of that branch. If I had yielded to that Mr. McNeill would not have been in the $2,800 class, but in the $4,000 class. I think I am justified in having given him $200 which will place him in the next division below that to which he might have been advanced. Mr. Barr is a dairy expert, well

known to many hon. members of this House, whose position in the dairy world and in the department as chief of the dairy subdivision requires that he should be put in the division to which he has been advanced. Therefore, he was put up to $2,100 in order to place him in that subdivision. The next I come to is Mrs. Henderson, a clerk. Mrs. Henderson is an old employee. She had been receiving $700. The subdivision which she would have gone into would have been subdivision B of the third division. She was such an industrious, painstaking and competent clerk, that the head of the branch in which she is employed recommended that she ought to go into the higher subdivision of the third division, and I gave her $200 to put her at $900. This enabled her to get into that subdivision. The next is a stenographer, Miss Robinson, and she was advanced just in the same way. The next is Mr. Charlan, who is the chief of the tobacco division of my department. This is a gentleman of scientific attainments, whom I was able to secure, a short time ago, from the French government. He was an expert in tobacco growing in the Department of Agriculture of France, and I brought him out to Canada on purpose to help to increase and encourage the tobacco growing industry of this country. Mr. Charlan has made good in an eminent degree and yet, when he first came, he did not know the English language well enough to be of a great deal of use in the English speaking parts of the country. But he has learned the language so well that to-day he is of just as much service in the province of Ontario and in the west as in the French parts of the province of Quebec. He has been placed in the division which begins at $2,100 and goes up to $2,800. At first he was given a tentative salary until we could find out what he was worth to the country and under these circumstances I have given him an increase of $400. I am ready to stand up and justify it from one end of Canada to the other. These are some of the instances that I take at the beginning of the list.

Now, I shall take one or two at the end of about the same character, although, in some cases, the amounts are smaller. There is one which I think my hon. friend mentioned which is a very big one. I gave a gentleman $600 and I did not do it to put him in another division. He got that increase on the 22nd April last and just for this reason: He had been studying veterinary science. He worked for us at $600 a year during his vacation. He was getting $600 last spring. He obtained his degree as a veterinary and then came back and asked me to employ him. Having qualified himself, having got his degree as a professional man, he came back into the department and I naturally and properly doubled his salary and gave him the same salary that other veterinaries employed in the department had been getting. If I had not done so I would not have done my duty to the department or to Mr. Laidlaw. I have another case, that of Mr. Spencer. Mr. Spencer is in charge of the live stock division. He was paid $1,950. He has charge of one of the most important sub-divisions in my department. I gave him $150 so as to put him in the $2,100-$2,800 class. Mr. Spencer's work, his knowledge, his reputation in the country, amply justify putting him in that class and I would not have been doing that which was due to myself and to the department if I had not done so. These are specimens of those for whom I did this. I do not conceal it and I do not desire to conceal it; on the contrary, I boast of it, because it is a recognition of men who have done good work for the country, of men who are doing good work, of men who ought to be encouraged to do good work and whose positions in the department I wished to recognize by placing them in higher subdivisions than they would otherwise have been in. I did that before the first of September for that express purpose and I do not deny it. I repeat that I do not wish to conceal it and that I was only doing my duty by the men, by the work and by the department in doing what I did. These are instances which show that the conclusions reached by my hon. friend from North Toronto are entirely wrong in dealing with the list which I have given him. Instead of his showing me up as one who has taken advantage of the law to do what I had no right to do, I have shown that I was simply carrying out my duty to the men who were in my department, and preparing for the proper exercise of the new law which brought these people into totally new circumstances and new conditions as distinguished from the conditions under which they had been in the old work and under the old regime. My hon. friend says that these men are all Liberals.

Mr. FOSTER. I did not say anything of the kind.

Mr. FISHER. Or that they are all late appointees.

Mr. FOSTER. I did not say that.

Mr. FISHER. The hon. gentleman read the dates of their appointments and talked about them as appointments which had been made after 1896.

Mr. FOSTER. The dates show when they were appointed.

Mr. FISHER. Quite so, and I want to say that the reason of that is that these divisions were not in existence before.

Mr. FOSTER. Was the poultry division in existence?

Mr. FISHER. The one at the farm was. Does my hon. friend know who got any increases in the poultry division ?

Mr. FOSTER. I know who did not.

Mr. FISHER. Who did not ?

Mr. FOSTER. The minister has the papers and can look.

Mr. FISHER. The papers only show those who did; who did not ?

Mr. FOSTER. I don't think you gave Mr. Gilbert much of an increase.

Mr. FISHER. No, I did not; he was at the limit of his class.

Mr. FOSTER. How long has he been in the service ?

Mr. FISHER. About twenty years.

Mr. FOSTER. What salary is he getting?

Mr. FISHER. I think it is $1,200 or $1,300, but I cannot say off-hand. I gave Mr. Fortier his assistant the $50 statutory increase last spring and he did not get any increase afterwards, but Mr. Gilbert was at the head of his class and did not get it.

Mr. FOSTER. Mr. Gilbert did not seem to get any special increase.

Mr. FISHER. Quite true; perhaps that is the reason my hon. friend has made this tirade.

Mr. FOSTER. Not at all.

Mr. FISHER. The hon. gentleman (Mr. Foster) implies, although he did not say it, that the men who got increases have been picked out because of political or personal favouritism. Well, in many of these branches the whole staff have been appointed by me personally and I did not give the whole staff increases. Of course I gave them all the statutory increases at the commencement of the fiscal year, but when it came to give the increases when this new Act was to come into force it was my officers at the head of the divisions who picked out the men who seemed to be specially worthy. My hon. friend has complained of discrimination, but he has overlooked one point. Supposing we had done as he wanted and brought these men in at their salaries before the 1st of September, after the 1st of September we either had to give them their statutory increase or promote them to another class. In some instances we gave them enough increase to give them promotion before they came in. In other instances where they were given an increase that did not promote them we would have been tempted to, and probably we would have promoted them after they came in and given them a larger increase because they deserved exceptional recognition. But if the recommendations of the hon. gentleman (Mr. Foster) were carried out and we waited until after the Act came into force and had then gone to the commissioners, the commissioners could only have given them a certificate for promotion and they would have had to get that promotion, and that promotion in some cases would have been far greater than the increase they got before they were brought in. The result would have been that the cost to the country would probably have been greater than under the arrangement we made.

My hon. friend speaks about the competence of the old inside service. I myself have stated on a former occasion that in 9 cases out of 10 and probably more, the old inside servants were competent and did their duty faithfully. But when they once got in at the bottom of the old inside service they rose step by step simply by seniority on their statutory increases, without picking out any of the good to put above the less good. The men in the outside service were not in that position. They could be raised without regard to the statutory increase. They could be picked out by the chiefs of their branches and given special increases because they were deserving of them. The men who got this particular favour at my hands before the 1st of September last were so picked out by their own chiefs, and on the recommendation of their chiefs I did what I did. For years back there has been more discrimination and more promotion for merit in the then outside service in Ottawa than there was in the old inside service under the old regime, because the minister and his chiefs had free hands and could do as they thought proper. The men who are at the head of these outside branches of my department are all of them without exception enthusiasts, earnestly having at heart the work of their branch. They were appointed for that reason; they were appointed as special technical experts; they were picked out of the best men among the agriculturists of Canada, and during the years they have held their positions compliments have been showered upon them by Conservatives as well as by Liberals. They have had the commendation of the Committee of Agriculture of this House over and over again, year in and year out. And these men having at heart the good of the service and wishing to make their branches as perfect as possible were more likely to recommend the good men than to recommend the bad, and to take merit as the sole ground upon which to recommend for promotion. I venture to say, with regard to the increases of the salaries of the outside servants that merit was the only guide. So far as I am personally concerned and I can only speak with certainty for myself, every one of these increases was given upon the recommendation of the head of the branch, and I know some of these officers ; in nine cases out of ten, I do not

know what they look like. My hon. friend (Mr. Foster) talked about 1,574 being in this class, as if the whole of these outside servants got special increases.

Mr. FOSTER. I did not say so.

Mr. FISHER. No, but when the hon. gentleman was dilating upon the evil he said that 1,574 of these people——

Mr. FOSTER. I said 1,577.

Mr. FISHER. Well that difference is not of much consequence. I may say that the figures given by the hon. gentleman are not the same as those I have had given to me by the department. He spoke about these 1,577 as being all brought in from the outside service, but in my own department 21 of these who were brought in from what appeared to be the outside service and made permanent, but had been previously paid out of civil government contingencies and were really in the inside service although they were not permanent.

Mr. FOSTER. They were not on the establishment.

Mr. FISHER. They were not on the establishment, but they were temporary clerks under the old Civil Service Act, had passed the qualifying examination and were paid out of civil government contingencies.

Mr. FOSTER. Some of them do and some do not.

Mr. FISHER. All of mine had passed the Civil Service qualifying examination, were paid out of civil government contingencies, and belonged to the inside service, although they were temporaries; and this Act has made them permanent. Now, I venture to think that the discrepancy which occurs between my hon. friend's figures and the figures which I gave to the House some time ago, is due to the fact that he has taken all of those who are made permanent under the new Act, and calls them the outside service. Judging by my own department, where there were 21 in the inside service who are made permanent, and I take the rest of the departments as about equal—

Mr. FOSTER. The whole number paid out of civil government contingencies was about 89.

Mr. FISHER. That would be taken off the figures of those who were brought in. When I gave the figures, however, I did not include the staff of the House of Commons and the Senate. I suppose my hon. friend has included them?

Mr. FOSTER. No.

Mr. FISHER. Then, I cannot account for the discrepancy. I have no means of knowing where my hon. friend got his figures.

Mr. FOSTER. Take the estimates.

Mr. FISHER. If my hon. friend has taken the estimates, he is all astray. They provide for the increase in the service during next year, and a great many of those will be new additions.

Mr. FOSTER. Is my hon. friend speaking about the number of salaries ?

Mr. FISHER. My hon. friend will find in the estimates the number of those who were brought in from the outside.

Mr. FOSTER. Then there is some discrepancy between those and the returns as brought down ; but I have taken the estimates as likely to be correct.

Mr. FISHER. The figures I have I got from the Finance Department, which made out the estimates and gave me the figures a few weeks ago, and there has been no change since. The figures were 2,695 in the whole service. My hon. friend gives 2,800 and something. He says that of these 1,577 came in from the outside. That would leave only about 1,300 of the old inside service. I have not here to-night the information on which I based the statement I made last year, when the Act was going through the House, that there were from 1,500 to 1,600 then in the inside service, and that the probability was that the Act would bring in 800 or 900 from the outside, making the total about 2,500. According to the figures given to me by the Finance Department, that number has been exceeded by about 200.

My hon. friend talked very much about injustice to those who were at the maximum of their class, and who may have to wait for promotion. That has always been the case in the Civil Service, and it must always be the case so long as we have a classification. Men who reach the maximum of their class have to stay there until they are promoted. As a general rule, the good clerks, the best clerks, get promoted. Those clerks who are being paid all they are worth, when they get to the top of their class, stay there, and it is just because they are being paid all they are worth that they they do stay there.

My hon. friend seems to think that we have been guilty of a gross and glaring injustice in this respect; but what is the fact? The fact is simply that we have increased the maximum of all the classes, all except one at any rate; so that we gave to the clerks who have been for years at the maximum of their class, an opportunity of going higher and getting an increase to their salaries. Is this an injustice for which we are to be blamed? Have we done this to injure these people? My hon. friend points out that it is chiefly the old clerks, who I suppose were appointed by himself and his friends, who are suffering this so-called injustice. All I can say

is that if any of his friends have remained for any length of time at the maximum of their class, they must have been inferior clerks, and not those who would certainly get promotion if they were very long at the head of their class.

My hon. friend criticises the flat increase. I do not know that it is right to discuss that on this occasion, because we have a Bill before the House in regard to it. I shall only say that while my hon. friend condemns the flat increase and considers it a very improper method of dealing with the service, the representatives of the service themselves state that they are thoroughly satisfied with it. We did not adopt the flat increase hastily. We recognized that the old Civil Service Commission had recommended a percentage increase, and we tried to work that out on various bases; but we found great difficulties and inequalities in the way. We found that the percentage basis went in a different direction from the sense and spirit of the recommendation of the commissioners, which was that those in the lower ranks of the service should get a greater increase than those in the higher ranks with large salaries. Under these circumstances we believed that by giving a flat increase of a certain amount, a larger percentage of increase would go to those whose salaries were low than to those whose salaries were high; and this was recognized last year in the representations made to the government. In the discussion of the question before the commission; and otherwise, it was pointed out that it was the middle and lower ranks of the service that needed the increase more than those receiving high salaries ranging from $3,000 to $5,000 a year. Under these circumstances we decided to give the flat increase. There is a Civil Service Association in Ottawa which is thoroughly representative of the service, over 90 per cent of the whole inside Civil Service belonging to it. That association chose a delegation to go to the Prime Minister and discuss this question of an increase of salary. They made several propositions, which we discussed and tried to work out; and eventually in a final interview between that delegation and myself, to whom the matter had been turned over by the Prime Minister, as I was in charge of the Bill, we made the proposition of a flat increase, and after the delegation duly nominated for that purpose by the Civil Service Association, had taken the time to discuss and think over the proposition, they agreed to it without hesitation, and gave me authority to use their personal names, if I chose, as evidence of their agreement. But they went further than that. As a result of that agreement the Civil Service Association, composed of over 90 per cent of the whole force in Ottawa, discussed the question at a meeting of its executive committee, and passed a resolution endorsing the action of the subcommittee which had conferred with the government regarding the reorganization of the service and the proposed general increase. Here is a paragraph from a letter addressed to myself from the secretary of the association:

> I have also to state that a cordial vote of thanks to yourself for your action on the matter was unanimously passed by the executive at the same meeting, and that I am instructed to convey the same to you, together with an expression of the appreciation of the sub-committee for the kind manner in which you received its representations.

Mr. FOSTER. What is the date of that?

Mr. FISHER. The date of the letter is January 27, 1909 and of the resolution January 21. I may say this—and I have no doubt it is partially the inspiration of what we have heard to-day from the hon. gentleman, that an anonymous communication, typewritten, was sent to me and many others complaining of the flat rate, but evidently whoever wrote this anonymous communication had not the pluck to sign it. I have here a letter from the secretary of the Civil service Association in which he says:

> Mr. McGiverin has just written to me with regard to an anonymous statement which he and several members of parliament have received in which complaint is made of a feature of the proposed increase and he suggests that it might be well to advise you as well as himself in the matter.
>
> The statement in question has also been sent anonymously two or three times to the officers of the association. It does not represent in any way the attitude of the association. That attitude remains, as defined to you by our subcommittee and in my letter to you of January 27, which was written after the publication of the resolution.

That letter is dated March 9. Mr. Coates goes on to speak of the thirty-five who receive no increase either under the reclassification or the new Bill and asking if possible to provide for such cases under the reclassification. I may say that when we came to work out this question of a flat increase, I was agreeably surprised to find that there were only thirty-five in the whole service at Ottawa who got no benefit under that proposition, and also surprised to find that when you take the whole amount paid and the number benefited, the average percentage of increase comes to almost exactly what the Civil Service Commissioners recommended, or about 12 per cent. That is a most extraordinary working out of the recommendations of the Civil Service Commission. Although we proceed on slightly different lines, we get to the same point and same result, and I believe it to be an abundant justification of what we have done and the manner in which we have done it.

I dare say I have omitted some of the many points my hon. friend has taken up, but I think I may safely say that I can just as satisfactorily answer them as I have been able to reply to those of which I took a note. In the work we have done during the last year, we have placed the Civil Service in a much better position than it ever enjoyed before. We have put a large number into the inside service who deserved to be there and who ought to be permanent and get any benefit derived from being in the inside service. Their work in Ottawa was practically the same as the work of those in the inside service, and it was unjust that they should be working side by side, doing similar work, under a different regime. We have given the service a better status, we have given them an improvement in their classification, and we propose to give them a flat increase in salary to rectify the great difference in the cost of living to-day compared with what it was some years ago. In my investigation I found that in 1857 the permanent officers began at $500 just as they did last year, and this is an evidence that a change was required in the system. In doing this for the Civil Service, I believe we have acted in the interests of the country. My hon. friend began by pointing out what a great army of civil servants we have and what a large sum of money is paid them. That is true. And he compared it with the militia and armed forces of Canada. Well, I venture to think that the men on whose honesty and efficiency we must rely in the transaction of the business of Canada, deserve just as much consideration as those who may happen to take up their rifles and serve their country under arms. I do not want to minimize what these do but merely to point out that both are working in the interests of their country. If our public administration is to go on in an efficient and successful manner, it must be conducted by men who are satisfied with their lot, who take a pride in their work, and who are properly and fairly recompensed for the work they are doing. I think I have been able to justify the work I have done in my own department. Of course, we cannot expect sympathy and support from gentlemen opposite, but I am satisfied that we are getting that sympathy and support from the great majority of the people who have sent us to parliament to represent them.

Mr. R. L. BORDEN (Halifax). Mr Speaker, as the subject under consideration has been gone into so thoroughly, very little remains to be said. The Minister of Agriculture (Mr. Fisher) was somewhat apprehensive lest he had omitted some points. Let me say that I do not think he did omit any points. There is one thing which he certainly did not forget, one which he very seldom fails to remember, and that was to pay himself a series of graceful and somewhat extravagant compliments on his management of his department. I do not think I have ever observed my hon. friend take the floor when he did not make that point good before he concluded. I have not always observed, however, that he makes any special reference to those celebrated chicken fattening stations in which the cost was so much greater than the revenue. He was good enough, in his somewhat discursive remarks, to make some personal references to my hon. friend from North Toronto (Mr. Foster), going back for this purpose as far as 1896. The hon. gentleman (Mr. Fisher) surely knows what was the issue in 1896—

Mr. FISHER. I certainly do.

Mr. R. L. BORDEN. It was a prohibition plebiscite. Even before I could name it, the hon. gentleman sprang at the subject.

Mr. FISHER. And we carried it out.

Mr. R. L. BORDEN. And I want to tell the hon. gentleman that the reason why the country was so satisfied with this government last summer was that the government had so thoroughly and faithfully carried out their pledge in that regard. The hon. gentleman (Mr. Fisher)—I think it was in 1898, after the vote was taken, and after he had kept silence for some weeks during the session—rose in this House in my presence and said that there had been rumours throughout the country that he was going to resign, rumours around the corridors of this House that he was going to resign, rumours among members of parliament that he was going to resign, because the prohibition pledge had not been carried out, as he knows it was not carried out. And he gave the House the assurance, which was absolutely and wholly unnecessary, that he was not going to resign—every one knew it.

Mr. FISHER. My political opponents have had several opportunities since then to turn me out if they could.

Mr. R. L. BORDEN. That day will come, perhaps sooner than the hon. gentleman thinks. I do not think that there is really very much to say so far as the hon. gentleman's department is concerned, because he has practically admitted the whole case. I never have listened in this House to a more extraordinary confession of faith from the mouth of any minister of the Crown, who is supposed to have some regard to the trust he owes to the public of this country, than the hon. gentleman's statement with respect to his exercise of the power of patronage. The hon. gentleman's answer to the charge was that, instead of making 146 appointments in August in defiance of the

spirit of the policy which he announced in this House last session, he had only made 46 such appointments. He had violated the terms of his own policy 46 times, instead of 146 times. The hon. gentleman (Mr. Fisher) shakes his head; I will not make the usual response to that. What was the whole spirit of the policy of this government, as announced with some boasting last session by the hon. gentleman himself, and with very great boasting in the Liberal press of this country on his behalf? The spirit of it was this, that from the day the Act was passed—from the day the announcement was made in this House—Civil Service reform, so far as the officers embraced within this statute were concerned, was a thing accomplished, and that the government deserved the gratitude of the people for having brought about that reform.

Look at the hon. gentleman's excuse in the light of this boastful announcement. There were officers in his department with whom he could deal as he saw fit in the course of any year, because of the elasticity of the votes under which they were paid. If he found an officer not receiving fair compensation for his services, he could remedy that wrong without coming to parliament. If I am wrong in my statement, the hon. gentleman (Mr. Fisher) will correct me. He does not correct me, therefore, I have stated the case fairly, as I intended to do. Now, on the very eve of this Act coming into operation, while these men were receiving salaries that the hon. minister must have found ample for the work they had been doing for the public, on the eve of the time when it would become the duty of the Civil Service Commissioners to judge of the men's qualifications, the minister committed a fraud upon his own policy by doing that which the Civil Service Commissioners should have been allowed to do. The hon. gentleman's answer to the charge has been made and a more utterly absurd answer, a more unworthy answer, it seems to me never proceeded out of the mouth of any member of this House. If he had allowed this matter, which had been standing in the same way for months if not years, to remain for two or three days longer, it would have come within the jurisdiction of the Civil Service Commissioners. But, in order that he might cheat the statute which he himself had framed he passed these orders in council and made these advances. And he boasted of it—actually stood on the floor of this House and boasted of it. And more than that, he has the—I was going to use a strong word, but let me say—audacity, and foolishness as well, to taunt my hon. friend from North Toronto (Mr. Foster) with inaccuracy. This hon. gentleman (Mr. Fisher), who stated from his place in this House that he had written assurance from the government of Japan as to a certain matter of policy, and who, three years afterwards, was obliged to stand in his place and say that he had received no such assurance,—this hon. gentleman ventures to taunt my hon. friend from North Toronto with a supposed inaccuracy which did not exist. He says my hon. friend from North Toronto was scarifying the Act which he had assisted to pass last year. Any hon. member who was present last session during the debate upon this Bill knows that the hon. member for North Toronto, in a thoroughly non-partisan and patriotic spirit, assisted the Minister of Agriculture, in no small measure, to have this Act passed. Every hon. member who was present on that occasion, will willingly bear testimony to that. There was no partisanship in it from first to last; hon. gentlemen on this side stood by the Minister of Agriculture; and there is very grave doubt whether the Act could have been passed if it had not been for the strong support it received on this side. The hon. minister (Mr. Fisher) says that the hon. gentleman (Mr. Foster) now seeks to scarify the Act. My hon. friend did not attack the Act, as I understood him, but he did attack the administration of the Minister of Agriculture, of the Minister of the Interior, and of the Minister of Public Works under this Act—or, rather, under the Act which was upon the statute-book before this Act came into force. The Minister of Agriculture takes credit to himself and boasts of his conduct in this respect. What about the Postmaster General, the Minister of Railways, the Minister of Marine and other ministers of the Crown, who thought it their duty, as this Act was coming into force, to hold their hands and let the men appointed for that purpose, the Civil Service Commissioners, do their duty under the Act?

Were these men doing something of which they should not boast, and was the Minister of Agriculture, in doing what was virtually a fraud upon this Act, accomplishing something of which he had any right to boast? I venture to think not. I do not quarrel with the advances to any of these men, I do not quarrel with their qualifications, I am not prepared to dispute anything that my hon. friend the Minister of Agriculture has said as to their qualifications. I have no knowledge which will enable me either to affirm or deny anything he has said in that regard. But what I do say is that the commission appointed for that purpose by this parliament last session should have been left to do the work, and if the minister's statements can be made good, every one of these men would have received at the hands of the commission, exactly what the minister has given him. This commission has been appointed just for that purpose, and every one of these

officials could have received the advancement from division to division, from subdivision to subdivision, which was necessary in the public interest, upon the recommendation of the Civil Service Commissioners. I repeat again that to bring about, at that time and in the manner adopted, these changes in the administration of this department, in the administration of the Public Works Department, in the administration of the Department of the Interior, was unworthy of the hon. gentlemen who preside over those departments; and I commend rather to the approval of this House and of the country the attitude and the action of the other ministers of the Crown, who thought it their duty to leave those matters to the adjudication and the judgment of the Civil Service Commissioners appointed for that purpose. The Minister of Agriculture has admitted the whole case put by my hon. friend from North Toronto this afternoon. I venture to hope that the administration of this Civil Service Act will be carried out in a fair spirit in the future. No Act can be made perfect, no Act can be put upon the statute-book, which will not leave something to the administration of the heads of the departments; and if this Civil Service Act is interpreted, if it is carried out, in the spirit so definitely boasted of by the Minister of Agriculture this evening, then all I can say is that this Act will prove to be of much less benefit to the Civil Service and to the public of Canada than we believed it would be when we passed it last session. Under the circumstances I think my hon. friend from North Toronto was thoroughly justified in bringing this mater to the attention of the House, and in pointing out very forcibly the abuse which has been perpetrated by the heads of no less than three departments, upon the very eve of the coming into force of so important a statute as this.

Hon. WM. PUGSLEY (Minister of Public Works). I shall occupy the attention of the House for a few minutes only, because my hon. friend the Minister of Agriculture has so thoroughly justified, as it seems to me, the action of his department and that of the Minister of the Interior, based upon the general powers which were given to the departments of the Civil Service Act, that it is scarcely necessary for me to make any further argument in support of what we have done. Now if the leader of the opposition will pardon the suggestion, I think it would have been much better for him to confine his remarks to a discussion of what the various departments have done under the Civil Service Act, rather than to deal with matters relating to the elections of 1896 and subsequently.

Mr. R. L. BORDEN.

Mr. R. L. BORDEN. Let me remind my hon. friend that I did not introduce that question.

Mr. PUGSLEY. Then if he did not introduce it, he went one better than the Minister of Agriculture. However, I suppose my hon. friend is to be pardoned for still entertaining some feelings of discomfort by reason of what took place last October. Now, Mr. Speaker, I am prepared to affirm that in my judgment the departments which were called upon to deal with the men and women who were in the outside service and who, under the statute were to be brought in to the inside service, simply discharged their duty when they fixed the status which these officials should occupy upon coming into the inside service. That, I apprehend, was our duty under the Civil Service Act; and if my hon. friends had intended to raise any objections to the heads of the departments taking that course the time to raise the objection was when the Civil Service Bill was before parliament last session. What, Sir, was our duty? Let me turn to section 8 of the Civil Service Act passed last session, and which provides as follows:

> 1. As soon as practicable after the coming into force of the Act, the head of each department shall cause the organization of his department to be determined and defined by order in council, due regard being had to the status of each officer or clerk as the case may be.
>
> 2. The order in council shall give the names of the several branches of the department, with the number and character of the offices, clerkships and other positions in each, and the duties, titles and salaries thereafter to pertain thereto.

Now what was I called upon to do as head of my department? I found that I had about 36 officers who came within the provisions of the old Civil Service Act; I had about 170, or perhaps more, who, although they had been for a long time in the department, performing work just as important, performing work of just as permanent a character as that which they would have performed if they had been within the old Civil Service Act, still remained there as temporary employees, although many of them had been there ten, twenty, twenty-five and thirty years, and had to be appointed year after year, and their salaries to be determined by order in council. Now in organizing my department, in acting under the requirements of section 8 of the Act, surely it was my duty to have regard to the services which those officials were performing, it was my duty to have regard to the efficiency with which they performed their duties, to the length of their service, to the value of the service they were giving to the country, to the number of people who were qualified to enter upon the dif-

ferent classes which it was my duty to organize under the Civil Service Act. Well, what did I do? I asked the deputy head of my department to do what the statute says he should do, and that is to take into consideration the number of people who were in the department, the services which they were performing, with a view to asking the Governor in Council to fix their status, and to fix the salaries which would pertain to the positions they would be called upon to fill under the Act. Now, probably I knew even less of my officials than other ministers who had been in charge of their departments for a good many years. I did not know the capabilities of those different officials. I would not have the same knowledge of the value of the services which they are performing, as the deputy head of the department. It is his duty to keep in touch with all the officials of the department, and I asked him to take the matter up, and to devote to the subject the greatest possible care, to see that every official who was being brought in from the outside service, received due recognition, and that in placing him in the one class or the other, a most earnest attempt should be made to do simple justice to him, without doing any injustice to any other official. Not days alone, but weeks and weeks were occupied by the deputy minister in the discharge of that duty. He consulted with the heads of the different branches, and I have reason to believe that he discharged that duty conscientiously, with a sincere desire to carry out the terms of the Act, and to discharge the duties which devolved upon him under the provisions of the Civil Service Act. Now what did we do upon his recommendation? Having regard to the different classes which the Civil Service Act declared should be established, we provided that in sub-division A of the first division there should be a certain number of the higher officials of that class. There would be some who were within the Civil Service Act already, and there would be others who would be brought in under the Act on the 1st of September. We selected those officials who were performing the highest duties in the department, and recommended that they should be placed in sub-division A of the first division.

Let me call upon the hon. member for North Toronto, who says that a grave injustice has been done to the old members of the Civil Service, to those who have been under the old Civil Service Act, to take the classification which was passed in council, and which, upon his own motion, was submitted to parliament, to point to a single instance where an injustice had been done to those who were formerly under the old Civil Service Act and who have been placed in subdivision A of the first division in my department. At the best he might perhaps have been able to make the point that there had been some error and that some injustice had been done, but my hon. friend has not ventured to do that, and I may say that if he attempts to do that he will fail in showing to the House that such has been the case. I have never heard that any one of the gentlemen who have been in my department, those who came under the terms of the old Act, have uttered any complaint as to the mode in which they have been treated by the classification which has been made and by the salaries which are to be paid to the various officials who are classed in subdivision A of the first division. Then, we have subdivision B of the first division, and, having regard to the various officials in my department of the outside service as well as the inside service, it was the duty of the deputy minister to consider all these officials, the duties which they were performing, the efficiency with which they were discharging their public duties and, having regard to those who ought to go into that division I, upon his initiation, recommended to council that a certain number of officials should be placed in subdivision B of the first division. That was in order to recognize the merits of a large number of the officials and to place in that subdivision those who we thought would be fairly entitled to be placed there. If you will look over the classification which has been made by the Governor in Council upon my recommendation as the head of the department based, as I have said very largely and almost wholly upon the recommendation of my deputy minister, the permanent head of the department, it will be found that we have provided as best we could and according to our best judgment for these various officials both in the inside and the outside service whom we were called upon to place and to whom it was our duty to give the requisite status pursuant to the classification which was made and which is now before the House. As I have said, if my hon. friend could take that classification, if he could take the different officials who have been appointed to these various offices in my department and show that any wrong has been done, that any injustice has been done to any one of these employees, whether those who had been formerly in the Civil Service or those who had been long in the department, although employed in the temporary organization which was instituted a great many years ago, he would be able to make some point against me in connection with this part of the management of my department, but my hon. friend has utterly failed to do that. I recognize that it was my duty, as I assume the hon. Minister of Agriculture (Mr. Fisher) recognized that it was his duty, to provide for the classification of the various officials in the department, to specify the number of

officials who would be respectively in the different classes, and I assume that it was his duty as it has been my duty to have regard to the various officials then in the department and to the services which they were performing as well as the faithfulness with which they had discharged the duties that they owed to the public. In doing that I endeavoured, and I have no doubt that my deputy endeavoured, to so arrange the classification and to so provide for the placing of the different officials as to do complete justice to the officials having regard to their service, the length of their service and the efficiency with which they were discharging their duties.

Just a word with regard to what I thought was an unfair or undeserved insinuation of the hon. member for North Toronto (Mr. Foster) that there had been some favouritism and that some officials who had been appointed by the previous government had been discriminated against. As far as my department is concerned I can assure my hon. friend that there is no warrant for making—not the statement—but for throwing out such an insinuation as that which was conveyed in the statement of the hon. gentleman. I find that one of the most important officials of my department, to whom there was an increase of $400, was appointed on the 20th March, 1891, under the government of which my hon. friend was a distinguished member. I find that the next gentleman to whom there was an increase of $650 was appointed on the 2nd of March, 1886, also under the former government. Another one occupying a very important position to whom an increase of $300 was given was appointed on the 13th July, 1882; another one to whom an increase of $200 was given was appointed on the 11th April, 1888; and another one to whom an increase of $200 was given was appointed on the 4th December, 1886. And so, if my hon. friend will take this statement which was brought before the House on his own motion and go over the names of those gentlemen who have received an increase, he will see, I am sure, that he has no warrant for making the suggestion that there has been any discrimination as between officials who have been recently appointed and those who have held office in my department for a great many years.

Mr. DANIEL. Will the hon. gentleman give the names of those to whom he has just referred ?

Mr. PUGSLEY. I will be very glad to. There is Mr. Adams who received an increase of $120; he was appointed on the 1st May, 1886; Mr. Chassé, the law clerk. who received an increase of $400, was appointed on the 20th March, 1891 ; Mr. Coleman, clerk in charge of returns, who received an increase of $300, was appointed on the 13th July, 1882; Mr. Cusson, assistant keeper of the records, who received an increase of $200, was appointed on the 11th April, 1888; Mr. Delaney, assistant photographer, who received an increase of $250, was appointed on the 4th December, 1886; Mr. Desautels, clerk of attendance book, who received a small increase, was appoined June 22, 1886 ; Mr. Lefleche, registration clerk, who received an increase of $200, was appointed on the 8th September, 1887. These are a few illustrations of the truth of what I have stated. So that they apepar to have received the benefit of the increase entirely irrespective of the dates of their appointments. I am sure that an examination of the return which has been submitted to the House will verify the statement which I unhesitatingly make that in the increases which were given in my department, in the classification which has been made and in the number of officials who have been respectively assigned to each, there has not been the slightest favouritism and that no one has received any increase by reason of the position he may have occupied politically prior to his becoming connected with the department. I have not allowed, and I do not think that the deputy of my department has allowed, political, or party, or personal considerations to enter into the matter in any way, shape or form. We have simply endeavoured to do justice to all ; we have endeavoured to recognize the merits of the different officials and to treat them as we have felt they ought to be treated, and in doing what we have done I challenge my hon. friend himself to show that we have done other than what it was our duty to do under the Civil Service Act.

It was our duty under section 8 of the Act to arrange for the classification of the departments, and in doing that it was also our duty to have in view all the different officials who were in the outside as well as in the inside service, and who under the terms of the law were to be brought within the Act, and to have regard to the salaries which they would receive because their salaries as of the first of September would fix their status under the Act. In doing so we simply acted within the powers conferred upon us by the Act. The hon. gentleman asks why we did not leave this for the Civil Service Commissioners to do. Well, the Act gives them no power to do what we have done in justice to these officials. The Act does not give the commissioners the power to arrange the classification ; the Act does not give the commissioners the power to say whether in the first division or in the second division or in any other division there shall be twenty officials or ten officials. That is a duty which rested upon the heads of the departments and upon the Governor in Council. It is a duty we could not relegate to the

Civil Service Commissioners ; we could not ask them to discharge a duty which parliament had imposed upon us. It was our duty to say how many of our clerks and which of our clerks should be placed in a certain class, and having regard to the services which they performed and to the claims which they had, it was our duty to fix their salaries so as to do complete justice as between the outside servants and the officials who were within the Civil Service Act, starting everything as from the first of September and after that leaving the working out of the Act and the matter of promotion and of salaries to the commissioners. We have done our duty; we started them under the Act on the first of September and hereafter it will be for the Civil Service Commissioners to perform their duty under the terms of the statute.

Mr. W. B. NORTHRUP (East Hastings). Might I ask the Minister of Public Works (Mr. Pugsley) a question as I am not perfectly certain that I understood the point of his remarks. He appears to claim that the action of the Minister of Agriculture, and of the Minister of the Interior, and his own action was based on the authority of section 8 of the Civil Service Act. That was his whole case.

Mr. PUGSLEY. Not my whole case; that gives the authority.

Mr. NORTHRUP. I may say that I differ entirely from the conclusion of the minister, but that it is so absolutely immaterial in view of another clause of the Act that I shall not waste time discussing it. Section 8 is:

As soon as practicable.

Not after the prorogation of parliament, not after July 20, but:

As soon as practicable after the coming into force of this Act.

And when did it come into force. Section 48 says:

This Act shall come into force on the first day of September.

And therefore, it is as soon as practicable after the first day of September. Surely a more monstrous proposition was never addressed to an astonished House than that of the Minister of Public Works who carefully tells us that the ministers in promoting these men and in increasing their salaries, acting like a shah, or a sultan, or a rajah or any other oriental despot, did all that by virtue of the power given them by section 8 of the Civil Service Act which says, that after the first day of September they are to call their deputies together and do so and so. But, the minister tells us that he did it before the first day of September so as to avoid the very effect which parliament intended should have been produced had he done as he was bidden by parliament after the first of September.

Mr. PUGSLEY. Will my hon. friend pardon me; I think he misunderstood me.

Some hon. MEMBERS. Oh.

Mr. PUGSLEY. Just wait a moment; I did not intend to say and I do not think I did say that we completed the work of classification until after the first of September. What I did say was that in my department for weeks before that we were preparing and arranging for the classification of the various clerks and then when the law came into force on the first of September, we had the matter arranged as we thought equitable and fairly, and they were placed under the various classes pursuant to the terms of the Act. That is what I intended to say.

Mr. FOSTER. You were caught that time.

Mr. PUGSLEY. Not at all.

Mr. NORTHRUP. If the ministers did what they say they did before the 1st of September, they did not do it in pursuance of the Civil Service Act, for that Act says they are to do it after the 1st of September. At all events the result of what they did was to bring about a state of affairs that would not have been brought about had they obeyed the Act and did it as soon as practicable after the Act came in to force. We therefore have the extraordinary result that a certain number of favoured individuals had their salaries increased before the 1st of September in order that they might get benefits which the law did not contemplate they should get. In my opinion everything so done by the ministers was wholly illegal. Is it not a rather singular ilustration of retributive justice that the gentlemen who began to reform the Civil Service by acting in defiance of the statute should now come down to this House with a further measure of reform to add $150 to the salaries of other civil servants in defiance of another statute of this country. I mean the election law. Has any one in this country the slightest doubt that this resolution granting $150 to the civil servants is the price deliberately paid by the government for the seats of the city of Ottawa? Is there a person in this country from the Atlantic to the Pacific who does not know that the government had dispaired of carrying Otawa and had to abandon the candidates nominated by a duly qualified party convention? Is it not known from the Atlantic to the Pacific that when even the Prime Minister was brought to Ottawa—and I do not think it was paying much of a compliment to Ottawa in view of the fact that he would not declare he would sit for Ottawa if elected—despite the appeals made on the ground of the wonder-

ful favours conferred by this government on Ottawa, they found that even he could not be elected for Ottawa in the face of the feeling which existed amongst the civil servants, until his colleague gave a promise, supported and backed up by the Prime Minister, that if—to use plain ordinary everyday Anglo-Saxon—if Ottawa did the square thing by the Prime Minister they could depend upon it that the Prime Minister would do the square thing for the Civil Service. And so we see how one wrong step leads to another, and that these hon. gentlemen commenced to carry out this measure (which last year was heralded throughout the land as such a marvellous system of Civil Service reform) by very carefully violating it so as to bring about results that could not be attained if they did not violate the statute, and then to complete their work, they had to bring down this measure to carry out the promises which everybody in Canada knows were relied upon by a large section of the civil servants in Ottawa when they voted for the Prime Minister. While I have a great respect for the Civil Service of Ottawa, while I feel that many a member of it is sadly underpaid, and while I would be willing to go as far as any member of this House in doing justice to the hard-working and worthy members of the service, I feel like voting against this resolution, for two reasons; first, because I think it is an insult to parliament to ask us to carry out that illegal promise made during the last election, and secondly, because I believe it is an insult to the intelligence of parliament to ask us to remedy a wrong, which it is admitted has existed in the Civil Service for years, in so haphazard a fashion as giving an increase of $150 all round, irrespective of the salary now received, the length of service, or the ability shown by the recipient—irrespective of everything except the promise made last session to increase the salaries of the Civil Service. Surely there is another and a better way than that; and if this matter comes to a vote, I for one, will vote against the resolution—first, because I decline to be a party to carrying out that illegal promise, and secondly, because, instead of doing justice to the service, it is making a hodge podge of them, and increasing the salaries of many who should not be in the service at all, but should be turned out on the first opportunity. If this were done and the money thus saved were divided among the rest of the service, we would have a far more useful and efficient service than we have.

Mr. H. B. McGIVERIN (Ottawa). Mr. Speaker, the hon. member who has just taken his seat was probably not in the House earlier in this session, when the matter to which he has referred was brought up by the hon. member for North Toronto. I refer to the so-called promise that was made during the last election. The statement that was made by me in regard to the increase of salaries to the Civil Service, was simply in accordance with the intention expressed in the House last session by the government of carrying out the recommendations of the Royal Commission appointed to inquire into the Civil Service. The only promise that was made by me was that I would use my best endeavours to have those recommendations carried out.

Mr. LENNOX. What about the letter?

Mr. McGIVERIN. That is exactly what the letter contained, and no more than that. That letter is in 'Hansard,' and if the hon. gentleman who has interrupted me had taken the trouble to look at it, he would have seen that there was no improper promise of any kind. I do not hesitate to say that the government, in putting through the Civil Service Act of last session, has taken a great step in Civil Service reform, and so far as I am able to judge in the city of Ottawa, the government and the commissioners are carrying out that Act fairly and honestly. There are no appointments being made that are not made in accordance not only with the letter but with the spirit of the Act; and when the hon. gentleman who has just sat down says that the government, in bringing forward a measure to grant the Civil Service a flat increase of $150, is not carrying out their policy of last session, I take issue with him, and will strongly support that measure. It is in no way a bribe, but is simply carrying out what was intended last session, and what, owing to the lateness of the session, it was impossible to carry out then. I had no intention of taking part in this debate, because I understood, from what had been said, that no fault could or would be found with the increase that is proposed; and I for one, knowing that the Civil Service Association are fully in accord with this proposition, give it my most hearty support.

Motion agreed to, and House went into Committee of Supply.

SUPPLY.

Dominion buildings, rents, &c., $200,000.

Mr. PUGSLEY. This item stood at the request of one or two hon. gentlemen who were desirous of seeing the leases of buildings in Ottawa. Those leases were shown to them, and I would like to have this item considered. I might say, in answer to a remark made by one hon. gentleman, I think the hon. member for Grenville (Mr. Reid) that I am quite sure that if he makes

inquiry he will find that the observations he made in regard to the rent being paid to the Imperial Realty Company of Ottawa were entirely without foundation. The hon. gentleman stated that the building was worth something less than $200,000, and that an enormous rent was being paid for it, no doubt to party friends of the government. I have made inquiry, and I find that some time ago bonds were issued on the building to the Royal Trust Company of Canada, and it was valued by valuators chosen by that company at $400,000. As to the building being owned by party friends of the government, I have taken occasion to look into the list of directors of the company, and I find that one is Mr. J. W. Woods, another is Mr. Finnie, manager of the Bank of Ottawa, and another is Mr. E. B. Osler, of Toronto, a gentleman very well known to hon. gentlemen opposite, and a very distinguished member of this House. I am sure that my hon. friend, if he were here, would be the first to withdraw the suggestion he made.

Mr. STANFIELD. A member stated to me to-day that he had spoken to Mr. Osler and Mr. Osler denied the statement that he is a director of this realty company.

Mr. PUGSLEY. That is my information.

Mr. STANFIELD. He denies it.

Mr. PRICE. As the hon. gentleman says that Mr. Osler denies that he is a director of the company and as two or three members are absent who would like to say something on the subject, it is only fair to put this item off for another night.

Mr. PUGSLEY. I do not like to refuse my hon. friends when they make a request, but I am sorry we have to put this item off. Of course I accept at once the statement, if Mr. Osler authorized it to be made, that he is not a director. My information is that he is, but no doubt, I am misinformed. However, I am quite willing to take up the Nova Scotia items.

Avonport pier—Repairs, $2,000.

Mr. PUGSLEY. The length is about 65 feet. The wharf became badly dilapidated. This is done by days' labour.

Baddeck wharf improvements, $1,500.

Mr. PUGSLEY. This is to complete the improvements to the wharf and also to level up the land and drain it. The original cost was $14,709.

Mr. MADDIN. What was the cost of the site and was the work let by tender?

Mr. PUGSLEY. The lot is 107 feet wide by 306 feet deep. The lot and the wharf, including building, was purchased for $3,000 from Mr. Alex. Macdonald.

Mr. MADDIN. Was the work let by tender?

Mr. PUGSLEY. Yes, the contract was let for $11,709.

Mr. MADDIN. Will the $1,500 complete the work?

Mr. PUGSLEY. Yes.

Mr. RHODES. What is the balance due on the contract?

Mr. PUGSLEY. This is to finish up the total expense. I do not know whether it is all in the one contract or not.

Mr. RHODES. Would this be for extras?

Mr. PUGSLEY. I find there is some extra work required, such as levelling up and draining. The appropriation last year was $3,500. The crib-work retaining wall is estimated to cost $696; filling in old work, $114; filling in space between warehouse and old work, $42; levelling ground, $111; repairs to the old warehouse, $120; new warehouse, $200; fitting up office, $200; superintendent, $350; due the contractor, $400—making a total of $3,500. That will exhaust the $2,000 used out of last year's vote and the $1,500 we are asking for.

Mr. RHODES. Was the warehouse built by the man who secured the original contract?

Mr. PUGSLEY. No.

Mr. RHODES. I find in the report of the Department of Public Works of 1908 that in addition to the construction of the wharf, an agreement was entered into with the contractor for the construction of two boat landings. May I ask if the contractor for the warehouse also built the two landing stages?

Mr. PUGSLEY. I have no memorandum on that point.

Mr. RHODES. I am reading from the report of the engineer contained in the minister's report.

Mr. PUGSLEY. In looking at it, it is evident that the landing stages would be included in the $11,709.23.

Mr. RHODES. So, the landing stages would be an extra. Were they constructed by the contractor who built the wharf?

Mr. PUGSLEY. Yes, I take that to be the case.

Mr. RHODES. Can the minister give me the name of the contractor who built the wharf, or, if not, can he give the name of the man who built the warehouse?

Mr. PUGSLEY. I have not a memorandum on that point.

Mr. RHODES. I feel like asking the minister to furnish the information. I can find in the Auditor General's Report the name of the man who built the wharf and

also the name of the man who built the landing stages, and I would like to know if it is the same contractor who built the warehouse.

Mr. PUGSLEY. I will instruct the deputy minister to get that information, and, later, when we consider the general vote, my hon. friend (Mr. Rhodes) will have an opportunity of discussing it. Will that be satisfactory?

Bay St. Lawrence harbour, $5.800.

Mr. AMES. How much was spent there last year?

Mr. PUGSLEY. This is under contract. There was expended, up to the 30th December, to the contractor $20,890, and to the inspector $283.75—a total of $21,173.75.

Mr. AMES. What is the nature of the work?

Mr. PUGSLEY. Providing a safe boat harbour by opening a channel about 360 feet long, with a width of 60 feet at the bottom and a depth of two feet at low water. This is made through the beach which separates the pond from the sea. There is also pier work on either side and protection of the channel on the inside.

Mr. AMES. What will be the depth of water at high tide?

Mr. PUGSLEY. Nine or ten feet, probably; I think the tide rises there about seven feet.

Mr. AMES. Does the engineer give it as his opinion that the sand will not fill up the channel?

Mr. PUGSLEY. The belief is that building the protection work will have the effect of preventing the channel filling up.

Mr. AMES. This does not make a harbour of refuge, as I understand it. I suppose it is only for the fishing fleet that fishes off the north end of Cape Breton?

Mr. PUGSLEY. It is only for small boats, drawing nine or ten feet of water.

Mr. AMES. It is a large expenditure for that purpose.

Big Bras d'Or wharf—close piling and repairs, $2,000.

Mr. RHODES. Is creosoted timber used there?

Mr. PUGSLEY. Yes. The old piling is destroyed. This is a revote.

Blue Rocks harbour—improvements, $4,000.

Mr. PUGSLEY. This is a revote also. It is to provide funds for the construction of a dam at the eastern end, and a breakwater at the western end of the harbour.

Mr. AMES. Is this being carried on by day's work?

Mr. RHODES.

Mr. PUGSLEY. No, by contract given after public advertisement and tender.

Mr. AMES. Will this amount complete the work?

Mr. PUGSLEY. This is expected to complete the work.

Breton Cove—extension of breakwater pier, $600.

Mr. PUGSLEY. This is a work of diversion of the mouth of the stream to the north of the wharf. It is a revote. The work is under contract.

Mr. AMES. What is it expected to accomplish?

Mr. PUGSLEY. It is to prevent gravel from washing around the end of the wharf and so interfering with the boat landing.

Mr. AMES. How extensive are these works?

Mr. PUGSLEY. The amount is $5,788. This vote is to pay the balance.

Mr. AMES. What will the works consist of when completed?

Mr. PUGSLEY. An extension of the present breakwater pier, 120 feet out to deeper water.

Mr. AMES. I doubt very much whether the work will stand. There is a tremendous sea there.

Mr. PUGSLEY. We hope it will stand; and the engineer thinks it will.

Mr. RHODES. Is creosoted timber used there also?

Mr. PUGSLEY. Yes.

Cheverie breakwater—extension of, $4,500.

Mr. JAMESON. When was the contract entered into?

Mr. PUGSLEY. On the 16th of December, 1908.

Mr. JAMESON. How many tenders were received?

Mr. PUGSLEY. Four, ranging from $4,295 to $5,270. There were four tenders between those amounts.

Mr. JAMESON. When were the tenders called for?

Mr. PUGSLEY. About a month previous to that time. It is expected this will finish the work.

Mr. JAMESON. What is the extent of the extension?

Mr. PUGSLEY. Eighty feet.

Mr. JAMESON. Is this work being done with creosoted timber.

Mr. PUGSLEY. I do not think this is creosoted timber.

Mr. JAMESON. What is the policy of the department, and on what principle does it use creosoted timber in some works and not in others ?

Mr. PUGSLEY. Creosoted timber would be used in localities where the worms are found to be very destructive.

Church Point—repairs to wharf, $600.

Mr. PUGSLEY. This is to finish up the work.

Mr. JAMESON. Would the minister define what he means by conductor of works and sub-conductor ? I see that both of these titles appear in the Auditor General's Report.

Mr. PUGSLEY. A conductor, my deputy informs me, is one who performs the functions usually performed by a foreman. A sub-conductor would be a labouring man who had an oversight of the work under the foreman.

Mr. JAMESON. I see elsewhere in the Auditor General's Report that the terms foreman and subforeman are used in public works. Are these synonymous with conductor and sub-conductor?

Mr. PUGSLEY. I think so.

Mr. JAMESON. Is not a conductor merely an inspector, so to speak ?

Mr. PUGSLEY. No, I think a conductor actually works himself.

Mr. JAMESON. On this item I would like to refer to the landing pier at Westport, in the county of Digby, with regard to which I asked the minister a question a few days ago. In the estimates of last year was an item of $3,000 for the purpose of beginning the construction of a public landing at Westport, and the minister informed me that nothing had been done, and it was not intended to go on with the work during the present year. Some time later when the matter of these deferred public works generally was under discussion, the minister made a statement of his policy in reply to a question. I will quote from ' Hansard ' page 1348 :

Mr. MEIGHEN. Will the minister also give us the assurance that those public buildings which were in the estimates last year and which now are unfortunately discontinued, will be preferred and gone on with before other public buildings of a similar kind are initiated?

Mr. PUGSLEY. I think that is a very fair question. I feel that is the course that I should pursue as Minister of Public Works, and will certainly recommend to my colleagues. Of course there may be other cases arise, such as a public building being burned down or a wharf being carried away, which might create an exception, and we might have to include these new works, but as a general principle I am and would be committed to those works which parliament was asked to sanction last year.

Mr. JAMESON. Does that apply to breakwaters and wharfs as well as to public buildings?

Mr. PUGSLEY. Yes. Of course, if I were convinced that any work was not necessary I would have to think the matter over, but as at present advised I would adopt that course.

Mr. JAMESON. I am referring to the items which were in the estimates last year and which are stricken out of the estimates of the present year, and which of course would not be placed in the estimates last year if the ministry did not consider they were justifiable.

Now I would like to ask the minister, because I am in receipt of many inquiries from Westport, whether he considers this public landing at Westport would be a work which, under the policy here stated, would be proceeded with next year. I may say that there is great need, and has been for many years, of a public landing at Westport. Westport is an important town where a large business is carried on, and which a large fleet of fishing and trading vessels frequents. It has steamboat connection with St. John, but owing to the extreme rise and fall of the tide there the people of that port and the travelling public generally, are very much incommoded from the lack of a proper landing place for vessels. In fact matters have come to such a pass that the steamer which calls from St. John is obliged to lay off in the stream at certain periods of the tide, and the only way the people can land is to wade through the water and mud to the shore, or to climb ashore by means of lobster crates and devices of that character. I would urge upon the minister the necessity of the construction of that landing. It was promised last year and was included in the estimates, but owing to the straightened financial condition, he has not considered it advisable to go on with that work the present year. May I ask him if, under these circumstances, it will be one of those works to which preference will be given, and that the people in that district may look for the beginning of the work next year?

Mr. PUGSLEY. I regret that I am not able to give any assurance with regard to this work, or with regard to other works, specifically. I have nothing to add to the statement I made upon a previous occasion. Of course if I have to determine as between different works in the estimates, I might take up some works in preference to others according to the public necessity. But it did not follow from the remarks I made that all of the works in the estimates would be taken up at the same time. Some may have to stand over. Therefore, I hope my hon. friend will not ask me to give any specific promise as to this work. He will simply have to rely upon the statement I made of a general character on a previous occasion.

Mr. JAMESON. It must have been recognized by the minister that there was a pressing necessity for a public landing at Westport when he included in the estimates of last year an appropriation towards its construction. Taking that as a basis and recognizing the necessity of the landing I will not ask whether it will be given preference over other works of a similar character which have been deferred, but I will ask whether it will not be given preference over new works for which there was no appropriation in last year's estimates?

Mr. PUGSLEY. I cannot give my hon. friend any assurance, because it may be that when the time comes to provide for further works some will be brought to my notice of a much more pressing character than the particular work to which he refers.

Mr. JAMESON. Then does the minister wish me to understand that he does not consider that this is a work which was necessary and that the appropriation which was made last year was made, not with the intention of going on with the work, but for some other purpose; or, does he believe that the work was necessary and that the appropriation of last year was honestly placed there?

Mr. PUGSLEY. The amount that was placed in the estimates last year was placed there in good faith and with the sincere belief that the works were a public necessity. I do not at all wish to withdraw a single word which I uttered in this chamber on a previous occasion with regard to this. My hon. friend must see that where some $7,000,000 or $8,000,000 have been struck off my estimates the time will soon come when parliament would feel like providing for a portion of that amount. I might have half the amount placed at my disposal and then I would have to discriminate between works which might stand over and works which were more imperative. There might also be new works which would be of the most urgent character. Under these circumstances I could not be expected in any way to bind the government or parliament as to what appropriations would be passed upon a future occasion. The very best I can do is to rely upon the statement which I made and which is fully reported in 'Hansard.' As to giving individual promises that this or that work will be undertaken, I must decline to do so. I could not with any degree of propriety give any assurance as to what action may be taken by the government at the next or any subsequent session.

Mr. JAMESON. The necessity for a public landing is greater and more urgent today than it was when that amount was placed in the estimates and the only changed condition, as far as Westport and the county of Digby generally is concerned, is that a Conservative and not a Liberal is now representing that county in this parliament. I trust that that is not the reason upon which the minister is basing his remarks. I trust he will not allow a trifling matter of that sort to cause him to discriminate against Westport. Westport has always been very faithful to Liberal traditions. Westport has always given a large Liberal majority. Westport has never had any assistance of this character from the public exchequer since 1896. Last year, when the election was imminent and when the people of Westport were beginning to be restive and suggested that they might not always support the Liberal policy, the promise was made to them that a public landing would be provided and an appropriation was placed in the estimates for its construction. Then the people of Westport did as they always have done in the past —walked up to the polls and gave a very good majority for the Liberal candidate. But the county generally did not follow their example and the Liberal canddate was unable to secure a majority in the county. But, I do not think that should be any reason why the people of Westport should be deprived of their share of the public moneys or why the minister should refrain from giving them any assurance that, so soon as the public funds will permit the construction of this work it will be proceeded with. I do not think it is unreasonable to ask the minister if he has changed his mind with regard to the necessity of the work. I think it is only right and proper, in view of the fact that this item was stricken out of the estimates and people have been told that the work will not be proceeded with now that they should be given the reason why this has been so stricken out and that they should also be given some assurance as to whether the work will be proceeded with when the public funds permit of the undertaking being carried on.

Mr. PUGSLEY. I have neither changed my mind nor have I seen any reason for changing my mind. But, as to giving any assurance, I do not feel that my hon. friend can properly ask me to do that.

Mr. STANFIELD. How much of the $1,200 voted last year was spent on the Brulé wharf and how much of the $1,000 voted last year was spent on the Economy wharf?

Mr. PUGSLEY. That is not in the estimates. If my hon. friend will be good enough to put a question in the House I shall be glad to answer it. The information I have here appertains to the estimates that I am asking the committee to vote.

Mr. STANFIELD. I thought your officers would know.

Mr. PUGSLEY. They would not carry these things in their heads.

Mr. STANFIELD. The information I have got is that none of this money has been spent. As I stated some evenings ago, I suggested the appointment of men to look after the work to be done by day's work, but my men were not taken on. Of course, I know there was an election on last year and there will probably not be another for four years.

Mr. PUGSLEY. Perhaps I am responsible that my hon. friend has not been further consulted with regard to the em-employment of the men because I really thought it would be imposing a burden on the hon. gentleman that he would not like to assume.

Mr. STANFIELD. If I had been consulted the money would have been spent honestly, and not stolen as it had been in the past. As to the Economy wharf it is known as the camel back wharf and I took a snap shot of it, but unfortunately when I developed the plate it did not turn out very well.

Mr. PUGSLEY. Did it break the kodak?

Mr. STANFIELD. Well not quite. The approach to the wharf runs in a semi-circle so that a team can hardly drive on to it. I cannot understand why for the sake of $1,000 the wharf is left in that condition. It would seem that wherever a Conservative is elected there is no money to be spent.

Mr. FRASER. I wish to direct the attention of the Minister of Public Works to the work at Naufrage pond, Prince Edward Island. At page 1347 of 'Hansard,' in reply to Mr. Ames the minister states that in the month of December the government made up their mind to drop certain public works for which tenders had been called. Further on he was asked by Mr. Foster to give a concrete instance of a public work for which tenders had been advertised but which would not be proceeded with, and the minister says:

> There was the case of the Naufrage pond in Prince Edward Island. The constituency had been asking for this for a considerable time but the amount was large, and although we asked for tenders we concluded that we might allow that to stand for another year. The matter was referred to the chief engineer and he reported that he did not think the public interest would suffer if it were allowed to stand for another year.

Now, notwithstanding that statement of the minister I find at page 64 of the estimates for the coming year an item of $14,-500 for protecting works at the entrance of Naufrage pond. There seems to be a discrepancy between the item in the estimates and the statement of the minister, and I would now ask him if it is the intention of the government to go ahead with the work this year?

Mr. PUGSLEY. It would be more convenient if the hon. gentleman would ask me the question when we come to that item.

Clark's harbour—protection works, $800.

Mr. JAMESON. What is the nature of the work at Clark's harbour?

Mr. PUGSLEY. The construction of beach protection works to protect the houses, stores and boat landings from danger of encroachment by the sea.

Mr. JAMESON. What has been expended previously on that?

Mr. PUGSLEY. $4,500.

Mr. JAMESON. What is the extent of these beach protection works?

Mr. PUGSLEY. 926 feet long and 3 feet high.

Mr. JAMESON. Does it run along a roadway or along private lands ?

Mr. PUGSLEY. I do not know.

Mr. JAMESON. It is very material that we should know that. There is a distinction between protecting public property, private property, and government property. Will this be for the protection of government property?

Mr. PUGSLEY. It protects the property of quite a considerable number of people.

Mr. JAMESON. Was there a petition in favour of this work?

Mr. PUGSLEY. I think there must have been.

Mr. JAMESON. This item should stand until the minister can tell us whether this work is to protect the property of some private individual or whether it is to protect work along some highway.

Mr. PUGSLEY. There is no question but that it is to protect such a number of properties as to make it of an entirely public nature. It is in no sense to protect the property of a private individual in the sense my hon. friend suggests.

Mr. JAMESON. Well, it must either be for the protection of public property or of private property.

Mr. PUGSLEY. When you get a large number of people whose property is to be protected the protection becomes of a public nature.

Mr. JAMESON. I am moved to ask these questions because some time ago the department was asked to protect property which is partly owned by the government, in Digby. I refer to the property locally known as Battery Point. It was protected many years ago but the protection work

has fallen into decay and the bank has tumbled down by the erosion of the tides, and has fallen into the harbour. The town of Digby has gone to very great expense in protecting the beach and foreshore generally, but they do not feel they should protect this particular government property nor indeed are they financially able to do so. If the minister thinks a policy of protecting the property of individuals is justifiable, is it not more obviously necessary to protect the property of the government?

Mr. PUGSLEY. I think it is the duty of the government reasonably to protect its own property.

Mr. JAMESON. Then will the minister make a note of this so that he may make provision for the protection of this property?

Mr. PUGSLEY. I will make a note of it with pleasure.

Cow bay—Port Morien—harbour improvements, $5,000.

Mr. MADDIN. How much was spent on that breakwater in the year 1908? $18,000 was voted, and $2,500 is re-voted now.

Mr. PUGSLEY. That would leave $15,500 as our expenditure to the 31st of this month.

Mr. MADDIN. There would be no expenditure during the months of December, January, February and March on a breakwater at Cow bay?

Mr. PUGSLEY. I do not know that that would be the case. I should think material could be got out during that time.

Mr. MADDIN. In the fiscal year ending March 31, 1907, the material that was used in those months was a little hardware, some white duck and some cement.

Mr. PUGSLEY. Could they not manufacture concrete blocks in the winter?

Mr. MADDIN. No, they could not.

Mr. PUGSLEY. I have an impression that they could. They do.

Mr. MADDIN. They do manufacture concrete blocks two feet square for the purpose of erecting buildings; but they do not make concrete blocks for breakwaters of the dimensions mentioned in the report of the Minister of Public Works. These blocks are not made and then transported and dumped into the harbour. They are erected in the water at low tide, and that could not be done in the winter time. Were tenders asked for this work in 1907 or 1908?

Mr. PUGSLEY. No. The opinion of the chief engineer was that this work latterly had better be done by day work.

Mr. JAMESON.

Mr. MADDIN. Would the minister consider that the man in charge of building a breakwater of this character should be a man having a special knowledge of the building of breakwaters, the mixing of concrete and that sort of thing?

Mr. PUGSLEY. I should say he should have a thorough knowledge of it.

Mr. MADDIN. Is the minister aware that P. J. Leslie, who did the work in the fiscal year ending March 31, 1907, who used 2,513 barrels of sand and 1,873 barrels of cement, and who superintended the work at $3 per day, is a lobster packer, who packs his catch at Port Morien in the summer time and lives at Halifax in the winter months?

Mr. PUGSLEY. I am not aware of that.

Mr. MADDIN. Is the minister learning that for the first time now?

Mr. PUGSLEY. This is the first time I have heard of it.

Mr. MADDIN. Who recommended Mr. Leslie to the department?

Mr. PUGSLEY. The inspector is always approved of by the engineer in charge.

Mr. MADDIN. Who was the engineer in charge?

Mr. PUGSLEY. Mr. Millidge is, I think, the resident engineer there.

Mr. MADDIN. Who was in charge during the last fiscal year ending the 31st of March of this year?

Mr. PUGSLEY. I think Mr. Leslie is still in charge, but I am not quite sure as to that.

Mr. MADDIN. Does the minister know as a matter of fact who was in charge during the expenditure of the sum of $15,500?

Mr. PUGSLEY. My memorandum shows that Mr. Leslie is still in charge; but if my hon. friend says that he was not, I will look it up.

Mr. MADDIN. Is the minister of Public Works aware that the man who succeeded Leslie and had charge of that work during the summer and up to October, 1908, was a butcher of the name of McLeod, who if building a flue or a foundation to his House, would hire a mason?

Mr. PUGSLEY. I am not aware of that.

Mr. MADDIN. Will the minister tell me who recommended the person in charge of the work for the fiscal year 1908-09?

Mr. PUGSLEY. I am sorry to say I have no memorandum in reference to that.

Mr. MADDIN. In view of the fact that this breakwater is of considerable importance to Port Morien, that it was built by

the Gowrie, Blockhouse and Coal Mining Company previous to 1873, that it originally extended a distance of 1,374 feet, practically a quarter of a mile, to 17 feet at low water or to 23 feet at high water, and was about 44 feet in width; that the property was subsequently transferred to the Dominion Coal Company; that part of the breakwater was destroyed by the August gale of 1873; that the present structure is 1,114 feet long, that is, 160 feet shorter than it was when the Gowrie Blockhouse and Coal Mining Company constructed it; and in view of the development of mining areas there by their successors, the Dominion Coal Company, and the recently commenced developments of the North Atlantic Colliery Company, which would indicate that a great deal of shipping would be made from that port; in view also of the fact that $15,500 has been spent on this breakwater in 1907-08 and $11,500 in 1906-07, and that $5,000 is to be expended in the incoming year, making a total expenditure of $32,000 in three years; does it not appear to the minister that it would be wise to have this money spent by some one who understood the construction of breakwaters, under the circumstances that obtain at that particular point, where the gales have carried away from time to time considerable portions of this breakwater? The minister's own report says that in 1895 it was torn to pieces.

Mr. PUGSLEY. I suppose it was not being as well constructed then as it is now.

Mr. MADDIN. It has been going to pieces again in 1908, and it will continue to go to pieces so long as butchers and lobster packers dump concrete cement in canvas bags on that coast in the month of October. I submit, in view of the necessity of this breakwater, that a survey should be made and estimates obtained for the purpose of building a permanent structure. The expenditure of such large sums should be made through contractors under tender and give to that harbour a permanent structure instead of expending money in such a manner as cannot give permanent satisfaction. In 1907-08, when $11,509 were spent, that expenditure covered a period of over 180 working days during which 12 men per day on an average were working. It is common knowledge to any one familiar with that coast that in the months of April and May, with high spring tides and strong winds from the north-east, and drifting ice hanging about that part of the coast, especially in 1907, when that harbour was ice-bound until the 7th June, it must be manifest that the suspension of canvas sacks down the side of the breakwater and filling with cement is not calculated to make a permanent structure, such as a breakwater. Is it the minister's intention to have the further sum of $5,000 spent by some butcher or lobster packer or by someone who has some knowledge of the work the government purposes to undertake?

Mr. PUGSLEY. Does the hon. gentleman give me the assurance that the inspector is not a practical man in concrete work ?

Mr. MADDIN. I would say that Mr. Leslie is not a competent man to undertake the repairs of a breakwater of this kind. He has no experience either in stone work or concrete, and the man who succeded him is if anything more incompetent than Mr. Leslie, not having had the experience at the expense of the government which Mr. Leslie had.

Mr. PUGSLEY. I am glad the matter has been brought to my notice. I shall have inquiry made to ascertain if the inspector is not a practical man having practical knowledge of concrete work. It is important he should be, because it is work which depends greatly on the quality of the cement used and the mode of mixing it. I shall have inquiries made at once, and if I find that the inspector is not a practical man, I shall see that one is put on the works. The instructions given to the resident engineer are always to find out whether the man suggested as inspector is a practical man.

Mr. J. A. CURRIE. What are his political affiliations?

Mr. PUGSLEY. That does not concern me.

Mr. AMES. Is the same letter issued to the resident engineers in Nova Scotia as is issued to those in Quebec, instructing them to apply to the local member for foremen of their various works?

Mr. PUGSLEY. The same letter.

Mr. AMES. The department sends a letter from Ottawa to the local resident engineer telling him to appoint no foremen except on consultation with the local Liberal member.

Mr. PUGSLEY. I do not think these are the terms of the letter, but if my hon. friend has it he can correct me. What is done is that the resident engineer is instructed to confer with the member as to the employment of the foreman, but his positive instructions are not to engage any man in special work of this nature unless he is a practical man and has practical knowledge.

Mr. J. A. CURRIE. Would the minister produce a copy of the letter sent by the department so that we may have it on record?

Mr. PUGSLEY. If there is a motion made in the regular way the letter will be brought down.

Mr. J. A. CURRIE. Is it not the rule of the House that if a minister refers to a document he must produce it?

Mr. PUGSLEY. The reference was made by the hon. member for St. Antoine. What I said was that any letters sent out to the other provinces were not different from the ones sent to Quebec.

Mr. MADDIN. Adverting again to Mr. Leslie at Cow Bay, in view of the fact that the lobster season begins in the latter part of March and continues to June.

Mr. PUGSLEY. Is the hon. gentleman opposed to the item passing?

Mr. MADDIN. Certainly not.

Mr. PUGSLEY. Then it might be as well for him not to obstruct it.

Mr. MADDIN. I am not opposed to the expenditure. If I have any fault to find it is that the break-water is inadequate. What I am opposed to is the system of expenditure. We could have a better break-water there if the money had been judiciously expended. In view of the fact that the lobster packing begins in the spring, is it proper that Mr. Leslie should draw $3 a day for inspecting the work on the breakwater when he is at the same time superintending the packing of lobsters when he employs a large number of people. In other words, does the Minister of Public Works think it advisable to encourage a man like Mr. Leslie to try to serve two masters?

Mr. PUGSLEY. I think that, if he is appointed inspector he should be there.

Mr. CROSBY. I do not think there is any desire on the part of anybody who knows this work to obstruct the expenditure. I know Mr. Leslie, the gentleman who has been referred to, to be a decent, respectable man. I know that he does not live in this place, but he lives in part of the Spry Bay and Port Halifax and Halifax City.

Mr. PUGSLEY. Where does he live in the summer ?

Mr. CROSBY. For a few months in the summer, he is in Cow Bay packing lobsters as the minister has been informed. I should judge from the information that we get from the minister that he did not know much about Mr. Leslie, but he is bound to make inquiry and to remove any wrong. The expenditure on this breakwater is one that is required; I know the locality well, and I know that this is an important work. But the minister, I am sure, will not complain when we try to give him information that will assist in the best expenditure of this money, because we wish the money to be spent to the best advantage, as I am sure the minister does also. If, even at this late date, he finds that the man in charge of the work should not be in charge——

Mr. PUGSLEY. What does the hon. member (Mr. Crosby) think of Mr. Leslie?

Mr. CROSBY. I have said he is a decent, respectable man, and a good citizen. If he has a fault, it is that he is a strong Liberal.

Mr. PUGSLEY. Does the hon. gentleman think that Mr. Leslie is competent for this work ?

Mr. CROSBY. I think he knows no more about concrete work than does the hon. gentleman who is now addressing the committee—and that is not much.

Mr. PUGSLEY. I will look into it at once.

Mr. CROSBY. The minister should see to it that proper men are put in charge of the work.

Mr. AMES. I think the point raised by the hon. member for Cape Breton (Mr. Maddin) is a very important one. A great deal of money is expended on operations done by day's work under the Public Works Department, and it is to be expected and desired that the persons in charge of these works should be compentent men, selected by the engineer without outside interference, and purely because they are able men for the work. In our province, there has been a system of applying to the local member, not for advice, but for the absolute choice of the man who shall be placed in charge of each of these works. Here is a letter, dated May 4, and addressed to Mr. J. C. Tache, resident engineer of the Department of Public Works at Chicoutimi, and the question I was putting to the minister a few moments ago is whether a similar letter is sent to the resident engineers throughout Nova Scotia, and whether a similar system is adopted in the choice of a foreman to overlook day's work in that province. This letter is written by the chief engineer at Ottawa to the resident engineer at Chicoutimi :

I am directed by the hon. the minister to authorize you to proceed, by day labour, with the works at the following places, for which appropriations have been granted by parliament during the session just ended. Will you please apply to the persons mentioned for the names of competent foremen, or for any other information which you may require in connection with the works in their respective counties.

And the name given here is that of Joseph Girard, M.P., for Chicoutimi and Saguenay. The letter proceeds :

You will please bear in mind that the above-mentioned sum must on no account be over-expended, and I would ask you to give positive instructions to the foremen to that effect. The foremen are to be paid at the rate of $2.50 per day, unless you are otherwise instructed.

There is absolutely nothing in that letter from the chief engineer, acting under

the minister, demanding that the resident engineer shall choose competent men and men who have knowledge of the work under their charge. The only thing he is told to do is to apply to the local member and put on the job whomsoever he recommends.

Mr. PUGSLEY. It says 'competent foremen.'

Mr. AMES. But the judging of their competency is left to the local member.

Mr. PUGSLEY. By no means.

Mr. AMES. Is it under this system that the lobster packer and butcher have been chosen to superintend the work at Cow Bay, where we are spending from $10,000 to $15,000 a year ?

Mr. E. M. MACDONALD. I would point out that my hon. friend (Mr. Ames) is hardly fair or candid in dealing with this subject when he attempts to misconstrue the letter to which he has referred so as to lead the committee to believe that it did not rest with the engineer to determine the competency of the men who might be recommended by Mr. Girard. The ordinary rules of grammatical interpretation of any document must show us that the letter calls for competent men who may be recommended by Mr. Girard, and that as to their competency, the resident engineer himself is to determine. And the minister informs me that there were special instructions besides. The engineer was asked to secure, on Mr. Girard's nomination, competent men. That could not be determined by a member of parliament but was to be determined by the engineer responsible for the work. The naming of the man would be for the member, but the judging of his competency would be for the engineer. I do not think that the hon. member (Mr. Ames) is so innocent as not to know that this system of getting members of parliament to recommend men who might be employed in matters of this kind has been going on since confederation. It is no great discovery to make in this forty-second year of confederation that men are recommended for employment by members supporting the government. Is there anything new, or anything very wrong about it?

Mr. AMES. 'By their fruits ye shall know them.' And what kind of men do we get?

Mr. MACDONALD. As good men, and in many cases better than those the country had when my hon. friend's friends were in power. Who are the best judges of these men unless it be the representative of the county? And who knows the men better than the man who represents the county?

Mr. CROSBY. That is Mr. Maddin.

Mr. MACDONALD. Apparently, he does not want it, and besides he is not in the confidence of the government.

Mr. CROSBY. The hon. gentleman said 'representative.'

Mr. MACDONALD. In this case I was discussing what my hon. friend from St. Antoine had said with regard to Chicoutimi and Mr. Girard, and was dealing with this case as one illustrating the general principle. The question of recommending to the government a man to have charge of an expenditure is not a question of competency only. A man might be competent but not honest; he might not want the government instructions to be carried out, and certainly the government would not want to be responsible for a man who is not recommended by one in whom they have confidence. Is this a new doctrine? Why do these hon. gentlemen prate about a thing that their friends did when they were in power, and would do again if they came into power to-morrow? We might as well be frank about this. No government would accept the recommendation of a man who did not have their confidence. Only yesterday, my hon. friend from North Toronto (Mr. Foster) started a discussion which took the whole afternoon about an expenditure in Nova Scotia. But if the Conservative candidate in that riding had been elected and sat here as a representative even if he had not recommended the man in charge, they would not have raised any question about that expenditure. If recommendations of the men who are to be inspectors were left in the hands of the opponents of the government, what a nice time hon. gentlemen opposite would have criticising the Minister of Public Works.

Mr. AMES. I should be sorry to believe that the ideals which the member for Pictou (Mr. Macdonald) says are shared by all, are likely to be the ideals which are forever to obtain in this country.

Mr. MACDONALD. Is my hon. friend any better than his party, when he is claiming high ideals? Any better than Sir John Thompson, or Sir John A. Macdonald, who led his party before him, and who instituted that system?

Mr. AMES. I would think that the practice the Minister of Public Works should adopt would be for his chief engineer to secure, in the first place, a competent resident engineer, and then let him choose the most competent man to be found in the neighbourhood as inspector of the construction of the public work. Then I think we would get honest work done, work that was worth 100 cents on the dollar.

Mr. CROSBY. We are here discussing a question of expenditure, because we have

reason to believe that there has been waste in connection with it. I know this Mr. Leslie, he is a councillor in the municipality of Halifax. I do not know whether he understands the kind of concrete that should be used in this breakwater, but he may understand some other kind of concrete he gets from the government. He is not a man I would select to superintend the building of a concrete work. In the county of Cape Breton there must be somebody that knows just as much about concrete work as Mr. Leslie; therefore it is strange that he should be appointed to a position of that kind, when he is not a resident of the county, does not live near the county at all, but only visits there during the lobster season, which lasts only about six weeks in the summer. I would have no objection to the appointment of a Liberal if he was suitable for the work.

Mr. AMES. The minister has not answered my question as to whether a similar letter is issued to his officials in Nova Scotia?

Mr. PUGSLEY. I have not seen any letter issued in Nova Scotia, but I have no doubt similar instructions are given to the resident engineers.

Mr. AMES. The member for Pictou has intimated that there are other instructions which go with it.

Mr. PUGSLEY. We are in touch with the resident engineers all the time, and they understand that it is their duty not to accept as inspector any man who in their judgment is not thoroughly competent to inspect the work.

Mr. AMES. I understood the minister to say that written instructions accompany the letter.

Mr. PUGSLEY. They have their general instructions, they understand that in no case shall they accept an inspector who is not thoroughly competent.

Mr. AMES. Then will the minister lay on the table to-morrow any letter of this character which is issued to resident engineers in Nova Scotia, together with any other instructions which may accompany the same?

Mr. PUGSLEY. Yes, to-morrow, or at an early date, if there are such.

Mr. HUGHES. Can the minister mention an instance where the resident engineer has declined to accept the nominee of the party?

Mr. PUGSLEY. Not at the moment, but I know it has happened.

Mr. J. D. TAYLOR. There are a number of constituencies in Nova Scotia that are not represented by members supporting the government. I would like to know upon whose recommendation, in those constituencies, the resident engineer appoints an inspector?

Mr. PUGSLEY. The instructions in that case were to confer with the gentleman who had run in the interest of the government. That is the course which has always been pursued.

Mr. J. D. TAYLOR. In view of this statement by the minister, it is a question whether we should proceed any further with the consideration of this vote. It seems to me a shocking statement for a responsible minister to make to this parliament, that the government should adopt so low an ideal, that they should place in the hands of a defeated candidate the appointing power, no matter how small may be the number of electors who voted for him, and no matter what his standing in the community may be.

Mr. MACDONALD. What would the hon. gentleman say if he was defeated by a bogus telegram?

Mr. J. D. TAYLOR. I was saying when the hon. gentleman so rudely interrupted me——

Mr. DEPUTY SPEAKER. It is not in order to attribute rudeness to an hon. member.

Mr. J. D. TAYLOR. The Chairman reminds me that it is not in order to describe the remark of the hon. member, but I would like to say that it is much more an offence for any hon. gentleman to be rude to a member who is addressing the House than it is for the member who is on his feet to express his view of the interruption. But, since the falsifying of a telegram is introduced into this discussion I would like to ask the hon. gentleman who has interrupted me why he does not first pay attention to his own household, why he does not first have an investigation into his own Department of Justice which is much closer to him than the location of the despatch to which he has alluded. I would like to call his attention to the——

Mr. PUGSLEY. Do you not think, Mr Chairman, that instead of discussing William Miner we might take up this item?

Mr. J. D. TAYLOR. —falsification of the telegram addressed to the Department of Justice and ask if these hon. gentlemen have taken any precaution to investigate that. I say that until they do take that precaution it ill becomes them to refer to any other despatch of that nature. Apologizing for this digression, made in answer to the unseemly interruption of the hon. gentleman, I would like to return to the subject which brought me to my feet and say that I do not think we should subscribe to the extraordinary doctrine laid down by the Minister of Public Works that he should

accept the advice of persons outside of this parliament, who have been rejected by the electors of any constituency, who have been turned down and whose places have been taken by the men who sit in this House. We should not subscribe to the doctrine enunciated by the minister that he should take their advice in preference to ours. That is a doctrine which is offensive to the dignity of this House, one to which this House should not assent, and the fact that it has been laid down by the Minister of Public Works on this occasion is a sufficient ground for us to declare a halt in these proceedings and ask for the adjournment of this committee so that we may take into consideration whether or not the parliament of Canada subscribes to a standard so low.

Mr. J. A. CURRIE. We all recall the words of the minister earlier in the session when he stated that the patronage list had been entirely abolished. Has the minister issued fresh instructions since then to the responsible engineers asking them to discontinue the old system of making appointments and to select only the best men.

Mr. PUGSLEY. There has been no change in the instructions which have gone to the engineers as to the appointment of foremen and the selection of their men.

Cow Bay Run and Osbornes—breakwaters, $1,200.

Mr. PUGSLEY. This is a revote to complete the work.

Cribbin's Point wharf—part renewal of superstructure, $3,300.

Mr. PUGSLEY. This is a revote to complete the repairs.

Digby harbour — improvements, including repairs and additions to pier, $30,000.

Mr. PUGSLEY. This is under contract.

Mr. JAMESON. Who has the contract?

Mr. PUGSLEY. Messrs. G. E. and A. Bigelow.

Mr. JAMESON. What are the terms of the contract?

Mr. PUGSLEY. The date of the contract is the 22nd of May, 1908, and the date of completion is the 22nd of November, 1909.

Mr. JAMESON. What will be the rate of remuneration?

Mr. PUGSLEY. The foreman on the works according to my memorandum is to get $2.50 per day.

Mr. JAMESON. What is the amount of the contract?

Mr. PUGSLEY. $17,900. This will construct the spur pier. It does not include the taking down of the old pier and rebuilding it with creosoted timber.

Mr. JAMESON. Does this include anything for the reconstruction of the old work?

Mr. PUGSLEY. We will require about $30,000 more to finish up the whole work.

Harbours and rivers, Nova Scotia—harbours, rivers and bridges—general repairs and improvements, $30,000.

Mr. PUGSLEY. This is a general vote.

Mr. CROSBY. Is there anything included in this for the construction of a wharf at Spry bay, Halifax county? Was it not commenced last year?

Mr. PUGSLEY. Yes, we spent $269 last year and if any small amount is required we can take it out of the general vote for this year.

Mr. CROSBY. The work that was done there was very small and in order to make it of any service it will be necessary to have some further work done there this year.

Mr. PUGSLEY. No doubt that will be considered by the engineers.

Mr. CROSBY. There is a wharf in Halifax county at Peswick near Musquodoboit. There was a wharf constructed at the head of the harbour. While it serves a good purpose there it would have been of greater service if it had been constructed nearer the mouth of the harbour on the west side. There should be a further expenditure of $1,000 to build a block for the use of the fishermen at the mouth of the harbour. I would like to bring that to the notice of the minister and I would be glad if he would ask his engineers to make some inquiry about it.

Mr. PUGSLEY. I will have an inquiry made.

Mr. RHODES. Will the minister explain the reason for inserting the word 'bridges' in this item ?

Mr. PUGSLEY. That has no application to Nova Scotia but it is a general term used in reference to the other provinces where there may be inter-provincial bridges.

Mr. STANFIELD. It might apply to the bridge the minister built at Tatamagouche Bay about a year ago.

Mr. PUGSLEY. That was a wharf.

Mr. STANFIELD. The photograph shows it is a bridge.

Mr. PUGSLEY. The province built the bridge.

Mr. STANFIELD. Well, it has dropped down about 18 inches and is in need of repair.

Mr. PUGSLEY. That is worthy of attention.

Mr. JAMESON. I wish to refer to the Sandy Cove breakwater which was built by the government in 1904. The minister, in reply to questions put to him this session stated that the contractors for this breakwater were released and their deposit of $800 returned to them on the 3rd of December, 1904. Subsequent to that the department received notice that a number of labourers on that work were unpaid and that certain men who had furnished material which had gone into its construction also remained unpaid. This work was constructed at Sandy Cove on Digby Neck which there is about one mile in width. There are properly speaking two coves, one on the bay of Fundy side and one on St. Mary's bay side, and the village of Sandy Cove is located——

Mr. PUGSLEY. To which item is the hon. gentleman speaking ?

Mr. JAMESON. I am speaking on the item before the committee.

Mr. PUGSLEY. I do not wish to interfere with the hon. gentleman discussing a question of this kind but it certainly does not arise on the vote now before the House. Let me say that this claim which the hon. gentleman is referring to has already been pressed upon the attention of the government just as strong as the hon. gentleman can press it. It has been pressed on the government by his predecessor and by the hon. member for Antigonish and the matter is now under consideration. There is nothing which my hon. friend can say to-night which can affect the determination of the question.

Mr. HUGHES. The hon. gentleman (Mr. Jameson) is perfectly in order in speaking as he does on this item.

Mr. PUGSLEY. This is a claim against the government which if granted would be a matter of grace on the part of the department and which would require a special appropriation.

Mr. JAMESON. I will ask the Chairman if I am in order.

Mr. DEPUTY SPEAKER. I was not following very closely the remarks of the hon. gentleman but on an item such as this I think it would be quite competent to refer to a vote which the hon. gentleman would desire to have in the estimates. I would not be prepared to rule that out of order.

Mr. PUGSLEY. This work is not paid out of this general vote. There was a special appropriation for it and the claim referred to by the hon. gentleman (Mr. Jameson) is in no way pertinent to this item.

Mr. JAMESON. I will continue what I was saying when the minister interrupted me.

Mr. PUGSLEY. What is your ruling, Mr. Chairman, in view of my statement?

Mr. DEPUTY SPEAKER. If it is a matter which is under the consideration of the government in an official way it might be as well for the hon. gentleman not to press it. As there are special circumstances in connection with it a long discussion on this item would not appear to be in order.

Mr. JAMESON. The minister stated in reply to a question of mine that these claims had been received by the government on the 20th June, 1905, and as they have been so long under consideration I think it is my duty to refresh the memory of the minister with regard to them. As I was saying when interrupted, this wharf was unfortunately located on the Bay of Fundy shore and not at the village of Sandy Cove proper. The construction of the work involved an expenditure larger than the contractors had estimated, and it appears they were unable to meet the cost of construction out of the money they received from the government. I shall not now speak in regard to the large claim of Mr. J. D. Kirk for $2,085.50 but I shall specially deal with the claims of a number of poor men, residents of that locality, for labour performed and material supplied. They supplied the labour and the material in good faith expecting to get paid for it, but their pay was not forthcoming and the government released the contractors and returned to them their deposit of $800. The government has taken over the work, and while I believe that the expenditure was not justified because of the location, as it should have been constructed on the St. Mary's Bay side of Digby Neck and at the village of Sandy Cove, where it would have been of considerable usefulness and would have assisted in the building up of that village, yet at the same time I do believe that the men who performed this labour and supplied the material should be paid. The government has taken over the work and has the advantage of the time and labour and material supplied by the men who have made the claims. If the work was justified, as it must have been in the opinion of the department before the expenditure was made, then these men have a very strong claim on the government for the amount still due them. I am not asking that anything be done for the contractors; I am not asking that anything be done for any one except the poor men who performed the labour and supplied the timber. I do think that their claim should be considered by the government and that payment to them should not be any longer deferred.

Mr. RHODES. In justice to the residents of a certain district of my county, I desire

to bring to the minister's attention the fact that a portion of an item of $5,000 which was in the estimates last year was, I believe, expended on the construction of a wharf at Joggin's Mines. I have been advised that, owing to the work having been stopped last season and fenders not having been placed on the sides of the wharf, the work thus far done is likely to go for naught. I feel it my duty to bring the matter to the attention of the minister in the interest of public property.

Mr. PUGSLEY. I will have it looked into.

Little Narrows wharf, $1,200.

Mr. RHODES. Is this a repair to an existing wharf?

Mr. PUGSLEY. No, it is for the construction of a small wharf.

Mr. RHODES. Is it to be built of creosoted timber?

Mr. PUGSLEY. We have no detailed plan yet.

Mr. RHODES. I understand that the water there is largely populated by the teredo, the worm that destroys timber.

Mr. PUGSLEY. If we find on the report of the engineer that it is necessary, we will have it creosoted.

Middle river—shear dams, $700.

Mr. PUGSLEY. That is a revote.

Mr. AMES. I know that it is a revote, but it never should have been voted in the first place. As I understand it, when voting for the harbours and rivers of Nova Scotia, the term rivers means navigable rivers, for the purpose of assisting shipping. There is a small stream in Cape Breton, a trout stream which I have fished in on more than one occasion, which contains so little water in summer time that one can wade across it without getting wet above his ankles; but sometimes, when the water is high, the farm land is washed into this brook, and the department has been persuaded somehow or other that it is a part of the duty of the federal authorities to build shear dams along the banks of this small river eleven miles inland. I can imagine no excuse that can be urged that can bring that expenditure properly under the vote we are being asked for. While I do not wish to divide the House to-night, I wish to go on record as protesting against that expenditure as being wholly and completely outside of our domain. If that principle were carried out generally, and every little river in any province where there was danger of farm land being washed away by the spring freshets, was to have cribwork built along its banks by the Dominion government, and the farmers whose land was protected were paid $2.50 a day for building it, the department would see no end to the demands that would be made upon it. In these days of economy, when we want to spend our money as carefully as possible, it seems to me that the minister should avoid expenditures of this character, which have no other than a political end.

Mr. PUGSLEY. This is a class of work which has been done more or less by all governments since confederation.

Mr. HUGHES. Can the minister cite any instance?

Mr. PUGSLEY. Oh, yes. In the province of New Brunswick, on the upper waters of the St. John river, ever since confederation, a few hundred dollars have been expended each year for the purpose of blasting out rocks.

Mr. HUGHES. That is because it is an international river.

Mr. PUGSLEY. Not at that point. Then, in the province of British Columbia work has been done, at the joint expense of the federal and provincial governments, on the Fraser and other rivers for the protection of the banks.

Mr. HUGHES. The Fraser is a navigable river.

Mr. PUGSLEY. The work has not been for the benefit of navigation, but for the protection of the property of the people living along the banks. In the same way twenty years ago work was done on the South Nation river, not to improve navigation, but for the purpose of enabling the water to flow more rapidly, and so preventing the lands being flooded. In the province of Nova Scotia and also in Quebec and Ontario, protection works of the same kind have been carried on. It has been done to a certain extent by both governments. Last session parliament made an appropriation to cut a channel across a portion of land near Portage la Prairie, the effect of which, it is asserted, will be to prevent the flooding of some 40,000 acres. Therefore, it is a question of degree. I admit very frankly that if this work were new, I would not at this moment and in the state of the revenues ask parliament for an appropriation; but the small amount now being asked is to complete the work which has already been begun.

Mr. AMES. There is only this to be said, that the rivers the minister has cited are all rivers in point of fact; and while what he describes may not be defensible, the crime is not so great as it is in this particular case. There is no reason why the land of the particular men on this little stream, several miles inland, should be protected any more than that of others,

but they had some strong pull. There are. I venture to say, in Nova Scotia, 500 streams as to which a similar excuse could be urged, and if we once commence spending moneys for this purpose, there will be no end to the demands and no possibility of refusing any.

Mr. J. A. CURRIE. As the minister has enunciated the policy of the government on this matter, I would like to call his attention to the fact that there is a very large stream running through the country I represent, the Nottawasaga river, which is navigable for about thirty miles, and has been used for many years as a means of transportation to the north. This river overflows every spring and renders useless some 30,000 acres of most valuable land in that section. In the province of Ontario we have not been accustomed to receive many of those favours. People have to go down into their own pockets to pay for these works, and in this case those interested have not seen fit to carry on the work for many years, but last session the Ontario government gave something towards cutting that river wider and deepening it so as to protect this land.

Mr. PUGSLEY. It is undoubtedly proper provincial work.

Mr. J. A. CURRIE. In the province of Ontario these works are provincial works, but not in the other provinces. I would ask the minister to bear this in mind as possibly his department may be asked to assist in that work along that river. If so, I trust he will give it the same consideration that he does these small trout streams in Nova Scotia and Cape Breton.

Minasville wharf at Dalrymple Point, $9,000.

Mr. PUGSLEY. This is for the construction of a breakwater, 300 feet long, 16 feet wide at the top, 4 feet deep at the shore and 19 feet at the outer end. Quite a number of vessels come there for lumber as well as fishing boats.

Mr. JAMESON. Was this under contract?

Mr. PUGSLEY. Yes, six tenders were received and the contract was let to Bigelow and Co., for $7,985. This will complete the work.

Port Hastings wharf, $11,600.

Mr. PUGSLEY. Tenders were called for and a contract entered into with W. J. Landrey, of Antigonish. This will complete the work.

Portuguese Cove breakwater—to complete payments to contractors Reid & Archibald on final estimates inclusive of interest accrued at 5 per cent per annum on overdue balance of $1,120—revote of lapsed amount, $1,100.

Mr. AMES.

Mr. CROSBY. This is a very important work, and I would bring to the notice of the minister the necessity of having a construction at the end of the breakwater, a kind of tee. This is necessary to make it complete.

Mr. PUGSLEY. I will consider this suggestion.

Mr. RHODES. Why is 5 per cent interest to be paid to the contractor?

Mr. PUGSLEY. This is a delayed payment.

Mr. RHODES. What amount is the interest?

Mr. PUGSLEY. $40.

South Lake Lakevale—opening channel from Lake St. George's bay, inclusive of protection work, $6,500.

Mr. PUGSLEY. I move to reduce that item by $4,500. The amount will be provided for in the supplementary estimates of the current year.

Mr. AMES. That is, $4,500 will be asked for that will be spent in the year 1908-9?

Mr. PUGSLEY. Yes.

Mr. AMES. What is it required for?

Mr. PUGSLEY. For the work of opening the channel.

Mr. AMES. Has the $4,500 already been spent?

Mr. PUGSLEY. It will be spent before the end of the current year.

Mr. AMES. Is it all, or practically all, owing in wages at the present time?

Mr. PUGSLEY. Yes, practically.

Mr. AMES. Has it been owing since last September, October and November?

Mr. PUGSLEY. I cannot give the particulars. There was a mistake—I do not know whether the fault of the resident engineer or the printer—and there was delay in making provision for it, and we understood that by leaving the whole amount in the estimates of the coming year, it would delay payment, and so we intend to ask for $4,500 in the supplementaries of the current year.

Mr. AMES. Last year the amount asked was $5,625. But the Minister of Finance said:

That estimate was made some time ago. Progress has been made so that so large an amount is not required. I propose to reduce the item to $700 and move that the amount be reduced accordingly.

So, we were given to understand that $700 would be all that would be required, but in addition, $4,500 has been spent. Who made the mistake?

Mr. PUGSLEY. It was reduced through an error. There is a good deal of correspondence, and the matter has taken a good deal of trouble to straighten out. It was a mistake to have the vote reduced last year.

Mr. AMES. It was a mistake. In this way, if I am rightly informed: the work was commenced and was continued until the appropriation was exhausted. Legally, no more money could be expended at that point. But the elections were close at hand, and Antigonish was a close county, and the member for the county felt that it would not be well to have the work stop suddenly in September or October. So the work was continued; the men were hired but not paid, and they continued to work until some time after the election. The form of irregularity may have been avoided by not paying out money, still, the amount of $4,500 wages is due to these men for the last four or five months. That is my information.

Mr. PUGSLEY. Quite right.

Mr. AMES. Is that the principle followed in the department—that if a fund is exhausted, the department feels justified in keeping men at work trusting to a subsequent parliament to see that they are paid?

Mr. PUGSLEY. The moment an appropriation is exhausted, or even when it is about exhausted, instructions go from the chief engineer to the resident engineer to stop the work.

Mr. AMES. Why not in this case?

Mr. PUGSLEY. The amount required for this work was placed in the printed estimates which were passed by the committee, and went to the chief engineer and he gave his instructions to the resident engineer, not being aware that on concurrence the amount was reduced. But that reduction was made in error. Ordinarily, when an appropriation is about exhausted, the chief engineer sends out word to the resident engineer and the work is stopped. The hon. gentleman (Mr. Ames) will remember that in the very letter he quoted the instructions to the resident engineer were that the amounts voted must not be over expended.

Mr. AMES. But the hon. gentleman does not touch the real point. It is hardly credible that the season would have nearly slipped by before the engineer found that only $700 had been voted. That must have been discovered with the first pay -roll that came up exceeding the $700. Yet other pay-rolls came up week after week and month after month, and these were not repudiated. A search of the files of correspondence with the local men would show why the work was not stopped. We are justified in protesting against this as an absolute irregularity. When the appropriation was exhausted, the department instead of discharging the men and taking the risk of losing the county—

Mr. PUGSLEY. The hon. member is entirely in error.

Mr. AMES. This opens up a method of doing business under stress of political pressure which shakes considerably the confidence of the people in the department. We have supposed, here in parliament, that when an appropriation for one of these works is exhausted, the work shall cease. It is a principle that has been fought for for hundreds of years that money that is not voted cannot be spent. When the appropriation was exhausted, the government should not have continued the work, even at the strenuous request of the hon. member for Antigonish to employ the men on that wharf. Is this the only case the minister knows of arising in the months of October or November?

Mr. PUGSLEY. I am sorry to see the hon. gentleman so suspicious; one so good should be disposed to be charitable. The hon. gentleman jumps at the conclusion that what was done was done at the instance of the local men.

Mr. AMES. Will the hon. minister say that there are no letters on file to that effect?

Mr. PUGSLEY. This was brought to my notice, and, so far as I know, no communication of any kind took place with the local men. The correspondence arose between the chief engineer of the department and the resident engineer. As I have stated. the amount was voted, and, on the strength of that the timber was procured and the work commenced. But owing to a misunderstanding, the amount was reduced on concurrence. Now at that time the work had been commenced, the timber had been bought. The deputy minister brought the matter to my notice, and I made inquiry and found a report from the resident engineer stating that unless the work was carried to completion, what was done would be absolutely destroyed and the money wasted. Under these circumstances I authorized the engineer to allow the resident engineer to go on. I thought the proper thing to do was to finish up the work.

Mr. AMES. When the minister gave that authority, did he expect that the men would be paid as they did their work ? Were the men given to understand as they worked through September, October and November, that the appropriation was exhausted, and that they would not get their money until

parliament had met and voted another appropriation? Was it just to the men to keep them at work on the expectation that money was coming from Ottawa when no money had been voted?

Mr. PUGSLEY. The engineer was told to inform the men they would have to wait for their pay.

Mr. AMES. Did the engineer inform the men while they were still at work during those three months, that they would have to wait till parliament voted more money?

Mr. PUGSLEY. He was instructed to do so, and I presume he did.

Mr. AMES. Would the minister lay on the table all the papers he has in connection with this transaction, within the next few days?

Mr. PUGSLEY. I will do so.

Mr. HUGHES. Was the minister within his right in ordering this work to go on when only $700 had been voted? Was the minister within his right in ordering the expenditure of $7,000 more?

Mr. PUGSLEY. I have explained that this work was done in order to prevent the loss of materials and the destruction of work already done. Something similar to that is done always when a contract is let. Parliament may vote $5,000 or $10,000 for carrying on a work, which may ultimately cost three times that. But the contract is entered into subject always to parliament appropriating the necessary amounts. The contractor goes on, but of course he has to trust to parliament making the necessary appropriation later.

Mr. HUGHES. Have these men been paid from any other fund, or any other source, or is the money due to these men personally?

Mr. PUGSLEY. I do not know whether the men have been paid yet or not. I could find out. I will undertake to get that information.

Mr. PRICE. I would like to ask the minister a question. Supposing there had not been an election last year, would these men have been paid? Would they have been kept on the work?

Mr. PUGSLEY. Everything would have been done exactly as it has been done.

Mr. PRICE. This looks like an election job.

Mr. PUGSLEY. No, the election had nothing to do with it.

Mr. AMES. I understand the minister will give us all the papers in connection with this matter, with all the letters from the local members with reference to it.

Mr. PUGSLEY. I will be glad to do so.

Tangier harbour—wharf extension, $1,000.

Mr. PUGSLEY. That is in Halifax county, and is to extend the wall which was built in 1907-8. This will complete the work, which is being done by day's labour. We have only obtained the material.

Mr. CROSBY. When did you obtain the material?

Mr. PUGSLEY. The expenditure up to the 1st of January was only $328, evidently for material.

Wallace bridge—wharf, $1,000.

Mr. PUGSLEY. This is to complete the construction of a wharf at Wallace bridge. The wharf runs at right angles with the bridge, towards the harbour.

Mr. RHODES. With respect to the wharf at Wallace bridge, I put a question on the Order Paper the other day, and the minister stated in answer that the total cost was $1,324, and that a portion of it was completed. Is there another portion of this wharf to be completed, and is this vote to complete that other portion?

Mr. PUGSLEY. The total cost was estimated at $2,500. We had an appropriation last year of $1,500, that leaves a balance of $1,000.

Mr. RHODES. In the reply the minister gave to me he said that a portion was completed, and that small vessels could use it.

Mr. PUGSLEY. We are not asking now any vote for an extension. This finishes the work.

Mr. RHODES. Then this vote does not agree with the answers the minister gave me.

Mr. PUGSLEY. Evidently there was an application for a further extension which we have not decided to make.

Mr. RHODES. Has any portion of this $1,000 been expended?

Mr. PUGSLEY. No portion of this has been expended. This will complete the required work.

Mr. HUGHES. Is the minister quite certain that none of that money has been expended?

Mr. PUGSLEY. No, none.

Yarmouth harbour—improvements, $60,000.

Mr. PUGSLEY. This is to continue the dredging work there.

Mr. JAMESON. Is it under contract?

Mr. PUGSLEY. Yes, to the Dominion Dredging Company.

Mr. JAMESON. What rate per yard?

Mr. PUGSLEY. Fifty cents per cubic yard.

Mr. JAMESON. To what depth?

Mr. PUGSLEY. To a depth suitable for those large steamers plying between Boston and Yarmouth.

Mr. JAMESON. Is it to straighten the harbour ?

Mr. PUGSLEY. Yes.

Mr. JAMESON. Will this complete the proposed improvements ?

Mr. PUGSLEY. No, you can dredge a long time before you finish. As you keep dredging, the boats are getting larger.

Mr. J. D. REID. Have this Dominion Dredging Company their own dredges ?

Mr. PUGSLEY. Yes, they have quite a large fleet of dredges in different parts of Canada.

Mr. J. D. REID. Who is at the head of this company ?

Mr. PUGSLEY. I think it is Mr. Stewart.

Mr. J. D. REID. Of Ottawa?

Mr. PUGSLEY. Yes.

Mr. J. D. REID. The son of the ex-member ?

Mr. PUGSLEY. Yes.

Mr. J. A. CURRIE. May I ask the minister if this 50 cents per cubic yard means scow measurement ?

Mr. PUGSLEY. Yes, scow measurement.

Mr. J. A. CURRIE. Is it the policy of the government to favour dredging by scow measurement all over the country ?

Mr. PUGSLEY. I do not know about it being the policy of the department, but that is the way it is being done.

Mr. J. D. REID. I would like to know why a different policy is being pursued by the Department of Railways and Canals and the Department of Public Works? When the Department of Railways and Canals let their dredging contracts it is always in situ and when the Department of Public Works let their contracts it is always scow measurement. When we get evidence before the Public Accounts Committee from officials of the Department of Railways and Canals they say that the only way that the government are safe in letting these contracts is to provide for measurement in situ. When we get the engineers of the Department of Public Works before that committee they say that scow measurement is the only safe way as far as keeping tally upon the work is concerned. I would like to know why there should be this difference in policy between these two departments?

Mr. PUGSLEY. In the case of canal work there is no difficulty at all in taking measurements in situ by cross sections and soundings. By reason of the work being confined to narrow dimensions measurement in situ can very easily be made. In the case of harbour works it is more difficult to make measurements with- sufficient accuracy to make sure that you can determine the quantity to be dredged by measurements in situ. Of course, if you can rely upon the honesty and carefulness of your inspectors I would think that scow measurement would be more accurate. Everything depends on the integrity and carefulness of the inspectors. Canal dredging would be something like dredging for crib sites. In the case of dredging for crib sites at Quebec hon. gentlemen will remember that the tender was for measurement in situ, but in ordinary harbour work where it is not confined to narrow dimensions, I should think that scow measurement would be the more accurate provided the inspectors could be relied upon.

Mr. J. D. REID. As far as the Department of Railways and Canals are concerned I do not think the minister will pretend that their work is entirely canal work. I know of a case in my own county where there was no canal work about it at all; it was simply dredging, widening and deepening the river between Prescott and the next village. It was similar to harbour work and in that case it was measured in situ. As far as the inspectors are concerned, I think it was proved in the Public Accounts that, as a general rule, the inspectors who are appointed are not men of experience. We had a case last year before the Public Accounts Committee in which a shoemaker was appointed.

Mr. PUGSLEY. I do not think that was so. The late member for Simcoe had a strong idea of that kind but it was not shared in by many.

Mr. J. D. REID. I think the minister will agree that the inspector we had before the public accounts Committee last year was a man not qualified for the position. In that case there was an inspector appointed for two dredges working a mile apart.

Mr. PUGSLEY. The best qualification for an inspector is to be thoroughly honest.

Mr. LENNOX. There were two inspectors appointed, but one did the work and had a rake off from the other.

Mr. PUGSLEY. I think that only lasted a very short time. The man was dismissed.

Mr. LENNOX. No, the work was finished.

Mr. FISHER. The work was not finished, but he was refused employment next year.

Mr. LENNOX. I dare say.

Mr. J. D. REID. From what I have seen of scow measurement I do not think there is any doubt but that in every case the government are defrauded.

Mr. PUGSLEY. I hardly think that. We are extremely careful.

Mr. J. D. REID. No matter how honest the ministers and his officers may be it cannot be avoided. I have seen work going on in my county and I have no confidence whatever in scow measurement. If an in situ contract is let I believe the work will be carried out in an honest way but I have no confidence in so far as scow measurement is concerned. I believe the Department of Public Works are paying an enormous amount for work more than is being paid by any other department that lets contracts by the in situ method.

Mr. PUGSLEY. Take the western entrance to Toronto harbour; the measurement there is in situ. To do dredging work all over the country where it is not confined within narrow limits, it would require a very large and extensive staff of engineers. It would all have to be sounded with the very greatest care. Then, as to the different materials there would have to be a very careful examination beforehand. I am not thoroughly wedded to the scow measurement; it is a question for consideration.

Mr. J. D. REID. The best evidence I have had of this is what the contractors themselves tell me. Contractors who have been doing work for the government for years have told me that if they could get a contract from the Department of Public Works on the principle of scow measurement they could take it at almost any price and make money out of it.

Mr. PUGSLEY. Who in the world ever told you that?

Mr. J. D. REID. A contractor working for the Public Works Department.

Mr. PUGSLEY. Would you mind giving me his name?

Mr. J. D. REID. I do not think it would be fair to the contractor, but if I gave his name he would never get a contract in the Public Works Department again.

Mr. LENNOX.

Mr. PUGSLEY. Perhaps he is a gentleman who never did get a contract.

Mr. J. D. REID. He is working to-day for the Public Works Department.

Mr. PUGSLEY. And if he does that it shows the man is a scoundrel.

Mr. J. D. REID. It does not.

Mr. PUGSLEY. It does. It shows he conspires with the inspectors to defraud the government and I should be sorry either to take that man's word or to give him a contract under the government.

Mr. J. D. REID. I do not agree with the minister, for the reason that the department lets the contract, scow measurement. If it is in situ there is not any possible chance of his getting any more than he would be entitled to, but with the scow measurement the inspector simply passes it along. We had evidence in the committee that there are from 20 yards to 40 yards difference in each scow; that a scow would hold 100 yards when there might be only 80 yards in it.

Mr. PUGSLEY. Does not the hon. gentleman know that the quantities must be certified to by the contractor's own man as well as by the inspector for the government. There is no way of defrauding the government unless the contractor is guilty of conspiracy jointly with the inspector.

Mr. J. D. REID. The contractor has nothing to do with it.

Mr. PUGSLEY. Yes he has.

Mr. J. D. REID. The government inspector is responsible for the certificate.

Mr. PUGSLEY. Does the hon. gentleman think the inspector would be dishonest unless the contractor offers him some inducement to be so?

Mr. J. D. REID. It was proved before the Public Accounts Committee last year that some of these inspectors were dishonest.

Mr. PUGSLEY. Without being induced by the contractor to be dishonest?

Mr. J. D. REID. Yes.

Mr. PUGSLEY. Then what possible object could the inspector have in being dishonest ?

Mr. J. D. REID. It was proved that one inspector was not attending to two different works.

Mr. PUGSLEY. That man was dismissed.

Mr. J. D. REID. It was proved the contractors were getting more than they were entitled to.

Mr. PUGSLEY. Does the hon. gentleman say that an inspector would be dishonest without connivance with the contractor?

Mr. J. D. REID. The contractor would not have anything to do with it.

Mr. PUGSLEY. Do you think a man would be deliberately dishonest without any one wanting him to be dishonest?

Mr. JAMESON. Who is the inspector and what is the amount of the contract?

Mr. PUGSLEY. $5 per cubic yard for rock, and 50 cents and 35 cents for other material.

Mr. JAMESON. What is the name of the inspector?

Mr. PUGSLEY. The inspectors are Messrs. Johnston, Crosby and Kimball.

Some resolutions reported.

Mr. FIELDING moved the adjournment of the House.

Mr. HUGHES. What business will be taken up to-morrow?

Mr. FIELDING. Supply: Public Works, and as we will likely go through them very quickly we will take up Interior and Marine afterwards, and probably Mines later on in the day.

Mr. AMES. Will you take the Public Works for Prince Edward Island and Quebec as the first order ?

Mr. PUGSLEY. I think they will be the first.

Motion agreed to and the House adjourned at 1.45 a.m. Friday.

HOUSE OF COMMONS.

FRIDAY, March 12, 1909.

The SPEAKER took the Chair at Three o'clock.

ADDRESSES, ETC., RE INSURANCE BILL 1908.

Mr. MILLER moved:

That the clerk be requested to lay on the table of the House a printed copy of the addresses, representations and suggestions made during the session of 1907-8 to the Select Standing Committee on Banking and Commerce, on behalf of various insurance companies, in connection with Bill (No. 42) of last session, respecting insurance.

Motion agreed to.

Mr. SPEAKER. I have the honour to state that the said report has now been laid on the table.

Mr. MILLER moved that the said addresses, representations and suggestions be referred to the Select Standing Committee on Banking and Commerce.

Motion agreed to.

ADULTERATION ACT AMENDMENT.

Mr. J. A. CURRIE (North Simcoe)moved for leave to introduce Bill (No. 107) to amend the Adulteration Act.

Sir WILFRID LAURIER. Explain.

Mr. J. A. CURRIE. The Bill first does away with the necessity of a deposit of money by the complainant in the case of goods being sold that are adulterated. The Adulteration Act provides that if anyone enters a complaint he must deposit with the officer sufficient money to cover the cost of purchasing a sample, and secondly, sufficient money to cover the cost of an analysis. I consider this a hardship on the public when parliament provides large sums of money for these officers and when, acording to the Auditor General's report, large sums are spent annually in purchasing samples for analysis.

The second clause is intended to simplify the prosecution. We have no prosecutions to speak of under this Act because the Act provides that the informant must deposit $25 with the officer as a guarantee of the costs of the prosecution; or, in other words, if anyone wishes to enforce this public Act he must first deposit $25 with the official. The Adulteration Act also provides that the complainant or informant shall receive a portion of the fine. The second clause of this Bill does away with this provision altogether and simply states that the officer shall prosecute in the same manner as under any other Act so that anyone may lay an information without making a deposit. Thus the law would be carried out and the offender fined but the informant would not receive a portion of the fine. Under this system there would be no inducement for anyone to become an informer beyond the desire to carry out the provisions of the Act. When this matter was under discussion in the House it was shown that whilst a great number of analyses had been made by the department, hardly any prosecutions had been made and if a firm or person were guilty of adulterating goods the only punishment suffered was the fact of their having sold adulterated goods was published in the pamphlets issued from time to time by the government. I think the time has come when the same course should be pursued in the enforcement of this Act as of any other Act.

Motion agreed to, and Bill read the first time.

DAYLIGHT SAVING ACT.

Mr. E. N. LEWIS (West Huron) moved for leave to introduce Bill (No. 108) intituled the Daylight Saving Act.

Sir WILFRID LAURIER. Explain.

Mr. LEWIS. I can best explain the provisions of this Act by, for two or three minutes, explaining the position of time in Great Britain and in Canada. On June 15, 1881, Mr. Sandford Fleming civil engineer, now Sir Sandford Fleming, made a report, which was really an essay, as to the time system then in use in Canada. We were then using the system which had been in vogue from time immemorial. On the 17th of June, 1882, Sir Sandford Fleming as chairman of the committee appointed for the purpose of looking into the question recommended a standard system of time for different parts of the country instead of the existing time system which changed with each degree of latitude, and in 1883 our present system was adopted in Canada. We have now in Canada four systems of time, namely, the eastern system, the central system, the mountain system, the Pacific system, not including the Atlantic system or the Yukon system, with regard to which there is special legislation in the Yukon territory. In the United Kingdom they have always been using mean time, namely Greenwich time or Dublin time. Some two or three years ago a gentleman named William Willets, who had been accustomed to early rising, began to realize that most of the people of England were lying in bed during the best hours of the day, that the best part of the sun-lit day was lost to the people and that the hours of recreation for workingmen were in twilight and dark when they might just as well be in the hours of daylight. Mr. Willets found that this condition of things affected adversely, more particularly the working men, the artizans, the agriculturalists, and the youth of the land. He agitated his scheme with the result that in March, 1908, the British parliament appointed a commission of nine members to investigate the subject and evidence was taken , the report of which may be found in the library. There was a majority report brought in by eight members of that commission and a minority report by one. The majority report contained this recommendation:

The Select Committee to whom the Daylight Saving Bill was referred, have agreed to the following special report:—

1. That the committee have met and considered the said Bill, and have examined numerous witnesses, records and papers and have directed the said Bill to be reported to the House with amendments.

2. And the committee find that the Bill proposes the adoption of a local time in advance of Greenwich mean time in the case of Great Britain, and in advance of Dublin mean time in the case of Ireland, during the summer months, viz.: from April to September in each year, with the object of promoting the earlier and more extended use and enjoyment of daylight during those months. And that such object is desirable and would benefit the community if it can be generally attained, and that the weight of the evidence submitted to the committee agrees with and supports this view, though there was divergence of opinion as to the best mode of accomplishing it.

The effect of the proposals of the Bill would be:—

(1) To move the usual hours of work and leisure nearer to sunrise.

(2) To promote the greater use of daylight for recreative purposes of all kinds.

(3) To benefit the physique, general health and welfare of all classes of the community.

(4) To reduce the industrial, commercial and domestic expenditure on artificial light.

A Bill founded on this report was introduced in the Imperial House of Commons and passed through its second reading last session. This year a similar Bill was introduced, read a second time, and submitted to a special committee for a report. The Bill which I propose submitting to the House is drafted on the same lines as the English Bill so far as the conditions in Canada will admit and is as follows:

An Act respecting the system of time now in use in Canada.

This Act shall be known as the Daylight Saving Bill.

Whereas, the adoption of a local time in Canada in advance of the standard time now in use there during the summer months for the object of promoting the earlier and more extended use and enjoyment of daylight during said period is desirable.

Therefore, His Majesty by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

1. From two o'clock in the morning of the last day of April in each year in Canada until two o'clock in the morning of the last day in October in each year in Canada the local time shall be one hour in advance of the standard time as now in use in Canada.

2. The time hereby established shall be known as local time in Canada, and whenever any period of time is mentioned in any Act of parliament, deed, or other legal instrument, the time mentioned or referred to shall, unless it is otherwise specifically stated, be held in the case of Canada to be local time as prescribed by this Act.

3. Greenwich mean time as used for the purposes of astronomy and navigation shall not be affected by this Act.

4. This Act shall apply to the Dominion of Canada, save and except the Yukon Territory, and may be cited as the Daylight Saving Act, and shall not come into force until one year from the date of passing of same.

I might state to the House that a number of localities in Canada have attempted to adopt some such system as is here outlined, but their efforts have not been successful as they could not legally alter the standard

time. The city of Nelson in British Columbia has been much agitated over the question for the last two or three months, and in Fort William and Port Arthur an unsuccessful attempt was made to deal with it. I would point out that after the first change is made there would be really no inconvenience to the people of Canada, and I feel they would soon become used to and highly pleased with the system which I propose. In Canada on April 30 the sun rises at 11 minutes past 5 o'clock and sets at 18 minutes past 7 o'clock; on October 31 the sun rises at 52 minutes past six o'clock and sets at 11 minutes past five o'clock. These are the dates set in the proposed Bill. I trust that Canada will not be backward in this movement, and I would ask the government to appoint a committee to investigate and to confer with the authorities in England, the United States, Australia and New Zealand, the latter countries having started legislation on these lines. I believe that if my idea is carried into legislation it will be conducive to the health and wealth of the labouring men, of the workingmen, and of the farmers of Canada.

Motion agreed to, and Bill read the first time.

CLASSIFICATION — HOUSE OF COMMONS STAFF.

Mr. SPEAKER. I desire to state to the House that in the classification list of the staff of the House of Commons, laid by me on the table of the House yesterday, there was, through misapprehension, an error in the classification of one second-class clerk who was placed in the second division subdivision A, who should, under the Act, have been placed in the second division, subdivision B, and the classification is to be amended accordingly. And also that all classification references in the organization statement be amended to correspond throughout with the said classification list.

INQUIRY FOR RETURN.

Mr. FOSTER. I want to ask again as to the reasons for delay in bringing down certain returns. We have been generous in passing estimates, but if these returns are not brought down, so far as I am concerned I shall not continue that generosity.

Mr. PUGSLEY. As to the returns from my department my deputy has informed me that there were quite a number of other motions ahead of those of my hon. friend, but I have instructed him to push these ahead at once and let the others stand.

Mr. DANIEL. What about the motion for papers which I referred to the other day?

Mr. PUGSLEY. They will be brought down.

Mr. DANIEL. When?

Mr. PUGSLEY. Very soon; in the course of a few days.

Mr. OLIVER. The hon. member for North Toronto asked for a return in regard to the Grand Trunk Pacific terminal town sites. I am informed that that return was laid on the table about the 12th of February.

Mr. GRAHAM. The hon. member for North Toronto asked for a return in reference to the persons appointed to office in connection with the Transcontinental Railway Commission, with their addresses. If it were not for the addresses, we could get the return very quickly; but it is likely to take weeks to ferret out the addresses of these men, and in many instances we have not their addresses at all.

INTERNATIONAL WATERWAYS TREATY.

Sir WILFRID LAURIER. As inquiry has been made in the House several times in regard to the Waterways Treaty, I have to inform the House that a despatch has been received, and the treaty will be laid on the table on Monday.

Mr. R. L. BORDEN. Will there be any announcement at an early date as to the acceptance by this government of the changes made in the treaty? I do not ask for any answer at this moment, but only whether or not there will be an announcement at an early date.

Sir WILFRID LAURIER. I may say that we were prepared to accept the treaty as it was. The changes made in it have reference to St. Mary's river, and we require some local information, which we are now trying to obtain before we make up our minds whether or not we can accept it.

SUPPLY—THE GRAND TRUNK PACIFIC RAILWAY.

Mr. FIELDING moved that the House go into Committee of Supply.

Mr. OWEN. Mr. Speaker, before you leave the Chair, I would like to ask the Minister of Railways and Canals if he is prepared to answer the question which I asked yesterday with regard to the Grand Trunk Pacific Railway. The reason I asked the question is that I have been told on good authority that that railway is costing this country in the neighbourhood of $100,000 a mile, including terminals and stations.

Hon. GEO. P. GRAHAM (Minister of Railways). The estimate per mile which I gave my hon. friend yesterday still stands. This estimate includes the roadbed, ties,

rails and fastenings, trackage of sidings and yards (326 miles), section-houses, stations, engine-houses, and cost of surveys, right of way and bridges, and also includes 10 per cent for engineering and contingencies. It does not include the terminals at Quebec and Winnipeg and large shops at Winnipeg, but includes $90,000 for ordinary divisional point at Moncton.

PUBLIC WORKS AT KINGSTON.

Mr. J. W. EDWARDS (Frontenac). Mr. Speaker, before you submit the motion for the House to go into Committee of Supply, I desire to make a few observations in regard to moneys expended and moneys proposed to be expended on certain buildings in the neighbourhood of Kingston. When we were considering the estimates some time ago, I asked several questions of the hon. Minister of Public Works, desiring to obtain full information as to the amount of money proposed to be expended. The minister told me that if I would submit a memorandum of what I wanted, he would bring down the information at a convenient time, and place it in 'Hansard.' For the past two and a-half or three weeks I have been endeavouring to get that information. It is scattered over the pages of 'Hansard' at different places, and I must say that I am not satisfied with the answers I have received nor with the manner in which they have been given. Following the promises of the minister made to me on Febuary 23, I asked certain questions, which were answered on March 1, at page 1792 of 'Unrevised Hansard.' Let us look at these questions and the answers. I asked for the estimated total cost of the 16 cottages constructed for the accommodation of the civil subordinate staff at Kingston Royal Military College, including fittings and furnishings. The answer which I received to that question was that the original estimated cost was $96,000. Now, I did not ask for the original estimated cost. I asked for the estimated total cost at the time I asked the question. On the 10th of March the hon. minister answered a somewhat similar set of questions, which I felt called upon to ask, as I had not received the information which I desired in the first place. The first question related to the present estimated cost—that is the way I put it. The answer was: $96,000, the same figure as was given in answer to the question I put on March 1. It would not have been necessary to submit this question on the 10th of March had I received the information which I asked for on the 23rd of February, and which I was entitled to receive. A second question which I asked on the 1st of March was:

> What portion of the work, in addition to the original contract, has been let by tender, to whom, and at what price?

Mr. GRAHAM.

I submit that that is a very plain question, and one that is entitled to a plain and distinct answer. The answer which I received to that question was this:

Alterations to main drain and lowering basement and inside drain, M. Sullivan..	$1,777 00
Change to pressed brick... ..	1,700 00
Electric wiring and fixtures, Halliday Electric Company.	3,550 00
Outside connections, Halliday Electric Company..	145 00
Heating, Mr. Sullivan..	2,750 00

Now, I want to call the minister's attention to page 1562 of 'Unrevised Hansard', when we were discussing the estimates.

Mr. SPEAKER. I may call the hon. gentleman's attention to the rule on that subject:

> Members may discuss various questions on the motion for the Speaker to leave the Chair, without moving any amendments thereto—a great latitude being always allowed on such occasions; but they may not refer specifically to any vote which has passed or is about to be discussed in committee.

If this matter has been referred to in committee, it is irregular to discuss it at this time.

Mr. EDWARDS. I am not aware that this matter has been referred to in committee.

Mr. SPEAKER. I understood that the hon. member was quoting from 'Hansard' a debate in committee.

Mr. EDWARDS. I was going to quote from 'Hansard' an observation made by the Minister of Public Works which is very pertinent to the point I am discussing.

Mr. SPEAKER. Until the committee has reported it would be irregular to discuss it.

Mr. EDWARDS. I have no desire to transgress the rules of the House in any particular.

Mr. SPEAKER. This may be discussed in a committee but not at this stage.

Mr. EDWARDS. The hon. the Minister of Public Works has said that tenders were received for the electric wiring and fixtures.

Mr. SPEAKER. The hon. gentleman had better wait until the House is in committee.

Mr. FOSTER. Suppose that is an answer to a question and which is on the record?

Mr. SPEAKER. He cannot refer to anything done in committee.

Mr. FOSTER. That was not done in committee. It was an answer given before the House went into committee.

Mr. R. L. BORDEN. The discussion might be justified on another ground, that this relates to an expenditure of the previous year.

Mr. SPEAKER. I understand there is an item in the estimates now on that point.

Mr. R. L. BORDEN. The fact that there is an item for a continuance of the expenditure would not be justification for preventing the discussion of the expenditure during a previous year and which is not before the committee.

Mr. SPEAKER. I am quite prepared to hear argument on that point.

Mr. EDWARDS. I want to show that I have endeavoured to obtain information from the Minister of Public Works to which I was entitled but have not been able to get.

Mr. SPEAKER. So long as the hon. gentleman does not refer to what has taken place in committee, he may proceed.

Mr. EDWARDS. In answer to a question which I put, we were told that tenders were called for in the case of the items I specified, namely, the lowering of the basement, the electric lighting and fittings, and so on. I am under the impression that tenders were not called for any of these except the electric wiring and fixtures. My reason is this. In answer to a question which I put to the minister, on the 10th of March, he said that tenders were received from three parties for the electric wiring and fixtures; but as regards the other work, the only person who seems to have been considered was Mr. Sullivan, the original contractor. Another question which I submitted, and to which I did not get a proper answer, was with regard to the work which was let without tender. I was informed that only $1,230 of the work had been let without tender. A little later, on the 10th of March, in answer to a question of precisely the same import, I was informed by the minister that the amount of work let without tender was $3,034. I submit that this was not fair treatment. I submit that when I asked a question in relation to this large expenditure at Kingston, I was entitled to the fullest details, and the Minister of Public Works promised he would give me the fullest details if I submitted a memo of what I wanted. I took him at his word but regret to say he has not kept his word. It was strongly impressed on my mind that in answering questions on the estimates, the hon. gentleman is more actuated by expediency than by regard for the facts or the rights of this House. I had certain reasons for alluding to this matter. These buildings are in my own constituency where the people of my riding can see them every day, and it is only natural that they should ask questions and that I should try to get the fullest information. I find that the amount appropriated for these cottages is $112,000, and that the estimate of the government's architect—a man referred to by the minister as an employee of thirty years' experience and undoubted ability—for the total work is $96,000. I think therefore I may very properly ask why the minister should have asked for an appropriation of $112,000 when his chief architect said the work could have been done for $96,000, and what becomes of the other $16,000. Taking the amount expended on these buildings up to the present, I find that the sum of $90,695 has been expended, so that there is something over $5,000 to be expended before the government reach their architect's estimate of the cost, and that leaves some $23,000 to be expended before they reach the amount they have asked for. Why have they asked for something over $20,000 more for these buildings than their own architect estimates they would cost and which even then is an enormous amount. In referring to the cost of these buildings, I made comparison with certain buildings at Queen's University, and the Minister of Public Works took exception to my comparison, an exception in which I think he was not justified.

Mr. PUGSLEY. I would ask whether or not it is proper, Mr. Speaker, to discuss a debate which took place in Committee of Supply? It is very inconvenient, on a motion to go into supply to discuss harbours and rivers, that we should be called on to deal with a debate which took place on public buildings. The officials in my department are not present and I have not the information always with me. If the hon. gentleman will indicate what information has not been furnished to him, I shall be only too glad to get it for him.

Mr. SPROULE. May I submit this point? If the House is deprived of information to which it is rightly entitled for an intelligent consideration of the votes it is asked to give, surely that ought to be a sufficient reason to submit before supplies are granted. If there is any one rule well understood, it is that before granting supplies grievances must be redressed, and this is a grievance the opposition have to contend with.

Mr. SPEAKER. My idea in calling the attention of the hon. member to the point is very evident: We are about to go into Supply, and, as the matter under discussion is before the Committee of Supply, I thought it would be better to know how the House intends to proceed. For, if this practice is followed, every item may be called up whenever the House is to go into Committee of Supply and the discussion

that has been had in Supply repeated. The rule laid down is that members 'may not refer specifically to any vote which has been passed, or is about to be discussed in committee.' In the estimates, this is one of the items still before the Committee of Supply. I think the older parliamentarians in the House will agree with me that it is a matter that the House might well determine in order that we may know what to do in the future.

Mr. FOSTER. I understood the hon. gentleman (Mr. Edwards) only to incidentally mention the vote as evidence of his inability to get the information.

Mr. PUGSLEY. No, he was referring to what took place in Supply, and to what he had said and what I had said.

Mr. FOSTER. I think at the time particularly referred to, my hon. friend (Mr. Edwards) was referring directly to a discussion which had taken place between himself and the Minister of Public Works in Committee of Supply on this item. In that respect, I should be inclined to agree with the ruling of the chair that such a practice would be both inconvenient and against the rules. But in the main matter which is being discussed by my hon. friend, he has taken his material from answers to questions given by the Minister of Public Works not in Committee of Supply. Any information he has received in that way, I think he has a perfect right to refer to, and to read from the records if he sees fit.

Mr. HUGHES. Or lack of information.

Mr. FOSTER. Yes, or lack of information; he has a right to make his plea to the House that he has not been given the information to which he is entitled.

Mr. SPEAKER. If the hon. gentleman refers, not to the proceedings in the Committee of Supply but merely to answers of questions by the Minister of Public Works in the House, I think the discussion is in order. The hon. member will have an opportunity, when the House goes into Committee of Supply, of taking the matter up. I thought I would take the sense of the House on the subject, because the same question might come up again.

Mr. EDWARDS. I will endeavour to confine my remarks within the lines of questions that I put and answers that I have received when the House was not in Committee of Supply. I understand that I shall be in order if I do that. I regret that I am unable to accept the assurance of the Minister of Public Works (Mr. Pugsley) given me a few minutes ago, that he would give me any information I desire, if I would put my wish in the form of a question. I have had experience of the hon. minister along that line which I do not care to have repeated. Now, I have certain reasons for thinking that the expenditure on these cottages is entirely too great. One of the reasons which led me to that conclusion is this: The contractor, at the same time that he was building these cottages, built four residences in the city of Kingston, seven-roomed houses, with pressed brick fronts, a verandah and balcony, fitted up in the most modern way imaginable; and these four residences, he says himself, cost him $11,000. Here are four residences erected at an average cost of $2,750, but these cottages are costing, according to the money voted, $7,000 each. This, compared with the cost of large buildings in Kingston in connection with Queen's University, buildings divided up into class-rooms and with solid partition walls, justifies me in concluding that money was being wasted in the building of these cottages.

Another matter on which I desired information, and on which I submitted questions, was the Royal Military College stables. The total cost of these was $8,563.69. But the contract price was $6,990, an excess over contract price of about $1,583. I called attention to the fact, and repeat the statement now, that these stables were lying idle for four years and are lying idle at the present time—they have never been made use of since they were erected. It has been stated that the reason for that was that there is no accommodation for the men who were to look after them. Money was voted to erect certain buildings for this purpose. I put a question on the Order Paper in regard to that, and was told that the barracks accommodation for the stables was for 25 or 30 men. Now, I call attention to the fact that the stables were to accommodate 22 horses. Thus, the barrack accommodation for the men to look after the horses allows for 25 or 30 men, and these men, apparently, are to look after 22 horses. This seems to me something that the country should be informed about. In answer to a question which I asked in reference to the barrack accommodation, I was informed that the contract, amounting to $9,490, covered practically every thing—excavation, mason work, brick work, carpentry, plastering, galvanized iron work, plumbing, painting and glazing. Yet the department is asking for $15,000 for this work. I think it is quite pertinent to ask what they are going to do with the other $5,510.

Another matter to which I wish to refer, and in regard to which I submitted questions to the Minister of Public Works, is the vote of $15,000 for veterinary hospital at Kingston. The answers to the questions with regard to this expenditure are, to say the least, very peculiar. On February 23, the hon. gentleman (Mr. Pugsley) justified the expenditure of $15,000. On March 8, in answer to a question I put, he said that

the whole item of $15,000 was an error. He lays the blame on the printer. It does seem to me very peculiar, to say the least, that, according to his own words, after consulting last year with the Minister of Militia, with reference to the veterinary hospital, he should, when the item comes up, justify the expenditure, and a week later feel called upon to explain that it was all a mistake, that the item should not have been in the estimates, and he proposes, with the concurrence of the House, to have it struck out.

Now, I have referred to these matters, not in any spirit of captious criticism, but because I think that I have the right, and the people of my constituency have the right to know what is being done with the public money. I think I was entirely within my right in asking the questions I did, and I do not think I have received the answers I should have received from the Minister of Public Works, and the answers which I had a right to expect after he had given me his assurance that if I would let the item go through and give him a memorandum of what I wanted, he would give me the fullest information. I say that I have reason to doubt his assurance to-day, I have reason to doubt that if I again submitted a series of questions he would give me the information I desired. I repeat that I express that doubt with extreme regret. A great deal has been said with regard to retrenchment; and I would call attention to the figures I have given here, showing the enormous cost of these cottages, and to the fact that over $20,000 has been appropriated more than the whole thing has cost up to date, and yet, according to the answers given me, everything has been covered except perhaps some painting and papering. I would call the attention of the House particularly to the large vote which has been granted by this House for these buildings; and I think that when in future we are considering in Supply the estimates that are brought down to the House by the various departments to construct public works, we should examine them more carefully than we have done in the past. I may say here that if I had possessed at the time the information I have received in this hap-hazard way, I would have urged more strenuously than I did that this money should not have been voted. I repeat again that I have no desire to transgress the rules of the House, and I trust that you, Mr. Speaker, and the House will be lenient towards me, and attribute any failure in that regard on my part to the fact that I am as yet new to the ways of this parliament.

Mr. PUGSLEY. In view of what the hon. gentleman has said of his inexperience in the ways of this parliament, perhaps I should not complain of the somewhat unusual manner in which he has brought this subject up at the present time. The hon. gentleman ought to be aware, and I am sure when he gets some experience he will be aware, that it is the usual practice, when a member intends to discuss a matter of public interest, to notify the minister concerned, and who would be likely to give information upon the subject, of his intention to bring the matter before the House.

Mr. EDWARDS. Right here I want to state to the House that I did send the hon. gentleman a letter of notification, this very day, that I was going to bring this matter up. Although in a previous discussion he had declared that so far as he was concerned he had said all that could be said on the matter, nevertheless I sent him a notification.

Mr. PUGSLEY. The hon. gentleman did send me to-day a letter stating that at some convenient time he would bring the matter up

Mr. EDWARDS. I rise to a point of order. I did not say what the hon. gentleman alleges I said; I said I would bring it up at the first convenient opportunity, and this is the first convenient opportunity.

Mr. PUGSLEY. I certainly did not assume for a moment that the hon. gentleman intended to bring the matter up to-day. I would certainly assume that if the hon. gentleman intended to discuss the necessity for these buildings at Kingston, he would have given the same intimation to the Minister of Militia, who is the minister best informed upon militia matters, so that he also might have been in his place to reply to the hon. gentleman. However, as the hon. gentleman has not chosen to do that, I will deal with the matter for a few moments. Now let me say that when I stated in Committee of Supply that if the hon. gentleman would furnish me with a memorandum of what he wanted I would be glad to give him all the information he desired, I indicated that the memorandum should go to the deputy minister, who would prepare the requisite information, but I am not aware whether the hon. gentleman gave any memorandum to the deputy minister or not. Certainly I have no recollection of his giving the memorandum to me which he intimated that he would do. I did give instructions, I remember, to the deputy minister to produce the tenders which were put in for these cottages, as I understood the hon. gentleman to desire them. I do not know whether he has received them or not, but I presume he has, because I gave the necessary directions. I want to say to the hon. gentleman that any information which he or any other member of this House desires from my department, if it is proper that the information should be furnished, will be pro-

duced at all times, whether the request comes from an hon. member sitting on this side of the House or on the other side. If I may be pardoned for making this observation, I may say that it ill becomes any member of this House, in the absence of any ground whatever, such as would appear to be the case with respect to the hon. gentleman, to insinuate with regard either to myself or any other member of the government, that information is being refused or withheld. Nothing has occurred since the hon. gentleman has been a member of this House to warrant him in suggesting any insinuation of that character.

Now the hon. gentleman asked questions with regard to these buildings upon two different occasions. I find upon page 2390 that the hon. gentleman asked some questions. He asked:

What is the present estimated total cost of the 16 cottages constructed for the civil subordinate staff at Kingston Royal Military College, including fittings, furnishings, &c.

That was the second question the hon. gentleman had asked. He had asked previously, page 1792, what was the original estimated cost, and the chief architect had given the original estimated cost at $96,000. But he had also been told, as the hon. gentleman will see if he chooses to read with any degree of care the answer which was given—

Mr. EDWARDS. I rise to a point of order. The hon. gentleman has misquoted me, he has stated things that I did not say. I did not ask what was the original estimated cost, as the hon. gentleman says I did.

Some hon. MEMBERS. Order.

Mr. SPEAKER. That is not a point of order. If there is a question of privilege, the hon. member can only give his explanation with the permission of the gentleman occupying the floor, otherwise he will have to wait until the speaker has concluded his remarks.

Mr. PUGSLEY. There can be no doubt whatever as to the meaning of the question, and the answer thereto. The question was:

What is the estimated total cost of the 16 cottages constructed for the accommodation of the civil subordinate staff at Kingston Royal Military College, including fittings, furnishings, &c.

The answer was that the original estimated cost was $96,000. Then the next question was:

What portion of the work, in addition to the original contract, has been let by tender, to whom and at what price?

Showing that the hon. gentleman was asking for two things, first, as to the original tender for the buildings, and secondly, as to the additional work which was required. The second question shows that the hon. gentleman was perfectly aware that there had been an original contract for the buildings, and that there had been additional work which would increase the price beyond the $96,000. The answer to the second question was as follows:

2. Alterations to main drain and lowering basement and inside drain, M. Sullivan.. ..$1,777 00
Change to pressed brick.. .. .. 1,700 00
Electric wiring and fixtures, Halliday Electric Company. 3,550 00
Outside connections, Halliday Electric Company.. .. .. .. 145 00
Heating, Mr. Sullivan.. .. .. 2,750 00

Then the hon. gentleman asked:

3. Has any of the work been let without tender? If so, what, to whom and the amount in each case?

To which the reply was:

3. Hot water boilers purchased from Cluff Bros. for $1,230, regular market price.

Any one who understands the meaning of the English language would understand that the original estimate was for the buildings alone, $96,000, and this was additional work which had to be performed. The hon. gentleman apparently was not satisfied with that answer and he put another question in somewhat similar form which appears at page 2390. He repeated the question as to the cost. Evidently the officials of my department, seeing the same question and having given the answer as to the original contract and additional work, repeated that the estimate was $96,000. It may be that the officials of my department should have repeated that that was the original estimated cost, but they took it for granted that my hon. friend was asking the same question because he followed it with other questions as to the hot water boilers, fittings, furnaces and other work for which tenders were not asked. There is another question as to the amount of any work, fittings, furnishings contracted for since the awarding of the original contract to Mr. Sullivan for which tenders were not asked. He also asked:

6. Will the sum of $57,000 voted this session complete the cottages, ready for use, or will a further sum be required?

To this the answer was:

(a) Yes; (b) No.

It may be that my hon. friend intended that that should not apply to the cost as estimated by the architect in the first instance, because you could understand that as this item was discussed in the Committee of Supply, without going into what took place there, there would be the

fullest opportunity to go into details and it would naturally be assumed that these details were gone into when the officers of my department were here in attendance on me as Minister of Public Works, consequently the estimate was repeated, being the original estimate of the chief architect. But then, in order that the hon. gentleman should have full information, detailed information is given in answer to his questions as to the boilers, printing and advertising, travelling expenses, architects' commission, photographs, and even a small charge by the Shedden Forwarding Company for cartage.

Mr. EDWARDS. How do you reconcile the facts that on page 1792 in answer to a question as to the total amount of work let without tender, the answer is given, $1,230, and on page 2391, in answer to a similar question, you say $3,034.20?

Mr. PUGSLEY. What are these items for?

Mr. EDWARDS. These are boilers, printing and advertising, travelling expenses, architect's commission, photographs, and cartage.

Mr. PUGSLEY. Does not my hon. friend see that when speaking of work being awarded without tender, the travelling expenses would not be included. How would you let a contract for travelling expenses? Does not my hon. friend see, if he will pardon me, how silly is the suggestion he makes?

Mr. EDWARDS. Why did you answer in the second place?

Mr. PUGSLEY. Does my hon. friend suppose that I would include the architect's commission when speaking of the work let after calling for public tenders? And then the photographs, $10? Does not my hon. friend understand that these photographs would be taken at the instance of the department? My hon. friend even complains of the payment to the Shedden Forwarding Company for cartage. Of course there were no tenders for these items.

Mr. EDWARDS. Then why were they not left out the second time?

Mr. PUGSLEY. My hon. friend is certainly cavilling in the matter, and I am quite unable to follow him.

Mr. EDWARDS. That is not my fault.

Mr. PUGSLEY. The two answers are identical that so far as concerned the fittings for these buildings the boilers were purchased from Cluff Brothers without tender.

Notwithstanding the unusual and unexpected remarks of the hon. gentleman, even now if there is any further information which he wishes, all he has to do is to make a memorandum which I shall send to the deputy minister and any additional information will be sent to him. The department has nothing whatever to conceal so far as this building or any other public work is concerned. The hon. gentleman has said that these buildings cost more than they should have cost, and compares them with certain cottages which he said have been erected in Kingston. The answer I make is that when the plans and specifications for these buildings were prepared we did the proper and usual thing for us to do, we called for public tenders, and gave the advertisement as wide publicity as it was reasonable to give it. We received four tenders, including one by Mr. Sullivan, of Kingston, an experienced contractor. The highest tender was from an Ottawa firm, Doran & Devlin, also experienced contractors. Their tender was considerably higher than the lowest tender.

Mr. HUGHES. I rise to a point of order, In case our good friend is going into such a lengthy discussion of this matter, the hon. member for Frontenac should be at liberty to state his side of the case, and not be limited to these questions.

Mr. SPEAKER. That confirms the stand I took, and I think the House will agree that a matter of this kind should have been discussed in committee, because we are clearly drifting away from the rules.

Mr. PUGSLEY. I am merely replying to the hon. gentleman who——

Mr. LENNOX. I presume if the hon. gentleman is allowed to pursue this argument we will be allowed to discuss it. We want to discuss it if it is opened in that way.

Mr. SPEAKER. The only justification for alluding to it now is that two questions were put to the minister by the hon. member for Frontenac (Mr. Edwards) and replied to. The hon. member for North Toronto (Mr. Foster), who spoke on the point, thought that with that view of it the question might now be discussed under other phases and certainly any discussion of that kind should take place in Committee of the Whole. While the question is on an item which I find in the estimates, it is clearly in violation of the rules to discuss it now.

Mr. PUGSLEY. The motion having been made that the House go into Committee of Supply, I am now replying to the observations of the hon. gentleman and I trust I have not departed at all from the line of argument presented by him.

Mr. DEPUTY SPEAKER. The general rule applies of course that in the interest

of the despatch of public business, the House should hear any explanation a minister of the Crown may have to make.

Mr. PUGSLEY. I frankly admit that buildings of a cheaper character might have been designed, but it was a fact that there was an area of some 330 feet by 30 feet, which had to be excavated from the solid rock. Of course, the buildings might have been erected without providing for fire proof brick partitions.——

Mr. SPROULE. I rise to a point of order. I ask if the minister is in order in discussing this question beyond showing that his answers were correct. He is now leading the House into a general discussion and making a defence of his policy.

Mr. PUGSLEY. Well, I feel we are only wasting time and I will cease my observations at once so as to close the matter.

Motion agreed to and the House went into Committee of Supply.

Mr. OWEN. I want to say a word or two, Mr. Chairman, before you proceed in committee.

Mr. DEPUTY SPEAKER. There is no business yet before the committee.

Mr. OWEN. But I want to speak on a matter before you bring up any business.

Mr. DEPUTY SPEAKER. That would not be in order.

Mr. OWEN. Then I move the committee rise, and I would ask the minister if he intends to follow the same policy this session as he announced last session when he stated that it was the policy of the government to erect public buildings in towns where they were most needed irrespective of the politics of the member.

Mr. DEPUTY SPEAKER. The hon. gentleman having moved that the committee rise, his remarks must be relevant to that motion.

Mr. OWEN. I move that the committee rise for the purpose of saying a few words to the Minister of Public Works. If I am out of order I will not proceed.

Mr. DEPUTY SPEAKER. The hon. gentleman will have opportunity to speak on another occasion.

Graham's pond, Prince Edward Island, $1,000.

Mr. FRASER. Is this work to be done by contract?

Mr. PUGSLEY. No, by day's labour.

Harbours, rivers and bridges, generally—improvements, $8,000.

Mr. PUGSLEY. This is the usual vote, it is the same as last year.

Mr. DEPUTY SPEAKER.

Mr. FRASER. Is it the intention to bring down supplementary estimates for this same purpose?

Mr. PUGSLEY. I am not aware of any such intention.

Mr. FRASER. Last year $85,000 was voted in the main estimates for public wharfs and public structures in Prince Edward Island, and $90,000 was voted in the supplementary estimates. This year the total vote is only $100,000 and some of the works for which there were appropriations last year are eliminated altogether this year. What is the explanation?

Mr. PUGSLEY. The postponing of works provided for at the last sesion of parliament is in accordance with the policy of retrenchment which is being pursued. It must not be forgotten that the government has two dredges at work in the harbours of Prince Edward Island, and the colleagues of my hon. friend (Mr. Fraser) from the island have already seen me in regard to very important dredging operations to be carried on there during the coming season. I have strong hope that in this way we may be able to meet the reasonable expectations of the people of Prince Edward Island. I have had to postpone the work on some of the wharfs because I was obliged to curtail my estimates very considerably.

Mr. FRASER. Last year there was a sum of $8,000 for the construction of a breakwater at Long Point and that is eliminated this year. Is it the intention to go ahead with that work this year or next year.

Mr. PUGSLEY. It is not the intention to proceed with the breakwater this year; I am unable to say what will be done next year.

Mr. EDWARDS. How much would that breakwater cost?

Mr. PUGSLEY. Between $30,000 and $40,000.

Mr. EDWARDS. That is just about the sum you over-expended on the Kingston buildings.

Naufrage pond—protected entrance to channel, $14,500.

Mr. FRASER. I wish to call attention to either a contradiction or a mistake made by the Minister of Public Works in this matter. Some days ago, when the hon. member for North Toronto asked the Minister of Public Works if he was proceeding on any principle in dropping certain works and going on with certain other works, and asked him to give a concrete case in which any public works for which tenders were called had been dropped, he gave this very case.

Mr. PUGSLEY. Would my hon. friend pardon me? I admit that that was a mis-

take. The name was given to me by one of my officials.

Mr. FRASER. I do not wish to object to the appropriation, but 'Hansard' has gone down to that part of the country, and people have told me that they had the minister's word that the work was not going on. I am glad to see that that is a mistake.

Mr. PUGSLEY. The case of Naufrage pond was confounded with the Long Point work, which I decided to drop. I intend to proceed with the Naufrage pond work.

Mr. FRASER. I would like to ask the minister if tenders have been called, and, if so, the names of the tenderers and the amount of each tender.

Mr. PUGSLEY. The work is under contract to F. S. Macdonald, of Souris, P.E.I., and the contract price is $12,995.

Mr. FRASER. Were any other tenders received?

Mr. PUGSLEY. Yes. Three were received in response to public advertisment, and this gentleman's was the lowest tender.

Mr. FRASER. I would like to have the name and the amount of each tender?

Mr. PUGSLEY. I haven't them here. The hon. gentleman can be furnished with them if he makes a motion.

Mr. FOSTER. Surely the minister is not going to ask a member to give a notice of motion in the House for tenders for a work for which a vote is being taken?

Mr. PUGSLEY. I merely wished the hon. member to call my attention to it or to ask a question in the House in case I should forget; but I think I can say that I shall have them this evening.

Mr. FOSTER. Let the item stand.

Mr. PUGSLEY. Oh, no.

Mr. FOSTER. The primary thing for a minister to have, when he is asked for the name of the successful tenderer, is the names of the other tenderers, and the amounts of their tenders. That information is absolutely germane, and it raised my hair to hear this young member asked to wait for a formal motion to be carried by the House for a return for this information.

Mr. PUGSLEY. I am quite sure that the hon. member can take care of himself without the assistance of the hon. member for North Toronto. If the hon. member wishes this item to stand, I am willing that it should stand.

Mr. FRASER. I would ask that it stand until we get the information.

Mr. PUGSLEY. Very well; perhaps we can get it in half an hour or twenty minutes.

Item allowed to stand.

Sturgeon pier — enlarging outer end and raising stem of pier, $4,500.

Mr. FRASER. I would ask the Minister of Public Works if this is sometimes called the Panmure wharf?

Mr. PUGSLEY. I do not know. This is on the southern side of Cardigan bay, about six miles south of Georgetown.

Mr. FRASER. That is where Panmure Island is. Although the wharf was built two years ago, the right of way to it has not yet been opened to the public. I would like the minister to have that done as soon as possible.

Mr. PUGSLEY. I will have it looked into and attended to at once.

Tignish—extension of harbour channel piers inwardly, $25,000.

Mr. FOSTER. The minister had better give us some information as to the present condition of the work.

Mr. PUGSLEY. The contract for this work has just been let. It has been pressed on the attention of the department for a good many years. Tignish is a very important point, particularly as a harbour of refuge for fishermen. I may say that there have been protection works built at Tignish, but they are not adequate to the protection of the harbour, and the present works include the extension of the northern and southern breakwater, 650 feet and 620 feet respectively, and the construction of a breastwork to extend 400 feet from either end of the breakwaters. Tenders were called by public advertisement in the ordinary way, and four tenders were received, ranging from $23,950 to $30,750, and the lowest tender was accepted.

Mr. BLAIN. Do public tenders mean public advertisement in the newspapers?

Mr. PUGSLEY. Yes.

Mr. BLAIN. How many newspapers?

Mr. PUGSLEY. I have not the number here, but at least a dozen.

Mr. BLAIN. What is the policy down there?

Mr. PUGSLEY. It is to give a sufficiently wide advertisement to assure a large number of contractors getting the notice.

Mr. BLAIN. Is the advertisement inserted in any papers that are not friendly to the government?

Mr. PUGSLEY. I am inclined to think so. I can name one at any rate.

Mr. BLAIN. What one is that?

Mr. PUGSLEY. I would not care to name it.

Vernon river bridge, Port Vernon—landing pier on west side of river, $8,000.

Mr. PUGSLEY. This is to complete. It is under contract. Probable total cost $8,000.

Mr. FRASER. Is it the intention to buy the right of way ?

Mr. PUGSLEY. The right of way is to cost us only $1.

To purchase creosoted timber for works in the maritime provinces generally, $20,000.

Mr. FOSTER. What is the system followed ?

Mr. PUGSLEY. The resident engineers in the lower provinces, in making provision for repairs to wharfs, where the teredo is likely to prove harmful to ordinary timber, estimate for creosoted timber. That is obtained in the south. We have no creosoting works in Eastern Canada. The wood is southern pine, and it is treated at Norfolk, Virginia. There are only two concerns engaged in the work.

Mr. FOSTER. What kind of a contract do you make ?

Mr. PUGSLEY. We do not ask for public tenders but obtain prices and take the lowest provided the timber passes a certain test. We require that it shall pass the test of our inspector.

Mr. FOSTER. How do you test it?

Mr. PUGSLEY. I am not aware of the details, but there is a regular mode of testing the quantity of creosote which is forced into the timber.

Mr. SAM. HUGHES. Why not have the timber creosoted in Canada ?

Mr. PUGSLEY. It would require an expenditure of a quarter of a million dollars to establish a plant.

Mr. SPROULE. I understand there are two methods—one by forcing the creosote into the wood by pressure and the other by boiling the wood in creosote.

Mr. PUGSLEY. The boiling is of no use. The oil must be forced in by pressure. The sap has to be drawn out by putting the timber in a vacum, and then the oil of creosote takes the place of the sap.

Mr. FOSTER. What extra cost does this creosoting entail ?

Mr. PUGSLEY. It trebles the cost, but more than trebles the life of the timber.

Mr. CROCKET. Is the timber bought by the department direct ?

Mr. PUGSLEY. No, through agents. The agents are Mr. Kirk of Nova Scotia and Mr. Bell of St. John.

Mr. BLAIN.

Mr. CROCKET. What price was paid last year ?

Mr. PUGSLEY. I think about $65 per 1000 feet. It depends on the length of the sticks. Long sticks would be worth more.

Mr. CROCKET. How much was bought last year ?

Mr. PUGSLEY. Up to the 1st of February, we bought $9,711 worth.

Naufrage pond, Prince Edward Island—protecting entrance channel, $14,500.

Mr. PUGSLEY. I have the information which my hon. friend from Kings county (Mr. Fraser) desired. The parties tendering were: F. S. Macdonald, Souris, Prince Edward Island, $12,995; R. N. Cox, Morell, Prince Edward Island, $13,800; Kimbell, Coffin, Calien McCarthy, H. D. McEwen, $14,925. The contract was given to F S. Macdonald at $12,995.

Public Works—Chargeable to income—harbours and rivers—Quebec—Anse à Beaufils—extension of western pier and breakwater, $3,000.

Mr. PUGSLEY. Of this, $1,000 is a revote, and the present vote is the amount required to complete the work.

Anse à la Barbe breakwater, $5,000.

Mr. PUGSLEY. This is required to complete payment on the breakwater that has been constructed. This is under contract.

Mr. FOSTER. Where is Anse à la Barbe?

Mr. PUGSLEY. In Bonaventure.

Mr. FOSTER. We had asked for a return relating to that county.

Mr. PUGSLEY. It is being prepared as rapidly as possible.

Mr. Foster. It is hardly in order to take up the items to be included in that return until the return has been brought down.

Mr. PUGSLEY. It is a lengthy return, covering thirteen years.

Mr. LENNOX. I desire to discuss these matters when the return is brought down, and, in the absence of the return, we cannot possibly discuss these matters intelligently.

Mr. FOSTER. Let the items relating to Bonaventure stand.

Mr. PUGSLEY. There is a great deal of work about the return, and it cannot be ready for two weeks. I do not think the return would in any way affect the passing of these items. Could not we have it understood that the hon. gentleman (Mr. Lennox) should have an opportunity, on some other item, of freely discussing these Bonaventure matters?

Mr. LENNOX. I think what the minister has said, if I understood him rightly, will be satisfactory—that is, it is understood that I can bring the matter up again.

Mr. AMES. Will this vote complete the contract on this breakwater?

Mr. PUGSLEY. Yes.

Anse à l'Ilot landing pier, $2,500.

Mr. PUGSLEY. This is a revote, to complete the work.

Mr. AMES. It is done by day's work, is it not?

Mr. PUGSLEY. Yes.

Mr. FOSTER. Not in reference particularly to this item, but generally, could the minister tell us how he proceeds when he undertakes a construction like this by day's work? What is the process?

Mr. PUGSLEY. The process is to instruct the resident engineer to proceed with the work by day's labour. He is instructed to confer with the member for the county supporting the government as to the names of competent foremen, to begin with, to take charge of the work, and also to purchase material at the lowest price.

Mr. FOSTER. From whom?

Mr. PUGSLEY. He is to use his judgment.

Mr. FOSTER. Whom does he consult as to that?

Mr. PUGSLEY. He has no instructions on that point.

Mr. FOSTER. What is the practice?

Mr. PUGSLEY. I am not able to say. I suppose that in this also he would consult the member supporting the government.

Mr. FOSTER. What price does he pay for labour?

Mr. PUGSLEY. The ordinary price paid in the neighbourhood.

Mr. FOSTER. And as to material?

Mr. PUGSLEY. He buys that at fair market prices.

Mr. FOSTER. Who buys it?

Mr. PUGSLEY. The resident engineer.

Mr. FOSTER. From whom does he buy?

Mr. PUGSLEY. From dealers.

Mr. FOSTER. Who keeps the pay-roll?

Mr. PUGSLEY. The resident engineer.

Mr. FOSTER. Can the resident engineer whose time is not entirely devoted to one of these little works, keep the weekly pay-roll?

Mr. PUGSLEY. Oh, no, the foreman must do that. The foreman certifies to the resident engineer, and the resident engineer certifies to the chief engineer.

Mr. EDWARDS. Does the engineer receive instructions to buy at the lowest prices?

Mr. PUGSLEY. Yes.

Mr. EDWARDS. Always?

Mr. PUGSLEY. Always.

Mr. EDWARDS. Very often they do not do it.

Mr. PUGSLEY. I am very sorry to hear that.

Mr. FOSTER. Now, as I brought this matter up, I may be permitted a remark. We have got a lot of information in a very short space of time. The system is a lovely system in theory—and it can be even more lovely in practice. Shorn of all verbiage, what does this mean? It means that the work, from beginning to end, is in the hands of the representative of the county supporting the government and is used for his party benefit, to go no further. When the work is decided upon, the resident engineer is told to go on and do the work by day labour. He applies first—and last and always—to the member who represents the county. He needs foremen to supervise the labouring men; the member for the county appoints them. He needs material for the work; the member for the county tells him where to go to get it. He needs to know the prices to pay for them; he consults the member of the county as to the prices.

Mr. PUGSLEY. No.

Mr. FOSTER. The pay-rolls are kept by the nominee of the member for the county, that is by the member for the county himself.

Mr. CROSBY. Or the defeated government candidate.

Mr. FOSTER. Yes, or the unsuccessful candidate in the interests of the government. It all inures to the party benefit, either to the member supporting the government or to the defeated candidate who wishes, next time, to be elected to support the government. These facts are sufficient condemnation of the system. The minister's power is absolutely nil, so far as any real effectiveness is concerned. No independent supervision is given over the matter, with the exception of what the resident engineer may give and he is not independent. The first thing he is told to do is to consult the member representing the county, if he is in favour of the government. Now under that system any one can understand what is going on in the public works of this country in the expenditure of millions of dollars, a very considerable portion of

which is done by day's work. It seems to me that this is a very bad system, both for the government and for the political life of the country.

Mr. LEMIEUX. The remarks of the hon. member for North Toronto would certainly apply where the pier is a large work involving a large amount of money. But I lay it down as a general principle that when the amount to be expended is less than $5,000, it is better not to call for tenders. For instance, in the counties of Bonaventure and Gaspé several small works have been going on for the last ten or fifteen years. Now take a small pier which is being built, to cost less than $5,000; would it be wise on the part of the government to call for tenders over all portions of Canada, or the whole district of Quebec, for instance, for the construction of that work? We would have to expend considerable money in advertisements, we know that newspapers are not paid by prayers, and we would have to spend a large amount of money in notices, advertisements and so on. Now take the county of Gaspé where this particular work is being done. The resident engineer of course is supposed to be an honest man, he belongs to a profession which naturally makes of him an honest man. He has to supervise the work for which a certain sum of money has been voted by parliament. Well, what interest would the resident engineer have in spending that money in an unwise manner? Would he take the advice of any one, and pay for timber a higher price than the market value? All accounts have to come back to the Public Works Department, where they are carefully checked by Mr. Kingston, I believe, an expert, who has been there many years. I know as a matter of fact, having had some experience with works of this kind in that district, that accounts have been checked and payment has been refused when the price appeared to be above the market price. So we can take it for granted that the market price is the one paid by the Department of Public Works. As regards paying the men—well, I am always speaking for the district of Gaspé. I have received letter after letter from my electors complaining that they had not been paid what they were entitled to. There is in every contract a clause inserted by the Department of Labour called the fair wage clause, which governs the payment of wages, so that in each district only the market price is paid for labour. This is known and adopted in the particular district. So there is no possibility, unless the resident engineer is a thief, of the department being swindled by people who are employed on those works. The acounts for the timber, the accounts for the stone, the accounts for labour, are all checked by Mr. Kingston, the chief accountant of the Public Works Department, and I do not see how the department can be swindled at all. My hon. friend says it is all a piece of partisanship, that only friends of the government are employed. Well, let me say this to my hon. friend: The county of Gaspé has elected me by acclamation many times, or by large majorities, since 1896, and it would be folly on my part to say to the resident engineer: You will employ only so and so. He must not make any difference, he must employ his men irrespective of politics.

Mr. FOSTER. Let us argue this question out in a common sense way.

Mr. PUGSLEY. How was it about fifteen years ago?

Mr. FOSTER. That doesn't amount to anything it all. We are trying now to see whether this is a good way to spend the people's money. What does the present system amount to? In the first place, the member representing the county, if he supports the government, obtains the work, and what is the next thing he does? There is a work to be carried on by the day's labour system as it has been portrayed by the minister. He goes down to his constiuency and he says, I have got a work for the constituency. He wants foremen, and he says to his party friends, I am going to put you in as foreman, and I am going to get this other man employed in some other capacity. And so he selects the workers, all party men. He says to this foreman. We have to have so many cords of stone. He goes around amongst those who have supported him and whom he expects to support him again, and he says: All you who have stone, here is a chance to bring it in. From the moment you start to the moment you finish is it not a complete electioneering arrangement? The men who sell the stone are the recipients of what my hon. friend denominates the bounty of the government—he remembers that phrase. They are told that the bounty of the government is being shared by virtue of the good will of the member whom they have elected, and whom they will be asked to elect again. From first to end, the work is confined to the party, is used to buttress up the members or the defeated candidate, and in all these things added expense is incurred. Here is an example. Word goes out even when a contract is taken on. The contractor is informed that he must buy his lumber or stone within the constituency in which the work is situated. Instruction goes out from somebody. If it does not, what is the meaning of this letter?

Ottawa, February 10, 1908.

E. D. Lafleur, Esq.,
Chief Engineer,
Department of Public Works,
City.

Dear sir,—With reference to our timber required for St. Alphonse work, Chicoutimi county, we find that to comply with the request of the member, Mr. Girard, to purchase all our timber in his constituency, we would have to take round timber from 12 inches up, as it is impossible to get 14 inch. We are very anxious to purchase everything in the constituency, and we trust that we will be allowed to take the round timber from 12 inches up to comply with the wishes of the member.

There may be no printed instructions sent to these men, but it works out; the member has it understood with the minister and knows exactly what his rights are and will insist on them and in the province of Quebec or in any other province he insists on his right and so the freedom of contract, the freedom of purchase, the freedom of wage, the freedom of the work from the beginning to the end is restricted by the party interests and the party advantages and the party privilege. That is not a way in which the country should do its business. I know that the Minister of Public Works believes that to be the case. But I never knew a proposition to be mentioned in this House in the way of criticism, affecting the minister's department, that he had not a defence for it. Why he even not very long ago——

Mr. PUGSLEY. I want no better defence than the course pursued by the hon. gentleman when he had a chance.

Mr. FOSTER. —set up the defence that if there was a candidate running in the interest of the government it was a proper thing that he should interest himself in peddling post office sites just previous to the time of election. The minister knows in his heart that that is not a correct system. His answer will be: You did the same thing. He has that in the back of his head now; I see it coming out, even before it receives audible expression.

Mr. PUGSLEY. And from one so perfect as my hon. friend it must have been correct.

Mr. FOSTER. There is another nice little phase of my hon. friend. When he is in a bad corner and his conscience troubles him a little—what he has left of it, and I hope he has a lot—he wants to say something about the virtues or perfection of the hon. member for North Toronto.

Mr. PUGSLEY. There is no harm in that.

Mr. FOSTER. But the nice little way in which he does it, as if he was to say: Oh, good Lord, you know I am sinful and weak and will reserve a large lot of favour for me; but you know that the hon. member for North Toronto is all straight, do not give him an inch of liberty. My hon. friend knows that this is a bad business system. Will he not acknowledge that?

Mr. PUGSLEY. There is perhaps a little bit of human nature in my soul, and when I try to measure up as to whether my conduct is absolutely right or reasonably right, I look to what other people have done who are at least as good as I am and who sometimes are thought by their friends and even by themselves to be a little better.

Mr. FOSTER. That is another nice little thing.

Mr. PUGSLEY. How does that strike my hon. friend?

Mr. FOSTER. You mean the Minister of Agriculture?

Mr. PUGSLEY. As a new Minister of Public Works it certainly is not at all out of place in determining the course to be pursued by my department to look back and see what has been the course pursued for many years, even ever since confederation, and it certainly would not be out of place for me to ask the course pursued when my hon. friend had charge of the public affairs of this country to a very large degree, while occupying the very responsible position of Minister of Finance, and, apart altogether from that portfolio, when he filled a large place in the public affairs of this country. I did not and do not think it out of place for me to refer to the fact that during all the time he was in power and was a very important factor in the government of the country, the very same course was pursued that we are pursuing to-day. We ought to be reasonable about these things. I am satisfied that one of the things which has hurt my hon. friend as much as anything else in the opinion of the people of this country is that he pretends, if he will pardon me for saying it in a public way, that if he had the power he would pursue a different course politically from what he did when he was in power. When my hon. friend was in power his government and the Minister of Public Works in his government allowed the very thing to be done which is being done to-day. What is more reasonable than that the resident engineer, who has the carrying on of these small works in regard to which tenders are not called, which are not large enough to require calling for tenders, should be told to confer with the member for the county who is supposed to be certainly as intelligent as anybody else in the county, and whose interest it is to avoid any possibility of scandal and to see that the public work is done in the most economical manner possible?

Mr. FOSTER. Roche & Carney, for instance, in Halifax?

Mr. PUGSLEY. And whose interest it is to see that the most capable foreman is chosen and that the material going into the public works is bought at the lowest possible price. I think it is not unreasonable that the member supporting the government should be consulted. My hon. friend from New Westminster (Mr. J. D. Taylor), who is opposing the government, complained bitterly yesterday that I did not consult him and would not appoint a foreman whom he recommended. That hon. gentleman takes even a stronger view as to what should be done as to consulting representatives than we do on this side.

Mr. SPROULE. If you consult the member in one county it would be a good rule to apply in another county.

Mr. PUGSLEY. I shall explain the difference. The member supporting the government is interested in seeing that government work is carried on in a thoroughly honest and proper manner. Without any disrespect to hon. gentlemen opposite, I am not able to say that they have any such interest as that. I have seen my hon. friends' faces beam with joy when they discovered that there had been any apparent maladministration of public affairs on the part of even the smallest official in the employ of the government. Therefore, I think it is only right, if we are to confer with anybody, that our resident engineer should confer with those whose desire it is, in the public interest, to see that the works are carried on in a proper and economical way.

Mr. LALOR. In case the member representing the county is opposed to the government to whom does the resident engineer go?

Mr. PUGSLEY. Then the resident engineer is instructed—we may as well be perfectly frank about it—to confer as a rule with the gentleman who had run as a candidate in support of the government. That has always been the practice, and that is the practice to-day; there is no use being hypocritical about these things; that is the way in which they are done.

Mr. FOSTER. Then you have not abolished the patronage system in your department?

Mr. PUGSLEY. Not so far as consulting for the selection of a foreman. We have the safeguard that even after the foreman is suggested by the member, the engineer is instructed not to employ him unless in his judgment he is a man who thoroughly understands the work and can be relied upon to perform his duties. As to the labouring men, they are, as a rule, employed by the foreman who is given a free hand. It is difficult often to get labouring men, and I happen to know that labourers on both sides of politics are chosen. As to the pay-sheets, the foreman is obliged to swear to their correctness, and when this sworn return is certified to by the resident engineer it comes to the chief engineer. The instructions to the resident engineer are of a very peremptory character to purchase materials only at the market rates, and as to whether he confers with friends of the government I have no knowledge. His duty is to see that the prices of material are fair and reasonable. The chief engineer has a pretty accurate knowledge of what are fair and reasonable prices for materials in all sections of the country, and he has to certify to the correctness of the bills, which then have to go to the chief accountant of the department, who must also be satisfied they are correct, and then to the Auditor General whose duty it is to review them. I do not think the hon. gentleman has presented any strong argument against the existing practice.

Mr. AMES. When the vote was taken last year it was promised the work would be completed, but only half the appropriation was spent.

Mr. PUGSLEY. As my hon. friend knows —and I hope he may not be annoyed at my referring to it because it might suggest a hint that he and his friends were responsible for it—we did not get the Supply Bill through until the middle of July, and the summer was more than half gone when we were able to commence the work.

Mr. AMES. Is it not a fact that in the case of pretty nearly every public work in Gaspé and Bonaventure the actual expenditure did not commence until about one month before the elections?

Mr. PUGSLEY. I do not think that can be true because we tried to get the work commenced as quickly as we could after parliament prorogued.

Mr. AMES. Will the minister have prepared a statement in respect to the expenditure in Gaspé and Bonaventure on harbours and rivers, showing at what date the several appropriations which were voted last parliament for these two counties commenced to be expended? I mean the commencement of the expenditure, not in Ottawa, but on the works themselves.

Mr. PUGSLEY. I will be glad to get that.

Mr. AMES. I refer to the work done by day labour and not by contract.

Mr. PUGSLEY. All right.

Mr. J. D. TAYLOR. The Minister of Public Works does not appear to have grasped the force of the remarks I made to the House last night. Perhaps it was because it was so late at night and that we were all so tired with the arduous labours of the day that we were not in a position to grasp an idea so clearly as we could this afternoon.

Mr. PUGSLEY. Or to express it so clearly.

Mr. J. D. TAYLOR. That may be. In order that there may be no misunderstanding on the subject I shall now endeavour to make clear what I stated to the committee last night, and in passing I would like to refer to a remark made now by the Minister of Public Works to the effect that he has no confidence in the honesty of gentlemen on this side of the House.

Mr. PUGSLEY. I did not surely go so far as that. I must have lost my head completely if I said that.

Mr. FOSTER. That is the second time to-day you lost your head.

Mr. PUGSLEY. Perhaps I said 'political' honesty.

Mr. J. D. TAYLOR. Let us take it that way.

Mr. PUGSLEY. I do not think I even went as far as that.

Mr. J. D. TAYLOR. At all events I would direct the attention of the minister to the fact that while in investigations before committees of this House there have been brought out no facts reflecting on the political honesty of the Conservative members, there have been brought out very material facts reflecting upon the honesty, political and otherwise—

Some Hon. MEMBERS. Order.

Mr. J. D. TAYLOR. Let these hon. gentlemen opposite possess their souls in patience—reflecting upon the honesty, political and otherwise, of the gentlemen outside of this House to whom the Minister of Public Works has chosen to go for that advice which he might better have sought from the chosen representatives of the people. It was no member of the Conservative party who was concerned—only to mention one of the most glaring transactions brought to light—in the five cents a yard additional on the St. John dredging contract. The point I sought to make last night was that when the minister seeks for advice throughout this country as to the men to be employed, as to the persons from whom supplies should be purchased, as to all the details of the administration of his department, there can be no objection of course to his going to any official source because then he goes to the man who is receiving pay for rendering the service which the minister requires of him. It is not surprising to me that in connection with the constituency of New Westminster the Minister of Public Works does not ask my advice as to whom he shall employ, although perhaps if he did it might save him trouble on some occasions. But it is surprising to me to hear him lay down the principle that in the constituency of New Westminster he should choose as the source of the inspiration of his official acts not the duly elected member for the constituency, not the late member who should possess the confidence of the government in every respect, but a man whose distinction is that he was rejected by the people by the largest majority they have ever given in an election. Here I give a concrete case of how this system works out, and one can speak more to the point in citing a concrete case than in dealing with generalities. The Minister of Public Works tells us he will continue this system in the face of the most solemn report of his own commissioners that the evil of the public life of this country has its origin in the patronage list. Notwithstanding the warning he has received from high official sources the Minister of Public Works has to-day declared it is his intention to perpetuate that evil and in each electoral district of this country enable some chosen instrument of his party to tithe all the contractors and to tithe all the employees in the service of the government; to make them contribute to a party political fund by the power he gives his instruments of having the final word as to who shall get this work, as to who shall be favoured with purchases by the government, and as to who shall be promoted to positions. I declare that system to be an abominable one. In our part of the world—and other members can speak for their own districts—it has led to the most grave abuses. It has led to the contractors under the government and to the employees of the government being called upon for contributions of all kinds for purely party political work, and which contributions they are forced to make good at the expense of the people of Canada. That is the point I sought to make in the protest I registered here last night. That is the point which is bound to be discussed this session in view of the public announcement of the minister, and of other matters which have come to the knowledge of members of this House.

Cap. St. Ignace wharf, $16,500.

Mr. NANTEL. Is that a new work?

Mr. PUGSLEY. Yes.

Mr. NANTEL. Last year $5,000 was voted for that work, but was not expended?

Mr. PUGSLEY. No, nothing was expended last year.

Mr. NANTEL. What is the estimated cost of the work?

Mr. PUGSLEY. $16,500.

Mr. GEO. TAYLOR. What is the amount of the contract?

Mr. PUGSLEY. $14,913.

Mr. NANTEL. Who has the contract?

Mr. PUGSLEY. Clouthier and Goudron.

Mr. FOSTER. What county is this in?

Mr. PUGSLEY. Montmagny.

Chicoutimi harbour improvements, $30,000.

Mr. AMES. Is that work by contract?

Mr. PUGSLEY. The construction of the retaining wall is by contract, and there is dredging work as well.

Mr. FOSTER. What is the total cost?

Mr. PUGSLEY. $92,000.

Mr. FOSTER. What will the minister have there?

Mr. PUGSLEY. A good deep water wharf, with a frontage of about 500 feet and a basin for vessels to turn in. But if the work is to be satisfactorily completed, it will mean straightening the channel for some distance down the river, which will take some years.

Mr. FOSTER. What depth of water will you get in the harbour?

Mr. PUGSLEY. Fifteen feet at the outer face of the wharf.

Mr. AMES. Who has the contract for building the wharf extension?

Mr. PUGSLEY. Thadée Desbiens.

Mr. AMES. What is the amount of the contract?

Mr. PUGSLEY. $52,500.

Mr. AMES. When was the contract awarded?

Mr. PUGSLEY. On the 27th of January, 1908.

Mr. AMES. Since the contract was awarded have any changes been made which lessen the quantity of the work to be done?

Mr. PUGSLEY. On the 29th of June there was a change in location which added $2,955 to the contract, making the total contract $55,455.

Mr. AMES. Is it not a fact that the change made the wharf a hundred feet shorter?

Mr. NANTEL.

Mr. PUGSLEY. I am not aware of that. Does my hon. friend state that? If so, I will have it looked into.

Mr. AMES. I am so informed. Where is the dredging being done—in the immediate vicinity of the wharf?

Mr. PUGSLEY. In front of the wharf, in the basin of the Chicoutimi harbour.

Mr. AMES. What depth of water does the minister wish to secure in front of the wharf?

Mr. PUGSLEY. Fifteen feet.

Mr. AMES. Is he aware that the dredge is working to a depth of 25 feet ?

Mr. PUGSLEY. I have heard that stated, but I have not been able to verify it.

Mr. AMES. Can the minister state what the dredge is doing with the soil that is being dug up opposite the wharf?

Mr. PUGSLEY. It is taken down to a part of the river where the water is deeper.

Mr. AMES. That is in the contract?

Mr. PUGSLEY. Yes.

Mr. AMES. And the contractor is under contract to do that with all the soil he digs out?

Mr. PUGSLEY. To deposit it wherever the resident engineer may direct. That is the usual specification.

Mr. AMES. If the resident engineer should direct it to be deposited at a point which would save the contractor an enormous sum of money, would the department feel interested in the matter?

Mr. PUGSLEY. That would depend entirely on circumstances. The department would not permit it to be deposited where it would interfere with navigation; but if it could be deposited in another place with equal advantage to the department without interfering with navigation, and the resident engineer allowed that to be done, I do not suppose the department would object.

Mr. AMES. If after a contract has been let, under the condition that the soil shall be deposited at a distant point, the contractor finds a place near by where it can be deposited more conveniently, and the resident engineer allows him to deposit it there, is any allowance made?

Mr. PUGSLEY. The dredged material has to be deposited at such place as the engineer in charge may direct.

Mr. AMES. Then the engineer in charge has it in his power to make it possible for the dredging contractor to make either very little or a great deal of money?

Mr. PUGSLEY. If the engineer insisted upon the contract taking the spoil an un-

reasonable distance, the contractor could protest to the chief engineer. In dredging contracts, the specifications are all alike in this respect, that the contractors must deposit the spoil at a specified place or at such other place as the resident engineer may direct; and therefore if there is a place nearer at hand, where it could be deposited without interfering with navigation, I should think the contractor would have that in mind, and would ask the resident engineer to allow him to deposit it there. But ordinarily that question does not arise.

Mr. AMES. I shall give the minister the information which has come to me and which will at least bear investigation as to its absolute veracity. There is at Chicoutimi a pier built at right angles with the south shore. It runs north and south. It was decided to very much enlarge the area, and in order to do so another pier is being built from the end at right angles, thus making a sort of L upside down. It is expected that at the far side of the L there will be a further construction, making three sides, the shore being the fourth, and that will be filled in and so make a solid wall. The contract was given to one Thaddée Desbiens. Tenders were called for. A number of responsible parties tendered, all of whom asked a pretty high figure. But Mr. Desbiens, a hotel-keeper at Chicoutimi, put in his tender at a very low figure, $52,500, and when his tender was accepted it was said by the local people that at that price he could make no money. But at the same time there was a contract made by the government with the dredging construction company whereby the dredge 'Algonquin' was set at work in that neighborhood. Four or five miles down the river there is a shallow channel and the government have been dredging out the channel in order to get a total 15 feet in depth. Opposite the pier there is already a depth of 15 feet, but the dredge 'Algonquin', which had the contract for dredging, is located immediately opposite the wharf, and it dug to the depth of 25 feet. And all the spoil which the 'Algonquin' dredged out was quietly taken, with the permission of the resident engineer, and dumped behind the pier which Desbiens was building. That made it unnecessary for him to bring down any dump and made it possible for the dredging contractor to get all his spoil placed within a very few yards of the place where he was dredging. Both the dredging contractor and the wharf builder benefited, and had it not been for the complacency of the resident engineer, the wharf could not have been built at the price. The result is a lot of unnecessary dredging. The dredge should have been located where a channel is wanted. But located where it is, it has served a double purpose, that of enabling the contractor to make some money and enabling the dredging company to increase their large profits.

Mr. PUGSLEY. The wharf is built by Mr. Desbiens at a very much lower price than the work is fairly worth.

Mr. AMES. The others cannot see how it was possible for him to make money at the price but now we see how it was possible. The local resident engineer was the arbiter of the whole matter. He said to the dredge-owner: Work opposite the wharf and deposit all your spoil behind Desbien's revetment.

Mr. PUGSLEY. The contractor is doing a good thing for himself and for the country as well.

Mr. FOSTER. But how about the other one who is digging down to 25 feet?

Mr. PUGSLEY. I am afraid my hon. friend relies too much upon rumours. He does not know himself that the contractor has gone to a depth of 25 feet. He does not know that he has gone actually below 15 feet. It is the duty of the resident engineer to keep very careful track of the dredging and he ought not to pay for a single yard of dredging below the specified depth. Until my hon. friend is able to state that the dredging has gone to a depth of 25 feet, I would not feel bound to accept that statement. There is a tide there of 15 feet, and you might have to dredge 25 feet or 30 feet to get 15 feet below low water. I have no information on the point and am surprised to hear the statement or rather the suggestion of my hon. friend. If I had any evidence, I would feel it my duty to make careful inquiry.

Mr. AMES. There is certain circumstantial evidence which supports the contention of my informant. The depth of water opposite the wharf has been recognized by all concerned as 32 feet and that was ample for any vessel expected there. But that dredge has been hard at work digging where there are 22 feet already and bringing up lots of mud, which would lead one to conclude that they were doing extra dredging for the purpose of accommodating the wharf contractor.

Clarke City, Seven Islands—wharf improvement, $4,600.

Mr. PUGSLEY. This is to pay the balance due on the contract to the Messrs. Clark. The contractors are the North Shore Power Railway and Navigation Company. A contract was entered into with them on the 4th of January, 1907 for this wharf at $29,990. This company, of which the Messrs. Clark own the controlling interest, has expended a very much larger amount on this work, but all the department agreed to pay was $29,990. The actual

expenditure made would run up to nearly $75,000. The Messrs. Clark have inaugurated works of very large proportions at Clarke city and expended considerably more than a million dollars. They employ a great many hands, and the government felt that, under ordinary circumstances, they would have been justified, in the public interest, in paying the whole cost of this work. But it was undertaken in the first place by the company, and a compromise was made that the government should pay only $29,990, and that is all we asked the committee to vote. This amount $4,600 is to pay the balance due them under the contract.

Mr. AMES. Has some dredging been done at Clark city close to the wharf?

Mr. PUGSLEY. I am not at the moment aware, but I think some dredging was done there.

Mr. AMES. This is one of the pieces of work that, I think, reflects less credit on the department than almost any other along that north shore. The minister did not tell us that, after the wharf was built and the mud was taken away from beside it, the greater portion of the wharf turned turtle, and a great deal of money had to be spent in taking down the old material and building up again. The wharf was built on a very soft, oozy mud flat. You could stick a pole down five or six inches anywhere.

Mr. PUGSLEY. Was not the wharf that turned over the company's wharf, built before the government took hold of the matter?

Mr. AMES. It was originally the company's wharf, but it was taken over by the government and the government have had to make the damage good. The trouble seems to have been due to the foolishness of taking out this soft mud beside the wharf. The government took over a private enterprise, and the private enterprise was so handled that it became practically useless and cost many thousands of dollars to put it in shape again. And all this for one private company.

Mr. FOSTER. How much money has the government put into the whole thing?

Mr. PUGSLEY. Up to 30th November last the government had paid altogether $102,562.29.

Mr. BLONDIN. Can the minister tell me the name of the inspector of the work from June 15 to September 15, 1907?

Mr. PUGSLEY. There was a Mr. Charles Sweeny at one time—I do not know whether at the time the hon. member refers to or not.

Mr. PUGSLEY.

Mr. BLONDIN. I see it stated in the Auditor General's Report that Mr. L. P. Girard was the inspector. I understand that Mr. Girard was paid $2.50 per day. I would ask the minister if he knows that Mr. Girard was a law student at the time?

Mr. PUGSLEY. There is a Mr. Girard who was on the engineering staff of the resident engineer, Mr. Michaud. He was at one time at Chicoutimi. He was engaged on this work in the summer for one or two summers.

Mr. AMES. A son of the member?

Mr. PUGSLEY. Yes.

Mr. J. D. REID. Is it a fact that a young law student was put on as inspector of an important work like this?

Mr. PUGSLEY. My information is that he is an engineering student.

Mr. AMES. He is practising law in Chicoutimi now.

Mr. PUGSLEY. That must be another man, because Mr. Girard is on the engineering staff of the department under Mr. Michaud at the present time. He was at Chicoutimi at one time on Mr. Tache's staff.

Mr. J. D. REID. It is important that we should know the facts in this matter, in view of the statement made by the hon. member (Mr. Blondin) that this man who was appointed inspector was a law student. If the minister cannot state the facts definitely now, he can learn them and give them to us later—say when we meet at eight o'clock.

Mr. PUGSLEY. No, Mr. Tache, the resident engineer, would have to be communicated with. I will get the information as soon as possible. It should not be necessary to let the item stand. The amount is small and we should close up this matter.

Mr. J. D. REID. The passing of this item is not important; we have a month or two to deal with it. The fact of putting on a man as inspector who was not qualified may account for the loss. Of course, the present minister was not in charge, and may not be personally liable to censure. But someone in his department is. If we pass the item now, we shall never get the information. As far as I am concerned, I would like the item to stand, so that we may learn whether the statement made to the committee is correct or not. If the minister can show that this man was a competent inspector, of course, the item will pass.

Mr. PUGSLEY. When I explain the case to the hon. member (Mr. J. D. Reid)

I am confident he will not press his request. The wharf which, it is alleged, fell down, was not built by the government, but by the company. Since the government rebuilt it, it has stood perfectly.

Mr. J. D. REID. That is not the point. What we want to know is whether it is the policy of the government to have incompetent men as inspectors of important works. The minister must know that this is not the only case in which unqualified men have been appointed as inspectors of important public works. If the minister had been here a few years ago and had stood with me at the corner of this building and seen the new tower of the western block fall, he would realize more clearly the importance of having good inspectors. I understand that the inspector who had the supervision of the work on this tower had never seen stonework or brickwork in progress before. It cost the country many thousands of dollars to make good that mistake. We find that on dredging works the government have men who are not competent. They put on men who are mere labourers at $1.50 or $2.50 a day, and the running of the whole thing is left to the contractor. If, in order to give a law student a holiday with pay the government have caused serious loss to the country, this committee should know it.

Mr. AMES. There is a little more in this than appears on the surface, and enough to make it necessary to discuss it for a few minutes at any rate. Here was a work of considerable difficulty, because the first wharf constructed there had collapsed, and it was found necessary to rebuild, removing the old wharf. The wharf was built on a very peculiar bottom, and consequently the construction required engineering management of considerable skill. Now what was done? A young man, who is the son, I understand, of the federal member, and who is a law student, was sent up there for his summer holidays. He got $2.50 a day while he stayed there, and all his expenses, as well as $116 for his board and travelling expenses. He spent a very pleasant vacation in the neighbourhood, and came back again, having had his whole summer at the expense of the government. He resumed the study of law, and has I believe just been admitted to the bar.

Mr. PUGSLEY. If the facts are as the hon. gentleman alleges, I will get the information about it as soon as I reasonably can.

Mr. FOSTER. Let the item stand in the meantime.

At six o'clock House took recess.

After Recess.

House resumed at eight o'clock.

PRIVATE BILLS.

PRINCE ALBERT AND HUDSON BAY RAILWAY.

House in Committee on Bill (No. 62) to incorporate the Prince Albert and Hudson Bay Railway Company—Mr. Neely.

Mr. LENNOX. Last session preliminary steps were taken by the government to build a railway to Hudson bay and surveyors have been put in the field at considerable expense to the country. The map exhibited in the Railway Committee shows this line cutting through what is supposed to be the government line, which apparently runs to Fort Churchill while this line apparently is projected to reach Fort Nelson. It is stated that Mr. Armstrong, government engineer, has reported in effect that a suitable harbour cannot be obtained at Fort Churchill, and that while Fort Nelson harbour was none too good it can be made suitable by a considerable expenditure. We have had a flood of oratory if not of reason within the last few days about the desirability of free trade in railways, but we have also had the matured wisdom of several members of the government in earlier days impelling them to point out the inadvisability of multiplying railways in such a way that they may become an increased charge on the people. Every sane statesman recognizes that if you construct two lines of railway where there is only business for one, the charge in the end must fall on the people. There may be infinite possibilities for railway development in the direction of Hudson bay, but at present it is in the experimental stage, and if the country is to build a railway to Hudson bay there is no reason why we should encourage a competing line. We extended the Transcontinental Railway to Moncton and we were told by the government that we were forced into that position by the stupidity of the Tories in building the Intercolonial on its present location. The Minister of Railways has now a chance to prevent anything of that kind occurring in the future; he has the ball at his foot and I hope he will do the kicking on this occasion and see that these people do not get this charter if it is going to injuriously affect the government road. I see there is another charter sought for a railway to Hudson bay in addition to this one, and as the object of the government in building a line is to find a short route for our western grain to Liverpool, and not for the purpose of developing local traffic, it makes no difference whether these lines parallel each other or not, for so long as their destination is a port on the Hudson

bay they must be in competition. The minister did not refer to this matter in the Railway Committee.

Mr. GRAHAM. It is hard to get a word in there.

Mr. LENNOX. That is true, but I trust the hon. gentleman will now say there is a good deal of reason why we should hesitate to incorporate railway companies into that country at present. If the minister thinks it is all right I will not make a very big kick, but I hope it will not result in our having to buy out these charters as has been our experience in the past.

Mr. GRAHAM. The giving of a large number of charters over any particular territory does not mean that there will be a large number of railways in that territory. The difficulty in Canada is, and I suppose it is not peculiar to us, that the number of railways constructed is small in proportion to the number of charters granted. As to the building of more than one railway through any particular territory, my hon. friend's observations may in some cases be correct, but generally speaking it is against the well established usage of endeavouring to get competition in railway lines. If two stores exist where there would be only a good living for one, the argument of the hon. gentleman is that the people would pay more for their goods because the two stores would have to be maintained, and while he is right in theory he is wrong in practice, because competition would compel them to sell their goods lower so as to allow one of them at all events to live, and in the end it would be the survival of the fittest. Mr. Armstrong is an engineer sent out by the government to survey the route from Pas Mission to Fort Churchill, and if I remember correctly, his report is not that Fort Churchill would not provide a suitable harbour but that he has been given information which leads him to believe that Nelson might provide a better harbour. There is a greater difference of opinion on that point than I had thought existed until I read this report. It is only to-day I had a conversation with a man well known in Canada who made an exploration through that part of the country some years ago on behalf of the then Ontario government, and he is confident that Nelson is the better harbour of the two.

Mr. LENNOX. That coincides with Armstrong.

Mr. GRAHAM. Yes, but it is fair to say that Mr. Armstrong says his report is only based on information he had received. I may say frankly that it is my intention to have Mr. Armstrong survey the route to Nelson as well as to Churchill so that we may have information obtained from an actual survey, and I have an item in the estimates to pay for that. I think it would be wise to take what he has reported even if it is only hearsay information. The route to be taken by these roads is not the route of the government line. The government line starts at The Pas, and runs to Churchill or Nelson as the case may be. If it runs to Churchill, the distance is 497 miles. This road starts in the vicinity of Prince Albert, runs south to a certain point further east than our line, and then to Churchill. I am not sure that it would be wise to prevent these charters being granted, because I am a bit skeptical as to the number of railways that will be built to Hudson bay. My own opinion is that the country will be glad, and I shall be satisfied, if one railway is constructed at an early day. But I am not prepared to say that we ought not to grant a charter or two for a line to run from Prince Albert in the direction I have indicated, even if we should build a line of our own to Hudson bay. I may say to the committee that there was strong pressure brought to bear on the government to start our line from Prince Albert; a deputation waited upon the Minister of Railways and urged that view. I pointed out that they already had a charter for a line from Prince Albert, that that line was surveyed or would be surveyed, and that our idea was to give the most direct connection from the railways now in existence to Hudson bay. Conditions vary so much in different parts of the country that it is impossible to lay down a hard and fast rule as to railway charters. Under some conditions it is wise to give as many charters as are wanted in order to get a railway built, because there is the danger of refusing a charter to the people most apt to build it. There are circumstances when it would be unwise to grant new charters, as they might possibly injure a business enterprise about to be launched. We have to deal with the different projects on their merits. Personally I see no objection to giving charters for a dozen lines to Hudson bay.

Mr. LENNOX. It is true that if you have two grocery stores on opposite corners, the prices of goods may be reduced by competition; but our railway board is not working in that way. We have established it at considerable expense, which is likely to increase as the years go by, and the theory on which it is based is this, that it shall see that the tariffs of the railways are so adjusted that they shall have a reasonable return on capital, working expenses, and so on, and that consistently with that object the rates shall be reduced to the people as much as possible. So that the minister's argument in that respect does not apply to this case. It is exactly the opposite, if our railway board does its duty, as I expect it will. If you put two roads where there is only a legitimate

amount of traffic for one, the railway board, when it comes to adjust the rates, will have to allow such rates as will pay ordinary working expenses and a reasonable return on the capital invested. If one railway can serve the needs of that country for the time being, and the government, as I assume, are going to build a railway, and you have another railway built to serve the same purpose, whether it is exactly parallel or not, you will diminish the profits of both roads, and each will have to charge the traffic a larger amount than it would otherwise do. The minister mentioned that the government were urged to start their road from Prince Albert. That is a very effective answer to the argument which we have often heard in the Railway Committee and sometimes in this House, that we do not interfere with freedom of action by granting a charter. The minister says that by reason of the fact that there was already a charter granted for a line from Prince Albert, he decided that the government would not begin their railway from that point.

Mr. GRAHAM. I did not quite say that. I stated as a fact that there was a charter for a road from Prince Albert, and that it was the object of the government to get the closest connection from the existing railways to the Hudson bay.

Mr. LENNOX. As I undersood, the minister was influenced by that fact, as a wise minister would be, because he would not want to build a railway over the same line for which there was already a charter. Where, as the minister himself suggests, one railway would probably serve the purpose completely for the present, we are not acting in the interest of the people or with good judgment if we grant this charter while we are contemplating building a road ourselves.

Mr. T. CHISHOLM. I have a letter in my hand from a gentleman of the name of Mr. Green. It is dated Fort Churchill, and I received it to-day. He gives some information in regard to this matter which I think it might not be out of place to state to the House. He has been there all summer. I saw him in Prince Albert before he left, and he told me that when he reached Fort Churchill he would send me a letter. I would point out to the House that Prince Albert bears very much the same relation to Hudson bay that Winnipeg does to Fort William. There was a time when people thought that one railway from Winnipeg to Fort William would be quite sufficient, but we shall very soon have three, and one of them will be double tracked. We need have no fear whatever in granting charters for railways to Hudson bay. Hudson bay must ultimately be the outlet for the northern parts of both Saskatchewan and Alberta, and no doubt before many years we shall see a railway running from Edmonton to Athabasca lake and thence to Depot harbour on Chesterfield inlet; another from Prince Albert to Fort Churchill, and probably another running east of Lake Winnipeg to York Factory. The probability is that York Factory is the best harbour, but Fort Churchill from what I have heard can be made an exceedingly good harbour, and it is considerably nearer to Europe. We will need all these harbours. Of course the traffic will require to go through Hudson straits after leaving Fort Churchill. It is considerably nearer to Europe than Port Nelson. It is not fair to the northern part of Saskatchewan and Alberta to ask them to send their trade away round to Nelson, nearly 150 miles out of the way from Prince Albert. There are settlers seventy-five miles north of Prince Albert and you ask them to send their produce to Prince Albert, then across the Northern Saskatchewan and then afterwards the southern Saskatchewan, and then go way down out of their way in a circle and come back to the crossing of those rivers at La Pau. From all I can hear there are no great difficulties to be encountered between the north part of Prince Albert and Fort Churchill. My correspondent tells me that there are great mistakes being made in locating railways in that country. In some places the moss between Split lake and Port Nelson is so exceedingly thick that it acts as a cover for the frost, just like straw in an ice-house, and prevents the ground from thawing out in the summer. But when a railway shall be constructed and this moss disturbed and gathered up the heat of the sun will penetrate into the ground and very often the bottom will be very apt to go out of the railway. More than that, my correspondent tells me that from Split lake to Port Nelson a great deal of the ground is simply muskeg. It would appear, therefore, to be almost impossible to continue the road the government have had surveyed from La Pau by way of Split lake to Fort Churchill, and it will be necessary to go to Port Nelson some other way. I see no reason why we should not have three or four railways, and even at my age I hope to live to see the day when there will be a double tracked railway running from Prince Albert to Fort Churchill. The government need have no fear to grant a charter. If we get plenty of charters, no doubt some of the companies chartered will undertake to build.

There is another thing. A few days ago the Minister of Railways, in answer to a question I put him, told us that the Nelson river might in time become navigable. If that be the case, why should not the two Saskatchewan rivers also become navig-

able? We all know that the difficulty in these rivers is that they're full of shifting sand. The sand bars form so rapidly that it is difficult to continue navigation. There is an item of $21,000 to clear the boulders out of the northern Saskatchewan this year which means that it is expected to make it navigable. No doubt if we do not have navigation on these rivers, we will have two canals, one from Edmonton to Prince Albert, and the other following the course of the south Saskatchewan, and then we may expect that Prince Albert will grow to be a great deal larger than Winnipeg. The grain will be transhipped from these canals to the railway from Prince Albert to Fort Churchill. I desire also to draw attention to the fact that there is no doubt that Hudson bay is open for as long a period in the year, or nearly as long as Lake Superior. We must not forget that Lake Superior is frozen up for a great part of the year. And, from what I have read in history, and from what I know of Hudson bay, I am led to believe that the season of navigation there is as long as that on Lake Superior. I made reference before to the situation of Winnipeg in relation to Lake Superior being similar to that of Prince Albert in relation to Hudson bay. In 1811, we find, Lord Selkirk came into Hudson bay with the old 'Edward and Anne,' an old worn out ship, and with another ship that was no better, and brought in his settlers, landing them at York Factory. At that time, there were no lighthouses, no wireless telegraphy—none of the advantages and aids to navigation that can easily be provided now. If we had lighthouses, signal stations and wireless telegraphy, I have no doubt that it would be quite possible to navigate Hudson bay for several months longer every year than at the present time. We know that the ice drifts south from Fury and Hecla straits and Fox channel, and if it comes in that direction, it must be driven to the south of Hudson strait. That being so, there must be open water near the northern shore of Hudson strait, even at a season when that strait is now supposed to be blocked with ice. With modern facilities, there can be no reasonable doubt, Hudson bay will be open to navigation for as many days of the year as Lake Superior is. I do not think that we should hesitate to grant all the charters that are required.

Mr. W. H. SHARPE. Before that order is passed, I would like to get an expression from the minister on a very important point. It is stated by the government that the matter of assisting the railways to Hudson bay is under consideration and that money will be voted for the purpose of bonusing or building the road. I would like to have a statement from the Minister of Railways on this point. If these charters are granted and the government should undertake to build a railway itself or assist a railway such as the Grand Trunk Pacific, will it undertake to compensate the holders of these charters for any expenditure they may have made or claim to have made while they were holding their charters. The moment the government steps in and proposes to bonus one of the companies holding a charter, the others will make a claim for compensation. It would be well for the minister to announce that there will be no compensation whatever in such a case. He will recollect many occasions when claims, in similar circumstances, were made for compensation by the holders of charters who never did anything with them. If we are going to give free trade in charters, which virtually is the policy of the railway committee, there should be a declaration by the government that any expenditure made by the holders of these charters, unless they proceed to build the road, will not be considered in fixing any compensation when the matter of bonuses comes up or the matter of building a railway.

Mr. GRAHAM. We are glad to grant these companies a privilege, and undertaking no obligation towards them whatever I could understand the situation when it would be fair that some compensation should be given a company holding a charter if this were the situation. Suppose a company had surveyed a certain route and the government stepped in and proposed to build on that route, it would be but right to compensate the company for the money it had spent in laying out that line. But except in such a case, the government has no intention whatever of giving any compensation.

Mr. BLAIN. I think that the government and parliament will have to be more careful in future in granting railway charters. It is only fair that great corporations, engaged in railway construction, should be treated generously by the government, but where promoters secure charters for other purposes than constructing the road, the government should be more careful. It is only fair that the government should state whether any of these gentlemen who are the provisional directors and who are not well known in Canada as railway constructors are bona fide railway men. Either the minister or the promoter of the Bill should be in a position to state this. They should be able to state whether there is any hope of the road being constructed under these directors or whether this charter is being obtained for the purpose of selling it to some other company.

Mr. NEELY. I have absolutely no personal interest in this Bill. I take charge of it because I believe the charter asked for is one that ought to be granted by this House. My hon. friend from Peel (Mr. Blain) wants to know if the men whose names appear as provisional directors are, bona fide, seeking this charter for the purpose of building the road or seek it merely for speculative purposes. So far as I know, their intention is to build the road—not all of it right away, but a part of it. A part of this road is urgently needed at this time. From the city of Prince Albert north, east and west some sixty or seventy miles, there is a tract of country a considerable part of which is good farming land, and some of which is very fine timber country. Settlers are loath to go into that district because there is no railway accommodation. Therefore, the first sixty or seventy miles of this road would be in the nature of a colonization road. As the committee are aware, the local government of Saskatchewan is assisting branch lines and colonization roads to a very considerable extent, and the promoters of this company have every reason to believe that, as soon as they are prepared to go on with the work, they will be able to secure aid from the provincial government. So, I think I can assure my hon. friend that the charter is being asked for in good faith, for the purpose of building the railway. While I am on my feet, I may say that it rather surprised me to hear the remarks of the hon. member for South Simcoe (Mr. Lennox). Surely he is not aware of the condition of affairs in western Canada, or he would not state that one road to Hudson bay should and would meet the needs of western Canada.

Mr. LENNOX. The minister says that one railway will be enough at present.

Mr. NEELY. One railway may be enough by way of experiment—and we know that the value of the road to Hudson bay is somewhat experimental. But the people of western Canada believe that it is a feasible route and that, at no very distant day, a large part of the produce of western Canadian farms will be shipped by way of Hudson bay. Should that prove to be the case, the hon. gentleman, of course, will not ask us to believe that one railroad will be sufficient to carry the produce of our western Canadian prairies to the markets of the world. So far as the route of this road is concerned, it does not interfere, as I understand the matter, with the railway projected by the government. I was pleased to hear the remarks of the hon. member for East Huron (Mr. Chisholm) in relation to granting this and similar charters to Hudson bay, and I hope that, in the interests of the people who wish to settle in the country north of Prince Albert, and in the interest of all western Canada, this charter will be granted.

Mr. GEO. GORDON. I am sorry to have to disagree with my hon. friend from South Simcoe because I do not think the people of Canada care how many railroads run parallel to each other, provided they are built at the expense of the corporations who receive these charters. I do not see where any danger arises in this case. If this road were to be built right away, these people, of course, would never obtain any subsidies from the government. Except in the case of railways, which, to reach from point to point must go through some narrow pass which will not accommodate more than one road, I do not see why the government should exercise great care in giving charters as my hon. friend wants them to do. Where there is room for many roads, parliament may well charter these roads, to be built at the expense of those who receive the charter. Judging from the way the government have treated the province of Ontario in not subsidizing the Temiskaming and Northern Ontario Railway, we may believe that the government will leave these other people to build the roads at their own expense.

Mr. LENNOX. I want to make it plain that I do not oppose railways, but I want the people to have them on reasonable terms, that is, I want the government to do what is right. The government should either occupy this field or else give it up to others to occupy. If they are going to occupy that field, they should see that they serve it properly. We should not have the same thing happening that we had in reference to the Intercolonial, and after these roads are built be asked to buy the roads out. Would it not be better for the government to adopt a definite policy now and say: We will occupy that territory and serve it; or else get out of the field and let an ordinary company in.

Mr. GRAHAM. What policy would my hon. friend adopt, that the government should take hold, or get out and give it to a company?

Mr. LENNOX. When I occupy the place the hon. gentleman occupies, I will have a policy, and when that time comes I won't be afraid to tell the people what my policy is. When I occupy a position of that kind I will say: 'Gentlemen, we are going in there and we are going to occupy that field, but we will occupy it on terms profitable to the people that we represent as the government of Canada, and profitable to the people whom we are to serve in that region. We will have our feeders running into our trunk lines, and it will be a profitable enterprise.' But on the other hand, what the government are doing is this, they are going to build their railway, they are going to let others build feeders from Prince Albert and Port Nelson; we will have the lean

part of it, and the others will have the rich part, and we will pay for both.

Progress reported.

CONSIDERED IN COMMITTEE—THIRD READINGS.

Bill (No. 49) respecting the Ottawa and Western Railway Company.—Mr. Devlin.

Bill (No. 50) to incorporate La Compagnie du chemin de fer international de Rimouski.—Mr. Ross.

Bill (No. 57) respecting the Vancouver, Fraser Valley and Southern Railway Company.—Mr. J. D. Taylor.

Bill (No. 59)to incorporate the Victoria and Barkley Sound Railway Company.—Mr. Ralph Smith.

Bill (No. 61) respecting the Burrard, Westminster Boundary Railway and Navigation Company.—Mr. Ralph Smith.

SUPPLY.

House in Committee of Supply.

Mr. PUGSLEY. Before we resume consideration of item 143 I would like to mention a matter for the information of my hon. friend the member for Frontenac (Mr. Edwards). I am inclined to think that both he and I, when we spoke this afternoon, were acting upon a wrong interpretation which we had taken from the answer which I had given to the House, I was misled, and I think he was misled also, by the amount which was in the estimates when that matter was under consideration before the committee a few days ago. The amount printed in the estimates was $57,000; the amount which had been asked for by the chief architect was $37,000. My hon. friend knows that the figure 5 and the figure 3 very often look alike upon the carbon copy of typewritten paper. The amount should be $37,000 instead of $57,000. So the answer which was given by me on the 10th instant, and which appears upon page 2391 of 'Hansard,' was that the estimated cost of $96,000 covered the cost of the building, heating, fittings of all kinds and all those expenses which are set forth upon the same page. As a matter of fact, the information of the chief architect is that the total cost will be something under that, and may not exceed $94,000. I am very glad to be able to give that information to the committee. My hon. friend can look up the figures, and if he takes the memorandum which I gave and substitute $37,000 for $57,000, he will see how the error has occurred. I have no doubt he was misled by these figures, as I was myself. When we come finally to pass the item I will have the correction made. I regret that the error occurred, and I am very sorry if it was the means of causing any misunderstanding between my hon. friend and myself.

Mr. BARKER. What was the number of the item?

Mr. PUGSLEY. It is in Ontario Public Bildings, item 132, Kingston Royal Military College, additional accommodation. $55,000 was voted last year, and $37,000 will entirely complete the building, and provide for heating, electric wiring, furnishing and fittings of all kinds.

Mr. EDWARDS. I am glad to hear the explanation given by the minister. I was seeking to ascertain where that money went. It seems to me the minister's explanation justifies the stand I took in endeavouring to find out. We discussed the item on the basis of $57,000 and on a total of $112,000, and dividing the $112,000 by 16 cottages we found that the total cost for each cottage was 7,000.

Of course if the item had been going through at $37,000 it would not have been necessary for me to ask so many questions.

Mr. PUGSLEY. What puzzled me was seeing the item at $57,000, and I had the memorandum of the chief architect that the total cost was $96,000. I am very glad I have been able to set the item right.

Mr. EDWARDS. I presume this item will be reduced as well as the other item for veterinary hospital, $15,000.

Clarke city, Seven Islands, $4,000.

Mr. PUGSLEY. I have telegraphed to Mr. Taché, the resident engineer, asking for information with regard to this young man, Mr. Girard, and may have it tonight. I find that Mr. Lamoureux was the engineer in charge, and it would be his duty to be constantly in attendance on the work. It has been the practice for a number of years for the resident engineers to take on young men, many of them students who are putting themselves through college and who wish to earn money for that purpose during the summer months by acting as rodmen or chainmen. I would be glad to have the item passed and would undertake to supply the information as soon as I receive it.

Mr. AMES. It would hardly seem that this young man would come under that class as he received the equivalent of $4 a day, $2.50 a day salary and his board and travelling expenses.

Mr. PUGSLEY. It is not fair to count the expenses in his wages.

Mr. BLAIN. What amount has been expended at this point?

Mr. PUGSLEY. A little over $102,000 altogether.

Mr. BLAIN. And what is the population of this place?

Mr. PUGSLEY. I do not know the population, but an exceedingly large industry has been established there, one of the largest manufacturing industries in Canada. The North Shore Power, Railway and Navigation Company have expended upwards of $2,000,000 and make daily freight shipments of 1,000 tons of pulp. The Quebec Steam Whaling Company have their headquarters there, with an investment of $200,000, and there are various other industries, so that altogether the investment of capital at Clarke City would be in the vicinity of $3,000,000. Several hundred hands are employed in these various industries.

Mr. BARKER. I would appeal to the minister that it is not fair to hon. gentlemen on this side of the House who are endeavouring to criticise these items fairly and intelligently for him to ask to have items passed on his promise to bring down information asked for with reference to them. It is impossible for us to keep a check on the manner in which the minister carries out these promises so that we will know just what is being done.

Mr. PUGSLEY. I am quite sure the hon. member would not object if he understood that the information asked for in this case is with reference to the employment of a rodman or a chainman two years ago. The certificates of the engineer show that the work has been thoroughly well done. No good purpose can be served by delaying the passage of this item, as there will be ample opportunity at another time to criticise the employment of this young man.

Mr. BARKER. It is a frequent occurrence in this House for a minister to ask that an item be passed on the promise of giving at a future date information which he should have in his possession at the time. It is unbusinesslike and should not be allowed. If the minister says that the question has nothing to with the item let him say so, but if it has, then the item should not be passed until we get the information.

Mr. PUGSLEY. Surely I cannot be expected to have with me the names of all the young men who were employed on that work some years ago?

Mr. J. D. REID. There is no difficulty about finding out the name of this young man because his name, L. P. Girard, appears in the Auditor General's Report as having been paid for 92 days at $2.50 a day. The only other items in the Auditor General's Report in connection with this are for payments to Joseph Lamoureux, assistant engineer, and a payment to the North Shore Power Company for 500 feet of copper wire with 21 rings attaching pine plugs. This young man must have been inspecting that copper wire.

Mr. PUGSLEY. That was for making the survey.

Mr. J. D. REID. You paid this young man Girard for every day in the week including Sunday. Was he inspecting anything on Sunday? The very fact that this item appears in such a form in the Auditor General's Report convinces me there is something wrong. It would appear that this young man was sent down there on his summer holidays to do nothing but sit around and draw his pay. It is said he is the son of one of the members of this House, and the minister can very soon get the information asked for.

Mr. PUGSLEY. It has to be got from Chicoutimi.

Mr. J. D. REID. Let the item stand then. The information will never be tendered to the House unless it is asked for again.

Mr. PUGSLEY. It is so important you would not forget to ask.

Mr. J. D. REID. You paid this young man for Sundays as well as week days?

Mr. PUGSLEY. This young man was not paid out of this vote at all but out of the general vote for harbours and rivers and bridges, so that it is entirely possible he was engaged on the survey of the harbour at Clarke City. The practice in the past has been to pay inspectors for Sundays. Last session I said I would give directions that they should not be paid for Sundays and I did so and the practice now is not to pay for Sundays.

Mr. AMES. Mr. Lamoureux was the assistant engineer on the wharf and his name appears in this same item.

Mr. PUGSLEY. He was in charge of the survey too.

Mr. J. D. REID. Is it not the practice in the Public Works Department for the inspector to make out the pay-lists and send them to the department? That practice is followed in the Department of Railways and Canals, and if so, did Mr. Lamoureux put Mr. Girard on the list?

Mr. BARKER. The minister says he has telegraphed for the information and that he will get it in the course of the evening and when he gets it the item can be discussed.

Mr. PUGSLEY. Suppose we do not get a telegram to-night, will not the item be passed?

Mr. BARKER. We can consider that when the occasion arises.

Mr. PUGSLEY. We will let the item stand for a little while.

Doucet's Landing—pile wharf, $1,000.

Mr. BOYCE. I should like to know what is the necessity for this wharf. It appears that there was a vote for it of $5,000 in 1906-7, which was revoted in 1907-8. The main necessity for this vote seems to have been the exigencies of a by-election, and the consequent expenditure upon a wharf from which the public in the county of Nicolet get absolutely no benefit whatever. There is there already, I believe, a wharf owned by the Grand Trunk Railway Company, which, as the minister doubtless knows, is used by one small ferry, that is all; and yet when there comes a by-election and it is necessary in order to carry that election to practically buy the votes of the electorate, the Minister of Public Works does not hesitate to appropriate a further sum to carry on a work for which there appears to be absolutely no use. Let me remind the minister of the discussion which we had in this House only a few days ago, and of his pathetic expression of opinion as to the need of retrenchment in expenditure, and let me again emphasize what I then said, that the time had come, if he desired to appear before the people of Canada in an official capacity as being honest in his administration, when he should retrench where retrenchment was most desirable, and should not, in pursuance of a policy of pretended retrenchment, lavish public moneys foolishly and uselessly where they would not serve the public good. It is somewhat difficult to understand how the minister can persist in forcing through appropriations of this kind for works for which there appears to be absolutely no necessity, except the exigencies of the party to which he belongs, while he leaves the public service without the necessary buildings which the public service requires. I see by the Auditor General's Report of 1908, at page V—206, that $400 was paid for a right of way, that is, the approach to this wharf. Now, the minister will find in his department records of some correspondence that I had with him during the past two or three years with regard to payment for a right of way for a wharf he built at Echo bay in the district of West Algoma, and the minister there states that under no circumstances does the government pay for a right of way to a wharf.

Mr. PUGSLEY. Has the hon. gentleman that letter to which he refers?

Mr. BOYCE. I have not got the letter by me.

Mr. PUGSLEY. The hon. gentleman would surprise me very greatly if he could produce a letter like that.

Mr. BOYCE. That need not surprise the hon. gentleman. There are more surprising things than that which have been and will be brought to his attention. But what I want to emphasize is that, in my judgment and from the information I have, this wharf is not required in the public interest; that there is no shipping to use it; that the wharf there already is used only by a small ferry and answers all the purposes of the public, and that this expenditure is probably only for the purpose of assisting in the carrying of a by-election for this government.

Mr. LEMIEUX. I happen to know about this wharf, because for some months I was the member for the county of Nicolet, and it was during my tenure of that position that this wharf was initiated. My hon. friend is under a misapprehension as to that wharf not being needed for the traffic of the county of Nicolet, the tourist traffic and the lumber traffic. It is quite true, there is already one wharf at Doucet's landing or Ste. Angele in the county of Nicolet; but that wharf is the property of the Grand Trunk Railway Company, which is the proprietor of the line running from Athabaska, the terminus of which is at Doucet's landing. The trouble is that that wharf is in a very poor condition, and is not fit for the ferry service between Three Rivers and the south shore. About four years ago the Delaware and Hudson Railway Company became the owner of the Quebec and South Shore Railway. The terminus of that railway at that time was Pierreville in the county of Yamaska; but when the Delaware and Hudson Railway Company became the proprietors of that road, they started to extend the railway, and at the present time it is constructed as far as Ste. Philoméne, in the county of Lotbinière. I might say that this is one of the most interesting districts in the province of Quebec; it is very rich and there is quite a trade in prospect for it with the construction of that new railway. The ferry service between Three Rivers and Doucet's landing could hardly use the Grand Trunk wharf, because it was in very poor condition, and the government were obliged every year to do some dredging at its extremity, and the Grand Trunk Company would contribute nothing towards the dredging or towards repairing the wharf. The government will not force the Grand Trunk Railway to make any repairs, but since the Delaware and Hudson have bought the Quebec and Southern Railway, they have started quite a business with the lumbering district in the St. Maurice region. Doucet's landing is exactly opposite Three Rivers. This serves not only Doucet's landing but Gentilly and Becancourt, a very large parish between Doucet landing and Gentilly. There is quite a large firm from Berlin, United States, which intends building a large pulp mill at that place and

the timber is to come from the St .Maurice river where this company has acquired very extensive limits. That wharf will serve for the lumber trade which comes over the St. Maurice river and which will be sent to the United States by the Delaware and Hudson.

Mr. BOYCE. When did the necessity arise for this?

Mr. LEMIEUX. The St. Maurice company has been in business quite a number of years but there was then no Delaware and Hudson. The old wharf is the property of the Grand Trunk Railway and any repairs done there would be for the benefit of the company. The government are pledged every year to do some dredging at the extremity of the wharf, while the present wharf although much shorter than the old one which is not our property, is in deeper water.

Mr. AMES. Will this appropriation finish that work?

Mr. PUGSLEY. Yes.

Mr. AMES. Will the Postmaster General tell us that we shall not have that wharf up again, once every four years?

Mr. LEMIEUX. I do not suppose you shall hear of it again.

Mr. BOYCE. How much has been spent?

Mr. PUGSLEY. The original contract was $4,911.75 and the total expenditure $7,500. My hon. friend from West Algoma (Mr. Boyce) has made the statement that I wrote him that under no circumstances would my department pay for the right of way to a public wharf. In view of the fact that this is a vote for the right of way to this wharf and that I have asked for votes to pay for the rights of way to other wharfs, I would ask my hon. friend to produce the letted to which he refers. If he has any letter from me bearing on the subject of wharfs at West Algoma, I think he will find, if he will read over again, that it contains no such statement as the one he attributes to me.

Mr. BOYCE. The hon. gentleman must not put words into my mouth which I did not say. No matter how exalted his position, he has no greater rights in this House than any other member, and I very strongly resent the attitude of the minister in endeavouring to thrust down my throat statements as having been made by me in this House which I did not make. I stated that I had communicated with his department and had received a communication from his department to the effect I mentioned. That is a communication upon which I think I can without difficulty lay my hands. I am quite willing to refer the hon. minister to that correspondence, but do not want him to endeavour to trap me into an apparent deviation from the actual line of truth by putting into my mouth the statement that I had correspondence with him and that he had written me such a letter.

Mr. PUGSLEY. 'Hansard' will show tomorrow whether the hon. gentleman made the statement or not. I certainly understood him to say that he had received a communication from me. I think he used the expression 'the minister,' but possibly not, and that the minister said that under no circumstances would the department pay for the right of way to a wharf. If he did not say that, that puts a different phase on the matter altogether. I wish to say that the department does, in cases where it is necessary, make a practice of paying for the right of way to public wharfs. It is necessary to do that in order to enable the public to have that enjoyment of a public wharf which parliament intended they should have.

Mr. BOYCE. Is that the principle, that the right of way shall be paid for?

Mr. PUGSLEY. Certainly, where it is necessary for the public enjoyment.

Mr. BOYCE. Where a wharf is built, the approach, as a right of way, shall be paid by the government?

Mr. PUGSLEY. Certainly.

Mr. BOYCE. The hon. minister will find that his words are at variance with the correspondence from his department.

Mr. ARMSTRONG. In the riding I represent there is a wharf at Grand Bay, and the entrance, which is not owned by the department, is the cause of considerable trouble. I would like to know whether the minister intends taking any action to secure the right of way?

Mr. PUGSLEY. We have had considerable trouble with regard to that property, and are taking the necessary steps to expropriate with the view of vesting it in the Crown.

Douglastown pier—addition, $2,000.

Mr. AMES. What is the estimate of the total cost when finally completed?

Mr. PUGSLEY. Up to the 31st of March last, $22,528.52 was spent and we are requiring $2,000 more. I think that will complete the work.

Mr. AMES. I do not think so.

Mr. PUGSLEY. Yes, it will do all we purpose doing at the present.

Mr. AMES. Then you will have something that is of no value.

Mr. PUGSLEY. It is said this will enable steamers to stop safely at the wharf.

Mr. AMES. It will not enable anybody to get ashore.

Mr. PUGSLEY. It is an isolated pier, of course.

Mr. AMES. Perhaps the minister will allow me to refresh his memory a little about this work. Douglastown is a very small point near Gaspé. There is practically no shipping there, though occasionally a steamer discharges a solitary passenger. The government has built a pier nearly one-third of a mile from the shore that is gradually, year by year with the expenditure of a few thousand dollars, creeping its way across the bay to the shore. It is already built some distance partly under water and partly above water. I suppose it is hoped that in the course of time, scores of years hence, perhaps, the land will be reached and the people will be able to go ashore without having to reship in a small boat. If the minister will let us know how much it is going to cost to actually complete this operation, perhaps the money could be voted, and we would not have this hardy annual coming up every session.

Mr. LEMIEUX. My hon. friend (Mr. Ames) is at bay, if I may so speak, about this matter——

Mr. AMES. Does the Postmaster General (Mr. Lemieux) mean 'at sea?'

Mr. LEMIEUX. No at bay, because this is at the entrance to the Bay of Gaspé, one of the most exposed points of the whole coast of Gaspé. When the hon. gentleman says that Douglastown is a small settlement, he is at sea because it is one of the mose respectable settlements on the coast of Gaspé in point of numbers.

Mr. AMES. Six hundred people all told.

Mr. LEMIEUX. Well, that is quite a respectable settlement. Douglastown was settled more than a century ago by the United Empire loyalists, being one of the few places in Gaspé settled by the loyalists. The people there are fishermen. This is one of the points which are most exposed, and my hon. friend has heard of the terrible disaster which took place there some years ago. The fishermen at Douglastown and Point Peter, the next settlement, fish on what are called the Orphan's banks off New Brunswick. They leave on Monday morning and come back on Friday evening the principal season being the fall of the year. The only protection they have in their harbour is this block; it is not a wharf, but a breakwater. It has rendered valuable service to the fishermen at that point. The hon. gentleman is also unjust —unwittingly, I hope— when he says that Douglastown will always be a small place. He has travelled in that country and he knows that the railway is under construction. By the end of next summer the line—the Atlantic, Quebec, and Western Railway Company's line—will have reached Douglastown and the Bay of Gaspé. The terminus will not be far from Douglastown, and that place will become a very important settlement. There is already quite a trade at that point.

Mr. AMES. What I want to know from the Minister of Public Works is how long it is going to take and what it is going to cost to have this Douglastown pier connected with the mainland, as, I suppose, is expected to be done?

Mr. PUGSLEY. My department has no intention, and I have no intention, of connecting that pier with the shore. For reasons which the Postmaster General (Mr. Lemieux) has given, the pier is of very great service without being so connected. It is a breakwater and affords shelter for fishermen and others which entirely justifies its construction. Not having any present intention of connecting it with the shore, I have not prepared an estimate of the cost of doing so. It will be time enough to prepare such an estimate when we contemplate doing the work.

Mr. AMES. Is it not a fact that at present it is a danger to navigation with a considerable portion of it under water?

Mr. PUGSLEY. I think not. Every breakwater must have a portion of it under water.

Father point—wharf repairs, $1,000.

Mr. AMES. I am sorry that, in this case, I cannot agree with the minister in his cutting down of his estimates. It is understood that some money was to be spent at Father Point, but, evidently, this is abandoned, and only $1,000 asked for to make small repairs. I am one of those who believe that Father Point should be developed so that ocean steamers passing up the gulf could stop there and discharge mails. There is not a deep water wharf between Gaspé and Quebec, and I do not know any place where steamers could actually stop close by the shore except at Father Point. I hope this will be taken into consideration, and that, when the finances of the country permit it, the work will be proceeded with.

Mr. LEMIEUX. It is true that the best point for landing passengers from ocean steamers would be Father Point, but for some reason, probably political, forty or fifty years ago, Rimouski was selected as the landing place. There is a splendid wharf there nearly a mile long. In order

to divert the landing place from Rimouski to Father Point, a large expenditure will be necessary, because you would have to extend the Intercolonial Railway at a cost of something like $200,000 to afford the facilities which we now have at Rimouski.

Mr. PUGSLEY. The hon. member (Mr. Ames) is aware that we have dropped an amount from the estimates and are only asking for $1,000 for Father Point. The Postmaster General (Mr. Lemieux) I think, has in mind only a part of the cost of the works. The cost is estimated at a minimum of $250,000, and it may run to $750,000 before the work is finished. I regretted that I was obliged to drop the amount, but we had to do it in pursuance with our policy of retrenchment.

Garthby—wharf on Lake Aylmer, $500.

Mr. PUGSLEY. This is to construct a roof over the head block of the landing pier.

Mr. BLAIN. Would the minister give us some information about this work?

Mr. PUGSLEY. A landing pier has been built at Garthby, on Lake Aylmer, the total expenditure, including the amount now asked for, being $5,178.30. This is to put on a roof for the shelter of the people who come to take the steamer.

Mr. BLAIN. Is there any revenue from that wharf?

Mr. PUGSLEY. I am not sure whether it has been transferred to the Marine Department or not.

Mr. BLAIN. What is the policy of the government with respect to transferring these wharfs? Are they transferred as soon as completed?

Mr. PUGSLEY. Not always. The policy is, generally speaking, to make transfers to the Marine Department, but in quite a number of cases, ever since the government has been building wharfs, there has been an objection to transferring the wharfs to the Marine Department, for that would mean that tolls would be collected from the farmers and others, who would find it burdensome. Owing to the hardship involved and the pressure brought to bear, it has been urged on the department to delay making the transfer. That is true of all governments, ever since confederation. I know some cases where wharfs were built twenty years ago and have never been transferred to the Marine Department. I may say that the Minister of Marine and Fisheries and myself have been conferring upon the subject, and endeavouring to arrive at some rule for the use of these wharfs at which small business is done. We think it would be well to take power to make an arrangement with the steamboat companies which come to the wharfs that they should pay a small wharfage sufficient to keep the wharfs in repair, so that the department will be saved the necessity of exacting tolls from farmers and others in respect to top wharfage. The House may be asked to consider a Bill which will give power to the Department of Marine to enter into arrangements of that character. But it is only after the wharfs are transferred that wharfage can be collected.

Mr. BLAIN. What is the population?

Mr. PUGSLEY. Between 300 and 400.

Mr. AMES. Can the minister tell us whether there is any steamer on this lake doing business?

Mr. PUGSLEY. Yes.

Mr. AMES. For how much of the year does the steam ferry service run?

Mr. PUGSLEY. I know there is a ferry running between Stratford and Garthby, I presume during the ordinary season.

Mr. AMES. It is built principally for summer residents, is it not?

Mr. LEMIEUX. Lake Aylmer is frequented by a large number of tourists.

Mr. BLAIN. Before this work was commenced, did the minister send his engineer to report upon the necessity of the wharf?

Mr. PUGSLEY. It was undertaken before I became minister. But there was a report from the engineer on the 15th of January, 1907.

Gaspé—deep water wharf, $10,000.

Mr. AMES. How much does the minister intend to expend at the terminus of the new railroad at Gaspé?

Mr. PUGSLEY. I cannot give, with any degree of accuracy, an estimate of the cost. We propose to make a careful examination, and then see how much it will be necessary to build at first in order to give the needed accommodation to the railway. Just how much would be expended, evidently would depend upon the extent of shipping and the extent of accommodation which will be required.

Mr. LEMIEUX. A few days ago I met the engineer of the railroad company. He had prepared a plan and submitted it to the Department of Public Works, for a wharf which was going to be the terminus of the railway. According to that plan his estimate of the cost would be something like $75,000 to $80,000. I told the engineer that the railway company need not expect that the government would spend so large an amount of money for the terminus of the railway. I understand he has since had an interview with the engineer of the Public Works Department,

and they have so far modified the plan as to reduce the cost of the proposed wharf by something like $35,000. The wharf will be at the terminus of the railway company. Ths rails will be laid within 15 or 16 months. The railway has reached more than half way now, and next summer will reach Pabos. In 18 or 19 months the whole line should be in operation, and I can assure my hon. friend that they are building a splendid line. They intend to have steamers plying between England and Canada at Gaspé. As my hon. friend knows, the harbour of Gaspé is one of the finest in the Dominion. I have the authority of Commander Wakeham to say that the harbour is open for navigation for at least nine months of the year, some say ten months, and in some years during the whole year. When this railway is built and proper facilities are given to that steamship company, Gaspé will afford the shortest route between Canada and Europe.

Mr. AMES. There is no question as to the importance of having proper terminal facilities when the railroad reaches Gaspé. But I would like to know what is the government's policy now in connection with the terminus of a railroad line. We have just had it enunciated that at Doucet's landing it was necessary to build a new wharf to be occupied by a railway company. Now we are starting with a new proposition. Is the government going to build a wharf that this railroad will occupy.

Mr LEMIEUX. Not exclusively.

Mr. AMES. Are they going to make an arrangement between the railroad and the government whereby they will divide the cost?

Mr. LEMIEUX. That would be a proper thing.

Mr. AMES. I would like to ascertain the policy of the government. Here we have, so to speak, a new proposition, with no entangling alliances and no vested rights. A railroad is coming down to the sea-board, and how is the cost of the terminal facilities to be borne? Is the government to pay for that, or will they make an arrangement with the railway company to pay for it mutually? If the wharf is built with public money, will anybody beside the railroad have use of it?

Mr. PUGSLEY. There is no hard and fast rule with regard to building wharfs for the use of railways. Of course, this wharf being built by the government, owned and controlled by the government, will be open to the use of the public equally with the railroad company. The same facilities will be given to whoever wishes to use the wharf. Speaking generally, a great deal depends upon circumstances. In the case of the Grand Trunk and the Canadian Pacific Railway, we are doing the dredging work for their new harbours at Tiffin and Victoria, while the railway companies are building the wharfs and other terminal facilities. We do the dredging, yet we feel that these companies, having now been in operation a good many years, are well able to build the wharfs themselves. In the case of the Grand Trunk Pacific at Fort William, which we regard as a part of the great transportation system of the country, we are doing the dredging and we are also building certain revetement walls which will be used as a part of the system of wharfage and for an essential part of the terminal facilities. There we will control in the interests of the public the wharfs and will have the right to say what tolls will be charged, and to give equal privileges to all vessels which desire to use those facilities. We think in the public interest we should do this. In the city of St. John, up to quite recently, the government has only done the dredging. The city of St. John and the Canadian Pacific Railway, but principally the city of St. John, has provided the wharfage facilities. The government is now building a wharf there which will be used in connection with the Canadian Pacific Railway. In many smaller towns we are building wharfs which are used in connection with railroads, but which are built at the government expense. At the city of Quebec we are building a new wharf upon the St. Lawrence and the St. Charles rivers in connection with the Canadian Pacific Railway, but the government is building that wharf at its own expense and will, subject possibly to an arrangement with the Quebec Harbour Commissioners, control the wharf tolls and the access of vessels to it in the public interest, so that there is no hard and fast rule, as I have said. In the case of Levis we have just bought a property with the approval of parliament for the purpose of constructing on the Carriere-Lane property a deep water wharf which will probably be used by all the railways centreing at Levis, the Delaware and Hudson, the Grand Trunk, the Intercolonial Railway and no doubt in a short time the Grand Trunk Pacific. We must be guided largely by circumstances, and I do not think it would be possible to lay down a hard and fast rule which would apply to all cases.

Mr. AMES. As we are always trying to do something in a better way than it has been done before, would not this be a good opportunity to test the best way in which there could be co-operation between the government and the railway company in the building of a wharf?

Mr. GEO. GORDON. I have a lettter from the Board of Trade of New Liskeard asking me if anything has been done with regard to the building of a wharf in that town. It seems that the Temiskaming and Northern Ontario Railway have agreed to build a track from the main line down to the bay as soon as this wharf is built.

Mr. PUGSLEY. There is no amount in the estimates for a wharf at New Liskeard and therefore I am not able to give my hon. friend any assurance that a wharf will be built during the present year; but I would suggest to my hon. friend whether, in view of the fact that we are retrenching in connection with the building of wharfs as well as other public works, the Ontario government, as owners of the Temiskaming and Northern Ontario Railway, which is hauling in enormous quantities of freight, vast numbers of passengers, and is receiving enormous revenues as royalties from the development of that country, should not build these wharfs needed there for the purpose of giving terminal facilities, in connection with their railroad. Instead of coming to this government and asking us to give these terminal facilities, let them do what this government is doing in connection with the Intercolonial Railway. It is building terminal facilities, building wharfs, dredging harbours and giving all the accommodation which is needed fo the Intercolonial Railway at the various harbours and various lakes touched by the Intercolonial Railway system. I recognize that in that northern country, upon Lake Temiskaming, the Montreal river and the Gowganda country, where thousands of people are going, the people should address themselves at this time to the Ontario government and get them to provide terminal facilities in connection with this railroad which is doing such an immense business as a result of the marvellous development taking place in that country.

Mr. GEO. GORDON. Am I to understand that great sums of money should be spent by the federal government in places where comparatively little business is done, and that in Ontario when places require wharfs if they are doing a large business, the minister would like the people to put up their own money instead of federal money. I do not think it is fair or right.

Mr. PUGSLEY. The province of Ontario is benefiting enormously in a financial way by this development.

Mr. GEO. GORDON. Does not the Quebec government benefit from the development there?

Mr. PUGSLEY. At all events there is nothing in the estimates for it.

Quebec harbours and rivers, and bridges—general repairs and improvements, $48,500.

Mr. PUGSLEY. This is the general vote.

Mr. PRICE. Will the minister give us some information about this?

Mr. PUGSLEY. This is to make repairs to the various wharfs in the province of Quebec and improvements to rivers and harbours in respect of which there is no specific vote.

Mr. PRICE. How about bridges?

Mr. PUGSLEY. That expression is used generally all over the country but it applies more particularly, in fact entirely, to the repairs of bridges that would be called interprovincial bridges. There are several bridges across the Ottawa north of here. My deputy informs me that there is one bridge in Ontario, in Haldimand county, which was built by the government many years ago which we keep in repair.

Mr. AMES. Does the minister affirm that the government have built no bridges in Quebec?

Mr. PUGSLEY. Not that I am aware of.

Mr. AMES. Would he ask his engineer to examine the bridge between St. Francois de Salle and Terrebonne? The government spent $20,000 in building concrete piers in a rapid running river upon which a bridge has been built.

Mr. PUGSLEY. Would that not be a case where the municipality utilized the wharf as a foundation? The government did not build the bridge.

Mr. AMES. The government built all the piers.

Lake St. Francis (Beauce)—wharfs, $5,000.

Mr. PRICE. Is my information correct that there is no navigation on Lake St. Francis except for pleasure boats?

Mr. PUGSLEY. I am informed that there is traffic in taking farm produce to market, but the principal passenger travel is in summer tourists.

Mr. PRICE. Considering the small amount of navigation on this lake it seems to me that an expenditure of $8,000 for a wharf is a little too stiff.

Mr. BELAND. It is for two wharfs, one at the upper end and one at the lower end of the lake. Lake St. Francis is twenty-one miles long and is situated in the counties of Beauce, Megantic and Wolfe. There are three boats plying on the lake.

Mr. PRICE. What kind?

Mr. BELAND. One steamer and two gasolene.

Mr. PRICE. Large or small?

Mr. BELAND. The steamer is large enough to carry the produce of the farmers

in the spring. The upper end of the lake is seven miles from a railway station, while the lower end is only one mile distant from the railway, and as the roads from the upper end to the lower end are impassable in the spring it is necessary to have crafts on the lake to carry the dairy products to where they can be transferred to the railway. There is an extensive lumber trade on Lake St. Francis. These wharfs have been petitioned for by every farmer in the vicinity.

Mr. GEORGE GORDON. The lumber trade on that lake is so extensive that one steamer and two gasolenes can accommodate it.

Mr. BELAND. At present the steamers have to anchor in the lake as there is no wharf, and of course that is highly inconvenient. There is no strong current on the lake and the logs are towed by these small boats.

Mr. GEORGE GORDON. Well, just previous to the last election in my district, my opponent in the Liberal interest promised that a wharf would be built at Liskeard, which is a town of 3,000 inhabitants. There is a dredge doing considerable work there and that work is absolutely useless until a wharf is constructed. Also, previous to the election my opponent promised that a wharf would be built at the small town of Cache Bay where there is quite an extensive lumbering industry, but there is no appropriation in the estimates for it this year. The Minister of Public Works has laid down the principle tonight that in other provinces small places where little business is done are to have wharfs, but when I make an appeal on behalf of certain places in the province of Ontario he advises me to ask the Ontario government for help. That is neither right nor fair. I am young in this game, as some one called it to-day, but if that is the political game I don't think much of it.

Mr. PUGSLEY. I laid down the principle which has influenced the Grand Trunk Railway and other railway companies to give terminal facilities in connection with their railway without appealing to the government for every little wharf. Here is the Temiskaming and Northern Ontario Railway touching the Montreal river and Lake Temiskaming at different points, and expecting to reach Lake Gowganda, and I do not see why the Ontario government or these commissioners ought not to build wharfs to accommodate their traffic as other railways do.

Mr. GEORGE TAYLOR. Why didn't the Grand Trunk do that at Lévis?

Mr. PUGSLEY. The Grand Trunk has done it at various places, and the Richelieu and Ontario Navigation Company have wharfs up and down the St. Lawrence. The hon. gentleman goes on the principle that notwithstanding all that the Temiskaming and Northern Ontario Railway is earning it should do absolutely nothing for the accommodation of the people to make connection between its railway and the water, but that it should come to this government, at a time when our revenues are not buoyant, and ask us to assist that railway which is amply able to give to the people the requisite accommodation. However, although I would be glad to have an appropriation in the estimates for a wharf at New Liskeard this year I am obliged to defer it for the present.

Mr. GEORGE GORDON. The minister knows that the Temiskaming and Northern Ontario Railway is about the only road in Canada that has not been heavily subsidized by the Dominion government. Not only has the federal government not contributed one cent to this road, but the minister now goes further and says that the railways should build, with the moneys of the province of Ontario, wharfs, which in other provinces are built by this government for railways that have been heavily subsidized. It is unfair and unjust to discriminate against Ontario in this way.

Lake St. John—dredging, $5,000.

Mr. PUGSLEY. There is a government dredge there and this is to pay the expense.

Mr. AMES. This is to keep the dredge in operation during the summer?

Mr. PUGSLEY. Yes.

Lake St. John—piers, repairs, &c., $4,000.

Mr. AMES. Are all the office charges of the engineer at Chicoutimi charged against this vote?

Mr. PUGSLEY. Any services performed by the engineers or inspectors in connection with these different wharfs would be payable out of this vote.

Mr. AMES. That is not my point. My point is whether the office staff expenses and all the charges of the local engineer at Chicoutimi are not charged to the Lake St. John wharfs?

Mr. PUGSLEY. No, I think not. They would be paid out of the vote for the outside engineering staff.

Mr. AMES. As a matter of book-keeping it is very confusing. If the hon. gentleman will consult the Auditor General's Report he will find that these are charged to the Lake St. John wharfs, although Lake St. John is fifty or sixty miles from where the engineer lives.

Magadalen Islands, break-waters and piers, $10,000.

Mr. PUGSLEY. This is for a number of improvements.

Mr. AMES. Last year the minister told us that the $12,000 which was then voted would absolutely complete the work.

Mr. PUGSLEY. The chief engineer, who was present last year, told me that that amount would complete the work which was then under construction or contemplated, but I am not quite sure whether further expenditure would not be required on new work. As there are a number of piers on the Magdalen islands there is work required there every year.

Mr. AMES. What work is expected this year?

Mr. PUGSLEY. This is to complete the works begun at Point Bass, Grindstone and Amherst piers, Basin Point—quite a number have to be constructed with a view to affording shelter and better harbour accommodation.

Mistook wharf, lake St. John—repairs, $1,000.

Mr. AMES. I would like the minister to see if this information is not correct in respect to this work. Mistook is a little place on Lake St. John, a mile and a half from the main road. There is not a house in the locality, and the money spent last year, I am informed, was spent in building a road from the wharf to the main road, about a mile and a half through the woods. The question arises whether we have to build for the people of Saguenay county not only their wharfs, but their roads to connect the wharfs with the main arteries of commerce.

Mr. PUGSLEY. This wharf was built in 1903-4. I do not know what representations were made or the exact location of the wharf; but I may say that it has been very badly damaged by the northwest storms which swept over Lake St. John during the unusually high spring floods of 1908. Whatever criticism there may have been for erecting the wharf in the first place, it being there and being damaged, it would hardly be right to allow it to be destroyed completely, and we are asking for this small sum for the purpose of repairing it.

Mr. AMES. Will the minister give us his assurance that this money will be spent on the wharf, and will not be used in improving the roads?

Mr. PUGSLEY. Yes, certainly.

Rimouski wharf—sheathing west side, $8,000.

Mr. AMES. There is a great deal of public work going on at Rimouski which I think is open to criticism. There is an extremely large bill every year for dredging in the neighbourhood of this wharf. I am quite familiar with the place, and it seems to me that the government are dredging to no purpose, but are simply wasting the money of the country at that point. The dredging channel is through soft, shifting sand, and the dredges are working on a line running north and south, while the current sweeps east and west, and the current of the river sweeps across the bay in the same direction, so that the sand is going back again, almost as fast as it is dug out. I think money should be spent in dredging at Rimouski, but not in the way most of it is being spent.

Mr. LEMIEUX. As Postmaster General, I am somewhat familiar with the condition of the Rimouski wharf. When the question of the repairs to the wharf at Father Point came up, I stated that forty or fifty years ago, when the landing pier for Atlantic passengers was selected, it was decided that it should be at Father Point and not at Rimouski. However, the government of the day selected Rimouski, and the wharf there is about a mile long. The river at Rimouski. as my hon. friend says, empties not very far from that wharf, and consequently drives the sand along the wharf. When two years ago we purchased a new tender for the service, the tender was for three or four months unable to reach Rimouski wharf, and that is how I happen to know about the dredging. Since that time some good work has been done by the dredges of the Department of Public Works, and the channel has been widened and deepened. I do not know how the government can stop dredging every two or three years at that wharf for the very reason given by my hon. friend a moment ago. The wharf was built too close to the river Rimouski and there is shifting sand at that point. Not only will dredging have to be continued near that long wharf, but there must be some dredging done in the river itself, because there are at the entrance to the river some very considerable lumbering establishments. I think that the hon. member for Quebec West (Mr. Price) is largely interested in that district. The Prices have been interested there for years, and some dredging is needed for the lumber trade at the entrance to the river. Since ten or fifteen years that trade has developed considerably. It is the main trade of the district, and I do not see how the government can avoid spending some money on dredging at that point. But I admit it is very difficult on account of the sand which accumulates and is carried away by the river.

Mr. AMES. Undoubtedly you continue the dredging which is being done by the General Construction Company.

Mr. PUGSLEY. This is dredging for the accommodation of the mail steamers.

Last year we had our own dredge there and we purpose continuing the dredging this year. The present vote is for the purpose of building and driving a row of piles around the wharf so as to enable dredging to be done close up to the wharf for the accommodation of the mail steamers.

Rivière Bonaventure training pier, $9,000.

Mr. AMES. This is an extremely absurd expenditure. There are many other ways in which we could invest that money better than by building a wharf at the Bonaventure river which cannot be reached by any steamer. There is not water enough at the far end, it is only used by four or five fishing boats, and the cost is entirely out of proportion to any benefit derived from it.

Mr. TAYLOR. Why is it called a training pier?

Mr. PUGSLEY. Because it gives direction to the current so as to preserve navigation.

Mr. AMES. It cannot be reached by any steamer. The farmers do not use it for taking out material and the railway runs right through the town. We have already spent $24,000, and are now going to spend $9,000 more on this useless wharf.

Mr. PUGSLEY. This is to pay for the completion of the work. I must confess that I am not sufficiently familiar with the locality to give very accurate information as to the necessity for the work. I find however, that the rivière Bonaventure was represented to the department as one of the largest streams in the Baie des Chaleurs district and that the harbour at the mouth is the most important lumbering point in Bonaventure county. The channel which leads to the inner harbour was being constantly filled in with sand and the building of this training pier will give a certain direction to the current which will scour out the channel and prevent the necessity of expensive dredging from year to year.

Mr. GEO. TAYLOR. If there is no shipping what is the use of it?

Mr. PUGSLEY. There is very considerable shipping done.

Mr. AMES. If the minister investigates, he will find that it is a very much less important than a good many other items he struck out of his estimates.

Mr. PUGSLEY. This was under contract and I have to pay for it.

River Richelieu improvements, $60,000.

Mr. AMES. We shall want very full details in connection with that expenditure.

Mr. PUGSLEY. The matter was brought to my notice shortly after I became minister and I found it had been under consideration a considerable time before that. It appears that in the season of floods the Richelieu river overflows its banks with the result that about 30,000 acres of what would otherwise be most valuable farming land is annually flooded. The hon. gentleman can see that land situated as this is in a well settled district would be of very considerable value if it could be saved from this great damage occurring yearly. The object sought to be obtained by the improvements to the river is to give such vent to it during the season of flooding that this overflow will be prevented. Upon the recommendation of the engineers of the department the government have asked parliament for the authority to enter upon this work. As a result we have had the plans prepared, and we are engaged in doing what may be called dredging work—removing boulders and rocks from the bed of the river at the point where the obstruction exists. We propose following that up with the construction of a movable dam in the river, and we believe that the effect will be to somewhat improve the navigation of the river for some distance above the obstruction, and also to somewhat improve the navigation of the Chambly canal, and be of enormous benefit to the people living on either side of the Richelieu river. The cost is estimated at $185,000. We are asking this year for $60,000. We did a good deal of work last year. We first ask for tenders, but when these came in we thought they were too high. After careful consideration and consultation between the resident engineer, Mr. Michaud, who is a very competent man, a man of experience and of excellent judgment, and the chief engineer of the department, it was decided that we could get the work done cheaper by providing a dredge and doing the work with our own plant. I am happy to say that we have saved a considerable amount of money, because we get the work done more cheaply than if we had accepted the owest tender. I believe that the contracors felt that there was considerable risk in connection with the piers of the bridge, and they did not tender at the price that we can do the work for. The whole counry is interested in this work, and the people there believe that the results we hope or will be obtained, and their opinion is ortified by the opinion of engineering exerts.

Mr. JOS. DEMERS (St. John and Iberville). (Translation.) Mr. Chairman, as this vote interests particularly my county, I desire to say a few words on this important subject. I am somewhat surprised to see that we have yet to discuss this item to-night, an item which is not new to this House. During the years 1907 and 1908, this parliament voted different sums of money to improve the situation of the farmers of

that district. Last year the honourable Minister of Public Works has given very plain statements on this subject. However, as there are in the House this year many new members who might take an interest in this question, I will take the liberty to add a few explanations to those already given by the hon. minister.

For a great many years, that is to say, since the construction of the Chambly canal, the farmers of the counties of St. John, Missisquoi, Iberville, have complained to the federal government about the grievous situation in which they were put by a construction of this canal. The lands in the vicinity are very low and their irrigation is naturally very difficult. A very small obstruction will sometimes prevent the flowing of the waters and will cause very disastrous floods. The natural difficulties of the irrigation of these lands have also been increased by the construction of the Chambly canal which had the effect of narrowing the width of the river by 200 to 300 feet. Since the deepening of this canal other obstructions have been added to those already existing: First, the construction of the two bridges, one by the Central Vermont and the other by the Canadian Pacific railway, two companies incorporated by this parliament. Secondly built on each side of the river, with the authorization of the federal parliament; important fisheries were established, and this has necessitated the construction of new weirs which prevented the flowing of the water, so that we have opposite St. John a most complete dam.

For a very long time, as I have said, the farmers of the district have sent petitions signed by every inhabitant of the vicinity. Numerous deputations were sent to Ottawa year after year at large sacrifices. These representations were all unsuccessful up to 1900, when the federal government gave instructions to competent engineers to make a survey of the flooded lands and an estimate of the damages. These engineers were also asked to find the cause of the floods, and to indicate the means of stopping them.

Upon their report the government placed an item of $5,000 in the estimates to begin the works. But this sum being evidently too small, no money was expended. In 1907 another vote was granted, the government admitting thus, and for the second time, their responsibility in the matter. The vote at that time was $10,000. When the government was about to spend that money came another objection. We had to submit the question to the International Commission on Waterways, because the proposed works might affect the waters of Lake Champlain. The commission decided on the 24th of October, 1907, that this work could go on without any prejudice to the rights of the United States on Lake Champlain.

Following this decision the government placed in the estimates of last year for the preliminary work to be done, an item of $30,000, out of which $18,000 have been spent up to the present. This year, besides the amount voted last year, the additional sum of $30,000 is asked to continue the deepening of the River Richelieu opposite St. John, on a length of 4,000 feet, a width of 700 feet and an average depth of 5 feet. As this dredging will hinder the navigation because it will open a wider passage for the waters, it will be necessary to build a movable dam that will be opened and closed whenever needed. For instance, in the spring, during the month of April, the dam might be opened so as to allow a rapid effusion of the water, but it will be closed gradually after that so as to have always in the river, for the needs of the navigation, during the low water season, more water than we have presently in that season.

These works will not only stop the floods, but will save the government the expenditure of $75,000 or $100,000, a sum which the dredging of the River Richelieu between St. John and Rouse's Point to supply the needs of the navigation would have come to. Besides that, these works will save to the government considerable expenditure which we would be obliged to make for the dredging of the Chambly canal, which is not deep enough for the needs of navigation because you will have then in the canal an additional foot and a half of water during the low waters. I take those figures from the calculations made by the engineers themselves.

The lands flooded are of considerable extent. These engineers estimate that there are 25,000 acres completely lost for agriculture. These lands are of first quality; they are alluvial soil of the best kind and of the most fertile that there are in the country. I think I am not mistaken when saying that the farmers of that district are losing annually and since a very long time more than $125,000 by reason of the obstacles created by the different railway companies and other causes of which I have spoken a few minutes ago. The government three or four years ago, set itself to perform an act of justice which, I hope, it will have no difficulty in completing.

Mr. AMES. (Translation.) I will ask the honourable member, who has so well explained the situation, if it is not to his knowledge that a plan has been submitted to the government for the construction of a dam at the mouth of Lake Champlain, in order to use the lake as a reservoir instead of the present plan.

Mr. DEMERS. (Translation.) I have never heard of it.

Mr. AMES. (Translation.) I had a talk the other day with an engineer who seemed to understand the question thoroughly; he told me that in his opinion this was the best solution. I desire simply to ask the Minister of Public Works to take the suggestion into consideration.

I may state for the benefit of the minister that in conversation recently with an eminent engineer who is familiar with all the circumstances, he suggested that it would be possible to erect a dam near Lake Champlain so that the lake could be used as a reservoir, somewhat after the principle of the Assouan dam in Egypt, and the water could be permitted to go out more regularly throughout the season.

Mr. PUGSLEY. I would approach the construction of a dam at Lake Champlain with great hesitation, because of the great value of the property which would be flooded upon the shores of the lake by the erection of a dam. The damages would be simply enormous; and it would have to be an international dam also.

Mr. AMES. I did not mean a dam that would be high enough to flood the waters, but a dam that would prevent the lake from reaching the extreme low level in the summer, making of it a reservoir.

Mr. PUGSLEY. All along the shores of Lake Champlain the water is high in the spring, but it recedes in summer, and people cultivate the land upon the shores of the lake. But the moment you hold the water back to a high level, you flood all the land in the dry season when it is capable of being put under cultivation. We had a little experience of that in Lake Nipissing. We thought we could hold the water back at high level, and we found enormous claims coming in, even there; and we have been obliged to alter the plan and give vent to the water so as not to retain it at the high level.

Mr. AMES. In this case the root of the evil is a little further back than appears on the surface. In the early days when the Adirondacks and the Green Mountains were wooded, and before all the timber was off, the water came down gradually into the lake and went out gradually. Now that the timber has been cut off the result is heavy spring freshets that raise the lake and cause a large efflux of water.

Mr. DEMERS. If we were to construct a dam near Rouses Point, what would happen to the navigation between St. John and Rouses Point?

Mr. AMES. The idea this engineer expressed was that if a dam was constructed near Rouse's Point the movement of the water flowing out could be regulated during the summer so that the extreme low level would not be reached.

Some resolutions reported.

INSURANCE ACT—AMENDMENT.

Mr. FIELDING moved the second reading of Bill (No. 97) respecting insurance. He said: It was intimated when I introduced the Bill that we should send it quickly to the Committee on Banking and Commerce. I think the general disposition of the House is so to send it, with the understanding that no hon. member is committed to it in any respect, but that every one will have full opportunity for discussing it in committee.

Motion agreed to, and Bill read the second time.

On motion of Mr. Fielding, House adjourned at 11.05 p.m.

HOUSE OF COMMONS.

MONDAY, March 15, 1909.

The SPEAKER took the Chair at Three o'clock.

PRIVATE BILLS.

WESTERN CANADIAN LIFE ASSURANCE COMPANY.

House in committee on Bill (No. 37) to incorporate the Western Canadian Life Assurance Company—Mr. Knowles.

On section 6—policy-holders and directors.

Mr. J. A. CURRIE. Is this in accordance with the Insurance Act ?

Mr. FIELDING. A clause in this Bill provides that if in any respect its provisions are found to be at variance with those of the Insurance Act as finally passed, the general Act will prevail.

On section 11—Notice of annual meeting.

Mr. SPROULE. I think it would be well for us to fix a certain date before which the annual meeting should take place, so that the company could send in its returns to the government at the proper time. We have such a provision in all Railway Bills, and it seems to me we ought to have a similar one in Insurance Bills.

Mr. FIELDING. The returns must be made at certain dates, and the presumption is that the company will hold the annual meeting early enough to enable that to be done.

On section 15—Distribution of profits.

Mr. SPROULE. This Bill is a little more definite in regard to what is meant by pro-

fits than another Bill which is before the House. They are here stated to be net profits. I think that in all Bills of this kind, it should be made clear that the policyholder shall be entitled to share in all the profits of the company instead of a portion of the profits; because the insurance companies resort to so many devices to put away their money, which is really earned from the policy-holders, that the participating policy-holder does not share in the profits in the proportion that he should. That is clearly the case in the Canada Life Bill, and I take it that it will be the same in this case. If this company, like the Canada Life, were to set apart a certain portion of the earnings every year as a reserve to strengthen the company, that money would really come from the policy-holders, and would be a portion of the profits in which they would have no share at all. It seems to me that there should be a clear and definite statement of what is meant by the distribution of profits as between the policy-holders and the stock holders.

Mr. FIELDING. The provisions of this Bill follow precisely the same lines as those of other Bills of similar character, and I would suggest to my hon. friend whether, if he wishes to press his view, he might more properly do so in connection with the general Bill, so that if there be an amendment made, it will apply to all.

Mr. SPROULE. If I were sure that there would be a general Act passed this session, and that it would contain a clause providing for this, I would have no objection; but it is because of the knowledge I have of the operations of insurance companies and of the difficulties that have arisen in the past on account of the ambiguity of the clauses relating to profits as between policyholders and stock holders, that I mention the matter. When we were dealing with the Canada Life Bill, the solicitor of the company said that it was a very far-reaching Bill. If the law as declared by Sir Robert Finlay with regard to the Canada Life prevails, and were not corrected by parliament, it would affect every life insurance company in the country doing business on the participating policy plan, and the participating policy-holder would properly demand and would be entitled to receive a much larger share of the profits than he has received heretofore. If we allow the provision before us, which has led to this difficulty, it seems to me that we shall be perpetuating something which has been declared to be very defective and not understandable, and I think we should take the earliest opportunity to make it so understandable and clear as to make it impossible for either the public or the companies or their agents to misunderstand it.

Mr. J. A. CURRIE. I think it would be entirely contrary to the spirit of the British North America Act, and the jurisdiction of this parliament over civil contracts to have any further clauses of this kind included in insurance company charters. I think that a plain provision that the directors would have the power to make such a division of the profits with the participating policyholders as they might from time to time deem necessary, is all the power we should give them. But in this clause we undertake to limit the division of profits to the profits arising from the moneys of the participating policy-holders, and then we further limit the amount the participating policy-holders shall receive. The insurance agent, in canvassing, can make all kinds of representations to the party he wants to insure. He can represent to him that he is to receive a far greater amount than he possibly can receive under this legislation. The party canvassed takes out a policy believing in these representations. He does not find any provision in the policy or contract itself defining what portion of the profit he is to receive but he believes that it is in the company's charter. Then the innocent insurer who has taken out a policy expecting to get a profit of 90 per cent of the whole profits of the company finds, after he has paid in premiums the requisite number of years, that all he is entitled to is only 90 per cent of the profits on his own money. This is all the return he gets for paying in a heavier premium than the ordinary insurance. It strikes me that in every insurance policy, the proportionate amount of profit to accrue to the policyholder should be clearly stated. As far as this Bill is concerned, we have no more right to limit the amount of profit the policy holder is to receive on the participating policy plan than we would have the right in a marriage contract to limit the amount which the wife is entitled to receive out of the profits of a marriage contract in her husband's property, and declare that she shall not receive more than say 10 per cent. For that reason I would ask that the Bill be held over and be referred back to the Minister of Justice for his opinion as to the legality of that clause. In my opinion there is good ground for considering it an infringement of civil rights since it limits the right to contract.

Hon. W. S. FIELDING (Minister of Finance). This clause has been in our insurance charters many years, and no question has ever been raised as to the constitutional power of parliament to enact it. Whatever opinion there may be regarding the wisdom of so distributing the profits, no question has been raised as to the constitutional authority of parliament on the matter. Unless the hon. gentleman has reason to think it is advisable, we ought not to treat this Bill differently from Bills of a similar character.

Mr. J. A. CURRIE. The reason is that this question is a matter of litigation now with companies.

Mr. FIELDING. Not affecting this company.

Mr. J. A. CURRIE. Why should we put in this Bill a clause which may, inside of six months, be declared ultra vires?

Mr. FIELDING. I am not aware that in any litigation, the constitutional power of parliament to pass a clause of this kind is raised. There may be litigation as to the meaning of a similar clause in another charter, but I am not aware of any question being raised touching the constitutional authority of parliament to enact such a clause.

Mr. J. A. CURRIE. This involves a constitutional question. A company enters into a contract with an individual by which he is to participate in the profits. If that be a civil contract, it will be defined according to the civil law of the provinces. Have we the right to limit the scope of the contract and prevent an insurance company from giving more or less than a certain percentage of profits if their contracts should be to the contrary. On several occasions Bills have been before this parliament touching on civil rights. There was one in which the Methodist Missionary Society was concerned. An attempt was made to insert a clause providing that conveyances granting land to that society should contain certain clauses or conditions. This House objected to inserting any clause which would interfere with the rights of the parties to make a civil contract as that was a matter entirely within provincial jurisdiction. I think that we should hesitate before inserting the clause in question. The matter will shortly be decided by the civil courts, and in the meantime I think we should not pass legislation that may be contrary to that finding. I can see no reason why an insurance company should not have the right to distribute its profits to participating holicy-holders in accordance with the contract between them and the company. Leave it to the company to agree to give 10, 20 or 95 per cent of the profits or whatever they like but have that stipulated in the contract. As it is, there is now nothing in the contract, and a man, who has taken out a policy on the faith of representations made to him by an insurance agent, finds there is an Act of parliament limiting his rights and giving him less than he was told he would receive.

Mr. FIELDING. I am not in charge of the Bill and not particularly concerned in its advancement. If my hon. friend's view be correct, it would be better to discuss it when considering the general Bill, so that whatever we may do will apply, not to one company alone, but to all.

Mr. KNOWLES. I would be quite willing to acquiesce in the suggestion of the hon member for North Simcoe (Mr. Currie) if I could see any reasonable ground for believing his anxiety well founded. It would be rather presumptuous on my part to give an opinion off-hand on a debatable point regarding constitutional law, but I can see no reason for hesitation in this matter. When we have the power to create an insurance company, surely we have the power to place whatever restrictions we may deem advisable on its operation. True, the provincial legislatures have jurisdiction in matters of civil contracts, but that must be taken within limits, such as in the case before us where we are asked to create a company and define what powers we shall give it. My hon. friend the Minister of Finance has called attention to the fact that this is the first occasion when objection has been raised to legislation of this kind; and before being asked to hold the Bill over, we ought to have some stronger reasons given for contending that it is ultra vires. Surely the anxiety of one individual is not sufficient reason for holding over the Bill. With all due regard for the valuable opinion of my hon friend, with which he so kindly favours us on frequent occasions, there is no documentary evidence and no seriously considered opinion submitted which would be a justification for our delay in passing the Bill.

Mr. J. A. CURRIE. I may say that a corporation has no right to divide its profits with its policy-holders or the public unless there is a special clause in its charter allowing it to do so. That is the law in England and every other country. This clause is placed in the charters of insurance companies to enable them to divide their profits and the charters of insurance companies give them the right to secure business not only in Canada, but in foreign countries. Have we the right to impose a limit in insurance contracts restricting the division of profits? Why should not the division of profits be a matter of simple contract between the company and the party insured. If you give a company the power to divide its profits with the policy-holders, why not let the percentage of profits be a matter of contract and written on the policy. Instead of doing this you frame this general clause, which is so worded that it enables an insurance company to avoid putting a clause in their contracts stating the amount of division. Thus a man may be induced to insure with the idea that he is going to receive a much larger percentage, and then, after he has paid in his premiums for many years, he finds, on looking at his policy, that there is no clause telling him what he is going to get,

and he has to refer to an Act of Parliament passed some twenty years before to find out that his profits are limited to a very small percentage. But if this question is going to receive consideration, if the Minister of Finance states that there will be a clause in the Insurance Bill which will deal generally with all companies, I am quite ready to waive my objection.

Mr. FIELDING. There is a clause in the Insurance Bill dealing with the method of distributing profits and raising this very question, so that my hon. friend will have an opportunity of dealing with the whole matter on that clause.

Bill reported, read the third time and passed.

GREAT WEST PERMANENT LOAN COMPANY.

House in committee on Bill (No. 40) to incorporate the Great West Permanent Loan Co.—Mr. Alexander Haggart.

On section 9—Securities for investments.

Mr. SPROULE. It is provided here that the company 'shall not invest in nor loan money upon the security of the stock of any other loan company except as hereinafter authorized.' That would indicate that they are authorized to invest in the stock of any other company not a loan company. Is not that too wide a power?

Hon. W. S. FIELDING (Minister of Finance). This clause is the same as in the Acts of other similar companies, and is the same as in the general Loan Company's Act.

Mr. SPROULE. On section 16, subsection c,

(c) Delegate any of their powers to committees consisting of such member or members of their body as they think fit, and any committee so formed shall, in the exercise of the powers so delegated, conform to any regulations that may be imposed on it by the directors.

There was a company started some years ago that adopted this plan of committees, and it seemed to me a very bad one; it proved very disastrous to those who had bought stock in the company. The plan I refer to is that of having a committee in each village or locality. The present section seems to give the company the right to delegate any of their powers to committees. The committees might be given certain limited powers, but the company should not have the right to give any committee the power to incur an obligation, borrow money or anything like that. In the York Loan Company that had such a disastrous history lately, that was one of the features; they had committees all over the country. I think these committees should only do certain routine work, become inspectors, report on property, look after collections, and such things as that. These things could well be done by a committee. But when you go beyond that you are giving them too large powers.

Mr. FIELDING. I think the clause is a usual one, and the superintendent informs me that no case has been brought to his notice of any abuse arising from it. Of course, it is a somewhat broad power to give the company to allow them to delegate their powers to a committee. I take it that the chief purpose of these committees is to encourage local business and create an interest in the company. I would not call them canvassers, although they do seek business for the company. It is to be presumed that the central authority would only delegate to them such powers as may be safely exercised. I am not aware of any real abuse having arisen under the clause. As respects the York Loan Company, I did not understand my hon. friend to say that the troubles arose from the operation of these committees.

Mr. SPROULE. I can only say that having watched the operation of some of these companies I always regarded this as a bad feature. Here is what they usually do: An agent goes to a village, he wants to rope in certain parties and form a committee for the purpose of doing business in that locality. He makes one chairman, he makes another an inspector, he makes a third a secretary. Each one has a duty to perform, and they are paid in proportion to the amount of work done in that locality. These are all paid officials, though the remuneration they receive is small; but the higher the amount of work done and the larger the loans, the more they are paid. They are all interested parties, interested in getting business for the company, they are concerned in the amount of business they can get for the company. I have thought how easy it would be for the inspector to join with the agent, and with the secretary, and with the chairman, and recommend loans where the security was not perhaps very good, larger loans than they ought to recommend, and do it because they would get a larger commission for it. Individually I do not think they are under any bonds to make them liable for anything they might do improperly, although the general law would cover it. They represent to the public: If you will put your money into this company it will pay you back within a few months, or within a few years a certain return—and it is a return which no company could give legitimately. I know that to be a fact, because I have examined two or three of them, and I know the returns which they promise to give are such that no respectable company in the world could give if they were carrying on a legiti-

mate and honest business. This is done through these committees and the result is that after awhile the companies go down. I remember one that flourished some twenty years ago in our locality and I do not know whether there are two members of that board there to-day who were appointed about twenty years ago. What is the result? People paid in their money, and when they endeavoured afterwards to get a return for it, with the profits that they had reason to expect, according to the representations made to them, they found that they had been egregiously sold, they did not get back one-fourth of the money expected. I remember one man who, I think, paid in $62 or $64, and according to the representations made to him, he ought to have taken out, after a certain term of years, $250, but he took out about $2 less than he paid in. That is in my judgment, a fraudulent and improper transaction, but it is carried on through the exercise of the powers delegated to this special committee. One after another of the contributors, finding that was the case, dropped out of it, and practically lost all the money they had put into it.

Bill reported.

NIAGARA-WELLAND POWER COMPANY.

House again in Committee on Bill (No. 33) respecting the Niagara-Welland Power Company—Mr. Guthrie.

On section 2,

Mr. SPROULE. Has not this power company started its business?

Mr. GUTHRIE. Yes.

Mr. SPROULE. Has it been carrying on operations for any length of time or making any effort to complete its work?

Mr. GUTHRIE. It was shown before the Private Bills Committee that it has spent between $60,000 and $70,000, but there are now some negotiations with the Ontario government arising out of the policy of the Ontario government with regard to the Niagara power. In the meantime this company does not want its charter rights to lapse.

Bill reported, read the third time and passed.

CANADA LIFE ASSURANCE COMPANY.

House in Committee on Bill (No. 56) respecting the Canada Life Assurance Company—Mr. A. H. Clarke.

Mr. J. A. CURRIE. I understand that some members desire to look further into this Bill, and I would therefore like to have the consideration of it postponed until a further day. I therefore move that the committee report progress and ask leave to sit again.

Mr. SPROULE.

Mr. PERLEY. I would like to say two or three words with regard to this matter. As I stated in committee, I am not a shareholder in any way in the Canada Life Assurance Company, but I am a policy-holder and as such I am perfectly satisfied with section No. 2, which is a contentious section, as I consider that it provides what was originally intended and what has actually been done for the last thirty years. But, as a member of parliament a serious question arises as to the retroactive character of this Bill. I spoke about this phase of it the other day in the committee, and I asked Mr. Leighton McCarthy, who had the Bill in charge, regarding our power to pass such legislation and as to the wisdom of our doing it. He answered me giving his reasons for it, which did not seem to be very satisfactory as he was naturally interested in the Bill as the lawyer for the Canada Life and there was no lawyer on the other side to represent the policy-holders. I have looked a little farther into the legal part of this question and I may say that I have found many lawyers opposed to our passing such legislation. Amongst others, I might refer to the argument of two celebrated and well known lawyers in this country who are members of this House, from the ridings of South Essex and North York. Both of these hon. gentlemen spoke the other day regarding the Cobalt Lake matter and presented arguments in that case which seemed to me to be decidedly against the wisdom of this House passing retroactive legislation of this kind. There are a great many policy-holders interested in this question who live not only in Canada but in almost every country in the world, and as I am not a lawyer and am unable to discuss this matter from a legal point of view it seems to me that before we pass this Bill we ought to have a definite statement from the Minister of Justice as to the wisdom of our passing legislation of this kind affecting as it does the possible civil rights of a great many people in a great many countries. I think he should assume the responsibility of advising this House regarding this matter as he is the keeper of the legal conscience of this House. Therefore, I wrote a letter to the hon. Minister of Justice, telling him that I would ask today that he give his opinion regarding the wisdom of passing this legislation, before we should go further with it. I sent the letter to him by mail and I am sorry to learn that he is indisposed. At the same time, I think the promoter of this Bill will agree with me that we should not go any further until we get an official opinion from the Minister of Justice as to whether it is wise and proper for us to pass such legislation. I therefore would be glad to second the motion of my hon. friend from North Simcoe (Mr. Currie).

Mr. A. H. CLARKE. The Bill before the committee has been very carefully considered by the Committee on Banking and Commerce, which is the proper committee for the consideration of matters of this sort. The questions which my hon. friend from Argenteuil (Mr. Perley) has just spoken of were also discussed in that committee, and it seems to me that with respect to private Bills, where the parties are heard before a committee, the decision of the committee ought to be accepted by the House. However, it is quite open to the members of the House, I concede, to discuss it further, and if hon. gentlemen really and truly desire to have it stand over for the purpose of further investigation I certainly am not going to insist upon going on against their wishes. I am naturally desirous that it should be disposed of as quickly as possible. This is an entirely different thing from the Cobalt lake matter which we had here the other day. If it were not I would not be here in charge of this Bill. I may say that I have given it a great deal of careful consideration because I am as much interested as any person in this House in seeing that the rights of the people are not affected by retroactive legislation. It is not a case of retroactive legislation at all, in my judgment. In the Cobalt lake case the matter was going to the courts and the court was the only tribunal that could dispose of it. In this case the words used in the Act did not carry out what the real intention of the parties was and this Bill is not to change any law or take away any rights; it is merely to give full effect to what the intention of parliament was at the date of the passing of the Act which is being amended. The courts have no jurisdiction in such a case as this. The judges have said that this is not a question for the courts, but that it is a question for parliament, and that parliament must correct the mistake. In this case parliament must act in a judicial as well as in a legislative capacity. It is for the members of this parliament to deal with the question as judges and say whether or not the case which is set up by the Life Insurance Company has been made out.

Mr. S. SHARPE. I am not surprised that no policy-holders were present at the discussion of this Bill before the Banking and Commerce Committee, because I do not think the advertisement published announcing that this legislation would come before parliament was sufficient to fix knowledge upon the various policy-holders. As hon. members know, there are some 35,000 policy holders interested in this legislation, but not one of these was present before the committee to oppose it. I would urge the advisability of leaving the Bill over not for a week or a day but until next session, in order that the policy holders may have an opportunity to examine its contents and be present at the discussions in the committee. The notice of intention to introduce this legislation as published was as follows:

> Notice is hereby given that application will be made to the parliament of the Dominion of Canada at the next session thereof for an Act to amend the Acts relating to The Canada Life Assurance Company by changing the date of the annual meeting and making necessary changes as to notices of meetings consequent thereon and providing for any further changes in the date of such meeting.

Merely formal matters are inserted first in order apparently to conceal the real intent of the Bill. Then there is a small clause:

> —defining the provisions as to division of profits.

And then a small clause:

> —extending the powers of the company as to holding real estate in Ontario, and for other purposes.

I submit that this is not sufficient notice to the policy holders that they are to be deprived of their salient, vital rights in connection with this Bill. The Bill deals with upwards of $2,000,000 and deprives 35,000 policy-holders of their rights, according to the opinion of one of the best counsel in England. I think the Bill should not be considered this session, but that the company should publish a fair and reasonable advertisement setting out the intention of the Bill so that the policy-holders may discuss it and fully understand it.

I cannot agree with the hon. member for Essex (Mr. A. H. Clarke) that this differs in its nature from the legislation relating to the Cobalt Lake Mining Company. True, the positions of the two are not exactly the same or at all similar, but this is in its nature retroactive legislation; it is taking away rights that are said, on good advice, to belong to certain policy-holders and transferring these rights to another class interested in the company, the shareholders. It is dealing with most important rights. I was much surprised on looking at the Bill to find that its sponsor was the hon. member for South Essex (Mr. A. H. Clarke), the very gentleman who moved for the papers in reference to the Cobalt Lake legislation, and who made very caustic references to the action of the Ontario legislature in passing it. Who is proposing this Bill? It emanates not from the policy-holders, but from the shareholders, the beneficiaries. The policy-holders, numbering, 35,000, have had no opportunity to organize and oppose it, and no policy-holder should be expected to come here at his own expense for that purpose.

Progress reported.

ROYAL CASUALTY AND SURETY COMPANY.

House in committee on Bill (No. 51) respecting the Royal Casualty and Surety Company of Canada.—Mr. H. H. McLean.

On section 1,

Mr. LENNOX. I have a letter from a constituent in reference to the name of one company. He speaks of a Bill proposed by the Royal Victoria Life Insurance Company to drop the word 'Victoria' and make it the Royal Life Insurance Company.

Mr. FIELDING. This is not the Bill to which my hon. friend refers. The question of title comes up here, however.

Mr. LENNOX. I presume that in the committee the question of title was probably discussed, but my correspondent, who is interested in the Royal Insurance Company, thinks this is not fair. I am not sure whether that is a life company.

Mr. FIELDING. Fire and Life.

Mr. LENNOX. This is a life and death company too; it is an accident company, and, of course, it involves the element of life insurance in that respect. I submit to the minister that it is worth while considering whether any company should be allowed to use a name that will conflict with the name of an existing company. I know that the minister thinks such a practice should not be encouraged. I find on the Order Paper a Bill to incorporate the Royal Canadian Accident Insurance Company, and I submit that we are having too much royalty in this matter.

Mr. FIELDING. I rather sympathize with the views of my hon. friend. This matter was considered before the committee and we had great difficulty in coming to a conclusion as to where the line should be drawn. Some of these names would naturally suggest themselves to anybody, and it has been held that no one company should have a monopoly of such a name. Take, for example, a Bill which we had before us respecting the Great West Loan Company. We have a Great West Life company, and it was suggested that there might be a certain confusing of names. On the other side it is said that the Great West is an expression which we use in describing our great western prairies, and that it would not be proper to let any one set of men take that name to themselves and use it as a monopoly; but if one company is doing one class of business and another company another, we would have to trust to the other words of their title to mark the distinction. Another view expressed at a previous meeting of the committee is that associations organized abroad, either in foreign countries or in Great Britain, and having particular names, should not be permitted to have a monopoly so that other companies could not use similar names in Canada. The last case of the kind which occurred a year ago was with reference to the word 'Travellers.' That is the name of a well-known American company doing business in Canada for many years. Application was made for a charter for a company to be called 'The Travellers of Canada.' Objection was at once taken that there was likely to be confusion, but the committee held that the word 'Travellers' could not be the property of any set of people; it was a common word which any one could use, and the mere fact that some company abroad had taken it should not debar the parliament of Canada from granting a similar name to a Canadian company. There is great difficulty in determining just where the line should be drawn. Wherever it is likely to create confusion in the public mind, I think we should not grant a similarity of names, but in the discussion before the committee the general view was that we should not permit any company to monopolize a name, especially one which might be common property. Royal is a name of that character; it is a name that is applied to a number of institutions. If we said that the first set of men who seized upon a common word of that kind should have a monopoly of it as applied to business organizations, I think we should be going too far. I am not very clear in my own mind as to whether this name is an invasion of the rule which the committee laid down or not; but taking it all in all, the committee held that the objections raised in this case were not well founded.

Mr. LENNOX. I quite appreciate that the minister has a pretty difficult task in this matter; but I am inclined to think that in this case we are doing what is probably unwise. There is, I think, a sharp distinction to be drawn between a foreign company and a British company; but I am not at all sure that there is any sharp distinction to be drawn between a Canadian company and a British company. We might refuse a charter to a foreign company which seeks to obtain a monopoly of a certain name; but when a British company, with our concurrence has been doing business with British people in Canada, I think we might very well deal with it upon the same basis as we would with our own people. That is the first point. There is another point. In the first case we view the matter from the company's standpoint; but it is even more important to view it from the standpoint of the people. The minister touched that note by saying that we want to deal with these matters so that the people will not be confused or misled, and as far as we can avoid repetition of names we should do so. The

'Royal' is the name of a very desirable insurance company, and people might be led into doing business with a company using that name under a misapprehension of the facts. There is a pretty long way between that name and such a name as the Great West. The Great West is a great inheritance of us all.

Mr. FIELDING. So is Royal.

Mr. LENNOX. Not in the same way. We do not propose to give a monopoly of the Great West to one set of people, not even to the Big Four; but when it comes to the question of a word that does not carry with it any property, it is somewhat different. I hope that whatever the minister may do in this particular instance, he has not made up his mind that in no instance will he restrain the use of the word Royal in connection with a life insurance company, and this is certainly in a sense a life insurance company.

Mr. J. A. CURRIE. I understand that some of the large English companies doing an insurance business in Canada get over the Act by having a Canadian company authorized, and underwriting its stock and its policies. I think the Liverpool, London & Globe, and one or two others, have charters of that description. The insurance agents who do business for the Royal Fire Insurance Company also do a casualty business.

Mr. FIELDING. No. The English company does not do an accident business.

Mr. J. A. CURRIE. The agents of the Royal do a casualty business for other companies; and the Royal of England is such a well known company that people taking casualty insurance from those agents assume that the Royal Canadian Company is a child of the English company and are therefore misled. If the promoter of this Bill will give this House the assurance that this company is a child of the Royal Insurance Company, I think we might pass it; but if he does not give us that assurance, I think we should not pass it.

Mr. FIELDING. The hon. member who has charge of the Bill does not appear to be in his place. Not only have I no assurance of the kind, but such information as I have leads me to believe that this is an independent company.

Mr. J. A. CURRIE. Then I would ask that progress be reported on this Bill until that assurance is given to us.

Mr. FIELDING. That matter was thoroughly considered in the committee. I do not say that is conclusive, but I doubt whether we can make much improvement in the Bill. This question is in line with other questions which have been discussed again and again. The committee thought there was a distinction between the Royal Casualty Company and the Royal Fire Insurance Company, and that there could be no confusion. However, I have no desire to press the Bill in the absence of the promoter, and if any considerable number of members wish to consider it further, I have no objection to it standing over.

Progress reported.

CANADA NATIONAL FIRE INSURANCE COMPANY.

House in committee on Bill (No. 76) to incorporate the Imperial Fire Insurance Company.—Mr. A. Haggart.

Mr. FIELDING. Objection has been taken to the name and it is proposed to substitute Canada National, but this can only be done by the Speaker in the Chair.

Bill reported and read the third time.

Mr. A. HAGGART moved that the Bill be passed and the title changed to Canada National Fire Insurance Company.

Motion agreed to.

CONSIDERED IN COMMITTEE.

Bill (No. 56) respecting the Canada Life Assurance Company.—Mr. A. H. Clarke.

Bill (No. 51) to incorporate the Royal Casualty and Surety Company of Canada.—Mr. H. H. McLean.

Bill (No. 63) to incorporate the Royal Canadian Accident Insurance Company.—Mr. Ames.

Bill (No. 62) to incorporate the Prince Albert and Hudson Bay Railway Company —Mr. Neely.

CONSIDERED IN COMMITTEE—THIRD READINGS.

Bill (No. 55) to incorporate the British Columbia Life Assurance Company—Mr. Cowan.

Bill (No. 62) to incorporate the Prince Albert and Hudson Bay Railway Company. —Mr. Neely.

Bill (No. 40) to incorporate the Great West Permanent Loan Company.—Mr. A. Haggart.

Bill (No. 33) respecting the Niagara-Welland Power Company.—Mr. Guthrie.

PATENT OF THOMAS L. SMITH.

Bill (No. 71) respecting a Patent of Thomas L. Smith.—Mr. Bickerdike—considered in committee and reported.

On motion for third reading:

Hon. GEO. E. FOSTER (North Toronto). Has this Bill come under the notice of the Minister of Agriculture (Mr. Fisher) and has it had his assent?

Bill read the third time and passed.

SECOND READINGS.

Bill (No. 69) to incorporate the Fort Erie and Buffalo Bridge Company.—Mr. German.

Bill (No. 91) to incorporate the Prudential Trust Company, Limited.—Mr. Macdonell.

Bill (No. 94) respecting the Cedar Rapids Manufacturing and Power Company.—Mr. Boyer.

Bill (No. 95) to incorporate the Royal Guardians..—Mr. Lachance.

Bill (No. 96) respecting the Kettle River Valley Railway Company.—Mr. Burrell.

Bill (No. 102) to incorporate the London and Northwestern Railway Company.—Mr. Beattie.

Bill (No. 103) respecting the National Accident and Guarantee Company of Canada.—Mr. Pardee.

Bill (No. 104) respecting the Thessalon and Northern Railway Company.—Mr. Smyth.

PATENTS OF AMMONAL EXPLOSIVES (1908), LIMITED.

On motion for the second reading of Bill (No. 93) respecting Patents of Ammonal Explosives (1908), Limited.—Mr. A. C. Macdonell.

Mr. J. A. CURRIE (North Simcoe). This I take to be with reference to patents for the making of ammonia powders. Some explosives for military purposes are now being manufactured by ammonia process instead of nitrates. This government may be manufacturing such explosives, and it may be that here is doubt about the wisdom of recognizing any such patent as this. The promoter of the Bill is not present to explain the matter, so I would ask that the Bill be allowed to stand.

Mr. SPEAKER. Stands.

QUESTIONS.

CANADA EASTERN RAILWAY.

Mr. AMES asked:

1. What was the price originally paid by the government for the Canada Eastern Railway?
2. Since the acquisition of the line between Fredericton and Chatham, what has been spent each year for betterment, and what does the government expect to spend under this head during 1909-1910?
3. What is the approximate value of the rolling stock that has been added to that previously in service on this branch?
4. What has been each year, since its acquisition by the government, the approximate expenditure for running expenses and the approximate revenue in connection with this branch?

Mr. FOSTER.

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. 1905

June 30, Department of Railways and Canals, amount paid at Ottawa	$800,000 00
1908	
February 29, Department of Railways and Canals, amount of cheques issued at Ottawa, W. B. Snowball, R. A. Snowball, W. C. Winslow	19,000 00
	$819,000 00

2. Amounts expended each year on Capital Account since the acquisition of the line between Fredericton and Chatham, from October 1, 1904 to January 31, 1909:

Year 1904-5	
Sidings	$ 9,575 05
Platforms	355 00
Track material and labour.	26,498 10
	$36,428 15
Year 1905-6	
To increase water supply	$ 19,243 04
Semaphores at stations	1,607 01
Sidings	10,929 62
*Fredericton and St. Mary's bridge	300,000 00
	$331,779 67

Which added to line and supplied. *Fredericton terminal.

Year 1906-7	
To strengthen bridges	$ 12,455 83
To increase water supply	3,634 48
Siding-Fredericton	96 00
Fencing portion of line not heretofore fenced	15,983 36
Air compressor at Gibson	1,780 91
Ice house at Gibson	2,138 76
	$ 36,089 34
Year 1907-8	
To strengthen bridges	$111,490 29
To increase water supply	11,559 88
Fencing portion of the line not heretofore fenced	11,979 24
Improving grades on line.	3,950 49
New turntables	3,348 08
Air compressors at Gibson.	361 54
Electric semaphores	512 26
Siding	2,382 28
To improve telegraph line.	2,498 23
Buildings	2,695 78
	$150,778 07
Year 1908-9	
To strengthen bridges	$ 8,650 94
To increase water supply	10,716 15
Fencing portion of line not heretofore fenced	11,267 94
Improvements at Loggieville	309 32
New turntables	1,035 09

Electric semaphores	$ 417 43
Land purchased	230 00
Sidings	2,303 15
Buildings	7,923 75
	$ 42,853 77
	$597,929 00

INTERCOLONIAL RAILWAY.

Capital estimates 1909-1910—Canada Eastern Division.

Sutton Road—Siding to be made through 100 foot extension	$ 875
Ivory's—New shelter and platform	350
Maloney's—New shelter and platform	350
Cushman's—New shelter and platform	350
Upper Nelson—For shelter	150
Blackville—Loading platform $250; To convert old baggage room into waiting room 300	550
Forks—New shelter and platform	350
Upper Blackville—Building for baggage, coal and oil	250
Weaver's—New shelter and platform	350
Hurley Brook—New shelter and platform	350
Blissfield—New shelter	150
Doaktown—Loading platform	250
Carroll's—To provide a shelter	150
Carroll's—To lengthen crossing siding 10 cars, 400 feet	800
Boiestown—To provide additional siding accommodation 20 cars, 800 feet	2,000
Astles—Shelter	150
Clearwater—Shelter	150
Cross Creek—To provide a loading platform 70 feet long	300
Cross Creek—To change highway between Cross creek and covered bridge to eliminate 4 road crossings	$1,000
Covered Bridge—Loading siding to hold 5 cars, 200 feet	500
Nashwaak—To provide shelter and platform	350
Manzer's—To provide a shelter	150
Marysville — To provide loading ground, siding and platform—	
Land $1,000	
Siding 1,600	
Platform 350	
Grading for roadway 500	
Freight shed 800	4,250
To provide fencing for 30 miles of line not previously fenced	20,000
To put line between Indiantown and Blackville in condition for operation—	
Ballast $10,000	
Ties and rails 10,000	
Fences 5,000	25,000

3. Approximate value of rolling stock that has been added to that previously in service of the Canada Eastern Railway is $57,500, made up as follows:

7 engines at $5,000 each equals	$35,000
9 passenger cars at $2,500 equals	22,500
Total	$57,500

4. Approximate operating expenses of the Canada Eastern Railway from October, 1904, to March, 1908:

1904-5	$105,790 82
1905-6	152,850 33
1906-7	141,243 22
1907-8	198,054 37

INTERCOLONIAL RAILWAY.

SUMMARY.

October 1 to December 31, 1904	9,060 91	12,914 13	4,425 49	26,400 53
Year 1905	45,068 86	67,019 51	19,646 36	131,734 73
Year 1906	48,375 54	78,488 26	17,387 25	144,251 05
Year 1907	53,028 09	74,935 85	17,131 36	145,095 30
Year 1908	57,073 53	75,505 87	18,634 10	151,213 50
Month January, 1909	3,576 80	5,228 75	1,237 42	10,042 97
Total	216,183 73	314,092 37	78,461 98	608,738 08

THE FRANKING PRIVILEGE.

Mr. FOSTER asked:

1. Was the franking privilege used by any minister directly or by permission in the distribution of campaign literature issued in the interests of the liberal party after the 21st of July, 1908?

2. If so, by what ministers, up to what period and to what extent?

3. To whom was the minister's frank entrusted for the above mentioned use?

Hon. RODOLPHE LEMIEUX (Postmaster General. Yes—just as the same privilege was exercised by ministers of preceding governments. No record being kept of matter so despatched from any post office, it is impossible to tell the quantity franked or by whom. The minister's frank is usually entrusted to his private secretary, or some other official in the minister's office.

FREE MAIL DELIVERY IN CITIES.

Mr. ARMSTRONG asked:

1. What are the names of the cities in Canada which were granted free mail delivery in the year 1908, and the estimated amount it will cost to deliver the mail per annum under present system in each city over the amount paid before free mail delivery was established?

2. How many mail and stage routes are in operation outside of the cities, towns and villages in Canada?

Hon. RODOLPHE LEMIEUX (Postmaster General):

1. During the year 1908 letter carrier delivery services were established in the undermentioned places at the estimated cost given below:

Office.	Estimated salaries of carriers.	Estimated cost of equipment.	Total.
	$	$	$
St. Catharines.....	3,916	344	4,260
Sarnia.....	3,526	301	3,827
Fort William.....	4,405	387	4,792
Port Arthur.....	3,916	344	4,260
Moncton.....	3,526	301	3,827
St. Thomas.....	3,526	301	3,827

As the salaries of carriers are determined by law the amounts payable to them will naturally increase, dependent upon length of service. Moreover, the growth of any particular city or town may call for the enlargement of area of delivery or more frequent deliveries, thus correspondingly increasing the cost. It is impossible to tell what increased cost has been involved by the adoption of the letter carrier system which is provided to prevent public inconvenience, pressure and delays at head office which would be occasioned where only a general delivery wicket was in operation, and which would otherwise undoubtedly call for an enlargement of public buildings as well as an increase in the clerical staff to attend upon the public.

2. A full list of all mail contracts appublic buildings as well as an increase in Report.

TOWN SITE OF COCHRANE—G. T. P.

Mr. ARMSTRONG asked:

1. Is the government aware that the Grand Trunk Pacific Railway Company are said to be ignoring the site of the town of Cochrane, at the junction between the Temiskaming and Northern Ontario Railway and the Grand Trunk Pacific and laying out a town site a short distance away?

2. If said circumstances exist, is it within the power of the government to interfere, and is the government likely to take any action in this matter?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). 1 and 2. The matter is not under the jurisdiction of the Grand Trunk Pacific Railway Company, but the Transcontinental Railway Commission state they have the question under consideration.

DOCK AT GRAND BEND.

Mr. ARMSTRONG asked:

1. Is the government aware that there is not a public highway leading to the dock at Grand Bend? If so, will the government investigate the matter and try and remedy the grievance?

2. How much money was expended on the wharf at St. Joseph in 1908, and does the government intend completing said structure?

3. Is the government aware that the town of St. Joseph was sold for taxes in 1908, and that the reeve and clerk purchased the site for $700?

Hon. WM. PUGSLEY (Minister of Public Works):

1. (a) Yes. (b) Steps are now being taken to expropriate land required for approach.

2. (a) Expenditure from January 1, 1908, to date, $748.25. (b) Resident engineer reports that since the approach of the wharf has been completed the whole work is in good condition.

3. The department has no information to this effect.

BOOKS ENTERING CANADA UNDER BRITISH PREFERENCE.

Mr. ARMSTRONG asked:

1. How many pounds of books entered Canada under the British preference in 1908, and what amount of duty was collected on same?

2. How many pounds of papers, magazines and other periodicals entered Canada under the British preference in 1908, and what amount of duty was collected on same?

Hon. WM. PATERSON (Minister of Customs):

1 and 2. The advertising pamphlets and other advertising matter entered under the British preference for the fiscal year ended 31st March, 1908, were as follows: Weight, 118,388 pounds; value, $23,661; duty collected, $11,838.80.

The customs returns do not show the weights of imported books, magazines, pamphets and periodicals, except in the case of advertising periodicals and pamphlets.

Books, including novels, periodicals and pamphlets, entered under the preference during the above named fiscal year were valued at $337,027.

Duty collected, $19,848.85.

(Exclusive of papers and magazines entered free from the United Kingdom).

FLOODING OF FRASER RIVER IN MUNICIPALITY OF DELTA.

Mr. J. D. TAYLOR asked:

1. Has the government received a report from Engineer Coste, or other official, of damage to the banks of the Fraser river, in the municipality of Delta, through the flooding of the river last summer? If so, what action, if any, has been taken on the report?

2. Have representations been received from the municipality of Delta in this connection? If so, to what effect and with what result?

3. Is it the intention of the government to take any steps calculated to prevent similar damage during the period of high water this year?

Hon. WM. PUGSLEY (Minister of Public Works):

1 and 3. Upon representations made by Mr. R. Jardine respecting damage done at Port Guichon through extraordinary changes in currents and formation of sand bars, Engineer Coste was directed to make an examination; he reported that the river required to be well studied out before a general plan of improvements could be adopted. A further and more thorough examination is now being made.

2. Yes, through Mr. John Oliver, M.P.P.; request under consideration, although I am not persuaded that this is a work which should be undertaken by the federal government.

EXPENSES OF ELECTIONS IN NORTH AND SOUTH ONTARIO.

Mr. SAMUEL SHARPE asked:

1. Have all the expenses incidental to the holding of the election in North and South Ontario on October 26, 1908, been paid?

2. If so, what were the amounts in each case, and to whom paid?

Mr. ARMSTRONG.

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals). All the expenses have been paid.

The amounts claimed and paid are as follows:

Ontario North:	
Total claimed	$822 39
Allowances paid to returning officer	806 55
Disallowed	$ 15 84
Ontario South:	
Total claimed	$890 65
Allowances paid to returning officer	888 68
Disallowed	$ 1 97

Note.—The detailed statements of allowances cover fifteen foolscap sheets. A copy can be supplied if required, or information will be given as to any particular individual's account.

ANNUAL ALLOWANCE TO ALBERTA AND SASKATCHEWAN.

Mr. HERRON asked:

1. When will the additional annual allowance of $93,750 to the province of Alberta and Saskatchewan, in lieu of public lands, provided for in section 20 subsection 2 of the Alberta and Saskatchewan Acts, cease?

2. How much of such additional allowance has been paid to date and how much is still to be paid?

Hon. W. S. FIELDING (Minister of Finance):

1. With the half-yearly payments due March 1, 1910.

2. $375,000 has been paid to each province to date, and $93,750 remains to be paid to each province.

ROYALTY ON COAL IN ALBERTA.

Mr. HERRON asked:

What was the total amount of royalty due and payable to the government on account of coal mined in the province of Alberta during the twelve months ending 31st March, 1908, and how much of the above was collected?

Hon. FRANK OLIVER (Minister of the Interior). From the returns of operations filed in the department the exact amount of coal mined subject to the payment of royalty in the province of Alberta during the above period of twelve months cannot be ascertained, as such returns are frequently received showing the quantity mined during considerable periods, and without showing the quantity which was mined during each of the months comprising such period.

The following amounts are therefore only approximate:

Amount which became due and payable	$ 52,604 00
Amount collected	15,720 00

GRAND TRUNK PACIFIC BONDS.

Mr. FOSTER asked:

How much of the balance of the proceeds of the government guaranteed Grand Trunk Pacific bonds, stated by the Minister of Railways on page 1451 unrevised Hansard,' as $1,899,264, in hands of the government, is still available for the prairie section, and how much for the mountain section of the Grand Trunk Pacific Railway?

Hon. W. S. FIELDING (Minister of Finance):

(a) Available for the Prairie Section, $1,572,517.09.

(b) Available for the Mountain Section, $326,747.69.

(c) The special account, in which the balance of the proceeds referred to is kept, stands at $1,911,337.23. The excess of this sum over (a) and (b) represents balance of interest accrued applicable to bond interest but not yet applied.

KINGSTON PENITENTIARY—RESIDENCE FOR DEPUTY WARDEN.

Mr. EDWARDS—by Mr. Blain—asked:

1. Has the government under consideration the building of a residence for the use of the Deputy Warden of Kingston penitentiary?'

2. If so, have any plans been prepared, and by whom?

3. What are dimensions of the building and the estimated cost?

Hon. GEO P. GRAHAM (for Minister of Justice):

1. The advisability of building new quarters for the use of the Deputy Warden is being considered.

2 and 3. No plans or estimates have yet been prepared.

STEAMSHIP COMMUNICATION BETWEEN CANADA AND GERMANY.

Mr. FOWKE—by Mr. Calvert—asked:

1. Has the attention of the government been directed to the statement that a steamship line known as the Canada Line has been formed to offer direct communication between Hamburg, Rotterdam, Bremen and Canada?

2. If so, is it the intention of the administration to open negotiations with the German government, with a view to the entrance of Canadian farm produce to the markets of the German empire on better terms than now obtain, as between this country and that?

Hon. W. S. FIELDING (Minister of Finance):

1. The Government have observed references in the public press to a proposed steamship line between German ports and Canada.

2. It is not deemed expedient in the public interest to make any statement at present concerning the commercial relations between Germany and Canada. The government will give all due consideration to any proposals which the German authorities may wish to make for the improvement of such relations.

NAVIGABILITY OF DIXON'S ENTRANCE, TUCK'S INLET AND HARBOUR OF PRINCE RUPERT.

Mr. COWAN—by Mr. Barnard—asked:

Has the government been furnished with any report, or copy of any report, made for the imperial government upon the navigability of Dixon's entrance ,Tuck's inlet, or the harbour of Prince Rupert?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). The Department of Marine and Fisheries has no knowledge of any such report.

GRAIN ELEVATOR AT VANCOUVER.

Mr. COWAN—by Mr. Barnard—asked:

Has the government decided to build a grain elevator at the Port of Vancouver? If not, is the matter under consideration by the government?

Hon. W. S. FIELDING (Minister of Finance). The answer is 'No.'

MAIL DELIVERY IN CENTRAL PARK, B.C.

Mr. COWAN—by Mr. Barnard—asked:

1. Has the government received a petition from some 500 persons residing in the rural district of Central Park, in the province of British Columbia, praying for a rural mail delivery in that district? If so, has the receipt of the petition been acknowledged?

2. Is it the intention of the department to grant the prayer of that petition? If not, why not?

3. Has the department had complaints, or does the department know, that the post office facilities in that district are insufficient?

4. If so, does the department intend to improve these facilities, and how?

Hon. R. LEMIEUX (Postmaster General). A petition was received containing 338, not 500, signatures, asking for the establishment of rural mail delivery in the Central Park district, but through an unintentional oversight, its receipt was not acknowledged. The matter having been referred to the post office inspector for report, it was ascertained that a rural mail delivery system was not desired by the petitioners, but rather a free letter carrier delivery service, but, as such services are only established in municipalities having a population of at least 12,000 and a total postal revenue of $20,000, conditions were not such at Central Park as to warrant favourable consideration being given to the application. It might be added that the revenue of Central Park for the last fiscal year amounted to only $389.58.

The department is not aware that the postal facilities in the district of Central Park are insufficient.

MONTREAL WOOLLEN MILLS.

Mr. LENNOX asked:

Has the attention of the government been called to the press announcement that the Montreal Woollen Mills will be compelled to permanently close down by the 1st of April next, owing, as is alleged, to the unsatisfactory condition of Canadian Tariff Laws?

Hon. W. S. FIELDING (Minister of Finance). The government has no information on the subject beyond what has appeared in the press.

HOLLAND RIVER CANAL.

Mr. LENNOX asked:

1. Who were employed to value the land of the right of way for the canal from Holland river to Newmarket, and were these parties entrusted with any other duties than valuation of lands?
2. What was the remuneration of each of these valuators?
3. For how long were they employed, and upon what terms?
4. (a) What properties did they value, (b) at what amount or rate in each case, (c) what was the acreage of each property, (d) in how many cases, by names, were the valuations accepted by the owners, (e) in how many cases by names, were the valuations finally rejected by the owners, (f) in what cases were expropriation proceedings resorted to, and (g) with what result as compared with valuators' figures?
5. Have titles to all properties been required?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). This will be quite a lengthy return. My hon. friend had better let it stand as a notice of motion for a return.

Mr. LENNOX. Will it make any difference in time?

Mr. GRAHAM. No, it will take the same length of time. It will take a great many sheets to contain the information.

Mr. SPEAKER. Stands as a notice of motion for a return.

LEASE OF LAND TO N. & A. BOURBONNAIS.

Mr. LORTIE—by Mr. Lavergne—asked:

1. Is the place known by the name of Foret, in the parish of St. Ignace or Côteau du Lac, in the county of Soulanges, leased to any person? If so, what is the name of the lessee?
2. For how many years is it leased, and what is the annual rent?
3. Should the tenant desire to surrender his lease, would the government be disposed to grant his request?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. Yes; to N. and A. Bourbonnais.
2. (a) One parcel of land containing 3 acres, as described in lease, at $18 per annum, during pleasure. (b) Second parcel of land containing 6½ acres, for a term of 21 years, at $39 per annum.
3. The government would have no objection.

UNPAID BALANCES IN CHARTERED BANKS.

Mr. S. SHARPE asked:

What is the amount of the dividends, deposits or balances which have remained unpaid for more than five years in the hands of the chartered banks, according to the latest returns required to be furnished to the government by the various banks by section 114, subsection 1, chapter 29, R. S. Canada?

Hon. W. S. FIELDING (Minister of Finance). Dividends, $3,864.19; deposits or balances, $556,332.91.

TIMBER PERMIT ISSUED TO T. A. BURROWS.

Mr. CAMPBELL asked:

1. What sections in townships 30 and 31, range 22, are included in the permit held by Theo. A. Burrows?
2. Are there any more sections granted to him under permit?
3. If so, what is the location and description?
4. What expenditure does the department make annually protecting these holdings from trespass?
5. How many years can these timber lands be held without operation?
6. Has the permit holder the right to absolutely denude these lands of every stick of timber?

Hon. FRANK OLIVER (Minister of the Interior).

1. Township 30, range 22, west 1st meridian—section 5, south half and northwest quarter-section 7, northeast quarter-section 12, section 13, west half-section 15, southeast quarter-section 16, southwest quarter-section 19, east half-section, 23, south half and northeast quarter-section 24, north half and southeast quarter-section 25, north half-section 27, east half-section 28, section 31, southwest quarter-section 32, south half-section 34 and sections 35 and 36.

Township 31, range 22, west 1st meridian—west half of section 9, and north half and southwest quarter of section 31.

2. Yes.

3. Sections 6, 7, 18, 19, and 30, township 30, range 21, west 1st meridian; sections 6, 7, and 18, and the north half of section 19, township 31, range 21; sections 3, 5, 6, 7, northwest quarter 10, west half 15, section 16, east half-section 17, sections 18 and 19, west half section 20, section 21, west half-section 28 and section 30, township 32, range 22; and sections 1, 2, 12, 13, 14, 24 and 35, township 32, range 23.

4. None.

5. The berth comprising the above-mentioned lands is subject to cancellation if not operated to a reasonable extent.

6. The permit holder has not the right to cut timber of a less diameter than ten inches at the stump.

LAKE MANITOBA.

Mr. CAMPBELL—by Mr. Schaffner—asked:

1. Did the government send an engineer last fall to Fairford district, on Lake Manitoba, to inquire into the feasibility of lowering Lake Manitoba?

2. If so, what was his report of the feasibility, of the probable location of channel, and of the probable cost?

3. Does the government propose to go on with this work in whole or in part this year?

4. Has the government or any of the ministers received any petition from the settlers in that locality asking for such work to be undertaken?

Hon. WM. PUGSLEY (Minister of Public Works):

1. Yes.

2 and 3. Resident engineer reports that, to afford permanent relief from high water, it will be necessary to incur considerable expenditure in increasing the outlet of Lake Manitoba, and also in erecting controlling works to regulate the flow and maintain the level of the lake at a constant elevation. To obtain an estimate of the cost of such a scheme would necessitate the carrying out of extensive surveys and investigations, which have not yet been made, at both the Fairford river and the Waterhen river. I am not satisfied that this is a work which should be undertaken by the federal government.

4. Yes.

ROUGH AND BROKEN STONE FOR THE DEPARTMENT OF MARINE AND FISHERIES.

Mr. BLONDIN asked: (Translation.)

1. During the years 1906, 1907 and 1908, did the government ask for tenders for furnishing rough and broken stone for the use of the Marine Department on the St. Lawrence between Quebec and Montreal?

2. If so, who were the tenderers, what were the prices asked, and what are the names of those who got the contract?

3. What quantity of broken stone and of rough stone did each contractor deliver, and at what price?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). (Translation.)

1. The department has asked tenders, and contracts were given in 1906, for broken stone, ballast, and rough stone. These contracts were continued during the years 1907 and 1908.

2. The following tenders were received for broken stone:

E. H. Germain and Leduc, at	$1.75	per ton.
Alf. Moreau	1.88½	"
A. Beauchemin and Co.	1.50	"
J. N. Beaulieu	1.48	"
The Railway Spring and Supply Co., Ltd.	1.78	"

The contract was given to A. Beauchemin & Co. Though the tender of J. N. Beaulieu was not considered the most profitable, because he had not the immediate facilities for the fulfilment of his contract; it was considered also that Beauchemin and Co. had furnished the stone required by the department the preceding year, and that they had given satisfaction; they had a good plant and machinery and they had also a large quantity of broken stone, ready for immediate delivery, besides that they were ready to reduce their price to $1.40 per ton, (the price asked for by J. N. Beaulieu) and the contract was given to them at $1.48 per ton.

The following parties had tendered for ballast and rough stone at the following prices:

E. H. Germain Leduc, at	$10.95	per toise.
Alf. Moreau	14.50	"
A. Beauchemin and Co.	12.00	"
J. N. Beaulieu	11.45	"
The Railway Spring and Supply Co., Ltd.	13.75	"

The contract was given to the lowest tenderer, Mr. Germain and Leduc at $10.90 per toise.

3. A. Beauchemin and Co. have furnished the following quantities of broken stone at $1.48 per toise.

During the year	1906	7,263	toises
" "	1907	1,800	"
" "	1908	1,214	"
Total		10,377	toises

Messrs. Germain and Leduc have furnished the following quantity of ballast at $10.90 per toise:

During the year	1906	1,086
" "	1907	813
" "	1908	1,298
Total		3,197

TELEPHONIC STATIONS BETWEEN MONTREAL AND QUEBEC FOR THE USE OF NAVIGATION.

Hon. Mr. ECREMENT asked: (Translation.)

How many telephone stations are there at present between Montreal and Quebec, for the use of navigation, and where are they situated?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). (Translation.) The telephone service on the river St. Lawrence for the use of navigation is composed of the following stations: Montreal, Longue Point, Verchères, Sorel, Three Rivers, Batiscan, St. Jean Deschaillons, Portneuf, St. Nicholas, Cap Rouge, Quebec, Crane island (below Quebec.)

ESCAPE OF BILL MINER.

Mr. J. D. TAYLOR asked:

1. Was a letter sent on or about the date and in the terms indicated, or on similar terms, by any officials of the Department of Justice at Ottawa to the warden of British Columbia penitentiary, namely:—

Ottawa, September 28, 1906.

Dear Sir,—The minister has been pleased to authorize you to permit Mr. Alex. D. McIntyre, barrister of Kamloops, B.C., to see his clients in the penitentiary at any time during business hours in your presence or in the presence of Mr. Harvey or other officer whom you name. You will please permit Mr. McIntyre's clients to reply promptly to all letters from Mr. McIntyre to them.

Yours very sincerely,
DOUGLAS STEWART,
GEO. W. DAWSON,
Inspectors.

Warden White,
New Westminster, B.C.

2. If so, at whose request was this letter sent?

3. Had Mr. Alex. D. McIntyre applications before the department with respect to any clients, other than for permission to visit and receive communications?

4. Were any visits made or did any communications pass to and from the penitentiary as the result of an order in above or similar terms?

5. Was the convict Bill Miner one of the clients of Mr. Alex. D. McIntyre, and is this the Alex. D. McIntyre mentioned at the inquiry into the circumstances of Miner's escape?

Hon. GEO. P. GRAHAM (for Minister of Justice):

1. Yes.

2. By direction of the Minister of Justice, on the request of Mr. McIntyre.

3. No.

4. None, so far as the department is aware, unless it may be the visit of 'his lawyer from up country,' which Instructor MacKenzie stated in his evidence Miner had told him about.

5. (a) In applying for the permission given by the letter quoted, Mr. McIntyre stated that he was 'senior counsel for the prisoners,' and that it was necessary for him as counsel to communicate with the prisoners by letter or personally in order to prepare for an appeal from their conviction which he intended to take. This is, as the department understands, the same McIntyre who was mentioned at the inquiry into Miner's escape.

DISMISSAL OF O. J. C. LEBLANC.

Mr. CROCKET—By Mr. Blain—asked:

1. What was the cause of the dismissal of O. J. O. LeBlanc from the position of fishery overseer for the county of Kent, New Brunswick?

2. Was complaint made to the Department of Marine and Fisheries? If so, when and by whom?

3. Was the complaint communicated to Mr. LeBlanc before his dismissal?

4. Was it made the subject of an investigation? If so, how?

5. How long had Mr. LeBlanc held the position, and what was the date of his dismissal?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries):

1. Offensive partisanship at the last Dominion election.

2. Yes. O. J. LeBlanc, M. P., through Honourable William Pugsley, 2nd December, 1908.

3. No.

4. No.

5. Since 18th June, 1894. 19th December, 1908.

EXPENSES *RE* LOAN OF JANUARY 27, 1909.

Mr. AMES—By Mr. Perley—asked:

1. With respect of the £6,000,000 loan of January 27, 1909, what were the charges, including discount for immediate payments, &c.?

2. What was the net amount of cash realized?

3. What was the total amount realized?

4. What was the annual effective rate of interest per unit?

Hon. W. S. FIELDING (Minister of Finance). The accounts of the loan are not completed. A portion of the moneys has not yet been paid in. It is probable that the effective rate of interest per unit will be as near as may be 4⅛.

GASPE-PERCE MAIL CONTRACT.

Mr. AMES—by Mr. Perley—asked:

1. When does the mail contract from Gaspé to Percé expire?

2. Is it the intention of the government to call for tenders? If so, when?

Hon. RODOLPHE LEMIEUX (Postmaster General):

1. 30th of June, 1909.

2. Tenders will be called for at once.

MOTIONS AGREED TO WITHOUT DISCUSSION.

For a return showing: 1. The number and names of the various dredges owned by the government.

2. When and by whom constructed, or when and from whom purchased.

3. The price paid for each dredge.

4. On what work each dredge has been engaged in each of the years 1905, 1906, 1907 and 1908.

5. How many months during each of these years each dredge was working, and how many cubic yards of material each dredge removed per month.

6. The cost of maintaining and cost of operating each dredge for each of these years.

7. The names of the dredges leased during these years, if any, to whom leased, on what terms, and what amounts were received each year under such leases.—Mr. German.

For a return showing, in respect of the election for the House of Commons, held in the county of Montcalm on the 26th of October, 1908, and in respect of each polling subdivision (a) the number of votes polled for each candidate; (b) the total number of valid votes polled; (c) the number of rejected ballots; (d) the number of spoiled ballots; (e) the number of voters on the revised voters' list; (f) the number of ballot papers in the possession of the deputy returning officer at the hour of the opening of the poll; (g) the number of ballot papers remaining unused in the hands of the deputy returning officer at the close of the poll; (h) the name and the address of the returning officer and the names and addresses of each of his deputies and poll clerks; (i) all correspondence between the government, or any officer thereof, and the returning officer, or any deputy returning officer or poll clerk or any candidate in respect of said election. —Mr. Ames.

For a return showing the amounts paid during the years 1903-1904, 1905-1906, and 1907-1908, by the following departments, (a) Marine and Fisheries, (b) Railways and Canals, (c) Customs, (d) Post Office, (e) Militia and Defence, and (f) Public Works, to the following persons, firms and companies, viz:—The Wilson Gas Buoys Company, the Canadian Fog Signal Company, James Murphy, William R. Blakiston, James Holliday, Allison Davie, J. B. Cote, Adolphe Huot, Joseph Samson, Samson & Filion, E. Pelletier, Napoléon Mercier, Sévérin Martel, Michel Thibodeau, Edmond Bélanger & Co., Marier & Tremblay, Terreau & Racine, Rock City Tobacco Company, J. N. Martineau, George Marchand, Jean Drolet, Elie Amyot, Charles A. Parent, A. N. Melvin, W. G. Robertson, Wm. Robertson & Co., Howell & Co., St. John Iron Works, Charles McDonald, John A. Moore, Wm. J. Vroom, John A. McAvity, McAvity Bros., George McAvity, Patrick J. Mooney, Polson Bros. or Polson Iron Works, Merwin & Company, F. L. Brooks & Company, F. S. Brooks, Safety Company, Submarine Company, Wm. J. Allan and Mr. Willard.—Mr. S. Sharpe.

For a copy of the report of the Conciliation Board in connection with the freight clerks of Halifax and St. John.—Mr. Crosby.

For a return showing what amount of money has been expended by the government for printing in connection with immigration matters during the fiscal year 1908 and up to 1st March, 1909; the amount of money that that has been expended for advertising in newspapers for the same purpose; the names of the said newspapers and the amount paid to each; what pamphlets were issued, their names, from whom they were purchased, by whom published, and what prices were paid for each.—Mr. Uriah Wilson.

SUPPLEMENTARY ESTIMATES.

Hon. W. S. FIELDING (Minister of Finance) delivered a message from the Governor General.

Mr. SPEAKER read the message as follows:

GREY,

The Governor General presents to the House of Commons supplementary estimates of sums required for the service of the Dominion for the year ending on the 31st of March, 1909, and in accordance with the provisions of the British North America Act, 1867, the Governor General recommends these estimates to the House of Commons.

Government House,
March 15, 1909.

On motion of Mr. Fielding, His Excellency's message, together with the estimates, was referred to Committee of Supply.

PROPORTIONAL REPRESENTATION.

Mr. F. D. MONK (Jacques Cartier) moved:

That in the opinion of this House the system of election prevalent in this country fails to reflect, in our representative assemblies, correctly, and in accurate proportions, the currents of public opinion which should find expression by the votes of the electorate. It is therefore desirable to reform our electoral law, by the adoption of an improved method of proportional representation whereby the House of Commons may become the faithful expression of the will of the electors as manifested by their votes; that a select committee of this House be appointed to investigate the different systems of proportional representation adopted or suggested elsewhere, as an improvement upon our present methods of election, with power to extend said inquiry to all the various forms of the proportional representation laws proposed or in force.

He said: I deem it, Mr. Speaker, a privilege to have this opportunity of placing before the House, in support of the motion you have just read, some explanatory observations upon a subject which has engrossed the attention of public men in all democratic countries for the past quarter of a century. It is a large subject, but, however extensive its scope, I will endeavour to curtail my remarks as much as possible. I feel that the reforms which I have in view cannot be carried out immediately. I feel also that my present object ought to be merely to draw the attention of parliament and the country to the duty which now seems to be put upon us, in common with all other free peoples, of examining the anomalies and the abuses which have rendered these reforms necessary and even urgent, and in this manner helping towards a trial of some of the reforms which I am about to suggest—a trial which might be made in our own country, and which would serve to preserve our institutions from what I think might be termed complete ruin and failure. No one, I suppose, will deny that representative institutions all over the world have proved a comparative failure. Admissions of this fact can be found in the books of all writers of every nation who have treated this important subject within the past twenty or twenty-five years.

Mr. TALBOT. Mr. Speaker, I rise to a point of order. Is it according to the rules of the House that the hon. gentleman should read his speech ?

Mr. MONK. My object in quoting largely from my notes, Mr. Speaker, is to make my observations as short as possible but I will endeavour to conform to what is a very wise rule of the House. It has been claimed that our popular assemblies, in which is lodged the direction and control of the nation's legislative and administrative powers do not now reflect the opinions, the desires or the aspirations of the electorate at large. It is claimed that the representation which we now have in parliament is only a partial one, that in reality it is a distortion, that a very large number of the electors are quite unrepresented in the council of the nation,, and that the council of the nation, or parliament, ought to be an exact mirror of public opinion, and of the desires, the aspirations and the will of the people generally. The claim is that the direction of public affairs is in this manner very frequently placed in the hands of men who are all-powerful, and yet who represent only a bare majority, very often even only a minority of the electorate at large, and that the rest of the qualified electors have no voice, no control whatever, over the affairs of the country. The final result of this situation is that the unrepresented are not to-day in a very different condition from the unfortunate condition in which were the villains in the olden times. They were deprived of power; they had no voice in the affairs of the country; they were attached to the glebe; they were absolutely ignored. To-day those who are thus unrepresented are, if I may use the expression, the slaves of the urn instead of being as the villains were formerly. Under the outward signs of liberty they have not in reality a greatly improved position over that of the unfortunate men of bygone times. Now, what is the cause of this state of affairs, and of the consequent abuses which have so greatly, within the past twenty or twenty-five years, brought representative institutions into disrepute and created, what every one I think has noticed, a want of interest in the administration of public affairs and in the elections which have for their object the production in parliament of a faithful reflection of public opinion throughout the country ? There has resulted, as every body knows, not only a want of interest, but a kind of void between parliament, between the representative assembly, between the council, when one reverts to municipal affairs, and the electorate from which these assemblies emanate; and the real reason for that regrettable state of affairs can be found in our greatly deficient system of representation. The principle which ought to underlie the creation of a representative assembly surely is this, that it should afford representation not merely to a part but to the whole of the electorate; otherwise of course it loses its representative character. If the powers, legislative, administrative, executive, are unlimited, and if those powers are wielded by one-half, or one-half plus one, of the electorate, the other half less one of the electorate, who have no voice or control whatever in the country's affairs, are quite powerless; so that it is impossible to say that such an assembly is really and truly a faithful reflection of the nation that has called it into existence. Even admitting the necessity of this crude system of a bare majority which has prevailed hitherto, and which is repugnant to the idea of a truly representative body, as the founders of our representative institutions conceived that body to be, matters become very much worse when we find, as we often do, that instead of a majority, even a bare majority, being in power and ruling the people, as a matter of fact, through the numberless deformations of our electoral system, the majority in the representative body does not as a matter of fact represent the majority of the electorate, but in fact represents a minority. In effect, the country is governed by a minority, sometimes quite a considerable minority, of the electorate, who rule the majority, and the majority are left without any recourse whatever. Such instances are by no means rare. Let me give one from a foreign country. In the French Chamber of 1881, 1885 and 1889, the ruling party in parliament represented a minority of the electors who had actually voted and a very feeble minority of the electorate, if one takes into consideration those who abstained from voting at all. In numerous cases, not only in France, but in our own country, a considerable portion of the electors cannot be said to be represented since they have not cast their ballots. In France, in the cases which I have mentioned, the reality was in direct violation of the principle that in a democracy the laws must emanate from all the nation, or at any rate from the majority of the representatives of every part of the nation. In theory our legislation must be sanctioned by all our citizens or a majority of their representatives. In England electoral reform is one of the burning questions of the day. To show that the strange anomaly I have mentioned is not confined to France, I shall, with the permission of the House, quote briefly from an article which appeared in the 'Westminster Review' of September, 1907, on proportional representation. The writer describes the situation in England in a fair and forcible manner. He says:

Commencing with the general election in 1874, we find, according to Lord Avebury's figures, the Tories in an actual majority of

48, whereas upon the votes, they would have been in a majority of 38.

In 1880 the Liberals gained 44 more seats than they were entitled to upon the votes cast in their favour, but after deducting these and adding them to their opponents, they would still have been left with an actual majority of 78, fully entitling them to office.

The results of the general election in 1885 were not materially different, and the question of office would still have remained unaffected by the proper results of the election in 1886. Here the Tories, whilst entitled upon their votes to a majority of only 29, obtained an actual majority of 119.

So, too, in 1892. The party victorious at the poll was in any case entitled to the administration. With a majority of 200,000 votes, the Liberals secured a majority of 40 seats, although proportionately they were entitled to 30 only.

The climax was reached, however, in 1895. The Tories gained 411 seats, the Liberals 259. Out of 6,331,000, 4,792,512 electors went to the poll, 2,412,100 supporting the Tory party, and 2,380,412 the Liberals, showing a majority of 31,688 electors in favour of the former. And yet upon this insignificant majority of votes, the Tory party secured the enormous majority of 152 representatives in the House of Commons.

As each member represented on the average about 7,000 electors, it will be seen that the true majority would have been 4 to 5.

Further on he says:

The haphazard nature of the present system may be gauged by a comparison between the figures of the 1892 and the 1895 elections. In the former the Liberals, with a majority of 200,000 votes secured a majority of 40 seats only; in the latter the Tories, with a majority of 103,814 (taking the highest figures), obtained a working majority of 152. With half the number of majority of votes, they secured a majority of representation nearly four times as large.

It is sometimes said that the results of the contested elections should alone be used for the present comparison, because it is impossible to determine what votes would have been cast in the uncontested constituencies. In all the figures here given, those for the last contested election have been taken, and this is the nearest approach to accuracy which can be made. Some writers count the whole of the possible votes to the sitting member, a method entirely unjustifiable and unreliable. If in the 1895 election the figures for the contested seats alone are taken a remarkable result is obtained, little flattering to the Unionist party. The Liberals polled 1,800,000 votes and the Unionists 1,775,000 with the result that the latter secured a majority representation of 77 seats, whereas according to Lord Avebury, by proportionate representation the Liberals would have been in an actual majority of three seats. And I venture to again here observe that even this majority of 100,000 votes would probably have been wiped out by the abolition of the plural vote. In England and Wales alone, for the year 1886, there were 68,000 electors with more than one vote. The average number of votes possessed by each elector was consequently something at least greater than two. It was probably two and a half to three. As three-fourths, to put it moderately, of plural voters are admittedly Tories, even in the disastrous year of 1895, the Liberals would, under a real system of representation, including the abolition of the plural votes, have secured a small majority in the House, instead of occupying the impotent and ignominious position they filled.

The results of the 1900 election were equally unsatisfactory and manifestly unfair. With a majority of about 80,000 votes, the Unionists secured a majority of 134 members. Their majority, apart from the plural vote, should have been about 8. With the abolition of the plural vote, the Liberals would have been in a majority of about the same number.

The figures for the 1906 election are even more instructive. Omitting Ireland from consideration, out of a total electorate of 6,483,000, 5,426,000 went to the poll. Of these 56·4 per cent of the votes were cast for the government, and 43·6 per cent for the opposition. Upon this calculation the real proportional representation would be 316, instead of 428 members for the government, and 244, instead of 132, members for the opposition. Those figures are taken from the 'Pall Mall Gazette' and may be taken as approximately correct.

I shall not quote at greater length to show that in England the general elections have given quite different proportions in the House from what they have produced throughout the country. Upon several occasions within the past 25 or 30 years, a minority of the electors has secured a majority in the House, so that the country has been governed by representatives of the minority. Having shown what very grave instances have occurred both in France and England, let us turn to our own country and examine the results of the last election. But before doing so, I shall quote from a speech made by Sir Richard Cartwright on a motion in the Senate for reform of that body in 1906. On that occasion the right hon. senator spoke as follows of proportional representation, also of the present system, and of some very peculiar occurrences in his own native province of Ontario. He said:

I have long been convinced that our present system of representation is radically faulty, that in some important respects it is not merely vicious in theory, but vicious in practice. I want it to be distinctly and clearly understood that I am the last man to dispute the right of the majority to rule, nor do I desire in the slightest degree to dispute the consequent right of the majority to a majority of the representatives; but I do dispute the right of the majority to arrogate to itself an unfair proportion of the representatives of the people. I will illustrate my position. Let me suppose that one side controls 100,000 voters, and the other side controlled 90,000, and that there are 190,000 representatives to be elected. It is perfectly just and right, it appears to

me, that 100,000 voters should return 100 representatives, and that those who control 90,000 should return 90 representatives; but it is not fair that those who control 100,000 voters should return 150 representatives, and that those who control 90,000 should return but 40. Yet that is what I have seen; that is what our system tends to; that is what has occurred again and again, and will occur again and again under the system under which we are at present working. I know the common argument perfectly well, that it is as fair for one side as the other, that each has its chance in turn. This is true, and is all the worse. Each side in turn obtains more power than it ought to have; each side is tempted to abuse it; possibly each side does abuse it; and I may add that this system offers, as no other system does, a steady and perpetual premium to gerrymander and corruption. I propose to make good my words.

Continuing, the right hon. gentleman gives statistics for the province of Ontario to show that, beginning in 1882, and previous to 1906, there has never been a proportionate representation of the complexion of the electorate in the House of Commons. I do not feel justified in taking up the time of the House to quote these statistics, but I may say that the statement is an interesting one which goes far to establish the thesis I have the honour to defend at the present moment.

Let me now refer particularly to the last general election as illustrating the proposition which is under discussion. I have taken my figures in regard to the election from a newspaper which published the figures as official, the Toronto 'News' of January 19 last. Everything leads me to believe that these figures are correct. We find that the strictly Liberal vote amounted to less than half of the total votes given at the election. The majority of Liberal votes over Conservative amounted to 24,117. The independent vote numbered 24,893. Therefore, while there was a majority of Liberals over Conservatives of 24,117, there was a majority of Conservatives and Independents over Liberals of 776. The 'News' says:

> Revised figures for the recent general election are now available; it will be recalled that the first set of figures published was incorrect as regards several provinces. Even now some restatement is necessary, as the quasi-official statement put out makes no allowance for an independent vote of nearly 25,000, and allots all the votes polled to one party or the other. Making the necessary rearrangement; allowing the total of over 10,000 in Maisonneuve as Independent (Labour) and Mr. Martin's 2,000 in Vancouver; and omitting the Yukon, where the election has not taken place; we have the following:—

Provinces.	Lib.	Con.	Ind.
Ontario	223,501	235,509	2,730
Quebec	150,844	126,424	10,759
Nova Scotia	56,588	54,500	....
New Brunswick	40,716	34,945	....
Prince Edward Island	14,496	14,286	....
Manitoba	30,915	35,071	2,078
British Columbia	13,412	17,503	6,453
Alberta	23,777	19,746	2,439
Saskatchewan	33,415	25,563	434
	587,664	563,547	24,893

Three Acclamations.

Several remarks must be made. Three acclamations, Rouville and Comox-Atlin (Liberal) and South York (Conservative) are not counted. In Ontario the total vote for Mr. Russell, East Toronto, 4,039 in all, is credited to the Liberals. In Halifax and St. John, where electors have two votes each, both votes are counted; in Ottawa, where the same condition prevails, only one vote is counted. In Kings, Nova Scotia, Mr. Eaton, Sir Frederick Borden's opponent, is regarded as a Conservative, Mr. Robitaille in Quebec county is reckoned with the Conservatives.

It will be seen that the total vote polled was 1,176,104, and the proportions were:

Liberals	49.96 per cent.
Conservatives	47.91 "
Independents	2.11 "

Popular Majority Against.

The government thus fell just a few short of half the votes. There is a very small popular majority against it if we combine Conservatives and Independents.

Now, if these are taken as the figures—and I think we may consider them, if not absolutely accurate, at any rate sufficiently accurate for the purposes of the argument—let us consider for a moment what should have been, under that vote, the representation in the House of the electorate at large under a system of proportional representation. In order to arrive at the result, as I am not much of a mathematician, I have had the calculations made by an expert and absolutely reliable mathematician. And he has proceeded in the following manner: He has divided the total vote in each province by the number of seats allotted to that province, and has attributed to the Liberal column and the Conservative column respectively, and to the independent column where there was an independent vote, its proportioal representation. These are the results of that operation, which, I think, are well worth considering at the present moment.

STATEMENT of Proportional Representation based on figures of Dominion Elections, 1908.

(Yukon Electoral District omitted.)

Province.	Number of Members.	Liberal proportion.	Conservative proportion.	Independent proportion.	Unit of representation.
Ontario	86	41·6	44	Fraction.	5,369
Quebec	65	34	28·5	2·4	4,431
Nova Scotia	18	9	9		6,171
New Brunswick	13	7	6		5,820
Prince Edward Island	4	2	2		7,195
Manitoba	10	4·5	5	Fraction.	6,806
British Columbia	7	2·5	3·3	1·2	5,338
Alberta	7	3·6	3	Fraction.	6,566
Saskatchewan	10	5·6	4·3	Fraction.	5,941
* Total	220	109·8	105·1	3 + fractions	
Dominion of Canada	220	110	105·4	4·6	5,346

The expert who carefully worked out these figures, adds these remarks under the asterisk reference:

* This line, being the addition of the above columns, is put in to show that the above calculation must be right since it corresponds pretty closely to the lowest line. The figures in the lowest line are the correct ones for the Dominion, taken as a whole.

Now, sir, what follows from these statistics? It follows that to-day we are governed by a legislative and executive power which is created in reality by a minority of the votes of the whole country, and that, I say, is a violation, is a disregard of the fundamental principle of representation. Of those voters whose numbers I have just given, and who voted adversely to this state of affairs, there is not one who has any control, any direction of any kind, in the management of the country's affairs. On the other hand, the spectacle which our American neighbours offer in their own country, as regards the representative system there, and which has existed since the foundation of the republic, is not any better than the spectacle presented by the countries to which I have already referred, including our own. Indeed,I think we have admissions from American writers that the system there has produced even worse results in the great republic than it has produced in other countries enjoying the benefit of representative institutions. Let me quote from the excellent work of Prof. Commons on 'Proportional Representation.' He says, on page 1:

The American people are fairly content with their executive and judicial departments of government. But they feel that their long-aching bodies have painfully failed. This conviction pertains to all grades of legislatures, municipal, state and federal. The newspapers speak what the people feel; and, judging therefrom, it is popular to denounce aldermen, legislators and congressmen. When Congress is in session, the business interests are reported to be in agony until it adjourns. The cry that rises towards the end of a legislature's session is humiliating. The 'San Francisco Bulletin' is quoted as saying:

'It is not possible to speak in measured terms of the thing that goes by the name of legislature in this State. It has of late years been the vilest deliberative body in the world. The assemblage has become one of bandits instead of law-makers. Everything within its grasp for years has been for sale. The commissions to high office which it confers are the outward and visible signs of felony rather than of careful and wise selection.'

Every State in the union can furnish examples more or less approaching to this. Statements almost as extreme are made regarding Congress. Great corporations and syndicates seeking legislative favours are known to control the Acts of both branches. The patriotic ability and even the personal character of members are widely distrusted and denounced.

Much more is to be found written by Prof. Commons in support of a general denunciation of the representative system as it exists to-day throughout the United States, not only in federal affairs, not only in state affairs, but also in the transaction of municipal business. Now, sir, there is one point upon which all writers and reports agree, that is, in condemnation of the single member district, the small electoral district, with one member, as one of the principal causes of the present evil. They maintain that the singe member districts, the ward districts, in our municipal representation is often the chief and only cause of this regrettable state of affairs. All argue that the larger the area of representation, the better and more widely known, the more representative and invariably the more independent are the men who are brought forward as candidates

in those larger and multiple districts; the more varied also are the interests involved, and consequently the discussion will take a wider range. It will not be limited merely to local and parochial matters, to purely local issues. In the larger groupings the issues are brought before the people as being bound up in the interests of a larger district, and invariably the better men, the more independent men are selected for the representation. Small intrigue and petty clique dwindle into insignificance when you have a large electoral district instead of a small one. The result of the enlargement of the electoral district has been in every instance where it has been tried to produce a better class of candidates and, in the discussion there is an entire absence of small, personal issues, the real and fundamental interests of the country come to the front and the electorate have a far greater interest in the contest than they have in the case of smaller electoral districts.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

Mr. MONK. Mr. Speaker, the great difficulty in the treatment of a subject of this kind is that as soon as you begin studying it you find it is a subject of great actuality and that the material placed at your disposal within the last 15 or 20 years is so considerable that it is difficult to exercise a judicious choice so as to be able to lay the subject before an assembly such as this within a given time, that is the reason that I have been obliged to condense the result of such researches as I have been able to make—and that condensation is one of the most difficult parts of the work, because as members of the House who have given some attention to the subject well know, we have moved forward a great deal since the days when the only classic works upon the subject of proportional representation was the well known work by Mr. Thomas Hare written in the early 50's and such support as John Stewart Mill gave to Hare's views in his own immortal writings.

When you left the Chair at six o'clock I was pointing out the great inconvenience, objections and dangers of the small single-membered constituency, and I had said that there was there the difficulty of choosing a candidate who would be acceptable to represent properly in the House the large interests of the country, the nature of a political campaign in a very limited constituency, the power of intrigue and political trickery of every description, such as we have all, if not known at any rate heard of in our political experience. All writers and all public men who have thought deeply upon the subject agree that in the enlarged constituency, in the grouping of constituencies, you do away with political corruption. There are no two opinions upon that subject; it becomes impossible in a very large constituency to have recourse to corrupt methods, to political trickery, to the work of obscure managers and organizations, and to that large number of devices used in politics which have for their object to defeat the proper, free and independent will of the electorate. I do not wish to insist upon that. Those members of the House who will study the question will all arrive at the conclusion to which the most eminent writers in every country have arrived, that this larger constituency does away with political corruption. From my own experience covering a number of years in our own country, I do not think the electorate of this country is what you would call a corrupt electorate. In our small single-membered constituencies with, I suppose, an average of 5,000 electors, I do not think it is an exaggeration to say that you will find 4,500 voters who are quite beyond the reach of corrupt methods, that there is no possibility of reaching them by any of the devices against which our laws, imperfect as they are, have sought to provide. But you will find within every constituency a certain number of voters who are absolutely indifferent as to the candidates, as to any question of political principle or political party, who are simply anxious to use their votes to gain money. Side by side with these men, who are the curse of our system, you will find a certain number of faddists, men of extreme views, who are not very numerous it is true, but who on account of the power they have in a small constituency very often render the member elect far more dependent than he really ought to be. These I think are general conclusions to which any member of this House who has observed our political atmosphere with any degree of care would undoubtedly arrive and to which he would adhere very readily.

I do not wish to refer at any length to the evil of gerrymandering which has become, as everybody knows, on this continent of America particularly, a very great evil indeed, in connection with elections; that is the dividing up of constituencies in such a manner by the party in power as to ensure almost as a certainty the result of any election held in a constituency. Before leaving the subject of the great evils of the existing system, let me repeat that it is my belief, which I have the honour of sharing with a great many men far more eminent than myself, who have written on that subject and thought deeply on it, that the root of the whole evil of our system lies in the small-membered constituency. Under that system we often see such strange occurrences as the following: You will find a constituency not necessarily gerrymandered

that has had leanings towards one political party. Perhaps ever since confederation that constituency has voted for one political party. What happens? Those of the minority having long ago given up any idea of obtaining any share whatever in the representation, of having any hope whatever of ever obtaining a voice in parliament, have ceased practically to take any interest whatever in the election of members. They cease to study the great questions of the day; they know that the election within the limits of their small constituency is a foregone conclusion, and they give up all hope of ever having a word to say in the administration of the affairs of the country. It has been urged I know as an answer to the undoubted evil presented by such constituencies that those who are in a minority in those constituencies have their opinions voiced and are in reality represented by members belonging to their party who are in other constituencies. That is an argument that should have no weight whatever with any reasonable man who knows anything of politics, because it would be idle to pretend that the aspirations, the feelings, the wants, the ideals of an electorate in one constituency can properly find expression in parliament through a member who has never seen the electors of that county, who knows nothing of them and has no mandate whatever to represent them. It would be absurd to suppose that a minority in a constituency, say in Ontario or even in some parts of Quebec which has voted Liberal since confederation, would be properly represented in this House by a member from some other constituency in some other province or even in the same province who happened to represent a constituency which voted exactly the other way. That contention has been sometimes urged, but I find that all writers of any experience and repute who have treated the subject consider it as absolutely unfounded. We have had the experience of what I might call, in a sense, the larger constituency, within the limits of my own province.

We have under our provincial representation the constituency of Hochelaga that surrounds the city of Montreal. It has grown during the past few years to quite enormous proportions. It is an extremely extensive constituency—I speak in reference to its provincial representation, because federally it has long ago been changed—the number of the electors approximating 40,000. You have there as a rule two candidates, and that constituency, which I understand is about to be sub-divided, has illustrated the argument which I am urging for larger constituencies. You have candidates who are well known, who enjoy a wide reputation, and it is impossible to resort to the methods of corruption, the political vices and tricks and the dominating influence of small politics. That is the experience which in a limited degree has appeared to prove some of the assertions which I have been making in regard to the advantage of large constituencies. In our own country, where the system of patronage prevails, or has prevailed, to what I think everybody will admit has been an odious degree, the objection to the smaller electoral district becomes still greater; because, for instance, in a very large constituency, say of the size of the entire island of Montreal, it would be impossible to resort to the promise of a great many small public works, which by the admission of everybody are not at present advantageous, when we have such immense problems to solve in connection, for instance, with the problem of transportation. Nobody in a grouped constituency within the limits I have just indicated, could advocate the construction of a small wharf or a small public building, but would be obliged to consider the relation of such a large territory as the island and city of Montreal to the all-important question of transportation. He would be obliged to lay before the electors, not promises of small and very often useless, though comparatively costly improvements, but the necessity of carrying out such a plan of transportation as was laid before the country and the government some years ago by a commission composed of very experienced men, who after considerable labour had in my opinion solved that very vital question in every part of the country. I have therefore endeavored to show that under present conditions you have not in parliament a faithful mirror of the feelings and opinions of the electorate, as it were a microcosm of the electorate, but as a rule exactly the opposite. You find, in many cases, in every country where the single-member constituency exists in actual operation, the government of the people by a minority of the electors; and in almost every case, even in England, where we are accustomed to look for what is right and proper and well calculated in electoral matters, an utter disproportion between the representation in parliament and the vote of the electors.

It goes without saying that the question I have treated, in a very limited and general way, has engaged the attention, in every country enjoying representative institutions, of most of the public men, and has resulted in the production of numerous works, by very competent publicists and writers, in every country in Europe; and I think most of these books have been written within the last twenty years. The question of reform is at the present moment the actual burning question in England. The question is, what kind of remedy can be applied to such a regrettable state of affairs? Of course, you cannot expect to find people who have thought of the subject to be of the same opinion. I wish to

point out as briefly as possible some of the remedies which have been resorted to. I will speak in the first instance of the general ticket, which was adopted for a time in France and is there called the scrutin de liste. Once the intolerable evils of the small single-member constituency or district had been fully realized, this remedy was resorted to in the first instance and tried in several countries, particularly in the United States, and there especially in the election of municipal school boards and other boards. The general ticket consisted in the abolition of the small district, the ward. Each constituency was enlarged and elected several members, and the elector had as many votes as there were members to be elected. What was the result of this innovation? There is no doubt that some of the evils resulting from the single-member district system were removed. Better, abler, more known and more independent men were chosen, and improper influences were diminished and curtailed. But, as will readily suggest itself to members of this House who are conversant with elections, in most cases the minority had no representation at all; the whole list or ticket went one way or the other. To give an instance among a great many illustrations that are to be found in Professor Common's recent and very able book on the subject, the city of Cleveland elected seven members of the school board under the general ticket system, all Republicans, with a vote of 110,000, and the seven Democratic candidates were defeated, when a displacement of only 2,000 votes would have produced a result exactly opposite. In France the scrutin de liste or general ticket was tried in only one election, with this result, that the Republicans with 4,300,000 votes secured 366 seats, when they would have been entitled proportionately to 311, and the Monarchists or Conservatives, with 3,550,000 votes, obtained 202 seats when they would have been proportionately entitled to 257.

The system of general ticket in France was abolished in 1889 and the method followed there to-day is exactly the same as in this country. That will, however, unquestionably undergo a change before very long, because in that country people have been giving a great deal of study to the proportional method, and a recent report by a government commission of very able men, who have studied that system carefully, recommends a change in the present one. One of those commissioners was Mr. Benoit, who has written a very able work on the subject. The report of that commission recommends the adoption of a proportional system similar to that which exists in Belgium, with some changes, in the direction of greater simplicity and freedom for the elector. I have endeavoured to obtain that report, but it has not yet been published in this country. It will be found, however, in a French paper called 'La Croix,' in its issue of the 8th or 18th of February last.

The general ticket system is an improvement undoubtedly on the system existing before, but it presents the obvious difficulties I have just briefly indicated, and it has been found not only to confine the representation to the two great dominant parties, giving no chance whatever to the smaller but still important groups, but also to give the political machine, the party managers and political organizers very great power indeed, which is a consequence rather to be deplored. Among other remedies suggested has been the system of limited voting. The limited vote is a modification of the general ticket system. It consists in this, that in a district where there are four representatives to be elected, an elector can only enjoy three votes. The result is to assure one seat, as a rule, to the minority. Of course a limited vote does not give proportionate representation. It insures some kind of representation to the minority, but does not secure in any sense proportionate representation or some mathematical proportion between the voters and the results of the election. As an example, the Boston municipal council, since 1893, has been elected under this system of limited voting. There are 12 aldermen elected at large annually and each voter has but seven votes. The result has invariably been to elect seven Republicans out of the twelve, and the remainder five Democrats, the constituency being essentially Republican. The five Democrats are elected because they get a sufficient number of votes, but no independent party can obtain any representation whatever, and and there is no chance of its having any voice in the conduct of municipal affairs. Furthermore, the elections are very often arranged for by the party managers in municipal politics. The same system was adopted for the election of aldermen of the city of New York, but was abandoned after a few years on account precisely of the results I have just indicated.

We have then, again, the system of cumulative voting. In this system, the elector has as many votes as there are representatives to be elected. You have a large constituency, and the men must be well and favourably known to be chosen; but the elector can plump all his votes on one or two candidates. That does not result exactly in proportional representation. In the case of a cumulative vote, the size of the constituency, of course, makes a considerable difference. In the small districts, where there are not many representatives to be elected, the result is very much the same as in the case of a limited vote. This system of cumulative voting was established in Illinois, as far back as 1870, and is, so far as I know, in force there to-day, so it

has had therefore considerable time for experiment. It has been found that there are 100 representatives on an average to be elected for the whole state and three in every constituency. The party in minority can always obtain one representative in the constituency. Therefore it cannot be said that there are parts of the state which are not represented by both sides. But on the other hand it dces not give proportional representation as one would like to see. It has not resulted either in procuring a very much improved class of candidates, and independent parties have not been able to elect any representatives at all. Of course, where there is cumulative voting, there is the difficulty presented of some powerful candidate getting an undue number of votes from what is called plumping. He receives a larger number of votes than is actually given for those who are running with him on the same side, and therefore it becomes the duty of the party bosses or organizers to remove candidates who would, by receiving a large number of plumpers, do great injury to the party. These candidates are otherwise in every way acceptable, but are considered dangerous and have therefore to be removed, and that is the reason why the system itself has been condemned in many parts of the United States where it has been tried for years. Where the limits of a constituency are very extensive, the system of plumping sometimes produces very remarkable results. Cumulative voting has been resorted to in many parts of the United States for the municipal elections, such as the elections of school trustees, and these elections have produced sometimes very curious results. I have in mind the case of a municipal election for the election of school trustees in the city of Manchester, where there were fifteen candidates and every elector had consequently fifteen votes. Although the city is remarkable for its ardent Protestantism and the strength of its labour element, the man who came out at the head of the poll, with 20,000 votes more than the next candidate, was the Rev. Canon O'Toole, a Catholic priest who, through the system of plumping, had succeeded in distancing all other candidates by a very large majority. That is a result which often occurs where the electoral district is large and there is cumulative voting.

So far I have as briefly as possible explained some of the reforms which are suggested and the demands made to mitigate the undue evils of the present system. It must be generally recognized by all experts who have considered the subject that these systems I have adverted to are a marked improvement on the old one and have in many cases procured the end in view, namely, some degree of proportionate representations and some voice for the minority, but they do not result in a true and mathematical representation of the opinions of the electors. Therefore, the matter has been studied more deeply by other writers, and I desire to say a few words to the House in regard to what is called strictly proportional representation. The name is an extremely long one, and it is to be hoped that those who are in favour of the system will invent some shorter formula than these two very long words to designate the movement. But, in reality it is a very simple system, and it is designated in shorter words where it has been brought into use on the continent of Europe, in Switzerland, in Denmark and Belgium. The system is advocated in England by a very important league called the Proportional Representation League. That league is composed of some of the most eminent men in England, both in politics—and on both sides—and outside of politics. And, as it states in its programme, it is not absolutely wedded to the single transferable vote. Perhaps the shortest way for me to make known to the House what the system is, is to quote the formula, if I may call it so, of the proportional league on the principles and methods of the society. I take this from 'Representation,' the journal of the society:

Our Aims.

1. To reproduce the opinions of the electors in parliament and other public bodies in their true proportions.

2. To secure that the majority of electors shall rule and all considerable minorities shall be heard.

3. To give electors a wider freedom in the choice of representatives.

4. To give representatives greater independence from the financial and other pressure of small sections of constituents.

5. To ensure to parties representation by their ablest and most trusted members.

Our Methods.

1. Unite existing constituencies into larger ones returning three or more members each, having regard to natural divisions of the country, such as large towns, counties or parts of counties; give each constituency so formed a number of members proportionate to its electorate, the total number of the House of Commons being the same as at present, or smaller.

2. Decide elections by a proportionate system, such as that known as the 'single transferable vote' under which

A. Each elector has one vote and one vote only.

B. The elector votes.

(a) By placing the figure 1 opposite the name of the candidate he likes best.

He is also invited to place

(b) The figure 2 opposite the name of his second choice.

(c) The figure 3 opposite the name of his third choice, and so on, numbering as many candidates as he pleases in the order of his preference.

C. A candidate, to ensure election, need not poll a majority, but only a certain proportion of the votes cast.

This proportion, which is the least number of votes sufficient to render certain the election of a candidate, is called the quota. Thus, in a single-member constituency a candidate who polls one more than half the votes must be elected; the quota is therefore one more than half. So, in a two-member constituency the quota is one more than a third, for not more than two candidates can poll so much; and in a three-member constituency one more than a fourth, and so on. Therefore, to ascertain the quota, divide the total of the votes by one more than the number of seats to be filled and add one to the result.

D. The returning officer ascertains the result of the election as follows:—

(1) He counts each ballot paper as one vote to the candidate marked 1 thereon; he also counts the total number of votes.

(2) He ascertains the quota.

(3) He declares elected the candidates who have received the quota.

(4) He transfers in strict proportions the surplus votes of those candidates who have received more than the quota, and credits them to the unelected candidates indicated by the figures 2, 3 and so on, as the next preferences of the electors whose votes are transferred. This operation renders all votes effective; votes are used and not wasted.

(5) He declares elected those candidates who, after the transfer of surplus votes, have obtained the quota.

(6) He eliminates the candidates lowest on the poll one after another by transferring their votes in accordance with the wishes of their supporters to the candidates indicated as next preferences. This process is continued until the required number of candidates, having each obtained the quota, have been declared elected, or the number of candidates not eliminated is reduced to the number of seats still vacant, in which event the candidates not eliminated are declared elected.

This system, as hon. members will see who will take the trouble to look at the formula which I have quoted, is in reality a very simple one. It has been made the subject in England of two important tests. One of these elections took place in 1906 and the other in 1908. Both were eminently successful. An account of each of these elections is given in the journals of the society. In the case of the last one, the names of 12 well known public men of England, including the former Prime Minister and the present Prime Minister were chosen. The newspapers in England, the great organs of public opinion, consented to give the greatest possible publicity to ballots containing these names. I think that the last day of sending in ballots was the 1st of December. The ballots were all returned to a central office in London. I may say that, in the first test, there had been only 6,000 votes. But, as evincing the increasing public interest in this question in England, I may explain that there were over 21,000 votes cast in this last test election. These votes were counted in Caxton Hall, Westminster, under the presidency of Lord Avebury the president and Lord Courtenay the vice-president of the league. There were present 40 volunteers to count the votes and the count began at a quarter to six o'clock; practically, the counting occupied from six o'clock to twelve o'clock, at which time the result of the election was proclaimed. This shows that the objection very often formulated against this system, that it would take too long to count the ballots, is absolutely without foundation. But there is no question as to that now; every one in England admits that under this system the ballots can be counted in a reasonable time.

I may say that the system advocated by this league in England, the single transferable vote, is advocated by a league in the province of Ontario, Mr. Robert Tyson, one of the principal citizens of Toronto, being the chief officer of that league. That system has been in use for quite a time in Toronto for the election of delegates from the labour council to the Labour Congress of Canada, and it has always given the most perfect satisfaction. Indeed I may say there is no country where the proportional system has been adopted that has manifested any desire to return to the old and defective system which is in force in this country. That system is not only attracting the attention of electoral reformers in England, but it has been actually put into operation in several British dependencies, in New Zealand and Queensland with excellent results. Bills for the adoption of the proportional representative system, and the single transferable vote, if I mistake not, have been adopted in some of the American states, and are, or were a short time ago, pending in many of the Australian states. They were pending a short time ago in South Australia. The system is about to be adopted in Tasmania; and Mr. Deakin, the Prime Minister of the Australian Commonwealth, is known to be an advocate of that system, and has evinced a disposition to see it adopted throughout the Commonwealth. It has been adopted quite recently in the new constitution of the South African confederation, which has not yet even received its ratification from the British parliament. In the 'Times' newspaper of the 10th February, I think, the scheme is published, and it proposes to adopt the system of proportional representation for the election of members of the executive members of provincial councils; it is to that limited degree embodied in the constitution. There is every expectation that an electoral reform on the lines of proportional representation will be introduced as soon as the Commonwealth of South Africa is definitely organized. At present it is in the constitution, and I

think the ' Times ' of February 10 contains, not only the constitution with that proviso, but a very able article calling attention to the progressive method adopted in the proposed new constitution, and generally advocating for England the system of proportional representation.

I have indicated these details because it is important to show that the system of proportional representation is actually being adopted in many of the great British dependencies, upon the same lines as it is proposed by the Proportional Representation Society of England; and it is of some importance, in view of the probable closer relations which are contemplated between the different parts of the empire, that we, too, in view of that movement throughout the empire, should give some consideration to this great electoral reform.

Now, Sir, in England itself, as I stated a moment ago, that is a question of great actuality. I would like to quote to the House the words of the Rt. Hon. H. H. Asquith, the Prime Minister, in receiving a few weeks ago a deputation organized by the Proportional Representation League, the deputation being composed of what I might call the very best men in England. They suggested to Mr. Asquith the immediate necessity, in view of the condition of affairs in England, of instituting an inquiry in regard to that particular phase of electoral reform. These are words of the Prime Minister in response to the delegation:

> Lord Courtney and gentlemen, I have received in this room and elsewhere many deputations, but I do not call to mind any one of them which, having regard to its composition—and here I speak not merely of the personal weight of the individuals but of the variety of opinions in the political schools which they represent—which is more entitled to have its appeal listened to with consideration and respect. I do not hesitate to say at the outset of the very few observations which I am going to ask you to listen to, that I am in entire agreement with your main position. I have said in public before now, and am therefore only repeating an opinion which I have never ceased to hold, namely, that there can be no question in the mind of any one familiar with the actual operation of our constitutional system that it permits, and I might almost say that it facilitates—but it certainly permits a minority of voters whether in the country at large or in particular constituencies to determine the representation —the relative representation in the one case of the whole nation, and the actual representation in the other case of the particular constituency, sometimes in defiance of the opinions and wishes of the majority of the electors. The moment you have stated that as a fact which cannot be disputed, and it cannot be contradicted by any one, you have pointed out a flaw of a most serious character, and some might say of an almost fatal character, when your constitutional and parliamentary system appears at the bar of judgment upon the issue whether or not it does from the democratic point of view really carry out the first principles of representative government. I therefore agree that it is impossible to defend the rough and ready method which has been hitherto adopted as a proper or satisfactory explanation of the representative principle. It is not merely, as more than one speaker has pointed out, that under our existing system a minority in the country may return a majority of the House of Commons, but what more frequently happens, and what I am disposed to agree is equally injurious in its results, is that you have almost always a great disproportion in the relative size of the majority and minority in the House of Commons as compared with their relative sizes in the constituencies. That is the normal condition of our House of Commons. I have had experience of some of the inconveniences which result. I have had experience in both ways.

The Prime Minister goes on to explain what those experiences have been, giving details with which I do not wish to detain the House. But after having said that the inquiry was absolutely necessary, the Prime Minister stated that the only trouble which he encountered was to know in what shape that inquiry should be carried on. He stated that in his experience, royal commissions, through an unfortunate circumstance in the past, had been composed of too many members. But the Prime Minister spoke of immediate consideration, and indeed only a few days ago the British government named a royal commission to examine this question, composed of eight very eminent men, with Lord Frederick Cavendish as chairman, and the Prime Minister promised that no measure of electoral reform, such as has been promised by the present governing power in England, will be presented to the House before the government is in possession of the findings of this important commission.

Now one word as to foreign countries. They have adopted the system of proportional representation in Denmark, what is called the Andre system, slightly different from the classic form of proportional representation advocated long ago by Mr. Hare and defended by John Stuart Mill; that is the system which they have with some variation in Denmark, with excellent results. In Belgium they have a most perfect system, the list system, but not the simple system of one list on which is based the programme of the Proportional Representation League. The list system give play to the parties, being a most excellent system in its results, inasmuch as it affords representation to minorities. That is the system which they have in Belgium. The voter has before him as many lists as there are parties, or an individual, or a very small group of individuals may present a list. One man may present a list. There is a vote for the list and a personal vote as well. It is what the French call 'la con-

currence des listes avec double vote simultané,' or a competition of lists, the conditions being that the voter exercises his own personal preference. That, I say, is the system which they have in Belgium and the calculation of the results is made by a very improved mathematical method which is known by the name of the system D'Hondt, after the inventor. I do not feel justified in explaining fully that system, but it is a very simple one and we find it nowhere better explained than in a very interesting report or blue book presented to the House of Commons in England. It is a 'Report of His Majesty's representatives in foreign countries and in British colonies respecting the application of the principle of proportional representation in public elections.' You have there a collection of the reports of all the representatives of the British government in foreign countries and also throughout the British dependencies, and you have there, from the ambassador at Brussels, or from one of the attaches at Brussels, an explanation of the Belgian system which makes it clear to the most ordinary intelligence. In this connection I might say at once, lest I forget it, that the objection is very often urged that these systems, excellent in their results and faithful to the principle of proportionate representation, are not susceptible of comprehension by the average elector and that it is impossible to find any ordinary elector capable of understanding the principle or the method adopted by the Proportional Representation Society or the scientific principle adopted in Belgium. The answer to that is that where these systems are in use there are less ballots spoiled than in the countries where the old system exists. Very few ballots were spoiled in the two test elections held in England, an infinitessimally small proportion, and in Belgium, and the British dependencies where the system exists the proportion of ballots spoiled is remarkably small. There is a story of a prominent advocate of proportional representation who was also an African explorer; he tried the system on a tribe in the centre of Africa and after explaining it to them an election was held in which there was not a single ballot spoiled. It is a mistake to imagine that the elector does not understand the ballot. I have often heard from returning officers that what you call the lower and less instructed class understand the ballot which we have without any explanation and that very often it is to the intelligent and educated that the deputy returning officers are obliged to explain the methods of voting.

I would say a word in regard to France where the system of single member constituencies, or scrutin d'arondissement, is in force to-day. It exists in France, Germany, Italy and Spain, but in France you have a host of writers who have studied the question. It is just as live a question in France as it is in England and there is a report by what is in France the equivalent of the Royal Commission in England in which they recommend the adoption of the Belgian system of lists with some modifications as to simplicity and the ensuring of greater liberty to the electors.

In the United States they have tried different systems of representation, all the suggested improvements of culmulative voting, general ticket transferable voting; there is no place where electoral experiments have been so numerous or varied as in the United States. But they too have their Proportional Representation League that quite recently, at one of its largest meetings at Saratoga, adopted a model Bill providing for proportional representation in congressional elections as well as for state and municipal elections. That model Bill can be found in the journals of the Proportional Representation Society of the United States. There was a Bill introduced into Congress by Mr. Johnson of Ohio as far back as 1892 in favor of proportional representation as applied to the election of members of the house of representatives. In Switzerland the system has been adopted with respect to the cantonal elections. It has been very often urged that with the system of proportional representation you cannot have a strong, stable government. It is suggested that after all, imperfect and tainted with vices as is the present system, you are pretty sure that you will have a strong and clear result even if the result gives an advantage to the minority of the electors. Yet, it is a question whether that contention is well founded. In France they have the single member constituency system and they have had numerous changes of government and not for many years what you might call a strong and stable government. That kind of argument would not apply to that country nor to Spain or Italy. It is suggested that with the present system you would have a division of the country into two great parties with no groups, no factions, no small grouping of electors. That contention is not well founded. In France, Germany and Italy you have groups, you have the electorate divided into groups which are quite numerous and for many years you have had these groups even in England. They have there Unionists, Liberal Unionists, Conservative Unionists, the Irish party, the Labor party, the Radical party and the Socialist party. I do not find that the proposition is well founded that the system of to-day has the effect of dividing the country into two strong dominant parties and that you are not exposed to factions under the present system or that you have an element of stability which you would not find

under proportional representation. I do not think that the proposition is well founded. However, there is a strong desire, even in England where the reform is earnestly desired, to maintain the division of party and to the authorities there and to many others it seems undesirable to depart suddenly from the division at present existing into parties and to have this one single list, freedom of course for the elector but one single list as proposed by the Proportional Representation League. Many who are in favor of the proportional representation consequently advocate the list system, they would not do away with the list system and they incline to view with favour the Belgian list system whereby each party would have its own list, and there would be apportionment of the seats between the two lists. There is strong ground for the contention that the men who take the liveliest interest in the Proportional Representation League are not averse to the recognition of the division of lists.

There is of course the difficulty of details as to the disposal of remainders. That is to say when you have with the quotient found a certain number of representatives who with the quotient are absolutely found in the number of votes on each list and some representatives still remain to be elected, how will you operate? This question has received many solutions. There is the solution adopted by the Proportional Representation League in England which is fair enough. The Belgians have a system which does away with the remainder completely. The only objection to that system, which is mathematically perfect and very easy to understand, is that while it gives small parties some modicum of representation it also has the effect of increasing the representation of larger parties. In some parts of the United States they proceed in a similar way and do away with remainders. I shall not go into that because I do not think time justifies my doing so but it is a very interesting question and has been fully treated by those who have studied the question, so that abundant material on this point is to be found in all the writers.

Another difficulty which I anticipate may be suggested in regard to this question is whether we are going to do away with by-elections, that very important element in our political life. That is to say in one of these large constituencies where there are from 7 to 15 representatives what could you do when a vacancy occurs? That problem has been solved in Denmark I believe, at any rate in Belgium, and in some other countries that have adopted the proportional representation system, by electing at the same time as the representatives are elected, supplementaries who are destined to fill vacancies. In other places the vacancy is filled by taking the man next on the list, who has come nearest to fulfilling the conditions for election.. This, however, does not seem to meet with approval in England and is repugnant to our ideas. A solution has been suggested in England in the maintenance of the present electoral divisions to this extent that in the grouping of constituencies to form the larger electoral districts, the older divisions could be maintained and the man elected, the one who would be first elected, who would have succeeded in having the largest number of votes, would be free to choose the particular subdivision he would represent. It is argued with, I think, great accuracy that the person would choose invariably the constituency with which he would have always been associated, from which he would have received the largest support, with which he was most intimately connected. There is no doubt about that and in this manner each of the candidates elected would have a choice of constituency, and an elected member would choose that division or subdivision with which he was most intimately connected. In that case, when the by-election became necessary by the creation of a vacancy, it would be possible, a very important element in our political life, to test public opinion by having one election in that particular district. I believe that with that adjunct the reform offers no very considerable difficulties, although the efforts I have made so far have been to make known to the House in a general way the nature of the reform which we contemplate, and its far reaching and beneficial results. I have been obliged to confine myself to very strict limits, to the question in its broadest possible aspects. I have not however, neglected the consideration of how the improved system might find application in our own country.

I shall not detain the House by going at length into details of conclusions on that particular point, but in the researches I have made in connection with this, I have found no obstacles to this great reform. It is true that in some of the vast tracts of the country, as for instance in British Columbia or in the prairie provinces, the grouping of constitunecies at first sight is a difficult problem, not so much the grouping as the obtaining of the result. One would be obliged in a constituency of very large area to await results. The operations themselves are simple and can be performed as quickly as in England, but you would have to wait. It is better in place of obtaining a result in a few hours which is an unsatisfactory result, which is associated with a system condemned by everybody, a crude system giving free action to all kinds of abuses, to wait a little longer and obtain satisfactory results under a satisfactory system. Where the aggregations of population are greater, as in larger

cities, there are absolutely no obstacles to the trial of that system immediately. It could be tried at once in large cities where you could easily group the constituencies and people would, upon that test, realize what an immense advantage in every respect these changes would bring about. Hence it would be a school where we could learn the advantages of the system and study the methods of applying it generally throughout the country. In my own province there are differences of race and religion which at first sight might present some difficulties, although, of course, the primary object of the system I am advocating is to ensure a representation of the minority within the province, and to ensure a satisfactory representation of the minority in the Dominion as well. There would be very little difficulty in applying that system within the limits of provinces where these diflerences of race and religion occur and the results would, I am sure, prove most satisfactory. I regret that I am not able to go into details in regard to that, although on some future occasion, if the government decide to give practical effect to the suggestions I have made this afternoon, I may be able to communicate the results of my studies on that subject to the House. Finally, I have endeavoured to show this: in the first place, the admitted failure of our present system of representation; the dissatisfaction with it which exists everywhere, not only in this country, but in every other country where the system is in force. I have endeavoured, secondly, to show the suggested improvement of the present condition of affairs by the adoption of some system of election which would secure the true manifestation in parliament of the opinions of the entire electorate. I have tried, in the third place, to show the changes which are at present being worked out in all other democratic countries, or are engaging the serious attention of public opinion. I can only add that the duty of our own country is to fall in with this great democratic movement all over the world, to take our place in the procession of improvement, to give this question serious study, either by the committee which this motion suggests, or, better still, by a small commission who would have the time and the means available for a complete study of the system proposed and its applicability in our country. It is our duty at the present moment not to remain indifferent, side by side as we are with the great republic, which is making considerable tentative efforts in the direction of reform. We too must show that the democratic spirit is alive amongst us, and we must equal, if not surpass, our neighbours in the way of reform.

Hon. W. S. FIELDING (Minister of Finance). Mr. Speaker, I am sure the House has listened with pleasure to the speech of my hon. friend from Jacques Cartier, in which he has brought to our notice one of the most interesting problems in connection with representative government. I do not rise for the purpose of offering any objection to my hon. friend's resolution—to its main purpose. On the contrary, I think we shall all admit, in the light of what he has presented to us, that the subject is worthy of study and investigation. My only purpose is to suggest to my hon. friend whether he has not, in the form of his resolution, gone a little farther than is necessary. I want to suggest to him that he might modify, not the purpose or the substance of his resolution, but only its form. In the early part of it he asks the House to commit itself to the principle of proportional representation. I would not think that was necessary to the purpose of my hon. friend. I do not understand that he presents this question to the House as a settled question upon which conclusions have been reached. I would rather understand from his speech that he regards it as an open question calling for investigation and study. I would therefore suggest to my hon. friend that he would serve his purpose and secure the co-operation of the House generally, if he would remove from the resolution the first portion, so that it would begin at the seventh line and read as follows:

That a select standing committee of this House be appointed to investigate the different systems of proportional representation adopted or suggested elsewhere as an improvement upon our present methods of election, with power to extend said inquiry to all the various forms of the proportional representation laws proposed or in force.

I can well understand that there may be some hon. members of the House who feel that the present system, with its admitted imperfections, is perhaps after all as effective as any other that we are likely to obtain. The question, interesting and important as it is, is by no means new, because for many years the question of minority representation or proportional representation has engaged the attention of students of constitutional government. Although very much has been said and written on it, the mother of parliaments, to which we naturally look for example, has up to the present time not been able to find anything better than the good old system of government by the majority of the people in the respective constituencies. I do not think my hon. friend finds it necessary to his purpose to ask us to declare to-day in favour of the principle of proportional representation. I rather think that the spirit of his whole speech, which we have listened to with so much interest and pleasure, is that this is a question that invites our attention, investigation and careful study. In that spirit I would suggest to my hon. friend

whether he might not modify his resolution in the way I have proposed, and in that form I have no doubt it will secure the unanimous approval of the House.

Mr. MONK. If I may be allowed, I would say that I am very well satisfied with the spirit in which the suggestion I have made has been received by the government. All I desire, and all I am sure that the members of this House desire, is to have the question examined, without committing ourselves to any special reform. I wondered, after I had given notice of this motion and after I had learned of the action taken by the British government, whether a commission would not perhaps be more satisfactory; but in the meantime the nomination of a committee would be very satisfactory to myself.

Mr. FIELDING. I would suggest to my hon. friend that he add to the resolution the usual words, 'with power to send for persons, papers and records,' which with his consent the clerk will add. I understand that my hon. friend consents to the amendment I suggest.

Mr. MONK. Yes.

Motion as amended agreed to.

THE RAILWAY COMMISSION.

Mr. W. D. STAPLES (Macdonald) moved:

That in the opinion of this House the vacancy on the Board of Railway Commissioners caused by the death of the late Hon. Mr. Greenway should be immediately filled by the appointment of an able and practical farmer of the west, in order that the best interests of the agriculturists may be protected.

He said: Mr. Speaker, in speaking to the resolution which I have had on the Order Paper for some time, and which I now move, I do not desire to make any lengthy remarks, nor do I wish it to be understood that I am moving the resolution for the purpose of making any political capital or gain. I move it in the endeavour to impress on the hon. members of this House, and the government in particular, how important it is that the vacancy on the Board of Railway Commissioners resulting from the death of the late Hon. Mr. Greenway, should be immediately filled, and that the appointment should go to a practical farmer of the west. My reason for mentioning the west is that the board as at present constituted is composed entirely of eastern members. The man appointed to the position should be one who has had some experience in the pioneer life of the west, he should be an honest man, he should be a capable man, he should be a courageous and energetic man, not afraid to stand out for the interests of the agricultural class. There are many professions practised in this country with which it is a credit for any man to be connected. To my mind there is no profession more noble, more honourable, more important, than that of agriculture, and I regret to say that the agriculturists in this country have not got that representation in our legislative halls and on our boards and commissions to which they are entitled. I need not argue that agriculture is the principal industry of Canada. That has long since been conceded and it is admitted almost every day in this House. But what I cannot understand is that we should find hon. gentlemen apparently so anxious to stand up for the farmers, and yet when it comes to appropriate the necessary money for the development of the great industry, this government is parsimonious to an extreme.

On looking through the statistics, I find that there are in Canada at present 575,000 practical farmers, that is men who depend on the cultivation of their own farms for a living. And I find that out of a population of 6,500,000, 3,775,000 are depending on the operations of farming. I find that there is invested in agriculture in this country $2,440,000,000, and that the revenue from our agricultural sources amounts annually to about $700,000,000, which is more than that derived from all the other industries put together. I find further that the agricultural exports from the country amount to about $150,000,000 annually. Now, I am not going to take up time travelling from the Atlantic to the Pacific to show where those farms are located or where this large amount of capital is invested, but shall content myself with saying that the major portion of this immense capital is invested in the west and that our resources come largely from the west, notwithstanding the fact that these new provinces are still in their infancy. But notwithstanding the large number of people engaged in agriculture, the large amount of money invested and the large revenue coming from that source, I regret to say that the farmers, who can produce as capable representatives as any other class in this country, have but a small representation in our legislative halls and on our important boards. Let me refer for a moment to the parliament which was dissolved last summer, and I am not doing so for the purpose of making any invidious reflections. In that parliament, composed of 214 members, there were but 13 farmers. As to the number of practical farmers in this parliament, with its increased representation, I am not able to say, that I want to point out that 90 per cent of the constituents represented in this House are farmers, and that the farmers expect the members of this House to stand up for their interest when anything pertaining to it is in question. For that reason I claim that there is not one hon. gentleman in this House who can get away from supporting my resolution.

The Board of Railway Commissioners, which was created some six or seven years ago, is a very important body, I do not know that there is any legislative body in the Dominion whose work has been more beneficial to the general public than that board. When it was first suggested, by means of petitions from the municipalities throughout the Dominion and personal letters to the government of the day, both sides of the House were anxious to give to the people such a board as they desired; and the board parliament created was not long in operation until it was found that the work was too strenuous for the railway commissioners to accomplish without submitting themselves to a very severe strain. I believe that the excess of work imposed upon one of the brightest men that we had in this country, who was chairman of that commission, shortened his days. It was then found that it would be wise to reorganize the board. That was the stand taken by the leader of the opposition and agitated by him on the hustings, but the government did not see fit to reorganize the board in the manner suggested by the leader of the opposition but did see fit to increase its members; and when they came to make the extra appointment, we in the west were pleased to know that they put on that commission a practical farmer in the person of the late Mr. Greenway. And we all regret that his death prevented our having the benefit of that work which no doubt so able a man would have been able to perform. No doubt it is the intention of the government to replace Mr. Greenway, and I appeal on behalf of the farmers of the west to have that appointment go to a practical farmer. Many members will probably ask: have you in the ranks of the farming profession a man qualified for this position? I have had that question put to me since I put this resolution on the Order Paper. To that question I reply that in the ranks of the farming profession there are men as capable of filling this position as can be found in any other profession, and I believe that if the government will make a little effort they will have no difficulty finding in the west such a person. I claim that this vacancy should have been filled before this. There is no board to which it is as easy for the farmers to go as the Board of Railway Commissioners. In a sense, the board comes to them. And I believe that, had the board had in its membership a representative of the farmers, there would have been a better understanding of the grievances and obstacles with which the farmers of that western country have had to contend in relation to the transportation problem, which, after all, is the great problem in the development of the west.

I have already asked: Is such a man available? I need hardly remind the Prime Minister (Sir Wilfrid Laurier) or the Minister of Railways and Canals (Mr. Graham) that the farmers of the west believe they have a proper man for that position. I do not know that it would be out of order for me to make mention of the name, for it has been in the press and has come to the attention of the government through petitions and personal letters, but I do not mention the name. The gentleman is a voter in the constituency I have the honour to represent. And, while he is politically opposed to me I can assure the Prime Minister and the Minister of Railways that they will make no mistake in giving to the farmers that particular person as their representative in the Railway Commission.

I claim that the farmers of this country are not getting justice; they are not getting, if you will allow the expression, a square deal. Some person is responsible for it. If I may be permitted, I would say that the man to whom we first look is the man whom the farmers have sent to represent them in the ministry. This hon. gentleman is placed in that position to champion and advocate the interests of the farmers. But we find, as I have already intimated, that we are not getting the necessary money to develop the industry of agriculture. We have heard the Minister of Agriculture (Mr. Fisher) state, time and again, that if he had the necessary money, he would have no difficulty in giving to the farmers the consideration to which they are entitled. I am not here particularly to complain of the small sum of money we are getting, but I do complain that the minister is not putting up the fight he should to get his share of the appropriations that are made. The Minister of Agriculture is given about half a million dollars, where the Department of Marine and Fisheries gets $5,000,000 annually and the Department of Militia about $5,000,000. True, the Minister of Agriculture tries to explain that in the last parliament his annual oppropriations amounted to about $1,000,000. But if he will leave aside the items which ought not to have been charged to his department, he will find that I am not far astray in saying that the farmers are only getting about half a million. I ask you, Mr. Speaker, what right has the Minister of Agriculture to allow the large item of archives to be charged up to agriculture? What has census statistics to do with agriculture? What have criminal statistics to do with agriculture? What has the Year-Book, what has Historical Data Regarding Canadian Families? What has the Patent Record to do with the Department of Agriculture? Yet the Minister of Agriculture allows these to be charged up to his department. It would seem that, as the ministers sit at the council board, when they find an expenditure which no department wishes to shoulder, the Minister of Agriculture says: Charge it up to the

Department of Agriculture, because the poor farmer, in his ignorance will never know that is charged to the Agriculture Department. The Minister of Agriculture (Mr. Fisher) laughs. But I want to say to him that the farmers do not treat this as a laughing matter. The Minister of Agriculture appears to go away out of his sphere in much that he does. He wants to be in all the big debates in this House, he wants to introduce legislation such as the Civil Service Bill—yes, and the Militia Bill. But I do not know that he has made a great success of the legislation he has taken charge of; I find about as much complaint about it, as about the department of which he has the honour to be in charge.

I would like to ask the Minister of Agriculture what he has been doing when these appropriations were under discussion? What was he doing, for example, when the Department of Militia asked for and succeeded in getting, last session, appropriations amounting to about $5,000,000? Where was he when $90,000 was being asked for the erection of dwellings for servants at the Royal Military college, making a cost of $6,000 to $7,000 for each house, every one a modern residence equipped with electric light and all other modern conveniences. Did the hon. Minister of Agriculture think of the people he is supposed to represent? Did he think of the people who had paid this money? Did he think of people who had to go out to the far prairie or to the backwoods there to hew down timber to build a shanty or construct a hut of sods? Had the minister given the consideration to his department that he should have given, he would have said: No; I will not allow such an amount to be appropriated for such a purpose. When they were appropriating a large amount of money, more than $20,000, to build a residence for the chief astronomer, could not the minister think of a better way to utilize the money than to build a comfortable home for an official already well paid? Then take——

Mr. SPEAKER. Does the hon. gentleman (Mr. Staples) understand the question before the House? I have allowed a certain amount of latitude, but I think——

Mr. STAPLES. Speaking to the point of order you have raised, Mr. Speaker——

Mr. SPEAKER. It is not a point of order, it is merely to call attention to the question before the House—the appointment of a railway commissioner.

Mr. STAPLES. I bow to your ruling, Mr. Speaker. I was trying to explain that the farmer is not properly represented, as the resolution states. However, Mr. Speaker, if I am getting wide of the mark I will be only too pleased to bow to your wishes. I do not intend in any case to take up much time. I only intended to bring this matter before the government and ask them to give the agriculturists representation on that board. I feel, and the farmers of the west feel, that they are entitled to have a farmer placed upon that board, a farmer who has had to go through pioneer life in that country, a man who understands the obstacles that the early settlers have to overcome in the development of that country. There is no class of people who have done more to build up this great Canada of ours than the farmers, there is no class who have contributed more in taxation and otherwise to build up this country than the farmers, and in my opinion there is no class who are receiving so little consideration as the farmers. I hope that the Minister of Agriculture will take heed to what I suggest to-night. I hope that when this government ask for any more appropriations to equip a vessel like the 'Montcalm,' with silver spoons and silver teapots costing $18 or $20 a piece, they will remember the pioneer who is away out on the prairie, or in the backwoods, and use some of the money for his relief which is now being wasted in other directions. In conclusion I again appeal to this government on behalf of the farmers, because they constitute, as I have said, about ninety per cent of the voters in the western constituencies, and are consequently deserving of much more consideration from the government than they are at present receiving.

Mr. F. L. SCHAFFNER (Souris). In rising to second the motion of my hon. friend from Macdonald (Mr. Staples) I shall detain the House but a short time. Nevertheless, I realize that this is one of the most important and far reaching questions that has been presented to this House, or will be presented to it, during the present session. I shall endeavour to show to this House that the farmer is more largely interested in freight rates and passenger rates than any other class of citizens in this country, and if I can show that the farmers are as large or larger supporters of the railways than any other class of citizens then surely, Mr. Speaker, the motion of my hon. friend deserves the support of this House and of the government. I do not wish to confine my remarks to the farmers of the west, although I have the honour of representing a very important farming constituency in the western country, but I wish to broaden my outlook and to include all the farmers in this country. I ask this government to place a representative of the farmers upon the Board of Railway Commissioners, a body which has been organized to hear the real or alleged grievances of the farmers, and to adjudicate them in the best interest of all parties concerned. Sir, I do not need at this time to expatiate on the great importance of the Board of Railway Commissioners in this country. I desire to give

this government credit for inaugurating that splendid institution, I believe it is one of the best institutions we have in this country. It is only five or six years ago since this country decided to do away with the old Railway Committee of the Privy Council, and to replace it with what is known as the Board of Railway Commissioners. Although a board of railway commissioners may be somewhat new to this country, it is no new thing to our friends to the south of us. We find upon examination that nearly every state in the union has its board of railway commissioners, not so large, I think, as ours, not having so many members as we have upon our board. Besides having a board for each state, they have established a great central convention, in which representatives from the various state boards meet yearly and discuss matters involved in the great question of transportation. They consider their object so important that they have decided to establish a permanent time and place of meeting, the time being the month of October, and the place the city of Washington.

Now, Mr. Speaker, although we have followed the example of our friends to the south in establishing a railway commission, we have not followed them so closely as I would like in selecting the personnel of that railway board. Last session, on the occasion of the appointment of the late Mr. Greenway, I made some remarks along that line. They are the sentiments of my heart, and I intend to express them here again, believing that although they come from a very humble member of this House, they are worthy of the consideration of this country. Our friends to the south do not select the members of their various boards from one political party, they select them from different political parties, and I believe that fact means more than it might appear at first sight to the members of this House. In some of the states, especially in the great State of Minnesota, no two members can be selected from the same political party, and I believe that mode of selection greatly enhances the confidence which the people have in the board. I have said that I gave this government credit for establishing the Board of Railway Commissioners, but I fear they have not done all they might or ought to have done to make this board as efficient as possible in the performance of the important work entrusted to it. I want to say that so far as the appointment of the late Judge Killam was concerned, notwithstanding that he was a Liberal of the Liberals, if this government had searched from the Atlantic to the Pacific, they could not have found a more capable, a more fair-minded gentleman to be chairman of that commission than the late Judge Killam.

We had a very interesting discussion not long ago upon the subject of deaths from preventable diseases. Everybody knows that the late Judge Killam did come to his death by an acute disease, but every medical man in this House knows that these acute diseases are much more easily contracted and that we are less able to resist them if our constitutions are worn out by overwork. I believe that Judge Killam was overworked. I believe that the Board of Railway Commissioners has been and even yet is a one man board to a very large extent. It is very good to have critical men, literary men, if you like, on that board, but I believe that if the curtain was raised, that if we knew more of the inner workings of this Railway Commission, we would find that there are some men who are more anxious to see that every 'i' is dotted and that every 't' is crossed than to give the chairman of the board the help that he should have in order to carry on the work successfully. I cannot speak of the present chairman as I can of Judge Killam, because I had known Judge Killam fairly well for some twenty-five years, but I believe that the gentleman who has succeeded him is fulfilling all the duties that he has been called upon to fulfil in connection with the chairmanship of this important board. But I do ask the government, in making appointments to this very important board, to rise above politics and opportunism and place upon the board a proper class of men. I am so earnest about this board that I intend now to offer a criticism in regard to one of the recent appointments. It may not be the proper thing for me to do it, but I have seen opportunism entering into an appointment to this board. Why did not the government keep right on appointing men of the stamp of Judge Killam and Judge Mabee to that board? What occurred recently every member on either side of this House knows. An election was coming on and the first minister wanted some new blood in his cabinet. Every portfolio was already filled, he could not make any new appointments, but he had to get rid of some of the old men and to my mind it is as clear as A B C that in order to get rid of some of the old ones something had to be done, and in connection with that bargain, for I can call it nothing else, a gentleman was called to that board who, I do not think, was fitted for that position. I would like that we on both sides of this House should be big enough and broad enough that when we wanted to appoint a man to this commission we would forget race and creed and appoint a man suitable for the position irrespective of race and creed.

Now, I want to give a few figures to show the importance of the farmers in this country. My hon. friend from Macdonald (Mr. Staples) has done it well, but I desire to add a few words to what he said. I do not suppose my hon. friend counted me as being among the honour-

able thirteen, but I want to say that I represent a farming constituency and I do not believe, farmer as my hon. friend is, that there is any man who takes more interest in the welfare of our farmers than I do and why?—because I know that I cannot benefit the farmers without benefiting the doctors, lawyers and everybody else in the country. My hon. friend from South Simcoe (Mr. Lennox), in answer to a question, obtained some figures about the farmers. My hon. friend from Macdonald referred to some of them and said that the farmers numbered 575,000. He also said that those dependent on the farmers numbered 3,788,000. That is not right. If there are 7,000,000 people in this country then there are 7,000,000 people dependent on the farmers.

Mr. STAPLES. I do not want to be misrepresented by the hon. gentleman. I said that 3,788,000 were depending directly upon the operations of the farmers.

Mr. SCHAFFNER. I am very pleased to accept my hon. friend's explanation. He never makes a mistake. The number dependent upon the farmers was given in answer to a question, and the statement of my hon. friend was 3,788,000, but I maintain that if there are 7,000,000 people in Canada there are 7,000,000 people directly dependent on the farmers. True it may be that like Macawber's wife's twins, for a time we are permitted to draw our nourishment from nature's fount, but we have not travelled very far along the journey of life before we switch off and become dependent upon what the farmers produce. The figures which I propose to quote are appalling. We wonder how it is that the hon. Minister of Agriculture (Mr. Fisher), out of all the revenue of this country, can only get the paltry sum of from $500,000 to $700,000 for the farmers. Let me give the following figures to the House:

Invested in agriculture, 1908.. ..	$2,440,000,000
Farm buildings	395,815,143
Farms and lots	1,007,454,358

Taking these two last items together we have $1,403,269,501 as the value of farm property including buildings and land. Now, let me make a litle comparison between this and the amount invested in the manufacturing industries of this country. We have lands and buildings used by the manufacturing industries valued at $467,274,905, and capital invested, $846,585,023. The value of farm products in June, 1908, was as follows:

Horses..	$264,000,000
Milch cows..	99,000,000
Horned cattle..	122,000,000
Sheep..	15,000,000
Swine..	31,000,000
Total..	$531,000,000

I am endeavouring to show the support that the farmer gives to the railway. Until recently the Board of Railway Commissioners devoted themselves almost absolutely to the question of transportation. The number of animals exported in 1908 was 157,279. If you take 30 to the carload you have 7,863 carloads of cattle that the trains were called upon to carry during the year 1908. Last year we grew in this country over 112,000,000 bushels of wheat. The area under wheat in 1908 was 6,610,300 acres. From that production of wheat we must deduct a little over 9,000,000 bushels for seed. Deducting also the amount required for home consumption, we have left for transportation about 75,000,000 bushels of wheat. This would make 75,000 carloads, 25,000 train loads and, averaging 20 trains to the day, it would take the railways 125 days, or about 4½ months to ship out the wheat grown in this country in one year. Does not this give the farmers some just claim to representation on this Board of Railway Commissioners?

Take apples. We grew in 1891 something over 7,000,000 bushels. In 1901 that had increased almost three times, it had grown to 18,626,186 bushels. In 1906 we grew in Canada 25,000,000 bushels of apples. Three bushels to the barrel would reduce this to 8,000,000 barrels which, at a reasonable price, say $1.25 a barrel, would be worth $10,000,000 and would fill 44,480 cars or, at 30 cars to the train, 1,481 train loads.

I might make an estimate of these combined. The value of farm animals and their products for 1908 was $531,000,000. The crop values of 1908 came to $432,534,000. The cheese, butter, milk, condensed milk and apples of this country amounted in 1908 to over $100,000,000, and apples to $10,000,000, making a total of $1,073,534,000. The beauty of this is that although this country was able to produce crops of such enormous value the land was left in just as good condition as ever to produce as large or larger crops in the next year. It is not so with the mines. You dig a hole and extract gold or silver and you have nothing left but the hole—I am told that in many mines the hole is all you ever do have. It is not so with the products of the farm, you can take this great amount one year and your farm is in just as good condition next year.

I may be met with the argument that this is a new country and that you cannot expect that the manufactures of this country will have become as important as the farming industry and its products. Let me call attention to the United States which is surely not a young country. If the agricultural products of the United States have increased in equal ratio and have kept ahead of the other industries of that country, have I not the right to argue that the same condition of affairs will exist in this country as now exist in the United States?

In 1905 the capital invested in manufactures in the United States was over $13,000,000,000. The capital invested in railroads was $13,000,000,000. The capital invested in agriculture was not $13,000,000,000 but more than twice that amount, it was over $30,000,000,000. The net return from products, manufactures, was $2,093,893,976; from railroads, $616,341,657, and from agriculture, net return, $2,945,461,200. If that is so it is high time that the representatives of this country, even although they may not be as practical farmers as my hon. friend (Mr. Staples), should realize from a business point of view the great importance of the farming industry. I want to warn the Minister of Agriculture that the farmers are beginning to wake up. I shall not take up that issue to-night. I intend to take it up later and to show not only the government supporters but the leader of the opposition and every one on this side that they will waken up one morning and find that the farmers are going to do what they ought to do, that is run this country.

As to the Board of Railway Commissioners, no body of men in this country are charged with graver duties or burdened with severer responsibilities. I say without fear of contradiction that no question approaches in magnitude, in difficulty or in importance, this great question of transportation. Let us meet it fairly and squarely. I do not ask parliament that a farmer from the west should be chosen, although I would be justified in doing so. The four great provinces of the west, Manitoba, Alberta, Saskatchewan and British Columbia are the great agricultural provinces, they are the great sources of profit to the railways. Why are the Canadian Pacific Railway and the Grand Trunk Pacific Railway so anxious to get into that country? Not for fun, they are business propositions, they are anxious to get there because they know the farmers of that country will produce the stuff that will give business to these railways. Let us not consider creed or nationality, but in the appointment of men to this important institution let us recognize the claim of the farmer. I hope that the appointment has not gone so far that the minister cannot adopt the suggestions so eloquently made by my hon. friend from Macdonald and place upon the Board of Railway Commissioners a practical farmer.

Hon. SYDNEY FISHER (Minister of Agriculture). I would not have to say a great deal had it not been for the delicate attention the hon. member for Macdonald (Mr Staples) has bestowed on me. It seemed to me that he had rather more at heart the showing up of my own delinquencies than the needs of the farmer or the constitution of the commission. His colleague (Mr. Schaffner) has said that his hon. friend does not make mistakes. I am sorry I cannot agree with that, because it will be my duty to show that he has made a few mistakes in the remarks he has made. In the first place he says that the Department of Agriculture has received about $500,000 in respect of agricultural work in the estimates. If he had studied the estimates of this session for the ensuing year he would have seen that after taking out all the estimates which he mentioned for extraneous subjects in the Department of Agriculture that department is asking the House for $782,000. I would like, however, to refer to the figures of a few years ago, and just out of curiosity I sent for the Appropriation Bill of 1895, the year before we came into office.

Mr. STAPLES. I am not criticising the late government.

Mr. FISHER. I know that my hon. friend would not criticise the previous government. I dare say that when that government was in power, my hon. friend knew very little about public affairs in Canada; if he had, perhaps he would not have said everything he has said to-night. Under that government, in 1895, the purely agricultural oppropriations for the benefit of the farmers came to $161,000. There was $40,000 more of advances to be made for dairy purposes, but that did not stay with the farmers, but came back into the public treasury; so that $161,000 was the amount by which under the Conservative regime the treasury of Canada was the poorer for the benefit of the farmers.

Mr. STAPLES. Will the hon. minister in fairness tell the House how much money was being expended in the Dominion of Canada previous to 1896, and figure out what proportion the farmers got ?

Mr. FISHER. Yes. Roughly speaking, the expenditure has increased by a little more than double for the whole of Canada, while the expenditure on agriculture has amounted to nearly five times as much. I can give the exact figures to my hon. friend, if he is seeking information, which he is sadly in need of. My hon. friend dwelt upon my iniquities in charging to agriculture the archives, the patent record, the census and statistics, the statistical year-book, and so on. I said a few minutes ago that my hon. friend probably did not know much about political questions in Canada when his party was in power some thirteen or fourteen years ago; but if he will look back to that time, he will find that these expenditures are placed under the control of the Department of Agriculture by statute; and being a law-abiding citizen and minister, I keep them in the Department of Agriculture. The hon. member, if he goes back a little further, will find that these laws were put upon the statute-book by the old Conservative government, and if he goes

back through the eighteen long years during which the Tory party ruled this country before 1896, he will find that under that regime the law-abiding ministers of that day, Tory though they were, put the archives, the patent record, the census and statistics and the year-book also under the Department of Agriculture; and if the Department of Agriculture is that omnium gatherum which the hon. gentleman describes it, it is due to the fact that under the old Tory regime all these outside services were put into that department—why? Because it did so little for agriculture that its then minister had nothing to do, and the Tory party put under his control any thing and everything the other ministers wanted to get rid of. But we have been doing something for agriculture, we have been increasing the expenditure on agriculture, we have been enlarging the Department of Agriculture until to-day it is doing five times the work it did in those days, spends five times the amount of money, and shows five times that appreciation of the interests and the power of agriculture that our predecessors showed. My hon. friend from Souris has said that the farmers were rising in their might and were going to wake up and run things in this country. I can tell my hon. friend that since the ministry at present in power have come in, they have been largely run by the agricultural vote; and if to-day, and during the last election, and the election before, and the election before that, and the election before that again, the Liberal party have been able to defeat the Conservative party, it has been largely because the agricultural vote of Canada has supported the Liberal party. We have shown consideration for the farmers in every respect, we shall be glad to show it in the future as we have done in the past, and if at any time the agricultural interests are not carefully safeguarded before the Railway Committee, I am quite sure that this government will see that they are looked after.

Hon. JOHN HAGGART (South Lanark). Mr. Speaker, I cannot congratulate the hon. Minister of Agriculture on his speech. My hon. friend here points out the importance of the farming interest in the Northwest, the immense development and production of that section, and claims that the expenditure for agricultural purposes is not large enough. The minister replies with the tu quoque argument. Whenever you find a gentleman using that argument, you may conclude that he has no other argument to offer; it is an admission that the hon. gentleman who spoke before him is right. The hon. minister says: I sent for the statutes of 1895, and I find that the Tory government expended only $161,000 on agriculture. Suppose it did. The Tory government established the Department of Agriculture and appointed the first minister. If we have a Department of Agriculture to-day, it is due to the Conservative government. The hon. minister forgot to tell us that from 1874 to 1878, when these gentlemen were in power, not one cent was spent for agricultural purposes. If the Northwest has to-day products amounting to $180,000,000, it is due to the progressive Conservative government which built the Canadian Pacific Railway in spite of the opposition of hon. gentlemen opposite. Everything that is in the Department of Agriculture amounting to anything was initiated by the Conservative government, and the hon. gentleman has done nothing but follow the example set by them.

Mr. J. E. ARMSTRONG (East Lambton). I have listened with great interest to the speeches of the hon. member for Souris (Mr. Schaffner) and the hon. member for Macdonald (Mr. Staples). But I heard with regret the remarks of the hon. the Minister of Agriculture (Mr. Fisher). It was certainly a humiliating position for a minister specially charged with the advancement of the greatest industry in this country, to take when, in reply to the fair criticisms made on his department, he gave us nothing but politics of the smallest description. Just let us go back ten years and find what this minister has done for the agriculturists of Canada.

Some hon. MEMBERS. Oh.

Mr. ARMSTRONG. Hon. gentlemen may well say oh, but if they will follow back his record what will they find? They will find him first introducing his scissors policy, in which he invented a pair of scissors to cut the peaches off the tree—peaches that had no stems. Then they will find him with his chicken fattening stations, established in different parts of the country, at the expense of tens of thousands of dollars, where he was trying to educate our farmers' wives to line up their chickens and fatten them with a squirt gun. Then what about his cold storage proposition? Have we not been pounding at his door for years trying to impress on him the necessity of improving our cold storage system and giving us a better means of transportation. But what has he been doing? I need hardly tell you the history of that cold storage system of his. It has been a perfect farce. Look at the money he has spent in equipping vessels to carry our perishable products across the ocean. He has spent hundreds of thousands of dollars in that direction and yet has no control over the temperatures in the boats or on the cars. Year after year we have been trying to convince him that he should have control over the temperatures of these boats and cars, but he keeps on making appointments in his depart-

ment and piling up the expenses but doing nothing to make our cold storage transportation what it ought to be. Compare for a moment the system of cold storage across the Atlantic from the Dominion to the markets of the world with the system in operation from New Zealand, or the system which brings the chilled meat from the Argentine Republic and lands it in the British market. I might go on to tell you about the improvements he has attempted to make with regard to the fruit marketing Act and about his squandering of the people's money in other measures he has brought before this House. In nearly every one of them, he has made a complete failure. And to-day we find him rising in his place and condemning my hon. friend from Macdonald (Mr. Staples) for trying to urge on the government the necessity for appointing a practical farmer to the Railway Commission. What has he done towards helping to remove the cattle embargo in the old country? Why, you find him standing up and telling the people that they do not want mutual preference in the British market. Nor will he make an effort to get our goods into the German market, the second best market in the world. A few months ago we found him telling the farmers in his own province that they do not want rural free mail delivery.

Mr. NESBITT. What has rural free mail delivery to do with the question before the House?

Mr. SPEAKER. If the hon. gentleman is raising a point of order, he should do so definitely and not in the form of a question.

Mr. NESBITT. My point of order is that the hon. gentleman is not speaking to the resolution before the House.

Mr. SPEAKER. The purpose of the resolution appears to be shown in the last few words: 'In order that the best interests of the agriculturist may be protected.' That certainly opens up agricultural questions, but I think that these agricultural matters should be discussed in the light of the preceding part of the resolution, and that is how they are to be protected by the appointment of an agriculturalist to the Board of Railway Commissioners, rather than by a close study of other matters connected with agriculture.

Mr. ARMSTRONG. I quite recognize that several of the hon. gentlemen who preceded me have wandered somewhat afield, but I think that the Minister of Agriculture was responsible for having introduced a number of subjects into the discussion not expressly covered by the resolution.

Mr. NESBITT. But what has rural mail delivery to do with it?

Mr. ARMSTRONG.

Mr. ARMSTRONG. I am sorry to see the hon. member for North Oxford taking the position he does. I am sorry to see that he does not take sufficient interest in matters pertaining to the farming interests to have them discussed on the floor of parliament. But I feel satisfied that when he goes back to his constituents and meets the different farmers of his constituency—and I have no doubt there are lots of brainy men among them—he will find that they will resent the position he has taken, in attempting to criticise any hon. member for trying to show up the sins of the Department of Agriculture. Coming back to the question before the House, I wish to point out that the hon. gentleman from Macdonald (Mr. Staples) was perfectly justified in urging on the government the necessity for appointing a practical farmer on the Railway Commission. I know he does not intend that the appointment should be limited to practical farmers from the west, because he recognizes that the farmers in the east are also in need of representation on that board. I need hardly call to your attention, Mr. Speaker, that an immense quantity of perishable products go out of our country every year, and that these require to be handled by men who understand their transportation, and consequently some one acquainted with that subject in particular should be on the Board of Railway Commissioners. I might also mention that the express companies have a great deal to do with the transportation of perishable products. I have in my mind one man who last year paid out $50,000 to the express companies for the transportation of perishable products, and I know of many others in our farming districts who pay out large sums to these companies. We need, therefore, on that commission a man thoroughly conversant with that subject. We need also one conversant with the question of railway crossings, and it must be admitted that the one class most interested in these are the farming class. Then there are questions of drainage which come before that board and in regard to which it is important to have some farmer, who thoroughly understands these questions, on that Railway Commission, for very important questions of this kind come before the Railway Commission from time to time. The question of the carriage of the mails to distant districts claims the attention of the people living in the rural parts of Canada. The independent telephone and telegraph companies are also interested in having a man to represent them on the Board of Railway Commissioners. I do not intend to take up further time. I content myself with expressing the earnest hope that the government will support this resolution, and, that when the time comes to appoint a man on the railway commission a man

thoroughly conversant with the farming interest will be appointed.

Mr. MICHAEL CLARK (Red Deer). Mr. Speaker, I think the House will be in pretty general agreement with me when I state that if, as the hon. member for East Lambton (Mr. Armstrong) said, that the Minister of Agriculture (Mr. Fisher) threw down the political gauntlet, it is certainly equally true that the hon. member himself showed great readiness in taking that gauntlet up. He introduced into his opening remarks an amount of heat which, to my mind, is utterly foreign to any agricultural question. I think the spirit that should animate us is one of pastoral calm, but I failed to catch that mood in the remarks of the hon. member. The Minister of Agriculture needs no defence from me; but, after all, I should venture to urge that he has the right of every other member of the House to defend himself when he is attacked— and he was very strongly attacked, for a mild mannered man. I am sorry the Minister of Agriculture has left; I should have offered him a little consolation. I am told that the late Sir John A. Macdonald used to say that if you want to find the best apple tree you do not need to look at the branches,—find the tree with the most stones lying under it. Judged by that standard the House and the country will agree that, in the Minister of Agriculture we have a man who gives most punctiliously careful, able and successful attention to the duties of a very important office.

Now, to turn to the resolution before the House, if it comes to a vote I intend to vote against that resolution. It did not suit me to give a silent vote, because I happen to resemble both the mover and the seconder of the resolution in that I represent an agricultural constituency. I have the advantage of at least the seconder of the resolution in that I not only represent an agricultural constituency but am myself a farmer, so far as Canada is concerned.

Mr. SCHAFFNER. So am I as much a farmer as the hon. member (Mr. Michael Clark). How much does he farm—how many acres?

Mr. CLARK. I am going to prove still that I have the advantage over my hon. friend and interrupter; I am a farmer; I have never done anything but farm in Canada. Can my hon. friend state that also? He is silent now. He admits that I have the advantage over him. I am not sure but that, if I were a careful man, the fact that I am a farmer would make me careful about voting against the resolution because, after all, the appointment to the railway commissionership is a kind of rig a man could drive. The Minister of Railways and Canals need not take that remark in any spirit more serious than the spirit in which I make it.

I think that the mover of the resolution clearly proved too much. If I understand his argument, his attempt was to prove that where the farmers' interests are particularly concerned, a farmer was the man to do the business of the position. Then the hon. gentleman immediately started out to disprove his own position by proving that a horrible mistake had been made in the case of the Department of Agriculture by appointing a farmer to the position. If the Minister of Agriculture, being a practical farmer, is such a horrible failure in his position, surely that ought to warn us against supporting the mover of the resolution. In regard to the seconder of the resolution, I am bound to say that, as I listened to him, I wondered how he ever had the conscience, being, as I understand a medical man, to sit as the representative of an agricultural community. If he holds the farmer to be of such importance as his language describes him, if he was not merely repeating that kind of speech which all of us make more or less when we are appealing to an agricultural community—for I believe it is a common saying in this country that everyone is a farmer at election time—if he was not merely repeating one of these speeches, he should retire from his present position and let a farmer succeed him to represent a purely farming constituency. What did the hon. gentleman say in regard to the farmer? He also proved too much. He said that the farmer's importance is such that everybody knows it. If that be so, you cannot pick the wrong man for the position of the Railway Commission. For, if everyone knows the importance of the farmer, whoever you appoint will look after the farmers.

Now, I wish, in a couple of sentences, to give the House the reasons why I object to the principle of the resolution. My hon. friends the mover and seconder of the resolution will, at any rate, give to me the credit that I cannot be speaking for my constituents' support, nor am I speaking from any selfish or grafting reason, because I am a farmer and a representative of farmers. My first reason for objecting to the principle of the resolution is that I have held the political creed known as the Liberal creed all my life, and it forbids me to make class distinction. I had a friend who spent his early years in Australia. He was one of the best men I ever knew in the north of England, and one of the best farmers in my native county. In the days when he went to Australia, in many places throughout the empire there was a property qualification for voting. A paper was sent to him containing a column, which he was to fill up stating the qualifications by which he claimed to be put

upon the suffrage, and in this column he wrote the one word: 'Manhood'. In my Liberal creed, it is a greater thing to be a man than to be a farmer, it is a greater thing to be a man than to be a cabinet minister. Manhood is the test of citizenship, with me, it is the true test in making any appointments. Following this line, what are you going to look for in a railroad commissioner? Capacity for work, qualifications for the position, ability to examine into, not only the needs of the farmer, but the needs of the whole community. You want judicial qualities in a man, you want a man who can procure and appreciate evidence from all classes. I feel perfectly sure that the government, in making an appointment, will look for those broader tests, and look away from the narrower tests called for in the resolution.

My second reason is this, that I do not believe it is right to restrict the choice of the government to any particular class in making this nomination. If I may venture to mention one thing that has struck me with surprise in this House, and I do so with great modesty, it has been the amount of sectionalism, the amount of provincialism, the amount of class thinking which has characterized the debates that I have had the honour of listening to in the short time I have been a member of this House. We want, if I understand the needs of my adopted country which I have learned to love, we want to develop in this country a sense of nationhood, and if that be our aim, we must place no restriction upon the government that they shall make their nominations from any particular class of people. If you are animated by the spirit of nationhood, in selecting a man for any position, I do not care whether it be deputy speaker of the Senate, or speaker of the House of Commons, or a member of this House, or a member of the cabinet, you will not look to any class, even though it be the great class to which I am proud to belong, but you will look in every case for a Canadian and a man.

Mr. GLEN CAMPBELL (Dauphin). It is with great pleasure that I rise to say a few words in favour of the resolution introduced by my hon. friend from Macdonald (Mr. Staples). I do so, not only from a sense of loyalty to him, but from a sense of the duty I owe to the farmers whom I am here to represent. I do it moreover because I am also a farmer, and I have the honour to represent in this House over 9,000 farmers in the Northwest. I say, therefore, it is a pleasure for me to speak on this question, because it affords me an opportunity of advocating their interests. But while I rise with pleasure to support this motion, my pleasure is tinged with a very sincere regret when I remember that the cause of this debate is the demise of a gentleman who stood high in the records of Canadian history. It is the demise of the Hon. Thomas Greenway which has furnished the occasion for this discussion. For twenty-five years Mr. Greenway took an active part in the politics of Manitoba. Although he made some political mistakes, from my point of view, still he was a man who did much to build up the great Northwest. He was a man of many parts, a lovable man in many ways, a man who was a strong personal friend of mine, though a political adversary. Many of the laws which he was instrumental in placing upon the statute book of Manitoba were, I believe, in the best interests of the people of that province. He was the leader of the great Liberal party in Manitoba, and might yet have been the leader, had he not been misled by the same influences that I told the First Minister had misled him with regard to the late elections in Manitoba.

I regret that this discussion has drifted into party politics, whereas we are, or should be, discussing the advisability of placing a representative of the farmers on the Railway Board in succession to the late Mr. Greenway, who was himself one of the most trusted and representative farmers in all Canada. Sir, we who advocate this resolution are not here representing only a fraction of the people of Manitoba, we are here representing over 140,000 farmers. It is their dictum we are asking this House to follow and it is their interest we are asking this government to consider. This House, through the Minister of Railways, has been asked by the farmers of the west to appoint a man whom they can trust, a man who sympathizes with their interests, to a position on the Board of Railway Commissioners. This is not a matter to be laughed at, as was done by my hon. friend who has just spoken, and by the Minister of Agriculture, it is a matter for the serious consideration of the members of this House, a matter to be discussed on common sense lines. Now let me point out the importance of these 140,000 farmers to Canada as wealth producers. Take my own province of Manitoba. The farmers of Manitoba last year raised farm produce to the value of sixty-six and a half million dollars, the result of the toil of their hands and the sweat of their brows. In Saskatchewan they produced thirty-seven and a half million dollars worth. They did not find this wealth by chance, they had to toil for it, and have they not a right to be listened to? In Alberta they produced fourteen and a half million dollars worth, a total for the three provinces of $118,500,000. Surely these people ought to be recognized as a factor in governing the appointment of members of the Board of Railway Commissioners. Looking east, we find that from the eastern boundary of Manitoba to the Atlantic ocean, agricultural products last year amounted to no less a sum than $236,000,000. And yet the Minister of Agricul-

ture dares to get up here and say that he is not here to listen to them. I say he is here to listen to them, he must listen to them, and this House must listen to them.

In speaking of the value of the farm products of the west, I have not said anything about the stock holdings there which roughly are as follows :

	Horses.	Cattle.	Sheep and hogs.
Manitoba ..	$24,000,000	$10,000,000	$11,500,000
Saskatchewan.	35,000,000	10,000,000	1,500,000
Alberta	24,000,000	20,000,000	1,000,000

Showing a total of $116,000,000 worth of stock, and yet the Minister of Agriculture, who is here representing the farmers, says that we are not here to listen to those people, but that we will make the appointment as we choose. I hold that these farmers have to be listened to. They have the right to be listened to. They are the wealth producers of the great western country, and were it not for them there would not need to be a railway commission at all. I have not taken into consideration the fact that millions of dollars worth of property are owned by the farmers of Canada. The farm buildings and real estate owned by the farmers of Canada, as quoted by my hon. friend from Souris (Mr. Schaffner), amount in value to—buildings—$395,000,000 and—real estate—$1,007,000,000. Surely that is a sufficient reason for asking this government to consider the claims of the farmers in this regard. When the late Hon. Thos. Greenway received the appointment this government congratulated themselves and pointed out to the people of Canada that they had appointed to that position a man who was a practical farmer. They said, prior to the election: We have put an actual farmer into that position to look after your interests. What do they say now? The Minister of Agriculture derides hon. gentlemen on this side of the House, who get up and make the suggestion that what the farmers ask for should be granted. To be accurate I wrote down the words of the Minister of Agriculture with reference to a computation, amounting to half a million dollars, made by my hon. friend from Macdonald and the words of the minister were these: 'However, that is as near as he can get to the actual facts.' I leave it to any member of this House to say if, in our experience, since we have been going through the estimates this year, it is possible to get any minister nearer to the actual facts than that. I think that if he came within a quarter of a million at a guess he would be very lucky. The Minister of Agriculture went on to apply the tu quoque argument and to say that the census, the archives, and the patents were introduced into the Department of Agriculture by the Tories. Hon. gentlemen on the other side of the House have been twelve years in power. They condemned everything we did when we were in power and they have had twelve years to correct these things, but they have not done it, and they use them as excuses for their own misdoings. When you plant twigs in a nursery and they grow up there comes a certain time when they must be transplanted, and we are trying to tell the Minister of Agriculture that it is now time to transplant and to allow of a maturer and larger growth of those matters which concern the farming interests. That is what the farmers are asking. The hon. gentleman, instead of agreeing, as he should have agreed, being the Minister of Agriculture, with many of the things said by the gentleman who preceded him in the debate, sneered at him for lauding the farmers. It is the laughing stock of Canada that the Minister of Agriculture poses as a farmer. It is time he knew it and I am glad to tell him if he did not know it before. The only kind of farmer that he is is the kind that farms the farmers and that is the wrong kind for a Minister of Agriculture. He establishes chicken fattening stations and says to the farmers wives that if they spend about ten cents more per lb. on a chicken than they can possibly get for it on the market, they will be successful. That is the kind of a Minister of Agriculture he is. He is the kind that sits there in his seat and allows the Department of Militia to grasp the public money that ought to be spent for the benefit of the farmers instead of being spent in making—shall I say—carpet knights. There is no money available for the advancement of the interests of the farmers, who are the greatest wealth producers of the country. The hon. member for Red Deer (Mr. M. Clark) reprimanded hon. gentlemen on this side of the House for having introduced politics into the debate. I want to tell that hon. gentleman that I never in my life saw any one follow a bad example to a greater extent than he has done. He handed out a very nice certificate of character in the first place to himself, and later on to the Minister of Agriculture, and he said that he regretted the attack, the onslaught, that was made on the Minister of Agriculture, whom he described as a very mild mannered man. I would bring to his attention a quotation from Ralph Balderwood which, to my mind, possibly applies to his description of the Minister of Agriculture. Sir Ralph Balderwood, in speaking of a very bad character, said:

> A milder mannered man never cut a throat or scuttled a ship.

Having reference to the present occasion, I think the hon. gentleman will admit that

Ralph Balderwood's words were absolutely prophetic. The hon. member for Red Deer made what I regard as a little slip of the tongue when, in speaking of himself, having previously been referring to the minister, he said: , I, at least am not speaking with any selfish or grafting motive,' I characterize that as a slip of the tongue because it would be a very harsh criticism and a very severe reflection upon his own minister from the hon. member for Red Deer. It might be all right coming from me. The hon. member for Red Deer prided himself lastly on the fact that he had taken a certain stand in politics. Among the tenets of his peculiar political creed, and I might say that in this he does not agree with the rest of his party, is that he does not believe in class distinction, but in the next breath he said: 'I am a farmer.' Is that not taking credit to himself for belonging to the great party of Canada?

Mr. M. CLARK. I did not ask to be made a commissioner on that account.

Mr. CAMPBELL. The manner in which suggestions from this side of the House are treated is most regrettable. If a Conservative introduces a resolution which is in the interests of Canada, the other side, for political reasons, I cannot attribute it to anything else, absolutely reject it. I would remind my hon. friend of the words of Holy Writ, 'Can any good thing come out of Nazareth?' I am strongly in favour of the resolution proposed. The farmers of the west, the farmers of all Canada, are desirous of having representation on that board. They represent the wealth-producing people of Canada. They have a right to be heard, they have a right to be listened to, and their wishes should be granted.

Mr. J. P. MOLLOY (Provencher). I am surprised at the remarks of the hon. member for Macdonald in criticising the qualifications of the present Minister of Agriculture. I believe and the people believe that he is the best and most competent Minister of Agriculture Canada has ever had. He is just as much a farmer as the hon. member who has just spoken, and a great deal more; I believe he pays more attention to the farming interest of this country. I have heard it stated during the last campaign that the three previous Ministers of Agriculture were not aware that milk came from a cow.

Is it necessary that this appointment should be made at once? Did the member for Macdonald (Mr. Staples) introduce this resolution because a constituent of his is looking for the appointment? Because he has canvassed members from the west for assistance to get that position. Perhaps it is. The hon. member says he is a political opponent, but in that case my information is not correct as I was informed before this resolution was written that this gentleman is a supporter of the hon. member.

Mr. STAPLES. The hon. member has asked a question and I have a right to answer.

Mr. MOLLOY. I did not ask a question.

Mr. STAPLES. I rise to a point of order.

Mr. SPEAKER. The hon. gentleman has the floor.

Mr. MOLLOY. Whether he is a supporter or an opponent of the hon. member for Macdonald (Mr. Staples) makes no difference to this House or to the people of this country. I am surprised—and pleased to hear——

Mr. STAPLES. I rise to a point of order. The hon. member for Provencher has stated that I mentioned a particular individual to be appointed to that board.

Mr. MOLLOY. No.

Mr. STAPLES. I never mentioned any name.

Mr. FIELDING. That is not a point of order.

Mr. MOLLOY. I am glad that the late hon. gentlemen who had a seat in this House and who was appointed to the Railway Commission, now that he is dead, received some credit from his political opponents. They say in the west that the dead Indian is the good Indian, and I suppose hon. gentlemen opposite think that the good Grit is the dead Grit.

I hope that this appointment will be made shortly, although there is nothing on record to show that the country is suffering. I believe that the present members of the commission are quite capable of handling the business that comes before them to the satisfaction of the country, and it is admitted by hon. gentlemen opposite that the work is being well done and in the interests of the country as a whole. I cannot accept or follow the advice given by the hon. member for Souris (Mr. Schaffner) that we should follow the example of the United States and entirely eliminate politics in such appointments. I hope, if it is necessary, as I believe it is, that the vacancy on the board will be filled as soon as possible and this government is quite well qualified to make that appointment at the proper time. I said I hoped it would go to the west because I am a western man. So far as I am concerned, I would have pretty nearly every appointment paid for by the people of Canada go to the west. Let them all go to the west, and I hope this one in particular will go to the west, and if a farmer is the best available man, let us have a farmer by all means. If the best available man is not a farmer, then we do not need a farmer and I hope one will not be appointed. The very fact of

appointing a farmer might be detrimental to the interests of farmers. A farmer might be appointed who would not be as well qualified to fill the position as the next man in line. Is that not true? Is there any guarantee that if this government does appoint a farmer he will be the best available man and will fill the position better than any one else? I do not think so. It does not necessarily follow. We hear particularly at election time, from some speakers and candidates in rural districts, the cry 'the farmer, the farmer, the farmer, I will do anything on earth for the farmer.' It is just stage play, the greater part of it. Sometimes the Grits are guilty as well as the Tories. The greater part of it is in vote-catching, and I believe this resolution is intended as a vote-catcher, but I believe it will fail.

Mr. STAPLES. I rise to a point of order. I ask the hon. gentleman to retract the statement.

Mr. SPEAKER. I do not think that is a point of order.

Mr. STAPLES. He says it is a vote-catcher and I say it is not.

Mr. SPEAKER. The hon. gentleman has the floor.

Mr. MOLLOY. I have to repeat that if there was a strong move made by that strong organization known as the Grain Growers' Association, it is being used by the hon. member for Macdonald as a vote catcher. It was a vote catcher for the next election, which is at present a considerable way off. I hope that the appointment will be given to a western man, that he will be the best available man for the position, and that he will be a farmer. That is all I have to say.

Mr. D. B. NEELY (Humboldt). Mr. Speaker, when I first saw this resolution on the Order Paper, I was glad to feel that there was a certain ground on which I could stand shoulder to shoulder to some extent with a political opponent from the west. In the heat of elections we are apt to say of the other side. 'Can any good thing come out of Nazareth?' When I first saw the resolution on the Order Paper I was inclined to give the hon. member for Macdonald (Mr. Staples) a good deal of credit; but after listening to his remarks in support of it, I have to retract a great deal of that credit. I had supposed that the hon. member was moving the resolution in the interest of the western farmers; but the tenor of his remarks has been more in the interests of the political party to which he belongs. I have the honour of having been elected by the votes of the farmers of a district in what I consider to be the banner province of western Canada, Saskatchewan, and I want to say that the farmers of the west appreciate the importance and value to the west of the Board of Railway Commissioners instituted by the present government. The farmers of the constituency I represent have no serious fault to find with the present government for the treatment they have received from that government since it has been in power. In the first place, the need of a board of Railway commissioners for Canada grew out of the transportation policy of this Liberal government. Until 1896 there were no transportation questions to solve in this country by a board of railway commissioners, because we had in the northwest only one railroad, what I conceive to be the greatest railroad monopoly on the continent of North America, the Canadian Pacific Railway. The few farmers who were in the west prior to 1896 were in the hands of that powerful corporation, because under the terms of the contract by which the railway was built, the government had practically no control over it or the way it did business. It could charge whatever rates for freight and passengers it pleased, and it had the farmers of the west completely in its power. The first remedy that came to the western Canada farmer was the vigorous action of this government in the construction of lines of railroad that would compete with the Canadian Pacific Railway. Having thus created the need for a board of railway commissioners, this government proceeded to establish that board, and it is something to the credit of this government that members of the opposition, when they speak on this question, are compelled to give the government that credit. Before this government came into power the farmers of the west needed relief in the very worst way; they came to this parliament again and again asking for relief; they came to this parliament asking for bread, and were given a stone. It was not until this government came into power that the farmers of the west received any of that consideration which his place in the industrial economy of this country entitles him to. The western Canadian farmer does appreciate this board of Railway Commissioners. It is a convenient court of appeal. It is a means of reaching the solution of the many transportation problems of the west that he never had before. With regard to that part of the resolution dealing with the appointment of a man to the vacancy brought about by the demise of the late Hon. Thos. Greenway, I believe that if a vote of the farmers of the west were taken on this question, they would not vote in favour of the resolution moved by the honourable member for Macdonald. The farmer of the west is not a sentimentalist, but is above all things a practical man, who looks for results, and is not above taking advantage of every kind of inventive and mechanical skill and using it for the betterment of his

condition. What he wants is to obtain results from the efforts of this Railway Commission. If a farmer were appointed to it just because he is a farmer, and did not ably represent the farming interests and all the interests of all the people of Western Canada as well as the farmers, the farmers of western Canada would be the first to condemn the government for appointing such a man. What the farmer of the west wants is that the government, in making the appointment, shall not consider any class distinction of any sort whatever, but shall appoint a man who has every qualification necessary for the proper carrying out of the duties of the office. I did not hear very distinctly all the remarks of the hon. member for Macdonald when he was introducing this resolution; but it did seem to me that he was endeavouring to bring it down to a very fine point. If I am not mistaken, he had reference to some man in his own constituency who had been highly recommended by the farmers of the west and whom he himself would be pleased to have appointed. These remarks from the hon. member from Macdonald (Mr. Staples) could not but lead to the conclusion that there was a coloured gentleman somewhere in the fence, and when he came to that part of his speech I felt that we had at last discovered the location of that coloured gentleman. Then the hon. member for Souris, who undertook to second this resolution, tried to impress on the government the necessity of filling this vacancy with a western Canadian farmer. Is it not rather peculiar that the hon member for Souris does not see the position in which he places himself by supporting this motion? The hon. gentleman, like myself and some others in this House representing rural constituencies, is not a farmer but follows another profession. No doubt he thinks that in electing himself, a medical man, to represent them in this House, his constituents made the best choice possible. But he does not wish his own election to be taken as a precedent in the filling of the vacancy on the Board of Railway Commissioners, that vacancy must of necessity be filled by a farmer. But if the contention of the hon. member for Red Deer (Mr. Clark) be correct, the hon. member for Souris should not occupy a seat in this House because his is a rural constituency, and the hon. gentleman should have seen that a farmer was sent here and not himself. I wish to say this, that so far as I am concerned, I am in sympathy with the word 'western' which is used in this resolution. When this House established the Board of Railway Commissioners, they made the number six, and there are only five at present. If this House saw fit in its wisdom to establish a board of six, and one seat becomes vacant, that seat ought to be filled. And in my opinion the board requires a man who thoroughly understands and appreciates the conditions in the west. I am prepared to go that far in support of the resolution. I would like to see a western man appointed, and I think the government, when making a selection, ought to cast their eyes over the territory from Lake Superior to at least the Rocky mountains. I suppose a British Columbian would say to the Pacific coast. I mention this because I think that a western man, probably in the majority of cases, understands the western conditions better than any other man probably can. But having said that much, I must deprecate the unseemly haste expressed by it. This resolution calls for the immediate filling of this vacancy. But I am not aware that the country is suffering very seriously at present. It may be true that five men are doing the work of six. It may be that the western interests will be better represented on this board when a new appointment is made and a western man is given the appointment; but so far as that is concerned, the main thing in these appointments is to get a man who will fill the position in the best possible manner. And I think the government should take sufficient time to look over the ground carefully and consider the possibilities of the situation thoroughly before they make a selection of such grave importance.

There is no amendment proposed and I do not, for my part, intend presenting one, but I do not think it would be a good thing for this House to pass the resolution in its present shape. It would restrict too much the choice. I think it urges undue haste in the making of this appointment, and therefore in conclusion I would say that I am prepared to support the view that the appointment should be filled, and I would be glad indeed if the government would see their way clear to appoint a western man. But the other part of the resolution, which limits the choice to that of a farmer and demands the immediatte filling of the office, I cannot conscientiously support.

Mr. A. MEIGHEN (Portage la Prairie). I had not intended addressing the House on this resolution because I did not anticipate that it would meet with the opposition that it has encountered. I have been rather amused at many of the reasons to which hon. members have had to resort in order to bring themselves into line with the party whip and lead themselves to what the hon. gentleman who has just spoken has described as a conscientious conclusion to oppose the motion. The hon. member for Red Deer (Mr. Clark), took very high and mighty ground. The hon. member for Provencher (Mr. Molloy) got down to something much more practical and made rather a frank statement of his position. He was followed by the hon. member for Humboldt (Mr. Neely) in much the same fashion; and I want to discriminate just for a

moment or two and contrast the reasons advanced by the hon. member for Red Deer with those advanced by the hon. member for Provencher. My hon. friend from Red Deer says we know no class or community in this country, no distinction of times and place, and that the only consideration which ought to move this government should be that of qualification. That is to say from whatever part of Canada, race or creed a man may come, he ought to be selected if he be the ablest and best qualified to fill the vacancy. The hon. member for Humboldt (Mr. Neely) however, in deference to the wishes of his constituents—and no doubt also in deference to the hope he has of being elected again some four years from now—trusts that the appointment will be given to a western man.

The hon. member for Provencher would go a little further—he would step down another grade from the position of the hon. member for Humboldt, and hopes that the new commissioner will be a western man and a farmer. The hon. member for Red Deer (Mr. Clark) has a considerable task before him in this House, as was pointed out by the hon. member for North Toronto (Mr. Foster) some weeks ago. He has many conversions to effect in the ranks of his own party. The resolution declares that in the opinion of this House the position of commissioner made vacant by the death of Mr. Greenway should be filled. The hon. member for Humboldt, who knows that this vacancy has existed for six months, acknowledges that it ought to be filled, but in order to make himself absolutely conscientious in opposing it he says that for it to be filled within six months is unseemly haste. The resolution goes on to declare that the position should be filled by the appointment of an able and practical farmer. In the first two positions that the appointment should be made and it should be made shortly, the hon. member for Provencher agrees. And I agree with him. In the next point — that is the appointee should be an able and practical farmer he agrees, and I agree with him. In the next point, that this farmer should come from the west the hon. member for Provencher coincides, and I coincide with him. He also agrees that the reasons are that the interests of agriculture should be looked after; and I agree with him. Wherein does the hon. gentleman differ from me? I propose to vote for this resolution and he proposes to vote against it. I agree with the resolution in all its details and every phrase it utters. The hon. member for Provencher does the same, but he comes to the conclusion that he will vote against the resolution, while I come to the conclusion that I will vote for it. The reason for the hon. member's conclusions, I am afraid, is that the government has decided that they cannot support this resolution, and the hon. member for Provencher supports the government.

I desire to devote just a moment in answer to the remarks of the hon. member for Red Deer (M. Michael Clark). He told us that the hon. member for Macdonald (Mr. Staples) proved too much: he says that that hon. gentleman proved that the Minister of Agriculture (Mr. Fisher) was not capably administering the department over which he presides; that the Minister of Agriculture is a farmer, and therefore this proof should act as a warning against the appiontment of farmers. And the hon. member for Provencher who evidently has been studying the appointments made by this government, warns the House, that if the government appoints a farmer that is no warrant that he will be a man able to fill the position. This resolution does not call for the appointment of a farmer because he is a farmer, but calls for the selection of a man in every respect fit to fill the position, and a farmer besides. It may be that the Minister of Agriculture is a farmer, but it is impossible to argue from that that a man could not be selected from among the farmers of Canada who would be a good Minister of Agriculture. The Board of Railway Commissioners, as has been stated by hon. members, is a most important body. No one appreciates more than I do the importance of that board. I should have thought it would be enough for the hon. member for Humboldt that the member who moved the resolution and gave credit to the government for the inauguration of that board to be able to state that as a reason for his determination to support this resolution, and not be drawn away from that position because the hon. member for Macdonald chose to criticise the Department of Agriculture. I should think it would be enough to prove to him that the hon. member was not animated by party feeling when he so freely gave credit to the government for the appointment of the railway board. I join in giving that credit, because the appointment of this board was a distinct step in advance for the people of this country. We must remember, however, that the establishment of the Railway Board was brought about much in the same way as the reforms we are now trying to bring about by this resolution—by petitions from the farmers of this country, by the agitation of municipal bodies and the strong and earnest effort of members on this side of the House. When, under these circumstances, we are willing to accord to the government credit for the appointment of the board, surely that should be enough to allow these hon. members at least to follow their first and virgin determination and support the resolution.

Now, membership on this board, I admit, demands a high standard of qualification. I believe that the duties devolving upon the members of the Railway Board are of equal difficulty, in many respects, with those devolving upon the Supreme Court. A member of this board needs to be of Supreme Court calibre, perhaps not in legal attainments, but certainly in general mental qualification. But I am not one of those who believe or fear with the hon. member for members for Red Deed, Provencher, and Humboldt, that men of that calibre cannot be found in the ranks of our western farmers. There are men among these western farmers who are quite competent to fill the position if the government will make a choice among them. Believing that, knowing it as a matter of actual knowledge, I should be derelict in my duty did I not vote for this resolution. The hon. member for Humbolt strikes the key note when he says that a man familiar with western conditions will best be able to perform the duties. The hon. member for Red Deer states that we should know no class, no locality, in this matter. But he is a supporter of the government that has always followed the principle which has been recognized ever since confederation, that one member of the cabinet should come from this section and another from that. We only ask for the extension of that principle to the Railway Board. How can the hon. member for Red Deer logically support the one position if he is not prepared to support the other? What is the principle that is thus recognized? It is that a member from New Brunswick better understands New Brunswick conditions, that a member from British Columbia better understands the conditions of that province. Similarly, on the Board of Railway Commissioners a member who has had to do with railway conditions in a given province will better understand the needs of that province.

On that principle I support the resolution, which requires that one man at least should hold a seat on that board who understands the distinctive features of transportation in the western country. Now how can the hon. member for Humboldt (Mr. Neely) support that feature of the resolution and fail to go further and support the feature which calls for the appointment of a farmer? If a man from New Brunswick, or a man from the west, for that matter, is better qualified to speak for the west, to legislate for the west, why then is not a man who comes from the farm, and who has devoted twenty or thirty years to practical farming, not better qualified to speak for the farmer in the deliberations of that board? There is no logic whatever in the position taken by the hon. member for Humboldt. What we ask is that, other things being equal, a qualified farmer be appointed to the board, on the principle that the farmers, so numerous in this country, have a right to be represented there. Now what are the problems that come up for decision on that board? A large proportion of them concern the farmers more directly than any other class of people. More than one-half of the time of that board is taken up with questions involving the interests of the farmers, on the one hand, and sometimes altogether. That board,since the death of Mr. Greenway, six months ago, has been without any man who understands class interests, and this resolution demands that that state of affairs be remedied by the selection of a farmer. Now the hon. member for Red Deer (Mr. Clark) says also that the member for Souris proved too much, when he proved that a farmer could better understand farming conditions than any other man, because he said, if that principle were carried out, the farmers would not have elected the member for Souris, who is a doctor, to represent that constituency. Now surely a resolution like this demands more serious consideration than that at the hands of this House, it demands the exercise of some degree of reason. We all admit that conditions may not be equal in all cases, and that it would be possible for the constituency of Macdonald, or the constituency of Souris, to send a farmer to this House who would not make a desirable representative, but we are not prepared to admit that in sending the present members they are not sending the best men they can find. Now I desire to be understood, I would not for a moment advocate any appointment to the Board of Railway Commissioners which would lessen the efficiency of that board. I would not do anything to lessen the efficiency of that board, even at the demand of the Grain Growers' Association. or of any other body of men, but I believe that a condition now exists in which the interests of the Grain Growers' Association, as well as of the municipalities and the farmers, can be consulted, and the efficiency of that board not be interfered with at all, and for that reason I shall support the resolution. And I further say that he who votes the other way at this time, acknowledging the immense interests as members have freely acknowledged, to be represented by the character of appointment aimed at, proclaims to his country and to his constituents by that vote, that in his opinion there is no practical western farmer qualified to measure for the office, and he must take the full responsibility for that position.

Mr. W. M. MARTIN (Regina). Representing as I do a western constituency, and a constituency whose electors are for the most part farmers, I must necessarily take

an interest in this resolution. As a matter of fact, in nearly all western constituencies a majority of the electors are farmers; this being the case, the resolution before the House is one that we must necessarily consider from their standpoint. I must, however, express some surprise at seeing a resolution moved by the hon. member for Macdonald (Mr. Staples), a representative of the Conservative party, calling upon the government to appoint a farmer to the Railway Commission. I have only to point out the fact that three of the Ministers of Agriculture under the Conservative government, were a brewer, a lawyer and a doctor. I have no fault to find with those appointments, doubtless they were good appointments, but it does appear to me a little inconsistent for a Conservative member of parliament to move a resolution to force the government to appoint a western farmer on the Railway Commission. I think we ought to take a broader view of the resolution which is before the House. So far as I can gather, hon. gentlemen opposite support this resolution for no other purpose than to make it apepar that they have the farmer's interests specially at heart, and they desire to gain a little political capital on that ground. That is a very narrow view to take of so important a question. If that is not the object of the hon. member for Macdonald, then the only other object he can have in view, it seems to me, is to force the government to appoint a man from his own constituency, which is a still more narrow view.

Now let us see what this resolution calls for. In the first place, it calls for an immediate appointment. Now, is there an immediate necessity for this appointment being made to the Railway Commission? I do not know whether any hon. gentleman opposite has any evidence that there is an immediate necessity for the appointment of another member of the Railway Commission, and unless there is such evidence, I think this House would be ill-advised in forcing the government to make an immediate appointment of any person. Let us see who compose at present the Board of Railway Commissioners. We have first of all, Mr. Justice Mabee, a gentleman of undoubted ability, and who stands as high perhaps in his profession as any other man in this country, a man thoroughly well equipped to deal with any question coming before that commission. Then we have Mr. Bernier, who was Minister of Inland Revenue in this government for some years, who was a farmer in the province of Quebec, and at the same time a notary public. Now if I understand the business of a notary, he is a man who has to do conveyancing and deal with other matters which bring him in close touch with the farmers. Then we have Dr. Mills, formerly principal of the Agricultural College at Guelph. Then we have Mr. D'Arcy Scott, and Mr. S. J. Maclean, who helped to organize the Railway Commission in this country. So the farmers have already two representatives on that commission at the present time, and they are well represented by these two gentlemen. It is to be remembered that had it not been for the Liberal party coming into power in 1896, there would have been no necessity of bringing forward a resolution in this House to consider the appointment of a railway commissioner, for there would have been no Railway Commission in Canada. Prior to that time railway companies were allowed to do as they pleased. We had nothing but railway monopolies. Since that time conditions have been considerably alleviated owing to the foresight of this government and the administrative ability shown by the Railway Commission in dealing with railway problems.

The other side of this resolution deals with the appointment of a western farmer to the Railway Commission. We must all admit that we are dependent upon the farmers. Several hon. gentlemen have said so during this debate and there is no use of disputing that fact. The farming community represents a very much larger amount of capital than any other industry in Canada and it is the most important class as far as the production of material wealth is concerned. But, let us see where these appointments came from considering the connection of the word 'western' with the resolution. Of the five representatives upon the Railway Commission four are from the province of Ontario and one from the province of Quebec. Members from the maritime provinces have just as good a right to move a resolution advocating the appointment immediately of some man from the maritime provinces as we who come from the west have. I think that we are all too much inclined, not excepting the members from Saskatchewan, to adopt a policy of sectionalism and provincialism when we are advocating any principle in this House. If a resolution is introduced you will find certain members from one province speaking upon it, when another resolution is introduced it will be discussed by another set of members, whereas we ought to approach these questions in a broad, national spirit and keep in view the interests of Canada as a whole. If we would devote our time to the consideration of large Canadian questions and forget that we are citizens of Saskatchewan or of Manitoba remembering that we are dealing with the affairs of a great country and are interested in building up a united national spirit, not forgetting our connection with the mother country, we would be doing something to promote the welfare of Canada as a whole. As far as the appointment of a farmer is concerned I do not care whether it is a farmer or a doctor or a lawyer,

a mercantile man or what kind of a business man it is as long as he is a man properly equipped to fill the position of Railway Commissioner if it is necessary to fill that position at the present time. I will say this however that in view of the importance of the transportation problem to western Canada—and it is the most important question in western Canada at the present time—and in view of the fact that possibly this question concerns western Canada more than it does any other portion of the Dominion, western Canada should be represented on the Railway Commission. I would urge upon the government the necessity, of endeavouring, in filling that position, if it is to be filled at the present time, to appoint a western man. Since these are the views I have on this question I beg to move, seconded by the hon. member for Provencher, that all the words after 'that' in the resolution be struck out and that the following be substituted:

The duties of the Railway Commission are such as to demand the appointment of the most capable man available who is acquainted with western railway conditions.

I move this amendment to the resolution having the fullest confidence that the government will exercise a wise discretion in making the appointment to the Railway Commission, and that it will select the very best man available, a characteristic which it has so well exhibited in the past.

Mr. R. S. LAKE (Qu'Appelle). Mr. Speaker, at this very late hour I do not intend to occupy the attention of the House with any very lengthy argument. I merely wish to put myself on record in connection with this matter and to express my regret that a representative of the great province of Saskatchewan should get up and argue against the terms of this resolution, which should commend themselves to every westerner and to every representative of the farming community. In regard to the amendment which has been proposed by my hon. friend from Regina (Mr. W. M. Martin) it is just as well that he did put that amendment before us in set terms, because I defy any member of this House to know what he was driving at in his speech. First, he argued that we ought not to ask that a westerner be appointed to the Railway Commission. He argues that we should do away with all sectionalism, and then he gets up a moment later and moves an amendment to the effect that the man who is to be appointed to the board should be acquainted with western railway conditions. Let me point out also that the hon. gentlemen who have spoken from that side of the House are very much divided in their opinions as to what are the necessities of the case in connection with this appointment. Two or three of them have argued that the appointment should be made immediately. The hon. member for Humboldt (Mr. Neely) said that the one thing that he wanted was that the appointment should be made at once, and others have asked that it should be made immediately. Now, we have the hon. gentleman who has moved the amendment taking the ground that there is no necessity for an immediate appointment to the board, and other hon. gentlemen on the other side of the House have also taken the same ground. I promised that I would not take up any length of time in debating this question at this late hour. I would like to put myself on record in this way: I believe, first of all, that the board should have a man thoroughly acquainted with western conditions. Western conditions are certainly very dissimilar in a great many respects from eastern conditions. Secondly, granted that the new member for that board should be a westerner, and my hon. friend opposite apparently now considers that he ought to be a westerner, then I consider that the man who would be most in sympathy with western conditions and needs would be a farmer of the west. Man for man I suppose that the farmers of the west come into more immediate contact with the railway companies than persons belonging to any other part of the Dominion. Farmers ship their own wheat, order their own cars and come into actual communication and business negotiations with the railway companies. They understand the immense difficulties that they are up against in the shipment of their wheat. They know what delays to their cars mean, they know what the difficulties are in getting the right kind of cars, they know the difficulties in the way with regard to the weighing of their grain and they are familiar with all other questions in connection with the shipment of their wheat. Only the farmers, I contend, can look at these questions from the farmer's point of view. It has been said over and over again in this House this evening that the farmers are very important members of the community and should carry very great weight in it. They are entitled to more representation than they have at the present time. We have heard a very able speech this afternoon upon the question of proportional representation. I regret to say that in the nature of things the farmers are unable to get proportional representation in this House, but hon. gentlemen opposite could very well give them proportional representation in the administration of the affairs of this country and particularly I think the government could give them proportional representation by placing one representative farmer from the west on the Railway Board. I trust they will reconsider their decision and that they will vote in favour of the motion proposed by my hon. friend from Macdonald declaring that the

appointment to the Railway Commission should be made immediately, that the person to be appointed should be a western man and a practical farmer.

Mr. M. S. SCHELL (South Oxford). I have listened with a great deal of interest to the debate on the resolution that is before the House. I had no intention of speaking when the discussion opened but because of some remarks made by the mover of the resolution and one or two of those who followed him in reference to the government's action and policy in regard to transportation matters I feel constrained to make a few remarks.

Dealing with the resolution first, I do not think there is a member who would not agree that the legislation which was enacted by this government in the constitution of a board of Railway Commissioners, has been the most important piece of legislation in the interest of the Dominion of Canada that has ever been put upon the statute-books. The commission have justified that statement by the work they have accomplished during the few short years they have been constituted as a board. The men who have been appointed from time to time, have been in every way eminently fitted for the position. Words of appreciation have been given from time to time by our friends on the other side of the House as to the personnel of the commission, and I cannot recall any adverse criticism in connection with the appointments to that board. I find from to-day's papers that two members of the Board of Commissioners have been through western Canada to the Pacific coast dealing with disputed questions and out of 333 cases that have come before them they have settled at least 90 per cent promptly and satisfactorily. The few that have not been dealt with are held over for expert information in order that the board may arrive at a proper conclusion. As to the immediate appointment of a commissioner I think the government know best whether there is need for one being appointed at once or not, and I favour the amendment that has been moved, to leave the appointment in the hands of the government to deal with when they consider that the appointment is opportune or necessary. As to whether the appointee should be a farmer or not, I am glad to hear so many members anxious to qualify themselves as farmers; doctors and lawyers seem to vie with each other in giving the impression in the House that they are farmers, or if not they would like to be. It is a good omen, it is at least an appreciation of the good work that is being done by the agricultural industry of Canada. The work accomplished by the Minister of Agriculture during his twelve years of office has conduced very materially to the high position of the agriculturist in Canada to-day.

An attempt has been made to criticise the policy of the government in connection with cold storage. The member for South Lanark (Mr. J. Haggart) claimed that cold storage was established before 1896. It was spoken of then but I do not know of anything practical being done by the government prior to 1896 towards the establishment of cold storage on cars or steamships.

Mr. BRODER. The hon. gentleman is not correct; cold storage was installed on two railways and on a number of steamships before this government came into power.

Mr. SCHELL. The Conservative government did what they could to induce the steamship companies to instal a cold storage system but in 1897 the present Minister of Agriculture entered into an arrangement with the Allan line to equip two or three of their steamers with cold storage plants, giving a subsidy, and the system proved so satisfactory and necessary that other steamship lines were compelled to introduce a similar system without any assistance from the government. The opposition claim some credit that prior to 1896 the government undertook to supervise or instal a system of cold storage on steamships plying to European ports.

Some hon. MEMBERS. Order.

Mr. SPEAKER. The hon. member will not forget that the question before us is an appointment to the Railway Commission. Of course I have allowed considerable latitude because the subject has a bearing on agriculture but to go back to 1896 would be rather an infringement.

Mr. SCHELL. I entirely appreciate your remarks, Mr. Speaker. I felt the discussion was irrelevant when it was introduced by the mover of the resolution and one or two who followed him. The member for Lambton (Mr. Armstrong) made practically all his speech in criticism of the government system of cold storage.

Mr. BARKER. I rise to a point of order. You ruled, I think, that the gentleman is out of order. At this time of the night I do not think that should be persisted in.

Mr. SPEAKER. The time of night has nothing to do with it. A speech on any specific question having no relevancy to the motion would be out of order but an allusion to such a subject would not.

Mr. SCHELL. With a due appreciation of the form the debate has taken I shall not detain you with more than one or two statements. If hon. gentlemen do not care to hear them I suppose it is an evidence that they feel the cause of the opposition is not very good, that their position is not sound. The results of the system of cold storage that has been introduced—

Mr. G. TAYLOR. Order.

Mr. SCHELL. —are so apparent and important that the exports of this country have increased in a wonderful ratio.

Mr. LAKE. I rise to a point of order. The words of the amendment read:

That the duties of the Railway Commission are such as to demand the appointment of the most capable man available who is acquainted with western railway conditions.

I appeal to you, Sir, that the hon. gentleman is not in order.

Mr. SPEAKER. The hon. gentleman must confine himself to the amendment.

Mr. SCHELL. I certainly will do so; I appreciate the point of order thoroughly. I believe that the same judgment, the same discernment, the same appreciation of the needs of this country, that the government had when they provided for a Board of Railway Commissioners, will continue to actuate them in dealing with this appointment. I believe that the government appreciates the needs of the great western part of this Dominion as well as the eastern part. The west is great; I do not know that it is any greater than the eastern part of the Dominion; but we appreciate it as fully as anybody can possibly do; and I believe that the government, in the appointment they will make, will consider not the agricultural interests alone, as the resolution specifies, but the interest of the people of this Dominion as a whole. If they can find a farmer in every way qualified, I believe the government would as readily appoint him as a lawyer or a doctor or a business man or a journalist, or any one else. I support heartily the amendment to the resolution moved by the hon. member for Regina.

Mr. MARTIN BURRELL (Yale-Cariboo). I do not intend to weary the House at this time of the night with more than one or two observations. The two points that have come up in this debate are whether the new commissioner should be from the west, and whether he should be a man who has a practical acquaintance with that great business which is the basis of Canadian prosperity, namely, agriculture. As far as I have followed the discussion up to the present time, I do not think there is much dispute in the minds of hon. gentlemen of the proposition that it is extremely desirable that the new commissioner should be a man from the west, and one who is thoroughly acquainted with western conditions. That is true, from the fact that the late commissioner, whose demise we all deplore, the Hon. Thomas Greenway, was essentially a western man. When we consider the vast and growing progress of the west, we must realize the importance of having a western man appointed to the vacancy. The mover of this resolution spoke of the desirability of having a practical farmer appointed. I have no doubt that he has conceived his resolution in the broadest spirit, and meant to include the great sister industry of horticulture. I speak of this more particularly for this reason, that although it is true that in this country horticulture is a subsidiary industry to that of grain growing, it is an immensely important one, far more important than most men in the west realize. I may say that ten acres in fruit will produce as much transportation as 100 acres in grain, and the day is not far distant when the fruit industry of the west will be one of enormous interest to the Railway Commission. I am sure that my hon. friend who moved this resolution will understand that I assent to it because I believe it to be broad enough to include both horticulture and grain growing.

Mr. STAPLES. That was the intention.

Mr. BURRELL. Now, I do not want to be behind any hon. gentleman, on either side of the House, in expressing the approval we in the west all feel of the creation of the Board of Railway Commissioners. I have always said, in every campaign in which I have taken any part against the present government or its representatives, that the creation of that board was one of the best things the present government ever did. Three years ago, when I had the honour of representing the province of British Columbia at a fruit conference in Ottawa, I was asked to represent that province in an interview with the Prime Minister to request him to have put under the jurisdiction of the Railway Commissioners the great express companies which have so much important work to do in carrying our fruit products; and it was satisfactory to us to find that the government enlarged the jurisdiction of the commission to embrace those companies. I am perfectly sure, therefore, that any man who is largely concerned in horticulture would be as anxious to carry out the aims of the wheat growers of Alberta, Saskatchewan and Manitoba, as any man on their part would concern himself with our problems in connection with the transportation of fruit. I am going to support the resolution, because the mover of the amendment simply asks for the appointment of a man who understands the railway conditions of the west; and having been connected for a quarter of a century with agriculture and horticulture, I think that this resolution fills a need that the amendment does not fill, because it directly connects the vacant commissionership with land products and the shipment of land products. I can only say in closing that I hope the government, in making this appointment, will appoint a western man who is directly and largely interested in the raising of either grain or

fruit and its transportation, and that they will make it as soon as possible.

Hon. G. P. GRAHAM (Minister of Railways and Canals). Mr. Speaker, lest my silence might be misunderstood, I think that I should say a few words on this question. The country is divided into very many classes. We have merchants, bankers, mechanics, artisans, farmers. You cannot fool any of these classes very long at a time; and when we attempt to make a certain distinction in selecting men for certain positions, the duties of which are applicable to all classes, I am inclined to think that the class to which we appeal will not take it seriously. What the farmers want is somebody on the board who will see that they get their products carried at a fair rate. Outside of those who would be willing to accept the duties of such an office, and their friends and others who might be interested in their welfare, the great mass of the farmers, as everybody else, want a man on this board who will see that they get fair play in the carrying of their products, both as to price and as to speed, and they are not particular whether the man appointed to this office is a farmer or not. Naturally, like the rest of us, just as journalists are pleased when a man in their ranks is appointed to a certain position, so are the farmers. I could get a petition from all the journalists of Canada asking for the appointment of a journalist to a certain position. I had representations from the telegraphers that, as they were well versed in the running of railways, they ought to have a man on this board. I have been asked time and again by gentlemen representing the commerical travellers to place one of their number on this board, as they not only travel more than any other class, but are interested in having freight rates right, because the quantity of orders they get depends largely on the transportation afforded for the goods they sell. The railway engineers asked me to put one of their number on the board, as they understood everything connected with the running of trains, and the services of such a man would be very valuable.

Every class is interested in this transportation problem, and I am not objecting at all to the farmers urging that one of their class should be appointed. We all would like to see men in the same walks of life as ourselves put in these responsible positions; but the main duty of the government is to see that the man placed in such a position is one who will fulfil its duties ably and impartially, regardless of class or section. If we are selecting a jury to try a case brought by a merchant before a court, no one would think of insisting that we must have merchants on the jury. What we want is men who will give the case a fair trial without regard to class. It is a mistake to think that this board is to be composed of men who are to act in the sense of pleaders or advocates for any particular interest in the community. On the contrary they are to hear the representations of all and give fair play to all. The arguments advanced by some hon. gentlemen in favour of the resolution are the strongest against it. If a farmer is to be appointed and he is to act, as they insinuate he ought to act, in the interest of the farmers alone, he is not fit to be on the board and ought not to get the position, because he would be simply there as an advocate of the farmers' interests. Every member of the board is supposed to hear the cases that come before him and adjudicate fairly between farmers, railway men, merchants, shippers and others. He is supposed to find out the right thing to do and do it regardless of any particular interests and not act as the advocate of any particular class. The moment he takes the latter course, he ceases to be an independent member of the board and might as well be engaged as a solicitor to plead the cases that come before the board.

Just one more remark before I get through. It has been argued that only a small amount of money has been given to benefit the farmers, but the hon. gentleman who made that argument answered it in five minutes, because he pointed out, as a reason why a farmer should go on the board, that the farmers are the greatest customers of the railways. Well, if they are the greatest customers of the railways every dollar spent in aiding a railway to carry their produce to market gives them more benefit than any other class. Consequently the $450,000,000 given to aid railways and solve the transportation problem have been given to the largest extent to the farming community. This is not a one man commission. It is not a commission with any one idea. What we want is a board that will do its work well and treat all with equal impartiality; and I submit, notwithstanding what has been said that the Board of Railway Commissioners is one which has been filling the requisite. If this vacancy is to be filled, it must be filled by some one, no matter to what class he belongs, who will see that every one who comes before the commission shall be fairly dealt with, just as fairly as if he were acting as the sole commissioner. But if the contention of hon. gentlemen who favour the resolution before the House were to be carried out, he would give his decisions always in favour of his own class. The first requisite of every member of this Board of Railway Commissioners must be that he will be a man who will act with even justice; and unless such justice rules in the findings of that body it

will soon lose public confidence. I am not adverse to having a western man on that commission. If we were to apply to that board the principle which is theoretically right, we would select the best man regardless of anything else but his qualifications for the position. But the same argument would apply to other positions. The theory is a good one but we do not carry it out in practice. The west has great interests, the traffic from the west across our railways is most important, and I fully believe—and am not backward in asserting my belief—that when this position comes to be filled, everything else being equal, the man who fills it ought to come from that part of Canada. But I do object to having parliament nail us down in our selection to any place or class because that might impair the efficiency of the board, and as a member of the government and responsible to the people, I am not prejared to do that.

Mr. ANDREW BRODER (Dundas). I do not rise to discuss the question as to who should be put on the railway board, but wish to correct the statement made by the hon. member for South Oxford (Mr. Schell), with regard to cold storage.

Mr. SPEAKER. The discussion of cold storage is not relevant to the question before the House.

Mr. BRODER. I merely wish to answer a question put by the hon. member who asked when the cold storage system had been inaugurated. In the sessional papers of 1896, vol. 29, No. 5, I find in the report of the Minister of Agriculture of 1895. sessional paper No. 8, in which appears the following paragraph:

> This action was followed by the inauguraton of the cold storage service, in which arrangements were made whereby refrigerator cars for butter were run during the summer on the main lines of railways leading into Montreal. These were used to pick up small lots of butter offered weekly. The shippers of butter by these cars and routes, were allowed to ship at the usual 'less than carload rates' without any charge for the icing or special service
>
> Ten steamships were fitted up; 35,605 packages of butter were carried in isolated compartments.

Mr. TALBOT. In what state was that butter landed?

Mr. BRODER. It was shipped to England and landed in good condition.

Mr. J. HERRON (Alberta). I merely rise to put myself on record in favour of the motion moved by the hon. member for Macdonald (Mr. Staples). Just a word with reference to a remark of the Minister of Railways. He said that a number of journalists or merchants would not be likely to call in farmers to adjudicate.

Mr. GRAHAM. I made no such statement or anything near it.

Mr. HERRON. Let me illustrate my point another way. Suppose a dispute arose between journalists or lawyers or manufacturers, would they be likely to call in a number of farmers to settle them? Is not this a case where practical farmers are required? The interests of the western farmers have attained such an extent today that they should be represented on the Board of Railway Commissioners, and for that reason I shall support the resolution. I am much surprised at the attitude taken by a number of western men, particularly at the action taken by the hon. member for Regina (Mr. Martin) in moving an amendment in order to side track this very important resolution. I cannot understand why members from the prairie section should oppose the placing of a practical farmer on this Railway Board.

Mr. J. A. CURRIE (North Simcoe). I shall detain the House but a moment in order to point out the significance of the amendment. The amendment says that the man to be appointed should be one well acquainted with western railway conditions. I think that the House would have adopted the amendment without question had the word 'railway' been changed to 'farming.' The hon. Minister of Railways has said that we should not narrow down this question to any particular class. But, as a matter of fact this amendment narrows it to some railway man. I cannot see it in any other light. I do not wish to cast a silent vote, for I think that whoever is appointed should be thoroughly familiar with the farming conditions of the west. The railway conditions are only a part of this question and for that reason I think it in the interest of the commission that whoever is appointed should be as well versed in farming conditions as in railway conditions.

Mr. GRAHAM. Perhaps I may be allowed to make a suggestion. It might meet the difficulty if we were to change it to 'transportation.'

Mr. LENNOX. It will take a lot of changing——

Mr. GRAHAM. It's all right; I was changing for the benefit of hon. members opposite, not for myself.

House divided on amendment (Mr. W. M. Martin.)

Amendment agreed to, and motion as amended agreed to.

Mr. FIELDING moved the adjournment of the House.

Mr. GEO. TAYLOR. What business will be taken up to-morrow?

Mr. FIELDING. On a motion to go into Supply, the Minister of Railways will make a statement concerning railways, and proceed with his estimates.

Motion agreed to, and House adjourned at 1 o'clock a.m. Tuesday.

HOUSE OF COMMONS.

TUESDAY, March 16, 1909.

The SPEAKER took the Chair at Three o'clock.

FIRST READINGS.

Bill (No. 105) relating to the water carriage of goods—Mr. Nesbitt.

Bill (No. 109) to amend the Government Annuities Act, 1908—Mr. Fielding.

GRAND TRUNK PACIFIC LOAN.

Hon. W. S. FIELDING (Minister of Finance) moved that on Friday next the House do go into Committee of the Whole to consider the following proposed resolution:

Resolved, That it is expedient to authorize the Governor in Council to advance by way of loan to the Grand Trunk Pacific Railway

Company a sum not exceeding ten million dollars for the purpose of aiding the company in the completion of the construction of the prairie section of the western division of the National Transcontinental Railway, the sum so advanced to bear interest at the rate of four per centum per annum, payable half yearly, and to be repayable in ten years from the time the loan is made, or if advanced in instalments, then in ten years from the time the first of such instalments is so advanced; and to provide,

That such sum, whether advanced in one or several instalments, shall be advanced upon the pledge of an issue of bonds, bearing interest at the rate of four per centum per annum, payable half yearly, to be made by the company as collateral security for the payment of such sum and interest, the principal amount of the bonds received in pledge to equal the sum advanced, such bonds to be secured, subject to any prior lien or charge, by a mortgage, or deed of trust by way of mortgage, of the prairie section, and of the undertaking, equipment and property, tolls, rights and franchises of the company in respect of said section, and to be guaranteed as to the payment of the principal and interest thereof by the Grand Trunk Railway Company of Canada; the form and provisions of such mortgage and of the bonds to be secured thereby, and of the guaranty thereof by the Grand Trunk Railway Company, to be substantially as set forth in the schedule of the Act to be founded on these resolutions;

That His Majesty, in the event of default in the payment of half yearly interest, or in default in the payment of the principal sum advanced under the provisions of such enactment, in addition to and without prejudice to any right or remedy against the company in respect of such default, and in addition to and without prejudice to any right or remedy His Majesty may have as pledgee of the whole or any part of such bond issue, shall, for the purpose of remedy, be deemed to be the holder of such bonds and entitled to all rights and remedies available to bondholders arising according to the terms of such mortgage when default is made in payment of interest or principal of such bonds; and that default in payment of interest on, or principal of, any advances made under the provisions of such Act, shall be deemed to be default in payment of the interest on or principal of such bonds to the amount accrued thereon according to the tenor thereof.

That the Governor in Council may, in addition to the sums now remaining unborrowed and negotiable of the loans authorized by any Act of parliament heretofore passed, raise by way of loan, in accordance with and under the provisions of that portion of chapter 24 of the Revised Statutes of Canada, 1906, relating to the public debt, and the raising of loans authorized by parliament, such sum or sums of money not exceeding ten million dollars, as may be required for making the advances contemplated by these resolutions.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the consideration of the House.

Motion agreed to.

Mr. FIELDING.

CATHOLIC IMMIGRATION.

On the orders of the day being called

Mr. T. S. SPROULE (East Grey). Mr. Speaker, I observe in Monday's 'Mail and Empire' and in other papers, the following item:

Limited to Catholics—Emigration Agent in England says he was so Instructed.

(Canadian Associated Press Cable.)

London, March 14.—Speaking on church prospects in Canada, Archdeacon Renison, of Moosonee, yesterday told how, travelling in England lately, he met an emigration agent of the Canadian government. This man was a German, who had built up a prosperous home in Canada, and asked the Canadian government to appoint him as an agent. For the last few years, he had been working in his native country, bringing out bands of emigrants and settling them in Alberta and Saskatchewan.

This man told Bishop Renison he had instructions to bring out only emigrants of the Catholic faith. Hundreds of German Roman Catholics were being planted year after year by the Canadian government in the great western prairie lands.

I wish to ask the Minister of the Interior whether there is any truth in that statement?

Hon. FRANK OLIVER (Minister of the Interior). As far as I am aware there is none whatever.

FISH SLIDES ON TRENT CANAL.

Mr. E. GUSS PORTER (West Hastings). I have received a communication of rather urgent importance. My correspondent writes on behalf of himself and a large number of others living along the line of the Trent canal, pointing out that in the construction of the dams on the Trent canal no provision is made for fish slides. He further points out that large quantities of food fish pass up the river and the construction of the dams in this way will have the effect of entirely excluding the fish from the river. If that is the case the minister's attention should be given to it at once.

PAY OF MILITIA AT HALIFAX.

Mr. A. B. CROSBY (Halifax). I am credibly informed that the militiamen and soldiers in Halifax have not received their last pay which is long overdue. I would like to know why this is so and when the men may expect to receive their money.

Mr. FIELDING. I shall be glad to call the attention of the minister to it. I am unable to give the hon. gentleman the information at the moment.

PORT OF OSHAWA.

Mr. SAM. HUGHES (Victoria). On the 11th inst. I put a question regarding the

Port of Oshawa, which both the Minister of Customs and the Minister of Public Works attempted to answer, I asked who was the collector of customs at Oshawa Harbour and what was his salary. Oshawa Harbour is not Oshawa town, and while the customs regulations may state that the port of Oshawa includes both the town and harbour, my question was so framed as to require an answer only for the harbour. I asked also what revenue has been collected at the port of Oshawa each year since it was taken over by the government and from what source was the revenue derived. I presume that, in giving the answer he did, the minister was technically correct, because the port of Oshawa includes both the town and the harbour. But what I want to get is the return from the Minister of Marine (Mr. Brodeur) or the Minister of Public Works or the Minister of Customs or the minister of any other department of the government showing what has been collected at the harbour of Oshawa—not the official port. I want a return of what comes in by water into the harbour at Oshawa, and not what comes by rail into the town. If necessary, I will repeat the question in another form.

Hon. WM. PATERSON (Minister of Customs). I do not know whether we will be able to divide the two and give the harbour distinct from the town.

Mr. SAM. HUGHES. It will be very easily done. There is nothing.

Mr. FOWKE. I can help the hon. gentleman out of his difficulty. He asked for information as to the amount expended by the government since taking over the port. I think what he meant to do was to ask who was the harbour master. The revenue through that officer.

Mr. SAM. HUGHES. That is the point.

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). I understand it is a matter which refers to my department, and will make inquiry.

FRAUDS ON THE INTERCOLONIAL RAILWAY.

Mr. BLAIN. I would like to ask the Minister of Railways if there is any truth in the report in the press under the heading of 'Frauds reported on the Intercolonial Railway,' to the effect that many thousands of dollars of a shortage are found in connection with the Intercolonial Railway, and that some of the officials have been suspended.

Mr. GRAHAM. So far as the department is concerned, the only information we have is what we have seen in the newspapers. I wired the general manager on the subject and have not yet received a reply. These things occur in every railway and I imagine —though I do not wish to express an opinion—that this must be much exaggerated. There will be a thorough investigation, if there is anything in the report.

INQUIRIES FOR RETURN.

Mr. BRADBURY. On the 17th of February two returns were ordered which I moved for. One was for copy of correspondence or petitions received from F. W. Colclaugh and the other for copy of correspondence between J. H. Davis and the Department of Marine and Fisheries. Why have these not been laid on the table?

Mr. BRODEUR. The return with regard to Davis is ready. It has been sent to the Secretary of State and when it comes back to my hands I will lay it on the table. The other is in course of preparation.

Mr. BRADBURY. On the same day I moved for an order of the House showing the amount of money paid by the government to the Logberg Printing Company and my motion was granted. What is the cause of the delay in bringing down that return?

Hon. CHARLES MURPHY (Secretary of State). I will have an inquiry made about it.

Mr. FOSTER. I again call attention to certain returns ordered by the House and not brought down. The Finance Department and the Public Works Department are the two chief sinners.

Hon. W. S. FIELDING (Minister of Finance). In the case of the Finance Department, my hon. friend himself is the chief sinner. He made a motion and the information was being prepared, but he discovered that he had made a mistake and asked that the form of the order be enlarged. I said we would be very happy to enlarge it at his suggestion, but I do not think he should blame us for the little delay thereby occasioned.

Mr. FOSTER. I asked for a return of all the loans which had been made from 1896 up to the present with their charges. I explained the matter to the deputy minister almost immediately, and I think he has had that information some time. There is another matter, that with reference to loans since January, 1907, which has not been brought down. Also the armouries under the charge of the Minister of Militia. And two stand to the debit of the Minister of Public Works, who is behind as usual.

Mr. PUGSLEY. These returns have not been overlooked. I have ordered that they be brought down as soon as possible, and I have been informed that they are being prepared with all possible speed.

SUPPLY—THE INTERCOLONIAL RAILWAY.

Mr. FIELDING moved that the House go into Committee of Supply.

Hon. G. P. GRAHAM (Minister of Railways). As is the custom at some stage during the session, when you are about to leave the chair, Mr. Speaker, for the purpose of allowing the House to go into Committee of Supply, a general statement is made concerning the government railways of Canada and dealing incidentally with the larger problems which confront this country on the matter of transportation. The questions now inviting attention of the Canadian people are of such great magnitude and import that interest in them is not confined to the Canadian people, but reaches the entire world; and in making comparisons between Canada and any other country regarding the facilities afforded for transportation of our products, the records show that we, as a people, have greater courage than any other on the globe in this particular direction. Per head of the population we have the greatest mileage of railways of any country in the world; and that this work is being continued and that mile after mile of railway is being constructed throughout this country shows two things.

It shows, first, that Canada has resources that require greater development, and, second, that the Canadian people, though comparatively few numerically considered, have unbounded faith in the country in which they live. When we stop for a moment to think that the question of the carrying trade of Canada's great west is being partially solved by utilizing the route from the Pacific across Mexico to the Atlantic, and thence to the European market. we are filled with wonder. It need not surprise us that people of other countries look in astonishment at our efforts to solve this problem which has come before us within the last few years. And when we consider that the proposition is now before the country, and the government intends in dealing with it, to add another channel for the great traffic of the west, this one to be via Hudson bay, it is all the more astonishing, I say again, that the courage of the people of Canada has reached such a climax. Were it not that we have unbounded confidence in the resources of the country, the undertaking of such great projects would stagger us. It is true that at the present moment the financial condition does not warrant us in launching out in great new schemes involving large expenditure. It is, nevertheless, true that the people of Canada look forward to the time when they will have greater avenues of trade, greater outlets for the carrying of our produce from our own country to the doors of the consumers without undue expense, and this at no distant day.

I have unbounded faith in this country; and, notwithstanding all the money that we are expending in railways, in canals, in deepening our waterways and improving our harbours—notwithstanding all the money spent in opening up these various channels for transport—I still have faith that the products of this country will be sufficiently great to tax all our carrying facilities, no matter what we may be able to make them. I have already said that we have in Canada a great railway mileage. On June 30 last we had 22,966 miles of railway in the Dominion, the increase last year being 514 miles. Shortly after that time 750 miles were put in operation, so that at the present moment—and I am stating the figures conservatively—there are in operation in the Dominion of Canada 23,716 miles of railway. In this matter we compare favourably with any country in the world. On June 30 last there were under construction in the Dominion of Canada 4,327 miles of railway. This means a great deal to the people of Canada. But, in discussing this question of railways, I desire to say that the prime object of a railway is not so much the development of other industries; the prime object in the interest of the people of Canada is that the railway may sell transportation at a fair price. Anything that conduces to the bringing about of this result is in the public interest. Sir, we have one transcontinental line already built, we have another under construction, and, in a few years, I believe we shall have a third, when the Canadian Northern gets its lines linked up. In this connection I am sure it will be interesting to hon. members for me to read and place on 'Hansard' a letter which is, in effect, a short interim report by Mr. Collingwood Schreiber, chief engineer of the western division of the Grand Trunk Pacific Railway. The letter is as follows:

Office of the General Consulting Engineer
to the Goernment.
Ottawa, Canada, February 5, 1909.

The Hon. George P. Graham,
Minister of Railways and Canals,
Ottawa, Ont.

Sir,—Knowing your desire to be kept fully informed as to the progress made, from time to time, with the works of construction upon the western division of the Grand Trunk Pacific Railway, I summarize the position on December 31, 1908, as follows:

Prairie Section.

From Winnipeg to a point 8½ miles west of the Battle river, a distance of 683½ miles the—

Grading and bridging is completed, and the track is laid over the whole distance with suitable sidings at each station, of which 92 miles has a full lift of ballast, 502 miles has a first lift and 89½ miles is a skeleton track having no ballast.

Station buildings.—The following are com-

pleted: West Winnipeg, Melville, Portage la Prairie, Nokomis, Rivers.

Others are in course of erection at Biggar and Wainwright.

Whilst the following are under contract: Scott, Iwana, Allan, Lazare, Kelliher, Semans, Leney, Punnichy, Bradwell, Goblenz.

Engine houses—have been erected at Rivers and Melville, and others are in course of erection at Watrous, Biggar and Wainwright.

Water services.—The following have been built: Beaudry, Elie, Harte, Rivers, Lazare, Welby, Gerald, Melville, Watrous, Bradwell, Earl, Biggar.

Water services—are in course of construction at: Portage la Prairie, Squirrel Creek, Pope, Quadra, Miniota, Uno, Atwater, Birmingham, Ituna, Mostyn, Touchwood, Wainwright, Quinton, Raymore, Nokomis, Iwana, Landis, Reford, Unity, Winter, Yonker, Artland, Dunn.

Grain elevators have been erected at: Cabot 2, Ingelow 1, Justice 2, Rivers 1, Pope 1, Uno 1, Spy Hill 1, Fenwood 2, Lazare 1, Gerald 1, Atwater 1, Waldron 1, Cana 1, Melville 2, Birmingham 1, Semans 1, Tate 1, Venn 1, Young 1, Bradwell 1, Iwana 1, Kinley 2, Landis 1, Scott 1, Nokomis 1, Watrous 1, Allan 2, Clavet 2, Juniata 1, Leney 1, Reford 1, making in all 39 elevators completed.

Loading platforms have been constructed at: Cabot, Barr, Caye, Deer, Exira, Firdale, Gregg, Harte, Ingelow, Justice, Knox, Levine, Rivers, Myra, Norman, Oakner, Lazare, Welby, Spy Hill, Gerald, Yarbo, Zeneta, Pope, Atwater, Bangor, Melville, Waldron, Cana, Fenwood, Kelliher, Tate, Nokomis, Undora, Venn, Watrous, Young, Allan, Bradwell, Clavet, Duro, Grandora, Iwana, Juniata, Kinley, Leney, Landis, Reford, Scott, Raymore, Unity. Making 52 in all.

Fencing.—There has been erected on each side of the railway 345 miles of fencing.

Telegraph line.—There has been erected a two-wire line from Winnipeg west for 672 miles, and a single wire line from the 672nd mile to Battle River 1 mile, and a stub line 2 miles—3 miles—making in all 675 miles.

This section of the road was opened for public traffic on the 21st September, 1908, since which it has been successfully operated to the great convenience and benefit of the public, especially to the population contiguous to the line.

Battle river to Wolf creek (western end of the prairie section), a distance of 241 miles.

Battle River bridge.—This steel viaduct and bridge was completed on the 11th December, 1908. This important structure consists of 51 spans of 50 feet and one of 151 feet, making in all 2,700 feet long and is 180 feet high.

Grading and bridging.—This work is practically completed from the Battle River bridge to a point 50 miles west of Edmonton, a distance of 172 miles, so that there is now no impediment to the laying of the track over the whole.

Clover Bar bridge.—This bridge over the north Saskatchewan river was completed on the 26th December, 1908.

From 50th mile west of Edmonton to Wolf creek (the western limit of the prairie section), distance 69 miles, about 75 per cent of the grading is done and a number of culverts have been built. There are two gangs of men engaged in driving piles for pile and trestle bridges. The grading and bridging on this section should be finished by July, 1909, which will complete the grading and bridging upon the prairie section.

The work is practically closed down for the season on the prairie section, with the exception of the pile driving for bridges, the concrete piers and pedestals for the steel bridge over the Pembina river and some grading in rock cuttings and in muskegs between the 65th mile west of Edmonton and Wolf creek.

Mountain section.

The first 100 miles from Prince Rupert easterly is under contract and fair progress is being made with the grading which is composed largely of solid rock. 633,396 cubic yards of solid rock, 94,970 cubic yards of loose rock and 94,407 cubic yards of earth have been excavated, and 32 culverts have been built; a capacious wharf and warehouse have been built at Prince Rupert.

There are 1,850 men and 90 horses and mules employed upon this work. This is short of what is required to finish the work in reasonable time, but I understand the contractors are making great efforts to largely increase the force.

This is the only work in progress on the mountain section, which is about 836 miles in length.

I have the honour to be, sir,
Your obedient servant,

(Sgd.) COLLINGWOOD SCHREIBER,
Chief Engineer, West Division, N. T. Ry.

Mr. FOSTER. What is the total length of the prairie section?

Mr. GRAHAM. From Winnipeg to Wolfe creek, 916 miles. The mountain section is 839 miles. Now I do not intend to go into any details of the Grand Trunk Pacific, as they will probably be discussed on another proposition. But I thought it would be interesting to the House and to the country to know just what progress was being made up to date with the western and prairie sections with regard to practical work. Coming east of Winnipeg, as hon. gentlemen will have noticed, I laid on the table of the House a day or two ago an interim report of what has been done on the Transcontinental, that is, the line between Winnipeg and Moncton, the government section. Since the end of the fiscal year, March 31 last, I have endeavoured to make a short summary of the contents of that report, and I think it would be interesting to give it to the House:

A summary of the interim report of the commissioners of the Transcontinental Railway, from the 31st of March, 1908, to the 31st of December, of the same year, being a period of nine months.

During this nine months they expended $18,866,212,84; making a total expenditure, from the initiation of the work to the 31st of December, 1908, of $45,924,156.88.

668.65 miles of grading were completed; and 309·12 miles of track was laid.

The entire line is under contract, with exception of the entrance into Winnipeg. Con-

tracts for steel superstructure and viaducts, amounting to 23,765 tons, have been awarded; and 6,995 tons have been practically completed. Contracts for 174,818 tons of 80 pound steel rails have been awarded, of which 105,692 tons are being furnished by the Dominion Iron and Steel Company, and 69,123 tons by the Algoma Steel Company. The necessary fastenings for these rails have been ordered through Canadian manufacturers.

During the nine months just mentioned, contracts have been awarded as follows :

McDonnell & O'Brien, for the construction of section in district "C," a distance of 107 miles; to the same firm, from a point still farther to the west, a distance of 114 97 miles.

O'Brien & McDougall, the construction of section about 126 miles in districts "E" and "F," being a contract about north of Lake Nipigon and westerly to a point at or near Dog lake.

A second contract to the same firm, O'Brien & McDougall, about 24 miles, from a point at or near Dog lake to the Peninsula Crossing.

M. P. and J T. Davis; construction of section in districts "D" and "E," from the westerly end of Fauquier Brothers' contract, (Abitibi), in a westerly direction, a distance of about 104 miles.

M. P. and J. T. Davis; a second contract of about 100 miles; this contract being about 60 miles west of the easterly boundary district "D," and westerly to the end of Fauquier Brothers' contract.

Contracts for first and second class railway ties have been awarded in district "C"; to the Eastern Construction Company and John G. Hearn—amounting, to about 200,000 ties.

The McArthur contract for the construction of the section between Winnipeg and the Fort William branch line of the Grand Trunk Pacific Railway has been, approximately, 82 per cent completed; and the work is to be finished so as to permit of the operation of the line in September next.

That is the expectation and anticipation.

Certain items of classification were disputed, between the engineer acting for the Grand Trunk Pacific Railway Company and the engineer acting for the commissioners of the Transcontinental Railway: Mr. Kelliher, chief engineer for the company and Mr. Lumsden, chief engineer for the commissioners, found that they did not agree in every particular with regard to the classification; and after going into the matter, they ultimately decided upon resorting to arbitration proceedings, under the National Transcontinental Railway Act. Accordingly, Mr. Collingwood Schreiber, C.M.G., has been named as the third arbitrator. Of course, no further progress can be made until the snow disappears from the ground.

Here is an item that I think will be of great interest to the country, and it only confirms what has been discovered by explorers sent out to that country a year ago by the Ontario government, that is, in reference to the amount of arable land found along the line of the Grand Trunk Pacific. This does not cover all the fertile land to be found in the clay belt in the province of Ontario, but merely, as I take it, refers to the land contiguous to the Transcontinental.

Mr. GRAHAM.

One item, that, I am sure, will be of very great interest to the country is: On the line of the Transcontinental Railway there is an area, in district "C," commencing about 4 miles east of the Bell river and extending to the western boundary of Quebec, of about 5,800 square miles, or 3,712,000 acres, of which it is said that 2,500,000 acres will make good farming land; and that most of the rest of the area can probably be drained so as to make a fertile country. The whole territory is well watered, and interspersed with fine lakes and rivers. For instance, the Hurricanaw is a good navigable river for steamboats, 60 or 70 miles in a southerly direction from the Transcontinental Railway. The land is said to be a good clay soil, easily drained, and the expectation is that the arable area extends much farther north than is now shown.

District "D" commences with the Ontario boundary and extends to the 74th mile or mile 185 on the map. There are about 2,100 square miles, or 1,344,000 acres of arable land, fit for cultivation upon clearing. From mile 185 on the map, to mile 285, there is an immense tract equal to any agricultural land in Canada, being a succession of long ridges, interspersed with swamps which can be readily drained. The country is well watered, and has an abundance of good fuel. There is an area of 7,500 square miles, 6,000 of which, or 3,800,000 acres, can be considered to be good arable land. It is a timbered country at present, covered with small spruce, balsam and white birch, with some occasional clumps of white pine. From mile 285 to mile 325, the soil is of a more sandy nature. It is stated that the valley of the Missanabie river contains some excellent land, the area of which would be, approximately, 500,000 acres of good arable land; 300,000 of medium quality, the balance suitable for pasture—and rocky well wooded land. There is another large area of tributary good land which will require drainage, as the country to the south is flatter and contains many swamps with low clay ridges, but all with a good sub-strata of clay.

There are reports and information from the Ontario land surveyors' explorations in the same territory, which show that the clay belt extends much farther north than that described in the area shown on the map and described herewith; which has been put in from personal observation and reports to the commissioners.

From mile 325 to mile 355, there is good agricultural land, comprising about 1,000,000 acres. The soil is a good sandy loam, well watered and timbered, with small spruce, birch and balsam. From mile 355 west to mile 475, the arable land area is much more restricted, so far as the reports go, being confined to the valleys of the large rivers. It is estimated, however, that there are 600,000 acres in this tract.

This will, I am sure, be information much appreciated by the House and the country, as it discloses that there is room for settlement along the line of the Transcontinental Railway between Nipigon lake, on the west, and La Tuque on the east; equal to that now occupied in the cultivated section of the old province of Ontario.

Mr. FOSTER. Is the minister able to say in what way that information has been gathered?

Mr. GRAHAM. These are reports received by the commissioners, which have been put in from personal observation and reports by the engineers in charge.

Mr. FOSTER. It is the information gathered by surveying engineers.

Mr. GRAHAM. That is, in short, what it is.

The through mileage from Moncton to Winnipeg is 1,804.84.

Now as to the work done on each one of these districts, I have had it placed in shape so that it can be readily understood by the House when they see the 'Hansard.'

Description of the Districts into which the Eastern Division of the National Transcontinental Railway has been divided.

Per cent of work done.

District 'A,' 39 %.—From Moncton to the New Brunswick line, 255·10 miles.

District 'B,' 53 %.—From the last named point to Clear lake, in the province of Quebec, in the vicinity of long. 74° west, 398·74 miles.

District 'C,' 0.—From the last named point to near the provincial boundary line dividing the provinces of Quebec and Ontario, 272 miles.

District 'D,' 4 % about.—From the last named point to near long. 84° west, 248 miles.

District 'E,' 0.—From the last named point to near long. 89° 30′ west, 258·91 miles.

District 'F,' 87 %.—From the last named point to Winnipeg (east bank Red river), 374·66 miles.

There are some other figures in connection with that subject giving the facts in detail, but I will not detain the House by reading them. Now, Sir, this is the large work in which the Dominion of Canada is at the present time interested and in which it is engaged. I am not going further into details with reference to this work as there will be ample time and opportunity for discussing it under another proposition which is before the House.

I want, in order not to be too tedious and to weary the House, now to proceed to consider a question that has been discussed by the press of the country and refer to one of its phases at least which was very ably discussed in the House by the hon. member for Westmoreland (Mr. Emmerson) and several other hon. members. I now wish to take up the Intercolonial Railway. A good deal has been said about the Intercolonial Railway. As long as I can remember, or since I have been able to read the newspapers and later to help to manufacture them, the Intercolonial Railway has been a subject that has been discussed by both parties, and it depended to a certain extent which party was in or out what view they took of that railway. I am not prepared at all to admit, Sir, that the Intercolonial Railway is not a well managed road. It has its difficulties, as has any project started as the Intercolonial was, not as a money making undertaking but rather as the result of an agreement in order to bring the outlying provinces into closer touch with the markets and the trade conditions which existed in what was then called Canada. It is as well managed as any road could be under those conditions. I shall endeavour in a moment to show by way of comparison what I mean. Taking the revenue account of last year I beg to submit the following figures:

Revenue Account.

The gross earnings and the working expenses for the year compare as follows:—

Gross earnings..	$9,173,558 80
Working expenses..	9,157,435 53
Surplus..	$ 16,123 27

The earnings from passenger traffic were: $2,711,416.98.

The earnings from freight traffic were: $6,054,493.55.

The earnings from mails and express freight were as follows:—

In 1907-8..	$ 407,648 37

I find that out of the amount of $9,157,435.53, working expenses, we procured a large quantity of rolling stock to say nothing of other improvements to the line. Out of revenue we purchased the following rolling stock:

1 first-class sleeping car.
1 dining car.
2 postal and smoking cars.
2 express and baggage cars.
100 box cars—60,000 capacity.
100 platform cars—80,000 capacity.
3 refrigerator cars—60,000 capacity.
92 hopper cars—30,000 capacity.
9 stock cars—60,000 capacity.
8 vans.

Sixty-nine of the 100 box cars replaced that many of smaller capacity.

The 100 platform cars all replaced smaller capacity cars.

The 3 refrigerators all replaced smaller capacity cars.

The 92 hopper cars replaced the same number of small hoppers of 6 and 8 tons capacity.

The 9 stock cars all replaced smaller capacity cars.

It does not require any explanation to convince the practical men who occupy seats in this House that it has become a necessity during the past few years to do away, as far as possible, with the smaller sizes of cars and locomotives and to replace

them with rolling stock of a large capacity. If we did not the railway could not compete with other railways that carry large amounts of traffic at a small cost.

Mr. HUGHES. To what account were those cars charged?

Mr. GRAHAM. They were charged to revenue. These things were purchased out of the $9,000,000 odd of working expenses charged to revenue. We could have made a good deal better showing if we had refrained from purchasing this rolling stock out of revenue. I want to point out, in this connection, that had the wages of the employees remained the same in 1907-8 as they were in the year 1906-7, the Intercolonial would have shown a surplus of $221,000. At the beginning of the year 1907-8 there were granted to the different classes of employees certain increases aggregating $205,989, or practically $206,000. These increases were as follows:

Aggregate increases.	Per annum.
Trackmen	$ 50,000
Mechanical department employees	100,000
Station staff	27,605
Stores department employees	3,024
Electrical department employees.	720
Ferry service employees	600
Watchmen	600
Officials and clerks	23,440

That is for the Intercolonial alone and I will again call the attention of the House to the fact that if the wages of the employees had remained as they were the year before we would have had a surplus, notwithstanding the falling off in the revenue during the part of the year, of $221,000. I want to point out this fact particularly to those who are sometimes inclined to tell us in the House that we are not paying fair wages on the Intercolonial Railway. I want to make the statement and to make it clearly that I believe the Intercolonial employee is as well off as the employee of any line on this continent. Also, in fairness to the men, I wish to say that I believe that the employees themselves of the Intercolonial will compare favourably with the employees of any line on this continent.

The capital expenditure on the Intercolonial for the year ended March 31, 1908, was $4,382,494.01, the principal items of which were:

Rolling stock additions	$1,805,462
Strengthening bridges	245,168
New locomotive shops and car shops, Moncton	645,598
Machinery	85,864
Engine house, Chaudière Junction	66,314
Sackville, improvements	58,344
Ste. Rosalie improvements, yard and buildings	75,992
Amherst, new station	33,937
Shops at Halifax and yard improvements	519,951
St. John improvements	$ 48,973
Mulgrave "	39,641
Truro "	86,594
Pictou "	45,138
Extension to Sydney Mines	48,993
Indiantown and Blackville branch	35,855
Increased water service	54,330
Additional sidings	27,196

Large amounts have been and are being expended on the different shops but I will only refer to one of these, and I think it is only fair to the House that I should do this because a large amount of money has been expended there and a large amount in addition will be expended. But as these shops at Moncton will provide in a large measure the terminals for the Grand Trunk Pacific I think it will be interesting for the House to know just what kind of shops we are constructing.

Mr. FOSTER. That is at Halifax?

Mr. GRAHAM. At Moncton.

Mr. CROSBY. It should have been at Halifax.

Mr. GRAHAM. Halifax will be one terminus and St. John the other terminus when we have all the railways down there as we shall no doubt in time. At the risk of wearying the House I wish to give a description of the shops at Moncton because I submit with all modesty that there are few of the members of the House who understand just what work has been done on the Intercolonial. I would go further; I think there are probably few people in Canada who know the Intercolonial as it really is, as a first-class railway. The shops that are being constructed at Moncton will serve the Grand Trunk Pacific also, and in that connection it will be interesting to have the following description of the buildings into which we are putting our money :

DIMENSIONS OF SHOPS RECENTLY CONCTRUCTED FOR THE INTERCOLONIAL RAILWAY AT MONCTON, N.B.

Freight car repair shop: 362′—0″ x 134′—8″. Area covered 48,700 sq. ft. Net floor area 47,400 sq. ft. Gross cubic contents 1,573,000 cubic ft. Net contents 1,541,000 cubic ft.

This building is composed of concrete foundations; reinforced concrete wall columns, curtain walls, and roof slab; steel trusses and purlins. There are two longitudinal rows of steel columns within this shop. Floors between rails are of 3″ plank; between tracks the floors are of mastic cement.

Six repair tracks run through the building, providing working accommodation for 48 cars.

Reinforced concrete air ducts are placed beneath the floor.

Planing Mill: 202′—8″ x 81′—10″; together with a fan honse 20′ x 20′. Area covered 17,100 sq. ft. Net area of floor 16,400 sq. ft. Gross cubic contents 550,000 cubic ft. Net contents 523,000 cubic ft.

This building is composed of concrete foundations, surmounted by a steel frame, with curtain walls and roof slab of reinforced con-

crete. The bottom chords of trusses are designed to carry 3 ton trolleys, and the floor space is entirely free from obstruction.

The floor is of hardwood.

Reinforced concrete air ducts are placed beneath the floor.

Passenger Car Repair Shop: 361′—8″ x 100′—0″. Area covered 36,100 sq. ft. Net area of floor 371,000 sq. ft. Gross cubic contents 887,000 cubic ft. Net contents 856,000 cubic ft.

This is a transverse shop with 18 tracks, besides an area at one end of 36 ft. x 100 ft. which together with a mezzaine floor 18 ft. x 100 ft. is for use as a cabinet shop.

The building is of reinforced concrete throughout, having four longitudinal rows of columns. Between the rails plank floors are provided; between tracks the flooring is of concrete.

Reinforced concrete air ducts are placed beneath the floor.

Passenger Car Paint Shop: 361 ft.—8 in. x 100 ft.—0 in. Area covered 361,000 sq. ft. Net area of floor 371,000. Gross cubic contents 887,000 cubic ft. Net contents 856,000.

This building is practically a duplicate of the repair shop. The end area, not occupied by tracks, and the mezzanine floor being devoted to upholstering and varnishing.

Storehouse and office building:—343-ft.—8-in. x 51-ft.—8-in..

Area covered by building 17,700 sq. ft. Net area of floors, 50,800 sq. ft.

Area covered by platform, 7,900 sq. ft. Net area including platform, 58,700 sq. ft.

Gross cu. contents exclusive of platform, 674,000 cu. ft. Net contents, 610,000 cu. ft.

The building is of reinforced concrete throughout, except the office partitions which are of porous tile.

The building consists of two stories and a basement. The greater part of the upper floor is devoted to offices. The building is provided on two sides and one end with a concrete platfrom designed for heavy loads. Freight elevators connect the different floors.

The interior is well finished. Floors are of hardwood except in basement which is of concrete. An ample supply of plumbing fixtures has been provided, and the building equipped for steam heating.

Locomotive shops { 408-ft.—4-in. x 178-ft.—4-in. / 375-ft.—1-in. x 157-ft.—9.in / 375-ft.—1-in. x 102-ft.—3-in

Area covered 171,000 sq. ft. Net area of floors 168,000 sq. ft.

Gross cubic contents, 7,360,000 cu. ft. Net contents, 7,270,000 cu. ft.

This is a group of buildings comprising;

Boiler shop:—375-ft.—1-in. x 102-ft.—3-in. In two bays, with riveting tower at one end of the erecting bay. The tool bay is served by a 10 ton electric travelling crane; the erecting bay by a 35 ton crane; and the riveting tower by a 30 ton crane. Plank floor on timber sills.

Locomotive erecting shop:—375-ft.—1-in. x 81-ft.—1-in. This shop is arranged with a central longitudinal pit, flanked upon either side by individual pits arranged in herring bone pattern. There is standing room for six locomotives upon the central pit, and for sixteen locomotives upon the side pits. Two electric travelling cranes, each of 60 ton capacity, command the shop. Flooring is of plank resting upon timber sills.

Forge shop:—375-ft.—1-in. x 76-ft.—8-in. This shop is served by jib cranes. The flooring is of earth.

Machine shop:—408-ft.—4-in. x 132-ft.—6-in. This shop is in two bays, each of which is commanded by a 10 ton electric travelling crane. The flooring is of plank, supported by a concrete base.

Machine Shop Annex, 408 ft. 4 in. x 44 ft. 10 in.

This includes the bolt room, tool room, brass room, brass foundry, with lavatories upon a mezzanine floor.

The foundations of all these shops are of concrete, the skeleton is of steel, with curtain walls and roof slabs of reinforced concrete. Travelling cranes command all floor space except that of the forge shop and the machine shop annex. Reinforced concrete air ducts are placed beneath the floors of all these shops forming the locomotive group.

Power House, 203 ft. 2 in. x 69 ft.

Area covered, 14,000 sq. ft.; net area of floor, 13,300; plus basement, 1,400; gross cubic contents, exclusive of basement, 477,000; net contents, 460,000.

This building consists of concrete foundations, surmounted by a steel frame, with curtain walls and roof slab of reinforced concrete. The engine room is served by a 15 ton travelling crane operated by hand. The engine room is provided with a hardwood floor, supported by steel framing over the basement portion.

Gas-producer House, 40 ft. 10 in. x 38 ft. 10 in.

Area covered, 1,600 sq. ft.; net area of floors, 2,750 sq. ft.; gross cubic contents, 61,600 cubic ft.; net contents, 52,700 cubic ft.

This building consists of a single story with a basement. It is a steel frame structure with reinforced concrete walls and roof slab. The basement floor is of concrete, the charging floor is of steel.

Dry Kiln, 57 ft. x 25 ft. 4 in., 17 ft. 4 in. x 16 ft. 8 in.

Area covered, exclusive of platform, 1,730 sq. ft.; net area of floors, 1,550 sq. ft.; gross cubic contents, 22,500 cubic ft.; net contents, 14,000 cubic ft.

This is a brick and wood combination building, upon concrete foundations. There is a platform on either side, 6 ft. in width.

Lumber Shed, 150 ft. x 20 ft.

Area covered, 3,100 sq. ft.; net floor area 2,800 sq. ft.; gross cubic contents, 46,500 cubic ft.; net contents, 36,000 cubic ft.

This is wooden structure upon concrete foundations.

Mr. J. HAGGART. What is the capacity of these shops? how many locomotives and how many cars can you build in a year?

Mr. GRAHAM. I have not that information but I will get it a little later on.

Mr. J. HAGGART. Oh, never mind.

Mr. GRAHAM. These shops, are I am told, very superior both in structure and capacity, and in referring to them it is perhaps not out of place to quote from an interview that was given to the 'Moncton Transcript' by Mr. Quesnel, who is the

International Vice-President of the Boiler Makers' union and who visits Moncton occasionally as he does I believe all railway centres on the continent. Mr. Quesnel certainly does know what is required in the construction of shops of this kind as he is conversant with the shops of the various American railways, and he makes this statement:

> The extent of the shops and their equipment certainly surprised me. When completed and equipped they will have no superior, not merely in Canada but in the United States, and I have visited every railway shop of any importance in North America.

That testimony coming from a man of such experience as Mr. Quesnel puts beyond all cavil the high class of the workshops being constructed at Moncton.

Mr. FOSTER. What is the total cost of all these?

Mr. GRAHAM. Speaking subject to correction, including a new piece of railway which we must construct in order to make a cut off leading from the city, the cost will be in the vicinity of $2,000,000.

Mr. FOSTER. Will that include machinery?

Mr. GRAHAM. I think so, but of that I am not sure. When you get into such large figures it is hard to be definite.

Now, I shall refer for a moment to the Provident Fund. To this fund the railway employees contribute a certain amount and the government contributes an equal amount. The fund has been established as a provision for those who retire from the service because of old age or other causes. In Committee of Supply I shall be able to give some more details as to the number of employees retired. Hon. gentlemen will please note that the government contribution to this fund comes out of the revenues of the Intercolonial. All the best railways on the continent have adopted such a system, and I am glad to know that the government railway is not behind any of them in this respect. The following table explains the position of the Provident Fund:

During the fiscal year the contribution of the employees amounted to	$ 82,707 74
The contribution by the railway amounted to	82,707 74
A total of	$165,415 48
The total expenditure was	27,700 63
Leaving a balance of	$137,654 85
To which is to be added the interest	1,594 36
Making a total amount to the credit of the fund on the 31st March, 1908	$139,249 21

Mr. FOSTER. What is the rate of interest?

Mr. GRAHAM. The rate of interest is not stated, but I imagine it is the bank rate of 3 per cent.

Mr. FOSTER. By the way, is that fund invested in any way or is it a debt owed by the government?

Mr. GRAHAM. I do not think it is invested but as to that I would not be sure. At all events it comes out of the receipts of the railway and not out of consolidated revenue. In reference to that fund let me say this: A few of the employees of the Intercolonial Railway, noting that the expenditures did not at all equal the income in this fund, formed the idea that the rate charged each year and set aside by the employees could be reduced; but I pointed out to them, and I believe the House will agree, that this is a fallacy. We cannot make that fund too strong and it is the history of all such funds that for the first few years not many are withdrawing, but every employee on the Intercolonial is growing one year older every 12 months and is getting that much nearer superannuation, so that instead of reducing the amount to be collected annually, if I had any advice to give it would be that the amount be increased in order to make the sum substantial to those who in a few years will go into the retirement class under the Provident Fund.

Leaving the Intercolonial Railway proper, I take up the Prince Edward Island Railway. For the benefit of the country who perhaps do not give this careful study, I might repeat that there are two branches at least of the government owned railway, one the Intercolonial Railway, 1,500 miles long, and the other the Prince Edward Island Railway, which brings our total government railway up to something over 1,700 miles. This railway, of course, has its beginning and its end, its Alpha and its Omega on Prince Edward Island. It is an industry by itself and so far as it can it has a monopoly.

Mr. EMMERSON. It is a belt line.

Mr. GRAHAM. It is a belt line.

The gross earnings and working expenses of the Prince Edward Island Railway for the year compare as follows:—

Gross earnings	$304,579 83
Working expenses	399,947 79
Difference (deficit)	$ 95,367 96
The gross earnings were	$304,579 83
The earnings from passenger traffic, 1907-8	132,382 76
The earnings from freight traffic, 1907-8	146,280 99
The earnings from mails and sundries, 1907-8	25,916 08
The capital expenditure on the Prince Edward Island Railway for the year ending March 31, 1908, was	$390,461 83
Charlottetown railway shops, new	$299,875 71

Souris wharf, new crib, and facing with concrete	$51,159 90
New machinery at Charlottetown	35,456 00
Rolling stock additions, 4 locomotives and 23 box cars	73,281 00

As to salaries, additions were made during the year beginning April 1, 1907, as follows :

Class of employee.	Aggregate Increase.
To trackmen	$4,768
To freight porters	394
To mechanical department employees	6,160

If these increased payments had not been made, then, as I said in reference to the Intercolonial Railway, the deficit on the Prince Edward Island Railway would have been that much less.

Leaving the operations of the government railways for last year, I wish to make a few comparisons in reference to the management of the railway. If my hon. friend from Westmoreland (Mr. Emmerson) will not find fault with me for encroaching on some of the ground he covered so ably the other night, in order to make my statement clear it is imperative that I should use some of the figures he used recently. How can we make a comparison ? A very prominent writer on the 'Economics of Railways' says :

> The percentage of the gross revenues which are devoted to operating expenses, fixed charges and dividends, are not necessarily an indication of creditable management or the reverse. Causes utterly beyond control of the management, may abnormally increase certain items of expense, while ruinous competition may cut down the gross revenue, so that little or nothing is left for dividends.
>
> A favourable location will sometimes make a road prosperous in spite of bad management. On the other hand, the highest grade of skill will fail to keep some roads out of the hands of a receiver.

If he had been writing about the location of the Intercolonial Railway, he could not have expressed the situation more clearly, and if he had been speaking of that very great competition which he calls ruinous, so far as the water routes are concerned, he could not have made a truer statement if he had had the Intercolonial Railway in his mind. But, I am not going to dwell on that point, I am going to make a comparison with some other lines on a basis which I think is fair, to show that notwithstanding these handicaps as to the location, notwithstanding the handicaps as to the water routes and other handicaps to which I will refer later, that must exist in the management of a government road, the Intercolonial is as well managed as the average railway in Canada, has no greater number of men to the mile and pays no more for the work accomplished. The train mileage expense is a fair basis of comparison, and although different considerations, such as the standard of the railway and the double track enter into the problem, the large amount of business brought by high standard and a double track generally counterbalance these to such a degree that the comparison of train mileage expense is applicable. The average cost per train mile in 1907-8 not including interest, just wages and material, on the leading railways of Canada was as follows :

	1907.	1098.
All Canada	$1.381	1.364
Canadian Pacific Ry.	1.45	1.493
Canadian Northern Ry.	1.551	1.480
Grand Trunk Ry. System	1.267	1.154
Temiskaming & North. Ont. Ry.	1.599	1.592
Intercolonial Ry.	1.193	1.295

The only railway that has a better showing as to the average cost per train mile in Canada than the Intercolonal Railway is the Grand Trunk Railway, and the cost on the Intercolonial Railway is considerably less per train mile than the standard or average of the Canadian railways in Canada.

Another significant comparison is the cost of maintenance of rolling stock per mile run. I will give this table under the three headings of locomotive mile, passenger mile and freight car mile. The figures are as follows :

	Loco. mile. cents.	Pass. mile. cents.	Frt. car. mile. cents.
C. P. R.	.0772	.0176	.0105
C. N. R.	.1235	.0137	.0066
G. T. R.	.0712	.0106	.0078
T. & N. O. Ry.	.0633	.0202	.0117
I. C. R.	.0845	.0191	.0106

It is apparent from this that the Intercolonial Railway is not extravagantly run in this respect, and it keeps up the standard well.

Another test is the maintenance of way and structures on the basis of the train miles run. The figures for the different railways in this respect are :

	cents.
Canadian Pacific Railway	.2997
Canadian Northern Railway	.3307
Grand Trunk Railway	.2007
Temiskaming & Northern Ontario Ry.	.2806
Intercolonial Railway	.2400

Again, the Grand Trunk Railway is the only line in the Dominion that shows less than the Intercolonial Railway under this heading. The Grand Trunk Pacific makes a better showing rather than the Intercolonial Railway.

Take the maintenance of the rolling stock per year. As hon. gentlemen know who have studied this question, there is a standard below which it is not safe to go. If that standard is departed from, the quality of the rolling stock must deteriorate.

Mr. J. A. CURRIE. Where are those train mile figures, giving the statement of cost, taken from?

Mr. GRAHAM. We have a statement from every railway every year, and you can get them from other authorities as well. We can figure out the cost per mile from the statements they give us, and we have other authorities as well. There can be no question about the authenticity of the figures.

Mr. J. A. CURRIE. Was the statement the hon. gentleman gave per train mile or what is called per train ton mile?

Mr. GRAHAM. The statement I gave has reference to the rolling stock and the maintenance of way and not to the ton mile at all. I may come to that later. Here are the figures tabulated:

	Per locomotive year.	Per passenger car year.	Per freight car year.
Standard.	$2,000 00	$600 00	$45 00
Canadian Pacific Ry..	2,444 63	985 21	75 19
Canadian Northern Ry..	2,388 69	639 48	37 09
Grand Trunk Ry.. ..	1,833 53	447 54	47 90
Temiskaming and N. O. Ry..	1,580 00	417 80	34 84
Intercolonial Ry.. ..	2,083 29	710 10	53 28

It will be apparent from the above that the Intercolonial Railway spends enough to keep up the standard of requirement; and as this comes out of its revenue, it shows we are not starving the maintenance of its equipment in order to make a good showing at the end of the year.

There is another test which has some bearing on the management of the road, and that is the percentage of loaded and empty freight car mileage. This is not always controllable, it depends upon the movement of trade, but in so far as it is controllable it is an evidence of efficiency; and in so far as it goes I want to give a comparison in that respect between the Intercolonial Railway and other railways. It certainly does not show lack of management on the part of the Intercolonial Railway. Here are the figures:

	Loaded.	Empty.	Empty p.c
Can. Pac. Ry.... ..	319,507,176	110,373,337	23
Grand Trunk Ry...	178,722,657	70,788,415	28
Canadian Nor. Ry.	43,837,190	16,078,648	27
Temiskaming & N. O. Ry.	1,639,951	851,533	34
Intercolonial Ry. ..	60,532,928	20,952,989	25

So that in making a comparison along that line, certainly the Intercolonial Railway does not show to disadvantage.

Then I want to come to another point and that is the number of employees per mile of railway. My hon. friend dealt with that the other night, and I think that my figures correspond approximately with his, but are perhaps of a little later date. It has been said in the press that we have, I do not know how many, hundreds of employees in excess of our requirements on the Intercolonial Railway. I am not going to argue that in other railways there have not been certain decreases, but if we compare the management of the Intercolonial Railway with the management of other railways, if we take the number of employees per mile, we will find nothing to complain of on our road in that respect. Taking the past two years, I find the comparison as follows:

Per mile of railway.	1907.	1908.
Canadian Pacific Railway..	7.39	5.68
Grand Trunk Railway	7.50	5.52
Canadian Northern Railway.. ..	3.94	2.85
Temiskaming and Northern Ontario Ry.	5.92	5.54
Intercolonial Railway..	5.72	5.81

Mr. J. HAGGART. What employees are those?

Mr. GRAHAM. All the employees.

Mr. FOSTER. From the president down?

Mr. GRAHAM. I could hardly consider myself an employee. From the manager down.

Mr. HAGGART. Should you not give the amount of work they do in order to have a fair comparison?

Mr. GRAHAM. The work on the line shows pretty well what they do.

Mr. J. HAGGART. Also the earnings?

Mr. GRAHAM. I shall attend to the earnings before I get through. What I want to point out is that we are not overmanned to the extent some newspapers would lead the public to believe we are. Or if we are overmanned, then every railway on the continent is in the same condition. Let me point out this feature, which will strike members of the House as I read these figures. While the other railways reduced their number of men per mile in 1908, owing to the shrinkage in the traffic, the government owned railways retained about the same staff.

Mr. LENNOX. The other railways had not an election on their hands.

Mr. GRAHAM. I am glad my hon. friend has made that interruption because what I have said about the Intercolonial Railway applies equally to the Temiskaming and Ontario road. So that I submit, in neither the one case nor the other, had the elections anything to do with this question.

Mr. SAM. HUGHES. Has the hon. minister dismissed any since the elections?

Mr. GRAHAM. None that would not have been out in any case.

I call attention to the fact that on the two government railways, the number of men remained stationary this year as well as last year. By last year I refer to 1908. While last year the other railways of Canada dismissed no fewer than 17,608 employees, owing no doubt to the falling off in the traffic, the Intercolonial Railway did not follow suit, and the fact that there was an election did not make a bit of difference as I suppose it did not make any difference with the Ontario government railway. I have an idea—perhaps an erroneous one—that in a government railway such as this, where thousands of men are employed, there can be a distinction fairly drawn between the treatment of these men, when hard times arise, and that accorded by the other great railway companies to their men. If we were to take the cold-blooded view of what it would mean to the railway itself, then it would be wise to dismiss every man possible, it would be wise to do, as other roads, and reduce the number of employees to the lowest possible extent. But by doing that we would only add to whatever pannicky condition might exist and intensify the conditions. I may be wrong and possibly railway managers may say so, but I take the ground that during a financial stringency it would be unfair to municipalities and to portions of the country through which the road runs and to the employees themselves, if we were to act as other railways do and turn our employees out on the street to do as best they could while hard times prevailed. I did not think we should do that nor did the Ontario government, and as a consequence, while other railway companies reduced the number of their employees very materially these two governments practically retained the same number as they did before.

Mr. SAM HUGHES. Why did not the hon. gentleman impress that line of conduct on his colleagues in the various other departments?

Mr. GRAHAM. They don't run a railway. This is a work that is in motion; it is not a new work, it does not mean not employing certain men, but it means depriving men of employment who have had it for years, and who depend upon it for their means of livelihood.

Now, I come to the question of earning power. I have tried to point out, as briefly as I could, that the management of the Intercolonial is as economical as the management of the other lines. You ask: Then, why does not this railway show a profit? Well, my own opinion is that the railways covering practically the same territory as the Intercolonial Railway have not made a dollar in the last ten years. I think that if hon. gentlemen will look into the facts, they will find that the Intercolonial stands as well financially year after year, for the last seven or eight years at least, as the other lines running through substantially the same section, considering these parts separate from the lines over the rest of the continent. The Intercolonial is a detached line, a line covering part of a territory, a line without feeders from the west, simply a long railway practically feeding itself, though getting what traffic it can from other roads. We have, it is true, an understanding and agreement with the Grand Trunk. But the Grand Trunk has its own connections to Portland, and will shortly have connections further east. And, while it may live up to its agreement with us, it does not give to the Intercolonial a pound of freight that it can get out of giving to that road; it gives as much as it can to its own line, and carries it to Portland. So, if you wish to compare the Intercolonial Railway with any of the other lines running through substantially the same section, we are willing to have that comparison made.

In considering the earning power, I wish first to take the train mile. When we discuss the train mile and the small rate received by the Intercolonial, we mean two things: first, that the Intercolonial does get a small rate on nearly all its commodities, and, second, that the majority of the traffic of the Intercolonial only entitles the road to charge the lower grade rate. If we had a railway into a rich silver district, or running through the richest agricultural section where they pay larger rates, we could have the same average rate as other roads similarly situated. The higher standard of the traffic would allow us to charge a higher average rate per ton per mile. To illustrate this I have only to call attention to the rates realized by the Ontario government road. Not that these rates are very much higher than ours if you consider them merely by the schedule; but their tonnage is of such a high standard, on the average, that they are enabled, as it works out practically, to get 149 per cent higher rate per ton per mile than the Intercolonial. I wish to be clearly understood: I am not saying that they charge too much for the kind of freight they carry, but theirs is a high class freight on which they are able, under the ordinary tariff, to charge a higher average rate than the Intercolonial can charge on its traffic. This accounts, to a certain extent, for the low rates on the Intercolonial. There is another condition to account for it, and that is the competition with the water rate from Sydney to Montreal, Quebec and other points, and also the water transportation from Halifax to Sydney. These must be met, and they are met; but in meeting them the Intercolonial gives

to the people of the eastern provinces and the Dominion generally great benefits in the rates. Now, let me make a comparison of the earnings per train mile of the different roads. The figures are as follows:

Earnings per train mile.

	1907.	1908.
Canadian Pacific Railway..	$2.279	$2.19
Grand Trunk Railway..	1.835	1.664
Canadian Northern Railway.. ..	2.41	2.201
Temiskaming & Northern Ontario Railway..	2.155	1.806
Intercolonial Railway..	1.254	1.238

There is a marked contrast, as hon. gentlemen will see, between the earning power of the other railways and the earning powers of the Intercolonial. Now, in the same way, take the average receipts. The following are the figures:

AVERAGE RECEIPTS.

	Passengers per passenger mile.		Freight per ton mile, terminal charges included.	
	1907.	1908.	1907.	1908.
	Cents.	Cents.	Cents.	Cents.
C. P. Ry.....	1·844	1·898	0·778	0·742
Can. Nor. Ry...	2·835	2·381	0·873	0·779
G. T. Ry.	1·839	1·771	0·672	0·685
T. & N. O. Ry..	2·585	2·288	1·518	1·443
Intercolonial Ry	1·762	1·845	0·584	0·578
New South Wales	.....	.....	.....	2·4

Then, to carry this comparison a little farther—for I wish to convince the House, if I can, that the Intercolonial rates are low and that receipts will continue to be low so long as we carry the goods of the people at these rates—let us see what would happen to the other companies' earnings on the basis of the Intercolonial's freight rates for 1908. The Canadian Pacific Railway rate was 28·4 per cent more than the Intercolonial. To compel the Canadian Pacific Railway to accept the Intercolonial rate would have meant a loss to the Canadian Pacific Railway on freight alone of $9,587,531. Now, take the Canadian Northern; its rate was 34·8 per cent more than that of the Intercolonial. If forced to accept the Intercolonial rate last year, it would have meant the loss to them of $1,760,628. The Grand Trunk rate was 18·5 per cent higher than the Intercolonial, and the loss to them on the basis of the Intercolonial rate, would have been $2,969,703. The Temiskaming and Northern Ontario Railway rate was 149·7 per cent higher than the Intercolonial, and the loss to them, had they accepted the Intercolonial rate, would have meant $166,462. So far as the passenger rates are concerned, I think that the Intercolonial rates are fair. The Canadian Pacific Railway, on the average, gets about the same, the Grand Trunk a little less, the Canadian Northern 23 per cent higher and the Temiskaming and Northern Ontario 24 per cent higher.

It has been stated, and has been made a subject of complaint in some quarters, that the government road has injured the provinces through which it runs. I have seen the question raised in the press, and have heard it discussed by gentlemen who have taken quite an interest in the matter and who have said that, in years gone by, the Intercolonial hampered the maritime provinces and the province of Quebec. I am not sure about that, but I am inclined to think that the figures and conditions will not bear out the statement.

Now, take the province of New Brunswick. There are 440 miles of the Canadian Pacific Railway in New Brunswick, 565 miles of other lines, and 503 miles of the Intercolonial, or about one-third. There are a great many company lines of railway, but the government road has only one-third of the total mileage of New Brunswick. So if there be anything wrong, if the railways have not been fair in their treatment of New Brunswick, only one-third of the unfairness ought to be charged to the government railway. Now take Nova Scotia. I want to point out also that the Intercolonial is not the only railway that has a large mileage in Nova Scotia. We have the Mackenzie and Mann, with 435 miles, we find other railways with 395 miles, and the Intercolonial has 485 miles. Again the government railway has only about one-third of the mileage in the province of Nova Scotia. Now I do not admit for a moment that the existence of a government owned and government operated railway has injured any part of Canada. It is true that conditions have changed—and I will deal with that a little later on—conditions have changed, and what would do for a government owned railway or a company owned railway a few years ago, will not do for a government owned railway or a company owned railway at the present time. Companies are waking up to the situation and keeping pace with the increased demand of the times, and the government owned railway will have to follow in their wake, if it is to occupy the place it has occupied, or ought to occupy, in the transportation of the country. Now I want to point out something that my hon. friend pointed out the other night, and that is the expenditure we have made in the Dominion of Canada on railways. We hear a good deal of comment about the money we spend on the government railway. Well, Sir, if we selected the government railway and expended money on it and not on the other railways throughout the Dominion of Canada, I would say that perhaps we were treating one part of the country a little better than the other. But the fact is that there is no part of the Dominion of Canada

that has not had, and is not having to-day millions of the people's money expended in order to obtain for the people of Canada better transportation facilities. Now I will give a few figures, and I will explain to my hon. friend from East Hamilton (Mr. Barker), that I have taken the basis of $5 an acre.

The total sum of money granted by way of aid towards the construction of railways to 30th June, 1908=

From the Dominion of Canada..	=$133,049,376
From the provinces..	= 35,191,415
From municipalities..	= 17,430,945
Making a total of..	$185,671,736

Further aid by way of land grants has been given, aggregating:

From Dominion, acres..	= 31,864,074
From provinces "	= 20,420,109
Total..	= 52,284,183

If we take the average value of the land in question at $5 per acre—a moderate estimate—we get $261,420,915, making in land and cash a sum equivalent to $447,092,651. Of this the Canadian Pacific and its allied lines got:

From Dominion government.. ..	$50,072,980 69
From provincial government....	12,617,536 79
From municipalities..	5,214,267 35
A total of cash .. .. =	$67,904,884 83
Land grants, 26,816,202 acres at $5 per acre.. .. .. =	134,081,010 00
Equivalent value to amount of =	$201,985,894 83

The Canadian Northern and allied companies, including the Quebec, Nova Scotia and Quebec and Ontario lines:

From Dominion government.. ..	$ 7,488,710 86
From provincial government.. ..	9,649,297 59
From municipalities....	174,000 00
Cash total of..	$17,312,008 45
Land grants of 5,047,872 acres at $5 per acre.. .. .. =	25,239,360 00
Equivalent value to amount of=	$42,551,368 45

The Grand Trunk Railway system and allied companies :

From Dominion government.. ..	$17,277,465 33
From provincial government.. ..	3,000,406 59
From municipalities..	5,305,727 37
Municipal subscription to shares.	440,000 00
Cash total of.. .... =	$26,023,599 29

Mr. FOSTER. Do the Grand Trunk figures take in the whole liability of the Grand Trunk Railway?

Mr. GRAHAM. I imagine they do, but I am not sure about that. I asked for the way it was distributed among these other companies. These amounts I have given do not total the amount I have mentioned, in the aggregate, but I have only taken the three larger railways. In addition to that, as I say, we have given in guaranteed bonds large amounts of aid to different railways. We are also constructing a large section of the transcontinental line, which amount is not included in these figures. Taking them altogether, we have given very many millions of money for the sole purpose of accommodating the people with railway facilities.

Mr. EMMERSON. We have made loans as well, and propose making others.

Mr. GRAHAM. Now we have been generous in the Dominion of Canada, not generous to the railways because we wanted to help the railways, not because it was thought wise to have great corporations, but we have been generous because it has been thought for years by the people of Canada, as represented in this House, that to give aid to the railways meant to give aid to the people in order that they might get better prices for their products in the markets of the world. That being the case, I do not think we ought to cavil so much when we are asked to make some expenditure on a railway we own ourselves. Now I want to point out one or two other things. It has been stated by somebody, at some place, at some time, that it would be wise to stop the expenditure on capital account on the Intercolonial. Now Sir, if that was done it would mean, as the Wall Street 'Journal' said, the stagnation and death of any railway.

Mr. JOHN HGAGART. Who made that statement? I never heard any one make it.

Mr. GRAHAM. I have heard people make it. I did not mention my hon. friend as having made it. I have heard it mentioned at some time, at some place by some person.

Mr. JOHN HAGGART. I was not there.

Mr. GRAHAM. I did not make any personal reference. If there has been any person who had the erroneous opinion——I will put it that way, to meet the views of my hon. friend—I want to point out that other railways have not stopped expenditures on capital account during the past year, although they have taken devious ways of securing that capital. I want to read a few of the ways they have adopted in certain companies. Owing to the financial panic in the United States, these other railways demanded the closest possible curtailment of money demands; yet to meet pressing obligations, short time notes were issued by the following companies for the amounts named:

Boston and Maine..	$ 7,000,000
Erie..	5,500,000
Delaware and Hudson..	6,000,000
Missouri Pacific..	6,000,000
New York, New Haven and Hartford..	8,320,000
Wheeling and Lake Erie..	8,000,000
Chicago Great Western..	3,300,000

*Chicago, Rock Island and Pacific	$ 6,000,000
Baltimore and Ohio..	11,600,000
Pennslyvania system issued 5 per cent 3 years collateral notes for..	60,000,000
The Canadian Pacific Ry. in turn issued in the year 1906-7 common stock at par to the amount of..	15,684,810

The Canadian Pacific Railway have, a few months ago, taken power to issue $50,000,000 more stock.

For the year 1907-8 preferred stock increased..	$4,866,666
Bonds increased for the same period	8,668,498

The Southern Railway Company, about 7,548 miles in length, has increased its expenditure on capital account by the sum of $76,000,000 in the past four years, for improvements in existing line, terminals and increased equipment.

Many other of the great systems of railways have, in like manner, made large investments on capital account, in obedience to the universal law of 'progress or death.'

But no matter by what method the capital is secured, it is necessary in order that a railway may live, that certain amounts be expended year by year in order to increase the facilities for carrying the people's goods, else these facilities will not be afforded and the railway must necessarily die. I want to take up another point that has been discussed in this House at times, and when I refer to it, I want to be distinctly understood as not taking any sectional view.

A comparison has often been made between the expenditure on the canal system and the expenditure on the Intercolonial Railway. That view may be sectional, but I want to point out that a great many people understood at the time of confederation, and it will be candidly admitted by any person who will read all the discussions which took place then, that the Intercolonial was to be built in a certain way to balance the canal systems that were built in other parts of the country. While it may be a sectional view, I want to carry out that comparison and point out to my hon. friends that there is not so much difference after all between us as to the contention that the Intercolonial Railway ought to be, for a portion of Canada, just as much the people's highway as the canal system is in another part of Canada. Anything that will tend to make it more efficient ought to be assisted by the people of the Dominion as a whole. With that end in view let me make a few comparisons. These figures are up to the latest date available. The Intercolonial and Prince Edward Island Railways—and I am including them both so as to be quite fair—had an expenditure made upon them on capital account up to the end of last year of $94,825,192.94. The total expenditure on capital account upon the canal system has been $93,457,874.28. Practically the same amount has been expended on the government railways as on the canal system. Now let us take the year ended March 31, 1908. We find that there was an expenditure on the canals of $3,221,984.73, made up as follows:

Capital account..	$1,723,156 07
Income account..	508,010 19
Maintenance staff..	556,902 83
Repairs..	433,915 64

Leaving out the amount of money that we received from hydraulic rentals in connection with these canals the deficit on the operation of the canals would be $1,498,828.66. But I wish to deduct from that amount what was received from hydraulic rentals, namely, $144,882.13, making the cost of the operation of the canals last year to the Dominion of Canada $1,353,946.53. I want to make another calculation in order to bring in the interest. I propose to make a comparison for the last twelve months with respect to the cost of the canals and the government owned and operated railways.

Mr. STRATTON. With respect to the operation of each?

Mr. GRAHAM. No, if we were to take the question of operation alone there would be a showing of about $1,500,000 in favour of the Intercolonial Railway. But I propose to take the interest for one year on the canal expenditure and the interest for one year on the government-owned railway capital expenditure and then the cost to the country of the canals and the cost for the maintenance of the government-owned railways and see where we stood last year. If I take the interest at three per cent on the government railway expenditure I find that it amounted to $2,844,755.78. If I take the interest on the canals I find that it amounted to $2,803,736.22, there being a difference in favour of the canals as against the government-owned railways for last year in interest alone of $41,019.55.

Mr. EMMERSON. You are including the Prince Edward Island Railway?

Mr. GRAHAM. Yes, I am including the Prince Edward Island Railway. Then if I take this $41,000 which was against the railway in the item of interest and deduct it from the $1,353,946.53, the net deficit on the canals, I find that it makes $1,312,927. If we were to stop at that point there would be an expenditure in one year, including interest and management of $1,312,927 in favour of the government railways, but that would hardly be fair. During that same year there was a deficit on the government railways of $79,244.69 and, deducting that, if we compare the expenditure on the canals with the expenditure on the Government Railway system we would find that the canals of Canada cost us $1,233,-

683 in excess of what the Governement Railway cost. That is, in a way, a sectional view and I do not want to confine myself to it. I take the position that the Intercolonial Railway is for the benefit of all Canada and that the canals are for the benefit of all Canada. That is the way I wish to regard these two propositions but I went to the trouble to figure out the position as to the cost in one year of the capital expenditure on canals and on the Government Railways to show the people of Canada who do not live along the Intercolonial Railway the point of view from which these two propositions are looked at by people in the maritime provinces and in a portion of the province of Quebec. The people of the maritime provinces contend, and rightly so, that this comparison was made at the time that they entered into confederation.

Now, I come to another point which is of as great interest but not as encouraging. I have been speaking all along with regard to the revenue of the Intercolonial Railway for 1907-8. The figures for the year that will end on March 31, inst., are not in the report but I want to refer to them very briefly.

Mr. R. L. BORDEN. Before the hon. gentleman leaves that point may I just ask one question because I was waiting for something further to come, that I have not quite gathered yet? Why is it that the statistics are so good and the results so bad?

Mr. GRAHAM. The satistics are so good and so true and the results so bad because the fares are so much lower than on any other railway in Canada that we do not get the income.

Mr. R. L. BORDEN. It is simply a question of tariff.

Mr. GRAHAM. Largely a question of tariff and of conditions. In some correspondence that I saw in the newspapers a writer said: Of course, the Intercolonial rate is lower but it is only about one-fifth of a cent per mile per ton lower. He did not know, or did not seem to grasp the idea, that that small amount per ton per mile meant $2,000,000 annually to the Intercolonial Railway. If you were to increase the rates by one-fifth of a cent per ton per mile on the freightage of the Intercolonial Railway you would have, instead of a deficit this present year, a large and comfortable surplus. While there may be deficiencies and lacks in the management of the government railways, as you will find them on all railways, the real reason why the Intercolonial Railway has not been able to keep even is because it gives to the people of the country lower rates than any other railway on the continent of America. Now, talking of the deficit, it will be within the knowledge of every member of the House who has studied this question at all during the past few months that any falling off in the trade of the country affects railway business more quickly and more decidedly than perhaps any other. All the traffic of the countrv, all the produce of the country, all the goods coming in, all the goods going out, all the product of the factory, all the product of the farm, all the product of the mine, all the product of the fisheries and all the product of the forest must be carried by some railway or by some other means of transportation. Once the business of the country is relaxed the railway and transportation companies are the ones to feel the result most keenly. Every railway on the continent has suffered greatly during the past two years. A year ago, I made a statement in this House. There was, at the end of January, quite a snug surplus on the Intercolonial Railway, but the traffic fell off so rapidly that by the 31st March it had been reduced to the small amount of $16,000.

That traffic has fallen off remarkably month by month and has been getting worse instead of better during the past year. Of course, the traffic has fallen off on other railroads as well but they have been able to keep their expenditure more nearly within their receipts by dismissing a large number of men which the Intercolonial has not done. The expenses of the Intercolonial during the past year owing to increase in wages and cost of material are larger than they were a year ago notwithstanding that the traffic is less. How is it that during the past week or two we have seen that the Canadian Pacific Railway is making a record showing? Sir, the Canadian Pacific Railway is a through line and its record week has been attained on account of the grain trade moving from the west. The Intercolonial has no grain moving trade from the west and I am afraid it never will until it is hooked up with some transcontinental line and is used as an outlet for some railroad system running from one end of Canada to the other. I am inclined to think that the trade of the Intercolonial Railway will not pick up until the traffic coming from imports received in exchange for the crop of this year begins to arrive when part of it will find its way over the Intercolonial Railway from the east to the west.

The statement for the Intercolonial Railway up to December 31, 1908, is as follows:

Passengers	$169,878 97	decrease.
Freight	567,151 39	"
Miscellaneous	199,564 83	increase.
Net decrease in earnings.	537,465 53	
Net deficit..	436,854 24	

Mr. J. HAGGART. What is the expenditure on capital account?

Mr. GRAHAM. I am merely giving a summary to the House of the results of operating the Intercolonial Railway for the past year; I have not the statement as to capital with me.

Mr. J. HAGGART. The minister is furnished with a statement from Moncton every month of the expenditure on capital account as well as on revenue and he ought to be able to tell us.

Mr. GRAHAM. I will give that in Committee of Supply. I am merely giving the net result on the railway for nine months.

Mr. FOSTER. You cannot give the net result unless we have the capital expenditure as well as the revenue.

Mr. GRAHAM. I am giving what I purport to give; I am giving the net results of the receipts and expenditures of the railway.

Mr. FOSTER. If a comparison is to be made the minister should give the expenditure on capital account up to the 31st of December. Surely that is germane to the question.

Mr. GRAHAM. It is not in any degree germane to the question I am now dealing with; it will be germane when we are in committee.

Mr. FOSTER. Does the minister now refuse to give the information?

Mr. GRAHAM. I don't refuse to give anything of the kind; I simply say I have not the figures.

Mr. FOSTER. Then we have not the whole deficit.

Mr. GRAHAM. What I am doing now has nothing to do with deficits. My hon. friend (Mr. Foster) has been so accustomed to deficits all his life that he has deficits on the brain.

Mr. FOSTER. There is no necessity for the minister showing his temper. Was it not a fair question that my hon. friend (Mr. Haggart) should ask what is the capital expenditure?

Mr. GRAHAM. Perfectly fair.

Mr. FOSTER. Then why did not the minister give it; or if he cannot he need not get cross.

Mr. GRAHAM. I was not cross with the hon. member (Mr. Haggart) because he asked a fair question and I gave him a fair reply and he was satisfied.

Mr. FOSTER. Was my question unfair?

Mr. GRAHAM. The hon. gentleman (Mr. Haggart) did not accuse me of refusing to give information. I am not accustomed to refusing the House any information I can possibly obtain and I do not think it is fair to make such insinuation. Just now I am merely giving the receipts and expenditure for the nine months which have not yet been published, and the capital expenditure has nothing to do with the question I am now discussing. When we are in committee the hon. gentleman (Mr. Foster) can criticise me all he likes, but he has no right to insinuate that I am endeavouring to refuse information. If he were addressing the House and I should make such an accusation against him he would think I was very rude.

Mr. FOSTER. Would my hon. friend allow a remark?

Mr. GRAHAM. Decidedly.

Mr. FOSTER. When the Minister of Finance is making his budget speech he gives his statement of revenue and expenditure and he immediately supplements that by stating the capital expenditure. If that were not done we would have no knowledge of the real financial state of the country. I suggested we can have no knowledge of the true position of the Intercolonial unless we have a statement of the capital expenditure and when I ask for that my hon. friend flies off at a tangent.

Mr. GRAHAM. Your hon. friend did not fly off at all; my hon. friend is wrong about that. I am only purporting to give the House the receipts and expenditure of the Intercolonial, and not the capital expenditure, and my case is entirely different from that of the Minister of Finance making a budget speech. I don't like to have the insinuation made that I am refusing to give information, because I think the House will admit that, such is not my habit.

Mr. FOSTER. Then, will the minister give the information?

Mr. GRAHAM. I will get the information for my hon. friend and it can be discussed in committee which is the proper place to discuss it. Now that we understand each other may I be permitted to proceed?

There are certain difficulties in connection with a government-owned railway and I am not going to minimize these difficulties. To those hon. gentlemen who are new to this House and who have not had their minds in any way biased by the discussions on the Intercolonial Railway from a political standpoint, I want to appeal, on one or two business points.

One point is that the method adopted by the House and by parliament—and I am not complaining of that method—in compelling the Intercolonial to publish and send broadcast throughout the country every detailed item of its expenditure, is unfair to the railway. There is not another railway on

the continent of America whose expenditures are so exposed. I have had occasion to get reports from other railways, and I point out that the Intercolonial Railway is handicapped in its buying of materials and supplies by the fact that every dealer in Canada and possibly on the continent is in a position to know just what we bought last year, and what we paid for it. The members of the House ought to have that information in the fullest degree so as to be able to criticise the buying and the expenditures of the government, but I submit that it is a handicap to the government-owned railway that every dealer in every kind of supplies to be sold to that railway has to-day in his hands the number of pounds or yards or tons bought last year, from whom bought, and the amount we paid for them. It is regrettable, but it is true that people in trade have certain understandings all over Canada. John Jones knows to-day what William Smith got for everything he sold to the Intercolonial Railway. He knows what the Intercolonial Railway bought and paid last year. Having that information the two dealers get their heads together, and if the price last year was too low then no matter how many tenders we may advertise for, we cannot get a price lower than they had agreed among themselves to charge. The Grand Trunk can go to a company or a dealer and say: We want all these goods. Then the dealer need not observe the agreement with other dealers so particularly as he would where the details are placed on record and published broadcast. No dealer will sell to the government for less than he has agreed with other dealers to charge for such goods because he knows that the price he gets will come to the eyes of the other dealer the minute the Auditor General's Report is published. That handicap does not exist on any other railway and no other railway would tolerate it.

Here is another handicap with reference to which I appeal to business men. The Grand Trunk or the Canadian Pacific Railway will go to a large dealer who perhaps during the year has a large amount of freight to carry. The officials of that railway will say to him: We want so many goods of a certain kind, what will you let us have them at? The dealer has to give them at a right price. No tenders are asked for but the goods are bought at a right figure and they are bought with the consideration that this particular concern will give that railway the carriage of their freight. Under the tender system we have to ask for prices publicly and we have to buy from the lowest tenderer. The result is that we often buy large quantites of goods from men who never give us a pound of freight, and as the result of buying from these men, we lose the freight of their competitors, who perhaps tendered at a higher price but who have a large amount of freight on the line. The tender system is all right in theory but in running an institution like a railway you are handicapped, as I said, by the publication of the details of every purchase, and by having to purchase from the lowest tenderer, no matter how much freight the railway may lose from some other competitor who would have given the goods at a fair price.

I now come to another question with which my hon. friend dealt the other night. This situation stares us in the face—and I want to approach it without wincing or shrinking. I may be right or I may be wrong, but I give my opinion for what it is worth. As I said, the Grand Trunk Pacific will soon have its line through the maritime provinces. The Canadian Pacific Railway now has its line there. Unless some arrangement is made by which the Intercolonial Railway will become the outlet for some transcontinental line, the Intercolonial Railway will only be a local road for all time to come, and there is not enough local traffic to keep it going on a paying basis. That is my opinion. Conditions have changed, years have come and gone; there was a time when the Intercolonial Railway had all the trade of the maritime provinces, anything that came to Montreal, Quebec or Levis, had to get into the maritime provinces over the Intercolonial Railway, and we had a portion of all this trade whether it was through trade or maritime provinces' trade. Now, we have the Canadian Pacific Railway, we will soon have the Grand Trunk Pacific, and these being fed by their own two lines and having to feed their own two lines, will not give us any traffic that they can possibly help. That means that they will give us no through traffic at all. I believe that if the Intercolonial Railway is to be made the road it should be, if we are to maintain it as a proposition in the interests of the people and to make it pay its way it will have to be hooked up with a through line from the west, which will feed it with east bound traffic and which it can feed with west bound traffic.

That brings me to the point of branch lines, a question of deep interest to the people of Canada in every part. I repeat that my opinions may be right or wrong, I think they are right. In order that there may be no mistakes as to my position on this point, and that I may not say something that really does not express the full view I hold, I trust the House will bear with me if I read a few lines which I have jotted down.

The question of branch lines is one that must shortly be faced, as it does not need

an authority on transportation and railway traffic to understand that there can be no prosperous main line unless it is fed by branches stretching out into adjacent territory.

The Canadian Pacific Railway is now in the east, the Grand Trunk Pacific Railway is going there, and if the Intercolonial Railway is to maintain its fair share of trade it will have to see that it gets some of the feeders.

There is no use shrinking from the situation. Either the government must ere long be prepared to acquire some of its feeders and build new ones or it must hand over the management of the Intercolonial to some company that will do so. It will not be fair either to the railway or the section of the country served by it in face of the changed condition, to very much longer continue to occupy the present position.

Companies recognize the necessity of branch lines, and that is why in the west there is almost, at the present time, a struggle to cover the territory with branch lines. If the Grand Trunk Pacific is to be the success it is hoped, it will have to see that it has a sufficient number of feeders to keep its trunk line busy.

I think I am safe in saying that if a company owned the Intercolonial it would immediately proceed to pick out some of the best branch lines and absorb them, as well as build others, and it is possibly not going too far to say that if we were prepared to lease the Intercolonial Railway to a company, any company desiring to get such a lease, as a condition of it, would agree to take over such branches and build others. This is my view of the situation, and while present conditions do not warrant the government in launching out on the acquisition of existing branch lines, and the construction of new ones, the time cannot be far distant when the government will be forced to take one of two positions: either to adopt the policy of expansion itself or in the interests of the road and the country it serves lease the railway to some company that will adopt these business-like measures.

I have dealt at some length with the Intercolonial Railway and the railway problem. I may have expressed views that do not coincide with those of members of the House. The views I have expressed are mine, I am prepared to defend them and I think they are founded on common sense.

What are we going to do with the road? A good deal of discussion has taken place as to what we are going to do in regard to its management. Let me say that among the officials of the Intercolonial Railway are many first-class railway men, men who are giving the country good service. It has struck me that possibly the Intercolonial Railway, having been a government-owned road so many years, having had to combat some of the conditions to which I have referred, may have possibly got into a rut, and that we might get it out of that rut by making some changes. I do not mean by changes the dismissal of officers, but what I have in my mind is this, and I shall state it frankly, and it will be an experiment if carried out. There is no use disguising the fact that such will be the situation, if the plan I have in mind be put into effect. It will be an experiment, but one I think well worth trying, and which should bring good results. My proposition is this: Not to establish a commission. I have studied that a good deal; and if I do not favour that solution, it is not at all because my hon. friend (Mr. R. L. Borden) advocates it. I have gone into the question of the management of the Australian railways, and I came to the conclusion that, as a minister of the Crown, with a railway under government supervision and management, two conditions confronted me. In the first place, I was not prepared, as minister of the Crown, to admit that the Crown itself, through proper means, could not manage a government railway. In the second place, I did not think the country would be prepared to say that the government ought to divest itself of the responsibility which the people had entrusted to its hands. Having that view, I made up my mind to make this proposition and give it a fair trial. That proposition is to establish a board, not responsible to parliament—that is, not directly responsible—but responsible to the government of the day, whatever government that may be—responsible to the government through a minister of the Crown, because after all we may say about commissions, this fact remains that the people will hold whatever government is in power responsible for the management of the Intercolonial Railway so long as it is owned by the government. There is no use in our trying to get away from the inevitable. Any government must retain the responsibility, and any minister of railways must accept full responsibility. On that board I propose to retain two of the officials, now on the Intercolonial Railway, in very high places. I propose also to allow Mr. Butler, the Deputy Minister of Railways, to act on that board, and I would call it, not a commission, not an advisory board, but a board of management. I propose as well to appoint on that board a man, whom I have not selected, from one or the other of the great railways—not an over expensive man, but a man with a good practical, level head, who would bring with him the knowledge and experience he had acquired on one of the great lines and add these to the knowledge and experience possessed by the officials on our line of railway. This board would have the management of the road, and be responsible, as a general

manager would be, to the government. My idea was that this board would have to meet my deputy at least every thirty days and give a full and complete report and information of everything done on the line, so that the minister would know at all times what was going on and what was being done. Would this relieve the minister of the responsibility? Not of one iota. The minister must retain all responsibility, but it would relieve him and his deputy of a multitude of details which now come here and which ought never to get beyond the head office at Moncton. We have to-day details coming to the department at Ottawa, which never go to the president of a railway company, which never get by the general manager, and three-fourths of which never get to the general manager. But a condition has grown up on the government owned railway for which nobody is to blame; and little details, instead of being settled on the spot by men detailed and paid for that purpose, keep filtering through by some means to the head office and to the Minister of Railways, until our department is at present flooded by these matters which ought never to reach it. This board would be given power to settle these minor affairs without reference to the department at all. This would be a good thing for the railway, it would be a good thing for the men, and a great relief to the department.

I have kept the House too long. I have expressed my views fully, and I know that they will receive that consideration which this House is always ready to give a statement of this kind. There are many sides to this question which I might discuss and discuss at some length, but the question of transportation is so broad that it is impossible to enter, as far as one would like, into a discussion of its many phases. I assure the House that anything done, will be done with the interests of the Intercolonial Railway at heart, and above all with the object of giving the people, whom this railway was built to serve, the best service at a minimum cost.

Hon. JOHN HAGGART (South Lanark). My hon. friend the Minister of Railways, in his opening remarks, dealt with the general question of transportation which is always a very interesting one. He spoke of the immense resources of this country, how they were being developed, and of the public anxiety for better transportation facilities than we have at present. He spoke to us at some length about the Canadian Pacific Railway and the Canadian Northern Railway and the present railway in embryo the Grand Trunk Pacific. He referred also to our different canal enterprises or water transportation. Regarding the later I have particular views which I may as well take this opportunity of stating. Two or three years ago I explained to the House that the solution of the problem of cheap transportation was a better water communication for the west. In that connection I instanced the different countries which had adopted that system—Germany, France, Austria, Belgium and latterly the United States. I drew attention to the speech of ex-president Roosevelt in favour of water communications and its necessity in the United States, and also to the speech of Sir Thomas Shaughnessy in the same direction. Nature has given us on the continent of North America a proper line of communication for transportation purposes from the centre of the continent to the Atlantic ocean, if we will only avail ourselves of it. If we take advantage of what nature has given us, we will not only control the transportation of the products of the great republic but also of a greater fertile area than is to be found in any other part of the globe, namely, the area which is contiguous to the St. Lawrence river and the great lakes down to lake Michigan and Superior. There you have an immense section of fertile country which produces men of the Anglo Saxon race ; and if the people who inhabit that country would avail themselves of the means of transportation afforded by nature, they would control the destinies of this great continent. I have said before that water communication in no way interferes with communication by rail. Sir Thomas Shaughnessy said that this doctrine had been laid down so clearly by President Roosevelt that it was useless for him to dwell on it. According to that doctrine, in order to carry the heavy freight, it is necessary to have a cheap system, and that is to be found in water transportation.

I have shown that, with an expenditure of $100,000,000, we could have water communication, practically sea communication, from the Atlantic to the upper lakes, giving us control of the water transportation of this part of the continent. The deputy Minister of Railways and Canals has proposed another thing : Seeing the advantage of water transport, and being aware of the interest that is taken in this matter throughout the west, he proposes the deepening of the Welland canal. Let me show in a word the fallacy of that. We have expended on Port Colborne already in the neighbourhood of between $3,000,000 and $4,000,000 in order to provide facilities so that vessels from the upper lakes may tranship to smaller vessels for transport eastward. The effect of deepening the Welland canal would be simply to move this point of transhipment from Colborne to Kingston. The expense of carrying the system further would be prohibitory. Does the minister or does his deputy know what it would cost to deepen the St. Lawrence so

as to make a channel of full depth to Montreal? The evidence on that subject was given before the Transportation Commission. The testimony of the best engineer then living in reference to these subjects, Mr. Wisner—I am sorry to say he has since departed this life—was to the effect that the cost of making a channel deep enough for ocean-going vessels from Kingston to Montreal would be in the neighbourhood of $200,000,000, or double the cost of building the Georgian Bay canal, a route which would be about 450 miles shorter than the other. However, that is incidental to the general question of transportation. I would not have dealt with it had not the minister introduced the subject in his opening remarks.

The hon. gentleman next dealt with the Grand Trunk Pacific Railway. He has built a branch road from Levis to Moncton that will be finished next year. Now, how is he going to utilize it? Is it to be worked by the Grand Trunk Pacific? It has no connection with the main line. Is it to be run by the government in opposition to the Intercolonial? The minister (Mr. Graham) hinted that he was considering a proposition of ferry boats at Levis pending the erection of the bridge. He tells us that the plans for the bridge will not be finished for a year or a year and a half. At that rate, the bridge cannot be completed in less than six or seven years. Are we to depend upon a ferry to connect the Levis-Moncton road with the rest of the system? I think the Minister of Finance (Mr. Fielding) and the leader of the government (Sir Wilfrid Laurier) must now see the folly of constructing a road which will be quite useless as part of the transcontinental system for seven or eight years to come. But, so far as the bridge is concerned, we have in this an instance of the government's paternal care for certain corporations. A corporation was formed to build this bridge. It induced the government to subsidize the work. A catastrophe happened to the bridge—it fell down. One would have supposed that the parties particularly interested in the loss of the bridge would be those who had stock in the corporation that was chartered to construct the work. But these gentlemen did not suffer a single cent; the government took over the whole of their stock at its face value with interest. Now, we come to the construction of the road. We had a statement from the Minister of Finance (Mr. Fielding)—not the celebrated statement backing up that of his leader that the road would only cost the country about $13,000,000—but a statement made in his saner moments to the effect that the road would cost in the neighbourhood of $38,000 per mile. The government now come down with the statement, that after revision of the plans of construction, they find it will cost $63,000 per mile. We have entrusted the construction of that road to a commission, supposed to be composed of gentlemen who were capable of taking charge of this construction, looking after the estimates, specifications and everything else necessary to the direction of the work. But we find now that contracts entered into are re-interpreted by the lawyers and that the Department of the Minister of Justice has given an interpretation to the specifications and schedules which has the effect of altering the classification under these contracts—which contracts, be it remembered, were approved, made on the authority of the engineer in chief, presumably after consultation with the commissioners. The effect of this interpretation is to increase the cost of construction from $38,000 to $63,000 per mile. Why, then, does the engineer in chief, whose opinion as to the classification has thus been over-ruled, still retain his position? Why do the commissioners, who have let these contracts, still remain in charge of the work of construction? But there is worse than that; even after they knew the opinion of the Minister of Justice, they continued to let the rest of the contracts with the same specifications and the same quantities as in the other. What will be the effect in the cost of the road to the country?

You would be astonished if I told you it will cost the country nearly $300,000,000. Let me give the figures as nearly as possible. From Moncton to Winnipeg the distance is 1,803 miles. According to Mr. Lumsden, the engineer in charge of the works, the cost of that section will be $63,427 per mile, or a sum equal to $114,393,765. Now what interest will we have to pay during its construction, which will take seven years? For three years and a half the interest at three per cent will be about $10,000,000. Then we have to pay interest for seven years after construction, which will amount to $14,422,000. The Moncton, Winnipeg, Quebec and other terminals, according to a statement brought down by the Minister of Railways, will cost $5,600,000. We have no information what is likely to be the cost of the mountain section of 800 odd miles. I estimate it, and I think very moderately, at $70,000 to $80,000 per mile. We guarantee 75 per cent of that, or three-fourths of the whole amount is guaranteed by us. The interest which we will have to pay on that alone will be without doubt $7,500,000. The loan is $10,000,000. The amount we guarantee for bonds on the mountain section will be nearly $50,000,000, and on the prairie section, $11,908,000. On the Quebec bridge we have already lost about $7,000,000, and I estimate the probable cost of reconstruction and of terminal facilities at Quebec at $15,000,000. Now the Minister of Railways brought down a return from Mr. Schreiber which ought to give us

the most accurate information in reference to the prairie section, and we have a right to rely upon it in considering the $10,000,000 which we are asked to advance to the company. So far as I can make out from the figures returned by Mr. Schreiber, he estimates that the mountain section commences 916 miles west of Winnipeg, and that it extends 800 odd miles to the coast. Now the cost of the prairie section of the road, if you can take the information which is furnished by Mr. Schreiber, is in the neighbourhood of $30,000 a mile. Add the $10,000,000 which we are giving for the purpose of finishing the road up to the end of the 960 miles, and the cost will be in the neighbourhood of $35,000 per mile at least. So here is a road which the engineers of the government, and which the government themselves, told parliament when they entered into the contract with the Grand Trunk Pacific, would cost the country $16,000 per mile, and we now find that it is going to cost $35,000 per mile. I will not deal here with the advisability of advancing the $10,000,000, as there is a resolution on the Order Paper which will call for a full discusion of that question, and all the details regarding it. The mountain section is the only part of the road where we have accurate information as to the probable cost. I regret that the government have not yet brought down the return moved for by my hon. friend from Simcoe (Mr. Lennox), in which a comparison is made between the quantities estimated by the engineers on which the contracts were let, and the estimates allowed to the contractors on a good many sections already let. It would be interesting to see how they compare. I have seen information in regard to the quantities which shows that the portions of the road which have been contracted for are going to cost double the amount which was originally estimated, owing to the fact that the government engineer had not been left to follow his own judgment, the resident engineers have not been left to follow their own judgment, in the matter of classifying the work. Now this is a serious matter. Now why do you retain in office men who make an estimate, who prepare your classifications, who draw your contracts, and yet who make such a bungle in the classifications? They ought to be at least qualified to draw up contracts and see that the classifications are right. Why is there such bungling in the administration of the commission? On some of the contracts the work is going to cost double. The engineer himself has increased the estimate from $48,000 to $63,000. The quantities should have been accurate, the information should be correct, and according to the information which I have in reference to that matter, I should judge that the cost of that road will be largely in excess of what is estimated by the engineer, even at the present moment.

What is our position? We have liabilities of nearly $300,000,000 in connection with this road. You may laugh, and say the amount will not be nearly that. I say it will come up to nearly $300,000,000. The liabilities of the people of Canada with regard to that road are enough to stagger any man who looks the matter squarely in the face. What likelihood, or what security, is there that the Grand Trunk will ever work that road from Winnipeg down to Moncton? The promise of the Grand Trunk Pacific Railway company is equal to their ability of performance. Can they do it? Look how their loan was floated the other day. See how their securities have been received upon the market. They cannot raise money for the purpose of building or extending the road. They were obliged to come to the government of the country for assistance to the extent of $10,000,000. What security have we that the Grand Trunk Pacific will go on and operate the road? It depends entirely on whether that road is a going concern able to earn the revenue necessary to keep running and pay a certain amount of interest. What security have we? No security at all. The security of the second bondholders ranks before that of the last advance of $10,000,000 which we are making to the company.

Now, let us come to the Intercolonial Railway. We have dealt with that question again and again in this House. There is always some excuse given from time to time why this road does not pay. I remember that at the time when I was Minister of Railways and Canals different corporations approached the government with the view of leasing the road. The minister complains that the rates are so low that they cannot possibly pay. The parties who were willing to lease that road undertook to guarantee the same rates which were then in force on the Intercolonial, not as high as those at present, because Mr. Blair, when he was Minister of Railways raised the rates beyond what they were in my time. There were corporations at that time willing to take over the road, maintain the rates then in existence and pay a handsome sum per annum to the government of the country. What is the financial position of the road? Let me take this statement as it is set down by the Minister of Railways and Canals himself in his own report: The expenditure on construction account on the Intercolonial Railway up to the 1st December last was $77,673,000. The deficit between revenue and working expenses on the Intercolonial Railway since it started has increased to $8,250,000. Add $8,250,000 to the $77,673,000 and you have nearly $86,000,000. To this is to be added the Cape Breton Railway, the Oxford and New Glasgow Railway, the Eastern Extension Railway, and other railways amounting to $9,750,727; or, on construction account, $87,127,000. Then,

add the amount of cash which was paid out of the consolidated fund of the country for the purpose of making up the difference between the revenue and working expenses of $8,250,000 and you have $95,000,000. Ninety-five million dollars added to the amount which the minister says the railway at the present time is behind and the possibilities of another capital expenditure will leave ,independently of the Prince Edward Island altogether, an amount of $100,000,000 expended on the Intercolonial Railway since it was undertaken by the people of this country. We have heard statements as to the beautiful prospects of the future —equip the road, give us large locomotives, increase the strength of the bridges, put heavier ties upon the road, let us use modern methods in operating the road and we will show you results; then the Intercolonial Railway will come out of the woods, it will no longer be a back number, it will no longer do business on the back street, if it is improved the result will redound to the benefit of Canada! Every year the promise has been made that the result will be better next year but still we find this state of affairs on the Intercolonial. Times are bad, they say, upon the railways in the different sections of the country at the present time. Two or three years ago they were not bad. Every railway on the continent of America was prosperous and paying dividends except the Intercolonial, under the management of the hon. gentleman who sits opposite me here, and it is getting worse and worse. What is the result at the present time?—the result that was dreaded by the people of the maritime provinces, the result that was foretold by the hon. gentlemen on this side of the House, that they would be obliged to part with the road, that no longer would the people of the country submit to the enormous expenditure above receipts for the purpose of continuing its operation. But the minister says: Oh, I would make things all right if they would allow me to fix the tariff on the road. The hon. member for Westmoreland (Mr. Emmerson), made the statement that the tariff for local purposes was one quarter lower than upon other roads. Notwithstanding that statement, the people of the maritime provinces pay, for everything except a few articles which I shall mention, as high rates for the carriage of their goods as are paid by people in any other part of the country. The minister made some comparisons with reference to haulage per ton per mile in connection with which he presented some of the most alarming figures that I have ever heard. I understand the question of haulage per ton per mile. Where you haul for 25 miles your rate per ton per mile is larger than where you are hauling for fifty miles, and the same thing applies to where you are hauling for a hundred miles. Where you have a full carload it is less per ton per mile comparatively than where you have part of a carload only. The only thing that the minister's figures prove is that he is using too much haulage power, that he is running trains without carrying freight upon them or without carrying passengers; in short, that he is running trains in excess of the requirements of the traffic. He sends out a train with half the load that it ought to carry and then he makes a comparison with other roads.

Mr. ARMSTRONG. To keep the men employed.

Mr. JOHN HAGGART. Too many men. When I came into the management of the Intercolonial Railway I found a state of affairs something like that which at present exists on the road. The idea of making comparisons as to the number of men per mile employed on that road with another road without comparing the amount of business done is the most absurd thing I ever heard of. What is the use of saying that the Intercolonial has only the same number of men as a certain other road if you do not tell us the amount of business that is done by each road? The Intercolonial Railway only earns altogether a little over $9,000,000 per year. Another road, with the same mileage and performing the same service, may be earning four times that amount, or $36,000,000 per year. What is the use of making a comparison as to the number of men employed on the road? What I was going to say was this. When I took charge of the Intercolonial I found a state of affairs existing similar to that which exists to-day, and that a number of people were employed in connection with the road more for political purposes than for anything else. They got so that the officials of the road dare not discharge them or interfere with them, and the power was not with the heads of the road, but with a political agent as is the case now. I found that at Moncton there were 1,200 men more than were requisite for running the shops, and they were dismissed.

Mr. EMMERSON. By you?

Mr. HAGGART. Yes, by me; nearly 1,200 men.

Mr. EMMERSON. In what year?

Mr. HAGGART. About 1894, if I remember rightly.

Mr. EMMERSON. 1,200 dismissed?

Mr. HAGGART. Yes, there were over 1,200 dismissed from the road. I had to endure all kinds of trials in connection with it. The Minister of Justice of the day, I remember, if he only knew who recommended the dismissal of these people he would decapitate them. But, there is no doubt you have to exercise a firm hand. Every railway man laughs at the excess of

men employed by the Intercolonial. Look at the grand description of the shops of which the people of the country are asked to be proud, greater shops than the Canadian Pacific Railway have, and built for the accommodation of the Grand Trunk Pacific. Mind you, eight or nine years before that road reaches its destination. I venture to say that the locomotives required for the Intercolonial can be purchased for less than they can be manufactured for in these shops. Now, a few words in reference to the capital account.

At six o'clock the House took recess.

After Recess.

The House resumed at eight o'clock

PRIVATE BILLS—ROYAL CASUALTY AND SURETY COMPANY OF CANADA.

Mr. LENNOX. I would suggest the advisability of leaving this Bill and the next one, to incorporate the Royal Canadian Accident Insurance Company, in the committee until we have before us the other Bill of which I spoke the other day, owing to the danger of confusion in names.

Mr. FIELDING. I understand the Bill referred to has not yet been introduced. Besides I think there may be shades of difference and an argument that might apply in reference to one might not apply in reference to another. If there is any objection to the names perhaps the better course would be to refer the Bills back to the committee for further consideration. There seems to be no question but the title and I have no views on the matter myself.

Mr. LENNOX. I would not want to do that, because there is no special difficulty with regard to these two. I think if we had the Royal Life Insurance Company and the Royal Insurance Company these two would infringe on the rule. When we come to consider these two I would not like to be hampered by the fact that we had passed these two Bills.

Mr. PERLEY. As I understand the feeling in the Committee on Banking and Commerce is that no company shall have the exclusive right to any particular name providing the difference is such that an ordinary person can understand it. As to the suggestion to change the name of Royal Victoria Life Company to the Royal Life, there is now a Royal Insurance Company doing a fire and life business. That would not appear to me to be a reasonable change. There is as much difference between the names of the companies now under consideration as there has been between names of similar character which have come up from time to time in the committee. If the the committee is to pursue any different policy, and the House directs them to do so, we will be glad to follow instructions.

Mr. J. A. CURRIE. I objected to the name last night because I had a communication from one of the agents of the Royal Insurance Company objecting to the use of the name 'Royal.' He said representations had been made to him by the general agent of the Royal in Montreal. I wrote last night to the general agents in Montreal. Apparently they were not aware of the fact that they could appear before the committee of this House and object to the Bill. I think the minister's suggestions to refer the Bill back is an excellent one. I shall write the general agents of the Royal Fire Insurance Company in Montreal and if they wish to come before the committee and make objection they should be heard. Many Bills affecting outside companies come before the committee and the parties vitally interested are not notified. Many foreign fire companies carrying on fire business here are not allowed to carry on casualty business and so they procure a charter for casualty business in Canada and call it, for instance, the Royal Casualty Company of Canada; but it is generally understood among people doing casualty business that in the case of a Canadian company with a name similar to that of an old country company the risks are underwritten by the old country company. If a company with the name 'The Royal Casualty Company of Canada,' was permitted to carry on business here, every one having a casualty risk would immediately arrive at the conclusion that the Royal Insurance Company of England was behind that company and therefore we should know definitely if the Royal Company is promoting any of these Bills. If it is we should give them a charter and let them carry on business, but if it is some one else seeking a charter with the name of the Royal I think it would be very wrong to give them the use of the name. If the Bill is referred back and the parties do not appear before the committee, they have themselves to blame if we give the name to some one else.

Mr. MILLER. This matter was threshed out in the committee. I quite agree with the remarks of the hon. member for Argenteuil (Mr. Perley). There is undoubtedly a great difference in the names of these two companies. As the hon. member (Mr. Perley) has said, we should be careful when a company comes before the Banking and Commerce Committee seeking to change its name from the Royal Victoria Life Insurance Company to the Royal, so that if we granted the charter we would have the Royal Insurance Company doing a fire and life business and the Royal Life Insurance Company doing a life business. I would object to that as misleading the

people, but there is a great difference between the name of the Royal Casualty and Surety Company of Canada and that of the Royal Canadian Accident Company. So far as the Royal Insurance Company of Liverpool is concerned, Mr McCarthy appeared in its behalf before the Banking and Commerce Committee when these two Bills were considered and made his objections. The committee fully considered the whole matter and decided that as the Royal Insurance Company of Liverpool is not doing an accident business and cannot possibly be permitted to do it, there was no reason why these two Bills should not pass. It would be unwise therefore to refer them back to that committee and cause unnecessary delay. The hon. member for Simcoe (Mr. Lennox) has mentioned the Bill of the Royal Victoria Life Insurance Company, which will probably come before us, and says he would have the strongest objection to the word 'Victoria,' being struck out. I quite agree with him, but it is not necessary, in order to avoid that, that we should hold up these two Bills.

Mr. FIELDING. I would rather gather that there are some parties who wish to be heard before the committee. The hon. member for Simcoe seemed to be under the impression that the Royal Insurance Company of Liverpool had no opportunity of being heard. That is a mistake. The agent in Montreal called on me, and he was told that the matter was coming up before the committee. A legal gentleman appeared there on behalf of the company. Of course if any one had not been heard, who has a particular interest in the matter, I would be glad to have him appear before the committee, but unless somebody has something further to present, I cannot see anything to be gained by sending the Bill back.

Mr. J. A. CURRIE. We are all aware of the fact that these casualty companies have been going to the wall pretty rapidly the last two or three years and there have been some pretty bad failures. We ought to be very careful therefore in giving names which might lead to people being misled. Of course if Mr. McKay, the agent of the Royal Insurance Company of Liverpool, was present——

Mr. FIELDING. He was not present but was represented.

Mr. J. A. CURRIE. That cuts away the ground of my objection. If that be the case, there is no use in objecting any further to the name. Still I think that the Minister of Finance should consider very carefully whether a casualty company should be permitted to take the name of a large company such as the Royal Insurance Company, especially in view of the fact that the large English companies have been building up subsidiary companies in this country, carrying their own names, to engage in the business of casualty insurance, and everybody knows that when an English company underwrites another, there is no possible risk on the part of the insured. The presumption would be that this company we are now chartering would be underwritten by the Royal Insurance Company of Liverpool.

Mr. FIELDING. It is not.

Mr. J. A. CURRIIE. As a matter of precaution it would be better not to give it a name so closely similar.

Mr. MILLER. The hon. member has said that a number of casualty companies have recently failed in Canada and that some of them have been bad failures. That is news to me; and for my own satisfaction and the credit of Canadian companies, I would like him to inform us what failures there have been recently among Canadian casualty companies?

Mr. MONK. I understand that the position taken by the Royal Insurance Company of Liverpool is this. It is authorized to go into the casualty business but does not do so, and therefore has no special objection to the incorporation of this company under the name 'Royal,' although that name comes pretty close to its own. But what it objects to is that a company doing a life insurance business should take the name, as for instance, the Royal Victoria Insurance Company.

Bill reported, read the third time and passed.

CONSIDERED IN COMMITTEE— THIRD READING.

Bill (No. 63) to incorporate the Royal Canadian Accident Insurance Company—Mr. Ames.

SECOND READING.

Bill (No. 93) respecting patents of Ammonal Explosives, 1908, Limited—Mr. Macdonell.

SUPPLY—THE INTERCOLONIAL RAILWAY.

House resumed debate on the motion for Supply.

Mr. HAGGART. Mr. Speaker, at six o'clock I was about to deal with the manner in which the books of the Intercolonial Railway are kept. I have argued again and again in this House in favour of the closing of the capital account of that railway. What I meant by that I fully explained, and I thought the House could have no misunderstanding of my meaning. Last session, in a debate in this House on the subject, Mr. Logan, the then member for

Cumberland, took the same view as the hon. member for Guysborough (Mr. Sinclair), that I meant that there was to be no expenditure on capital account. An item might be necessarily an expenditure on capital account; but my contention was that a road that has been finished and in operation by the government for twenty-five or thirty years has no reason for a capital account. The reason is that it would induce the minister to be lax in his administration, in reference to expenditures, the purchase of land for stations, and various additions to the railway, which, if he had no capital account, he would be chary about incurring. If there were no capital account the Finance Minister would not allow him the funds for an expenditure if it were to appear in the Public Accounts as ordinary expenditure, as he would want to make a good showing. The Minister of Railways cannot resist the importunities of his friends and he has no objection to making an expenditure if he can have it charged to capital account, and it does not appear in the current expenditure. The man who first made the suggestion in this House, supported by the whole of his party, was the Hon. Alexander Mackenzie. He drew the attention of the House to the iniquities that might be perpetrated with an open capital account, to which the minister could charge a great many expenditures, while the Finance Minister would not care two-pence about them so long as they did not appear in ordinary expenditure. With those sentiments I entirely agree. If we have to have an Intercolonial Railway controlled by the government, the only possible way to make a fair comparison with the past is to close the capital account altogether. I think I have made myself perfectly plain to the hon. member for Guysborough. I mean to say that an amount which might be fairly charged to capital account on other railroads, in a worse condition as to locomotives and other things, could not be fairly charged to capital account on a road like this. We should have no open account, the whole charges should be against revenue and expenditure. When I was controlling the Intercolonial I endeavoured to do so. In a couple of instances, I must admit, I went astray. There was a large expenditure for additions to the freight and passenger establishments at St. John, and that was entered in the books to capital expenditure. I discouraged as much as possible any charge of that kind. I told the officials of the road that although improvements, additions to locomotives, new stations, new rails and so forth, might be charged to capital account on other roads, it was a vicious system on a government road.

Now we find that the expenditure has increased from 1896 up to the present day from $50,000,000 up to over $100,000,000 on capital account. The minister stated that the capital account on the Intercolonial and the Prince Edward Island road amounted to $94,000,000. It is over $97,000,000 on the Intercolonial alone. The hon. member for Westmoreland (Mr. Emmerson) who sits opposite smiling at me, perhaps does not credit it. For his benefit I will give the figures, and if he can show where I am wrong in any particular, I will be glad to hear from him. For construction account on the Intercolonial there is $77,673,576 to the end of the current year. The difference between working expenses including the Windsor branch, and the revenue received including the Windsor branch, is as the difference between $122,000,000 and $130,000,000, or $8,000,000. To this is to be added the expenditure on the Cape Breton Railway, the Oxford and New Glasgow Railway, the Eastern Extension Railway, the Montreal, European and Short Line Railway, the Drummond County Railway and the Canada Eastern Railway, making on the whole $9,750,727, or an amount equal to about $95,000,000 plus the amount we owe during the current year. That will bring it up as nearly as possible to $100,000,000, and that is not taking the Prince Edward Island Railway into account. But that is a small amount to the people of this country, we are perfectly indifferent about it. The people would rather have this enormous expenditure on the Intercolonial than to be without it. What does it amount to? Two postage stamps per year for each man in the country. Two postage stamps was the argument I heard, perhaps outside this House, and I am not permitted to refer to debates in the House. Let the people of the Dominion support the burden. We have no objection to the Intercolonial, we like to see it a prosperous and flourishing concern, but we insist that the road shall be well managed, the same as any other public institution.

The minister says that the reason he can not make it pay, the reason that the Intercolonial Railway is not in the position of other railroads, is that we do not charge as high freight and tariffs as they do on other roads. I have heard that remark before, and I have heard it supported by the schedule of rates charged on the different railroads, which was filed by a minister in making his address to the House showing that the people using the Intercolonial only paid about one-fourth of the freight that the people pay on other railways. In ordinary rates, people pay as much on the Intercolonial as the people pay in ordinary rates on any other road in the Dominion of Canada. People pay just as high rates for freight and passengers on the Intercolonial. It is true there are some things we carry on the Intercolonial at a lesser rate. For instance, for the purpose of developing the coal trade in Cape Breton,

we carry coal on the Intercolonial for less than we can afford to. We do so for the purpose of encouraging the coal trade, and other collateral trades, and for the purpose of developing a larger trade for Halifax. We have built elevators there for grain, and we carry grain to Halifax for less than we could possibly haul it and pay expenses. Parties exporting lumber on the Intercolonial pay less rates perhaps than are paid on other roads. But for ordinary freight and passenger rates on the Intercolonial, as fair a price is charged as on any other road in the Dominion. Let a party make inquiries, any party who is an expert in reference to tariffs, and he will find that what I say is the fact. But what is the remedy? The suggestion was made the other evening in a debate on this question, that people who use this road do not wish to use it in forma pauperis. If we do not pay rates sufficient in the carriage of freight and passengers, the hon. gentleman stated, we are perfectly willing to pay higher rates. What a commentary all this is on government-owned railroads. Look at the tendency of the present day. In every civilized country in the world, France, Holland, Belgium, the German Empire, the Austrian Empire, what is the tendency?

The tendency is towards state-owned railways. We have the lamentable spectacle here of a Minister of Railways admitting that he cannot make both ends meet on the Intercolonial Railway, that he is going to give it up, that he is going to try another system. It is a commentary upon our government. What is the form of management proposed? If you are going to do away with the present system there are two or three plans that perhaps might suggest themselves to ordinary persons. First, there is the plan of leasing the road to some other railway company that will manage it better than the government do. Or, you might govern it, as my hon. friend suggests, by a commission. There is a new idea proposed by the Minister of Railways and Canals. He speaks of a board of which his deputy is one of the members. Two of the parties who now manage the Intercolonial Railway are to be members of that board and they are to add another man to it. The country will have no confidence in a board of that kind. If the minister cannot govern the road and cannot make both ends meet under the present system no board that he appoints, governs and rules will have the confidence of the country. You might appoint a commission for the purpose of doing it. I doubt very much if a commission will be much better. The people of the maritime provinces, no matter how badly the road has been managed in the past, no matter how far short of meeting the expenditure the revenue has fallen,

are fond of the Intercolonial Railway, and they will support no government, as I found out when I was in power, that will part with the Intercolonial Railway. It is a parting with the undertaking if you lease it to a railway company. There is another way suggested, and that is to grant to the different railways that connect with the Intercolonial running powers over the road. But, it is impossible to work that out. The granting of powers amounts to nothing. The three railway companies that will connect with the Intercolonial Railway are the Canadian Northern, the Grand Trunk and the Canadian Pacific Railway. In order to have joint running rights upon the road each of them would have to appoint agents for the purpose of picking up business and operating their trains upon the road. That would involve a three-fold expenditure which is unnecessary for the purpose of running the institution. There is still another way in which you could do it; you could create a company of which these three companies would be members. The Canadian Northern, the Grand Trunk and the Canadian Pacific Railways could form a joint stock company for the purpose of operating that railway in connection with their own roads, or for the purpose of pooling the earnings in the interest of the three. That possibly might be done, but in order to put the Intercolonial Railway in a position to compete or to make money there would have to be a considerable expenditure upon it, not in acquiring branch roads, not in building branch roads, but in affording modern facilities for what is perhaps the best paying traffic of any in connection with a railway, that is the tourist traffic. You want to build hotels in every part of the country traversed by the road, you want to offer the best possible facilities to the tourist to come into the country. All of that requires money. Of the three parties that might join in the undertaking two could not afford to pay anything. Is the other company going to pay the whole amount for the joint benefit of the two which can pay nothing? It is an impossible arrangement, yet that is the only way in which it could be undertaken. Then the minister is forced to the alternative of appointing a board. I think he was a little jealous of the idea suggested by the hon, leader of the opposition (Mr. R. L. Borden) of appointing a commission for the purpose of managing the road. I must say that I differ from both of them. I have no faith in commissions. I believe that a proper man at the head of the Railway Department, free from political influence, big enough to stamp his foot and put it down on any interference and who would govern it on correct and modern principles, would make the Intercolonial a paying concern. It is our only

hope if we are to have a government railway system in Canada that there should be a spirit encouraged amongst the people of the country which would result in making it possible to have good management, free from political influences. When I was running the Intercolonial Railway, of course, approaches were made for the purpose of securing that road. We could have rented the road for what would have been a valuable addition every year to the revenue of the country on conditions such as would have preserved to the people the rates that they at that time enjoyed. I hope that the minister's board may be a success. I wish, from the bottom of my heart, as I know every member on this side of the House and from this section of the country wishes, prosperity to the Intercolonial Railway. May it fulfil to the utmost extent the wishes and desires of the people of the country in building up trade and commerce and developing what may possibly be the cheapest railway transportation in the country. We believe that with proper management it can be done. No matter what the deficits are, I am with the hon. member for Westmoreland (Mr. Emmerson) when he says: Do not part with the road; try it again and again, and the day will come in this country when there will be a management of the road which will redound to its credit, and which will show that in this country we possess a form of government equal to that in any of the older countries. Those having their reputations as business men at stake, will agree with me, I am sure, that such a management of the road would be a credit both to the country financially and in every other respect. I have nothing more to say. I am not going to discuss the details of this question which has been so fully dealt with by the minister. The opportunity will be afforded me if necessary in the committee. I have only to add that I hope that whatever the minister or the government may do, they will not part with the principle of government ownership of the Intercolonial Railway. I hope that their followers sitting at the back of them will also voice that opinion. Let it be a heritage for the people of the maritime provinces, and if the government adhere to that principle they will receive the support of the people in other sections of the country as well as those of the maritime provinces.

Mr. R. L. BORDEN (Halifax). Before you leave the Chair, Mr. Speaker, I desire to say just one word. My hon. friend the Minister of Railways and Canals (Mr. Graham), this afternoon, certainly did give to us statistics regarding the operation of the Intercolonial Railway that seemed to be of a very excellent character indeed. I was very much struck by them, but I do not know whether in the statistics he embodied all the essential tests of the good management and effective operation of a railway. I am not sufficiently familiar with the practical operation of a railway to judge of that. However, the statistics as far as they went seemed to be exceedingly good but the results disclosed at the end of his very eloquent speech are not such as we might have expected from hearing these statistics for the first time. The hon. gentleman disclosed to us a deficit of about half a million dollars, and when I asked him why the statistics were so good and the results so bad he told me it was entirely due to the fact that the passenger and freight tolls on the Intercolonial are lower than upon the other great railways. I cannot of my own knowledge controvert that statement, but during the past two or three years those who know something about it have informed me that with the exception of the commodity of coal — and perhaps one or two other articles—the tolls of the Intercolonial Railway are just as high both for freight and passengers as upon any other great Canadian railway. We have therefore a responsible minister of the Crown assuring us on his responsibility as a minister that the reason for the extraordinary discrepancy between the good statistics and the bad results of the Intercolonial are because the Intercolonial Railway tolls are lower than they should be. But on the other hand I have the statement of men familiar with the practical operation of railways in this country who say it cannot be assigned to any such cause. When we come to discuss this question more particularly in committee, the House will be entitled to some comparative statement from the minister which will prove beyond doubt in what respect the tolls paid by the people of the maritime provinces upon the Intercolonial are lower than those paid by the patrons of the other great railways.

The Minister of Railways used a remarkable argument in the course of his able address when he said that in the near future the Intercolonial would be face to face with a critical condition because of the approaching completion of the Grand Trunk Pacific. I endeavoured to follow the remarks of the hon. gentleman with a good deal of attention and I think I am right in understanding that this was one of his arguments for advocating some necessary change in respect to the management and operation of that railway. His point was that upon the completion of the Grand Trunk Pacific, that road would necessarily be in competition with the Intercolonial Railway; that the revenues of the Intercolonial Railway would decrease because of the business diverted to the Grand Trunk Pacific, and that hence there might

be demanded a very thorough change of policy on the part of the government with respect to its road. I would remind the Minister of Railways that before he was a member of this House, such was not the position taken by those who spoke for the government in the transcontinental debates of 1903 and 1904. I could quote from the debates of that session a great many arguments from the government benches exactly the contrary of the argument he has used this afternoon. However, I will merely give one citation from the speech of the then Minister of the Interior (Mr. Sifton) who in my opinion made the most effective argument of all from the government benches in support of their policy. Speaking of the Intercolonial Railway, he said

We are told by our late colleague (Mr. Blair) that the facilities are not sufficient as yet, and that some millions more will be required to enable that road to cope with the business which it has to meet under present conditions. Well, I do not know whether that be correct or not; I do not know enough about the Intercolonial to say, but I think perhaps we may all agree over that which we do know, which is a matter of common knowledge, that the Intercolonial had all the business within the last year or two that it could do, and its facilities are not more than sufficient to enable it to do the business which it has at the present time.

The hon. member for Hamilton (Mr. Barker) had argued that the Intercolonial ought to be permitted to carry the traffic brought by the National Transcontinental Railway from the west to Montreal, on to the maritime provinces; and the government, through the Minister of the Interior (Mr. Sifton) met that argument in this way:

Now, what is the proposition of the member for Hamilton. It is that the Intercolonial, with its barely sufficient equipment to do the business which it has now, shall take three or four times as great business as the Grand Trunk, that it shall take the business of the Canadian Pacific Railway, and that the business of these railways shall be suddenly precipitated upon the Intercolonial Railway, and that that railway shall be expected with its insufficient facilities to do the business of the whole three, and my hon. friend says that is a consummation to be desired.

And he goes on to draw a harrowing picture of the conditions if the Intercolonial Railway should be called upon to assume the burden of that transportation. It will therefore be seen that the argument from the government benches at that time was that the building of the Grand Trunk Pacific through the province of New Brunswick would not injure the Intercolonial Railway or take away any business from it, but, on the contrary the increase of business would be such that both of these lines would be necessary through the province of New Brunswick to handle the traffic. I desire to point this out to the Minister of Railways so that he may know that the argument presented by him for the government this afternoon was the very antithesis of the argument which the government set up in 1903.

The hon. gentleman (Mr. Graham) referred to the efforts of the Grand Trunk to carry this traffic to Portland. Well, the hon. gentleman knows that that phase of the question was thoroughly debated in 1903 and 1904. The hon. gentleman (Mr. Graham) seems rather to despair of the Grand Trunk doing anything else. Why it is five years ago since we despaired of its doing anything else, and we then pointed out that all the clauses and all the agreements and all the contracts that were placed before parliament would not and could not be sufficient to prevent the Grand Trunk from carrying its traffic to Portland in the future as it had in the past. The Prime Minister in discussing the matter at that time said he had no expectations whatever that the Grand Trunk would divert from Portland the traffic it then had and carry it to the maritime ports of this country. He said very frankly that he did not expect that but he did expect that owing to the provisions of the agreement then placed before this House, all the traffic which the Grand Trunk Pacific would gather up in the west, all the new traffic as he expressed it, would be carried not to Portland but to the maritime ports of Canada. There was a good deal of scope for criticism of that statement. Hon. gentlemen on this side at least could not very well understand how there should or could be any such sharp distinction as that. They did not see and do not yet see how it can be expected that the Grand Trunk will make some curious division of traffic and that which might be assumed to have been created in the past shall go to Portland but all that which might be assumed to be created in the future shall go to St. John and Halifax. No one sees that yet, so far as I am aware, and I am convinced by the remarks of the Minister of Railways to-day that he least of all sees how any such arrangement as that could be carried out.

The minister has by his further remarks given us the best possible illustration of the absolute futility of any such contract as that entered into by this government in 1903 and 1904. What were the remarks of my hon. friend this afternoon? He said that the Intercolonial Railway could not very well be successful, could not very well be remunerative, could not very well command the western traffic which it ought to command unless it could get 'hooked' up to some great railway corporation. I rather think that the great difficulty with regard to the Intercolonial Railway in the past has

been that it has been hooked up too much to political pull and patronage and not sufficiently hooked up to ordinary business-like and efficient methods. That is the difficulty with the Intercolonial Railway, but I shall come to that later on. The minister desires that it shall be hooked up to some great Canadian railway system. Let us go back for a moment to ten and eleven years ago, let us go back to the proposals of the government in 1897 and 1898. I very well remember the discussion of those years because I was a new member in this House, and was naturally attracted by a very important debate such as that, especially as it had reference to the Intercolonial Railway in which the members from the maritime provinces feel an absorbing interest. What was the proposal of the government at that time? It had entered into a contract with the Drummond County Railway and another with the Grand Trunk Railway, and I would point out to the Minister of Railways the glowing predictions uttered at that time. A very able gentleman then occupied the position of Minister of Railways and Canals, the late Hon. Mr. Blair. At page 4264 of the 'Hansard' of that year Mr. Blair, speaking for the government, to the parliament of Canada and to the people of Canada, said:

The idea has gone abroad and has sunk deeply in people's minds, that because the Intercolonial Railway has not been a paying property—or, in other words, has scarcely in all its history been able to show a balance on the right side of its accounts—there was something inherently vicious in the government ownership of railways, and that the less a government had to do with them the better. That was an idea which I think I am justified in saying strongly impressed itself upon the people's minds. But I think I shall be able to show this committee that if there has been one thing more than another which has led to this state of affairs, it is that the Intercolonial Railway has been cribbed, cabined and confined. I will give this committee, before I get through, good reasons for believing that after this extension shall be concluded, and after it shall have an opportunity of getting into successful competition, the days of deficits will be over, and we shall be able—I do not say to pay interest on the capital invested—I do not think the country looks for that—but by the business arrangements which we shall be in a position to make, and by the facilities which will be secured to us in Montreal, to show a balance on the right side of the account and to reverse the record which has been exhibited in the running operations of this railway in times past.

Further on:

I do say, as far as I have been able to exercise any little judgment I may have, that the extension of this railway to the city of Montreal will reverse the position it has had in the past by creating business which cannot fail to produce vastly important results.

Then at page 4269:

But the fact, as I say, that we have carried only a small proportion of through passengers and through freight in times past, shows under what disadvantages the road has been operated. We look for an entire change in this respect.

Further on:

And, as I was saying a moment ago, if you examine the details of the contract which has been entered into between the government on one hand and these companies on the other, you will perceive very clearly that we have been solicitous and careful, that every term and every condition should be introduced which would ensure us an opportunity to gain our share of the western trade. As you will see, we have engaged with the Grand Trunk to carry the freights for us from the west to Montreal and to deliver these freights to us when they get them there, not to take them around by the Richmond line or by Lévis—not to carry them off on the Grand Trunk, but to deliver them to us. So, when we send our canvassing agents through the west, as all railway companies do, and ought to do, and those agents pick up traffic and make contracts, we may be sure that the business will fall into our hands when it reaches Montreal.

From this you will observe the position taken by the government at that time. Mr. Sifton expressed it during the debate of 1903 in a still more striking way. He said that the Intercolonial Railway had had its terminus in a ploughed field and they had brought that terminus to the city of Montreal and had placed that railroad in a position to compete for and obtain its fair share of the great traffic of the west. The government in 1903 had made a contract with the Grand Trunk, the terms of which are embodied in 'Hansard' at page 4088 et seq. The government claimed that this contract with the Grand Trunk Railway would enable the government of this country, by the agreement thus constituted, to obtain its fair share of western traffic and through traffic and that it would necessarily result in placing the Intercolonial Railway on an entirely different basis from that which it had occupied in days gone by. There were to be no more deficits, the Intercolonial Railway was to obtain its fair share of western traffic and the agreement thus consummated by the government was to result in an absolute revolution in the returns which the people of this country were to expect from the Intercolonial Railway. We have had 10 years' experience with that contract. What is the answer of the Minister of Railways to-day? His answer to the people of this country, his answer to the parliament of this country, is practically that the agreement of 1897 and 1898 between the government of Canada and the Grand Trunk has resulted absolutely in no change or benefit to the Intercolonial Railway or the people of Canada, that the agreement has been practically evaded, that it has not resulted

in the Intercolonial Railway obtaining any fair or proportionate share of western traffic. I ask hon. gentlemen of this House and the people of this country, in the light of that, how much we are to expect from the agreements which this government in 1903 and again in 1904 made with the Grand Trunk Pacific Company, which is only another name, after all, for the Grand Trunk Railway?

Mr. Speaker, it seems to me that the Minister of Railways and Canals in the address which he delivered this afternoon, has unwittingly passed about as severe a criticism upon the agreements of 1903 and 1904 as have ever been addressed to the parliament or the people of this country. He has shown the absolute futility of any such agreement whether contained in the Act of 1897 or the Act of 1903, so far as the purpose may have been to divert traffic over the Grand Trunk Railway from Portland in the United States, to the Canadian ports in the maritime provinces. Under these circumstances, how does my hon. friend propose to get the Intercolonial Railway hooked up to any great railway system in Canada to a greater extent than it was hooked up to the Grand Trunk Railway by the agreement of 1897. How is it possible to devise an agreement which, on the face of it, would be stronger or apparently more effective for that purpose ? My hon. friend would not, I think, be prepared to suggest how that agreement, in its terms, could be made stronger. Yet we see the result. Every prediction of the government in 1897 has been falsified, not only in the spirit but the letter. The deficits, instead of disappearing, have increased, and we are faced to-day with a deficit of half a million dollars. The only reply which the minister can give is one that cannot very well be confirmed, and that is the people of the maritime provinces are getting lower freight rates than the people of any other province.

Mr. GRAHAM. I was speaking about the lower rates without any particular reference to this year. The deficit this year is largely attributable to the vast falling off in traffic which has taken place on all railways. The falling off up to December 31, was over half a million dollars.

Mr. R. L. BORDEN. I do not desire that my remarks as to the results of the operations of the Intercolonial Railway shall be confined by any means to the year we are now considering, because it is well known that when every other railway worthy of the name on this continent was earning dividends on the capital invested in it, the Intercolonial Railway was considered to have made an excellent showing if it came out without a deficit or with a surplus of a few thousand dollars. There must be some explanation of this. The opposition took a certain position in this regard in 1903, when the government brought down its proposal. I am not going to argue the case over again but will simply invite attention to what we then proposed. I moved a resolution in that session declaring, among other things, the following :

That this House is of the opinion that the Intercolonial Railway and the Prince Edward Island Railway should continue to be owned and operated by the government of Canada.

That the government system of railways should be developed and improved in the province of Quebec and the maritime provinces, and should also be extended from Montreal westward to such point or points as will enable it to transport to eastern Canada and to our national ports on the St. Lawrence and on the Atlantic the rapidly increasing products of our great western country.

That the management of government railways and of all railways, under the control or direction of the government, should be free from party political control, influence and interference.

In the same session, or the session following, there were questions put and answers brought down which indicated that the Intercolonial Railway, if it had been operated from Parry Sound to Halifax, could have carried grain at a rate which would have shown a profit and which would also have ensured to it a fair share of the western traffic. However, I shall not go over that portion of my argument more than to recall to hon. members the fact that we did take that position at that time.

My hon. friend the Minister of Railways has spoken of bettering the condition by leasing the Intercolonial Railway to some great railway corporation. If that policy, he said, is not adopted and carried out, then it will be necessary for the government to adopt the suggestion of the hon. member for Westmoreland (Mr. Emmerson) and acquire certain branch lines in the maritime provinces, especially the province of New Brunswick. I fail to understand how the acquisition of these branch lines in New Brunswick will bring us to our share of that western traffic which, according to every minister of railways, whom I have heard discuss the subject, is absolutely necessary to the future success and operation of the government road. The acquisition of branch lines in New Brunswick will not give us any special advantage in securing our fair share of the great western traffic to which we are looking in the future. Nor do I see how the acquisition of these branch lines is going to offset the disadvantage relied upon by the Minister of Railways—if it be a disadvantage—of the low rates which he says the people of the maritime provinces enjoy at present as compared with the people of the rest of Canada. Yet my hon. friend puts the two as alternatives. He

says there are only two things to do. One is to lease the Intercolonial Railway to some great railway corporation; the other is to acquire these branch lines. Take the latter alternative, will any man tell me how the acquisition of these branch lines in the province of New Brunswick will remedy the disadvantages of which the minister has spoken? I may be singularly obtuse, but I cannot understand how that will get the Intercolonial Railway out of the difficulties into which, according to the minister, it is now plunged.

I do not know whether or not the Minister of Railways is considering the other alternative. The question was put across the floor in the early part of the session, and the answer of the government was that there had been certain proposals made to it in that regard, but that these proposals were not even considered. But now we come to another important, and a very important part, of the minister's argument this afternoon. He said that some change might be necessary. I think he went so far as to say that in his opinion some change was necessary in the management of the Intercolonial Railway, and he spoke of the appointment of a board. My hon. friend from South Lanark (Mr. Haggart) has referred to my proposal of some years ago that the Intercolonial Railway ought to be placed under the management of a committee. Mr. Speaker, I have not the slightest confidence in, nor do I place the slightest reliance on the word 'board' or the word 'commission,' but I do place some reliance on the management of the Intercolonial Railway by business methods and the absolute elimination of party political control. I do not say, mark you, the elimination of political control or interference. By political interference I mean political in the highest sense of the word. It may be absolutely right and proper that the government and parliament should on occasion exercise what you might call political control in connection with the management of the Intercolonial Railway. But what I am referring to is party political interference, that political patronage, that party pull, which tends to make the Intercolonial Railway, whether the one party or the other be in power, a great political machine. I know, from my own experience in the maritime provinces, that there are certain party hacks there who regard the Intercolonial Railway as belonging to the Liberal party, while that party is in power, and not as belonging to the people of Canada, but to be used for the ends of the party so long as it remains in office. And I am not party man enough to deny that if the Conservatives were in power, there might be men calling themselves Conservatives who would have as fantastic and as absurd a view regarding the ownership and management of that road.

The essential thing that requires to be done is to put the management of the Intercolonial Railway under such conditions that the party hack should have no right to interfere. My hon. friend says that the management of the Intercolonial Railway is to-day all that it should be. I know something about the management of the Intercolonial Railway, and I do not believe that it is to-day what it should be. I believe that there are men by the score, by the hundred, on the Intercolonial who are not bound by the ordinary ties of discipline, because forsooth they were put where they are by political pull and interference; and that same political pull and interference prevents them from submitting to that discipline which is absolutely essential to the proper and efficient management of any railway. I know whereof I am speaking, and if it were necessary or desirable I could give some illustrations of that fact. The name amounts to nothing; the principle amounts to a great deal; and when my hon. friend the Minister of Railways and Canals tells us that government responsibility would be to some extent interfered with, I venture to think that he speaks, if I may say so without offence, a little without the book. What have we been doing in Canada in recent years? Did we not appoint a commission to superintend and carry on the construction of the Transcontinental Railway? I suppose that was an endeavour to take that work out of party politics, if it were possible to do so by appointing men to carry it on separately from any department of the government. Have we not appointed a Civil Service Commission, and is not government responsibility, in the sense in which my hon. friend spoke, interfered with somewhat by the appointment of that commission? And did we not three or four years ago appoint a Railway Commission for Canada, which has to-day imposed upon it some of the duties, and which under the statutes of this country has assumed some of the functions which were formerly discharged by the Railway Committee of the Privy Council, consisting of members of the government?

I venture to think—and I am speaking to business men who will I am sure weigh my words—that when the government of any country undertakes to engage in a business such as that of transportation, some of the old ideas about governmental responsibility will have to be modified a little. The business of transportation in Great Britain, in the United States, and in this country has been committed almost entirely to private enterprise. As my hon. friend from South Lanark (Mr. Haggart)

has well remarked, it is not so in other countries; because if you eliminate Great Britain and the United States, you will find that at least two-thirds of the railways of the world are owned and for the most part operated by the state. But in Great Britain and the United States, it is not so. Therefore when we in Canada engage in a business which in the great English speaking countries of the world has been committed to private enterprise—when we engage in that business in competition with private enterprise, it seems to me that we ought not to be bound too much by the fetters of that governmental responsibility to which my hon. friend the Minister of Railways and Canals attaches so much importance. Suppose the parliament of Canada put the Intercolonial Railway under a commission or a board, or under the management of one man—these are details as to which I care nothing—and give to that man a status which would enable him to manage the road free from party patronage, free from political pull, free from political interference, the parliament of Canada could take back what it had given, and, if it found that that system was not a successful system, it could revert to the earlier methods or seek some new method of dealing with the railway. You do not take away any of the responsibility of parliament or of the government except for the time being, and you take it away only in respect of the operation of the road and in order that it may be carried on as an efficient business enterprise and by efficient business methods. Therefore, I venture to think that the suggestion which has been made in this regard ought not to be put aside too lightly by the Minister of Railways and Canals. He speaks of a board of four men, but he is absolutely nebulous as to what their duties and responsibilities shall be. You have a general manager of the Intercolonial Railway now. What would it advantage the Intercolonial Railway or the people of this country if you appoint four men and leave the methods of operation exactly as they are at present? You might as well appoint Ministers of Railways and Canals and expect good results as to do that. What we must arrive at by any satisfactory solution of this question, which has been under discussion for the past twenty-five years, is some means of applying to the management of the Intercolonial Railway just ordinary, plain, honest business methods. Three or four years ago we advocated making the Intercolonial Railway subject to the Railway Commission just like any ordinary railway in this country. I see no reason why that should not be done. Whether the Minister of Railways and Canals appoints a board, a commission or one man, I think that he will arrive at good results, he will accomplish more than any of his predecessors have accomplished, if he will so frame his statute and his regulations that the road will be carried on by the same methods that private enterprise has applied to the transportation business. If he does that, I venture to think that good results will follow.

I see no reason why the Intercolonial Railway should not be operated successfully There seems to be an impression in the minds of some of the hon. members of this House that the Intercolonial Railway runs through a wilderness. Why, it runs through some of the finest districts in Canada, in the province of Nova Scotia, the province of New Brunswick and the province of Quebec. Is the country between Quebec and Montreal not one of the finest districts in Canada? Does not the Intercolonial Railway in the province of New Brunswick run through a splendid fertile region, with great timber and other resources of many kinds? Does not the Intercolonial in the province of Nova Scotia run through a thickly populated country, and is it not carrying the freight of great enterprises such as the Dominion Iron & Steel corporation and the Nova Scotia Steel Company? And can you imagine a finer district anywhere in the Dominion than that portion of the province of Nova Scotia through which it runs? I do not put out of sight the consideration that the minister has placed before the House in respect of the competition of water carriers; but let no one imagine that the Intercolonial is running through a wilderness. It is running through just as good a country as there is on the face of the earth to-day, and there is no reason why it should not be carried on by honest, straight business methods; and there is no reason that I can understand why it should not be operated successfully and bring a fair return, or some return at least on the very large amount of capital which the people of this country have put into it.

With regard to the question of branch lines, that has been very fully debated, and I do not intend to touch upon it to-night. I would be in sympathy with any reasonable movement for providing feeders for the Intercolonial Railway in the maritime provinces or the province of Quebec. My view of the Intercolonial is that it cannot stand still; it must develop or we must give it up, one or the other. You will not find any live railway in Canada today that is in a condition of stagnation. The people of Canada and the government of Canada must both make up their minds to either one thing or the other, to give up the Intercolonial altogether, as my hon. friend the Minister of Railways partly suggested this afternoon, that is, pass it over to some private corporation, or to develop that railway, to apply the same enterprise

and efficient business methods, not only to the operation of the road, but to its development, which we might expect if the road was absolutely transferred in title to a corporation. There can be no half way measure about it, it must either be efficiently developed or it must be handed over to some corporation. I rose, however, in the main, for the purpose of pointing out to the Minister of Railways that the glowing predictions of his predecessor of the results of the extension to Montreal, have not been fulfilled, and to point out the extreme difficulty of accomplishing such results as were predicted in that case, by the mere terms of a contract. That has not been possible in the case of the extension of the Intercolonial to Montreal, and it will not be possible, I think, under the contract which this government, in 1903-4, entered into with the Grand Trunk Pacific.

Hon. H. R. EMMERSON (Westmoreland). I am sure that any one who has been at all familiar with the part which I have taken in discussions with respect to the Intercolonial, will not condemn me for prolonging somewhat this debate. My voice has been heard at this session already, and on former occasions I have felt impelled to give an expression of my views. I have listened with the closest attention to that which has fallen from the lips of the hon. gentlemen who have preceded me this afternoon and evening, and I am bound to say that I have not been able to elicit very much comfort from anything that has been said either on one side or the other. You, Sir, will agree with me that it is a lonesome task to plough a lone furrow; and when I listened to the remarks of the Minister of Railways and to the subsequent remarks of the hon. member for South Lanark (Mr. Haggart) with respect to the Intercolonial and its branch lines, and when I listened with close attention to the remarks of the leader of the opposition, it will be understood that I could not get much comfort from any of them. It is a somewhat unpleasant position to stand half way between, and to find none who agree with the views which I hold with respect to so great a question as the Intercolonial Railway. Let my attitude not be mistaken. I have now been in public life upwards of twenty-five years, and I have never yet, and never will be, charged with being an opportunist, or with concealing my convictions on public questions, whether they are adverse to one party or the other. It may be said that I hold extreme views with respect to the Intercolonial; that may be true, but they are honestly held, and are the result of a life study of the conditions which prevail on that road, are the result of a familiarity with it that could only be obtained by the association which I have been permitted to have with the employees who are engaged on that road, and by the knowledge I have of the people of the maritime provinces and of the conditions which that railway is designed to meet.

Now, Sir, I can congratulate the Minister of Railways and Canals on the very able speech which he made this afternoon. I think that if ever there was a speech delivered that was confirmatory of the attitude I have taken in this House, it was the speech of my hon. friend the Minister of Railways. It will be borne in mind perhaps that the views which I hold are, in the first place, that we should continue to own and operate the Intercolonial as a government road, and that its operation should be expanded, that it should be developed in every respect. I am sure that in the very clear, and concise, and eloquent speech delivered by the Minister of Railways, every point that I have taken with respect to that railway has been established, has been demonstrated beyond question.

Mr. R. L. BORDEN. Why was not the minister's speech a comfort to the hon. gentleman ?

Mr. EMMERSON. My hon. friend need not anticipate. He has established my premises, he has supported every assertion I have ever made; he has demonstrated by comparison with other railways that the Intercolonial has been one of the best managed railways in Canada, that it has been efficiently managed, that its rates are low, that its earnings are as a consequence small, that its expenses are not great in comparison with those of other railways; he has demonstrated all these, and he has shown that the Intercolonial has served a great purpose. He started out with saying that, as a first condition, we must remember that the Intercolonial was a set-off of the canals, that they were both to be viewed in the same light at the time of confederation, that they were designed to come down through the decades of our life as a confederation in that same relative position, the one off-setting the other.

My hon. friend the Minister of Railways and Canals clearly agreed with that condition. Then he brings out the point that it is the duty of this parliament, as it is the duty of the people of the country, to recognize the Intercolonial and the canals as twin systems, each to be treated in precisely and practically the same way, the one serving as a highway for central Canada and the other as a highway for eastern Canada as well as for central Canada with respect to its traffic. He proved that beyond all question, and my hon. friend the leader of the opposition only took exception to one point in the argument of my hon. friend the Minister of Railways and Canals. He joined issue upon the question as to the tariff

rates of the Intercolonial Railway, My hon. friend the leader of the opposition states that he wants it demonstrated to him that the rates prevailing on the Intercolonial are lower. I did, on a former occasion, I think, two years ago, place on the table of this House the tariff rates prevailing on the Grand Trunk, the tariff rates prevailing on the Canadian Pacific Railway, the passenger rates and traffic rates prevailing on these respective railways, and I, at the same moment, placed before this House the passenger and freight rates prevailing on the Intercolonial. I need only remind the House of that which demonstrated clearly and beyond question on that occasion, that the freight rates on the Intercolonial Railway with respect to every classification of freight were lower than on either of the other railways. I showed then what increase per cent of the Grand Trunk and Canadian Pacific rates over the Intercolonial rates was. on certain classes of freight. I gave the rate with respect to different distances, commencing with five and over ten miles and ranging up to 700 miles, I pointed out the difference both as to export tariff rates and as to the ordinary tariff rates and I also pointed out that the increases over the Intercolonial rates ranged all the way from fifty to one hundred per cent with respect to certain classifications. I called the attention of parliament at that time to the local comparative rates on coal in carloads, and I showed then, in comparison with other railways, that the Intercolonial rates were from 25 to 10 per cent lower dependent upon distance. I also showed that with respect to lumber, to give one illustration, the rates on a 650 to 700 mile haul on the Intercolonial are 57 per cent lower than the export rates on either of the other railways, and with respect to the ordinary haul 76 per cent lower than they are on either the Canadian Pacific Railway or Grand Trunk Railway. The passenger rates were found to be lower dependent upon the mileage. Hon. members need only turn to the 'Hansard' of 1907, page 5338 and following pages, to find confirmation of the statements which I am now making. If my hon. friend the leader of the opposition is anxious to know he can there learn because these are the actual freight tariff rates prevailing on these railways. The originals, as they came from the railways, were presented to parliament and the facts and statements were there made. Only in that respect was there any difference between my hon. friend the leader of the opposition and my hon. friend the Minister of Railways and Canals with respect to the Itercolonial Railway. I have said that I do not get very much comfort even if my position with respect to the Intercolonial Railway as to its operation has been established by the remarks of my hon. friend the Minister of Railways and Canals because of his conclusions. He has, after saying that the railway had been efficiently managed, that there was nothing wrong with it, that its administration could not be better in comparison with that of other railways, asked the question: What shall we do with the road? Why is it necessary to do anything with the road? He has clearly shown that during the past year, in common with the other railways on this continent, that railway had a decrease in its earning power that has been very marked particularly in the maritime provinces because of the depression in the lumber traffic. It will be borne in mind that the lumber traffic of the Intercolonial represents 26 per cent of its whole traffic, and I am sure that I am within the facts when I state that there has been a practical stagnation in the matter of the transportation of lumber along the Intercolonial during the past twelve months in consequence of the condition of the lumber trade in Great Britain. In that particular alone there has been an immense falling off in the earnings of the Intercolonial Railway and the falling off in that regard has been followed by a lessening of its earning power in other respects, to the extent, as the Minister of Railways and Canals has shown, of $500,000. He has shown that, despite that falling off and despite an increase in the wages paid to the employees, there is only an anticipated deficit of half a million dollars this year. Have we not had a surplus on the Intercolonial Railway for the past five years? Then, what is there to complain of? What is there to be done? If the management of the Intercolonial has been good, in comparison with that of other railways in Canada, if there is nothing to complain of with respect to it in that regard, why should it be condemned simply because there have been deficits? Surely, Mr. Speaker, that will not be contended in this House. We had a report laid on the table of the House the other day showing that the deficit of the Welland canal alone, during the past five years had averaged nearly $180,000 per year. Some hon. member has computed the figures with respect to the deficits on the Intercolonial from 1867 down to the present and has shown that the average deficits on the Intercolonial, commencing with its inception, when it was a railway running from Rivière du Loup to Halifax, Moncton and St. John, have only been about $245,000. On that one little canal alone there is an annual loss of $170,000. Is there talk of doing anything about that? The minister has told us that the canals of Canada are a balance of the Intercolonial Railway, but if you add but one other canal you will have a greater annual deficit on these two canals than you have all told on the Intercolonial Railway. Of course, if you take the canals of Canada as a whole

there will be, according to the statement of the minister himself, a deficit of upwards of one and a quarter million dollars. How is it we never hear the question asked. What shall we do with the canals, or, shall we put them under a commission, or, shall we transfer them to a private corporation in the interests of the country? If these questions are asked about the Intercolonial, surely they could with equal reason be asked about the canals which also have deficits.

Mr. ANDREW BRODER. Of course the hon. gentleman is aware that the traffic on the canals is free to the whole country. There is no analogy between them and the Intercolonial Railway.

Mr. EMMERSON. I am thankful to my hon. friend for the information, but I think there is a great analogy for there is an investment of $90,000,000 of the people's money in the canals and an investment of $80,000,000 of the peoples' money in the Intercolonial both investments being to develop the trade of the country. But there is this additional point in favour of the Intercolonial, that its construction was undertaken as well to bring about the confederation of the then scattered provinces into one Dominion.

My disappointment at the speech of the Minister of Railways is to be found in the fact that his conclusions do not seem to agree with his argument. He argued that the excellent management of the Intercolonial under government operation showed up well in comparison with the private operation of privately owned railways, and that while the results of the book-keeping were not so favourable to the Intercolonial yet that was brought about by peculiar conditions. I agree with the Minister of Railways up to that point. However, he concludes that although the government administration of the railway is good and although the Minister of Railways through his department can manage it in excellent fashion, and although the conditions justify low rates, yet he says we must go back to company operation before the Intercolonial Railway can be made a success. A success in what way? The hon. gentleman proposes to make it a success by trying an experiment. He proposes to form a board of management, a sort of advisory board he says. But let me ask: What is the necessity for an advisory board or a managing board if the management is as excellent as he said it was under the present administration.

Mr. LENNOX. Hear, hear.

Mr. EMMERSON. Why the necessity for any change? If the minister brushes aside the question of placing this railway under an independent commissioner or commissioners, independent of this government or of any future government and only answerable to parliament; if he declines to place that railway under the direction of a servant of this parliament, then, what is the necessity for turning aside from the excellent management of the railway during the past few years,—and I agree with him that the management has been excellent. If it is desirable to have a board of management then I would invite the attention of the minister to the character of the board. I understand from him that three of the gentlemen who are to comprise that board are now connected with the Department of Railways. One of them is the deputy minister, and a very able deputy minister he is as I have had opportunity of knowing. The other two are to be men who have been for years in the employ of the Intercolonial and who have had the management and control of it under the Department of Railways. If this is to be an advisory board we have had for many years the advantage of the advice of these two gentlemen, and we have had for four or five years past the advantage of the great experience and knowledge of the deputy Minister of Railways. I do not know to whom the minister refers when he speaks of two other gentlemen who have been for years in the employment of the Intercolonial Railway, but I suppose I can assume that they are gentlemen who have controlled and managed the Intercolonial Railway in the past. Is that management going to be any better because they are clustered together in a board? Assuming that one of them is the present manager of the Intercolonial Railway, are you going to have him any more efficient or any more alive by attaching him to others and making it a hydraheaded management ? I do not think so. I ask the minister, and I ask hon. gentlemen to consider how it can be expected that any better results will be obtained in the management of the road from these very same men. Well, sir, I do not look for any great success, nor do I look for any great improvement in that direction.

I should be glad indeed to see the hopes of the minister realized but I cannot now see anything but failure written all around the proposition and in that I think many hon. members who have a knowledge of the conditions will agree with me. But that is neither here nor there, I simply call the minister's attention to it. I asked myself what my hon. friend meant when he said that if this experiment failed these other questions would be considered. What other questions ? Is it the transference of the Intercolonial Railway to a company-operated road? I would hope that that question had been settled in the mind of the minister. He has convinced me and I believe he has convinced the country that he can manage the Intercolonial Railway efficiently. He has

demonstrated to this House this afternoon that it is possible to so manage the Intercolonial that it will be in the interests of the people and that it will become what it was designed to be a government-operated road in the interests of the country. The very moment you discuss the question whether the government of this country shall part with the Intercolonial Railway, you are face to face with one great issue, whether you will have a government-operated railway or whether the people will tolerate a railway-operated government, surely the time has not come when we cannot operate that railway, when we cannot as a people manage the railway in the interests of the people. If it should be shown to me that the Intercolonial Railway could be managed under some system with greater advantage to the people of Canada, that it would develop the east to a greater extent under a private corporation, I would be willing to accept that alternative, but the prevailing opinion to-day is in favour of that measure of government-operation which we have. That feeling is not confined to eastern Canada, you will find it in Ontario and in the west. That opinion should be recognized by this parliament. I quite admit that the corporations are anxious to secure the road. The minister has pointed out that the Canadian Pacific Railway already have access to the Atlantic coast and that in a very few years the Grand Trunk Pacific will find an outlet there. He says then that there must be an outlet for another railway and that the Intercolonial Railway offers an excellent outlet for some trans-continental line of railway. There are only three railroads that have aspirations towards becoming transcontinental; the Canadian Pacific Railway is now a transcontinental line, the Grand Trunk Pacific is seeking to become one and we intend that it shall be, the Canadian Northern hope to become one. The possession of the Intercolonial Railway by the Canadian Northern Railway would be of immense advantage to the Canadian Northern. Their system is now 50 miles west of Edmonton and they hope to reach the Pacific coast. They connect Edmonton and Port Arthur. I read in the newspaper press that there are now proposals to supply the link between Port Arthur and Sudbury. Soon they will have a through line from Sudbury to Montreal. There will still be a missing link between Montreal and the sea-board and it would be of immense advantage to them to reach Halifax or Cape Breton. They would then be in contact with their Nova Scotia system. They have a line of railway from Halifax westward around the south coast of Nova Scotia, known as the Halifax and South Western. If they could connect their western system with their eastern system it would be a great advantage to them, and I do not say they are not justified in having hopes and aspirations in that direction. The question is, is it in the interests of the people of Canada to have them secure that road? I can well understand that it would establish them in their credit, that they would be placed in an entirely different position before the financial world from that which they are in to-day. It would be of immense advantage to them but would it be of advantage to the people of Canada? If the experiment which the minister is to undertake with respect to the management of the road during the next year be a failure, if it bring about no better results than he is now obtaining, I would like to know whether there is an idea that we should discontinue our operations of that road in favour of the Canadian Northern? If that were the proposal before this House I would unquestionably take my stand against it. I would be recreant to what I deem to be my duty to my constituents, I would be falsifying the record of a life time, if I were to support any such idea. I cannot agree with the Minister of Railways that the Intercolonial Railway must of necessity be the outlet for a transcontinental railway in order to achieve the success which he would like to see it achieve. It must be borne in mind that the Intercolonial was not built for the wheat traffic. It must be borne in mind that in 1903, when we had under consideration the bringing of the produce of the west to the Atlantic seaboard, it was the opinion of the people of this country, it was the opinion of the members of this House, that the Intercolonial Railway should not be that channel of communication, and that by reason of its conditions by reason of its grades, it would be impossible for it to carry that traffic, and if it is true as the minister states, that the Intercolonial Railway must be an outlet for a transcontinental line, why did we not make it an outlet in 1903?

Some hon. MEMBERS. Hear, hear.

Mr. EMMERSON. My hon. friends think they get some comfort from that idea. I hold and every man on the other side must recognize, that the Intercolonial was not designed for the purpose of carrying the wheat from the west, it was extended to Montreal to secure the traffic of central Canada, uniting Ontario and Quebec and the maritime provinces. It was intended to unite the provinces of Ontario and Quebec to the maritime provinces. It was never built as a transcontinental line and it was never expected that it would become such a line. If the Intercolonial is given the advantage of management and the advantage of the traffic of the provinces of Ontario and Quebec, if its facilities are enlarged, if its branch lines are extended into the remote sections of the maritime provinces, it will accomplish the object

which led to its construction—not the carrying of traffic from the wheat fields of the west, but the traffic from industrial centres of Ontario. These industrial centres are pouring out each year an increasing quantity of products for which they are seeking a market, and in order to secure that market they require the best possible transportation facilities. They require to reach the remote sections of the maritime provinces at the lowest cost and with the greatest advantage. But under the conditions prevailing with respect to ing Intercolonial Railway and its connecting lines, these advantages are not given the manufacturers of Ontario, and these manufacturers consequently cannot reach those remote markets. The Intercolonial Railway will be a great success if it could but assemble that traffic and distribute it within the zone of its influence. That zone can be widened and extended by the acquisition of these branch lines. And if it is extended and if rates fair and reasonable to the consumer as well as to the manufacturer are afforded, I venture the assertion that the Intercolonial Railway would be an immense success, not merely in bringing together the people of the different provinces, but in earning a surplus which would increase each year. I remember on one occasion I had a computation made as to what the financial returns of the Intercolonial Railway would have been had we charged on our traffic for one year the rates charged on the Canadian Pacific Railway in eastern Canada, and I found that we would have had a surplus on that year's operations of two and a half million dollars. Surely with these opportunities within our reach, it is the duty of this government and parliament to place the Intercolonial Railway in such a position that these results will be brought about. My hon. friend the Minister of Railways realizes that. His own argument demonstrated that it could be done, and I am sure that there is no man who would dispute the conclusion, that if it can be done it should be done.

I do not wish to say anything further with respect to any management or any proposed management or method of management. Opportunities for criticism will naturally be offered, but it seems to me that the minister should take into consideration the additional expense involved. I am not one of those who had very great faith with respect to the Civil Service Commission. I venture to declare myself from my place in this House on that subject. We find to-day that we have established a commission at Ottawa for the purpose of doing—what? For the purpose of selecting employees for the civil service in Ottawa. and $30,000 were voted the other day simply to run that commission. But formerly the work entrusted to that commission was done, and well done, by the heads of the departments. But if this board in connection with the Intercolonial Railway is created, there must of necessity be additional expenses; and while I am not in accord with the Minister of Railways regarding this proposition, because I do not think it is in the interests of the Intercolonial Railway or the proper administration of his department, yet I think that he should be given full latitude to manage that railway in the way he considers the most efficient. I am criticising his proposition, as others no doubt will, but yet it is not a matter of vital concern. The question which is vital, boiled down, is this, that the Intercolonial Railway shall be continued as a government-operated railway, that it shall be extended, that its influence shall be made wider, and that it shall be made better able to do, not the transcontinental business, not the assembling of traffic from the fields of the west, but the gathering up of the products of Ontario and Quebec and distributing them to the markets of the east and to the point of departure to markets beyond the sea. If we should aim to do that, in my judgment we will be fulfilling the expectations of those who have the interests of this country at heart, and assist in developing our industries.

Mr. W. S. LOGGIE (Northumberland, New Brunswick). I cannot let this opportunity pass without saying a few words on the very important question before the House. The matter of the construction and operation of the Intercolonial carries us back to the days of confederation when that road was made a link in the chain which binds the maritime provinces to the rest of Canada. As my hon. friend from Westmoreland (Mr. Emmerson) pointed out a few days ago, there is a clause in the British North America Act providing that the construction of the Intercolonial Railway shall commence within six months of the passing of the Act, and we have during the last forty years operated that road as a government railway. In 1896, when the present government came into power, the earning power of that railway was in round numbers about $3,000,000. During the last twelve years by adding the mileage between Ste. Rosalie and the Chaudiere, namely, 112 miles, and between Fredericton and Loggieville, 125 miles, we have increased the earning power of that road by $6,000,000. We have increased its earning power 300 per cent, whereas we have not, except by a very small percentage, increased its mileage.

We have therefore to take this position that we can do the transportation from the east to the west and from the west to the east—I do not mean as a portion of a great through line from the prairie provinces; but in the great industrial centres of

Canada, mainly in the commercial metropolis of the Dominion, the city of Montreal, we can gather up a very large proportion of our traffic; and we are handed a portion by the Grand Trunk Railway, according to an arrangement between the government and the company. But I want you, Mr. Speaker, not to forget when we are talking about traffic from the west, which we are not in a position to gather up as perhaps we would be if the railway extended to the prairie provinces, that at the present moment we have a practical monopoly of gathering up the traffic in the east. We are told by the department in reply to the hon. member for Guysborough (Mr. Sinclair) that the Intercolonial Railway traffic from the east to the west is fifty-six per cent. As far as that fifty-six per cent of the traffic is concerned, what does it matter how many railways there are carrying the traffic from the west to the east? They will not affect it. We have a traffic arrangement with the Grand Trunk Railway Company by which we take their traffic at Montreal in exchange for our traffic to them. When they take that traffic from us, it is surely reasonable that we should have something that we can offer to other roads, if the Grand Trunk Pacific should say that it wanted all the traffic to Moncton. We must not get the blues over this project. It is a matter that has engaged the attention of this country for the last forty years, and there has been adverse criticism by both parties. When the Conservative party was in power, there was adverse criticism by the opposition. I am very glad, however, on this occasion to hear my hon. friend the ex-Minister of Railways (Hon. John Haggart) say: Do not part with the Intercolonial Railway; the time will come when it will be a heritage to the maritime provinces. Let me say, Mr. Speaker, that these are my sentiments —to stand by the tie that binds the provinces by the sea with the provinces of central Canada. The very word Intercolonial means an interchange of traffic. You have this steel road taking Ontario flour from the west to the east, and fifty-six per cent of the traffic of the Intercolonial is from the east to the west; and if it be true that our rates are lower than those of any ordinary railroad, will any gentleman tell me that the people in the west are not receiving a share of the benefits arising from those low rates? It does seem to me that if there are low rates on the Intercolonial Railway, the advantage is mutual. There was 44 per cent of the traffic going east carried over the road during the past year. I venture to say that a very large proportion of that arises in the city of Montreal and is not handed over by the Grand Trunk Railway at all. If we look on the bright side of this matter, we shall be able to realize the picture of

the ex-Minister of Railways on the Conservative side of the House (Mr. Haggart) who said to-night that we must not part with the Intercolonial Railway, and I echo in the strongest terms that sentiment. I realize that it is the heritage of the maritime provinces and the link uniting those provinces to the other portions of the Dominion. If you leased the railway for ninety-nine years, you would to all intents and purposes be selling it, and the effect might be to break that tie. I shall not forget very quickly what the hon. Minister of Railways said to-day about linking the Intercolonial Railway to one of the great transcontinental lines. In the Act relating to the construction of the Grand Trunk Pacific, there is a clause providing that the Intercolonial Railway should be linked to the Grand Trunk Pacific from Moncton to Halifax and from Moncton to St. John. That clause reads like this:

> Securing to the company running powers and haulage rights over the Intercolonial Railway or any portion thereof, upon such terms as may be agreed upon between the government and the company.

I am sure that is good doctrine. That is using the rails of the people's railway from Moncton to the sea-board, and it does seem to me that it would not be unreasonable to apply the same principle to another great transcontinental railway that will very soon reach the city of Quebec. That is, use the rails of the Intercolonial railway from Quebec to Moncton—retain the management of the people's railway and give haulage rights over it. I know that there is objection to that. I know that it will be said that it is a long haul, and that local traffic would not be gathered up. I quite admit that. It seems to me all the same that some favourable arrangement might be made along these lines. I have another alternative. This is a project of mine, and you will pardon me, Mr. Speaker, if I make it known. The Act relating to the Grand Trunk Pacific Railway gives the government this power:

> Reserving power to the government to grant running powers and haulage rights sufficient to enable any railway company desiring to use the said eastern division, or any part thereof, to do so upon such terms as may be agreed upon between the companies, or, in the case of their failure to agree, then upon such terms as may be deemed reasonable and just by the government, having regard to the rights and obligations of the lessees.

Now my proposition is this: We will have one of the best pieces of railroad in the world between Quebec and Grand Falls. We have power to allow the Canadian Northern to run over the rails down as far as Grand Falls. Then the country requires in the very worst way a railroad constructed

between Grand Falls and St. John down the St. John valley. Therefore, we have a through road for the Canadian Northern from the Pacific to the Atlantic by using a certain number of miles of the Transcontinental Railway, namely the distance between Quebec city and Grand Falls, and there you will have a road filling a gap which very much needs to be filled, because every hon. gentleman in this House knows that the necessity of a road down the St. John River valley is one of the most urgent needs in New Brunswick to-day. When this gap is filled, a line will be afforded from one ocean to the other ocean. So far as I am personally concerned, that project would satisfy me very well. I would never think of saying to the Canadian Northern, you take over the management of what we have managed for forty years, and administer it. The government have done so that its earnings have increased from $3,000,000 twelve years ago to $9,000,000 this year. Now, Mr. Speaker, so far as the management of the railway is concerned, I am willing to listen to any suggestion that hon. members may have to make. They can eliminate the partisan feature from it. The road intersects my county from one end to the other, and I can tell hon. gentlemen that I do not know anything wrong in the management of the road. I do not know that the partisan feature which is dwelt upon so much, affects the revenue in the least, I do not know that there is a man on that railway who is not earning the dollar a day that he receives. So far as I know the railway is well managed, and it is a pleasure for me to compliment the Minister of Railways on the statement he has given us to-day, both as to its management during the year past and also so far as the present year has gone. Now I cannot help but say this, Mr. Speaker, that the great corporations base their expenditures on their revenues and have to pay interest on capital. Their management endeavour to manipulate profits so that the interest for dividends is provided for. If, however, there comes a bad year and earnings do not reach nearly what was anticipated, the inevitable must happen, namely, no dividend is declared, but as a rule, there is no noise about it. Now, what is the case with the Intercolonial in this regard; it is this: The expenditure and revenue are based on practically an equilibrum, and when a panic year happens, and earnings fall off, then the only result can be a deficit, because provision was not made for any great surplus over expenditure. So far as I am concerned I would favour, if necessary, raising the rates 5 per cent all round, 10 per cent if necessary, 15 per cent if necessary. I am satisfied that as a party and as a people we owe it to ourselves to make that railway self sustaining, knowing that it is the chain that was forged many years ago to bind the maritime provinces to upper Canada, and that chain is clearly provided for in the British North America Act. Therefore I say that for my part I am opposed to the Intercolonial passing into the hands of any corporation to manage it, but I would allow another corporation to use the rails on terms that are reasonable and fair. I am willing to give the Transcontinental most favourable terms from the starting point to the seaboard, I would give them less rates than they could possibly afford, to pay interest on the capital invested, if it used its own rails. Now, Mr. Speaker, any proposition to part with the management of the Intercolonial seems to me like breaking faith with the maritime provinces. I see no reason for pessimism. The prospects are bright. My hon. friend from South Lanark (Mr. Haggart) said that the road could be made self supporting. I do not think there is much danger if the Grand Trunk Railway should say they are going to hand over to the Grand Trunk Pacific what was our share of the freight going east. They cannot give it for Campbellton, they cannot give it for Newcastle, they cannot give it for other points between Lévis and Moncton, it is true they can give it for Moncton. Let me tell you that they receive more from us than they give us and in a fair exchange we can take care of ourselves.

Mr. LLOYD HARRIS (Brantford). I do not think this discussion should close without the House hearing from one of the private members from the province of Ontario. We have heard from the Minister of Railways to-night, a statement on the Intercolonial and I must admit that after listening carefully to the statements he made, I came to the conclusion that perhaps after all the opinion I have had in the past was wrong. He made out such a case for the good management of that property that once or twice I began to think that perhaps the Intercolonial was managed better than any other road. I have consulted the report of the Minister of Railways, and studied the figures which are given as regard capital expenditure, and revenue, operating and working expenses. According to my calculations I find that during the 41 years the road has been in operatian, the Intercolonial has produced a surplus in 18 years, and in 23 years it has produced a deficit. Then I analysed it a little bit closer. I wondered whether the bad management was all since the present government came into power. I took the number of years in which there were surpluses from 1878 to 1895, and I found that they numbered six and that the number of years in which there were deficits was twelve. The percentage of surplus years was not as great as we would like them to

have been. From 1896 to 1908 I found that the good or bad management, as shown by surpluses and deficits, was a little to the advantage of the present government, as the number of years in which they had surpluses was seven and the number of years in which they had deficits was six.

However, I have got back to the point I started from. I have had my own opinion as to the management of the Intercolonial Railway, I have discussed that question with members of this House, I have discussed it with business men outside of the House, in the maritime provinces, in the province of Quebec and in the province of Ontario and in these private discussions every man with whom I have talked has been of the opinion that the Intercolonial can never be properly and successfully managed under a government department as it is at the present time. If we feel that, if we believe it, I cannot see why we should not have the courage to stand up and say so. My hon. friend from Westmoreland (Mr. Emmerson) stated that he had cold comfort in the speeches which he had listened to, and I am very much afraid that he will find less comfort perhaps in my few remarks than he had from the others. We are discussing at the present time the theory of government ownership. We have had an opportunity of experimenting with government ownership in this country for forty-two years and over. If we were running a business and we found that one department of it was being carried on at a loss, what would happen? We would change our methods of management or get rid of that particular department of the business. Are we running a business when we are representing the people in this House? Is not this simply a great big business undertaking and should it not be run on strictly business lines? I was very much struck with the statement which was made by my hon. friend the Minister of Railways and Canals and also with another statement which was made by my hon. friend the hon. leader of the opposition. The hon. Minister of Railways and Canals made the statement in his remarks that the views of the political parties on the Intercolonial Railway depend on whether they are in or out. The hon. leader of the opposition made the statement that the Intercolonial has been too much hooked up to political influences. You have these two statements made by prominent members on both sides of this House, and I think that ninety-nine, perhaps one-hundred per cent, of the members of this House believe that these statements disclose the cause of the whole trouble, and account for our failure to properly manage the Intercolonial. If that is the case I think we should face the situation and endeavour to seek a solution which will be in the interest of the country at large, because any solution which can be arrived at with regard to the management of this property will necessarily and decidedly be to the interest of the country at large. The first principle of government ownership is to give the people the special utility to be owned and managed by the government at cost. When I say cost I do not figure as my hon. friend from Northumberland, New Brunswick, (Mr. Loggie) does. He says that the revenue and expenditure of the Intercolonial Railway are on an equilibrium. That is very good. If we ran our own private business with the revenue and expenditure on the same kind of equilibrium we would all be in the poorhouse in short order. I am of the opinion that the Intercolonial should be managed in such a manner that it will not only pay its operating or running expenses, but that it will earn a fair and and decent amount of interest on the capital employed in the construction of the property. That is a principle that every hon. gentleman, I am sure, will agree with. The ouly management I will be satisfied with and I believe the only management that other members of this House will be satisfied with is the one that will produce results of that kind. I was very much surprised to hear the hon. member for Westmoreland make the statement on the floor of this House that local rates in the maritime provinces are lower than they are in any other part of the country. Is that not right?

Mr. EMMERSON. They are lower than any where in the world.

Mr. HARRIS. In that case then the other provinces are having a very decided and great wrong done to them because the people in the maritime provinces have no right to have local rates lower than we have in Ontario or than the people in Manitoba and the western provinces have.

Mr. EMMERSON. You get your canals free of tolls.

Mr. HARRIS. I do not propose to take up this canal question because I think it is a very dangerous thing to get into any sectional discussion. The hon. member for Westmoreland (Mr. Emmerson) tells us that the deficits on the Welland canal are so and so. The only thing I will say about that is that if we have deficits on the Welland canal we have a perfect right to have them for the simple reason that the good old province of Ontario which stands as a buffer state between the east and the west has to pay the deficits; so, why should we not have them if we want them ? Now, we evidently cannot agree as to the best means of managing this property. The hon. member for South Lanark (Mr. Haggart) is

not apparently willing to agree that any of the methods which have been mentioned here to-night would be satisfactory. Others have agreed that a commission would be satisfactory. I personally do not believe that a commission would assist us very much. I do not think that we would get any better results by management under a commission than we get at the present time for the simple reason that I do not believe that we could get a commission which could be completely separated from political influences, and therefore management by commission would have the same drawbacks that we have at the present time. I am not going to make any suggestion as to how the property should be managed but I am glad the question has come up and that we have had an opportunity of expressing our views and opinions upon it. I hope, before anything definite is done, that we will have a further opportunity of seriously considering the question with the view of getting together in a fair, proper and reasonable discussion and endeavour to arrive at a solution which will help us out of a position which is not a good one for the country generally and especially for that portion of the country through which the road runs.

Motion agreed to, and House went into Committee of Supply.

Capital—Intercolonial Railway towards double tracking part of the line, $69,000.

Mr. GRAHAM. This is merely to carry on the work between Moncton and Painsec junction, which has been going on for some years.

Mr. RHODES. Will this vote complete the work?

Mr. GRAHAM. It is considered it will complete the section between Moncton and Painsec junction.

Mr. RHODES. What will be the total cost of double tracking that section?

Mr. GRAHAM. The total expenditure to the present time has been $783,973,

Improvements at Loggieville, $25,500.

Mr. RHODES. What is this money being spent for?

Mr. GRAHAM. Three-stall engine house, concrete engine pits, remodelling and enlarging the station building, loading platform, freight house, tracks and grading. There is a revote of $14,450.

Mr. RHODES. Is this a divisional point?

Mr. GRAHAM. It is really the end of the Canadian Eastern section from the junction down to Loggieville.

Increased accommodation—Truro, $52,000.

Mr. STANFIELD. I do not rise to find fault with this vote, which I may say is a very necessary one. I would like, however, to call the attention of the minister to the very unsanitary condition of the present Truro station, and I shall not delay the House more than a minute or two because I feel sure it will be unnecessary to dwell on the matter at any great length. I have in my hand a clipping from a Truro paper which contains a statement signed by Dr. S. L. Walker, health officer of the town of Truro. It is stated in this newspaper that the report of the medical officer is to be forwarded to the Minister of Railways and myself but my copy has not reached me.

Mr. GRAHAM. Nor mine.

Mr. STANFIELD. I will direct the attention of the minister to what Dr. Walker says in conclusion, and then I shall send him over the report so that he may read it. Dr. Walker says:

Taken as a whole the Truro railway station is a positive menace to the health of all who enter it for any purpose, and were it under the town's jurisdiction it could be condemned by the board of health.

I would like the minister to look into this matter and have a remedy applied with as little delay as possible.

Mr. GRAHAM. I certainly agree with my hon. friend (Mr. Stanfield) that there appears to be a very undesirable condition of affairs at Truro station. The report to which my hon. friend refers was brought to my attention by himself but I have not yet received my copy. I can assure the hon. gentleman that I will give it attention. Of course we will get rid of all these things when we build the new station but in the meantime we will look into that report.

Some resolutions reported.

Mr. FIELDING moved the adjournment of the House.

Mr. BLAIN. What business will be taken to-morrow?

Mr. FIELDING. We shall go into supply on the Public Works estimates. At the first convenient opportunity in committee I would like to have the supplementary estimates for the current year considered.

Motion agreed to, and House adjourned at 11.05 p.m.

HOUSE OF COMMONS.

WEDNESDAY, March 17, 1909.

The SPEAKER took the Chair at Two o'clock.

QUESTIONS.

WESTVILLE POST OFFICE.

Mr. CROSBY—by Mr. Rhodes—asked:

1. What is the contract price of the Westville post office, Pictou county, Nova Scotia?
2. Who is the contractor?
3. Is the work completed? If not, when will it be completed?
4. What is the date under contract when it was to be completed?
5. What is the total amount paid to the contractor, and what further sums will be payable to him?
6. What amount of extras, and for what, is paid and to be paid to the contractor?
7. What will be the total cost of building when completed?
8. Who is the inspector, and between what dates has he been employed?
9. Has he stopped work, and when was he discharged? If not discharged, when will his work be finished?
10. How much per day is he paid, for how many days, and what is the total amount paid to him to date?

Hon. WM. PUGSLEY (Minister of Public Works):

1. $12,997.
2. E. F. Munro.
3. No. Contract will be completed in about a week.
4. October 15, 1908.
5 and 6.

	Paid.	Due.
Contract	$11,510 00	$1,487 00
Heating	1,011 65	
Electric wiring and fixtures	350 00	351 00
Sidewalks, curbing and gravel walks	1,455 13	
Varnishing and plastering	42 50	
Road to station		478 80
Drain		29 60
Ladder and peg rails		13 75
Totals	$14,369 28	$2,360 15

7. The original estimated cost was $22,000 which did not include the road to station.
8. W. R. McKeen. From October 5, 1907, to present time.
9. (a) No; (b) in about 6 weeks.
10. (a) $3.50 per day; (b) 482 days; (c) $1,687.

I may add that the arrangement with the present inspector was made before the new rule was adopted by the department that inspectors are not to be paid for Sundays. Previously, pay for Sundays was included in what was regarded as monthly employment.

HOLSTEIN CATTLE.

Mr. ARMSTRONG asked:

1. What reason does the government give for not having Holstein cattle at the experimental farm?
2. Is it true that the Minister of Agriculture has stated in public that he did not wish to encourage the breeding of Holstein cattle in Canada? If so, what reasons are given for making such a statement?

Hon. SYDNEY FISHER (Minister of Agriculture):

1. Any more breeds than are there at present could not be satisfactorily dealt with.
2. No.

DEPARTMENT OF AGRICULTURE, EXPENDITURE AND EMPLOYEES.

Mr. ARMSTRONG asked:

1. What is the total number of employees in the Agriculture Department, inside and outside service, who devote their time to agriculture alone, and the total amount paid in salaries?
2. What was the total amount of money expended in the year 1908 on purely agricultural purposes, and the names of each branch and the amount expended?

Hon. SYDNEY FISHER (Minister of Agriculture):

1. Number of employees.. 450
   Amount paid in salaries .. $253,560 00
2. $762,589.89.

Experimental farms	161,125 91
Printing and distribution of bulletins, farm	8,000 00
Fumigation stations	4,499 71
Dairying and fruit industries, &c	133,669 28
Seed	63,229 57
Live stock	44,656 22
Health of animals	320,538 10
Civil government	26,871 10

ASSISTED COLD STORAGE PLANTS.

Mr. ARMSTRONG asked:

1. How many companies have taken advantage of the clause in the government Cold Storage Bill which grants 30 per cent bonus to builders of cold storage plants as provided for in the Bill?
2. Where are said plants situated, what is the amount paid to each company, and the amount still to be paid by the government?

Hon. SYDNEY FISHER (Minister of Agriculture):

1. Seven.

2.

Name.	Where situated.	Amount paid.	Amount to be paid.
		$ cts.	$ cts.
The New Brunswick Cold Storage Co., Ltd.	St. John, N.B.	36,740 00	13,360 00
The Halifax Cold Storage Co.	Port Hawkesbury, N.S.	6,685 06	2,430 85
Scott & Hogg	Peterborough, Ont	2,175 00	2,175 00
Cold Storage Ltd	Woodstock, N.B.	3,836 55	3,836 55
Scott, Ashton & Co	Morrisburg, Ont.	Nil.	18,986 70
The Trenton and Atlantic Storages Ltd	Trenton, Ont.	"	13,569 91
The J. D. Moore Co., Ltd	St. Mary's, Ont.	"	5,100 00

N.B.—In addition to the foregoing the following have made applications which are pending:—

Edmonton Produce Company, Edmonton, Alberta.

The B. Wilson Company, Limited, Victoria, British Columbia.

Canadian Fish & Cold Storage Company, Limited, Prince Rupert, British Columbia.

R. T. Treen, Prince Albert, Saskatchewan.

The Nova Scotia Cold Storage Company, Halifax, Nova Scotia.

The Acadia Cold Storage Company, Limited, Halifax, Nova Scotia.

The London Cold Storage Company, Limited, London, Ontario.

These contracts have not yet been awarded.

ISLAND OF SOULANGES.

Mr. LORTIE asked: (Translation.)

1. Has the Bureau of Canadian Geographers changed the name of the island of Soulanges, in the St. Lawrence?
2. If so, what name has been substituted for it?
3. What are the reasons for this change of name?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries.) (Translation). The attention of the Bureau of Canadian Geographers has been called recently to an island upon the St. Lawrence indicated upon the charts under the name of 'L'Ile Soulanges' and 'L'Ile Dondaine'. The Bureau has decided for the adoption of the last name which seemed to have priority over the other, as it will, at the same time, avoid the repetition of the name Soulanges' already given to several localities, in the vicinity.

THE BOOK 'FARM WEEDS.'

Mr. GOODEVE asked:

1. How many copies of the work entitled 'Farm Weeds' were published, and what was the total cost?
2. How many copies have been distributed, to whom, what are the names of the parties receiving them, and how many copies to each?
3. How many copies are on hand at present?

Hon. SYDNEY FISHER (Minister of Agriculture):

1. 25,000 copies at total cost of	$26,770 49
2. 18,500 copies, on application from:—	
Senators and Members of House of Commons, 3 copies each	525 00
Public Libraries, one copy each	925 00
Educational institutions, including rural schools in which libraries are maintained, or on behalf of which some assurance is given by inspectors of schools that the book will be maintained as the property of the school section	14,874 00
Agricultural Colleges, up to 30 copies each	412 00
Agricultural Organizations, one copy each	1,000 00
Farmers' Institute lecturers and Agricultural Educators, one copy each, and on personal application to others shewing a special interest in the subject	764 00
	$18,500 00

3. 6,500 copies.

INSPECTION OF DRESSED HOGS IN KENT AND ESSEX.

Mr. McCOIG—by Hon. R. F. Sutherland—asked:

1. How many dressed hogs have been inspected in the counties of Kent and Essex from October 1, 1908, to March, 1909, under the Meat Inspection Act?
2. How many hog carcasses were rejected by the government inspectors in Kent and Essex from October 1, 1908, to March, 1909.

Hon. SYDNEY FISHER (Minister of Agriculture):

1. 12,330.
2. 10 entire carcasses, and portions of 954.

PAYMENTS TO ERNEST BOIVIN AND A. DESBIEN.

Mr. MONK—asked :

1. Has Mr. Ernest Boivin, of Bagotville, province of Quebec, been employed by the government on any of its works during the years 1906, 1907 and 1908? If so, during what space of time, in what capacity and at what salary?

2. How much has the said Ernest Boivin been paid by the government during the said three years?

3. Did the government during the first six months of 1908 issue a cheque of $14 in favour of one Auguste Desbien for work performed at or near Bagotville?

Hon. WM. PUGSLEY (Minister of Public Works) :

1 and 2. Ernest Boivin has not been employed by this department at any time; but on the 28th of June, 1904, he and one Onésime Coté entered into a contract with the department for the construction of a wharf at Sacré Coeur, which was duly completed on 1st July, 1905. The department has no knowledge what Mr. Boivin's share of the contract earnings may have been.

3. Yes.

INDEBTEDNESS OF GRAND TRUNK RAILWAY TO DOMINION GOVERNMENT.

Mr. GEORGE TAYLOR—asked :

1. In what amount, if any, is the Grand Trunk Railway Company indebted to the Dominion of Canada?

2. How much is owing for principal and interest, respectively, upon the said indebtedness?

3. How many years' interest is due?

4. On what date was interest last paid?

Hon. W. S. FIELDING (Minister of Finance):

This deals with a very old and complicated account. It might be more convenient to put it as a motion for return, but as I thought the hon. gentleman (Mr. George Taylor) might regard it as having a bearing on proposals of this session I have brought down the answer :

1, 2, 3 and 4. In the year 1862, five years prior to confederation, a reorganization of the Grand Trunk Railway of Canada was effected under chapter 56 of the Statutes of Canada of that year.

Provincial debentures of the provinces of Canada to the amount of $15,142,633.34 had been issued, prior to the passing of this Act, in aid of the company. These debentures carried interest at the rate of six per cent per annum.

By section 19, of the chapter referred to, the province of Canada consented to allow its claim for interest due and accruing in respect of these debentures to be postponed to the payment of certain charges which were made prior by the Statute. The section provided that after the payment of the working expenses of the Railway the balance of earnings was to be appropriated and applied in payment:—(a) of interest on equipment mortgage bonds; (b) of interest on first preferential bonds and the dividend due on first preference stock; (c) of interest due on second preferential bonds and the dividend due on second preference stock; (d) of dividend due on third preference stock; (e) of dividend due on fourth preference stock; (f) of dividend of 3 per cent per annum for ten years on the ordinary stock of the company and thereafter at the rate of 5 per cent per annum; (g) of further dividend on one per cent per annum on the third preference stock; (h) of further dividend of one per cent per annum on the fourth preference stock; (all the above were given priority over the government claim for interest); and then; (i) in payment of the interest for the time being due and accruing, subsequent to the 1st January, 1862, on the provincial debentures issued in aid of the company, before the passing of the Act, at the rate of 6 per cent per annum.

The interest on the provincial debentures referred to amounted, at the time of confederation, to $10,457,458.01. Amounts, represented by these province of Canada debentures, $15,142,633.34, and this interest of $10,457,458.01, were, at confederation, taken over by the Dominion from the province of Canada, and have since been carried in the balance sheet without change under the heading 'Railway Accounts,' but these amounts have not been included in the statement of assets of the Dominion.

As the net earnings of the company never met all the prior charges, as provided by the Act, no part of this interest has ever been payable.

There was also carried in the province of Canada accounts and taken over at confederation a special interest claim of $7,302.18, which has been continued in the balance sheet. This special interest claim arose from an adjusted balance of various accounts made between the province of Canada and the Grand Trunk Railway Company, which balance was confirmed by an order in council of the 18th October, 1866.

Besides the above, the province of Canada was, at the time of confederation, the holder of fourth preference stock of the company, (converted, by section 11, chapter 18, Act of 1873, into third preference stock), of the par value of $121,739.65. Dividends have been paid to the Dominion on this stock on several occasions as follows :

During year	1881	$ 608 70
"	1883	1,643 48
"	1884	1,978 26
"	1902	1,217 40
"	1903	2,434 80
"	1905	2,434 80
"	1906	3,652 20
"	1907	3,652 20

This fourth preference stock was accepted by the province of Canada in payment of a certain part of the accounts adjusted by the order in council referred to.

DISRAELI WHARF.

Mr. LENNOX asked:

1. Referring to the statement of the Minister of Public Works as recorded in unrevised 'Hansard' of 10th March instant, as follows: page 2425, Mr. Pugsley,—It happens in that case that vessels land and deliver their cargo on the lower side of the bridge, and at the wharf, which is at the lower side of the bridge, and page 2429: With regard to the wharf at Disraeli, I am surprised at my hon. friend from Peel (Mr. Blain) should allow himself to be misled as to the facts of the case. When he went there on the occasion to which he has referred, he must have studiously avoided the side of the wharf which is frequented by vessels navigating the lake. The same rather unjustifiable and inconsiderate statement was made at the last session of parliament. A report had been made by the resident engineer to the effect that vessels do go to that wharf and that it is a very useful structure for the purpose of navigation. It is true, the wharf having been built, the municipal authorities used an end of it for supporting a bridge, and their doing so does not interfere with the purposes for which it was built. I hope my hon. friend will get more reliable information before he again speaks on that subject in this House,—(a) how many vessels carrying passengers or merchandise regularly called or landed at Disraeli wharf during the navigation season of 1908, and (b) called or landed at all during the season, (c) what were the names of these vessels, and of what tonnage were they?

2. What vessels, boats or craft of any kind called or landed at or used the said wharf during said season, and to what extent was it used?

3. What is the area of the lake called Lake Aylmer into which the stream passing under Disraeli wharf empties?

Mr. SPEAKER. I am not sure that that question is regular as it referred to what happened in Committee of the Whole in a previous debate. The latter part of the question, I think, might be put.

Mr. LENNOX. I would prefer to withdraw altogether, Mr. Speaker, if you do not think it in order. It seems to me all right.

Mr. SPEAKER. Bourinot says that it is not regular to refer to what has been said or done in a previous debate, and this refers directly to what was said in Committee of the Whole.

Mr. LENNOX. It is a mere question for purposes of certainty, it seems to me. But I will withdraw it.

Mr. SPEAKER. I think the latter part of the question is quite regular, but not the first part quoting the words of the minister.

Mr. LENNOX. I suppose the latter part covers the matter.

Mr. FIELDING. Stand, to be amended.

FRENCH TRANSLATION IN DEPARTMENT OF AGRICULTURE.

Mr. PAQUET asked:

1. Has the hon. Minister of Agriculture established in his department an office of French translation?

2. If so, when was it established, and what are the names of the translators?

3. Is the volume entitled in French La Statistique Annuaire, translated in the Department of Agriculture?

4. Are all the documents and reports respecting the office of agriculture translated in that department?

5. In what departments have offices of French translation been established?

Hon. SYDNEY FISHER (Minister of Agriculture):

1. Yes.

2. 1907. C. E. Mortureux and L. Noailles, a temporary assistant. From 1892 to 1906 Mr. Louis D'Auray translated the Statistical Year Book, and from 1892 to 1908 Mr. Guignard translated the Experimental Farms Report.

3. Yes.

4. Yes, with the exception of such as are translated by the House of Commons translation staff.

5. All departments have officers or clerks who understand both of the official languages, and who translate documents from one language to the other for their departments.

MARCONI STATIONS BETWEEN MONTREAL AND QUEBEC.

Mr. ECREMENT asked:

1. Has the department of Marine and Fisheries received from certain navigation companies petitions asking for the installation between Montreal and Quebec of telegraph stations of the wireless Marconi?

2. If so, is it the intention to grant what is asked for in these petitions?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries.) (Translation).

1. Yes. The Montreal Shipping Federation has sent such a petition.

2. Under consideration.

DUTY ON REPAIRS TO CANADIAN SHIPS IN FOREIGN COUNTRIES.

Mr. J. A. CURRIE asked:

1. Have any representations been made to the government to reduce or abolish the tariff or duty now payable on repairs done to Canadian ships in foreign countries?

2. If so, who were the individuals making these representations, and who did they assume to represent?

3. Is it the intention of the government to deal with the matter this session?

Hon. WM. PATERSON (Minister of Customs):

1 and 2. Definite representations have not been made to the Customs Department to reduce or abolish the duty now payable on repairs done to Canadian ships in foreign countries since the Act came into force July 20, 1908, except representations by the Dominion Marine Association not to impose the duty in any case where it is impossible to enter a Canadian dock on account of its previous engagement or occupancy.

3. The government is not prepared to make any statement on this point at present.

BONUSES OR SUBSIDIES—NONE PAYABLE.

Mr. J. A. CURRIE—by Mr. Geo. Taylor—asked:

1. Are any bonuses or subsidies payable under any legislation passed by this House overdue?

2. If so, what are the items and amounts, and why have such amounts not been paid?

Hon. W. S. FIELDING (Minister of Finance). So far as I am aware there are none, but if the hon. gentleman will indicate more fully the purpose of his inquiry the matter will be more closely looked into.

DREDGING AT INDIAN POINT.

Mr. CROCKET—by Mr. Daniel—asked:

1. Were tenders called for the dredging which was done by the Maritime Dredging Company at Indian Point, N.B., last summer and fall?

2. If so, what tenders were received, what are the names of the tenderers and the amounts?

3. To what depth was the dredging done, and what was the depth of water before dredging?

4. How much in all was the contractor paid for rock and boulders exceeding two cubic yards, and how much for other materials?

5. From what appropriation was the money paid?

Hon. Sir FREDERICK BORDEN (for the Minister of Public Works):

1. Yes.

2. Maritime Dredging and Construction Company:

Price per cubic yard, scow measurement.

Towed to dumping ground—

Rock or boulders exceeding 2 cubic yards	$17 00
Other materials	0 50

Cast over—

Rock or boulders exceeding 2 cubic yards	19 00
Other materials	0 50

3. Dredging at Indian Point last season was done to seven feet, low water summer level; average depth of water before dredging was three feet and eight-tenths below summer level, one third of track having but six-tenths depth at low water.

4. (a) Rock and boulders: $0.00

(b) All other materials: $48,247.68.

5. From appropriation 'dredging, maritime provinces.'

CARRIAGE OF GOODS BETWEEN CANADA AND GREAT BRITAIN.

Mr. SPROULE—by Mr. Geo. Taylor—asked:

In view of the representations made by the Home and Foreign Produce Exchange, London, regarding the urgent need of a law to regulate water-carriage of goods between Canada and Great Britain, is it the intention of the government to introduce a measure for that purpose at the present session?

Hon. W. S. FIELDING (Minister of Finance.) A Bill dealing with that subject is now before the House.

TELEGRAPH AND TELEPHONE TARIFFS.

Mr. LENNOX asked:

1. When was the proclamation of the Governor in Council bringing into force part 1 of 7-8 Edward VII, chapter 61D, respecting telegraph and telephones issued?

2. What was the cause of the delay?

3. Has the railway board issued regulations as to the form, size and style of tariffs to be filed, and the information they are to contain and will the minister lay a copy upon the table of the House?

4. Will the companies be at liberty to charge at the rate of their old tariffs of tolls for four months after the date of the proclamation?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. The proclamation referred to was published in the 'Canada Gazette,' February 6, 1909, bringing part 1 into force from and after Monday, the 8th February, 1909.

2. When the minister's attention was called to the fact that proclamation was necessary he immediately recommended that an order in council be passed authorizing it.

3. The board has not yet issued regulations as to the form, size and style of tariffs to be filed and the information they are to contain.

4. Yes, unless such tolls are in the meantime disallowed by the board.

INSPECTION PERMANENT CORPS AT ESQUIMALT.

Mr. BARNARD—by Mr. Cowan—asked:

1. When was the permanent corps at Esquimalt last inspected, and by whom was such inspection made?

2. Where does the inspecting officer reside?

3. What allowances for travelling or other expenses were made to the inspecting officer?

4. What was the total cost of such inspection?

5. Was any remuneration over and above his regular salary allowed to such officer for such inspection?

Hon. Sir FREDERICK BORDEN (Minister of Militia and Defence):

1. On June 21 and 22, 1908, the whole of the permanent corps at Esquimalt were inspected by the inspector-general.

2. The inspector-general has his headquarters at and resides at Ottawa.

3. The usual allowance and expenses made to an officer of his rank when travelling; i.e., actual cost of transport and $5 per diem to cover hotel expenses and subsistence en route.

4. Esquimalt was inspected by the inspector-general during his tour of inspection of all the corps west of the great lakes, and, as the expenses incurred on that tour were paid in a lump sum, it would be a difficult matter to arrive at the cost of any one particular inspection.

5. No.

TENDERS FOR CERTAIN PUBLIC WORKS.

Mr. J. A. CURRIE—by Mr. Geo. Taylor—asked:

1. Is the government aware that in the Appropriation Act, 1908, 7-8 Edward VII, money was voted for the following purposes:—

(a) To provide for the construction and completion of a survey steamer for the Pacific coast and furnishing.

(b) For the purchase or construction of a steamer for the hydrographic survey of the gulf and river St. Lawrence, to replace 'La-Canadienne.'

(c) For the construction of an ice-breaking steamer for the Northumberland straits.

(d) For the construction and completion of a dredging plant for the river St. Lawrence from Father Point to Montreal.

(e) For the purchase or construction of a steamer to replace the fisheries protection cruiser 'Georgia.'

(f) For the purchase or construction of a vessel to replace the condemned fisheries schooner 'Osprey.'

(g) To provide a fisheries protection cruiser for the Pacific coast.

(h) To provide for the construction or purchase of a lighthouse tender and buoy steamer for the Great Lakes.

(i) To provide a boat for lighthouse and buoy service in the Bay of Fundy to replace the 'Lansdowne.'

(j) To establish and maintain a lightship at Pointe Pelee, Lake Erie?

2. Were tenders called for these various items and services? If so, which ones, and what are the dates?

3. Were tenders awarded for any of the above items? If so, to whom awarded, and what were the amounts respectively?

4. If tenders were called and contracts not awarded, why not, and in what cases?

5. Is it the intention of the government to proceed with the construction or purchase of the items above referred to? If so, when and what items?

6. Is it the intention of the government to confine the purchase and construction of government steamers, vessels and dredges, to Canada, that the fair wage clause can be enforced as against contractors and shipbuilders?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries):

a, b, c, d, e, f, g, h, i, j: Yes.

2. (a) Tenders were invited for the construction of a survey steamer for the Pacific coast in March, 1906.

(b) Tenders were invited for the construction of a hydrographic survey steamer for the Atlantic coast in October, 1908.

(c) Tenders were invited for the construction of an ice-breaking steamer for the Northumberland straits in February, 1908.

(d) No tenders were invited for the construction of a dredging plant for the River St. Lawrence as this work is being performed at the government shipyard at Sorel.

(e) Prices were obtained for the suitable vessels available in British Columbia to replace the 'Georgia,' and the most advantageous offer was accepted.

(f) No. The steamer 'Christine' was purchase and exchanged for the steamer 'Constance,' formerly owned by the customs Department.

(g) Tenders were invited for the construction of a fisheries protection cruiser for the Pacific coast in November, 1908.

(h) Tenders were invited for the construction of a lighthouse tender and buoy steamer for the great lakes in March, 1908.

(i) Tenders have not yet been invited for a boat for the lighthouse and buoy service in the Bay of Fundy.

(j) Tenders have not yet been invited for a lightship for Point Pelee, Lake Erie.

3. Yes. Contracts were awarded for the following:

(a) A survey steamer for the Pacific coast to the British Columbia Marine Railway Company, Limited, Victoria, B.C., at $143,000.

(c) The construction of an ice-breaking steamer for the Northumberland straits to Messrs. Vickers Sons and Maxim, of Barrow-in-Furness, at £103,000.

(h) A lighthouse tender and buoy steamer for the great lakes to Messrs. Swan, Hunter and Wigham Richardson, of Wallsend-on-Tyne, at £33,000.

4. The tenders for the construction of a steamer for the hydrographic survey of the Gulf and River St. Lawrence and a fisheries protection cruiser for the Pacific coast are now under consideration.

5. Answered in Nos. 2, 3 and 4.

6. The government is desirous of encouraging the building of vessels in Canada and will always give the preference to Canadian yards over foreign yards when same can be done with due regard to economy and efficiency.

RETURNING OFFICER FOR ST. JOHNS-IBERVILLE.

Mr. MONK asked.

Was J. A. Lussier, a notary of St. Johns, P.Q., the returning officer for the electoral

division of St. Johns-Iberville at the last federal elections? If not, under what authority was it announced for those having claims in connection with said election to call on him for payment?

Hon. CHARLES MURPHY (Secretary of State). The returning officer for St. Johns and Iberville in the election of October, 1908, was Charles Arcand, farmer. His election clerk was M. J. Aimé Lussier, notary, of St. Johns, Quebec.

There is nothing of record in the office of the Clerk of the Crown in Chancery of any action having been taken by Mr. Lussier in the election held in St. Johns and Iberville. Everything that was reported to the office mentioned was signed by Returning Officer Arcand.

SUPPLIES TO ROYAL CANADIAN DRAGOONS, ST. JOHNS.

Mr. MONK asked:

1. (a) Have the contracts for supplies to the Royal Canadian Dragoons, at St. Johns, P.Q., been awarded for the coming fiscal year? (b) If so, what is the name of each contractor and article, and the price of said articles, and (c) was the contract in each particular case awarded to the lowest tenderer?

2. If tenders were called, in what newspapers were said tenders advertised?

Hon. Sir FREDERICK BORDEN (Minister of Militia and Defence):

1. (a) Yes. (b) Contracts were awarded as follow:

For meat to L. Papineau, beef, 7½c per. lb.; mutton 7½c. per lb.

For bread, to Arthur Labelle, 2¾c. per lb.

For groceries and vegetables, to R. Gould—

		Cents.
Bacon, breakfast	per lb.	16
Bacon, green	"	12
Potatoes	"	1
Beans	"	3½
Jams	"	8¾
Butter (in 1 lb. lots)	"	25
Butter (in 25 lb. lots)	"	24
Cheese	"	14
Split pease	"	2½
Sugar, white	"	4½
Salt	"	½
Coffee	"	18
Tea	"	25
Pepper	"	15
Fresh vegetables	"	1
Lard	"	14
Yeast, Royal	per doz.	10

For forage, to George O'Cain—
Hay, $14 per ton of 2,000 lbs.
Straw, $7 per ton of 2,000 lbs.
Oats, 55c per bushel of 34 lbs.

For emptying refuse pits and cleaning chimneys, to Henri Masse.
Emptying refuse pits, $20 per month.
Cleaning chimneys, $1.75 per flue.

For scavenging to Ernest Camaraire.
Emptying latrines, 75cts. per flour barrel.

For removing manure, to T. C. McGinnis, at $8.50 per month.

For washing bedding, &c. to J. B. Thuot:

	Cents.
Blankets	each 5
Cases	" 4
Cases, bolster	" 1
Rugs	" 5
Sheets	per pair 5
Cases, pillow	each 1
White haversacks	" 2
Nose bags	" 1
Hospital clothing, per suit of 3 pieces	15
Hospital clothing, per suit of 2 pieces	6
Towels	each 1
Night shirts	" 2
Table cloths	" 6
Tuques	" 1
Aprons	" 2
Blinds	" 3
Bandages	" 1
Covers, mattresses	" 6

(c) Yes.

2. The St. John 'News,' 3 insertions, and 'Le Canada Francais,' 3 insertions.

Tenders were also called for by 50 posters, 25 in English and 25 in French, posted in or about St. Johns.

ST. JOHNS WHARF, P.Q.

Mr. MONK asked:

1. What amount was expended last year in connection with the repairs to wharf at St. Johns, P.Q.?

2. What amount has been spent upon said wharf since the end of the fiscal year?

3. Was said wharf changed from wood to concrete? If so, why?

4. Who executed such repairs, and were they by contract?

5. Were tenders called for publicly through the newspapers? If so, in what newspapers?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. $157.96 was expended for engineering expenses.

2. The sum of $5,500 was voted for 1908-09, under the head of 'Income,' for rebuilding the old wharf at the upper entrance; out of this amount $5,469.82 was expended as follows:

Labour	$2,451 05
Cement, stone, sand, lumber, &c.	3,018 77

3. The top of the old wharf repaired as stated above at a cost of $5,469.82, was changed from wood to concrete, so as to make it permanent.

4. The work of repairs to the old wharf was done by the canal repair staff, and the materials required, purchased under accepted tenders.

5. Since the work was done by the regular repair staff, by day labour, it was not necessary to call for tenders.

NEW WESTMINSTER PENITENTIARY.

Mr. RALPH SMITH asked:

1. Who was the chief warden of the New Westminster penitentiary from 1876 to 1888?
2. How many prisoners escaped during that period?
3. Was Oliver Adair one of the escaped criminals? If so, what was his sentence and crime?

Hon. CHARLES MURPHY (for the Minister of Justice):

1. Arthur Hill McBride from the opening of the penitentiary in 1878, until, and for several years after, 1888.
2. Fourteen. Of these, nine were recaptured, leaving five escaped convicts at large December 31, 1888.
3. Francis Oliver Adair escaped with another prisoner on September 6, 1888. He was sentenced at Nanaimo, B.C., December 1, 1885, to serve a term of 15 years for the crime of robbery with violence.

GOVERNMENT FISHERY CRUISERS.

Mr. RALPH SMITH asked:

1. How many fishery cruisers does the government own and operate for fisheries protection throughout the whole of Canada?
2. What are their names and where are they separately placed?
3. Has the government definitely decided to build cruisers for the British Columbia fisheries protection?
4. As the House of Commons appropriated a sum for this purpose two years ago, why has the work been delayed?
5. Have the claims for such protection been presented to the department? If so, by whom?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries):

1. Nine.
2. 'Canada.' Southeast coast of Nova Scotia and Cape Breton.
'Constance.' Cape Breton coast.
'Petrel.' Prince Edward Island coast.
'Curlew.' Bay of Fundy.
'Princess.' Magdalen Islands and Lower Gulf Division.
'Vigilant.' Lake Erie.
'Kestrel.' British Columbia coast.
'Falcon.' British Columbia coast.
3. Yes, the government has decided to build a cruiser for the British Columbia fisheries protection service.
4. Tenders were called a year ago for the construction of the cruiser. The tenders received were not considered owing to representations made by some Canadian ship building firms, who suggested some changes in the plans and specifications. The plans and specifications were revised and new tenders called for. These tenders are now under consideration.
5. Yes. Mr. Ralph Smith, M.P., Vancouver Board of Trade, and Hon. Hewitt Bostock.

ST. JOHNS HARBOUR, PROVINCE OF QUEBEC.

Mr. MONK asked:

1. Has a contract been awarded for works this coming spring and summer in the harbour of St. Johns, province of Quebec, and the extension of wharfs, construction of breakwater, and changing the intake pipe of the waterworks from its present location to one above the barracks?
2. If so, to whom was the contract awarded, was it awarded by tender, and what was the amount of the contract?
3. In what newspapers were tenders for the above works called for?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. Yes; a contract was awarded for improving the harbour of St. Johns, province of Quebec, consisting principally of clearing the site of proposed wharf and dredging to the required depth, building a new wharf and breakwater. The contractor might also be required to build in, intake pipes for St. Johns' waterworks, and to take up those now in use.
2. Messrs. John G. Poupore & Company, awarded by tender, schedule rates. Contract to be completed by April 1, 1909, which when moneyed out on approximate quantities amounts to $35,282.
3. Montreal: The 'Jewish Times,' the 'Herald,' the 'Witness,' the 'Trade Review,' the 'Shareholder,' 'La Patrie,' 'La Presse,' 'Le Canada.'
St. Johns, Quebec: 'Le Canada Francais,' 'Le Progres,' the 'News.'
Valleyfield: The 'Progress.'
Lachute: The 'News.'
Richmond: The 'Times.'
St. Hyacinthe: 'L'Union.'
Brockville: The 'Recorder.'
Toronto: The 'Globe,' the 'Star.'
Ottawa: The 'Free Press,' 'Le Temps,' the 'Danebrog.'

MAIL CONTRACT, CHATEAUGUAY.

Mr. MONK asked:

1. Who has now the contract for carrying the mail from the post office at Ste. Philomène, in the county of Chateauguay, to Ste. Philomène station, on the Grand Trunk Railway?
2. What is the yearly cost of this contract and when does it expire?
3. What distance has the present contractor to traverse.
4. Have tenders been asked to carry out a new contract for the same service? If so, what are the names of the parties tendering and their prices?
5. Has a contract been awarded for this same service? If so, at what price and for what length of time?

Hon. RODOLPHE LEMIEUX (Postmaster General):

1. François Labrie.
2. $93.50 per annum. Contract expires March 31, 1909.

3. 2½ miles each way daily.

4. Yes. Godfroi Labrie, $79; J. B. Damour, jr., $69.

5. A contract has been entered into covering the usual period of four years dating from April 1, 1909, price $69 per annum.

GRAND TRUNK PACIFIC LOAN.

Mr. R. L. BORDEN (Halifax). Before the orders of the day are called, I would like to ask my hon. friend the Minister of Finance to have certain information prepared when the government's proposal respecting the loans to the Grand Trunk Pacific is brought down for discussion. I think the House should have all correspondence, reports and other documents relating to the matter. That goes as a matter of course. We ought to have a statement of the amounts actually expended up to date on the prairie and mountain sections respectively; also of the respective sources whence these sums have been derived; also an estimate of the cost when completed of the mountain and prairie sections respectively; also a statement of the amount required to complete each of these sections; also of the outstanding indebtedness of the corporation in respect of each of these sections and of the rolling stock; also a statement of the available assets of the company in respect to each of these sections. We should have full particulars of the location of these roads in relation to other existing roads now in operation; also a statement of the amount which has been expended on rolling stock and the dates when expended; also information as to the uses to which the rolling stock has been applied; and under what arrangement and for what consideration it has been so used; also a statement of the stock issues of the company and the proceeds thereof, and for what consideration and under what conditions or arrangements the stock has been disposed of and by whom it is now held; also information as to how the branch lines have been financed, and how they are to be financed; also information as to what these bonds would realize now if placed on the market, according to the opinion of the government; also information as to the prior mortgages now outstanding, of which I understand there are three; also a summary of these and copies to be laid on the table in so far as they have not already been laid on the table; also information as to the total anticipated capitalization of the eastern and western divisions respectively of the National Transcontinental; also all the information within the possession of the government as to what will be the amount of the total fixed charges upon each division and the total line when completed; also information as to the actual amount invested in the enterprise by the promoters of the undertaking. If there be any contract under which the indebtedness mentioned by the Minister of Finance this afternoon, the indebtedness of the Grand Trunk Railway to this country has arisen, I would like a copy of that contract laid on the table.

Mr. FIELDING. That refers to before confederation. I do not know whether there would be such a contract but we will look it up.

Mr. R. L. BORDEN. I do not know either.

Mr. FIELDING. It was back in 1862.

Mr. R. L. BORDEN. I am asking purely for information because that is a subject I know absolutely nothing of, and I would like to get some information about it.

I would like also a statement of all the indirect liabilities of Canada by way of guarantee or otherwise at the present time.

I would be glad also to have a statement of the results of any examination of the books of the Grand Trunk Pacific Railway Company by the government or any officer of the government made in connection with the proposal which the government contemplates submitting to the House.

I would like also information as to the number of miles actually completed; the number of miles under operation during construction, if that is the proper term; and generally, information as to how far the work has progressed upon both the prairie section and the mountain section in all aspects of the work.

I have observed question No. 1 upon the Order Paper standing in the name of the hon. member for Brandon (Mr. Sifton). As this question has been upon the Order Paper since the 26th day of January I presume the answer to it has been prepared, and if it be convenient to the government I would be glad if they could give us that information at the same time.

Mr. FIELDING. So far as the information the hon. gentleman has asked for is within the possession of the government or accessible to the government we shall do our best to get it down. The order is a pretty large one and it deals somewhat in futures and I am not sure whether we can cope with it all. We will see that the hon. gentleman's request is put in the hands of officials with instructions to get as much of the information as is possible.

Mr. R. L. BORDEN. Very well.

Mr. FIELDING. Would my hon. friend mind sending me his memorandum?

Mr. R. L. BORDEN. The hon. gentleman is welcome to it but I am afraid he cannot read it.

Mr. FIELDING. I think I will make it out.

Mr. HAGGART. The hon. member for Simcoe (Mr. Lennox) has two questions on

the Order Paper, one of them with reference to the original quantities that were estimated to be on the national Transcontinental Railway and the quantities as found by actual work upon the road. I would like to have that information before the discussion.

Mr. LENNOX. My hon. friend refers to the order of the House for the production of papers which has not yet been complied with. There is another motion on the Order Paper bearing on a somewhat similar question.

Mr. GRAHAM. I will ask the commissioners to give me that matter with all possible speed. I will look up the motion on the list and see what it calls for.

WATERS OF LAKE SIMCOE.

Mr. SAMUEL SHARPE. I would ask the Minister of Public Works when we may expect the return ordered by the House on the 8th of February respecting the measures taken by the government to lower the waters of Lake Simcoe and Lake Couchiching?

Mr. PUGSLEY. I thought that had to do with the Trent Valley canal and so was in the Railway Department, but I will make inquiries.

CUSTOMS AND INLAND REVENUE SEIZURES.

Mr. BARR. When will the return be brought down asked for on the 8th of February, concerning the seizures of the Department of Inland Revenue?

Mr. TEMPLEMAN. I was not aware a return had been ordered, but I will give instructions to have it brought down.

Mr. PATERSON. Does the hon. gentleman refer to the customs seizures?

Mr. BARR. I also asked for customs.

Mr. PATERSON. The return has been brought down with regard to both.

PAY OF MILITIA AT HALIFAX.

Mr. CROSBY. I am credibly informed that the men of the permanent force in Halifax have not yet received the last pay due them. If that be the case when will they be paid?

Sir FREDERICK BORDEN. I am informed that the fund for paying the permanent force was exhausted on the 7th or 8th of this month, but fortunately there was plenty of money voted during the last session of parliament for the whole militia. A slight readjustment will be necessary and the supplementary estimates which were laid on the table of the House a few days ago will provide for that readjustment. So soon as these estimates pass which I hope will be in a short time—perhaps within a few hours if the House consents—the pay will be available. I have heard no complaint from any source, and I wish to take this opportunity of reassuring the junior member for Halifax and the permanent force that the pay will be forthcoming in due season.

SUPPLY—RURAL FREE MAIL DELIVERY.

Mr. FIELDING moved that the House go into Committee of Supply.

Mr. J. E. ARMSTRONG (East Lambton). I wish to direct the attention of the House to some matters pertaining to the department of the Postmaster General. It has been my privilege to have had a seat in the House for the past six years and I must say I have appreciated the ability shown by the Postmaster General both as Solicitor General and in his present office. And while I appreciate the efforts he has been putting forth on behalf of the people in general, I cannot fail to appreciate also the ability or the agility he has shown in taking a right about face on the important question of furnishing better mail facilities to the rural districts. I need not remind the House of the statements made by the Postmaster General for some years past on the important measure introduced on a number of occasions with regard to the establishment of rural free mail delivery in Canada. As we are all aware the hon. gentleman has distinctly stated many a time that we could not expect to have such a system until we had a population 20,000,000, and that it was a luxury that could only be thought of as ideal. Last session a resolution was moved urging upon the government the necessity of dealing with this matter in an energetic manner Every member on the government side of the House voted in direct opposition to that resolution, and it was generally understood that they would not take any other position on that important question. However, just on the eve of the general election the hon. Postmaster General, in a speech which he delivered at Niagara Falls, showed plainly the position he took in regard to it. He showed that it was his desire to make a political football of the question, by announcing to the people of the Dominion that he was going to give them free rural mail delivery. Not only did he humbug the people by his announcement on that occasion, but a number of Liberal candidates, in their political campaigns, announced repeatedly in their constituencies the wonderful advantages which the people would receive from the boon granted to them by the present government. I have

here papers showing that several Liberal members of parliament told their constituencies that they were not only going to get their mails delivered at their doors if they returned this government to power, but the boxes would be furnished to them free, that all they would have to do would be to bore a post-hole and put up a post, and the box would be delivered to them.

Let me go a little further. On the 17th of September, 1908, the Post Office Department issued a pamphlet which was quite different from the one which was issued only a few weeks ago. In the first pamphlet you will not find any reference to the price of the mail boxes or any suggestion that the people will have to pay for them, while in the later pamphlet the Postmaster General distinctly states that the cost of these boxes, with the necessary fittings, will be $3 each, and they can only be obtained from the Post Office Department. I cannot understand why the minister found it necessary to issue these two different pamphlets, were it not that he felt that the position which he had taken in the first place was not likely to meet with the general approval of the people.

However, let us look into this matter of the boxes for a few moments. The Postmaster General stated in reply to a number of questions I asked on the subject that he had purchased these boxes in the city of New York from the International Mail Equipment Company of New York. I would like the hon. gentleman to explain to this House who are the members of that company or tell us something about it; because I have here, from the latest report of the United States Post Office Department, a list of the firms which have supplied the boxes for the rural districts of the United States, not only during the last year, but during the past five years, and among the names of 300 firms I do not find any such name as the one mentioned by the hon. Postmaster General. How the hon. minister came to purchase 6,000 boxes from a firm which apparently has not been in the habit of manufacturing boxes for the rural districts of the United States I cannot quite understand. Further, in examining into the cost of the boxes used in the United States and comparing it with the price paid by the Postmaster General, I find a very great difference. For instance, out of over 300 boxes that are supplied to the Post Office Department of the United States there are two boxes that cost $2.75 each one at $3, one at $3.25, one at $3.50, and one at $4. The balance of the boxes cost only $2.50 or less. The average would not exceed $1.50. Yet the hon. Postmaster General goes to New York and purchases 6,000 boxes, costing in New York $3 each, and, according to his own statement, he pays the freight from New York to Ottawa and the customs duties on them, and delivers them to the different districts in Canada, and then they are not lock boxes. They are to be supplied with locks from the department at cost. So that the people of Canada will find, after the freight and customs duties are added to the amount paid for the boxes in the city of New York, and the amount they will have to pay for locks, that these boxes will cost them over $5 apiece. For 6,000 boxes that will amount to over $30,000. Let us compare that with the amount paid by the people of the United States for their boxes. The boxes are delivered to the farmers in the different districts, and the department at Washington pays for them only from 42 cents to $2.50 each. I hope the minister will be good enough to explain to us his position in that regard.

Then, I might ask why it is that in the proposition the hon. Postmaster General has made to this House, there is no provision for any reduction in the number of post offices; while the Post Office Department of the United States has been able to dispense with over 100,000 post offices as a result of the splendid system they have inaugurated in that country. I might ask the Postmaster General still further why it is that in the splendid system he has been granting to the people of the Dominion, he is not delivering registered letters and issuing money orders? He is aware that in the United States registered letters are delivered and money orders issued to the people living along the main and side roads, if they live within one mile of their box. and they are also able to purchase post cards and stamped envelopes, and have many other advantages. I might go on to speak of the parcel post. When a parcel that is too large for the box or a money order or a registered letter comes to a man who is living on a mail route or stage route at the present time, it would be necessary for him to go to the distributing post office, perhaps five miles away, to receive his mail or else he would have to depend entirely on the carrier. Further than that the minister knows that the system which he has inaugurated in Canada, although it may be called a step in the direction of rural mail delivery, can have no other result than to create contention and strife in the rural districts of Canada. I cannot understand why a man who happens to live on a mail or stage route—and I am sure the department will have difficulty in defining just which are the existing mail and stage routes—should have his farm increased in value owing to the advantages conferred on him by that delivery, by having his daily papers, having market quotations and many other advantages denied to others whose farms do not happen to be on mail routes. I am sure that when the

farmers thoroughly understand this question they will urge upon the Postmaster General the necessity of enlarging this scheme and giving this service to the thickly settled portions of the Dominion of Canada. The minister knows that the United States system is carried on under certain definite regulations, and while he may contend and try to becloud the issue by saying that our country is sparsely settled, that we cannot possibly grant to the people of Canada rural free mail delivery, yet he knows that in the United States the sparsely settled districts are not being served by rural free mail delivery, and the United States government have no intention of serving these rural districts until they become sufficiently populated to come under the existing regulations. The United States regulations provide that the standard route must be 24 miles long, that there must be 100 families on it, and that 84 of these must be willing to pay for a box and put it up before any route can be established; and if the route should be shorter than 24 miles the rural mail carrier's wages are proportionately reduced, although even if the route is shorter than the standard it must contain a proportionate number of families. Hence I claim that it is nonsense for members of the government to contend that the Americans have free delivery in the sparsely settled districts.

I would ask the minister what he intends to do with his present surplus. He may say that he is going to leave it as part of the Consolidated Revenue Fund, but I would ask him if he thinks it is wise to make the Post Office Department a taxing department, that the postal service should be utilized to gather taxes from the people of Canada so that that money may be put into the different departments and, to a large extent, squandered as in the past few years it has been squandered. Does the minister propose to establish an all-red route, an all-red cable, and extend, as he seems to be willing to extend, the carrying of mails into foreign countries at a nominal charge? There is no talk of these propositions not paying, nothing is said with reference to the subsidies and steamship subventions which amounted to over $1,250,000 last year, for the carriage of mails into foreign countries. We hear nothing of these services not paying, and it is our duty to see that the men living in the rural districts, the men who pay two-thirds of the taxes that enable the government to carry on the public service, receive better facilities for the delivery of mail so that they may enjoy some of the advantages which are granted to the cities in Canada.

I know that the Postmaster General will say that we have been improving the postal service, that we have been increasing the number of postoffices in the scattered districts of Canada and to some extent in the thickly settled portions. That may all be true, but the minister knows full well that if we examine into this question more thoroughly he will find in Ontario some 40,000 square miles of thickly settled country in the rural districts of Ontario in which he could satisfactorily establish rural free mail delivery. He might also find in Quebec some 30,000 square miles of similar territory and then he might go to the maritime provinces or to the western provinces. When the minister thinks this is not a live question in the western provinces, he is sadly mistaken, because he must remember that large numbers of people are coming into those provinces from the United States who have been accustomed to these advantages in the United States and who feel the need of like advantages in Canada. It is only fair and reasonable that the people of the rural districts, who contribute so much of the money which permits the free delivery in cities, should enjoy similar advantages to those enjoyed by residents of cities. We cannot but appreciate that the men living in the rural districts are justified in urging on the government the necessity of the extension of this system.

Let us glance at the progress that they are making in the United States. Some 900 counties are to-day entirely covered by rural free mail delivery, and where necessary the postoffices have been dispensed with, saving a large amount of money. The star-route system which the minister claims to be established in Canada is not employed in the United States except in the most sparsely settled portions which enjoy free delivery. According to the statement of the minister, 44 routes have already been established in Canada and the actual cost to the department has been only $663 per annum. $663 per annum is the estimate given by the Postmaster General for the establishment of 44 routes, which amounts to an average of ouly $15.06 per route. Does the minister think that this is an extravagant proposition? Does he think it would involve a tremendous drain on the revenue of his department if he did likewise in the thickly settled districts of this country? I am satisfied that when he investigates this question, and I hope he will, he will see that we are not asking anything out of reason in regard to the establishment of this system in Canada.

Now, let us look a little further. The minister tells us that the system in the United States is a very expensive system. I would like to refer to a previous debate in this House in which the minister tried to becloud the issue and to lead the people of Canada to believe that this system was so expensive that we could not possibly think of undertaking it in the Dominion at this session of parliament. I am

satisfied that when he examines the reports of the United States he will no longer compare the Dominion of Canada, with its six millions of people, with the United States with its eighty-five millions, and he will not hold up before our people the expenditure of $35,000,000 in the United States for the purpose of frightening us and telling us that it would bankrupt Canada if we were to expend any such amount of money. Does the hon. gentleman not realize the fact that 18,000,000 of people in the United States are being served by rural free mail delivery, and that the $35,000,000 that are being spent on the system amounts to only $2 for each family that is being served? But that does not take into account the income received by the Post Office Department for the sale of stamps to people in those rural districts, and the amount of money that is spent on stamps in outside districts for sending mail matter to those people who are living in the delivery districts. Let the minister appreciate this fact that last year when there were 40,000 routes in operation supplying 18,000,000 of people the system covered 1,000,000 miles of road; the carriers covered an aggregate of 200,000,000 miles and 2,000,000,000 pieces of mail were handled by the rural free mail delivery carriers on those 40,000 routes. Does the minister not realize that in handling this enormous amount of mail matter there is an enormous revenue coming into the department from the stamps that are sold, both to the people who send the mail and the people who reside in those rural districts? Now, the amount of revenue that comes into the Post Office Department from those 2,000,000,000 pieces of mail matter only represents a cost to the people of $2 per head. It is evident when you take into consideration the enormous revenue that is gathered under this system that the people of the United States do not look upon rural districts as being producers of deficits, but the reverse. Only a year or two ago the Postmaster General of the United States stated that instead of the rural free mail delivery system being a deficit producer, it is a revenue producer. I would remind the hon. gentleman that the President of the United States distinctly urged upon Congress the necessity of extending this system, and giving a better service and a more expensive service even than they have at the present time.

But the minister will say they had a deficit of $16,000,000 last year. That is true. The increase in the post office revenue for the last number of years has exceeded over 9 per cent, while last year the increase did not exceed 4·24 per cent. But if he will take into consideration the fact that over $9,000,000 were paid in increased wages to employees in the Post Office Department and that there was a falling off in the revenue owing to the financial depression in that country, he cannot but conclude that, had it been a normal year and under normal circumstances, there would have been a surplus instead of a deficit. Now, let us look at the matter in another light. In 1896 when the United States government undertook the establishment of rural free mail delivery the deficit in the Post Office Department was over $11,000,000, at a time when they had only expended on the system $14,000. Last year when they were expending $35,000,000, the deficit only amounted to a little over $6,000,000, nearly one-half of what it was when they were expending only $14,000 on the system. I wish to quote from the annual report of the Fourth Assistant Postmaster General made in 1903:

> The average number of routes in 50 states and territories was 315. The average number of houses on each route was 137. The average population on each route was 585; the average number of boxes, 70; the average number of patrons, 381; and the average cost of each route, $597.80.

Those people who oppose the introduction of the system into Canada should take into consideration these figures, which go to show that the United States has not established rural free mail delivery at all in the sparsely settled districts, nor do we on this side of the House urge on the minister to establish rural free mail delivery in any districts but those where the system can be carried on successfully, and that are thickly populated. Now I wish to call the attention of the minister to the fact that it is necessary for him to make a further investigation into this subject. He has been able to go part way, by granting rural free mail delivery to a portion of the country. But there is no doubt in my mind that, before many years pass, he will be compelled by public opinion and by the position the people are taking in many districts to grant this advantage to the thickly-settled portions of Canada generally. The increase in the value of the farms in the United States has been very great where rural free mail delivery has been established. Take a farm worth $5,000; if it increases only five per cent—and prominent men in the United States say that the increase in farm values has been a great deal more than five per cent—there is an increase of $250. If the minister were called upon to spend an average of that amount in delivering mail to the people on these farms it would mean that the farmers could afford to pay $5 a year for fifty years for this great boon. But it is not necessary for them to pay any such amount. I have here the statements published by Mr. Hamilton, of the Toronto 'News,' who gathered a great mass of facts in regard to the establishment of rural mail

delivery in the county of Lincoln. I need not tell the minister that many counties in the eastern provinces of the Dominion have what are called militia maps. These maps show exactly the number of homes on the different roads. By the aid of such maps, you could lay out routes for free mail delivery that would cover the county completely. The minister, of course, is aware of this fact. I wish I had time to place on record the splendid material which has been gathered concerning the county of Lincoln by Mr. Hamilton. But I may say that he has shown that sixteen routes would cover the county, and that the cost to the people of that county would not exceed fifty cents per head over the cost of the present system. Lincoln is not thickly populated, for if the minister will investigate the figures, he will find that there are only thirty-four families to the mile. After studying these facts, as I have done, I cannot come to any other conclusion than that we have in the Dominion of Canada at least 1,700,000 living in the rural districts who could be successfully served by a rural free mail delivery system. If we take the minister's system of delivery in the county of Lincoln, even if it were thoroughly carried out there would be only 600 people who would be reached, while 2,500 people, who have as good a right to mail deliveries as the others, would be compelled to do without it. I only call these matters to the attention of the minister, that he may investigate the matter more fully. If he will do so, I am satisfied that he can only come to one conclusion, the conclusion that I reached many years ago—that it is time for us not only to investigate this matter but to make the system part of the Post Office Department for the benefit of our people generally.

There is another matter of which I wish to speak. I would urge upon the Postmaster General (Mr. Lemieux) the necessity of investigating the mail matter that is coming into this country under the British preference. I wish I could bring the minister to see the necessity of appointing a board whose duties would be to cause to be examined practically every bit of literature coming into this Dominion. There is no doubt in my mind that masses of literature are coming into this country whose only tendency is to degrade and demoralize the people. The Postmaster General can go to the bookstores of this very city and find stacked up there the cheap novels coming from Great Britain, and also the cheap weekly periodicals, whose influence upon the people is so injurious. The Minister of Customs (Mr. Paterson) said, a few days ago, that the amount of material coming through his department in the shape of books and novels was $350,000 worth, and that the cheap periodicals and papers came in free. While the Postmaster General may try to saddle the Minister of Customs with some responsibility in this regard, I cannot but feel that we should have a board of censors. For, though you put your best and ablest men to teach in your colleges, to preach in your pulpits, to lead in your sabbath schools, yet you may depend upon it that, if you allow the literature that is now coming into this country to continue to come in, much of the good that our best institutions would bring to the people will be neutralized.

Another suggestion I would make to the Postmaster General is this: We need inspectors in the Post Office Department. The Postmaster General may say that he already has inspectors in the different districts of the Dominion. That is true. But their duties are so heavy that they are not able to go into the rural districts and examine the post offices. What we need is a body of inspectors whose powers are as wide as the Post Office Department can possibly grant, and whose duties will be to go into the different post offices, examine the systems in use, look into the finances, consider the different postal routes and in every way seek to improve the carrying and distribution of the mail.

But that which I wish particularly to impress upon the minister is what I have said in regard to the establishment of rural free mail delivery. I sincerely trust the Postmaster General will receive these remarks in the spirit in which they are made, and will investigate this system which is in vogue in the United States. For. I am satisfied, that had the hon. gentleman investigated the systems now in operation in Great Britain, New Zealand, Germany, France, and other countries, he would have found that the best system in vogue for our purposes is that of the United States. The people of that country have had the advantage of the system for the last eleven or twelve years, and it is time that we began to investigate it, to say the least. Surely we will be able to improve upon the position they have been taking because we will be able to benefit by the mistakes made in the past. I would urge on the minister the necessity of investigating this question without further delay.

Mr. C. J. THORNTON (Durham). As a young member, representing a rural constituency, I would like to say a word or two on this question of rural free mail delivery. I feel particularly interested in it because I represent a county which is almost entirely agricultural. I have been impressed with the conviction that there should be something done in the way of giving our agriculturalists better mail facilities. I was therefore glad when the government proposed to institute such a system, and I have been pleased with the

spirit which the hon. Postmaster General has shown towards those members who have seen fit to interview him in connection with postal matters. I must say, without any desire to flatter, that I think the Postmaster General is anxious to serve the people and the rural constituencies in the best manner possible. But in looking over the matter, I must say that it does not appear to me that a comprehensive plan of rural free mail delivery has been inaugurated by the minister such as we should have had. Looking at the conditions in my own county, it appears to me that the plan devised by the minister is one which benefits an already favoured class. Take my own county as an example, and what applies to my county will apply to nearly all the rural constituencies in Canada. In my county there are about 140 miles of mail routes, and the people on those routes are the most favoured so far as mail facilities are concerned. They have nearly all of them, and have had for years, a system of rural mail delivery of their own. They pay the mail carrier a yearly sum of from $1 to $2 each, in return for which he drops their mail in boxes placed at their gates. In my county the residents along the mail route pay the carrier $1.50 per year for that service. But outside of those mail routes, the great majority of the people have no mail facilities of that kind. Taking my county again, I find that there are about 1,500 miles of travelled roads along which farmers reside, but there are only 140 miles that would be served with free mail delivery, according to the plan laid down in this little pamphlet. These are particularly favoured, while the people on the other 1,350 miles enjoy no such mail facilities. I would like to see the minister bring down a broad, comprehensive plan of rural free mail delivery which would serve the great majority of the agricultural class. I do not say that he could serve all the people, but I do believe that a plan could have been devised which would have given free rural mail delivery to a much larger portion of the agricultural class.

But there is another matter of more importance, and that is that there are large communities of wealthy, tax-paying people who are without any postal facilities whatever. What I mean by that is that they live long distances from the post office. There are communities in which there are large thickly settled districts of comparatively wealthy people, who contribute largely, directly and indirectly, to the revenues of the country, and who have not anything like efficient postal service. In my opinion it should be the first duty of the Postmaster General to see that these communities are served before any system of rural free mail delivery is instituted.

There is another question of importance to my mind, and that is the inadequate compensation paid our rural postmasters. I know that there was a re-adjustment of the scale of remuneration paid to postmasters a few years ago and that the postmasters get more now than they did previously. But I want to point out that while the revenues from many of our country post offices have not increased, the work has increased three-fold. I need but mention but one office in my own county, which is a fair sample of many of them. The work in connection with that office has been increased three-fold inside of twenty-five years, while the revenue has not increased. Twenty-five years ago we had only one daily paper and to-day we have twenty-five. Twenty-five years ago there were twenty-five weekly papers taken at that post office and there are a hundred and twenty to-day. And then we have to-day catalogues and circulars by the hundreds and thousands delivered at that office. Twenty-five years ago we had none of these. I know, as a matter of fact, that it takes in that office one person, seven to eight hours a day delivering postal matter, and for this he is paid some $35 a year or about 11 cents a day, and there has always to be some person in attendance. That is one of the things which should engage the attention of the Department of the Postmaster General.

There is another matter of importance, and that is the re-arranging of the postal route. In my own county there is a mail delivery at a certain point on the Canadian Pacific Railway and the mail from that point, which is a distributing office leaves that office at 11 a.m. by horse and buggy, and delivers mail at a certain office on the route at 4 o'clock, p.m. Now, at that very point there is a mail train passing within a stone's throw of that office at 11.40 in the forenoon and there could be a mail delievered at that office at that hour, instead of waiting until a horse travels 11 or 12 miles to reach the office at 4 o'clock in the afternoon. We are away behind the times when we allow such a state of things to exist. Unfortunately this is not an isolated case for there are very many others all over the country. Now, first of all I would like to see a good comprehensive system of free mail delivery, but before that I would like to see postal facilities given to many communities who have no adequate postal facilities to-day and who need them badly. In the second place I would like to see better remuneration paid the country postmasters, and in the third place I would urge a re-arrangement of the postal routes so as to give the people the very best facilities for the delivery of mail matter. I hope the Postmaster General will give these matters his best attention.

Hon. RODOLPHE LEMIEUX (Postmaster General). I have listened with great attention to the remarks of the hon. mem-

ber for Durham (Mr. Thornton), and even though I do not share his views I must congratulate him on the manner in which they were expressed by him. I am sure the hon. gentleman will be quite an addition to the House and especially to His Majesty's loyal opposition. I have taken note of his suggestions for improvements in our postal system, and will give them attention. As regards the number of post offices in the country districts I may tell the hon. gentleman that since I have been Postmaster General it has been my aim and my pleasure to increase as much as possible the postal facilities by adding to the number of post-offices and thereby reducing the distance between those previously existing. In the olden times when the population of this country was sparser the distances between the post-offices ranged from 10 miles to 20 miles, but of course that system got out of date and in view of our buoyant revenues I decided some years ago that we should reduce the distances between post offices to from 3 miles to 6 miles which is about the present average. As regards better remuneration for Postmasters I would remind the hon. gentleman that under the regime of the Conservative government postmasters were paid $12 a year, and that when Sir William Mulock took office he increased that to $25 a year and when I became Postmaster General three years ago I came to the conclusion that the surplus we had in the department entitled us to increase the remuneration of our rural postmasters so as to give them $35 a year. I also increased the percentage on rental, fuel, and light and to-day, generally speaking, our postmasters derive quite a nice revenue from their offices and there are no complaints. As to rearranging our postal routes I may inform the hon. gentleman that that rearrangement is going on quietly throughout the country. As new settlers go into New Ontario and New Quebec, and the west, we are naturally forced to rearrange the postal facilities and to give to outside settlements the facilities which the travelled routes enjoyed for many years. The inspectors in these new districts have received special instructions in that regard and I can assure the hon. gentleman that the good work will be continued in the future. I now come to the question of rural mail delivery and I hope my remarks will be brief. My hon. friend from Lambton (Mr. Armstrong) referred to my right about face on that question but I can assure him that I made no right about face at all. I acted in perfect consistency with the views expressed by me on previous occasions in this House. I said that in view of our area, of our scattered population. and of our revenue, I could not favor for Canada the same system of rural free delivery which had been adopted in the United States. But at the same time I said I was in favour of the system known in the United States as the star route system, and that I would be glad to be able to adopt it as an experiment in Canada.

Mr. ARMSTRONG. Will the minister say when he first made that statement?

Mr. LEMIEUX. I have not 'Hansard' at hand, but I shall later on give my hon. friend the citation. The hon. gentleman will remember that I pointed out that in the United States they have a dense population and a large revenue, which justified free rural mail delivery, but that we in Canada having the same area but less revenue and less population could not so advantageously adopt it. I stated at the same time I would be in favour of the star route system and that is the system which we inaugurated in Canada a few months ago. When in the month of September last I was in Ontario with the Prime Minister, the question of the star route system had been discussed not only by the officers of my department but by the cabinet several months before, and I never dreamed that I would be accused of trying to corrupt the electors of this country, because on the 15th day of September at the opening of the electoral campaign I announced to the people of Canada that we had decided to establish a system of rural mail delivery. I do not see anything smacking of corruption in that announcement It is a matter of public policy ; and if the government could take credit for the establishment of that policy, I do not know what power would prevent me from announcing the policy and giving due credit to the government for it.

Why, Mr. Speaker, if the announcement I made at Niagara Falls was an act of corruption, I only followed in the path of the hon. leader of the opposition, who two years ago in the Halifax platform stated that if he were supported by the people and became Prime Minister, he would give to the people of this country free rural mail delivery, and recently, at a banquet given by his friends under the roof of this very building, he stated again that if he were placed at the head of affairs of this country, he would give the people of Canada free rural mail delivery. I do not intend to give the people of Canada free rural mail delivery, as they have it in the United States, but I will give to the people of Canada the measure of free rural mail delivery which I established in September last, and which is now working fairly well. I did not say in my speech at Niagara Falls that I would give every farmer a box where collection and delivery of the mails could be made every day. I have the manucript of the speech which I delivered

on that occasion, and which was published verbatim on the 16th September, in the Toronto 'Globe'; and here are the words I used:

As I have often stated in parliament, it is a splendid system which I admire greatly, and which can be introduced step by step in Canada. For some two or three years, acting under my instructions, the officers of the department have been studying the main features of rural delivery as operated in the United States with a view to the possible introduction of a scheme in accordance with our revenue, population, and physical conditions.

Towards that end, the Post Office Department has evolved a scheme of rural delivery and collection from the present system of stage routes whereby the rural population of the country may be able to receive and post all ordinary mail matter at their doors instead of having to drive from two or three miles to the nearest post office for that purpose.

I have, therefore, determined, with the consent of my colleagues to equip all existing mail routes in Canada with rural delivery boxes, under regulations to be published and enforced shortly. At the junction of every concession line with the main road the people will also be given the privilege of having boxes located for the receipt and collection of their mail, as desired.

The department has made all arrangements for the carrying out of this scheme, and will at once proceed to inaugurate it. This system of rural mail delivery can be introduced at a cost which the country can afford to pay. It will evolve and expand gradually with the growth and development of Canada and at a ratio of cost that will not prove burdensome. It is, on the whole, a great postal reform which will be hailed with delight by the farmers of Canada.

That is the declaration I made, and it was not made with a view of corrupting the electorate—far from it. I do not believe the farmers could be induced to vote for the government simply because the government does its duty in placing postal boxes on the road for the collection and delivery of letters. Mr. Speaker, there are two systems of rural mail delivery: there is free rural mail delivery, and there is the star-route system. The free rural mail delivery as differentiated from the star-route system, consists in the delivery and collection of letters, papers, parcels, registered letters and registered parcels. In fact, free rural mail delivery, as they have it in the United States, serving, as my hon. friend has stated, eighteen millions of people, is simply a post office on wheels, equipped with postal facilities, postal notes and money orders. That system is a most expensive system, which we in Canada are not in a position to adopt. The other system, the star-route system, is described in this blue-book, which was distributed to all members of the House a few days ago, in these words:

Mr. LEMIEUX.

Any person living on or contiguous to a rural mail route and not within one-quarter mile of the corporate limits of any city, town or village, who desires his mail deposited in a box authorized by the department at a given point on the line of the route by the rural mail courier, may take advantage of the opportunity offered.

That is to say, the ordinary mail courier starts on his route with the mails, and if the patrons on each side of the route have these boxes, he delivers to or collects from the boxes, but he does not sell postage stamps and does not deliver registered letters unless an order is given to him by the patron to do so. That system is also in vogue in the United States; but before I proceed to explain it more fully, let us see what are the cold facts and the cold figures of the cost of free rural mail delivery in the United States, how the system has evolved in that country and how it has come to attain the proportions which it has to-day. Now, I will answer the questions put by my hon. friend as they arose in the course of his remarks. Rural free delivery has been in operation in the United States for over twelve years. Starting as an experiment in 1897, with 83 rural routes, the number has increased in the following gradation: in 1898, there were 148 routes, in 1899, 391; in 1900, 1,276; and since that time the number has increased by leaps and bounds until at the close of the fiscal year 1908 there were 39,277 routes in operation. What about the expenditure for these routes? Remember always that we have practically the same area as the United States. The expenditure for rural mail delivery in 1897, when the experiment was started, was $14,884, a very humble figure; but in 1898 it was $50,241; in 1899, $150,000; in 1900, $420,433; and in the fiscal year ending the 30th June, 1908, the expenditure for free rural mail delivery in the United States, which my hon. friend from Lambton would be so happy to see established in Ontario, Quebec, and the other provinces, had reached the stupendous figure of $34,361,463. It began in 1897. Then every politician in the United States, every congressman was anxious to have his little free rural mail delivery in each county and each state and to-day the Postmaster General of the United States throws up his hands and says, raising his arms to heaven: 'It is startling, I do not know when it will stop.' What about salaries to rural mail carriers, because you cannot expect them to perform that duty without pay. As they are always on the route they are quite friendly with the powers that be, they are pretty good politicians themselves and try to get from the United States treasury the best salaries they can. The average salaries paid to rural carriers in the United States by biennial periods since 1897, have been as follows:

1897	$178
1899	383
1901	406
1903	532
1905	650
1907	711

For 1908, the year of the presidential election, the average was $877.68. These are the salaries paid to each mail carrier for the beautiful but expensive system of free rural mail delivery in the United States. The United States, of course, can afford to have that luxury. As I stated on another occasion, my hon. friend from Lambton (Mr. Armstrong) may be in a position to travel in an automobile. His revenue may justify him in making that expenditure, but a poor man like myself will always be satisfied to travel in the tramway. However, my hon. friend may say: 'Why do you not travel in an automobile? You will get a breath of fresh air and besides it is more luxurious.' Of course it is, but it depends on the revenue. My hon. friend can travel in an automobile and I can only afford to travel in a tramway. Well so far as the mails are concerned the United States can travel in automobiles and we must be satisfied with the ordinary vehicles.

The receipts of the United States postal department from all sources during the last fiscal year were $191,478,864.41. The expenditures amounted to $208,351,886.15, showing a deficit of $16,872,222.74. The expenditure of the Post Office Department in the United States on account of rural free delivery forms the second largest item in the total expenditure for the year. It is exceeded only by the expenditure for railway transportation. Of the total amount of the deficit for the last fiscal year, which is the largest in the history of the United States Post Office Department, $9,891,321.92 is due to increased rate of pay to post office clerks, letter carriers, railway mail clerks and rural carriers. The increased pay of the rural carriers accounts for $6,594,837.18, of this deficit. That is to say 66-⅔ per cent of the whole deficit is eaten up by the free rural mail delivery. It is estimated that the rural delivery routes will cost $35,500,000 for the fiscal year 1909 and considerably over $36,000,000 for the next fiscal year, 1910. These figures are all taken from official returns. I wish to quote the words of the Postmaster General of the United States who says in his last report of the rural free delivery system:

> The expenditure for the fiscal year ending June 30, 1897, was $14,840, while for 1908 it was $34,361,463. What the expenditure will be ten years from now is startling to consider.

If that is not a doleful expression from the Postmaster General of the United States I do not know what it is.

The whole question in a nutshell is: Can Canada afford the luxury of free rural mail delivery as they have it in the United States or can she not? I claim and the figures are there, that we are not in a position to operate a similar system in Canada, but that we can evolve from our present system a scheme of rural mail delivery which our population and revenue will justify.

Mr. ARMSTRONG. The minister admits that 18,000,000 people in the United States receive their mail delivered at their doors in the rural districts. Has he any estimate as to the number of people in Canada living in thickly settled districts who would likely be served? There cannot be two million.

Mr. LEMIEUX. It is very easy to learn from the census returns which are the thickly-settled and which the sparsely-settled portions of Canada. I do not need to send my officers to prepare a statement showing these conditions. Any one who is at all conversant with the different sections of Canada knows that this section of Ontario in which my hon. friend (Mr. Armstrong) resides is a thickly-settled section, while many of those in the west are sparsely-settled. I do not mean to be at all demagogic, but I claim that what the thickly-settled portions of Canada receive, the sparsely-settled portions should receive also; I do not want to discriminate in this matter; what the people of Ontario and Quebec receive, the people of the west must also receive.

Now, in the United States also they have the star route system. The department inaugurated the policy of delivering mail into and collecting it from boxes along the lines of star routes, and an obligation requiring such service was incorporated in the new contracts as they were made from year to year covering the four contract sections. The service is incidental to the transportation of the mail over star routes, and involves no specific increase in expense. These facilities supply a valuable convenience to rural residents, and are appreciated. The Postmaster General of the United States says in his report:

> The contracts for star-route service in all parts of the United States now provide for delivering mail into and collecting it from boxes along the lines of the routes. This feature of the service has proved highly satisfactory to the large number of patrons so served, and is recognized as a valuable public convenience.

Now, our system, which is the star route system, must have regard to the vast area to be served, and also to our population and our revenue. What is our postal revenue as compared with that of the United States? The revenue of our Post Office Department for the year ending March 31,

1908, was $9,483,166.13. There is quite a difference between this and the revenue of the Post Office Department of the United States. And, although we have about the same area as the United States, bear in mind that the population of that country is fourteen times as large as ours, while their postal revenue is twenty-one times as large as ours. The postal revenue of Canada represents $1.50 per capita, while the postal revenue of the United States represents $2.50 per capita of their large population. As I have just stated, the two conditions most essential for rural free mail delivery, as they have it in the United States, England, France, Germany or Belgium, are, first, large revenues and, second, large population and thickly-settled country. My hon. friend praised the United States, and I do not begrudge our American cousins the praise the hon. gentleman gives them. But my hon. friend must remember that in the United States they adopted rural free mail delivery, not when they had a population of seven or eight millions, the population that we shall show at the next census according to the recent prediction—I hope, a sound prediction—of the Minister of Agriculture. My hon. friend must remember that when the United States had a population of only seven or eight million, the system of rural free mail delivery existed in Europe. It is not by any means a new thing; it existed in Europe at the beginning of the last century; it had been successfully carried on in England, France and Germany for nearly a hundred years before the United States adopted it. The United States waited until they had reached a population of seventy million and a postal revenue of $80.000.000—a practical acknowledgment and illustration of what I have just said that, in order to give rural free mail delivery there must be a population and there must be revenue. This is an expensive system, though a beneficial one.

Mr. ARMSTRONG. May I ask the Postmaster General a question? Is it his intention, so far as he is concerned, to establish free rural mail deliveries only when we have a population of twenty millions?

Mr. LEMIEUX. The Post Office Department is giving the country a good service, an up-to-date service, and it intends to follow the development of the country and to expand with the expansion of the country. I would not like to make from my place in parliament any vain promises to the people of Canada. I will act cautiously—I was going to say that I would act conservatively. I have been asked to act cautiously by the farmers of Canada. My hon. friend (Mr. Armstrong) says it is a sham; he has even used a very unparliamentary term and has spoken of 'humbug.' He did not mean it, I am sure; he does not know what the word means, for he himself has never humbugged anybody. The farmers can speak for themselves. I do not believe there is a better representative body of the farmers in Canada than the Grange, which has its seat of influence in the province of Ontario. Probably there are many grangers in my hon. friend's constituency. Let me quote from an account of the proceedings of the Grange:

> The report of the Resolution Committee covered a number of propositions but it is stated that the clause in the report which drew forth the most animated discussion was the one dealing with rural mail delivery. The clause as drafted contained the following:—
>
> We desire to commend the Dominion government for inaugurating free rural mail delivery. At the same time we would urge the necessity of going cautiously and profiting by the experience of other peoples who have adopted this system.

My hon. friend knows that the Grange is an outcome of the farming community of the United States, and the institution, as we have it in Canada, came to us from that country. The Grange informs the Canadian Postmaster General that it commends his action but urges him to be cautious and to profit by the experience of the country where the Grange itself was established.

> We would also urge that regulations be laid down to enable all rural communities to avail themselves of the advantage of free mail delivery.

The 'Weekly Sun,' in which Dr. Goldwin Smith—'A Bystander'—writes, says, with reference to the debate on this resolution:

> The general expression of opinion on the part of the members was that, while they appreciated what the Dominion government has done, it would be a dangerous thing to proceed too rapidly along this line. The general feeling was that the service should be extended only as the revenue derived in return warrants.
>
> There was a decided indisposition to ask for anything that was likely to involve a charge upon the general revenue for the special benefit of farmers. Eventually the first section of the resolution was adopted, and other sections eliminated, thus simply declaring approval of the action of the government in inaugurating free rural delivery along the line of existing mail routes, and at the same time urging the necessity of going cautiously and profiting by the experience of others.

Mr. Speaker, I intend to follow the advice of the grangers, the advice of the farmers of Canada, who understand their own interest, and who would not like to see the Postmaster General rush in where angels fear to tread. But my hon. friend says: What are you going to do with your surplus? My surplus? No, the surplus of Canada, the surplus of the farmers of

Canada. Has my hon. friend followed the expansion of the department of late years? Does he not remember that under the regime of his friends there was a huge deficit of $700,000 a year in round figures, every year? When Sir Wm. Mulock took office he administered the department in such a way as to wipe out that deficit and to create a surplus. But did he not do anything for the people of Canada with that surplus? While he increased the revenue of the department, he was at the same time able to reduce the rates and thereby to reduce the postal taxation. The inland letter rate has been reduced from three cents to two cents per ounce or a fraction thereof; the letter rate from Canada to the United States was reduced from three cents to two cents per ounce; the letter rate from Canada to Great Britain and to every portion of the British empire was reduced from five cents to two cents per half ounce; and in October last it was made two cents per ounce or fraction thereof; the rate on drop letters in cities has been reduced from two cents to one cent per ounce, a lower rate than exists in any other country of Europe or America; the rate on Canadian newspapers and periodicals sent from publishers in Canada to subscribers in Great Britain and every other part of the empire, was reduced from eight cents per pound to a quarter of one cent per pound; the rate on Canadian newspapers and periodicals sent by the general public in Canada to correspondents in Great Britain and other parts of the empire, was reduced from eight cents per pound to four cents per pound, a reduction of 50 per cent. It is also to be borne in mind that the reduction in the rates on papers sent by publishers in Canada to subscribers in Great Britain tends to the wider dissemination throughout the empire of Canadian newspapers and other publications. So it is easy to see what has been done by the Postmaster General with the surplus in the department since 1897.

Now, Mr. Speaker, how have we served the country with our surplus? Let us look at the expansion of the service as shown by this table:

EXPANSION OF SERVICE.

Number of post offices.

1896	9,103
1908	11,823

Increase, 2,720.
Percentage of increase, 30 per cent.

Money order and postal note offices.

1896	1,310
1908	9,637

Increase, 2,720.
Percentage of increase, 636 per cent.

Post office savings bank.

1896	755
1908	1,084

Increase, 329.
Percentage of increase, 43 per cent.

Total miles of annual travel of mails.

1896	30,551,683
1908	43,986,149

Increase, 13,434,466.
Percentage of increase, 44 per cent.

Number of letters carried.

1896	116,028,000
1908	396,011,000

Increase, 279,983,000.
Percentage of increase, 241 per cent.,

Total number of articles carried in mails.

1896	177,178,136
1908	519,452,045

Increase, 342,254,909.
Percentage of increase, 190 per cent.

Amount of money transmitted by money orders and postal notes.

1896	$13,081,860
1908	55,284,595

Increase, $42,202,735.
Percentage of increase, 323 per cent.

Number of depositors in savings banks.

1896	126,442
1908	165,691

Increase, 39,249.
Percentage of increase, 31 per cent.

Financial results.

1896 (deficit)	$ 781,152
1908 (surplus)	1,101,827

Making a financial improvement of $1,882,979.

I said a moment ago that in 1896 there was a deficit of $700,000 a year; last year we had the magnificent surplus of over a million dollars. These, Mr. Speaker, are some of the things we have done with the surplus of the Post Office Department.

My hon. friend stated a moment ago that the box which was supplied by the Post Office Department for this special service, was a box unknown in the United States. For the information of my hon. friend let me tell him that in the United States they have nearly 300 styles of boxes in use, and it was decided lately to do away with all of them and to adopt the box which Canada has been the first to adopt. In the month of July or August last there was a committee appointed by the United States Congress to examine the latest pattern of postal boxes with which to replace the 300 patterns which they have been using there, and that special committee decided unanimously that the best box to be used in that great country was the one selected by Canada. The box they have adopted, following our example, is one which can be used without the letter carrier being obliged to dismount from his carriage, thereby saving time, and giving better collections and better delivery to the carrier. My hon. friend says the box costs $2. It would be easy for this government to make cheap popularity by saying to the farmer, we will give you that box free of any cost. That would sound so well before a general election.

Mr. ARMSTRONG. Might I ask the Postmaster General a question? In his speech at Niagara Falls did he make any definite statement of what it would cost the farmers, or did he say in the first pamphlet that he issued anything with regard to the cost?

Mr. LEMIEUX. The question was not put to me at Niagara Falls. I did not enter into details, I simply stated that it was decided to inaugurate a system of rural mail delivery. I did not say anything about the cost of the box, but every man knows that if he wants a box in front of his house he has to pay for it, just as every man must know that when he goes to the post office to mail a letter he must buy a stamp. I stated that this box would cost $3. When the box was examined at Ottawa, not only by the post office authorities but by members of the government, the question was asked if the price of $3 would always be the same. Of course if the number of boxes is much larger, as it will become later on when the system expands, evidently the cost will be much less because the manufacturer will be able to supply a larger quantity at a smaller profit. At that time, however, we took only 6,000 of those boxes at $3 each and we had them examined by an expert, a manufacturer in this city, whose name I cannot just now recall. That expert said that to manufacture the same box in Canada would cost more than the $3.

Mr. S. HUGHES. As I understand the system, it is only those who happen to reside along the mail route and will pay for the service, who will get this delivery?

Mr. LEMIEUX. Yes, and those who reside on the outside concessions have also the privilege of putting their boxes at the cross road.

Mr. GEO. GORDON. Did this expert say, how much more the boxes would cost if manufactured in Canada?

Mr. LEMIEUX. He said that to manufacture a similar box would cost in Canada more than the $3.

Mr. GEO. GORDON. How much more?

Mr. LEMIEUX. I have not his report here, but I will be quite willing to lay it on the table. One of the boxes will be exhibited in the Liberal room and another in the Conservative room, and my hon. friend will have an opportunity of examining it.

Mr. GEO. GORDON. Unless the box costs a great deal more in Canada than in the United States, would you not prefer having it made in Canada?

Mr. LEMIEUX. It was said in the press during the elections that Mr. Lemieux had betrayed the interests of Canada because forsooth he had not provided for the manufacture of that box in Canada. Well, I was very prudent and cautious, as I was urged to be by the Grangers. When I decided to inaugurate that system, here is the letter I wrote to the Rural Automatic Mail Company:

August 14, 1908.

Dear Sir,—Referring to the several interviews we have had with respect to the adoption in Canada of your rural mail delivery box, I beg to say that the Post Office Department views the box with approval, and is desirous of making experiments as to its adaptibility for service in Canada. For this purpose we are prepared to buy from you six thousand (6,000) at the price of $3 per box f.o.b. factory in United States, such box to be delivered to our order on or before the 10th of September prox.

In giving this order it is the intention of the department to distribute the boxes for experimental purposes as widely as possible throughout the Dominion. Our expectation is that they will prove successful, and that they will be largely adopted on the existing mail routes in Canada. If this expectation should prove correct, we should, of course, be ready to order larger quantities of boxes for future use, and in that case, if we are able to give you assurances as to satisfactory quantities, we should require you to establish a factory for the manufacture of the boxes in Canada.

As stated above, we view the box with approval, and fully expect that it will be widely adopted in Canada, but we do not feel free to bind ourselves for the future until after we have made the experiments as proposed.

Yours respectfully,

(Sgd.) RODOLPHE LEMIEUX.

Dr. Harriss,
Representative of Rural Automatic
Mail Company, New York, N.Y., U.S.A.

So that we have been very careful not to commit ourselves to the adoption of any box. We wanted the best and the latest pattern and one which would serve the people best. Since three months the system has been in vogue, and these were three winter months, the worst part of the year. During these three months we organized forty-three routes; and since I gave that answer to my hon. friend a few days ago, we have organized some eight or ten more, so that we have altogether fifty routes since the 15th of September last. These are serving actually 3,500 people. We have in use 700 boxes on the 43 routes and on the 50 we shall require 750. So as time goes on, and in view of the many petitions which are pouring into the department, I expect that within say two years many thousands of people will be served by that system throughout Canada.

The remuneration which the department has decided to pay to the contractor for the mail service for depositing into and

collecting from the King Edward boxes erected along his route, is as follows:—

$1 per box per annum for a service once a day or more frequently.

75 cents per box per annum for a service less frequently than once a day but more frequently than once a week.

50 cents per box per annum for a weekly service.

The scale of remuneration for this service is uniform throughout the Dominion.

Mr. BLAIN. Might I ask if those routes are established in thickly settled parts of Canada?

Mr. LEMIEUX. Yes, as a general rule.

Mr. BLAIN. Is it working well?

Mr. LEMIEUX. It is. I have here some testimonials from various postmasters:

From the Postmaster, Hamilton, Ont., re Ancaster-Hamilton route.

I have inquired of a number of the patrons as to whether the new system was quite satisfactory to them or if they had any complaints or objections to make. All expressed themselves as well pleased and thoroughly satisfied.

From the Postmaster, Waterloo, Ont., re Waterloo-Crosshill route.

The system adopted to deliver the mail to the patrons on the Waterloo and Crosshill route has been quite satisfactory to the patrons.

This office has a case with sufficient pigeon holes to have one labelled for each patron and the mail for each patron is placed in the pigeon hole after each mail has been assorted. When all the mail for the route is assorted the letters and papers are tied into parcels for the respective patrons and handed to the courier. By this method we have found errors to be at a minimum.

The patrons of this route have apparently taken advantage of the opportunity offered by the free rural mail delivery as most of them are now taking a daily paper, and the number of letters and other correspondence has also been on the increase since the establishment of this route.

From the Postmaster, Milton West, Ont., re Milton West-Mount Nemo route.

I have made inquiry and find that the system is altogether satisfactory. The mail courier informs me that all the patrons are well satisfied.

Then, the post office inspector at Vancouver, speaking of the Terra Nova and Vancouver route, says:

I beg to say that since the inauguration of the rural mail delivery on Vancouver route No. 1, I have taken advantage of two or three opportunities to interview the patrons regarding the same, and without exception they all expressed themselves as well satisfied, and some went so far as to say that the accommodation was invaluable. The boxes appear to work satisfactorily. No complaints have been received from the patrons and the only trouble I have had was with the council of the municipality of Point Grey who considered the boxes an obstacle to traffic and requested that they be removed, but this was amicably arranged, concerning the particulars of which you have already been advised.

So far as the Vancouver office and the intervening offices are concerned, they are each doing their part satisfactorily, in fact, so smoothly is the system working that it leaves nothing further to be desired.

Mr. HENDERSON. I understand the former mail courier on the Milton-Mt. Nemo route declined to do the work for what the government offered. Has the government secured the services of a new courier?

Mr. LEMIEUX. In some instances the mail courier has refused to do the additional work for the remuneration offered and we are obliged to give notice to cancel the contract and to call for new tenders. It may happen that the same courier will tender at a little higher figure and accept the new contract.

Mr. HENDERSON. Has that been done in the case I refer to?

Mr. LEMIEUX. I cannot say.

Mr. BARR. Do you advertise at so much per box?

Mr. LEMIEUX. We say the department will pay $1, or 75c. or 50c., depending on the frequency of the service. My hon. friend (Mr. Armstrong) said that the mail delivery in the United States had produced quite a large revenue, but my information is that the United States postal authorities have been able to ascertain the revenues on only 21 of the best equipped and best paying routes, and as regards all others they have been unable to say what share of the revenue was derived from that service. The United States postal authorities are however well able to say that the cost is increasing by leaps and bounds. Perhaps it might be interesting to read the following letter from Mr. De Graw fourth assistant Postmaster General of the United States to Mr. George Ross chief post office superintendent of Canada:

POST OFFICE DEPARTMENT.

Office of the
Fourth Assistant Postmaster General.
Washington, January 22, 1909.

George Ross, Esq.,
Chief Post Office Superintendent,
Toronto, Canada.

My dear Mr. Ross,—I gladly comply with your request of January 19, 1909, for further information in relation to the average annual cost of rural delivery routes in the United States.

In the communication sent you January 14, 1909, the rate named of $865.58 per route was based upon the average cost for service by

carriers alone on routes in operation December 1, 1908.

On January 2, 1909, rural delivery service was in operation in the United States as follows:—

No. of Routes.	No. of Times Served.	Annual Cost.
38,920	Six times per week..	$33,954,474
650	Three times per week.	302,094
Total..		$34,256,568

These routes were served by 39,441 carriers; 129 of the carriers served two tri-weekly routes each on alternate days. On this basis of the cost of service for carriers the average per route, January 2, 1909, was $865.72, and per carrier, $868.55.

During the fiscal year ended June 30, 1908, various sums not included in the above estimate were expended as follows:—

Clerks-in-charge rural stations...	$ 7,921 52
Tolls and ferriage..	9,655 35
Substitutes..	1,159,717 35
Supplies..	54,037 00
Total..	$1,231,331 22

This miscellaneous expenditure for the current fiscal year will be somewhat greater and will probably reach $1,300,000. If this last named sum is added to the total cost of $34,256,568 for carriers on routes in operation January 2, 1909, there would be a gross annual expenditure of $35,556,568 or $898.57 per route.

In explanation of the fluctuation in average cost it may be stated that during the month of December, 1908, the increases in length caused by amendment of routes largely exceeded the decreases and the number of routes on which service was increased from three to six times per week exceeded the number on which frequency of service was reduced.

Very truly yours,

P. V. DE GRAW,

Fourth Assistant Postmaster General.

It will be seen that on each route the United States there is an average expenditure of $898.57 but the United States authorities have been unable to say what the revenue is. However, a technical newspaper in the United States which has given considerable attention to this matter has come to the conclusion that the deficit between expenditure and revenue on each of the routes served by rural mail delivery in the United States is about $400. Of course, it is difficult for me to make a comparison between the revenue on the Canadian routes and the revenue on the American routes.

Mr. ARMSTRONG. Might I ask the hon. gentleman if that is the paper that he quoted from a year or so ago?

Mr. LEMIEUX. No.

Mr. ARMSTRONG. He does not know the name of it or where it is published?

Mr. LEMIEUX. There are so many papers published in the United States that I cannot off-hand remember the name. The Post Office Department of the United States is unable to state what is the revenue derived from the free rural mail delivery system. They have been able to state what was the revenue, from 21 of the best equipped routes, but that is all.

Mr. EDWARDS. Does the hon. minister expect that these fifty routes which have already been started in Canada will be self-sustaining, or does he anticipate that the general revenue of the Post Office Department will be drawn on to any extent in order to maintain them?

Mr. LEMIEUX. Of course our routes are not the same as the American routes. In the United States the rural mail carrier goes from door to door, and last year he received a salary of $900. In Canada we have not the same expenditure to meet; our system is less costly; but I am not yet in a position to say that it will be self-sustaining. At all events, the government are quite ready to take a slice of the surplus in the Post Office Department in order to give the farmers of Canada the boon, as it has been termed by some hon. gentlemen, of the star-route system.

My hon. friend has reminded me that there has been some undesirable literature circulating in our towns and cities. I can only say to my hon. friend that I am as anxious as he is to stamp out undesirable literature in this country. So far as the Post Office Department is concerned, we are doing our best to prevent any such literature passing through our mail boxes or our mail cars. We have been able, since two or three years, to do away with nearly all the objectionable literature which came from some of the western states. I do not know that there is at present any quantity of such literature circulated in Canada; I think there is not; but if there is, the people have the weapon for dealing with it in the Post Office Act. Any man can institute proceedings in any police court of this Dominion, against the merchant who sells any such undesirable literature. As to a board of censors, I would not say that is impracticable, but it is very difficult to establish one. We are all jealous of the liberty of the press. I am asked sometimes by over-zealous clergymen, I will not say to what denomination they belong, to suppress some papers which in their opinion are published against their particular faith. Well, it is very difficult for the Postmaster General to act as censor in such cases. The common sense of the people will be the best judge. I cannot take upon my shoulders the task of judging of the heterodoxy of a publication which may or may not serve the purpose of any religion or any sect in this Dominion. But as regards filthy literature, I am as desirous as

any one to suppress it, and I am pleased to say that under the regulations of the Post Office Department, since I have been Postmaster General at least, in the mining districts, such as Cobalt and others, where I have been myself a witness of what has taken place, filthy literature has been completely suppressed. I had the testimony of the postmasters themselves, and I myself visited the mail boxes, and so am able to testify that in those districts filthy and yellow literature has disappeared completely. At the same time, it is always prudent and wise to watch, and I intend to watch in the future as I have done in the past.

Mr. ARMSTRONG. Mr. Speaker, before the motion is adopted, I wish to say a few words.

Mr. SPEAKER. The hon. gentleman can only do so by the consent of the House.

Mr. ARMSTRONG. I understood that the Postmaster General was quite willing that I should have the privilege?

Mr. SPEAKER. But there is a rule of the House that a member cannot speak a second time on the same motion.

Mr. LEMIEUX. I have no objection personally.

Mr. ARMSTRONG. I will only take a few moments.

Mr. SPEAKER. If the House so understands it; but I may say that it is a very dangerous precedent for the House to make, because any other member might claim the same privilege.

Mr. ARMSTRONG. I do not wish to infringe on the rules of the House, Mr. Speaker.

Mr. SPEAKER. The hon. gentleman can put a question, but should not make a second speech.

Mr. ARMSTRONG. Under these circumstances, Mr. Speaker, I will not attempt to say anything further. I am sorry that I am not given the privilege of making some reply to the statements made by the Postmaster General.

Mr. SCHAFFNER. Mr. Speaker, if I am in order, there is a matter which I would like to refer to the Postmaster General. There is a feature of the administration of his department in my constituency which I think has been very unfair, and I believe that in this case the Postmaster General has been bossed, overruled, by a man who at one time in our country had considerable power—power enough to be called the young Napoleon; but of late he has certainly been plucked of his plumage, and has no longer the same influence in the west, and I did not think he had the power to overrule fair play and justice to the extent that he has done in this particular case since the elections of October, 1908. I refer to the dismissing of postmasters.

Mr. LEMIEUX. The hon. member for Brandon (Mr. Sifton) who is ill, asked me to request my hon. friend not to bring up this question of the dismissal of postmasters, for which the hon. member (Mr. Sifton) takes full responsibility, until he is present. It will be only a few days until he is here.

Mr. STAPLES. He was in his seat on Monday and if he was well enough to be here then, he is well enough to be here today.

Mr. SCHAFFNER. If it is the desire of the Postmaster General, I shall be glad to accede to his request.

Mr. FOSTER. What does the hon. member mean by saying that the hon. member for Brandon (Mr. Sifton) accepts full responsibility for the dismissals?

Mr. LEMIEUX. I do not throw the responsibility on his shoulders. I take the responsibility of the dismissal, but the hon. member for Brandon (Mr. Sifton) recommended the dismissal and I acted on his advice.

Mr. G. TAYLOR. He bosses the government all right.

Mr. LEMIEUX. Oh, no.

Motion agreed to and House went into Committee of Supply.

River Saguenay—dredging and other improvements, $30,000.

Mr. FOSTER. Some returns ordered have not yet been brought down. The minister would think us harsh if we refused to grant Supply without them, and we do not wish to be put in that position.

Hon. WM. PUGSLEY (Minister of Public Works). I have spoken to my deputy about these returns, but he explained that we have really no room in our department for extra help. I told him he must arrange for two or three temporary clerks and he said he would do so at once, so as to expedite the returns.

Mr. AMES. What is the Saguenay work?

Mr. PUGSLEY. We are doing dredging upon the Saguenay, improving and straightening as well as deepening the channel. Last year we had an appropriation for this purpose of $40,000 and there was an expenditure for work done under contract by the General Construction Company's dredge of $23,291.17. There were also the working expenses of the tug 'Storm King,' $6,158.53 and the Canada Improvement Company did dredging to the amount of

$3,280.10. We are asking this vote of $30,000 to continue the work of dredging upon the Saguenay. It is very necessary in order to enable deep draft vessels to reach the important town of Chicoutimi.

Mr. BLAIN. Will this be a continuous expenditure?

Mr. PUGSLEY. It will take some years to thoroughly complete the work.

Mr. BLAIN. What will be the total cost?

Mr. PUGSLEY. You cannot very well estimate definitely in dredging of this kind because it depends upon the depth to which we go. There are about six or seven miles below Chicoutimi which require to be straightened and dredged out to make a perfect channel.

Mr. FOSTER. What depth will you get?

Mr. PUGSLEY. In the turning basin we are going to a depth of 20 feet and hope to continue to dredge the channel to a depth of 20 feet as well, but of course it will take some few years to obtain that.

Mr. AMES. If you look over the public accounts as given by the Auditor General during the last two or three years, you will find that a good deal of money has been spent and is being spent from time to time under the head of 'Saguenay Dredging,' and you will find also that the local engineer manages to interpret the term 'Saguenay Dredging' in a pretty broad sense. For instance, in the Auditor General's Report for 1907 is an item concerning the River du Moulin. $1,409.39. And in another year you find a further item relating to the River du Moulin. And when you come to inquire you find it difficult to see why this work on the River Du Moulin is charged to 'Saguenay Dredging.' Now the story of the River du Moulin is this: This is a small stream which comes into the Saguenay from the south, if I remember rightly, just a little to the east of the town of Chicoutimi. The people of that town had been accustomed to use an old wooden bridge across the river, and they were extremely anxious to have that wooden bridge replaced with a steel bridge upon stone abutments. They endeavoured to pursuade all and sundry to come to their relief, not wanting to pay for the work themselves, but without much success. They approached the federal member to ask his good offices in this particular, and the federal member interviewed the engineer to know if there was any way in which the River Du Moulin wooden bridge could be replaced with an iron bridge and charged to 'Saguenay dredging.' The engineer apparently suggested this exceedingly ingenious expedient: In the spring of the year, some earth comes down from the mountains and passes out into the Saguenay river by way of the River du Moulin; therefore let us charge to 'Saguenay Dredging' what it may cost to protect the banks so that they will not wash away. Now, inasmuch as the dredging is five miles below the point where the River du Moulin enters the Saguenay, and inasmuch as there is a depth of thirty feet for three miles below the place, and inasmuch as the River du Moulin is a very small stream which brings down very little silt each year, it took a pretty long stretch of imagination on the part of the engineer to find it possible to charge this to 'Saguenay Dredging.' However, with the aid of the local member they were able to accomplish it. They made a report that it was necessary to build a concrete pier on the left side of the river, right under where the old wooden bridge used to rest. As a matter of fact, there was already a wooden protection, all that could possibly be needed to prevent erosion, and this wooden protection had to be taken down in order that it might be replaced with the concrete pier. Then, the people of the municipality arranged with a contractor to build a stone pier directly opposite, and so they had the two abutments for the bridge. If the minister is interested, I shall be glad to send him a photograph, so that he may see the concrete pier under the iron bridge on this small river some distance up from the Saguenay, which concrete pier has been charged to 'Saguenay Dredging,' which dredging is being done on the main river seven miles below.

Now, when we are asked to vote money, we like to know what it is for, and when we are told it is for one purpose we do not like to have it used for another. In this particular case, I would like to ask whether the minister has disciplined the local engineer whose misleading statements undoubtedly induced this item to be charged in the way it has been, and also whether he or his predecessor was aware of the fact that when they were asking parliament to vote an appropriation for the dredging of the channel leading into the upper river at Chicoutimi, they were really asking that a portion of that money should be used to build a concrete pier under a municipal bridge?

Mr. PUGSLEY. I am unable, at this moment, to enlighten my hon. friend (Mr. Ames) as to what knowledge my predecessor had in regard to what would be done with the vote given for the 'River Saguenay, Dredging and other Improvements.' My attention was called to the fact that the bridge had been built either immediately adjoining to or upon a part of the foundation of the glance pier. I made inquiry and was informed by the engineering staff of my department that the object of building this glance pier was to prevent

the silt which came down from this river to which my hon. friend referred, flowing into the Saguenay river and so nullifying to a considerable extent the dredging work being carried on.

Mr. GEO. TAYLOR. Does the photograph show it?

Mr. PUGSLEY. Photographs are very deceptive. I could have a photograph taken of my hon. friend (Mr. George Taylor) from such a position that his best friends would not know him. A great deal depends upon the photographer.

Mr. GEO. TAYLOR. That photograph looks perfect.

Mr. PUGSLEY. It is evidently taken from the landward side of the pier. A photograph from the river side would present a very different appearance and might give a different impression from that conveyed by this photograph.

Mr. GEO. TAYLOR. What does the engineer say?

Mr. PUGSLEY. He would not recognize it from this photograph. Having asked him, I may say that another reason he would not recognize it is that he has never been there. I can say to my hon. friend (Mr. Ames) that, in asking parliament for this vote for the 'River Saguenay Dredging and Other Improvements,' I can assure the committee that directions will be given that the money shall be used entirely upon the river Saguenay and that it will be used for Dredging and Other Improvements of the river Saguenay. I think that my hon. friend will admit that the dredging work is very useful, that the channel is a very crooked channel, that it is difficult if not dangerous for vessels to approach Chicoutimi by the present channel, and that it is very necessary to improve the position by widening and straightening, as well as deepening, the channel.

Mr. AMES. No doubt, it is necessary that the channel, which is six or seven miles below Chicoutimi, should be deepened and widened so that steamers can come up. But, in this particular case, I think it required a very great stretch of imagination to bring this pier under the vote which this parliament passed for 'Saguenay dredging.' One feature I call to the attention of the minister which takes away, I think, the only argument that he has advanced. It is this: At the place where the concrete pier was built, there had previously stood a completed wooden structure which protected the banks from erosion as effectively as this concrete pier does, and this wooden structure had to be taken away so that the concrete pier could take its place. Thus, so far as erosion was concerned, there was as good protection before as there is today. No, the whole matter was hatched between the member and the resident engineer with a view to saddling on this government an expense which the federal government should not bear. That is the same story all along down the Lower St. Lawrence, and if there is any way in which they can disguise these expenditures so that they will escape the attention of the minister or of the members of parliament, whose duty it is to study the documents in connection with these cases—if there is any way in which it can be disguised or concealed, that will be done. Before we get through this afternoon I shall have the pleasure, unless six o'clock is reached too soon, of showing other cases like this, where money is voted by parliament under, I might almost say, false representations, because it is expended for other purposes entirely than those which parliament intended it should be expended for.

Mr. FOSTER. Who is the resident engineer?

Mr. PUGSLEY. Mr. Tache.

Mr. FOSTER. How long has he been there?

Mr. PUGSLEY. He has been in the department 35 years. He was formerly at headquarters.

Mr. FOSTER. Who is the engineer here that passes his work?

Mr. PUGSLEY. The chief engineer, Mr. Lafleur.

Mr. FOSTER. I do not know how the minister feels with reference to this. I do not know how members sitting on either side of the House feel about it, but I cannot find language too strong to characterize a transaction of that kind. What are we here for? To misrepresent, to conceal? Surely it cannot be that. It makes no matter whether we are Liberal or Conservative, —do we approve of stealing the money of the people under false representations, and actually expending it, and coming to parliament and lying about it? If they want it to build a glance pier at Riviére du Moulin, seven or eight miles above where the channel is being dredged, why not come in an honest way and get a vote for it—explain it to the House, and if the House stands under it, then do it. But here is a vote for dredging the river Saguenay, and they are dredging a channel below Chicoutimi, as I understand.

Mr. PUGSLEY. Below and in the vicinity of Chicoutimi.

Mr. FOSTER. It is at least seven miles below the River du Moulin, which is a small insignificant stream. They have absolutely gone to work and have spent a sum of

money in taking down a wooden protection to the bank of the stream in this River du Moulin, and building a concrete pier, and on that concrete pier a bridge has been placed. Thus the government is spending out of the Saguenay river dredging vote $1,000, $2,000 or $3,000 to build a concrete pier. The municipality have built another pier on the other side at their own expense, and then a bridge is put across. If it is to build an abutment for a bridge, come to parliament and ask for it. If it is for the purpose of protecting the stream in any way, come to parliament and say what it is for. But to get a vote for dredging in the River Saguenay and make a channel deeper and wider, and then go seven miles above into a little bit of a stream and build a concrete pier, and try to justify it by saying that it is meant to keep the silt from coming down the River du Moulin——

Mr. HUGHES. How far is this from the Saguenay river?

Mr. FOSTER. The River du Moulin runs into the Saguenay river. Now this is not an isolated instance, it is being done over and over again in the province of Quebec, it may be in other provinces. We bring them up and make these statements, and the minister plays a little piece of comedy about it, glosses it all over, winks his eye to show how nicely he has done it. I want to ask the minister whether, if the statement is true that has been made by my hon. friend from St. Antoine (Mr. Ames), he has not a duty to perform. Will he perform that duty, or is he going to cover it up, as he has done in case after case, make a laugh of it, and pass it off by some glib words? That is not what the minister ought to do, that is not what members of parliament ought to allow. What impression does it create? That the department is not to be trusted. If the state of things is as stated by my hon. friend, it means that the engineers are not to be trusted, that the resident engineer has condoned the taking away of the moneys of parliament voted for a certain purpose, and applying them to another purpose; that the engineers in the department here condone it, or support it, or show negligence, if they do not know it. It is a very poor answer to have from the engineer here who finally passes the account, to say that he has never been there and does not know.

Mr. PUGSLEY. My hon. friend does an injustice to Mr. St. Laurent, he is not the gentleman I mentioned. I said that it was Mr. Lafleur, the chief engineer, who passes the work. It is the assistant deputy that is here in the committee.
